SHEFFIELD.—The more active conditions in some of the lighter steel branches reported last week continue, but progress is slight and the movement is insufficient at present to warrant the belief in a substantial and permanent improvement. Nevertheless people are hopeful of continuous revival in the winter months even if normality is not attained. The latter can only be possible when Governments overseas remove their currency restrictions and shipping and railway business pick up. Depression is acute in heavy steel forgings and castings. Activity can be found among makers of hacksaws, permanent magnets, engineering precision tools, and expensive steels used in aircraft construction. The extension of Government credit on Russian debts should prove helpful to firms having Russian orders in hand, but it will not further the placing of new business, because the amount allocated for this purpose was exhausted a long time ago. Trade is expanding slowly in the cutlery and plate branches, but orders generally are on a retail scale.

GLASGOW.—While business in the heavy iron and steel industries in the West of Scotland remains exceedingly quiet, there is a slight increase in the volume of work placed and overseas buyers are showing more interest. It will be some time before steel makers will benefit from the contracts which the Admiralty have placed with Clyde yards during the present week, but much gratification is felt that so much work has come to this district and the announcement has vastly brightened the outlook for workers in the Clyde shipyards and engineering works, as it is understood these contracts will provide sufficient work for some 2,000 to 3,000 men for about two years. The continued advance in Continental prices is helping to shut out Continental semis, and while there is not a great deal of business to be placed by local users, such small lots as are required are being placed with home manufacturers. In the sheet trade the position is rather better this week, tonnage booked being greater than for a few weeks past, and there has been a slight increase in the operating plant. Prices for home trade are steady, but for export business prices have been shaded slightly.

CARDIFF.—There has been no material improvement during the past week in the state of business in the South Wales tinplate trade. Production has been adjusted to the diminished demand, and prices are firm up to 15s. 6d. per basis box, with the usual extras for canning sizes. Shipments from Swansea last week totalled 87,163 boxes, compared with 59,128 the previous week, and 61,318 boxes in the corresponding week last year, but stocks are nearly 11,000 boxes greater than they were a week ago and 48,000 boxes less than a year ago. There has been an increase in the imports of foreign steel bars recently, but South Wales bars are unchanged at 95s. per ton net. The prices of galvanised sheet bars are unaltered.

OTHER METALS.

TIN.—The market in tin opened weak on Monday and turnover was small. On Tuesday, demand improved and prices rose steadily, closing on Wednesday a shade higher than a week ago. Sales on the London Metal Exchange were 350 tons on Monday, against 400 tons last week; 850 tons on Tuesday, against 1,150 tons last week; and 450 tons on Wednesday, against 500 tons last week. The New York quotation on Wednesday was 24.70 cents per lb., against 24.85 cents a week ago and 23.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £151 15s. to £152, compared with £150 10s. to £151 17s. 6d. last week. Stocks in London and Liverpool at the end of last week were 31,955 tons, a decrease of 246 tons on the week.

COPPER.—Little interest was shown in copper at the beginning of the week, but on Wednesday buyers were more in evidence and prices rose a little in sympathy with the firmer tone in Wall Street. Sales at the London Metal Exchange were 750 tons on Monday, against 800 last week; 850 tons on Tuesday, against 2,250 last week; and 1,100 tons on Wednesday, against 1,250 last week. Domestic spot was quoted 6½ cents per lb. in New York on Wednesday, against 6¼ cents a week ago and 5½ cents a month ago. Wednesday's official closing price for standard cash in London was £34 15s. to £34 16s. 3d., compared with £33 5s. to £33 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,690 tons, show an increase of 1,153 tons, and stocks of rough copper, at 1,501 tons, an increase of 17 tons.

LEAD.—Lead opened easier on Monday in London, was dull on Tuesday, but improved a little on Wednesday, despite the decline of prices in New York, owing to the scarcity of sellers. Sales at the London Metal Exchange were 550 tons on Monday, against 250 tons last week; 800 tons on Tuesday, against 1,700 tons last week; and 600 tons on Wednesday, against 800 tons last week. The New York quotation on Wednesday was 3.40 cents per lb., against 3.60 cents a week ago and 3.40 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £12 18s. 9d. for September shipment, compared with £12 15s. last week.

SPELTER.—Spelter, like other metals, was neglected on Monday, but improved on Tuesday and Wednesday under the influence of a better demand. Sales were 500 tons on Monday, against

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

REPORT OF DIRECTORS.—To be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 22nd November, 1932, at 11 o'clock in the forenoon.

ACCOUNTS.—1. The Directors submit the Company's Balance Sheet and Profit and Loss Account for the financial year ended 30th June, 1932. As the Company is incorporated in the Union of South Africa, the Accounts now submitted are on a South African currency basis, with the exception of the Company's stocks and shares, including British Government securities and Fixed Assets in London, which appear in the Balance Sheet at their British sterling value. As regards these assets, the difference in currency value has been provided for in the aggregate by placing £500,000 to a Special Currency Reserve, for which purpose £150,000 has been provided from Revenue and £350,000 from the General Reserve.

PROFIT AND LOSS.—2. The revenue of the Company has been well maintained, although it has not altogether escaped the effects of the prevailing depression. After providing for depreciation in stocks and shares and all other charges, the net profits amount to £359,675 18s. 7d. This sum, together with £166,685 2s. 11d. brought forward from the previous year, brings the total amount available to £526,360 3s. 6d.

DIVIDEND.—3. On the 14th July the Directors declared a Dividend of 1s. 6d. per share, in British currency, less United Kingdom Income Tax. This distribution will absorb £220,706 5s. 0d., and after placing the sum of £150,000 referred to above to the credit of a Special Currency Reserve Account, there remains a Balance of £155,653 18s. 6d. to be carried forward to next account.

RESERVE FUND.—4. As indicated above, £350,000 has been transferred to a Special Currency Reserve Account, which leaves the Reserve Fund at £300,000. The purpose for which the Special Currency Reserve Fund of £500,000 is created has already been explained, and it will be available, if and when required.

VALUE OF SHAREHOLDINGS.—5. Unrelieved industrial and economic depression has continued during the year under review, in consequence of which depreciation in the value of stocks and shares has been exceptionally heavy. This depreciation has been provided for, and the shareholdings of the Company appear in the books at market prices current on the 30th June last, or at cost, whichever is the lower.

At present these assets show a substantial surplus over the amount at which they stand in the Company's books.

FINANCIAL POSITION.—6. The financial position of the Company is strong, and its assets include £1,000,000 in British Government securities. **MINING INTERESTS.**—7. The Reports issued by the Gold Mining Companies of the Group give full details of their operations, but a brief summary is given hereunder, from which it will be noted that the results of the Government Gold Mining Areas (Modderfontein) Consolidated, Limited, New State Areas, Limited, and The Randfontein Estates Gold Mining Company, Witwatersrand, Limited, have been particularly noteworthy.

The supply of native labour to the Mines has been adequate for all requirements. The value of the gold produced by the Mines of the Group for the twelve months to 30th June last was, approximately, £13,380,000 in South African currency.

GOVERNMENT GOLD MINING AREAS (MODDERFONTEIN) CONSOLIDATED, LIMITED.—The tonnage mined during 1931 amounted to 2,435,000 tons, and resulted in a working profit of £2,733,117, of which the Union Government's share was £1,458,998. The Union Government has now been paid a total sum of £15,911,084 under the terms of its Lease to the Company. Dividends totalling 90 per cent. have been paid for the twelve months to 30th June last.

The Ore Reserves at the end of the year were estimated to amount to 10,510,000 tons, with an average value of 8.9 dwts. over a stowing width of 60 inches.

While the results for the year compare closely with those of the previous year, the gold recovered, revenue and profit for the year, constitute records in the history of the Company.

THE LANGLAATJE ESTATE AND GOLD MINING COMPANY, LIMITED.—The tonnage mined during 1931 amounted to 945,000 tons, resulting in a working profit of £370,376. Dividends totalling 20 per cent. were paid for the year to 30th June last.

The Ore Reserves at the end of the year were estimated to amount to 1,190,000 tons, with a value of 7.2 dwts. over a stowing width of 44 inches.

NEW STATE AREAS, LIMITED.—For the year ended 31st December last, 958,000 tons of ore were treated, resulting in a working profit of £658,411, of which the Union Government received £552,732. The profit share were paid for the year to the 30th June last. Dividends totalling 20 per cent. were paid for the year to the 30th June last.

The Ore Reserves at the end of the year were estimated to amount to 2,737,000 tons with an average value of 8.9 dwts. over a stowing width of 50 inches.

The position at the Mine is very satisfactory, and the monthly profits have shown a steady and progressive increase.

THE RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.—The tonnage mined amounted to 2,751,000 tons for the year to 31st December last, and showed a working profit of £598,628. Both these figures were considerably higher than those of the previous year.

The development work of the year was gratifying, in the continued flattening of the strata ore reserve position substantially strengthened, but the intense flattening of the strata in depth confirmed the belief that all the payable reef on the property will lie at a workable depth, and thus a long life for the mine of dividends during the year, and two distributions, totalling 14 per cent., were paid to 30th June last.

The Company resumed the payment of dividends on 30th June last.

The Ore Reserves at the end of the year were estimated to amount to 6,324,000 tons, with an average value of 6.2 dwts. over a stowing width of 49 inches.

VAN RYN DEEP, LIMITED.—The ore treated during 1931 amounted to 753,000 tons, and showed a working profit of £337,909. Dividends totalling 22½ per cent. were paid for the year to 30th June, 1932.

We report to the Shareholders that we have audited the accounts of the Johannesburg Office of the Johannesburg Consolidated Investment Company, Limited, dated 30th June, 1932, and have obtained all the information and explanations we have required. The Audited Accounts of the Johannesburg Office have been properly incorporated in the above Balance Sheet and Profit and Loss Account, and, in our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us, and as shown by the books of the Company. We have also verified the securities in Johannesburg. The Company has kept proper books and records.

					£386,653	18	6		
					£598,360	8	6		

150 a week before; 500 tons on Tuesday, against 1,400 the week before; and 800 tons on Wednesday, against 1,100. The New York quotation on Wednesday was 3.25 cents per lb., against 3.50 cents the week before, and 2.75 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 17s. 6d. for September shipment, against £14 16s. 3d. last week.

OTHER NON-FERROUS METALS.—The tendency of other non-ferrous metals whose price is not controlled was slightly easier. Aluminium was again £95 per ton. Nickel was unchanged at £240 to £245. Quicksilver was slightly lower at £9 6s. to £9 14s. per flask, against £9 7s. 6d. to £9 15s. a week ago. Platinum was reduced from £9 15s. per ounce to £9 5s. per ounce. Foreign antimony was again unchanged at £25 to £25 10s. per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, September 14th to 21st (inclusive), are 41,346 bales, of which 15,251 bales are American, 5,500 Peruvian, 4,768 Argentine, 12,517 Egyptian, 886 African, 1,406 East Indian, and 1,018 sundries.

Manchester.—Trading in the market during the past week has been very difficult. Buyers have been nervous, partly owing to the further fall in values, and the continuance of the weavers' strike has prevented makers from being able to guarantee deliveries, and numerous customers have not been prepared to grant a strike clause in contracts. On the whole, most abnormal conditions have prevailed, and in the circumstances activity could not be expected. A fair amount of inquiry has been met with in piece-goods for India, and scattered sales have taken place, chiefly in light goods and fancies. Standard makes for China have attracted very little attention, but occasional lines have been reported in dyed goods. Stock lots have been in request for certain minor outlets East and West, and some home trade buyers have displayed rather more interest in prices. No improvement in the position can take place until production in the weaving section is resumed. Considerable satisfaction has been expressed by merchants at the reduction in bleaching charges. There has been a good deal of irregularity in American and Egyptian yarn quotations, and a limited turnover has occurred in home counts. A fair demand has been met with in export numbers for India and the Continent.

THE WOOL TRADE.—Bradford.—According to our correspondent, the sixth series of London sales which commenced last Tuesday have demonstrated the soundness of wool values. The demand for 64's quality upwards is about equal to the supply; for 56-58's it is more than can be satisfied; there is an improved call for 50's, and lower qualities are still waiting for a further improvement. Fine crossbreds are going into hosiery and in substitution for merinos, and this may eventually be expected to be reflected in lower qualities. In this way, all descriptions of wool are holding their own. The bulk of the London demand has been on Continental account, with Germany the principal buyer. So far as it has been possible to estimate cost at this juncture, average 64's tops are costing 25d. This leaves buyers on Bradford account rather dissatisfied, though against this there is the compensation that considerable weights of wool have been sold privately to the Continent from this district, and good profits must have been made. The advance in wool prices since the commencement of the current selling season, and in tops in Bradford, do not make either commodity too dear for manufacturing purposes, and whilst spinners have been making low bids for merinos tops, the prospect is that business will continue to be done somewhere between prices bid and the present maximum of cost represented by the buying basis in London. Continental firms operating on a 25d. basis in Coleman Street means that, in their own currency, they are getting the wool at substantially less. Coincidental with this, the marketing and consumption of wool stocks is likely to continue, and to leave the sellers with a good profit. The advance in London compared with the close of the July series is around 12 1/2 per cent. for greasy merinos, and up to 15 per cent. for fine crossbreds, with medium wools 10 per cent. dearer, and low crossbreds 7 1/2 per cent. upwards. The Bradford market is quiet. The advance in London has already been discounted here, but quotations for all quantities of tops are firm.

THE JUTE TRADE.—Dundee.—Conditions have again become very slow in the jute industry. A declining tendency on the part of raw-jute prices has been detrimental to business in the other sections of the trade, and buyers, having formerly purchased to a fair extent, are now awaiting further developments. With cheaper jute in view, producers of yarns and cloth are inclined to be more willing to shade their terms. The raw-material position, however, is still very sensitive and fluctuations in prices occur,

occasionally being firmer, at which times buyers of jute goods increase the volume of inquiry, which leads to the opinion that there are many wants to fulfil. The Calcutta goods market has been very quiet, with prices following those of raw jute. Sellers of the fibre have reduced their prices to £20 for First Marks, £18 15s. for good Lightnings, and £17 10s. for best Hearts, while grade qualities are quoted at £18 10s. for Firsts, £17 15s. for Lightnings, and £17 for Hearts, September-October. Daisie assortment full group has been sold down to £17 5s., threes quoted at £17, and fours at £16 5s., while Tossa assortment rules at £18, threes at £17 15s., and fours at £17, October-November. Only a few small sales have been recorded, as spinners are receiving little incentive to purchase. Jute yarns have ruled very quiet, but the quoted rates of spinners have remained unchanged in general. Common 8-lb. cops are named at 2s. 1d. and 8-lb. spools at 2s. 2d., but offers of business at less would not now be refused. Twist has been sold at 3 1/4d. for 3-ply 8-lb., and sacking yarns are offered at 2 1/4d. for 24-lb. weft and 3 1/4d. for 8-lb. chains, while rove could be obtained at £19 15s. for 48-lb. and £16 15s. for 200-lb. The finer yarns have come in for some attention for export to Brazil, fourth grade Rio weft being sold at 2s. 3 1/4d. and warp at 2s. 4 1/4d. for quick delivery. Second quality 8-lb. warp is quoted at 2s. 9d. and third at 2s. 6d. Carpet yarns have been purchased very sparingly at from 3 1/4d. for 14-lb. warp. Only trifling lots of jute cloth have been bought, but in the case of the wider widths manufacturers have been able to adhere to their terms. The narrow widths are badly off for orders, though there are not so many of these being made in Dundee now, Calcutta makes being preferred by buyers on account of the cheaper prices. In the widths 45 in. and over, Dundee goods are quoted at 3d. for 10 1/2-oz. 40-in. and 2 1/4d. for 8-oz. Linoleum hessians are of small interest, and heavy goods are dull. Calcutta goods prices have come back to 20s. 3d. for 10-oz. 40-in. and 15s. 4 1/4d. for 8-oz., September, 19s. 10d. and 15s. 6d. respectively, October-December, and 19s. 3d. and 15s. 3d. for January-March. Liverpool twills are quoted at 58s. and "B" twills at 51s. 3d., September, 57s. and 50s. 9d. for October-December, and 56s. 9d. and 50s. for January-March. Spot prices of 10-oz. and 8-oz. hessians are 21s. and 16s. 6d. respectively.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has undergone little change during the past week. This week's rise in prices is due to the renewed upward movement in Wall Street, i.e., it reflects a change in sentiment rather than an improvement in the wheat outlook. Nevertheless, crop reports continue to influence the course of prices. Russia's probable exports are estimated by Mr Broomhall at not more than 5 million quarters, against 9 million quarters exported during the past season. On Wednesday, September futures were quoted in Chicago at 52 1/2 cents per bushel, against 48 1/2 cents the week before, and 50 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. 6d. per 496 lbs., against 29s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s., against 28s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 28s. 3d.; Australia, ex ship, 30s. 6d., against 30s. 3d. a week ago.

WHEAT FLOUR.—Business in flour has been a little more active. North American shipments were 155,000 sacks, compared with 118,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 26s. per 280 lbs., against 26s. last week; delivered London, 25s., at both dates. Manitoba patents, ex store, 24s. 3d.-27s. 3d., against 24s. 6d.-27s. 6d. Australian, ex store, 20s. 6d.-21s., against 20s. 6d.-21s. last week.

BARLEY.—The market in feeding barley has been quiet in this, and in most Continental countries. October futures were quoted in Winnipeg on Wednesday at 29 1/2 cents, against 29 1/2 last week and 31 1/2 a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 24s., against 24s. a week before.

OATS.—Foreign oats have been in small demand in this country. Other importing countries whose supplies are met chiefly by Canada and Argentina report a quiet trade. In Chicago, September futures were quoted at 16 1/2 cents, against 15 per bushel a week before and 15 1/2 a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., against 18s. 9d. a week ago; "River Plate," ex ship, 17s. 6d.-17s. 9d., against 17s. 9d.; "Chilean White," landed, 23s.-24s. 6d. at both dates.

MAIZE.—The market in maize has been steady, and, as Argentine exports are expected to decrease in the near future, prices have hardened a little. September futures in Chicago were quoted on Wednesday at 28 1/2 cents against 27 1/2 cents on Wednesday of last week and 30 1/2 cents a month ago. Quotations in London, Wednesday: "Plate," landed, 21s. 3d. per 480 lbs., compared with 21s. 6d. last week; "Plate," ex ship, 20s. 6d., as against 20s. 6d.; "Plate," September-October, 20s. 9d., as against 20s. 9d. Yellow maize, ex wharf, was quoted at £6 2s. 6d. per ton, against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat	Owts. 133,328	Owts. 52,386	Owts. 176,086	Owts. 421,436

Average price of English wheat per cwt.	s. d. 5 8	s. d. 4 8	s. d. 7 2	s. d. 9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Sept. 10, 1932.....	Cwts. 118,467	Owts. 55,087	Owts. 45,968	s. d. 5 8	s. d. 8 6	s. d. 6 7
Sept. 17, 1932.....	133,328	137,074	42,175	5 8	9 2	6 6
Sept. 15, 1928	266,589	284,104	79,428	9 2	12 4	9 0
Sept. 14, 1929	309,088	205,624	52,131	9 11	11 5	7 11
Sept. 20, 1930	176,086	267,255	45,992	7 2	9 2	5 11
Sept. 19, 1931	52,386	151,358	24,468	4 8	9 9	5 7

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Sept. 23, 1931.	Jan. 4, 1932.	Sept. 14, 1932.	Sept. 21, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148 1/2	56 1/2	54 1/2	62 1/2	51 1/2	52 1/2
Chicago (No. 2 Winter) —Cents per 60 lb.	130 1/2	79 1/2	48 1/2	55 1/2	48 1/2	52 1/2

The visible supply of wheat in Canada, at 69,399,000 bushels, shows an increase on the week of 4,265,000 bushels. Supplies a year ago stood at 47,115,000 bushels.

OTHER FOODS.

SUGAR.—Lack of activity in the raw sugar markets, which was partly responsible for last week's decline in quotations, has given way to a slightly better demand on Wednesday when prices rose a few points in New York. September futures were quoted in New York at 1.06 cents per lb. on Wednesday, against 1.03 cents a week before and 1.07 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 6 1/2d. to 5s. 9d. per cwt., against 5s. 11 1/2d. to 5s. 11 1/2d. a week before, and "March, 1933," at 5s. 9 1/2d. to 6s., against 6s. 2 1/2d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
London	Tons. 2,079	Tons. 2,532	Tons. 738	Tons. 2,178	Tons. 13,718	Tons. 19,981
Liverpool	19,206	14,510	13,970	61,805	69,034	
Total	2,079	21,738	15,248	16,148	75,523	89,015
Last week ...	20,482	1,387	15,438	13,839	88,692	83,425

COFFEE.—In New York, the market in coffee was active, and prices advanced further. On Wednesday, Rio No. 7 (cash) was quoted at 9 1/2 cents per lb., against 9 1/2 cents per lb. on the corresponding day a week ago. Demand was active at Tuesday's London sales and prices were firm to dearer. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 41 bags; exported, 327 bags; stocks, 14,779 bags, against 2,273 bags a year ago. Central American, landed, 386 packages; delivered for home consumption, 1,340 packages; exported, 2,917 packages; stocks, 84,991 packages, against 88,538 last year. Other kinds: Landed, 253 packages; delivered for home consumption, 1,990 packages; exported, 1,178 packages; stocks, 61,907 packages, against 74,455 last year.

COCOA.—The sharp advance in cocoa prices which took place recently has given way to a reaction. September futures were quoted at 4.50 cents in New York on Wednesday, against 4.56 cents a week ago and 4.43 a month ago. Accra, November-January, at 28s. 3d. c.i.f. Continent, shows a fall of 1s. 9d. on the week. Last week's movements of cocoa in London were as follows: Landed, 593 bags; delivered for home consumption, 6,203 bags; exported, 496 bags; stocks, 137,049 bags, against 195,367 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 60,180 packages of Indian and 31,526 packages of Ceylon tea. Monday's "Indian" offerings met with a better demand, which was maintained during the "Ceylon" sales on Tuesday and during the "Indian" auctions on Wednesday. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.

Sept. 1, "	11.67	6.64	8.84	5.05	4.50	5.74	9.46						
Sept. 8, "	10.61	6.34	8.48	4.72	4.46	6.36	8.81						
Sept. 15, "	10.16	5.90	8.61	4.37	3.89	5.49	8.71						

RICE.—The market in rice has been quiet. The spot quotation was maintained at 10s. per cwt., but forward positions were easier at 8s. 3d. per cwt., against 8s. 4 1/4d. a week ago. Movements in London during the past week were as follows: Landed, 16 tons; delivered, 144 tons; stock, 1,816 tons, against 1,165 tons a year ago.

CONSOLIDATED MAIN REEF MINES & ESTATE, LIMITED.

(Incorporated in the Union of South Africa.)

Extracted from the Annual Report for the Year ended 30th June, 1932.

Capital, £1,247,602 in 1,247,602 Shares of £1 each (all issued).
NOTE.—Of the above Issued Capital 35,267 ex-Enemy Shares are held by the Company.

DIRECTORATE.

F. RALEIGH (Chairman).
MAJOR C. S. GOLDMAN. W. H. A. LAWRENCE. A. A. AURET.
DR. W. S. McCANN. J. MARTIN. W. A. MACKENZIE.
SIR ABE BAILEY, Bart., K.C.M.G.

Tonnage Milled, 820,100.

Total Working Revenue	£1,169,783 17 2	Per ton milled.	£1 8 6
Total Working Expenditure	589,145 4 5		1 4 1
Working Profit	£180,638 12 9		£0 4 5
Total Profit for the year			£187,144 6 11
Balance unappropriated at 30th June, 1931			128,584 15 7
This amount has been dealt with as follows:—			£315,729 2 6
Net Expenditure on Capital Account for the Year	£6,021 4 9		
Mines' Pensions—Provision on account of Outstanding Liability as at 31st July, 1931	14,614 0 0		
Government and Provincial Taxes	17,831 13 2		
Forfeited Dividends Account	13 11 9		
			38,480 9 8

Dividends declared during the year:—
Nos. 44 and 45 of 6 1/2 per cent. each £277,248 12 10
Leaving a balance unappropriated of £151,541 17 6

Ore Reserve.—The available Ore Reserve, as re-estimated at 30th June, 1932, is as follows:—

	Tons.	Value, Dwt.	Stopping, Inches.
Main Reef Leader	1,045,800	7.8	41.6
South Reef	395,130	6.2	43.4
Bird Reef	352,810	4.5	68.2
Total	1,793,740	6.8	45.5

In addition, there is a total of 383,770 tons of payable ore developed, of an average value of 6.5 dwt. per ton, standing in shaft and safety pillars. The Full Report and Accounts (with Plans of Workings) may be obtained from the London Secretaries, A. MOIR AND CO., No. 1 London Wall Buildings, London, E.C.2.

POTATOES.—The demand for potatoes was a little more active and prices were steady. At the London Borough market, "King Edward," light soil, were again quoted at 4s. 9d. to 5s. 3d. per cwt. **SPICES.**—The spot market in pepper has been quiet, and "Black Singapore" was again quoted at 6 1/2d. per lb. on Wednesday. Forward positions were steadier. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 9 tons; stock, 269 tons, against 607 a year ago. White, landed, 25 tons; delivered, 32 tons; stock, 395 tons, against 486 a year ago.

MEAT.—Beef prices at the Smithfield market show little change on the week. On the other hand, both English and New Zealand mutton was slightly dearer. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 11d. to 4s. 4d. per 8 lbs., as compared with 3s. 8d. to 4s. 4d. last week. New Zealand frozen mutton was 2s. 4d. to 3s. per 8 lbs., against 2s. 4d. to 2s. 10d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 8,645 tons, against 8,771 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.3 per cent. of the beef supplies, against 84.8 per cent. a year ago. Imported mutton, mainly New Zealand, formed 73.9 per cent. of the total supply of mutton and lamb, against 72.8 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Much quieter conditions prevail, and there is an all-round easing of values. Business also is very slow and confined to very small compass. The advance in linseed occasioned by adverse crop reports in Argentina and an improved outlook for the American crop has evaporated, and in sympathy with wheat prices have eased, Plate afloat falling to £9 5s., and for October shipment to £9. Moreover, heavy shipments of late have increased the quantity on passage to Europe to the large total of 218,400 tons, which compares with only 123,300 tons a year ago. Shipments to Europe so far this year are close upon 1 1/2 million tons, and are at least 100,000 tons in excess of a year ago, but shipments to the United States are 125,000 tons less. Current values of Plate afloat are £9 7s. 6d., and to the end of the year £9 2s. 6d. to £9 5s. according to position. Trade in cottonseed has been somewhat better, and old crop Egyptian is steady around £7 5s., while for new crop, September loading, £7 7s. 6d. has been conceded. Vegetable oils are quiet, and little business is passing. Linseed oil is easier and in poor demand, raw oil for September delivery quoting £16 15s. per ton naked ex Hull mill, and October-December £16 10s. Cotton oil is firm but inactive, crude Egyptian ex Hull being held for £23 10s., and refined (technical and edible) for £26. Oilcakes are in moderate demand, and mill prices remain unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Hides from home-slaughtered cattle were again slightly firmer at the auctions held

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

$\frac{3}{4}$ per cent. provided that the dates are suitable. This has given rise to an impression in the market that the banks are evading their declared minimum rates, and in one sense this is true, for the purchase of a fortnight's bill from a bill-broker is equivalent to a loan to him for that period. On the other hand, most of the banks have been for some time prepared to buy these short bills, and so it would be wrong to say that the banks have in any way changed their practice. The real point is that the fall of discount rates below the banks' minimum loan rate has created an anomalous position, and the banks cannot be blamed if in these circumstances their operations become equally anomalous.

There is, however, no doubt that the money market is working at a loss, and it is thought that one or two of the smaller firms have begun to pay off part of their weekly fixtures. The significance of this move lies in the fact that both the banks and the bill-brokers regard weekly fixtures as being almost equivalent to permanent loans, for the banks rarely call them, while if a broker pays them off, the banks are free to replace them with weekly fixtures elsewhere, so that the broker cannot as a rule re-borrow on these terms. Thus most brokers as a whole prefer to keep their fixtures open against the time when their employment will again become profitable, and their repayment rather suggests that a broker is being driven to make a permanent contraction in his business.

Hitherto the banks have had no difficulty in finding fresh fixtures to replace those paid off, but there is a limit to the amount they can replace, and so ultimately the banks may think it desirable to reduce both their minimum short loan rate and the London deposit rate. There is probably little chance of all the banks agreeing to pay no interest upon London deposits, but a reduction in the loan rate to $\frac{1}{2}$ per cent. and the deposit rate to $\frac{1}{4}$ per cent. cannot be entirely ruled out of the question. It is almost certain, however, that the banks will wait until the Government's refinancing operations are complete, in case that brings about a stiffening in money and discount rates.

	Sept. 8, 1932.	Sept. 15, 1932.	Sept. 22, 1932.	Sept. 29, 1932.	Previous Rate and Date Changed.

In the meantime the discount market is almost completely idle. Last week's Treasury bills went at the record low rate of 7s. 11.16d. per cent., in spite of the fact that £50.0 millions of bills were offered and £48.0 millions allotted. Most of the bills applied for are to be paid for on Saturday, October 1st, for as January 1st is a Sunday, these bills mature on December 31st in readiness for the turn of the half-year. No shortage of money is expected next Saturday, as the market had already foreseen these dates and had arranged for most of this week's maturities to be repaid on Saturday. Returning to this week's experience, the banks have been willing to buy Treasury bills of all dates at $\frac{1}{2}$ per cent., but the market has been holding out for $\frac{3}{4}$ per cent., and so business has been limited and irregular. The governing factor, indeed, has been money. If a broker has had loans to pay off, it has paid him better to sell at the banks' price than to borrow from them at 1 per cent., but otherwise it has not paid him to sell his bills if he can only relend the proceeds of his sale at the outside rates of $\frac{1}{2}$ down to $\frac{1}{4}$ per cent. Three months' bank bills were quoted at $\frac{1}{2}$ per cent. and standstill bills at $\frac{1}{2}$ per cent.

The foreign exchange market was dull and inactive again this week, and most of the principal currencies

moved in varying degrees against sterling. New York went sharply against sterling from 3.46 $\frac{1}{2}$ to 3.45 $\frac{1}{2}$, it is suggested as a result of heavy purchases of cotton on the settlement of the cotton dispute, coupled with European purchases of American securities. Some official intervention was reported on Thursday, to prevent the rate falling below 3.45. Paris moved less sharply from 88 $\frac{1}{2}$ to 88 $\frac{1}{4}$. Brussels was unchanged at 24.90. Milan improved by $\frac{1}{4}$ to 67 $\frac{1}{4}$. Madrid was steady at 42 $\frac{1}{4}$. Amsterdam went from 8.61 to 8.59 $\frac{1}{2}$ and Berlin gained a point at 14.50, as did Switzerland at 17.91. The Scandinavian currencies were all dearer in terms of sterling, Stockholm being quoted at 19.46, Oslo at 19.85 and Copenhagen at 19.27. The South American exchanges are still nominal and stood at last week's levels, Rio at 5 $\frac{1}{2}$ d. sellers, Buenos Aires at 34 $\frac{1}{2}$ d., and Montevideo at 28.90d. The Far Eastern currencies were all firm, the rupee being unchanged at 1s. 6 $\frac{1}{2}$ d., while the yen hardened to 1s. 4 $\frac{1}{2}$ d. and Batavia gained two points at 8.65. In the forward market dollars were rather more on offer at wider discounts of $\frac{1}{4}$ cent for one month and $\frac{1}{2}$ cent for three months. Paris was harder at 1 $\frac{1}{2}$ centimes and 6 centimes discount, against 2 and 7 centimes last week. Brussels one month delivery was unchanged at 8 centimes discount, but three months' improved by three points to 20 centimes discount. Milan was weaker at $\frac{1}{2}$ lira discount for one month and $\frac{1}{4}$ lira discount for three. Milan was unchanged at $\frac{1}{2}$ peseta and $\frac{1}{4}$ peseta discount for one and three months respectively. Amsterdam one month fell away by $\frac{1}{4}$ to $\frac{1}{2}$ cent premium, but was unchanged at $\frac{1}{2}$ cent premium for three months. Switzerland remained at $\frac{1}{2}$ centime and one centime premium. Silver prices were unchanged on balance at 17 $\frac{1}{2}$ d. for cash and 17 $\frac{1}{2}$ d. for forward, India and China buying being offset by sales from the Continent and America. Among the China silver exchanges Hongkong remained at last week's level of 1s. 4d., while Shanghai was $\frac{1}{2}$ d. cheaper at 1s. 9d.

During the past few months foreign exchange brokers in the London market have agreed to quote wider rates, and the margin between the buying and selling rate is now $\frac{1}{2}$ cent for New York and $\frac{1}{4}$ fr. for Paris. It has also been decided between the various members of the market that sales and purchases for delivery up to seven days ahead of each transaction shall be done at these margins. These changes in practice have been made with the object of checking speculation, for it had been found that some operators had been taking advantage of narrow margins to snatch a small turn out of a big turnover of funds, while others had been trying to develop a forward market in exchange for settlement a week ahead. At times like these it is desirable that operations of this kind, which might cause harmful movements in the exchanges, should be checked, even at the sacrifice of some of the normal freedom and fluidity of the market. It is understood that every effort is being made to provide legitimate traders with exchange at reasonable rates, and that the wide margin—which incidentally is of no advantage to banks and other dealers—is being used solely to restrict very fine arbitrage dealings of the character referred to above.

New York money rates are again unchanged, call money being quoted at 2 per cent. and 90-day bankers' acceptances at $\frac{1}{2}$ per cent. The improvement in the dollar referred to above is reflected in further gold arrivals and releases of gold earmarked upon foreign account. Imports for the week ended Wednesday last amount to \$5.7 millions, of which \$2.8 millions came from Holland, \$2.0 millions from Canada and \$850,000 from England. The decrease in earmarkings during the same period amounted to \$9.0 millions, making a total gain on the week of not quite \$15 millions.

Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

THE END OF AN EXPERIMENT.

THE resignation from the Government of Lord Snowden and Sir Herbert Samuel and the Liberal colleagues of the latter marks the end of a great experiment; it is one which justified itself and will probably rank in history as an outstanding proof of the sound political sense of the British people. At the end of August, 1931, the enemy, in the form of grave financial crisis, was at our gates. At the enemy's approach the Labour Prime Minister and several of his leading colleagues, boldly risking their political lives and future, appealed to men of good will and to leaders of the other parties to come together and form a Government of national safety. The appeal was answered, as it always will be answered in this country when real national danger threatens. Conservative and Liberal leaders threw their persons and their whole influence into the formation and maintenance of a national Administration. In one respect the effort was too late. World distrust of the British position had gone so far that the gold pound could not be saved. But in other respects quick and decisive success followed. The Budget was balanced, the dissipation of national resources checked, the currency saved from a deterioration which might have assumed menacing proportions, and, generally speaking, the ship of State was righted from a dangerous list to an even keel. Away back last autumn the way was paved by heroic finance for the triumph of War Loan Conversion recently accomplished.

In one respect the experimenters erred. We have never changed our view that the Emergency Government, formed to face a crisis, should have continued in office until its most urgent and critical tasks were completed, and then, and only then, should have laid down its powers and given the country the opportunity in a calmer atmosphere to elect the Government of its deliberate choice. Other counsels, however, prevailed. While the atmosphere was still full of crisis and hysteria, the National Government, as such, appealed to the country to be returned for five years. A mixture of fear psychology and the patriotic instinct yielded the Government in name, but the Conservative Party in fact, a majority of overwhelming and unhealthy size. Thereafter the difficulties of the Liberal Ministers began in earnest. Elated by electoral success and reinforced by the fiscal concessions of Mr. Runciman, the Conservatives, perfectly naturally, pressed hot and hard along the road of Protection. As they pressed on, Liberal Ministers' embarrassments grew, until the introduction of the Import Duties Act—Britain's first comprehensive Tariff—goaded them into resignation. They were, however, persuaded to remain in the Government, in return for the concession of the "right to disagree" on tariffs—a right which was used by Sir Herbert Samuel with vigour and decision. Here was another experiment. Politically the Liberal Ministers may have made a mistake in trying it, but the fact that it was tried at all is, we admit, a wonderful tribute to the decencies of our public life and the willingness of politicians of varying parties and views to place what they considered to be the public interest before considerations of their own personal inclination or advantage. Nevertheless, the days of this second experiment were always numbered. Backed by a huge Conservative majority the policy of the Government inevitably developed along protectionist lines, and unless this tendency could have been kept within very narrow limits, it was only a matter of time before the breaking point was reached. Ottawa brought matters to a head. The agreements made there, signing away our fiscal independence, saddling this country with substantial food taxes (contrary to explicit election pledges), raising our own tariff schedules in return for problematical benefits, and limiting our freedom in commercial negotiations with other countries, were too vital and far-reaching and too permanent to permit of being dealt with by temporary agreement to disagree.

So, in our view, Lord Snowden, Sir Herbert Samuel and their colleagues have taken the only course honour-

ably and properly open to them. What next? They will be replaced. Indeed, the work of replacement has already been largely accomplished. Sir John Gilmour goes to the Home Office, his place at the Ministry of Agriculture being taken by Mr. Walter Elliot, while a "Simonite" in the person of Sir Godfrey Collins replaces Sir Archibald Sinclair as Secretary for Scotland. Thus, Mr. MacDonald's Administration will go on. The Government car has been fitted with a new cylinder in place of one which was not firing; the brakes can hardly function worse than before; the steering gear has been tightened by the insertion of a few more Conservative screws. Technically, the machinery of Government will work more smoothly. The Cabinet will not be the weaker for the removal of internal dissension, and should indeed benefit from the presence in Parliament of a group pledged to eschew factious opposition, but to offer constructive criticism. There may perhaps be a temptation to drive faster in the wrong direction, though we are hopeful that Mr. Baldwin and many of his colleagues will appreciate the force of the argument of the *Times* that it is even more urgent than before for the Government to take a national and not a party view of its responsibilities. But, even so, from the point of view of the country, the step taken by the dissentient Ministers is to be welcomed. Had they remained in office longer, on any terms and conditions, they would have become progressively more impotent to influence the course of Government policy in progressive directions; while as it is they will provide a rallying point and a mouthpiece for the growing volume of public opinion, hitherto all too inarticulate in the present Parliament, which regards with increasing distrust a tendency to drift towards nationalism both in the domestic and in the international sphere. It is high time that enlightened criticism of these policies should be authoritatively voiced at Westminster and studied by the country. Had the dissentient Ministers remained inside the Ministry, impotent to guide its actions, British policy in the coming crucial months would have developed without effective public discussion and criticism in the House of Commons. The great merit of the resignations is that they restore freedom of discussion and ensure that, in crucial matters the Government threatens to blunder, the bright light of criticism will be turned upon them by a responsible Opposition.

The crisis to face which the National Government was formed was mainly domestic. In its most pressing phases it has been faced and brought under control. Crisis faces us still, but its roots lie in the international field. The urgent problems of to-day are world problems. The return of prosperity to Britain, and all other countries, depends first and foremost on the achievement of sane international agreements to relieve the burden and the increase of armaments, to remove the incubus of debts, to remedy the causes which have thrown the currencies of half the world into the melting pot, and to cut the bonds which strangle international trade. If by staying in the Government Sir Herbert Samuel and Lord Snowden could have influenced their colleagues towards a forward and constructive policy in this vast field, we have no doubt that they would have stayed. Unhappily, the Government, by their latest essay in diplomacy, have aggravated the international tension in Europe, and have contributed nothing towards a solution of the armament deadlock. At the same time, so far from doing anything to help the frozen trade streams of the world to thaw, they have thrown fresh and formidable impediments in the way of the commerce which still manages to trickle through the barriers. While following these courses, they have been immune from frank and outspoken criticism, and the country is not yet awake to the truth. If the Liberal ex-Ministers, while supporting the Government fully on all agreed matters, can arouse the country to a gravity of the world situation and draw attention to the weak points in the Government's policy, they will deserve well of their country and of the world.

AT LOGGERHEADS ON DISARMAMENT.

SINCE we continued the chronicle of the armaments controversy last week, a fresh chapter has been added. Monsieur Herriot made a speech on Sunday and Herr von Papen issued a reply on Tuesday. The controversy goes on, but disarmament comes no nearer. In fact, the project of disarmament is visibly and most alarmingly receding. Disarmament is what people want—in France, in Germany, in England, everywhere. Yet disarmament is one of the things that the politicians of this post-war world seem unable to achieve. Each of them professes the most excellent intentions, but finds in the attitude of his contemporaries in other countries an insuperable obstacle to any definite action. All this curious manoeuvring would be a fine comedy if it did not happen to be a serious tragedy as well.

There is, indeed, a touch of comedy in Monsieur Herriot's oration. When he tells us that "it is one of the grievous sorrows of the present time to see the new generations—those which ought to have profited by the cruel experience of their fathers—broken in to exercises and habituated to gestures which are far from favourable to moral disarmament and peace"; and when he asks "how people can bring themselves to teach children the art of killing"—when we read these words, we begin to wonder whether, at long last, a prophet has arisen in Israel. But only for a moment; for the context shows that the "people" in question are only German people, and that there is somehow a difference without a distinction when the same things are done by the French. "France has escaped this contagion and is directing her national education towards other ends." For the Frenchman, "national defence is simply one form of civic duty"—whatever else it may be for the foreigner, the aggressive Swiss or the ambitious Dane. Again, when Monsieur Herriot tells us that France stands for the policy of the League of Nations, and that this is a policy of equality of status between all nations great and small, he almost surprises us into forgetting for an instant that this very equality of status is the essence of Germany's claim in the burning question of disarmament.

But Monsieur Herriot's speech has also its serious side, both for good and for evil. It is all to the good that Monsieur Herriot should have freely confessed in his speech—as Sir John Simon did not quite admit in his Note—that the premises contained in the preamble to Part V of the Versailles Treaty, and in Monsieur Clemenceau's interpretative letter, constitute moral obligations even though they do not possess legal binding force. On the other hand, it is all to the bad that he should virtually accuse Germany now of trying to get round the treaty limitations upon her armaments by technical adroitness once again, as she did in 1806-1813. And, from the point of view of practical action, it is, if possible, worse that he should once again insist that disarmament has to wait upon the attainment of "security." For although this is a truism if "security" is interpreted in its natural sense—the sense in which the heart of security is confidence and its only true guarantee disarmament itself—it is also unfortunately true that the stock French formula implies the postponement of disarmament to the Greek Kalends if "security" is interpreted in the esoteric French sense; for this *secured à la française* is manifestly a programme which cannot possibly be realised as far as we can see ahead.

Perhaps Monsieur Herriot is conscious of this himself; for, in his speech, he does not define his security in his own words. He takes as his text a French Socialist statement of 1917; and the passages which he quotes from this document (and himself endorses) contain stipulations, not only for an international regime in the nature of the Geneva Protocol, but also for "a great international force au service du droit"—in other words, for the French demand which was presented at the opening of the Disarmament Conference by Monsieur Herriot's predecessor in office.

If Monsieur Herriot has really adopted this programme as his own, he has in effect declared that France will not disarm further, and so brought the whole disarmament

movement to an end. When he protests that this is not "a pretext that masks an unwillingness to disarm," we must remind him that hitherto, whenever France has been given some measure of the kind of security that she demands, she has each time ignored what she has obtained and has insisted, as vehemently as ever, that security does not exist for her unless she obtains something further. Given the Covenant, she demands the Protocol; and given the Locarno Pact—which is the Protocol as far as France and Germany and England and Italy are concerned—she demands the international force. How can we assume that, even if we gave her the Protocol for the Eastern half of Europe, and the international force into the bargain, France would really be satisfied? The plain fact which we see is that France, on one pretext or another, is refusing to honour an admitted moral obligation to reduce the present disparity between French and German armaments.

And having said this of the French Government, we have some pertinent questions to put to our own Government. In the first place, is there not some justification for the French suspicion that Great Britain does not take her obligations under the Covenant and the Locarno Pact altogether seriously? Have we taken steps to remove this French fear? Have we convinced the French that they can at least rely upon our honouring those international obligations for the maintenance of other people's security—and, incidentally, of our own—that we have already undertaken? Again, supposing a miracle were to happen and Monsieur Herriot were to declare next Sunday that France was satisfied with the Locarno Pact and would disarm substantially forthwith, so long as other countries disarmed *pari passu*: would this sensational news make the British Government glad or sorry? Would they joyfully hasten to scrap the British battle fleet in return for the scrapping of their neighbour's submarines? Or would they mutter to one another that Herriot was really very tactless and that this sudden conversion of the French Government to disarmament was very inconvenient? We ask these questions because the suspicion undoubtedly exists that French and English politicians alike are not prepared boldly to grapple with the service view that French and British armaments cannot safely be reduced. This is a suspicion from which the Governments of "the more heavily armed Powers" (to use Sir John Simon's phrase) ought to clear themselves promptly if they can. For if the suspicion is justified this situation of stalemate will have disastrous consequences.

The consequences will be fearful because they will entail the definitive defeat of the moderates in Germany, and the victory of elements which really will pursue the aims which Monsieur Herriot unwarrantably accuses Herr von Papen of pursuing now. We hold no brief for General von Schleicher, whose speeches have not only been "untimely," but have been calculated to defeat the declared policy of the Government of which he is a leading member. Nor is it a sufficient excuse that his vigorous words were intended for internal consumption. We have all learned by painful experience that it is not possible for public men to speak with one voice to the public at home and with another to the rest of the world. But the fact is that, just as in the decade before the war, the forces of militant nationalism are at grips with the powerful forces—more powerful in every country than ever before—making for moderation and understanding. The supreme task of international statesmanship is to encourage the latter and enlist them in support of civilisation. This is particularly the case in dealing with Germany to-day.

The declared policy of the von Papen Government, as the Chancellor insisted in his reply to France, is unquestionably a moderate one—indeed, remarkably so when we have regard to the uneasy temper of the German people. They ask that the limitation on German armaments shall be placed on the same legal footing as that of other national armaments; they ask that the weapons forbidden to Germany in the Versailles Treaty as aggressive shall be renounced by all countries, though if this is refused they undoubtedly wish to have some of such weapons included in their permitted armaments as an indication of their equal status; and they ask that the general disarmament convention in which this equalisation of status is to

be embodied shall have only a limited duration in so far as it perpetuates the present disparity in the size of national armaments. What the von Papen Government does not demand, here and now, is equality in strength, in addition to equality in status forthwith. For equality in strength they are willing to wait patiently; and they will apparently accept something like the present disparity in strength for the time being provided they can organise some form of militia training as an alternative to the present medley of privately organised "armies." Whether this demand would be persisted in if there were a substantial reduction of effectives by Germany's neighbours we do not know; but surely this is not an attitude that deserves to be rebuffed on the French and British side? And if it is rebuffed now, is it ever likely to be repeated? The decisive moment—decisive for future peace or war—has come.

THE INTEREST RATE AND PROSPERITY.

EARLY this year Mr Keynes, who has for some time past held the view that the long-term rate of interest was inevitably tending to fall, expressed the opinion that there was no reason why the yield of British Government long-term securities should not fall to a $3\frac{1}{2}$ per cent. basis within the year. Though we were in general agreement with Mr Keynes about the long-term trend, the pages of the *Economist* will show that we were less bold than he; as late as the beginning of May we shared the conviction of most commentators that at all events a large portion of the 5 per cent. War Loan would have to be converted to a 4 per cent. basis. We are only too glad that Mr Keynes has proved the truer prophet. In the circumstances a very special interest attaches to his article in the current number of the *Economic Journal* in which, speaking of the yield on Government securities, he says that "there is now no reason why they should not fall gradually to a much lower basis than this ($3\frac{1}{2}$ per cent.), and every reason in the world why we should wish them to do so." But, if this is to happen, it will, in his opinion, require the combination of deliberate purpose with the organised co-operation of the principal factors involved.

The possibilities in this direction are not, at the moment, our main concern, and in this connection we would only remark in passing that, in order to meet the generally recognised need of providing a market with securities of varying types and maturities, Mr Keynes is a little concerned at the colossal amount which is due to be exchanged into the new long-term $3\frac{1}{2}$ per cent. stock, and is of opinion that shorter dated bonds at a lower rate of interest than $3\frac{1}{2}$ per cent. should be offered fairly soon to holders both of "assented" as well as "dissented" War Loan. There is much to be said for this particular suggestion as part of the policy of exploiting the present situation to the full.

But the very remarkable change that has so quickly taken place suggests some reflections on more general questions, such as whether the present trend may be relied upon to continue, and what its economic effects are likely to be. As to the first question, it is clear that we cannot assume that the occurrence of this remarkable phenomenon means that it has come to stay. It is equally true of long-term as of short-term rates that a fall may come about as a result of conditions of distress and dislocation. If there are no new borrowers in the market whose prospects enable them to offer reasonable security—if, for example, as is largely the case to-day, very few Governments or public authorities in the world have sufficient credit to tempt the investor, while the future economic situation is still so uncertain that no industrial or territorial development could safely be undertaken—a very small margin of savings seeking a permanent home will drive down the rate of interest while these conditions last. Indeed, this clearly represents the present phase of events. Savings are certainly small; for though in present circumstances it is more than usually difficult to get any accurate idea of the amount that is now being saved in any country, there can be little doubt that during the last two years net savings out of income—represented by the surplus of national income over consumption—must have

fallen immensely below normal, and in some cases may even have become negative.

The ease of money and idle deposits do not disprove this; for a great increase of funds in every country accumulating at the banks or lying idle and apparently available for investment at times like these represents to a large extent the squeezing out of circulating capital from productive processes owing to the shrinkage of economic activity. It is at the moment a common phenomenon in enterprise of all kinds to find the cash position extremely strong and liquid owing to the reduction in the magnitude of the funds required to finance work in progress or raw material now being handled at much lower prices. Such conditions are the common phenomena of a period of depression. But though savings are now small, they will rapidly recover with a rise of prices—indeed they are probably reviving already—and we see no reason to suppose that the demand for new capital will rapidly overtake them. Hence, in our view, though prophecies of interest rates even a year ahead are speculative, we find ourselves in agreement with Mr Keynes' expectations of very "cheap" money for some little time to come.

Looking farther ahead, we get deeper into the realm of speculation; but there are substantial grounds for thinking that we need not expect over a period of years to see an upward trend in the rate of interest. It is arguable, for example, that the rate of capital equipment in the world will slow down in the next decade. There are enormous quantities of industrial plant in many countries of the world some of which are definitely over-equipped, while that other great form of capital investment which consists in the opening up of new countries has nothing like the same scope as in the nineteenth century. Whether, taking a very long view, this is a true diagnosis is more doubtful. The area of the world available for development, it is true, is limited; but the scope for capital equipment in backward countries is stupendous and even in developed countries new forms in which wealth may be permanently embodied are almost infinite. The argument, however, may quite reasonably be admitted in respect of the next decade. In any case, it is probable that the price of those categories of goods on which capital is mainly expended is likely to fall relatively to goods for consumption, particularly, for example, foodstuffs, and that, therefore, capital needs will be met comparatively cheaply. On the other hand, there is no ground for doubting that the proportion of the national income that is saved in different countries will recover to something like the ratio which has existed hitherto in normal times. While, therefore, the long-term rate of interest may be subject to changes from time to time, as psychological or market conditions stimulate the rate of investment, we are disposed to take the view that the underlying tendencies will permit a low rate of interest for some time to come.

If this view, which we propounded a considerable time ago in a series of articles, is correct, it has important economic consequences. The ways in which a low level of the long-term rate influences economic life are many. The fact that it is not possible to any substantial extent to modify the rates on existing capital—except by arbitrary action, which may have harmful effects on confidence and on the free movement of capital—means that it takes a very long time before a low level influences the social

structure by affecting the distribution of the national income. It is fortunate for the nation that a large part of the National Debt has been contracted on terms which give the Government the right to convert. But this right is not general. We have no such right, for example, for a long time to come in respect of the great amount of capital which has been invested during the past decade in rehousing the nation. If we had been able to borrow for this purpose at $3\frac{1}{2}$ per cent. instead of 6 per cent., or were now in a position to convert to such a basis, the national, municipal or private debts incurred in this great effort, the problem of how to let decent houses at an economic rent would not exist. The importance of this consideration is illustrated from the opposite point of view by the case of the British railways. These great organisations are patently in a difficult enough situation; but their finances would long ago have become impossible if their immense fixed charges had been contracted at $5\frac{1}{2}$ or 6 per cent. instead of at 3 or 4 per cent., at which price they were able to raise the funds for a great part of their construction.

But though the fall in the interest rate only affects the past to a very small extent, it holds out the possibility in the future of greater elasticity than the conditions through which we have been passing in the last decade, while it affords a hope of starting in the immediate future a normal movement of capital. This brings us to practical considerations of present policy. Many enterprises which were hitherto speculative and whose profitability was doubtful can, on a low-interest basis, be classed as definitely remunerative; and it cannot be too clearly emphasised that, whether we are thinking of public or private capital expenditure, it is to the public advantage that at this stage investment should recommence as quickly as possible and over a broad field. We are not alarmed at the fear that investors will be led astray by wild-cat schemes. The lessons of the crisis are far too recent and too painful for that. On the contrary, the danger is that we shall suffer for a long time to come from an excess of caution. The one definite step that can be taken to help matters along is to lift the embargo on new issues in the London market as quickly as possible. Our quarterly record of new issues referred to in another column shows practically a clean sheet. The magnitude of our conversion operation undoubtedly required very exceptional measures to ensure success, but if this great accomplishment is to be exploited to the full, it is important to avoid the impression that the advantages of low-interest rates are limited to a particular kind of security. We hope, therefore, that at the end of December our capital issues record will tell a very different story.

STRESA AND THE DANUBE.

(BY A CORRESPONDENT).

THE decision at Lausanne that the financial and economic difficulties of the Central and South-Eastern European countries should be reviewed at a special conference, and reconstruction schemes thus prepared for the subsequent World Economic Conference, was welcomed by the Governments and peoples of the more or less bankrupt Danubian countries. The psychological effect of the news that a conference was accordingly being convened at Stresa, where the representatives of both the creditor and debtor nations were to discuss the situation, was good; and, in spite of the recent failure of the Tardieu plan, hopes ran high again and the average man in the street in every Danubian country began to envisage the possibility of an early economic revival. The delegates of the Danubian countries, in fact, went to Stresa with the hope that the creditor nations' delegates would help them to liquidate the past and so pave the way to recovery.

Unfortunately, it became soon enough obvious in Stresa that the schemes sponsored by the creditor nations, though often desirable in themselves, did not go far enough to face the unpleasant realities arising out of the excessive borrowing of the past; and thus very little was done to meet the immediate difficulties and even less to lay the foundations of a better future. Disappointment in

all Danubian countries naturally followed. The one concrete proposal of the Conference, to set up an Agrarian Fund to help the depressed agriculturists of Hungary, Roumania, Yugoslavia, etc., is not only vague, but needless and futile: there is no wheat surplus this year, and the disposal of other agricultural products could be solved in a far more satisfactory and simple manner if Germany, Italy, France, Switzerland, Czechoslovakia and Austria did not bar their markets to these products by quotas and prohibitions. The Danubian agricultural countries could easily sell their maize and barley surplus in Germany and Czechoslovakia—they would not even need preferential treatment—if only they were not excluded by prohibitive measures; and the same is true of livestock and slaughtered animals, vegetables and fruit. What is needed is not the grant of subsidies or theoretical preferences, but free markets, which Stresa has failed to provide.

The future welfare of the indebted agricultural Danubian countries cannot be achieved by artificial attempts to keep up prices. The financial difficulties of the Danubian countries have been intensified by efforts to maintain artificial price levels, by high tariffs, and other "pegging" interventions, rendered possible temporarily by excessive borrowing from abroad. Instead of holding out idle hopes of further artificial "higher price" schemes, Stresa should have given the Danubian countries practical encouragement to reconstruct their public finances and banking structure on a freer trade basis. But even the financial recommendations of the Conference were not helpful in this respect. The suggestion that "Danubia" should remove currency restrictions is theoretically sound, but it is impracticable without the previous settlement of the foreign debts problem. For instance, in the case of Hungary, the value of the total merchandise exports in the first eight months of 1932 was less than 200 million pengö; but the annual foreign debt service is about 300 million pengö, which means that in the first eight months the total exports would just have sufficed to pay the foreign debt service if it had been possible to shut out all merchandise imports. Quite apart from the fact that Hungary could not exist without imports, as she lacks the essential raw materials such as timber, cotton, etc., her exports could not have been maintained even at this very low level without a contra-item of imports, for the simple reason that her chief purchaser, Austria, could not buy without paying with goods.

The view that the removal of the currency restrictions would put an end to the most harmful and unnatural price discrepancies which exist as between the Danubian countries is also questionable. The present situation of balances of foreign payments would render the premature removal of the restrictions useless, because the volume of unconsolidated foreign short-term debts, coupled with a flight probably from the national currency, would create exchange chaos before trade could benefit from the otherwise desirable free play of economic forces. For instance, Hungary's foreign short-term obligations amount to 1,800 million pengö (more than \$300 millions at gold par value), and, given exchange freedom, a *saute qui peut* on the creditors' part would almost certainly produce serious depreciation of the pengö; trade would again be paralysed.

The resolution of the Stresa Conference that arrangements should be made between creditors and debtors with regard to short-term debts and that means should be adopted for the utilisation of short-term credits at present "frozen" was apparently directed at Hungary, because the major part of the Austrian short-term debts relate to the Credit-Anstalt, and no solution other than State-guaranteed long-term bonds with very moderate interest rates can be expected, in this case, by the creditors. The short-term obligations of Czechoslovakia need not be interfered with (Czechoslovakia is the only solvent country in the Danube valley); and those of Roumania and Yugoslavia are comparatively small. On the other hand, of Hungary's unconsolidated short-term debts, about one-third are banking credits. Hungary's representatives at Stresa made it plain that while Hungary was anxious to conclude standstill agreements with her foreign creditors, the utilisation of the present "frozen" credits is practically impossible, because it would drive the country into

a wholesale bankruptcy without benefiting the foreign creditors.

The lessons of the Stresa Conference for the Danubian countries are that they can no longer expect miracles from international conferences, and the only hopeful sign is that at last they begin to realise it. On the other hand, it is well to point out that the reluctance of the foreign creditors to face the inevitable consequences of national insolvencies arising out of the radical change of the price level and excessive foreign debt service may lead to grave consequences. The recent Cabinet crisis in Hungary, where Count Károlyi has resigned on account of the exorbitant demands of the agrarian politicians, who clamoured for one-sided action in the matter of the scaling down of the debt service, should warn the foreign creditors that, apart from the financial troubles, there are political and social dangers ahead in the distressed Danubian countries with which they must reckon. They can hardly hope for either principal or interest on the "frozen" debts from Hungary for a long time to come, and the prospects in Austria, Roumania and Yugoslavia are not much rosier. Only when budgets have been balanced and normality of trade restored can foreign creditors hope that the service on external obligations will be properly met.

PEACE TERMS IN LANCASHIRE.

ON Tuesday evening of this week, not without some last-minute hesitations on the part of the weavers, the terms of settlement of the dispute in the manufacturing section of the cotton textile industry were finally signed; on Wednesday morning the mills were reopened, and a welcome end was put to a stoppage which is estimated to have cost the county something like £12 millions in lost wages and orders. In the protracted and hard-fought negotiations which led up to the settlement the officials of the Ministry of Labour played a conciliatory part to which full tribute should be given; and though, as we write, the joint negotiations on wages in the spinning section of the industry have yet to reach agreement, the foundations appear to have been laid of better understanding and closer co-operation between employers and employed in Lancashire. For the peace terms give the satisfactory impression of being not merely a patched-up truce in relation to the isolated question of the precise reduction now to be made in wages, but of containing, for the adjustment of disputes in wider issues, the nucleus of machinery whose inauguration is of good promise for the future.

The terms of settlement are embodied in a lengthy memorandum signed jointly by the Cotton Spinners' and Manufacturers' Association, the Textile Trades Federation and, on behalf of the Ministry of Labour, by Mr Leggett, the independent chairman of the negotiating committee. The agreement, which came into operation on September 27th, provides that wages shall be reduced by approximately $8\frac{1}{2}$ per cent. With regard to the "more looms" system, it is agreed that the firms working on that system shall not make any reduction on the prices for piecework paid immediately before the stoppage; that matters under dispute on the question of price and conditions for the "more looms" system shall be referred to the revised conciliation machinery now to be set up; and that, pending a settlement, which it is hoped may be reached within two months, there shall be no further extension of the application of the system. As for the remaining immediate issue in dispute—the reinstatement of operatives displaced during the guerilla warfare which preceded the general stoppage—the employers undertake strongly to recommend their local associations "in a spirit of goodwill to persuade all their members, as well as the firms immediately concerned, to offer employment as speedily as possible to operatives who have been displaced." If any difficulties still exist at the end of two months, the situation is to be jointly reviewed.

The wage settlement, it will be seen, is in effect a "splitting of the difference" between the 10 per cent. reduction demanded by the employers and the $6\frac{1}{2}$ per cent. which the operatives had offered to concede before the stoppage began. Whether such a reduction, when translated into costs and selling prices, will increase appreciably

the demand for Lancashire's goods is in present circumstances problematical; and the outsider may well feel inclined to deplore the fact that the heavy price of a month's stoppage should have been necessary to bridge the difference between the employers' and the operatives' figures. Equally, it is difficult to see why, in the name of human sanity, it was necessary to wage a month's industrial war before a decision could be reached to refer the "more looms" question to the procedure of conciliation or to adopt a "goodwill" basis for the re-absorption of the displaced operatives. The milk, however, is spilt; and to-day the question which side has "won" is much less important than the consideration whether the sections of the agreement dealing generally with the future of labour relations in the industry contain the promise of mutual advantage to both sides alike.

It is in this respect that the settlement is most satisfactory. Starting from the premise that industry requires the effective operation of collective agreements throughout its ambit, and that nothing but harm can result from the unfair competition which arises when general agreements are broken by individual elements, the memorandum provides that all the agreements governing hours and wages and methods of collective bargaining which existed prior to their abrogation on June 11, 1932, shall be restored. In addition, there is to be established a Conciliation Committee consisting of not less than three or more than five representatives aside of the employers' and employees' organisations; and this Committee is to have an independent standing chairman nominated by agreement between the parties or, alternatively, by the Minister of Labour, together with two independent members (one to be appointed by each side) who shall be associated with the chairman for consultative purposes. In the event of any dispute arising, the Committee is to endeavour to settle the matter by agreement, but, failing settlement, the standing chairman, after consultation with the independent members, shall make a recommendation; and the chairman, if invited to do so by both sides, shall have authority to make a definite award.

This procedure, whose functioning is to be supplemented by the constitution of a Standing Joint Committee of the industry to meet at regular intervals and examine "economic and legislative matters both at home and abroad which affect the industry" appears to us to be calculated to contribute usefully to the creation and maintenance of better industrial relationships in Lancashire. The experience of the past few years has proved that the cotton industry's conciliation machinery, lacking a neutral element, has been consistently failing to regulate points of dispute with the success which it attained in this direction in the easier days existing before the war. The proposed new machinery, while avoiding the rigidity of compulsory arbitration in every case—and neither side of the industry would be prepared to accept such conditions—will bring to any deadlock the friendly assistance of impartial opinion and, with commendable flexibility, will enable the industry to avail itself of arbitration if arbitration is desired. We welcome, too, the establishment of the Standing Joint Committee for mutual study of the general situation of the industry from both the domestic and the foreign point of view. As we have emphasised throughout the recent unhappy stoppage, the problems of reconstruction and adjustment to the fundamentally changed conditions which Lancashire has to face go far beyond the mere palliative of this or that percentage reduction in piece-rate wages. Not only does the whole system of wage payments in the industry require careful re-examination, but, whether the solution be the wider extension of the "more looms" system or orderly contraction on other lines of the industry's personnel and numbers of productive units, the post-war reconstruction of Lancashire is patently a task which has yet barely been begun. It will, we hope, prove to be the great gain of an otherwise disastrous conflict that this week's settlement, by restoring and re-emphasising the validity of the industry's collective agreements and by providing more efficacious machinery for the adjustment of future disputes, may prove to be the prelude to more vigorous tackling of difficulties on jointly agreed lines of constructive policy.

RUSSIAN IMPRESSIONS.—I.

(BY A CORRESPONDENT.)

Russia has always been an enigma to the West, and the traveller to-day finds the land of the Soviets no less perplexing than his predecessor a generation ago, found the land of the Czars. Intourist, the State-owned and official travel agency, conducts the visitor to the great institutions of social welfare, shows him the factories and power-plants and farms which embody the outward and visible results of the Five Year Plan, explains the rationale of the Communist State, and displays the background of autocracy and revolution without which Soviet Russia cannot be understood. But though Intourist may plan the traveller's route, it cannot close his eyes to the common everyday tell-tale things. Obviously, a great social and economic experiment is in progress in Russia, characterised by schemes of unexampled scope and aimed at bettering the conditions of the workers. But since the best intentions can never guarantee success, the traveller finds himself continually asking whether the schemes will be realised, whether the foundations will support the towering superstructure that is being erected on them, whether Russia really can sustain the vast commitments she has undertaken.

There is ample evidence that the Five Year Plan is being at least partially carried out. The cities are filled with buildings just completed or under construction. Roads are being repaired or metalled for the first time. Factories are now working which a few years ago existed only on paper. The new administration building at Kharkov, the tractor factories at Kharkov and Stalingrad, the agricultural machinery works at Rostov-on-the-Don, the great Ford plant at Nijni-Novgorod—these are only a few examples of what has in fact been done already under the Five Year Plan. Perhaps the Plan's outstanding triumph in European Russia is Dnieprostroi. This world-famous hydro-electric scheme, carried out where in former days the Zaporozhian Cossacks had their island fastness, comprises a great dam and lock, which together have raised the level of the Dneiper 150 feet and make the river navigable throughout its length; a turbine house where four 90,000 h.p. turbo-alternators are already working and five more are being installed; an industrial area, some 80 square miles in extent, in which coke ovens, blast-furnaces and steel furnaces, a ferro-alloy plant and an aluminium works are in process of construction; and a new city, already partly built, to house the numerous workers required by this great industrial complex. Dneiprostroi alone would be enough to confute the sceptics who question utterly the Five Year Plan's translation from theory to practice; and when to Dneiprostroi are added the other new plants which Russian pride exhibits to visitors there can be no doubt at all that substantial strides have been made towards converting the Plan's industrial schemes from paper into brick and steel and stone.

Factories are useless, however, unless they work efficiently and produce goods of good quality in sufficient volume; and though the holiday traveller naturally cannot gather exhaustive evidence about the operating efficiency of the Soviet plants, he soon realises something of the nature, magnitude and complexity of the difficulties which still have to be overcome. The first difficulty is transport. It would not be true to say that in Russia trains never start or arrive on time. We started promptly at least twice, and once we arrived promptly. But these occasions were exceptions that proved the Russian rule of unpunctuality. Ordinarily our trains were anything up to an hour late in starting and an indefinite number of hours late in arriving. River transport is often no better. On the Volga our boat reached Nijni-Novgorod fourteen hours late and left for Stalingrad about ten hours late; and we gathered that this was not unusual. Russian transport arrangements appear, indeed, to be based on the Chinese proverb that it is better to travel than to arrive; but however this principle may affect people, the fact remains that where goods are concerned it creates dislocation and delay and often throws entire factories out of gear. Quite apart from unpunctuality and disorganisation, transport in Russia is backward in material equipment. On the rail-

ways the permanent way is generally ballasted with sand or dirt and only very rarely with metal. The rails, which are usually light, are not set in chairs but are spiked to the sleepers. Most of the rolling stock is old and much of it is in bad repair. Consequently trains cannot go fast; and the volume of goods and passenger traffic is correspondingly reduced. Road transport is worse. Roads are bad, rarely paved and full of pot-holes. Motor cars and lorries are few. The customary means of road transport is still the wagon commonly drawn by horses little larger than Shetland ponies and carrying an incredibly small load at a snail's pace. Many of these defects are due, of course, to years of war and revolutionary struggle. They are naturally recognised by the Russians. On the railways there have been campaigns to improve the organisation and increase efficiency; and the Second Five Year Plan is understood to contain large schemes for extending and bettering the transport system as a whole. But whatever may be done in the future, at present transport constitutes a bottleneck which blocks industrial production, raises costs, and seriously hampers output.

The second great industrial difficulty is lack of skill. The shortage of trained industrial workers is serious. Before the war Russian industry was small in scale and included some 2½-3 million workers. Though the statistics are hard to interpret, there are now at least five million industrial workers, and, according to some calculations, fifteen millions. The larger figure certainly includes other categories besides factory workers; but even the smaller total represents a tremendous increase over the pre-war aggregate. The majority of the new recruits to industry were formerly peasants, completely ignorant of factories, machines or organisation. The task of training them merely to mind machines engaged on the simplest operations is prodigious. But besides unskilled machine minders, modern mass production methods require large numbers of highly skilled men as foremen, supervisors, shop and works managers; and in these grades the shortage of trained men is even more severe.

The Russians have tried to solve this problem in four ways. They have engaged large numbers of foreign engineers and specialists to supervise construction and train Russian successors. Selected Russian workers have been sent abroad to study foreign plants and have been given responsible posts on their return. Russians who have lived abroad have been drafted into the industries where they worked in other countries—a category which includes many emigrants returned from the United States. Finally, formal training has been organised on a large scale, both in factory schools, which all factory workers are urged to attend, and in technical high schools and universities where students are paid during their period of study. Training will doubtless produce enough skilled workers in the long run, though the scanty information which was all the traveller could glean suggests that the general standard of training is low and that quality is at present sacrificed to numbers. In the meantime, the lack of skilled technicians and organisers, combined with the industrial inexperience of peasant workers only yesterday drawn from their villages, is having grave effects on efficiency and output. In general, the factories visited seemed to be over-manned, and two or three workers were frequently engaged on operations where one should have been ample. Naturally this was not always the case; sometimes the tempo of work was high and jobs were being very efficiently carried out. But as a rule, even in the most modern factories, there was evidence that vital details had been overlooked, that organisation was faulty. For example, material was often manhandled where the installation of a crane would have saved time and labour. Aisles and gangways were frequently cluttered up with parts which had finished one process and were waiting for the next. Stores were often in great confusion, and frequently piles of worked parts were rusting out of doors in uncovered stacks or dumps. Delays were numerous and much complained of. Many machines seemed to be working much below capacity. Costly plant, even when quite new, was often damaged by lack of skill. Under such conditions depreciation is naturally high, and the life of plant is certainly much shorter than in the West.

The traveller's opinions about the quality of output must necessarily be limited to what he saw, and what one traveller sees may not be a fair sample of the whole. But the views of the competent observers in our party were pretty unanimous. The new buildings, with rare exceptions, were roughly built. Bricks were frequently not true and often badly laid. Doors and windows and their frames were poorly finished. Electrical work in the new houses was crude, and an electric cable seen in Nijni-Novgorod was primitively made and badly insulated; though it should be added in fairness that the new automatic telephones in Moscow, while cheaply constructed, seemed to work well. The clothing worn in the streets appeared to be made from poor materials, and such boots and shoes, coats and caps as we were able to inspect more closely were shoddy. After watching the work in the factories we were not surprised by complaints about tractors breaking down. On the other hand, some products were much better. For instance, the trains of new tank cars which rumbled through Rostov Station with a load of Baku oil seemed to be well made, and peasant woodwork in the shops for foreign visits was exquisite in finish and workmanship. And occasionally a building would be seen—the new G.P.U. apartment house in Moscow is one notable example—which was both well executed and well designed.

The Soviet authorities are naturally well aware of the existing shortcomings, though perhaps less keenly sensitive to the quality of current output. Devices of every kind are being used to raise efficiency. Piece rates are paid whenever possible—in Russia piece rates are said to be free from the disadvantages attaching to them in capitalist countries. Competitions between shops and factories are frequent. So-called shock brigades of enthusiastic young Communists go wherever the need is greatest in order to speed up operations. Factory newspapers and wall newspapers bring defects home to the workers and stimulate improvement. The whole vast propaganda machine of the Soviets is being used to stimulate enthusiasm and increase efficiency. But though colossal energy is being devoted to the task, the *vis inertiae* of millions of peasant workers, the high labour turnover, the shortage of technicians and organisers, above all the enormous scale of what is being attempted simultaneously over a vast area are obstacles to achievement which have not been overcome. Output often remains far below the plan; depreciation is heavy and costs are high. Thus, whatever may be the possibilities of the future, at present the traveller comes away from the factories with an uneasy feeling that the industrialisation of Russia is still a matter of promise rather than of performance.

THE POONA AGREEMENT.

LAST week witnessed the achievement of a reconciliation within the Hindu community which time may show to have been the greatest feat in Mahatma Gandhi's career and the most important event that has occurred in the history of Hinduism for centuries. At noon on Tuesday, September 20th, Mr Gandhi began the "fast till death" which he had announced his intention to make unless the British Government's Communal Award was rescinded in so far as it assigned special electoral constituencies to the Depressed Classes of the Hindu community. Now the British Government rightly felt that it ought not to deprive the Depressed Classes of the constitutional safeguards provided for them in the Award except in exchange for some alternative settlement freely negotiated, on an equal footing, between the representatives of the Depressed Classes themselves and the leaders of the Caste Hindus. In these circumstances, Mr Gandhi's decision seemed like an act of perversity which was likely to have a tragic ending. It seemed perverse because, to non-Indian eyes, the arrangements made in the British Award for the protection of the Depressed Classes seemed the soundest point in the whole settlement—arrangements which must be even less open to criticism than the arrangements for the protection of the Muslims and Sikhs and other Minorities, inasmuch as the Depressed Classes were more at the mercy of the Hindus than any of these,

PURCHASING

REVERSIONS AND REVERSIONARY ANNUITIES is a specialised business.

£2,360,255 invested in the purchase of these securities and over £13,155,582 representing Loans on other classes of security demonstrates the activity and usefulness of the Society in this phase of its business. Forms of application on request.

and were also subject to almost intolerable social conditions already. When Mr Gandhi declared that he was doing what he was doing for the sake of the Depressed Classes in particular, as well as for Hinduism as a whole, no one doubted his sincerity; yet, to any non-Hindu, his position must have seemed a paradox. How could Mr Gandhi be helping the Depressed Classes by opposing the British Government's efforts to protect them? And how could he maintain that it would be a misfortune for the Depressed Classes to have their separation from the Caste Hindus expressed in constitutional terms, considering that this separation was a hard fact, centuries old, which was of the Caste Hindus' own doing? As non-Hindu observers watched Mr Gandhi take his stand, they had to confess that they could not follow the workings of the Hindu mind. Yet the *dénouement* has shown that Mr Gandhi knew what he was about. So far from the fast ending tragically, it has produced an agreement between the two sections of the Hindu community which is undoubtedly far better, not only for Hinduism as a whole but also for the Depressed Classes in particular, than the Award which the British Government had been constrained to make in the absence of agreement between the two parties directly interested.

The sequence of events was rapid and dramatic. The *impasse* created by Mr Gandhi's decision to fast to death, combined with the unwillingness of the British Government to rescind their award except in exchange for a satisfactory agreed settlement, promptly stimulated the leaders of the Caste Hindus to make a revolutionary change of attitude and policy towards the Depressed Classes—a change which, until the other day, would have seemed quite beyond the range of practical politics. Earnest and strenuous negotiations were started; and by last Saturday—the fifth day of the fast—an agreement had been reached under which the Depressed Classes are to forego their separate electorates and content themselves solely with the general Hindu electorates (in which, of course, they were already included, as well, by the terms of the British Award)—subject to important safeguards which the Caste Hindus are to concede to them. In the first place, they are to have specific numbers of reserved seats among those assigned by the British Award to the Hindu Community in the various Legislatures. In the second place, they are to elect, by themselves, four candidates for each reserved seat—the Hindu general electorate being confined, in its subsequent choice, to one of these four. The settlement as a whole is to last until altered by common agreement. The Depressed Classes' primary elections are to last for a maximum period of ten years.

This Poona Agreement has been accepted by the British Government in lieu of the relevant parts of its Award—subject to reservation of judgment on points in the Poona Agreement that fall outside the scope of the Award. Upon receipt of a telegram from the Prime Minister conveying the Government's decision, Mr Gandhi broke his fast on Monday. And thus Mr Gandhi has removed an obstacle in the path of India's progress towards self-government that had loomed as large as any mountain. Nor is this all. For the political agreement between Caste Hindus and Untouchables, which Mr Gandhi has brought about, has evoked a movement among the Caste Hindus for abolishing the social disabilities upon the Untouchables out of which the whole political problem arises. If this further

movement gathers momentum, it may have an almost magic effect in reforming Hindu practice and rejuvenating the Hindu spirit. This is the Indian way of doing great deeds, and it certainly seems very un-Western. Let us imagine, for instance, that the present Democratic candidate for the American Presidency, Mr Franklin Roosevelt, were to announce his intention of fasting to death unless the Southern Democrats abolished "Jim Crow Cars" and allowed their coloured fellow-citizens a genuine exercise of the vote. In that event, Mr Roosevelt would be a doomed man. He would just starve—and no inter-colour convention would meet in the South and make a sensational agreement in order to prevent the tragedy from being enacted to the bitter end.

To find parallels in our Western history one must go back very far indeed. But in the 5th century of our era there actually was a Stylite saint who threatened to come off his pillar (a sacrifice of holiness which was felt to be worse than death itself) unless the Emperor renounced a heresy. The Emperor, being a Roman and an Occidental, waited for the saint to come down before he gave in. But when Daniel the Stylite really did come down and hobbled into the Imperial presence, the whole of Christendom was so deeply stirred that the Emperor had to conform in a hurry under imminent peril of losing throne and life. That long-lost atmosphere of Christendom is still the atmosphere of Hinduism to-day, as Mahatma Gandhi's achievement shows us. But the rôle which Daniel the Stylite had to play was straightforward. He had to deal with one man—albeit an Emperor. Mr Gandhi, on the other hand, has to deal with a great democracy in the West and with all the complexities of a nascent democracy in the East—complexities so great that he may be pardoned if he wishes sometimes to retire to the Stylite pillar and stand aloof from the turmoil of politics.

Notes of the Week.

The American Election.—As far as one can judge from this distance, the tide of popular opinion continues to flow in favour of Mr Roosevelt. The shock of the Maine elections spurred the Republicans on to redoubled efforts, but the effect of their intensified labours is not yet visible; and while Mr Hoover remains at the White House issuing statements and directing the course of the campaign from behind the fighting line, Mr Roosevelt has plunged boldly into the trenches and is arousing enthusiasm by the energy of his personal raids on the enemy's lines. Omens favourable to Mr Roosevelt are indeed so many that betting in Wall Street has turned in his favour. He has definitely gained prestige from his handling of the case of Mayor Walker; his eloquent plea to the electorate to "try a change" seems to be getting home; and even Wall Street, where sentiment is always predominantly Republican and in this case recently very definitely anti-Roosevelt, appears to have liked one or two of Mr Roosevelt's later speeches, and reconciled itself (after a fit of nerves following on the Maine results) to the probability of a Democratic President. Only five weeks or so are now left before the votes will be cast, and probably a great preponderance of the electorate has already made up its mind which ticket to support. If that is so, Mr Hoover's only chance would seem to be that some new emergency should arise to shock public opinion and create an unwillingness to "change horses." But we can hardly imagine that Mr Hoover would so far play with fire as to work up the growing Japanese-American tension for electoral purposes; and it is not clear from what other quarters a shock is to be produced.

The Week at Geneva.—At Geneva, the Bureau of the Disarmament Conference and the Council of the League and the Assembly have all come into session during the last ten days. The Bureau of the Disarmament Conference opened on the 21st, but Sir John Simon and Monsieur Paul Boncour, between them, have reduced the session

to nullity, in spite of the efforts of Mr Henderson—ably and unfactiously supported by Monsieur Litvinov—to get the really important issues discussed—first and foremost among them the German Government's refusal to participate. The Bureau has now adjourned; and in the light of the Disarmament Conference's present predicament, the Assembly's decision to appoint no disarmament sub-committee this year, on the ground that the Disarmament Conference itself is in session, reads rather ironically. Nor will this Assembly discuss the Lytton Report. For the League Council, which met on the 23rd, decided next day to grant Japan's request for a delay in the consideration of the Report by the Assembly; and the Lytton Report is accordingly to come before an extraordinary session of the Assembly on November 14th. On this occasion the President of the Council, Mr de Valera, expressed frankly the Council's regret that Japan should have anticipated the discussion, and even the publication, of the Report by recognising and entering into treaty relations with Manchukuo. He spoke equally frankly, though in more general terms, in his opening address to the thirteenth ordinary session of the Assembly on Monday. What Mr de Valera said on this occasion has been wrongly interpreted in some quarters as an attack on the League. It was rather an attack upon the national Governments of which the membership of the League is composed, and upon whose loyalty—or enlightened sense of their own self-interests—the efficacy of the League depends. "There was a suspicion," Mr de Valera said, "that the action of the League in the economic sphere would be paralysed by the pressure of powerful national interests, and that if the hand that was raised against the Covenant were sufficiently strong, it could smite with impunity." This needs saying; for until the peoples of the world are aroused to the necessity for exacting good international behaviour from the Governments, we shall never get the international order which the peoples need and desire. On Tuesday, the Council accepted Sir Eric Drummond's resignation from the Secretaryship-General, which he has held since the League came into existence. One wonders what the first Secretary-General thinks of these last dozen years in retrospect, and how the present prospect will appear to his successor.

New Governments in Europe.—The past year has witnessed changes in the Governments of all the major European Powers except Italy. During the past week, there has been a crop of similar changes in smaller European countries. In Hungary, for example, September 21st saw the fall of Count Károlyi's administration. Count Károlyi has done well financially and his fall seems to have been brought about by his resistance to certain extravagant policies in regard to exchange restrictions and to agrarian relief, which are advocated by his former supporters. So this change is to be reckoned a misfortune. On the other hand, in Sweden a Socialist Ministry has just come into office with the programme of breaking down Customs barriers, cutting down Swedish national armaments, and working for the international limitation of armaments, both military and economic. In Greece, a general election was held on Sunday which has resulted in something very near a tie between Monsieur Venizelos's Liberal Party and Monsieur Tsaldaris's Popularists—owing to the system of proportional representation, which Monsieur Venizelos has reintroduced for the occasion, the definitive result may not be known for some days. This Greek election seems largely to have been fought on personal issues and on memories of a past which has now little meaning except in the minds of the older generation of Greek politicians. Monsieur Venizelos is a brilliant and masterful personality who inevitably arouses a certain amount of opposition. Monsieur Tsaldaris and his supporters inherit the traditions of the former Royalists—though Monsieur Tsaldaris has emphatically declared that he does not now contemplate any change of regime, and has deprecated Monsieur Venizelos's tactics of representing his own party's cause as identical with the cause of the Republic. As for Monsieur Venizelos's record during these

last four years of office, it has been conspicuously successful in the field of foreign affairs. His reconciliation with Turkey, for instance, has changed the whole face of the Near Eastern situation. In home affairs, his Government has found the world economic crisis as difficult to cope with as all governments have found it everywhere. What is surely wanted in Greece now is some working arrangement between the two strongest parties to carry the country through these difficult times. And this is the solution to which the results of the election point, as far as these results are yet apparent.

The Ills of Latin America.—More and more Latin America seems to be feeling the economic pinch, and the political explosions in which she expresses her *malaise* go on spluttering like fireworks that will not go off and yet will not go out either. In the once stable and sensible Chile, the past fortnight has seen another revolution come and go. The Provisional President, Señor Davila, who had so lately returned to his presidential post, was deposed in the small hours of the morning of September 13th by the Commander of the Air Force and the Director-General of the Navy. Thereupon, the Army rose up against the Air Force, only to find that the bird had flown. By the 15th, however, the flight had ended in a surrender, and the surrender had been followed by a reconstruction of the Government, which does not appear to have made much appreciable difference in the Chilean situation. Meanwhile, in the heart of Brazil, a civil war which commands much larger forces and also apparently arouses much deeper feelings is being carried on stubbornly, with trench warfare and intensive artillery bombardments. The war between Bolivia and Paraguay in the Gran Chaco also goes merrily on, in spite of the sincere and strenuous efforts of all the neutral Powers to stop it. Bolivian chauvinism seems to have been encouraged by the armament firms of the world, who are reported to have been furnishing Bolivia with admirably deadly weapons at wonderfully moderate prices. But there seems to be some hope that Bolivian ardour may be damped by the tropical rains, which will impede the operations of tanks and artillery in the Gran Chaco more effectively than diplomatic representations, and will also try the health of the aggressive Bolivian highlanders more severely than that of the Paraguayan natives, who must be regarded as being, on the whole, the less offensive of the two parties. This week Salvador, though through no fault of her own, has become a source of embarrassment to Anglo-American relations. The Government of General Martinez, an ex-Minister of War, who seized the reins of Government forcibly last December, has been recognised by the British Government, in the face of a strong plea for non-recognition made by the States Department at Washington. This action, which is reported to have caused an unpleasant sensation in Washington, clearly needs explanation; and the Foreign Office should state their reasons. For it is scarcely a propitious moment, to say the least of it, to administer a gratuitous rebuff to America.

The British War Debt.—Surprise appears to have been occasioned in some quarters by the fact that Great Britain did not exercise on September 15th her right under the funding agreement to give notice that she intends to postpone the payment of the annual instalment on account of amortisation of the principal of her war debt (amounting to \$30 millions) falling due to the United States on December 15th. In this connection it may be convenient to recall that under the Anglo-American debt settlement Great Britain may postpone any payment of principal for not more than two years, provided that the payment of principal falling due in the next succeeding year cannot be postponed for more than one year until the sum first suspended has been paid. Similar clauses appear in the United States' agreements with other war debtors, so that in respect of the year 1932-33 the position of the

payments due by the principal debtors under the agreements is as follows:—

DUE TO U.S.A., JULY, 1932-JUNE, 1933.			
Debtor.	Total Annuity. \$'000.	Postponable Portion. \$'000.	Remainder Payable. \$'000.
Great Britain.....	171,500	30,000	141,500
France.....	60,000	21,477	38,523
Italy.....	14,791	12,300	2,491
Belgium.....	8,250	...	8,250
Poland.....	6,627	1,125	5,502

In the case of Britain's settlements with her war debtors the postponement conditions differ. Taking the two chief debtors—i.e., excluding sums due from Greece, Portugal, Yugoslavia and Roumania—France has the right to postpone for three years half of each half-yearly instalment, cumulation not to continue beyond two years, and Italy may postpone for not more than two years such part of any half-yearly instalment as exceeds £2 millions. In respect of these debts, therefore, in 1932-33 the position is as under:—

DUE TO GREAT BRITAIN, JULY, 1932-JUNE, 1933.			
Debtor.	Total Annuity. £'000.	Postponable Portion. £'000.	Remainder Payable. £'000.
France.....	12,500	6,250	6,250
Italy.....	4,437	2,437	2,000

These are the facts as they exist under the debt funding agreements; but it would be a quite mistaken interpretation of the British Government's intentions to assume that failure to exercise the right of postponement notice means that we intend to pay to the United States on December 15th both the principal and interest, or either. It is fully recognised on both sides of the Atlantic that the whole matter will be raised after the American election. In the meanwhile, an announcement of the postponement of the sinking fund payment might well have been regarded by American opinion as committing us to payment of the interest provided in an agreement, the revision of which, it was made clear at Lausanne, would be suggested to America in due course.

Australia's Conversion Loan.—With the completion of the final stage of the 5 per cent. War Loan conversion and with the stage now set for the refunding by the Australian Government of the £12.4 millions of New South Wales 5½ per cents. which fall due on November 1st, the question of the yield basis on which this refinancing is to be effected appears to be leading to a sharp difference of opinion between the Commonwealth and the London market. Australia apparently argues that her efforts at setting her house in order merit a generous reciprocal gesture from London, and that a conversion rate higher than 4 per cent. would be a keen disappointment to the Australian public, who would feel that their sacrifices had been in vain. If the terms of the forthcoming issue proved to have reactions in Australia which led to any slackening on her part in the task of her financial rehabilitation, it would be profoundly regrettable. On the other hand, it is surely not unreasonable to ask the Australian taxpayer to bear in mind the following considerations: (1) Striking though the measure of Australia's recovery has been during the past twelve months, both in respect of her balance of payments and of her budgetary position, the British holder of her securities has still a lively recollection of his very recent anxieties over the extreme depreciation of Commonwealth stocks. Moreover, having regard to the fact that Australia's export surplus of £34 millions in the twelve months ended June last was achieved only by the abnormal process of forcibly reducing her imports to one-third of what they were two years ago, he must ask himself whether the restoration of Australian equilibrium can be taken as permanently assured unless and until there is a further recovery in the price of her staple exports. (2) By the continuance of the present official embargo on the new capital market the Australian Government has been given a specially favoured position in regard to her present refinancing. (3) In view of the magnitude of the later conversions which Australia hopes to carry out, it is imperative that this initial opera-

tion should be a complete success, and that there should be no risk of the forthcoming issue being placed at a figure which either proved unacceptable or, if the operation just "went through" in the present circumstances of an artificially limited market, led to subsequent depreciation of the stock. After all, Australia is still rated as a 5½ per cent. risk in New York, and the improvement in her credit in London from a yield basis of over 6½ per cent. at the beginning of this year to the present figure of about 4½ per cent. should in itself be a matter for real gratification in Australia. When all is said, the business of the City is not to make "reciprocal gestures," however genuine may be its appreciation of Australia's efforts and her achievements, but to advise on the rate at which the Australian Government can hope in a capitalist world to reborrow from individual investors, who, in many cases, have responsibilities either to their dependants or as trustees. If, as opinion in responsible City circles appears to suggest, the minimum rate which Australia can achieve is 4½ per cent., or a shade higher, we hope that Australia will not mistake for lack of sympathy what is, in fact, a necessary recognition of the realities of the situation. The alternative is to borrow on a short-term basis or to wait and see what are the possibilities, say, a year hence.

Our Growing Tariff.—The September issue of the Bank of England's *Statistical Summary* contains, in addition to its usual features, an important analysis of the volume of trade affected by the duties imposed by the Import Duties Act of 1932. The trade returns of 1930 are taken as the basis of calculation, and it is shown that after the application of that Act only £223.2 millions, or 30.2 per cent., of goods remained on the Free List out of total imports valued at £739.9 millions. The value of goods previously subject to duty was £130 millions, while the Act imposed new duties on imports valued at £386.7 millions, or 52.3 per cent. of our total imports. This figure of £386.7 millions of goods subjected to duty by the Act is analysed in relation to the levels of duties imposed. On imports to the value of £249.1 millions the duty is 10 per cent. *ad valorem*; a 15 per cent. duty applies to £18 millions, 20 per cent. to £94.9 millions (or 12.8 per cent. of our total imports), 25 per cent. to £5 millions, 30 per cent. to £2.7 millions, and 33½ per cent. to £16.9 millions. That was the position before Ottawa. Under the Ottawa agreements it is proposed to impose duties on wheat, unwrought copper and linseed entering Britain from foreign countries. This will have the effect of removing from the Free List, according to our own calculations, goods to the value of £86.5 millions—on the basis of 1930 trade. This means that, if the Ottawa agreements are implemented, the Free List will (on the basis of 1930 figures) be reduced to less than £187 millions, out of a total of £739.9 millions. Few people, perhaps, realise that so huge a field has already been covered by our "experiment" in Protection; or how substantially the Ottawa agreements will raise the incidence of duties imposed by the Import Duties Act. On butter, cheese and eggs, and condensed milk the duty is to be lifted from 10 per cent. to 15 per cent. or over on the basis of current prices. Duties on raw fruits, at present 10 per cent., are similarly to be raised to levels ranging from 15 to 31 per cent. The duty to which unwrought copper is to be subjected works out to-day at over 50 per cent. Where is all this going to end?

The Copenhagen Exhibition.—At Copenhagen this week the Prince of Wales opened the most comprehensive exhibition of British goods which has ever been seen on the Continent of Europe. The event is peculiarly timely. Ottawa has concentrated attention upon trade with the Empire. Copenhagen reminds us of our huge trade interests in foreign countries, and of the necessity to sell more wherever we can, if our factories are to absorb the existing millions of idle hands. The disparagement of this exhibition by those fanatics who regard it as wicked to trade with foreign countries merely serves to refresh the minds of all thinking people of this inevitable necessity. It will, let us hope, remind them, too, that if we are to sell to foreign countries, we must also buy from foreign

countries, and cause them to bear this in mind in judging the Ottawa agreements. We want and need to sell our goods to Denmark, and in return we want to buy from Denmark the bacon and butter which she can sell us to mutual advantage because it is of good quality, cheap and close at hand. Of all the services which the Prince of Wales has performed as an Ambassador of trade, by no means the least is his visit to Denmark this week.

The Forty-hour Week.—The special session last week of the Governing Body of the International Labour Organisation was held to discuss a proposal of the Italian Government that a forty-hour working week in industry should be immediately instituted by agreement in all countries. Whereas previous proposals for the shortening of hours by international conventions have had as their objective the humanitarian purpose of improving the status of employed workers and their opportunities for greater leisure and recreation, the Italian scheme, it is interesting to observe, has for its aim primarily the reduction of the hours of enforced leisure of the unemployed or, in other words, a redistribution of employment. The last I.L.O. conference instructed the Governing Body to study this question; and the immediate task of last week's meeting was to decide procedure. By 16 votes to 7 it decided that the matter should be referred to a preparatory technical committee to meet at Geneva in January. Prominent among the dissentient votes were those of the representatives of the British employers and of the British Government. The latter disclaimed any desire to stereotype long working hours, but they attacked the Italian proposal as being "superficially alluring," but calculated merely to lead to "the preparation of a convention which in practice would not be ratified and would therefore be useless in alleviating the unemployment evil." This, we suggest, is a questionable attitude open to serious misconception. The question whether it is practicable by an international hours convention to break up to some extent the present "frozen pools" of unemployment brestles with difficulties too complicated to be discussed here; but this was not the occasion nor the subject for a blank *non possumus* in regard to a proposition for emergency action which raises quite different issues to those involved in the unratified Washington Hours Convention.

London Transport Peace.—We are glad to be able to record that the strike of London omnibus workers, threatened for September 23rd, has happily been averted. The company, it will be recalled, at first proposed that, in addition to the introduction of new speeded-up running schedules which were calculated both to affect earnings and create a certain redundancy of staff, the basic rate of wages for omnibus men should be reduced by 3s. 4d. per week in the case of drivers and by about 3s. in the case of conductors. This proposal was subsequently modified, and the reductions asked for limited to 1s. 6d. and 1s. a week respectively for the two grades. Finally, however, considerable further concessions were made by the company; and the Executive Committee of the Transport and General Workers' Union recommended to the omnibus men for acceptance an agreement which provided that there should be no change in the standard rate of pay; that the new running schedule should be introduced as from January 1st for an experimental period of six months; that redundant staff should be "carried" by the company and absorbed with the introduction of the next summer schedule; and that there should be no reduction of wages in the case of the "inside" staff, whose work will be affected by reorganisation and re-grouping of garages. Though there appears to have been considerable opposition to the acceptance of what must strike the outside observer as a very good agreement for the workers, a delegate conference of the omnibus men decided last Friday by 39 votes to 21 to accept the terms of settlement. Londoners, who are grateful to their busmen yet consider them, not without justice, to enjoy a position which compares favourably with that of railway men and other analogous workers, were relieved to find that they would not be forced to walk to work as victims of a needless conflict now sensibly composed.

The Milk Settlement.—The danger of the serious public inconvenience which must have attended a general withholding of milk supplies from the usual distributors has now been averted by a compromise. The farmers are to receive 14s. per dozen gallons instead of the 14s. 4d. which they asked, or the 13s. 9d. which the distributors offered, so that the average price of liquid milk will be just over ½d. per gallon higher than last year. The percentage of milk which is to be sold at "manufacturing" prices remains unchanged, but the farmers have secured a valuable concession in the shape of a guarantee that this price shall not fall below 5d. The "manufacturing" price is based upon the price of Colonial cheese. In view of the fact that British cheese manufacturers are concerned to a large extent with more luxurious cheeses whose prices, especially since they have been to some extent protected against Continental competition, do not necessarily move with those of Colonial cheese, this basis seems somewhat out of date. There is, however, a prospect that the present clumsy system of milk price-fixation may be superseded, or modified, when the Milk Reorganisation Commission has completed its labours. The problem of reorganising the system of milk distribution is so complex that one would not wish it unduly hurried, but if a workable scheme could be produced in time to save a recurrence of this dispute next autumn, it would be very welcome.

The Quarter's New Capital.—The monopolisation of the London capital market by the War Loan conversion operation is reflected strikingly in the statistics of new capital issues during the past quarter. As will be seen from the following table, all operations together resulted in a debit figure of £1 million. This represents £1.5 millions net encashments of National Savings Certificates—a figure which compares with £4.4 millions in the previous quarter—less £500,000 of other issues:—

NEW CAPITAL ISSUES.
(£ million.)

	Total.	British Government.	Foreign and Colonial Govts.	British Colonial and Foreign Corps.	Foreign Railways.	Mines, Finance, and Exploitation.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1927	355.1	66.0	67.5	37.9	5.4	33.2	11.0	134.1
Total whole year, 1928	369.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2
Total whole year, 1929	285.2	65.4	30.0	12.1	7.8	41.5	6.4	122.0
Total whole year, 1930	267.8	65.6	70.3	44.7	7.6	11.5	9.3	58.8
Total whole year, 1931	102.1	10.7	32.2	8.0	2.9	12.2	0.2	35.9
1932—1st quarter ...	17.7	Dr. 3.0	4.1	9.8	NH	0.5	0.4	5.9
1932—2nd quarter ...	145.9	106.2	12.0	17.2	NH	...	...	10.5
1932—3rd quarter ...	Dr. 1.0	Dr. 1.5	...	...	...	...	...	0.5

Practically all the quarter's financing other than that of the British Government took the form of offers to shareholders only, and was made up of one iron and steel issue of ordinary shares, calling for £378,000, a small debenture issue for a colonial railway, two small tin mining issues and one or two issues of relatively negligible dimensions for miscellaneous manufacturing concerns. For the nine months to date the total new capital raised in the London market amounts to £162.7 millions, of which £145.2 millions were destined for this country and £17.5 millions for British Possessions. With the exception of a few thousand pounds, foreign issues in 1932 have not figured in the picture.

Franco-German Commercial Relations.—Our Paris correspondent writes:—Reports from Geneva, asserting that private *pourparlers* are in progress there, on French initiative, between representatives of the two countries in regard to the replacement of the present Franco-German commercial treaty by one more in accord with the changed circumstances, are causing deep interest here. Assertions that denunciation by France of the existing treaty is imminent appear to be unfounded, but there is every probability that the French are preparing some action in the matter. From the French point of view the existing treaty, which was signed in 1927, was based on Germany's demands that, in order to be able to comply with the conditions of the Young Plan, it must be made possible for her to increase her export trade. Thanks to

the new treaty, German exports to France during the first seven months of this year were 2,256,000,000 francs in value, while French exports to Germany were only 979,000,000 francs. The French argument is that, now that German reparation payments have been wiped out, there is no reason why France should favour German exports, when Germany is doing her utmost to keep out French products, and particularly when France is quite well able to do without German goods, even when exported under the dumping system. There are indications that unless Germany is prepared to agree to more or less reciprocal tariff conditions, the present agreement will be denounced.

The Australian Gold Bounty.—Further details regarding the suspension of the Commonwealth Government bounty in respect of excess gold production are now available in a recent statement by the chairman of the Gold Producers' Council. The original Bounty Act was passed in December, 1930, and provided that during the following ten years a bounty of £1 (Australian) per ounce of fine gold should be paid on the yield in excess of the average production for the three years 1928-30. Later an amending Act was passed, reducing the bounty to a minimum of 10s. per ounce, but providing for an increase of 1s. per fine ounce for each three points by which the exchange on London fell below 130. Thus, if and when the Australian pound returned to parity with sterling, the original bounty of £1 per ounce would be automatically restored. When early this year it appeared likely that the Australian Government would abrogate or suspend the bounty, meetings were held of representatives of the mining companies registered in Great Britain, which between them are responsible for over four-fifths of Australia's gold production. These meetings recognised that both the need for economies in Australian public expenditure and the increase in the price of gold consequent upon the British suspension of the gold standard removed the present case for the bounty, but they decided to press for its suspension as opposed to its cancellation, and for the automatic restoration of the bounty without further legislation or parliamentary authorisation in the event of the price of gold falling below a specified level before the end of 1940, the original ten-year term provided for in the 1930 Act. These principles have been conceded by the Australian Government, and after consultations between Mr Bruce and Australian mining interests in London, the budget has been amended to provide that the bounty becomes payable in the event of the sterling price of gold falling to £5, provided that the price in Australian currency is not above £5 10s. per fine ounce. At these prices the bounty becomes payable at the rate of 16s. per ounce upon excess production, increasing to £1 per ounce, if the Australian pound returns to parity with sterling. This settlement is regarded as satisfactory by the industry; for it ensures a substantial minimum premium over the standard price for at least the next eight years. It is equally satisfactory to the Government, for as there is no early prospect of the sterling price of gold falling low enough to make the terms of this agreement operative, they are relieved of this charge upon the Australian budget for an indefinite period.

Commonwealth Bank of Australia.—As was to be expected, the report of the Commonwealth Bank for the half-year ended June 30th is unusually interesting and informative. On the question of public finance, it points out that the objective of the Premiers' Plan, to attain Budget equilibrium for the whole of the Australian Governments by June 30, 1934, has been jeopardised by the unfortunate condition of affairs that existed until recently in New South Wales. This not only involved that State in a deficit of £13.5 millions, against an estimated deficiency of £5.5 millions, for 1931-32, but also impaired the ability of New South Wales to budget according to the Premiers' Plan for 1932-33. This, in turn, entails the exercise of additional efforts, if equilibrium is to be attained by the designed date. The cumulative effect of this has been to place an increased strain upon the Australian banking system, pointing to the necessity of obtaining relief

from other internal sources. The report next discusses the Commonwealth Bank's exchange policy. It emphasises the need of complete freedom for the Bank from outside interference. The Bank, however, has accepted the Government's view that in its exchange operations it should have regard to the "economic aspect of the position," as well as to the narrower aspect of fluctuations in Australia's overseas balances. Furthermore, on the advice of the Bank, the Government has passed legislation authorising the Bank to hold, as legal reserve against its note issue, either gold or sterling, or a combination of both. The Bank justifies its advice by pointing out that the retention of physical gold reserves had become a luxury beyond Australia's needs; that their conversion into sterling meant turning a sterile asset into a working asset; and that, as external debts are in practice settled upon a sterling basis, the holding of the note reserves in sterling is not inimical to Australian external credit. During the first six months of this year the Bank maintained a stable rate of exchange on London of £125 Australian per £100 sterling, so that the Australian pound fluctuated with sterling against gold and gold currencies. Deposit rates paid by the Australian banks were reduced during the half-year from 3 to 2½ per cent. for three months' money, and from 4 to 3½ per cent. for two years' money, with equivalent reductions for intermediate terms. Advance rates have also tended downwards, and on July 1st the Commonwealth Bank fixed its own advance rate at a maximum of 5 per cent. As regards general conditions, the report lays stress upon the Australian unemployment, and points out that other means of employment must be found for the large element in the population which formerly found work on Government and other schemes financed out of loans which have now been definitely terminated.

Overseas Correspondence.

LEAGUE OF NATIONS.

Assembly — Disarmament — Lytton Report.

(FROM OUR CORRESPONDENT.)

GENEVA, September 27.

It is difficult to see what the League Assembly will have to do on the matters of most urgent importance. The two great questions of the moment, disarmament and Manchuria, are in the hands of the Disarmament Conference and of the Special Assembly which meets later, and it is not yet obvious what further can be done with regard to the World Economic Conference. The Preparatory Committee of experts has been set up, and the indications are that the Conference will not meet much before February of next year. This Assembly, therefore, will have its general routine work to go through; apart from that, its main value should be to provide the opportunity for general exchanges of views, and for conversations regarding the German claim. On this point there is not yet any progress to report. Sir John Simon has talked with the German Foreign Minister and with M. Herriot; and Mr Henderson has also seen Baron von Neurath, but nothing positive has arisen, and M. Herriot's speech on Sunday, which caused some consternation here, has not provided much ground for hope.

Whether any initial progress can be made depends upon what France and Great Britain are prepared to offer. But the official attitude of the United States is not exempt from criticism. The view that it is a purely European problem which does not concern the United States, as they are not signatories of the Versailles Treaty, is neither helpful nor strictly accurate. Part V of the Treaty, which is here concerned, was incorporated in the separate treaty which the United States made with Germany, so that the Versailles Treaty cannot in this case be conveniently cited as an excuse for disinterestedness. On the general issue of the disarmament problem as a whole, which will be so definitely determined by the final response to the German claim, no Government anxious for substantial reduction on the lines proclaimed by the United States could reason-

ably hold aloof. If the United States want the Hoover Plan to go through, they must fight for it; the fact that they have not been doing so in any convincing manner provides opportunities for others to spread the idea that the United States are not enthusiastic about their own plan. This inaction does not absolve either the British or the French Governments from their grave responsibilities; but the world has a right to expect something more than a dormant attitude from the one great State which has launched drastic proposals.

As for M. Herriot's Sunday speech, it was found here unexpectedly harsh in tone, and his final proposition for the regulation of armaments in proportion to the degree of security has been read with some weariness of spirit by those who have heard this repeatedly since the first days of the League. However, some consolation is being drawn from the fact that he mentioned M. Clemenceau's promise to the Germans, and the speech is being excused as a bargaining move. It is hard to discover its bargaining points, but his reference to "eminent people" who are studying the security point—a reference that appears to have puzzled many people—means apparently that some further political plans will be put forward. There have been signs of this here, and the speech of the President of the Assembly, M. Politis, lent colour to the suggestion. There is not much promise in this direction; but, if it is pursued, it would be an appropriate moment for the British Government to remind M. Herriot of what he and the French people seem entirely to have forgotten: that the British Government entered into very serious commitments of this nature in the Locarno agreements. What more does France expect? Does she anticipate the promise of armed British support in every conceivable circumstance? Possibly M. Herriot will give the Assembly some further indications. The temporary absence of Sir John Simon and the departure of the German Foreign Minister at least for a time on Thursday will prevent any fruitful conversations for the present.

The report of the Lytton Commission will be published here on Saturday or Sunday, and the Council has acceded to the Japanese request not to discuss the report until six weeks after its publication, in order, ostensibly, to allow the Government time to study its contents and to send its representative with instructions to Geneva. The Council is to meet to consider the report on November 14th, unless the Acting President considers it necessary to meet a little later, up to November 21st. This was not done without protest from the Chinese representative in a spirit of gentle irony; and Mr de Valera, who presided, stated with candour the reluctance felt in acceding to the Japanese request, which would have been ungrudgingly accepted if Japan, even before the Lytton Commission's report was received, had not recognised the so-called Manchukuo Government. This was also emphasised by M. Madariaga (Spain), but no other support for the President's rebuke to Japan was forthcoming. While this rebuke must be considered as the voice of the Council, it was a matter of comment that all the representatives of the Great Powers remained absolutely silent throughout. Sir John Simon evidently felt content to leave the leadership to Mr de Valera, who, both at this meeting of the Council and in his opening speech at the Assembly, scored a considerable personal success. His outspoken address to the Assembly was couched in moderate terms; amidst a curious silence, he told the Governments that the testing time had come and that the public opinion of the world must be shown that the Covenant of the League was a solemn pact "with obligations that no State, great or small, would find it possible to ignore." The sole alternative, he said, to competitive armaments was a security for national rights afforded by "uncompromising adherence to the principles of the Covenant."

This is certainly one of the moments when *uncompromising* is the appropriate word. What the report contains or what will be done by the Council is not known, but it is certain that calculated support for Japan is diminishing, and there is scarcely an intervention by the Japan representative in Geneva or an act by the Japanese Government in Manchuria which does not tend still further to isolate Japan from the rest of the world. A

small sign of this was the result of the election of the six Vice-Presidents of the Assembly. It has always been the rule to include the heads of the delegations of the five Great Powers. On this occasion the chief delegates of Great Britain, France, Italy and Germany received over forty votes, and the head of the Japanese delegation was the last to be elected with thirty-four votes, or four votes below the representative of Nicaragua.

UNITED STATES.

Bonds — Banking — Business — Prices — Politics.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 21.

WITH the abatement of speculation in the stock and commodity markets the tone has turned steadier. It has been particularly noticeable that the banks, with the commercial demand for credit still slow and with little net gain in loans against securities, are turning rather strongly to the gilt-edged bond market to employ their funds. Currency hoarding is definitely a thing of the past, and gold continues to come in. The Federal Reserve system is offsetting the natural increase in member bank reserves by constantly contracting its own credit outstanding, but the excess of funds continues high.

United States Government bonds are at the best prices of the year, in spite of the growing deficit and the demand for bonus legislation. New capital issues have been scarce in recent weeks, but another attempt to sound the market and to make a gesture of confidence is expected soon. Meanwhile, in no well-informed quarter is it expected that any change in Federal Reserve Bank policy will follow a possible change in national administration. Cheap money, it seems, is having some beneficial effect in arresting the course of depression. Present policy is likely to continue until the business or financial situation dictates a change. The gold stock went up \$23 millions last week, and the currency fell \$57 millions, partly owing to the return of money from holiday circulation. Total Reserve Bank credit dropped \$18 millions, and this measures the reduction in member bank borrowing.

The rise of \$62 millions in brokers' loans last week was virtually all accounted for by loans of banks to dealers and others subscribing to the new Treasury one-year certificates and five-year notes. The remainder is explained by borrowing to meet the quarterly taxes. Reporting city member banks cut their loans on securities in all but the New York district, and there was a sharp fall in the so-called commercial loans. This item fell largely under the influence of loan liquidation which took place on the change of a large Chicago bank from a State to a national institution.

It is nevertheless true that business still is failing to receive more credit directly from the banks. This does not necessarily mean that it is having to go without that which it wants or that there is taking place no increase in activity. The R.F.C., the National Credit Corporation, the Railroad Credit body, the Commodities Credit organisation and other semi-public credit institutions are taking over much of the lending ordinarily handled by the commercial banks. As a result, the banks are putting more of their funds into securities. City member banks for the week show a rise of \$38 millions in investments.

An analysis of the loans other than those on security collateral made by New York City member banks of the reserve system shows that the bankers' acceptances included in the item termed "all other loans" amounted at the end of August to \$424 millions out of a total of all other loans of \$1,819 millions. During the month the rise in bills held by the banks was \$16 millions, against a drop in strictly commercial loans of \$48 millions.

In its current bulletin the Federal Reserve Board publishes figures showing the improvement in the financial situation. Bank failures in August fell to 85, the smallest since last May. In the same month 20 banks re-opened, with deposits virtually as large as those of the 85 banks

which closed. In 27 States no bank failures occurred last month.

The bulletin also points out the rapidity of the return of currency from hoards. Between July 6th and August 31st, approximately \$85 millions in currency returned from circulation. However, in the same period Treasury currency rose \$53 millions, on the expansion of national bank note circulation, so that the net reversal in hoarding (except for gold coming out of hiding) was \$32 millions. This country's gold stock was placed by the Federal Reserve Board at this time at \$4,086 millions. Since the middle of June the gain has been around \$200 millions.

Business news is faintly encouraging. Electrical output is still rising, as are railroad freight car loadings, with the exception of the Labour Day holiday week. The rise last week was about 11 per cent. over the previous week. The steel industry is disappointed at its failure to improve more rapidly, but the operating rate is now up to around 16 per cent. of capacity. Motor makers are making larger inquiry and the railroads, spurred mainly by their desire to help employment, are taking more loans from the R.F.C. to spend for the purchase and repair of equipment.

Building permits in August were 4½ per cent. higher in August than in July, according to the Bureau of Labour. Employment in sixteen industrial groups in August rose 0.5 per cent. over July, although payrolls fell 1 per cent. For manufacturing industries, the increase in employment was 1.4 per cent. and in payrolls 0.3 per cent.

Commodity prices rose about 1 per cent. in August, according to the Bureau of Labour Statistics index, which stood at 65.2, against 64.5 in July. The decline from a year ago was 9½ per cent. The principal rise was that of 2½ per cent. in farm products. A comparison by groups follows:—

INDEX NUMBERS OF WHOLESALE PRICES.
(1926 = 100.)

	August, 1931.	July, 1932.	August, 1932.
All commodities	72.1	64.5	65.2
Farm products	63.5	47.9	49.1
Foods	74.6	60.9	61.8
Hides and leather products	88.7	68.6	69.7
Textile products	65.5	52.7	54.0
Fuel and lighting materials	66.5	72.3	72.1
Metals and metal products	83.9	79.2	80.1
Building materials	77.6	69.7	69.6
Chemicals and drugs	76.9	73.0	73.3
House-furnishing goods	84.9	74.0	73.6
Miscellaneous	68.3	64.3	64.6
Raw materials	64.1	54.7	55.7
Semi-manufactured articles	68.3	55.5	57.9
Finished products	76.4	70.5	70.7
Non-agricultural commodities	73.9	68.0	68.5
All commodities other than farm products and foods	74.2	69.7	70.1

Much of the renewed reassurance in markets is due to the conformity to orthodox economic doctrine of Mr Franklin Roosevelt as indicated in his Western campaign speeches. His outline of a farm relief programme differs in no particular essential from that of the Republicans, except that he condemns the Farm Board, as does nearly everybody. Mr Roosevelt's remedy, at bottom, is the hollow promise of a tariff—a nostrum applied with poor results repeatedly by the Republicans. On the railroad situation Mr Roosevelt has taken a stand which meets with general approval in Wall Street, although with much reason the Republicans claim that he has virtually stolen their thunder. No radical proposals are made. Mr Roosevelt cites the need of larger revenues, of living wages for employees, of reduced capitalisation in some instances, of regulation of competition, of the retention of receiverships and the hastening of consolidations. It is anticipated that he also will shortly make a conservative statement of his stand on public utilities, reassuring those who have feared his alleged ideas of Government ownership or overstrict regulation. Moreover, gossip in Wall Street and in the Press attributes to Governor Roosevelt the intention before long publicly to declare against a soldiers' bonus at this time. Being largely Republican and conservative in its political sentiments, Wall Street naturally has taken heart at the sharp setback to the radical La Follette regime in Wisconsin.

FRANCE.

Politics — Conversion — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, September 28.

ACCORDING to present arrangements, the Chambers will re-assemble for the autumn session on or about October 24th, when outstanding matters to be dealt with will include the Budget for 1933, and, it is expected, the thorny question of Germany's demand for equality of armament status. In view of the fact that the Socialist leader, M. Léon Blum, has frequently expressed views of the latter question which are entirely in agreement with the thesis put forward by the present Cabinet in Germany, it seems practically certain that the fate of the Herriot Ministry will depend largely on the line which it adopts in the Chamber in regard to the German demand. In political circles three contingencies are discussed: (1) That M. Herriot may suffer defeat at the hands of the Socialists, with a large proportion of the Right Centre and Right either abstaining (for tactical reasons) or voting against him; (2) that the fall of the Government may be brought about from within, by another revolt of the "advanced" wing of the Radical Party; (3) that this, although it might bring about the temporary advent of a Radical-cum-Socialist Cabinet, might subsequently bring a closing of the present gap between the bulk of M. Herriot's followers and the rest of the Centre Parties and lead to the formation of a strong Ministry of Republican Concentration. In this connection the possibility of a definitely Moderate Cabinet, headed by M. Caillaux and including both M. Herriot and leaders of the parties which supported M. Tardieu, is being mentioned.

The great Rentes Conversion operation resulted, according to provisional figures, in direct conversion into new $4\frac{1}{2}$ per cent. stock of 81,000,000,000 francs (or a shade over $95\frac{1}{2}$ per cent.) of the 85,000,000,000 francs of 5, 6 and 7 per cent. issues involved. Total demands for repayment were 4,000,000,000 francs, or less than $4\frac{1}{2}$ per cent. of the whole. These payments were compensated to the extent of one-half by subscriptions for the new stock, from non-holders of the old, of rather over 2,000,000,000 francs. The operation resulted, therefore, in a success to the extent of over $97\frac{1}{2}$ per cent. So far as the public debt situation is concerned, 85,000,000,000 francs of high-interest stock has been transformed into 88,000,000,000 francs of new $4\frac{1}{2}$ per cent. scrip, at an immediate cost of 2,000,000,000 francs, plus a further 400,000,000 francs or so representing payment of the accrued portion of redemption premiums, due on conversion of 17,000,000,000 francs of 1927 Redeemable 6 per Cents. and some 2,500,000,000 francs of outstanding 7 per Cent. Treasury Bonds.

The effort was really a Treasury operation, but was carried out mainly at the cost of the Caisse d'Amortissement, which found the financing of the matter perfectly within its resources, so that no Treasury Bond issue has been required. The amount advanced by the Caisse merely represents extinction expenditure which would have been incurred had conversion not been applied, though probably the corresponding amount of normal extinction would have been spread over a longer period. In this way the Treasury will receive, at no cost to the Budget (except for extra printing and personnel), the entire benefit of the operation. This, it is estimated, will represent Budget economy of 828,000,000 francs a year, in addition to a saving of 492,000,000 francs a year by the Caisse d'Amortissement. The cost to the Treasury for extra machinery was met from a credit of 20,000,000 francs opened under the current Budget.

The amounts of the reimbursements and of subscriptions of fresh money were both larger than had been expected. Repayments on Monday were only 60,000,000 francs, and on Tuesday, Wednesday and Thursday not over 200,000,000 francs per day. On Friday, however, demands totalled 1,000,000,000 francs, and on the closing day represented over 2,000,000,000 francs, which came as a complete surprise. The vast majority of the demands for repayment, it was noted, came from the industrial districts

(especially those identified with export trade) and the wine-growing centres, which in both cases have suffered seriously from the present crisis. The widespread anxiety as to pending complications with Germany was also admittedly an adverse factor. In other directions doubts were entertained as to the balancing of the Budget in the near future.

M. Germain-Martin insists that reports that only the minority of the convertible issues was in the hands of the general public are unfounded, and asserts that barely one-third of the stock involved in the operation was held by the Caisse des Dépôts, the Caisse d'Amortissement, the insurance companies and the banks.

There is little doubt that the remarkable success of the French conversion scheme has been largely due to its extreme simplicity. French State issues are, to a very large proportion, in the hands of the humbler classes. The simplest possible conditions are thus always obligatory, if conversion operations in this country are to be successful. The huge mass of peasant holders are asserted to have accepted conversion practically unanimously, in spite of the serious reduction in yield. The celerity of the conversion was remarkable. Within eight clear days from the meeting of the Chambers and the disclosure of the conditions the whole operation of converting some £950,000,000 of stock, held by millions of persons, had been completed. The technical basis of the operation erred, if at all, on the side of sound finance. The greater portion of the stocks involved consisted of irredeemable issues (totalling 55 per cent. of the whole), and it says much for the improvement latterly in French public debt policy that the Government resisted the temptation to convert at least the half, if not the whole, into scrip that would relieve the Budget (especially just now) of heavy annual sinking fund charges. As it is, the whole issue must be extinguished (by annual drawings or buying in on the Bourse) within 75 years.

The foreign trade returns for August (issued this week) indicate a drop on the month of 114,000,000 francs in imports and of 4,000,000 francs in exports, and the totals under both headings were the lowest registered for over ten years. Imports were 2,274,000,000 francs, against 3,188,000,000 francs in August last year and 4,051,000,000 francs in August, 1930. Exports were 1,426,000,000 francs, as compared with 2,810,000,000 francs in the previous August and 3,127,000,000 francs in August, 1930. Exports since January 1st have been 88 per cent. less in value and 26 per cent. smaller in tonnage than in the corresponding period of last year, and imports 33.6 per cent. less in value and 20 per cent. lower in tonnage.

GERMANY.

Import Quotas — Interest Reduction — Employment.

(FROM OUR CORRESPONDENT.)

BERLIN, September 27.

BERLIN, September 27.

HERR VON BRAUN, the Food Minister, has announced, in a speech to the Bavarian Agricultural Council, the long-awaited agricultural programme of the Government, which consists of quota limitation of imports of agricultural products, and a reduction of the rate of interest on agricultural debts. In both the Government have endeavoured to limit the concessions to agriculture in such a way as to avoid unduly harmful effects on the rest of the community, but parts of their programme are none the less questionable from the standpoint of the general economic interest.

The list of goods covered by the new quotas includes, among other things, vegetables (peas and cabbage), tomatoes, fruit, hewn softwood and pulpwood, animals for slaughter, butter, bacon and lard. No cereals are included; cereals are subject to prohibitive duties, and, in addition, the use of breadstuffs of domestic origin is enforced by regulation, so that the desire of farmers for control of imports is already met. The consequent increase in the price of grain, however, is precisely one of the reasons why those farmers who are compelled by considerations of soil and climate to confine themselves to cattle raising and fruit production, and are only receiv-

ing very inadequate prices for their products, are urgently demanding some measures of relief in respect of their products. This demand is now to be met by the new quotas, for it is considered that very little would be effected by new duties on these goods.

Most of the proposed quotas have, however, very little importance for agriculture as a whole. Vegetable cultivation has, indeed, spread very considerably in Germany during recent years, but in comparison with grain, meat and especially with dairy products, it still plays a relatively small part. The removal of Dutch, Italian and French competition, which in some cases was very keen, will come as a great relief to certain specialised farms, but the bulk of peasant holdings will gain practically nothing from it. The same is true of fruit growing. In this case, in particular, the most serious competition, that of tropical fruits, will not, with the exception of bananas, be affected at all by the new restrictions. The timber quotas are primarily of fiscal importance, as the German forests are for the most part owned by the States and Communes. Meat is one of the most important products of German agriculture, and an effective increase in meat prices would, therefore, be very advantageous to the industry, but 99.2 per cent. of the German consumption of meat and animal fats is met out of home production, so that, obviously, nothing worth mentioning is to be gained by German agriculture by a limitation of imports. Fresh milk, too, which plays an exceedingly important part in German agriculture, is not imported to any great extent, so that it has not been put on the quota list. Butter, however, is on the list and the practical effect of the new measures depends, more than anything, on the way in which the butter quotas are administered.

There has been a butter quota for some time, but imports were permitted in excess of the quota, though under an almost prohibitive duty, whereas under the new system they are to be prohibited. Germany has already been in negotiation with the principal exporting countries, Holland, Denmark and Scandinavia, on the question of the allocation of the butter quotas, as the apportionment had turned out to be unfair. An agreement had virtually been reached, but it is not yet known whether the new regulations will necessitate its being scrapped, or whether it will be incorporated in the new system. The German Government, in their communiqué on butter, particularly stressed their intention of endeavouring to reach an agreement with the exporting countries. In any case, however, and this greatly reduces the force of the objections to the new quotas, a German delegation is to get into touch with the principal countries concerned, in order to endeavour to secure a corresponding modification of the trade agreements. Germany considers herself strictly bound by her treaty obligations, and is not trying, as many people have feared, to put her restrictions in force regardless of treaties. That reduces the danger of reprisals from abroad. It is true that the feeling of irritation, especially in the northern countries, is strengthened by these measures, and it is precisely the danger of this programme that while it does not give very much to German agriculture (because it does not take a very great deal from other countries), it none the less provides valuable material for the protectionist agitation abroad, and thereby injures German exports. Its introduction at this moment is due mainly to political consideration for the mood of the farmers, but this mood is largely determined by the erroneous belief that the price of German agricultural products is depressed primarily by foreign competition, whereas really the low prices are primarily a consequence of the inadequate purchasing power of the town populations, and thus ultimately, of the economic crisis.

In the other relief measure, the reduction of interest, a repetition of the compulsory conversion undertaken by the Brüning Government last December has been avoided. The rates of interest on all securities are unchanged, but the interest on mortgages owed by farmers is reduced by 2 per cent. They are not, however, to be reduced below 4 per cent. (most mortgages bear 6½ per cent. at present). The reduction is not to be final and is made in the first place for two years, though the possibility of a prolongation is hinted at. The sum saved is to be repaid towards the

redemption of the mortgage. In order to prevent the credit institutions, which must maintain the service of their mortgage bonds, from becoming involved in difficulties, the Reich will make good, by the issue of Treasury bonds, the losses of those of them whose mortgages consist to the extent of over 10 per cent. of farmers' debts. The interest lost by the "Landschaften," the co-operative real estate credit institutions of the large landowners, which are already in a very difficult position, will also be made good by the Reich. The total mortgage debt of German agriculture amounts to Rm. 7,000 millions, so that the annual saving in interest amounts to Rm. 140 millions. The creditors are almost exclusively Germans.

Interest on personal credits is also to be reduced. That follows, to some extent, from the reduction in the Reichsbank rate from 5 to 4 per cent., but the Government wishes to affect a more extensive reduction than that involves. The details of what they have in mind are not yet clear, but the way is to be paved for it by a reorganisation of the rural credit societies. The rural credit system was transformed only recently when the two leading organisations, the Raffeisen Association and the Allgemeiner Genossenschaftsverband were amalgamated. This already revealed the necessity of a reform of the credit societies, but meanwhile more of the personal credits granted by the societies to farmers have become unrepayable. The Reich is now to place 100 to 200 million marks, in the form of Treasury bonds, at the disposal of the societies, by handing over these bonds, in the first place, to the Preussische Zentralgenossenschaftskasse, which will write off the debts of individual societies to a corresponding amount. This will save the societies from the necessity of procuring from their sound debtors the funds wherewith to write off the doubtful credits, and it is hoped that this will enable them to reduce their rates of interest.

The protection of farmers against compulsory sale of their property and the special provisions for facilitating agreements between agricultural debtors and their creditors, which are due to expire shortly, are prolonged, and in addition the conditions upon which protection against distraint may be claimed, and a composition with the majority of the creditors be put into effect, are made less exacting.

The number of unemployed in Germany has increased very little during the last few weeks, though a heavy increase is usual at this season. Economists are not agreed as to the explanation. The optimists see in it the first symptom of an improved outlook for business, but the sceptics point out that the changes in the insurance regulations have made the statistics unreliable. The decree of last July disqualifying many persons from benefit on the ground that, although unemployed, they had other means of subsistence. These people, who formerly presented themselves regularly at the unemployment exchanges, as benefit is only paid to those who apply there for work, now in many cases no longer take the trouble to go there, as the prospect of finding work is so small. All persons over 60 have also been excluded from the unemployment statistics, as they are no longer deemed capable of work. As, however, the increase in the number of unemployed since July is over half a million less than during the same period of last year, it is very doubtful whether the cause is not actually to be found in a movement of the trade cycle.

How far the Government programme is giving rise to increased employment it is not yet possible to say, as very few figures are yet available. It is, however, already plain that the reductions in wages provided for by the emergency decree are meeting with great difficulties. The workers say they are willing to put up with a reduction in their earnings as long as it arises only from a reduction in working time to 40 hours per week without any increase in hourly rates, and gives rise to a corresponding reabsorption of unemployed workers, but as soon as the employers try to go further, and reduce hourly wages, according to the terms of the decree, in spite of existing tariff agreements, they proceed in very many cases to strike. The strikers are financially supported by the unions, and are also helped by the refusal of the unemployed to accept

work in the establishments where the strike obtains. The usual result is that the employer gives way in order to keep his factory going, and to secure at least the Rm. 100 subsidy for each additional worker employed. The Minister of Labour recently called the attention of the unions to the fact that the support of strikers in such cases is illegal, as the object of the strike is to render nugatory the provisions of the emergency decree. The unions, however, take the line that the decree cannot prevent them from holding their employers to the terms of their agreements by means of a strike. There is a danger that a serious conflict may develop out of this difference of opinion, and the Communists, Social Democrats and National Socialists are at one in defending that trade union point of view.

POLAND.

Unemployment Relief — Finance — Bourse.

(FROM OUR CORRESPONDENT.)

WARSAW, September 18.

WITH the approach of winter, increasing concern is being felt over the unemployment problem, despite the fact that the official figures show that the number of registered unemployed has declined from a peak of 860,081 at the end of March to 215,000 in the middle of August. The concern is over those who are not registered and so not eligible for relief under the law. The Ministry of Finance on September 1st accordingly announced a series of supplementary taxes, the proceeds of which are to be used solely for unemployment relief. These supplementary taxes are placed on theatre tickets, sugar, beer and other beverages, pari-mutuel tickets, electric light bulbs, apartment rents, restaurant bills and safe deposit rentals. It is hoped that a revenue of about 20 million zlotys will thereby be realised, and that the Exchequer will be able to supplement it to the extent of 40 million zlotys, so that a special fund of 60 million zlotys will be available to keep the unemployed this winter from actual starvation. The major difficulty is that these supplementary taxes no longer realise anything like the amount anticipated. Taxation is already excessive, and additional burdens merely bring about further contraction.

The Bank of Poland has withdrawn from circulation 10-zloty banknotes, against which the statutory gold cover had to be maintained, and the Ministry of Finance is replacing them with 10-zloty metal coins containing a percentage of silver. The present silver coins of 1, 2 and 5 zlotys are also being withdrawn by the Ministry, to be replaced by coinage of a more convenient size—meaning, no doubt, less silver. The law requires that an increase in bullion circulation beyond 820 million zlotys must be approved by the Bank of Poland. The circulation of bullion increased from 240 million zlotys at the end of July, 1931, to 268 millions one year later. It is believed to have increased much more rapidly during the past month, and it is now reported to be the intention of the Ministry of Finance—the consent of the Bank of Poland having already been obtained—gradually to increase the volume of bullion to about 400 millions, mainly by the issue of the new 10-zloty pieces. It is asserted in this connection that previous currency laws contemplated a metallic circulation of approximately 12 zlotys per inhabitant, and that the rise in population from 27 to 33 million zlotys since stabilisation was last effected justifies a substantial increase in the issue of metal coins. It is quite true that the contraction in banknote circulation (from 1,254 million zlotys on July 31, 1931, to 1,089 million zlotys one year later) has gone too far, and business rather welcomes the experiment in "controlled inflation" now being carried out. It is, of course, assumed that no serious threat to the maintenance of the gold standard is implied in this ingenious action of the Ministry of Finance in making itself a present of about 100 million zlotys just when the Budget so badly needs it.

Following the Budget deficit of 58 million zlotys contracted during the first quarter of the present financial

year, the preliminary figures for July show revenue as 172 million zlotys and expenditure as 189 million zlotys. The deficit for the year to date, therefore, is 75 million zlotys. Although the Ministry of Finance during July increased its non-interest bearing overdraft at the Bank of Poland by 20 million zlotys (the total at the end of the month being 70 millions), this sum is included in the preliminary Budget figures as income, so that the actual deficit in July was greater by that amount than the amount shown. Since there appears to be no likelihood under present conditions either of securing an external loan or of contracting expenditure to the diminishing revenue, the Minister of Finance must now resort to such expedients as increasing the circulation of metal coins to keep the Exchequer solvent.

ROUMANIA.

Agricultural Conversion — Finance — Exchange — Stock Market.

(FROM OUR CORRESPONDENT.)

BUCHAREST, September 15.

ONE of the first tasks of the newly-elected Parliament was to be the revision of the Agricultural Conversion and Judicial Liquidation Acts, but after a month of parliamentary activity nothing is yet accomplished. There are serious differences of opinion in the ranks of the Government party and in the Cabinet itself on these problems. The latest formula which is submitted to the direction of the Government party for consideration preparatory to its introduction into Parliament as an amendment to the Agricultural Conversion Act provides an agricultural debt moratorium of eighteen months in order to give time for financial arrangements without which the measure cannot be carried through and also to give opportunity to the debtors and creditors to come to a settlement by direct negotiation.

Meanwhile, the Government is continuing in its efforts to find funds for the most pressing needs. The Minister of Finance is now asking Parliament for authority to issue a new Government loan of 6,000 million lei, carrying interest of 4½ per cent. per annum, to be redeemed in sixty years by half-yearly drawings or by purchase in the open market. The loan will be exempt from all taxation, including income tax, and will be received at its nominal value in payment of taxes to the extent of 10 per cent. of the tax payable on condition that the remaining 90 per cent. is paid in cash at the same time. The loan is to be issued in payment of the floating debt of the State and will be calculated for this purpose at its nominal value. On the basis of the present prices of Government Stock on the Bourse the creditors should be able to realise their bonds at about 80 per cent. to 85 per cent. of their nominal value. A Bill has been introduced authorising the Government to revise the budgets of all public departments and autonomous institutes. Drastic cuts of expenditure are to be made, the aim being the realisation of an economy of at least 800 million per month. The collection of taxes is to be accelerated, but certain agricultural taxation is to be reduced.

To judge by the attitude of the National Bank of Roumania it is increasingly difficult for this institution to meet the legitimate trade requirements of foreign exchange. Demands for cheques or transfers, backed by the most complete documentary evidence, are held over without apparent justification for more or less long periods, and the amounts granted are doled out in instalments stretching over weeks. The latest regulation coming into effect on September 15th requires import declarations to be at least three months old, before the request for foreign exchange for the payment of the goods concerned can be considered. This amounts to the enforcement of a three months' credit in favour of Roumania. For goods imported in 1931 and before on the cash against delivery system foreign exchange is no longer to be granted. All these restrictions, of course, interfere considerably with trade, and as a result, the clandestine exchange market is exceedingly active. As far as its weekly returns show, the National Bank has not improved its situation at all.

The following figures compare the gold and exchange reserve and the sight liabilities at the end of May (the first restrictions came into force on May 18th) with those appearing in the statement of August 20th:—

	End May, 1932.	August 20, 1932.
	(In millions of Lei).	
Gold holding	6,071	6,254
Gold abroad	3,345	3,222
Foreign exchange	152	687
Total reserve	9,568	10,163
Note circulation	21,982	20,854
Other sight liabilities	4,729	7,500
Total sight liabilities	26,711	28,354

Proportion of reserve to sight liabilities 35.82% 35.84%

The bank gained in the three months about 600 million lei in exchange. The whole increase took place in the week covered by the last statement, and is undoubtedly due to the loan arrangement with the Swiss banking syndicate. The proportion of the reserve to the sight liabilities improved only by 0.02 per cent. Considering that the Stabilisation Law stipulates a proportion of not less than 35 per cent., the margin in the hands of the National Bank is not reassuring. The authorities apparently hope that the autumn exports of cereals will relieve the situation. A Bill is in preparation imposing very heavy penalties on clandestine dealing in foreign exchange.

SPAIN.

Property Redistribution — Catalonia — Railways — Trade.

(FROM OUR CORRESPONDENT.)

MADRID, September 15.

THE excitement of the military rising has now died down and things have outwardly become normal once more. The number of political prisoners taken, including members of the wealthiest and most aristocratic families in Spain, shows up the widespread character of the rebellion and this has given the Government an opportunity of applying very severe measures to the aristocracy in general and at the same time facilitating the application of the Agrarian Reform Law, which has just been passed. The lands of all those implicated in the rising are to be confiscated without compensation and this measure is to be extended, in principle, to all Grandees of Spain. Whether this radical redistribution of property will produce the results anticipated by the Government is somewhat doubtful in view of the state of mind of those who are supposed to benefit by the innovation—a consequence of the Bolshevik propaganda amongst agricultural labourers—and in any case the application of the new law is likely to cause considerable confusion, for the time being at least.

The military rising facilitated the passing of the Catalan Statute, which has now been definitely approved and will be put into force at once. As a result there was an outburst of optimism on the Barcelona Stock Exchange which became decidedly bullish, but the movement was stopped by Madrid pessimism consequent on the seizure of the big country estates by the Government. The reaction affected state issues which had hitherto been consistently firm; furthermore it is known that Treasury receipts have not come up to expectations and it is feared that a further application may have to be made to the market to cover the deficiency. The city of Bilbao is about to make a public issue of bonds amounting to 17,000,000 pesetas, the proceeds of which are to be applied to public works. The interest will be 5½ per cent. per annum, or slightly higher.

A recent law established an active intervention by the State in the management of all Spanish railways, the Government officials being empowered not only to inspect the books but also to veto any agreement of the boards of such railways, should they think fit. A rather curious clause of this law states that no bank director may become a director of a railway company, the idea being, presumably, to prevent the control of the company from passing into the hands of a banking group, and also to

eliminate possible opposition to the Government's plans concerning the railways. It is thought that this principle may eventually be extended to other spheres where banks wield considerable influence, not only on account of their own holdings of shares but also owing to the large numbers of blank proxies which are usually received by them before the shareholders' meetings. This is another indication of the socialistic tendency of the present Government, but although the latter has apparently declared war on the Grandees, the idle rich and even some of the industrious rich, apart from this they are proceeding cautiously and are making it very clear to the working classes that they must not expect easy times just because Spain has become a Republic. This means that they have now to contradict some of their own pre-revolutionary propaganda.

The favourable balance of trade, which in May amounted to 14,100,000 gold pesetas, has not been maintained in the subsequent months. The figures for June show that the balance is now on the other side to the extent of 27,200,000 gold pesetas. The following is a comparison of the results of the first six months of the last three years:—

	Imports.	Exports.	Total.
	(In millions of ptas. gold.)		
First half-year 1930	1,249.7	1,137	2,386.8
" " 1931	682.5	571.9	1,254.4
" " 1932	482.7	409.3	892.1

The decreases in exports during the first half of the present year were: raw materials, from 86 to 53.8 millions; manufactured goods, from 74.1 to 51.3 millions; and foodstuffs from 382.7 to 302 millions of gold pesetas. Of the imports, raw materials show the largest drop, amounting to about 25 per cent.

ARGENTINA.

Finance — Trade.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, September 17.

EXCEPT in New York, there was but little depreciation of Argentine bonds when the news of the Santa Fé moratorium was published, and subsequently, following Dr. Hueyo's declaration that neither emission nor a moratorium entered into the calculations of the National Government, prices on the European bourses recovered at once and, in certain instances, Argentine bonds were quoted fractionally higher than they were prior to the premature action of Santa Fé.

The statement on public finance published on September 16th is at first sight decidedly reassuring. Once more the Minister of Finance affirms it as his considered opinion that there is no need for Argentina to take extreme measures in order to set its finances on a firm footing. It is maintained that revenue steadily increases and that overdue accounts including salaries are being gradually reduced. The figures for January 1st to September 15th are as follows:—

Revenue.	Paper \$ 1931.	Paper \$ 1932.
Revenue in cash	473,942,315	506,405,093
Custom House	187,430,998	177,150,438
Land tax, licences, &c.	70,091,028	94,930,610
Inland revenue	77,984,151	94,359,276
Tax on transactions	...	13,184,677
Income tax	...	3,349,548
Posts and telegraphs	27,073,192	24,662,950
Sanitary works	24,652,943	13,788,401
Revenue from bonds	2,804,516	5,913,349
Miscellaneous	83,915,477	79,065,844
Negotiation of bonds	80,541,404	258,075,049
Bonds sold	58,484,480	17,973,615
Bonds for payment accounts ..	249,228	16,760,953
Bonds cancelling bills	2,536,105	2,545,183
Treasury bills	16,248,284	5,349,185
Patriotic Loan	...	215,450,133
Other loans	3,023,307	...
Totals	554,483,719	764,484,142
Expenditure.	Paper \$ 1931.	Paper \$ 1932.
Salaries	240,924,691	289,825,861
Expenses	41,401,293	50,120,008
Cancellation or amortization of credits ..	6,009,549	21,092,469
Debt services	159,718,311	202,752,108
Accounts from private firms and transport companies ..	22,192,240	26,504,126
Subsidies to provinces	316,800	377,520
Council of Education	46,182,933	59,168,763
State Railways	3,200,295	22,767,692
Subsidy of B.A. and National Territories ..	2,801,258	7,681,193
Sanitary funds	2,074,052	8,137,064
Municipal works	12,330,167	13,404,607
Public works	31,529,015	40,265,666
Armament laws	3,074,951	2,044,322
Totals	571,755,555	750,141,399

Local comment on the foregoing is guarded, but the following quotation from *La Nacion* is illuminating:—"Treasury receipts were \$549,034,029 from all sources, plus \$215,450,113 from the Patriotic Loan. But the estimated receipts for the whole year were \$852,328,027, and the loan has brought in about \$260 millions. There is thus a shortage of some \$300 millions, and even so the Treasury has still \$45 millions to receive on account of the loan. Income tax, down to yield \$51 millions, has only brought in \$3,349,548. Customs dues, estimated at \$290 millions, have given \$177,150,348. Internal revenue, down for \$151,900,000, brings in \$94,359,276. The tax on transactions, estimated to bring in \$45 millions, has not given more than \$13,184,677. Admittedly, the estimates are for the whole year, whereas the figures given above refer only to collections for the period ending September 15th, but they serve to give a general idea of what results will be and the amount of optimism justifiable under such circumstances." No one doubts for a moment the honesty of purpose of the Minister of Finance, but the figures themselves make it abundantly plain that the additional funds come from the Patriotic Loan, and its partial rediscount in the Conversion Office. The heavy increase in expenditure is naturally explained by the efforts of the Government to use the funds brought in by the loan for the purpose of meeting past due indebtedness. What troubles the situation at the present time is the fact that this local indebtedness is still very far from being satisfied, and that, unless funds can be found to put the Government account straight without further loss of time, no real improvement in the local situation can be expected.

As regards the exchange situation, the outlook is decidedly better. There is more cover available now for local remittances than there was a couple of months ago. Produce prices are up and international demand for Argentine goods is more general. The Exchange Control Committee have not relaxed their restrictions, nor are they likely to do so for some time to come. This is a grave error, seeing that large numbers of private individuals, finding themselves unable to obtain comparatively insignificant remittances, cedula interest, pensions, house rents, and so forth, have undoubtedly made up their minds to withdraw the whole of their capital as soon as that may be conveniently done. As far as can be gathered locally the Exchange Control Committee has not exercised diplomatic discretion in dealing with the remittances made for account of the small *rentier* resident abroad, whereas it is notorious that wealthy Argentines with political connections have found means to meet all their requirements. It is to be feared that this phase of exchange control will be found to have done great harm to Argentine interests if ever the time comes for this country to borrow abroad. For undoubtedly the person who has been most hit by exchange restriction is the small investor.

The most notable feature of Argentina's trade is its heavy shrinkage, the total volume of imports and exports for the first seven months of 1932 amounting to \$581,763,544 gold, as against \$719,681,511 gold for the corresponding period of 1931. Her imports are less by \$127,721,272 gold, while her exports are down by \$10,196,695 gold. These figures show that the favourable balance of trade, \$167,898,838 gold, cannot be regarded as evidence of returning prosperity. For the plain truth appears to be that, unless very drastic measures are taken without delay, Argentine business will have reached such a low level that recovery cannot be brought about, by anything short of a miracle, for several years to come.

CANADA.

Crops — Business — Railways Problem — Parliament — Wheat Pool — Soviet Relations — Trade.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 6.

THE Bureau of Statistics has not yet hazarded any forecast of volume of the Western wheat crop, but estimates compiled by other organisations place it between 400 and 450 million bushels. This means that Canada will have

to find a market for an additional 140 million bushels of wheat as compared with last year, and in view of the fact that Germany, France and Italy are reported to be harvesting excellent crops and maintaining their restrictions on wheat imports, the problem of finding the necessary markets presents obvious difficulties. Wheat prices have been dropping as the majority of the prairie farmers are so hard pressed for ready cash to meet urgent obligations that they want to dispose of their wheat as soon as possible. The stocks of Canadian grain in store on September 9th were estimated at 125,789,882 bushels, as compared with 111,689,572 at the parallel date in 1931. The grain harvest in Eastern Canada is now finished except in a few upland areas, and the yield is rather below the average. The Maritime provinces have recently been visited by severe hurricanes and they have done very serious damage to the apple crop in the Annapolis Valley in Nova Scotia and other places. Apple production in Canada promises to be smaller than in 1931.

Some signs of improvement in general business conditions are now being claimed, and it is reported that autumn business shows a distinct gain as compared with either of the past two years. An increasing demand for merchandise as the result of the marketing of the new crop is helping to stimulate industrial activity, especially as retailers' stocks had been reduced to a very low level. Autumn orders for the textile and boot and shoe factories show a decided gain, and the sales of agricultural implements are better. A sharp advance in the price of raw cotton has been responsible for an upward adjustment in the price of finished cotton goods and the Canadian cotton companies will not be faced with the necessity of taking losses on inventories such as they have been confronted with in recent years. The building trades are still very idle, and the value of the new building permits in August was only \$3,331,278, as compared with \$4,227,673 and \$8,201,979 in August, 1931, and 1932 respectively. On August 1st the employment index of the Bureau of Statistics had fallen to 86.3, as compared with 88.7 on July 1st and 105.2, 18.8 and 127.8 on August 1, 1931, 1930 and 1929 respectively. It is therefore quite plain that during the coming winter the various authorities will again be faced with heavy expenditure for unemployment relief.

The downward trend in commodity prices seems at last to have been checked, for the Bureau of Statistics' wholesale index number in August rose to 66.8 from 66.6 in July, 80 quotations were higher, 65 lower and 357 remained unchanged, but the gain marked the first rise since November, 1931, when the index stood at 70.7.

Railway earnings have shown a little improvement as the result of the heavier movement of grain, but the general situation of both the great railway systems is still very unhappy, and the report of the Royal Commission on Transport, now completed, is awaited with intense interest. It is now taken for granted that it will not recommend any scheme of amalgamation, but will content itself with suggesting some plan whereby duplication of services can be eliminated and other economies effected. Whatever its contents are, the report is certain to provoke sharp controversy, and when the Bennett Ministry begins to embody its recommendations in legislation some stiff parliamentary battles are anticipated.

The Federal Parliament has been summoned to meet for its regular session on October 6th and the Cabinet is holding regular meetings to discuss its sessional programme. It is expected to bring down the measure of tariff revision which will implement the fiscal agreements concluded at the Imperial Conference without delay as business is being checked by the unwillingness of manufacturers and merchants to make further commitments until they know the new tariff schedules. The Opposition will decide upon its attitude once it is apprised of the exact character of the tariff concessions, but it is likely in general to take a critical line towards the Conference. Meanwhile, the first opportunity of testing public sentiment about the Conference and its works is being afforded by a by-election in the South Huron division of Ontario, necessitated by the death of the sitting Liberal member. Normally, in view of the continuance of depressed con-

ditions for agriculture the Liberals would have had little difficulty in holding a rural seat which has been traditionally Liberal, but the situation is complicated by considerable signs of agrarian insurgency, boding ill for the prospects of the Liberal party at the next general election. The new third party, styled the Co-operative Commonwealth Federation, which was organised in the West two months ago, is trying to draw into the net a variety of agrarian labour and Socialist bodies, and its sponsors profess to be gratified by the encouragement which they are receiving in their campaign of organisation.

The Federal Government has again found it necessary to renew guarantees to the banks for advances to be made to the wheat pools in connection with the handling of this year's wheat crop. Pressure was apparently brought upon Mr. Bennett to set up a national wheat marketing board, but he declined to do so. The pools, despite their misfortunes, seem to have retained the loyalty of their members in remarkable fashion, and are still a very important factor in the Western grain trade, but the banks, in view of their previous experiences, are very chary about advancing them money without guarantees.

The trade relations of the British Commonwealth with Soviet Russia bulked very large in the more controversial discussions of the Imperial Conference, and in light of the Canadian Government's insistent demands for an embargo upon Russian imports into Britain, considerable speculation and surprise was occasioned last week by the arrival of a Danish tanker in Montreal with a cargo of Russian oil from Batum. The mystery was solved by the disclosure that it was part of a transaction whereby the Aluminium Company of Canada, which is a subsidiary of the American Aluminium Company, and, like it, is con-

trolled by the Mellon interests of Pittsburg, had contracted with the Soviet authorities to supply them with aluminium products, chiefly wire and cables, for their electrification programme, and to take in payment crude oil. The oil was consigned to the La Salle Petroleum Company, which, after refining and distributing it, will pay the proceeds to the Aluminium Company. Oil does not figure in the list of Russian products covered by the embargo, but it is understood that the consent of the Bennett Ministry to the transaction was secured and a permit authorising the discharge of the cargo was given by the National Revenue Department. The value of the company's contract with the Soviet Government has not been disclosed, but it is stated to amount to a substantial sum, and as a result the company has been able to take on 300 additional hands at its plants at Shawinigan Falls and Arvida in Quebec, to the relief of the local unemployment situation. Moreover, it is announced that another vessel, with 14,000 tons more oil, is on its way to Canada, and that another shipment is expected before the close of navigation upon the St. Lawrence.

The foreign trade returns for August are given below:—

	August, 1930.	August, 1931.	August, 1932.
Exports	\$ 69,290,228	\$ 48,763,652	\$ 41,314,120
Imports	77,906,294	47,308,079	36,527,262

They reveal a favourable balance of \$4,786,858, which is comforting to the protectionists. The figures for July and August also show a notable change in the trend of Canadian exports; during these months Canada exported to the British Commonwealth goods valued at \$40,255,935, and to the United States goods valued at \$24,714,432, whereas during July and August, 1931, the respective figures were \$36,738,057 and \$43,330,000.

BOOKS OF THE WEEK.

World Production.

THE League of Nations has for some time past published an annual volume dealing with the movements of world production and trade. In the current issue* the body of information has been considerably expanded, and its presentation improved. There is a good deal more about manufacturing output, as well as the production of food-stuffs and raw materials; some information is given about particular countries and products; and a rough estimate is now given for the movement of world production as a whole. As far as the incidence of the world slump can be measured in figures, this volume provides a better measurement than is available from any other source. The League's statisticians possess the art of presenting their information in a readily intelligible form, without too much "smoothing" or parade of statistical method; and they are not afraid of putting forward tentative conclusions even where the data are admittedly defective. They are, of course, at the mercy of the national statistical agencies which exist in the various countries. Some badly-needed figures are missing altogether, and even others suspect of being little better than guesses; and even where figures are most abundant they are often not readily comparable on an international basis. Still, the League statisticians do their best with what they can come by; and it is on the whole a very good best, and steadily better from year to year.

In the present volume, the basis used is the average of the years 1925-1929—that is, the period of rapidly expanding production, especially in Europe, which preceded the world slump. On this basis, the world's production of primary goods rose from 95 in 1925 to 106 in 1929. The output of industrial raw materials alone rose much more rapidly than this—from 92 to 111, although one conse-

quence of the rapid technical changes in industry was that more finished goods were being made with a given quantity of crude material. Yet the output of finished industrial goods only about kept pace with that of industrial materials—rising from about 92 to 112. This was partly because the accumulation of stocks was beginning even before the slump set in; but it may be also partly due to the less representative character of the statistics of industrial output, which are based on a far smaller number of countries than the figures for primary products. Certainly between 1925 and 1929 total world production rose a good deal more sharply than the figures for primary products would suggest; for the output of foodstuffs, which bulk largely in the total, rose much less than that of either industrial materials or finished manufactures. Moreover, during these years the volume of services, which are not counted at all in the figures of production, probably rose most rapidly of all.

Over the same period the volume of world trade also advanced rapidly, from 91 in 1925 to 110 in 1929; and there was a noticeable shift in the character of this trade, the proportion of manufactured goods in the total tending to grow at the expense of primary products. With the advance in industrial development of new countries, world trade was tending to assume a more complicated form, as a complementary exchange of finished or semi-finished goods, and no longer so largely an exchange of finished goods for crude materials. World tariffs were rising even then, but not fast enough to interfere with this tendency, or seriously to check the total growth of trade.

The figures for the years since 1929 present a very different picture. World output of all primary products has indeed fallen only from 106 in 1929 to 96 in 1931. But whereas the output of foodstuffs is only down from 103 to 99, that of industrial raw materials has dropped from 111 to 91, and manufacturing industrial production from 112 to about 85, the discrepancy being again partly accounted for by the huge increase of accumulated stocks. For the volume of world trade in 1931 the League does

* "Review of World Production, 1925-1931." League of Nations Economic and Financial Intelligence Service. G. Allen and Unwin.

not venture on a precise estimate; but it puts the decline in the neighbourhood of 20 per cent. from 1929 to 1931.

This decline is, of course, like the advance of the preceding years, very unevenly distributed over the various parts of the world. In total production of primary goods, Africa and Oceania show, even in 1931, only a slight decline as compared with Europe and North America, the fall being heaviest in the United States, and Russia alone of all countries recording a continued rapid advance. Industrial activity fell in the United States from 108 in 1929 to 74 in 1931, or by more than 30 per cent., and the decline in Germany was of equal magnitude, whereas in Great Britain the fall was about 20 per cent., and in France not more than 10 per cent.

The "Review" also includes a valuable survey of price movements, both generally and in relation to particular classes of goods. This brings out clearly both the general widening of the gap between wholesale and retail prices, and the divergent effects of currency and tariff policies on price-movements in the different countries. It also shows the remarkable changes which have occurred in the "barter" terms of trade, owing to the heavy fall in the prices of foodstuffs and materials; and it gives useful tables for Germany and Austria comparing the movements of the prices of cartellised and non-cartellised goods. Indeed, this section dealing with relative prices may be regarded as the most important part of the "Review"; but it is not of a nature to be readily summarised in a few lines. As an intelligent commentary on the influence of divergent price-movements on the course of economic events it is invaluable to all students of the underlying factors of the world depression.

SHORTER NOTICES.

"Women's Work Under Labour Law." No. 2. (London). P. S. King. 264 pp. 6s.

THE study of protective legislation for women in industry and agriculture recently issued by the International Labour Office is of considerable interest, despite its forbidding appearance. It also, we must confess, should be a source of shame to some of its more "civilised" readers, when they compare the record here coldly set out of the extent to which the various Governments have either ratified or put into effect international conventions relating to women's labour. Over and over again, in this Report, we read that "among fifteen States which have ratified" a particular convention, Great Britain is not included; and while it is certainly arguable that ratification by, say, a minor South American State, even if the State also passes what would be considered very advanced legislation, does not necessarily mean much, that is not a full defence of either Great Britain or the United States. The State of Peru may possibly enforce its very comprehensive law for prohibiting women's night work no more effectively than the early British Factory Acts were enforced; but even a half-enforced Act must be better than the position in the United States, which can point to no legislation at all. Nor can any member of the Nordic races, we should imagine, look with pride upon the situation as regards maternity and childbirth when he compares the provisions made for working women during this time by the Soviet Union with the state of things in Great Britain and America, both of which lay down a short period during which employment is forbidden, the Americans paying nothing whatever to help the mother, and the British only the questionably adequate sums laid down in the Health Insurance Acts. Furthermore, as regards the protection of women from sweated wages, the United States Supreme Court seems to be steadily disallowing such legislation as has been passed by the separate

States of the Union, except in cases (such as Massachusetts) where the law does not lay down any penalty for the employer.

The whole of the summaries of legislation upon various aspects of women's work, indeed, makes very interesting reading, which ranges from the difficulties presented in the regulation of wages to States in which the married woman is still legally in whole or in part under the power of her husband to the problems of "moral protection of women" and that somewhat excessively grandmotherly country which specifically debar women from assisting in the production of obscene literature. Apart, however, from the apparently slow rousing of the countries which are commonly called advanced, the most interesting information comes from the Soviet Union, which, to its credit, makes elaborate and generous arrangements for rest periods before and after confinement, for nursing of infants during factory employment, and for the adequate maintenance of nursing mothers, and has recently initiated a plan for the partial reservation of certain occupations for women workers—an idea which had previously occurred to no State but Cuba. To what extent the Soviet regulations are actually enforced is not stated in the Report, whose information is, naturally enough, much fuller for States which are members of the League of Nations than for those that are not. It is, nevertheless, interesting to see that at any rate one country which is in process of rapid industrialisation and is endeavouring to put its greatest effort into the production of capital goods rather than the improvement of the standard of life has not thought it necessary, as in the days of the industrial revolution it was thought necessary in Great Britain, to build up its capital equipment at the expense of the bodily health of the generation which is to reap its fruits.

M. I. C.

"Moody's Manual of Investments." Edited by John Sherman Porter. In 5 Vols. (London and New York). Moody's Investors' Service, Ltd. 28 per vol.

THESE elaborate American volumes are well known as constituting a complete and invaluable encyclopedia for the investing public. The 1932 editions, which deal in turn with Government, public utility, railroad and banking, industrial insurance and investment trust securities, maintain their previous high standard and bring up to date all available information of interest to the investor. The industrial volume includes an interesting statistical analysis of America's basic industries, while that devoted to Government securities contains chapters on reparations and war debts, foreign trade by countries, and statistics of gold holdings and note issues. Special features of the other volumes are sections on the Federal Reserve System, the Federal Farm Loan System, the Bank for International Settlements, and surveys of railroad and public utility progress. The series should prove an indispensable work of reference for all banking, insurance and other financial or industrial institutions.

The Stock Exchange.

WOOLLEN TEXTILE COMPANIES.

In the *Economist* of September 17th we examined the position of the cotton textile companies. Turning to the woollen textile trades, we find less evidence in the overseas trade returns of the benefits of a depreciated £ and the boycott of Japanese goods in China. The lower exchange certainly favoured exports of woollen tops and yarns—comparing the eight months of this year with the corresponding period of 1931 the exports of tops have increased by 46½ per cent. and those of yarns by 17.8 per cent.—but the exports of woollen manufactures have been actually 15 per cent. lower this year than last, as will be seen from the following table:—

	Eight Months ended		
	1930.	1931.	1932.
Wool tops	1,943,854	1,296,593	1,899,903
Woolen and worsted yarns	6,915,302	4,614,242	5,611,494
Woolen and worsted manufactures (except apparel)	19,170,168	12,559,569	10,667,333

In a few directions exports of woollen goods have increased this year, notably to Scandinavia, Holland, the Irish Free State, India and New Zealand, but it is disappointing to find that exports to the British Empire as a whole have declined, while there has been something like a slump in sales to South America. Business with France has also declined. This may be a reaction of the new import duties which has killed the women's dress trade between London and Paris fashion houses. The exports of woollen and worsted tissues to individual groups are shown in the following table:—

EXPORTS OF WOOLLEN AND WORSTED TISSUES.

	Volume.			Value.		
	Eight Months.			Eight Months.		
	1930.	1931.	1932.	1930.	1931.	1932.
British Empire	Sq. yds. 25,896,000	Sq. yds. 17,380,900	Sq. yds. 19,180,200	£ 4,048,884	£ 2,423,116	£ 2,321,412
Central and South America	17,078,200	12,505,800	8,552,900	4,017,532	2,533,717	1,537,135
Other countries	36,678,900	28,869,500	28,905,500	8,275,350	5,982,882	5,287,551
Total	79,653,100	58,756,200	56,638,700	16,341,766	10,939,715	9,146,098

It will be seen that, comparing the first eight months of this year with the corresponding period of 1931, exports to Central and South America have fallen by nearly 40 per cent., those to the British Empire by over 4 per cent., and the world total by 16 per cent.

Fortunately the woollen textile companies are much less dependent on the export trade than is the cotton textile industry. Indeed, the protection of the home

market, in addition to the indirect protection of the depreciated exchange, created something like a boom in the woollen textile trades last autumn. Under the Abnormal Importations Act a 50 per cent. protection was provided, but later the duties on woollen piece goods were reduced to 20 per cent. and those on woollen yarns to 10 per cent. There are, of course, manufacturers who maintain that these duties are not sufficient to keep out foreign imports, but it appears that Yorkshire is still securing the bulk of the trade in woollen goods which in the past were automatically imported from the Continent. Looking back on the heavy buying which took place last autumn, it is now evident that optimism was overdone, for the manufacturing section of the industry produced more material than the wholesale section could dispose of, and stocks are still on hand which cannot be cleared. If, however, raw wool prices remain firm—and this is generally expected—the confidence of the industry will gradually be restored. Thus trading conditions should remain reasonably satisfactory for the industry as a whole.

The trading results of the leading woollen textile companies for the past two years are shown in the table at the foot of this page. Actually many of the largest firms in Yorkshire are private companies whose names are scarcely known in London. Of the wool-combing section of the trade, Isaac Holden and Woolcombers, Ltd., are the best known, and being public companies have shares quoted on the London Stock Exchange. As these two firms work on a commission basis, they are not affected by fluctuations in the prices of raw wool. Woolcombing should be the first section to feel the benefit of any improvement in general trade. In 1931, the results of Woolcombers, Ltd. already showed remarkable improvement, the net profits being more than doubled. In the spinning section, Illingworth Morris do a large and varied trade, so that unless general conditions are good, the company is never fully employed. At the moment, it is benefiting from the increased demand for worsted cloths for China and has orders in hand for the supply of yarns from the manufacturers in this trade. For the ten months to March 31, 1932, the company's profits were higher, which was attributed by the directors to the depreciation of the £ and the import duties, but in June at the general meeting the chairman complained of difficult trading conditions and deplored the reduction in the import duties. It may be recalled that in 1927 this company reduced its capital by writing 5s. off the £1 preference shares and 16s. off the then £1 ordinary shares, while arrears of preference dividends to March, 1927, were cancelled. Payment of preference dividends are again in arrears since March, 1928.

Messrs. Patons and Baldwins are the leading manufac-

PUBLISHED BY PITMAN'S

A MAIN CAUSE OF UNEMPLOYMENT

By P. C. LOFTUS. Based on a thorough investigation of the factors leading up to the unemployment débâcle, this book treats of British Financial Policy from a new and important viewpoint. The criticisms and remedies which it puts forward merit the closest study. 92 pp. 2s. net. (By Post 2s. 3d.)

Order from a bookseller or

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

turers of knitting wools and hosiery yarns in the country and have now extended their operations to Angora rabbit wool spinning. They have factories also in Canada, Australia and New Zealand. The company's mills are all efficiently run, large sums having been spent on bringing them up to date. The profits for the year to April 30, 1932, showed an increase of no less than 140 per cent., but comparison with the results of the preceding year is not altogether valid, seeing that the latter were affected by losses over the Australian exchange. The company has been considerably helped by the bigger home demand for hand knitting yarns—for the knitting craze has affected all classes of the female population and woollen materials in general are enjoying a great vogue. The company's overseas factories have also been more actively employed.

Salts (Saltaire), spinners and worsted stuff manufacturers, a firm which covers every section from the processing of the raw wool to the finished fabrics, reported a sharp improvement in business as the result of the departure from the gold standard, but the chairman, in his speech in June, referring to the present lack of orders, complained that an insufficient protection was given to the worsted industry by the present duties. The company has effected considerable economies in its operating expenditure and has steadily improved its position in the last few years.

Winterbotham, Strachan and Playne, the West of England woollen manufacturers, dyers and spinners, have derived some benefit from the depreciated exchange, although the slump in purchasing power abroad has affected the general volume of their export sales. The import duties have conferred no advantages on this company as there is no foreign competition in the class of cloth which it produces. Steady dividends have been paid by this combine since its formation in 1920.

Wolsey, Ltd., the well-known manufacturers of hosiery and woollen underwear, showed a slight increase in profits in 1931, but the total was still 30 per cent. below the level of 1929. At the general meeting in March the chairman looked to a great improvement in the domestic hosiery trade as a result of the import duties and reported that in spite of the serious decline in the export trade the output from the company's factories had been greater than ever.

Turning to the market valuations of the "equities" of these woollen textile companies, we find that the Stock Exchange apparently takes an optimistic view of the future earnings and dividends of the leaders. The next table gives the lowest prices of the year, the present market prices, the current dividends and dividend yields:—

	1932 Prices.				Div. %	Yield %
	Lowest.	Present.	Divs.	Div.		
Woolcombers £1	51/3	72/6	11½ free	£ s. d.	3 2 0	free.
Illingworth Morris & Co. ...	1/8	3/-	Nil	4	2	9 free.
Patons and Baldwins £1	24/6	39/6	7½ free	5	1	3 free.
Salts (Saltaire) £1	1/6	3/9	Nil	Nil		
Winterbotham, Strachan & Playne £1	17/6	17/6	5	5	14	3
Wolsey "A" £1	9/10½	13/9	3	4	7	3

The woollen and worsted industry is now making its claim to the Import Duties Advisory Committee for a higher measure of protection, but it must realise that it cannot live and prosper on the home market alone, and that, without an expansion of international trade, its future prospects are limited. It is difficult to avoid the conclusion that near future prospects have been adequately discounted in the market prices of the dividend-paying companies.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
October 4. October 6.

DISPITE the virtual settlement of outstanding industrial disputes over the week-end, markets again bore a hesitant appearance, and in face of the continued lack of international understanding abroad and the break-up of the

"National" Cabinet at home, dealers were not inclined to increase their commitments. The funds were fairly well maintained, Assented War Loan being quoted at a new high record, but less was heard of market talk, to which reference was made in this column last week, regarding the possibility of the Treasury meeting forthcoming calls without resorting to a new issue.

Gilt-edged stocks suffered initially from profit-taking, but by mid-week quotations were again improving. Assented War Loan went ahead steadily. Conversion 3½'s proved a strong spot, while a renewed demand was experienced for Treasury 3 per cents. India Loans remained firm and Australian issues were persistently buoyant in anticipation of the terms of the conversion offer which is shortly to be made to holders of New South Wales 5½ per cent. Stock. Commonwealth Fives were also firmer.

In the Foreign market, Japanese loans suffered from nervous selling, due to renewed fears regarding the outcome of the Manchurian problem, but Chinese commanded considerable support. German bonds were steady, and Austrian Sixes were maintained, while the Sevrens enjoyed and maintained an improvement. Argentine stocks revealed fresh strength, and Buenos Aires issues were mostly higher. The San Paulo Coffee Loan weakened and Chileans were out of favour.

The feature of the Home Rail market was the substantial demand for the Prior stocks, resulting in rises of a point or two, accompanied by corresponding liquidation of the "equities," the week's traffics being once again extremely unimpressive. Foreign rails were in no better shape, the Argentine "Big Four" having a heavy aspect.

In the Industrial Share market quotations generally had no decided trend, and the influence of Wall Street was erratic. Trans-Atlantics strengthened in mid-week after early irregularity, Cables and Wireless being helped by a strong speculative demand on Thursday. Home issues were inclined to sag in the absence of support. Iron and steel shares were quiet, but among coal shares Amalgamated Anthracite found favour. Textiles again lost ground, and rayons were on offer, Courtaulds losing a fraction. British Aluminium improved on provincial buying, while among other miscellaneous issues Imperial Airways were a good feature and Harrisons and Crosfield were in demand. Criterion Restaurants reflected the cut in the interim dividend.

Despite the receipt of worse news regarding the position of the American oil industry, the oil share market was only slightly reactionary. Paris came in a seller, and fairly large lines of Shell and Royal-Dutch shares changed hands, the latter emanating mainly from Brussels. The news on Thursday of a reduction of 1 cent per gallon in the price of petrol by the Standard Oil Company of New York weakened sentiment. Cheap buyers were in evidence for rubber shares at one time, but transactions were hardly sufficiently numerous to test values. Tea shares were mainly steady, though there was little activity.

In the Mining section quotations had no decided trend despite an improvement in metal market prices in mid-week. A large turnover occurred in Gold Fields, and although there were several rumours as to the cause of the spurt no official explanation was forthcoming. Durban Deep were purchased from the Cape. Diamond shares were dull and Rhodesian copper shares experienced little change. Wiluna enjoyed a rise on Tuesday and this im-

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

FOREIGN STOCK EXCHANGES.

NEW YORK.

Business on the New York Stock Exchange was fairly well maintained, but the manner in which quotations fluctuated indicated that dealers and public alike were taking a reserved view of the much-advertised "revival," preferring to wait for further evidence of an improvement in commodity prices and a clarification of the political situation. Markets opened with a considerable amount of profit-taking, particularly in Rails. A sharp break occurred in Drug Incorporated on the announcement of that company that they would undertake drastic reorganisation unless the landlords of their chain stores effected reductions in rents. American Can was also depressed by its failure to pay an "extra dividend," though the regular payment was maintained. Railroads had a firmer appearance in mid-week following President Hoover's appeal that wage reduction discussions should be postponed until the New Year. Operators with bullish inclinations took heart from the Federal Reserve's encouraging review of business conditions, an improvement in the industrial situation of more than seasonal proportions being reported for the first time for months. Industrial statistics again bore a mixed appearance. Commodities were inclined to weakness where changed, but preliminary figures of car loadings suggested that a further substantial improvement has taken place. Steel production was reported at 17½ per cent. of capacity, against 16 per cent. the previous week. Electric power production for the past week showed a decline of 10.2 per cent. compared with the similar week of 1931, but the previous return showed a fall of 11.2 per cent. The New York Times' Business Index was 54.2 for the week ended September 17, against 54.5 for the preceding week.

* 2-hour session.

PARIS.

The Bourse opened with a heavy appearance, but after the session had progressed for a time prices tended to rise only to be followed by another reaction. French Rentes were adjusting themselves for conversion reasons, while convertible stocks declined to their repayment value. Business showed no inclination to revive in view of the uncertain political outlook. Canadian Pacific scored a sharp gain on Monday, but Suez Canal were liquidated. Banking shares fell, Bank of France falling 195 to 11.970 on Wednesday.

BERLIN.

News that the Government would not decree a fresh cut in interest rates was received with satisfaction, but business remained at a very low ebb. Uncertainty was (Continued on page 604.)

WALL STREET.

Moody's Investors Service Ltd., acting as agents for their New York organisation, can supply immediately a complete statistical service on American Companies (up to date to the current week), company analyses for circularising, or any special service.

MOODY'S INVESTORS SERVICE LIMITED,

King William Street House,
Arthur Street, E.C.4.
Tel.: Mansion House 7685.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are not redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

felt regarding the measures of relief promised to German agriculture. Prices were fairly well maintained at first, but later in the week the Bourse was again attacked by depression, and most leading shares fell. Fixed-interest securities were early in demand, while Reichsbank found support after early weakness.

AMSTERDAM.

The Bourse was very listless all the week. There was a slight activity in Rubbers on news of a further reduction in English stocks, though prices were unaltered on balance. Royal Dutch, however, suffered an early decline. There was a slight general advance on Wednesday, but the improvement was not maintained. Industrials were largely neglected, an exception being provided by sugar shares, which displayed considerable firmness in the later sessions. Tin shares were steadier.

OTHER CENTRES.

The tone of the minor European Bourses was quiet and dull. Paris was a seller of several issues for the account at Brussels, while at Stockholm the general tendency was heavy, and falling prices were the rule, though an improvement occurred in the later sessions. Rayon shares were weak at Frankfurt, where otherwise quiet and inactive conditions prevailed.

INVESTMENT NOTES.

The Coming Government Issue.—The gilt-edged market remains firmer on the completion of the War Loan conversion operation, prices tending upward in anticipation of a coming British Government issue. Whether this issue will be made before the Australian conversion loan, the prospects of which are considered in an article on page 587, remains to be seen. Actually the Australian Conversion Loan is more urgent, for the £13 millions of New South Wales 5 1/2 per Cent. 1922-32 Bonds mature on November 1st. The British Government maturities on December 1st include £140,800,000 4 1/2 per Cent. Treasury Bonds, £12,800,000 4 1/2 per Cent. War Loan and the unconverted balance, which is expected to be under £100 millions, of the 5 per Cent. War Loan. To what extent the 4 1/2 per Cent. Treasury Bonds are held in the hands of Government Departments is, of course, unknown, but it is believed that the Government holdings have lately been switched into this issue. As the Treasury is believed to have something left over from the issue of 3 per Cent. Treasury Bonds, it has been suggested that the Government might be able to provide for the cash repayment of these maturities without making an immediate long-term issue. It is, however, doubtful whether the Government would be wise to cause any further increase in the floating

debt, which now stands at £881 millions, as compared with £612 millions at the end of March, 1932, and £681 1/2 millions a year ago. Moreover, it is likely that the Government will desire to make a new issue of Government stock to provide not only for the December 1st maturities, but for the £114,600,000 of 5 per Cent. Treasury Bonds, 1933-35, which can be called for redemption on February 1st next year. As regards the terms of the issue, the gilt-edged market inclines to the view that a medium-term issue would be desirable. Looking forward to near maturities, we find £105,000,000 of 4 per Cent. Treasury Bonds which may be called on April 15, 1934, on three months' notice, £378,000,000 of 4 1/2 per Cent. Conversion, which may be called after January 1, 1940, on three months' notice (repayable finally on July 1, 1944), and £323,000,000 of 5 per Cent. Conversion Loan, which can be called on three months' notice after May 1, 1944 (repayable finally on May 1, 1964). It would, therefore, be to the advantage of the Government to issue a loan repayable not earlier than, say, 1942 so that a ten-year loan might perhaps suit the Treasury requirements. It is thought that a 3 per cent. stock at 96 might be issued, which, if repayable in 10 years' time, would allow a redemption yield of about £3 8s. 6d. per cent. and a running yield of just over £3 2s. This would compare not unfavourably with the existing redemption yields on the medium-dated stocks:—

	Redn. Date.	Price.	Yield per cent. With Redn.
Long-dated stocks:—			
Consols 2 1/2%	Perpetual	73 1/2xd	3 8 1
War Loan Assented 3 1/2%	1952 or after.	101 1/2	3 10 2
Funding 4%	1960-90	107 1/2xd	3 13 10
Conversion 3 1/2%	1961 aft.	99 1/2xd	3 10 5
Local Loans 3%	Perpetual	86 1/2xd	3 9 6
Medium-dated stocks:—			
Conversion 4 1/2%	1940-44	110 1/2	4 1 10
Conversion 5%	1944-44	115 1/2	4 6 5

It will be seen that a 3 per cent. 10-year loan at 96 1/2 would yield slightly more on redemption than Conversion 5 per Cent. and about 7s. per cent. more than Conversion 4 1/2 per Cent. It should thus be popular with private investors as well as with the joint-stock banks.

The U.S. Rail Merger.—The four-party plan for the consolidation of the Eastern trunk lines of America, which had been approved after revision by the Inter-state Commerce Commission, has now received the sanction of the heads of the four groups concerned. The plan provides for the consolidation of the Eastern railroads system into four groups, comprising the Pennsylvania, Baltimore and Ohio, the New York Central and the Chesapeake and Ohio-Nickel Plate, with a joint capital of over \$8,000 millions. Negotiations for this merger have been going on for the past twelve years, and it is expected that a considerable time will elapse before the specific consolidations now approved of are accomplished. The composition of the merger will be as follows: (1) The New York Central system will absorb the Pittsburgh and Lake Erie, the Delaware, Lackawanna and Western, the Indiana Northern, the Michigan Central, the Toledo and Ohio Central and about fifty-two short lines, together with one-fourth interest in the Pittsburgh and West Virginia. (2) The Pennsylvania system will include the Long Island, the Norfolk and Western, the Wabash, the Baltimore and Eastern, the Baltimore, Chesapeake and Atlantic, the Cumberland and Pennsylvania, the Lehigh and New England, and over fifty more short lines. (3) The Baltimore and Ohio will include the Reading, the Jersey Central, the Western Maryland, the Chicago and Alton, the Buffalo-Rochester and Pittsburgh (which it already controls), the Lehigh and Hudson River, the Maryland and Pennsylvania, and about forty short lines, together with one-fourth interest in the Lehigh and New England. The Chesapeake and Ohio will include the Erie, the Pere Marquette, New York, Chicago and St. Louis ("Nickel Plate"), the Lehigh Valley, the Wheeling and Lake Erie, the Hocking Valley, the Chicago and Eastern Illinois, certain important lines in the Pittsburgh industrial area,

and various minor lines of local importance. Certain amalgamations will be carried out almost immediately, possibly the merger of the Erie and Pere Marquette with the Chesapeake and Ohio, and possibly the Lackawanna with the New York Central. The "Nickel Plate" is, as everyone knows, in serious financial difficulties. The Reconstruction Finance Corporation has advanced sufficient cash to enable it to meet its October 1st interest regardless of the outcome of the negotiations for an extension of 75 per cent. of the notes maturing on October 1st, which are regarded as the final effort of the company to avoid receivership. When the consolidations are completed, it is expected that great economies will be derived, for 300 lines, with a mileage of 53,000, will in future work as four groups. But the main problems of an American railroad will remain, viz., competition from unregulated road carriers, unbalanced capitalisation and high wage costs. Whether debt capitalisation will be reduced as a result of the mergers remains to be seen. As regards the labour unions, their representatives last week refused to meet the committee of railway managers to consider a further reduction in wages on the ground that since they gave their assent to the last agreement for a wage reduction designed to increase employment, employment in the railway industry has actually declined by 37 per cent. The unions are now proposing to forward a request to Congress that legislation should be passed to preserve railway workers' jobs regardless of the consolidations. The present market prices of the leading lines compared with the lowest prices this year are as follows:—

	1932. High.	Low.	Sept. 23.	Sept. 29.
(a) New York Central	38 1/2	8 1/2	31 1/2	30 1/2
Delaware Lackawanna	44	8 1/2	44	41 1/2
(b) Pennsylvania	23 1/2	6 1/2	20 1/2	20 1/2
Wabash	44	1 1/2	2 1/2	3
Norfolk and Western	135	57	102	107 1/2
(c) Baltimore and Ohio	21 1/2	3 1/2	18	18 1/2
Reading	51	9 1/2	40	43
(d) Chesapeake and Ohio	31 1/2	8 1/2	25 1/2	25 1/2
New York, Chicago and St. Louis ..	9 1/2	1 1/2	5 1/2	5 1/2
Erie	11	2	9 1/2	9 1/2

As three of the four big systems in the merger have had to go to the Reconstruction Finance Corporation for help, while the fourth is tied to several weak lines, the merger has naturally not aroused very great enthusiasm in the stock market.

Gaumont-British Picture Corporation.—At the general meeting of the Gaumont-British Picture Corporation which was held this week, the speech of the chairman, Mr Mark Ostrer was remarkable for its omissions rather than for its disclosures. It gave, however, a few details of the production activities of the group. The company has now acquired voting control of Gainsborough Pictures (1928), Limited, a film-producing company with which it had been associated for some considerable time. Gaumont-British and the Gainsborough will now make full use of the new studios which were opened last May at Shepherd's Bush. Mr Ostrer claimed that British films, thanks to the pictures produced and sponsored by the Gaumont-British, now occupied the premier position on the screens of British cinema theatres. He might, however, have added that this was due partly to the fact that the quality of American films had deteriorated as the result of the financial upsets in Hollywood. With regard to the theatre-owning subsidiaries of the group, Mr Ostrer stated that the theatres and cafés owned and controlled by the company now exceeded 300, and extended from Aberdeen to the English Channel and from the east coast to the west. Theatre takings during the summer months had fallen below the average, which he attributed to the exceptionally fine weather, the reduced spending power of the people and the additional entertainments tax. The winter months formed the peak period of the cinema theatre business and, provided there was no trade setback, Mr Ostrer hoped that the company would make good the decline in the average takings of the summer. The accounts of the Gaumont-British were fully analysed in

our leading article last week. It is to be regretted that Mr Ostrer did not say more about the profit-earning capacity of the company, for, as we showed, the net profits last year represented only 6.1 per cent. net on the loan and share capital, plus share premiums. Mr Ostrer was significantly silent regarding the settlement in the action brought by the Fox Film Company against Mr Isidore Ostrer in regard to the contract for the purchase of a 49 per cent. interest in the Metropolis and Bradford Syndicate, which holds control of Gaumont-British. That this action has an interest for the shareholders of Gaumont-British is obvious to everybody, and it is a pity that Mr Ostrer did not take the shareholders into his confidence.

Austin Motor.—The disappointment caused in market circles last week by the announcement that the Austin ordinary distribution was to be halved has been to some extent mitigated by the publication of the full report, which suggests that the reduction was a precautionary and conservative measure rather than one dictated by financial necessity. Trading profit, it is true, has fallen by nearly 22 per cent., but this cannot be regarded as abnormal in view of the difficult conditions prevailing. Net profit, at £390,387, provides ample cover for preference and preferred ordinary dividends and earnings of 182.2 per cent. on the £150,000 of ordinary capital. The ordinary distribution is 50 per cent., against 100 per cent. A further sum of £100,000 is added to reserve account, while the carry-forward is increased from £270,489 to £319,220:—

	1930.*	1931.	1932.

* Seven months.

† Actual for seven months, or 102.8 per cent. for year.

The trend of motor-car sales as a whole is demonstrated by the fact that whereas the number of new registrations of cars taxed on horse power during the first seven months of 1930 was 104,908, the comparative figure fell to 94,804 in 1931 and 91,952 in 1932. The Austin record is remarkable, since, though there were fifty-one manufacturing concerns supplying cars for sale in Great Britain, the company took 50 per cent. of all home sales in the 8 h.p. to 13 h.p. class, 40 per cent. in the 14 h.p. to 16 h.p. six-cylinder class, and 20 per cent. in the 24 h.p. class. Sales in the export market were approximately equal to those of last year, while the sale of vans was considerably increased. The report states that orders

B.U.F. PUBLICATIONS
1 GREAT GEORGE STREET, LONDON

2/6

to date for all the new season models are well ahead of those obtained in the corresponding period last year. During the year the sum of £166,148 was expended on new plant and £61,393 on new buildings. The balance sheet is strong, liquid assets including £1,148,821 in cash, £121,155 in debts, and £105,221 in marketable securities having a market value of £113,180 on July 31, 1932. Current liabilities total £748,171. The 5s. ordinary shares yield about £9 10s. 6d. per cent. at their present price of 28s. 9d., allowing for the dividend of 50 per cent. The highest quotation so far for 1932 is 25s. 6d.

Brazil Funding Plan Extension.—Messrs M. L. Rothschild and Sons announce that they are advised by the Brazilian Minister of Finance that the economic position of his country will necessitate the continuance of the Funding Plan for a second year. Details of the original plan were published in the *Economist* of March 19th last. The scheme provided for the suspension of interest on some twenty-two loans during a period not exceeding three years. For that period interest was to be provided by the issue of 5 per cent. funding scrip, the interest and sinking fund of which are payable in cash. Under an arrangement made by the Brazilian Government with the Board of Inland Revenue, scrip issued in exchange for coupons falling due between October 1, 1932, and September 30, 1933, both inclusive, of the suspended sterling loans is to be issued free of British income tax, no such tax being payable by the recipient or repayable by the Revenue in respect of the value of the scrip or funding bonds to be issued in exchange. Liability to surtax in respect of the value of the scrip on funding bonds will not, however, be affected by this arrangement, nor will the arrangement affect the liability to income tax or surtax in respect of the periodical interest payable thereon.

The Anglo-Siam Meeting.—Interesting references to the financial position of Siam were made by Mr J. M. Ryrie at the annual meeting of Anglo-Siam Corporation this week. A study of the full financial statement of the country, he said, left the impression that Siam had come through her trials better than most countries, in spite of the fact that her finances had been disturbed by Great Britain's departure from the gold standard, most of her currency reserve and a large part of her debt redemption fund being in sterling. Siam had been able to meet all her obligations without borrowing and without using up the whole of her accumulated reserves, and in the circumstances it was to be anticipated that the *tical* would be maintained on a parity with sterling. With regard to the trading position of the corporation, Mr Ryrie struck a cautious note, but pointed out that, while trading profit had declined by £16,654, net profit for the year was only £5,968 less. The report issued last week mentioned economies resulting from the concentration of business at Singapore and Penang (not Shanghai, as was stated in last week's *Economist*), and there has also been an increase in dividends and interest. The chairman declared that as a result of the "May" Commission's report, a duty of 10 per cent. had been levied on imports of *Siamese teak* into this country, and as a result of the Ottawa Conference that duty might be increased and extended to other markets. The large British interests in the *teak* industry of Siam were going to suffer from these preferential duties. Having regard to the duty of 25 per cent on shipments to India, and the additional advantage which Burma enjoyed in the matter of exchange, the marketing of *teak* was not going to be easy. We have been asked to point out that the figure of £81,220 which appeared in "Summary of Profit and Loss," on page 571 of last week's *Economist*, under the heading "Amount Available for Distribution," did not include the sum of £10,000 transferred from "Equalisation of Dividend Fund," which would raise the total to £91,220.

Sheepbridge Coal and Iron.—The results of this Midland colliery and iron-producing company for the financial year to June 30th last reveal a gratifying stability. Gross profit is up slightly at £140,125, while after deduction of the usual charges, net profit stands at £82,692, compared with £74,344 for the previous twelve months. The preference and ordinary shares again receive a dividend of 5 per cent., absorbing £8,368 and £58,558 respectively, while after £20,000 is placed to reserve account the carry-forward shows a drop of £4,234.

Year to June 30.	1930.	1931.	1932.
	£	£	£
Gross profit	150,452	134,415	140,125

Carried forward	99,842	87,260	83,026

The directors are of the opinion that the operations of the Coal Mines Act have so far been to the general advantage of the collieries and that its renewal for a further period of five years will result in additional benefits. The market for pig iron has been unsatisfactory and "stocks are accumulating throughout the country." The company has decided to surrender its leases of the Cottesmore Ironstone Mines in favour of the Frodingham Iron and Steel Company on terms which the board regard as satisfactory. The balance sheet reveals a strong liquid position, while the reserve fund stands at £300,000. The £1 ordinary shares are quoted around 17s. to yield about £6 15s. per cent., allowing for the final dividend of 3½ per cent.

Staveley Coal and Iron.—The accounts of this company, which, besides being interested in coal and ironstone mines, owns coke ovens, by-product plants and blast furnaces, make less satisfactory reading than those of its neighbour, Sheepbridge Coal and Iron. Gross profit, as a result of "fierce competition" and lower prices, has declined from £432,074 to £372,292, and net profit from £286,180 to £219,279. The distribution on the £3,385,356 of issued capital is lowered from 6 per cent. tax free to 5 per cent. tax free.

	1930.	1931.	1932.

Reserve	75,000	75,000	50,000
Carried forward.....	99,135	107,143	107,155

* Tax free.

This conservative step has permitted the addition to reserve account of a further £50,000 and the maintenance of the carry-forward at £107,000. The balance sheet is strong, revealing an adequately liquid position, while general reserve totals £850,000. The company continues to undertake new development schemes, including the setting up of an up-to-date installation for the manufacture of bleaching powder and the erection of plant for the manufacture of blacking. The £1 ordinary shares are quoted at £1½ to yield about £3 18s. per cent., tax free, allowing for the final dividend of 2½ per cent., tax free.

Pritchard's Restaurant Deal.—It is announced by Messrs. Grahams, Rintoul, who have been acting on behalf of certain holders of preference shares in Pritchard's Restaurants, that the preference shareholders who took exception to the terms offered in the directors' circular of September 14th, have already received sufficient support to defeat the proposals. The directors' circular stated that an offer had been received to purchase, for cash, the whole of the issued preference and ordinary shares of the company at a price of 10s. and 5s. 6d. respectively, free of commission stamps and transfer duty. The purchasers stipulated that to make the offer effective it must be accepted, on or before the 30th of the month, by 75 per cent. of the preference shareholders—or such less number as the purchasers might fix—and all the ordinary shareholders. Several large holders of preference stock (chiefly Trust Companies) opposed the scheme on the ground that the sale of the company's business on the terms set out in the circular did not provide a sufficient sum to satisfy the preferential rights of the preference shareholders, who were not consulted before such terms were agreed to. It was also pointed out that the suggested division between ordinary and preference shareholders was not an equitable one, since the ordinary shareholders were to receive, under the offer, £30,000 in cash, while, under existing conditions, the present value of their shares is nil. The preference shareholders appear to have a sound case, and, in view of the large support which the objections have received, it seems probable that an amended scheme will be forthcoming.

Industrial Profits.—During August we received 69 company reports, aggregate profits showing a decline of 26.66 per cent., compared with 34.31 per cent. in July:—

Reports.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).

August was naturally a period of partially suspended animation as regards the issue of company statements, and

the month's figures have a less representative character than those of earlier months. The brewery reports, which accounted for more than half the profits shown in the above table, showed a uniform falling off in earnings, due to decreased national purchasing power and a significantly increased taxation. The month's textile reports, on the whole, showed a marked improvement in earning power since the devaluation of sterling, higher profits being reported, *inter alia*, by Isaac Holden, Tootal Broadhurst Lee, William Fulton, Leigh Mills and Calico Printers (although the figures of the last-named do not appear in our August compilation).

Sherwood Starr.—The annual report of this Rhodesian enterprise affords confirmation of the market rumour that an increase in the ore reserves would be shown. The total at June 3rd last is 246,000 tons, against 151,300 tons twelve months previously. Unfortunately, this agreeable feature has been to some extent counterbalanced by decrease in grade, the average value now being 44.5s. as compared with 46.6s. Present tonnage represents about four years' supply for the mill. In view of the position of the mine in this respect, the extension of the treatment plant was decided upon; completion is expected in November. Last year's capital expenditure totalled £31,900. The balance sheet shows a cash deficiency of almost corresponding amount. Presumably the outlay on plant will have to be refunded before any expansion in profits will be available for distribution. For each of the past two financial periods the dividend has totalled 30 per cent. Current price of the 5s. shares being 18s., the yield indicated is approximately 8 per cent.

Consolidated Main Reef.—Publication of the preliminary ore reserve figures, showing a fairly appreciable decline, was accompanied by a fall in the price of the shares. The issue of the full text of the report to June 30th

THE EASTWOOD GROUP.

EASTWOODS LIMITED.

INADEQUACY OF TARIFFS.

Presiding at the meeting of Eastwoods, Ltd., held, on the 28th ultimo, Sir T. Cato Worsfold, Bt., LL.D., J.P., D.L. (Chairman), said that since the issue of the directors' interim report, issued on February 1st, informing the shareholders of the general situation, there had been some return of confidence in financial circles, and the announcement of the Government's policy of economy and retrenchment, as foreshadowed in the conversion proposals, had led to a gradual resumption of the flow of business generally, though the holding up of the erection of public buildings has retarded the sale of bricks and the employment of those engaged in this particular industry.

After allowing for the adjustments in prices, the volume of business handled had been well maintained.

The company remained in an excellent position to take advantage of the resumption of activities following the recent period of financial stringency and economy in public finance—a resumption which, he believed, was slowly but surely returning to this country.

MANAGING DIRECTOR'S STATEMENT.

Mr Horace Boot. (Vice-Chairman and Managing Director), referring to the heavy taxation in this country, observed how many people, when investing in gilt-edged securities, realised that the investment itself never earned its interest, but that they were taxed to pay their own dividend. On the other hand, money invested in industry actually earned the dividends which were distributed, thus increasing the wealth of the individual and providing further funds for investment. The high taxation to which industrialists were subject had done incalculable harm, because not only had it robbed them of the means of keeping their plant and machinery up to date, but they were called upon to pay tax on any reserves which might be put aside for a "rainy day," thus automatically reducing those funds by 25 per cent. A wise and courageous remedy would be to reduce the income tax on investments in ordinary shares of industrial companies to 2s. 6d. in the £, which should have the effect of inducing the investor to support industry instead of putting his money into gilt-edged securities.

The report and accounts were unanimously adopted.

EASTWOODS FLETTONS.

At the annual meeting of Eastwoods Flettons, Ltd., Mr Horace Boot (Chairman) said for a considerable number of years the British brick manufacturer has been suffering from unrestricted imports of foreign bricks, which had come mainly from Belgium and France. It would be readily appreciated by the shareholders that the company had really never been competing on the same basis owing, as he had said, to the generally better conditions and higher taxation ratios ruling in this country.

The 10 per cent. duty originally imposed, did not represent even the extra cost in this country of National Health and Unemployment Assurance, leaving outside the additional social services and welfare schemes, plus the enormous difference in wages paid to the foreigner. Was it a surprise, therefore, that the English works are closing and foreign importations go on merrily? The surprise was that under the "present circumstances" foreign importations of bricks were not prohibited. Again it is the British workman who suffers owing to the short-sighted policy of our legislators.

The report and accounts were adopted.

EASTWOODS CEMENT.

At the annual meeting of Eastwoods Cement, Ltd., Mr Horace Boot (Chairman) said that the economy measures of the new National Government led to the drastic curtailment, if not the actual suspension, of development work of every kind. The wisdom of that course in its application to the activities of local authorities was immediately contested by the manufacturing interests. It was seen at once that unless certain public works in progress were permitted to proceed, the savings on the one hand would be more than offset by expenditure of a vicious and unproductive nature on the other. Further, the building societies, who in the past had done so much for this country, found it desirable to embark on a restrictive policy for their own protection. Consequently, for a considerable period, until confidence was restored, many important contracts were wholly or partially suspended, and new work was postponed for more propitious times.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 24, 1932, amounted to £7,960,900 against ordinary expenditure of £5,121,600. After allocating £425,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £313,342 the operations for the week, as shown below, reduced the National Debt by £2,101,000 to £7,673,375,000:— (000's omitted.)

Treasury Bills	£ 734	Public Department Advances	£ 2,700
Road Fund	135		
	734		135
			2,835

A complete analysis of the National Debt at June 30, 1932, was printed in the *Economist* of July 2, 1932.

Messrs Samuel Montagu and Company write on September 28, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,421,213 on the 21st instant, as compared with £139,292,183 on the previous Wednesday. Moderate supplies came on offer in the open market and included about £40,000 saved from the s.s. "Egypt." The amounts available during the week were again taken for the United States and the Continent. Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
September 22	119s. 1d.	14s. 3-2d.
" 23	118s. 11d.	14s. 3-5d.

" 27	119s. 5d.	14s. 2-7d.
Average	119s. 1-3d.	14s. 3-2d.

Large shipments of gold, totalling over £1,400,000 were made from Bombay last week; the s.s. "Malwa" carries £390,000 consigned to London and the s.s. "President Monroe" £1,041,000 consigned to New York.

SILVER.

Following a general advance in the New York markets, the week opened with an upward movement in silver prices, which, on the 22nd instant rose 1/2d. to 18 1/2d. for cash and 18 1/4d. for two months' delivery. The improvement, however, was not maintained and, in the absence of support, quotations declined 1/2d. on the following day to 17 1/2d. and 17 1/4d. for the respective deliveries. Subsequent fluctuations have been very small and the market quiet. America has shown little interest, but China seems disposed to sell at any advance in prices; the Continent sold moderately, but a measure of support has been given by the Indian bazaars and speculators.

At the present level the market is quite steady, and there are no indications of any important change at present.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 19th instant to mid-day on the 26th instant:—

IMPORTS.	EXPORTS.
Germany	Poland
Aden and Dependencies	British India
Canada	Germany
British West Africa	France
Syria	French Possessions in India
Iraq	Other countries
Other countries	

44,872

133,869

a price basis. In cloth for India the business offering has been encouraging and very fair sales have been arranged in dhooties for Calcutta, light whites for Karachi and Madras, and fancies for Bombay and the up-country markets. Grey and white shirtings have attracted very little attention for China, but dyed goods have been sold in moderate lots for Shanghai and Hong Kong. A little more activity has shown itself in bleaching cloths for Egypt and the Near East and printing and finishing styles have been wanted for South America, North and West Africa and the Continent. Some manufacturers have had a rather better week in home trade fabrics. Throughout the manufacturing section there is more optimism than for some time back. Quotations in American and Egyptian yarns have been generally firm and spinners have dealt with a larger inquiry. Rather more orders have been placed for quick delivery and delivery instructions against old contracts have come in more freely. Fine yarns continue in request for the Continent.

THE WOOL TRADE.—Bradford. — Though wool values in London and Australia have suffered a slight setback, writes our correspondent, the position must still be regarded as quite sound. According to cable information, apparently emanating from Sydney early this week, there was a 5 per cent. decline in all descriptions, and this had a somewhat disturbing effect in Bradford, though there was not the slightest justification for it. The cable failed to state whether the decline was compared with the previous week or the commencement of the season, and it has since transpired that it was intended to apply only to Continental style wools. Even then it was not regarded as being strictly correct, and though the Sydney market is admittedly slightly easier than at the commencement of the season, there is not now, nor likely to be, anything in the nature of a serious fall. Bradford topmakers state very emphatically that they need wool at a reasonable price to enable them to bring tops in at cost, though they would be prepared to follow the market upwards if there were justification for it. Firms who produce some of the best merino tops obtainable in Bradford have stated that they have been unable to obtain their types in Sydney at much, if any concession in the cost of the raw material. Though the time does not now seem opportune for any further upward movement, steadiness is fairly well assured. The London sales this week are, if anything, doing rather better than last, though it is impossible to say that prices are maintained at the opening level. Owners have been more disposed to meet the market, and withdrawals have consequently not been so large. This is one of the best features of the sales this week, and it is understood that there are further buying orders in the market on Bradford account. Continental competition is still very largely setting the pace, but if that section drops out Bradford will probably be able to buy big enough weights to cancel any possible ease. The market in Bradford is quiet. Quotations for all qualities of tops are steady. Small weights of average 64's can be bought for spot delivery at 23½d. Spinners are still bidding 22d. for next year's delivery, but are not able to place any orders. Good deliveries of tops are being made from the combs, and some spinners of white botany yarns are rather busier.

BARCLAYS BANK LIMITED

THE GRAIN MARKETS.

WHEAT.—Wheat prices have moved within narrow limits, and the general wheat situation is scarcely changed on the week. Canada again supplied the lion's share of importers' requirements, but international trade is on a relatively small scale. The two factors chiefly responsible for this are the satisfactory yield of the crops of the chief European importing countries and the severe import restrictions imposed by many of these countries. Under these circumstances, a substantial rise in wheat prices in terms of other commodities seems improbable in the near future, despite the fact that Russia is exporting smaller quantities than a year ago. According to Mr. G. Broomhall, the world's visible supplies on September 1st last, amounted to 432 million bushels, as compared with 500 million bushels a year ago. On Wednesday, December 5th, the week before, and 58½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. 9d. per 496 lbs., against 28s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s. 3d., against 28s.; No. 3 Northern Manitoba, Vancouver, ex ship, not quoted, against 27s. 6d.; Australia, ex ship, 30s., against 30s. 6d. a week ago.

WHEAT FLOUR.—The volume of international trade in wheat flour has been a little larger. North American shipments were 158,000 sacks, compared with 121,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 26s. per 280 lbs., against 26s. last week; delivered London, 25s., at both dates. Manitoba patents, ex store, 24s. 3d.-27s. 6d., against 24s. 3d.-27s. 3d. Australian, ex store, 21s.-21s. 6d., against 20s. 6d. 21s. last week.

BARLEY.—Feeding barley has been a quiet market. October futures were quoted in Winnipeg on Wednesday at 25½ cents, against 29½ last week and 34½ a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 24s. against 24s. a week before.

OATS.—The demand for foreign oats in importing countries has been quiet. In Chicago, December futures were quoted at 17½ cents, against 18½ per bushel a week before and 19½ a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., against 18s. 6d. a week ago; "River Plate," ex ship, 17s. 3d.-17s. 6d., against 17s. 6d.-17s. 9d.; "Chilean White," landed, 23s.-24s. 6d. at both dates.

MAIZE.—The demand for maize has fallen off, and, as the decline in Argentine shipments has been largely made good by increased supplies from Russia and Danubian countries, prices gave way a little. December futures in Chicago were quoted on Wednesday at 28½ cents against 29½ cents on Wednesday of last week and 35 cents a month ago. Quotations in London, Wednesday: "Plate," landed, 21s. per 480 lbs., compared with 21s. 3d. last week; "Plate," ex ship, 20s., as against 20s. 6d.; "Plate," December-January, 21s., as against 21s. 6d. Yellow maize, ex wharf, was quoted at £6 per ton, against £6 2s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to September 24	188,043	59,230	157,614	354,216
4 weeks to September 24	530,003	219,233	646,731	1,680,106
Average price of English wheat per cwt.	s. d. 5 8	s. d. 4 6	s. d. 7 2	s. d. 9 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Sept. 17, 1932	133,328	137,074	42,175	s. d. 5 8	s. d. 9 2	s. d. 6 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE	Jan. 2, 1930.	Jan. 2, 1931.	Sept. 30, 1931.	Jan. 4, 1932.	Sept. 21, 1932.	Sept. 28, 1932.
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	148½	56½	53½	62½	52½	50½
Chicago (No. 2 Winter) Cents per 60 lb.	130½	79½	44½	55½	52½	52½

The visible supply of wheat in Canada, at 78,901,000 bushels, shows an increase on the week of 9,502,000 bushels. Supplies a year ago stood at 51,238,000 bushels.

"I do like
Cadbury's new
food drink"

THE 'GOOD-NIGHT' DRINK THAT BECOMES
TOMORROW'S ENERGY...

9d
Guaranteed 1/5 net
GUARANTEED 1/5 NET

90% of its
nourishment can
be turned to human energy in a few hours

Everybody is saying it. "I do like Cadbury's new food drink." They like the delicious flavour. And they like Cadbury's Bourn-vita because it does them so much good. This perfect food-drink, so easily digested, induces peaceful, refreshing sleep at night and builds new energy for the morning.

FEEL THE BENEFIT TO-MORROW!

Even by to-morrow you will benefit by taking Cadbury's Bourn-vita to-night. The main ingredients used—fresh full-cream milk and eggs from British farms with British malt and Empire cocoa—are combined according to a formula which ensures a scientifically calculated balance of nourishing elements essential to good health, but often inade-

quately provided by ordinary diet.

THE FOOD DRINK PERFECTED

All the experience of Cadburys, who have specialised in food-drinks for over 100 years, has contributed to the perfecting of this new Cadbury product. Add two teaspoonfuls of Cadbury's Bourn-vita to a cup of hot milk and your "good-night" drink is ready. Very good for you! And very enjoyable.

Cadbury's
BOURN-VITA

Obtainable from all grocers

OTHER FOODS.

SUGAR.—Towards the end of last week the New York "futures" market became easier, but by Wednesday last the points lost had been regained as a result of an improvement in demand. December futures were quoted in New York at 1.08 cents per lb. on Wednesday, against 1.08 cents a week before and 1.15 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 9d. to 5s. 10½d. per cwt., against 5s. 8½d. to 5s. 9d. a week before, and "March, 1933," at 6s. to 6s. 1d., against 5s. 9½d. to 6s. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	2,252	179	1,498	1,180	14,472	18,980
Liverpool	8,386	3,900	14,094	14,858	58,097	58,076
Total	10,638	4,079	15,592	16,038	70,569	77,056
Last week ...	2,079	21,738	15,248	16,148	75,523	89,015

COFFEE.—Quotations of Brazilian coffee in New York continued to advance under the influence of a good demand. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., against 9½ cents per lb. on the corresponding day a week ago. Tuesday's auctions in London, comprising 4,000 packages, were characterised by keen competition and many grades realised higher rates. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 373 bags; exported, 75 bags; stocks, 14,331 bags, against 2,173 bags a year ago. Central American, landed, 355 packages; delivered for home consumption, 1,911 packages; exported, 4,444 packages; stocks, 78,991 packages, against 85,625 last year. Other kinds: Landed, 4,076 packages; delivered for home consumption, 1,811 packages; exported, 1,783 packages; stocks, 62,389 packages, against 71,072 last year.

COCOA.—The market in cocoa has been a little steadier since the beginning of this week. December futures were quoted at 4.44 cents in New York on Wednesday, against 4.64 cents a week ago and 4.88 a month ago. Accra, November-January, at 28s. 3d. c.i.f. Continent, shows no change on the week. Last week's movements of cocoa in London were as follows: Landed, 2,451 bags; delivered for home consumption, 4,526 bags; exported, 688 bags; stocks, 134,286 bags, against 190,758 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 63,411 packages of Indian and 31,914 packages of Ceylon tea. Monday's "Indian" offerings met with keen competition at higher rates for common and low medium grades. At Tuesday's "Ceylon" auctions all except medium grades were firm. On Wednesday, common and low medium "Indian" varieties recorded a further advance. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

AVERAGE PRICE PER LB.

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
Sept. 24, 1931	d. 5-66	d. 9-27	d. 16-74	d. 8-14	d. 7-32	d. 5-85	d. 14-40
Sept. 1, 1932	d. 11-67	d. 6-64	d. 8-84	d. 5-05	d. 4-50	d. 5-74	d. 9-46

Sept. 15, "	d. 10-16	d. 5-90	d. 8-61	d. 4-37	d. 3-89	d. 5-49	d. 8-71
Sept. 22, "	d. 10-09	d. 6-04	d. 9-25	d. 4-82	d. 4-10	d. 5-32	d. 9-02

RICE.—The market in rice was steady. The spot price rose from 10s. per cwt. to 10s. 3d. per cwt., while the forward quotations at 8s. 3d. per cwt. remained unchanged. Movements in London during the past week were as follows: Landed, 400 tons; delivered, 96 tons; stock, 2,120 tons, against 1,134 tons a year ago.

POTATOES.—There was a good demand for potatoes, but in view of ample supplies, prices are scarcely changed on the week. At the London Borough Market, "King Edward," light soil, were quoted at 4s. 9d. to 5s. 6d. per cwt., against 4s. 9d. to 5s. 3d. a week ago.

SPICES.—The market in spices was quiet. Spot pepper, "Black Singapore," was again quoted at 6½d. per lb. on Wednesday. Forward positions were steadier. Movements of pepper in London during the past week were as follows: Black, landed, 32 tons;

delivered, 25 tons; stock, 276 tons, against 590 a year ago. White, landed, 80 tons; delivered, 37 tons; stock, 438 tons, against 525 a year ago.

MEAT.—A good demand for meat at the Smithfield Market was met by ample supplies, and prices are scarcely changed on the week. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 6d. to 4s. 4d. per 8 lbs., as compared with 3s. 11d. to 4s. 4d. last week. New Zealand frozen mutton was 2s. 4d. to 3s. per 8 lbs., against 2s. 4d. to 3s. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,523 tons, against 8,857 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.2 per cent. of the beef supplies, against 85.6 per cent. a year ago. Imported mutton, mainly New Zealand, formed 72 per cent. of the total supply of mutton and lamb, against 69.6 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets are very quiet indeed and the tendency is markedly downward, supplies being more than ample and demand almost non-existent. Large quantities of linseed are pressing for buyers, but crushers here and on the Continent appear to have sufficient seed to meet the poor demand for oilcake. Plate on spot and afloat for Hull has dropped to 28, shipment quoting from 28 17s. 6d. to 29 5s. according to position. Calcutta is steady but neglected, shipment to London offering at 21 1s. without finding buyers. The quantity afloat for Europe has increased to 225,700 tons, or 7,300 tons more than last week, and compares with only 127,700 tons a year ago. Though shipments to Europe are 100,000 tons better than at this time last year the United States has taken 140,000 tons less, and that available for export from Argentina and India to the end of the year is estimated at 600,000 tons, as against something over 400,000 tons shipped in the remainder of 1931. There is little demand for cottonseed, which is easier, old crop Egyptian offering freely at 27. New crop is now coming on the market, current value for early shipment being around 27 2s. 6d. Linseed oil is in extremely poor demand and prices have fallen in sympathy with seed. Raw oil for September delivery ex Hull mill has declined to 116 and October delivery to 116 5s. Cotton oil is lower, crude Egyptian being now 223 and refined (technical or edible) 225 10s. ex Hull mill. Other seed oils are in slow demand as are also oilcakes.

HIDE, LEATHER AND ALLIED TRADES.—Generally speaking, the demand for hides and skins remains good, but the advance tendency of the market is not so evident as it has been for several weeks past. At the auctions held in Manchester this week all weights and classes of ox and heifer hides, together with cows and bulls, changed hands at the previous week's figures, but there was a slightly firmer tone in regard to calfskins, two weights of which sold for 4d. per lb. more money. There has been some small improvement in the inquiry for sheepskins, and here also rather better prices have been realised. Business in connection with imported hides has not been quite so brisk, but quotations, with the exception of those for South American wet-salted hides, have been maintained at about the level of the previous week. In Argentine ox, sales have been made at 4½d., while cows have changed hands at up to 5½d. and Montevideo ox at a fraction over 5½d. The market for dry hides from the same origin has been somewhat irregular, with only a moderate amount of business done. B.A. Americanos are being offered at 6½d.; Inservibles at 4d.; Cuyabanos at 5½d.; and M.V. Americanos at 6½d. African hides have remained very firm in price, with 5½d. asked for heavy unbathed Adis Abebas, 5½d. for Mombasas, and 6½d. for Nigerians. Business has been done in dry Capes at 6½d. and 5½d. for firsts and seconds, while drysalted in the same selections have realised 1d. less for 20-30 lbs. and 1½d. less for 30-40 lbs. Inquiry for Australian hides has been rather less, with prices fractionally lower. Turnover of sole leather has been of fairly respectable dimensions, and although the inquiry may not have been good for all descriptions, aggregate sales have been maintained at a reasonable level. Shoe manufacturers have been interested in certain lines of dry hide bends, and in the light and medium weights fair parcels have changed hands. English and wet-salted bends, however, have been the best market and with the exception of heavy weights, good business has been forthcoming for most selections. Demand for pinned bellies and shoulders has been up to the average of recent weeks, and, in addition, the market for rough bellies has improved. In the upper leather section inquiry has again been confined chiefly to box and willow calf and glacé kid, for both of which descriptions of leather a steady business has been done. Some improvement has been experienced in sales of patent, and there has also been slightly more interest taken in reptile skins. Dressed kip and hide leather appears to be accounting for rather more business, although at the moment individual orders are still confined to small quantities.

THE TIMBER TRADE.—The bad state of the building industry in the Metropolitan area (28 per cent. unemployed in August, compared with 16.9 per cent. last year), and the general average of unemployed building trade workers last month of 27.37 per cent., against 19.2 per cent. a year ago, have been a great handicap to all spot traders in timber. Imports of European building and joinery woods have been kept well down within recent weeks, and in conformity with the decline in this year's demand. Stocks on the market are light for early autumn, but moderate when considering the actual consumption. The stocks position here is viewed with optimism in supply countries, shippers having firm up their quotations, but United Kingdom importers do not seem inclined to buy freely until actual consumptive demand warrants that course. Hence, large winter supplies are not yet assured for consumers' benefit. Canadian shipments of eastern sawn pine

Wednesday's spot price for rubber, at 3½ cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for April-June, 1933, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,323 tons; delivered, 2,537 tons; stocks at the end of last week, at 102,990 tons, show a decrease of 1,214 tons as compared with the preceding week.

THE MONEY MARKET.

ALTHOUGH the payment of dividends upon the 3½ per cent. Conversion Loan, 2½ per cent. Consols, Local Loans and certain Indian stocks liberated a certain amount of funds, money this week has been a little more usable. Renewals have remained at ½ per cent., but rates of ¼ and ½ per cent. have been paid for new money, and a little more clearing bank money was taken at the minimum rate of 1 per cent. The usual week-end ease was absent last

Saturday, as heavy payments for new Treasury bills and maturities of old bills caused a big turnover of funds. The Australian issue this week did not have much effect upon the supply of money, because the initial call was only 5 per cent., and the money so collected was at once re-lent to the market. The Stock Exchange, however, has been borrowing a little more freely, and in some cases brokers have been able to obtain day-to-day money at the low rate of $\frac{1}{2}$ per cent.

A definite change has occurred in the discount market during the past week. Immediately before the Treasury bill issue of September 30th the clearing banks decided to raise their tender rate, and according to one report they put in their tenders at $\frac{1}{2}$ per cent., in contrast to the previous week's average tender rate of 7s. 11.16d. per cent. There was no particular significance about this decision, for the bills offered on September 30th were January maturities, and so it did not pay the banks to tender for them at the inordinately low rates previously in force. The market, however, was apparently taken by surprise, with the result that the various tenders submitted exhibited unusually wide variations in rates. In the end the market rather than the banks got most of the £48 millions of bills allotted out of the original offer of £50 millions, and the average tender rate worked out at 11s. 8.15d. per cent., or just under $\frac{1}{2}$ per cent.

This rise of nearly $\frac{1}{2}$ per cent. in the tender rate, as compared with the previous week, has naturally caused a general revision of market discount rates, and for a time it was difficult to find a basis for quotations. In the end it transpired that the banks were not prepared to buy "hot" Treasury bills at less than $\frac{1}{8}$ per cent., and this decision has naturally restricted business, and has also caused the rate on "hot" bills to harden to that figure. It was also expected that the bills issued on October 7th would go at a higher rate, and $\frac{1}{2}$ per cent. or more was on Thursday a very general estimate. The banks bought a few October and November bills at $\frac{1}{8}$ per cent., again a substantial advance upon the previous week's rates. Three months' bank bills were quoted at $\frac{1}{2}$ - $\frac{3}{4}$ per cent., and standstill bills at 1-2 per cent. upwards.

Whereas last week it had been rumoured that the banks might be going to reduce their minimum rates on short loans below 1 per cent., it now appears that instead they have decided to raise discount rates; and there is no doubt that, up to a point, they can give effect to such a decision, for to-day bank tenders form an important part of the weekly applications for Treasury bills. This is in contrast to the practice of the banks only a few years ago, which was to leave it to the market to tender for new Treasury bills, and to buy shorter bills from the brokers for such dates and in such quantities as they required. Many bill brokers would like the banks to revert to their previous practice, and so leave the discount market free to perform its proper function to supply the banks' needs, but so long as the banks have so much surplus cash at their disposal it is difficult to see how they can do so. In the meantime the market is naturally pleased that the banks are modifying their previous anomalous practice of continuing to lend money at not less than 1 per cent. and at the same time competing with the market for bills at rates well under their minimum.

This week's Bank return shows a moderate increase of £2.7 millions in the note circulation, a change which is readily explained by the public's cash requirements for the end of the month and also for quarter day. As the Bank's gold stocks are unchanged, the Reserve is lower by the same amount. Dividend payments referred to above have reduced Public Deposits by £11.7 millions from £23.4 millions to £11.7 millions. Not all the money so released, however, has gone into Bankers' deposits, for the expansion in the note issue has absorbed £2.7 millions, while securities held by the Banking Department have been reduced by £3.3 millions. Furthermore Other Deposits have increased by £1.3 per cent. Thus Bankers' Deposits have only expanded by £5.0 millions to £85.7 millions. The payment of the Bank's dividend has reduced the Rest from £3,677,000 to £3,085,000. The proportion of the reserve to the Banking Department's outside liabilities stands at 40.0 per cent.

The Foreign Exchange market was dull and inactive during the past week, and business remained very limited. The fact is that the New York and Paris rates are now both pegged for all practical purposes, with the result that speculative operators have transferred their activities to Paris. New York was quoted 3.45 $\frac{1}{2}$ at the close, after rising to 3.46 on October 1st, and was thus unchanged on the week. Paris was also approximately at last week's level, closing at 88 $\frac{1}{2}$. Brussels improved to 24.85, as did Amsterdam to 8.59, while Milan was unchanged at 67 $\frac{1}{2}$. Switzerland was 17.89, Spain depreciated to 42 $\frac{1}{2}$, and Berlin was slightly on offer at 14.54. The Scandinavian currencies were steady and showed no quotable change. The South American exchanges remained at last week's levels, but were largely nominal. Among the Far Eastern exchanges the rupee was unchanged at 1s. 6 $\frac{1}{2}$ d., but the yen fell away on the publication of the Lytton Report to 1s. 4 $\frac{1}{2}$ d., though it recovered later to 1s. 4 $\frac{1}{2}$ d. Batavia was 8.57. In the forward market dollars were in better demand, principally on American account, at discounts of $\frac{1}{2}$ cent for one month and $\frac{3}{4}$ cent for three months. Paris forwards also improved to par for one month and 1 centime discount for three months. Forward belgas were wanted on account of Belgian inquiries at discounts of 6 and 16 for the respective periods. Milan forwards improved to discounts of $\frac{1}{2}$ lire and $\frac{1}{2}$ lire. Amsterdam was at premiums of $\frac{1}{2}$ cent for both dates. Forward Switzerland was unchanged at last week's levels, as was forward Madrid. In the silver market prices were steady on a quiet market until Wednesday, when Continental bear covering caused a slight rise to 17 $\frac{1}{2}$ d. for cash and 17 $\frac{1}{2}$ d. for forward delivery. Hong Kong was 1s. 4 $\frac{1}{2}$ d. and Shanghai 1s. 9 $\frac{1}{2}$ d.

Including additional imports for the previous day, announced on Thursday of last week, total gold imports into the United States for the week ended October 5th came to \$4.7 millions. \$1.4 millions came from Holland, \$1.3 millions from India and \$1.2 millions from England. Gold ear-markings upon foreign account were reduced by \$8.9 millions. New York money rates are unchanged at 2 per cent. for call money and $\frac{1}{2}$ - $\frac{3}{4}$ per cent. for 90-day bankers' acceptances. Loans by the Reconstruction Finance Corporation from its inception on February 2nd to the end of August are returned at \$1,182 millions for business and agricultural purposes (including \$64 millions lent to farmers), and \$34 millions for the relief of distress. Loans to railroads amount to \$243 millions, while those to banks and trust companies come to \$784 millions, plus \$39 millions lent to liquidators and receivers of closed banks. Other loans include \$80 millions to building loan associations, \$72 millions to insurance companies, and \$83 millions to mortgage loan companies.

With this week's issue of the "Economist," we publish our Autumn Banking Supplement, containing among other features, a discussion of the present British banking position, and reviews of banking conditions throughout the Empire, and in the United States, Scandinavia and South America.

THE LYTTON REPORT.

THE Lytton Report, which was published at Geneva on October 1st, is an admirable piece of work, well-informed, impartial, constructive, and—above all—inspired throughout with manifestly sincere goodwill, untainted by a single touch of animus. It is, in fact, a State paper that is worthy of the distinguished members of the Commission and of the able experts by whom they have been assisted; and, at the same time, the Commission are to be congratulated upon their success in having done work of this high standard under peculiarly difficult conditions. They have had to take their evidence and form their judgments in an atmosphere of excitement, suspicion and hatred and under local conditions of turmoil and disorder and violence. And they have had a heavy responsibility on their shoulders. For the despatch of the Lytton Commission to the Far East was the one substantial contribution that the League of Nations had been able to make towards the settlement of the Sino-Japanese conflict during the first three months after its outbreak on the night of September 18-19, 1931. Since the appointment of the Commission on January 14th last, in pursuance of the League Council's resolution of December 10, 1931, it has depended on the Commission to find a way out of the international impasse and to reconnoitre a new road for the settlement of the Sino-Japanese conflict by pacific international action. In our belief, the Commission has successfully carried out this formidable enterprise. We believe that the constructive proposals with which the Report concludes do offer a satisfactory and a practicable solution of the Sino-Japanese problem. And we take this view without ignoring the "accomplished facts" which have been brought about—and deliberately brought about by the Japanese military authorities—in Manchuria while the Lytton Report has been in preparation. We may add that the Commission itself, in the text of the Report, anticipates everything that has happened up to date, including the treaty between Japan and "Manchukuo," and has made its recommendations with all these facts in mind. Thus there is no warrant whatever for dismissing the Commission's proposals as out of date. They stand commended by their evident merits; and if the statesmen of the world—following their all too frequent habit of piling up trouble at compound interest for to-morrow in order to avoid the trouble of to-day—now throw away the opportunity, offered by the Report, of making a supreme effort to achieve a Far Eastern settlement, their responsibility for the grave consequences that will follow for the whole world will indeed be a heavy one at the bar of history.

The League Council set the Lytton Commission a dual task:—

"(i) An examination of the issues between China and Japan which were referred to the Council, including their causes, development and status at the time of the inquiry;

"(ii) A consideration of a possible solution of the Sino-Japanese dispute which would reconcile the fundamental interests of the two countries." (Report, page 10.)

In the nature of the case, the exposition of the issues and the facts occupies more space in the Report than the recommendations for action; and these recommendations can only be understood and appreciated in the light of the historical background. At the same time, it is, of course, these constructive and concrete suggestions for a solution that are the most interesting and important part of the Commission's work.

On the issues and the facts, the Report is devastating to Japan. After a manifestly able and impartial examination of the evidence, the Commission conclude that "the military operations of the Japanese troops during" the night of September 18-19, 1931, "cannot be regarded as

measures of legitimate self-defence" (page 71); that the new State of "Manchukuo" "could not have been formed" without "the presence of Japanese troops and the activities of Japanese officials, both civil and military," so that "the present regime cannot be considered to have been called into existence by a genuine and spontaneous independence movement" (page 97; *cp.* page 99); and that the feeling of the Chinese population of Manchuria is solidly opposed to the Japanese and to their faked Manchurian Government (pages 107-111). Of 1,550 letters received by the Commission from individual inhabitants of Manchuria, "all except two were bitterly hostile to the new 'Manchukuo Government' and to the Japanese"! This is really portentous, when we consider that the Chinese and the Sinified Manchus in Manchuria account for about 28 millions out of an estimated total population of 30 millions (page 25), and that "the social and economic Chinese organisation in Manchuria is a transplanted society which has kept the customs, dialect and activities of its home" (page 124). The cumulative effect of these three conclusions is decisive; and the moral impression is vastly heightened by the studiously moderate and conciliatory language in which the evidence and the conclusions are presented; by the conspicuous absence of anti-Japanese bias; by the handsome recognition of Japanese economic and even strategic interests in Manchuria; and by the searching exposure of the long-drawn-out anarchy in China and of the provocation which the Japanese have received at Chinese hands—including an illuminating discussion of the rights and wrongs of the boycott.

So much for the way in which the Commission has acquitted itself of the first part of its mandate. When it comes to the second part, it proposes both a procedure and a basis for a settlement. The basis proposed is the maintenance in principle of the territorial and administrative integrity of China, combined with the grant of a large measure of autonomy to Manchuria and the recognition of Japan's interests in Manchuria, which should be defined and secured by the establishment of new treaty relations between China and Japan. In detail, "it is suggested that a special gendarmerie should be organised, with the collaboration of foreign instructors, which would be the only armed force within the three Eastern Provinces," and that "an adequate number of foreign advisers" should "be appointed by the chief executive of the autonomous Government, of whom a substantial proportion should be Japanese" (page 134). Alternative suggestions are offered for solving the problem of Japanese rights of settlement in Manchuria and for co-ordinating the local Chinese and Japanese railway systems.

This, very briefly, is the gist of the Lytton Commission's proposals. In the light of the Lytton Report, what is the world going to do about the Far Eastern situation, and what is Japan going to do about it? The interests of the world are pointed out by the Commission in a passage which deserves quotation in full:—

"Any real and lasting solution by agreement must be compatible with the obligations of [existing multilateral treaties], on which is based the peace organisation of the world. The considerations which actuated the representatives of the Powers at the Washington Conference are still valid. It is quite as much in the interests of the Powers now as it was in 1922 to assist the reconstruction of China and to maintain her sovereignty and her territorial and administrative integrity as indispensable to the maintenance of peace. Any disintegration of China might lead, perhaps rapidly, to serious international rivalries, which would become all the more bitter if they should happen to coincide with rivalries between divergent social systems. Finally, the interests of peace are the same the world over. Any loss of confidence in the application of the principles of the Covenant and of the Pact of Paris in any part of the world diminishes the value and efficacy of those principles everywhere" (page 129).

The interests of the world are sufficiently explained in this passage, which is possibly the most important single paragraph in the whole Report.

And what about the interests of Japan? When the

Japanese militarists already had the draft of the report in their hands, they deliberately sought to "queer the pitch" before its publication by rushing through the treaty between Japan and "Manchukuo." This is a Japanese *fait accompli* which the rest of the world evidently cannot afford to accept. And can Japan herself really afford to go on repeating "J'y suis, j'y reste"? There are many cogent considerations in the negative which must surely carry weight in Japanese minds on second thoughts. To begin with, the Japanese *fait accompli* is only accomplished on paper. If it is true that resolutions passed at Geneva are impotent to remove the Japanese army from Manchuria, it is equally true that a treaty signed at Changchun between Japan and a fictitious "Manchukuo" Government is impotent to bring Manchuria *de facto* under effective Japanese military control. At present, the Japanese troops control only a fraction of the country; the armed resistance to them is visibly gathering strength; and their local Chinese adversaries are now effectively raiding the Japanese railway zone and railway towns, which were practically immune from attack until the Japanese overthrew the old order in Manchuria a year ago. And even supposing that Japan were able eventually to subjugate effectively the whole of Manchuria at the formidable cost in blood and treasure and time which that undertaking would undoubtedly involve, what would she have gained, either economically or strategically? Economically "Osaka . . . has always depended more on Shanghai than on Dairen," and "Japan depends for the bulk of her commerce far less on Manchuria than she does on the United States of America, China Proper and British India" (page 123). Strategically, Japan can only make herself mistress of Manchuria at the price of eventually drawing down upon herself a counter attack from China and Russia in combination; of incurring the suspicion and hostility of all the white nations that have seaboard on the Pacific; and of possibly finding herself in the position of Germany in another world war.

These are considerations which should give pause to even the hottest-blooded militarists in Japan, while China's present predicament should bring down even the most exalted Chinese Nationalists from the clouds. The Lytton Report offers a possible basis for a Far-Eastern settlement at the eleventh hour. No party—not Japan, not China, and not the world at large—can afford to let this last opportunity for saving the future peace of the world go by.

LABOUR AT LEICESTER.

ONLY ten days remain before the curtain rises on a further act at Westminster, and a rather restless audience is peeping somewhat anxiously to see what it can of the resetting of the political scene. The Free Trade Ministers have left the Government and have declared in set terms that they have done so because that Government is pursuing a purely Tory policy in the matter of tariffs. The Conservative conference at Blackpool has been busy framing a *tu quoque*, and averring that it is only the Liberals who are thinking in terms of party, while they, the Conservatives, recognising the enduring need for national unity, continue patriotically to sink their political identity in the common cause.

To our mind these charges and counter-charges of partisanship are largely unreal. The times, indeed, are far too serious for pure faction, and none of the protagonists would willingly put party before the State. At the same time, our problems are equally too serious for complacent abstention from criticism of policies believed to be wrong, especially if they are calculated to have enduring results; nor is it a suitable time, we should have thought, for maintaining the pretence of national unity regarding major policies and measures, when, in fact, such unity does not exist. Those who have left the Government have pledged themselves to support the Government so long as it acts nationally, and, on the other hand, have promised no factious opposition, but a constructive criticism on matters of grave controversy. At the moment both sides are setting out the reasons which led to the parting of com-

pany; but here, too, there is a distinct air of vagueness. For until we are told what the Ottawa agreements contain—and they are not to be published until the middle of the month—there is really little to be added to the reasons given in the resignation letters of the Liberal Ministers and Lord Snowden. The only further point of importance that has emerged is Mr Neville Chamberlain's confident assertion to the Conservative Association meeting at Blackpool that the Ottawa agreements will not debar us from making trade agreements with other countries. But he does not tell us what the nature and effect of those agreements will be. Clearly, agreements with this or that country for slight modifications in regard to particular articles which specially concern them are always possible. But are agreements possible which will lead to a widespread and a substantial reduction of tariff levels? Has the Government a plan for this purpose? It is of the greatest importance from the point of view of the future evolution of the world crisis that there should be a clear answer to this question.

Meanwhile, what of his Majesty's Official Opposition? A year ago the Labour Party, judged both by membership in the House of Commons and by votes cast at the polling booth, was numerically the strongest in the country. Eleven months ago it was shattered by a combination of circumstances and forces which is hardly likely to be repeated. It has now passed through the first stage of bitter recrimination and is slowly approaching the task of building up a new programme which it hopes will be acceptable to the masses and will serve to carry it not merely into office but into power. The party has been holding its annual conference at Leicester this week, and its proceedings have been watched with more than usual interest by those who are anxious to find out how far it has progressed in the task of reconstruction, and what are the evidences of the political direction in which it appears to be moving. From one aspect the most interesting point which emerges from Leicester is the common recognition of the failure of the last Labour administration. This acknowledged failure seems to have done two things. First, it has raised acute dissent as to whether in future Labour should agree to form a minority Government—a question on which much heat and verbiage will doubtless be expended for the next year or two—and, secondly, it seems to have taught the Labour leaders (though not as yet "the movement") that a disillusioned people can no longer be attracted by airy preachings of the millennium; if the support of the majority of the country is to be won back by Labour, the party must first evolve a policy for immediate application.

There is a distinction, however, between a policy which is to be "immediately applicable," and one which satisfies the electorate as being practicable in the immediately existing world, and a feature of the Leicester Conference has been the convincing evidence which it gives that the rank and file are in a far greater hurry than their leaders, are on the whole inclined to swing to the Left, are likely to drive the party into the pledged acceptance of the widest application of doctrinaire State Socialism, and, finally, that they exhibit not merely a lack of enthusiasm, but even a lack of patience, for Mr Henderson's emphatic support of democratic as distinct from revolutionary procedure. This trend of opinion in the Labour movement was manifested very clearly and in several important ways. The Executive, in pursuit of the task of gradual programme building, have so far produced reports covering the fields of banking and currency, transport, electricity and agriculture, whose general bearing lies, as might be expected, in the direction of large extensions of State control on *planwirtschaft* lines. For example, the Policy Report on Currency and Banking favours price stabilisation as the objective of monetary policy, "public ownership and control" of the Bank of England, and the creation of a National Investment Board, manned on "suitable grounds of ability." Similarly, the Electricity scheme, which contemplates bringing distribution as well as generation under "control," proposes the establishment of a National Board, "appointed on appropriate grounds of ability" to co-ordinate development; and the conception of expert boards or commissions—roughly analogous to the existing

Central Electricity Board but with wider powers—permeates also the plans for Transport and Agriculture.

There is much in this "Neo-Socialism" which, with some modifications in detail, would elicit support from influential sections of opinion not directly connected with the Labour Party; but it was significant that the resolutions based on two of these reports failed to satisfy the delegates. Whereas the Executive were content to advocate "public control" of the Bank of England, the Conference insisted on including under the resolution the whole banking system of the country; and so the project of the nationalisation of every bank and acceptance house bids fair to become a definite plank in the official policy of the Labour Party. The resolution on transport gave the Conference another opportunity to tell the Executive that, in failing to provide for a measure of "workers' control," they were not moving fast enough or far enough in the direction of pure Socialism, and Mr Morrison, late Minister of Transport in the Labour Government, was compelled to withdraw the official resolution and to promise reconsideration.

Even these two definite acts of rebellion against party authority were not enough for the Conference. In the face of the strongly-phrased opposition of Mr Henderson himself, a resolution was passed to the effect that the Parliamentary Labour Party on assuming office, either with or without power, must immediately promulgate definite Socialist legislation and that the party should stand or fall in the House of Commons on the principles of Socialism. The party, indeed, seems to have got the bit between its teeth and is in no mood at present to heed the ineffective whip-cracking of leaders whom it regards as largely discredited by the events of last autumn. We are still too near to the election of 1931 to be able to see whether this development is in part a reaction to the persistent smart of defeat or whether it really represents the definite demarcation of the new road on which the Labour Party is to march in future. From the Labour Party's own point of view, a crucial and dangerous point would seem to have been reached; and of this the leaders seem to be well aware. Had the party been content to frame reasoned policies practically applicable to the main economic problems of our times, and put that programme forward in a spirit which recognised that Rome was not built in a day, then it might have attracted to its ranks a very large body of people who, although their progressive instincts revolt against policies of reaction and restriction, are yet not convinced that the application of rigidly doctrinaire Socialism is likely to bring about a Utopia.

The final reflection which arises from the Leicester debates is that there is both room and need for a constructively progressive democratic party whose programme of peace and reform is not marred by the undesirable planks of reckless expenditure and schemes whose adoption would be revolutionary in effect, if not in avowed intention.

RAILWAY WAGE RATES.

IN many interested quarters the bearing of the depreciation of sterling on the level of wages in this country has probably led to not a little confusion of thought. It being fairly common ground that British wages eighteen months ago were, in many instances, and indeed on the average, at a level which rendered our selling costs "uncompetitive" in relation to those of other manufacturing countries, our enforced departure from the gold standard was accepted in many quarters with a sense of relief that, whatever disadvantages might attend the cutting adrift of sterling from gold, the step at least bade fair to solve the problem of the British wage level, while obviating the need for painful adjustments of nominal wages. The expectation was that in relation to "gold" prices sterling wholesale prices and, to a considerably less extent, the cost of living would rise; that the decrease in our "gold" costs of production would enable us to secure not merely a relatively increased share of world trade but an absolute expansion of industrial activity; and that at the price of a fall in real wages, which would not be severely felt, or perhaps even clearly recognised, by the recipients, British industry would be placed on a reasonably competitive basis in international markets. This forecast has been largely falsified by the event: not only have steadily mounting impediments to world trade robbed us of any appreciable absolute economic revival, but a pronounced fall in gold prices has left sterling prices, both wholesale and retail, in much the same position as that in which they stood a year ago, while the active deflation of wage rates abroad has eliminated to a considerable extent the initial competitive advantage bestowed on this country by the fall in the exchange value of the pound. In short, though it might not be true to say that, from the point of view of comparative wage rates, we have lost all the advantages of exchange depreciation, the events of the past year have certainly not witnessed, as many hoped would be the case, the complete solution of the British wage problem.

If these considerations are borne in mind, one point at least of possible misunderstanding may be avoided when the railway companies' present application for a further wage reduction comes up for examination by the industry's conciliation machinery. Whatever be the rights of the case, it is clear that the merits of the companies' proposals must be judged in relation to a general position which the suspension of the gold standard has done little to modify; and, so far as the immediate particular situation of the railways is concerned, no one who has glanced at this year's traffic returns will be inclined to deny that there are at least *prima facie* grounds for considering that some reduction of labour costs, however socially regrettable, may be economically imperative. In the statement which they issued last Saturday, the companies pointed out that the traffic receipts of the four groups this year up to date are £10.6 millions below the corresponding period of last year and £21.8 millions below a similar

period of 1930. The companies, it is claimed, have continued their efforts to attract and create new traffics, and have tried to offset the reduction of gross revenue by economies and improved methods of working. The increasing seriousness of the situation, however, has now compelled them to ask for further substantial relief from the present burden of wage costs; and it is accordingly proposed that the reductions which were made under the National Wage Board's award in March, 1931—namely, 2½ per cent. on all earnings with a "super-cut" of a further 2½ per cent. on earnings in excess of forty shillings—should be replaced by a general reduction of 10 per cent. on all earnings, provided that a full week's wages shall in no case fall below thirty-eight shillings.

Strong opposition by the Unions to these proposals is a foregone conclusion; and it may safely be anticipated that the issue will be carried in due course to the National Wages Board. To judge by the proceedings before that tribunal at the beginning of 1931, the Unions will probably submit—with an emphasis made the greater by the 1931 reductions—that present wage rates are not "unduly" high; that the railways are over-capitalised, and that the stock-holders should first be called upon for further sacrifices; and that, unless the companies can guarantee that the benefit of lower working costs will be passed on to the railway user, there is no case for wage reductions. The case so stated requires to be fully and sympathetically met; and we trust that there will be no more reference by the companies to their "right" to the "standard revenue" as determined by the statutory Railway Rates Tribunal. The truth is that neither stock-holder nor railway worker has any "right" to draw, by what is in fact a toll on the community, any fixed, supposedly "just" remuneration. Moreover, the salient fact of the situation to-day is that, though it might be difficult to prove that a reduction in railway charges would produce any substantial revival of traffic, the traffic does not now exist in sufficient volume to stand the burden of meeting both the present wage bill and the railway companies' debenture interest and prior charges. To seek an increase of gross revenue by means of higher rates would certainly be suicidal; the efficiency of operation has undoubtedly been raised in recent years—to a level perhaps the highest in the British railway companies' history; and the scope for further economies in face of diminishing revenue is now probably very small. Thus, quite apart from the consideration that an actual reduction in railway wages would tend greatly to promote, though it could not guarantee, an improvement in the general position of British industry, the crux of the problem to-day is how a drastically diminished cake is to be cut up and distributed as between railway capital and labour.

The position from this point of view can be illustrated by a few simple figures. In the following table we show for 1913, 1930, 1931 and, in the form of a very rough estimate, for 1932, the total receipts of the four railway groups, the expenditure on wages and other items, and the balance available for the holders of railway debentures, prior charges and equity stocks:—

	(Million £.)	1913.	1930.	1931.	1932 (Est.)
Total receipts*		129.1	196.5	180.1	165
Wages.....		47.0	109.2	102.0	100
Other expenses		36.9	49.7	44.7	40
Available for stockholders		45.2	37.7	33.4	25

* Including all miscellaneous revenue.

Even from these aggregate figures, which do not reveal the relatively greater difficulties of certain groups as compared with others, it will be seen how great has been the change since 1913 in the proportions of the gross revenue accruing to the stock-holders and the wage earners respectively. Even if we accept the Unions' contention that the railways are "over-capitalised" on the basis of their net earnings during, say, the past five years—it would be most difficult to argue that they are "over-capitalised" on the basis of replacement costs—the fact remains that the maintenance of a £100 million wage bill bids fair to represent not merely the wiping out of railway "equity," but the expropriation of the great proportion of the railways' fixed capital and prior charges. These call for a

service of £33 millions a year, and interest on debentures alone absorbs £11 millions.

Is the painless extinction of the railway rentier an objective for which the Unions are prepared to press, or whose approval by the National Wages Board they would seek to justify? Observing from the companies' statement that, even after the proposed reductions, the general level of railway wages would still be 99 per cent. above the pre-war level, the general public will await with interest the Unions' reply to the proposal which the managers have lodged. However opposed one may be on general grounds to the insensate policy of wage reductions for reduction's sake, it is difficult not to feel that, responsible and sometimes dangerous as is the work of much railway labour, and justifiable though the Unions' claim may be that pre-war wages were meagre, a strong *prima facie* case for further retrenchment in labour costs has to be answered.

TEXTILE FIBRES—WOOL.

In common with that of most raw materials the price of the principal textile fibres at the beginning of the current year stood at a level at which production had become unprofitable to the majority of producers. There has since been a slight recovery in values; but the future is by no means easy to forecast, and we propose to survey the position of the chief textile raw materials in a series of articles. As the following table shows, the relative importance of the various fibres has undergone considerable changes since the war:—

	WORLD PRODUCTION (in million lbs.).	Average, 1909-13.	Average, 1926-30.	Quantity.	Percentage increase on earlier period.
Wool (in grease) ..	3,086	3,617	18		
Cotton (ginned) ...	11,663	14,018	20		
Silk (raw)	65*	125	93		
Rayon (yarn)	19	331	1,610		

* Average 1911-1915.

The disparity between the increase in the production of the two "old" staple fibres and that of silk and rayon is striking. The competition of rayon with wool and cotton fibres has recently become increasingly severe, and during the past year the output of rayon yarn reached almost 500,000,000 lbs. Wool, it will be seen, records the smallest increase of all in the post-war period. A statistical presentation of the raw wool position is notoriously difficult, as the production figures for many countries are incomplete and often unreliable, while an estimate of stocks is almost impossible except in the case of the chief producing countries. In a recent survey, however, the Empire Marketing Board has rendered a valuable service to the wool textile industry by collecting such statistics as are available, and by bringing them together in a comparable form.* A summary of the development of wool production in the chief countries during recent years is given below:—

	Wool Production, in the Grease (in millions of lbs.). (c)	Period.	Australia.	Argentina.	New Zealand.	South Africa.	U.S.A.	United Kingdom.	World.
1909-13	728	332	171	158	314	136	5,086		
1925	834	312	238	234	315	112	3,267		
1926	924	352	254	246	336	117	3,481		
1927	888	332	262	276	357	123	3,543		
1928	958	335	272	285	384	124	3,735		
1929	938	311	272	309	400	122	3,737		
1930	901(a)	329	265	290	434	121	3,587		
1931	950(g)	333	257	335	435	124(a)	(b)		

(a) Provisional.
(b) Not yet available.
(c) Including wool shorn in the spring in the Northern Hemisphere, and during the last few months of the same calendar year in the Southern Hemisphere.

There has been a substantial increase in the production of wool in Australia, New Zealand, South Africa, and in the United States. On the other hand, Argentina, Russia, Uruguay and the United Kingdom record no advance, as compared with their pre-war level of production. Australian growers, who produce the bulk of the finer grades of wool, commonly known as "merino," have made substantial progress in improving both the quality and the

* Wool Survey. Prepared by the Statistical and Intelligence Branch of the Empire Marketing Board. Price 2s. net.

yield of this raw material. The yield per sheep has increased from 6 lbs. in 1891 to about 9 lbs. during the season 1928-29. Similar progress has been recorded in some of the other countries, notably South Africa and New Zealand. The climatic conditions in the latter country are less suitable for the production of fine wools, but they are eminently favourable to the rearing of cross-bred sheep, and therefore to mutton production. The attempt to combine wool and mutton has been increasingly successful in recent years, and accounts for the diminishing proportion of "merino" wool in the world's total output.

The next table, though incomplete, suggests that there has been no accumulation of wool in producing countries on a scale comparable with the enormous increase in stocks of other fibres, particularly cotton:—

STOCKS OF RAW WOOL AT END OF SEASON
(in millions of lbs.).

	Australia. (a)	Argentina (b).	New Zealand(a).	South Africa(a).
	In store at selling centres.	All centres.	All centres.	At Ports only (sold and unsold).
1926 ...	10.5	11.0	24.0	Not available
1927 ...	8.0	4.0	19.0	
1928 ...	9.9	19.0	18.8	6.0
1929 ...	13.7	25.0	27.5	8.0
1930 ...	32.8	20.0	81.5	5.0
1931 ...	16.6	9.0	95.5	14.0
1932 ...	44.5	(c)	116.0	20.0

(a) Season ended June 30th.

(b) Season ended September 30th.

(c) Not yet available.

In relation to the total output of these countries, the stocks remaining at the end even of recent seasons are unimportant. Indeed, the feature of the wool position in 1928-32 has been that producers have made no serious attempt to hold stocks off the market. Although no figures are available showing stocks of raw wool in the chief consuming countries, these, too, are believed to be of small proportions. Further, stocks of tops, at the principal Commission Combing Houses in Belgium, France, Germany and Italy do not appear to be abnormally heavy. The total stocks of "merino" tops in these four countries amounted to 22.3 million lbs. at the end of the past calendar year, as compared with 26.1 million lbs. in 1930 and 20.7 millions lbs. in 1929. "Crossbred" tops stood at 20.7 million lbs. at the end of 1931, against 26.2 million lbs. and 31.7 million lbs. at the end of the two preceding years. Nevertheless, as the next table (taken from the "Weekly Wool Chart") shows, the decline in prices since 1928 has been disastrous:—

PRICE INDICES (JULY, 1914 = 100).

	Period.	Wool.	Tops.	Yarn.	Group Average.
Average, 1925		162	163	177	167
" 1926		133	138	155	142
" 1927		140	142	158	147
" 1928		153	158	169	160
" 1929		116	125	143	128
" 1930		75	84	107	88
" 1931		57	68	90	72
1932, January		59	71	93	74
" June		49	61	81	64
" July		54	65	82	67
" August		56	66	83	68
" September		61	70	86	72

As a result of the increase in the proportion of "crossbred" wool to total production, the fall in the price of this type has been more pronounced than that of other varieties. According to the Empire Marketing Board, the price index for "crossbred" wool in December, 1931, was 53 (1909-13=100), while that of merino wool was 69, and the figure for carpet wool was 95. Despite this collapse in wool prices, no appreciable reduction in output has become noticeable, partly because production cannot be readily adjusted, and partly because the larger proportion of sheep are reared to yield mutton as well as wool. Moreover, as already stated, concerted policies of restriction of sales have not been adopted. The slight advance in sterling wool prices following the suspension of the gold standard was soon lost, and in June, 1932, values reached

BANKING

a low record. A turning point, however, came when the new clip came on the market in July, and prices recorded a substantial recovery between June and September, though some of the gains have already been lost at the London auctions.

As far as can be judged from preliminary estimates, the new Australian clip has again been heavy, but the market for wool, contrary to that of most other textile fibres, is not clogged by a heavy carry-over from the previous season. Although it would be over-sanguine to predict a further rise in raw wool prices under present circumstances, it nevertheless appears that, thanks to the absence of artificial "stock-holding" schemes, the wool position is at the moment more favourable than that of many other raw materials.

RUSSIAN IMPRESSIONS.—II.

(BY A CORRESPONDENT.)

RUSSIAN industry, the Red Army and the G.P.U., administration and all other urban activities taken together occupy at most a quarter of the Russian population—a generous estimate which includes families and dependants as well as actual workers. Three-quarters or more of Russia's 160,000,000 inhabitants are still peasants and dwellers on the land, and the agricultural side of the Five-Year Plan is, therefore, at least as important as the industrial side. From many points of view, indeed, it is much more important; for, having regard merely to the magnitude of the two undertakings, the socialisation of agriculture is obviously an immensely greater and more difficult task than the socialisation of industry.

In the Caucasus and the Ukraine the Russians had bad luck with weather this year, both in the spring and during the harvest. Between Stalingrad and Rostov, as well as through the Central Ukraine to Kharkov, many fields seen from the train were filled with cocks of blackening rye which could not be brought in owing to hard daily rains. Expert travellers who had ranged farther afield reported poor crops in other important districts normally producing a surplus of grain. Though we naturally could not check the reports, we were told by reliable informants that in certain factories the bread ration of some groups of workers at least had been reduced, and that in other districts ration cards were no longer available for dependants, who consequently had to buy their food at high prices in the free markets. Russia is so vast and transport as a whole is so bad that want in some areas is quite compatible with plenty in others. For instance, last August, fruit and vegetables were scarce in Leningrad and Moscow, though on the Volga and in the South, melons, cucumbers and similar products were plentiful. Apart from gherkins, which are commonly pickled, the summer fruits cannot be preserved for winter use. On the whole, our net impression was that the current grain harvest will be small in total and low in yield in comparison with previous years; and this view was supported by such official figures and reports as were available at the time, and has subsequently been confirmed by the extension of rationing to foreign journalists resident in Moscow. What a bad harvest will mean for Russian grain exports we were unable to estimate.

But although in many areas this year's poor harvest may be largely due to bad weather, the accounts we

received from informed observers suggested that mistakes in the application of the policy of socialising agriculture were at least partly responsible. The agricultural side of the Five-Year Plan falls into three main parts. First, so-called technical crops are being developed. These comprise products like cotton, sugar, tea and *tau-saghi*, a rubber substitute. We saw nothing of these crops on our trip, but we were told that the cotton experiment was progressing well and that, apart perhaps from small Egyptian imports, Russia now produces enough cotton for her domestic needs. Reports about tea and *tau-saghi* were also favourable. One the other hand, the beet sugar crop was said to be suffering extremely from weeds and caterpillars. A recent investigation has shown the whole sugar situation to be highly unsatisfactory; and, following severe criticism by the Bolsheviks themselves, the officials responsible for the mistakes and failures have been removed and the entire organisation of the sugar industry is being thoroughly overhauled.

The second side of Soviet agricultural policy is the development of State farms. Enormous tracts of land, sometimes carved out of virgin prairie, these farms are worked by thousands of labourers and use machinery to the fullest possible extent. Verblud, a State farm near Rostov, was included in our itinerary. It covered some 250,000 acres, employed 8,800 workers, served, in addition, as a training ground for 1,200 students, and, including dependants, housed a population totalling some 10,000 souls. The workers lived in blocks of two- or three-roomed flats, which were airy and clean. The usual communal kitchens, assembly halls, crèches, schools and other social services were provided; and living conditions on the farm were generally much better than in the old-fashioned village. But Verblud was thick with problems. Roads were bad and transport difficult. The organisation of work was complicated and cumbersome. Weeds were plentiful; and, although much machinery was employed, the sight of peasant women in a barn winnowing the weeds from the grain by hand provided an eloquent commentary on mechanical farming under the conditions prevailing locally. In general, the State farms have proved to be white elephants: they have been unmanageably large and many of them have had to be split up; capital charges on buildings and on machinery which can be used only for part of the year are high and overload costs. Miscalculations seem to have been made about the potentialities of machinery; for, at all events in certain areas, wheeled tractors get mired in the fields, caterpillar tractors are not available in sufficient numbers, and the combined harvester-and-threshers, which need dry clean grain to operate successfully, are often choked by weeds and rendered unusable owing to rain during the harvest period.

Though technical crops and large State farms may take pride of place, the collectivisation of peasant holdings is by far the most important phase of agricultural policy. Collectives are of several kinds, and vary from associations for the cultivation of privately-owned fields by collectively-owned means of production to pure "Kolhozi," which own land and machinery and work throughout on a collective basis. Some of the dairying collectives which we visited appeared to be well run and efficient. Much naturally depends on personalities, and where a collective is lucky with its members and its land the results are often happy.

Particular successes apart, however, collectivisation has produced consequences grave in character and lasting in influence. Thus, a large proportion of Russia's live stock were slaughtered by peasants who refused to contribute their animals to the collectives. In one district of the Ukraine—an area formerly noted for its livestock—killings totalled 60 per cent. of the horses, 70 per cent. of the cattle, 75 per cent. of the pigs and 90 per cent. of the sheep. The loss of horses is particularly serious; for while 4,000,000 are believed to have been slaughtered throughout Russia, only 600,000 h.p. in tractors have been available in their place. On the mechanical side, tractors have been disappointing because they are easily damaged by peasants totally unused to complex machinery, but not so easily repaired. Doubtless the peasants will become mechanically educated in time, but meanwhile their lack of skill and the shortage of horses reduces agricultural pro-

ductivity. Moreover, even if the tractor programme were amply fulfilled, and if peasants understood machinery, horses would still be needed for technical reasons, and they will have to be bred again. Indeed, the replacement of her flocks and herds is one of the most serious agricultural problems which Russia now faces. For this to be done, time is needed above all. On a favourable estimate, it will take five to seven years before her livestock are again as numerous as when collectivisation began.

Apart from the livestock problem, other complications can fairly be charged to collectivisation. It was carried out at too swift a pace, and Stalin himself was obliged to curb his subordinates' zeal in his famous "Exuberance of Success" speech. The campaign against the Kulaks, or relatively well-to-do peasants, however justified by the canons of Bolshevik theory, in fact, stripped the villages of many intelligent and enterprising workers. Under collectivisation the quality and quantity of work is said to have fallen; and, though in farming piece rates are notoriously hard to administer, they are being widely used to replace the incentives of private ownership. The serious shortage of finished consumers' goods which, under the Five-Year Plan, have been sacrificed to industrial development, has weakened the peasant's desire to produce. Heavy taxes and the low prices fixed by the State for requisitioned grain have further discouraged him. Last spring seed corn was eaten in many districts. Peasants are said to be complaining more and more openly. During August a decree was passed penalising theft of corn from the fields with death; and even during our short stay the decree was executed. Nevertheless, stealing continues, and one traveller returning from the relatively prosperous Crimea reported a grim encounter with hungry peasants, who were kept from molesting his party only because it was armed.

It would be unfair to attribute all of Russia's present agricultural troubles solely to collectivisation. In any event, the need to reform the old strip system in the interests of efficient farming partially justifies the policy, while the age-old tradition of the *mir* probably makes collectivisation more palatable to the Russian peasant than it could conceivably be to the far more individualistic farmers of other countries. Moreover, time is needed for the change to prove its benefits. No individual traveller can describe the state of Russian agriculture as a whole, or accurately disentangle the full consequences of Bolshevik agricultural policy. But when every allowance has been made, the final impression remains that this year's harvest will be bad, that the coming winter will be hard and hungry, and that many of the agrarian difficulties which have been experienced under the Five-Year Plan have yet to be overcome.

Notes of the Week.

Whitehall and Dublin.—The agreement to open negotiations in London on October 14th in regard to the financial issues in dispute between the British Government and that of the Irish Free State, offers grounds for hope, if not for very sanguine optimism. In one sense, last Wednesday's announcement came as a surprise. Having succeeded in securing the exit from the Irish scene of the Governor-General—albeit by procedure which showed a curiously punctilious regard for the Imperial constitution—Mr de Valera, it was thought, might have been still less inclined than before to abate his somewhat rigid attitude with regard to the annuities; and, though it remains to be seen whether he is entering these negotiations with the intention of securing the best possible compromise or of creating yet another deadlock by insistence on complete cancellation, it is significant that the President is no longer talking of an arbitral award from an international tribunal. On the other side, the British Government have eased matters by making what is in fact a large concession. They have agreed that the discussions shall include not merely the land annuities, whose payment is now in suspense, but all other sums in dispute, such as, presumably, the Royal Irish Constabulary pensions and payments arising

from various Telegraph Acts. The negotiations bid fair to be neither short nor easy; little will be gained by British insistence on the letter of the financial agreement signed by Mr Cosgrave, but not formally ratified by the Dail; and if the basis is to be found for a compromise acceptable on both sides of the St. George's Channel there will clearly have to be give and take by both parties. It may be that the loss and disorganisation already wrought in Ireland by the British punitive tariff have brought Mr de Valera to realisation of the fact that a settlement must be reached if he is to avoid having the Free State in such economic chaos as to give the White Army a favourable opportunity for a *coup d'état*. On the other hand, his scope for retreating from the position he has taken up on the financial issue is limited. Apart from the fact that in many cases the land annuities are no longer being, and under present circumstances, cannot be, collected, there is a very real political obstacle in that the great majority of those who voted for Fianna Fail at the last election did so, undoubtedly, in the belief that Mr de Valera would secure not merely formal severance of the tie with the British Crown, but suppression of the whole of what is popularly, if erroneously, regarded as "tribute to England." Mr de Valera, in the midst of his economic anxieties, may be prepared to counsel his supporters to have patience, but he cannot afford to run flatly counter to their wishes.

Mr Hoover's Campaign.—The course of events in the American Presidential election contest has forced Mr Hoover to abandon his intention of conducting his campaign from the seclusion of the White House; and on Tuesday he delivered a speech at Des Moines, Iowa, with the object of stemming the flow of the tide. At first sight he seems to have had little success, for Wall Street (which is overwhelmingly Republican in sentiment) promptly registered its disappointment at the absence of any new proposal likely to turn the fortunes of the election, and a sharp market reaction took place. In so far as it concerned domestic affairs, the President's speech consisted of a striking description of the grave dangers through which the United States has been passing, and of an emphatic defence of the measures taken by his Administration to avert disaster at successive stages of the crisis. In logic this defence is powerful. Politically it may well prove ineffective. One's mind goes back to the British election of May, 1929. The Conservative Party had been in office for four years and their record, in the eyes of the country, was not impressive. The party looked to Mr Baldwin's chief campaign speech for inspiration. It got instead a review of his four years' record and the appeal:—"Send us back and we will continue this record." The country, in search of something new, swung towards Labour. May history not be repeating itself in this way in the American campaign? It must, of course, be remembered that Mr Hoover was addressing a farming audience, which may have been more pleased than Wall Street at the promises of still higher protection, if need be; and other impending speeches may possibly restore Mr Hoover to favour with other sections. On the other hand, there is little present indication that the Des Moines speech has done much to improve the Republican chances, while Mr Roosevelt's position has this week been further strengthened by his reconciliation with Mr Al. Smith, which marks an important closing of the Democratic ranks at a crucial moment. As regards international subjects, Mr Hoover declared himself (like the Democrats) against the "cancellation" of debts—a declaration which does not rule out negotiation for readjustment. Cabled summaries of this passage in his speech are brief, and their brevity probably accounts for the suggestion that Mr Hoover advocated the use of war debt receipts for subsidising American exports. It can hardly be supposed that he would make in so crude a form a proposal so economically unintelligible. In any case, it is well to remember that the speech was made for domestic campaign purposes, and therefore possesses the minimum of international significance.

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

The Armaments Crisis.—There are two outward events in the history of the armaments crisis to be recorded this week. The first is the publication on Tuesday of an article by Senator Borah in which he expresses the opinion "that Germany's demand for equality is natural, and not only natural, but essentially and fundamentally just"; that "the time is extremely opportune to raise these post-war problems and adjust them on the basis of peace"; that "this question of equality is wholly within the control of the other Powers"; and that, "if the Conference fails, the fault will rest with the Allied and Associated Powers, and not with Germany." In the same article, Senator Borah incidentally urges the recognition of the Soviet Government by the United States. The other important event—for which the ground has been prepared by Sir John Simon's flittings between London, Geneva and Paris—is the announcement that the British Government have been in communication with the Governments of France, Germany and Italy for the purpose of ascertaining whether the difficulties which have arisen from Germany's withdrawal from the Disarmament Conference could be made the subject of an exchange of views between them; and that the British Government have also intimated that, if this course were found feasible and were generally approved, they would be willing to arrange a meeting for this purpose in London. At the moment of going to press, Italy has accepted, and it looks as though the German Government might be ready to fall in with this suggestion provided some less negative formula than the Simon Note can be found; but the attitude of France is more doubtful. At the same time, there are signs of an imponderable but none the less distinctly perceptible change of opinion in France. It looks as if the majority of the French electorate which brought Monsieur Herriot into power at the last general election was now rousing itself to demand that its mandatory should really carry out the mandate that was given to him by the electorate on foreign affairs, instead of carrying on the policy of the Tardieu Government which the electorate turned out of office. While Monsieur Herriot is still fumbling with schemes for "security" by way of "sanctions" which are not really within the range of practical politics, the French Press of the Left is telling him that something must be done to prevent a renewal of the competition in armaments; and French Liberal opinion is apparently beginning to come round to the view that the solution lies, after all, in some substantial reduction in the armaments of "the more heavily-armed Powers." As we record these symptoms, we have a feeling that they are almost too good to be true; still, it is such a propitious gleam from such a vital quarter that we cannot refrain from recording it as, at any rate, a good omen.

The New Government in Hungary.—A new Government was formed in Hungary last Friday by General Gömbös. The General's advent to power may perhaps be taken as indicating decisively the end of the temporary phase of French influence over Hungary—a phase which began last year when Count Bethlen had to retire in favour of Count Karolyi. General Gömbös is *persona grata* to the Regent, Admiral Horthy. In fact, his relation to him can be described in terms of Herr von Papen's relation to President von Hindenburg. At the same time, Gömbös, and for that matter Horthy himself, is the Fascist kind of reactionary and not the Legitimist. When the late King Charles made his second *Putsch*, Gömbös co-operated with Horthy in taking active military measures to prevent the ex-king's return to the Hungarian throne. Gömbös is also reported to be no friend of the Hungarian landed-interest—though there is no mention of agrarian reform in the statement of policy which he broadcast on Tuesday. He did, however, announce his intention to introduce the secret ballot—a long-overdue reform in Hungary, where open voting has been one of the principal instruments of political terrorism for half a century. In foreign politics, General Gömbös is reputed to be friendly to Fascist Italy and also to Yugoslavia. (The Magyar minority under Yugoslav rule is very small compared to the subject Magyar minorities in Roumania and Czechoslovakia; and Hungary needs Yugoslavia's goodwill in order to secure access to the sea.) In the field of foreign affairs, General Gömbös announces that his Government proposes to seek the revision of the Peace Treaty of Trianon—albeit by peaceful means—and that he is ready to play his part in an economic rapprochement between all the Danubian States, on the understanding that the rights of the Magyar minorities in the "Successor States" are scrupulously respected. General Gömbös's epiphany, following upon that of Herr von Papen, is another symptom that the European system based on the unequal peace treaties is nearing its end; and that the ex-victors have the choice of coming to an agreement with their ex-adversaries whilst they are in the way with them, or else seeing Europe re-divide into two rival armed camps which would inevitably try conclusions sooner or later in another Great War—a fearful alternative, of which no one can foresee the outcome, if things are allowed to drift into the current which sets towards that maelstrom.

A Turn of the Tide in Latin America?—The unrest in Latin America continues, and in particular the war between Bolivia and Paraguay in the Gran Chaco still drags on. Yet in two of the most important Latin-American countries, namely Brazil and Chile, there have been developments during the last few days which may conceivably point to a turn in the social tide that has been flowing on a revolutionary course for more than two years. In Brazil we have a rare example of a Latin-American insurrection ending in a victory for the Government in office. The revolt of the State of San Paulo against the Brazilian Federal Government, headed by Provisional President Vargas, collapsed last Sunday; and there are welcome indications that the Vargas Government is making a moderate use of its military success, and is thinking more of permanent reconciliation than of the immediate reassertion of its own power. The Federal authorities have announced, for example, in their first proclamation, that they do not intend to humiliate San Paulo; and the extreme legal penalty for military offences in war-time has been commuted from death to imprisonment with hard labour for thirty years. The City of San Paulo is not to be occupied militarily by the victorious Federal forces; there is to be an amnesty for all except the actual promoters of the insurrection; and the Constitution of 1891 is to be in force pending new elections—a provision which should mean, on the face of it, a reversion from military to civilian rule. Meanwhile, in Chile, a movement of civilian protest against military interference in politics has started at Antofagasta and has already produced sufficient effect throughout the country to bring about the resignation of General Blanche, the Provisional President of the moment. Chile, after all, is a country that has been

accustomed to an orderly civilian Government for many decades; so that this new movement is as natural as it is timely. If only the "A.B.C." group of Latin-American countries can now recover their normal degree of political stability, we shall be able to look forward to the beginnings of economic recovery, not only in those particular countries, but throughout the Latin-American world.

The F.B.I. and the Salter Report.—The Federation of British Industries have submitted to the Minister of Transport a statement of their views on the proposals of the Rail and Road Conference. Starting from the premise that "industry must have the cheapest and most efficient system of transport possible upon an economic basis"—for which purpose both rail and road are, of course, indispensable—they proceed to criticise most of the proposals of the Conference. The objections taken to the specific recommendations—which are concerned in the main with a new scheme of licence duties and conditions of control of road transport—do not, however, seem to us to be well founded or to face the problems for which the Conference had to find a solution. While admitting that some redistribution of the burden of taxation between heavy and light vehicles and between petrol and non-petrol vehicles is necessary, the F.B.I. think that a duty on the latter equal to the petrol tax is excessive. They desire, on the contrary, to keep some differentiation as a protective element in favour of home-produced fuels—and, in particular, of coal for steam wagons. We doubt, however, whether there will be much public support for letting such vehicles off with less than their fair share of road maintenance, particularly in view of the damage, discomfort and loss of speed to general traffic which they commonly involve on roads often unsuited to carry them. Again, though the Federation are not opposed to the exclusion of certain kinds of vehicles from specified roads, they are against the right of the Minister of Transport to prohibit certain classes of traffic being carried by road. In commenting on the Salter Report, we suggested that such powers must be exercised with very great discrimination, but there is no reason to suppose that the Minister will not so use them or will be obstructive to reasonable claims. Indeed, the tone of the F.B.I. objections suggests to us that they have not fully recognised that certain kinds of road transport are now being subsidised by the public, and are given undue competing advantages owing to lack of organisation and control; and that this subsidy is making more difficult the problem of the sound adaptation of the railways to present conditions. The F.B.I. would meet the situation not by imposing new restrictions on road transport, but by relieving the railways from the restrictions under which they work. They point out, for example, that the Act of 1921, which aims at fixing rates so as to give the railways a "standard revenue," is unsuited to present conditions. This doctrine at first sight seems plausible. But it really involves a misapprehension. The Act of 1921 was devised in the spirit of the nineteenth century to prevent the railways from exploiting their monopoly by charging excessive rates. These provisions, for all practical purposes, are a dead letter. The railways to-day cannot hope to earn their standard revenue, and are forced by circumstances—as the most far-sighted experts foretold at the time—would be the case—to charge "what the traffic will bear." And in a very large number of cases it will bear very little. There is no reason to suppose that if the relevant clauses of the Act of 1921 were swept away the railways would earn for their shareholders a penny more, or charge the members of the F.B.I. a penny less, than they do at present. It is more to the point to call attention, as the Federation do, to the lack of co-ordination involved in the fact that, while rates are under the review of a rates tribunal, the wage costs of the railways are reviewed by an entirely different body, which has no jurisdiction in the matter of rates. We have always maintained that there was a strong case for a joint body, which would deal with the railway industry as a whole. It is, also, highly relevant to emphasise—as, indeed, we pointed out when the conference report appeared—that taxation and control deal only

with the negative side of the problem, and that the positive task that is waiting to be tackled is the efficient organisation and co-ordination of transport facilities. But, whatever may be done hereafter in this direction, it does not render it any the less necessary to put an end to the subsidising of certain forms of transport by the revision of an out-of-date basis of taxation, and to restrain by some measure of control the present chaotic conditions in road transport. The unanimous proposals of the rival interests meeting under a neutral chairman hold the field; we cannot see that the F.B.I. have brought forward any valid grounds for setting them aside.

New Issue Control.—The announcement of the final figures of the 5 per cent. War Loan conversion result last Friday, showing £165 millions, or 8 per cent. of the total, to be redeemed in cash on December 1st—a result on which we comment further in an Investment Note on page 650—was accompanied by an official statement with reference to the embargo on new issues. It was intimated that the Chancellor of the Exchequer feels that no further restrictions on new issues are required, with the exception that until further notice (1) there are to be no foreign issues, i.e., issues on behalf of borrowers domiciled outside the Empire or issues whose proceeds would be remitted abroad; (2) there are to be no issues involving either underwriting or an invitation to subscribe new cash for the optional replacement of existing issues; and (3) it is requested that, with a view to co-ordinating the requirements of intending borrowers and so preventing the congestion of the market, no issue ranking as a trustee security shall be made without prior consultation with the Bank of England regarding its amount and date of issue. We find it difficult to appreciate the motives behind this curiously illogical interference with the freedom of the market. So far as (1) and (3) are concerned, a ban on foreign issues is under existing circumstances palpably otiose, while the improbability of trustee issues being made without due precautions to prevent clashing of dates and over-congestion need hardly be emphasised. As for (2), it passes belief that the Treasury should appear to favour the issue of capital for any "new" purpose, however economically useless or undesirable, while making it difficult, and in many cases impossible, for high-grade industrial concerns to take advantage of existing low interest rates to lighten their fixed charges by refunding operations, which in any case could not diminish the aggregate amount of capital available for general investment. It was precisely because it foreshadowed the filtering down of cheaper money to industry and, not least, to concerns now carrying a heavy burden of "dear" debentures, that the success of the War Loan conversion was doubly welcome, apart from its eventual assistance to the Budget. The retention of this partial embargo is, on the face of it, so wrong-headed and ridiculous that it gives colour to the suspicion that the Treasury may have some doubts in its mind as to the ability of the gilt-edged market to maintain a yield basis of 3½ per cent. should the restoration of complete freedom for high-grade industrial refinancing lead to any considerable "switch over" by investors from Government stocks to new and—from the earnings' point of view—slightly more attractive debentures of proved concerns. If this be so—and we are a little sceptical with regard to a "flood" of new issues for conversion—we would suggest that the Treasury's tenderness towards holders of British Government stocks is mistaken. In the long run it is desirable, from every point of view, that interest rates should be allowed to find their true level in a free market.

Australia's Conversion Loan.—The impasse created, as we observed last week, by the reluctance of the Australian Government to assent to the only terms on which the City considered that the £12 millions of New South Wales maturities could be refunded on a long-term basis, has

been solved in the way which we suggested last week was the only alternative, namely, re-financing on a short-term basis. Holders of the 5½ per cent. New South Wales stock due for payment on November 1st were offered on Tuesday an equal amount of Commonwealth Government 3½ per cent. stock 1936-37, plus £2 10s. per cent. in cash, while cash subscriptions were also invited for the new stock at 97½. Though we have yet to learn the amount of conversions, the new bonds with a currency of four to five years were naturally attractive to banks and the money market; and the lists were closed almost immediately. The result appears to have caused gratification in the Commonwealth, where the difference between refunding on an unacceptable long-term basis of slightly over 4½ per cent. and short-term refinancing at a figure which offers a running yield of about £4 1s. per cent. is doubtless not unduly stressed and "3½ per cent." is made to look attractive to the debtor. With the probable influence of this operation on the price of other Commonwealth stocks, having regard to other early Australian maturities, we deal more fully on page 650. From a broad point of view the conclusion must be that, if the rate of interest continues to fall during the next four years, the present decision may be justified by the event. But, when regard is had to the already somewhat unwieldy bulk of Australian short-term indebtedness, we are disposed to think that, if political considerations had permitted, it would have been worth while for the Commonwealth to accept London's terms for the sake of getting this volume of debt out of the way.

The Half-Year's Revenue.—Although it is impossible to draw any definite conclusions from the figures of national revenue and expenditure during the first half of the financial year (printed in full on page 636), the results to date throw some light at least on the question whether the Chancellor's Budget forecast is likely, in the main, to be realised. Excluding the self-balancing items, ordinary revenue in the first six months of the year amounted to £268.5 millions, an increase of £5.1 millions as compared with the corresponding period last year, while ordinary expenditure totalled £359.5 millions, or £2.4 millions less than in 1931-32. In view of the fact that revenue and expenditure were estimated in the Budget to drop during the year by £4.2 millions and £4.6 millions respectively, these gross figures seem on the whole to be moving in the right direction. On the revenue side, income tax amounts to £47.3 millions and surtax to £10.7 millions, showing reductions of £6.2 and £5.2 millions respectively, as compared with the April-September period last year. These reductions are doubtless accounted for largely by the "tax-drive" of January last, which reduced substantially the amount of arrears to be collected in the first half of the current financial year. Estate duties, at £39.0 millions, are £4.6 millions higher. In April last Mr Chamberlain's estimate of an increase of £11 millions for this item seemed to us somewhat optimistic, but in view of the recent appreciation in gilt-edged and other

JUST OUT

SCIENTIFIC INVESTMENT

By HARGREAVES PARKINSON, B.A., B.Com.

With Foreword by SIR WALTER LAYTON, C.H., C.B.E.

THIS new book explains the logical technique of investment. "He (the author) presents no argument which is not of as much moment to the small investor as the large, and from his close experience he is able to add even to the knowledge of those whose business is investment control," says THE FINANCIAL NEWS.

Demy 8vo. 10/6 Net. 244 pp.

Order from a bookseller or
SIR ISAAC PITMAN & SONS, LTD., PARKER ST., KINGSWAY, W.C.2

stocks, there now seems more likelihood of his expectations being realised. Receipts from Stamps, at £8.8 millions, reveal only a small increase of £880,000, and it seems very unlikely that the estimated increase for the year of nearly £6 millions will be forthcoming. Customs amount to £82.4 millions, an increase of £17.4 millions over last year's figures; and it seems probable that the estimated increase of £38.4 millions will be realised, as the first half-year's receipts suffered somewhat from forestalling of the new duties at the beginning of April. Excise, at £60.5 millions, shows a rise of only £3.9 millions, and has considerable leeway to make up if the increase of £15.5 millions is to be realised by the end of the year. Turning to expenditure, the estimated saving of £13.5 millions on national debt interest has, thanks to low Treasury bill rates, already been achieved, save for £1½ millions, and should in all probability be largely exceeded. Supply Services, at £217.3 millions, show an increase of £9.2 millions, whereas the total estimated increase for the year was put at only £8 millions. The danger point in the accounts seems to lie within this item, owing to the increased cost of unemployment relief, the total burden of which, it will be recalled, was transferred to Supply under the Emergency Budget of last autumn. Introducing his Budget last April, Mr Chamberlain admitted that his estimates for this particular item were based on the expectation of a continued reduction in the numbers on the unemployment register, which then stood at about 2.6 millions. In view of the recent considerable increase in this figure, however, and its probable growth during the coming winter months, it is not unduly pessimistic to anticipate that the Exchequer will have to provide at least an additional £12 millions to meet this liability. Although much depends on the course of events during the next six months, it looks at the moment as though the Chancellor's forecast has, on balance, a fairly reasonable chance of fulfilment, when allowance is made for the reduced interest charge of the National Debt.

Ministers at the Microphone.—Radio having now occupied an accepted place in the scheme of modern democracy, it was natural that the British Broadcasting Corporation should afford representatives of the Government and of the resigning Ministers the opportunity to state their case to the country. The case for the former was put on Friday by Mr Baldwin and on Saturday by Sir John Simon, while the latter were represented by Lord Snowden and Sir Herbert Samuel respectively. The broadcast speeches of the retiring Ministers consisted of an amplification of their letters of resignation already published. Lord Snowden, with the incisiveness which recalls his fateful broadcast speech on behalf of the National Government less than a year ago, repeated his plea that the Government's policy was pure Conservatism, with no concession whatever to the points of view of other parties. Sir Herbert Samuel laid particular emphasis on the reasons why the resignation of himself and his colleagues had not taken place before. On the other side, Mr Baldwin argued that just as a year ago "All hands to the pump" was the motto, so to-day it was equally essential to "Stick to the ship." Sir John Simon concerned himself mainly with the argument that the "agreement to differ" made last spring would properly have covered all present differences; and as regards the Ottawa agreements in particular he asked the country to "wait and see." It may be that in the country at large more influence has perhaps been exerted by the reasoned defence of the retiring Ministers made by Lord Grey than by the aerial polemics of the "Stickers" and "Quitters." Some comment has been directed to the fact that no official representative of the Labour Party was invited to participate in this national discussion of national politics. In this particular case, the B.B.C. would appear to be on firm ground in regarding the points in dispute as lying exclusively between the Government and the seceders. When the Ottawa agreements come before Parliament the leader of the Parliamentary Labour Party will be offered his chance at the microphone.

New Zealand's Budget.—According to Mr Forbes's Budget statement, New Zealand's revenue for the past year amounted to £22,719,733 and expenditure to £24,860,552. There was thus a deficit of £2,140,819, which Mr Forbes ascribed, firstly, to a shortfall of £1,946,000 in revenue below the original estimate—this being mainly due to a drop of £846,000 in Customs revenue as a result of the steps taken to restrict imports and correct the trade balance; and, secondly, to the increased cost of London remittances caused by the depreciation of the New Zealand pound against sterling. To deal with this prospective deficit, a Committee on National Expenditure was appointed some time ago, and in his Budget statement Mr Forbes said that the Government had adopted economies recommended by this Committee to the amount of £2,100,000, and also further miscellaneous economies totalling £405,000. The suspension of war debt payments to Great Britain under the Hoover moratorium would permit of a further saving of £825,000, but, on the other side, there were certain unavoidable increases in expenditure amounting to £975,000. The net saving came to £2,355,000, which was nearly sufficient to balance the Budget without any increases in taxation, the final estimates for the coming year being expenditure £22,507,000 and revenue £21,630,000. The main item of expenditure is £10,012,000 for debt service, while social services require £8,870,000. The principal sources of revenue are Customs, £5,700,000; income tax, £3,400,000; Stamps and Estate duties, £2,900,000 and interest receipts, £2,550,000. The total estimated revenue also includes an item of £2,500,000, "transfer from reserve," and it is clear both from these accounts and from the general tenor of Mr Forbes's speech that the Budget has only been approximately balanced, and that with difficulty, and with the continued imposition of heavy burdens upon the people. The amount available for public works this year is £2,700,000, which is a substantial reduction below last year's figure of £4,794,000. Mr Forbes insisted that not only was it uncertain if additional funds could be raised overseas at a reasonable cost, but also that the Dominion could not afford to increase its debt charges, even if capital could be obtained. Mr Forbes referred to the loan of £5,000,000 floated in London last April, and stated that £4,000,000 of this sum had been used for the repayment of Treasury bills in London, and the balance for public works. He added that the £5,000,000 of bonds issued in London in 1931 should be redeemed so soon as conversion could be secured upon favourable terms, as these were costing over 6 per cent; but he intimated that the average rate of interest upon New Zealand's internal debt was below the present effective borrowing rate, so that the scope for the reduction of debt charges by conversion was limited. In conclusion, he announced the intention of the Government to introduce a Central Bank Bill on the lines recommended by Sir Otto Niemeyer. The general impression left by the Budget is that it is the best the Government can do under the present adverse circumstances, but that some of the revenue estimates take a somewhat optimistic view of the outlook for the coming year. There is no doubt that under prevailing conditions New Zealand's public debt constitutes a terribly onerous burden.

Cotton Spinners' Wages.—It was believed in Lancashire cotton trade circles, writes our Manchester correspondent, that after the settlement of the strike in the weaving section there would not be much difficulty in reaching agreement with regard to wages in the spinning branch; but the negotiations between the Master Spinners' Federation and the trade unions have so far failed, and there is a danger of a crisis at the end of next week. When deadlock in the negotiations was reached, the position was that the employers had reduced their claim to 15½ per cent. off standard lists, equal to 1s. 8½d. in the £ off current earnings, or the same percentage as agreed upon in the weaving section. The operatives, however, refused to go beyond their previous proposal of a reduction of 7½ per cent. off standard lists, equal to rather less than 10d. in the £ on current earnings. An important development occurred on Tuesday, when the Wages Committee of the

Master Spinners' Federation decided to recommend the General Committee to instruct their members to post notices of a wages reduction of 15½ per cent. from standard lists, the new rates to come into force on the making-up day in the week commencing October 10th. It is anticipated that this recommendation will be approved. There have been rumours of some dissension amongst the employers as to the wisdom of forcing this issue to the point of a stoppage of machinery, but Mr Fred Mills, the President of the Federation, has stated that there is complete unanimity on the question of pressing the demand. It was thought at one time that it would be necessary under the rules of the Federation to take a ballot of the members and obtain an 80 per cent. majority in favour before drastic action could be taken, but the Federation has now announced that there is no intention of taking such a ballot. As a lock-out cannot begin until the end of next week there is plenty of time for a resumption of negotiations between the employers and the trade unions, and it is fully expected in trade circles that arrangements will be made for a further joint conference early next week. It is understood that the leaders of the workpeople are determined to resist a cut in wages similar to that in the weaving section, but for many years it has been usual for wages in both branches of the industry to move up and down to the same percentage.

Sterling and International Prices.—The recession in the price level which set in after the "peak" reached on September 7th, has made further progress during the past fortnight. Our index of international gold prices shows a fall on the fortnight of 4.3 per cent., that of the sterling price of primary products a decline of nearly 2 per cent., while the complete *Economist* index has receded by 1.2 per cent. :—

Movements of British sterling prices again show some irregularity, but the predominant trend has been downwards—copper, most of the textile materials, butter, meat, bacon, maize and flour being prominent in the decline. The sectional figures are given below :—

"ECONOMIST" INDEX.
(1927 = 100).

	Sept. 18, 1931.	Sept. 21, 1932.	Oct. 5, 1932.

1924 = 100	52.2	55.3	54.7

With regard to the foreign index numbers reprinted in the first table, it will be noted that American prices are now falling again—a fact which has contributed not a little to this week's severe reaction in Wall Street.

Lancashire Cotton Corporation.—During the last month or two there have been signs of a change of policy in the Lancashire Cotton Corporation, the combine which was floated early in 1929 for the purpose of amalgamating about 100 spinning mills containing about 10,000,000 spindles. The developments have come to a head with the resignation from the board of Sir Kenneth D.

Stewart, the late chairman, Mr John L. Tattersall, the vice-chairman, and Mr John Ryan, the managing director. Since its inception this large organisation has been worked on a basis of centralisation through the head office in Manchester, and the individual units have had very little power. It has been evident for some time that the system adopted was not proving successful and that a change in methods was desirable. The resignations from the board now announced mean that the three executive directors have had to give way to the new policy, which consists of decentralisation and the placing of increased responsibility upon the managers and officials of individual mills. A month or two ago, writes our Manchester correspondent, Mr John Grey, one of the best-known leaders in the industry, and Mr Frank Platt, a director of several mill companies, were elected to the board, and it is understood that the policy now being adopted is largely due to the latter's influence. The Corporation from the start has had to meet strong criticism from all sections of the cotton industry, and the latest developments have brought significantly few expressions of regret from certain quarters. The situation as it now stands, however, gives some support to the opinion held by many people in Lancashire that individual mills efficiently run are superior to and more economical than any big combine. The financial year of the Corporation is from November 1st to October 30th, and it is expected that the accounts for the past twelve months will be published early in 1933. The Corporation undoubtedly derived considerable benefit from the increased trade which came after this country went off the gold standard, but their trading experience during the last six months is not likely to have been very satisfactory.

Coal Mining Results.—The latest quarterly statistical summary issued by the Mines Department reveals a slight seasonal deterioration in the coal-mining industry during the second quarter of the current year :—

Period.	Tonnage Disposed (Mill.).	Costs per Ton.		Proceeds per Ton.	Profit per Ton.	Output per Man-shift.	Earnings per Man-shift.
		Wages.	Total net.				
1930.		s. d.	s. d.	s. d.	s. d.	cwts.	s. d.
1st quarter	60.0	9 2	13 4	14 5	1 1	21.94	9 3

3rd "	45.3	9 4½	14 0	13 10	— 0 2	21.35	9 2½
4th "	50.9	9 1½	13 6	14 1	0 7	21.86	9 2
1932.							
1st quarter	49.6	9 1	13 6½	14 0½	0 6½	21.98	9 2
2nd "	46.1	9 1½	13 10	13 8	— 0 2	21.78	9 2

As compared with the first quarter of 1932, the total quantity of saleable coal raised, at 50.1 million tons, showed a decline of 3.8 million tons, and the disposable tonnage fell from 49.6 millions to 46.1 millions. Total proceeds were £31,550,607, against £34,895,165 in the previous quarter. The net cost of production amounted to £31,916,768, as compared with £33,557,790 in the January-March period, leaving a debit balance of £366,161, against a credit balance of £1,337,375. This unfavourable result was due to the increase in costs per ton from 13s. 6½d. to 13s. 10d., coupled with a reduction in proceeds per ton from 14s. 0½d. to 13s. 8d. The output per man-shift declined from 21.98 cwts. to 21.78 cwts. Out of nine coal-mining districts, only Yorkshire, North Derbyshire and Nottinghamshire, South Derbyshire, and Lancashire showed a small credit balance. As the situation in the coal trade deteriorated further during July and August, the results for the third quarter will probably be still less favourable than those for the April-June period.

Irish Free State Banking.—The Irish Free State Currency Commission has filled a gap in Irish banking statistics by beginning the issue of a quarterly return showing the position of the eight shareholding banks and the National City Bank, Limited. The return represents an average of figures for a selected date in each of the

5. Investments:			
(a) Government	2,114,523	74,059,748	76,174,271
(b) Other	1,917,886	3,986,982	5,904,868
6. Premises	2,014,580	1,072,614	3,087,194
7. Liability of customers for acceptances, &c.	6,316	33,368	39,684
8. Other assets	1,432,419	3,497,355	4,929,774
	65,721,474	132,870,931	198,592,405

The return shows that the banks have a ratio of cash to deposits of 12.1 per cent., which is slightly above the normal English cash ratio. Advances amount to 43.5 per cent., and investments to the high ratio of 48.7 per cent. of deposits. Bills form an unimportant part of the banks' assets. The geographical division of the banks' assets and liabilities is particularly interesting, for while 76 per cent. of the banks' deposits come from within the Free States, 67 per cent. of their total assets fall within the "elsewhere" category, while the insignificant amount of call and short money lent within the Free State boundaries denotes the complete absence of an Irish money market. These facts show how difficult it would be to separate Irish banking and finance from that of the British Isles as a whole. We welcome this addition to the general body of banking information, and the only suggestion we would like to make is that this very valuable return should be compiled monthly instead of quarterly.

The 1930 Census of Production.—Volume XVIII of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the coke and manufactured fuel, carriage, plate and jewellery, watch and clock, fur, and fish-curing trades. The following summary shows the gross value, the net value (gross values, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee	
	1924.	1930.	1924.	1930.	1924.	1930.
Coke and by-products and manufactured fuel	Thous. £ 26,296	Thous. £ 16,550	Thous. £ 5,421	Thous. £ 3,609	£ 267	£ 223
Carriages, carts and wagons	3,733	2,145	1,997	1,035	189	166
Plate and jewellery	10,952	8,058	5,445	4,281	183	180
Watches and clocks	626	722	378	400	192	187
Furs	5,413	3,747	1,903	1,355	281	243
Fish-curing	6,858	5,737	1,465	1,218	189	169

With the exception of the watch and clock trade, the returns for this group of industries reveal a substantial decline both in gross and in net value of output between the two census years. The quantity of foundry coke made in 1930 was 11,616,000 tons, valued at £9,664,000, as compared with 12,782,000 tons, valued at £16,810,000 in 1924. The output of manufactured fuel in 1930, at 1,144,000 tons, shows a reduction of 111,000 tons on the earlier year, and its value declined from £1,751,000 to £1,185,000. Among by-products, the production of crude and refined tar increased from 508,400 tons to 516,900 tons, but its value declined from £1,487,000 to £871,000.

The total value of by-products decreased from £6,898,000 in 1924 to £4,677,000 in 1930. As was to be expected, there was a substantial fall in the number of carts and carriages made for animal traction. Quantitative comparison of the output of plate and jewellery between the two census years is not possible, owing to the diversity of the articles made, but the reduction in the average number of employees from 29,759 to 23,759 suggests a considerable decline. The total weight of fish cured in 1930 was about 16 per cent. less than in 1924. The weight of herrings alone decreased by 22 per cent. from 4,845,000 cwt. to 3,763,000 cwt.

Our Growing Tariff.—In a Note of the Week in last week's issue, commenting on an analysis in the Bank of England's Statistical Summary of the volume of trade affected by the Import Duties Act, we compared a remaining Free List of £223 millions with "total imports" of £740 millions. The figures related, of course, to total imports from foreign countries; shipments from the Dominions, amounting in 1930 to just over £300 millions, did not figure in the picture which we were concerned to examine. Similarly, the percentages to the "total" represented by imports covered by various grades of duty relate also to total from foreign countries. We trust that any shortcomings in the clarity of our Note have not given rise to misconceptions on the part of readers.

Overseas Correspondence.

LEAGUE OF NATIONS.

Lytton Report — Germany's Equality claim — Preparing the World Conference — The Stresa Proposals — Iraq joins the League.

(FROM OUR CORRESPONDENT.)

GENEVA, October 5.

THE Report of the Lytton Commission has given rise to many reflections, but it is generally agreed to be one of the best, both in substance and form, that has been submitted to the League. It is regarded as a standard by which the action of the League and of the Governments of the world will be finally judged, and the mere production of such a report is a fact whose significance is apt to be overlooked in these times of criticism and depression regarding the efficacy of the League.

It is surely unprecedented that an impartial and responsible commission should have been called upon to enter into a detailed inquiry involving the vital interests of two Great Powers; that it should also have produced a report with such definite conclusions on the main issues, ungoverned by political prejudices and wirepulling, establishes the value of this new international method. These observations are valid whatever subsequent action may be; the situation has been diagnosed, and conclusions have been convincingly stated. The general view here is that Japan has been condemned before the world. Unfortunately it is also clear that those who, for various reasons, dislike such objective study of responsibilities, are continuing as though nothing could ever be established against the correctness of Japan's conduct. Yet none of the steps proposed should be impossible, given the proper political spirit. Japan's actual needs and interests could be met far better by the Commission's plans than by military occupation and attempts to separate this vast territory from China proper; in fact, the Commission says that the present Japanese method cannot settle the problem satisfactorily either for Japan or anyone else.

These are all conclusions stated categorically by a body of men who have been driven to them by the logic of facts as they themselves have seen them on the spot. Their Report is a challenge to the world. No amount of narrow political calculation, and no amount of prejudice against

the existence of the League of Nations can affect this salient point. It ought to strengthen the hands of the Members of the League, working, as they can do, in full co-operation with the United States of America. Unhappily, no one here is confident that all of these States will like their hands so to be strengthened, and the sequel to the Report, either in Geneva or in the East, is uncertain. At the same time, it will be far more difficult, undoubtedly, for some of the statesmen to maintain any longer an "open mind"; the time is coming for a decision, and the material for judgment is ready. The Members of the Council and Washington will have an opportunity for reflection before the Council begins its examination sometime between November 14th and 21st. It is not certain whether in passing the Report on to the Special Assembly, the Council will do so with or without observations, but it is expected that the Assembly will not be able to approach its serious task until about the middle of December. Japan will not look at the Report, but the Commission has already spiked her guns concerning her excuse that the Report no longer holds now that Manchukuo has been recognised. The Report puts Japan more and more in an isolated position, whatever the Assembly may do, and Japan's growing economic and financial difficulties are corroborative evidence of the Commission's assertion that the policy that Japan is now pursuing is bound ultimately to fail.

The only criticism so far raised is that the procedure suggested by the Commission implies negotiations while Manchuria is under military occupation, and gives loopholes for legal side-stepping. This may be so, but on any reasonable interpretation of the Report, the negotiations would not be entered upon until after the acceptance of the principles upon which the negotiations should take place. These principles are perfectly clear, and the procedure suggested is only a means of putting them into contractual form. But whatever may be said about the Report, the grave double problem now before the Council and the Assembly of the League is the preservation of peace in the Far East and of every principle for which the League stands.

It is understood that Mr Ramsay MacDonald is endeavouring to arrange for a conference in London between four or five of the Great Powers to deal with the German claim for equality of armaments status. There seems no reason why the Germans should be more content to go into conference in London than in Geneva, but it may quite well be so, and the fact of having a limited conference for this purpose would in itself be something like a step towards a concession. For that reason it seems more probable that the French would be unfavourable to the idea. Meanwhile, there is no progress on the substance of the question, and there are no conversations going on at Geneva.

UNITED STATES.

Deficit — Railroads — Industrial Earnings.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 28.

TREASURY financing has presented no great difficulties owing to the extreme ease in short-term money, but it is still doubtful whether a long-term issue will be attempted this year, unless the market recedes to a 3 or 3½ per cent. basis. The most recent discount bill issue for \$100 millions was sold on an interest basis equivalent to 0.28 per cent., the lowest obtained since the system of discount bills was put into effect. Canada also is taking advantage of our excessively cheap short-term market. A Canadian one-year note issue of 4 per cents. sold at par was quickly snapped up this week, and represented virtually the only new financing in the past fortnight.

The United States Treasury will have to provide for \$300 millions of maturing certificates in the middle of October. It is expected to do so with another short-term issue. Meanwhile the rate at which expenditure is outturning receipts is causing increasing expectation of higher taxes, and perhaps of the adoption of the sales

tax. Obviously the Budget cannot be balanced by the Revenue Act of the last Congress. Since the beginning of the fiscal year, July 1st, the deficit has been steadily growing. If the present rate continues, the Treasury at the end of the year will have a deficit of fully \$500 millions. The deficiency is due in part to lower income-tax yield, but the chief disappointment has come from the low yield of the so-called "nuisance" taxes—the levies on cheques, oil, tyres, radios, gasoline, beverages, electric energy and the like. These taxes last month fell about 40 per cent. below the Treasury estimates, and they promise for the half-year to fall short by at least \$350 millions of the hoped-for collections.

A transport commission has been appointed, composed of ex-President Calvin Coolidge; ex-Governor of New York, Alfred E. Smith; Mr Alexander Legge, President of the International Harvester Company, and formerly chairman of the Federal Farm Board; Mr Bernard M. Baruch, capitalist; and Mr Clark Howell, editor of the *Atlanta (Georgia) Constitution*. These men have undertaken to study the whole transport problem at the behest of investment bankers' associations, insurance companies, and organisations interested primarily in railroad securities. The large deficits sustained by most railroads in the past few months have been due only in part to the general business depression, and an improvement in trade can scarcely effect a complete cure. In many cases management has been too rigid and somnolent, and has ignored too long the growth of motor and other forms of competition. Financial direction also has been partly at fault in permitting a constant addition to capital long after the roads had ceased to increase their carriage of freights and passengers. Moreover, the railroads are confronted with new conditions. The survey is expected to result in a report and recommendations to be made after the election, to cover necessary legislation to change rate-making practice, facilitate mergers, regulate motor, airway, waterway and pipeline competition, and to suggest capital reorganisation. The character of the men on the Commission insures public support for its recommendations.

Railroad traffic is enjoying some seasonal improvement. A rise has been in progress for the past few weeks, the increase in freight car loadings for last week being over 2 per cent., but still well below the total of a year ago. In keeping with the increase in rail-carried goods, there is a continued increase in electric energy output and a slow expansion in steel-making operations. The steel industry has risen to between 17 and 18 per cent. of capacity, and a further increase is expected; but not many companies are likely to be able to increase their output sufficiently to operate at a profit during the remainder of this year. Wall Street is still undecided about the fate of the United States Steel Corporation's preferred stock dividend. It is felt that if trade is showing real improvement and a good prospect when the board meets at the end of October, the full rate will be voted for at least another quarter, in spite of the operating deficit; otherwise a reduction will be ordered.

Company earnings for the third quarter will be poorer than those of the second three months, but the markets have been expecting that for a long time. As an offset, the trend now is slightly upward in various lines, and business failures as well as calls for aid from the Reconstruction Finance Corporation have declined. Railroad earnings in August were about 50 per cent. under those for the same month of last year, and for the eight months are down about 56 per cent.—the showing, poor as it is, indicating some improvement for August. The railroad situation is, nevertheless, difficult. Two large roads—the St. Louis-San Francisco and the New York, Chicago and St. Louis (Nickel plate)—are both advising noteholders to deposit under what amount to reorganisation plans, in order to insure sufficient aid from the Reconstruction Finance Corporation and to stave off receivership.

President Sloan, of the General Motors Corporation, appointed to head a commission for the study of international debts, has long held the view that reduction of indebtedness to this country would stimulate our trade.

No report is likely to be made, however, on this delicate subject until after the elections. Incidentally, Mr Sloan asserts that some real improvement in motor car buying is taking place. As yet this increase, if it is general, has not affected orders for steel, nor the rate of operations for Ford and some of the smaller companies. Motor production in August, according to the Department of Commerce, was 94,391 vehicles in this country and Canada, compared with 118,613 in July and 191,741 in August, 1931. For the first eight months output was only 1,072,000 units, against 2,053,000 a year ago.

The oil situation is becoming worse, with illegal production in areas subject to State regulation. The refining of gasoline from this alleged surreptitious production is depressing the price, already weakened by the decline in consumption which has been noticeable in the past two months. Further steps may be taken to hold output in check in the South-Western States, or a general breakdown in the price structure will result. Copper shipments are rising a little and some decline in stocks for September is predicted, and one or two large buyers of copper, including Westinghouse, have come into the market.

FRANCE.

Conversion — Deficit — Industry — Unemployment.

(FROM OUR CORRESPONDENT.)

PARIS, October 5.

THE Finance Minister, M. Germain-Martin, yesterday informed the Cabinet Council that the final figures show that the great Rentes conversion operation, for the transformation of outstanding 5, 6 and 7 per cent. war and post-war issues into 4½ per cent. stock, has proved appreciably more successful than was indicated by the provisional figures announced last week. The total volume on October 31st last of the outstanding issues involved was 85,874,000,000 francs, which by September 9th last, when the conversion operation began, had been brought down, by the normal operation of the sinking fund and by buying in for extinction, to about 85,500,000,000 francs. Of this total 81,000,000,000 francs, in round figures (or about 95 per cent. of the whole), was directly converted into the new 4½ per cent. stock. The demands for reimbursement, therefore, were equivalent to 4,500,000,000 francs (slightly over 5 per cent.). Subscriptions for the new scrip, which, it was reported last week, had totalled 2,000,000,000 francs, have since been found to amount to 2,935,000,000 francs. This fresh money furnished substantially more than half the amount required for reimbursements, and brought the net amount required to meet reimbursements down to the comparatively negligible total of 1,565,000,000 francs. Analysis of the distribution of the convertible issues indicates that the proportion held by the banks, insurance companies, savings banks and other great organisations was nearer 25 per cent. of the total than the one-third estimated last week. By the operation the debt involved has been reduced from 85,500,000,000 francs to 88,900,000,000 francs.

The problem facing the Chambers, when the Budget for 1933 will have to be dealt with, soon after Parliament resumes its sittings towards the end of the month, appears likely to prove even more difficult of solution than was forecast a few weeks ago. At the beginning of the summer it was generally considered, in competent quarters, that the deficit to be met would be in the neighbourhood of 7,000,000,000 francs. In official financial circles it is now estimated that the shortage will be much more likely to amount to 10,000,000,000 francs. This probable larger figure is confirmed by practically all periodical statistical data made public during the past three months, and is likely to be emphasised by the September figures when published. The monthly revenue returns showed that recoveries in July were 12 per cent. below Budget estimates, and that for August the proportion was in the near neighbourhood of 14 per cent., the total deficit for the first five of the nine months' financial year being nearly

1,450,000,000 francs. Recoveries of direct taxation make a specially poor showing. Down to August 31, 1931, demand notes levied for income tax totalled 8,288,600,000 francs, of which recoveries to date were 2,627,000,000 francs. At the same date in the current year demand notes levied were 7,198,700,000 francs, and recoveries only 1,765,000,000 francs, or 24 per cent. (against 31½ per cent. last year). In the circumstances, with only three months of the year still to run, there is reason to estimate that the yield from taxation of all kinds will show a shortage of at least 3,000,000,000 francs, and possibly 3,500,000,000 francs. Unless some marked improvement occurs in the general economic situation in the near future, this deficit will necessarily be larger during 1933, as the coming financial year will comprise the full twelve months. Further, the current nine-months' year has benefited from some 3,000,000,000 francs of exceptional resources, which will not be available or replaceable during 1933, while France, during the coming financial year, will be deprived of the net balance of about 2,000,000,000 francs which would remain at her disposal out of the Young Plan annuity had not German reparation payments been suspended.

Provision for meeting an appreciable portion of this possible deficit of anything between 9,000,000,000 francs and 10,000,000,000 francs has already been assured. Economies of something like 2,300,000,000 francs appear to be counted on from the operation of the Emergency Finance Act of last July (imposing, among other things, cuts in all departmental expenditure), but past experience of attempts to reduce expenditure by Government departments confirms the view that there is little chance of this figure being reached. Directly and indirectly, the Budget should benefit from the recent conversion operation to a total of something like 2,000,000,000 francs. These two factors, therefore, may possibly bring down the potential deficit by about 4,000,000,000 francs, leaving a balance of something approaching 6,000,000,000 francs still to be found (equivalent to about 15 per cent. of total Budgetary expenditure, if we omit public debt charges, no further reduction of which appears to be practicable for some years to come). So far no definite proposals have been mooted as to how the difficulty is to be met. The Socialists are clamouring for more stringent measures to prevent fiscal frauds, which the bearer bond system—universally operative in France—renders comparatively easy. All sections of opinion appear to be agreed that any serious further increase of taxation is unthinkable, and recent experience has demonstrated that any economy based on cuts in the pay of the public servants, similar to those adopted in most other countries, would be foredoomed to fiasco. The only hint of a method that may be adopted was dropped by M. Herriot last week, in a speech in which he suggested a massive public works' loan, ostensibly for the purpose of helping both capital and labour. Fears are already expressed, however, that such a measure would possibly lead to the inclusion of a good deal of essentially current Budgetary expenditure under programmes of economic re-equipment, designed to be financed by the loan, and would thus result in the actual deficit being masked, instead of being made definitely to disappear.

Revenue returns for August, which were made public last Thursday, indicate total recoveries from all Budgetary sources (exclusive of revenue diverted to the Caisse d'Amortissement) of 3,205,455,000 francs, of which 3,157,000,000 francs (against 3,230,000,000 francs in August, 1931, and 3,331,000,000 francs in August, 1930) were drawn from "normal and permanent" sources. "Direct taxation" (almost entirely income tax) produced 1,009,000,000 francs, and "indirect" taxes (which in this country include a good many imposts regarded as "direct" in Great Britain), 2,137,000,000 francs; the balance being revenue of between 10 and 11 millions derived from landed and other property belonging to the State. Indirect taxes and State monopolies yielded 362,368,000 francs, or 15 per cent., less than in August last year. Taxes on motor spirit and benzole produced about 10 per cent. more than in the corresponding month, and the yield from taxes on Bourse operations, owing mainly to the activity in the Rentes market, was nearly 20 per cent. better. Yield from taxes on securities was

over 65 per cent. less than a year ago, and from turnover taxes 14 per cent. down. The yield from income tax was nearly 25 per cent. higher in August than in the corresponding month of 1931, although recoveries from this source were over 25 per cent. lower than in the corresponding period of 1931.

Coal production figures for August show a total output during the 26 working days of 3,868,000 tons, as compared with 3,796,000 tons in the previous month (25 days) and 4,011,500 tons in August, 1931 (25 days). Output of metallurgical coke by the colliery plants was 272,144 tons, against 453,429 tons in the previous month and 406,011 tons in August last year. Imports of coal during August included 484,256 tons from the Saar district, 752,000 tons from Great Britain, 346,500 tons from Germany, 152,787 tons from Belgium and Luxembourg, 84,900 tons from Holland, and 48,328 tons from Poland.

The weekly unemployment return issued for the period ending September 24th indicates that the total number of workless in receipt of unemployment allowances through the various departmental and other labour bureaux was 259,956, as compared with 262,843 in the previous week. Unemployment, after a steady fractional rise for some weeks, now again appears to be decreasing.

GERMANY.

Quota Negotiations — Wages — Bond Interest — Karstadt.

(FROM OUR CORRESPONDENT.)

BERLIN, October 4.

THE German delegation which is to negotiate the incorporation of the new German quota system in the commercial treaties with Holland, Belgium, France and Italy—according to the latest news the Commission intends also to go to London, although the Anglo-German Commercial Treaty can hardly be directly affected by Germany's intention—has begun by reaching an agreement with Belgium. This does not, indeed, mean very much, for Belgian interests were only injured to a very inconsiderable extent, and, in addition, Belgium has received as compensation a slight concession in respect of her coal exports to Germany. In the countries which are more severely hit, the announcement of the German proposals has so far been unfavourably received. There has for some time been a difference of opinion with Italy on the subject of exchange regulation, and it appears that the impression made there by the new quota system has been so strong, perhaps because they have been wrongly interpreted, that forcible measures were considered necessary. Last Sunday Italy practically put an end to all monetary transactions with Germany. Germany had denounced the clearing treaty with Italy as from October 1st, and Italy immediately undertook reprisals, but this seemed to her merely an interlude before the establishment by agreement of new regulations. Suddenly, however, the Reichsbank was notified that its holdings in Italy, which it kept available for distribution to German importers, were no longer at its disposal. That amounted to a declaration of commercial warfare, and Germany promptly sent a special Commission for the Regulation of Foreign Exchange to Rome, and in addition ordered the Quota Delegation to proceed to Rome from The Hague.

What will happen if the German delegation comes back without having secured the consent of the other parties to the German proposals, or at least to a great part of them? Herr Warmbold, the Minister for Economics, Herr von Neurath, the Foreign Minister, and Count Schwerin-Krosigk, the Finance Minister, can all be trusted to refuse to take part in any violation of existing treaties, but it is impossible to see how the von Papen Cabinet can keep itself in existence if it is not able to fulfil its promises to the farmers. On the other hand, a Cabinet crisis at present would be incapable of any solution. One can, therefore, only hope that it may still prove possible to reach a compromise with the agricultural export States, and that should prove the more possible in that the scope of the

German measures is not really very great, and the opposition is, to a large extent, a psychological matter.

The opposition of workpeople to wage reductions which the emergency decree made possible even during the currency of existing agreements still persists. So far, however, no very large firms have been affected, and the total number of strikers is not very large. The employers' lack of resisting power is, however, very noticeable, for in most cases they accept the demands of the unions or try to come to some agreement with them. The Minister of Labour has issued, at the request of the employers' associations, a new decree, which does away with any doubt that strikes aimed at preventing a reduction of wages in accordance with the emergency decree are illegal. It is doubtful whether that means much in practice. At all events, the employers can only bring actions for damages, if they wish to take legal steps to prevent strikes, as any form of criminal proceedings is just as impossible as before.

In spite of the difficult position of many mortgage institutions and communes, all interest payments due on September 30th, one of the most important payment days in Germany, were functionally met, but the capital payments which fell due on that date could not be redeemed. Treasury bills of the City of Cologne to the amount of Rm. 40 millions, and Rm. 30 millions Treasury bills of Frankfurt-am-Main were due, and in order to save these cities from bankruptcy, and the public sale of their property for the benefit of the creditors, the Government issued an emergency decree prolonging the Treasury bills for three months. The same emergency decree paves the way for negotiations between debtors and creditors. Hitherto only debenture holders of industrial companies have had the power of meeting and taking legally effective decisions altering the terms of a loan. This power is now extended to the holders of municipal loans. The three months' prolongation of the Cologne and Frankfurt Treasury bills is thus decreed with the intention that meetings of the holders of these loans shall be held in the meantime, and a decision reached as to the conversion of the Treasury bills into a new loan. Such a decision requires a three-quarters majority, however, and this will be very difficult to secure, for the cities, which have no ready money, are hardly in a position to offer a conversion premium. A new issue for voluntary conversion is quite out of the question in the present state of the capital market, while the German communes can hardly hope for short-term bank credits, as practically all of them are so heavily indebted that their bank creditors have for a long time had to confine themselves to prolonging their credits as they fell due. None the less the calling of these meetings is to be welcomed, for it shows that the German Government has no desire to relieve debtors of their obligations by one-sided decrees, but wishes to secure voluntary agreements between debtors and creditors.

This attitude of the Government is important in connection not only with internal debt, but also with Germany's foreign debt. The Rudolph Karstadt A.G., the first company to declare itself unable to meet the interest payments on its foreign debt, has just announced that in spite of the difficulties of its position, it will meet the interest payments due on November 1st punctually in dollars. It does not wish to make the negotiations, now pending with the holders of its loans, more difficult by a one-sided breach of its obligations. In one respect, however, Karstadt is not fulfilling the conditions of its loan. Its 25 million dollar loan is redeemable by annual drawings at par on November 1st. The necessary funds for the drawings now due, amounting to about \$200,000, have been placed at the disposal of the company by an American trustee, but the drawings are not to take place, for it would be unfair to the mass of the holders if a few of them who were lucky in the lottery received 100 per cent., while at the same time the terms of the loan were changed. (The bonds stand at present at 25.) The company is at present negotiating with the representatives of the bondholders for the redemption of the loan, not only by drawings, but also by repurchase. In addition, the company would like to secure a reduction, for the duration of the crisis, of the 6 per cent. rate of interest.

HUNGARY.

Politics — Finances — National Bank.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 3.

THE uncertainty which has dominated Hungarian politics since the resignation of Count Bethlen came to an end with the fall of the Károlyi Cabinet. The relations between Count Bethlen's majority party and Count Károlyi have never been cordial during the latter's thirteen months of administration, and in the last three or four months they became definitely hostile. Parliamentary government bade fair to become impossible, and Count Károlyi decided to go. He is blamed by the Opposition, where he was always more popular than in his own party, for not asking the head of the State to dissolve Parliament and to appeal to the electorate. Count Károlyi declared that in view of the general discontent of the rural population owing to economic distress, he did not consider such a course to be in the interest of the country. Probably he was right, because the electioneering slogan of the rival parties on the land, "To hell with the creditors," would have undoubtedly made the position even more difficult. Count Károlyi brought a much-needed asceticism into Hungarian public life—he is constantly referred to as the Gentleman Premier—but, unfortunately for the country, he could not tackle the financial problems awaiting urgent solution, because his party did not support him. So he left this task to his successor, General Gömbös, who was called upon by the Regent to form a Cabinet after Count Bethlen, the leader of the majority party, declined the offer in view of the coming Eastern Reparation Conference, where the much-disputed Optants' case will come once more into the forefront of international politics. Count Bethlen, being an Optant himself, could not go to this Conference without being attacked at home; so he judged it wiser to recommend General Gömbös, his former Minister of National Defence.

General Gömbös's designation was not unexpected. It was obvious that after a weak administration a strong hand is needed to bring the country back to realities. General Gömbös is what is called in Continental political language "Realpolitiker." He has many opponents; first of all, the Legitimists, who want Otto Hapsburg to return to the throne of his ancestors; then the Liberals, Socialists, etc. But it is too early to say what the political situation will be, because the crystallisation process, which was bound to come after the end of the long administration of Count Bethlen, but was postponed owing to the hesitation of Count Károlyi where to turn for support, will certainly soon produce important political changes. One thing is certain, however, that General Gömbös need not and will not submit himself to the dictation of the majority party, because if the party will not bend to his will he can find a majority elsewhere. It is significant that not one member of General Gömbös's Cabinet belongs to the aristocracy, and the domestic Press attaches great importance to the fact that this is the first Hungarian Government since 1867 without "magnates." Time alone can tell whether the Gömbös administration can cope with the difficult financial and political problems awaiting both in the domestic and in the international spheres.

The recent report of the League Financial Committee to the Council on Hungary's finances is a timely reminder that there is a huge budget deficit in the current financial year, which will in all probability amount to more than 100 million pengő. The Committee believes that further substantial savings can be made, and points to the danger involved in the protection of certain categories of agricultural debtors. This partial agricultural moratorium expires at the end of October and the new Government is endeavouring to alter its provisions so as to save the economic life of the country from the unnecessary obstructions. Recent statistics collected by reliable financial institutes show that not more than 10 per cent. of the indebted estates are insolvent, whereas a general agricultural moratorium must prove ruinous to the majority of landowners.

The end of September return of the National Bank

reflects the abnormal credit situation brought about by the financial crisis. The note circulation amounted to 372.2 million pengő, as against 382.8 million pengő a year ago. The credit facilities granted by the National Bank increased to 606 million pengő, as against 533 million pengő a year ago, an increase of 73 million pengő, corresponding very nearly to the amount paid into the "Foreign Creditors' Fund" at the National Bank. The abnormal height of the bill portfolios of the National Bank cannot decrease until the long delayed banking reorganisation is carried out, and in all probability the only help the State can give will be that a considerable part of the present "frozen" bills will be taken over as State obligations, because a great deal of the bank's immobile assets, refinanced by the National Bank, are State or municipal debts, which cannot be met otherwise.

JUGOSLAVIA.

Harvest — Public Finance — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BELGRADE, September 17.

CONDITIONS have improved somewhat during July and August, although it would be difficult to say whether this improvement is more than seasonal. It may, at any rate, be described as a stiffening of resistance against economic pressure. The wheat harvest has been definitely poor, with 17,600,000 quintals as against 27 millions last year, and will allow for export only the equivalent of the reserve from last year, 15,000 trucks. Barley, with 3,800,000 quintals, and rye with 2 millions, approximate last year's yield, while oats have fallen from 3,100,000 to 2,500,000 quintals. On the other hand, maize, for which final figures are not yet available, has given a bumper harvest, and so has fruit. Home prices of these are therefore ruinously low; maize fetches 25-30 dinars per quintal, plums 30-35 dinars, wine one dinar per litre, brandy four dinars. As a compensation, however, this abundance and cheapness will allow the substitution of maize for wheat and for the fattening of export pigs. Other raw materials have slightly stiffened in price, and the index has risen for the first time in July to 65.6 from 64.4 in June, as against 74.4 in July, 1931.

The remaining economic data offer a similarly mixed picture. On one hand there is an increase in the number of bankruptcies and compulsory settlements, as well as the application of the clause of suspended payments to 12 banks. On the other, building has become exceedingly brisk, and there is a latent firmness in all State securities. The general note of slight improvement is also characteristic of State finance. Official statistics show that the low ebb for receipts was reached in June, since when the inflow has improved. The total receipts for the months April-July were 2,846 million dinars (budget, 4,025 millions), of which 1,707 millions were derived from taxation, monopolies and general sources, and 1,139 million dinars from State enterprises (railways, posts, estates). The expenditure during the same period was cut down to 3,012,600,000 dinars, thus leaving a Treasury deficit of only 166 million dinars, which actually means a reduction of the Treasury deficit at the end of June, when it was 203 million dinars. Preliminary reports show that August receipts were by about 40 million dinars better than those for July.

AN INTRODUCTION TO INTERNATIONAL TRADE AND TARIFFS

By R. A. HODGSON, B. Com. Brings together the study of these two vital sides of trade questions, so that the problems of one can be studied in relation to the other. Special attention is paid to the practical questions that arise in making and operating a Tariff, and to recent British experiences. 208 pp. 6s. net.

Order from a bookseller or

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

The Government is continuing its efforts to increase receipts and thus ensure the balance of the budget. High imposts have been introduced on sugar and electricity; the tax on business turnover has been raised from 1 per cent. to 2 per cent.; and an extensive list of luxury articles has been published which will have to pay an additional tax of 10 per cent. either on import or on sale if home-produced. The Government is also making a profit from the minting of 500 million to 600 million dinars' worth of silver coins of 10, 20 and 50 dinars, part of which have already been let into circulation. This profit which had previously been earmarked for repayment of a further instalment of the debt to the National Bank, is now being used for budgetary purposes.

Equally important is the concession granted by the French Government, by which all payments on loans from one Government to another are to be suspended for one year. The concession applies to the 5 per cent. armament loan of 300 million French francs of 1924, and to the 250 million French francs advance of October, 1931, payments for which, to the amount of 185 million French francs, ought to have been made between October, 1932, and October, 1933. In the meantime, a special agreement is being drafted by which Yugoslavia will be enabled to increase her exports, and especially those of timber, to France. The agreement is thus envisaged as a solution of the transfer problem and provides for the payment of debt in goods.

The particular importance of the French concession lies naturally in the fact that it reduces the sum required by the Yugoslav Government for payments abroad to only 450 million dinars during the budgetary year 1932-33, and thus greatly eases the transfer problem. It is for this reason that much was expected from the Stresa conference, and only moderate satisfaction is felt at its meagre results. Imports during the first seven months amounted to 1,589 million dinars, as against 2,970 millions in 1931 and 4,056 millions in 1930. Exports during the same period were 1,544 million dinars, as against 2,667 millions in 1931 and 3,876 millions in 1930. The deficit is therefore 45 million dinars as against 302 millions in 1931 and 180 millions in 1930.

JAPAN.

Relief Measures — Trade — Business — Finance.

(FROM OUR CORRESPONDENT.)

TOKYO, September 8.

THE short emergency session of the Diet, convened for remedial legislation, was adjourned on Monday. All the Government measures obtained Parliamentary approval, with the single exception of the farmers' debt settlement guild scheme. The official relief proposals are a combination of many varied items, consisting of the extension of construction works, public highways and harbour and river improvement, the placing of a large Government order with munition works, encouragement of building of new ships and scrapping of old ones under the subsidy scheme, increased grants-in-aid to primary education, and several others. Supplementary estimates for the cost of the relief schemes totalling 163.4 million yen were also approved. Apart from the immediate expenditure, the rice stabilisation funds have been increased by 130 million yen to keep up the price of rice, and a low-interest loan of 201.2 million yen will be arranged from the Treasury to help the liquidation of mortgage debts and co-operative societies' loans. The funds for the execution of these relief schemes are all to be met by a new loan, and inflation is now inevitable.

Besides remedial legislation, the Government has used all its powers and influence to give effect to the credit expansion programme, and has inaugurated a cheap money policy. The Post Office Savings Bank was instructed to lower the interest rate allowed on deposits drastically from 2 per cent. to 8 per cent. on and after October 1st. The Bank of Japan's official minimum was changed from 5.11 per cent. to 4 per cent. on August 18th. On August 26th the Tokyo and the Osaka clearing banks reduced their

deposit rate by $\frac{1}{4}$ per cent. from 4.7 per cent. to 4.2 per cent. in the case of big banks, and from 5.2 per cent. to 4.7 per cent. in the case of lesser banks. The savings banks followed suit as from the same day with a reduction of $\frac{1}{4}$ per cent.

The upward movement in the general level of commodity prices, which developed in July, was both rapid and substantial during last month. The Bank of Japan's wholesale index number for August registered a sharp advance of $5\frac{1}{2}$ per cent. on the month, recovering to the level of the corresponding month of last year. The rise was general, though the commodities which enter into international trade played a large part in the general advance. Raw silk led the list with a rise of $48\frac{1}{2}$ per cent., followed by cotton yarn with $26\frac{1}{2}$ per cent., wheat with $17\frac{1}{2}$ per cent., copper with $12\frac{1}{2}$ per cent., and sugar with 10 per cent. The sharp upturn may obviously be explained largely by the heavy fall in the yen and the rally in a number of the principal commodities in the United States.

Apparently assisted by the fresh fall in the yen exchange, the foreign trade returns for last month disclose a distinct improvement. The August returns show that imports contracted to 73,352,000 yen, while exports expanded to 136,626,000 yen, the largest monthly figure for many months, revealing a fairly large favourable balance of 63,774,000 yen. As compared with August, 1931, imports fell by 18,634,000 yen, or 16 per cent., while exports rose by 28,905,000 yen, or 27 per cent. The decline in imports is general, with the exception of raw cotton and machinery. On the export side the increase is largely accounted for by textiles, though many other staples have done rather well. Among the textile goods, the expansion in the cotton trade is most prominent; there was an increase of 7,946 piculs (35 per cent.) in yarns, and of 22,546,000 square yards (34 per cent.) in piece-goods.

The national accounts for the fiscal year ended March 31st disclosed a surplus of 19,193,000 yen, revenue amounting to 1,581,082,000 yen and expenditure to 1,511,889,000 yen. The disclosed surplus, however, has been only realised by a raid of 44 million yen on the sinking fund and "loans for Budget deficits" of 21 million yen, and when these figures are eliminated the accounts show a deficit of 46 million yen. As compared with the preceding year, receipts from taxation alone show a heavy decline of 99.5 million yen.

Letters to the Editor.

OTTAWA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of October 1st, in the article headed "The End of an Experiment," you use these words: "Ottawa brought matters to a head. The agreements made there, signing away our fiscal independence, saddling this country with substantial food taxes (contrary to explicit election pledges)..." Free Traders in the past have made too many long-period treaties which limited our fiscal independence for them to be able to raise this as a serious argument. So far as food taxes are concerned, I do not understand why the word "saddling" is used, because the substantial ones that have been in operation now for several months have not saddled the people of this country with any disadvantage, but have already led in a number of cases to important expansions of production, very remarkable indeed having regard to the seasonal nature of agricultural production. These food taxes differ from the old Free Trade food taxes in that, so far as one can find out, the burden of them has not fallen on the British consumer in the way that the old Free Trade food taxes invariably did.

So far as "explicit election pledges" are concerned, the writer of your article found it much easier to use the phrase than he would find it to prove the accuracy of it.

I write more in sorrow than in anger, because I, like everyone else, respect the *Economist* as a great journal, and am only sorry that on one great controversy ancient economic prejudices forbid a clear intellectual examination of the facts of the situation.—Yours faithfully,

351, Abbey House,
Victoria Street, S.W.1.
October 3, 1932.

Books and Publications.

BOOKS OF THE WEEK.

Education for the Young.

THE text-books, and particularly the school text-books, at present in use in this country, provide a very interesting indication of the extent to which normal school education is out of touch with the problems with which the adults of the country are presently concerned. To take one example, the nation's economic affairs have got into such a state that the ordinary member of the reading public realises their importance and is prepared actually to read with avidity books on economic questions. Books on economics are bought, and bought so eagerly that they have even been known to be listed as "best sellers" in the Sunday papers. But, for all this, there is practically no economic teaching in schools. Few children leave school with any clear idea of how either their own living or that of the country as a whole is provided. It is the same with international affairs. The fact that the world is one whole is being forced upon us more and more every day; but the school text-books, for the most part, still confine themselves to a narrow interpretation of English history; and it is really quite difficult even to find a book, suitable for a child, which deals at all adequately with French history, or which gives any description other than a purely geographical description, of any foreign country. Here again the food supply of the children has lagged behind that of the adults; though the enormous success of Mr Wells's *Outline of History* should have shown the way. In science the position is still not adequately covered, and the history of science is still not adequately covered, and there is room for a great deal more to be written for children on biology and physiology.

This being so, it will be a matter of great interest to follow the fortunes of the children's omnibus which the joint enterprise of Mr Victor Gollancz and Mrs. Naomi Mitchison has produced. * This work, which both in bulk and in production is a very handsome return for its price, is divided into three sections. The first section, headed *Science*, contains chapters on the history of science and on its limitations, on physiology, psychology (rather a weak effort), biology, chemistry, physics with astronomy and mathematics, and a brief essay on "The Structure of the Earth." This section is by far the best. The second section, which is entitled *Civilisation*, is divided into thirteen chapters, covering history, social organisation, present-day government, and economics, and including a present-day government called "Problems and Solutions," which is probably intended to be a guide to the future of the world. Finally, there is a short section called *Values*, with chapters on dancing and drama, on art, architecture, writing (an odd and interesting essay, which gets a long way from its subject), and on music.

It will be seen from this summary that the purpose of the book is almost entirely cultural in the widest sense. This at once differentiates it sharply from the various Children's Encyclopædias which have from time to time been published, and which abound in "useful and curious facts" and "practical hints." There is here no assistance offered in making a wireless set or a rabbit-butch, nor are the young readers told the height of St. Paul's or how many pennies it would take to stretch from here to the moon, or anything of that sort. Not that there are no facts in the book; there are enough to provide most children with reading for a very long time, and even to secure for it, we should imagine, a fairly wide public among parents whose schooldays, for the reasons mentioned above, did not acquaint them with any of these facts. But its main purpose is clearly to give its young readers food for thought, to provide them, within necessary limits, with an idea of the shape and scope of life,

* "An Outline for Boys and Girls and their Parents." Edited by Naomi Mitchison. (Gollancz.) 928 pp. 8s. 6d.

and with an introduction to the most important of the problems and preoccupations which they will find there. Its purpose, in a word, is education rather than instruction or amusement.

In fulfilling this purpose, Mrs. Mitchison has done her work admirably. Her writers, who include among them some very distinguished names, have written in terms which will be understood by young readers without "writing-down" or using the infantile expressions which disfigure some modern "children's books" and which nobody resents more than the children themselves.

Where there is such a generally high level, both of writing and of editing, it is hard to single out contributions for special praise; but one may instance Mr John Pilley's temperate and sensible introduction to the scientific part, Dr. Winifred Cullis's *Physiology*, which could hardly be better done; the two sections on biology by Dr. J. R. Baker and Mr N. W. Pirie; and Mr Richard Hughes' magnificent attempt to make the mysteries of modern physics and mathematics intelligible to young minds. These names all occur in the first section: in the others stand out a balanced and concise account by Mr Delisle Burns of "The Peoples of the World," an admirably lucid but all too short essay by Mr. G. R. Mitchison on "Law and Government," and two excellent chapters on architecture and music by Mr Williams-Ellis and Mr J. B. Trend. The illustrations are the weakest part of the book, and some of the portraits are, frankly, unrecognisable; but this is a minor blemish. Time alone will show the demand of the younger generation for culture; meanwhile, we can but congratulate editor and publisher on their enterprise.

SHORTER NOTICES.

"Scientific Investment," by Hargreaves Parkinson. With an introduction by Sir Walter Layton. (Sir Isaac Pitman and Sons.) 10s. 6d.

We commend this book warmly to our readers, for it is a real contribution to a cause which the *Economist* has always had at heart—making the business of investment less of a gamble and more of a science than it is to-day. Mr Parkinson brings to bear on the subject a wide experience of investment problems, a sound knowledge of economics and a specialised training in the methods of statistical analysis. In his own words: "The object of the present work is to discuss certain methods by which statistical analysis and commonsense may be brought to bear on investment problems and to formulate some of the 'laws' of investments which emerge. The treatment is severely practical. Wherever possible, the illustrations used are based upon the published figures of well-known companies and all the conclusions reached are designed to be of concrete service to the wayfaring investor and his professional mentors."

The book proceeds to analyse the merits as investment media of debentures, preference shares and ordinary shares. A technique for measuring the value of the equity shares is put forward which every investor, lay and professional, should study. The chapters on the "gear ratio" of ordinary shares and "priority percentages," revealing the real earnings cover for debenture stocks and preference shares, are constructive contributions to the study of investment as a science which everyone should read, and we commend to the company director as well as the shareholder the chapter on "Reserves." It is satisfactory to see the "nest-egg" theory so skilfully exploded.

The chapters we have been discussing are the most valuable part of Mr Parkinson's book. They do not cover the whole field of investment, for Government and Municipal bonds are not considered. Other chapters are included which are extremely readable and entertaining. We are in general agreement with Mr Parkinson's criticisms of company directors (he supports the proposal of a specialised finance director) and his suggestions for Stock Exchange reform are everything which the reformist should desire. Mr Parkinson has done an important work in resolving investment into a study of the concept of earning-power, a study which he has made of practical usefulness by his statistical methods of analysis.

The Stock Exchange.

COUNTY OF LONDON ELECTRIC—I.

THE County of London Electric Supply Company, Ltd., in spite of its reputation as one of the most profitable and rapidly progressing systems in the country, is somewhat of an enigma to the investing public. An important part of its undertaking comes within the scope of the London Electricity Act (No. 1) of 1925, which provides for the regulation of dividends by a sliding scale in connection with prices charged, and ultimate transfer to the London Home Counties Joint Electricity Authority in 1971. Since no separate accounts are published, the effect of this statutory limitation of dividends is by no means clear. At the same time, the company possesses a "controlling," but otherwise indefinite, interest in a number of other undertakings, which represents a very important part of its total assets, and with respect to which no consolidated accounts are published.

Little information is available about the County Company's holdings in subsidiaries, but it is believed to have a controlling interest, directly or indirectly, in the companies whose names are set out, with their respective capitals, at the head of the opposite page. All the companies in question, with the exception of the Bournemouth and Poole, its subsidiary the Blandford Forum Company, and the Coatbridge and Airdrie Company (which serves a district near Glasgow), are situated in the South-East England area, and both the South London and the South Metropolitan companies come within the scope of the same (No. 1) Act of 1925, as the County Company itself.

Apart from the three outlying subsidiaries, the area of the system extends over 3,200 square miles. In the Metropolitan area it includes parts of Finsbury and Holborn, and all London south of the Thames with the exception of Battersea, Deptford and Woolwich, and parts of Bermondsey and Southwark. Outside London, the retail distribution area includes the greater part of the counties of Kent and Essex and parts of Surrey and Sussex, the most important districts being, in the south—Chipstead, Coulsdon, Purley, Horley, Chatham, Rochester, Sittingbourne, Sevenoaks, Folkestone and Deal; and in the north—Wanstead and Woodford, Dagenham, Romford, Epping, Chipping Ongar, Wickford and Rayleigh. Most of the Essex area was obtained by the 1927 Act, which gave the County of London distribution rights over the greater part of the county where a supply was not then available. The company subsequently formulated a comprehensive five years' scheme of development, involving the provision of supply to every community in this area with a population in excess of 500, which is now being actively pursued.

The bulk supply areas of the system include Ilford, Leyton, Bromley, Caterham, Beckenham, Bexley and Dartford, Brentwood, Chelmsford, Colchester, Chatham, Canterbury and Whitstable. The dimensions of the area covered by the company and its subsidiaries in London and the Home Counties (omitting that of more distant subsidiaries like the Bournemouth and Poole) is indicated on the map opposite.

The franchise of the County of London gives the company perpetual distribution rights over a large part of its area outside London, whilst the rights of local authorities to purchase various of the subsidiary undertakings are not sufficiently extensive to constitute a serious danger to the system. In this connection, the refusal of the Electricity Commissioners to allow the purchase of the Folkestone undertaking by the Town Council is not without significance as a possible indication of a new policy, directed against any further multiplication of authorities responsible for the supply of electricity.

Though the area served by the system is predominantly residential, the industrial load is more substantial than might be expected. It accounts, in fact, for almost

one-third of the revenue from the sale of energy and serves to give a useful diversity to the whole. It is common knowledge that new industrial development is proceeding more rapidly in the Home Counties than elsewhere, so that this area has the advantage both of a more stable load and the prospect of satisfactory future development. The table below gives the latest available figures of sales of energy by classes for the County system:—

† Figures for 1931 are, respectively: 557,609; 1.36; £3,160,831. See text below.

The power sales of the Kent Electric Power Company have been segregated from the rest of the power sales of the system. The Kent Company's figures have grown at a remarkably rapid rate (although the rate of increase slackened appreciably in 1930), and there is reason to believe that they consist principally of sales to cement and paper industries on the Thames and Medway. The average price received by this company is very low. Whatever the direct profit may be, however, the load undoubtedly serves to keep the general cost of generation for the system at a low figure. It is scarcely to be expected that consumers of such great magnitude can be obtained with frequency and regularity. We have, therefore, shown the power load of the Kent Company separately, since to have included it in the general power sales would have distorted the picture of the growth of the system as a whole. For similar reasons the figures showing the growth of load of the system as a whole are given after the elimination of the traction load in all areas.

The rate of increase for the County group is consistently higher than that for the London Home Counties Electricity District, though the latter is itself one of the most rapidly progressing in the country. Since 1927 the total units generated in this area have increased by over 100 per cent., against an average, for the country as a whole, of approximately 70 per cent. An indication of the relative immunity of the South-Eastern England area from the effects of depression is afforded by the fact that, in the year ended December 31, 1931, its total of units generated increased by 7.69 per cent. as compared with 1930, whereas the increase for Great Britain as a whole was only 8.89 per cent., and predominantly industrial regions, such as Central Scotland and North-East England,

The figures so far examined suggest that the group of interests, of which the County of London Company is the head, is of undoubted importance, from the viewpoint of the electricity industry in general, and of the investor in electrical supply shares in particular, that its recent record, on the supply side, has been distinctly progressive. We propose, in a succeeding article, to examine its financial structure, and to discuss its present earning capacity and future prospects.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKETS. ACCOUNT.
October 18. October 20.

THE markets having lost all speculative momentum, prices tended slowly to ebb, under the influence of lower commodity prices, weakness in New York and a general absence of "something to go for." Hopes of an early economic revival had already been tacitly abandoned, and the markets prepared rather to dig themselves in for another winter of depression. The final War Loan Conversion figures were not quite as good as had been expected, and the absence of any announcement of an early Treasury issue to cover the December 1st payments resulted in a withdrawal of some speculative funds from gilt-edged stocks for employment in connection with pending new issues, following the raising of the embargo. The position of the railways remained disquieting, and though there was little selling of home industrial shares, the tone throughout the week was hesitant. The more speculative markets reflected the concern of operators, particularly in America and on the Continent, over the decided check to the upward movement in commodity prices.

Profit-taking in gilt-edged stocks particularly affected Assented War Loan and Victory Bonds. Confidence in the market's prospects was unabated, but a temporary setback, of moderate dimensions, was believed to be inevitable at the beginning of the effective reopening of the new issue market. India stocks, by contrast, were consistently firm, but Commonwealth loans, which gained fresh ground before the week's new offer, were subsequently easier.

Foreign bonds generally showed a steady tendency, but business remained narrow. Japanese were lowered after the Lytton report, and, having recovered slightly, became dull again on the large appropriation for Manchurian military costs in the coming year's Budget. Brazilian issues sharply responded to the news of peace and the reopening of the port of Santos. German bonds improved on slight speculative buying.

The week's traffic returns confirmed the gloomy financial picture but forward in the railways' memorandum, last week-

end, in support of their policy of wage reduction. Selling, at first confined mainly to equity stocks, affected many of the less secure prior charges in the latter part of the week. Argentine stocks continued to be offered, the market being lifeless under the influence of uniformly unfavourable traffic returns. Brazilian railways, however, shared in the improvement of Government bonds on the cessation of civil war.

A new account in the industrial market opened without enthusiasm. A certain amount of support served to prevent any considerable weakness, but no indications were available of any early resumption of last month's activity. "International" and "transatlantic" counters were easier, with the exception of Brazilian Traction, which reflected the better news from overseas. A steady enquiry was received for electric supply shares, several companies being credited with the intention of obtaining cheap funds by early public issues. Austin improved on the chairman's speech (discussed on page 652), but other motor shares were quiet, and steel shares dull, without exception. Apart from Courtaulds, which were particularly active in the provinces, textile shares made little headway. Tobacco and brewery shares were steady. A strong speculative movement developed in Cables and Wireless, the unfortunate recent decision of the board to suspend monthly traffic figures having left the way open for exaggerated market reports of an undoubted increase in revenue over the last few weeks.

The rubber share market was almost entirely without support, and the absence of considerable selling alone prevented a widespread fall in prices. Tea shares remained idle and neglected, the public being unimpressed with the stronger tone of quotations for the commodity at the week's auctions. The oil market resisted aggressive bear tactics, and strong buying was recorded of Trinidad Leaseholds and Apex. The undertone, however, was noticeably less confident, anxiety prevailing as to the stability of the American price structure.

Demand for mining shares was intermittent and selective. Randfontein and West Rand were firm on unofficial rumours of favourable developments, and Central Mining and Rand Mining were helped by the advance in Trinidad Leaseholds. Paris was an uncertain factor, selling one day and buying back the next. Tin shares were dull in sympathy with the reaction in the commodity, and copper shares tended to lose ground. Among West Australian issues Wiluna again attracted speculative attention.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After a quiet opening, with trading mainly professional, prices broke sharply on Wednesday, individual losses ranging up to eight points. The main factor in the break was disappointment over the absence of the promised improvement in business, which caused the public first to withdraw and subsequently to come in as a seller. The

speculative fraternity was influenced by the weaker tendency of commodity prices, Wednesday's decline of two cents a bushel in wheat, in particular, having a disproportionately unfavourable effect on sentiment. The progress of the election campaign was scarcely helpful to Wall Street, which, by tradition, training and temperament, viewed the growing omens of a Democratic victory as most decided bear factors. Mr Hoover's speech at Des Moines, Iowa, was regarded as impeccable from a party point of view, but unlikely to influence any large number of votes. A meeting of railroad executives was held to consider the President's request for suspension of wage reduction demands until the New Year, and was disposed to compromise on a continuance, if possible, of the existing 10 per cent. cut after February 1st. An application was made by a noteholder for a receivership for the "Nickel-Plate" Railroad (the New York, Chicago and St. Louis) on the failure to pay principal or interest on the notes which matured on October 1st. It was expected, however, that the Court would grant a moderate delay, for further efforts to obtain Reconstruction Finance Corporation assistance. Business recovery has proceeded slowly, and may shortly be arrested, since the latter part of October normally marks a seasonal peak. It has significantly failed to penetrate to the heavy industries, steel operations, for example, having risen only to 18 per cent. of capacity. The increase in car-loadings also remains of small dimensions, the total loadings for the week ended September 24th being 595,639, an increase of 8,400 over the previous week.

* 3-hour session.

PARIS.

The Bourse opened with a heavy tone and the volume of transactions, which fell considerably at the end of last week, declined afresh. Prices gave way gradually, but later a decidedly heavy tendency developed owing to an absence of fresh buying. Rentes again lost ground, but other Government issues remained more or less unchanged. Among Banking shares, Bank of France rose to 11,800, but receded later to 11,585. There was a small improvement later in the week owing to reports that fresh efforts were to be made in the Franco-German armaments question, and purchasers showed more willingness to buy. Oils, with the exception of Royal Dutch, were cheerful. Young bonds were up 9 at 594. Mining shares were a bright feature, Rio Tinto gaining 11 at 1446 and Central Mining 34 at 985. The market closed steady with a firmer tendency in most directions.

	Sept. 29, 1932.	Oct. 3, 1932.	Oct. 6, 1932.	Sept. 29, 1932.	Oct. 3, 1932.	Oct. 6, 1932.

Rio Tinto	1,410	1,435	1,430	De Beers	376	336
Royal Dutch	16,750	16,250	15,650	"Johnnies"	138	132

BERLIN.

Without any apparent cause the Bourse opened weak and prices continued to recede throughout the session. Among Banking shares Reichsbank fell 2 to 125, but subsequently recovered to 125½. Fixed Interest securities, which have usually proved resistant, joined in the general set-back. Towards the end of the week an optimistic tone set in and fortunately there was no excessive unloading of shares. Mines showed a general upward tendency, but Hoesch lost ½ to 35½. In Lignites, Rheinische Braunkohlen rose 1½ to 173½. Rayon shares showed a marked recovery, J. P. Bemberg advancing 3½ to 53½.

	Sept. 29, 1932.	Oct. 3, 1932.	Oct. 6, 1932.	Sept. 29, 1932.	Oct. 3, 1932.	Oct. 6, 1932.
Reichsbank	128.00	125.00	124.00	A. B. G.	31.50	31.25
Disconto	75.00	75.00	75.00	Siemens & Halske	128.00	115.00

Norddeutscher Lloyd	18.00	17.00	17.80	Hamburg-Amer. ("Hapag")	17.10	16.60

AMSTERDAM.

The tone of the Bourse was dull throughout the week, and nearly all shares suffered from lack of support. Royal Dutch were a particularly weak feature, falling 6½ points on the week to 157. Industrials also suffered, Unilever N.V. falling 1½ to 116½ and Philips Lamps 1 to 125½. Rubbers were dull at first, but slightly improved later in the week, Amsterdam Rubbers rising to 66. Tobacco shares were better than in the previous week, and Tins

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

OTHER CENTRES.

Business on the minor European Bourses was very quiet. Brussels opened with a dull tone and the majority of prices were lower. Professionals liquidated many of their holdings, which tended to force prices down further. The market rallied at the close of the week, but lack of support caused quotations gradually to fall backwards. Budapest opened with prices somewhat erratic, but finished steady on the week. There was little of interest at Frankfurt, Vienna or Stockholm.

INVESTMENT NOTES.

Conversion Results.—It is a curious fact that, measured in percentages, the result of the War Loan conversion operation has been the same as in the Goschen conversion scheme of 1888. Approximately £1,920 millions of the £2,085 millions have been converted, leaving only £165 millions, or 8 per cent., to be redeemed in cash on December 1st. On the occasion of the Goschen conversion scheme £514 millions out of a total of £558 millions were converted, the proportion of unconverted stock being also 8 per cent. Actually, the success of the Goschen conversion may be said to have been more remarkable, for the amount of Consols then tackled represented a greater proportion of the total national debt than is represented to-day by 5 per cent. War Loan. But, having regard to the magnitude of the present operation, the results of the Chamberlain conversion scheme cannot be held to be other than remarkable. It is true that the market was somewhat disappointed, for it had been expecting the cash redemptions to be under £100 millions. Apparently very little progress was made in conversions in the last two months. When the figures were taken out for the actual conversions up to the end of July, in respect of which a bonus of £1 was payable, it was found that £1,885 millions had been converted. Thus £85 millions have been converted in August and September. The amount due for repayment on December 1st—£165 millions—in addition to the £140.8 millions 4 1/2 per cent. Treasury Bonds and £12.8 millions War Loan, a total of £318.1 millions, make it obvious that a Government issue of stock will have to be made this month, the probable terms of which we discussed in an Investment Note of our last issue. Having regard to the restrictions still imposed on the new issue market, which are criticised in a Note on page 682, the sooner the terms of the forthcoming Government loan are announced the better.

Australian Conversion Loan.—The issue of the Australian conversion loan—which took the form of a Commonwealth 3 1/2 per cent. stock, 1936-37—met with a good response from the market, the list being closed after a few minutes. The stock was offered to the holders of the £13,860,959 5 1/2 per cent. stock at par plus £2 10s. per cent. in cash and to the public for cash subscriptions up to the amount unconverted at 97 1/2, the Commonwealth

having the option to repay at par on or after November 1, 1936. As the market is ill-supplied with short-dated bonds of this type, the banks and discount houses ensured the success of the issue. The issue, however, does nothing to improve the prospects of converting the high interest-yielding Australian stocks, which may be repaid at the borrower's option at the present time. These loans, in point of interest burden, are more important than the New South Wales maturity, as will be seen from the following table:—

£15,000,000	Commonwealth 6% 1931-41.
2,980,400	New South Wales 5 1/2%, 1924-34.
4,901,233	New South Wales 5 1/2%, 1925-35.
6,427,465	New South Wales 6 1/2%, 1930-40.
9,527,090	New South Wales 6%, 1930-40.
2,000,000	Queensland 6%, 1930-40.
2,982,500	South Australia 6 1/2%, 1930-40.
2,977,800	South Australia 6%, 1930-40.
2,000,000	Tasmania 6 1/2%, 1930-40.
2,980,848	Victoria 5 1/2%, 1924-34.
3,906,800	Victoria 5 1/2%, 1930-40.
1,049,993	Western Australian 5 1/2%, 1930-40.

£56,734,129
Loans bearing 5 per cent. interest which also carry an option to repay at the present time are as follows:—

£5,633,900	South Australia 5%, 1932-42.
3,979,050	New South Wales 5%, 1932-42.
1,150,000	Tasmania 5%, 1932-42.
13,875,800	Victoria 5%, 1932-42.

£24,638,750

Some critics consider that the Commonwealth would have been better advised to refund the New South Wales maturity on a long-dated basis on terms favourable enough to whet the appetite of the investor for forthcoming conversion issues. Success in the first instance would have ensured success on terms more favourable to the Australian borrower in later issues.

Decline in Railway Traffic.—The dreary showing made by the weekly gross traffic figures of the four main-line railways is causing trepidation among British investors. The junior stocks were all prominent in the recent rise in equity shares. In the last fortnight, however, they have shown a perceptibly declining tendency, although some prior charges have better held their ground, in sympathy with the firmness of gilt-edged stocks. We deal in a leading article on page 627 with the outlook for British railways generally, in the light of the proposals for further wage reductions brought forward by the managements, as a partial set-off to the decline in revenue. The latter has been the more discouraging since its intensity has increased as the present year has proceeded. In the first three months of 1932 it was relatively moderate, but the contrast with 1931 became more unfavourable after Easter, and has been still further accentuated since the beginning of August. This is clearly brought out by the following table:—

AVERAGE WEEKLY LOSS OF GROSS TRAFFIC.
(1932 compared 1931—000's omitted.)

	London, Midland and Scottish.	London and North Eastern.	Great Western.	Southern.
First 11 weeks (to Mar. 20)	£ 70	£ 68	£ 24	£ 24
Next 18 weeks (to July 24)	106	99	59	46
Next 10 weeks (to Oct. 3)	126	109	62	39

Too much should not be made of the apparent increase in traffic losses during the last ten weeks, which cover the height of the holiday period. It is regrettable, however, that the figures for the three most recent weeks, during which the importance of holiday traffic has fallen off, show no sign of improvement. The railway and the Ministry of Labour unemployment returns have shown fairly close correlation. It is generally admitted that the movement of railway traffic this year reflects unfavourable trade developments (including, possibly, the effect of import tariffs on inward traffic) rather than unduly heavy losses to the roads. Whatever amelioration the railways may eventually secure by way of further wage concessions,

new relations with road transport, under the Salter Report, etc., such changes obviously cannot affect the financial position for 1932. The figures given in our leading article indicate that the junior prior charges on the two larger and the equity stocks of the two smaller railway ways will have a negligible earnings cover. The following table shows how prices for leading stocks have lately fluctuated:—

	Highest, 1932.	End March, 1932.	End July, 1932.	Begin. Oct., 1932.	Yield on 1931 Dividends. £ s. d.
L.M.S.R.—

5% Consol. preferred	79 1/2	78 1/2	59 1/2	76 1/2	6 11 7
4% debentures	98 1/2	85 1/2	97	99 1/2	4 1 3
S.R.—					
Preferred ordinary	40 1/2	35 1/2	15 1/2	27	14 16 3
5% redeemable preference (1964)	83 1/2	80 1/2	60	73	7 1 8
5% guaranteed	102 1/2	94 1/2	99 1/2	102 1/2	4 17 7

The net recovery in market quotations in the last three months has been of faith rather than substance. It has already discounted a considerable trade recovery in the case of many junior stocks.

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, April to September, 1932.

(1928=100)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks—Daily Figures.

The Insull Charges.—It has come as a surprise to the British investor to hear that indictments against Mr Martin Insull and Mr Samuel Insull have been returned by a Chicago Grand Jury on charges of embezzlement. The first indictment is against Mr Martin Insull in respect of \$344,000 belonging to Middle West Utilities, and the second and third, in which both are involved, are in respect of embezzling \$56,000 from Middle West Utilities and \$104,000 from Mississippi Valley Utilities. The indictments cover embezzlement, larceny, and larceny as a bailee, and the District Attorney in the case is advised that, under the extradition laws, he will be able to secure the return of Mr Samuel Insull, who is now in Paris, and Mr Martin Insull, who is now in Canada. It will be recalled that Mr Samuel Insull resigned his directorships in June on the appointment of receivers for the holding companies in which he was interested, Mr Martin Insull having resigned earlier in the year. The Insull group was the largest of the "pyramid" structures in the public utility industry. The two investment trusts which exercised control over the so-called "Insull Utility Empire," namely, Insull Utility Investment and Corporation Securities of Chicago, were declared bankrupt last month. The judge expressed the opinion that there was no chance of reorganisation and no possibility that the assets of the two corporations would be sufficient to bring stockholders any return whatsoever. Over \$300 millions had been invested in these two holding company trusts. So far, it has been possible to keep the major operating companies of the trusts in existence. The case will be followed with particular interest on this side of the Atlantic, as both Insulls were born in England, Samuel in 1859, and Martin in 1869. Mr Samuel Insull went to America at the age of 22 and became private secretary to the late Thomas Edison.

Austin Meeting.—We commented last week on the distinctly moderate decline in the Austin Motor Company's profits during the difficult year which ended on

July 31st last, and on the directors' prudence in limiting the dividend to 50 per cent. on the company's small ordinary capital, though earnings were at the rate of over 180 per cent. At last Monday's meeting, Sir Herbert Austin wisely wasted no time in formal defence of this step, which, he inferred, was to be related to the uncertainty of the general economic outlook. The greater part of the speech was concerned with two matters—the productive capacity of the Austin Company, and its position in the export markets. It is clear that the recent tendency of home light car demand to shift from the lowest horsepower groups to the low-medium categories has not shaken the position of the "Seven," which continues to be manufactured in greater numbers than any other model in the country. The company is catering for new public tastes, at the same time, by the manufacture of two fresh models, from which much is expected, and is simultaneously extending its interests in the light commercial vehicle section. Indeed, it may be questioned whether the company, like others in the industry, is not being unduly generous in the choice offered to purchasers. A total of 26 different models, ranging from 7 to 20 horsepower, argues relatively high production and plant costs. As regards foreign markets, the company's considered policy of special sales campaigns appears to be bearing fruit, even under present unfavourable conditions. European sales have increased, particularly as regards countries like Spain and Denmark. In Calcutta, which is representative of other parts of India, the company's cars have ousted those of American manufacturers from first place—an achievement which may be portentous. It would appear, however, that foreign demand is centred less on the higher-powered than on the small cars, especially the "Seven." This typically British product may have potentialities for city and "runabout" work abroad, which, even yet, have not been fully explored. In the territory of the heavy car, however, the American producers still seem firmly entrenched, and in this respect the continuance of onerous petrol taxation, by driving home demand (on which the programme of every manufacturer must chiefly be based) towards the lower-powered models, is a grave disadvantage.

Electricity Merger in the North-East.—Early this year the Newcastle-upon-Tyne Electric Supply Company applied for permission to absorb several companies (operating chiefly in Durham), with which it had been associated for many years. After a comparatively easy passage, the Bill giving the necessary authority to carry out the amalgamation has been passed and the merger has now been carried through. For many years the Newcastle company has supplied power to an area of over 4,760 square miles, mainly in the industrial district of the North-East coast. The total share capital outstanding is £7,116,698 and total loan capital £4,410,908. For the past five years the company has paid a dividend of 6 per cent. on the ordinary shares, but for the year 1931 the dividend earned was only 4.9 per cent. The company has changed its name to North-Eastern Electric Supply Company, Limited—a title appropriate to the increased area over which the company's activities will extend. A new issue of capital is foreshadowed, which will, presumably, be used mainly for development purposes, since the Newcastle company already owned the whole or the major part of the capital of the companies taken over.

China Clay Fusion.—The preliminary announcement of a merger agreement between English China Clays, Lovering China Clays and H. D. Pochin and Company, three of the leading companies in the trade, will cause little surprise. It has long been evident that some measure of consolidation was imperative if production was to become, even in a small way, profitable. Proof of the critical condition of the industry is supplied in the last reports of the three companies. English China Clays has an issued capital of £1,496,591 in ordinary shares and £399,070 in 7 per cent. cumulative preference shares.

The dividend on the preference shares is in arrear from 1930, and the last ordinary dividend of 4 per cent. was paid in 1929. The last dividend payment of Lovering China Clays was 5 per cent., paid in 1930. Heavy losses were made by all companies last year, after a further decline in prices. A holding company, to be known as "English Clays, Lovering, Pochin and Company, Limited," is to acquire from the vendor companies, on a valuation, the leases of their clay lands, with such other assets as relate to the production and selling of china clay and its kindred products. The purchase price will be paid in fully-paid preference and ordinary shares of £1, the preference shares being entitled to a 7 per cent. dividend and being redeemable at 21s. at the option of the company on six months' notice. To ensure adequate working capital, each of the vendors has agreed to subscribe in cash at par for 100,000 preference shares in an agreed proportion. The scheme appears to promise the elimination of wasteful competition, but its effective consummation demands an act of faith by the shareholders concerned, who may be required to subscribe new money without obtaining any specific charge on the merger assets.

African and Eastern Reconstruction.—An informal meeting of large shareholders of the African and Eastern Trade Corporation was held last Wednesday in order to "sound" opinion regarding the main heads of a scheme of reconstruction prepared by the board. The meeting was not unanimous, but it is understood that sufficient support was received to allow of a completion of the scheme's details, which will be published in due course. The company has had a melancholy experience since it merged its African interests with those of the Niger Company, in 1929, to form the United Africa Company. Depression in West Africa had begun somewhat earlier, the company's regular 8 per cent. ordinary dividends having ceased abruptly in 1927. The company's chief assets now consist of a minority interest in the United Africa Company. The latter has never paid a dividend since its inception, and a few months ago was found to be in need of substantial working capital to permit of the effective continuance of its activities. Its capital was reduced last April to £7,500,000, and, as the African and Eastern was unable to raise its due share of the new money, its interest in United Africa was reduced from 45 per cent. to 20 per cent. The reconstruction of African and Eastern is clearly inevitable. It is understood that the plan under consideration contemplates the writing off of 19s. from each of the 4,000,000 £1 ordinary shares and of 10s. from each of the 3,066,165 cumulative "B" preference shares. The latter's real dividend rights, however, will be unaltered, since it is proposed to double the rate of interest on the reduced preference capital. Holders may, possibly, also be given one 1s. ordinary share per "B" preference share, as a compensation for the waiving of four years' arrears of dividends. The smaller issue of 800,000 £1 6 per cent. "A" cumulative preference shares will not be affected. The scheme appears, if these forecasts are accurate, unduly favourable to the "B" preference shareholders, at the expense of the ordinary shareholders.

Sub Nigel.—The past year's results, writes our mining correspondent, have borne out the favourable view we expressed a year ago. New records were set up in tonnage crushed, profits earned and development footage performed. A setback in yield—due partly to the mining of ore below the average of the reserves—was more than offset by reductions in the cost ratio. Capital expenditure absorbed £69,950, in place of £101,240, and the Government's participation in profits £61,300, as against £79,260. Taxation called for the increased sum of £141,050. We contrast the results of the past three years:—

are you concerned about...

your child's education? Success will depend much on his (or her) education. "The Secret of the Satchel" tells you how you can provide, inexpensively, for that education. Every thoughtful parent will appreciate this booklet. Write for a copy to-day.

	1930.	1931.	1932.
Ore crushed	323,800 tons	378,000	435,700
Yield per ton.....	69/10	74/9	72/11
Cost per ton.....	44/-	37/5	34/11
Profit per ton	25/10	37/4	38/-
Total working profit	£418,760	£705,650	£827,900
Dividends, amount	300,000	450,000	£562,500
Dividends, per cent.....	40	60	75
Development footage	45,290	58,140	61,650
Ore reserves	965,000 tons	1,206,000	1,320,000
Average value	18-0 dwts.	17-3	17-6

Although the ore opened up last year showed a somewhat smaller percentage of payability than in 1930-31, the value was appreciably higher, and favourably affected the average of the reserves as a whole, though these are calculated over a stopping width of 29 inches instead of 27 inches. Moreover, a general improvement occurred in the tenor of development throughout the mine in areas outside those containing the main ore shoots. This is described by the consulting engineer as the "most important feature" of the year's underground operations. That official forecasts a material increase in profits for the current year—granted a continuance of "reasonably normal development disclosures." Some months ago a distinct effect was produced upon the quotation of the shares by the news of the acquisition of the undermining rights of 2,027 claims. These are to be tested in the first case by an extension of two drives from the main area. A study of the mine plans suggests that it would be unwise to attach too much importance to this ground until a fair amount of exploratory work has been performed. At the current quotation of 5½ for the 1s. shares Sub Nigels give a yield of 7 per cent., irrespective of exchange considerations.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Manila Railway, City and International Trust, City of San Paulo Improvements and Freehold Land, Malayalam Plantations, Leyland and Birmingham Rubber, D. Gestetner, and Leethems (Twilfit). Presid-

Plus what?

*Plus a little
something
some others
haven't got*

In default of any agreed restriction the board estimated the crop of tea for the current year would amount to about 10,000,000 lbs. which they hoped to produce at a still lower cost than last year. If the present prices for tea continued the company must again make a loss this year. Everything possible was being done to mitigate the loss or to turn it into a profit, and it was perhaps some small comfort that with the improvement effected in the cash position and the various economies effected it appeared that even in the unlikely event of prices remaining for another two or three years

at their present low levels the company would be able to carry on without raising further capital.

There were many grounds for hope that within the next year or two they would see the re-establishment of the remarkable upward trend of the last 10 years in the world demand for rubber and an increase in its price to a level which would permit of profitable production by plantation producers generally.

The report and accounts were adopted, and a resolution authorising the conversion of the capital of the company from shares of £1 into stock was unanimously approved.

D. GESTETNER, LIMITED.

COMPANY'S STRONG POSITION.

The ordinary general meeting of D. Gestetner, Limited, was held, on the 30th ultimo, at the company's offices, Aldwych House, London.

Mr Sigmund Gestetner (chairman and managing director) said that the past year had been a difficult one for trading, but the directors hoped that, taking all the circumstances into account, the shareholders would be comparatively satisfied with what had been achieved.

Referring to the assets side of the balance sheet, the Chairman said that at the end of August, 1931, they had cash at bank £197,937, whereas this year their total cash resources, including sinking fund policies, amounted to the comforting figure of £365,000. After mature reflection they had invested a considerable sum in British securities, and had also purchased sinking fund policies with various insurance companies.

It was satisfactory to be able to report that the volume of home trade in the year under review was practically the same as in the preceding year. The principal cause of the reduction in their turnover, and consequently in their trading profit, was the falling away in the export market, and in the light of common knowledge he did not think it necessary to enlarge on their difficulties in that respect.

In spite of the difficulties, they were preserving their goodwill throughout the world, and all their subsidiary companies, concessionsaires, and agents were still distributing the company's products in their various territories. The directors were taking the long view, knowing that, if they continued to give the attention and service to their customers for which they were famous, when trading conditions again became normal they would reap to the full the benefit of that continuity of their policy.

The general position of the company, as reflected in the balance sheet and trading account, was one of great strength. They had a sound and steady business and, with their large cash resources, they would be in a position to take advantage of any opportunities that might arise. If world conditions improved in the near future they would immediately feel the benefit.

The report and accounts were unanimously adopted and the proposed final dividend of 5 per cent., less tax, making 10 per cent., less tax, for the year, on the ordinary shares, and a capital bonus of 6d. per share on the ordinary shares were approved.

LEETHEMS (TWILFIT), LIMITED.

ALL ROUND PROGRESS.

The annual general meeting of Leethems (Twilfit), Limited, was held, on the 4th instant, in London, when the report and accounts were unanimously adopted and the retiring director and the auditors were re-elected. Sir John Rowland, J.P. (the chairman and managing director of the company), presided.

The comments of the chairman on the accounts for the year stated that, taking into consideration the discouraging conditions of the year, he thought shareholders had no cause to complain. The directors were gratified to be able to record an increase in the turnover of the company, and an increase in the profits earned. The new factory, referred to a year ago, had been completed and equipped during the year, and the company had had the benefit of the occupation of the new premises for some weeks.

As to Leethems (Ireland), Limited, the trading and profits of that company showed an improvement over last year. Provision for depreciation of assets and additions to reserves had again been of a liberal character, and the creation of reserves in the accounts of that company had enabled it to finance its own subsidiary, the Dublin Underwear Manufacturers, Limited, without increasing the financial advances the parent company had made to Leethems (Ireland), Limited. When embarking upon the new venture, the board had not anticipated that the trading of the first year of the Underwear Company would be profitable. During the early part of 1932 a substantial improvement arose in the demand for manufactures of that company, and before the close of its financial year at June 30th they had every reason to believe the business had reached a profit-earning

stage. A reserve more than sufficient to meet the loss on the Underwear Company had been made before arriving at the profits of their Irish subsidiary. The board were pleased with the manner in which La Mascotte, Société Anonyme, incorporated in Belgium to comply with the requirements of Belgian law, had maintained the sales of its own productions and with the progress made in Belgium in the manufacture and sale of corsetry bearing the "Twilfit" mark.

Generally, the company was fully equipped and in a position to avail itself of any advantage which might arise. The economic crisis and depression in the world of business still persisted, but the board would continue to study the requirements of their customers and maintain to the full the system of frequently visiting the company's friends in the United Kingdom and on the Continent of Europe. No effort would be spared to increase business.

LEYLAND AND BIRMINGHAM RUBBER COMPANY, LIMITED.

MOST CREDITABLE RESULT.

ATTACK ON BOARD REBUTTED.

Presiding at the ordinary general meeting of this company held, on the 6th instant, in Preston, Mr R. T. Byrne said that hitherto their meetings had been harmonious, and he thought they would have continued so, but for the agitation provoked by Mr Berry and his friends, culminating in his attempt to secure seats on the board for himself and his two friends. On the issue depended continued success or utter failure. Excepting motor tyres they manufactured practically every article in the trade, their manufactures were sold all over the world and they had large vested interests. To direct successfully a business of this magnitude required men with great technical knowledge and experience.

The year's trading profit was £24,448, making, with amount brought forward, £14,391, after deducting depreciation, reserves for discounts, etc. The balance of £8,391 remaining after payment of preference dividend it was proposed to carry forward. The result, compared with a loss of £26,741 for the previous year, reflected the greatest credit on the whole management, especially when the world depression was taken into account.

It was painful to refer to the attack upon the directors, but he could not find that Mr Berry had any experience of the business, and he hoped that gentleman would indicate what would be the policy of himself and his friends if they succeeded in gaining seats on the board—would he continue the services of the present administrative directors whom he had characterised as little more than mere puppets? He could not have it both ways. A chaotic state of affairs would ensue if Mr Berry achieved his object.

Mr Berry charged the directors with having acted "ultra vires" in the arrangement with the British Moulded Hose Company. The opinion of leading counsel, however, was that the directors had acted properly. If Mr Berry and his friends considered that the directors had contravened the articles in any way, application could be made to the Law Courts. Directors who acted "ultra vires" were open to very serious penalties.

After prolonged debate the report and accounts were adopted, with a proviso (accepted by the chairman) that goodwill be reduced at the earliest opportunity. By show of hands the re-election of the retiring directors was negative, and a proposal that Messrs H. Berry, P. R. Ward, and A. J. Lomax be appointed directors was adopted. On both resolutions the chairman demanded a poll to be taken at the company's offices at Leyland on the 13th inst., between noon and 4 p.m.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the six days ended September 30 1932, amounted to £6,667,400 against ordinary expenditure of £14,623,800. After allocating £318,200 to Sinking Fund and having allowed for an increase in Exchequer Balances of £28,471, the operations for the period, as shown below, increased the National Debt by £8,303,000:—

REPORTS AND NOTICES.

ANGLO-SIAM CORPORATION, LTD.—In connection with our "Note" last week, it should be clearly understood, as regards the concentration at Singapore and Penang, that only the Malayan business is affected, the corporation's interests in Siam and India being carried on as before.

BANKS

THE CHASE NATIONAL BANK OF THE CITY OF NEW YORK.—The statement of the Chase National Bank of the City of New York for September 30, 1932, shows an all-round increase in the important balance-sheet items since June 30, 1932, the last quarterly statement date. Total resources of the bank have risen from \$1,731,509,127 on June 30th to \$1,855,616,518 on September 30th. Cash and due from banks at \$377,210,936 represents an increase of \$77,266,200 as compared with the June statement. Investments in United States Government securities at \$249,899,379 are up by \$31,825,885. State, municipal and other securities maturing within two years at \$120,393,930 show an increase of \$13,882,444 over the June figures. Other bonds and securities, including stock in the Federal Reserve Bank, amount to \$90,371,216, compared with \$99,847,100 on June 30th. Loans and discounts total \$860,923,954, against \$880,848,464. On the liabilities' side, the capital and surplus of the bank at \$148,000,000 and \$100,000,000 respectively remain unchanged. Undivided profits at \$18,335,062 show an increase of \$953,912 since June 30th. Reserve for taxes, interest, contingencies, etc., amounts to \$14,540,979, against \$12,170,961. Deposits at \$1,420,221,444 compare with \$1,302,456,350 on June 30th.

WIENER BANK-VEREIN.—According to a decision taken at the general meeting of shareholders held on August 19, 1932, the shares of this institution of a nominal value of Sch. 20, at present in circulation are to be stamped with a rubber stamp recording the reduction of the nominal value to Sch. 10, the shares being henceforth described as series B. Shareholders are invited to deposit their share-warrants between October 1 and December 31, 1932, at the following places during the usual office hours, for the purpose of having this stamp affixed thereto: In Vienna, at the Wiener Bank-Verein; in London, at the Banque Belge pour l'Etranger, S.A. (limited company incorporated in Belgium), 4 Bishopsgate, E.C.2. Shares deposited in London must be listed on forms to be obtained on application to the Banque Belge pour l'Etranger, S.A.

MISCELLANEOUS.

ELDER DEMPSTER AND COMPANY, LTD.—Profit for the year 1931 was £34,127. After charging interest, £68,549, interest on calls in arrear, £57,606, losses of subsidiaries, £131,416, and debenture interest £100,000, there is a debit balance of £323,444 against a loss in the previous year of £147,442. The auditors call attention to the fact that certain securities included in investments show a shrinkage of £2,031,239. The directors also draw attention to an over-valuation of shares in subsidiary and associated companies which will have to be adjusted when conditions permit of a complete reorganisation of the loan and share structure of the company.

Commercial Reports.

MARKET SUMMARY.

Last week's irregular tendency of the prices of the principal raw materials has given way to a definite downward movement in values. In view of the absence of any response from industry to the recent advance, the downward movement is not surprising. According to quotations in the United States, the chief non-ferrous metals have been easier, with the exception of lead, which gained a few points. Raw cotton prices receded further, and rubber was also sold at a lower level. Among cereals, wheat, maize, oats and rye all recorded a decline. Similarly, cocoa suffered a further setback, and coffee was easier, following the cessation of hostilities in Brazil. Sugar, however, was maintained. According to reports from various industrial centres in this country, the coal trade continues to improve, but the iron and steel industries are making little headway. The cotton trade reports an increase in the volume of enquiries, and the demand for rayon fabrics is expected to improve. Business in wool manufactures continues limited.

THE COAL TRADE.

SHEFFIELD.—There has been a steady call for best steams for export absorbing the whole of limited output. Prices continue firm at 17s. 6d. to 18s. f.o.b. There is little or no improvement in sales for industrial uses, except in the coke department. The improved demand for this class of fuel, however, is mainly due to its use for central heating. Prices of blast furnace coke range from 10s. to 10s. 9d. at ovens. Trade in house and gas coals is more active. Best South Yorkshire house coals commands from 22s. 6d. to 24s. at pits, prices being somewhat irregular.

GLASGOW.—The expanding tendency of business is more pronounced, and while as yet the curtailed output has been sufficient for requirements, export prices have a much steadier appearance. Washed nuts remain scarce and strong, demand being good for Scandinavian and South of England markets. The former are also responsible for a good part of the increase in large coal business. Higher prices are easily obtained for fuel for inland use. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 14s. 9d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 12s. 6d.-14s.; doubles, 11s. 6d.-12s.; singles, 10s.-12s. 6d.; pearls, 9s.; dross, 8s. 9d. **FIFE.**—Screened navigation,

16s. 6d.; first-class steam, 12s. 9d.; third-class steam, 11s.; trebles, 16s.-17s.; doubles, 12s.; 13s. 6d.; singles, 10s. 6d.-11s.; pearls, 9s. **LOTHIANS.**—Prime steam, 10s. 9d.-11s.; secondary steam, 10s. 6d.; trebles, 14s.; doubles, 12s.; singles, 10s.; pearls, 9s. 6d. **AYRSHIRE.**—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 14s.; doubles, 12s.; singles, 10s. 6d.; pearls, 9s. 6d.; dross, 9s.

NEWCASTLE-ON-TYNE.—The firmness of the Northumberland screened steam market continues to be the feature of the North-East. Blyth collieries are well stemmed for the next two or three weeks, and for shipment three or four months ahead the D.C.B. collieries are now quoting 3d. above their minimum of 13s. 6d. Trade from Scandinavia improves, and this week an order of 130,000 tons of gas coal has been booked by Newcastle merchants for Durham coal shipment to the Copenhagen gasworks. Foundry coke remains steady on the basis of 16s. for the prime brands. To-day's f.o.b. prices for export are as follows: **NORTHUMBERLAND.**—D.C.B. screened steam, 13s. 9d.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin screened, 13s.; smalls, 8s.; Tyne prime large, 12s. 9d.; smalls, 9s.; Hartley Main large, 12s. 6d.; smalls, 8s. **DURHAM.**—Lambton, South Hetton screened steam, 15s.; smalls, 11s.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s.; coking unscreened or smalls, 12s. 6d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.; prime foundry coke, 16s.; Newcastle and District gas coke, 18s.

CARDIFF.—Anthracite and dry steam coals have maintained a firm tone on the South Wales coal market, and during the past week there has been a slightly better tendency also in the demand for steam coals. The recent rise in the homeward rates from the Plate has led to the recommissioning of about thirty Cardiff-owned idle vessels, and this circumstance has increased temporarily the demand for bunker grades, and an increased proportion of the tipping appliances at the local ports has, therefore, been in operation. Stocks in wagons, particularly of small coals, have been reduced, while sized grades are firmer than ever at the recently improved prices. The aggregate volume of demand, however, remains well within the reduced quota for the December quarter, and it is unlikely that there will be any application to the Central Council for an additional allocation as was the case a year ago. Shipments of anthracite coals to Canada at Swansea and Port Talbot continue active, while it is anticipated that South Wales will benefit from the increase of 100,000 tons in the French import quota for household coals. Provisional returns of exports from the South Wales ports during September record a smaller volume than that for any other month since January, 1931, when the South Wales coalfield was idle for practically three weeks owing to a wages dispute. The total shipments to foreign destinations were only 1,219,640 tons, compared with 1,316,982 tons in August, and 1,687,842 tons in the corresponding month last year. The principal losses compared with a year ago were to France (137,000 tons), Italy (158,000 tons), South America (84,000 tons), and the coaling depots (82,000 tons). On the other hand, exports to Canada were roughly 35,000 tons, or practically 35 per cent. more than a year ago. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 10s. 9d. to 11s.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 18s. 9d. to 19s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Although an optimistic tone has recently existed in regard to the pig-iron markets, some disappointment is beginning to be felt at the slow recovery that is taking place. Local consumption of pig iron is on a poor scale, and there are no indications of any substantial improvement in the near future, while deliveries to Scotland are considerably curtailed owing to the depressed state of the foundry trades in that area. Further, the demand for iron for the Continent is now reduced to almost negligible proportion, so that altogether the position cannot be regarded as at all promising, and it is not surprising that stocks are increasing. The shipments last month of pig and manufactured material were about 5,000 tons below the previous month of August, viz.:—

	1932 September.	1932 August.
Pig iron	5,639	7,296
Manufactured iron	991	689
Manufactured steel	23,702	27,407
	30,332	35,392

There was only a moderate attendance at Tuesday's weekly market, and the business transacted was of small extent. Official prices for Cleveland iron were unchanged, viz.:—No. 1, 61s.; No. 3, f.o.t., but special concessions are still offered to Scotch consumers. The demand for hematite has fallen off recently, and purchases are again mostly restricted to early requirements. Ordinary mixed numbers are offered by makers for early delivery at 69s. per ton, and this price has been shaded in odd instances. In the constructional trades a few orders are coming to hand which will absorb a fair amount of steel material. Dorman, Long & Company, Ltd., are expecting to get final details arranged at once in connection with the big Danish bridge that will allow work to commence immediately. Prices for steel materials for home consumption under the rebate scheme are unchanged, viz.:—Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other materials are iron Crown bars,

£9 15s.; heavy steel rails, £8 10s.; 24-gauge galvanized corrugated sheets, £10; and 24-gauge black sheets, £8 5s. per ton; sheets f.o.b. or f.o.t., others 10s. less for export. The ore market is very quiet, and imports against contracts are on a poor scale. Best Bilbao rubio is nominally 14s. 6d. c.i.f., and the current freight Bilbao/Middlesbrough is 4s. 3d. Imports of all kinds of ore into Middlesbrough during September amounted to 29,013 tons, against 37,612 tons for the previous month. Coke continues in plentiful supply, and good blast furnace qualities are offering at 14s. 6d. per ton delivered at consumer's works. The number of blast furnaces in operation in the district is unaltered at seventeen.

SHEFFIELD.—Conditions in the steel industry continue to show signs of improvement in sections, but the heavy branches fail to develop. Tariffs, combined with exchange differences, are diverting a good deal of trade in special alloy steels from the Continent to Sheffield. These imported steels have been in the past extensively used in motor construction. As the cost of the imported steel is now nearly as high as that of home made, motor firms are now buying the latter. At the same time, British makers are the reverse of busy, owing to the poverty of the home market for tool and alloy steels. Makers of engineers' and mechanics' small tools are not badly employed at the moment, but keen competition among themselves for the limited amount of business available in the home market has brought down prices to an unremunerative level. Export trade to Australia and South Africa is expanding, but is stagnant to foreign markets. Output of open-hearth steel is slightly better, but depressed in heavy engineering forgings and castings is as acute as ever. The position of pig iron and wrought iron is no better. The market for steel scrap is slightly stronger with prices still considerably below normal. A valuable Russian order for steel rolling mills has been booked by a Sheffield firm which specialises in such machinery. The September trade in plate and cutlery has not come up to expectations, and these trades are still being carried on unremuneratively.

GLASGOW.—During the present week there has been no decided change in the situation in the West of Scotland. During recent months there has been a considerable amount of important ship-repairing work carried on in Clyde yards, but there are now fewer vessels in the repairers' hands. The need of shipbuilding specifications is much felt at the steel plants, and while on the whole there has been a rather better demand for other material, there is only sufficient work coming in to keep a very small proportion of the plant operating. Sheet makers continue to do a steady business in both black and galvanized sheets, and the improvement recently noted in the export demand for blocks is being maintained, and although there are still a number of idle mills, there is some increase in the number of tube makers, who, during the past few weeks have been somewhat busier, are now finding a slackening off. In

the manufacturing trades a number of the smaller shops have been exceedingly well employed during recent months, and a steady business is being maintained. Things remain very quiet with makers of wrought iron and re-rolled steel bars are also in very poor demand.

CARDIFF.—Demand for tinplates was slightly less active on the Swansea Metal Exchange on Tuesday, but prices were steady at round about 16s. per basis box, while, as the result of last week's heavy shipments of 122,033 boxes, stocks were reduced to 107,532 boxes, compared with 145,325 boxes the previous week, and 189,445 boxes in the corresponding week last year. Steel bars have recently been imported in increased quantities at 82s. per ton delivered, while local bars have remained unchanged at 95s. per ton. Galvanised sheets are quoted at from £9 10s. to £10 per ton, but trade in them continues restricted.

OTHER METALS.

TIN.—On the publication of the world's tin stocks at the end of September, which, at 57.2 metric tons, show a decline of only 0.5 metric ton on the month, the market became slightly easier. Turnover was not large, and Wednesday's quotations show a fall of more than £2 per ton on the week. Sales on the London Metal Exchange were 350 tons on Monday, against 575 tons last week; 575 tons on Tuesday, against 300 tons last week; and 275 tons on Wednesday, against 375 tons last week. The New York quotation on Wednesday was 24.35 cents per lb., against 24.75 cents a week ago and 26.625 cents a month ago. Wednesday's official closing quotation in London for standard cash was £151 5s. to £151 10s., compared with £153 10s. to £153 12s. 6d. last week. Stocks in London and Liverpool at the end of last week were 31,430 tons, a decrease of 268 tons on the week.

COPPER.—Copper opened firm on Monday, but, in the absence of a sustained demand, prices weakened on Tuesday. On Wednesday, however, the metal regained most of the ground lost on the previous day, but closed about £1 per ton below the level of a week ago. Sales at the London Metal Exchange were 700 tons on Monday, against 700 tons last week; 1,100 tons on Tuesday, against 1,100 last week; and 600 tons on Wednesday, against 700 last week. Domestic spot was quoted 6½ cents per lb. in New York on Wednesday, against 6½ cents a week ago and 6½ cents a month ago. Wednesday's official closing price for standard cash in London was £33 12s. 6d. to £33 13s. 9d., compared with £34 12s. 6d. to £34 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 22,724 tons, show an increase of 2,157 tons, and stocks of rough copper, at 1,851 tons, an increase of 95 tons.

LEAD.—The demand for lead in London was quiet on Monday and Tuesday, but on Wednesday the market was favourably influenced by the rise in the New York quotation. Sales at the

London Metal Exchange were 500 tons on Monday, against 800 tons last week; 600 tons on Tuesday, against 1,000 tons last week; and 500 tons on Wednesday, against 500 tons last week. The New York quotation on Wednesday was 3.25 cents per lb., against 3.00 cents a week ago and 3.60 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £12 13s. 9d. for September shipment, compared with £12 18s. 9d. last week.

SPELTER.—The market in spelter was dull on Monday. Cheaper offerings induced buyers to come forward on Tuesday. On Wednesday business was on a large scale and quotations rose a little. Sales were 350 tons on Monday, against 350 a week before; 750 tons on Tuesday, against 250 the week before; and 1,200 tons on Wednesday, against 600. The New York quotation on Wednesday was 3.10 cents per lb., against 3.25 cents the week before, and 3.30 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 6s. for September shipment, against £15 6s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was quoted at £100 per ton, against £95 per ton a week ago. Nickel was unchanged at £240 to £245. Quick-silver was slightly lower at £9 5s. to £9 10s. per flask, against £9 5s. to £9 12s. 6d. a week ago. Platinum was again quoted at £9 6s. per ounce. Foreign antimony was again unchanged at £25 to £25 10s. per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool. Imports for the week September 29th to October 5th (inclusive) are 28,915 bales, of which 8,368 are American, 189 Brazilian, 4,276 Peruvian, 2,745 Argentine, 7,231 Egyptian, 541 African, 4,929 East Indian, and 656 sundries.

Manchester.—The market during the past week has continued to be well supplied with inquiry, but actual business has been rather irregular and some spinners and manufacturers have expressed disappointment at the failure of demand to mature on satisfactory lines. The ups and downs in raw-cotton rates from day to day have had a rather disturbing effect upon trade. Although the labour situation is still a factor of importance, there is very little fear of a stoppage in the spinning section. Some makers of piece-goods suitable for India have experienced a reduced demand compared with the previous week, but a fair turnover has taken place in light whites, prints and fancies for Calcutta, Karachi, Madras and the up-country markets. Offers have been reported for fairly substantial quantities of dhooties for Calcutta, but transactions have been very difficult to arrange. There has not been any particular move on the part of exporters to China, but white shirtings and dyed goods have been wanted for Hong Kong. A few more lines have been put through in bleaching styles for Egypt and the Near East, and fine fabrics have attracted increased attention from Switzerland and Scandinavia. Business has been done from day to day in printed and dyed cloths for South America and West Africa. Buying in home trade goods has been rather patchy. There has been some irregularity in American and Egyptian yarn quotations, and no free buying has been reported. Spinners are still making determined efforts to maintain their improved margin. Fine yarns for the Continent have attracted rather less attention.

THE WOOL TRADE.—Bradford.—According to our correspondent some conflicting reports have been published this week about the movement of wool values at the London sales, but the position is fairly sound and encouraging. One disappointing feature of the auctions has been the fairly large withdrawals of second-hand wool. Owners were induced by the improvement in manufacturing conditions and the advance in prices to offer them for sale, but in many cases have found the experiment rather disappointing. It looks as if patience will have to be exercised if all the wool now in stock in London and elsewhere is to be disposed of profitably, either in the saleroom or by being turned directly to manufacturing purposes. The position with regard to the sales in London seems to be that the finest greasy merino wools have shown the greatest ease. Average merino and fine crossbreds have lost very little ground since the opening, and in no case is the fall more than 5 per cent. The selling of the latter wools was not marked at the opening by such a big advance as in others, and home and foreign buying has prevented any very marked fall. It is still estimated by those who have definite buying orders in London, that warp 64's tops are costing 24½d., and as this price is not realisable in Bradford, it is small wonder that very little business is being done there. This week the sales have been characterised by 60's wool remaining very dear against 64-70's. There has also been a good demand

on Continental account for New Zealand and Punta Arenas 56-60's, and ordinary wools of 46's to 50's qualities. Although there have been very large offerings of slipes, these have been cleared with scarcely any ease at all. The Bradford market is quiet. It is almost impossible to get any response at all from spinners. There is still a big output of tops from the combs, and as these are being readily taken up, top-makers have no surplus lots to offer on spot account; 23½d. is quoted for average 64's, but this is a protective figure, and spinners are still refusing to talk about more than 22d. for delivery next year.

THE JUTE TRADE.—Dundee.—Business continues very quiet in all sections of the jute trade. Prices of the raw material have shown a tendency to decline, in consequence of which buyers of yarns and cloth have withheld their orders in anticipation of lower terms. Values of Calcutta goods have also disclosed weakness, and even the fact that the stocks of both hessians and sackings were considerably reduced at the end of September compared with end of August has had no influence in checking the downward movement of prices. Stocks of hessians at the end of September were 112,440,000 yards and sackings were 82,721,500 yards, compared with 127,279,000 yards and 123,465,000 yards respectively at the end of August. During this month there will be a number of holidays in Calcutta and production will be curtailed on this account, which should result in a further reduction of stocks by the end of October. The imports of raw jute into Calcutta are fairly large compared with those of last season at this period, in spite of the fact that a short crop was forecasted. Prices have fallen recently until £19 10s. is the value of good First Marks, £18 5s. for good Lightnings and £16 to £17 10s. for Hearts, according to quality, October/November shipment. Full group of Daisee-2/3 has been sold on several occasions at £16 15s. and fours at £16 5s., while Tossa assortment is quoted at £17 15s., threes at £17 10s. and fours at £16 17s. 6d., October/November. Spinners here are purchasing very sparingly. There is little incentive to buy raw jute on account of the lack of demand for jute yarns. Only trifling quantities of hessian qualities are being bought at 2s. for common 8-lb. cops and 2s. 1d. for 8-lb. spoils. Twist rules at from 3½d. for 3-ply 8-lb., and sackings yarns are readily obtainable at from 2½d. for 24-lb. web and 3½d. for 8-lb. chains. Rove has been sold at £18 for 72-lb., £19 10s. for 48-lb., and £16 10s. for 200-lb., which are all under recent limits. Fine yarns are in demand for Brazil, but the difficulty is to get delivery in time for shipment to arrive before November 20th, on which date the concession of 50 per cent. on tariffs on imported yarns into that country expires. Prices are from 2s. 8d. for second quality 8-lb. Rio warp, 2s. 5d. for third and 2s. 3d. for fourth. Orders for jute cloth are usually small and prices are not being seriously tested. For 104-oz. 40-in. hessians 2½d. would quickly be accepted and 2½d. for 8-oz., though in the case of the wider widths ½d. more is usually required. Linoleum hessians are quiet and only a small trade is passing in heavy goods. Calcutta goods prices have declined to 19s. 9d. for 10-oz. 40-in., October, 19s. 8d. for November/December and 19s. 3d. for January/March, with 8-oz. at 15s. 9d. in all positions. Spot business has been done at 20s. for 10-oz. and 16s. for 8-oz.

THE GRAIN MARKETS.

WHEAT.—The international wheat position has taken a turn for the worse during the past week. International trade in wheat has again been on a small scale, owing to the fact that the chief Continental importing countries have practically "closed the door." Canada has again supplied the largest proportion of requirements, but favourable crop reports from Argentina and Australia suggest that these two countries will soon become an important factor in the market. Meanwhile, prices have been easier, and there are scarcely any prospects of an early improvement in values. On Wednesday, "December" futures were quoted in Chicago at 52 cents per bushel, against 54½ cents the week before, and 58½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. 6d. per 480 lbs., against 28s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s., against 28s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 9d.; Australia, ex ship, 29s. 3d., against 30s. a week ago.

WHEAT FLOUR.—International trade in flour has again been on a relatively small scale. North American shipments were 161,000 sacks, compared with 158,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 25s. per 280 lbs., against 26s. last week; delivered London, 24s., at both dates. Manitoba patents, ex store, 24s.-27s., against 24s. 3d.-27s. 3d. Australian, ex store, 21s.-21s. 6d., against 21s.-21s. 6d. last week.

BARLEY.—Feeding barley has been in poor demand, and prices showed a declining tendency. "October" futures were quoted in Winnipeg on Wednesday at 23½ cents, against 25½ last week and 32½ a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s. against 24s. a week before.

OATS.—The market in oats has been quiet. In Chicago, "December" futures were quoted at 16½ cents, against 17½ per bushel a week before and 19½ a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., against 18s. 6d. a week ago; "River Plate," ex ship, 17s. 3d.-17s. 6d., against 17s. 3d. 17s. 6d.; "Chilean White," landed, 23s.-24s., against 23s.-24s. 6d. a week earlier.

MAIZE.—There has been a marked decrease in the demand for maize, and, despite smaller shipments from Argentina, prices became easier. "December" futures in Chicago were quoted on Wednesday at 20½ cents against 28½ cents on Wednesday of last week and 33½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. 9d. per 480 lbs., compared with 21s. last week; "Plate,"

[October 8, 1932.]

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

WHEAT FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Oct. 7, 1931.	Jan. 4, 1932.	Sept. 28, 1932.	Oct. 5, 1932.
Wheat (No. 1 Manitoba)	148½	56½	52½	62½	50½	48½
Chicago (No. 2 Winter)	130½	79½	46½	55½	52½	52

The visible supply of wheat in Canada, at 86,280,000 bushels, shows an increase on the week of 7,379,000 bushels. Supplies a year ago stood at 49,304,000 bushels.

OTHER FOODS.

SUGAR.—The outstanding feature of the past week has been the signing of a decree by the Cuban President providing for the segregation of 700,000 tons of raw sugar until July 1, 1933, after which date it is to be released in equal monthly quantities during July-December, 1933. The chief raw sugar markets have been quiet during the week and prices fluctuated within narrow limits. December futures were quoted in New York at 1.06 cents per lb. on Wednesday, against 1.08 cents a week before and 1.13 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 10d. to 5s. 11½d. per cwt., against 5s. 9d. to 5s. 10½d. a week before, and "March, 1933," at 6s. 1½d. to 6s. 2d. against 6s. to 6s. 1d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1932	1931	1932	1931	1932	1931
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	101	19	1,061	2,597	13,512	16,402
Liverpool.....	12,545	4,670	13,838	23,314	54,799	39,425
Total	12,646	4,689	14,899	25,911	68,311	55,827

Last week 10,638 4,079 15,592 16,038 70,569 77,056

COFFEE.—Following the cessation of hostilities in Brazil and the re-opening of the port of Santos, coffee prices have been easier in New York. On Wednesday, Rio No. 7 (cash) was quoted at 9 cents per lb., against 9½ cents per lb. on the corresponding day a week ago.

At Tuesday's London auctions, demand was poor and most parcels realised lower prices. Last week's movements of coffee in London were as follows: Brazilian, landed, 131; delivered for home consumption, 801 bags; exported, 7,164 bags; stocks, 8,497 bags, against 2,320 bags a year ago. Central American, landed, 2,252 packages; delivered for home consumption, 2,111 packages; exported, 4,497 packages; stocks, 74,835 packages, against 82,459 last year. Other kinds: Landed, 1,016 packages; delivered for home consumption, 1,854 packages; exported, 2,718 packages; stocks, 58,833 packages, against 68,930 last year.

COCOA.—Following last week's improvement, the market in cocoa has again been under the influence of a weaker tendency. December futures were quoted at 4.19 cents in New York on Wednesday, against 4.44 cents a week ago and 5.03 a month ago. Accra, November-January, at 27s. 6d. c.i.f. Continent, shows a fall of 9d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 4,668 bags; delivered for home consumption, 7,077 bags; exported, 272 bags; stocks 131,606 bags, against 182,242 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 84,071 packages of Indian and 31,774 packages of Ceylon tea. Monday's "Indian" auctions again encountered keen competition at rising prices, particularly for common and low medium varieties. The improvement was maintained at Tuesday's "Ceylon" sales and at the second "Indian" auctions on Wednesday. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

	AVERAGE PRICE PER LB.					
Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Total.
Oct. 1, 1931	15-74	11-17	18-08	9-00	7-89	15-07
Sept. 8, 1932	10-61	6-34	8-48	4-72	4-46	8-81
" 15, "	10-16	5-90	8-61	4-37	3-89	8-71
" 22, "	10-09	6-04	9-25	4-82	4-10	9-02
" 29, "	10-75	6-28	10-05	4-74	4-09	9-57

RICE.—The market in rice was steady. The spot price was again 10s. 3d. per cwt., while the forward quotations at 8s. 1½d. per cwt. show a decline of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 139 tons; delivered, 286 tons; stock, 1,993 tons, against 1,278 tons a year ago.

POTATOES.—With the advance of the season, the pressure of supplies is beginning to decrease, and consequently a slight rise in prices has already become noticeable. At the London Borough Market, "King Edward," light soil, were quoted at 5s. 6d. to 6s. per cwt., against 4s. 9d. to 5s. 6d. a week ago.

SPICES.—Business in spices was small. Spot pepper, "Black Singapore," was again quoted at 6½d. per lb. on Wednesday. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 15 tons; delivered, 22 tons; stock, 269 tons, against 569 a year ago. White, landed, 49 tons; delivered, 31 tons; stock, 456 tons, against 499 a year ago.

MEAT.—The outstanding feature of the past week at the Smithfield Market has been the decline in both English and Argentine beef prices. English mutton was also easier, but "New Zealand" has been maintained. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 5d. to 4s. 2d. per 8 lbs., as compared with 3s. 6d. to 4s. 4d. last week. New Zealand frozen mutton was 2s. 4d. to 3s. per 8 lbs., against 2s. 4d. to 3s. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,599 tons, against 9,145 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.5 per cent. of the beef supplies, against 84.6 per cent. a year ago. Imported mutton, mainly New Zealand, formed 69.4 per cent. of the total supply of mutton and lamb, against 71.2 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Trade has been on exceptionally quiet lines, crushers buying oilseeds only from hand to mouth to meet the demand for cakes (which is very poor), in view of the uncertainty as to what may happen to the Ottawa proposals to tax linseed in order to give a preference to India. This, coupled with lower Plate options and heavy supplies afloat, has depressed the market, and seed on passage to Hull has been done down to 88 15s. There is, however, a steadier tone and Plate afloat and for October shipment offers at 88 17s. 6d., with later positions at a slight progressive premium. Calcutta is also easier, and October-November to London is reported at 89 1s. 3d. The quantity of linseed afloat to Europe is heavy, and at 224,000 tons compares with 132,200 tons a year ago. World shipments this year to date are 50,000 tons in excess of a year ago and there is yet available for export to the end of the year over half a million tons and 150,000 tons more than was actually shipped in the remainder of 1931. Business in new Egyptian cottonseed, October-December loadings, has been transacted at 88 17s. 6d. Vegetable oils are a slow market and there is little or nothing doing in any direction. Raw linseed oil for October-December delivery is quoted around 116 15s. per ton ex Hull mill. Cotton oil is easier, crude Egyptian ex Hull being obtainable at 222 10s. and refined at 225 prompt. Oilcakes are in poor request and, with the exception of linseed, mill prices are 5s. per ton lower.

HIDE, LEATHER AND ALLIED TRADES.—No auctions of market hides and skins are being held this week, because the bulk of the buyers are in attendance at the London Shoe and Leather Fair which, at the time of writing, is in full swing. Demand for all

THE MONEY MARKET.

MONEY became a little easier towards the end of last week, and the usual week-end conditions prevailed with $\frac{1}{2}$ per cent. charged for both old and new money. On Monday the absence of Treasury bill maturities made credit a little less plentiful, and by Thursday money had become definitely firmer, with $\frac{1}{2}$ per cent. the most common rate for new money. Some calling for making-up purposes was also noticeable on Thursday for the first time this week, and the market had to borrow a little clearing bank money at the minimum rate of one per cent. Renewals, however, were still effected at $\frac{1}{2}$ per cent.

ALLIANCE

ASSURANCE COMPANY, LIMITED.

(Established in 1824.)
HEAD OFFICE: BARTHOLOMEW LANE, LONDON, E.C.2.
ASSETS EXCEED £30,000,000.

INSURANCES OF EVERY KIND.

FIRE DEPARTMENT.

COMPREHENSIVE POLICIES are issued for Buildings or
Contents of Dwelling Houses.

LIFE DEPARTMENT.

The "ALLIANCE" FAMILY PROTECTION POLICY gives
Lump Sum and Instalment Benefits in one contract.

MOTOR INSURANCE.

The Company's MOTOR POLICIES are framed on broad
and generous lines and comprise all the most modern
developments of Motor Insurance.

A. LEVINE, General Manager.

CHRISTIANIA BANK OG KREDITKASSE OSLO

Established 1848.

Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.
Offering complete services to banks and firms
doing business on Norway.

Correspondence invited.

COLLECTED ON SPECIALLY FAVOURABLE TERMS.
CORRESPONDENT OF THE ROYAL ITALIAN TREASURY.

Telegrams: "Italocredi, London."
Telephone: Avenue 3031-6.

As had been expected, last week's Treasury bills went at a definitely higher rate, and although applications amounted to the very high figure of £100.8 millions for the £50 millions of bills on offer, the average tender rate worked out at 10s. 11.24d. per cent., compared with 11s. 8.15d. per cent. the week before. All the bills were allotted. Since then business in the discount market has been restricted, as the banks are still trying to raise discount rates, and so are reluctant to buy at less than about $\frac{1}{2}$ per cent. for January (including "hot") Treasury bills and $\frac{1}{4}$ per cent. for shorter dates. A certain outside demand for January Treasury bills has been noticeable at $\frac{3}{4}$ and occasionally at $\frac{1}{2}$ per cent., but on Thursday afternoon when money was more wanted, it was easy to obtain hot bills at $\frac{1}{2}$ per cent. Three months' bank bills were quoted on Thursday at $\frac{3}{4}$ per cent. and standstills at 1-2 per cent.

The new 2 per cent. Treasury bond issue was welcomed by the market on the ground that it is a good short-dated maturity from the market point of view. It is, of course, not yet known how many cash applications will be accepted, as the list for applications to convert 1932-34 Treasury bonds remains open until Monday. If all the outstanding £140 millions of Treasury bonds are converted, only £10 millions of new cash will be required, and additional uncertainty as to the effect of the issue upon the money market arises from the belief that £80 or £100 millions of the 1932-34 Treasury bonds are held internally by Government Departments, who may decide either not to convert at all or alternatively to convert and subsequently sell the new bonds.

This week's Bank return records comparatively few changes. Part of the quarter-day notes have returned from circulation, for against last week's expansion in the note issue of £2.7 millions there is a contraction this week of £1.1 millions. Gold coin and bullion held in the Issue Department is unchanged, so that the reserve is higher by £1.1 millions. Public Deposits have expanded by £3.4 per cent., no doubt as a reflection of the incidence of Treasury bill payments and maturities. Bankers' Deposits consequently are reduced by £2.1 millions to £88.5 millions. The Proportion is 40.3 per cent.

The September averages of the nine English clearing banks show a continuation of the trend of banking figures during recent months. Deposits are again higher and advances lower, so that the banks have had to add still more to their holdings of bills and investments. The further contraction in advances and acceptances shows that so far there has been no improvement in trade.

	Sept., 1931.	June, 1932.	July, 1932.	Aug., 1932.	Sept., 1932.

Total assets	1,926.1	1,942.8	1,972.8	2,014.2	2,024.2

It is of interest to compare last month's banking position with that of September, 1931, which was the month in which the drain of funds from London culminated in the suspension of the gold standard. Since then the banks

have steadily recovered their lost deposits, so much so that the increase during the year is as much as £140.9 millions. Cash, too, is £10.2 millions higher on the year, but bad trade and lack of enterprise have reduced advances by £107.7 millions and acceptances by £43.5 millions, while the banks have had to increase their bills by £155.9 millions and their investments by £77.4 millions. Provision for the depreciation of investments in the autumn of last year has reduced published capital and reserves by £9.3 millions, but this amount must have since been more than recovered through the appreciation of the bulk of their investments.

The Foreign Exchange market was inactive. New York moved from 3.45 $\frac{1}{2}$ to 3.44 $\frac{3}{4}$. Montreal was 3.78 $\frac{1}{2}$. Paris was at 87 $\frac{1}{2}$, a gain of $\frac{1}{4}$ on the week. Brussels was 7 points better at 24.78. Milan was fractionally better at 67 $\frac{1}{2}$ and Madrid gained $\frac{1}{2}$ at 42.00. Amsterdam improved by 3 points to 8.56, Berlin by 5 to 14.49, and Switzerland by 6 to 17.83. The Scandinavian currencies were little changed, Stockholm being quoted at 19.46, Oslo at 19.86, and Copenhagen at 19.28. The South American currencies were nominal and steady, Buenos Aires being quoted at 34 $\frac{1}{2}$ d. and Rio at 5 $\frac{1}{2}$ d. (offered). In the Far East the rupee was steady at 1s. 6 $\frac{1}{2}$ d., as was the yen at 1s. 4 $\frac{1}{2}$ d. Batavia was 8.55. In the forward market dollars were unchanged at $\frac{3}{4}$ cent and $\frac{3}{4}$ cent discount for one and three months respectively. Paris one month was unchanged at par, but the three months' rate went to 1 centime premium. Brussels was at discounts of 4 and 10 centimes. One month's Milan was fractionally weaker at $\frac{3}{4}$ lira discount, three months' being unchanged at $\frac{1}{4}$ lira discount. Madrid was $\frac{1}{2}$ peseta discount for one month and $\frac{3}{4}$ peseta discount for three months. Amsterdam was unchanged at $\frac{1}{2}$ cent premium for three months' delivery, but weakened by $\frac{1}{4}$ to $\frac{3}{4}$ cent premium for one month. Switzerland was $\frac{1}{2}$ centime premium for both deliveries. The silver market was quiet and inactive, small offers from the Continent being offset by Chinese and some Indian buying. Prices advanced by $\frac{1}{4}$ d. for both deliveries, cash being quoted at 17 $\frac{1}{2}$ d. and forward at 17 $\frac{1}{2}$ d. The China silver exchanges were fairly steady, Hong Kong being unchanged at 1s. 4d., while Shanghai fell away by $\frac{1}{4}$ d. to 1s. 9 $\frac{1}{2}$ d.

The chief movement in the exchanges during the past week has been the fall in the dollar as a result of Mr Hoover's Iowa speech, followed by its subsequent recovery against sterling. The fall in the dollar against the gold exchanges was due to purely speculative operations, and its extent is explained in the following paragraph dealing with conditions in New York. The subsequent depreciation of sterling against the dollar and other gold exchanges is in part seasonal, but may also represent preparation for repayment on December 1st of foreign holders of Dissented War Loan. It is conceivable that a fair amount of foreign exchange will be required for this purpose, and so it is possible that steps are already being taken to accumulate it in advance.

This week the inflow of gold into New York has fallen away, for imports only amounted to \$1.1 millions and releases from foreign earmark to \$2.9 millions. No exports were reported. The Treasury at Washington reports a decrease of \$38.8 millions during September in the total currency in circulation, the closing figure for the month being \$5,653 millions. The effect upon the leading foreign exchanges of Mr Hoover's Iowa speech, in which he recorded the danger the United States was in during the spring of having to suspend the gold standard, is shown by last week's fluctuations, for the Paris rate rose from 3.91 $\frac{1}{2}$ to 3.93 $\frac{1}{4}$ cents, the Swiss rate from 19.27 $\frac{1}{2}$ to 19.89 $\frac{1}{2}$ cents, and the Dutch rate from 40.16 to 40.37 $\frac{1}{2}$ cents. This movement was largely speculative, and early this week there was a recovery, so that on Tuesday, immediately before Columbus Day, Paris was quoted at 3.92 $\frac{1}{4}$ cents, Switzerland at 19.81 $\frac{1}{2}$ cents, and Amsterdam at 40.22 cents. It is now announced that the Reconstruction Finance Corporation loans during August included \$68.9 millions for "cotton stabilisation." This brings the month's total to \$198.2 millions.

THE MEANING OF OTTAWA.

THE long-awaited disclosure of the details of the agreements signed at Ottawa in August between the representatives of His Majesty's Governments in the United Kingdom and the Dominions was made on Wednesday night. The official papers comprise so great a mass of complicated detail that a final or comprehensive review is impossible, without prolonged study of the tariff schedules of the Dominions before Ottawa and of the effects of the Ottawa changes upon extensive individual categories of trade. Nevertheless, subject to the interpretation of detail, we now know the broad truths; and it can be stated at once, that those who hoped to find in the full documents a serious reduction of tariffs—not revealed in the earlier summaries—will be completely disappointed.

While the bargaining was at its height in August, we suggested in the *Economist* that there were three major principles to which stubborn adherence by the British delegates was essential in the interests both of this country and of the progress of world recuperation. We propose to adopt these as a criterion to be applied to the agreements now published. They are as follows:—

1. The essence of any bargain must be a drastic lowering of tariff schedules. A widening of British preferences unaccompanied by substantial reductions in general tariff rates is unacceptable.

2. No agreement must be signed which would so far tie Britain's hands as to ruin her chance of successful bargaining in forthcoming negotiations for lower tariffs in the European zone. Any forward fiscal move at Ottawa must be complementary to, and not exclusive of, future agreements between Britain and her chief foreign customers.

3. Britain cannot afford to make any concessions which would have the effect of raising substantially the cost of living and the costs of production in this country.

None of these principles have been honoured in the Agreements. In no case, either in the texts themselves or in the actions subsequently taken by the Governments at home, with the exception of the abandonment by Australia of certain emergency restrictions, is there any sign that steps are being taken by any Dominion to lower the rates of their general tariffs. It has to be remembered that in the past decade the British Dominions have been in the forefront of the high tariff movement, and in the last few years have been active in repeatedly raising their schedules. Ottawa's first failure is that it contributes not one iota towards reversing this policy or reducing the general tariffs of the Dominions towards the outside world to levels which will widen the channels of trade or set an example to the world. Indeed, one of the features of the statistics which we print on later pages is the number of cases in which, in order to increase the British Preference, the general level of duty is increased.

Judged by our second criterion, the agreements equally stand condemned. Not only has no progress been made at Ottawa towards the general lowering of tariffs; but, in return for concessions of wider preference margins, Britain has given her promise not to upset the existing arrangements for five years, thereby depriving the British Parliament of its freedom in fiscal policy and restricting, to say the least of it, the opportunity of this country to lead the way in negotiation for the downward revision of the economic barriers which are stifling the world's trade.

To what extent the third principle has been violated cannot yet be precisely estimated. We are told that the meat quota need not raise the retail price of this necessity in the British market, but is to raise the receipts of the producer in the Dominions. How this feat is to be accomplished we do not know. But two things at any rate are clear. We have promised Australia and Canada that we will interfere with our former and natural supplies of meat in the one case and bacon in the other—and incidentally we have promised to reserve for Canada some of the bacon market hitherto supplied by Denmark, thereby helping to stultify the recent exhortation made at Copenhagen that the Danes should buy British goods. The second point that is clear is that, as we have shown in recent issues of the *Economist*, the Government has undertaken to impose substantial duties

on an important range of necessary foodstuffs. To measure the precise effect of these steps is not yet possible; but though their effect may be delayed by the fall in gold prices or masked for the moment by crisis conditions, their general tendency can only be to increase the cost of living and production in this country relatively to the level obtaining in other countries.

On later pages we attempt to disentangle from the complicated schedules the most important items and the most important changes, and the figures there presented will serve as preliminary data for drawing up a profit and loss account as between the Mother Country's concessions in the matter of taxes on foreign foods and materials and the preferential margins now offered by the Dominions. Of the British sacrifices, the details (except as regards the meat quota) have long been available. We are now able to see roughly what we are to get in return.

Much play will doubtless be made with the considerable list of British exports which Canada places on the free list, and also of the increase in the margin of preferences which she makes. The benefit to be derived by this country from these measures cannot in any case be anything like what it might appear at a first cursory glance. In the case of many goods placed on the free list we do not enjoy, and cannot hope to enjoy, any substantial trade in Dominion markets. The most prominent case of this is the entry of motor cars on the free list. If American manufacturers can surmount both our own tariff and our currency depreciation, and sell their cars in the British market, is it likely that British manufacturers will be enabled to compete in Canada with the locally-manufactured Buicks and Fords? Many of the Canadian concessions are illusory for another reason, namely that even after existing reductions, the British preference rate remains at a prohibitive level. For the most part the changes—for example, in the steel schedules—will result in some transfer of trade to an extent which is only a matter of guesswork, from other countries, in particular from the United States—to Great Britain. But total trade will not be increased, for when such reductions as have been made in the British preference rate are set against the higher duties imposed both by us and by the Dominions, the mass of tariff barriers is without any doubt at all much greater than before.

It is true that the situation as regards Australia cannot be accurately assessed as yet. Many people in Australia now frankly recognise that the high protection that has existed in that country for the last decade is largely responsible for the artificial conditions which precipitated the crisis there, and it may be that some recognition of Australia's urgent need will be shown in the tariff review that is to take place. Indeed, at the end of August some remission of emergency surcharges and reductions of the duty on certain classes of goods was made on the recommendation of the Tariff Commission, while Australia, like other Dominions, has undertaken that where goods cannot suitably be produced in Australia, nothing more than revenue duties shall be applied. What remissions will actually be made the future alone can show; but so far as firm undertakings are concerned, the actual promise we receive from Australia in return for our concession of a meat quota and, among other things, a duty on foreign wheat and butter, is nothing more specific than a formula, which, while it may lead in some cases to a widening of the British preferential margin, gives only one definite assurance, namely that its application shall not raise the tariff against foreign nations above the modest level of 75 per cent. The changes, therefore, that are being announced this week are merely to give effect to the formula and will mean a raising of the foreign duty until such time as further reports are presented by the Tariff Board. The will of the Australian people to release themselves from the thicket in which they have enclosed themselves has yet to be proved. From the New Zealand and South African agreements little, if anything more, is to be expected, nor are matters made better by the provision that

Dominion duties on British goods will be adjusted "to give United Kingdom producers full opportunity of reasonable competition on the basis of the relative cost of economical and efficient production." This plan of basing tariffs on differences in costs of production is both vicious in principle and unworkable in practice, and its insertion in the Ottawa documents sets a deplorably bad example to the world.

Here is the upshot of the whole matter. Some British industries may sell a little more in the Dominions, although against any such advantage will have to be set intensified competition in foreign markets. That is the sole gain which Ottawa brings to Britain, and the extent of it is problematical. To achieve this Britain restricts her freedom in fiscal policy for five years, sacrifices her vastly important right to buy her food supplies whenever and wherever it suits her best, and submits to taxes on foodstuffs and raw materials which must tend to raise relative production costs and endanger the competitive power of her manufacturers. Above all, our Government has surrendered in the first skirmish of the battle for lowering world tariff barriers; and has debased the Imperial connection into a system of mercantile bargaining. Time will show, we fear, that Ottawa is a liability, not an asset, to the world. As regards Britain herself, she has got, if we may invert the old political phrase, fourpence for ninepence. Indeed, we can find nothing in these agreements to refute the charge of the retiring Liberal Ministers who complained at the Queen's Hall of Wednesday that at a moment when it was, above all things, necessary to check the national tendencies that are rampant in the world, this country was following the bad example of the Dominions and turning her face in the wrong direction.

THE TROUBLE IN JUGOSLAVIA.

THIS week the outer world has begun to hear news of internal disturbances in Yugoslavia which have evidently become too serious to be concealed by the Yugoslav Government's censorship. The Croat half of the Serbo-Croat population of Yugoslavia has been growing more and more restive ever since the morrow of the Peace Settlement, when they woke up to discover that they had only got rid of the old Magyar whips at the cost of being handed over for chastisement by Serbian scorpions. It was a rude awakening; for the Croats, in their exasperation at the chauvinism of the Magyars, whom they knew, had persuaded themselves before the war that the Serbs—whom they did not know at first hand until after the collapse of the Hapsburg monarchy in 1918—were their own long-lost brethren who were coming to liberate them. In 1918 the Serbian liberators duly arrived in Spalato and Zagreb with flags flying and drums beating, and, ever since, the Croats have had to take the consequences. For the Serbs are a rough people to begin with; and their experience in the Great War—a terrible ordeal ending in a dazzling victory—has added to their roughness a note of grimness and of military arrogance. This is the guise in which the Serb has presented himself to the Croat ever since the Armistice, since he has been quartered in Croat towns and villages as a military officer or a *gendarme*. The Croats have found this Serbian domination odious, and they have reacted against it in various successive ways.

The first Croat reaction was Stephen Radic's campaign of non-violent non-co-operation, and this had no effect. The next reaction was an attempt to take advantage of the ostensibly democratic post-war constitution of the Serb-Croat-Slovene kingdom by making the weight of Croat numbers felt in the Parliament at Belgrade and entering into political alliances with the other non-Serb elements which had been incorporated in Yugoslavia by the treaty-makers—Germans and Magyars and Muslims and Macedonian Bulgars. This second Croat reaction succeeded well enough to move King Alexander and the Serbian Corps of Officers to sweep the Constitution aside and to substitute for it a military dictatorship. Under this military regime the very existence of "tribal" political organisations—i.e., parties representing either the Croats or any of the other non-Serb nationalities in Yugoslavia—

has been prohibited. In addition, the internal administrative geography of Yugoslavia has been recast on revolutionary lines which deliberately efface the historic boundaries between the old territory units—Croatia and Dalmatia and Bosnia and Serbia, and so on—of which post-war Yugoslavia is composed. In fact, the object of this regime has been to "Serbise" the whole of Yugoslavia by force. The regime has lingered on and on; for the road into dictatorship is notoriously a "one-way street," out of which it is virtually impossible to back without a smash. Accordingly, King Alexander's half-hearted attempts to return to some diluted form of parliamentary government have come to nothing. The military dictatorship in Yugoslavia, once established, has in effect persisted; but, while persisting, it has wholly failed to produce the result which was the object of its establishment. Its failure is manifest in this week's news. For it is now apparent that the ultimate result of the attempt to repress the Croats by force has been to evoke yet a third Croat reaction which is neither passive nor parliamentary, but militant.

We now learn that a regular Croat insurrection has broken out against the Serbian military rule. The insurgents, who are called Ustasi, are organised, uniformed and armed with modern weapons; they have the sympathy and support of the Croat peasantry; and their tactics are to attack and destroy the Serb *gendarmes* posts. The Croats have as formidable a fighting tradition as the Serbs themselves. They used to produce some of the best regiments in the old Hapsburg Army. If their tempers are now aroused and their hands equipped, they may succeed in making trouble which will tax all the Serbian Army's resources.

The districts in which the insurrection has raised its head are the forbidding Lika district of Croatia—a tangle of bare limestone mountains overhanging the Adriatic coast; the adjoining coast of Northern Dalmatia, which is the same kind of terrain; and the open country of Eastern Slavonia, in the neighbourhood of Ossijek. All these three districts are close up against the national boundary line between the Croats and the Serbs; and all three have been the scene of the historic border warfare between the Hapsburg and the Ottoman Empires which was waged during the centuries when the Croats were subject to the Austrians and the Serbs to the Turks. It looks as if the old historical factors were somehow reasserting themselves in this part of Europe against the artificial arrangements which have been introduced by the late peace settlement. In this light, the Croat insurrection presents itself as one part of a much wider movement; for at this moment "the regime of the peace treaties" is crumbling and cracking at many points. Reparations have gone already; inequality in armaments is going (either through a reduction in the armaments of the ex-victors or through a re-armament of the ex-vanquished nations); and now these events in Yugoslavia are a symptom that the revision of the peace treaties may not stop short of their territorial clauses.

The fate of Yugoslavia is a matter of general interest, because the creation of Yugoslavia has been an extreme experiment in what one may call "linguistic nationalism": that is, the doctrine that, because people happen to be speakers of the same mother-tongue, it follows that they ought to be citizens of the same State. This doctrine, which would make German citizens out of Alsations and British subjects out of Americans *a priori*, is refuted by some very glaring historical facts. It has been applied, however, in the post-war European peace settlements; and the post-war Yugoslavia and Czechoslovakia and Greater Rumania are the outcome. The history of all these countries during these post-war years suggests that this doctrine of "linguistic nationalism" needs a good deal of overhauling if it is to be made to work.

There is, of course, much to be said for making political and administrative areas coincide geographically with linguistic areas in these days of democratic government and universal education. From the standpoint of a technician in public administration, it is no doubt easier to hold elections, or to organise primary schools, in a State which embraces all the speakers of some single vernacular language, and no speakers of any other vernacular lan-

guage, than it is in a State which includes fragments of several different linguistic groups. But there are evidently limits to the price which it is wise to pay for this technical convenience. On the other hand, we have the spectacle of Switzerland, where the French-speaking and German-speaking and Italian-speaking Swiss get on together much more comfortably, in spite of their linguistic diversity, than the Serb and Croat citizens of Yugoslavia who speak the same Serbo-Croat mother-tongue. On the other hand, this Serbo-Croat case in point brings out the fact that the linguistic factor is only one of a number of factors that have to be taken into account in practical politics.

Inspection shows that, in post-war Yugoslavia, there are two pertinent facts which count for more than the fact that the Serbs and the Croats happen to speak the same language. The first of these other relevant facts is that, ever since the Dark Ages, the Serbs and the Croats have been divided from one another by differences of religion, culture and political allegiance. The Croats have been Catholics and Westerners and subjects of the Hapsburgs; the Serbs have been Orthodox Christians and Byzantines and subjects of the Osmanlis. Even with the aid of a common language it would have been, in any case, a difficult problem in political engineering to bring these two disparate elements together so suddenly into a single political unit. But the problem might still not have proved insoluble if the union had been achieved on the initiative of the more civilised of the two elements that were to be united, and on the basis of this element's initial ascendancy over the other. The unification of Italy, for example, was more or less imposed by the progressive Piedmontese and Lombards and Tuscans and Romagnols upon the backward Romans and Neapolitans and Sicilians. In the post-war unification of Yugoslavia, however, it has been just the other way round: the initiative and ascendancy have lain not with the relatively progressive Croats, but with the relatively backward Serbs, and this has made the experiment of unification an impossible *tour de force*. It would seem as though this post-war Yugoslavia could only survive on condition of the Serbs conceding to the Croats, at this eleventh hour, the fair share in the government of this synthetic State to which the Croats are entitled in virtue of their civilisation and their numbers.

THE WHEAT OUTLOOK.

FOR four years wheat growers have been unable to dispose of their crops except at prices unremunerative to a large proportion of them and ruinous to many. The resulting shrinkage in their purchasing power has contributed in no small measure to the deepening of the world crisis. Low prices, the normal corrective, have failed to restore the equilibrium between supply and demand, because of the advent of the world depression in 1929, the emergence of Russia as an exporter during the season 1930-31, the increase in tariffs and acreage in many importing countries, and the "stock-holding" schemes adopted in some of the principal exporting countries, notably in Canada and the United States. The development of world supply, "disappearance" (i.e., increase in "invisible" stocks plus consumption) and prices during recent years is shown in the following tables, based on a recent publication of the Food Research Institute of Stanford University, California:—

Season.	Available Supplies (Million Bushels).				Average Price No. 1 Manitoba Winnipeg Dollars per Bushel.
	Stocks, July.	Crops (excl. China and Russia).	Russian Exports.	Total.	
1921-22.....	476	3,104	...	3,580	1.35
1922-23.....	507	3,156	...	3,663	1.11
1923-24.....	461	3,481	21	3,963	1.05
1924-25.....	578	3,081	27	3,686	1.68
1925-26.....	419	3,312	49	3,780	1.51
1926-27.....	482	3,371	7	3,860	1.46
1927-28.....	521	3,593	...	4,114	1.24

(a) Preliminary.

It will be seen that demand failed to keep pace with the growth of production since 1929. On the one hand, enormous stocks have been held off the market in North America (the holdings of the Grain Stabilisation Corporation amounted to 257 million bushels on July 1, 1931). On the other hand, many European importing countries, including France, Germany and Italy, prevented the increase in consumption, which normally would have followed the decline in world wheat prices, by raising their tariffs. Although the estimated surplus of supplies over consumption and a normal "carry-over" was less than 10 per cent. of the total supplies during the past four years, it was very large in relation to the quantity entering international trade. As the correlation between "surplus" and prices is therefore relatively close, the world wheat problem can hardly be solved until the "carry-over" at the end of the wheat year is reduced to a normal level. In the absence of simultaneous crop failures in some of the chief producing countries, the level of stocks can only be reduced by an increase of consumption, or, alternatively, by a reduction in the acreage under wheat. As has been shown above, an increase in demand has been prevented by means of tariffs, and the reduction in acreage has been retarded by deliberate attempts to raise prices in the principal exporting countries as well as by the absence of alternative uses of the land. Consequently, the season ended July 31st has brought no relief to the wheat grower, though prices during the past year have been more stable than those of many other primary products.

Owing to unfavourable crop reports and a spurt in international trade, wheat prices in Winnipeg (No. 1 Manitoba) rose from a monthly average of 53 cents per bushel in September, 1931, to 66 cents per bushel in February last. But a decline in the takings of the chief European importing countries, coupled with more favourable crop reports, soon shattered all hopes of an improvement in prices. In August, wheat prices were again carried upwards on the crest of the general advance in raw-material prices, but, as the fundamental situation had undergone no change for the better, quotations relapsed again, averaging only 52 cents per bushel in September. They have since fallen further, touching a new low level of 48 cents per bushel in Winnipeg on October 11th.

Although the world's supplies for the current crop year can so far only be estimated, it is already clear that a permanent and substantial rise in wheat prices in terms of commodities in general is highly improbable. It is generally agreed that production will at least equal last year's yield. Further, although the "carry-over" outside Russia at the end of the past season may have been about 50 to 100 million bushels below the figure of a year ago, a large proportion of the stocks is concentrated in exporting countries, particularly in Canada and in the United States. It is generally believed that Russia's exports will fall below the level of last season (Mr G. Broomhall estimates probable shipments from that source at 40 million bushels, against 72 million bushels shipped a year ago), and that the crops in the chief Danubian countries have been a failure. These favourable factors are, however, largely offset by the large crops harvested in the principal European importing countries. According

to the International Institute of Agriculture, the crops of the Northern Hemisphere have been as follows:—

(Millions of bushels.)				
	1929.	1930.	1931.	1932.
Europe (23 countries)	1,433	1,348	1,418	1,488
North America (3 countries)	1,124	1,297	1,216	1,190
Asia (4 countries)	375	448	400	389
Africa (4 countries)	77	62	70	70
Total	3,009	3,155	3,104	3,137

Actual yields per acre increased from 29.0 bushels to 33.0 bushels in Germany, from 20.5 bushels to 25.0 bushels in France, from 20.5 bushels to 21.9 bushels in Italy, and from 11.9 bushels to 16.2 bushels in Spain. As, in addition, all these countries have a prohibitive tariff on wheat, the prospects of an expansion in the international wheat trade are not bright. While, therefore, farmers can scarcely expect an increase in world consumption during the current season, their only hope lies in a substantial reduction in the acreage to be sown, coupled with an effort to reduce costs to the lowest possible level.

THE MOTOR INDUSTRY.

I.—Private Cars.

(BY A CORRESPONDENT.)

THE Annual Motor Show is held this year in circumstances which hold elements of considerable difficulty for the British motor industry. The number of new registrations of private cars totalled 132,764 for the eleven months October, 1931, to August, 1932. This figure compares not unfavourably with 135,097 for the corresponding months of 1930-31 and 159,847 for the record year of 1928-29, but the motor industry must have lost heavily from the declining average h.p. per car and the small number of new large cars sold. New registrations of cars of 20 h.p. and over numbered only 7,092 for the ten months October/July, compared with 11,975 in 1930-31 and 16,136 in 1928-29, and the relative fall in registrations of cars of 15/19 h.p. was equally great. The available information further suggests that there has been an absolute decline in the number of large cars on the roads. There are in all approximately 100,000 cars of 20 h.p. or over still in use, against 7,000 new registrations per year at the present rate. An annual replacement of some 12,000 vehicles is necessary to keep 100,000 vehicles permanently on the road, so that a further decline in the use of large cars may be predicted.

There has also been a slowing down of demand at the other end of the scale. Registrations of cars up to 8 h.p. totalled 29,981, a decline of 17.3 per cent. on 1930-31, as compared with a general decline of only 3.7 per cent. This tendency became accentuated during the summer, when the introduction of the Austin "Ten-Four" transferred the lead in respect of the biggest number of new registrations from the 8 h.p. to the 10 h.p. category. The rest of the loss incurred by "Baby" cars of 8 h.p. has been the gain of the 9 h.p. category, which shows 15,077 new registrations, an increase of 28.3 per cent. over the previous year. The true "Baby" car of 8 h.p. or less, the distinctively British contribution to cheap motoring, is, in fact, losing its popularity on the home market, although not on the foreign markets; the reason is to be found in the development in the last two years of cheap cars combining the economy in running costs of the "Baby" car with the general appearance and comfort of a larger vehicle.

It is to be hoped that British manufacturers will succeed in maintaining in the new fashion for these light cars the lead which they established so successfully in the past with "Baby" cars. Their manufacturing policy is, however, open to criticism; the concentration of competition on the 9/10 h.p. range is very great and cannot but be uneconomic, since the tendency is still to increase the number of models in the cheap range. Under present circumstances this inevitably means reducing the demand for each model. The manufacturers of the once popular 8 h.p. cars have introduced new models at either 9 h.p. or

10 h.p., while retaining their 8 h.p. models in production, and, in addition, some manufacturers who previously were only interested in the larger cars have been compelled, on account of the falling off in demand for luxury products, to enter the small-car market with competitive models in order to keep their works open. Between 1930-31 and 1931-32 there was a net increase of eight models in the ranges of the twelve most popular manufacturers, and the increase in the current season is apparently of the same order. Furthermore, the increase in models is occurring mainly among cheap cars, which should be produced along mass-production lines. This would normally lead to a price-cutting campaign in the 9/10 h.p. range, but the power of each individual manufacturer to cut prices must, under the circumstances, be seriously diminished by the increased number of models over which his production is spread. Both the individual firms and the industry must suffer from the expenditure to which comparatively small firms are driven to set up the machinery for the production of more and more models, while, at the same time, owing to the fickleness of fashion and the fact that each year only two or three models prove best sellers and real financial successes, the chance of any particular model selling on a sufficient scale to cover its production costs is diminished directly with the increase in the choice provided for the public. The reaction of the manufacturer is too often to produce five instead of four models, and hope that among them one at least will prove a best seller and enable him to recover his outlay on the others. This weakness can never be overcome until production has been concentrated in the hands of fewer groups; and at present there are no signs of any considerable movement in this direction. Details of registrations are appended:—

NEW REGISTRATIONS OF CARS, OCTOBER-JULY.

	1930-31.	1931-32.	Inc. or Dec.
Up to 8 h.p.	36,241	29,981	17.3 Dec.
9/14 h.p.	45,884	66,813	45.6 Inc.
15/19 h.p.	35,444	20,817	41.3 Dec.
20 h.p. and over	11,975	7,092	40.8 Dec.
	129,544	124,703	3.7 Dec.

The second great problem which faces the motor industry to-day is how to maintain the replacement demand for cars, as, under existing circumstances, the possibility of inducing fresh strata of the population to become motorists is extremely limited. The average life of a car has in the past been just under eight years, so that, on a total of 1,200,000 cars in operation, an annual replacement demand for 150,000 vehicles might be expected under normal circumstances. This figure is rather in excess of the total present absorption capacity of the home market, the discrepancy between the actual and theoretical replacement demand being partly accounted for by the high proportion of "young" cars on the roads, but even more by the trade depression, which is having the effect of making buyers postpone the purchase of new vehicles and thus increase the average age at which old vehicles are being scrapped. It would appear more than ever advisable from the manufacturers' point of view to explore the possibilities of a co-operative scheme for removing from the "used-car" market all vehicles above a certain age, which could, in fact, be done quite cheaply, or alternatively, to follow the example of Ford in America, and break up all second-hand cars returned to the trade in "part exchange" for new cars. The former scheme would be a modification of a plan proposed some time ago by M. André Citroën for regulating the position in certain importing countries. It should be comparatively easy to organise such a scheme in Great Britain now that imports of foreign cars have fallen to negligible proportions. The cost of eliminating old vehicles would not exceed a few pounds each, part of which would be recoverable expenditure. The support which a move of this kind would give to the used car market, which is now being choked by the plethora of very old cars, and the improvement it would bring in the demand for new vehicles, would fully justify any small immediate sacrifice of profits its adoption might entail. The prospects of such a scheme would be greatly improved if manufacturers would agree on a proper standardisation of agents' com-

missions on all cars and so stop the common abuse of the agent sharing the commission with the buyer through making an excessive allowance in respect of a "used car" offered in "part exchange."

The position of the British motor industry, nevertheless, compares extremely well with that of the American industry. American production of passenger cars for the first half of the current year amounted to 825,395 units, compared with 1,499,945 units last year and 3,188,241 in 1929. The increasing relative weight of overhead charges on the American industry, combined with the stimulus to exports given to the British manufacturer by the abandonment of the gold standard, have vastly improved the position of the British light car, owing to the peculiar circumstances of the depression, which has driven Governments all over the world to increase motor taxation and petrol taxes as an easy way of balancing their budgets, is competing in the foreign, and particularly the Continental, markets under conditions which have now become very similar to those which have prevailed on the British market for many years. It is not surprising, therefore, that, in spite of the reduced world purchasing power available for quasi-luxury products such as cars, British exports of private cars and chassis increased from 11,574 units, valued at £1,868,150, for the first eight months of 1931, to 17,467 units, valued at £2,177,881, for the corresponding period of 1932. A considerable proportion of this increase is attributable to the capture of markets in the non-motor manufacturing countries of Europe.

INDUSTRIAL PROFITS.

THE number and importance of the accounts of joint-stock undertakings published during the third quarter of the year are always considerably less than is the case with other quarters; but, with this reservation, the aggregate figures disclosed by our analysis covering the three months ended September 30th point clearly to a continuance of the downward trend. The net profits revealed by the reports of 303 companies which have reached us during the past quarter amount to £14.7 millions, as compared with £20.6 millions a year ago, a percentage decline of 28.6. This figure compares with 24.2 per cent. in the previous quarter and a fall of 26.5 per cent. on the average for the year ended June 30th last.

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Companies.	Reports published in		Increase (+) or Decrease (-).	
		1930.	1931.		
Third quarter	320	£ 24,793,702	£ 15,996,685	— 8,797,017	— 35.5
Fourth quarter	474	26,460,390	12,292,859	— 14,167,531	— 53.9
		1931.	1932.		
First quarter	548	63,463,727	54,314,815	— 9,088,912	— 14.3
Second quarter	675	74,997,272	56,832,591	— 18,164,681	— 24.2
Third Quarter	303	20,628,079	14,722,754	— 5,905,325	— 28.6

In the next table the aggregate results are analysed by groups of undertakings. The single exception to the pronounced recession is to be found in the textile group, whose trebled net earnings, reflecting notably the better results shown by the Calico Printers' Association, are evidence of the temporary benefit which textile concerns enjoyed as a result of the depreciation of sterling. For the rest, the picture is almost uniformly depressing. The rubber group shows a serious increase in the rate of loss; a small profit in the case of tea is converted into an appreciable debit balance; and, thanks mainly to the adverse showing of Harland and Wolff, whose accounts related to the year ended December 31st last, the iron, coal and steel group registers on balance a loss of £250,000, as compared with a profit of nearly £500,000 a year ago. The net earnings of shops and stores were relatively well maintained, but the contraction of consumers' purchasing power is reflected in the 24 per cent. decline shown by the brewery group; and it is significant that the large miscellaneous group, which forms a rough index of the earnings of a wide range of British undertakings not separately

classified, records a fall of 31 per cent., as compared with a decline of 17 per cent. on the average for the four previous quarters:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Cos.	Reports published in Quarter ended September 30.		Increase.		Decrease.	
		1931.	1932.				
Breweries	20	£ 8,264,963	£ 6,271,369	...	...	£ 1,993,594	% 24.1
Financial, land, &c.	16	419,265	305,750	...	...	113,515	27.1
Gas	5	79,259	66,816	...	...	12,443	15.7
Hotels, restaurants, &c.	3	116,839	52,961	...	...	63,878	54.7
Iron, coal and steel	25	485,538	Dr 256,269	...	...	741,807	152.8
Motor and cycle	5	538,452	239,948	...	...	298,504	55.4
Oil	2	211,943	23,649	...	...	188,294	88.8
Rubber	55	Dr 141,678	Dr 279,418	...	...	137,740	97.2
Shipping	7	558,106	406,014	...	...	152,092	27.3
Shops and stores	10	604,403	574,748	...	...	29,655	4.9
Tea	17	3,504	Dr 56,744	...	...	60,648	1,555.5
Textiles	15	309,951	924,672	614,721	198.3	...	...
Trusts	20	863,060	716,204	...	...	146,856	17.0
Waterworks	4	21,978	19,908	...	...	2,070	9.4
Miscellaneous	99	8,292,096	5,713,146	...	...	2,578,950	31.1
Total	303	20,628,079	14,722,754	...	...	5,905,325	28.6

After the heavy drafts made on reserves during the last two quarters of 1931, a welcome feature of the first six months of this year was the reversion to a sounder ratio borne to total profits by the amount "ploughed back." The past quarter, however, saw a reversal of this satisfactory trend, and the reserved proportion, as will be seen from the following table, fell from 11.1 to 3.2 per cent.:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1931.	£ 15,996,685	£ 11,479,274	% 76.9	£ 4,517,411
Third quarter	12,292,859	9,462,779	76.9	2,830,080
Fourth quarter	12,292,859	9,462,779	76.9	2,830,080
1932.	£ 14,722,754	£ 11,479,274	% 78.3	£ 3,243,480
First quarter	54,314,815	37,438,571	68.9	16,876,244
Second quarter	56,832,591	31,983,074	56.3	24,849,517
Third Quarter	14,722,754	9,702,398	65.9	5,020,356

A further analysis of the distribution of profits is given in the next table, which divides the aggregate into the various groups of undertakings. It will be seen that a high proportion was "put back into the business" by shops and stores, shipping companies, textiles and trusts. At the other end of the scale the iron, coal and steel group, regarded as an aggregate, trenched heavily upon reserves for the payment of dividends, though it should always be borne in mind that these group figures must not be read as implying that individual concerns which made losses nevertheless disbursed dividends to shareholders. The true position is that the group's aggregate profits, less the dividends paid out by individual companies showing a net surplus, left a debit balance:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1931.	£ 15,996,685	£ 11,479,274	% 76.9	£ 4,517,411
Third quarter	12,292,859	9,462,779	76.9	2,830,080
Fourth quarter	12,292,859	9,462,779	76.9	2,830,080
1932.	£ 14,722,754	£ 11,479,274	% 78.3	£ 3,243,480
First quarter	54,314,815	37,438,571	68.9	16,876,244
Second quarter	56,832,591	31,983,074	56.3	24,849,517
Third Quarter	14,722,754	9,702,398	65.9	5,020,356

The ratio of net profits to capital in the past quarter was 4.2 per cent., as compared with 4.6 per cent. in the third quarter of 1931 and 8.8 per cent. in the corresponding period of 1930. The average rate of ordinary dividend works out at 4.3 per cent., as compared with 5.4 per cent. in the third quarter of 1931 and 8.3 per cent. two years ago. On page 713 will be found our usual tables showing the average rates of debenture interest and preference and ordinary dividend over a period of years, together with an analysis of the rates paid by individual groups during the past quarter.

RUSSIAN IMPRESSIONS—III.

(BY A CORRESPONDENT.)

RUSSIA is extremely poor, goods for immediate consumption are short, and, if incomes were all equal, life would be universally unpleasant. But forty-eight hours in Russia are ample to convince the traveller who uses his eyes that incomes are by no means equal. The officials who ride in the rare motor cars, the high army officer with his smart uniform who occupies one of the few places in the *wagon-lit*, the comparatively well-dressed men and women who lunch, dine and even dance on the hotel roof-garden are clearly very different mortals from the artisans and clerks who throng the streets lined with shabby rococo buildings. Our guide assures that "classes"—in the Marxian sense—have been abolished. Well, we think, what's in a name? There are more ways than one of differentiating between people; money incomes are unequal in Russia; unskilled workers, for example, get as little as 65 roubles a month, whereas a high civil servant is paid 800 roubles or more; and the technique of distribution has been so arranged that real incomes are much more unequal than money incomes.

The Soviet technique of distributing commodities is outstandingly important for everyone in Russia and for all foreigners who wish to appraise Bolshevism objectively. The full ramifications of the distributive system are exceedingly complicated, but the underlying principles are simple and clear. Under the Soviets, status vests individuals with the right to purchase goods at specified co-operatives; each co-operative admits only individuals possessing designated qualifications (or accredited members of their family) and excludes all others; within any co-operative the goods an individual may buy are rationed; and all other purchases whatsoever must be made, if at all, on the free market or at a Torgsin, where purchases must be paid for in valuta or gold. Goods bought in the free market cost, say, five to ten times as much as goods obtainable in a co-operative.

The co-operative to which an individual is assigned is determined by his position and work. Thus, higher officials of the G.P.U.—the notorious and efficient secret police—belong to one co-operative; the administrative officers at a factory, the skilled artisans, and the unskilled workers will be assigned to several different co-operatives. All workers receive ration cards nominally entitling them, for instance, to certain quantities of bread, meat, sugar, tea, cloth and so on; but by the simple device of having the limited supply of existing commodities actually available in certain shops and not in others, specific groups are favoured as regards both quantities and qualities, while others whose co-operative does not stock what is on their cards are unable to buy what they are nominally entitled to procure. The application of similar arrangements to meals served in factory kitchens or equivalent institutions, to housing accommodation, to resthouses and sanatoria effectively differentiates in these cases also. For although the "free" market is theoretically accessible to everyone, in fact only people with relatively high money incomes can have recourse to it to supplement their rationed supplies; the poorest paid workers cannot afford to buy many even of the limited goods which the free market offers at the dear prices charged for them. To be driven to the free market is, therefore, no joke; but certain categories of people receive no ration cards, have no access to any co-operative, cannot buy even bread at low co-operative prices, and consequently suffer the most extreme hardship. On the other hand, the most-favoured groups are able to buy the best of whatever goods may be available in quantities which are not wholly inadequate. To this category belong the top grade of commissars, civil servants, factory officials, foreign specialists, the heads of the Red Army and the G.P.U. All other categories suffer more or less from the extreme shortage of commodities of all kinds, which the Bolsheviks so far have been quite unable to remedy. In the outcome the poorest grade of workers live practically on brown bread alone, supplemented perhaps by an occasional cucumber or sausage, with a few ounces of tea and sugar as rare luxuries. Peasants are worse off as regards all goods except food-stuffs; and the persistent lack of manufactured articles has

for years proved a serious deterrent to agricultural efficiency. Indeed, the only bright spot in the system is the provision of certain social services, such as sickness and maternity benefit and holidays in resthouses and sanatoria, which are available, though not for the entire population, at least for a sufficient number of workers to relieve somewhat the drab monotony of deep general impoverishment.

Our party were keenly interested in the Bolshevik technique of planning and profoundly disappointed in what we learnt about it. Our principal informant was the Vice-President of the State Planning Commission. From him and others we gathered that, once the general "directives" had been laid down, planning was essentially a form of budgetary forecasting. Appropriate returns of anticipated output and requirements for material, labour and machines were requested by the central planning bodies situated in Moscow or local capitals, and were prepared by the enterprises concerned. The central planning bodies, though empowered to expand or reduce the proposals and requisitions of individual works, as a rule discussed amendments beforehand with the factory directors concerned. A rough effort was made to relate production to capacity. In the end, after mutual discussion between all the relevant authorities, an annual scheme for each plant was agreed and approved for action, and the yearly programme was broken down in turn into quarterly statements. The areas and authority of the various planning bodies were naturally somewhat complicated. All-Union factories—such as the Stalingrad tractor plant—dealt direct with Moscow through the appropriate commissariat and the State Planning Commission. But such factories also dealt with their own original planning body, which likewise exercised direct control over smaller undertakings. Still smaller enterprises, which, however, accounted in the aggregate for a large volume of economic activity, were not planned to any important extent by any planning authority. The total needs of all planned undertakings for machinery or for materials such as steel or coal or concrete, and the total projected output according to the programmes laid down, were ultimately consolidated and approved by the State Planning Commission in Moscow, which acted as a final clearing house for all the regional planning bodies and industrial commissariats.

Some such machinery is, of course, obviously necessary for planning of any kind, and differs only in scale from the machinery used by any large company with a centralised organisation in planning its yearly output subject to market demand. What was disappointing was that the Bolsheviks have apparently evolved no technique for overcoming the difficulties inevitable between plan and performance. We asked what happened if demand for a particular article were wrongly estimated; but we got no reply at all—perhaps because all goods are too scarce for this situation to have arisen. We asked what criteria were employed to reapportion goods when supplies were short, and were told that this was done "by considering the totality of the situation"! We asked what margins were worked to, and what percentage of accomplishment was regarded as satisfactory. The answer was that, as programmes were revised every quarter, there could never be any discrepancy—which did not exactly square with what we found in the factories, which were filled with complaints of shortages of essential parts and materials, lack of workers, bad transport and so on. These difficulties were well illustrated at Kharkov, where 500 tractors stood in a park, complete except for their radiators, which had not arrived from the factory which made them. Further conversations also brought to light the important facts that position, authority, influence and personality played an important part in determining the programme of output agreed on and a still more important part in getting supplies; that rationing at best was highly arbitrary; and above all, that political interference was common and detrimental at practically all stages of planning.

To some extent the difficulties of planning were due to a severe shortage of adequately trained and educated personnel—which may be overcome in time, though mean-while it is a serious obstacle to satisfactory and economic production. But the inner meaning of the Five Year Plan is not to be found in the machinery of planning; and defects in this machinery, though they definitely hamper

accomplishment, are unimportant compared with the Plan itself.

The Five Year Plan is an instrument for ensuring the success of Bolshevism by industrialising Russia, collectivising her agriculture, and so raising the general standard of life. The Plan is also affected by many factors of a non-economic character. Nationalism and war psychosis are deplorably conspicuous in Russia, and travellers are told wild tales about the hostile designs of capitalistic Powers. The Bolsheviks therefore argue that Russia must not merely be industrialised but must also be made self-sufficient, dependent on the goodwill of capitalistic countries neither for machines nor technical aid nor raw materials. Such influences divert the Plan from purely economic ends, and are partly responsible for the present fierce tempo. The pace which has been set can only be maintained over the long run if enthusiasm holds out and if discipline and the power of organisation increase rapidly enough to make production efficient. Perhaps they will. If so, then mankind will have taken a great stride towards better things. But whatever the ultimate possibilities, the terrific problems now confronting a population unorganised, unskilled, only yesterday roused from the sleep of barbarous ages, threatened this winter through a short harvest with fresh privation terrible to contemplate, make the immediate prospects dark and troublous. Meanwhile, year by year, three and a half million new mouths clamour for bread.

THE OTTAWA SCHEDULES.

A SUMMARY of the proceedings and the text of the trade agreements concluded at the Ottawa Conference have now been published (Cmd. 4174, price 1s. 6d.). In our issue of August 27 we printed a full analysis of the agreements, in so far as they were then disclosed. Except for details of the meat-import regulation scheme (new particulars now revealed are discussed in a "Note of the Week" on page 681 of this issue), the undertakings by Great Britain were fully described, and there is nothing which need now be added. In the case of the Dominions' undertakings, however, there were certain important omissions in the preliminary announcement. The broad lines of the Dominions' future tariff concessions were adumbrated: there were to be increased preferences for British goods; and Tariff Boards were to review existing rates and apply the "compensatory principle" when assessing the Dominions' requirements by way of protection against British imports. But details of immediate tariff changes were not disclosed.

The present statement to some extent fills in the gaps; and we have endeavoured to make a preliminary analysis of the new data.

The Canadian Tariff.

The Canadian tariff consists of some 800 items, of which 215 are affected by the new agreement. In 132 cases the British preferential tariff is lowered (in 79 cases to zero). In 83 cases the tariff against foreign imports is increased, the British preferential tariff remaining unchanged. In 1931-32 Canada's imports were—

	\$ million.
From Great Britain	106.4
From other countries	472.1
Total	578.5

It is estimated, semi-officially, that, on the basis of the above figures, the British preferential tariff will be—

	Total Imports.	British Share.
	\$ Mill.	\$ Mill.
Reduced to zero in the case of	31.2	8.3
Lowered in the case of	58.9	37.4
And the foreign tariff will be raised in the case of	35.1	8.8

We give below some indication of the effects of the new schedules, selecting the most important items of trade.

COTTON TEXTILES.

In most cases the existing *ad valorem* British preferential and general tariff rates, which range from 12½ per cent. and

The MERCANTILE BANK of INDIA

LIMITED.

Branches and Agencies throughout the East.

BILLS OF EXCHANGE accepted for collection or advance.

Enquiries from merchants regarding shipments to the East and the special facilities available are invited.

22½ per cent. respectively on yarns not more advanced than singles, to 25 per cent. and 35 per cent. respectively on clothing and fully manufactured fabrics, remain unchanged, but the specific duty of 3 cents per lb. in the British preferential tariff is reduced to 2 cents per lb., the specific duty in the general tariff remaining unaltered at 4 cents.

Other changes are summarised below:—

	Present Rates.		Proposed Rates.	
	Brit. Pref.	General.	Brit. Pref.	General.
Mercerised yarns and warps No. 40 and finer, imported for further manufacture	Free	Free	Free	25% (Till end 1933). Free (Thereafter).
Do. unmercerised	12½% + 3 cts. per lb.	22½% + 4 cts. per lb.	Free	15% + 4 cts. per lb.
Woven fabrics with cut pile	22½% + 3 cts. per lb.	Free	Free	15% + 4 cts. per lb.
Seamless cotton duck for hosepipe....	Free	Free	Free	15% + 4 cts. per lb.
White cotton bobinet	15%	25%	Free	25%
Woven fabrics of yarns of counts 100 or more	17½% to 32½% + 3 cts. per lb.	25% to 32½% + 4 cts. per lb.	Free	32½% + 4 cts. per lb.

In many cases the British preferential tariff on cotton goods will remain higher than before the 1930 tariff. The reduction of the specific duty is trivial in comparison with the total duty (including the anti-dumping duties) charged, and the cases in which an appreciable advantage is given to Lancashire represent an inconsiderable volume of trade.

WOOLLEN TEXTILES.

Typical changes are illustrated below:—

	Present Rates.		Proposed Rates.	
	Brit. Pref.	General.	Brit. Pref.	General.
Yarns and warps imported for further manufacture	10% + 10 cts. per lb.	20% + 17½ cts. per lb.	10% + 7½ cts. per lb.	20% + 17½ cts. per lb.
Woven fabrics not exceeding 6 ozs. weight to square yard	20% + 12½ cts. per lb.	30% + 20 cts. per lb.	20% + 9½ cts. per lb.	30% + 20 cts. per lb.
Clothing	30% + 25 cts. per lb.	40% + 35 cts. per lb.	30% + 18½ cts. per lb.	40% + 35 cts. per lb.
Socks and stockings.....	30% + \$1 per doz.	35% + 22½ cts. per doz.	30% + 75 cts. per doz.	35% + \$1.50 per doz.
Blankets	22½% + 20 cts. per lb.	35% + 30 cts. per lb.	22½% + 10 cts. per lb.	35% + 30 cts. per lb.
Italian linings	10%	25%	Free	25%

Here, as in the case of cotton goods, the effect on British exports is likely to be negligible, since the revised duties still represent extremely high protection.

OTHER TEXTILES.

British Linen Thread, formerly taxed 15 per cent., is to be placed on the free list, as are also a substantial range of linen fabrics, now charged from 15 per cent. to 22½ per cent. The general tariff will remain on a range from 25 per cent. to 35 per cent.

Woven fabrics of jute, now charged 15 per cent., are to be placed on the free list, the general tariff remaining at 25 per cent.

COAL.

In the case of anthracite coal, of which in 1931 875,000 tons were imported from the United Kingdom as compared with 2½ million tons from the United States, British imports continue, as before, on the free list, but the general tariff is raised from 40 cents to 50 cents per ton.

IRON AND STEEL.

Changes illustrating the trend of the new Canadian iron and steel duties are given below. Broadly, the impression created is that articles subject to international cartel arrangement are unaffected, that duties remain prohibitive in classes where the Canadian manufacturers can supply the market, and that, in cases where imports are essential, some advantage is given to British producers by changes designed to divert purchases from the United States.

	Existing Rates.		Proposed Rates.	
	British Pref.	General.	British Pref.	General.
Steel ingots, blooms, &c., not made in Canada and imported solely for further manufacture	Free	\$2.50 per ton.	Free	\$3 per ton.
Bars and rods, &c., weighing less than 60 lb. per yard, hot rolled	\$4.25 per ton.	\$7.0 per ton.	Free	12½% per ton.
Plates not more than 66 inches width	\$4.25 per ton.	\$7.0 per ton.	\$4.25 per ton.	\$8.0 per ton.
Ditto, over 66 inches width	Free	\$5.0 per ton.	Free	\$6 per ton.
Sheets tin-coated, not made in Canada	Free	5%	Free	15%
Sheets cold-rolled, for manufacture of tinplate	5%	10%	Free	15%
Angles, beams, &c., weighing not less than 35 lbs. per yard	\$2.0 per ton.	\$3.0 per ton.	Free	\$3 per ton.
Barbed wire fencing	Free	Free	Free	10%
Steel tyres, in the rough	Free	7½%	Free	10%
Cutlery:—				
Table knives and forks	20%	30%	15%	35%
Penknives	20%	30%	Free	30%
Spoons	20%	30%	15%	35%
Scissors	20%	30%	Free	30%

LEATHER.

Typical changes are summarised below:—

	Present Rate.		Proposed Rate.	
	British Pref.	General.	British Pref.	General.
Belting leather	15%	25%	12½%	27½%
Tanned leather in whole hides	10%	15%	Free	15%

The volume of Anglo-Canadian trade in leather of all sorts amounted in 1931 to only \$1.2 millions out of total Canadian leather imports of \$7 millions.

MISCELLANEOUS ARTICLES.

The following changes illustrate the trend:—

	Present Rate.		Proposed Rate.	
	British Pref.	General.	British Pref.	General.
Cocoon butter (Previous imports almost wholly from Holland.)	Free	2 cts. per lb.	Free	3 cts. per lb.
Cigarettes (1931 imports, 1931, were \$95,000.)	25%	25%	25%	25%
Bottled beer, &c. (Total imports, 1931, were \$397,000, whereof \$328,000 were from Great Britain.)	\$4.10 per lb.	\$4.10 per lb.	\$3.50 per lb.	\$4.10 per lb.
Books, &c. (1931 imports, \$591,000, almost entirely from U.S.A.)	42 cts. per gall.	42 cts. per gall.	30 cts. per gall.	50 cts. per gall.
Soap (laundry) (1931 imports, \$288,000, mainly from U.S.A.)	5%	10%	Free	10%
Scrap (laundry) (1931 imports, \$591,000, almost entirely from U.S.A.)	65 cts. per cental.	\$1 per cental.	50 cts. per cental.	\$1.50 per cental.
Printing ink (1931 imports, \$288,000, mainly from U.S.A.)	12½%	20%	12½%	25%
Oatmeal and oil, when imported for further manufacture (Total imports, 1931, \$854,000, whereof \$285,000 from U.K. and \$569,000 from U.S.)	Free	Free	Free	10
Tableware of china, &c. (1931 imports, \$3,000,000, whereof \$2,400,000 from U.K.)	Free	30%	Free	35%
Window glass (1931 imports, \$741,000, whereof \$549,000 from Belgium and \$47,000 from U.K.)	17½%	25	Free	15%
Aluminium, crude and semis	Free	Free	Free	30%
Aluminium manufactures	15%	25%	15%	30%
Particlers, manufactured (1931 imports, \$477,000, whereof \$17,000 from U.K.)	5%	10%	Free	10%

In addition, British preferential duties are lowered on a number of chemicals, and preference margins increased on others.

The Australian Tariff.

The agreement with Australia does not make specific provision for any reductions in the British preferential tariff. It is provided, however, that British goods shall enjoy certain minimum preferences graded according to the duties chargeable upon them in accordance with the following formula:—

When the duty on U.K. goods is—

Free to 19% *ad valorem*.
19% to 29% *ad valorem*.
Over 29% *ad valorem*.

The minimum margin of preference will be—
15% *ad valorem*.
17½% *ad valorem*.
20% *ad valorem*.

The 20 per cent. margin of preference is not to be applied so as to result in a rate of duty exceeding 75 per cent. *ad valorem*.

The formula is not to apply to goods not commercially produced in the United Kingdom, nor to goods in respect of which it may be agreed that the application is unnecessary. Nor is it to apply to a specified list of goods in whose case the existing preference, or a new preference indicated below in brackets, is to operate. These are, chiefly:—

Velvets, Plate glass.
High-grade carbon steels, &c. Certain medicines.
Iron and steel tubes or pipes (12½%). Playing cards (3s. per dozen packs).
Linotype and printing machines (20%). Vacuum cleaners (20%).
Traction engines (12½%). Explosives.

Subject to the above, existing preferential margins in favour of Britain are to be maintained, but they may be reduced as shown below on the following list of goods:—

Goods.	Maximum Reduction <i>ad valorem</i>
Silk piece-goods	2½%
Lace, embroidery, trimmings	5
Clothes	5
Cutlery	5
Glassware and lamps	5
Fancy goods	5

As we go to press the effect of applying the formula to the Australian tariff is not known and we must therefore reserve further comments until next week.

The New Zealand Tariff.

The existing surtax of nine-fortieths of the Customs duty now payable on British goods covered by the New Zealand tariff (this amounts on the average to a duty of 5 per cent. *ad valorem*) is to be abolished.

The New Zealand Government undertakes that existing margins of preference now enjoyed by British goods shall not be reduced except that where the margin of preference now exceeds 20 per cent., it may be reduced to that figure.

The following changes are to be made in the British preferential tariff:—

	Rate of Duty.	
	Existing.	Proposed.
Confectionery	30	27½
Clothing	32½	27½
Hosiery	32½	27½
Silk and rayon piece-goods	10	Free

On the basis of 1930 figures, the value of the United Kingdom trade covered by the abolition of the surtax is £10 millions a year and that affected by the changes of rates given above is £2.4 millions.

The South African Tariff.

The South African Government undertakes:—

(1) To secure to the United Kingdom new or increased preferences on a short list of manufactured articles of which the most important are locomotives, tractors, typewriters, machinery, electrical batteries, soap, radio apparatus and vacuum cleaners. It is not stated whether these increased preferences are to be secured by lowering the British preferential or raising the general tariff.

(2) To impose new duties on certain foreign textiles, leaving the existing British preferential tariff unchanged.

(3) Not to lower existing margins of preference enjoyed by British goods on a considerable list of manufactures. The present differentiation is in most cases 5 per cent. *ad valorem*. It is semi-officially estimated that on the basis of 1931 trade figures the range of imports covered by the tariff changes is as under:—

	Total Imports. £ million.	Imports from the U.K. £ million.
Goods on which existing preferences are maintained	7.4	4.3
Goods on which new or increased preferences are given	7.2	3.1

The Indian Tariff.

The Government of India will invite the Legislature to give a long list of British goods a rate of preference amounting to 10 per cent. *ad valorem*; exceptionally, motor-cars are to

have only 7½ per cent. *ad valorem*. The preferences are not, however, to apply to (a) classes of goods admitted free of duty or (b) goods subject to protective duties—these being separately dealt with. Since, therefore, the goods on which a preference is to be given are in the main those now subject to revenue duties, it remains to be seen whether India can afford to give the preferences without a countervailing increase in the general tariff.

With regard to goods now subject to protective duties, the Government of India undertakes that, except where the protective duties are directed against United Kingdom goods as a result of the recommendations of the Tariff Board, a preferential margin of 10 per cent. shall be accorded on some classes of cotton and rayon goods and certain classes of apparel. These preferences may be given either by a reduction in the duties on United Kingdom goods or by an increase of the duties on foreign goods, or by a combination of both methods. It is estimated on the basis of 1930-31 figures that the volume of trade affected by the proposed new preferences amounts to about £32 millions, of which £13 millions represent imports from the United Kingdom. It is further provided that Indian imports of galvanised sheet shall be tariffed as follows:—U.K. sheet made from Indian steel 30 Rs. per ton; other U.K. sheet 53 Rs. per ton; foreign sheet 83 Rs. per ton.

Southern Rhodesia Tariff.

The Southern Rhodesian Government undertakes to secure the following margins of preference on British goods:—

Electrical material	10 per cent.
Batteries, typewriters, radios and glassware	15 " "
Cutlery	20 " "

There is no provision for any reduction of existing rates on British imports. These new margins represent increased preferences ranging from 5 to 10 per cent., but the volume of trade affected is small.

The Newfoundland Tariff.

The Newfoundland Government undertakes to afford British goods, which in 1930-31 represented imports of \$1.6 millions out of \$6 millions from all sources, a 10 per cent. preference as from July, 1933, subject to the right to grant a lesser margin if a 10 per cent. preference would involve loss of revenue.

Notes of the Week.

The Herriot-MacDonald Conversations.—Messieurs Herriot and MacDonald—pale shades of the two confident and liberal-minded statesmen of 1924—are conferring again on the perennial subject of Disarmament and Security in sadly different circumstances from those in which they met and collaborated eight years and more ago. In the interval, both of them—in fact, though not in form—have become prisoners in the Conservative camp; and we fear that their freedom of negotiation may be cramped, this time, by conditions imposed upon them by their respective political lords and masters. We profoundly hope that our fear may be belied by the event, and we cannot pretend to prejudge the issue, since the conversations are still going on at the moment of writing. We will, therefore, take stock, this week, of the more hopeful elements in the momentary state of the armaments problem. The most hopeful element of all is the whole-some effect which the spectre of German re-armament has at last begun to produce in Europe—particularly in the small countries and this not only among the ex-neutrals, but also, apparently, in some of the "successor-states" that are the military allies of France. It seems now to be generally recognised that in some mysterious elusive way, the virtue has gone out of the European peace treaties. They have lost their coercive force. For, although the reactionary forces in France may still be able for a little longer to prevent the French people's undoubted longing for peace and quiet from being translated into constructive measures of disarmament all round, it is also fairly evident that, if this negative French official policy does result in the re-arming of Germany, it will be beyond the power of the French reactionaries to induce the French workmen and peasants to sacrifice their lives in fighting a "preventive war," or even to mobilise them for a reoccupation of the Rhineland and the Ruhr. Therefore, wise men in France itself, as well as wise men

in Belgium and Denmark and Czechoslovakia, are coming to realise that a drastic measure of disarmament on the part of the heavily-armed Powers is the only way out of the *impasse*; and if the Herriot-MacDonald conversations can conduce to this, they will have been very much worth while. The problem is to devise a scheme of security, in the French sense of the term, which will be acceptable to British and American opinion and will at the same time reassure French opinion to a sufficient extent to enable the French Government to propose a measure of French disarmament which will satisfy the German *desiderata*. M. Herriot has apparently brought in his pockets a whole set of proposals which are designed to fulfil these complicated and delicate conditions. He is reported to contemplate the negotiation of no less than five diplomatic instruments: A general convention of disarmament; a general consultative pact; a regional pact of assistance, security and control; a pact for the progressive formation of an international force; and a protocol embodying the principle of equality of states in the matter of armaments. It is good news that the regional pact—which is to include of equality of status in the matter of armaments. Herriot's project, to the Continental countries. At the same time, the Germans are reported to have devised a clever formula. They will ask for the abolition of offensive weapons and for equality in defensive weapons; and they will leave it to the other parties to decide which weapons to assign to which category! On the whole the prospects of disarmament do not look quite so desperate as they looked a week ago.

Disorder in the Far East.—While the Lytton Report lies on the table of the League Assembly at Geneva, pending the receipt of the Japanese Government's observations, it is already receiving a most effective commentary in the shape of the actual course of events in the region with which it deals. Everything that is happening in the Far East at this moment bears out the Lytton Commission's description and analysis of the situation there and gives reason to the Commission's recommendations. Day by day it is becoming clearer that, in Manchuria alone—not to speak of the endless hinterland into which the Manchurian adventure may draw them on—the Japanese have "bitten off more than they can chew." The latest news is that a local Chinese commander astride the north-westernmost sector of the Chinese Eastern Railway, between the Khinggen Mountains and the Russian frontier, has risen against the Japanese and against their puppet "Manchukuo" and has seized the 200 Japanese residents at Manchuli, the frontier station, as hostages. In this direction the nearest Japanese military post is at Tsitsihar, some 400 miles away; and a punitive expedition of this distance, to the further side of a mountain range, would presumably be impracticable unless the whole Japanese Army of Occupation in Manchuria, behind the striking force, were strengthened in proportion to the extension of the area which it would have to hold down. In these circumstances is the Japanese Army likely to make another forward move? The experience of the past year suggests that there is really no folly of which the Japanese Army is incapable—the fact being that, in the Japanese Army to-day, the power and the initiative are in the hands of secret associations of young officers, who are able to impose their will upon the "big-wigs." It is not impossible that the Japanese Army may march on Manchuli; and, more than that, if the League Assembly adopts the Lytton Report, they may march on Jehol and Tientsin and Peking into the bargain. But this would indeed be a hazardous step, for already their occupation of Chinese territory has reached an extension at which it is bringing in diminishing military and political returns; and if they march on into the blue they will assuredly court, in the end, the discomfiture which overtook the Allied and Associated Powers when they marched into the heart of Russia in 1918-20, and the Greeks when they marched into the heart of Turkey in 1920-22. The forecasts of the naval and military estimates for the forthcoming Japanese Budget give a glimpse of the abyss towards which Japan is heading under military leadership. The Army is reported to be asking for 560,000,000

yen in place of last year's 189,000,000; the Navy for about the same amount in place of last year's 211,000,000. This scale of increase in unproductive public expenditure is something which Japan, in her present grave economic and financial situation, simply cannot afford. The figures must rejoice the heart of any Chinaman who reads them. Yet any tendency towards elation on the Chinese side will be damped by the news of a fresh outbreak of Chinese civil war in Shantung. This news gives point to those passages in the Lytton Report which draw a faithful picture of the Chinese anarchy. These passages have been as ill-received in China as the rest of the Report in Japan; but this new outbreak of the chronic Chinese malady to which the Lytton Report draws attention must surely impress upon China the urgent necessity of putting her own house in order. For unless she helps herself in this way, she will be making it next to impossible for the League to help her. In fact, both China and Japan would do well to consider, in the light of current events, whether the Lytton Report does not provide, for both of them, the obvious way out of an increasingly serious predicament.

The U.S. Election and the Dollar.—Mr Hoover's election speech at Des Moines, to which we made reference last week, caused a commotion which, we imagine, must have surprised even its author. Unfortunately, the speech has been inadequately reported on this side; but it appears that in elaborating his defence of the steps taken by his administration to meet the crisis at various stages, Mr Hoover painted with a thick brush the imminent peril that at one time beset the stability of the dollar. Presumably, it was the President's purpose to emphasise the fact that the measures which he took had definitely steered the dollar back to safety. Rather curiously Continental centres reacted in a very different manner. It appears to have been argued in speculative quarters that if the dollar has recently been in imminent peril, there is nothing to prevent a recurrence of danger. For a couple of days something like a scare developed, and the dollar depreciated *vis-à-vis* certain Continental currencies to a level very near gold export point. This scare, which is already passing off, was illogical and unjustifiable. At the time to which Mr Hoover was referring, the development of international distrust of the dollar might ultimately have led to hurried withdrawals of foreign funds on a very large scale. To-day the situation is fundamentally different. The volume of foreign, especially French, funds in New York has been reduced to a level which is probably not far in excess of a working minimum. A fresh wave of distrust might, it is true, bring about foreign selling of Wall Street securities, but it cannot be imagined that the volume of such selling could reach proportions sufficient to menace the dollar, or even to make any serious drain on America's large holdings of gold. The much-criticised French action over gold withdrawals from New York during the summer, in fact, left America's currency position essentially stronger. There is every reason to believe that there is now no external factor which can be expected in any foreseeable circumstances to drive the dollar off gold. If such an event were to occur, it could only come from a lack of confidence by the American public themselves leading to large scale hoarding; and this danger is very much more remote than it was in the spring and summer before bank failures had ceased and before Lausanne had given an impetus to recovery of public confidence. Mr Hoover's supporters, we see, in particular Senator Reed, are endeavouring to make political capital out of this unexpected incident. The Senator is endeavouring to make the electors' flesh creep by telling them that the result of Mr Hoover's defeat would be to bring the dollar once more into its old peril. We doubt very much whether such electoral tactics are likely to prove profitable. It is less from this incident than from the reported progress of the Socialist candidate's progress that the Democrats would appear to have any reason for a setback in their recently growing confidence. For in so far as the Socialist polls, he will clearly draw most of his votes away from Mr Roosevelt.

The F.B.I. on Commercial Policy.—At a moment when the country is weighing up the balance sheet of the Ottawa agreements, the F.B.I. has issued its *pronouncement* on the policy which, in its view, we should follow in making commercial agreements. Its statement is a very instructive document, for it illustrates the dilemma of those who still believe in a protectionist system as a definite and permanent policy for this country, but at the same time are compelled by the object lessons of events to recognise the vital interest of a supreme effort to get trade going again. The Federation starts, for example, by regretting that it should be necessary at this moment for Great Britain to negotiate with foreign countries at all. Certain British industries are just beginning to enjoy the benefits of protection, others are asking for more, and everyone is knocking at the door of the Advisory Committee for concessions of one kind or another. What a pity that we should have to make terms with foreign countries at a moment when the game is only just beginning! But almost in the same breath the Federation recognises that our primary object must be to restore the freedom of world trade, and that we must take active steps to remove abnormal restrictions and re-establish the international exchange of goods on a satisfactory basis. This, the Federation quite correctly says, may be achieved in two ways:—(1) By laying down general principles of negotiation applicable to all countries (whether initiated by this country alone or agreed at a World Conference), and (2) by proceeding on a less ambitious plan of separate negotiations. The Federation recognises the desirability of working towards the larger plan, but there are many practicable difficulties, including the indeterminate attitude of many countries at the present moment. Therefore, without abandoning the ultimate objective, they feel that much can be done with provisional arrangements, first of all with those countries who, either as a result of history or their complementary trade development, are willing to co-operate with this country in establishing an area of freer interchange. In this connection, much of what the F.B.I. has to say is sound sense. It suggests, for example, that in this matter the following principles should apply:—

1. The basic objective should be to increase trade between the negotiating countries by every practical means.
2. The magnitude of our purchases from any country should be regarded as definitely entitling us to specially favourable treatment from that country. This may involve some departure from the strict principles of unconditional M.F.N. treatment, but in the present stage of the world it does not appear possible to regard these principles as sacrosanct.
3. Negotiations with countries whose basic development for some time to come is likely to be complementary to our own should be given precedence, both as offering a more promising field for a substantial advance towards freer interchange, and the fewest technical difficulties in negotiation.

Whether they are as wise in suggesting that on account of the state of uncertainty now obtaining this agreement should be terminable at very short notice, is less certain. If other countries are to make substantial modifications of policy which unquestionably mean that they must be ready to substitute the interchange of goods for some forms of production which have been artificially fostered, they will want to be sure that the access to markets, which is offered to them as an inducement, will not be arbitrarily blocked. In suggesting that these negotiations must cover the state of the exchanges, all forms of restriction, double taxation, foreign investment and trade policy generally, the Federation is on sound ground, and we have no fault to find with the suggestion that it should be made possible for British manufacturers to make arrangements for the more stable organisation of their industries, nationally and internationally—provided always that the conditions suggested at the World Economic Conference for safeguarding the interests of the consumer are observed. Fortunately the Federation recognises that circumstances demand that all this should be attempted now. Those members of the Grand Council who fear that their hope of organising a permanent system of protection may be limited by these negotiations, must recognise that conditions of crisis have created a situation which offers greater opportunity of making a real change than has presented itself for a very long time past. Whether the Government has the determination or has thought out a plan for profiting by it, is another matter.

The Debt Charge.—In commenting a week ago on the revenue returns for the first six months of the current financial year, we expressed the view that a considerable prospective excess of expenditure on Supply Services, as compared with the Budget estimate, would in all probability be offset by a substantial saving on the debt charge, though it should be borne in mind that, from the point of view of Treasury book-keeping, any saving on the cost of debt interest and management would go automatically to augment the sinking fund, for which £32.5 millions were provided in the Budget out of a total debt charge of £308.5 millions. The situation of the debt charge, present and prospective, merits a little further examination. According to the return made up to October 8th, the saving on interest which has accrued so far this year amounts to £14.6 millions. Of this amount, £13.5 millions represents, of course, the non-payment of the British war debt to America, for which no provision was made in the current Budget, but which figured, in so far as concerns the June instalment, in the accounts for 1931-32. That is to say, up to the present lower interest charges have yielded a net saving of only £1 million, the smallness of the amount saved so far being accounted for by the greater volume of Treasury bills outstanding and, apparently, by the fact that more accrued interest on National Savings Certificates encashed has had to be paid out than was the case at this period in the last financial year. It should, however, be borne in mind that the September-April period of 1931-32 witnessed a great increase in the cost of financing Treasury bills, which absorbed altogether in that year £20.7 millions. In the summer of 1931 the rate was barely 2 per cent., but it had risen by the following winter to well over 5 per cent., whereas the Chancellor will probably be justified in expecting an average rate this year of not much over 1 per cent. throughout. Even allowing for an increase of nearly £200 millions in the average volume of Treasury bills outstanding this year as compared with last, it seems reasonable to expect that the cost to the Treasury of short-term financing in 1932-33 will show an actual saving by the end of March of not far short of £10 millions. This would bring the debt charge, exclusive of the sinking fund, down to the neighbourhood of £265 millions, but it has to be remembered that the Budget estimate makes no provision for the payment of the December 15th instalment of the war debt due to America, which totals \$106.9 millions, or £31.1 millions at the current rate of exchange. The extent to which this payment would upset Mr Chamberlain's Budget calculation requires no emphasis.

The Meat Quota.—It will be recalled that when the preliminary announcements of the Ottawa results were made it was stated that the British Government had agreed with the Australian Government to arrange for the regulation of imports of foreign meat in accordance with "an agreed programme." This programme for import control is now published. The maximum quantities of foreign meat to be allowed to be imported into the United Kingdom during each quarter of the period from January 1, 1933, to June 30, 1934, are shown in the following table, expressed as percentages of the quantities imported in the corresponding quarters of the twelve months ended June 30, 1932:—

Meat.	1933.				1934.	
	Jan.-March.	April-June.	July-Sept.	Oct.-Dec.	Jan.-March.	April-June.
Chilled beef	100	100	100	100	100	100
Frozen beef (boned) ..	90	85	80	75	70	65
Frozen mutton and lamb	90	85	80	75	70	65

In 1931 our sources of supply were as follows:—

	(Million Cwt.)			
	South America.	Australia.	New Zealand.	Others.
Chilled beef	9.3	Nil	Nil	Nil
Frozen beef	0.9	1.1	0.4	0.3
Frozen mutton and lamb ..	1.8	1.5	3.5	0.3

It would appear, therefore, that by the middle of 1934 the Government intend to contract the British imports of foreign frozen beef by about 400,000 cwt., and those of frozen mutton and lamb by about 700,000 cwt. Since total British consumption annually of beef is about 28.3 million cwt., and of mutton about 12.6 million cwt., these curtailments will tend to produce a rise in prices—to the advantage of the home producer but at the cost of a serious addition to working-class budgets—except in so far as Dominion supplies are augmented. In this connection, the Australian Government undertakes to ensure that in 1933 frozen beef shipments from the Commonwealth to this country shall not increase by more than 10 per cent., i.e., roughly 100,000 cwt.; and there can be no increase in "chilled" alternative supplies from the Argentine. Hence, by as misguided a piece of artificial price-rigging as could well be imagined, the whole scale of beef prices, from "frozen" to "home-grown," will be raised against the consumer. In the case of mutton and lamb the intentions of the Antipodean Governments are not so precisely stated; but there can be little doubt that, with the British Government's express approval, a similar policy of shortened supplies and higher prices is projected.

Nine Months' Overseas Trade.—Like the September returns of unemployment and bank advances and acceptances, the overseas trade figures for that month show that last August's hopes of an impending trade revival are far from being fulfilled. Imports of food show an increase of £2.4 millions compared with August, but imports of raw materials have fallen to £11.2 millions, which is nearly the worst figure of the year. Thus the increase in total imports from £53.3 millions for August to £54.3 millions for September means nothing. Exports were even more disappointing, for the September figure of £26.2 millions was a new low record since the war. The comparison with previous years is given below:—

MONTH OF SEPTEMBER. (000's omitted.)					
	1932.	Increase or Decrease as compared with			
		September, 1931.		September, 1930.	
Imports	£ 54,267	— £ 14,027	— 20.5	— £ 24,323	— 30.9
British exports	26,229	— 3,617	— 12.1	— 16,512	— 38.6
Re-exports	2,902	— 859	— 22.8	— 2,492	— 46.2
Total exports	29,130	— 4,477	— 13.5	— 19,004	— 39.5
Excess of imports over total exports	25,137	— 9,504	— 27.5	— 5,319	— 17.4

Coming now to the returns for the first nine months of the year, imports show a reduction since last year of £101.1 millions, of which £24.7 millions can be ascribed to foodstuffs, £69.5 millions to manufactured goods and only £4.4 millions to raw materials. Exports of British goods have declined by £21.9 millions and re-exports by £9.2 millions, so that the adverse visible trade balance, excluding gold movements, has improved by £70.6 millions.

FIRST NINE MONTHS. (000's omitted.)					
	1932.	Increase or Decrease as compared with first five months of			
		1931.		1932.	
Imports	£ 520,215	— £ 101,132	— 16.3	— £ 264,813	— 33.7
British exports	271,107	— 21,883	— 7.5	— 170,008	— 38.6
Re-exports	39,028	— 9,227	— 19.1	— 28,650	— 42.3
Total exports	310,136	— 30,510	— 9.1	— 198,658	— 39.0
Excess of imports over total exports	210,079	— 70,622	— 25.2	— 66,155	— 23.8

Exports of British goods for the past nine months show varying results as compared with last year. In general the heavy industries, including coal, iron and steel, machinery, locomotives and railway material, show decreases, which are particularly large in the last two instances cited. Textiles, with the chief exceptions of woollen and worsted piece-goods, are better, and the improvement in exports of cotton yarn and cloth is very striking. The leather and boot trades show up badly, but

mission for the imports necessary to establish it. This will give the Government control of the extension of industry, which has proved essential as there is at present a great tendency to unnecessary reduplication. Meanwhile all existing factories can import freely for their needs. Further, the Minister may "intervene executively" to bring about the export of Turkish products against the import of goods outside the quotas. Carpets, mohair, essence of rose, tortoiseshell, building wood, sleepers and tobacco are the products whose export in exchange for imports outside the quotas is authorised. These regulations, together with the activity of the new Minister of Commerce, have restored confidence and brightened the outlook.

The Australian Budget.—Our Melbourne correspondent writes:—The Commonwealth Budget presented to Parliament by Mr Lyons on September 1st shows a surplus for 1931-32 of £1,314,091 and an estimated deficit of £1,301,622 for 1932-33, the estimated surplus for the two years together being shown as £12,469. The form of the accounts is complex, but on a gross basis the total estimated expenditure for 1932-33 is £92,787,622, against £94,799,838 for 1931-32, and total estimated receipts £91,486,000 against £96,118,929. These totals include expenditure for interest on State debts (for which the Commonwealth has undertaken full responsibility) estimated at £33,084,912, towards which the States contribute £25,500,000 and the Commonwealth £7,584,912. Interest payable by the Commonwealth on its own account is estimated at £15,350,000, which includes £10,000,000 on War Loans. The accounts for 1931-32 and 1932-33 show the effect of the suspension of interest and sinking fund payments on indebtedness to the British Government, but for which the accounts would have been worse by about £5½ millions per annum. Income-tax collections during 1931-32 were £13,481,982, or about £3½ millions above the estimate; but for 1932-33 only £10,000,000 is estimated, the assessable incomes having been reduced by the depression. Alterations in taxation consist of some minor adjustments of the tariff, but any changes resulting from the Ottawa agreements are not yet disclosed in detail. With regard to the general character of the latter, Mr Lyons stated that the reduction of a number of duties will reduce revenue from the importation of the present volume of British goods, and that the substitution of British for foreign goods will result in lower duties being payable on these imports. Although details are not yet available, anxiety is being displayed in protectionist circles lest alterations in duties should be against manufacturing interests. In dealing with expenditure, the Government has made various economies, the largest individual item being invalid and old-age pensions, which are estimated at £10,500,000 for 1932-33, against £11,125,956 for 1931-32. This form of expenditure has grown rapidly, the above figures comparing with £4,484,804 in 1919-20 and £2,592,201 in 1913-14. The total public debt of the Commonwealth and States at June 30, 1932, was £1,187,827,868, against £1,156,086,118 a year ago, or an increase of £31,791,750. The interest payable has fallen from £58,169,435 to £51,747,114 as the result of the internal conversion.

Commercial Bank of Sydney.—Bad trade, low prices, and the reduction in bank interest rates consequent upon the execution of the Premier's Plan have made it inevitable that there should be a shrinkage in Australian banking profits for the current year; and it is easy to appreciate the causes of the fall in the net profits of the Commercial Bank of Sydney from £441,816 for the year ended June 30, 1931, to £253,866 for the following year. To compensate for this loss the board have had to reduce the dividend for the year from an average of 8½ per cent. to one of 5½ per cent., and also to encroach upon undistributed profits to the extent of £7,000. The carry-forward, however, remains at £117,445, which is a fully adequate figure. The balance sheet of the bank for

June 30, 1932, shows that deposits have been well maintained at £44,466,000, against £44,014,000. The year's additional borrowings by the Commonwealth Government upon Treasury bills are reflected in an increase in this item from £1,550,000 to £4,700,000—an increase which underlines the wisdom of the Commonwealth Bank's contention that there must be a limit to the assistance of this kind to be expected from the banks. Discounts and advances are slightly lower at £34,043,000, against £35,891,000, while investments, including British and Australian Government stocks, are also fractionally lower at £4,989,000, against £5,019,000. To compensate for the increased short-term requirements of the Commonwealth Government, cash has been reduced from £7,829,000 to £5,899,000, but call money is higher at £1,035,000, against £700,000. The fact, however, cannot be overlooked that this year an unusual proportion of the bank's liquid assets consist of advances to the Government.

(FROM OUR CORRESPONDENT.)

GENEVA, October 11.

THERE is a general feeling here that it would be imprudent to press too hard at this moment for a meeting in London or elsewhere on the German equality claim. Active conversations and exchanges of view are valuable and necessary, and provided the question is not allowed to stagnate there are advantages (having so far failed to persuade Germany to return to the Bureau of the Disarmament Conference) in not unduly insisting upon a set meeting until the German elections take place. Apart from that, opinion is at least divided about the methods pursued by Mr MacDonald. He is credited, rightly or wrongly, with dislike for the Geneva institution, and, perhaps with greater justification, with the feeling that only the Great Powers and the great men really matter. While there are some who take the reasonable view that the main thing is to get out of the impasse without bothering about procedure, others criticise the MacDonald methods not only because they feel they are unlikely to lead to success, but because they show a lack of regard for the interests of others and a too conscious tendency to work outside the League. If this were a calculated step—as is contended—it would certainly be serious. The normal thing for such a conference between a restricted number of Powers, if deemed advisable, would be to meet in Geneva, and there is therefore some sympathy with France's reluctance to attend a meeting elsewhere; the French seem determined to make their propositions in their own time at Geneva. The revised French scheme now under their consideration has been disclosed in only very general terms, and so far as it can be judged it has the character rather of a tactical move. Nevertheless, France would be in a position of considerable strength if she put forward an offer of drastic reduction provided she obtained satisfaction on security. The struggle that seems to be approaching is between American and British pressure for reductions pure and simple (throwing the onus on France) and the French offer of drastic reduction on security conditions (throwing the onus on America and Great Britain).

As for the controversy over Mr MacDonald's supposed undertaking to Germany at Lausanne to support her equality of status claim, it can only be said that the report has been consistently spread by the Germans for some weeks. Whether or not the so-called undertaking is supposed to have been given in writing or merely recorded in writing is not clear. In view of the emphatic denial of the whole story by the Foreign Office in London, the German Government should either produce its

evidence or corroborate the denial of the Foreign Office. For the matter to be left as it is would only accentuate the distrust already far too prevalent.

The Bureau of the Conference has not yet met, but whether it meets on October 17th or 19th it will only be to take account of the progress of work by the various committees now in session. One of the most important of these is on the trade in and manufacture of arms: although a definite advance is manifest in the way of regulation and control, there is a refusal on the part of the Great Powers to contemplate the suppression of private manufacture, despite determined efforts by France and a number of smaller States to eliminate what they properly regard as one of the fundamental dangers to peace. Until a brake is put on the activities of armament firms all the world over, the armaments problem will remain. The United States is specially obstinate in this respect, but the activities of Mr Norman Davies indicate a healthy sign of more positive leadership from the United States in pushing forward the Hoover plan. Incidentally, it is assumed that Mr Davies' conversations in Geneva, Paris and London do not exclude the Far Eastern situation.

Sir Austen Chamberlain, representing the London League Loans Committee, was heard by a committee of the Council, which eventually adopted a report underlining the serious obligations assumed by the borrowing States, calling upon them to make every effort at the earliest possible date to carry out their engagements, and making provision for close watch on the situation. Sir Austen, receiving the Press at his hotel, said in answer to a question that the possibility of conversion operations in respect of these loans might perhaps be a matter for the world financial and economic conference. In connection with this conference, various general discussions have taken place, and some consternation has been caused by repeated observations by British delegates strongly advocating reduction of tariffs as one of the essential means of a return to general prosperity, and citing the Ottawa Conference results as an example and help. It is a paradox which has baffled everybody.

Difficult and confused debates have taken place in the Budget Committee of the Assembly, where the necessity for economies has been the great topic. This committee, since the beginning of the League, has always commanded more keenness and devotion on the part of delegates than any other League committee. This year it is more important, not only because of the failure of a good many States to pay what the Secretary-General publicly described as their debts of honour (that is to say, their contributions to the League), Germany being one of the chief offenders, but also because of the political problem of the reorganisation of the Secretariat of the League. This has to be settled before the Council appoints a successor to Sir Eric Drummond as Secretary-General—an appointment to be made in time for the approval of the Special Assembly which meets later in the year. The main point concerns the four undersecretaries-general, all of whom are due to retire, and it affects the whole character and make-up of the Secretariat. At present, the Secretary-General and the Under Secretaries-general are nationals of the Great Powers, and the smaller powers are anxious to do away with the Under Secretaries-general on political grounds and also on grounds of economy. But the Great Powers are fighting obstinately for their retention, and will probably succeed. Administratively there is little or no case to be made for their retention, and, as they are the most highly paid officials, the abolition of the posts, without diminishing the efficiency of the staff, would help towards those economies which the British and other leading Governments have been so eager to achieve. Running through all the discussions of the Assembly in recent years is an insistence on the international character of the functions of officials, and it is a cynical commentary on the sincerity of those provisions that regarding the one category where the Great Powers feel they have a political hold, they should with one accord fight to retain it, at the same time showing no compunction in advocating the abolition of other really useful administrative posts.

UNITED STATES.

Money — Finance — Railroads — Business.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 4.

THE rising tide of surplus credit is sending short-term money rates to new record low points and stimulating the market for gilt-edged bonds, but it is making itself felt only gradually in trade. Excess reserves of member banks of the Federal Reserve system are now around \$400 millions, admittedly the highest figure yet seen, but perhaps not a record in proportion to total credit. Since this reserve would support a credit expansion of approximately \$4,500 millions, the condition of the market is extremely easy. Money on call on the Stock Exchange is maintained at 2 per cent., but this is simply an agreed upon rate set by the banks months ago. It governs the charge which brokers make to their customers on debit balances, but actually little money changes hands at that figure, and it is not necessary for any borrowing to be done at that rate. Outside the Stock Exchange call funds are plentiful at as low as one-half per cent. on the best collateral, that is for United States Government bonds. Time funds dropped this week to 1½ per cent. up to six months' maturity, and commercial paper for the best names was reduced to 1½ per cent., the lowest on record.

The redundancy of credit has naturally given birth to reports of a change in Federal Reserve policy, but such stories are premature. The system has steadily reduced the volume of credit since the week ended July 20th, when total reserve bank credit outstanding reached \$2,438 millions. The total last week was \$2,241 millions. Reduction has been effected by holding Government bond and bill portfolios stationary and allowing member banks to pay off discounts, largely with reserves obtained from gold imports and the return of currency from circulation. Eventually, of course, the reserve banks will cut down their Government bond holdings, now totalling \$1,854 millions, but probably before that time the commercial banks will begin to build up their loans and general investments and sell Government bonds. A strong factor militating against net reduction in Reserve Bank bond holdings is the certainty of heavy Treasury borrowing over the next few months. Calls on the Treasury for cash to meet Reconstruction Finance Corporation loans are being made at a less rapid rate, but even the banks are still adding to their borrowings slightly on balance.

It is expected that within a short time the Reconstruction Finance Corporation will enjoy a net reduction in its loans to banks, inasmuch as the rising bond market and the end of hoarding are putting an end to failures. On the other hand, the Reconstruction Finance Corporation is exploring the field of loans for social purposes, such as loans to corporations to be spent merely in aiding employment, buying wheat to send to China, and the like. Apart from the heavy demands of the Reconstruction Finance Corporation, the Treasury is running far behind in its ordinary receipts. In the first quarter of the fiscal year, July-September, the deficit amounted to \$402 millions, mostly because of the disappointing collections from the new miscellaneous taxes. Even if the soldiers' bonus ghost is laid at the next session of Congress, new sources of revenue must be discovered. Signs point to a general sales tax, and until the problem is solved the

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

recovery in business necessarily will be hampered. The publication of loans made by the Reconstruction Finance Corporation in its second month of operation under the new appropriations law still is being held up on a squabble over the legality of publicity. Meanwhile the chairman, Mr Atlee Pomerene, has declared that the fear of publicity has prevented a good many banks from asking for money. This fear seems to have been misplaced, but in any event Wall Street has recovered from its first doubts as to the wisdom of publishing the names of borrowers and now thinks the matter unimportant.

The shadow of railroad receiverships has again fallen over the security markets, in spite of aid given by the Reconstruction Finance Corporation and recent assurances that no major defaults would occur during the remainder of this year. The New York, Chicago and St. Louis (Nickel Plate) system failed to secure sufficient funds to meet an October 1st maturity of \$20 millions and had to default. It offered a refunding plan, giving 25 per cent. in cash and new securities, and about three-fourths of the old noteholders have agreed to the plan. A holder of a small amount of the defaulted notes has brought receivership proceedings. In view of the success of the St. Louis-San Francisco Railway in avoiding receivership in similar circumstances, hope is still held out for the Nickel Plate, but the affair has injured the market for railroad bonds and shares.

The harm chiefly lies in the assumption by a section of the public that the bankers are no longer willing or able to help railroads with which their names have long been associated. This, of course, ignores the great help already extended and the obvious duty of the Interstate Commerce Commission and the Reconstruction Finance Corporation. Once the most important of the Van Sweringen system of eastern roads, the Nickel Plate was retired a few years ago to a minor place, and the strong Chesapeake and Ohio given the head of the proposed consolidated system. Actual receivership for the Nickel Plate would doubtless delay the merger of Chesapeake, the Erie, the Pere Marquette and the Nickel Plate, but it could scarcely prevent the union.

The Coolidge-Smith Commission to study the railroad and general transportation problem will hold its first meeting this week, when the views of numerous railroad executives and others will be heard. No report is expected until after the November elections. Railroad traffic continues to rise in response to seasonal factors, and freight car loadings for the week of September 24th reached the best total for the year, but were still far lower than a year ago. Shippers estimate requirements for the fourth quarter at only 10 per cent. under 1931, against an actual decline in the third quarter of 30 per cent. These estimates, unfortunately, usually turn out to be too optimistic by 50 per cent. A seasonal decline in freight traffic will probably begin in another month.

Railroad executives have not yet decided on what course to pursue on wages. It had been generally decided to post notices of a 20 per cent. cut immediately, so as to have new pay rates go into effect on the expiration of the present agreement, which will be February 1st. However, President Hoover's appeal to postpone action until the New Year has thrown the matter into uncertainty. No promises have been made, and much annoyance is felt in railroad circles as to what is regarded as an act of political strategy by President Hoover, who has been asked by the unions to intercede.

Most business indices show some moderate improvement. Electric power output is up again and the steel trade has advanced its operating rate to around 18 per cent. of capacity. September dividend reductions and omissions were the smallest for any month and business failures have declined. Last month the country gained \$102 millions in gold, following an increase of \$114 millions in August, most of the rise being release from earmark. There were no exports last month, and imports were about \$20 millions. In its monthly bulletin the New York Federal Reserve Bank notes an increase in industrial production of more than seasonal proportions in September, the principal rise being in the textile industry.

Disclosures regarding the Insull public utility and holding company operations have increased nervousness in public utility markets. It is feared that the state of affairs now being revealed will increase pressure for drastic regulation of holding companies which, while perhaps a good thing in the long run, may result first in a heavy market for public utility securities, if the great holding companies have to sell.

Apart from the Insull and Nickel Plate affairs, the market for new securities has improved to the point where much talk is heard of giving it a fresh trial. The Canadian \$60 millions loan went well, and the market could probably take substantial new offerings of the best grade. The success of the British conversion scheme has done a world of good to confidence, and the Australian proposals are being closely watched. The market has been full of rumours of the early return of sterling to gold, but most people in Wall Street regard it as mere gossip, and pay no attention to alleged deals in debt reduction. Meanwhile the view broadcast in the Hearst press that there is no middle ground between full international debt payments and complete cancellation is strongly resented in intelligent quarters.

FRANCE.

Deficit — Prices — Industry — Wheat Crisis.

(FROM OUR CORRESPONDENT.)

PARIS, October 12.

It is now becoming apparent that the Government proposes to solve the Budget problem neither by the imposition of a substantial amount of additional taxation—which, indeed, there is every reason to believe would be impracticable, in view of the general economic situation of the country—nor by massive reductions in expenditure, but by resorting to the time-honoured French expedient of a large internal loan. Unusual reticence is being observed by the Government as to its programme, but it is officially announced that at last night's Cabinet Council, prior to M. Herriot's departure from London, a large proportion of the sitting was devoted to "further study of the balancing of the Budget, and of the programme of re-equipping the national economic plant." This may doubtless be taken as meaning that the Government proposes to get over its Budget troubles, as well as certain other problems, by the application of a further great programme of public works, in which will be embodied a substantial proportion of development expenditure which has at present to be met from Budget sources. A similar expedient was adopted a year or two ago, it may be recalled, when some 1,900,000,000 francs of annual debt burden, hitherto met from the Budget, were handed over to the Caisse d'Amortissement. This relief enabled a more or less balanced Budget to be arrived at, although it is not surprising that the expedient was somewhat severely criticised on the grounds that it suspiciously resembled a raid on the Sinking Fund, and also that it came perilously near to an infringement of the special Constitutional Law adopted, on the initiative of M. Poincaré, for the express purpose of placing the Caisse d'Amortissement out of the reach of Financial Ministers in difficulties.

So far no definite programme seems to have been drawn up, but it is already fairly certain that it will not be found possible to raise by means of the proposed public works loan more than a portion of the 8,000,000,000 francs of deficit which will have to be wiped out if a really balanced Budget is to be voted. The unprovided balance, there is reason to suppose, will be obtained by a variety of means, of which much sterner methods for preventing evasion of taxation will be among the most important. It is notorious that a large proportion or perhaps the majority of French incomes at present escape taxation, and the same is generally admitted in regard to payment of succession duties. It is possible the new Finance Act will include stipulations for the declaration of the exact amount of cash deposits in banks, and that it will no longer be possible, thanks to the universal prevalence of the bearer form of securities in this country, for such a large proportion of income de-

rived from dividend coupons to escape the fiscal net. The imposition of the famous *carnet des coupons*, vainly proposed some years ago by a Poincaré Cabinet, is more than possible. It is also probable that stricter control will be introduced over the incomes of members of the liberal professions, whose earnings under the present system are difficult to establish.

All this will undoubtedly be acceptable to both the Socialistic Radicals and the Marxian Socialists, who recently combined in successful opposition to the somewhat bold programme originally put forward by M. Germain Martin, in which he ventured to propose cuts in pensions, Civil Service salaries, etc. Pensions of all kinds, it is reported, are to be handed over bodily to the charge of an autonomous Caisse de Pensions, modelled on the Caisse d'Amortissement and entirely independent of the Treasury and the Budget. It is probable, further, that the Government, notwithstanding their recent unfortunate experience, will venture to bring forward (although in a substantially different form) proposals for reductions, on a sliding scale ranging from 5 to 10 per cent. in the pay of public servants, and also perhaps the stopping of pensions to war widows who have remarried. Such proposals, if they are ultimately brought forward under the pending Finance Bill, promise another exceptionally lively Budget debate, but it is unlikely (in view of the present foreign situation) that this can now begin until late in November.

The index for wholesale prices in France at the end of September (July, 1914 = 100) is 397—equivalent to 81 gold—against 394 (80) in August, and 437 in September last year. The increase was due to a sudden jump of 4 points in the last week of the month, due to the improvement in raw material quotations. The figure for French products stands unchanged on the month at 445, while that for imported goods shows a rise of 5 points on the month to 309. The increase in the figure for raw materials from 358 to 363 was due to rises of 9 points in minerals and metals and of 10 points in sundry products, the index for textiles having declined 6 points. The figures show a drop of approximately 300 points in world prices below the mean in 1929, while domestic wholesale prices of French goods have declined only 200 points in the same period.

Industrial production index figures for August show a fractional improvement on the month. The general index is 93 (1913 = 100), against 92 in the previous month, 121 in August, 1931, 140 in 1930 (the peak year) and 139 in 1929. Industrial rubber output moved up 11 points on the month (to 612) and textiles recovered a point (to 59). Engineering remained unchanged at 93 for the fourth month in succession, and leather output at 95. Output in the extractive and paper industries dropped 2 points on the month (to 92 and 98 respectively). Metallurgical output (71), and building (92), both declined a point, and motor-car output was 3 points smaller in volume. The index of electrical power consumption in the Paris area during August (1913 = 100) is 91.4 gross (96.6 adjusted), as compared with 98.3 and 97 respectively in July, and 103.8 and 114.7 in August last year.

Iron and steel production figures for August, issued by the Comité des Forges de France, show a minor fractional improvement in tonnage on the month under both headings. Total pig-iron production was 457,000 tons, against 453,000 tons in July and 680,000 tons in August last year. The number of blast furnaces in activity was 82, against 81 in the previous month, and 113 in August, 1931. Crude steel production totalled 468,000 tons, against 465,000 tons in the previous month, and 644,000 tons in August last year. Iron-ore output in September is returned as 2,222,000 tons, against 2,205,000 tons in the previous month, and monthly averages of 3,232,000 tons last year. Potash output (K₂O) in August was 24,600 tons, as against 25,000 tons in July, and monthly averages of 30,600 tons in 1931 and 42,200 tons in 1930. Railway receipts in August averaged 243,000,000 francs weekly, against 240,000,000 francs in the previous month, 270,000,000 francs in August, 1931, 298,000,000 francs in 1930, and 289,000,000 francs in 1929. Loaded trucks averaged 43,400, against 44,000 in July, 51,700 in August last year, and a weekly average of 65,400 in 1930.

The Government stocking proposals, as a solution of the wheat problem, are exciting enormous opposition in the agricultural districts, where discontent is taking the form of wholesale resignations of the mayors. Ninety mayors of communes in the Eure-et-Loire wheat-growing area resigned last Saturday, and over 100 have since followed their example, as a protest against "the inadequacy of the Government measures to stop the catastrophic fall in wheat prices." It is alleged, in furtherance of this form of protest-strike, that every ministerial decision in this connection merely opens the doors to a fresh attack by wheat speculators, to the direct detriment of the farmers. There have also been several demonstrations by angry wheat-growers on the floor of the Paris wheat market. The index representing official wheat quotations on the Paris Produce Market, which was returned as 654 last May, had dropped by September to an average of 392, as the direct result, it is alleged, of illicit speculative manipulations and misleading reports circulated among the growers as to the over-abundance of this year's harvest and predictions of a substantial drop in selling rates. Spot quotations on the Paris market to-night closed at 113-114 per quintal, as against 100 francs quite recently, whereas the average normal return demanded by growers would be somewhere around 120-125 francs. As matters stand, a large proportion of the growers have urgent need to dispose of their stocks forthwith, in order to be able to carry on, and are faced with the almost certain loss of their profit unless steps are taken to allay wholesale illicit speculation. The situation is complicated by the drop in the selling price of bread and by the fact that in most of the wheat departments large stocks of flour are being sold at rates from 10 francs to 15 francs below official flour quotations, and in many districts at still lower prices.

GERMANY.

Steel Trust — Disarmament — Economic Improvement.

(FROM OUR CORRESPONDENT.)

BERLIN, October 11.

The Government are at present considering how they can best supervise those firms which have become financially dependent upon the State in consequence of the measures taken for their assistance during the past year. In particular there is the question of government influence on the largest German steel producers. The Reich acquired this spring the majority of the shares of the Gelsenkirchener Bergwerks A.G., which itself, though certainly in conjunction with certain other partners, has a majority holding in Vereinigte Stahlwerke. At present the Reich has no influence over Vereinigte Stahlwerke, but such an influence is to be established, perhaps by means of a reduction in that company's capital.

Opinions differ, however, as to the necessity of the probable extent of the rectification of the German steel trust. During the current year German steel production has so far averaged 470,000 tons monthly, whereas the capacity of the steel works is some 1½ million tons. Leading directors of Vereinigte Stahlwerke have, however, made public statements last week to the effect that the very low proportion of their capacity which is at present being utilised justifies them in hopes for the future. Domestic consumption of iron at present is only a quarter of that in 1927. It cannot remain at the present low level, for a higher consumption is necessary even for the most indispensable repair purposes. A relatively small improvement in the steel market would be enough to restore steel production to a profitable basis. In the course of the last year the works have been technically perfected, and production costs reduced, so that even if they were to work at 50 per cent. of capacity there could scarcely be any more talk of a need for "rectifying" the German steel trust.

Even if it is assumed, however, that an increase in the output of steel to six or seven thousand tons monthly is well within the bounds of possibility, a reduction in the capital of Vereinigte Stahlwerke might be impossible to

avoid. The company, which is burdened with about Rm. 500 millions for foreign loans, cannot pay anything on its Rm. 800 millions ordinary shares within any measurable distance of time. In addition, losses on investments and, for the time being, also on current working, have to be met. The annual report of Klöckner-Werke, another large German steel company, which reveals a loss of Rm. 10 millions for 1931-32, shows that these works cannot at present cover their costs of production, expenses and interest charges out of the proceeds of their sales. In all probability therefore the question of "rectifying" Vereinigte Stahlwerke will be postponed, and perhaps when times are better it will be possible to do it in such a way as to render superfluous any increase in the influence of the Reich over the concern.

Germany's complaisant attitude to the British conference proposal has made evident a fact which was never doubted by people who understood German policy, namely, that Germany desires not the right to arm but general disarmament. Everything which the German Government have done, even to their withdrawal from the Conference, was done only with the purpose of promoting this ideal. Any other policy on Germany's part would be rank insanity, for she would not be able, for financial reasons, to avail herself within any measurable period of the right to arm. She can therefore only attain her object, a greater equality of armaments, by bringing about the disarmament of other countries. This is in no way altered by the unfortunate speeches of Cabinet Ministers, for the position is independent of the wishes of military experts or the representatives of any political tendencies. Germany must be prepared to promote anything which will help to overcome the deadlock in the disarmament negotiations, and the London Conference seems to offer an opportunity for so doing. Herr von Neurath and his expert colleague, Herr von Bülow, are much too wise and moderate to allow the internal political atmosphere to cloud their vision of the national need. The fault of the von Papen Cabinet in occasionally accompanying its movements in foreign politics by gestures which are designed to produce an effect at home is one which they share with other European Governments, but it does not affect the essentials of their foreign policy.

Statistics of unemployment have recently shown a very favourable development. This is not a result of the recent measures taken by the Cabinet, for the development began before these measures had had time to take effect, and according to the Government's own figures the number of workpeople who have been given employment as the result of the emergency decree is so far only 20,000. The improvement is evidently a reflection of the general world economic recovery, and perhaps also a sign that the consequences which the credit crisis of 1931 brought about within Germany are gradually being overcome. At all events, there is no doubt that the decline in the unemployment figures which always sets in in summer has lasted much longer this year than usual. In September there was a further fall of 163,000, whereas in September, 1931, there was an increase of 31,000. Whereas the number of unemployed at June 30, 1932, was still 1½ millions higher than at June 30, 1931, at September 30th it was only 745,000 more than at the corresponding date of 1931. Whereas the unemployment curve has steadily risen since the autumn of 1927, so that a new record was set up every year, the curve is now showing a clear tendency to revert to the level of last year. Doubts have been cast on the statistics, and references made to "invisible unemployment," and there is no doubt that this does actually exist. The Konjunkturinstitut has recently calculated that Germany has not 5.2 million unemployed, the figure shown by the official statistics, but 7.1 millions. Many of the unemployed, who have long lost hope of obtaining work, no longer go to the exchanges, since the emergency decree deprived of the right to relief those who have other means of support. It must therefore be assumed that, although the German unemployment statistics are the most complete in the world, they cannot be completely relied upon in times of crisis.

While, however, the unemployment statistics produce too favourable an impression, the calculations of the Konjunkturinstitut, which are based on the membership statistics of the health insurance societies, err in the opposite direction for technical reasons. Even those figures, however, show, if not a decline, at least no increase in the numbers of unemployed. That is, politically as well as economically, a very impressive circumstance for a country in which people have long been accustomed to ever-recurring wage reductions, budget deficits and taxation increases, all of which were symptoms of a perpetual contraction of economic activity. Already the Government, though, of course, they are influenced by election considerations, have informed the Nationalist Party leaders that they are considering the restoration of part of the cuts in benefit. It is very doubtful, however, whether the improvement in the labour market will influence the result of the elections. The Nationalists, the only party which can be regarded as a Government party, will probably make gains for other reasons, but their influence on those sections of the community which are directly hit by unemployment is very small. Perhaps even the Government will fail to profit by the improvement, for it is very clear that it was not brought about by their measures. It may, however, be expected that such a well-founded hope of an early economic recovery will strengthen all the forces of peace and moderation, and reduce the number of supporters of any policy of adventure.

ITALY.

Interest Reduction — Supertax — Commercial Retaliation — Cartellisation — Crops.

(FROM OUR CORRESPONDENT.)

TURIN, October 3.

A most important agreement was reached during August between all ordinary and savings banks under the auspices of the Governor of the Bank of Italy and the Finance Minister. The rate on current accounts, deposits and correspondents' balances was reduced as from October 1st to a maximum of from 2½ to 3 per cent., and on time deposits to 3 to 4 per cent. Signor Olivetti, Secretary to the General Confederation of Industry, states that the agreement aims at putting an end to the unwholesome practice which arose during the war of paying high rates of interest for current and time deposits up to 4, 5 and even 6½ per cent. Banking deposits thus changed from temporary utilisations of uninvested resources to permanent investments of new savings; and banks were forced to incur the risk of investments, with ominous consequences during times of crisis. The reduction of bank interest rates will aid the general policy of freeing banks from the investment business so that they can go back to the time-honoured tradition of current liquid discounts and advances to trade and industry.

This is a sound move, but it is doubtful what its consequences will be in the present mood of savers. Even before the reduction of interest rates a certain shifting of deposits from higher to lower interest paying banks was noticeable. Putting banks in the order of the rates of interest presumably paid, we get the following results:—

	Deposits (million lire).	
	On December 31, 1928.	On the last available date (April to June, 1932).
Eight largest ordinary banks	4,695.3	4,789.7
Regional banks	3,037.3	3,066.0
People's banks	1,013.3	1,053.0
Ordinary savings banks	15,684.8	18,259.3
Postal savings banks	10,819.4	15,421.7
		Per cent. Increase.
		%
		2
		0.9
		3.9
		16.4
		42.5

The increases in deposits in ordinary and regional banks, which paid the highest rates, were negligible; and even popular banks, many of which erred in a less degree on the same side, increased their deposits by less than 5 per cent. Only savings banks and postal banks markedly increased their holdings. The comparison is not wholly correct, inasmuch as ordinary, regional and popular banks do not put, for fiscal reasons, the greatest part of the sums

received under the deposits head, but classify them instead as correspondents' balances; but the figures are significant of the savers' trend in favour of banks which pay low rates.

Investments in Consols, other State securities and securities to bearer enjoyed until to-day a practical exemption from supertax, as fiscal authorities were bound to calculate the income subjected to supertax exclusively by adding incomes already assessed in virtue of taxes on land, houses, industry, professions and other incomes. Incomes from Consols, being exempted from the income tax, could therefore be assessed for supertax purposes only on the basis of voluntary confessions by taxpayers, and such confessions were, as it appears, exceedingly rare. In virtue of a recent decree, fiscal authorities will be able, henceforward, to make supertax assessments on the basis not only of direct taxation, but also of other assumptions, mainly that of the taxpayer's standard of living. As the chain leading from investments in Consols and other "securities to bearer" to supertax assessments is long and loose, it is thought that the new taxation system will not react unfavourably on Consols quotations. The Treasury hopes for an increase in revenue of from 300 to 500 million lire, owing to this change.

Restrictions on the slaughtering of foreign cattle having provoked complaints from export countries, especially from Hungary, Yugoslavia and Roumania, negotiations have been entered into with the interested States. The have been entered into with the interested States. The outcome is that restrictions are revoked, but new duties are imposed. Obstacles to international trade are progressively intensifying. The German restrictions on payments to foreign importers have immediately provoked retaliation by the Italian Government. As soon as the German Government notified their intention not to prolong the validity of current agreements after September 30th, a Decree was issued in virtue of which importers of German goods can make payments to their creditors only through the agency of Italian accounts held in Germany to the credit of Italian creditors, thus freeing those frozen credits to the benefit of Italian exporters. If these accounts are not sufficient to allow full payment for German imports to Italy, banks can provide *disegni* to the maximum of 25 per cent. of the sums due. The balance must be paid by the importers and deposited by the bank in a suspense account, without interest, opened by the Exchange Institute. These sums may be disposed of only as far as new accounts to the credit of Italian citizens in Germany can be utilised. Reichsmark transfers on suspense credits into the Institute's fund are held to be legally valid against foreign creditors. Violation of these restrictions renders the offender liable, in addition to the usual sanctions, to a fine equivalent to the full value of the imported goods. On September 22nd another Decree extended the above rules to Yugoslavia. On September 24th the *Official Gazette* published a Decree of September 19th in retaliation against the special turnover tax on foreign imports enacted in France. As the new French tax increases progressively from raw materials to intermediate and finished goods, the Italian retaliatory tax was likewise arranged. At the same time a refund of the internal turnover tax was granted on all Italian goods exported to France. All these measures, while suited to the militant logic now prevalent in international economic relations, certainly do not pave the way to the next Economic Conference and are not helping the re-establishment of normal conditions in business.

Cartellisation or rationalisation of industry seems to be progressing in a haphazard way. The dissolution of the sulphur consortium seems to have been short-lived. A new voluntary consortium, having as its scope the sale of sulphur produced in Sicily, has already been constituted among all the bigger Sicilian producers. In the cotton industry there are authoritative demands for cartellisation. Roughly the situation may thus be summarised: spindles in existence, 2,860,000 double shift and 3,223,000 single shift; spindles in activity, 1,656,000 and 2,263,000 respectively. Looms are 150,000, of which half are idle. Even before the war 600,000 spindles and 40,000 looms were

idle. The addition of 1,000,000 spindles and 30,000 looms during the war and the immediate post-war years made the situation much worse. Reorganisation is now widely regarded as essential in order to save the industry, but opinions differ as to the means. Some people advocate the abolition of double shifts in order to spread employment; while others are in favour of concentration of production in the best equipped mills.

In the beer industry, on the other hand, there are angry protests against the present reservation agreement. In 1926 an agreement was reached by brewers, in which they bound themselves not to encroach upon one another's customers. The retailers sought escape from this dependence, and they took in many instances to selling wine and other beverages and to importing foreign beer. Consumption thus decreased from 1,500,000 hectolitres in 1923-24 to about 400,000 in the current year; a decrease not wholly due to bad times, but said to be partly the result of the discontent of retailers with the brewers' agreement.

Contrary to pessimistic forecasts, Signor Mussolini was able to announce to the last meeting of the Wheat Committee that the wheat crop for 1932 had reached the record figure of 7,515,000 tons, with an average product per hectare of 1.52 tons. The average production for 1909-16 was 4,927,300 tons, with a yield per hectare of 1.04 tons, the corresponding figures for 1919-22 being 4,528,600 and 0.99, and those for 1926-31 6,160,721 and 1.26. Prices, too, are good. Thanks to a 750-lire per ton duty on foreign imports and to a scale of variable proportions of maximum millable foreign wheat, the price, which in August, 1931, was 940 and 1,020 lire per ton for soft and hard wheat respectively, reached in August, 1932, a level of 1,100 and 1,250 lire. Maize production is estimated at 3 million tons, against 2 millions in the past year and an average of 2.27 millions in 1927-31. The yield and prices of cocoons were bad, but the vintage, if somewhat belated, is held to be 15 per cent. over that of past year. The increase in the cereal production is not due to any appreciable increase in the area sown (4,952,000 hectares in 1932, against 4,737,000 in 1870-74 and 5,099,000 in 1905-09), but to better yields: 1.52 tons in 1932, against 0.86 and 0.92 in the above said periods. The self-sufficiency ideal is no longer beyond the realm of realisations, but it may involve a fall in the price to a level wholly unremunerative to agriculturists. To maintain prices at the present level a system of bounties on exports must be evolved, with what reaction on foreign policies it is difficult to foretell.

AUSTRIA.

Exchange Restrictions — Budget — Industry — Prices.

(FROM OUR CORRESPONDENT.)

VIENNA, October 10.

On October 9th the Austrian foreign currency restrictions were one year old. Both industry and commerce took this opportunity to bring forward with great intensity their demands for some relief from this imposition. Although the rigidity of the original regulations has been mitigated, there are still numerous obstructions to trade. For example, export against payment in schillings is completely prohibited, and Austrian export trade is declining steadily and rapidly. The causes are to be sought, apart from the diminished purchasing power of foreign markets, in the foreign exchange difficulties and also to some extent in the measures of protection with which foreign countries have responded to the Austrian import prohibitions. In the months of May to August (the import prohibitions came into force on May 1st) exports fell by 45 per cent. as compared with the corresponding period of the previous year, while imports sank by only 40 per cent., in spite of the strict application of the prohibitions.

The prohibition of the export of merchandise against Austrian schillings is the principal object of attack by the industrialists, while in regard to commercial treaty policy the attitude is not so clearly marked, as some

branches of industry are satisfied with the protection of the home market. On the other hand, protests are being made that in the according of private clearing arrangements the National Bank is often guided by considerations of commercial treaty policy. For this reason it is demanded that the right of the National Bank to permit private clearings should be revoked.

A further cause of great resentment is the fact that out of the proceeds of export 15 per cent. has to be handed over to the National Bank at the compulsory rate of exchange, which means a loss of at least 20 per cent. to the industrialists. The National Bank states that this percentage corresponds to the "raw material quota" of the goods, but it is objected that, with the exception of very small sums, which amount to about a million schillings, the National Bank has for months allotted no foreign exchange for the purchase of raw materials. There is great dissatisfaction among Austrian merchants.

The provisional arrangements between Austria and Hungary have now lapsed, and the tariff war has broken out again. At the same time, the trade treaty negotiations between the two countries are meeting with great difficulty. Trade between Austria and Hungary is steadily shrinking, and it must be admitted that the embargo upon imports from Hungary is having an unpleasant effect, because supplies of certain articles, which were previously imported chiefly from Hungary, are beginning to fail. Negotiations in regard to preferences are shortly to begin with Germany, Poland and France. As the Stresa Conference did not create the preliminary conditions necessary for preference treaties, it is uncertain whether these negotiations will lead to success. In any case, only a timorous attempt will be made, as preferential duties are to be agreed upon for no more than six to eight articles, in order that it may be seen what attitude the most-favoured States will take.

It is still uncertain when the proceeds of the Lausanne Loan, amounting nominally to 300 million schillings, will be available. So far, the consent of the States has been obtained for no more than 250 million schillings. It is, however, possible that the amount will be brought up to the sum of 300 millions through agreement on the part of the B.I.S., which has a short-term call upon the Austrian National Bank for 90 million schillings, to accept repayment of 40 million schillings and conversion of the remaining 50 millions into a long-term credit. Immediately the proceeds are available the Bank of England is to receive payment of the 100 million schillings it advanced. The sum remaining after the short-term commitments have been paid will be used in part to settle various items in the Budget of 1932.

The estimates for 1933, which will shortly be submitted to Parliament, will for the first time for many years contain no deficit, which means not only considerable retrenchment, including a further reduction of the civil service, but also complete cessation of all State investment. The most important budgetary question is that of unemployment. Already it is reported that the 100 per cent. increase in the merchandise turnover tax, which is destined exclusively for the support of the unemployed, is not sufficient, and that a further increase of the merchandise turnover tax may be anticipated. In the second half of September the number of persons in receipt of unemployment benefit in Austria rose by 5,100 to 275,800, which is very bad for this time of the year, and represents an increase of 73,000 persons, or about 35 per cent., as compared with the corresponding level of last year. The army of unemployed who receive no benefit is also increasing. In spite of the fact that reports from some branches of industry are improving, the unemployment figures continue to rise, the principal explanation being that the building trade is badly hit through the conclusion of the State housing scheme. The coal mines, however, are in a position to take on more hands, and there are other signs of a slight improvement in the heavy industries from the low level at which they have been. There is also an improvement in the automobile industry. In the textile industry things are slackening slightly, and it is fortunate that the fears, which attached to the suicide of a prominent textile industrialist on account of the fate of the

important textile firm of Herr Pollack's Sons, do not seem to be justified. The firm owes certain Austrian and foreign banks about six million dollars, but it has always met its obligations in full, and, in view of the state of trade, it is hoped it will again do so when the next payment becomes due in 1933.

Since the foreign exchange regulations were issued in October, 1931, Austrian prices have not been following the downward trend of world market prices. For industrial articles the price level in Austria is 80 to 85 per cent. higher than prices abroad, and for farm produce the level is as much as 80 to 100 per cent. higher, for in this line the increases of Customs duties and the suppression of importation permit the farmers to make monopoly prices. The Institute for Commercial Research has recently made investigations as to whether the removal of the foreign exchange restrictions would involve danger of further rises in prices. From a broadcast lecture given by the Director of the Research Institute, it appears that it is assumed at the Institute that the price level of Austria already fully corresponds to the depreciation of the schilling on foreign money markets (about 20 per cent.), and that a price need hardly be feared, the likelihood being that prices would ease slightly.

The most conflicting reports of the foreign tourist traffic in Austria have been current this year. Up to July it was assumed that the foreign season would be extraordinarily bad. The hotel keepers in Vienna were most pessimistic about the absence of foreign visitors. But as early as July an excellent foreign season set in. Owing to this development, it was feared at the beginning of summer that the balance of payments would be able to show no revenue worthy of mention from the foreign tourist traffic. By the middle of September, however, it was clear from the foreign reports of the Austrian banks that about 800 million schillings had flowed back to Austria under the heading of foreign tourist traffic. As the good season still keeps on and in Vienna even shows improvement, it is hoped that the above figure will be exceeded.

ROUMANIA.

Russian Negotiations — Stresa — Financial Report.

(FROM OUR CORRESPONDENT.)

BUCHAREST, October 8.

It is imperative in the interests of the Government that the negotiations now proceeding with M. Litvinoff should be crowned with success. They are of a particularly delicate nature owing to the Bessarabian problem, and, in addition, ever since the treaty of non-aggression between Poland and Russia was signed and similar negotiations were carried on between the latter country and France, Roumania has felt left out in the cold. Public opinion has been distinctly uneasy. If France and Poland considered it necessary to supplement the Kellogg-Briand Pact by a direct treaty it is argued that Roumania also stands in need of the additional safeguard of a special understanding with the Soviet Government. The relations with Russia have occupied the succeeding administrations in Roumania off and on for the last 14 years. All negotiations, however, direct and indirect, have so far broken down, as no satisfactory formula regarding the status of Bessarabia could be found. It is now decided to leave the Bessarabian problem entirely on one side, and to limit the issue to an agreement on general lines to the effect that no litigious questions are to form the pretext for an armed attack by either of the powers concerned, but even so, it will be difficult to find a formula which is acceptable to both sides.

M. Magearu was Roumania's representative at the Stresa conference. He is now charged by the block of agrarian countries of Central and South-Eastern Europe to defend their interests before the League of Nations. In the main the recommendations of the Stresa conference were the establishment of a preferential régime for the cereals of the countries concerned and the creation of an international fund for the revalorisation of cereals. It

will be M. Magearu's task to obtain from the League of Nations the recognition of this programme and some concrete assistance towards its realisation. In view of Russian and overseas competition and the restrictions on foreign trade introduced lately by most European countries, the success of M. Magearu's mission is exceedingly doubtful. It has long been recognised by unbiassed observers that, in so far as Roumania is concerned, the remedy for the present unsatisfactory agricultural situation lies not so much in Utopian international agreements as in internal effort and organisation, improvement of quality and yield, and better transport facilities.

Of yet more immediate interest is the manner in which the Financial Committee of the League of Nations will receive its experts' report on the financial situation of Roumania, and here again M. Magearu will have a difficult task if he wishes to realise the extravagant hopes of assistance held in this country. Roumania's finances are in desperate straits. Only by makeshifts—some of the arrangements bordering dangerously on currency inflation—has it been possible to provide funds for the payment of salaries during the last few months. Treasury receipts are dwindling day by day, and it is unlikely that much more than 60 per cent. of the Budget estimates will be collected by the end of the year. Evidently, to grant a further loan would mean throwing money into a bottomless pit, quite apart from the inadvisability of placing further charges on the Exchequer which could not possibly be met. It is hoped to obtain the suspension for a few years of the amortisation service on the foreign debt and the cancelling of the war debts. The relief would be appreciable but hardly sufficient. It would have to be supplemented by internal economies and a thorough reorganisation of the public departments, and in the light of past experience any recommendation which the League might make to this end would have to be safeguarded by some kind of effective control. M. Rist's report on the financial administration of Roumania since the stabilisation of the currency and that of M. Auboin, covering the last nine months, should be sufficient warning to make this stipulation an essential condition of any assistance that may be given.

The report of M. Auboin, the financial adviser of the National Bank under the stabilisation arrangements, came out a few days ago. It is devastating in its criticism of the former Government's administration. M. Auboin states that, while at the beginning of the year it seemed probable that Roumania might weather the storm of the financial and economic crisis, the policy since followed by the Government has turned to naught any prospects of improvement that may have existed. He condemns especially the Agricultural Debts and Judicial Liquidation laws, and proves that these laws caused (1) a complete cessation of the sale of "devisen" resulting from exports; (2) an active demand for foreign exchange and a flight of capital; (3) a complete disregard of their obligations by debtors; and (4) an increasing difficulty in collecting taxes. He points to the provisional arrangements made by the Government to secure funds for the most immediate needs, and goes on to state that the monetary mission of the National Bank has been seriously jeopardised by these measures. He further shows that the total means of payment which were in circulation on September 3rd, i.e., bank notes, token money and current accounts, amounted to 29,647 million lei, representing an increase of 5,000 millions against 1931 and of 6,000 millions against 1930. This circulation, he proceeds, is artificial and exaggerated and shows not progress but a great danger. It is a sign of lack of confidence and of hoarding. He concludes by saying that Roumania suffers from defective financial methods, i.e., chronic budget deficits, exaggerated expenditure, lack of short-term credit facilities, and that these methods must be changed if real progress is to be made. The report is a beacon of warning. Reading it together with other signs, such as the remarkable activity at the Bourse of Bucharest, where the prices of shares are soaring, one may draw the conclusion that in spite of all measures of defence taken so far the sinister threat of the depreciation of the currency is looming high above the horizon.

SWITZERLAND.

Foreign Trade — Industry — Railways.

(FROM OUR CORRESPONDENT.)

GENEVA, September 23.

FOREIGN trade returns for the first half-year reflect the acuteness of the economic crisis now prevailing in Switzerland. Imports reached a value of 905,709,588 francs, compared with 1,108,779,539 francs in 1931. That drop of 203,069,951 francs—or about 18 per cent.—is due not only to reduced demand, but also to the import restrictions set with a view to protecting home industry. Exports totalled 416,465,240 francs, as against 709,823,978 francs in 1931, a decrease of 293,358,738 francs, or nearly 41 per cent. The adverse balance is therefore 489,244,348 francs, or about 54 per cent., while it was 398,955,541 francs, or nearly 36 per cent. in 1931. It will not be made good by invisible exports, as banking receipts are likely to be much lower, and the earnings of the hotel industry will be very poor owing to bad weather in July and the small number of tourists who visited the country.

In examining these figures, one should take into account the fact that prices have dropped considerably. Imports decreased much less than exports, a sign of the resistance of the home market. While the value of imports dropped by, roughly, 203 million francs as compared with 1931, the quantities increased by about 200,000 tons. On the other hand, the drop in the value of exports was 293 millions and in quantity about 130,000 tons. The exports of the four chief industries—watch-making, silk, cotton and machines—have been dwindling month after month, and the aggregate figures for the first half-year show a drop of nearly 50 per cent. from the corresponding period of last year.

Conditions seem to be somewhat better at present, but it is too early to say whether the tide is turning, or whether this is only a temporary improvement. It is true that there is a renewed activity on the Bourses and in banking in general, that prices of raw materials are rising, that there is more work in the watchmaking industry, and passenger traffic on the railways has been increasing since the middle of August. The number of unemployed has fallen from 41,441 in June and 45,448 in July, to nearly 41,000.

Profiting by the low money rates, many Cantonal Governments have issued conversion loans, most of them at 3½ per cent. instead of 5 and 5½ per cent., and the Confederation, which already issued two conversion loans of 150,000,000 francs, each at 3½ per cent., is now issuing a new one of 125,000,000 francs at 3½ per cent. for the Federal Railways. It is estimated that, by means of these different conversions, the Federal Government will be able to make a yearly economy of 5,000,000 francs in the service of the Public Debt.

The situation of the Federal Railways during the first half-year is by no means brilliant. Receipts during that period totalled 194,640,000 francs, as against 220,117,000 francs in 1931, and the surplus was 40,468,000 francs, compared with 61,763,000 francs last year. During the first six months of the year, the railways transported 66,216,000 passengers and 8,719,000 tons of goods, as against respectively 73,854,000 and 10,000,000 last year. The situation of the other railways and transport undertakings is even worse, as they suffer more from the competition of motor cars.

IRISH FREE STATE.

Foreign Trade — Finance — Railways.

(FROM OUR CORRESPONDENT.)

DUBLIN, October 10.

THE economic war between Great Britain and the Free State has not been suspended during the negotiations that are taking place between the statesmen of the two belligerents. It is obvious that the discussions will not be confined to the narrow issue of the monetary payments, which are the immediate cause of the quarrel, but will be extended to cover many constitutional and political issues besides. In view of the complexity of the problems involved and of the intransigence of some of the parties, it requires a good deal of optimism to hope that the negotiations will succeed in bringing the present deplorable situation to an end.

Meanwhile, the tariff war is being waged with undiminished intensity. The recently-published trade returns show that, while imports from Great Britain have been greatly reduced in the last two months, exports have been reduced to a much greater degree. It is difficult to see in what way the war is benefiting either of the belligerents. Great Britain is collecting, by means of the new duties, only a trivial fraction of the unpaid annuities and is losing a valuable export market, while the Free State is paying more for many of its imports and is playing havoc with its vital export trade in live stock and live-stock products. It is true that live-stock prices would have slumped this autumn, war or no war; but they would not have slumped nearly as seriously had normal conditions of trading prevailed. The growing "adversity" of the balance of trade is naturally alarming, and pressure on the exchange would long since have begun to appear if it had not been for the exceptionally large sterling assets available in the Free State.

The Government is attempting to assist the export trade by granting bounties on agricultural exports sufficient to neutralise the effect of the British tariff. Needless to say, such a measure is very costly and can be regarded only as an emergency expedient, which could be frustrated at any time by an increase in the rate of duties imposed by Great Britain. Even at the existing rates of duty, the cost of bounties sufficient to maintain a normal year's trade is estimated at £2,500,000. Clearly, a sum of this magnitude could not be met from ordinary revenue sources, and it would probably be provided, if it were needed, from the

emergency fund voted by the Dail before the adjournment. Whether the withheld land annuities will be used to feed this fund will depend upon the course of the negotiations; if they are not available, resort may be had to borrowing.

Apart from abnormal expenditure incurred in connection with the economic war, the financial position is satisfactory. The half-yearly Exchequer return issued on October 1st shows that both revenue and expenditure are higher than last year. The increased revenue, however, is the result of new taxation rather than of heavier yields. The substantial increases in Customs, Excise and Stamp duties reflect the intensification of the protective policy of the Government, the tax on petrol and the levy on the sweepstake funds. The increase in income tax is quite small in spite of the fact that the rate was increased twice in the last year, and it looks as though further pressure on the direct taxpayer might produce disappointing results. Taking the figures as a whole, however, there is nothing to suggest that the Government is in the slightest financial difficulties.

Possibly the most difficult domestic problem with which the Government is faced is that of the railways. A multitude of conflicting interests must be regarded, and, if possible, reconciled. The shareholders, the road-users, the trade unions and the general public are all interested in the future of the transport system. The present situation is impossible and cannot be allowed to drift on; and any action that is taken is bound to be unpalatable to some of the interests concerned. The Labour Party is clamouring for nationalisation, but it is understood that this demand has been definitely rejected by the Government. It is rumoured that a Bill will be introduced early in the coming session of the Dail giving the railway companies a monopoly of all transport by rail and road, subject to close public regulation and control. Such a measure would be welcomed by the railway shareholders, who are very numerous, and whose voting power is not to be despised, but would be anathema to the Labour Party, who are committed to nationalisation.

An interested political situation might arise if the Labour Party were to vote against the Government's railway Bill in the Dail. Mr Cosgrave would then have it in his power to defeat the Government and force an election. Whether he would do so if the occasion arose is extremely doubtful. To throw out the Administration on a sound and constructive Transport Bill might be unwise, or the time might not appear propitious for an appeal to the country.

BOOKS OF THE WEEK.

The Psychology of Industry.

It is thirteen years now since, in the words of the first of these books,* "the first of such conferences (for the formation of an institute of psychological research in industry) was arranged for Dr. Myers by Mr G. D. H. Cole at the Fabian Hall," and at that conference Dr. Myers and his future colleagues showed that they had at any rate a grasp of the psychology of workers in industry which had been denied to some of their predecessors in the field. For the conference was originally called under a title which suggested that the term "Scientific Management" was somewhere lurking in the background; and it is greatly to the credit of Dr. Myers that he saw at once, from the attitude of the trade unionists present, that the practices of Taylor in America had rendered this term an object of bitter suspicion to industrial workers, and that his new institution, if it was to gain their confidence, must adopt a title which conveyed no suggestion of Taylor's systems.

* "Ten Years of Industrial Psychology." By Henry J. Welch and Charles S. Myers. London. (Pitman's.) 142 pp. 6s.
"Industrial Psychology in Practice." By Henry J. Welch and George H. Miles. London. (Pitman's.) 242 pp. 7s. 6d.
"Business Rationalisation." By Charles S. Myers. London. (Pitman's.) 73 pp. 3s. 6d.

This may seem a small point; but it is symptomatic of the Institute of Industrial Psychology, whose career is here introduced to the public by Mr Welch and Dr. Myers, and whose work is related in more detail in the second volume by Mr Welch and Dr. Miles. Taylor was an efficiency engineer whose engineering may have been very efficient, but whose knowledge of common or garden psychology was so sadly lacking as almost to destroy the value of his work; the heads and the staff of the Institute of Industrial Psychology have throughout displayed that knowledge of human psychology which enables one to advise and assist another in such a tone as makes it probable that the advice will be taken. Figures speak loudly, especially where they concern voluntary bodies; and the rise in the fees received by the Institute for investigations from zero in 1921 to over £20,000 in 1931 speaks loudly indeed; but casual accounts of the tactful methods employed by the investigators (as, for instance, in inducing the miners of a certain pit of their own volition to ask for heavier lamps which gave a better light) bear witness also to their intelligence.

Much of the detailed advice given to firms, which is collated in *Industrial Psychology in Practice*, will be found of great interest by those whose job it is to see how the monotonous and unpleasing tasks of industrialism can be made comparatively palatable to those who have to per-

form them. In particular, we may instance the series of cases reported in which tools quite unsuitable and in certain cases dangerous were being used for purposes for which suitable tools could with a little effort be found; and the restaurant in which the nerve-strain caused by the continued bellowing of orders (and who has not heard it?) resulted in an outrageous number of breakages, which was greatly reduced by the installation of a silent indicator. The plates and diagrams are also admirable, as are the reproductions of Safety First posters and the criticisms of them; and we note with pleasure that the Institute appears nearly to have freed itself from the temptation to quote elaborate statistics in proof of what everybody knows—though there is one table, indicating that miners who live very far from their pit are more liable than those who live near to "voluntary absenteeism," which might with advantage have been omitted.

Dr. Myers and his colleagues have, in fact, shown beyond all possibility of doubt that, even with the deep clash of motive which exists in present-day industry, much can be done with the aid of intelligent and sympathetic persons, to improve efficiency and increase output. Not even the most class-conscious workman really desires to work under uncomfortable and energy-wasting circumstances; and once he can be assured that the desire of the investor is not—as Taylor's was—to find a plausible means of reducing his wages, he is very willing to co-operate in any device which may render his work pleasanter and easier and therefore more productive.

There remains, however, a real problem, which is only just touched by Dr. Myers in his reprinted lectures on *Business Rationalisation*. The final purpose, to the employer, of industrial psychology is to save costs, and particularly labour costs; the purpose of rationalisation is to achieve the same end, but on a much wider scale and by more drastic means. If the result of these two combined is, while not reducing the wage of the employed worker, to throw more and more out of employment because of the inability of the market to absorb the goods produced by a rationalised system of production, how is the co-operation of the about-to-be discharged worker to be procured? Dr. Myers touches the fringes of this problem, but does not solve it, save by a gentle hope that industry will become more and more the servant of the community. How come more and by what means? are the questions to which it will take more than his admirable Institute to provide the answer.

SHORTER NOTICES.

"Montagu Norman: A Study in Financial Statesmanship." By Paul Einzig. Kegan Paul. 10s. 6d.

Mr Montagu Norman's critics and his admirers will agree on one point at least—namely, that his work and his personality will have a prominent place in the history of the troubled years which have followed the Treaty of Versailles. The man and his work, in this environment, deserve, and will surely receive at the proper time, the balanced and considered treatment of a practised biographer. But Mr Einzig cannot wait. He rushes in now while Mr Norman is not only living but also in full activity in his great office; and although Mr Einzig professes no personal knowledge of his subject, and has not even asked his permission, he claims to take us "behind the scenes" and reveal the inner reality of this great "mystery banker" against the background of portentous events. What is the result? Up to a point Mr Einzig performs his self-appointed task with real skill. His is a readable book which combines clever penmanship with most industrious research into such correspondence of Mr Norman as has been publicly reported. We are even prepared to believe that he has written a "best seller." Nevertheless, we cannot commend his book. Big events in which Mr Norman has figured are too sketchily recorded, and often we are convinced Mr Einzig's information is at variance with the facts. Often again we are left with the feeling that the author gets hardly within nodding distance of the actual truth—as, for instance, in the account of such affairs as the Credit-Anstalt's "rescue" and the crisis of September, 1931. In such circumstances any condemnation of Mr Norman, had Mr Einzig's mind moved that way, would have been little heeded by the careful thinker. As it happens the author's purpose is nearer to adulation. This equally is unsatisfying under the circumstances. While congratulating

Mr Einzig on a clever piece of journalism, we could wish that he had left his important and attractive theme to a greater, a later, and a more intimate pen.

"An Introduction to Finance." By T. E. Gregory, D.Sc., Professor of Banking in the University of London.

"An Introduction to Economics." By Maurice Dobb, M.A., Lecturer in Economics to the University of Cambridge. Gollancz. 1s. 6d. each.

These two pleasantly-produced little books are reprinted from the massive Outline of Modern Knowledge which Messrs Gollancz published a year ago. In both cases the space allowed is too short to admit of any comprehensive treatment, and both introductions must be regarded rather as essays than as text books even of the most elementary kind. Professor Gregory's Introduction to Finance is a highly competent brief survey of banking and the money market, including also a short reference to the problems of public finance. It is admirably lucid and much more simply written than most of Professor Gregory's work. Mr Maurice Dobb in his Introduction to Economics had a far harder task, because the foundations of economic theory have of late been so severely shaken that it is exceedingly difficult to present in a short essay even a clear view of what the economist is attempting to do. Mr Maurice Dobb is a Marxist who combines his Marxism with recognition that the orthodox economist can arrive at valid conclusions within the scope of his assumptions. Mr Dobb believes these assumptions to be the wrong starting point for an economic theory that will serve to interpret the outstanding phenomena of the modern world. His method of treatment in this Introduction is mainly critical and historical. As a criticism of the classical and modern orthodox schools it is excellent; but it fails as a satisfactory introduction because Mr Dobb, after dismissing the accepted theories, refrains from clearly stating his own, and therefore leaves the reader in the end suspended in mid-air.

OTHER BOOKS RECEIVED.

Bankers' Profits from German Loans. By R. R. Kaczynski. (Washington, D.C.) The Brookings Institution. 227 pp.

An attempt, based largely on the hearings of the Senate Committee on Finance, to ascertain the profits accruing to bankers from German loans in the United States.

Business Statistics. By Joseph Lyons Snider. Second edition. (London and New York) McGraw-Hill Book Co. 496 pp. 30s. net.

The book deals in turn with the forecasting of commodity prices, the statistics of various leading industries, measures of business conditions, and the general bases of business forecasting.

American Railroads. By Winthrop M. Daniels. (London) Oxford University Press. 120 pp. 9s. net.

A discussion of the railroads in the light of their relations to Wall Street, Congress, the White House, and the public.

The Punjab Peasant. By M. L. Darling. Third edition. (London) Oxford University Press. 276 pp. 11s. 6d. net.

This revised edition contains a considerable amount of new material relating to the agricultural debt of the Punjab.

Why Buy British? By Sanford Cole. (London) Wishart and Company. 41 pp. 1s. net.

A plea for greater international co-operation and the abandonment of economic nationalism.

Some Aspects of the Indian Problem. By Rt. Hon. Lord Irwin. (London) Oxford University Press. 31 pp. 1s. net.

A reprint of the inaugural Massey lecture delivered before the University of Toronto in April last.

Handbook of New York City Banks. Edited by F. Edmonds Tyng. Third edition. (London) London General Press. 141 pp.

A useful collection of data on the history, mergers and capital changes of New York banks.

COUNTY OF LONDON ELECTRIC.—II.

In our last week's issue we discussed the identity, scope and capitalisation of the companies included in the group headed by the County of London Electric Supply Company, Limited. We showed that, while an important part of the company's own undertaking came within the scope of the London Electricity Act (No. 1) of 1925 (which provides, *inter alia*, for transfer to the London Home Counties Joint Electricity Authority in 1971), its system, with that of its subsidiaries, covered an area of over 3,200 square miles (including large parts of Kent and Essex), in addition to the areas of outlying companies like the Bournemouth and Poole and the Coatbridge and Airdrie. We adduced figures of sales of energy, computed for the system as a whole, and showed that they compared extremely favourably with those of the country generally. We propose to complete our survey by a discussion of the group's financial position.

The earning power of the system is difficult to determine, for the parent company publishes no consolidated appropriation accounts or balance sheets. Its own figures for the last five years may be summarised as follows:—

COUNTY COMPANY'S FIGURES.

	1927.	1928.	1929.	1930.	1931.
	£	£	£	£	£
Gross revenue.....	1,714	1,859	1,874	2,092	2,309
Ordinary shares { Earned (%) ...	15.5	18.2	15.8	11.1	11.0
{ Paid (%)	7½	10	11	11	10½
Issued ordinary capital.....	3,103	3,103	3,320	4,482	4,482*

* Since increased to £5,690,547.

The investor, however, in the long run, is more closely concerned with the earning power of the group as a whole than with the figures of the holding company. In framing our estimates of the system's receipts we have of necessity made one or two possibly arbitrary assumptions. For example, in order to obviate the disturbing effect of new acquisitions on the figures, we have consolidated the accounts of the various companies (excluding the Weald Company, which has only been recently acquired) on a uniform basis from 1927 onwards. We have assumed that the County Company owns half the ordinary share capital of the Bournemouth and Poole, South Metropolitan, South London and Richmond Companies, and all the ordinary shares of the other companies mentioned last week, with the exception of the Blandford Forum Company and the West Kent Company, whose capital is assumed to be entirely held by their respective parent companies. This does not conflict with the County Company's own balance sheet statement regarding investments in subsidiary companies, and would seem to give a reasonably fair picture of the position.

The table in the next column sets out the consolidated income account of the system, for the last five years, on this basis. The figures in the last line may be compared with the earnings percentages of the earlier table, disclosed in the County of London Company's accounts. Popular impression has always credited a large surplus of undisclosed earnings to the company, and this surplus, as the table shows, was very substantial in the early years. Subsequently, however, it has shown a sharp falling off. Capital expenditure on new development, however, has lately been very heavy, and while a "forward" policy is being pursued it is not unreasonable to expect a temporary contraction in earnings. As recent expenditures come into full bearing, the fall in earnings will probably be more than recovered.

Between 1927 and 1931 the gross revenue of the system shows an impressive gain of £625,000—a natural corollary of the increase in unit sales of current, upon which we

COUNTY COMPANY SYSTEM—CONSOLIDATED FIGURES.

* Including fuel, repairs and maintenance, other costs, rates, &c., on generating plant, interest and depreciation on generating plant, and cost of current purchased.

† Including management, &c., rent, rates and taxes, and other costs.

‡ Including other operating revenue, non-operating income, interest charged to capital re Barking Supply, and interest on generating expenditure.

commented last week. The increase in gross profit is £407,000, but the real expansion is less than this figure suggests, comparison being affected by the excessive cost of fuel in 1927, after the coal stoppage, which may be put at about £100,000. It would seem, therefore, that more than half the increase in gross revenue since 1927 has been swallowed up by increased generating costs. This result, doubtless, reflects the fact that the new Barking Station is as yet by no means developed to capacity.

As a result of the increasing proportion of load taken by the Barking Station, the fuel consumption has dropped from 1.88 lbs. per unit generated in 1927 to 1.45 lbs. in 1931. The operating costs of generation have been correspondingly reduced from 0.3725d. per unit generated to 0.869d. However, during the same period the capital costs of generation rose from 0.1104d. to 0.1388d., whereas normally they might have been expected to fall. In sum, therefore, in spite of the impressive economy in fuel consumption, the overall cost per unit generated has not fallen proportionately.

This state of affairs, however, may be regarded as temporary. Under the Central Board scheme, Barking will be used as a base-load station for the South of England, and will operate at a high percentage of capacity more or less continuously all the year round. This, together with the normal development of the County Company's load, should bring down the cost of generation appreciably below the present figure.

The figures of net profit show an even more marked divergence. There has been an actual fall, over the period, of £112,000, due to an aggregate increase in distribution expenses of £520,000, or over 70 per cent. The greater part of this rise is accounted for under the headings of depreciation and repairs and maintenance, which may have been at an unusually low level in 1927, and have since increased by £272,000, or 78 per cent. Rents, rates and taxes account for £100,000 of the increase in distribution costs, and general management expenses for a

further £120,000. The latter item probably may be related to the increased overhead charges necessitated, both by the development of new areas which have still to contribute their proportionate share of gross revenue and by the policy of active stimulation of domestic load throughout the area as a whole, which has probably not, as yet, borne full fruit. Even so, management expenses remain slightly below the average for twenty of the largest electric supply companies in the country.

Altogether, the result of the more rapid growth in expenses than in gross revenue, and the increased requirements of debenture and taxation changes, has been a decrease over the period in the amount earned (net) on ordinary capital, of some £170,000—the greater part of which is attributable to the County Company itself. The fall in the amounts shown for minority shareholders in 1930 and 1931 reflects chiefly the effect of the consumers' rebates given by the South Metropolitan and South London companies. A special word is necessary as to the position of these companies. Under the 1925 Act, these London companies are entitled to pay certain fixed dividends. If the revenue actually received from the sale of current is below what it would have been if the company had charged certain "standard prices" per unit sold, the difference is entitled "consumers' benefit." "Fixed" dividend (or reserves) may be augmented, if the earnings are available, by a sum equal to one-sixth of the earnings after 1931 the fixed dividends will be reduced to 7 per cent. on the ordinary capital, after capitalisation of reserves. The standard prices will also be revised downwards, so that the scope for earning consumers' benefit, and therefore "extra" dividends may be diminished for a few years.

The position of these two companies under the Act is by no means clear, but up to 1930 neither company was entitled to distribute, or to put to reserve, any earnings over and above its fixed dividends, although both companies had substantial surplus earnings, amounting, in 1929, together, to as much as £100,000. As a result of the accumulation of these non-distributable earnings, the carry-forward of the companies had begun, by 1930, to exceed the statutory limits imposed by the Act. They were therefore obliged to reduce them by giving substantial rebates to their consumers in 1930 and 1931. This not only eliminated their surplus earnings for these years, but also put them into a position to earn "extra" dividends under the sliding scale. In 1931 these amounted to approximately £36,000. In for the two companies to approximately £36,000. In effect, therefore, the consolidated accounts above, up to 1930, include as earnings of the system substantial amounts attributable to these two companies which were not, apparently, distributable. In 1930 and 1931 this no longer applied.

As regards the County Company itself, the position is even more complicated, owing to the lack of relevant data. If, however, an attempt be made to separate its accounts into two parts, relating respectively to the area controlled by the 1925 Act and the rest of the undertaking, it appears that in 1930 (the latest year for which an estimate is possible), the shareholders' proportion of consumers' benefit was approximately £140,000, as against £100,000 in the previous year. At the same time, the estimated net earnings available for ordinary dividends on the "London" undertaking were approximately £120,000 in excess of the "fixed" dividend. It is probably safe to conclude, therefore, that in 1930 the County Company was entitled to distribute all its earnings. In 1931 the actual earnings declined and as the amount of "shareholders' proportion of consumer's benefit" probably rose substantially, it seems fair to assume that there was again no excess of earnings over the amount which the company will be revised downwards, and *prima facie*, there should be at least a temporary fall in the amount of divisible earnings in respect of that part of the company's undertaking in London.

So far, apparently, the County Company has become entitled to most of its "extra" statutory dividends in respect of its bulk supplies. Its opportunities, in this respect, after 1931, will be materially diminished, but the

company will probably be able to earn "consumers' benefits" in respect of supplies to domestic and industrial consumers on a much greater scale than hitherto, so that the effect of the 1931 revision may be less than would appear at first sight.

We may sum up the position by saying that the apparent trend of earnings, shown by the consolidated figures, is somewhat misleading, since earnings in the early years were exaggerated by the low scale of depreciation, maintenance and repairs, and by the inclusion of the non-divisible surplus of the South Metropolitan and South London companies. By 1930, however, these factors had been eliminated, and at present the distortion is in the opposite direction. The development of the Barking Station, and the new policy of domestic load stimulation have temporarily depressed earnings. Finally, the post-1931 revision of "fixed" dividends and "standard prices" will introduce another temporarily disturbing element into the immediate prospects of the company. The development of the Barking Station, however, and the probability of increased earnings from the new areas recently opened up by heavy capital expenditure, should result in improved figures in the next few years.

If the investor is clearly to understand the company's future position, it is essential that official information be forthcoming on two points—namely, the extent of the company's own undertaking, respectively, subject to and outside the 1925 Act, and its holdings in subsidiaries. The Metropolitan Electric Supply Company, in a similar position, presents full information to its shareholders. Why should the County Company, with its satisfactory earnings and finance, be more reluctant to take its proprietors into its confidence?

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 18.	October 20.

The markets were influenced this week primarily by monetary considerations. The view found increasing acceptance that low interest rates were likely to continue, for good or ill, over an indefinite period. The new Treasury bond issue was a money market rather than a Stock Exchange security, but its immediate over-subscription induced a buoyant tone, first in the gilt-edged market and subsequently throughout the list of good-class stocks. Gilt-edged quotations advanced rapidly on a considerable volume of business, short intervals of profit-taking being invariably followed by further gains. Assented War Loan advanced to 102½ on Thursday—the price, however, including the 2½ per cent. December

(Continued on page 698.)

WALL STREET.

Moody's Investors Service Ltd., acting as agents for their New York organisation, can supply immediately a complete statistical service on American Companies (up to date to the current week), company analyses for circularising, or any special service.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 695.)

dividend. Three-and-a-Half per Cent. Conversion Loan and Four per Cent. Consols were also strong. Local Loans were prominent. Long-dated India stocks were in keen demand for their relatively attractive yields. Among Dominion issues, interest centred in the new Commonwealth 3½ per cent. scrip, which opened at 1½-2 premium. Home corporation issues were popular.

The improvement in the gilt-edged markets tended to overflow into foreign bonds. The Dawes and Young Loans were in request, and both Austrian Sixes and Sevens improved. Roumanians were weak, however, on the external debt relief proposals (referred to on page 701), but quotations strengthened a little in mid-week. Japanese bonds were initially heavy, but improved later, the market seeing in the parlous budgetary situation a possible inducement to a less intransigent attitude over Manchuria.

Home rails had a better appearance, a recrudescence of small orders coinciding with a slightly improved batch of traffic returns. Modest gains were recorded throughout the list. Among overseas railway stocks Canadian Pacific was a little harder, but the poor appearance of Argentine traffic reacted unfavourably on the quotations of the "Big Four." Leopoldina, whose traffic returns showed an improvement, were, nevertheless, marked down.

The better tone in the industrial share market was confined at the outset to prior charges, but the improvement became less discriminative as the week advanced. The Ottawa agreements were a negligible factor. Transatlantic issues were mainly dull. A steady investment demand was in evidence for electrical supply shares, West Gloucestershire Power being prominent on amalgamation rumours. Babcock and Wilcox were weak before declaring a reduced interim dividend, and a sharp fall occurred in Telsen. Rayon shares were depressed at first, but orders increased in mid-week, though the announcement of litigation between Celanese and Courtaulds was unwelcome. Among miscellaneous shares, a sharp advance occurred in United Dairies £1 units, on an unexpected increase in the ordinary dividend. Imperial Airways suffered a setback for an opposite reason. British Oxygen, whose merger scheme is discussed on page 703, enjoyed a moderate improvement. Bank and insurance shares were consistently in demand in sympathy with the firmness in gilt-edged issues.

Considerable activity was experienced in the oil share market, higher prices being received from America following the news that the Consolidated Oil Corporation was raising crude oil prices in all fields. Later, however, Shell and Royal Dutch fell back on Continental selling, and Eagle issues, similarly, failed to maintain an initial rise. A trickle of selling continued in the rubber share market, but prices were only affected in a few instances. The speech of the Harrisons and Crosfield chairman was, on the whole, bearishly interpreted. Some substantial buying orders were received for tea shares, and prices tended to advance on renewed talk of an early restriction scheme.

Business in the mining share market showed signs of increasing, but the volume of activity was not impressive. Johannesburg was inclined to be selective in its purchases, and Paris turned a seller of Kaffirs in the later sessions. Gold Fields, however, were a good feature, and City Deep, and Mines and Grootvlei were in request. Moderate support was forthcoming for diamond shares. Tin shares advanced with the metal. "Chartered" were slightly better, but the Rhodesian market generally was inclined to be dull. Among Western Australian issues, Wiluna made a further sharp advance, the market showing signs of manipulation.

FOREIGN STOCK EXCHANGES.
NEW YORK.

The markets broke sharply last week-end, after a slump in cotton prices on a disappointing Government crop report. A substantial volume of selling came from Europe, whose financial interest now lies mainly in the security markets. This liquidation, however, applied mainly to equities, foreign demand for high-grade bonds, particularly public utility prior obligations, being little affected by day-to-day changes in sentiment. The week opened badly, but part of Monday's losses were recovered before Wednesday's Columbus Day holiday. Further all-round weakness was evinced on Thursday. The behaviour of prices, altogether, suggests that professionals and public alike are anxious not to take up new positions until the elections were over. A really bad break may force out further large selling, but the outlook otherwise promises dull rather than depressed business for the next two or three weeks. The general economic background has changed little recently. There are few signs of a resumption of the upward movement in commodity prices. General trade, similarly, gives no indication of a decisive turn. The continuous decline in car loading figures has been definitely checked, but the small increases recorded in the last few weeks have been seasonal, and nothing more. This week's rise in crude oil prices follows immediately on the enactment of another sharp production cut in Texas by the State Railroad Commission, and has no bearing on the broad question of economic recovery. The renewal rate for call money on the Stock Exchange was reduced on Thursday to 1 per cent. from 2 per cent., at which it had stood since July 7th.

PARIS.

The Bourse opened with a listless tone owing to an absence of any stimulating features. Later in the week, however, London buying helped to restore confidence, but the persistent weakness of Wall Street reacted unfavourably, and there was a good deal of unloading. Rumours of fiscal measures in connection with the 1933 Budget, coupled with a falling off of arbitrage business with banking shares received some support from unknown quarters, but eased towards the close. German bonds were firm, Young bonds rising from 595 to 599 to finish unchanged at 586. Dawes loan was higher, rising from 7,400 to 7,505. Oils opened cheerfully but lost value later, Royal Dutch falling from 1534 to 1528. Industrials were irregular, but Internationals, after being affected by New York news, closed better.

BERLIN.

The last few weeks have seen a sobering-down of hopes on the Stock Exchange in Berlin as elsewhere. The big rise lasted from about August 25 to September 6. Then, after a short setback for about two weeks, there followed a period of relative firmness. The eagerness of the public to buy was not, indeed, maintained, and turnover declined, but most rates held. Since the end of September, however, the Stock Exchange has been very weak, so that most of the gains of the previous month have been lost. In addition to the weakness in New York, a decisive influence was the feeling that a rapid improvement in the cycle was not, after all, to be expected. In connection with the Government programme for the revival of employment, but so far there is no sign of any increase in capital expenditure by industry. Further, there are anxieties both at home and abroad—impending elections, the disarmament conflict, and, above all, the effects of the German agricultural policy. The projected quota system for German imports of agricultural products is giving rise

One tangible guide for financial advertisers

MORE NEW YORK STOCK EXCHANGE

MEMBERS READ THE HERALD TRIBUNE

THAN ANY OTHER MORNING NEWSPAPER

WHEN your advertising appears in the New York Herald Tribune, it becomes part of the newspaper that has met professional approval of New York Stock Exchange members.

For some time, many people believed the New York Herald Tribune to be the preeminent American newspaper in the financial field. Today, this belief has been proved a fact. Three independent, impartial surveys (one by the scientific research specialists, Walter Mann and Staff) has shown that

Among members of the New York Stock Exchange the New York Herald Tribune is:

- 1—Read regularly by more members than any other New York morning or Sunday newspaper.
- 2—Read for financial news on weekdays by more members than any other New York morning newspaper.
- 3—Preferred for financial news on weekdays by more members than any other New York morning newspaper.

To understand this professional preference for the Herald Tribune, secure a copy from our London office (Bush House) and study its financial pages. Notice the accurate tables, its carefully-planned, easily-digested makeup, its complete coverage of commodity news, its daily average of twenty security groups (more than twice the number averaged by papers that are strictly financial publications). Picture, too, its high type of circulation, bringing your advertisement to the attention of (1) its first-rank financial following and (2) its ever-widening circle of families who read it, believe in it and buy from it.

For RESULTS in America's largest financial market—the New York Herald Tribune.

NEW YORK Herald Tribune

LONDON, Bush House, Aldwych
PARIS EDITION, The New York Herald, 21 Rue de Berri

to anxiety in respect of the export of industrial manufactures, and the turnover and profits of many German industrial companies depend upon their exports. Electricity shares especially have declined during the last few weeks. A.E.G., which rose from 80 to 46 in August and September, have lost the entire increase, for a severe reduction of capital is expected. Siemens and Halske have fallen from 145 to 114 in the last four weeks, and the company will probably reduce its dividend, which was 9 per cent. last year, very substantially for the year ended September 30, 1932. Coal and steel shares were rather better maintained. Fixed interest securities kept up better than shares, as fears of a compulsory reduction of interest have not been fulfilled, but even these have given way a point or two recently. The best rentes still yield 9 per cent. at current quotations.

AMSTERDAM.

The Bourse continues to be weak, though prices generally display a good resistance. Business on Monday was almost negligible, the Jewish holiday, Yom Kippur, causing many absences. Royal Dutch shares were a bright feature of the week owing to favourable oil price rumours. Rubbers opened listlessly, but became stronger towards the close. Among industrials, Philips Lamps improved 1 to 126½, and Unilever N.V. 1 to 114. Tobaccos fluctuated sharply, but ended a few points higher. Sugars were strong throughout the week.

	Oct. 6, 1932.	Oct. 10, 1932.	Oct. 13, 1932.		Oct. 6, 1932.	Oct. 10, 1932.	Oct. 13, 1932.

OTHER CENTRES.

The minor European Bourses exhibited little or no activity. At Brussels, the result of the municipal elections proved a depressing factor, but although the tone remained dull throughout the greater part of the session a few prices closed better on balance. Vienna and Budapest were closed on Monday. Business at Stockholm was erratic, and there was a general decline in prices at the close.

INVESTMENT NOTES.

Two Per Cent. Treasury Bond Issue.—The issue of 2 per cent. Treasury Bonds, 1935-38, at par, on Tuesday of this week, took the market by surprise, and some Stock Exchange optimists immediately began to discuss the prospects of a 2½ per cent. yield basis for long-dated British Government stocks. It was, however, quickly appreciated that this issue of £150 millions was a special "money market" offer, intended primarily to meet £140.8 millions 4½ per cent. Treasury bonds maturing on December 1st. Holders of these bonds will receive a cash payment of 10s. per cent. on conversion. No commission is offered on cash subscriptions bearing the stamp of stockbroking firms or banks, the commission of 2s. 6d. per cent. being allowed only in respect of conversion applications from holders of the 4½ per cent. Treasury Bonds. The market is keenly discussing the prospects of a medium term issue to deal with the £185 millions of 5 per cent. War Loan and £12.8 millions of 4½ per cent. War Loan maturing on December 1st. In our issue of October 1st we suggested that a ten-year issue of 8 per cent. bonds at 98 would be attractive to the market. In view of the further rise in gilt-edged prices it is suggested that a 15-20 year issue of 8 per cent. bonds at a small discount would prove acceptable. The rise in the gilt-edged market

which has taken place this week is shown in the following statement:—

	Price, October 6.	Price, October 13.	Rise.
Assented War Loan.....	100½	102½	1½
Consols 2½%	73½	77	3½
Consols 4%	107	108½	1½
Conversion 3½%	98½	100½	2
Conversion 5%	114½	117½	2½
Funding 4%	107	108½	1½
Local loans 3%	86	88½	2½
Australia 5%, 1945-75	106	106½	½
India 3½%	85	89½	4½

It will be seen from this table that stocks such as Consols 2½ per cent. and Local Loans 3 per cent., which are below their par values, have enjoyed the largest rise. No doubt some prophets see Local Loans 8 per cent. at par in the near future.

Wall Street Prospects.—Before adjourning for its Columbus Day holiday on Wednesday, the New York Exchange had lost approximately half the rise in common stocks recorded between July 8th and September 21st. The position is best shown by the following Dow Jones indices:—

	July 8.	Sept. 21.	No. of points Rise.	Oct. 11.	No. of points Fall.
Industrials	41.22	75.16	33.94	58.47	16.69
Utilities	16.53	33.01	16.48	25.51	7.50
Railroads.....	13.23	36.22	22.99	23.63	12.59

It will be seen that the most striking recovery was enjoyed by the railroad market, which is, however, proving most vulnerable to the more chastened views now being taken of the autumn recovery in business. The prospects of the railroad market, however, are not entirely unfavourable. The organisation of a non-partisan railroad commission, with Mr Calvin Coolidge as chairman, backed up by every bank, insurance company and business institution, is intended to convince Congress of the need for immediate legislation to protect the financial foundations of the railroad industry. Railroad car loadings last month made a better showing than was anticipated. Another reassuring factor was the denial of a receivership for the "Nickel Plate" system by the court, the company being given a respite in which to obtain further deposits of bonds under its scheme for the extension of its notes maturity. As regards utility shares, little more has been heard of Governor Roosevelt's attack on the rates of the big utility companies. There is, however, a disposition to avoid the shares of the complex holding companies, whose popularity has suffered through the Insull-Middle West Utilities liquidation. As regards industrial shares, the market is now entering a sensitive period of important dividend declarations, which will largely decide sentiment. The dividend announcements due in the next three weeks include those of Woolworth, National Biscuit, Liggett and Myers, U.S. Steel, American Tobacco, Consolidated Gas Company of New York and Standard Oil Companies, and General Motors. The business indices are now at the highest levels since June. According to a survey made by the banking house of Lehmann Brothers, a majority of 100 business leaders, whose opinions were canvassed, expressed the view that the low point of the depression was passed in the summer of 1932, but that unemployment was not likely to abate until the "Business" index rose some 15-20 per cent. above the present level. No great rally in the stock markets is expected until either commodities turn upwards or the bond market recovers its recent firmness. Moreover, the shadow of the November election now falls across every prospect.

No Referendum on "Commissions."—The Committee of the Stock Exchange have chosen a somewhat unfortunate method of defending an entirely sound decision. They have refused this week to accede to the request of 1,678 petitionaries in the "House" for a referendum, by secret ballot, on the relative merits of the Committee's own proposals for a 50 per cent. return of commission to

J. G. GRAVES Limited, of Sheffield

banks and 33½ per cent. to all other agents, and the counter proposals of an unofficial committee that banks should receive only 33½ per cent. and all other agents 25 per cent. Many of the more conservative members of the "House" are at one with the official Committee, both in their regret at the banks' intransigence and their conviction that a trial of strength would be disastrous. The banks, strategically posted in every town and village, have exploited their security business with energy and determination as an admittedly profitable side line. At present, from 50 to 60 per cent. of all business done on the Stock Exchange is subject to division of commission, and appreciably more than half such orders are received through the agency of the banks. Some dissatisfied members complain that the banks' security dealings on their own behalf, which are generally large, go to a few favoured firms, while those on behalf of customers, which are frequently small, though numerous, are more evenly distributed. It is not uncommon for a broker's expenses on such small orders to swallow up the greater part of the 50 per cent. commission which he retains. In these days of restricted business, this presses hardly on the smaller firms and the "free lances" of the Stock Exchange. Bank business, however, appears likely to increase further rather than to decline, for the banks (unlike the Stock Exchange, which has no guarantee fund) offer their customers a complete indemnity against default. The Committee has rightly taken a serious view of its responsibilities, but appears to have been over-reluctant to explore the possibilities of further negotiations with the banks. It is understood, for example, that at one stage the banks threw out a hint that brokers should include a non-divisible "expense charge" in their accounts rendered to clients, over and above the "divisible" commission, and that the Committee actually asked the "unofficial committee" to consider the possibilities of a flat 5s. "expense charge," but subsequently dropped the idea. The ostensible grounds for rejecting this week's referendum petition, however, may tend to arouse strong feeling on a point which, after all, is irrelevant to the main issue. A proportion of signatories, to total members, of 42½ per cent., is sufficiently large to deserve every consideration. What is more, the fact that signatories in the former group were nearly twice as numerous as those in the latter, and represented nearly 40 per cent. of the total membership in their group, was an argument against immediate rejection of the referendum proposal. The and decisive rejection of the Rules will presumably be confirmed next Monday, and come into force immediately. The question, however, may be destined to figure, for good or ill, in the Stock Exchange elections next March.

Building Society Dilemma.—Sir Enoch Hill, president of the Halifax Building Society, has considered it necessary to issue a denial of a wild rumour that certain building societies unknown are in some way connected with

an alleged £2,000,000 syndicate for the purchase of corporation housing estates. This report obviously carries its own refutation. Greater interest attaches to a considered statement of policy, made by the Abbey Road Society (the largest of the societies with metropolitan headquarters, and the second largest society in the country) in its official organ, regarding probable future interest rates. The society accepts the view that the Treasury's successful War Loan conversion has placed British Government credit "practically on a 3½ per cent. basis," and appears to have accepted its implication—namely, that there must be a general lowering of interest rates. The statement, however, is disappointingly vague as to the effect of the new regime on the society's own future policy. It refers to the reduction of a half per cent. already effected in new mortgage rates, but refuses to commit itself, directly or indirectly, to any promise to revise rates upon existing mortgages, until "adequate experience" has been obtained of the effect of changed conditions. Possibly, a reference elsewhere to an inquiry, now proceeding, regarding the continuance or otherwise beyond December 31st next, of the present rate of interest on existing fully paid shares in the society (the rate on deposit accounts and on new fully paid shares has already been reduced) may have a bearing on this matter. The changed interest situation, indeed, has placed all building societies on the horns of a dilemma. They cannot well reduce their receipts of mortgage interest without a corresponding adjustment in outgoings by way of payment to investors and depositors, particularly in view of recent additions to their effective liability to income tax. Their deposit and share rates are admittedly on the high side, under present conditions, and would probably attract much more money than the societies would care to handle, were it not for the somewhat arbitrary limitations on the amount of new investments, etc., which have been imposed by some leading societies. On the other hand, an abrupt downward revision might provoke a volume of withdrawals by their less well-informed clients, which the societies would be anxious to avoid at all costs. It is probable that, once the societies are agreed that present interest levels are more than a temporary phenomenon, it will endeavour to make the necessary adjustments gradually but effectively. In the meantime, it is clear that new lending on house property cannot be expected, in coming months, to reach anything like the dimensions of the last two or three years, if present conditions endure.

Roumanian Bond Position.—The visit of M. Virgil Madgearu, the Roumanian Minister of Commerce, to London was widely interpreted as presaging proposals for some relief of the burden of Roumania's external debt service. The plan of the Roumanian Government provides for a complete suspension of sinking fund payments for five years. Under its terms interest on the 4 per cent. consolidated loan and the 4 per cent. external loan will be paid in full, but the service of the 7 per cent. loan of 1929 and the 7½ per cent. loan of 1931 will be met, it is understood, by paying only half the interest in cash, the other half being paid into a blocked leu

account with the National Bank of Roumania. As regards the pre-war loans, including the Roumanian share in the Austro-Hungarian debt, a temporary reduction of 50 per cent. will be effected. Recent movements of quoted Roumanian loans are shown in the table below:—

Loan.	Amount Outstanding.	High, 1932.	Low, 1932.	Price, Oct. 7.	Present Price.	Yield. %
Roumania 4½% Gold Loan, 1913	£ 1,221,022	34½	14	28½x	24½x	£ s. d. 18 7 4
4% Ext. Loan, 1922, Sterling Bonds	1,554,640	63½	30	61½	57½	6 19 3
4% Cons. Loan, 1922 (British issue)	13,718,700	36½	12	26½x	24½x	16 6 8
7% Monopolies Institute Guaranteed Loan, 1929	1,871,900	71	23	54½	49½	14 2 10

x = ex dividend.

Under the scheme British holders will be affected only to a minor extent, since their main interest is in the 4 per cent. consolidated loan of 1922. The redemption of this issue is carried out by purchases in the open market, and the Government has purchased the annual amounts three years ahead. The position as regards the 7 per cent. loan of 1929, however, is more obscure. Hambros Bank and Lazard Brothers, through whom the sterling portion of the loan was issued, announced in mid-week that they had not been approached on the subject by the Roumanian Government, and that "in the meantime" statements should be disregarded. It was suggested, however, that as the loan was arranged and the greater part of it placed in Paris, the Roumanian Government was probably discussing the provisional modification of its terms in that city before notifying the London issuing houses. It is understood that a conference will be held in Paris on October 24th to discuss the details of the proposals. A Roumanian Government announcement regarding the position of the 4 per cent. loan will be found on another page.

New Fixed-Interest Stock Index.—The *Financial News*, whose daily index of the average values of 30 leading British industrial stocks is widely used as a market "pointer," has now initiated a companion index, showing the movement of 20 representative fixed-interest stocks. In view of the activity in gilt-edged and high-grade industrial bonds, the new index starts at an opportune time. The computations of other authorities, like the Actuaries, the *Investors' Chronicle*, and the *Bankers' Magazine*, are published only at monthly intervals. The all-important consideration of speedy calculation involves the taking of short cuts, but the new index, though not an instrument of precision, should admirably serve its purpose as a short-period ready reckoner. Its components include six "long" British Government stocks, four Home Corporations, three Public Boards, three Home Railway Debentures and four British Industrial Prior Charges. Thus, it is predominantly a "trustee" index. No attempt, unfortunately, will be made to allow for accrued interest in any stock, but the components have ex dividend dates spread fairly evenly over the year, the maximum distortion being put at 0.2 to 0.3 points in the index. Recent figures make the following comparison with those of the Actuaries' Index, which are, necessarily, more detailed and more "delicately" compiled:—

End of Month.	Financial News (Average 1928 = 100.)		Actuaries (Dec. 31, 1928 = 100.)	
	20 Fixed Interest Stocks.	3 British Govt. ment.	5 Home Corporations.	45 Industrial De-benture.
Dec., 1929...	95.1	94.7	93.8	94.1
June, 1930...	98.6	98.8	98.5	95.5
Dec., 1930...	102.9	104.6	103.6	98.1
June, 1931...	105.6	108.4	105.9	96.1
Sept., 1931*	90.6	90.0	93.6	89.6
Dec., 1931...	91.7	92.9	93.4	89.4
June, 1932...	111.0	115.0	112.7	95.2
Sept., 1932...	122.4	123.1	130.8	105.8
Oct. 12, 1932	125.2	...	...	...
Oct. 13, 1932	125.8	...	...	...

* After departure from Gold Standard.

The *Financial News* index closely follows the "British Government" and "Home Corporation" indices of the Actuaries. It contains, however, too few industrial prior charges to serve as an adequate guide for this section of

the market, which has lagged behind in the recent rise. We propose to publish the *Financial News* figures, each week, in our "London Stock Exchange" column (see page 698).

Motor Company Finance.—The vitality of the British motor industry requires no other testimony than that provided by the Annual Motor Show which opened this week at Olympia. Investors may be recommended to study the facts and figures set out in a survey of the industry, from the sales side, on page 674 of this issue. Financially, the industry is one of paradoxes and sharp contrasts, as the following table suggests. The figures cover fourteen companies, whose reports have been published since the beginning of this year:—

Name of Company.	Net Profit, 1930-31.	Ord. Div.	Net Profit, 1931-32.	Ord. Div.	Present Price.	Yield.
	£	%	£	%		%
Albion Motors (£1)	45,195	7½	Dr. 18,266	Nil	13/9	£ s. d. 18 7 4

† Tax free.

(a) After writing down share values in subsidiaries by £58,000.

The fall in aggregate earnings of more than 60 per cent. does not reflect the current outlook of the trade, which is on tiptoe for any sign of revival in world markets. The table, nevertheless, suggests that there has been a great deal of capital expenditure in the industry which can never be adequately productive, and will have to be eliminated before a healthy financial condition is attained. As we go to press the Standard Motor Company announces a jump in profits from £70,298 to £201,698 for the year ended August 31, 1932. The ordinary shareholders receive a dividend of 10 per cent. and a bonus of 5 per cent. The previous payment was 10 per cent. for 1925-26.

Murex.—Interest has been taken in the report of Murex, Limited, a small, but progressive, company in the chemical industry, engaged in welding, the manufacture of alloys, and ore separation. This company acquired some of its subsidiaries—Thermit, Limited, and Premier Electric Welding Company—from the Imperial Chemical Industries, which is represented on the board of both Murex, Limited, and Murex Welding Processes, Limited. No information is given in the report as to the proportion of profits derived from the company's various activities, but the accounts show that the results have been uniformly successful. Trading results for the past two years are shown:—

	Years to June 30, 1931.	1932.
Total income	£ 49,674*	£ 76,332
Earnings for dividend	35,193	54,256
Shares:		
Earnings %	24.8*	38.8
Paid %	35	35
Carry forward	28,908	34,204

* After deducting £33,198 loss on forward contracts for raw materials entered into before June 30, 1930. But for this exceptional loss, the earned ratio for 1931 would have been 48.2 per cent.

The company holds half the capital of American Murex Corporation, but this is not shown separately in the balance sheet. The total value of shares in subsidiary companies is given as £265,210, and goodwill and patent rights as £15,000. The balance sheet shows a liquid financial position. The company has been working on a small capital of £186,517, but an issue of £50,000 7 per cent. cumulative preference shares was made in April last at 21s. per share. The ordinary shares of the company are quoted at 39s. 8d., and allow a yield of nearly 8 per cent., on the basis of existing dividends.

Oxygen Merger.—The announcement that the British Oxygen Company is proposing to buy the undertakings and assets of Metal Industries and Oxygen Industries marks a further step in the co-ordination of those businesses which are primarily concerned with the manufacture of oxygen and plant for the cutting and welding of metals. British Oxygen was formed as far back as 1886, and has steadily increased its interests at home and abroad. It now has a controlling interest in Sparklets, Limited, owns all the share capital of Oxygen, Limited, practically the whole share capital of Liquid Air, Limited, and since December, 1930, has absorbed the businesses of Allen Liversidge and its subsidiaries, the Dissolved Acetylene Company, and Imperial Light. Recent profit figures reflect the difficult trading conditions which have been experienced, the ordinary dividend for the year to December 31st last being only 3 per cent., against 6 per cent. for 1930. The proposed agreement, which is conditional on its acceptance by an extraordinary general meeting to be held on October 27th, authorises the purchase by British Oxygen of Metal Industries and Oxygen Industries' assets so far as they relate to the manufacture of and dealing in the commodities in which the company and trades. The purchase consideration is to be satisfied almost wholly in ordinary shares, but the terms of the agreement are not to be made known until the general meeting. Partly for the purpose of meeting the purchase consideration and partly in order to maintain a reserve of unissued ordinary capital for future contingencies, the nominal capital of the company is to be raised to £2,250,000 by the creation of a further 250,000 ordinary shares. The company already has 805,900 ordinary shares authorised but unissued. It is a condition of the agreement that three of the present directors of the vendor companies shall join the board of British Oxygen.

First Co-operative Investment Trust.—As at July 31, 1932, the investments of the First Co-operative Investment Trust stood in the books at £1,731,761, and had a market value of £778,966. This represented a depreciation of 55 per cent. as compared with 52 per cent. at January 31, 1932, and 41 per cent. at July 31st, 1931. It is to be considered whether an investment trust faced with a depreciation of this abnormal amount, should not immediately propose to its shareholders a reconstruction or writing down of capital. That a depreciation of 55 per cent. will ever be recovered is unlikely, for the company's mistaken policy (long since abandoned) of paying high dividends before adequate reserves had been accumulated, resulted in the earlier purchase of high-yielding and speculative securities, many of which must now be unsaleable. The portfolio shows a fairly orthodox distribution by type—35.87 per cent. in ordinary shares, 16.78 per cent. in preference shares, and 47.35 per cent. in bonds and debentures, but the geographical distribution discloses the factures that nearly 40 per cent. of the trust's investments are located in European countries outside Great Britain, 18½ per cent. of the total fund being accounted for by investments in Germany. The directors argue that the market valuations do not afford a full measure of value, but investments to an investment trust are worth what they will earn. The accounts for the half-year ended July 31st, 1932, showed net revenue of £30,916, as compared with £36,874 in the half-year July 31, 1931. Thus earnings amounted only to 1.8 per cent. on the capital invested, an interim dividend of 1 per cent. being paid. If a writing-down of capital were arranged, there would be two advantages for the shareholders. First, it would not be necessary to transfer such large sums to reserve. Secondly, the restrictions upon the withdrawal of shares might be removed. In our issue of August 20th we drew attention to the remarkable conversion scheme for the trust's preference shares. The trust's official organ now states that holders of about 75 per cent. have accepted conversion of their 5½ per cent. preference shares into new 4 per cent. preference shares. The same proportion of acceptances has been received from preference holders in the Third and Fourth Trusts. Some 50 per cent. of the Second Trust's preference shareholders have, similarly, accepted the chairman's dogma that 4 per cent. "should be attractive enough."

United Molasses.—The interim half-yearly report to June 30th shows that the company, after its troubles, is at last working at a profit once again. For the last six months the trading profit—including receipts from subsidiaries—was £255,000, and after allowing for depreciation at customary rates and the cost of molasses run to waste, the net profit was approximately £45,000. The company has been heavily handicapped by the depreciation in sterling, its purchase contracts in the East being in gold currencies while the bulk of its sales are in sterling. Unhappily, there is no evidence that the company has really turned the corner yet. There has recently been a falling off in demand in various markets, particularly in the United States, and the results for the second half of the year are likely to be less favourable. Despite the continued fall in the price of molasses, the company has been able to add to its liquid assets, but there is no prospect whatever of an early resumption of dividends, and capital reorganisation is inevitable, sooner or later.

Cam and Motor.—At the normal price of gold last year's profit fell slightly short of the total for 1930-31. By reason of Rhodesia's currency being linked to sterling, an additional £127,000 net was derived, giving a disposable balance of £327,650, as against £191,800. A substantial portion of the windfall is devoted to strengthening the balance sheet, £86,000 now being applied to depreciation and the like, as compared with £40,500 in respect of the preceding period. After the payment of dividends totalling 22½ per cent., or 5 per cent. more than before, the substantially enhanced balance of £38,340 remains to go forward. The feature of last year's treatment operations was a reduction of 2s. 6d. per ton in costs, the difference more than counterbalancing a decline in average yield. A cut of fully 3,000 feet in the development footage was accompanied by an increase of 122,000 tons in the ore reserves to a round million tons. The expansion in quantity has been accompanied by a further shrinkage in values, the average now being 44s. per ton, as against 48s. at the end of June, 1931, and 50.8s. in 1930. Three years' supply for the mill is indicated and recent developments at depth have been of an encouraging nature. As the company will obtain the benefit of the "gold premium" for the whole of the current financial session, the earnings should advance further. The necessary measures are now to be taken for making the 7s. 6d. return of capital foreshadowed at the last annual meeting. This sum is exactly equivalent to the amount of the assessment levied in 1919. It is seldom that shareholders in a reconstructed enterprise are so fortunate.

CAPITAL ISSUES.

THE advertised "avalanche" of new issues shows no signs of excessive momentum. The Treasury has floated a highly successful 2 per cent. Bond issue, which is discussed in some detail on page 700. The remaining offers have all been of modest amount, the borrowers including two industrial companies and yet another greyhound enterprise. *Hugh Stevenson and Sons, Limited*, is an old-established cardboard-box manufacturing business.

Its debenture stock, after a further issue, to be made later, will be covered by assets 2½ times (a moderate but not generous proportion) and will yield a shade over 6 per cent. This figure itself puts the issue into the second-line debenture category, but the stock may appeal to investors for "mixing" purposes. The 7 per cent. preference shares of *Qualcast, Limited*, are a reasonable industrial proposition, covered over five times by progressive profits. *The Blackpool Greyhound Stadium and Racecourse, Limited*, offer, like all in its class, is a speculative gamble. As the company's entire share capital is no more than £47,500, the market in the 2s. shares is bound to be narrow. Despite the impediments imposed by the Treasury ban, a number of important conversion issues are being undertaken. *The Phoenix Assurance Company* is converting its 5 per cent. registered debenture stock to a 4 per cent. basis, holders being offered a bonus of 2 per cent. by way of additional inducement. *Dickins and Jones, Limited*, controlled by Harrods, similarly, is converting its 6 per cent. First Mortgage Debenture stock to a 4½ per cent. basis. Neither of these operations involves underwriting, or an appeal to the public for cash with which to pay off dissenting holders.

Public Offers.

2 per cent. Treasury Bonds 1935-38.—Issue of £150,000,000 2 per cent. Treasury Bonds, 1935-38, at £100 per cent. The loan is a trustee investment. If not previously redeemed, the bonds will be repaid at par on April 15, 1938, but the Treasury reserve the right to redeem in whole or part at par at any time on or after April 15, 1935, on three months' notice. Holdings of 4½ per cent. Treasury Bonds, 1932-34, may be surrendered in whole or part, in multiples of £100, in exchange for a like amount of 2 per cent. Treasury Bonds, 1935-38. Holders who accept this offer will receive a cash payment at the rate of 10s. per cent. on the amount of the holdings surrendered and will be entitled to receive on December 1, 1932, four months' interest on such holdings due on that date.

Hugh Stevenson and Sons.—Issue of £125,000 6 per cent. mortgage debenture stock at 99 per cent. A trust deed will provide that the company shall maintain its liquid assets, consisting of stock, work in progress, sundry debtors and cash, at a figure not less than 40 per cent. of the nominal amount of the stock for the time being outstanding. The stock will be redeemed on or before March 1, 1962, by means of a cumulative sinking fund commencing on March 1, 1934, which is to be applied in the purchase of stock at or below 102½ per cent. or in drawings at 102½ per cent. The company reserves the right to redeem the stock at any time after March 1, 1938, at three months' notice. The company was formed in 1920 to acquire the undertaking and assets of Hugh Stevenson and Sons, cardboard box manufacturers. The proceeds of the issue will be applied to extending factory premises and acquiring additional plant for the production of certain essential raw materials. The company will later issue further stock, ranking *pari passu* with the present issue, to redeem the existing 6 per cent. and 7 per cent. mortgage debenture stocks. Profits, before charging maintenance and depreciation (£11,555 for the last complete year), have been as follows:—1927-28, £58,350; 1928-29, £69,374; 1929-30, £56,914; 1930-31 (15 months), £73,644. Service of outstanding debenture stock (including the present issue) requires £17,029.

Qualcast.—Issue of 75,000 7 per cent. cumulative preference shares of £1 each at par. The company was incorporated as a private company in January, 1920, under the title of Derwent Foundry (1920) to acquire the business of ironfounders carried on at the Derwent Foundry, Derby. The company was converted into a public company and the name changed to the above in June, 1928. Profits, before charging income tax, interest, directors' fees, bonus to staff, and expenses of removal to new works in 1930, were:—1928, £25,053; 1929, £28,243; 1930, £30,151; 1931, £34,762; 1932, 32,215. Average profits thus covered the dividend on the preference shares over 5½ times. No part of the issue has been underwritten.

Blackpool Greyhound Stadium and Racecourse.—Issue at par of 385,000 ordinary shares of 2s. each. The company has been formed to acquire the lease of property and to lay out and equip the property as a greyhound racecourse and sports stadium. The location of the site is regarded as very favourable. The purchase consideration is £15,000, payable as to £6,000 in cash and to the balance by the allotment of 90,000 shares of 2s. each.

South Staffordshire Waterworks.—Offer for sale by tender of £200,000 ordinary stock, Class B, at a minimum price of £150 per £100 stock. Statutory maximum dividend is 7 per cent., on which basis the stock yields £4 13s. 4d. per cent. The proceeds will be used for the repayment of bank loans and for development. Ordinary dividends have been at the rate of 7 per cent. per annum for the past nine years.

Cranbrook District Water.—Sale by tender of £25,000 5 per cent. irredeemable debenture stock, minimum price £105 per £100 stock, yielding at that price £4 15s. 2d. per cent.

Pending Issue.
J. G. Graves.—Offer for sale of 800,000 Participating Preferred Ordinary Shares of 5/- each at 14/- per share. The prospective dividend yield is approximately 9 per cent. The lists open on Tuesday next.

Stock Exchange "Introductions."

Nor-Rust Liquid Lead Company.—Issued capital £17,210 in "A" shares of £1 each and £1,250 in "B" shares of 1s. each. The company was incorporated in December, 1929, with the object of carrying on the business of manufacturing rust-proof metallic and other paint and varnish. For the financial period April 19, 1931, to June 30, 1932, a profit of £1,674 was shown.

Calls Due Next Week.

The grand total of calls falling due in October, 1932, is £4,827,802, which compares with £2,397,913 which fell due in October, 1931. The following calls fall due in the week from October 17th to October 22nd, 1932, inclusive, and are calculated on the amount of stock or shares offered:—

Date of Call.	Already Paid.	No. of Shares.	Amount of Call.

Company News.

REPORTS AND NOTICES.

Wm. Cory and Son, Ltd., announce that Mr W. Valder has retired from the board. Mr A. G. Stanfield has been elected a director and appointed a managing director of the company.

Mr Samuel Courtauld has joined the board of directors of the Week End Review, Ltd.

INSURANCE.

PHENIX ASSURANCE COMPANY.—A meeting is called for October 25th of the holders of the 5 per cent. registered debenture stock (1922) for the purposes of securing the assent of the stockholders to a modification of their rights by which the interest payable thereon, as and from December 15, 1932, would be reduced from 5 per cent. to 4 per cent. per annum. If this is agreed to it is proposed to pay by way of additional interest a bonus of 2 per cent. on the amount of stock held, and further, the date on which the company is entitled to give notice of intention to redeem the stock or any part thereof at £105 per £100 will be postponed from January 1, 1932, to January 1, 1942.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.—The society's directors have decided to reduce the rate of interest chargeable in respect of new advances under its house-purchase scheme to 5 per cent. per annum. The rate recently charged for such advances was 5½ per cent., and the society has already made advances under the scheme of over £2,000,000.

MISCELLANEOUS.

EBBW VALE STEEL CAPITAL.—The Ebbw Vale Steel Iron and Coal Company announces that the voting on the scheme of arrangement submitted to meetings of the preference and ordinary share-

holders and holders of six per cent. debentures and eight per cent. unsecured notes held on September 29, 1932, resulted as follows:—

Holders of	For scheme.		Against scheme.	
	No.	Representing.	No.	Representing.
Preference	1,788	485,040	60	13,280
Ordinary	2,169	1,330,962	112	28,211
6% debenture	513	433,700	61	62,000
8% unsecured notes	1,065	835,775	67	27,875

The scheme provides, *inter alia*, for the reduction of the share capital from £3,700,000 to £425,000 by writing 15s. off each £1 preference and 19s. off each ordinary share. The £1,673,125 of notes held by the public are to be exchanged for 814,254 "A" participating preference shares in the proportion of one £1 "A" participating preference for every £3 principal and interest accrued on the notes. Interest on the six per cent. mortgage debentures is to be paid at the reduced rate of 3 per cent. per annum for five years.

SKANDINAVISKA KREDITAKTIEBOLAGET.—We have been asked by the Skandinaviska Kreditaktiebolaget to give prominence to an addendum which Messrs Price, Waterhouse wish to make to a report recently issued by them, viz.: "The following paragraph appearing on page 44 [page 48 in the printed edition] of this report was to some extent based on a letter addressed by Kreuger and Toll to the Skandinaviska Kredit A.B. The liquidators have now informed us that according to information now provided by the bank to them, a statement contained in this letter is inaccurate and a misleading representation of the facts and, in those circumstances, we wish to expunge the paragraph in question which reads as follows: 'Even allowing for this, it is nevertheless evident that the Skandinaviska Kredit A.B. knew definitely that the operation involved no subscription of new money and that the issue had not been fully subscribed and it would therefore be abnormal procedure if, as a member of the underwriting syndicate, it did not enlighten the other members as to the true results of the issue.' Price, Waterhouse and Co., Stockholm, September 27, 1932."

STE. MADELINE SUGAR COMPANY.—At the annual meeting on October 13th, Mr G. Moody Stuart said that the past year had been the worst ever known for sugar in the world's open market. The average price since their last meeting had been £4 6s. 3d. per ton c.i.f. on the gold basis, and all the big producing countries had adhered to that and had suffered disastrous losses. During May and June the price did not exceed £3 8s. c.i.f. per ton. The fact that the company had come through the year with something on the right side was due, in the first place, to the abandonment of the Gold Standard, and, in the second place, to the increase in the preference by £1 6s. 8d. per ton given them in the Budget last April. The prospects for the coming year were more favourable.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of September are as follows: Production of oil, 48,650 tons; deliveries, 49,770 tons. The totals for the year ended September 30, 1932, are: Production of oil, 546,680 tons; deliveries, 544,850 tons, which compare with the previous year's figures of: Production of oil, 624,925 tons; deliveries, 520,250 tons.

HAMILTON'S OIL CONCESSIONS (ROMANIA), LTD.—Production for the month of September, 1932: 13,944 tons, equal to 97,608 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of September amounted to 65,195 barrels, or approximately 9,314 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended September 10, 1932, was 258,000 barrels. Production for the week ended September 17, 1932, was 263,000 barrels. Production for the week ended September 24, 1932, was 257,000 barrels. Production for the week ended October 1, 1932, was 254,000 barrels.

Commercial Reports.

MARKET SUMMARY.

The reaction in the price of the principal primary products a week ago has proceeded further. According to quotations in the United States, the price of the chief non-ferrous metals continued to decline. Copper, lead, spelter and tin were all cheaper. Raw cotton again lost a few points on the publication of a "bearish" crop report in the United States. Among cereals, wheat, oats, and rye declined again, but maize was fractionally higher. Coffee and cocoa receded further, while raw sugar advanced on an active demand. Reports from various industrial centres in this country show a seasonal improvement in the coal trade. The iron and steel industries, on the other hand, fail to show any signs of an early improvement. The decline in raw cotton prices has had an unsettling effect on the demand for Manchester goods, while the demand for woollen manufactures, though limited, remained steady.

THE COAL TRADE.

SHEFFIELD.—The market for prompt business in best steams for export is quiet, but supplies are none too plentiful and prices continue to harden. Current quotations are firm at 17s. 6d. and 18s. The forward position is improving. Demand for gas coal is below former levels. The position of industrial fuel is unsatisfactory, but slightly better than of late. Foundry coke is in demand for heating, and there is rather more forward buying for the blast-furnace trade. Good qualities command 10s. at ovens.

GLASGOW.—The development of the winter demand is resulting in increasing business in the Scottish coal market, and last week's shipments, at some 263,000 tons, were the highest this year. With production curtailed—the quota has again been reduced—there is distinct indication of scarcity, and values in the East of Scotland

are especially firm. Although Lanarkshire has not shared to the same extent in the expansion in export business, prime splints are well booked, and of course the inland demand is on a larger scale. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s.; splint best, 15s. 3d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 12s. 6d.; trebles, 14s.-14s. 6d.; doubles, 12s. 6d.; singles, 10s. 6d.-10s. 9d.; pearls, 9s. 6d.-9s. 9d.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 13s. 6d.; third-class steam, 11s.-11s. 6d.; trebles, 16s.-17s. 6d.; doubles, 12s. 6d.-14s.; singles, 10s. 6d.-11s.; pearls, 9s. 6d. LOTHIAN.—Prime steam, 11s. 6d.-12s.; secondary steam, 11s.; trebles, 14s. 9d.; doubles, 12s.-13s.; singles, 10s. 6d.-10s. 9d.; pearls, 9s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 14s. 6d.; doubles, 12s. 6d.; singles, 10s. 9d.; pearls, 9s. 9d.

NEWCASTLE-ON-TYNE.—Northumberland screened coal is well booked for some weeks ahead, and inquiry for shipment over the winter months, both from home and abroad, is above the average for this time of the year. Hastings/Hartley Main classes are particularly well stemmed and are selling at the price of 12s. 6d. per ton, which is 6d. above the minimum. Smalls are still difficult to dispose of, but shipments during the last few weeks have shown a little improvement, and there is more inquiry for ahead. The Durham position is fairly steady, but collieries producing coking brands would welcome more trade. There has been a better arrival of tonnage for "bunkers only," which has given the prime brands a steadier appearance, but all other classes are in abundant supply. To-day's f.o.b. prices for export are as follows: NORTH-UMBERLAND.—D.C.B. screened steam, 13s. 6d.; smalls, 8s. 6d.; Howards, Bentinck, Newbigin screened, 13s.; smalls, 8s.; Tyne Prime, large, 12s. 9d.; smalls, 9s.; Hartley Main, large, 12s. 6d.; smalls, 8s. DURHAM.—Lambton, South Hetton screened steam, 15s.; smalls, 11s.; Wear Special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s.; coking, unscreened or smalls, 12s. 6d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.; Prime foundry coke, 16s.; Newcastle and District gas coke, 18s.

CARDIFF.—There has been a little more activity in inquiries on the Cardiff coal market this week, and it is understood that the Egyptian State Railways are about to place an order for 22,000 tons of sized grades. They are also in the market for supplies of large coals, and it is anticipated that contracts will be placed for at least 50,000 tons for delivery as from December 1st next. The Great Western Railway Company's fuel export returns for the four weeks ended September 25th last show an increase of 130,000 tons, or about 8 per cent., over those in the four preceding weeks, but in spite of this improvement the exports of coal, coke and briquettes in the four weeks ended September 25th were 192,000 tons, or more than 11 per cent., below those in the corresponding period last year. It is anticipated, however, that the October trade will compare favourably with that in September, and that under the amended conditions of the French import licensing scheme shipments to France will show a substantial increase. Prices are very firm for sized and washed coals, but for all other grades they are ruling on the basis of minimum schedule. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 35s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stovo nuts, 36s. 6d. to 45s.; rubbly culm, 10s. 9d. to 11s.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 19s. 3d. to 19s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The past week has been somewhat disappointing as regards the volume of business transacted both in Cleveland and hematite, and the expansion that was confidently predicted a few weeks ago has failed to mature. The foundry trades are depressed both here and in Scotland, with a consequent reduced demand for foundry iron, and the same applies to other home consuming centres, in fact there is not a single instance where the consumption of iron is not at present adversely affected. Substantial concessions are still offered to Scottish consumers with the object of attracting more business from that area, but the result is unsatisfactory, and the small production is more than sufficient to meet requirements. At the weekly market on Tuesday the business

In Cleveland foundry iron reported was small in volume, with little inquiry. Official prices were unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t., with the usual concessions to Scotch consumers. Transactions in hematite are also on the short side, consumers buying no more than is actually required, and not going further ahead than is actually necessary, which is rather surprising considering the low price at which the iron is obtainable. Ordinary mixed numbers are offered by makers at 59s. per ton for prompt delivery, and might even be got at a trifle less if immediate shipment can be taken. Shipments of pig iron this month so far are only poor, the total of all kinds cleared to 11th inst. being 2,816 tons, against 4,887 tons to same date in September. In the finished trades, the negotiations in connection with the details of the big Danish bridge are proceeding satisfactorily, and are expected to be finally completed almost immediately. A few orders of fair importance are reported to have been secured recently, one of which involves 900 tons of steel work in connection with a power station in Scotland. There is no change in the ore market, and practically no new purchases are being made. Best rubio remains nominally 14s. 6d. c.i.f., and the current freight Bilbao/Middlesbrough is 4s. 3d. Coke is plentiful in supply, and good blast-furnace qualities are offering at 14s. 6d. per ton delivered consumer's works. The number of blast furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—Conditions in the steel industry have varied but little over a period of three or four months, and the absence of feature continues to be conspicuous. Large combined firms report no change in the total of turnovers for a long period. Spurts of new business in one or other departments occur from time to time, but as a rule they do not last long. There is a noticeable absence of substantial and forward buying. In the finished sections, turnovers both in the overseas and home markets exceed those of a year ago, but low and often unremunerative prices continue to be a bugbear. The market for ferro-alloys used in special steels is rather stagnant, and prices have sunk to an unremunerative level. This state of things, however, fails to induce forward buying. This week, prices of tungsten have been reduced twopence per pound, and have now reached the lowest point since the war. A considerable amount of trade in special steels has been diverted from Continental to Sheffield firms since the duties on foreign steel were imposed. Certain automobile makers who have bought their steel from abroad in the past are now using Sheffield material. The higher tariff on foreign steel expires on the 20th inst. Consultations between the steel makers and the Tariffs Advisory Committee are taking place, and it is expected that the tariff will be renewed for a lengthy period.

GLASGOW.—Business in the West of Scotland is very quiet this week, but on all sides it seems to be expected that there will be some improvement when more information is forthcoming regarding the Ottawa agreements. At the steel plants there is still only a very small proportion of the plant in operation, and specifications are few, and only for small quantities. In the sheet trade things in Glasgow are also quiet, particularly in the galvanised sheet trade, and there are fewer of the local mills operating than for some weeks past. Structural engineers have booked only a small tonnage during the present month, although a number of important inquiries are on the market, and local firms are tendering. Tube makers are also poorly employed, and practically every branch of the iron and steel industry in this district is experiencing a quiet spell at the moment.

CARDIFF.—On the Swansea Metal Market on Tuesday, tinplates were a shade easier, but nominally quotations were unaltered on the basis of 16s. per basis box. Galvanised sheets were also stationary at from £9 15s. to £10 per ton f.o.b. Foreign steel bars continue to arrive at the South Wales ports, and are delivered to works at round about 82s. per ton, but local bars are maintained at 85s. per ton delivered. Shipments of tinplates at Swansea last week were relatively small, totalling only 78,885 boxes, compared with 122,033 the previous week, and stocks have consequently increased to 115,384 boxes.

OTHER METALS.

TIN.—At the end of last week tin prices reacted on the lack of demand. On active support quotations began to rise again on Tuesday and closed on Wednesday at last week's level. Sales on the London Metal Exchange were 450 tons on Monday, against 350 tons last week; 450 tons on Tuesday, against 575 tons last week; and 350 tons on Wednesday, against 275 tons last week. The New York quotation on Tuesday was 24.05 cents per lb., against 24.35 cents a week ago and 24.80 cents a month ago. Wednesday's official closing quotation in London for standard cash was £151 10s. to £151 12s. 6d., compared with £151 5s. to £151 10s. last week. Stocks in London and Liverpool at the end of last week were 31,429 tons, a decrease of 1 ton on the week.

COPPER.—The market in copper opened dull on Monday, remained inactive on Tuesday, but prices advanced a little on Wednesday in sympathy with the improved tone in Wall Street. Sales at the London Metal Exchange were 1,200 tons on Monday, against 700 tons last week; 500 tons on Tuesday, against 1,100 tons last week; and 500 tons on Wednesday, against 600 tons last week. Domestic spot was quoted 6½ cents per lb. in New York on Tuesday, against 6½ cents a week ago and 6½ cents a month ago. Wednesday's official closing price for standard cash in London was £32 8s. 9d. to £32 11s. 3d., compared with £33 12s. 6d. to £33 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 23,661 tons, show an increase of 937 tons, and stocks of rough copper, at 2,451 tons, an increase of 600 tons.

LEAD.—Despite the reduction in the price of this metal in New York, the market in London was active at prices slightly below those of last week. Sales at the London Metal Exchange were 1,600 tons on Monday, against 500 tons last week; 600 tons on

Tuesday, against 600 tons last week; and 450 tons on Wednesday, against 500 tons last week. The New York quotation on Tuesday was 3.00 cents per lb., against 3.25 cents a week ago and 3.60 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £12 2s. 6d. for September shipment, compared with £12 13s. 9d. last week.

SPELTER.—Spelter reacted under selling pressure on Monday, but was steadier on Tuesday and Wednesday, owing to the attitude of reserve adopted by sellers. Sales were 600 tons on Monday, against 350 a week before; 500 tons on Tuesday, against 750 the week before; and 1,200 tons on Wednesday, against 600. The New York quotation on Wednesday was 3.10 cents per lb., against 3.25 cents the week before, and 3.30 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 5s. for September shipment, against £15 6s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was again quoted at £100 per ton. Nickel was unchanged at £240 to £245. Quicksilver was slightly higher at £9 7s. 6d. to £9 15s. per flask, against £9 5s. to £9 10s. a week ago. Platinum was again quoted at £9 5s. per ounce. Foreign antimony was lower at £23 to £23 10s. per ton, against £25 to £25 10s. per ton a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week October 6th to 12th (inclusive) are 31,609 bales of which 18,052 are American; 4,752 Peruvian; 4,653 Argentine; 3,978 Egyptian; and 174 East Indian.

Manchester.—The market during the past week has been rather unsettled, owing to the easier movement in raw cotton prices following the bearish crop report of the American Government. It has been necessary for spinners and manufacturers to revise their quotations. The general inquiry in piece goods has kept up fairly well. Irregular buying has taken place for India, most of the contracts being in light bleaching descriptions and fancies. Numerous offers have been met with in dhooties for Calcutta, but only occasional sales have taken place. Prints and fancies have been in request for Bombay and the up country markets. A few more offers have been met with in white shirtings for China, and rather more demand has been about in dyed goods for Hong Kong. Only occasional transactions have been put through for Egypt and the Near East, but the recent improvement in the demand for the Continent has been well maintained, and some makers of printed and dyed goods have booked moderate lots for South America and West Africa. Home trade buyers have displayed rather more interest in prices. At the beginning of the week a feature of interest in the yarn market was the desire of users to secure larger supplies owing to the possibility of a strike in the spinning section, but in view of the intervention of the Ministry of Labour the pressure for deliveries has fallen off. A fair amount of new business has been done in American and Egyptian counts but export demand has been rather poor.

THE WOOL TRADE.—Bradford.—Though, writes our correspondent, there has been some irregularity in wool values in Australia within the past week, and it has taken fully a fortnight of selling at the London sales to bring prices on to a fairly reliable basis for the home trade, a big quantity of all descriptions of raw material has been disposed of. Both on the Continent and in the West Riding of Yorkshire there has been a very large consumption by combing, spinning and other machinery. It is evident that though there are big supplies of wool, and the adjustment of prices between buying and selling interests is still almost as difficult as ever, there is no real danger of wool accumulating to such an extent as to exert much, if any, depressing effect upon its market value. An outstanding feature of the season so far has been the comparatively small purchases on home trade account in Australian and South African centres. Foreign competition has largely led the way, and credit must be given to these for the improvement in values compared with last season. So far as the home trade is concerned, there have been "bear" influences at work during the past month. This has come from spinners who have been under no immediate necessity to buy tops, but all the time there has been a big consumption for hosiery manufacturing purposes, and encouraging sales of wool for export. The latter is still in evidence. Medium and low Colonial crossbreds are wanted by Continental users. This demand is rather pressing, and the prices offered come so near sellers' ideas that only the remote possibility of a relapse in the market can prevent business being done. In London the opening advance has not been maintained, but all descriptions of wool are dearer than at the close of the July auctions; 5 to 7½ per cent. in merino greasy combing, 7½ to 10 per cent. in fine crossbreds,

and 5 per cent. in medium and low. The Bradford market is quiet, but prices for tops and yarns are steady. Spinners are still trying to buy average merino tops at 22½, and there may be an inclination here and there to accept it, but it is not likely that there will be any big movement much before the next series of London sales.

THE GRAIN MARKETS.

WHEAT.—In the absence of any bullish factors, wheat prices weakened further under the influence of heavy selling pressure, particularly in Canada. Another weakening factor was the reaction in the price of commodities in general. Information relating to the probable supplies of wheat during the current season, though still incomplete, are now sufficient to show that they will be almost equal to those available last year. Under the circumstances, an early substantial improvement in prices seems unlikely unless the acreage under wheat in the chief exporting countries will be reduced considerably. On Tuesday, "December" futures were quoted in Chicago at 49½ cents per bushel, against 52 cents the week before, and 54½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. per 496 lbs., against 28s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 28s.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 3d., against 27s. 9d.; Australia, ex ship, 28s., against 29s. 3d. a week ago.

WHEAT FLOUR.—There has been a reduction in international trade in flour during the past week. North American shipments were 127,000 sacks, compared with 161,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 25s. per 280 lbs., against 25s. last week; delivered London, 24s., at both dates. Manitoba patents, ex store, 23s. 6d. to 25s. 6d., against 24s. to 27s. Australian, ex store, 20s. 6d. to 21s. 6d., against 21s. to 21s. 6d. last week.

BARLEY.—The market in barley was dull. "October" futures were quoted in Winnipeg on Wednesday at 24½ cents, against 23½ last week and 29½ a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s., against 22s. a week before.

OATS.—Continental countries continue to absorb the bulk of Argentine shipments. In Chicago, "December" futures were quoted at 16½ cents on Tuesday, against 16½ per bushel a week before and 17½ a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 3d. per 320 lbs., against 18s. 6d. a week ago; "River Plate," ex ship, 17s. 3d., against 17s. 3d.-17s. 6d.; "Chilean White," landed, 23s.-24s. 6d., against 23s.-24s. a week earlier.

MAIZE.—An increase in offers by Argentine shippers, unaccompanied by an improvement in demand, had a depressing effect on prices. "December" futures in Chicago were quoted on Wednesday at 27½ cents, against 26½ cents on Wednesday of last week and day at 27½ cents a month ago. Quotations in London, Wednesday: 30½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. 3d. per 480 lbs., compared with 20s. 9d. last week; "Plate," ex ship, 19s. 3d., as against 19s. 9d.; "Plate," December-January, 20s., as against 20s. 6d. Yellow maize, ex wharf, was quoted at £5 15s. per ton, against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat:				
1 week to October 8	333,392	68,580	129,267	285,327
6 weeks to October 8	1,153,889	349,723	908,142	1,965,433
Average price of English wheat per cwt.	s. d. 5 8	s. d. 5 4	s. d. 7 0	s. d. 9 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Oct. 1, 1932	Octa. 290,494	Octa. 324,483	Octa. 70,617	s. d. 5 7	s. d. 9 1	s. d. 6 5
Oct. 8, 1932	333,392	246,045	80,464	5 8	7 11	6 3
Oct. 6, 1928	374,763	509,878	98,190	9 2	10 10	8 10
Oct. 5, 1929	354,216	565,878	78,951	9 6	10 6	7 10
Oct. 8, 1930	129,267	305,812	50,234	7 0	9 5	6 1
Oct. 10, 1931	68,580	354,479	52,639	5 4	9 3	6 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Oct. 14, 1931.	Jan. 4, 1932.	Oct. 5, 1932.	Oct. 11, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	55½	62½	47½	48½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	130½	79½	50	55½	52	52
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 91,544,000 bushels, shows an increase on the week of 5,264,000 bushels. Supplies a year ago stood at 47,567,000 bushels.

OTHER FOODS.

SUGAR.—Following the recent period of inactivity in the chief raw-sugar markets, buyers have shown more interest and prices have consequently shown a firmer tendency. December futures were quoted in New York at 1.11 cents per lb. on Tuesday, against 1.06 cents a week before and 1.03 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 11½d. to 6s. per cwt., against 5s. 10d. to 5s. 11½d. a week before, and "March, 1933," at 6s. 2½d. to 6s. 3d. against 6s. 1½d. to 6s. 2d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932	1931	1932	1931	1932	1931
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	—	222	1,256	3,937	12,256	12,687
Liverpool	11,870	13,194	12,423	13,185	54,246	39,434
Total	11,870	13,416	13,679	17,122	66,502	52,121

Last week 12,646 4,689 14,899 25,911 68,311 55,827

COFFEE.—The reaction in coffee prices has continued during the past week in New York. On Tuesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 9 cents per lb. on the corresponding day a week ago. At Tuesday's London auctions demand was poor. Last week's movements of coffee in London were as follows: Brazilian, landed, 408; delivered for home consumption, 74 bags; exported, 76 bags; stocks, 6,755 bags, against 2,104 bags a year ago. Central American, landed, 217 packages; delivered for home consumption, 1,824 packages; exported, 2,893 packages; stocks, 70,135 packages, against 77,718 last year. Other kinds: Landed, 2,986 packages; delivered for home consumption, 2,588 packages; exported, 1,442 packages; stocks, 57,789 packages, against 64,545 last year.

COCOA.—The weaker tendency in the market for cocoa noticeable a week ago persisted during the past week. December futures were quoted at 4.18 cents in New York on Tuesday, against 4.19 cents a week ago and 4.88 a month ago. Accra, November-January, at 26s. 9d. c.i.f. Continent, shows a fall of 9d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 9,008 bags; delivered for home consumption, 6,335 bags; exported, 1,449 bags; stocks, 132,830 bags, against 176,604 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 62,122 packages of Indian and 31,174 packages of Ceylon tea. Monday's and Wednesday's "Indian" auctions were characterised by keen competition, but the "Ceylon" grades offered on Tuesday showed occasional easiness. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
Oct. 8, 1931	d. 14.43	d. 10.43	d. 17.66	d. 8.39	d. 7.51	d. 7.09	d. 14.31
Sept. 15, 1932	10.16	5.90	4.37	3.89	5.49	8.71	8.71
" 22, "	10.09	6.04	9.25	4.82	4.10	5.32	9.02
" 29, "	10.75	6.28	10.05	4.74	4.09	NH	9.57
Oct. 6, "	10.25	6.50	10.45	5.22	4.34	5.69	9.54

RICE.—The spot market was steady, but forward positions declined further. The spot price was again 10s. 3d. per cwt., while the forward quotations at 8s. per cwt. show a decline of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 139 tons; delivered, 266 tons; stock, 1,993 tons, against 1,276 tons a year ago.

POTATOES.—Although there was a good demand for potatoes at the principal markets, the slight advance in quotations noticeable a week ago was maintained. At the London Borough Market, "King Edward," light soil, were quoted at 5s. 6d. to 6s. per cwt., against 5s. 6d. to 6s. a week ago.

SPICES.—The market in spices was quiet but steady. Spot pepper, "Black Singapore," was again quoted at 6½d. per lb. on Wednesday. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 11 tons; delivered, 5 tons; stock, 276 tons, against 599 a year ago. White, landed, 65 tons; delivered, 64 tons; stock, 547 tons, against 585 a year ago.

MEAT.—Meat prices at the Smithfield market have scarcely changed on the week. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 4d. to 4s. 2d. per 8 lbs., as compared with 3s. 5d. to 4s. 2d. last week. New Zealand frozen mutton was 2s. 4d. to 3s. per 8 lbs., against 2s. 4d. to 3s. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,868 tons, against 9,851 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.9 per cent. of the beef supplies, against 84.4 a year ago. Imported mutton, mainly New Zealand, formed 72.4 per cent. of the total supply of mutton and lamb, against 75.3 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets are extremely quiet and generally easy, there being no disposition on the part of consumers or operators to do business pending the disclosure of the full purport of the Ottawa agreements and a study of the schedules attached thereto. Linseed, with large supplies still pressing on the market, is definitely easier. Plate on passage and for shipment to December has declined to £8 15s., the market being entirely without support. Calcutta to London is quoted down to £10 17s. 6d. for October-November shipment. The quantity of

linseed afloat for Europe has increased to 234,600 tons (including 6,400 tons from India), which is 10,500 tons more than last week, and compares with 141,300 tons a year ago. There is still available for export from Argentina and India over half a million tons, or 180,000 tons more than was actually shipped during the remainder of 1931. Cottonseed is without buyers, and new crop Egyptian (black) to Hull has dropped to £6 15s. for shipment. Trade in vegetable oils is only poor, consumers for the most part holding off. Linseed oil has declined in sympathy with seed, and for October delivery ex Hull is quoted £16, and November-December, £16 5s. per ton naked. Cotton oil is neglected. Crude Egyptian ex Hull offers at £22 and refined at £24 10s. without attracting buyers. Other vegetable oils are quiet and in several instances are lower on the week. The demand for oilcakes and meals is below normal for the period of the year.

HIDE, LEATHER AND ALLIED TRADES.—The sales of hides and skins from home-slaughtered cattle were resumed this week after an interval of a fortnight, and for some classes it was noticed that the market was easier. At the Manchester auctions there was no change in the prices realised for ox and heifers, cows and bulls, but at the Leeds market several weights in the former (both clear and warbled hides) changed hands at from 4d. to 4½d. per lb. less money. Cows and bulls were fairly steady. Inquiry for calfskins continues moderately active and prices are inclined to take an upward course. Slightly weaker conditions characterise the position of the imported hide market, with no great amount of business done in any direction. Turnover in regard to South American hides has shown signs of contraction and for most types fractionally lower figures are being mentioned. In wetsalted orders have been placed for Argentine ox at a shade over 4½d., while small sales have been made in cows at 4½d. and Montevideo

ox at 5½d. Business in regard to dry South American hides is confined chiefly to the Continent with B.A. Americanos selling at 6d., Inservibles at 3½d., and M.V. Americanos at 6½d. Moderate business has been done in dry and drysalted Capos at round about the figures which were ruling last week, but for some other sorts of African hides the tendency of the market is inclined to be a little weaker. The Australian market is quiet with prices fractionally lower. There has been no great movement of leather this week, but at the same time inquiry for stock is going around all the time and it is hoped that orders from this will mature very shortly. English and wetsalted bonds continue to be the best feature of the trade done, and there is a steady call for these in most weights. Shoe manufacturers are also taking up supplies of medium and light weight dry hide bonds, but there is little call for the heavier turnover. Producers and distributors of upper stock are meeting with a moderate amount of business all the time for glauc kid and box and willow calf, with most other lines in request to a lesser degree.

RUBBER.—The market in rubber has been dull during the past week. Liquidation was in evidence and prices were slightly easier. In New York, Wednesday's spot price for rubber, at 3½ cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. for April-June, 1933, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 434 tons; delivered, 955 tons; stocks at the end of last week, at 102,712 tons, show a decrease of 521 tons as compared with the preceding week.

DEATH DUTIES

Seventy Million Pounds are taken out of capital each year to meet Estate Duties alone.

The only satisfactory method of meeting the capital loss is by LIFE ASSURANCE.

Write for special booklet "Provision for Death Duties at Minimum Rates."

EQUITY & LAW
LIFE ASSURANCE SOCIETY
18 Lincoln's Inn Fields, W.C.2.

Established 1844 Funds Exceed £10,000,000

You cannot afford to ignore an immediate and certain Bonus of **£30** per cent.

Under the Distinctive System of this Institution the premiums are on so moderate a scale that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or hereby with right to bonuses.

Full particulars and rates will be sent on application.

THE MONEY MARKET.

AFTER being easy over the week-end, money has shown a tendency to become firmer during the current week. On Saturday last $\frac{1}{2}$ per cent. was quoted for both new money and renewals, but the absence of Treasury bill maturities on Monday made new money a little more usable at rates of $\frac{1}{2}$ and $\frac{3}{4}$ per cent., and by Wednesday most borrowers were having to pay $\frac{3}{4}$ per cent. The following day money was again firm, and during the whole week a certain amount of clearing bank money had to be borrowed at

the minimum rate of one per cent. The result of last week's Treasury bill tender came as a disappointment to the market, which had confidently expected a higher rate than the one of 15s. 0.84d. per cent. actually achieved. As a result most of the £46 millions of bills allotted last week missed the market. Early in the week "hot" Treasury bills were quoted at $\frac{1}{2}$ per cent., but the rate gradually stiffened under the influence of firmer money until by Thursday afternoon it was a full $\frac{1}{2}$ per cent. November and December Treasuries were quoted on Thursday at $\frac{1}{2}$ - $\frac{3}{4}$ per cent., and three months' bank bills at $\frac{1}{2}$ - $\frac{1}{4}$ per cent. Standstills were quoted at $\frac{1}{2}$ -2 per cent.

	Sept. 29, 1932.	Oct. 6, 1932.	Oct. 13, 1932.	Oct. 20, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	2 $\frac{1}{2}$ (June 30 '32)
Banks' Deposit Rate...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12 '32)
Discount / Call	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Houses / Notice	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 $\frac{1}{2}$ (May 12, '32)
Market rate ("hot")	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Market rate (3 months' bank bills)	$\frac{1}{2}$ - $\frac{3}{4}$	$\frac{1}{2}$ - $\frac{3}{4}$	$\frac{1}{2}$	$\frac{1}{2}$ - $\frac{3}{4}$	...
Market rate (standstill bills)	$\frac{1}{2}$ -2	1-2	1-2	$\frac{1}{2}$ -2	...

This week's Bank return records a further contraction of £2.2 millions in the note circulation, which has now returned to its September level. As the Bank's gold holdings are unchanged, the Reserve is higher by the same amount. The main changes in the Banking Department are an increase of £15.7 millions in Public Deposits and a decrease of £11.6 millions in Bankers' Deposits. These two movements are complementary, the difference of £4.1 millions between them arising chiefly from the return of notes from circulation and the rise in the Reserve. As usual this transfer of funds to Public Deposits probably represents discrepancies between Treasury bill payments and maturities.

The foreign exchange market was more active this week, and fluctuations were wider and more frequent. A heavy movement set in against sterling. The New York rate went from 3.44 $\frac{3}{4}$ to 3.39 after touching 3.35, from which it was pulled up by official intervention, and Montreal went from 3.78 $\frac{1}{2}$ to 3.70. Paris improved by 1 $\frac{1}{2}$ francs to 86 $\frac{1}{2}$. Brussels went from 24.78 to 24.35. Milan gained a point at 86 $\frac{1}{2}$, and Madrid $\frac{1}{2}$ at 42 $\frac{3}{4}$. Amsterdam went from 8.56 to 8.42 and Berlin from 14.49 to 14.25. Switzerland appreciated sharply to 17.54. The Scandinavian exchanges all moved against us, but in far less degree, Stockholm going from 19.46 to 19.40, Oslo from 19.86 to 19.80, and Copenhagen from 19.28 to 19.26. The South American exchanges are still nominal, Rio being quoted at 5 $\frac{1}{2}$ d. (sellers), or no change from last week; Buenos Aires at 34 $\frac{1}{2}$ d.; and Montevideo at 29d. In the Far East the rupee was steady at 1s. 6 $\frac{3}{4}$ d., as was the yen at 1s. 4 $\frac{1}{2}$ d. Batavia gained 13 points at 4.42. In the forward market dollars went to premium quotations of $\frac{3}{4}$ cent for one month and $\frac{1}{2}$ cent for three months. Paris from par and one centime premium went to 5 and 8 centimes premium for one and three months respectively, these changes indicating the speculative nature of the operations. Milan was unchanged at $\frac{3}{4}$ lira and $\frac{1}{4}$ lira discount, but Madrid was better by $\frac{1}{16}$ at $\frac{1}{16}$ peseta discount for one month and by $\frac{1}{8}$ at $\frac{1}{8}$ peseta discount for three months. Amsterdam firmed up to $\frac{1}{4}$ and $\frac{3}{4}$ cent premium, whilst Switzerland was unchanged at $\frac{1}{4}$ centime premium for both deliveries. The silver market was quiet, but inclined to improve with the decline in sterling, cash prices rising by $\frac{1}{16}$ d. to 17 $\frac{1}{2}$ d., and forward by $\frac{1}{8}$ d. to 18d. on some Indian and Chinese buying. Of the China silver exchanges Hongkong was unchanged at 1s. 4 $\frac{1}{2}$ d., but Shanghai improved by $\frac{1}{8}$ d. to 1s. 9 $\frac{1}{2}$ d.

The main event of the week, therefore, has been the fall in sterling, and it is inevitable that it should have given rise to many rumours. Most of these can be dis-

missed at once. Thus it was suggested that the Government had decided that they would have to resume the American war debt payments next December, and such a rumour is well calculated to give rise to considerable misgivings on the Continent as to the whole debt and reparations question. Here it is sufficient to recall that no provision for war debt payments was made in the Budget accounts, and that in his speech last April the Chancellor stated that if the international debt situation—which he had described as one of balance between incomings and outgoings—were changed and any action were required by us as the result of the Lausanne Conference, he would bring the matter again before Parliament. Another suggestion, to which we alluded a week ago, was that a fair amount of exchange would be needed on December 1st to cover cash repayments to foreign holders of dissented War Loan. The facts of the case are that the bulk of the foreign-owned dissented War Loan belongs to big holders, who not only covered the exchange forward at the time they decided to dissent, but, indeed, based their decision upon the relative level of interest rates at home and abroad and the state of the forward exchange market at that time. In other words, most of the exchange needed to cover foreign War Loan repayments was bought prior to the expiry of the conversion offer on September 30th.

The chief explanation of the fall in sterling is the very simple one of seasonal influences. The fact that sterling had been held by the authorities at between \$3.45 and \$3.50 since the middle of August gave rise to the dual belief that the exchanges had been pegged at that level, and that this week it had been found impossible to keep the peg in any longer. It is arguable that the authorities were a little too rigid in their operations, and continued them to a point which created a false impression; but the plain truth is that the authorities never had any intention of maintaining a rate of \$3.45 or any other fixed rate during the whole of the autumn pressure, and the most that will be done is to smooth out speculative fluctuations and leave sterling free to find its natural level from time to time in an orderly fashion. Circumstances may quite easily arise that will cause sterling to fall by another 10 or even 20 cents during the winter, and such a decline need not cause the slightest alarm. Even if speculative operations affect the course of the exchange at times, in the long run they will cancel out, while temporary intervention will always be practicable in order to keep such operations within bounds. In short, while the authorities have ample resources at their disposal in order to deal with temporary subversive fluctuations, it was not intended that these resources should be used to stabilise the pound at a particular and arbitrary rate at a time when it is as yet quite impossible to determine the long-term normal level of the pound.

While the New York Reserve Bank's rediscount rate remained unchanged at 2 $\frac{1}{2}$ per cent., on Thursday of last week a general reduction was made in other money rates. The official rate on call money was reduced from 2 to 1 per cent., the first change since July 7th; while the rate for 90-day time money was reduced from 1 $\frac{1}{2}$ to $\frac{1}{2}$ per cent. Open market discount rates on 90-day bankers' acceptances were simultaneously reduced by $\frac{1}{4}$ per cent. from $\frac{3}{4}$ - $\frac{1}{2}$ per cent. to $\frac{1}{2}$ - $\frac{1}{4}$ per cent., but the rate on commercial paper remained at 1 $\frac{1}{2}$ - $\frac{1}{2}$ per cent. These reductions in rates are regarded as a belated recognition of the existing plethora of money, and bring the official rates into closer conformity with actual conditions. Even so the "outside" call rate is now only $\frac{1}{2}$ per cent., or the same as the record low point touched in periods of acute trade depression during the past fifty years. The exchanges improved early in the week, but reacted again slightly on Wednesday. The gold influx, however, has again been resumed. For the week ended October 19th, imports amounted to \$3.2 millions and releases from earmark to \$10.1 millions. On Wednesday a small export to Switzerland was reported, representing the first shipment since the middle of August. This was an isolated and insignificant movement, and left the total gain for the week at \$13.8 millions.

PARLIAMENT AND OTTAWA.

THE fate of the Ottawa agreements at the hands of the British Parliament has, of course, never been in doubt; for the Government is in a position to be certain of an overwhelming majority for any measures which proceed along the lines of Conservative or Protectionist policy. In a sense, therefore, the long processes of debate initiated in the House of Commons on Tuesday are only of academic importance. Nevertheless, they will be robbed of some of the unreality which they would otherwise have possessed by the fact that the Liberal Ministers, now free in the specific case of Ottawa to perform the true functions of an Opposition, will use their freedom to shine the full light of public criticism not merely upon the broad policy and the consequences which it entails, but upon the many disquieting details which, in the absence of such criticism, might never have been brought to the attention of the country.

In opening the discussion on Tuesday, Mr Neville Chamberlain endeavoured to present a comprehensive sketch of the Ottawa landscape. His picture when finished was an attractive portrayal of Imperial progress and unity, holding promise of similar progress and co-operation among the nations of the world at large. In the Special Supplement which we publish this week, we present our own picture, which attempts to present the real effects of Ottawa against a hard background of economic and statistical facts. No observer, we are afraid, would recognise that the two pictures were two attempts to treat the same subject.

We do not propose here to retread the ground covered by our Supplement, nor even to marshal into summary conclusions the lessons which the facts and figures teach. We propose rather to follow Mr Chamberlain on to the broad ground which he deliberately chose for his opening essay in the Ottawa discussions. Placing less emphasis than might have been expected upon the supposed specific benefits to be derived by British industry, the Chancellor devoted his main effort to an attempt to prove that the meaning of Ottawa is increased and freer trade in the British Commonwealth leading to greater Imperial co-operation and to Imperial prosperity, which will help in turn to restore prosperity to the world. In the forefront of his speech—one might almost call it his text—he placed the resolution, which he quoted verbatim, in which the participating Governments record their conviction that "by the lowering or removal of barriers among themselves provided for in these agreements the flow of trade between the various countries of the Empire will be facilitated and that by the consequent increase of purchasing power of their peoples, the trade of the world will also be stimulated and increased." The fact is that the terms of this resolution, with which Mr Chamberlain expressed so much satisfaction, represent a vital surrender by the British Government to the high tariff proclivities of the Dominions, and the fact that they were unable to obtain the inclusion in the resolution of a commitment by the nations of the Commonwealth to pursue a policy of general tariff reduction is the first and crowning failure of Ottawa. Mr Baldwin, at any rate, cannot profess to share in the Chancellor's satisfaction. Speaking as the leader of the British Government delegation at the opening session of the Conference, Mr Baldwin explained that there were two possible methods by which existing preferences between members of the Commonwealth could be increased. This could be effected, he explained, "either by lowering barriers among ourselves or raising them against others." He continued, "This choice should largely be governed by local considerations, but subject to them it seems to us that we should endeavour to follow the first rather than the second course, for, however great our resources, we cannot isolate ourselves from the world." But the "local considerations" have clearly had the best of the argument; and a comparison of the agreements with these words is sufficient to show that the result of Ottawa is very far from that which Mr Baldwin set out to achieve. Readers of our Supplement will discover as one of the main features of the agreements the wide extent to which the Dominions have had recourse

to raising their tariff rates against the rest of the world in order to increase the margin of British preference. It is impossible, therefore, to claim that Ottawa has done anything in the direction of leading us towards the restoration of freer trade conditions throughout the world. Its contribution has been in the opposite direction.

The implied answer which Mr Chamberlain's speech gives to this line of argument is that Ottawa will lead to increased prosperity within a huge composite group of nations and that this prosperity will spread abroad. There have been many times during the last decade when those who despaired of the possibility of ever securing general all-round tariff reductions by separate national action have discussed the possibility of dividing the world into economic groups, such, for instance, as the British Commonwealth, the United States of Europe and the United States of America. It has been forcefully argued that these or other large regional agreements might be a tolerable second-best in the event of more general economic co-operation between the nations proving to be impossible. But, even ignoring for the moment the formidable difficulties which such grouping presents to Britain, who occupies a peculiar dual position as both a European and Imperial Power, it is clear that the formation of large groups—and this applies to any preferential system whatsoever—can only redound to the general advantage if two conditions are fulfilled.

The first of these is that the internal barriers within the group must be so drastically reduced that the principle of division of labour between the groups can be carried much farther than would otherwise be the case and thus increase the efficiency of production. If this condition is not realised there will be no increased prosperity. The Ottawa agreements only go a very little way in this direction. Indeed, Mr Mackenzie King is of opinion that so far as Canada, at all events, is concerned they go no distance at all, for in his view the tariff remains substantially on a prohibitive level even against Great Britain. The second condition is that the tariffs of the group against the rest of the world should be so moderate that those outside the group can buy and sell freely enough with its members to be able to share some of its prosperity and thus offset the loss which they must inevitably suffer through the diversion of trade from its former channels. This greater liberality of policy towards the outside world has certainly not been achieved by Ottawa. There is no hopeful approach to the restoration of world prosperity or of the prosperity of Britain, who, if her present standard of living is to be maintained, must depend upon the largest possible intercourse with the world at large, by dividing the globe into hostile economic camps trading as much as possible within their own borders and as little as possible outside. The group with the moderate external tariff wall is a conceivable *pis aller* under certain circumstances. The group entrenched behind a high fence raises a vista of economic warfare likely to lead to political warfare; and so far as this country is concerned membership of such a group threatens a permanent curtailment of world commerce by which alone we can ever hope to live prosperously. In so far as Ottawa has created a group, it has created the worst of these two types.

For the rest, this week's debate followed expected lines. Mr Lansbury scanned the agreements in vain for any hope of more work for the unemployed. Sir Herbert Samuel slightly elaborated his reasons for resignation and for opposition to the Ottawa legislation. Mr Hannon voiced the blessings of the arch-protectionists, and from the Liberal and Labour benches came the unanswerable question: "How will Ottawa help the British farmer?" It was left to the Prime Minister to claim that the pledge given before the election that the fiscal problem would be "studied" before any permanent tariff system was adopted had been fully observed. For ourselves, we have never heard of any systematic examination of the problem, such as that which millions of free traders believed to be promised, and in consideration of which they were persuaded to give their support to the "National" cause.

THE DANGER TO EUROPE.

THE gleam of light which seemed to flicker for a moment over the gloomy European landscape last week has proved, apparently, to have been a will-o'-the-wisp. The illusion only lasted so long as the upshot of the Herriot-MacDonald conversations remained unknown; for the official *communiqué* on the results made it clear at once that this conclave had equalled in ineffectiveness, the more fruitless of the many consultations between statesmen that punctuated the course of the crisis last year. Last week, as always, an agreement was reached. That is common form when statesmen are transported long distances in order to confer with one another. *Tantus labor non sit cassus*. Unfortunately, however, this agreement, like so many of the kind that have gone before it, has left unsolved the very problem with which the MacDonald-Herriot conversations were intended to deal. The problem was—and is—to find ways and means of satisfying the German demand for equality of status and equity of treatment in the matter of disarmament, with a view to inducing Germany to reconsider her decision to hold aloof from all further proceedings of the Disarmament Conference. Apparently M. Herriot and Mr MacDonald were sufficiently impressed with the need of solving this problem to think it worth while to meet in order to talk it over. But, when they had talked they announced an agreement with which—as was immediately revealed—Germany's concurrence, which it was their primary object to secure, would not be forthcoming. They decided to convene a four-power conference; but in the same breath they decided that the place of meeting should be Geneva—thus inviting the Germans to come to the place which they had already refused to visit, in order to discuss whether the visit was to be paid! "Distinguo," Sir John Simon may retort. "In inviting the Germans to a conference at Geneva we are not demanding their re-attendance at the Disarmament Conference, for Geneva is not one of those points that have position but no magnitude. There is room in its hotels for two perfectly distinct conferences to take place simultaneously." But, alas for this argument, the ground has been cut from under the British Foreign Secretary's feet by the French Prime Minister's statement—made before he left London—that Geneva would be the best place for the projected four-power conference, because "that would be the place to discuss" a "problem which naturally falls within the framework of the Disarmament Conference." If the German Government's refusal had not been decided upon already, these words of M. Herriot's would have sufficed to make it a certainty.

Thus we are back in the familiar situation in which every statesman is in a position to assure his constituents that it is all the foreigner's fault. Herr von Papen can represent last week's abortive Anglo-French agreement as a French device for getting Germany to eat her own words and return to the Disarmament Conference by a roundabout route without having secured those assurances which the German Government has publicly declared to be a *sine qua non*. So von Papen can congratulate himself on having exposed and frustrated M. Herriot's knavish little trick! On the other side, M. Herriot can represent the German Government's refusal to attend, at Geneva, a four-power conference which it is willing to attend at London or at The Hague, as a frivolous display of childishness, on the best construction, and at worst as a deliberate act of sabotage which is intended to give the Disarmament Conference its *coup de grâce* and thus to open the way for Germany to re-arm. In insisting upon Geneva, M. Herriot can say to his countrymen he has stoutly stood up for the cause of France, which is identical with the cause of the League and the cause of the small countries. As for Mr MacDonald, he can now say to the majority in Parliament, on whose support he depends, that he has done his level best—as indeed both he and the Foreign Secretary have done—to bring the French and Germans together, but that, pending a Franco-German *entente* he does not feel it timely to initiate any fresh scheme of disarmament. Thus, as usual, the statesmen emerge from their latest performance all admirably

covered as far as their personal political standing is concerned, while the peoples—whose life and property and happiness are the stakes of the diplomatic game—emerge in greater danger than ever.

How is the mess to be cleared up? There are two immediate alternative courses. The first is for the French and British Governments to pluck their brand from the burning by consenting to some other city than Geneva—and, while they are about it, to some other country than Switzerland—as the place where the four-power conference is to meet. On their own showing, they have no shadow of excuse for allowing the conference to fall through on account of Anglo-French intransigence on this point. For if it is a good thing (and they have committed themselves to this thesis) that the German case should be discussed outside the Disarmament Conference at all, then it cannot be a bad thing to conduct the discussion at any place that Germany may prefer. On the other hand, if M. Herriot is right in saying that the problem ought to be discussed "within the framework of the Disarmament Conference," then he has no excuse for having agreed to a separate four-power conference, either at Geneva or elsewhere. In our view the best course now is to retrieve the four-power conference by consenting to hold it outside Switzerland, on the understanding that the whole purpose of the four-power conference is to bring about the resumption of the Disarmament Conference at Geneva, with the full participation of Germany, at the earliest possible date.

The alternative course is to let the proposal for a four-power conference drop and to resume the work of the Disarmament Conference, with Germany conspicuous by her absence. The advocates of this course are calculating that Germany's menacing absence would stimulate the heavily armed Powers to agree among themselves to such drastic reductions of their own armaments that Germany would subsequently be willing to return to the fold. To this argument we can only reply, "Remember the Peace Conference of Paris!" Did Germany's absence from the Peace Conference conduce to a good peace settlement? The question answers itself; and, indeed, it was obvious that in diplomacy, which always lives from hand to mouth, "out of sight is out of mind." If the Disarmament Conference re-assembles without German participation, the other delegates will assuredly agree. We take that for granted. Only—if Germany is out of the room they will courteously and generously concede to each other a scale of armaments that will put Germany's concurrence out of the question once and for all. In fact, another session of the Disarmament Conference under these conditions would merely reproduce the results of last week's conversations in London on the grand scale.

We hold, then, that the French and British statesmen ought to meet the German and Italian statesmen at any place which the Germans may find agreeable, and ought then to offer so substantial a reduction in French and British armaments that the Germans cannot but feel that their claim has been fairly and squarely met. What is wanted now is a Franco-British gesture in the manner of the American gesture which assured, at the outset, the success of the Washington Conference eleven years ago. And there is no uncertainty about the kind of offer which the French and British Governments ought to make. It is set out simply and forcibly in the National Memorial on the Disarmament Conference, published this week, which has been presented to the Prime Minister by a number of authoritative and representative British signatories.

The Disarmament Conference must be saved; for the picture of what Europe will be like, if the statesmen fail to save it, is being fast filled in, and its features are appalling. A Germany throwing the whole peace settlement to the winds by re-arming and recalling the Hohenzollerns; a Russia alienated once more from a capitalist world with which she had been gradually coming to a *modus vivendi*; an open conspiracy between the militarists in every country to play into one another's hands; that is not the Europe which the people of this country want, or the people of France or Germany either. The peoples are the statesmen's true constituents, and the peoples have given the statesmen a clear mandate. The statesmen's true

interest, as well as their plain duty, is to carry this mandate out before it is too late. The time factor is so serious that every day's delay renders a settlement gravely more difficult. A few weeks ago the German Government were willing, and politically able, to consent to a *de facto* inferiority in armaments for a period of years, provided the principle of the right to equality of status was fully conceded. But the situation is changing fast—and for the worse. It is not merely that exasperation at the quibbles and delays of the diplomatic game is having a progressive effect upon the temper of the German people. A further factor has begun to operate. There is a growing belief in Germany that fears of German re-armament may cause Poland to decide upon making an attack upon East Prussia before her opportunity passes. The rapidity with which this belief (right or wrong) is spreading, means that every successive day of disarmament deadlock makes it more and more difficult for the German Government to adhere to their offer to accept, temporarily, *de facto* armament inferiority. If they are forced to abandon it, the fat is in the fire. Delay, therefore, is something that the world cannot afford. The Franco-British statesmen must set aside trivial issues and agree at once to talk with the German statesmen anywhere and at once.

THE PRESIDENTIAL CAMPAIGN.

(BY AN AMERICAN CORRESPONDENT.)

THE next President of the United States will be elected on November 8th. No Republican candidate at this late stage of the campaign has ever looked so badly beaten as President Hoover. The straw vote of the *Literary Digest*—in previous years it has shown no more than a 10 per cent. margin of error—gives Franklin D. Roosevelt, the Democratic candidate, a three to two lead. Out of the 2,500,000 straw votes recorded by the middle of this month Mr Hoover had received 973,367 to Roosevelt's 1,473,446. In this poll Mr Hoover was ahead in only the six New England States and New Jersey. A slight improvement in Republican chances set in this month as a result of the President's tour of the middle west, and this undoubtedly is not yet reflected in the poll. But the gains he must make to draw level are almost impossibly large.

The earliest pointer towards the defeat of President Hoover was the loss of the mid-term congressional elections two years ago. Only twice in the history of American elections has the party which won the mid-term congressional elections failed to capture the Presidency two years later. On one of these occasions—the Hayes-Tilden campaign of 1876—the Democrats, after winning the congressional elections two years before, saw Tilden pile up a popular majority of 250,000, and lose the Presidency by one vote in the electoral college. In 1914 the Democrats lost the congressional elections, but re-elected President Wilson in 1916. But here the fight was close and the issue was determined by a Republican defeat in California

through an unexpected turnover of a few thousand votes. The national crisis of the war unquestionably saved Mr Wilson from defeat. The Republicans for the past two years have been hoping that the national crisis of the economic depression would save Mr Hoover too. But it is not the nature of an economic crisis to popularise governments. When there is distress people vote against the government of the day.

This, as has always been foreseen, is the great factor in the American election; and no other issue, not even the liquor question, has changed the fundamental character of the campaign. The truth is that President Hoover is losing the election; Mr Roosevelt is not winning it. Mr Roosevelt is not proving to be an especially popular candidate. Though a Roosevelt, he cannot claim quite the magnetism of his distant cousin. He is failing to arouse any great enthusiasm. But he is not anxious on that account, since President Hoover's unpopularity, whether deservedly or not, is very widespread. Mr Garner, the Democratic candidate for the Vice-Presidency, was asked by a reporter if he were not going to make more speeches. "We have got this election won now," he replied, "and I'm not going to do anything to lose it."

In the matter of defining policy the Democrats have been consistently cautious since the beginning of the campaign, and indeed during the period when he was working for nomination Mr Roosevelt was equally cautious. His caution kept him from siding against Tammany and hauling Mayor Walker of New York before him in the fruitful days of the Seabury investigation, and his long-delayed intervention, which ended in Mr Walker's resignation, while an act of courage, was also a recognition that he could not afford to be inactive any longer. His attitude on the soldier's bonus, it is now promised, will soon be revealed, and Wall Street the other day had a happy spell of rising prices on the rumour that he would be against it. "Al" Smith has made peace with Mr Roosevelt publicly, greeting him in the presence of a throng of reporters with: "How are you, you old potato?" Mr Smith, an impulsive man, has been against the bonus consistently, and has written against it in the heat of the campaign. Possibly a pledge from Mr Roosevelt to follow his example will be the outcome of this reconciliation. But Mr Roosevelt has so far done nothing to prevent him from getting support from the American Legion under their assumption that he is their man.

This temporisation is a familiar strategy, and many a candidate in America, Republican and Democrat, has employed it before. But it reveals a quality in Mr Roosevelt, a quality of patience, which Europe, if it has to deal with him in the White House, may have to take into account. *Life*, the humorous weekly, said bitterly of Mr Roosevelt: "He reminds us of Jack Dempsey. Dempsey has three great gifts, bobbing, weaving and punching. Mr Roosevelt has two of these." Lack of the "punch" no doubt explains why Mr Roosevelt has not been a more popular candidate. It need not mean that he is weak in public office, and his record denies that he has been. He was

decisive enough when he did finally come to grips with Mayor Walker. As Governor of New York he has left a better history than his detractors and even some of his friends predicted for him. This has been his story ever since he was a young man. He has invariably done better than was expected of him. He is cautious, and he wants time to find his own mind. But he has the wisdom to know what it is he does not understand, and the willingness to seek advice.

The reconciliation with Mr Smith has been a great boon to Mr Roosevelt, since it gives him a united party. He has had further good fortune in winning the open support of the progressive Republicans, Senator Norris of Nebraska and Senator Johnson of California. The help of Senator Johnson probably means that the Democrats will carry this, President Hoover's home State. Senator Norris, as the ablest of the insurgents, will bring him many scattered votes which otherwise might have gone to Norman Thomas, the Socialist candidate. It must not be forgotten that, if Mr Roosevelt is elected, it will be by votes which normally are Republican. In the *Literary Digest* poll, of every hundred who voted for Mr Roosevelt, only about 56 had voted for Mr Smith in 1928. The other 44 were disgruntled Republicans. There are disgruntled Democrats too, but they make up less than 7 per cent. of Mr Hoover's votes.

The elected President does not take office until March 4th, and, if President Hoover is defeated, America, and Europe too, must face the inconvenience of dealing with a "lame duck" administration for four months. It has been suggested that President Hoover, if defeated, will at once name Mr Roosevelt Secretary of State, then resign along with Vice-President Curtis. According to the constitution, Mr Roosevelt would then at once become President. This convenient procedure is hardly likely to be followed, though the American people may be more ready now to amend the constitution and put forward the date of the inauguration. The gap between election and inauguration was made so large only because of the long time of travel by stage coach and horseback in the eighteenth century from the outer reaches of the then thirteen States.

An immediate question would be raised by Mr Hoover's defeat as to whether this would affect the date of the World Economic Conference. If America were to be represented by a delegation which did not command the full support of the Roosevelt administration, the Conference might better be deferred until the new President could name his own representatives. But the question in reality will not arise, as Mr Hoover could be trusted to let Mr Roosevelt choose his own Democrats to the delegation. Narrow partisanship in foreign affairs is fast disappearing in America, as is evidenced by the presence in London at this moment of Mr Norman Davis, a Democrat, representing the United States in disarmament talks with the British Government. So far as the American position counts, the World Economic Conference can be held as soon as would otherwise be found convenient. The American delegation, one imagines, would be much the same whichever candidate wins the election.

THE MEANS TEST.

The statement made by the Prime Minister on Wednesday night that the Government's policy with regard to the Means Test would be announced next week is evidence of the Cabinet's realisation that the system inaugurated a year ago has given rise to serious difficulties and discontent. In the following article a correspondent who is closely conversant with the problems involved reviews the situation and suggests lines of reform. Some of his suggestions will arouse considerable controversy, but we print the article as a pertinent contribution to an urgent and important discussion.

A storm of controversy is blowing up on the question of the Means Test as now applied to about a million of our unemployed citizens. Indeed, reports from various parts of the country show that the critics will find plenty of

grievances to go upon, and the Opposition in Parliament are audibly sharpening their knives for an attack. The question is whether they will spoil their case by the extravagance of their demands. How have the difficulties arisen? To understand them it is necessary to recall the events of a year ago. Faced by the financial crisis, this country had somehow to make economies in the vast unemployment benefit charges which were piling up against the Exchequer. Nor was there any doubt as to what had to be done. The practice of paying fixed rates of benefits as a legal right for unlimited periods could not continue; a term had at last to be put to the ten-year-old confusion between contractual insurance and a national relief scheme for the unemployed. Preceding Governments had glanced at the grim necessity, but all had turned away to less invidious tasks. The crisis, however, precipitated matters, and the National Government took the plunge.

On November 12, 1931, by Orders-in-Council, two kinds of restrictions were imposed. Firstly, a cut of 10 per cent. was made in the fixed rates of standard benefits, the effect of which was to grant 15s. 3d. a week, instead of 17s., to a man over 21. Secondly, a duration limit of 156 days was fixed, and those applicants who had not paid 30 contributions in two years (that is, had not had insured work on one or more days in each of 30 weeks) ceased to be entitled to any benefits as a right. For them and for those who had exhausted their 156 days a new form of State aid was started, called Transitional Payments, which could be drawn, not as a right, but, like ordinary outdoor relief, only in proportion to unsatisfied basic needs. The assessment of need and the determination of payments was entrusted (by voluntary agreement, not as a statutory duty) to the Local Authorities. Payments were still to be made at the exchanges; they were to be wholly in money and free from any condition as to task work; they were never to exceed the new rates of standard benefits; but otherwise they were to be assessed by the same local committees and on the same local standards as ordinary outdoor relief for the able-bodied class. Only those between 18 and 65 years of age were eligible, and all the usual tests of genuine unemployment had to be satisfied at the exchanges. To these payments no duration limits were fixed.

Apart from its immediate effects, this new policy had some historical significance. At the end of twenty years of persistent effort by the State to take over direct responsibility for unemployment and to put relief on a national rather than a local basis, the Local Authorities had, after all, to be recalled to take a large share in the task. Similarly the desperate expedients which had been adopted in order to extend the right to a fixed rate of benefit to all the unemployed who had ever worked in an insured trade had at last to be abandoned. Relief on a basis of rights had to be helped out by relief on a basis of needs.

To the unemployed, and especially to those who had suffered long spells of enforced idleness, the change came as something of a shock. They resented the new inquiry into their family circumstances, coming on top of the cuts in their rates of benefit. Moreover, certain Local Authorities adopted a low level of assessments in harmony with their local tradition of a strict Poor Law. On the other hand, in some areas, where Labour elements were in control of local policy they said, "We will not treat these unemployed men as if they were applying for outdoor relief. We refuse even to cross-question them as to their means. Let them all, or nearly all, be assessed at the full rate."

The trouble was, patently, that the Minister of Labour had no adequate control. Like the Minister of Health in respect of the Poor Law administration, he had taken no powers to regulate, but only to supersede local Public Assistance Committees. And the weapon of an auditor's surcharge was denied to him, because the local authorities were to bear no financial responsibility. Even their costs of administration were paid by the Exchequer. So there has, really, been nothing, except the maximum rate, to curb the freedom with which some 200 independent bodies

have been spending a national fund during the last twelve months.

Having said that, one has to admit that, on the whole, the emergency scheme has worked surprisingly well. All but about a dozen authorities have so far sympathetically observed the spirit of the Order in Council and co-operated with the Ministry of Labour. A year's experiment suggests that, in principle, the plan is a good one. It should be mended, not ended. There is no necessity for setting up a wholly new national scheme, which, while it might dispense with all local aid, would duplicate existing local machinery. What is indicated is a still closer partnership between the central and local bodies. Let it be the statutory function of local Public Assistance Authorities to co-operate with the Ministry of Labour in carrying out a reasonably uniform scheme of payments, "Needs Test" and all; and let some fraction of the cost be borne upon local funds. In London, the London County Council, which is playing its part as well as any Council, is said to be willing to fall in with such a plan, even with the financial side of it. Other authorities would doubtless follow suit? But, what of the depressed areas in Wales and in the North? Admittedly there are localities that could not afford any new burden, but even hard cases might be met in a carefully adjusted and not illogical scheme. Above all, it is desirable that the Ministry of Labour or a Statutory Commission should lay down the broad lines of a uniform "Needs Test" and the limits within which variations could be permitted.

The important thing to remember is that a new and probably permanent social service is now in the making. It will be a complicated task. How should this relief scheme be related, on the one hand to the national services, like Employment Exchanges and Unemployment Insurance, and, on the other hand, to the local administration of the Poor Law, Education and Public Health? Before long we shall hear what the Royal Commission on Unemployment Insurance has to say on the matter, and their conclusions should be carefully examined before the new legislation is presented to Parliament. Meanwhile the whole idea of a "Means Test" is condemned in some quarters; the Labour Party has already implied that sentiment in its proposed Vote of Censure. This sweeping condemnation, however, is unreasonable. Outside the limits of contributory insurance benefit, no legal right to fixed rates of payment, with allowances for dependents, can properly be given to all kinds of persons, whose only common circumstance is that they are willing to work for wages. Some adjustment of relief to meet the widely varying needs of individuals and families is essential. And that there is a real danger of giving money where it is not needed is proved by the experience of the last year. About 20 per cent. of the applicants for transitional payments have been found to have sufficient resources and have received what is called a "nil determination." Instances of considerable possessions have not been few. Nor is it at all likely that the local authorities have recklessly made "nil determinations"; for the only sequel would be demands for Poor Law relief, the cost of which is a local charge.

A reasonable estimate, based on the figures given in the *Labour Gazette*, is that little more than half the claimants during the year have been assessed as needing the full rate of payment. Altogether, it will probably be found that some £20,000,000 will have been saved to the Exchequer. Economy is not everything in dealing with a vital social problem, but savings of this order are not lightly to be thrown away. If, therefore, the present dual arrangement of a limited insurance benefit, backed by a locally administered relief scheme for the non-benefited, can be improved in detail and dove-tailed with the other social services, it should be retained; but public opinion will never accept the second part of the arrangement unless it can be made to work fairly as between man and man and with reasonable uniformity in all parts of the country.

THE MOTOR INDUSTRY.

2. Commercial Vehicles.

(BY A CORRESPONDENT.)

THE commercial vehicle manufacturers have been less successful than the manufacturers of private cars in maintaining demand at its pre-depression level, although the past year 1931-32 is the first year which has shown any material falling off in new registrations. The slight shrinkage in the previous year was more than counterbalanced by the increasing average weight of the new vehicles. New registrations of goods vehicles amounted to 43,077 for the eleven months October, 1931, to August, 1932, a decrease of 9.9 per cent. on the previous year, when the total was 47,336. New registrations of passenger vehicles of nine seats and upwards showed a much more serious decrease of 35.2 per cent. for the eleven months from 6,981 for 1930-31 to 4,653 for 1931-32, while registrations of new taxicabs fell from 1,122 to 657 over the same period. The change in the position over the past year, however, is not by any means entirely attributable to the trade depression. Omnibuses and motor-coaches have, since April, 1931, been under the jurisdiction of the Area Traffic Commissioners, whose policy has broadly been to forbid any extension of road services, except in areas where the question of competing with the railways does not arise, and rigorously to prune down the many services begun between the passing of the Road Traffic Act in August, 1930, and the appointment of the Traffic Commissioners the following April. The result has been that the home demand for large passenger vehicles is now mainly a replacement demand, and the market is still glutted with the large number of vehicles which have been taken off the roads through the withdrawal or amalgamation of the services on which they were operating. The reduction in new registrations in the different classes of passenger vehicles is shown in the following table:—

NEW HACKNEY REGISTRATIONS, OCTOBER TO AUGUST.

	1930-31.	1931-32.	Percentage Inc. or Dec.
Up to 4 seats	966	562	41.8 Dec.
5-8 seats	156	95	39.1 "
Taxicabs	1,122	657	41.4 Dec.
9-14 seats	554	140	74.7 Dec.
15-20 "	931	902	3.1 "
21-26 "	561	174	69.0 "
27-32 "	2,070	1,419	31.4 "
33-40 "	482	310	35.7 "
41-48 "	409	411	0.5 Inc.
49-56 "	1,921	1,025	46.6 Dec.
Over 56 seats	53	272	413.2 Inc.
Omnibuses and coaches	6,981	4,653	33.2 Dec.

The decrease is more marked for vehicles of under 26 seats than for vehicles of greater seating capacity, and there has been an actual increase in the largest class of 56-seaters and upwards. The explanation is that, where services have been limited by the Traffic Commissioners, operators are putting on bigger vehicles, so that, in spite of a shrinking vehicle-mileage, they may maintain their seat-mileage and revenue-earning capacity. This tendency will probably be intensified on all the denser traffic routes, and the manufacturers of the bigger vehicles should benefit from it as soon as the replacement demand assumes larger proportions. At present a very considerable percentage of the largest classes of passenger vehicles are manufactured by two firms, A.E.C. and Leyland, and

the steady absorption of the smaller omnibus operators by a few groups of holding companies will probably increase the proportion of the industry in the hands of the more powerful manufacturers. There is, under present circumstances, no reason to expect any further reduction in the rate of sales of omnibuses and motor coaches; at the existing level new registrations are barely sufficient to keep a fleet of 48,000 public service vehicles permanently on the road by filling up the gaps, and, as the demand for passenger road transport facilities is being extraordinarily well maintained, and the tendency has recently been for fares to harden slightly, operators are for the most part in a good financial position to carry out a proper programme of replacement, and once the present temporary excess of vehicles has been absorbed, the home market should provide a regular and stable demand; this will be less than in the years of rapid expansion which culminated with the appointment of the Traffic Commissioners, but will supply a bread-and-butter basis of home supply from which the export trade can be attacked. The high standard of development in this country in both the design of omnibuses and the organisation of the omnibus industry should be a great advantage to British manufacturers.

The future of the goods vehicle industry will depend very much on how far the proposals of the Salter Committee become the basis for the next transport legislation. Any steeply-graded taxation on the larger vehicles based on an increased licence duty may be expected to have the effect of increasing the annual mileage of these vehicles which continue in use, in order to reduce the tax cost per mile. There may be a tendency to increase the use of lorries of three to four tons, the tax on which will either remain the same or only be increased by a moderate amount, if the Salter proposals are adopted, at the expense of the larger vehicles. But on the other hand the increasing proportion of lorries of over five tons unladen weight, which has been characteristic of new registrations over the past year or two, is by no means entirely due to the relatively low licence duty payable by such vehicles; it is to an even greater extent attributable to the extremely rapid technical advance in the design of heavy lorries, which, by increasing their potential life and reducing their repair bills, has had the effect of substantially reducing their running costs compared with the position two years ago. It is significant that, in spite of the publication of the Salter Report in July, there was an increase in new registrations of vehicles of over five tons in August. The rapidly increasing popularity of Diesel-engined vehicles, of which there are now over eight hundred in use, the majority of them coming into the "over five ton" class of lorry, is also tending to focus the attention of buyers on large vehicles, although a further decline in new registrations of steam lorries must be set against the comparatively healthy registrations of internal combustion engined vehicles.

REGISTRATIONS OF NEW GOODS VEHICLES, OCTOBER TO AUGUST

	1930-31.	1931-32.	Percentage Inc. or Dec.
Showmen's vehicles	12	2	83.3 Dec.
Agricultural vehicles	153	183	19.6 Inc.
Other goods (internal combustion):			
Not exceeding 12 cwt.	3,889	5,577	43.4 Inc.
12 cwt.-1 ton	8,093	6,419	20.7 Dec.
1-1½ tons	10,095	6,320	37.4 "
1½-2 "	16,517	15,238	7.7 "
2-2½ "	3,568	4,723	32.4 Inc.
2½-3 "	1,489	1,443	3.1 Dec.
3-4 "	1,243	850	31.6 "
4-5 "	1,077	801	25.6 "
Over 5 tons	1,365	1,323	3.1 "
Total	47,336	42,694	9.8 Dec.
Steam-driven	244	145	40.6 "
Electrically-propelled	52	53	1.9 Inc.
Total—all goods vehicles	47,797	43,077	9.9 Dec.
Tractors	388	310	20.1 Dec.

Some compensation for the decline in the home market may be found in the improvement in exports, in quantity if not in value. Over the eleven months October to August, exports amounted to 6,785 vehicles and chassis, valued at £1,847,257 in 1931-32, compared with 5,066

units, valued at £1,729,861 in 1930-31. Although new registrations of lorries up to three tons would not be affected by an increase in taxation of the heavy-weights, the licensing proposals of the Salter Committee, if brought into force, might nevertheless have serious reactions on the manufacturers of the lighter classes, as the recommendations would in fact mean that the haulage industry would be prevented from expanding, in the same way as the omnibus industry, since licences would be refused where it could be shown that alternative transport facilities were adequate, or that congestion would be aggravated if the licence were granted. There might even conceivably be a reduction in the scope of the haulage industry, as apparently vehicles would be restricted to particular routes by the licensing system, whereas a large proportion, probably the majority, of haulage vehicles do not at present work on regular routes, but get loads where they can and take them anywhere. The haulage industry is said to embrace 30 per cent. of the goods vehicles in operation, and, on account of the fact that hauliers usually operate the heavier types of vehicle and run larger mileages than private owners, it is probable that considerably more than 30 per cent. of the annual output of goods vehicles, especially if measured in value, is absorbed by the haulage industry. There was an increase in August, 1932, of 8,000 in the number of goods vehicles in use, compared with August, 1931, the total being now 357,000, and the loss of this annual expansion would be a serious blow to lorry manufacturers, who, like the omnibus manufacturers, would be compelled to rely entirely on the replacement demand to keep their works employed.

ASQUITH.

Not a great part of this fine life* of Asquith which his latest biographers (an ideal combination) have presented to the public deals with his activities in the world of finance and economics. That is natural; because the things for which he fought there have become so generally accepted that they seem now, rather unfairly, dull and uninteresting. The main themes of his three Budgets, economy, debt reduction, the graduation of income tax, "cuts" in the fighting services, the cautious financing of social reform schemes, even the reduction of taxation whenever possible upon essential foodstuffs, like sugar, are almost commonplaces in the modern Chancellor's lips. Some of them were by no means so commonplace in the first years of the century, some were fiercely criticised and resisted. Even the fundamental Free Trade argument, never more lucidly and incisively stated from any public platform than by Asquith, has ceased largely to be challenged. What the intelligent protectionist to-day does is to pay lip service to the doctrine and then declare it inapplicable to the abnormal conditions of a world in chaos. This journal may claim to have had some part in the formulation of his ideas on such subjects as these; for in earlier years at the Bar he spent some of his leisure time on serious journalism, and from 1880 to 1884 contributed a regular weekly article to the *Economist*, usually on some prominent topic in the realm of foreign politics. Researchers into the *Economist* files of those years may not find it difficult, although his articles were unsigned, to detect his penmanship and to note the remarkable control over the English language which afterwards developed into the great asset of one of the foremost of parliamentary orators.

Asquith's first Budget really was "humdrum." He took a penny off tea, abolished the tax of a shilling a ton on exported coal, and made a beginning of economy by a cut of £1,500,000 in the Naval Estimates (which greatly alarmed and angered the Admiralty). But the Budget of 1907 was notable in its way because it witnessed the beginnings of the distinction, much criticised

* "The Life of Henry Herbert Asquith, Lord Oxford and Asquith." By J. A. Spender and Cyril Asquith. Hutchinson & Co. 36s.

at the time, between earned and unearned income. By means of a temporary addition to the sinking fund, Asquith laid the financial foundations in this Budget for his future old-age pensions scheme. He did one thing more.

"In 1907 he was looking ahead to yet another task which he assigned himself for the following year, and that was, as he told the House, to 'sweep away root and branch' the whole system by which assigned revenue, the proceeds of Imperial taxes were intercepted from the Exchequer and handed over to local authorities; and to substitute for it the payment of equivalent grants based on the existing receipts but not dependent on or absorbing the yields of particular taxes. To release the Treasury from this bondage Asquith held to be imperative, and his achievement of that object may be reckoned still as one of his principal contributions to Treasury practice."

His third and last Budget (introduced as Prime Minister after he had ceased to be Chancellor) rounded off and completed the work of the previous two. He reaped the reward of his debt reduction and revenue building in a realised surplus (for 1907-08) of £4,726,000 and an estimated surplus for the following year of £4,901,000. On the strength of this he not only introduced his old-age pensions scheme but he reduced the sugar tax from 4s. 2d. to 1s. 10d. per cwt. at a cost of £3,400,000 to the Exchequer. The loss of this money, as a matter of fact, was severely felt when the naval scare before the next Budget led to new large demands from the Admiralty; and his own hesitation about the wisdom of this reduction was justified by the event. But at the time the caution and providence of his finance generally were widely recognised and acclaimed; and not unjustly.

It all looks a little small and unpretentious by the side of the 1909 Budget and the colossal figures of post-war finance. But these three Budgets undoubtedly paved the way for Mr Lloyd George's famous financial adventure; and Mr Lloyd George himself has testified that but for Asquith's emphatic and rather unexpected support in the Cabinet, his own scheme (especially the land taxes) might never have been accepted.

The most important new light which the book sheds on public events bears on the relation of the Crown and the Prime Minister during the constitutional crisis arising out of the struggle with the peers. Asquith's difficulty, as a meticulous constitutionalist, was to avoid even seeming to infringe the King's prerogative by anticipating and announcing beforehand what the King would do in certain circumstances; and at the same time to hold in check the reasonable suspicions and fears of his followers that in the end they might be defeated by a refusal of the Crown to create peers. Asquith handled this very delicate situation with the skill of a virtuoso. He strained the patience of his supporters to the utmost; but the event in this case justified his patient wisdom, and the whole story (now fully told for the first time) illustrates a strain of fineness and scrupulosity in his character which won for him deservedly the respect of one Sovereign, the affection of another, and the unquestioning confidence of both.

If he was not a great War Minister, it was perhaps never reasonable to suppose that he would be. He was over sixty years of age when the war broke out. He was essentially a Parliamentarian, who had lived all his life on the assumption of government by consent; and war is the negation of this assumption. He was a lawyer, who could never bring himself to believe that great bodies of responsible men would deliberately set themselves to defy the law. This incredulity hampered him fatally in dealing with the miserable Ulster business, culminating in the Curragh mutiny (the clearest account of this yet published appears in this book). Yet it is possible to undervalue his usefulness in the early days of the war before opinion had hardened and the problem became purely military. It is very doubtful whether any one else could have kept together so relatively successfully a Cabinet containing such an extraordinary variety of such highly combustible elements. His stolid, strictly civic courage—his sturdy contempt for the terrified financiers weeping into their teacups—were great public assets. He was admirably industrious, and he could act quite decisively when he chose. Where he failed was in his utter incapacity to

make the emotional appeal which in times of strain is essential for successful leadership. "In war," Mr Bonar Law told him with one of those flashes of insight of which he was sometimes capable, "you must not only be active; you must seem active." But Asquith could not pose. The disability was part of his greatness; it was also the cause of his downfall.

To that rather grim story the book adds little. The ultimate truth can never be known. Lord Beaverbrook's picture of a dark Machiavelli craftily using all the resources of his position to trap and crush his enemies is out of drawing with any recognisable picture of Asquith: but the vision revealed to his extreme supporters of a just man fallen among thieves, the helpless victim of his own innocent confidence in unworthy colleagues, is not much more convincing.

The outstanding success of the book is the vividness and skill with which the real Asquith, as distinct from the humorless, passionless, equable Sphinx of the popular imagination is presented. The lover of P. G. Wodehouse was not humorless. The man who thinks the writer of the wonderful letters to Margot passionless does not know what passion means. He was equable: and his equanimity was based on a form of intellectual loftiness, which "would not choose what many men desire"; but it was at bottom a very human loftiness, far removed from the monstrous insensibility of Parnell, for example. His epitaph is well written in the fine prose of his biographers. "As time passes, his detractors fall into the background, and his figure is seen in massive outline, embodying the qualities which Englishmen most like to think of as their own, fortitude, dignity, honesty, generosity, the equal mind in arduous affairs."

Notes of the Week.

A New Political Chapter.—Although, in the technical sense, the reopening of Parliament last Tuesday was not the beginning of a new session but only the resumption of an old one, it definitely marked the opening of a new chapter in the life of the Government. So long as the Government included in the persons of Sir Herbert Samuel and his colleagues the accredited representatives of the Liberal Party, it could, despite the absence of representatives of the official Labour Party, claim that it had at least something of a national complexion. After the secession of the Liberals and the Labour Chancellor, Mr MacDonald faces the House of Commons as Prime Minister of a Government whose overwhelming Conservative colour is not concealed by the retention in office of two or three Ministers who previously belonged to the Labour Party, or by the concession to the followers of Sir John Simon of a greater proportion of offices than their numerical strength could justify. This position inevitably gives rise to the question how long Mr MacDonald will be willing to retain so uncomfortable a saddle, or, alternatively, how long a restive horse will refrain from throwing off a jockey not of its own stable. The past week has given no indication of the answer to these particular questions, but it would probably be rash for Mr Mac-

Donald to interpret the carefully staged ovation given to him in the House of Commons on Tuesday by his Conservative followers as an indication of durable and patient loyalty. But at any rate, the Prime Minister has given the Conservative Party nothing to complain of. His defence of Ottawa followed the most approved lines of neo-Protectionism, while his so-called "policy" speech delivered on the eve of the session studiously avoided the promulgation either of definite doctrines or of definite policies which might be unacceptable to the partisan. Nevertheless, the Parliamentary weeks that lie ahead of us may present difficulties not so easily overcome. As Ottawa details come to be dissected, with their disclosures of duties upon the essentials of life, and as problems such as the application of the "Means Test" and the overhaul of the unemployment insurance system obtrude themselves, as they must very shortly, upon the attention of Parliament and the public, it will become increasingly difficult to preserve an appearance of unanimity between two schools of thought so fundamentally opposed as those, let us say, of Mr MacDonald and of Lord Hailsham. In judging the political future, it must be remembered that although the Government is so predominantly Conservative, the retention of other elements gives it something of the natural weaknesses that we have learned to be inherent in all coalitions. By this we do not mean to suggest that another general election is in sight, even on the horizon, but it would seem probable that the retirement of Lord Snowden and the Liberals is only the first step in the ultimate and inevitable passage from a National to a Party Government.

Irish Deadlock Unsolved.—After the prolonged nature of last week-end's conversations in London between Mr de Valera and British Ministers, it came as a disappointment to the public to hear that no progress whatever has been made towards a composition of the most unfortunate quarrel between Britain and the Irish Free State. In the House of Commons on Tuesday, Mr J. H. Thomas summarised the discussions and the reason for their failure, and revealed the fact that Mr De Valera, so far from confining himself to the possibility of a bargain over the annuities in immediate dispute, ranged back into the realms of distant history, denied the validity of the agreements on which the recently suspended payments are based, asserted that no ultimate financial settlement between the two countries was ever made, and claimed that a new and final settlement should be discussed in connection with which, he alleged, the over-taxation of Ireland ever since the Act of Union of 1801 should be taken into account. Irish claims based on past chapters of history long closed, were said by Mr Thomas to be in the region of four hundred million pounds. Although allowance must be made for Mr De Valera's well-known proclivity for living mentally in the past, it is difficult to believe that he could seriously hope to advance the solution of the present dispute, by opening up so vast a field of historical and financial controversy. In the course of this dispute, we have, on several occasions, been severely critical of the policy and action of the British Government. But if Mr Thomas's statement in the House of Commons is a fair summary of the representations on the Irish side, it is clear that the blame for the latest breakdown must rest upon Mr De Valera. And we cannot say that the latter's statement in the Dail on Wednesday does anything towards changing that conclusion. But the apportionment of blame helps neither Britain nor Ireland; while both countries continue to suffer from the continuation of this most deplorable deadlock.

Anglo-Russian Agreement Denounced.—The denunciation by the British Government of the Anglo-Russian trade agreement, signed in April, 1930, is, as Mr J. H. Thomas explained in the House of Commons on Tuesday, an automatic consequence of the Anglo-Canadian Agreement at Ottawa. Article 21 of this agreement runs as follows:—

This agreement is made on the express condition that, if either Government is satisfied that any preferences hereby granted in respect of any particular class of commodities are likely to be

frustrated in whole or in part by reason of the creation or maintenance directly or indirectly of prices for such class of commodities through State action on the part of any foreign country, that Government hereby declares that it will exercise the powers which it now has or will hereafter take to prohibit the entry from such foreign country directly or indirectly of such commodities into its country for such time as may be necessary to make effective and to maintain the preferences hereby granted by it.

The inclusion of this article, which of course is aimed principally against Russia, was inserted as the result of the vigorous insistence of Mr Bennett, the Canadian Prime Minister. In order to be in a position to implement it, the British Government regards itself as being compelled to free itself from the operation of Article I of the Anglo-Russian Agreement the purpose of which is to assure to Russian imports into Britain treatment equally good as that given to other foreign imports. The salient passage reads as follows:—

The natural produce and manufactures of the United Kingdom shall enjoy in the U.S.S.R., and the natural produce and manufactures of the U.S.S.R. shall enjoy in the United Kingdom, all the facilities, rights and privileges which are at present or may be hereafter accorded to the natural produce and manufactures of any other foreign country, in all that relates to the prohibition and the restriction of imports and exports, customs duties and charges, transport, warehousing, drawbacks and excise.

Article 21 of the Anglo-Canadian Agreement, though aimed at Russia, obliges the British Government to put itself in a position to prohibit cheap "dumped" imports from any foreign country, if such dumping is facilitated by State subsidies or other forms of State assistance. The question arises whether Article 21 will not lead the Government into the denunciation of trade agreements with other countries. May it not lead to something near a wholesale denunciation of all British treaties which include the most-favoured-nation clause? That question opens up a wide vista. For the moment the step taken in the case of Russia, while not necessarily causing any big immediate reduction in Anglo-Russian trade, or indeed making trade operations more difficult so long as "dumping" is not resorted to, will create fresh suspicion in the relations between the two countries, which in turn will prove a hindrance to mutual trade.

A Decade of Fascism.—Signor Mussolini and his fellow-Fascists have just been celebrating the tenth anniversary of the March on Rome; and foreigners, as well as Italians, may well pause to take stock of the results, for good and evil, which this decade of Fascist rule in Italy has produced. For Fascism is more than a parochial phenomenon. What has happened in Italy since the war is simply the classic example of a tendency which has declared itself in some degree, and with some measure of success, in a number of countries that have found themselves more or less in Italy's situation. Very broadly, we may say that Fascism, like Bolshevism, is a reaction to a sense of failure to hold one's own "under the strenuous conditions of the modern world." A people which feels itself hopelessly out of the running is tempted to break away and seek to move, henceforward, in a separate orbit. A people which feels that it could catch up with the vanguard by making an effort is tempted to try a short cut; and it is this second reaction which is represented by Fascism. The Fascist movement is a short cut towards modern efficiency; and it is in this aspect that we can best understand its good and its evil, its strength and its weakness. On a short cut, one has to jettison cherished possessions—especially if the path leads through bushes and briars, up hill and down dale. Italian Fascism has jettisoned Mercy and Liberty. And even at such a price one may not, after all, achieve one's object. Instead of regaining the high road abreast of the foremost runners in the race, one may fall romantically over a precipice or prosaically lose one's way. And either of these adversities may still befall Italy in the race which still lies before her over the arduous Fascist track. We need not dwell on the bloodshed and violence and illegality through which Fascism came into power; and we will not dwell, either, on the black incident of the murder of Matteotti, and the almost stifled by Fascist brute force; for these things belong

to the past. The vital issue is this: Is the negation of liberty by which Fascism rules really essential for the performance of the great practical constructive achievements that Fascism undoubtedly has to its credit; and, secondly, if the necessity for this repression is proved, then are these Fascist achievements worth the price? Perhaps the answer depends on whether we take a short view or a long view. On a short view we may shrug our shoulders and say *Primum vivere, deinde philosophari*. Liberty, political or intellectual, is a luxury for good times. In bad times, national salvation comes first, and liberty must not stand in the way. On a longer view, we may reflect that without liberty no nation can truly save itself. Fascism may be justified if in ten years, or in twenty, Italy finds her way back into the open road, with her pre-Fascist time-lag made up. But what if the Fascist short cut should end in a *cul-de-sac*?

Political Crisis in Roumania.—Last week there were symptoms of unrest to be recorded in one South-East European country, Yugoslavia. This week there are symptoms in a neighbouring country, Roumania, which are milder in their nature, but which point, nevertheless, to the same fundamental disease. What is wrong with all the South-East European "Successor-States" is the imperfection of the Peace Settlement, which has created a number of small territorial units that are unworkable economically on the post-war principle of "autarchy." And the worst of it is that this economic sacrifice which has been laid upon the altar of political self-determination has not after all availed to exorcise the political discontents and dangers of the old regime. For the new map, in removing one set of political wrongs, has created another. These points are all illustrated by the present case of Roumania, who is suffering at this moment from a combination of two troubles: the economic trouble which is common to all the agrarian countries of the Danubian region, and the peculiar political trouble with which Roumania is burdened in Bessarabia. These two troubles between them have been responsible for the fall of M. Vaida Voevod's Government at Bucharest this last Monday. His ministry had been shaken by the prospect of having to carry out the drastic economies in public expenditure which have been recommended by the experts who have been investigating Roumania's financial situation; and the final blow has been struck by M. Titulescu, who could not see eye to eye with M. Vaida Voevod over the policy to be pursued in the delicate matter of Bessarabia. It will be remembered that the ex-Russian province of Bessarabia was occupied in the war by the Roumanian army during the interregnum created by the Russian Revolution. This action was justified in Roumanian eyes by the fact that the majority of the inhabitants of Bessarabia are Roumanians by nationality. But the occupation and subsequent annexation of the province were carried out by Roumania—and afterwards approved by the Principal Allied Powers—without asking the leave of any Russian Government, White or Red; and the Soviet Government has never recognised the *de facto* situation, with the result that there has never been any resumption of official relations between Russia and Roumania. The Bessarabian question perpetually crops up, and it has cropped up last over the question of the negotiation of a Russo-Roumanian Pact of Non-Aggression. The Russians, apparently, are willing to conclude such a pact without raising the Bessarabian question so long as the fact that they have refrained from raising this question in this connection is recorded in the text. M. Vaida Voevod and M. Titulescu differ on the question of how far Roumania shall go to meet this distinctly conciliatory Russian offer; and, unfortunately, M. Titulescu, who stands for a policy of pedantic intransigence, has won. His victory will perhaps serve to drive home, in France, the rapidly growing conviction that East European allies are liabilities rather than assets.

The Personnel of the League.—Nationalists who gird at the League should recollect that they are blackening their own faces; for the League is an association of some fifty or sixty national—and mostly nationalist—States, and the record of the League is determined by the standards of its members. When the record is bad, it is these national standards that are exposed to criticism. This reminder is perhaps needed at the moment, *à propos* of the rather questionable arrangements that have just been sanctioned by the League Assembly in regard to the personnel of the Secretariat. On the one hand, economy has been sought through a reduction of 10 per cent. in the salary scale—a reduction which is to apply to new appointments or to future changes, following promotions, in the salaries of present members of the staff. On the other hand, the self-same Assembly has decreed that the League shall carry on its budget no less than six senior posts, involving high salaries, which are admittedly superfluous—and indeed positively harmful—from the standpoint of the Secretariat's efficiency. The explanation is frankly political. Each of the five Great Powers that are League members insists upon always having on the Secretariat one national of its own in a high official position. Assuming that the Secretary-General himself is a national of one of the "big five," this means that four deputy secretary-generalships or assistant secretary-generalships must always be provided for the other Great Powers. But the small countries have now made good their claim that they, too, shall have at least one post of the kind between them if the Great Powers are always to have one each. So the total number of senior posts that is demanded by the exigencies of politics is six; and this means that the Secretary-General must always be surrounded by five deputies or assistants, each fitted out (at the League's expense) with a staff of his own nationals, and each regarding himself in fact, whatever the theory may be, as commissioned primarily to look after his own country's interests and only secondarily to do the League's work. In fact, these are national ambassadors masquerading as international officials; and the honest and open course would be to give them the status of ambassadors—to be paid by their own Governments and to be accredited to the Secretariat without being enrolled in its staff. The actual arrangement is wrong; and it is particularly unfortunate at a moment when the League is on the point of losing the services of its original Secretary-General, Sir Eric Drummond. The vacancy is being filled—as it were, automatically—by the promotion of Monsieur Avenol, who possesses the qualification of what the American machine-politicians call "availability," because he is the present Assistant Secretary-General and because he is a Frenchman. Monsieur Avenol has had financial experience which may no doubt be timely in the present state of the world's economic affairs. But, of course, the financial ability which the League Secretariat requires can be provided—as it has always been particularly well provided hitherto—in the Financial and Economic Section. What is needed in the Secretary-General at all times, and most urgently of all to-day, is the political gifts for dealing with the world's political

problems. The difficulty of these political problems is reflected, within the microcosm of the Secretariat, in the political issues on which we have just been commenting. And it is by its success or failure in dealing with this part of its task that the League will stand or fall in the critical years ahead.

Mr Henderson Resigns.—Mr Arthur Henderson this week resigned his position as leader of the official Labour Party. There are abundant reasons to explain his action in doing so without searching for any deep political meaning. It has been traditional for the leader of the Labour Party in Parliament to be the leader of the party in the country, a system which has many advantages and to which the party was bound to revert before long, either through the return of Mr Henderson to the House of Commons or by the transfer of his office to Mr Lansbury. The decision has presumably been delayed in the hope that Mr Henderson would find an opportunity to seek re-election to the House of Commons, and that it is taken now is a recognition that such a course is precluded in the near future by Mr Henderson's absorption with his duties as President of the Disarmament Conference. While resigning the leadership, "Uncle Arthur" retains both the secretaryship and the treasurer's office of the party, a fact which demonstrates the absence of political disagreement between himself and his colleagues. All the same, it is possible that the proceedings of the recent Labour Party conference at Leicester, of which the chief feature was the impatient temper of the rank and file of the party, may have hastened Mr Henderson's decision to hand over responsibility for its supreme guidance for the time being.

Sterling and International Prices.—The price level has again receded during the past fortnight, but it is still considerably above the lowest figures reached last June, the complete index, the primary products, and the international gold prices index being still respectively 5.7, 8.0 and 5.3 per cent. higher. During the last fortnight our international gold prices index has receded by nearly 2 per cent. and that of the sterling price of primary products by 2.6 per cent., while the complete *Economist* index shows a fall of 1.4 per cent.:

Oct. 19th ...	103.1	112.3	84.0	88.9*	...	93.1*	86.9*

* These figures relate to October 12th.

The majority of movements in British sterling prices has been downwards, there being only seven rises as against twenty-six decreases—barley, bacon, jute, lead, copper, spelter and linseed oil featuring largely in the declines. The sectional figures are given below:—

"ECONOMIST" INDEX.

(1927 = 100).

	Sept. 18, 1931.	Oct. 5, 1932.	Oct. 19, 1932.
Cereals and meat	64.5	64.7	62.2
Other foods	62.2	64.0	63.8
Textiles	43.7	51.5	50.4
Minerals	67.4	76.1	75.3
Miscellaneous	65.8	62.5	62.4
Complete index	60.4	63.2	62.3
1913 = 100	83.1	87.0	85.7
1924 = 100	52.2	54.7	53.8

It will be noticed from the first table that the decline in prices is general with the exception of France, whose index number is still rising slightly.

More Import Duties.—The frequent White Papers issued by the Import Duties Advisory Committee, which add bit by bit to our new tariff structure, remind us forcibly of the advertisement for a well-known "elastic bookcase"—"always growing but never complete." This week's dose of increased protection* consists of the imposition of additional duties upon light railway wagons and rubber boots and shoes. The class of wagons selected for this favour is described as "wagons for use on railways not exceeding 3 ft. in gauge"—in fact, the type of wagon most commonly used in this country for mining, quarrying and road-making and for public works. On such wagons and on the parts thereof, the existing duty of 10 per cent. *ad valorem* is raised to no less than 33½ per cent. on the argument that the British engineering industry is capable of supplying home requirements. There is no indication whatever that the Commissioners have considered what exports we have been sending to the countries which supply us with these wagons, or how far the imposition of this duty may limit our sales to the countries involved. The boot and shoe duty, which already, before the present order, was at the level of 20 per cent., is increased by the addition of 3d. per pair when the footwear in question covers the ankle, and 2d. per pair where it does not rise so high. This means that in the case of rubber boots, the equivalent of an additional 17 per cent. import duty is imposed. The reasons which the Commissioners give for this recommendation are rather curious. For instance, they say "recently there have been marked changes in the sources of supply, accompanied by a pronounced fall in the price level of the imported goods." They also admit that imports in 1931 slightly declined. We seem to remember promises that the interests of the consumer would be carefully studied in framing our tariff, but, in this case, the complaint seems to be that the man in the street has been obtaining essential articles of clothing too cheaply. Another step, albeit a small one, in the process which our new tariff is bringing about of increasing the cost of living and of industrial production relatively to those of competing industrial nations.

Cotton Trade Wages.—Further negotiations have taken place at the Midland Hotel, Manchester, this week between the operatives and employers in the spinning section of the cotton industry regarding the employers' claim for a wage reduction equal to 1s. 8½d. in the £. Mr F. W. Leggett, of the Ministry of Labour, has throughout acted as independent chairman of the committee. The two sides have reached a decision maintaining a 48-hour week, and the question of cleaning and oiling time and certain anomalies are to be dealt with by the new conciliation machinery which is to be set up after the present discussions have ended. On Tuesday and Wednesday the whole of the time was spent in negotiating the wages issue. The operatives have improved their offer of a wage reduction to a fraction more than 1s. 1d. in the £, as against their last offer of 9½d. in the £. The employers, however, continue to hold out for a reduction of 1s. 8½d. in the £, and this is the position at the time of writing. The employers' notices do not expire until Saturday noon, and failing a settlement the mills will not re-open on Monday. There is time, therefore, for agreement to be reached.

Railway Wages.—As had been anticipated, the immediate reply of the railway trade unions to the application by the four trunk railways to substitute for the present deductions from railwaymen's standard wages a general deduction of 10 per cent. was a refusal. At a meeting held on October 16th representatives of the three railway unions formally stated that they would not accept the companies' proposal, and Sir Ralph Wedgewood, the chairman of the general managers, intimated that the companies were compelled by prevailing circumstances to forward their proposal to the Central Wages Board for its consideration. It is expected that the Central Wages Board will meet at an early date to consider the proposal, and as this board consists of equal numbers of representatives of the companies and the unions it is unlikely to be

* Cmd. 4176. H.M. Stationery Office, 3d.

able to arrive at an unanimous decision. If so, the matter will be referred automatically to the National Wages Board, which is expected to give a decision within a month. In speeches delivered at the week-end, Mr Dobbie, the president of the National Union of Railwaymen, insisted that the men's answer to the companies must be an emphatic "No," while Mr Cramp said that it was time to call a halt to the downward trend of wages, and that railway capital must be reorganised and also bear a greater part of the depression. The controversy is thus proceeding along familiar lines, and the position has not changed during the past week. The real points of interest will emerge when the companies and men meet before the National Wages Board, probably in a few weeks' time, when it will have to be seen whether the representatives of the unions are able to recognise the implication of the general economic situation and its bearing upon the railway wage question as discussed in the *Economist* a fortnight ago, and if so to what extent. At the moment there is no reason for supposing that agreement will not be reached.

Co-operative Trade.—A correspondent writes:—Close association with the distributive trade of the country has convinced the directors of the Co-operative Wholesale Society that there has been no easing of the intense depression from which the country has suffered so long. Nor do they observe any prospects of material improvement. During the first thirteen weeks of this year they recorded an increase of 3½ per cent. in the turnover, but the continued decline in the average prices of the principal commodities handled, coupled with the reduced purchasing power of co-operators, has wiped out that increase and the sales of £39,953,630 for the six months ended July 9th were a shade below the corresponding period of 1931. There was an increase of half a million pounds in the supplies of groceries in London and the south; but this was counterbalanced by decreases in the coal, drapery, woollens, readymades, shoes and leather and furnishing departments. The distributive trade from the Manchester headquarters was £18,999,278, a fall of nearly 1 per cent.; in the Newcastle district it was £4,522,644, a decrease of 3½ per cent. The advance of London and the south has continued and an increase of 2½ per cent. has brought the turnover to £14,045,094. The Metropolitan societies are becoming increasingly important customers of the C.W.S. and they, with the societies in the west of England, are looking to greater recognition in the movement generally. The trading results are re-echoed in the deposits and withdrawals from the C.W.S. Bank which dropped 5½ per cent. to £327,364,657. Not only has the C.W.S. felt the depression in the Home Market, but its export sales fell to £615,351 from the £645,080 of the corresponding period of last year. The most encouraging note in the report which will be brought before the delegates' meetings this month relates to the better inquiry from retail societies for the productions from the co-operative works. The supplies were £11,618,482, an increase of £190,262. This is small, but is in advancing ratio to the total sales which declined £182 and is regarded as proof of the trend of the retail societies towards greater preference for stocks from their own factories than for those from outside firms. The supplies from the ten flour and provender mills of the C.W.S. were £3,583,646, while the sales of tea reached £1,958,510, and amounted to over 1,031,000 lbs. weekly. Biscuits, preserves, and margarine are other well-supported co-operative industries. In soap, too, the turnover of the three works was £1,225,205. The most conspicuous success of C.W.S. co-operation has been in the supply of foodstuffs. Out of its half-yearly turnover of nearly £40 millions, practically £30 millions was in grocery and provisions. The aggregate production of its two flannel mills and three weaving sheds was £361,000, while the output of its six clothing factories, three shirt factories, and hosiery, corset, mantle and underclothing factories totalled £832,570. From its eight boot and shoe works the supplies were £739,879, and the five cabinet works had a production of £249,544. These are sections of co-operative enterprise which are now being developed through departmental stores and emporia which are being

opened by retail societies in large towns—notable examples having recently been provided in Newcastle, Burslem, Bristol, Liverpool and Stafford. Meanwhile, the C.W.S. is increasing its productive capacity and will shortly open a new furniture factory at Ponder's End, another printing works at Reading, and a works for the production of milk bottles at Newark.

Iron and Steel Production in September.—Production of pig iron in September amounted to 260,400 tons, a slight improvement over the August figure of 259,400 tons since this figure was for 31 days; the number of furnaces in blast at the end of September (59) was two more than at the beginning of the month. Steel production amounted to 430,300 tons, compared with 361,500 tons in August, which was, however, unduly low on account of the holidays. Both pig iron and steel production were slightly higher than in the corresponding month a year ago. Imports of iron and steel at 107,100 tons were practically the same as in the previous month, but exports declined by 29,200 tons to 127,000 tons, largely owing to the completion of the Russian orders, for the exports of plates and sheets declined by 8,200 tons to 12,100 tons, and of hoops and strips by 7,600 tons to 2,100 tons. Imports of tinplates and sheets also showed a substantial reduction. The following table compares the production, imports and exports of iron and steel in each quarter of 1932 with the corresponding quarter of 1931.

U.K.—PRODUCTION, IMPORTS AND EXPORTS OF IRON AND STEEL. QUARTERLY 1931 AND 1932

	Production of		Imports.	Exports.	Board of Trade price index 1913 = 100 (at end of each quarter)
	Pig Iron.	Steel Ingots and Castings			
	(In thousands of tons)				
1931—					
1st quarter	1,012.5	1,388.7	609.4	481.2	107.3
2nd quarter	993.5	1,261.4	667.5	518.0	103.9
3rd quarter	840.9	1,186.5	653.2	451.6	101.8
4th quarter	911.2	1,342.0	922.0	529.8	103.9
Total, 1931	3,758.1	5,178.6	2,852.1	1,980.6	...
1932—					
1st quarter	989.2	1,373.1	552.9	473.5	104.3
2nd quarter	943.6	1,309.5	414.6	479.0	102.9
3rd quarter	812.4	1,230.2	330.9	441.4	103.0

While pig iron production in the first nine months of this year has been slightly lower than in 1931, steel production has been slightly higher. Imports in the first three-quarters of this year amount to 1,298,000 tons, compared with 1,930,000 tons in the first three-quarters of last year, while exports amount to 1,394,000 tons, compared with 1,451,000 tons last year. In each of the last six months exports have exceeded imports. The improvement in Continental prices which began in August was continued in September; for instance, sheet bars which at the end of July were 38s. per ton f.o.b. Antwerp (on a gold basis) increased to 39s. 6d. at the end of August and to 40s. at the end of September; merchant bars rose from 43s. at the end of July to 47s. 6d. at the end of August and 48s. 6d. at the end of September, while heavy plates rose from 52s. to 55s. in August and 57s. 6d. in September; they are still, however, less than 50 per cent. of the corresponding level at September, 1929. British prices remain steady, the Board of Trade price index number for September being 103.0 (1913 = 100) compared with 102.6 in August.

Liverpool Cotton Statistics.—The annual circular of the Liverpool Cotton Association published this week contains a mass of valuable statistics relating to the cotton season for 1931-32. The average price of middling American cotton during the twelve months was 4.82d. per lb., against 5.71d. per lb. in the previous year and 9.09d. per lb. in 1929-30. With regard to Egyptian cotton the average price of fully good fair Sakel during last season was 6.80d. per lb., against 9.06d. per lb. in the previous season and 14.52d. per lb. in 1929-30. The total stock of all kinds of cotton in Liverpool at the end of last season

was 590,279 bales, against 778,676 bales a year earlier and 705,974 bales two years ago. The imports of raw cotton into Great Britain during last season were 2,412,498 bales, against 2,288,134 bales in the previous year, and 2,748,012 bales in 1929-30. The consumption of all kinds of cotton in Great Britain last season was 2,539,914 bales, against 2,023,798 bales in the previous year and 2,610,221 bales in 1929-30. The circular contains a valuable table showing the proportional distribution of the American crop and it is significant that Great Britain for the two-year period 1930-32 took only 8.99 per cent., against 25.22 per cent. in the five-year period of 1905-10. The United States now uses 43.95 per cent. of the crop.

Anglo-South American Bank.—The changes of last June, when a London banking consortium took over certain of the bank's nitrate assets amounting to £7,500,000 and also an equivalent liability of the bank in exchange for £1,000,000 of 5 per cent. new preference shares and the assumption of a deferred liability for this amount of £7,500,000 by the bank, have vested the new balance sheet of the Anglo-South American Bank with unusual interest. As was to be feared, the latest report and balance sheet form a disappointing document, for in addition to the appearance for the first time of the new preference shares and the deferred liability of £7,500,000, which is a contingent guarantee ranking after all other outside liabilities of the bank, the accounts show that both the general reserve and the special reserve created a year ago to provide for the depreciation of foreign assets have entirely disappeared. The current report states that both funds have been applied in making provision for depreciation of investments, for all known bad debts, and for all debts which in present conditions appear to involve the possibility of loss. The report further adds that owing to the general dislocation of the exchanges and the contraction of trade throughout the world, it is very difficult, even after the strictest scrutiny, to make accurate estimates of the amounts required for doubtful debts. The salient features of the accounts for the past three years are summarised below:—

	June 30th.	1930. £ thous.	1931. £ thous.	1932. £ thous.
Liabilities:—				
Issued capital:—				
"A" shares		4,367	4,367	4,367
"B" shares		1,265	1,265	1,265
Preference shares		...	...	1,000
Reserve fund		3,275	1,000	...
Legal reserves abroad		107	133	72
Special reserve fund		...	2,275	...
Acceptances		9,402	12,490	3,208
Deposits		49,814	40,640	25,564
Bills for collection		8,202	5,822	4,648
Assets:—				
Cash		7,997	6,789	4,356
British Government securities		7,219	4,507	380
Foreign securities		2,147	1,887	1,553
Bills receivable		9,020	6,275	4,401
Acceptances		9,402	12,490	3,208
Advances		31,411	27,134	15,988
Net profits		491	461	466
Contingent liability		...	...	7,500

The general contraction in the chief items on both sides of the balance sheet is an eloquent commentary upon the general position of the areas served by the bank, even though £7,500,000 of the contraction represents the assets and liabilities taken over by the banking consortium. The report further alludes to a depreciation of £1,414,875 in the bank's foreign assets, arrived at after revaluing them at current market or official rates of exchange on June 30th last, whichever rate is applicable. This amount, the report adds, cannot be dealt with in a definite manner until more normal conditions are restored. Net profits for 1931-32 amount to £466,000, but £450,000 has been required to make further provision for bad and doubtful debts, so that no dividends are paid even on the new preference shares; nor is any sum apparently allocated towards the reduction of the bank's contingent liability, though the agreement of last June provided that half the free profits of the year should be so used. The general impression left by the accounts is that the bank is finding it an arduous and slow business to get clear of its accumu-

lated difficulties; but that, thanks to the help afforded last June, the latest balance sheet presents a far truer picture of the real position than those that have appeared since the bank's present difficulties began.

Commonwealth Bank Policy.—In an address in London last Tuesday to the Royal Empire Society, Mr. E. C. Riddle, the Governor of the Commonwealth Bank of Australia, gave an interesting and valuable account of the history and policy of the bank. After reviewing the foundation of the bank and its gradual development into the central bank of the Dominion, he made reference to the part played by the bank during the serious difficulties of the past few years. In 1929, when the approach of the depression was foreseen, the bank advised the Government to give it power to marshal the gold holdings of Australia. At that time the trading banks held about £18,000,000 of gold, and by arrangement they transferred £17,000,000 of this to the Commonwealth Bank in exchange for notes or credit with the Commonwealth Bank. In practice they surrendered all notes they received in excess of their till-money requirements, so that their cash came to consist largely of balances with the Commonwealth Bank. The next problem the bank had to deal with was that of governmental deficits, and Mr Riddle claimed that it was the pressure put by the Commonwealth Bank upon the Loan Council which resulted in the calling of the various Premiers' Conferences and the formulation and adoption of the Premiers' Plan. In the meantime the Commonwealth Bank provided temporary finance for the Governments by taking up Treasury bills. To avoid inflation the trading banks agreed to take over many of these bills with the right of rediscount, and thus also provided the trading banks with a remunerative form of reserve. The Commonwealth Bank next had to direct its attention to the unfavourable exchange position, due to the trade depression, the adverse trade balance, and the closing of the overseas loan market to Australia. To meet this emergency, the bank organised a pool agreement under which the trading banks earmarked sufficient of their purchases of London funds to provide for Government requirements. For a time this created difficulties for ordinary traders to whom remittances abroad were for a time restricted or denied, and the position was rendered more serious by a moderate flight of capital, so that the exchange premium of sterling rose to 30 per cent. Fortunately by this time Australia had begun to tackle her financial problems, with the result that the year 1931-32 left her with a favourable trade balance of £3 to £4 millions after providing for external debt service. As a result the exchange premium fell by 5 per cent. and all restrictions upon commercial exchange transfers could be removed. Mr Riddle concluded an interesting and valuable address with a warm tribute to the wholehearted co-operation of the trading banks. He took an optimistic view of Australia's future, and said that provided that a moderate increase in commodity prices could be achieved, Australia should soon be in a position to increase her imports both from the Empire and from the rest of the world.

UNITED STATES.

Gold — R.F.C. — Trade — Railroads.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 12.

WALL STREET was taken aback by the reception given abroad to that section of President Hoover's speech at Des Moines which touched on fiscal policy. Everyone here was much surprised at the President's statement that, at one time, he had been informed by the Secretary of the Treasury that, unless urgent measures were taken, the country might be forced off the gold standard in two weeks.

It was recognised that the strong outflow of gold which began a year ago, combined with the growth of currency hoarding and demand abroad for American gold coins and paper currency, might, especially if the budget were not balanced, at least on paper, put the fiscal system to some strain. However, in good quarters no one seriously believed at any time that the country would be forced off gold, and no examination of the figures, either for last February, when the Glass-Steagall Bill was passed, allowing substitution of bonds for gold as part backing for currency notes, or later in the summer when currency hoarding reached its peak, justifies the statement that at any time we were so close to leaving gold.

Since the middle of last June the monetary gold stock has risen nearly \$300 millions and is now \$4,201 millions. Under the Glass-Steagall Bill free gold is approximately \$176 millions, while even under the old provisions the deficiency in free gold is only about \$89 millions. Present indications are that the Glass-Steagall provisions will soon no longer be needed, but it is expected that the Act will be extended next March. Wall Street, while surprised at and critical of President Hoover's warmth in defending the efforts of his party to maintain the gold standard, had considered the reference a mere bid for votes.

The error of the statement is now apparent, but the financial district is quite without alarm over the country's fiscal future. The recent issue of \$450 millions of 4½-year 3 per cent. notes was over-subscribed eighteen times, and the latest discount bill issue was taken on a .19 per cent. interest basis. For all that, the floating debt is mounting and additional taxes will have to be provided for at the next session of Congress. The public debt with the note issue will be \$20,331 millions, of which nearly \$6,000 millions is in notes, certificates and bills. At the end of the 1930 fiscal year the debt was under \$16,000 millions.

Calls for help from the Reconstruction Finance Corporation continue to decline. Loans made in August were \$186 millions, of which \$64 millions was for relief and cotton purchases. In the month there were a good many cancellations and repayments, and no important bank, except one Cleveland institution, received help. Loans for September were only \$62 millions. It is expected that in another month the R.F.C. fund will become a revolving one, with payments equalling new loans, thanks to repayments by the banks. This means a lightening of the load on the Treasury.

At the end of the last fiscal year, June 30th, the Treasury had provided \$500 millions for capital of the R.F.C., and in addition bought \$267 millions of R.F.C. debentures. Funds paid for debentures are not included in figures showing Treasury deficit, amounting in effect to an "extraordinary budget." Since June 30th the R.F.C. has taken out of the Treasury on debenture account \$280 millions (including September 30th). In addition to spending its capital stock of \$500 millions, the R.F.C. has distributed from debenture issues about \$560 millions. If all the loans made by the R.F.C. were to be added to the Treasury's deficit that would be now around \$680 millions instead of the \$402 millions shown.

Net expenditure on loans from R.F.C. debenture proceeds, which measures the drain on the Treasury for R.F.C. loans, has been as follows:—

	\$
June	245,000,000
July	150,000,000
August	116,000,000
September	15,000,000

On a number of days recently repayments have exceeded fresh loans. The 5½ per cent. charge to the banks for loans is acting as a spur to repayments, and the publicity feature is restraining applications. A method of repayment of R.F.C. loans now much used is for the banks to obtain large Treasury deposits through subscription to the new Treasury note and certificate issues. The banks then sell the new Government securities in the market at a profit, after pledging other securities than the new Treasury notes as security for the deposits, and use the proceeds to repay the R.F.C. Deposit with-

drawals then are met by bank borrowing, which with the current huge total of excess reserves is simple. Treasury deposits, incidentally, are almost double the normal figure.

Bankers estimate that foreign balances subject to withdrawal here are around \$500 millions less than normal, and likely to rise rather than decline. Against this figure, only a portion of which is central bank money, is a sum of over \$500 millions of American cash balances employed in foreign countries. Much of this is in the gold standard countries. Gold held under earmark here is down to \$129.3 millions. At the end of last year earmarked gold amounted to \$429.6 millions.

The so-called raid on the dollar of the past several days was, in the opinion of Wall Street, given imaginative colouring by those abroad who were poorly informed of the situation and others here who sought to make political capital out of it.

Trade improvement retains enough momentum to carry somewhat further. Railroad traffic, as measured by car loadings for the week ended October 1st, rose sharply, and was the best of the year. Ordinarily the first of this month marks the peak in traffic, but this year, owing to the delayed grain movement and retarded coal shipments, it may come later. The steel trade has risen to about 20 per cent. of capacity, and it now turns out that steel ingot production in September was at the average rate of over 17 per cent. of capacity. The United States Steel Corporation's unfilled orders for September rose 15,000 tons, and while the figure seemed to come as a disappointment to Wall Street there had been no reason for expecting anything better. The Federal Reserve Board reports a rise in retail trade last month.

The commission formed to study transportation problems, headed by ex-President Calvin Coolidge, has held its first meeting, announced its purposes, and expects to have a report ready about the first of the New Year. The New York, Chicago and St. Louis Railway (the Nickel Plate) has failed to meet a \$20 millions note maturing on October 1st, and a bondholder has asked the Courts to appoint a receiver, which so far they have refused to do, pending the road's efforts to secure the consent of noteholders to take new obligations for 75 per cent. and cash for 25 per cent. of the maturity. Meanwhile work is progressing slowly on railroad mergers in Eastern territory. It will probably be several years before any of the proposed four trunk line consolidations are achieved.

FRANCE.

Elections — Budget — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, October 19.

THE triennial senatorial elections, for the renewal of one-third of the Upper House, took place last Sunday, the net result of the 111 contests indicating a very slight further trend to the Left. The real significance of the leftward movement, however, was that it was wholly to the advantage of the Radical Party, which is at present in power, and, at the same time, to the detriment of the Marxian Socialists. The candidates of the Gauche Démocratique group in the Senate, which corresponds in doctrine and practice to the Socialistic Radical Party in the Chamber, gained nine seats, bringing their total strength to 57, equivalent to over one-sixth of the Upper House. Three-cornered contests were numerous. The Cartel system of mutual support between Socialists and Radicals was successfully applied in second and third ballots in many of the constituencies, but failed markedly in the Grenoble area, where the local Radicals included in their list a Marxian Socialist, who was defeated by one of M. Herriot's leading supporters from Lyons.

The reassembly of the Chambers for the Autumn Session, which was postponed till after the Senate elections, was yesterday officially decreed for Tuesday next, but it is

understood that the resumption of Parliamentary business will be purely formal, except for a full-dress debate on foreign policy, which is expected to occupy the rest of the week. The Chambers will then, according to present arrangements, adjourn until November 8th, to enable the Premier and the other Parliamentary members of the Radical Party to take part in their National Congress, which is to be held at Toulouse from November 3rd to 6th.

The suspension of a French Parliamentary Session in order to allow Ministers and their principal supporters to attend a party caucus shows the importance attached to the Toulouse Congress by the Cabinet. Opinion is inclined to regard the pending Toulouse gathering as likely to be marked by a decisive contest between the Moderate and Advanced sections of the Radical Party; to settle whether M. Herriot will continue to depend on a majority of the Left, or will definitely throw over his Socialist semi-allies and reconstitute his Ministry on the basis of a strong concentration of the combined Centre Parties. The matter, at any rate, will require very delicate handling. There is some nervousness lest, if the present Ministry were overthrown, M. Lebrun would not feel compelled to entrust M. Léon Blum, as the leader of the next largest party in the Chamber, with the formation of a new Cabinet, and that the Socialists might find it possible, with the aid of the more Socialistically-inclined Radicals, to assume office—for a brief period, it is possible, but sufficiently long, perhaps, thanks to the play of constitutional practice, to throw confusion into financial and economic conditions and again annihilate confidence.

Meanwhile, the Chamber Finance Commission re-assembled yesterday for an informal preliminary consideration of the Budget situation. The dominant problem seems to be, not so much the measures to be adopted to wipe out the important deficit as to find means of inducing the Chamber, in view of the lack of any really stable majority, to accept any safe programme that may be put forward to meet the present abnormal financial situation. The Finance and Budget Ministers are obviously anxious to solve the problem by sound and practicable methods, as their abortive efforts last summer proved. It will be remembered that M. Germain Martin's economy proposals, although endorsed by the Cabinet, were rendered impossible of application from the moment they were made public by the determined opposition instantly manifested by the Socialists and the Advanced section of M. Herriot's own party. These had the powerful support of 770,000 public servants, the army of old soldiers, pensioners, and other organised bodies, whom the Marxian Socialists declare were prepared to take revolutionary action unless proposals for fractional reductions in their pay and allowances were immediately dropped. The Opposition programme appears to be limited in effect to "More taxation for the rich, more doles from the public purse, State control (if not ownership) of banks and insurance companies, reduction of expenditure for national defence to the vanishing point, and massive loan issues for the balance." The main items in the Budget proposals are to be considered by the Cabinet this week. Unofficial reports state that these will include a revival, in a modified form, of the cuts in public servants' pay and civil and military pensions, vainly proposed in July, the elimination to a great extent of pension charges from the Budget (which will apparently involve a large special loan), a 50-franc tax on owners of wireless apparatus (who hitherto have contributed nothing but the necessary cost and upkeep of their appliances), a huge public works loan (involving substantial relief of the Budget) and possibly a further great loan for direct Budget relief, plus a massive conversion operation for the consolidation of the recent heavy issues of Treasury Bonds into funded debt.

M. de Chappedelaine, Vice-President of the Chamber Finance Commission and a recent Budget Rapporteur, in a strongly-worded article entitled "The Loan Mirage," insists that, in spite of the 3,000,000,000 francs of additional revenue for 1933 provided by the Emergency Finance Act of last July, and the saving of 1,300,000,000 francs expected to result from the recent great Rente conversion operation, the deficit to be met has again risen to

the level of the 8,000,000,000 francs at which it was estimated last March, owing to the ever-increasing diminution of revenue from taxation, due to the prolongation of the economic crisis. M. de Chappedelaine estimates that the deficit on the present nine months' Budget by the end of December will be at least 4,000,000,000 francs, and predicts that during the course of next year the Government will have to borrow at least a further 20,000,000,000 francs, which will completely wipe out the results of the efforts of the Caisse d'Amortissement since its creation six years ago.

Prospective loans, either already authorised or for which authority must be asked in the near future, are stated to include 7,000,000,000 francs for conversion of recent Treasury Bond issues into funded debt; 3,000,000,000 francs for the State Railway, cheap housing and the Post Office; 4,000,000,000 francs for the proposed public works programme; between 4,000,000,000 francs and 5,000,000,000 francs to meet the deficit in the common fund of the railways as a whole; 2,000,000,000 francs to finance the proposed new organisation to take charge of national pension obligations; 1,500,000,000 francs to recoup the Caisse d'Amortissement for the excess of reimbursements over demands for new stock, in connection with the Rente conversion operation; 500,000,000 francs for the *sinistres*; 2,000,000,000 francs for extensive new public works projected by the City of Paris; between 1,000,000,000 francs and 2,000,000,000 francs for financing the new Compagnie Nationale du Rhone, which is to carry out the important scheme for electrification, irrigation and navigation based on the transformation of the Rhone into a great inland waterway. Loans for Algeria, 1,500,000,000 francs; Morocco, 1,000,000,000 francs at 4½ per cent., issued at 970; and Tunis 200,000,000 francs, have already been authorised. The Crédit Foncier is expected to announce a further new issue of 1,000,000,000 francs early in 1933.

Foreign trade returns for September show a slight improvement on the month. Exports were 1,625,703,000 francs, or 200,000,000 francs better than in August (although still 648,000,000 francs below August last year and 1,512,000,000 francs, or nearly 50 per cent. less than in August, 1930). Imports in August were 2,228,000,000 francs, against 2,274,000,000 francs in the previous month, or 960,000,000 francs less than in August, 1931, and 1,732,000,000 francs below August, 1930. Exports during the first nine months were 38 per cent. less in value and 24 per cent. smaller in weight, sales of French manufactured goods abroad having fallen off on the year by 36 per cent. in value and 24 per cent. in weight. Imports during the same period declined 34 per cent. in value and 22 per cent. in weight (including a drop in coal from 21,790,000 tons to 15,392,000 tons), total tonnage of raw material imports having been over 25 per cent. smaller. Imports of manufactured goods during the nine months were 2,694,000,000 francs, or 37½ per cent. less. The adverse balance on the nine months was 7,607½ millions, as compared with 9,983½ millions for the corresponding period of last year.

GERMANY.

Chancellor's Speeches — Quotas — Italian Agreement —
Luther and Schacht.
(FROM OUR CORRESPONDENT.)

BERLIN, October 18.

THE Chancellor has made speeches in Paderborn and Dortmund, both in the north-west industrial area, of almost identical content. He has made no new political statement; on the political side, his speeches, like that in Munich, were a polemic against parliamentarianism. The emphasis was upon economic and social policy. In his speeches the Chancellor joined issue with the leaders of the Catholic trade unions, who had addressed to him an open letter which touched him particularly on the raw because it came from a quarter which is generally sup-

posed to be very close to him. The Catholic labour leaders, all of them clericals, had written:—

"We declare that never, even during the months of collapse, was the labouring population stirred by such profound unrest, such bitterness and ferment. This causes us the greatest anxiety, not only on account of our workers, but also on account of the State and of Christendom. We therefore feel in conscience bound to declare to you as our firm conviction that you cannot serve the Fatherland along these lines. In order to carry out your economic programme you have taken powers to transform and destroy the entire structure of workers' protection and social services which took sixty years to build. We cannot avoid the impression that forces are now at work which are aiming at the complete expulsion of 'welfare' from the State."

This is a reference to the first announcement of the Papen Cabinet, which declared war on the "welfare state." The Chancellor has now, however, in Paderborn, very decidedly denounced as false the impression "that we are trying completely to banish welfare from the State." Herr von Papen is obviously anxious to oppose the idea that he is opposed to the workers. This is evident from his announcement at Paderborn of an increase in unemployment and other benefits, which has since been put into effect.

The new increases, which probably represent a burden of some 50 millions, chiefly affect families with large numbers of children. They are to be met out of the savings in unemployment benefit and other expenditure for the relief of the unemployed which will accrue from the improvement in the labour market whose beginning is already perceptible. It is, of course, a somewhat bold policy to anticipate such savings, but that it seemed to the Chancellor a political necessity is the easier to understand as the action of the Catholic labour leaders was followed by a sort of official declaration of war by the Centre Party through the mouth of the Prelate Kaas. The former Minister of Labour, Herr Braun, also a member of the Centre, has also announced himself strongly opposed to the Government. Social policy is playing a very large part in this storm, while a recently published letter from Herr Löbe, the ex-President of the Reichstag, to Herr von Hindenburg complains particularly of the doubt which Herr von Papen has allowed to arise over his attitude to the constitution.

In the Paderborn speech Herr von Papen, almost contrary to expectation, defended the proposed quotas for agricultural products. It had been supposed, during the last few weeks, that the difficulties which the German delegation had encountered at The Hague and in Rome, when they wished to negotiate on the quotas, would have pretty well wrecked the plan. There is no doubt that the almost unanimous resistance of industry to the quotas, which was expressed, *inter alia*, in a telegram from the Ruhr coal syndicate, made a profound impression on several members of the Cabinet. The warning letter of the directors of the Reichsbank may have strengthened this impression, but these protests have evidently aroused fresh zeal among the agricultural organisations. The "green front," a committee of agricultural unions of all complexions, have demanded that the Chancellor should not wait for the outcome of the negotiations with the other parties to the treaties but should set the quotas in force forthwith. That will certainly not be done, but what will happen if the delegation returns with only small success is once more far from certain. The decision will probably have to be taken during October.

The negotiations between Germany and Italy have led to no understanding on questions of commercial policy, and the quota delegation has gone on to Paris armed with contingent proposals from Italy which are of little value. An agreement has, however, been reached on the exchange question. Until October 1st a sort of clearing agreement was in force between the two countries. German and Italian importers were to pay cash to the extent to which they were allotted marks or lire by their central banks within the frame of the exchange rationing system. Beyond that, German imports from Italy would be covered by the payment of Reichsmarks to the Reichsbank, and Italian imports from Germany by the payment of lire to the Banca d'Italia, these accounts

being then set off against each other. The only condition was that the recipient of payments should declare himself ready to wait until an adequate contra-item was available. This agreement was denounced by Germany, partly for reasons connected with the system of aid to agriculture, partly because this arrangement only allowed Germany additional exports to the extent that she was able to buy additional imports from Italy, whereas Germany had hitherto had a large export balance with Italy. Under the influence of the impression created by the German quota measures, Italy had replied to the denunciation of the agreement by a complete embargo on exchange dealings with Germany. The new arrangement, which was agreed upon with the Italian Government by a commission headed by a representative of the Reichsbank, restored the old procedure, but with the alteration that in the supplementary trade the proportion between imports and exports which obtained in 1931 should be approximately retained. This clause is also embodied in a similar agreement between Germany and Sweden. Germany is obliged to strain every nerve to maintain her export surplus in the trade with her European neighbours, for only so can she keep her balance of payments in order. This surplus is necessary for the purchase of raw materials from overseas countries which cannot take corresponding quantities of German goods, and also for the maintenance of her debt service. As the Chancellor said in his Paderborn speech, "The creditor countries can only count on the payment of Germany's foreign debt if they are ready to take German goods in payment of it." This sentence, which seems to have caused some uneasiness abroad, merely refers to a general and indisputable law, and does not in any way indicate a change in the attitude of the German Government to the Standstill Agreement or to any aspect of the debt question.

The decided opposition of the Reichsbank directors to the quota policy has rekindled the opposition to Dr. Luther. As some months ago Dr. Luther allowed himself to be used as a shield against demands for inflation and devaluation, so he has now against the commercial policy of self-sufficiency, and he has thereby made those who stood to gain by the proposals into his deadly enemies. It is proposed to replace Dr. Luther by his predecessor, Dr. Schacht. Since the Papen Government assumed office there have been many efforts to get Dr. Schacht into public office again under some form or another. The motives for this are obscure and complicated. Many possibilities of finding a sphere of influence for Dr. Schacht have been canvassed during the last four months, and the possibility was at first discussed of making him a trustee for the large Reich participations in banks, heavy industry, shipping, etc. Then it was suggested that he might be given the special task of solving the foreign debt problem, and finally it was proposed to make him banking commissioner. While the first two of these offices would have had to be specially created, the third is at present held, and held, moreover, by Herr Ernst, who has, since July, combined it with the office of Trade Commissar in Prussia, and enjoys universal confidence. It appears that none of the three posts satisfied Dr. Schacht, and that he would, in particular, only have accepted the post of Commissioner of Banking if the powers attached to the office had been

NEW THIRD EDITION

BUSINESS FORECASTING AND ITS PRACTICAL APPLICATION

By WILLIAM WALLACE, M.Com. With a
Foreword by SIR WALTER LAYTON, C.H., C.B.E.

The standard work, revised to include detailed information on contemporary business conditions, and showing very clearly how "business barometers" may be used to eliminate guesswork in the administration of manufacturing, buying, and selling organizations. 148 pp. 7/6 net.

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

greatly extended, and this the Government could not have done without coming into conflict with the Reichsbank. Apart from this, there was, of course, no lack of opposition to Schacht, especially among industrialists. The fight, however, is still going on. The President of the Reichsbank cannot be removed as long as the Young Plan is in force; that is to say, as long as the Lausanne Agreement remains unratified. The normal term of office of the President runs till the spring of 1934. By then not only may the political position have cleared up, but the big financial questions which are to-day in dispute may have been decided.

SOVIET RUSSIA.

Food Distribution — Industry — Foreign Trade.

(FROM OUR CORRESPONDENT.)

Moscow, October 5.

THE provision of an adequate food supply for the population is the most urgent of the internal problems confronting the Soviet Governments. The system of widespread rationing of the city population, accompanied by virtual requisitioning of the peasants' surplus produce at fixed prices, never very satisfactory, broke down badly last winter and spring, partly as a result of the poor harvest of 1931, partly because of the stocking of foodstuffs for possible military emergencies in the Far East. During the spring the Government issued a number of decrees which relaxed without abolishing the requisitioning system by reducing the amounts of grain, meat, fruit and vegetables which the peasants were obliged to deliver at fixed prices and affirming their right to trade freely on private markets with the remainder. At the same time, with a view to giving the peasants more material incentive to bring their goods to market, factories were instructed to devote part of their time and material to the manufacture of furniture, cutlery and other small articles for everyday use, and the *artels*, or co-operatives, of handicraft workers were freed from some of the former bureaucratic regulations which had hampered them in buying raw materials and selling their wares on a commercial basis.

These measures may bear fruit in the future, but they have not yet yielded the flow of foodstuffs to the markets which it was hoped would bring about an automatic lowering of the fantastically high prices. At present on the Moscow markets a pound of butter costs about sixteen roubles. A pound of meat costs nine or ten roubles if it is bought from a private dealer and six or seven if the purchaser has time and patience to stand in a queue at a booth where a collective farm is selling its produce at somewhat lower prices. Ten eggs command a price of seven or eight roubles; a chicken, depending on size, ranges from ten to fifteen roubles, and other foodstuffs, in so far as they are obtainable at all, are priced proportionately. These are extreme scarcity prices, whether measured by the nominal value of the Soviet roubles (over two shillings at par) or by the prices which prevailed before the Five-Year Plan was inaugurated in 1928, or, most important of all, by the Soviet wage and salary level. The average wage of the industrial worker in the Soviet Union is in the neighbourhood of a hundred roubles a month. (It is somewhat higher in Moscow and the larger industrial centres, somewhat lower in the smaller provincial towns.) On the free market this monthly wage is equivalent to a little over six pounds of butter or a little over ten pounds of meat.

Last spring it seemed that the Soviet authorities saw a temporary remedy for the food shortage in the permission of freer private trade, pending the development of greater productivity on the State cattle, dairy, pig and fruit farms. Last month, however, a draconic decree threatened all "speculators," or middlemen, with penalties of five or ten years of imprisonment in a concentration camp. This decree may quite conceivably undo much of the effectiveness of the concessions which were made to the peasants earlier as a means of promoting freer

circulation of foodstuffs, for the individual peasant is often unable or unwilling to take the trouble to come to a city market and sell his few products, whereas he would dispose of his produce to an enterprising middleman. The deterioration of the food situation had led to many rumours that the plenary session of the Communist Party Central Committee would announce some momentous decisions in regard to agrarian and food distribution policies, but nothing of the kind happened. What the session really offered was not a new programme but rather a lecture on efficiency. In the field of trade the main recommendations were: more attention to the needs of the consumer, the release of more goods for the broad general market and at least a partial abandonment of the old practice of tying up large quantities of goods for the needs of definite institutions, more emphasis on decentralised food collections, improvement in the material and living conditions of the employees of the co-operatives and trading agencies. The results of the freer trade which was permitted last spring were described as "insufficiently successful," and a reduction of the "abnormally high prices" on the new collective farm markets was urged.

Official figures indicate that the Soviet industries, in spite of gains in quantity output, are far behind the year's plan. This is especially marked in the iron, steel and coal industries. Up to the end of August the Soviet Union had produced 4,006,000 tons of pig iron and 3,761,200 tons of steel. There is obviously little prospect that the year's programme of 9,000,000 tons of pig iron and 9,500,000 tons of steel will be fulfilled, even if there is an improvement during the last months of the year. The coal output is also lagging badly, with a figure of 42,289,000 tons for the first eight months, against a year's plan of 90,000,000 tons. It is already quite clear that the widespread Soviet slogan, "The Five-Year Plan in Four Years," will not be fulfilled in the iron, steel and coal industries, while food output, in which the Plan promised improvement, has definitely deteriorated by comparison with 1928. There has been as yet no intimation of any intention of postponing the inauguration of the second Five-Year Plan, which goes into effect on January 1, 1933, regardless of the fact that some rather important aims of the first Plan will not have been realised by that time.

During the first seven months of 1932 Soviet industries as a whole, increased output over the corresponding period in 1931 by 17.1 per cent. The rate of increase slowed down in the summer months and was 4.7 per cent. in July. As has been the case in Russia for many years, the lion's share of the production gains fall to industries which do not minister directly to the everyday needs of the consumer. The output of such products as pig iron, coal, tractors, lorries, although not up to plan, shows an appreciable increase over 1931 as a result of the opening of new plants and the expansion of the productive facilities of others. On the other hand, the July figures show a decline, by comparison with July, 1931, in the output of goods for immediate consumption. The food industries produced 78.9 per cent. of the July, 1931, figure, while the so-called light industries (textiles and clothing, boots, furniture, household goods, etc.) were 2.8 per cent. below their output in July, 1931.

The most formidable problem which looms up at the present time is perhaps the definitely discouraged morale of the peasants, especially in Ukraine, as a result of unduly heavy requisitions last year which left many country districts in a decidedly hungry condition in the spring. This lowered morale has been reflected in a decrease of the Ukrainian planted area and still more, perhaps, in very indifferent cultivation of the fields. Apparently it is believed that an intensive effort to produce goods for immediate consumption will revive the peasants' will to work and that more attention to the training of suitable managers for the collective and state farms will raise the quality of agriculture. Two measures in this direction are the transformation of the Communist universities into higher agricultural schools and the creation of a new Commissariat for the management of the state farms, leaving to the Commissariat for Agriculture responsibility for the collective farms.

The recent publication of the Soviet foreign trade figures for the first half of 1932 indicates that in this field, at least, the Soviet Union is feeling the full blast of the world depression. Soviet exports amounted to 275,160,000 roubles (about £28,000,000 at par), as against 366,256,000 roubles for the corresponding period in 1931. Imports declined from 517,279,000 roubles to 405,273,000 roubles. These figures point to a probable decline of about 25 per cent. in Soviet exports for 1932, as against 1931, when there was a decline of 21.7 per cent. by comparison with 1930.

During the first half of 1932 there was a tremendous drop in Soviet purchases in the United States, which went down from 142,652,000 roubles to 19,261,000 roubles. Unfavourable credit conditions in America, and England's departure from the gold standard, which made it more profitable for the Soviet commercial agencies to spend in England the proceeds received from sales to England were the main causes of this precipitate decline. England's balance of trade with the Soviet Union improved, Soviet sales to England declining in value from 92,276,000 roubles to 65,305,000 roubles, while Soviet purchases in England grew from 33,051,000 roubles to 51,793,000 roubles. Germany enjoyed the lion's share of Soviet foreign trade during the first six months of 1932.

HOLLAND.

Budget — New Issues — Trade Negotiations.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 5.

IN the third week of September the outstanding event of importance in this country is always the opening of the Dutch Parliament and the presentation of the Budget by the Government. According to the Budget figures the expenditure for 1933 is estimated at 572,857,868 guilders and the revenue at 518,223,483 guilders, showing accordingly a deficit of 54,633,885 guilders. This deficit does not make an alarming impression in comparison with those of 1931 and 1932, when the debit balance on the Budget was 49.5 and 48.8 millions respectively. In the explanatory memorandum to the 1933 Budget, however, the Minister of Finance pointed out that the deficit of over 54,000,000 guilders on the ordinary services is simply a hypothetical figure. Originally a deficit of 147,600,000 guilders was forecast. The Government proposes to work off that deficiency by means of retrenchment in expenditure to the extent of 57 millions, and by augmenting the revenue by means of an increase of 30 per cent. on import duties and beer tax. The general import duty in the Netherlands will accordingly become 13 per cent.; with a view to averting abnormal imports the increase is to be made effective retrospectively from September 29th. In addition, another increase in the super tax is proposed, as well as the introduction of a luxury tax. By the operation of these measures, the deficit would be reduced to only 22.1 million guilders still uncovered, which deficiency is occasioned by losses sustained by the Dutch railways, which have to be borne by the State.

It is not surprising that these Budget figures were accorded a favourable reception, and tended to induce greater confidence in State loans, with the result that even the 4 per cent. State Loan was quoted above par. This stimulated the entire investment market, so that municipal loans also recorded a pronounced advance and numerous new issues were placed on the market. The municipality of Amsterdam, for instance, succeeded in issuing 10 million guilders' worth of 5 per cent. bonds, and the Dutch East Indies are now issuing 5 per cent. bonds to the amount of 106,500,000 guilders at 97½ per cent. The revival of the issuing business in the Netherlands is assuming quite important proportions already. This is also apparent from the figures for September, 1932, when issues totalled 20.9 million guilders, as against 12.3 millions in the preceding month and 3.5 millions in September, 1931. Practically all the loan flotations were marketed successfully. The satisfactory results have encouraged the issue houses to show

more activity than they have ventured to display so far. The possibility is again being discussed of placing their issues with syndicates, thus transferring the risk of the issue to them. The course of events has already induced some issuing houses to undertake foreign issues, and in the course of the past month a loan for account of the Grand Duchy of Luxembourg was issued here, and meanwhile a flotation on behalf of the Belgian telegraph and telephone régime is announced. It is hardly necessary to say that so far the flotations have been confined entirely to issues of bonds.

The state of affairs in trade and industry in the Netherlands, indeed, shows no sign of recovery as yet. The strike in the Dutch mercantile marine has ended, but this only means that the existing agreements as to wages and working conditions are to continue until March 31, 1933. In the meantime negotiations are to take place between the parties, who are to apply conjointly to the Government for the purpose of securing co-operation with the object of providing more employment in the shipping trade.

The difficulties in commercial politics are still present. As regards the negotiations with Belgium, nothing new has been reported. In Luxembourg the negotiations consequent upon the treaty of Ouchy were resumed at the end of September and agreement has been reached, so that within a few weeks a new commercial treaty will be signed, operating parallel with the Treaty of Ouchy in regulating the economic relationships between the three signatory powers. In addition, conferences with representatives of the German Government, which took place at The Hague, in connection with Germany's new quota policy for safeguarding her agricultural interests, involving a serious menace to our exportations of agricultural and horticultural produce. In consequence of the proposals, there is already agitation in the quarters concerned for boycotting German goods. The preliminary discussions at The Hague with the German delegation provided no basis for further negotiations, so that the German visitors departed without having achieved anything. The import quota for shoes into Holland has again been extended by six months till April 1, 1933; the percentages remain unchanged, but there has been some modification in the basis years.

NORWAY.

Anglo-Norwegian Trade — Budget — Money — Bourse.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, October 8.

THE general business outlook in Norway has not undergone any material change during the last four or five weeks. Special attention continues to be focussed on the trade relations with foreign countries, of which Great Britain undoubtedly ranks first in importance to this country. While there is still no direct step taken with regard to a trade agreement with Great Britain, Norway has recently signed new commercial treaties with the United States on the basis of most-favoured-nation principle, and with Iceland, the latter also including a shipping treaty. Meanwhile, Germany has introduced a very heavy duty on the import of salt herrings from Norway, the rate having been raised from 3 to 9 marks a barrel. Our export of salt herrings to Germany amounts to about 10-11,000 tons a year on an average, and the value in 1930 aggregated about 2 million kroner. The amount, certainly, is not itself very important, especially not in comparison with the amounts representing German imports of herrings from Holland and Great Britain, but quite important enough to make the increased duty felt as a hard blow to Norwegian fishers and exporters. In comparison, the duty of 10 per cent. recently introduced in England on Norwegian fish seems quite reasonable, and at least not of such a prohibitive character as the German one.

It has often been said, and it is certainly quite true, that in Great Britain Norway finds the chief markets for her export articles, but it is likewise a truth, although perhaps not so commonly acknowledged, that Norway is

one of Great Britain's best customers in Europe. According to a resumé recently published in the *Aftenposten*, Norwegian exports to England in 1930 amounted to 178.2 million kroner, and her imports from England to 274.3 million kroner, e.g., an import excess of 101.1 million kroner. Curiously enough, however, British statistics reveal the fact that, in the same year, British exports to Norway exceeded imports from Norway by £964,000, viz., about 18 million kroner only. This seeming discrepancy is chiefly accounted for by the method of compiling the statistics, which is somewhat different in the two countries. For instance, while the English statistics take into consideration the place of destination (or consignment) of the goods only, Norwegian statistics always take into consideration the country where the goods are bought.

According to the foreign trade figures for August last, the excess of imports over exports only amounted to about 1.5 million kroner, practically speaking a balance. The export value has not been higher in any month during the last two years (except in March, 1931), and the value of imports is 11 million kroner lower than for the same month last year, while there is an increase of 8.3 million kroner compared with July last. Compared with last year, the value of imports during the first eight months of the year has been reduced by 102.3 million kroner, and compared with the same period in 1930 the reduction even amounts to 242 million kroner. Whether this contraction of the import figures signifies a favourable development viewed from a national economic standpoint, may perhaps be disputed, but it is at any rate an unmistakable sign of reduced activity among trade and business circles in the country.

Although it was generally known last autumn that the State accounts for the Budget year of 1931-32 would show a considerable deficit, the final result, which has just been published, was rather disappointing. It appears that revenues are about 12 million kroner lower than estimated, while expenditure has exceeded the estimates by about 23 million kroner. Such a heavy deficit, of course, is not a peculiarity in Norwegian State accounts only, many other countries having—for various reasons—shared this fate when making up their accounts for that particularly difficult period. In Norway one of the chief reasons is the optimism which has been prevalent with regard to the country's ability to shoulder the numerous responsibilities and claims arising during the years of depreciation.

During the last four or five years the State debt has been gradually reduced by 105.5 million kroner, but the gold suspension not only brought this development to a standstill but suddenly increased the State debt by several times the above amount.

The money market has been rather easy during the last four weeks, the Norges Bank has been able to increase its balances abroad, and the krone has improved in proportion to the £ from 19/95 to 19/86. The Municipality of Oslo floated an 18 million kroner loan last month, which was over-subscribed in a few days. On the Bourse there has been much activity all through September, especially as far as bonds are concerned, transactions having taken place at steadily increasing prices.

FINLAND.

Money — Foreign Trade — Public Finances.

(FROM OUR CORRESPONDENT.)

HELSINGFORS.

THE state of the money market was affected in August and during the first half of September chiefly by the customary autumn stringency, which is a result of the credit requirements for financing the harvest and for the autumn imports. The tendency to be observed in foreign markets for prices to rise encouraged importers to supplement their small stocks and thus accentuated the usual seasonal movement. These tendencies, however, became apparent

not in increased credits by the Joint Stock Banks—on the contrary, credits fell off in August by 45.9 million marks—but in considerable withdrawals from the banks. The principal reduction was in the short-term deposits of the Joint Stock Banks on correspondents' and current accounts, which represent the accounts of the business world, by 173.7 million marks, compared with only 36.8 millions during the same month in 1931 and 73.3 millions in August, 1930. Deposits were also reduced by 64.8 million marks, against 58.5 and 45.5 millions in the same month in 1931 and 1930. The reason for this is to be found in unemployment and in the collection of the communal taxes. Altogether the deposits in the Joint Stock Banks fell in August from 7,687.6 to 7,449.1 million marks. As credits dropped simultaneously from 8,577.8 to 8,531.9 millions, the difference between credits and deposits in the Joint Stock Banks increased in August by 192.6 million marks to 1,082.8 millions. At the end of 1931 the corresponding figure was 1,819.8 millions.

The foreign position of the Joint Stock Banks grew weaker in August, for their foreign balances were reduced by 76.1 million marks to 101.7 millions, while their foreign indebtedness rose by 6.5 million marks to 157.7 millions. By this means the position was altered in such a way that, whereas they had a small net balance at the end of July amounting to 26.6 million marks, they had a net indebtedness to other countries of 56.0 millions at the end of August. The Bank of Finland, however, shows a rise in its foreign balances of 72.0 million marks in August to 510.5 millions. This increase was a consequence of the Bank raising its foreign credit from £500,000 to £1 million. In actual fact, therefore, the amount of foreign currency going out—chiefly on account of payment of foreign indebtedness—was in excess of the amount of foreign exchange received for exports. In regard to credits, there was an increase of 30.9 million marks in August, mainly in consequence of the Joint Stock Banks increasing their bills rediscounted at the Bank of Finland from 184.4 to 169.1 million marks. The note reserve remained more or less unchanged in August. During the first fortnight in September the tendency was approximately in the same direction. The total credits of the Bank of Finland increased by 61.3 million marks to 1,085.0 millions, principally as a result of a rise in rediscounted bills. The supply of foreign exchange was reduced by 10.3 million marks, while the note reserve fell off by 3 million marks to 568.5 millions.

Imports in August amounted to 332.6 million marks compared with 300.7 millions in July and 289.9 millions in August, 1931. Although exports were less than in July, their value amounted to 421.9 million marks and exceeded the value of imports by 89.3 millions. For the past eight months of the current year there was a surplus of exports amounting to 842.9 million marks in comparison with 562.7 millions at the same date last year and only 298.1 millions in 1930.

The Government has submitted its Budget estimates for 1933 to the Diet. Owing to the continued depression, it was necessary to anticipate that some items of revenue would not provide as much as in previous years. The Government was consequently obliged to cut down several items of expenditure still further. The total revenue, according to the Budget estimates, amounts to 2,825.7 million marks compared with 2,857.7 millions, according to the Budget adopted for the current year, while the expenditure totals 2,822.6 millions in comparison with 2,855.6 millions in the Budget for this year. The Budget estimates thus result in a surplus of revenue amounting to 3.1 million marks. This circumstance is all the more worth noting seeing that the revenue does not include any fresh taxation or loans, whereas in the expenditure higher grants must be estimated for interest and redemption of the foreign part of the National Debt. The financing of public works, for the greater part productive, instituted for the relief of unemployment, is not included in the Budget. According to the plans approved by the Diet, about 350 million marks are to be employed for this purpose up to next summer, the money being raised by means of internal loans.

CANADA.

Crop Conditions — The Hudson Bay Route — Reopening of Parliament — The Sun Life — Business Conditions.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 6.

THE penultimate stages of the Western grain harvests have experienced somewhat variable weather, and in many districts heavy rains caused an interruption of threshing operations, although at the time of writing it has been possible to resume them in many localities. In Manitoba threshing is practically finished, and in Saskatchewan it is 90 per cent. completed, but in Alberta at the end of September about 35 per cent. remained to be done. In some areas the grain has lost colour as the result of exposure to the weather, but apparently a very substantial proportion of the crop is grading No. 1 and No. 2. Autumn ploughing is now in full swing in Manitoba, and a commencement has been made with it in Saskatchewan. The new grain is now pouring down to the seaboard, and the deliveries are greatly in excess of the volume at the corresponding period a year ago. Unfortunately, the majority of the Western farmers, after struggling along for months without any cash income, are so pressed for funds to meet their more urgent obligations that as soon as they have a marketable commodity like wheat they are almost forced to sell it; very few of them are able to hold their wheat, and the result has been a swamping of the markets and a demoralisation of prices, which on Saturday, October 1st, sank to a low level of 49½ cents (No. 1 Northern at Fort William). The necessity of securing funds regardless of the price of the product is also forcing down the price of other farm commodities; cattle, for instance, are being pushed upon the markets in large numbers, and prices are consequently falling. The consequence is that the purchasing power of the Canadian farmer promises to be considerably smaller than was anticipated a month ago, and its curtailment is bound to have an adverse effect upon general business. In Eastern Canada, however, the farmers, having more diversified crops and practising subsistence farming in many districts, are in a better position to withstand the prolongation of the agricultural depression than their Western brethren.

The high hopes which have been cherished in the West about the benefits of the new Hudson's Bay route as an outlet for grain have been somewhat dashed by the disaster which befell the grain boat "Bright Fan" on October 2nd. While passing through the Hudson's Straits with a very heavy cargo of wheat it struck an iceberg and foundered within a few hours, without, however, any loss of life. This wreck, disclosing the perils of navigating this route, will certainly tend to prevent any decrease of the special insurance rates levied for the route for which the Western papers have been clamouring.

The Federal Parliament reassembled on October 6th and will probably sit for six or eight weeks before adjourning for a long recess. The most important business of the early half of the session will be the ratification of the trade agreements concluded at the Imperial Conference, and, judging by speeches which Mr King and other Liberal leaders have delivered in a by-election campaign in the South Huron division of Ontario, they will adopt a very critical attitude towards them. They will be encouraged by the result of this by-election held on October 3rd, which the Liberal candidate won by a record majority of over 2,000, the actual figures being 6,808 to 4,775. The seat, which is largely rural, is traditionally Liberal, but the majority of the late member in 1930 was only 349, and had never before exceeded 1,200, and the result reveals widespread popular dissatisfaction, shared clearly by Conservative farmers, with the tariff and other policies of the Bennett Ministry. The seriousness of the rebuff from the Government's point of view is accentuated by the fact that five

Ministers took part in the campaign and all tried to make the Conference and its results the dominant issue.

A beginning has been made with the drafting of the legislation necessary to implement the recommendations of the Royal Commission on Transport problems, but the legislation may not be brought down until after the Christmas vacation. On the whole, the report has had a very sympathetic Press, but the Canadian Pacific Railway and its friends are not particularly pleased with it, and it is understood that they are not disposed to accept without a fight the plan for an arbitral tribunal which would have any definite control over the activities of the C.P.R.

A long campaign which a financial paper, *The Journal of Commerce*, has been conducting against the management of the Sun Life Insurance Company of Canada came to a culminating point on October 3rd, when, at the instance of Mr T. B. Macaulay, the president of the Sun Life, Mr James J. Harpell, the president of the Journal of Commerce Company, was arrested on a charge of criminal libel. The basis of the charge was an article in the last number of *The Journal of Commerce*, in which the careers of Mr Macaulay and the late Mr Ivar Kreuger were compared in parallel columns. Mr Harpell pleaded "not guilty," and was released on bail.

The claims that there is visible a certain improvement of a modest kind in the underlying business situation is partially sustained by the latest business survey of the Bureau of Statistics, for which the method of compiling the indices has lately been altered, and given below are weighted indices of the physical volume of business based on the monthly average for 1926 (= 100) and corrected where necessary for seasonal variation, with the data for July, 1932, and August, 1931, given in parallel columns:—

	August, 1932.	July, 1932.	August, 1931.
Forestry	59.6	55.9	75.0
Mineral production.....	84.8	83.4	89.5
Manufacturing	75.5	76.9	86.1
Construction	35.2	36.8	70.1
Electric power.....	137.1	129.0	139.9
Total industrial production....	78.1	78.3	90.3
	August, 1932.	July, 1932.	August, 1931.
Distribution.....	90.4	89.6	99.5
Trade employment	115.3	115.9	122.5
Car loadings.....	64.3	60.5	75.2
Imports	42.6	42.1	55.0
Exports	41.9	41.9	50.0
Bank debits	108.5	104.1	111.0
Shares traded	96.7	50.4	30.0

These data reveal that in a few spheres of business activity there has been some gain, and that in others the pace of the decline has been slowed down. There has been some further improvement in September, but the Speech from the Throne, while claiming that there are signs of a passing of the acuteness of the depression, admits that the economic situation still weighs heavily upon all classes of the community. Retail and wholesale merchants report that there is visible some improvement in the volume of orders from the country districts, but industrial conditions are still very unsatisfactory and comparatively few factories are working at more than 60 per cent. of their operating capacity. The slight upward turn in commodity prices which was noted in August has not persisted, and the wholesale price index of the Bureau of Statistics for September rose fractionally from 66.8 to 66.9, largely as a result of a drop in the price of vegetable products.

The Government has announced in the Speech from the Throne that decennial revision of the Canadian Bank Act, which was due to take place this session, will be postponed until the results of the World Economic Conference are disclosed, and accordingly Parliament is to be invited to renew the charters of the Canadian banks for another year. In a speech during the South Huron by-election campaign Mr Mackenzie King pledged the Liberal Party to press, at the revision of the Bank Act, for the establishment of a central bank of rediscount for Canada.

ARGENTINA.

Finance — Transport — Improved Outlook.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 1.

ARGENTINA'S determination to meet all her engagements, while refraining from recourse to expedients of doubtful eventual utility, has again been emphasised by the courageous pronouncement recently made before the Senate by Dr. Hueyo, Minister of Finance. Invited by that body to express the views of the Government on the proposed emission of special bonds by the National Mortgage Bank, these bonds to be discountable immediately at their face value in the Conversion Office, Dr. Hueyo declared that he spoke with the full weight of the Government behind him when he said that the Executive Power was entirely opposed to any such operation. In a brief but notable speech he outlined the antecedents of a fallacy that dates back to the time of John Law, and made a particularly telling point by quoting at some length from the declaration made on the 28 ventose An. IV., striking a parallel with certain paragraphs of the measure now awaiting the consideration of the Argentine Senate. It should be clearly understood that the danger has been postponed, not definitely removed, although after the remarks of the Minister of Finance it will be no easy

matter to find logical reasons for a revival of the plan when Congress meets anew, the ordinary sessions having closed on September 30th.

Congress has sanctioned the Road Transport Bill, which thereby definitely becomes law, and undoubtedly improves the outlook for the private railway interests, inasmuch as it will now be possible to co-ordinate transport by road and rail, in accordance with up-to-date modern practices. There is also every likelihood that liquidation of outstanding accounts owing by the Government to sundry railway companies for freight and passage during a prolonged period will be made early next year. The Government, by decree, have laid before Congress a measure asking for permission to pay such accounts, up to the amount of \$25 millions paper, in *Credito Argentino* 6 per cent. bonds, and it is possible that this matter may be dealt with during the Extraordinary Sessions of Congress, likely to be held during the latter half of October or at the beginning of November.

Thus with financial matters maintained on what one may describe as a sound conservative base, with crop prospects reasonably satisfactory throughout the greater part of the Republic, and with political tranquillity the desire of all parties, it is permissible to think that the outlook for Argentine affairs at the year-end is likely to be brighter all round than one would have thought possible three months ago.

Books and Publications.

BOOK OF THE WEEK.

Methodology and the Social Sciences.

EVERY student of the social sciences will wish to read a book by Mr and Mrs Sidney Webb on methods of research; for, even apart from their personal contribution (in the great works on English local government, trade unionism, co-operation, etc.) to the knowledge of nineteenth-century institutions, there is a mass of research work now being done in this country which practically owes its existence to the influence of the Webbs. It was Mrs Webb who demonstrated that a Government Commission could really be used as a means of social research; it was the Webbs who were directly responsible for setting up that small institute of research and study which has now grown into the enormous London School of Economics; and it is the Webbs who have done much to rescue economic and political science from the age of immense *a priori* generalisations and forced it to study objective fact. The generalisation, of course, remains and can be fruitful; it is the service of the Webbs to have made at any rate a provisional delimitation of the sphere of usefulness to be assigned to the broad generalisation and the detailed study.

As pioneers in this field, then, the experience of the Webbs in the practical organisation of research work, given in this book,* will be of great value to their followers. Of course, their methods, like those of all pioneers, are highly individual, and would not necessarily suit all types of research or research workers, though here again their personal experience of what can and cannot be achieved by various methods is very illuminating to the beginner. Indeed, much of the interest of the book is to be found in the intimate record, often extracted from diaries, of the Webbs' successes and failures. The sad story of the great trade union questionnaire, which could not be filled in by anyone who "did not combine the accuracy and zeal of a scientific worker with the trustfulness of a saint or a fool" leads to an analysis of the value of questionnaires for research work which many public bodies might read with advantage; there are many useful hints, which have the clear ring of authenticity, on the best method of interviewing ("Bear in mind that it is desirable to make the interview pleasing to the persons inter-

viewed," is one of the simplest yet most valuable); there are pungent and well-deserved criticisms of the methods of Royal Commissions, coupled with a resigned realisation that these bodies are commonly set up for political reasons and not for the ascertainment of fact.

It may be suggested that their method of note-taking, on which the authors lay so much stress, is one which happens to suit their particular habit of work, and would not necessarily suit others. It should also be noted that some types of research, particularly historical research, demand a greater knowledge, by the investigator, of the surrounding circumstances—what Mr Leonard Woolf would call the "matrix"—than the Webbs seem to require. Too much of the work done for University theses, for example, is vitiated by the fact that the writer seems to have soaked himself in his own speciality while ignoring the world around—to have written, for example, on the history of the northern miners' unions in oblivion of any miners' unions in any other part of the country or of any economic changes in the coal trade at large. The greatest omission, however, in the Webbs' book is one due to the authors' modesty: they have not stressed enough that passionate disinterestedness, that desire not to write a thesis which would lead to a Ph.D., not to become an "authority" on some obscure subject, but simply to find out, for directly social reasons, how and why the institutions of society worked, which has made their study fruitful and continuing. The Webbs are not exactly poetical stylists; but this spirit shines out clearly in passage after passage. And it is this spirit which makes social research socially valuable, and saves it from the barren heap labelled "Theses—Query, suitable for publication?"

SHORTER NOTICES.

"The Future of East and West," by Sir Frederick Whyte, K.C.S.I. (Sidgwick and Jackson.) 1932. 3s. 6d. net.

This little book is as good as one would expect it to be from the name of the author on the title-page. Sir Frederick Whyte enjoys a unique combination of qualifications for writing on this subject. He knows his own West as a former Member of Parliament and publicist; he was an observer at the Peace Conference; he was the first Speaker of the Indian House of Representatives at Delhi; and since then he has been political

adviser to the Central Government of the Chinese Republic at Nanking. In fact, he knows the ground; and it is therefore not surprising to find that, in handling his subject in small compass, he manages to bring home to his readers all the fundamental truths which lie at the heart of this "East-and-West" problem.

The first and simplest of these truths—which has, no doubt, been borne in upon the author by his own varied personal experience in India and in China—is that there is no such thing as "the East" or "Asia." As far as such labels have any meaning, they give a false appearance of positiveness to what is no more than a convenient negative term: the "non-West" in distinction from Western Christendom. The West, of course, is an entity and a unity: it is a society, it is an idea, it is an attitude and a tradition; and the social and spiritual influences radiating from the West have impinged, during the last few centuries, upon the whole non-Western remainder of the world. But this similar and simultaneous exposure to Western influence is really the only thing which the various components of the non-West have in common. The author justly insists that India differs far more profoundly from both China and Europe than China and Europe differ from one another.

Another important truth brought out in the book is that the impact of the West upon these non-Western societies has caused each of them to undergo simultaneously a number of different kinds of revolution which have all occurred in the West, but have occurred here in succession. In Europe we took the Renaissance before the Reformation, and the Reformation before the Political Revolution, and the Political Revolution before the Industrial, and so on. And, even so, we seem to have been leading a hectic life during the four or five centuries that have elapsed since the beginning of our modern era. How much more hectic must be the life of the Chinese of our own generation, who at this moment are going through all these revolutions all together!

Sir Frederick Whyte goes on to explain that the political revolution in China or India or Japan, which catches the eye and makes news for the Press, is really rather superficial. The non-economic revolution bites deeper into the lives of the non-Western peoples who are passing through it. But it is the spiritual or mental or cultural revolution that cuts deepest of all. It is on this field that the really decisive struggle is being fought out.

In this struggle, the two combatants are not, as is commonly supposed, the Western and the non-Western peoples. Sir Frederick Whyte takes the case of India, and shows that the ostensible conflict between Indians and English really masks a profounder conflict which is being waged by two parties of Indians with one another. The real missionaries of Western culture in the non-Western world are not the Westerners themselves, but the Indians or Chinese or Japanese who have become converts to Westernism. The real conflict is between these Westernised non-Western Westerners and the zealots who are up in arms to defend the old non-Western order against its enemies in its own household.

In this light the Western force which has been radiating out over the world is seen to be not a material force—not the power of Western weapons and other Western machinery, but rather the power of Western ideas and feelings and aspirations. It is these intangible but most potent emanations of the Western spirit, working in non-Western souls, that this brilliant little book reveals.

"The Greater Britain," By Sir Oswald Mosley. B.U.F. Publishing Company, 1 Great George Street, Westminster. 160 pp. 2s. 6d.

Sir Oswald Mosley has gained in clarity at least from his sojourn in the political wilderness. His new party, whose creed he enunciates in this little book, is now definitely defined as Fascist, and as having a policy which, where he describes it at all, resembles closely that of Italian Fascism. Further, his opening attack upon the present bankruptcy of British politics and institutions is more incisively written and better expressed than it has been before; there are some good and quotable phrases in his opening chapters, and the desire to promote "the Corporate State"—Machiavellianism up to date—which is the emotional basis of Fascism—is well stated. Beside this, however, there is little that is either new or definite in the book. Sir Oswald says that there is a Fascism suitable for Great Britain which is unlike Italian Fascism; but what it is and wherein it differs he does not tell us, beyond the statement that his party will probably not run Parliamentary candidates at the next General Election. If, as he seems to imply, the British Fascist revolution is to resemble other Fascist revolutions only as the change in 1832 resembled the French Revolution, some rather harder political thinking will be necessary. Sir Oswald, as ever, finds things too easy; a few figures dispose of the awkward problem of export trade; and he commits himself to a conception of the Empire as an economic unit

which is far less definite than that of the Empire Crusaders. In the Fascist programme this Imperial entity is to be strong, even iron-like, in its nature, and it would seem desirable to lay down a little more explicitly what exactly it is to be. Whether Sir Oswald has learned more about the art of effective propaganda since his resignation from the Labour Party remains to be seen; certain sentences in his book rather indicate that he is still unaware of the movements of the mass of English people, and has not yet realised that enthusiasm and rhetoric, even backed up by a certain amount of reasoning, are not a substitute for political common sense.

"William James Ashley. A Life by his Daughter," Anne Ashley. London. P. S. King. 171 pp. 8s. 6d.

The most interesting thing about the life of the late Professor Sir William Ashley was, perhaps, that, though his main pre-occupation and the main bulk of his work was, of course, academic, he was neither academic in origin nor at all wholly academic in his interests. The son of a journeyman hatter of Bermondsey, who actually suffered unemployment for some time as a consequence of technical changes in the trade, he retained throughout his life a recollection of the practical working of "economic laws" which may have tended, by making him distrustful of pure economic theory, to give him a strong bias towards economic history and practicality in the sense of political economics. One of the most exciting events in a quiet life seems to have been when he led the University of Birmingham to battle in the local elections on behalf of a political opponent whose work for Birmingham housing he considered ought not to be interrupted; and during the latter part of his life he was probably as well known for his work on Government Committees as for any academic honours. Ashley's contribution to economic history is so well known as to need no discussion. It is not everyone who can write, at so early an age, so undoubtedly a classic as his *English Economic History and Theory*, or who can also popularise a weight of learning in so easily readable a style as that of *The Economic Organisation of England*, for which every teacher of elementary students must bear him much gratitude. He founded no school, as Unwin did in Manchester, of writers and teachers who to this day bear the deep impress of Unwin's thought; but he has left much more of the written word than Unwin did. His life, here compiled by his daughter, is a grave and quiet story, sympathetically told, and Professor Muirhead contributes a chapter on the University of Birmingham which is of considerable interest to the student of the growth of economic study.

OTHER BOOKS RECEIVED.

Speeches and Documents on the British Dominions, 1918-1931. Edited by Arthur Berriedale Keith. (London) Oxford University Press. 470 pp. 2s. net.

A very useful pocket reference book.

The Tyranny of Gold. By W. R. Hiskett. (London) Williams and Norgate. 99 pp. 2s. 6d. net.

The author finds a remedy for the present world depression in the substitution of commodity bills (i.e., bills exchangeable into goods) for gold and bills of exchange.

Review of the Economic Councils in the Different Countries of the World. Prepared by Dr. Elli Lindner. (Geneva) League of Nations. 105 pp. 3s.

Contains information regarding the constitution, operations, rights and duties of economic councils in the leading countries of the world.

IMPERIAL ECONOMIC CONFERENCE AT OTTAWA, 1932

A Summary of Proceedings with copies of the Trade Agreements reached at the above Conference is now ready. This publication also includes a number of schedules listing a wide variety of goods on which changes of duty are to be brought into force.

The Conference records its conviction that, by the lowering or the removal of trade barriers within the Empire, provided for in the Agreements, the flow of trade between the various countries of the Empire will be facilitated, and that by the consequent increase of purchasing power of their peoples the trade of the world will also be stimulated and increased.

The Stock Exchange.

RAYON TEXTILE SHARES.

RAYON shares have been a much more active market, for some weeks past, than those of either the cotton or wool textile industries, whose prospects we have recently discussed (see the *Economist*, September 17 and October 1, 1932). The reason is not far to seek. There is a widely prevalent impression that the industry will be among the first to benefit from a trade revival. Quite a moderate rise of prices, indeed, might restore the industry to relative prosperity. Consumption is gradually increasing and manufacturing costs are being reduced. Protection in the home market, whether necessary or otherwise, has been added, both by way of a depreciated pound and a high tariff. In spite of world depression, demand for rayon yarns continues to expand as quality and usefulness reach higher standards. Rayon, in fact, is becoming more and more a "utility" textile whilst retaining its decorative appeal. Not only is it in increasing demand for the cheaper classes of textile goods, but it is now being used in conjunction with other fibres in the more expensive dress materials. In the furnishing trades new uses are continually being found.

In the period following the departure from the gold standard, British consumption of rayon reached unprecedented levels. While there has been some reaction in the summer months, consumption is still substantially higher this year than in either of the two preceding years. The recovery in the export trade this year is shown by the following table:—

EXPORTS (PRODUCE AND MANUFACTURES OF THE UNITED KINGDOM).
(Nine Months ended September 30).

	Volume.			Value.		
	1930.	1931.	1932.	1930.	1931.	1932.
Art. silk yarn	5,163,439	3,447,222	5,025,134	£ 893,518	£ 463,728	£ 536,331
Manufactures (excluding apparel)	9,367,379	6,337,392	8,139,688	£ 3,899,033	£ 2,214,458	£ 2,492,137
Stockings and lingerie	...	...	...	£ 423,687	£ 262,309	£ 269,206
				£ 5,216,238	£ 2,940,495	£ 3,297,674

Though it is not to be expected that exports will be resumed on the scale of a few years ago, before Japanese competition became acute, the present low exchange is undoubtedly stimulating our export trade.

As regards protection of the home market, the depreciation in the pound sterling has naturally restricted the import trade, particularly in woven piece goods. Under the Abnormal Importations Acts imports, so far as mixture goods were concerned, were practically shut out, being subjected to a 50 per cent. *ad valorem* duty in addition to the already existing duty of 3s. 6d. per lb. The revised

duty on all rayon fabrics or mixture goods is now 3s. 6d. per lb. plus 10 per cent. *ad valorem*. As British manufacturers, however, pay an excise duty of 25 per cent. on their raw material, and the import duty by weight is comparatively small, it is expected that certain fabric goods will continue to be imported in some volume. However, new duties have been imposed since May on rayon knitted stockings and garments, which are now subject to 43 per cent. *ad valorem*, or 5s. per lb., whichever is the greater. In some cases the duty on weight works out at 100 per cent. *ad valorem*, and in many others it is more than 50 per cent. The home market has therefore been protected effectively against the imports of the cheaper rayon stockings and garments. British manufacturers have not been slow to take advantage of this favoured position. Courtaulds have led the way by introducing a mass-produced yarn for the cheaper hosiery lines. Several of the smaller manufacturing firms are now working on similar yarns. With the increase in raw silk prices there is expected to be an increasing demand for the cheaper rayon stockings.

Investors should bear in mind, nevertheless, that conditions in the industry remain highly competitive. The house of Courtauld, which continues to dominate the industry, is not likely speedily to increase prices, and thus encourage the reopening of plants which have been closed down, and the flooding of the market by a surplus of inferior yarns and piece goods. It has been, and is, the policy of Courtaulds to keep prices low and to rely on a reduction of costs and an increase in turnover for the maintenance or recovery of profits. In America, where the rayon industry was more seriously affected than in this country by trade depression, Courtaulds' subsidiary was quick to take advantage of an increase in consumption this year by raising prices to a more remunerative level. This blessing, however, has been denied the home market. It has, consequently, been difficult for yarn-producing firms to dispose of their output on a remunerative basis, even when demand was at its height. Economies in operating expenditure have therefore been the only means of salvation. Much has, in fact, been accomplished—by way of higher machine speeds, fewer workers per machine and lower wages. The most interesting development of recent months has been the adoption by Courtaulds and British Enka of the practice of washing and bleaching the yarn while it is still in the spinning spot. This enables the yarn to be wound on to cones for the hosiery trade, and eliminates the costly process of reeling the yarn into hanks. This new system was evolved by Courtaulds to cater for the bulk trade which has grown up in cheap hosiery and underwear. So far the new direct winding process has not been commercially applied to

weaving yarns, but this development is expected in the near future.

The table on the preceding page gives the trading results of the principal companies in the industry for the last two years. Courtaulds have been responsible for the bulk of the increase in production this year, and no doubt have been able to show better results than the rest of the trade on account of their larger turnover and lower overhead costs. In the early part of 1931, it may be recalled, the company was making no profit at all in spite of lower costs. In the autumn of 1931 a small profit began to be earned, and as the chairman in March stated that the company was then within measurable distance of full production, we may look for a fair increase in profits this year. Mr Courtauld, however, warned shareholders that capacity in the industry was still excessive, and that there was no near prospect of any rise in prices. It was the company's policy, he said, not to advance prices as long as they had any machinery standing idle. As regards the company's outside interests, the American Viscose is having a more profitable year, although the rise in yarn prices has not been fully maintained. The Canadian subsidiary is perhaps the most prosperous of the Courtaulds group, though it is still relatively unimportant financially. In spite of the more favourable trend of earnings this year the dividend policy of Courtaulds remains conservative. The interim dividend in July was 1½ per cent. against 2 per cent., free of tax, in the previous year. Last year a final of 3 per cent., tax free, was paid, and the market is hoping that this year at least 2½ per cent., tax free, will be paid, making 4 per cent., free of tax, for the year.

British Celanese, whose accounts have been issued this week and are analysed on page 749, has been able to increase its profits as a result of the active trade buying from October, 1931, to March, this year. The accounts, however, do not show the extent of the economies which have been effected, as an "adjustment of stock values" appears in the expense item. Thus the vital question on which the investment value of British Celanese shares largely depends, is left unanswered by the current report. There is no indication that the demand for acetate rayon is likely to decline. On the other hand, nothing points to a substantial increase. Acetate has certainly been used to a greater extent in the knitting trade, but the bulk business, both in weaving and knitting, remains with the viscose producers. Acetate and cuprammonium silks remain more or less in the category of speciality yarns.

The Cellulose Acetate Silk Company, the only one of the small acetate companies which is still alive, appears to be making reasonably good progress, although it has never been clearly revealed how far the company is indebted to damages awarded in a lawsuit for the rise in profits shown in the year to March, 1932. The chairman stated in July that British Celanese had started an action against the company for infringements of patents, but the company had been advised that it need have no apprehension as regards the result, and no fear in proceeding with its present manufacturing process.

With regard to the smaller viscose producers, British Enka, which suffered losses up to the year ended December, 1931, should show a more favourable result this year. The chairman stated last April that the company had recently purchased a number of spinning machines and other equipment from a company which had gone into liquidation. This new plant was then gradually coming into operation, and should materially help towards a reduction in costs.

Harbens (Viscose Silk Manufacturers) has been perhaps the most consistently efficient and successful of the smaller viscose companies. It actually increased its profits by 20 per cent. in the year to April 30th. The company is turning out a high-grade product and has no difficulty in clearing its full production, but it is not in a position to compete with Courtaulds and British Enka in direct winding yarns. Nor for that matter is Kirklees, a company which has made good technical progress in the last two years. The chairman of Kirklees stated in September that as the output had been raised considerably above that for which the spinning plant had been designed, the greater part of the profit had been absorbed in capital expendi-

ture upon the necessary equipment to deal with the increased production. The company's plant was at work on full capacity throughout the year to June 30th, 1932. Orders in hand in September were sufficient to absorb the whole output for a considerable period.

The market in the shares of the rayon manufacturers is confined chiefly to Courtaulds and British Celanese. An optimistic view is held of the prospects of Courtaulds, for the yield at the present price, even if a dividend of as much as 5 per cent., tax free, is paid, is only £4 2s. per cent. gross. In the case of British Celanese, optimism would appear to be taking an even higher flight. The 10s. ordinary shares, which are not within sight of a dividend in the near future, are valued at 9s. 6d., while the 7 per cent. first preference £1 shares are quoted at 9s. 3d. and the 7½ per cent. second preference £1 shares at 7s. 3d. Only a nominal market obtains in the shares of the smaller companies, but it is worthy of mention that there are no shares on offer of Harbens. Our final table gives the highest and lowest prices this year, the present price and the dividend yields (if any) of the shares of companies mentioned in this survey.

Ordinary Shares.	1932 Prices.			Last Dividend.	Dividend Yield (%).
	Highest.	Lowest.	Present.		
British Enka (£1).....	8/9	4/6	6/3	% Nil	£ s. d. Nil
British Celanese (10/-).....	11/3	4/9	9/6	Nil	Nil
Cellulose Acetate (£1).....	4/3	...	4/-	Nil	Nil
Courtaulds (£1).....	38/1	23/9	32/6	5% tax free	{ 3 1 6 free 4 2 0 gross
Harbens, Ltd. (4/-).....	3/6	1/3	3/3	Nil	Nil
Kirklees, Ltd. (5/-).....	3/3	...	3/-	Nil	Nil

It may be appropriate that the market should favourably regard the prospects of an industry whose chances of recovery on a moderate rise in selling prices are reasonably bright. It would appear, however, that the border line between reasonable expectation and excessive optimism has become somewhat blurred.

RISE IN GOLD MINING SHARES.

THE widespread activity of the market for gold mining shares this week may be related almost entirely to the fall in the sterling exchange. The more or less steady depreciation of the pound, after its spectacular rise early this year, has been strikingly reflected in our "Kaffir" share index:—

(DECEMBER, 1928 = 100.)

	1930.	1931.	1932.

" December	76.6	88.8	...

* ex dividends.

The index is based on market quotations for sixteen South African mines which declared dividends in December, 1928, and had then estimated lives of ten years or more, the total market capitalisation (£70,292,000) at that date being taken as 100. The actual appreciation of quotations, since this country's departure from the gold standard, is greater than the table suggests, since our index excludes some shares which have risen more than the average, e.g., Randfontein, East Rand and West Rand, which paid no dividends in December, 1928, and newcomers like East Geduld and Daggafontein. Incidentally, the dividends declared by the sixteen companies in June were equal, in sterling, to 6.75 points of the index.

The rise in values, as the index suggests, has largely reflected the inevitable adjustment of sterling quotations to dividends paid in South African (gold) values. The Union has steadily refused to countenance the idea of currency devaluation, and this week's break in sterling

raised the South African exchange to a level representing a premium of well over 40 per cent. The dividends for the second half of 1931 were paid at 35 per cent. premium, and those for the first half of 1932 at 33½ per cent. premium. Obviously, much may happen between now and the distribution of the December dividends, but at present levels a dividend of 5s. per share in South African currency is worth over 7s. in sterling.

We show below the present prices of a representative selection of South African and miscellaneous gold shares, compared with the highest quotations of 1931. We also show the maxima of the preceding four years. These, unlike those of to-day, are quoted in gold prices:—

The rise in values among the South African mines has been steady, but not uniform. The same feature is disclosed by the comparative figures for companies operating outside South Africa, whose "benefits" as a result of the gold premium are expressed directly in higher sterling earnings and dividends. The dividends of the Cam and Motor, for its last financial year, for example, totalled 22½ per cent. as against 17½ per cent. in the previous year. The Champion Reef has recently declared an interim of 1s. 8d. per share, which compares with 1s. 6d. for the whole of 1931, and the Nundydroog of 2s., comparing similarly with 2s. 9d. Of the monthly profits of between £50,000 and £60,000 reported by the Ashanti (West Africa) something approaching one-half has been due to the enhancement in the price of gold.

It is not surprising, therefore, that many gold mining shares have now attained "record" high levels. In many cases they still offer attractive yields, especially for mixing purposes. Buyers for a further rise, however, should clearly realise that they are, in effect, "bears" of sterling, and exchange speculation is a dangerous activity for the amateur.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.
TICKET. November 8. ACCOUNT. November 10.

THE strong tone of last week was not maintained at the opening of the three weeks' account. Political factors like the failure of the Anglo-Irish discussions and the subdued tenor of the Prime Minister's speech on Monday, combined with anxiety regarding the Anglo-American debt position to depress sentiment. By mid-week, however, markets were entirely dominated by the course of sterling. In spite of considerable fluctuations, the recession in gilt-edged stocks has been reassuringly moderate. The *Financial News*' daily index of fixed interest stock prices gave 122.7 for October 7th and 126.8 for October 20th, while the *Financial Times*' British Government securities index (which is now published on a daily basis) was 116.1 on October 7th and 117.8 on October 20th.

Gilt-edged prices were irregular with sterling. A heavy tone was apparent on Tuesday morning, and scattered selling continued in mid-week. Consols, Conversion 3½, Assented War Loan and Funding being all easier on Thursday. India long-dated stocks came in for considerable selling pressure, but made a striking recovery. Colonial stocks fluctuated uncertainly, the new Commonwealth 3½'s easing to 3 premium, while the New South Wales 5½ per cent. Loan lost ground.

There was a tendency for the foreign market to confine itself to "gold" bonds. The Boxer loan was a firm feature, demand being stimulated by approaching drawings. Japanese issues were dull. The Brazilian Funding loans were supported, and elsewhere San Paulo Coffee 7½'s improved. In the European section the Dawes loan was fairly active, but weakness set in on Thursday. A steady business was done in German municipal issues.

Home rails had a dull appearance, despite a batch of somewhat improved traffic figures. Southern Preferred attracted attention on the earnings statement contained in this week's debenture issue prospectus. The subscription list for the new stock was closed early. Argentine rails were conspicuous, prices advancing on the first reports of the "Big Four," but subsequently relapsing, the report of the Great Southern being regarded as less satisfactory than had been anticipated. Fresh support was forthcoming in mid-week and Central Argentine was prominent.

The industrial share market was affected by the fluctuations of sterling, home issues being in moderate demand, though interest was mainly confined to a few specialities. Internationals opened dull, with Cables and Wireless out of favour, and remained easy throughout the week. Spillers, Imperial Chemical, Carreras and Imperial Tobacco were among the favourites, Chemical being bought on provincial account. Turner and Newall were a feature, while Rayons reflected the encouraging results announced by British Celanese (summarised on page 749). The outlook for rayon shares is discussed in a leading article on an earlier page. Profit-taking set in among electricals after initial strength, but Victoria Falls Power remained strong, the market being short of the shares. Guinness, among breweries, was inclined to dullness at first in connection with the intensification of the Anglo-Irish tariff war, but the weakness was short-lived. Motor shares were in demand. Leyland and Rolls-Royce strengthened. Insurance shares continued to enjoy a steady investment demand.

The oil share market had an unpromising appearance in the early sessions, but a firmer tone supervened when New York prices advanced. A decline in United States crude production created a favourable impression, but the Continent proved to be a seller, and Royal Dutch fluctuated within narrow limits. Rubber shares were quiet, the number of transactions being again very limited in the absence of any new factor. Prices were assisted somewhat by the firmness of the commodity. Malayalam were inquired for, and Allied advanced. Tea shares were rather more active than of late, on restriction rumours (discussed on page 749).

The mining market enjoyed considerable popularity, stimulated by the break in sterling, the strength of

"Kaffirs," stimulated by the break in sterling, being one of the week's leading features. The position is discussed in a leading article on page 743. Other sections showed signs of strength, Lake View and Star, in the West Australian group, finding especial favour.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets turned firmer before the end of last week, Friday's gains of 3.5 points being consolidated on Saturday, after the publication of car-loading figures for the week ended October 8th showing a gain well up to expectation—due, however, entirely to the movement of coal. The markets this week have been mainly professional, but prices generally have held their ground. The volume of dealings has been modest. The uncertain and slightly downward trend of commodity prices has been a neutral, rather than a discouraging, factor. The public for the most part is remaining outside the market, owing to the absence of speculative stimuli of any kind at a period when the unsettling effect of the forthcoming election is nearing its maximum. Wall Street is becoming more resigned to the possibility of seeing Mr Roosevelt at White House. His attitude towards the Soldiers' Bonus, as was expected, has been studiously "correct," and he is regarded as leaning increasingly towards the conservative elements in the Democratic Party for support. The market's fears are now centred less on the effects of his return than on the possibility of stagnation during the interregnum before his prospective assumption of office in March. Third-quarter statements, as was expected, show a continued decline in earnings, Du Pont, for example, reporting 36 cents per share against \$1.12 in the third quarter of 1931, and National Biscuit 55 cents against 74 cents. General Electric net earnings for the first nine months were 34 cents per share against \$1.07 last year. Some liquidation of tobacco shares is in progress, in anticipation of a reduction in the standard 15-cent brands, whose trade is being cut into by the 10-cent brands of the smaller manufacturers, which are now estimated to

account for 20 per cent. of the total business. General trade shows no widespread change, but is moving, if anything, upward against the seasonal trend. Steel activity has now reached the neighbourhood of 19½ per cent. of capacity. The market closed heavy on Thursday.

PARIS.

Local and international developments had an adverse effect upon the Paris Bourse. Rumours regarding certain large banks and the difficulties of the French financial problem, as revealed by the special committee on the subject, causing considerable trepidation. The sharp fall in the pound also added to the general nervousness. Rentes were an especially weak feature, the unloading of full commitments having an adverse effect upon prices. Gold mining shares were a bright feature, but industrials fell to lower levels. Foreign securities were uncertain. Internationals rallied slightly at the opening, but fell away towards the close.

BERLIN.

The nearness of the general election—only three weeks off—had a noticeable effect on all shares. Fixed-interest securities were weak, with the exception of provincial loans, which rose 2 per cent. The fall in sterling led to almost complete stagnation, many people fearing it would lead to another period of deflation. Dye Trusts were weak and Rseinsche Braunkohlen slumped sharply.

AMSTERDAM.

Quiet conditions prevailed at the opening with a generally easier tendency owing to unfavourable comment on the German Chancellor's speech. Royal Dutch were moderately offered, but after a slight rally in mid-week relapsed, falling 4 to 148. Industrials were idle, Philips Lamps and Unilever falling 3½ to 127 and 4 to 115½ respectively. Rubbers were listless in spite of reduced London stocks, and sugars were a dull feature.

	Oct. 13, 1932.	Oct. 17, 1932.	Oct. 20, 1932.		Oct. 13, 1932.	Oct. 17, 1932.	Oct. 20, 1932.

OTHER CENTRES.

The minor European bourses were dull throughout the week. Brussels opened with a weak tone, the fear of a new election causing a general decline in prices. There was, however, a certain amount of selling, but the volume of trading was not large. The market was steadier towards the close, but prices were still somewhat irregular at the end. Unsettled conditions prevailed at Budapest and Vienna. Frankfurt was steady, a quiet tone prevailing throughout the week.

INVESTMENT NOTES.

Sterling and the Markets.—The break in sterling came as a shock to the gilt-edged market, which had apparently been somewhat deceived by the recent stability of the exchange. Government stocks were marked down sharply, whilst British industrial shares were strong, gold shares "boomed," and international shares of gold currencies received speculative attention. On second thoughts, the market became firmer. Government stocks recovered most of their fall on Wednesday and finished on Thursday fractionally higher. India stocks encountered considerable selling pressure at the outset, but recovered with the rest of the market. The following table shows the prices ruling on Thursday evening as compared with those at the opening of business on Tuesday and the low levels touched on Wednesday morning:—

	Prices Low	Oct. 18th.	Oct. 19th.	Oct. 20th.
War Loan Assented.....	102½	101½	102½	102½
Consols 2½%	77½	76½	76½	76½
Consols 4%	109½	108½	109½	109½
Conversion 3½%	101	100½	100½	100½
Funding 4%	109½	109	109½	109½
Local Loans 3%	90	88½	89½	89½
Victory 4%	109	108	108½	108½

The recovery in the gilt-edged market shows that the volume of money seeking investment is still overwhelming. This is particularly evident in the buying of the "second line" stocks outside the British Government circle. Each week the stocks of local authorities and public boards show further appreciation, and even the debentures of the home railways have risen high enough to allow the Southern Railway to issue a 4 per cent. debenture stock at par. This investment buying has overflowed into the equity shares of the leading industrial concerns. It will be found that the shares of the leading electricity supply companies yield no more than 4 per cent. Outside the gilt-edged market the greatest activity has been seen in South African gold-mining market. We discuss this feature in a leading article on an earlier page.

Stock Exchange "Commissions."—The General Purposes Committee of the London Stock Exchange, at its meeting last Monday, duly confirmed the alteration to Rule 199, under which the proportion of commission, returnable by a broker to an agent, is reduced from one-half to one-third, except as regards: (a) remisiers or clerks in a broker's exclusive employment, and (b) "banks and banking houses carrying on business in the City of London" whose names appear on a register kept for the purpose. The new provisions, however, will not operate before January 1st next, and the interim should provide ample time for the making of necessary individual arrangements. Before the next Stock Exchange elections are held, in March, both parties in the recent controversy will have given careful consideration to the wider, non-personal issues which it has brought to light. The present Committee and their immediate predecessors, have, by general recognition, endeavoured to steer a difficult middle course between reform and the powerful traditions of a conservative institution. Their policy has been progressive whenever beneficial changes could be effected by internal action (as in the case of the regulations regarding Permission to Deal), and cautious where strong outside interests were likely to be antagonised. The unofficial proposal to alter the position of the banks, in the matter of half commission, was an issue precisely calculated, once started, to involve every major problem raised by the present constitution of the Stock Exchange—advertising, a guarantee fund, the relations of broker and jobber, the position of large and small firms, and, ultimately, dual control and the entire organisation of the "House" itself. The technique of postponement does not, naturally, contribute to the solution of urgent matters which events may compel the House to face in the relatively near future. It may be doubted, however, whether a Committee whose members' time must necessarily be occupied with depart-

mental duties, and has no special "mandate" for reform from its constituents, should be asked to undertake, unaided, the stupendous task of preparing a scheme involving such far-reaching issues. It may be asked whether the Stock Exchange might not advantageously break with tradition by setting up a special body to examine the entire question of reform in the greatest possible detail, and to present a report for approval by the whole body, after due consultation with every vested interest outside.

Tea "Restriction"?—The tea share market has been active since the turn of the month, on rumours of private discussions for a new output restriction agreement embracing producers in India, Ceylon and the Dutch East Indies. Quotations for many leading shares are not far below the highest of the year:—

	1932 Prices.				Yield on last Dividend (%)		
	High-est.	Lowest	Oct. 1	Pre-sent.	£	s.	d.
Assam Company (£1)	16/10½	7/6	12/6	16/3			Nil
Jhansi (£1)	29/-	17/-	22/6	26/3	3	0	0
Jokai (£1)	34/4½	19/4½	28/9	32/6	1	11	0
Kanan Devan (£10)	23	16½	18½	18½	6	15	0
Amalgamated (£10).....	8½	5½	7	8			Nil
Cons. Tea and Lands (£10)...	9½	4½	7	8			Nil
Eastern Produce (£1)	2½	1½	1½	1½	6	3	0

Restriction broke down after 1930 mainly because of the unwillingness of the Dutch Colonial authorities to inter-vene, in order to prevent an increase in native production, which, quantitatively, cancelled the restrictive efforts of the Dutch estate producers. The London market has been in a very disturbed state for the last few months. It is an open question, however, how far the depression which, despite spasmodic recoveries, has reduced the present average for Northern India teas to 10.57d. as compared with 1s. 1.73d. a year ago, and for all teas to 10.10d. against 1s. 1.96d., is due to "over-production," and how far to world trade difficulties in general and the effect of far to world trade difficulties in general and the effect of recent Budget changes on the buying side of the trade in particular. In view of the acute realisation that, at present values, some of the best, as well as of the worst estates cannot operate profitably, it would scarcely be surprising if the present restriction proposals had come from the British side, and had been encouraged by a more satisfactory response from the Dutch side than might have been expected even a few months ago. Statements purporting to give details or to suggest that agreement has even approximately been reached should be received, however, with caution. That there is a determination on the British side to secure a *modus vivendi*, on reasonable terms, may, however, be confidently assumed. In the meantime the share market has already discounted a very considerable recovery which, under the best conditions, must take a significant time to mature.

Goodson's Mantle—Capital Reorganisation.—This company, a holding concern interested largely in the retail drapery business, has a capital of £400,000 in 8 per cent. cumulative participating preference shares and £30,000 in 1s. ordinary shares, against assets which are now valued at only £215,479. Capital reorganisation being necessary, the directors have been in consultation with the larger preference shareholders, and the result is a scheme which holds the balance very fairly between the different interests concerned. In return for a reduction of the 8 per cent. £1 preference to 7 per cent. 10s. preference, and the cancellation of three-and-a-half years' dividend arrears, the senior shareholders are to receive, gratis, 600,000 preferred participating shares of 3d. denomination, entitled (a) to the first £8,000 of profits distributed each year after reduced preferential payments, and (b) to half the equity in remaining profits. The 10s. preference shares will rank for £1 in a winding up. The existing 1s. ordinary shares are to be written down to 3d. The effect of the scheme may be summarised along these lines:—

OLD CAPITALISATION.	NEW CAPITALISATION.
400,000 £1 8% cum. pref.	400,000 10/- 7% cum. pref.
600,000 1/- ordinary ...	600,000 3d. pref. participating
	600,000 3d. ordinary ...
430,000	215,000

DIVISION OF PROFITS.

<i>If net profits, before tax, are :—</i>	<i>Existing Pref. Holders Receive—</i>		<i>Existing Ord. Holders Receive—</i>	
<i>£</i>	<i>Old Style.</i>	<i>New Style.</i>	<i>Old Style.</i>	<i>New Style.</i>
10,000	10,000	10,000	£	£
25,000	25,000	22,500	Nil	Nil
50,000	32,000	35,000	18,000	2,500
100,000	32,000	60,000	68,000	15,000
				40,000

If future profits range under £44,000, existing preference holders will lose up to a maximum of £6,000 in annual dividends, but if the company regains its earlier prosperity their share in the equity will place them in a better position than before. The company's initial capitalisation, like that of all "shilling ordinary" concerns, was top-heavy and objectionable. The new arrangements, while ostensibly increasing the preponderance of preferential capital, in fact go far to redress the balance, so far as existing preference holders are concerned. The preference shares were last dealt in at 5s. 9d., and the ordinary at 3d.

British Celanese.—It is satisfactory to find that the prophets of British Celanese were not altogether vain. A 40 per cent. rise in profits is disclosed in the accounts for the year ending July 2, 1932, but once again the report of the directors is an unsatisfactory document, giving no real indication of the earning power of the business. What exactly, we may ask, is "the balance of trading account," which tops the credits in the profit-and-loss account? And why add "adjustment of stock values" to the item of expenditure? We give below the results of the past two years as far as we are able to compare them:—

	Year ending June 30, 1931.	July 2, 1932.
Trading balance	995,240	1,471,892
Other income	17,384	24,490
Total	1,012,624	1,496,382
Expenditure	795,035½	996,664*
Written off research and advertising expenditure and patents	172,699	126,577
Earned for fixed charges	44,890	373,141
Debt interest	283,886	268,015
redemption	35,629	35,804
Earned for dividends	Dr. 274,625	126,428†
Written off new issue expenses	—	12,452
Carry forward	Dr. 99,385	14,591

* Including unstated amount for "adjustment of stock values."
† Including sundry reserves and provisions for contingencies, no longer required of £57,106.
‡ Including sundry charges and adjustments of stock values of £57,350.

The company is now earning its debenture charges, but not its preference dividends (£6,250,000 of preference capital being issued), while its £2,211,333 ordinary capital seems as far away from dividends as ever. The balance sheet, however, shows a liquid position. The prospects of the company are discussed in our leading article. The 10s. ordinary shares are quoted at 9s. 3d.; 7 per cent. first preference shares at 9s. 3d., and the 7 per cent. first debenture stock at 107.

TO FINANCIAL HOUSES

Business man having considerable experience special interest, knowledge and aptitude for financial work and negotiations, widely travelled, wishes join staff Financial House for constructive work for coming active period, highest references. Write Box 90, The Economist, 8 Bouverie Street, Fleet Street, E.C.4

Standard Motors.—The report and balance sheet for the year ended August 31st last suggest that the chairman's optimism at last year's meeting was better founded than in most other cases. Profits have increased from £70,298 to £201,698, and the shares re-enter the dividend list:—

	Years to August 31.		
	1930.	1931.	1932.

Brought forward	Dr. 123,698	Dr. 83,506	Dr. 4,514
Carried forward	Dr. 83,506	Dr. 4,514†	22,434

* After bringing in £8,694 from taxation account.

The board deserve every credit for the year's excellent recovery, which has completed the wiping out of a debit balance to profit and loss, which, a few years ago, had reached large proportions. Turnover last year showed an increase of 80 per cent. A bank overdraft of £59,056 has been replaced by a bank balance of £200,950. The £1 ordinary shares stand at 48s. 6d., to yield about £6 12s. per cent. gross.

Imperial Airways.—It is unfortunate that Imperial Airways, Limited, does not see fit to show separately its receipts from trading and from Government subsidies. The report for the year to March 31st last, otherwise, is a detailed and lucid document, packed with comparative statistics of passengers and freight carried, miles flown, etc. It includes both a consolidated balance sheet, summarising the assets and liabilities of the parent company and its fully-owned subsidiary undertaking, and a valuable commentary on the year's changes in assets and liabilities. Gross profit for the past year was £152,797, against £155,165. The directors have drawn on the carry-forward to the extent of £6,355 in order to repeat the previous year's 4 per cent. dividend, by way of a "gesture" of satisfaction with the increased receipts obtained (since the closing of the accounts) after the putting into service of the company's new fleet of aircraft. Unfortunately, the published figures give no indication whatever of the real earnings position. That the company receives subsidies from the Government, which last year may have been of the order of £500,000 to £550,000, is, of course, no secret. For various reasons, it has been considered necessary that the concern, until it hopes to become self-supporting in 1940, should be organised on a basis of "commercial" capital ownership and publicly assisted revenue. Why, then, should not the directors distinguish clearly between trading and subsidy receipts, seeing that, at present, dividends are being paid entirely out of the subsidy? Disclosure of the latter's amount would have no prejudicial effect on the company's credit. On the other hand, it would enable shareholders more accurately to estimate the prospects of the "commercial" side (on the earning power of which they will ultimately be dependent), and would give the taxpayer the satisfaction of learning how his money was being utilised.

Buenos Ayres Great Southern.—Operating receipts on this line in 1931-32 fell from £11,348,750 to £10,561,447 and operating expenses from £7,958,639 to £7,420,493. After heavy deductions for currency depreciation and exchange obligations and a larger debenture charge, net profit is down from £1,175,382 to £595,608. The full distribution is made on the preference capital, but the carry-forward is

reduced from £715,915 to £431,165. No payment is declared on the ordinary stock.

	Year to June 30.		
	1930.	1931.	1932.
Operating receipts	12,214,562	11,348,750	10,561,447
Operating expenses	8,782,900	7,958,639	7,420,493
Dividends and interest	404,760	273,647	180,150

Carried forward	309,641*	715,915	431,165

* Including £150,000 from a contingency fund and £74,206 from a suspense account.

Allocations to the general renewal fund have been charged to revenue to the extent of £148,241. The total number of passengers carried during the year was 55,923,922, against 59,517,077, but goods traffic showed an increase of 89,958 tons. The 6 per cent. preference stock is quoted at 67½ to yield about £8 17s. 9d. per cent. The ordinary stock is quoted at 30.

Buenos Ayres Western.—In view of the extremely difficult trading conditions which have prevailed during the past year in the raw material producing countries, the results of this Argentine railway cannot be considered unsatisfactory. Operating revenue is down from £3,822,120 to £3,729,929, and as a result of economies, expenses have declined from £3,021,168 to £2,881,272. After all deductions, net profit at £191,570 compares with £20,649. Preference dividend is met in full, but again there is no distribution on the ordinary capital. The carry-forward item is increased from £62,853 to £91,927.

	Year to June 30.		
	1930.	1931.	1932.
Operating revenue	4,381,349	3,822,120	3,729,929
Operating expenses	3,309,942	3,021,168	2,881,272
Railway taxes	30,751	21,298	23,325
Rentals and other receipts	397,354	263,681	201,316

Paid %	5	Nil	Nil
Reserve	Nil	Dr. 103,848	32,142
Carried forward	67,711	62,353	91,927

No allocation from the year's revenue has been made to the renewal funds, but as a result of the sale of the railway power house there has been liberated the sum of £216,256 standing to the credit of the renewal fund created in respect thereof. Exchange losses were heavy at £308,996, but the charge was lowered by the transfer of £32,142 from reserve for depreciation of currency, floating assets, written back. The 4½ per cent. preference shares of £10 each are at present quoted at 5, to yield £9 per cent., while the ordinary stock is quoted at 28½.

Buenos Ayres and Pacific.—This railway reveals a less satisfactory financial position than any of the Argentine "Big Four" which have so far published their results. Gross receipts are down from £7,067,293 to £6,478,812 and working expenses from £5,557,876 to £5,047,514.

Exchange charges are larger than last year. The company's fixed charges are heavier than those of the other major Argentine lines. Debenture interest absorbs £817,795, but £350,398 is unpaid under the scheme of arrangement. Neither the preference nor ordinary capital receives any distribution, there being a net loss after all charges of £608,698.

	Year to June 30.		
	1930.	1931.	1932.
Gross receipts	7,854,906	7,067,293	6,473,312

* Half-year.

† After deduction of £99,442, exchange difference.

In the case of this line, passenger receipts were down by £216,728, while goods traffic was likewise less by £216,728, revealing a decrease of £214,724. The remunerative, revealing a decrease of £214,724. The 6 per cent. preference stock is at present quoted at 20, against a high level for 1931 of 99 and for 1932 to date against 40½. The ordinary stock is quoted at 15½. Mr Cecil Constantine Mallet has been appointed a director of the company. Mr Mallet has an intimate knowledge of Argentine conditions acquired during long residence in and business experience with that country.

The Uruguayan Railway Group.—Stagnation of trade, resulting from currency vagaries and the decline in demand for wool and meat, has struck a severe blow at the finances of the Uruguayan railways. Gross receipts of the largest line, the Montevideo, fell by no less than £498,518, from £1,191,023, the decline in gross expenditure (£383,032) being insufficient to counteract the drop in receipts. The complication caused by exchange factors is demonstrated by the fact that the loss sustained by the fall from parity on the remittance of funds to London during the year amounted to no less than £223,500. The comparative results of the group lines for the past two years are set out in the table below:—

Year to June 30.	Central Uruguay, Eastern Extension.		Central Uruguay, Northern Extension.		Central Uruguay of Montevideo.	
	1931.	1932.	1931.	1932.	1931.	1932.

Paid %	3	Nil	24	Nil	Nil	Nil
Carried forward	Dr. 4,501	2,333	Dr. 9,747	Dr. 13,417	60,566	31,300

* Interim only.

The Eastern Extension line suffered a fall in passenger receipts of 18 per cent., while, notwithstanding an increase of 15 per cent. in cattle and goods tariffs as from December 7th, gross receipts declined by 21 per cent. Passenger traffic receipts of the Northern Extension, which has an expenditure agreement with the Central Uruguay line, fell by 18 per cent., and goods traffic receipts by 24 per cent. None of the lines was able to pay a preference dividend or make a distribution on the ordinary capital, and the tone of the reports suggests that little recovery can be expected, at least until the end of 1933.

Broken Hill Proprietary.—Our mining correspondent writes:—The re-entry of this company to the dividend list, after more than three years' absence, came as a pleasant surprise to the shareholders, and had an altogether disproportionate effect upon the market for the shares. At the last annual meeting, held in Melbourne on August 26th, no hint was given of any payment in the near future, the directors coming in for some criticism on the point. After providing for depreciation the net profit for the year ended June 30th amounted to £103,700, against £83,300 in 1930-31 and £161,000 in 1929-30. Presumably the funds are being provided chiefly by income on investments. The mines at Broken Hill have been closed down since June, 1930, owing to low metal prices. Meanwhile, the company has taken a hand in prospecting for gold in various parts of Australia, more particularly Kalgoorlie. A point of importance has arisen in connection with the debenture redemption. Repayments are at the rate of £128,000 per annum; the "A" series will be extinguished within two years from now. On the advice of counsel the bonds presented in London were met in sterling. This procedure was confirmed by a legal decision, and the result of an appeal is now awaited. Obviously, payment at the current rate of exchange would impose a heavy additional burden upon the company.

CAPITAL ISSUES.

THE new issue market continues to be under- rather than over-active, judged by normal canons. None of the promised Colonial issues has yet made its appearance, the only trustee issue (under the Chancery Rules) to be floated this week being a redeemable debenture offered by the *Southern Railway Company*, with a maximum life of 35

Total.	NH	Total.	NH

Messrs Samuel Montagu and Company write on October 19, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,094 on the 12th instant, as compared with £139,421,534 on the previous Wednesday. Substantial amounts of gold have been offered in the open market and most of the available supplies have been secured for a destination not disclosed. Higher prices have been quoted in consequence of the weakness of sterling, and to-day's quotation of 122s. 2d. per fine ounce is the highest since January 6th last.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
October 13.	119s. 9d.	14s. 2.3d.
" 14.	119s. 9d.	14s. 2.3d.
" 15.	119s. 10d.	14s. 2.1d.
" 17.	119s. 10d.	14s. 2.1d.
" 18.	120s. 0d.	14s. 1.9d.
" 19.	122s. 2d.	13s. 10.9d.
Average.	120s. 2.7d.	14s. 1.6d.

About £515,000 of gold was shipped from Bombay last week. The s.s. "Mantua" has £428,000 and £44,000 consigned to London and Holland respectively, and the s.s. "City of Cairo" £43,000 consigned to London.

SILVER.

Until to-day, the market had continued very quiet, with only small daily variations in prices. Moderate sales from the Continent were offset by China buying, whilst America also gave some support. The Indian Bazaars have not been active, but have carried forward contracts falling due.

To-day, firmer advices from China, following the appreciation of the dollar, were followed by buying orders from that quarter and prices rose 1d. for cash and 1/2d. for two months, being quoted at 17 1/2d. and 18d. for the respective deliveries.

In view of the factor responsible for the rise, the market is somewhat uncertain and may continue to be influenced by movements of the dollar/sterling exchange.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 10th instant to mid-day on the 17th instant:—

IMPORTS.		EXPORTS.	
	£		£
Germany	30,930	Czecho-Slovakia	50,900
Belgium	4,590	Yugoslavia	109,839
British India	12,900	Poland	23,275

REPORTS AND NOTICES.

The directors of the National Provincial Insurance Company, Limited, announce the appointment, as from November 1, 1932, of Mr J. H. Luxton to be manager of the company in succession to the late Mr Wilfred Gale. Mr J. H. Luxton, who was formerly London manager of the State Assurance Company, Limited, has also held important branch managerial positions in the service of the Royal Exchange Assurance. Mr J. H. Buchanan, who was due to retire on pension last month, has kindly consented to continue in the service of the company until the end of the year.

GOVERNMENT, &c.

KINGDOM OF ROUMANIA FOUR PER CENT. CONSOLIDATION LOAN, 1922.—From various communications that have reached us it is obvious that a certain number of bondholders of the Roumanian 4 per cent. External Loan, 1922, have misinterpreted the communication we recently made on behalf of the Roumanian Government in connection with the Roumanian Four per Cent. Consolidation Loan, 1922, as referring to the former loan. This is not the case. The Roumanian Four per Cent. External Loan, 1922, of which £1,554,640 is outstanding, is preferential in character, and in a different category from all other Roumanian loans. Fiscal Agents for the Roumanian Government, The British Overseas Bank, Limited. (Signed) Arthur C. D. Gairdner, Deputy-Chairman and Managing Director.

BANKS.

THE NATIONAL CITY BANK OF NEW YORK.—The statement of the National City Bank of New York at September 30, 1932, including domestic and foreign offices, shows assets totalling \$1,610,067,556,

comprising: Cash in vault and in Federal Reserve Bank, \$190,513,013; due from banks, bankers and United States Treasurer, \$130,501,277; loans, discounts and bankers' acceptances, \$665,181,883; United States Government bonds and certificates, \$310,373,464; State and Municipal bonds, \$31,506,289; stock in Federal Reserve Bank, \$6,600,000; other bonds and securities, \$110,200,747; ownership of International Banking Corporation, \$8,000,000; bank buildings, \$60,455,899; items in transit with branches, \$15,244,803; customers' liability account of acceptances, capital, \$124,000,000; surplus, \$76,000,000; undivided profits, \$6,554,883; reserves for contingencies, \$31,072,317; unearned discount and other unearned income, \$2,730,041; interest, taxes, other accrued expenses, etc., \$7,785,358; dividend payable October 1, 1932, \$3,100,000; liability as acceptor, endorser or maker on acceptances and bills, \$81,552,249; circulation, \$1,997,610; deposits, \$275,275,096; total, \$1,610,067,556.

MISCELLANEOUS.

A. W. GAMAGE, LIMITED.—In connection with the reorganisation of this company it is now announced that the board, under the chairmanship of Mr. J. T. Greenwood, has been strengthened by the inclusion of Major Sir William Prescott, C.B.E., J.P., D.L., chairman of the Metropolitan Water Board, and Sir Wm. Prescott and Sons; Mr G. H. Bullimore, F.C.A., of Messrs. Hogg, Bullimore and Company, Limited, C.A., who is also chairman of the Champion Cycle Company and Currys, Limited; Mr. M. R. Moritz, member of the London Stock Exchange, and ex-member of Gamages Shareholders' Committee.

LEVER BROTHERS, LIMITED. announce in connection with their recent conversion offer to holders of their 5 per cent. first mortgage debenture stock that applications received substantially exceed the

amount of new 4 per cent. consolidated debenture stock available. Allotment letters were posted on October 20.

UNITED DAIRIES, LTD.—Net profit for the year ended June 30, 1932, was £591,517. The dividend on the ordinary shares has been increased, and is now 12½ per cent., against 11 per cent. and 10 per cent. for the two preceding years. It is proposed to place £80,000 to the general reserve and £30,000 to a pension fund. The carry-forward is increased from £93,503 to £101,269. The meeting will be held on October 28th, at noon, at the Connaught Rooms, Great Queen Street, W.C.2.

Commercial Reports.

MARKET SUMMARY.

The downward tendency in the price of primary products at the principal international markets has not yet been arrested. The course of quotations in the United States during the past week shows a further decline in the principal non-ferrous metals. Raw cotton, too, is substantially lower on the week, and rubber failed to recover. Among cereals, wheat, maize and oats were cheaper, but rye has been maintained. Among other foodstuffs, coffee continued to decline in value and sugar was fractionally lower, but cocoa has been a little steadier. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, moved in sympathy with the decline in the gold value of sterling. An outstanding feature has been the improvement in tea prices at this week's London auctions. Reports from various industrial centres in this country are none too encouraging. The slight improvement in the coal trade is mainly seasonal, and expectations of an expansion in activity in the iron and steel trades have so far not been fulfilled. On the other hand, the demand for cotton and rayon manufactures has been a little better.

THE COAL TRADE.

SHEFFIELD.—A scarcity of best steams for export is due entirely to insufficient production quotas, and there is little forward business passing. Industrial consumption fails to expand. House coal trade is unsatisfactory. Due to the mild weather sales continue below last year's level and prices are irregular; in a number of cases the usual winter increase is not being charged. Best steams for export are quoted at 17s. 6d. to 18s. f.o.b., and best ordinary house at 23s. and 24s. at pits. Production of blast-furnace coke exceeds consumption, prices being easy round about 10s. at ovens.

GLASGOW.—The market maintains its more active condition, business on home, coastwise and foreign account being better than at any time this year. With the production quota reduced for the final quarter some classes of large fuel are already none too plentiful—smaller have, of course, been scarce for some time—and values have a definitely firmer trend. East of Scotland areas have benefited principally from the increase in business, and one or two pits in Fife have been closed so as not to exceed the allocated output. Fife has been closed so as not to exceed the allocated output. Shipments of best (f.o.b. district ports):—LANARKSHIRE.—Ell best 14s.; splint best, 15s. 3d.; splint second, 13s. 9d.; navigation, 14s. 14s. 3d.; navigation second, 13s. 13s. 3d.; Hartley, 15s. 6d.; steam, 12s. 6d.; trebles, 14s. 6d. 15s.; doubles, 12s. 6d.; singles, 10s. 6d. 10s. 9d.; pearls, 9s. 6d. 9s. 9d.; dross, 9s. FIFE.—Screened navigation, 16s. 16s. 6d.; first-class steam, 13s. 6d.; third-class steam, 11s. 11s. 6d.; trebles, 10s. 6d. 18s.; doubles, 12s. 6d. 14s.; singles, 10s. 6d. 11s.; pearls, 9s. 6d. LOTHIANS.—Prime steam, 11s. 6d. 12s.; secondary steam, 11s.; trebles, 14s. 9d.; doubles, 12s. 13s.; singles, 10s. 6d. 11s.; pearls, 9s. 6d. AYRSHIRE.—Unscreened navigation, 15s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 14s. 6d.; doubles, 12s. 6d.; singles, 10s. 9d.; pearls, 9s. 9d.; dross, 9s.

NEWCASTLE-ON-TYNE.—The Tyne coal and coke shipments during September amounted to 1,032,157 tons, as against 1,037,583 tons in September of last year, a decrease of 5,426 tons. In the nine months ending September the shipments were 9,315,778 tons, compared with 10,377,179 tons in the corresponding period of 1931, a decrease of 1,061,401 tons. The outlook, however, is more encouraging, inquiries being steady and inclined to expand. The Northumberland steam position is particularly healthy, the D.C.B. collieries firmly adhering to 14s., as against their minimum of 13s. 6d. In Durham, the coaling station shipments are better, and the number of vessels calling for "bunkers only" have been much greater. Some prime brands of bunkers are 3d. to 6d. per ton above minimum prices. To-day's f.o.b. prices for export are as follows:—NORTHUMBERLAND.—D.C.B. screened steam, 14s.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin, screened, 13s.; smalls, 8s.; Tyne prime, large, 13s. 3d.; smalls, 9s.; Hartley Main, large, 12s. 6d.; smalls, 8s. DURHAM.—Lambton, South Hetton, screened steam, 15s.; smalls, 11s.; Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second class gas, 13s.; coking unscreened or smalls, 12s. 6d.; Prime unscreened bunkers, 14s.; second-class unscreened bunkers, 13s.; Prime foundry coke, 16s.; Newcastle and District gas coke, 18s.

CARDIFF.—The persistent slackness of the demand for large steam coals continues the most unfavourable feature of business on the Cardiff coal market, and there are no indications of an improvement in this respect in the immediate future. Moreover, with the closing of the Canada season exports of anthracite are likely to decline. Collieries are working under the reduced December quarter output quota, but are unable to find outlets for all their large coals, and consequently many of the pits are working very irregularly. Quotations for sized and other small coals are firmly maintained at their recently enhanced levels, but little business is passing at these figures, the bulk of the deliveries being under contracts arranged at or about the minimum price schedule basis. Members of the

Executive Committee of the South Wales Coal Marketing Association have this week received the proposed amendment of the provisions of Part I. of the Coal Mines Act, which have been drafted by a committee of the Central Council. They include, *inter alia*, proposals for separate quotas for home consumption and export; the sub-division of the home quota of each district into (a) sales in its own geographical area, and (b) deliveries to other parts of the United Kingdom; the delegation to the Central Council of more definite powers for the co-ordination of district prices; the fixation of differing minimum prices for the same class of coal according to geographical position and class of consumer; and the introduction of a levy on home sales to assist the export trade. The amendments are of a tentative character, and they must receive the support of 85 per cent. of the output before they can be submitted to the Board of Trade for approval and enforcement under an Order in Council. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; best large anthracite, 36s. to 38s. 6d.; red vein, large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 10s. 9d. to 11s.; special foundry coke, 32s. 6d. to 34s.; patent fuel, 20s.; pitwood, ex ship, 21s. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—The volume of business passing in Cleveland iron shows no appreciable expansion, in fact trade becomes more restricted, and the position is causing some anxiety. The foundry trades locally are short of work, and the same applies to the Scotch area, where orders are very scarce, and much idle time is being experienced. Very little pig iron is at present going there from this district, despite the substantial concessions that are granted to Scotch users on the prices charged to our own local consumers. Indications do not point to any early change in the conditions and stocks in makers' hands seem likely to continue to increase. The weekly market on Tuesday was again quiet, and the business reported was only on a small scale. Official prices for Cleveland iron were again unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t., with usual concessions for Scotch consumers. The hematite market is steady in tone, but there is only a moderate business doing. Consumers are still chary about committing themselves to forward purchases, and restrict their operations to early requirements. A few contracts of this description have been made recently, for which producers have generally been able to obtain 59s., but in one or two instances they have shaded the figure a trifle where very prompt delivery could be taken. Makers are very anxious to secure some forward business for which they are asking a slight premium, but find consumers disinclined to operate except in very odd instances, and for small quantities. Shipments of pig iron this month are very moderate, the total cleared to 18th instant being 4,473 tons compared with 5,177 tons to same date in September. In the finished departments there is a little more business doing, and prospects are regarded as brighter. The British Steel Makers agreed last week to leave home and export prices unchanged. The former therefore remain: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s., subject to rebate. Other commodities are iron crown bars, £9 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £10; and 24-gauge black sheets, £8 5s., all for home consumption. The ore market remains very quiet. Best rubio is nominally 14s. 6d. c.i.f., and the current freight Bilbao/Middlesbrough for early loading is 4s. 3d. Coke is freely offered for early delivery at 14s. 6d. delivered consumer's work for good blast-furnace qualities, but the demand is short of supply. The number of blast-furnaces in operation in the district is unchanged at seventeen.

SHEFFIELD.—The present month has brought little or no revival of activity to the heavy steel branches of the city and the outlook is the reverse of encouraging. Substantial orders are few in number, and these, with oddments, scarcely suffice to maintain half-time operating at the works. Production in such circumstances cannot be remunerative. As regards special alloy steels, sales are maintaining former levels, but show only slow expansion. There has been a moderate influx of orders for various hand and engineers' small tools, some factories, at least, being busier than at any time during the last two years. All the makers, however, could deal with much more work than is coming forward. The most active line in Sheffield to-day is the manufacture of permanent magnets; the major part of the output of these articles is going into wireless loud-speakers. The position of cutlery and plate is extremely unsatisfactory, there being no sign at present of any buying movement in connection with the Christmas season trade. Fortunately the trade in safety razors more than maintains its ground at home and is constantly increasing its hold on the overseas markets. Scissors are in demand at home. Imports of

IS YOUR BOY A PETER PAN?

Issued by the

NATIONAL PROVIDENT INSTITUTION
48 GRACECHURCH STREET, LONDON, E.C.3

cutlery have fallen to the lowest point ever recorded. The Ottawa agreement proposes than pen and pocket knives, scissors and razors shall be placed on the Canadian duty-free list. At present they are subject to 20 per cent. The duty on British spoons, forks and table knives is reduced from 20 to 15 per cent. The Canadian duty on hand tools is reduced from 20 per cent. to 10 per cent. on British goods, with a general tariff of 35 per cent. Sheffield best tool steels are on the free list.

GLASGOW.—At a number of plants in the West of Scotland a general overhaul is in progress, and it would seem that there is a disposition to get plant into good working order in anticipation of more work being available in the near future than has been the case for some time. In the heavy trades tonnages booked during the present week are not considerable, but there is a decided increase in the number of inquiries, and overseas buyers are evidently taking much more interest in our products. At the ship-repairing yards the amount of work on hand this week is quite important. Sheet trade bookings, particularly of black sheets, have been more satisfactory than for a number of weeks past, and there are more mills operating. Tube makers generally are not finding much improvement in demand, but at one or two of the works operatives are better employed than for some little time past. The demand for re-rolled steel bars remains poor.

CARDIFF.—There has been no improvement this week in the state of business in the South Wales tinplate trade. Prices have been a shade easier at from 15s. 9d. to 16s. per basis box, and shipments at Swansea last week were smaller than those recorded for some time past. They totalled only 61,073 boxes, compared with 78,885 boxes the previous week, and 89,410 boxes in the corresponding week last year. Production is below 60 per cent. of capacity, and stocks are again increasing. Galvanized sheets at about £10 per ton f.o.b. are also a quiet market. Welsh steel bars are quoted at 95s. per ton delivered and foreign bars at from 10s. to 13s. per ton lower. Total imports of foreign partly-manufactured iron and steel goods at the South Wales ports last week reached the exceptionally high figure of over 18,000 tons.

OTHER METALS.

TIN.—The market in tin was dull at the end of last week and the price gave way. On Tuesday prices advanced under the influence of the attitude of reserve adopted by sellers. Owing to profit-taking a further rise in quotations was prevented on Wednesday, but previous gains were maintained. Sales on the London Metal Exchange were 200 tons on Monday, against 450 tons last week; 225 tons on Tuesday, against 450 tons last week; and 650 tons on Wednesday, against 350 tons last week. The New York quotation on Tuesday was 24.10 cents per lb., against 24.05 cents a week ago and 24.70 cents a month ago. Wednesday's official closing quotation in London for standard cash was £153 2s. 6d. to £153 6s., compared with £151 10s. to £151 12s. 6d. last week. Stocks in London and Liverpool at the end of last week were 31,288 tons, a decrease of 141 tons on the week.

COPPER.—At the beginning of the week the demand for copper in London was poor and prices were sagging. On Wednesday, there was a slight spurt owing to the decline in the gold value of sterling. Sales at the London Metal Exchange were 300 tons on Monday, against 1,200 tons last week; 500 tons on Tuesday, against 500 last week; and 700 tons on Wednesday, against 500 last week. Domestic spot was quoted 6½ cents per lb. New York on Tuesday, against 6½ cents a week ago and 6½ cents a month ago. Wednesday's official closing price for standard cash in London was £32 6s. 3d. to £32 8s. 9d., compared with £32 8s. 9d. to £32 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 23,810 tons, show an increase of 149 tons, and stocks of rough copper, at 4,006 tons, an increase of 1,555 tons.

LEAD.—On Monday and Tuesday the market in lead was quiet and prices declined under selling pressure. A slight improvement in demand brought about a firmer tendency on Wednesday. Sales at the London Metal Exchange were 200 tons on Monday, against 1,600 tons last week; 450 tons on Tuesday, against 600 tons last week; and 800 tons on Wednesday, against 450 tons last week. The New York quotation on Tuesday was 3.00 cents per lb., against 3.00 cents a week ago and 3.40 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £11 18s. 9d. for September shipment, compared with £12 2s. 6d. last week.

SPELTER.—As in the case of other non-ferrous metals the demand for spelter was dull at the beginning of the week, but improved on Wednesday when prices advanced sharply. Sales were 500 tons on Monday, against 600 a week before; 350 tons on Tuesday, against 500 the week before; and 1,200 tons on Wednesday, against 1,200. The New York quotation on Wednesday was 3.00 cents per lb., against 3.05 cents the week before, and 3.25 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £14 18s. 9d. for September shipment, against £15 5s. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was again quoted at £100 per ton. Nickel was unchanged at £240 to £245. Quicksilver was slightly higher at £9 10s. to £9 17s. 6d. per flask, against £9 7s. 6d. to £9 15s. a week ago. Platinum was again quoted at £9 5s. per ounce. Foreign antimony was unchanged at £23 to £23 10s. per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, October 13th to 19th (inclusive), are 31,017 bales, of which 11,070 are American, 8,611 Peruvian, 1,876 Argentine, 5,605 Egyptian, 125 African, 3,214 East Indian, and 516 sundries.

Manchester.—The general inquiry in the market has continued rather more encouraging, but a certain amount of nervousness has prevailed with regard to the spinners' wages dispute. On the whole, however, it is expected that a settlement will be reached without any stoppage of machinery. A persistent demand has been met with in piece-goods for India. Rather freer operations have occurred in light bleaching descriptions for Karachi and the up-country markets, and a few more lines have been booked in dhooties for Calcutta. Inquiry for China has tended to broaden and in addition to isolated sales in bleached shirtings more activity has shown itself in printed and dyed goods. A rather more encouraging turnover has also taken place in fancies for Hong Kong, Java and the Straits Settlements. The offtake for Egypt and the Near East remains poor. Rather less demand has been about for South America, but useful orders have been secured for West Africa and the Continent. Moderate buying has taken place in home trade fabrics. Towards the close of the week yarn quotations have been more firmly held and some spinners have sold a little more freely in home counts. Demand in export numbers has been disappointing.

THE WOOL TRADE.—Bradford.—Fully a week having elapsed since the close of the sixth series of London sales, and further auctions having been held in Australia, it is possible, writes our correspondent, to give a fairly comprehensive review of the raw material situation. The first half of the selling season is now fairly well advanced, and the trade is getting closely to grips with the consumption of the current clip. In this respect the situation must be regarded as fairly encouraging. Big weights of wool are being consumed in the West Riding of Yorkshire and other manufacturing districts in this country, and there are indications of similar developments on the Continent. There need not therefore be any great anxiety about the future of values. A big weight of wool was cleared at the last London sales, and values for most descriptions have maintained a large part of the opening advance. Prices have been left on a slightly higher level than in July. Any modification in values between now and the end of the year can only be regarded as one of those phases through which the industry must pass in order to cope with supplies. For several weeks there have been possibilities for big business developing in the West Riding, spinners being prepared to place larger orders for tops. Now that wool and tops have come into line, and a considerable amount of forward business having been done in the latter, importing topmakers are able to buy the raw material in overseas markets on an approximately corresponding basis. The Bradford market is again quieter. For any business passing the price of good 64's is around 22½d., and for forward business it would be possible to buy at less. Combing machinery is busy, there being a bigger output of crossbred tops. Spinners have sold yarns fairly freely.

THE GRAIN MARKETS.

WHEAT.—The realisation that the size of the new world crop is such, that little reduction can be expected in the surplus carried over from last season, has had a depressing influence on wheat prices. Other adverse factors are the general economic position of the world and the heavy selling pressure of Canada. There is, of course, the possibility that the Far East will absorb increasing quantities, particularly if long-term credits can be arranged, and the practical certainty that Russia's exports will be considerably less than during the past season. On the other hand, crop prospects in Argentina and Australia have recently been improving. As these two countries usually market their exportable surplus readily, considerable pressure on the markets may be expected in the spring. On the whole, it is therefore unlikely that wheat prices will establish a substantially higher level in the near future. On Wednesday, "December" futures were quoted in Chicago at 49½ cents per bushel, against 49½ cents the week before, and 52½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. per 496 lbs., against 28s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 27s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 27s. 3d.; Australia, ex ship, 28s. 3d., against 28s. a week ago.

WHEAT FLOUR.—Business in flour has been quiet. North American shipments were 143,000 sacks, compared with 127,000 the week before. Wednesday's London quotations were: Straight delivered London, 2½s., at both dates. Manitoba patents, ex store, 23s. 6d. to 25s. 6d., against 23s. 6d. to 25s. 6d. Australian, ex store, 20s. 6d. to 21s. 6d., against 20s. 6d. to 21s. 6d. last week.

BARLEY.—The market in barley has been inactive and quotations gave way despite the fact that there was little selling pressure. "October" futures were quoted in Winnipeg on Wednesday at 25½ cents, against 24½ last week and 28 a month ago. Quotations in London on Wednesday were: "English feeding," i.o.r., per 448 lbs., 22s. to 24s., against 22s. a week before.

OATS.—Oats have been in poor demand, and Canadian exporters have had to accept lower prices. In Chicago, "December" futures were quoted at 16 cents on Tuesday, against 16½ per bushel a week before and 16½ a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., against 18s. 3d. a week ago; "River Plate," ex ship, 16s. 9d., against 17s. 3d.; "Chilean White," landed, 23s.-24s., against 23s.-24s. 6d. a week earlier.

MAIZE.—Until recently, Continental Europe has readily absorbed the heavy quantities exported from Argentina. Demand has, however, fallen off, and prices have declined, despite smaller shipments from South America. "December" futures in Chicago were quoted on Wednesday at 25½ cents, against 27½ cents on Wednesday of last week and 28½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. 3d. per 480 lbs., compared with 20s. 3d. last week; "Plate," ex ship, 19s. 3d., as against 19s. 3d.; "Plate," December-January, 20s., as against 20s. Yellow Maize, ex wharf, was quoted at £5 15s. per ton, against £5 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE	Jan. 2, 1930.	Jan. 2, 1931.	Oct. 31, 1931.	Jan. 4, 1932.	Oct. 11, 1932.	Oct. 19, 1932.
Winnipeg (No. 1 Manitoba).....	148½	56½	59½	62½	48½	48½
Chicago (No. 2 Winter).....	130½	79½	53	55½	52	49½

The visible supply of wheat in Canada, at 91,991,000 bushels, shows an increase on the week of 447,000 bushels. Supplies a year ago stood at 45,717,000 bushels.

OTHER FOODS.

SUGAR.—The firmer tendency of raw-sugar values following an improvement of demand in the United States has not been maintained during the past week. December futures were quoted in New York at 1.08 cents per lb. on Tuesday, against 1.11 cents a week before and 1.06 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 11d. to 5s. 11½d. per cwt., against 5s. 11½d. to 6s. a week before, and "March, 1933," at 6s. 2½d. to 6s. 2½d. against 6s. 2½d. to 6s. 3d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	1	53	1,005	3,083	11,252	9,657
Liverpool.....	15,383	6,050	14,157	12,745	55,472	32,739
Total.....	15,384	6,103	15,162	15,828	66,724	42,396
Last week....	11,870	13,416	13,679	17,122	66,502	52,121

COFFEE.—There has been a further setback in coffee prices in the United States. On Tuesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents per lb. on the corresponding day a week ago. Tuesday's London auctions were characterised by a slow demand, and prices were barely maintained. Last week's movements of coffee in London were as follows: Brazilian, landed, 129; delivered for home consumption, 183 bags; exported, nil; stocks, 6,701 bags, against 2,039 bags a year ago. Central American, landed, 1,586 packages; delivered for home consumption, 2,067 packages; exported, 2,423 packages; stocks, 67,231 packages,

OVER ONE HUNDRED YEARS OF SERVICE.

London: 5, Walbrook, E.C.4 and 4, St. James's Street, S.W.1

against 76,734 last year. Other kinds: Landed, 3,006 packages; delivered for home consumption, 2,335 packages; exported, 1,986 packages; stocks, 56,474 packages, against 59,960 last year.

COCOA.—The market in cocoa has been dull, and prices failed to recover. December futures were quoted at 4.20 cents in New York on Tuesday, against 4.18 cents a week ago and 4.50 a month ago. Accra, November-January, at 26s. 9d. c.i.f. Continent, shows no change on the week. Last week's movements of cocoa in London were as follows: Landed, 1,102 bags; delivered for home consumption, 5,645 bags; exported, 179 bags; stocks, 128,108 bags, against 169,818 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 56,514 packages of Indian and 31,139 packages of Ceylon tea. Throughout the "Indian" and "Ceylon" auctions on Monday, Tuesday and Wednesday, competition was keen, and most varieties of tea realised higher prices. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Auction during past weeks:—

Week ending	AVERAGE PRICE PER LB.

" 13, ".....	10.57	6.74	11.07	5.78	3.91	5.38

RICE.—Business in rice was not large, and forward positions declined further. The spot price was again 10s. 3d. per cwt., while the forward quotations at 7s. 10½d. per cwt. show a decline of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 345 tons; delivered, 239 tons; stock, 2,198 tons, against 2,220 tons a year ago.

POTATOES.—The chief markets were abundantly supplied with potatoes, but demand was again good, and prices show little change on the week. At the London Borough Market, "King Edward," light soil, were quoted at 5s. 6d. to 6s. per cwt., against 5s. 6d. to 6s. a week ago.

SPICES.—The market in pepper was quiet. Spot pepper, "Black Singapore," was again quoted at 6½d. per lb. on Wednesday. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 15 tons; delivered, 20 tons; stock, 271 tons, against 405 a year ago. White, landed, 178 tons; delivered, 49 tons; stock, 586 tons, against 442 a year ago.

MEAT.—Beef prices at the Smithfield Market are scarcely changed on the week, but mutton—particularly "New Zealand"—was cheaper. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 4d. to 4s. 2d. per 8 lbs., as compared with 3s. 4d. to 4s. 2d. last week. New Zealand frozen mutton was 2s. 2d. to 2s. 8d. per 8 lbs., against 2s. 4d. to 3s. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,618 tons, against 9,486 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.3 per cent. of the beef supplies, against 85.5 a year ago. Imported mutton, mainly New Zealand, formed 72.3 per cent. of the total supply of mutton and lamb, against 67.0 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets are still overshadowed by the uncertainty of the fiscal situation, especially in the case of linseed, on which a tax of 10 per cent. is proposed under the Ottawa agreements when drawn from other than Empire sources. The great bulk of the United Kingdom supplies of this commodity is received from Argentina and very little indeed from India. The effect would be to give an advantage to Continental crushers who, it is presumed, would continue to import their seed free. At present there is a 10 per cent. duty on foreign linseed oil, and to offset the tax on seed it is suggested that this should be increased to 15 per cent. or higher. Until something definite is settled crushers are postponing purchasing as far as possible. Although some support has been forthcoming from the Continent, Plate linseed has further eased, current value for "afloat" and October loading being £8 12s. 6d., and November to March £8 15s. to £8 17s. 6d. The quantity afloat for Europe has dropped to 198,200 tons, which is 36,400 tons less than last week and compares with 147,200 tons a year ago. Cottonseed is neglected and easier, new crop Egyptian afloat to October being quoted £6 15s. to £6 17s. 6d. according to position. Vegetable oils are in only moderate demand. Raw linseed oil naked ex Hull mill is easier and for October delivery is quoted £17 and November-December £16 15s. Cotton oil is dull, crude Egyptian offering at £22 10s. and refined at £24 5s. ex Hull. Oilcakes are in poor demand and mill quotations are lower.

HIDE, LEATHER AND ALLIED TRADES.—Although the demand for hides from home-slaughtered cattle continues fairly satisfactory

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

values are again weaker this week. At the Leeds auctions the majority of ox and heifers sold at from 4d. to 5d. per lb. less money, while lower prices were paid for both cow and bull hides. The downward tendency of the market was not so pronounced at the Manchester sales, excepting in the case of cows, on which an all-round reduction of 1d. per lb. was recorded. Calfskins remain at fairly steady figures, but there has been some set-back in the position of the market for sheepskins. Generally speaking there has been no increase in the demand for imported hides, as, although slightly more interest has been taken in some sorts, other descriptions have accounted for less inquiry in spite of the lower basis of values which has been established. In the South American market wetsalted Argentine ox are now quoted at 4d., with a fraction over 4d. asked for cows and 5d. for Montevideo ox. Dry hides from the same source have also cheapened, B.A. Americanos being offered at 5 1/2d., Inservibles at 3 1/2d., and M.V. Americanos at 6 1/2d. Even at the figures mentioned no large business has been done, the only direction from which reasonable interest is forthcoming being the Continent. Moderate sales have been made of African hides and for these sorts there has been little change in values. Dry Capes still figure at 8 1/2d. and 5 1/2d. for firsts and seconds, with dry salted offered at 1d. less. Unbathed Adis Abebas are quoted at 5 1/2d. and Mombasas at 5d. There has been no improvement in the market for Australian hides, which continues weak. Consumption of sole leather on the whole has been moderate, as, although the inquiry for English and wetsalted bends continues satisfactory, shoe manufacturers show no great interest in dry hide bends. Light and medium weight goods are in request most, although some small business has been done in the heavier weights of English. Rough bellies and shoulders have not been responsible for any improved trade, but the inquiry for pinned sorts has progressed on steady lines. In the upper leather section orders are still mainly confined to box and willow calf and glacé kid, for which a fair amount of business is coming to hand all the time. Orders for reptile leathers are also maintained at a moderate level, in addition to which there has been rather more inquiry for parcels of suede and patent.

RUBBER.—The market in rubber has again been dull and inactive and prices moved within narrow limits. In New York,

Wednesday's spot price for rubber, at 3 1/2 cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2 1/2d. per lb., against 2 1/4d. per lb. on the corresponding day last week. In forward positions, business has been done at 2 1/2d. to 2 3/4d. for April-June, 1933, as against 2 1/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 655 tons; delivered, 1,807 tons; stocks at the end of last week, at 101,560 tons, show a decrease of 1,152 tons as compared with the preceding week.

THE MONEY MARKET.

MONEY was generally easy at the week-end, with 1/2 per cent. quoted for both old and new money, but on Monday the absence of Treasury bills maturities made funds more usable, and up to 3/4 per cent. had to be paid for new money. Rates of 1/2 to 3/4 per cent., in fact, have remained in force during the whole of this week, though renewals have been continued at 1/2 per cent. In order to prevent

money from becoming too stringent some special buying of early December Treasury bills has taken place at $\frac{1}{2}$ per cent., this date being presumably selected with the object of placing the authorities in funds at the time when they have the big December War Loan and other maturities to meet. These operations have been conducted in such a way as not to widen the existing adverse margin between money and discount rates, for in accordance with the usual practice the bills were only bought at the rates already in force.

The result of last week's Treasury bill issue was a disappointment to the market. As the movement of forward sterling from a premium to a discount has deterred foreign interests from applying for new Treasury bills at current rates, it had been hoped that in the absence of any foreign demand, the rate would rise above the previous week's level of 15s. 0.84d. per cent. Applications from the clearing banks, however, were in evidence and nearly five millions were cut off the original offer, and the result was that the average tender rate fell to 13s. 7.36d. per cent., or just under $\frac{1}{16}$ per cent. This week the banks have been heavy buyers of three-months' bank and Treasury bills at $\frac{1}{16}$ per cent. These rates represent selling rates, and the current market rates are $\frac{1}{16}$ per cent. for "hot" Treasury bills, $\frac{3}{4}$ per cent. for three months' bank bills, $\frac{1}{8}$ -1 per cent. for four months' and 1- $\frac{1}{2}$ per cent. for six months' bank bills. Standstills were quoted at 1-2 per cent.

Very few changes are recorded in this week's Bank return. There is a slight decrease of £0.8 million in the note circulation, and with no gold movements a corresponding increase in the Reserve. There is a turnover of £5.3 millions from Public Deposits to Bankers' Deposits. This partly neutralises the converse movement of last week, and possibly reflects the special buying of Treasury bills already referred to, and also the official buying of 1933-35 5 per cent. Treasury bonds discussed below. The remaining items in the Banking Department's accounts show very little change. The Proportion stands at 41.8 per cent.

This week's revenue returns included a receipt of £3.8 millions, consisting of cash applications for the recent issue of 2 per cent. Treasury bonds. As 5 per cent. of the purchase price was payable on application, and as there is ground for believing that unsuccessful applicants received their money back before the returns were made up, this suggests that allotments for cash amounted to £76 millions. From this it follows that most of the £80 millions of maturing 4 per cent. 1932-34 bonds estimated to be held internally were not converted, for the total amount of the new issue was £150 millions. In any case, the Government will receive about £70 millions of new cash on December 1st, the day of the War Loan repayment. Meanwhile, heavy official buying of the 5 per cent. 1933-35 Treasury bonds is reported, and the market expects that on November 1st the prescribed three-months' notice will be given of their repayment on February 1st. It does not follow that a new Government issue will be made immediately, for it may well be decided to wait until Government securities recover from their present slight weakness, due to the depreciation of sterling.

The foreign exchange market was fairly active this week. After a steady opening, sterling became subject

to violent fluctuations and declined sharply, closing, however a little above the lowest levels touched. New York was 3.28 $\frac{1}{2}$ after 3.26. Montreal gained 8 points at 3.62. Paris, after 83, closed at 83 $\frac{1}{2}$, or nearly three francs dearer than last week. Brussels improved sharply to 23.60, as did Milan to 64 $\frac{1}{2}$. Madrid went from 41 $\frac{3}{4}$ to 40, and Lisbon from 109 $\frac{1}{2}$ to 108 $\frac{1}{2}$. Amsterdam was 8.16 against 8.42 last week and Berlin 13.80 against 14.25. Switzerland moved sharply against sterling to 17.00. The Scandinavian currencies went with the rest but less markedly against sterling, Stockholm moving to 19.18, Oslo to 19.60 and Copenhagen to 19.20. Helsingfors was 230, Bucharest 550 and Constantinople 690, offered. The South American currencies remain largely nominal. Rio improved by $\frac{1}{2}$ d. to 5 $\frac{1}{2}$ d., sellers, and Buenos Aires by $\frac{1}{2}$ d. to 35 $\frac{1}{2}$ d., Montevideo being unchanged at 29d. In the Far East the rupee was firm at 1s. 6 $\frac{3}{4}$ d. The yen fell away by $\frac{1}{2}$ d. to 1s. 4 $\frac{3}{4}$ d., but Batavia improved from 8.42 to 8.10. In the forward market dollars went from a premium for both deliveries to par for one month and $\frac{1}{2}$ cent discount for three months. Paris was at 4 and 9 centimes premium, and Brussels at one and 2 centimes discount. Milan, Madrid and Amsterdam were unchanged at last week's levels, but Switzerland improved sharply to 1 $\frac{1}{2}$ and 3 centimes premium. The silver market was quiet and prices rose for a time on the decline in sterling, closing at 17 $\frac{1}{2}$ d. for cash and forward, cash being unchanged on balance, whilst forward declined by $\frac{1}{2}$ d. The China silver exchanges were both better by $\frac{1}{2}$ d., Hongkong being quoted at 1s. 4 $\frac{1}{2}$ d. and Shanghai at 1s. 9 $\frac{1}{2}$ d.

So far as can be told, the official policy is still to let sterling find its natural level, and it is impossible to trace any evidence of intervention in either the spot or forward market. It is also becoming clear that other influences against sterling are being superimposed upon the original seasonal pressure. Thus the first break in the exchanges a week ago probably caused some hurried forward covering by commercial interests with foreign commitments to meet before the end of the year. This caused certain forward rates to move from a premium to a discount for sterling, and at once made it unprofitable for foreigners to hold Treasury bills, or sterling balances or other short-term investments. Thus in certain cases foreigners allowed their sterling bills to run off and withdrew their funds, and this has increased the pressure on the spot rate. In the meantime there has been some bear speculation in sterling in Continental centres, but it must be remembered that in the long run the effects of speculation will cancel out as speculative positions are closed. It is, in fact, possible that this week's improvement in the New York forward rate is due to forward covering by speculators.

New York money rates are unchanged, with call rate at 1 per cent. and open market discount rates at $\frac{1}{4}$ - $\frac{1}{2}$ per cent. for 90-day bankers' acceptances. Reconstruction Finance Corporation loans authorised during September are returned at \$139 millions. This total includes \$64 millions to banks, railroads and other financial institutions; \$18 millions for relief purposes; and loans of \$53.0 millions for self-liquidating projects. This raises the total of loans authorised since the creation of the Reconstruction Finance Corporation to \$1,500 millions. Gold imports during the week ended October 26th totalled \$5.5 millions. They include \$3.7 millions from India, and also \$1.0 millions from China and \$0.6 millions from Australia received at San Francisco. There were no exports, and releases from foreign earmark total \$25.9 millions, making a total gain of \$31.4 millions.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production and a series of indices of British trade activity.

UNEMPLOYMENT POLICIES.

It was a foregone conclusion that the vote of censure on the Government, moved from the Labour benches in the House of Commons on Tuesday, would be rejected by a huge majority. As it happened, that majority was swollen to over 400 by the unexpected decision of the "Samuelite" Liberals to support the Government in the lobby. The ground for this action was presumably the recognition that many of the Government's actions indicated in the motion of censure were taken while Sir Herbert Samuel was in the Cabinet, and that it was incumbent upon him to avoid giving the appearance of shirking responsibility which abstention from the lobby might have created. This was the only surprise in a disappointing debate, which did nothing to enhance the reputation of the House of Commons. When, on the threshold of a grim winter, with the evils of large-scale unemployment in no way abated, the elected representatives of the people meet to discuss "the conduct of the nation," the occasion surely calls for dignity and for constructive speeches. On Tuesday the latter were all too few, while the proceedings were enlivened, though not graced, by a welter of political badinage, which, though amusing no doubt, was out of keeping with the circumstances in which the debate was held.

The terms of the censure motion permitted the debate to range over a wide field; but, in fact, so much of it as was serious was concentrated on one main theme—unemployment. The effect of the speeches was to narrow down the indictment of the Government to two charges—first, the negative one that they have done nothing to increase employment, and, secondly, the positive one that, by imposing, harshly and inquisitorially, a "means test" on applicants for transitional payments, they have inflicted injustice and hardship upon a large section of the unemployed. So far as the first of these subjects is concerned, no participant in the debate brought forward any new proposals for the absorption of unemployed into useful work. Indeed, the only constructive contribution came from Mr Lloyd George, who, after a bout of political rallery at the expense of Sir John Simon and Sir Herbert Samuel, pleaded earnestly with the Government to adopt his own familiar plans for State financing of public works—slum clearance, telephones, land settlement, reclamation and reconditioning of derelict lands. We have, pleaded Mr Lloyd George, "millions of men idle, millions of acres idle, hundreds of millions of money idle. Cannot we bring the three together?"

This is not the place for the rediscussion of the plans which Mr Lloyd George has over and over again explained to the country, and whose merits have frequently been examined in these columns. Here we would merely remark that, as matters stand, there is a valid case against increased public expenditure which is financed out of rates and taxes; mere transference of purchasing power brought about by such an operation will do more harm than good. But the same objection cannot be raised against useful or reproductive capital expenditure financed by borrowing. The argument that this involves a corresponding diminution of the capital available for other forms of investment, and hence a corresponding contraction of other activities, may be sometimes a valid one; but at the present moment with abundant resources lying idle it is certainly not sound. Apart from the fact that money is now so abnormally cheap that the State could borrow to finance big schemes of housing, slum clearance, land settlement, etc., at rates which would ensure a reasonable prospect of an economic return upon the outlay of public funds, the paramount consideration to-day is that, in the absence of enterprise, savings are not merely lying idle; the processes whereby savings are created are paralysed. Even if State or municipal capital expenditure out of loans eventually involved some increase by way of interest charges, the stimulus likely to be given by the inception of useful works to-day would beyond doubt have economic advantages far outweighing the mortgaging of future revenue. Right and reason,

therefore, are with Mr Lloyd George when he demands either that some of his work plans should be adopted, or that the Government should produce plans of their own. We believe that the exigencies of the situation will compel the Government to take action, at long last, in this direction.

On the other most prominently topical aspect of the unemployment problem—the working of the "means test"—Tuesday's debate threw little new light. Indeed, so meagre was the discussion of this matter that the Minister of Labour, who attended the debate with a prepared speech in his pocket, decided to refrain from delivering it. Next week, however, the Government, who will soon have in their hands the long-delayed report of the Holman Gregory Commission, are to reveal their policy. In deciding upon their course of action, the Government can assume that on two major points there is something approaching general agreement. The first is that, despite the effective "combing out" of undeserving benefit recipients by the Anomalies Act, a "means test" in some shape or form must be retained. These are not days when the State can afford to hand out the taxpayer's money to citizens who can draw upon adequate private resources to keep the wolf from the door. In a recent answer to a parliamentary question the Minister of Labour stated that out of 936,757 initial applications for "transitional payments" between January 25th and September 3, 1932, no less than 289,726 were awarded payment at rates below the maximum, while 171,495 were refused altogether. No one would suggest that any change should be made which would incontinently restore these vast numbers to the maximum benefit scale. Equally it will be agreed that the machinery hastily improvised a year ago, by which the test is at present imposed, works inequitably as between different parts of the country, promotes grievance and resentment by frequent harshness in its application, and requires to be thoroughly overhauled.

The first prime necessity is the establishment of a uniform standard to be applied throughout the country. In formulating the standard the aim of the Government should be to combine the adequate safeguarding of the public purse with a degree of increased generosity sufficient to remove legitimate grievances; and we certainly regard it as a legitimate grievance that applicants should be compelled, as a condition precedent to the receipt of any payment, to sell necessary furniture at knock-out prices or to exhaust the meagre savings of a lifetime. Admittedly, it is not unreasonable to remind applicants for State payments who possess considerable assets that one of the main purposes of individual savings is to provide for just such "rainy days" as those through which we are now passing, and also that the Government has a duty to hold the balance justly between them and the hard-pressed taxpayer, who might be compelled himself to exhaust his savings or sell his possessions in order to meet the demands of the Exchequer. It is a delicate matter, but on the whole we should not quarrel with a decision to disregard altogether savings up to, say, £100 in considering applications for State payments, while in the case of the more elderly applicants, or those with numerous dependents, even larger amounts might well be disregarded, only the interest on the capital being taken into account. Some relaxation is certainly also necessary in the treatment of the question of family contributions to the upkeep of unemployed parents. It is surely questionable how far a married son should be compelled by the State to stint his own family's needs in order to support parents who brought him into this difficult world without his permission. Moreover, even in the case of young workers who live in their parents' house, it is only fair that a substantial proportion of their earnings should be regarded as retainable by them of right, before their contributions to the family income are included in the calculations of the parents' "means."

Reforms are needed in other directions also. There is, undoubtedly, widespread resentment at the searching

nature of the investigation which is at present being conducted into the means of applicants on the same lines as those followed in the case of applicants for Poor Law relief. If it is not considered practicable to confine the obligation of the applicant to the filling in of a "questionnaire" form, subject, of course, to heavy penalties for giving false information or withholding salient facts, then, at least, the Government should issue a set of regulations, drafted as humanely as possible, to direct the lines on which investigation should be permitted. Whether it prove advisable eventually to transfer the task of dealing with transitional payments from the Public Assistance authorities to some other body or not, a clearly desirable interim measure is the co-ordination and simplification of "tests" in such a way as to remove as far as possible the "Poor Law taint," which so many applicants consider to be involved in the functioning of the present machinery.

We are aware that the reforms and relaxations which we suggest will cost money. It has been estimated that the saving of public money arising from the imposition of the "means test" is of the order of £20 millions per annum. We are prepared to find that the sort of easements which we have in mind might reduce that figure to a saving of perhaps £15 millions. Even in the difficult budgetary circumstances of the moment, the price is not too high to pay for the removal of injustice and the assuagement of legitimate resentment. Some way in that direction, at any rate, the Government will be compelled to move; and when the statement of policy is made next week we hope that plans for "means test" reform will be coupled with even more necessary plans for stimulating employment and thereby reducing the numbers of those to whom the test will have to be applied.

INDIA: THE NEXT STAGE.

THE Indian Round Table Conference is to re-assemble again in London about the middle of next month; and the names of the Indian representatives who are to take part in this forthcoming session have been announced this week. We are thus on the eve of the next stage in the delicate and hazardous business of launching the Indian ship of state upon the high seas of self-government; and this seems a convenient moment for taking stock of the present situation and for peering—if we can—into the future.

One important fact is brought out at once by the actual list of names; for the list includes not only eighteen representatives of British India, but also eleven representatives of thirteen Indian States. This means that the Conference is expected this time to deal comprehensively with the whole problem of constitutional reconstruction—including the structure of the All-Indian Central Government as well as the structure of the Provincial Governments. And, in pursuance of this plan of operations, His Majesty's Government in Great Britain apparently intend, when the time comes for laying the recommendations of the Round Table Conference before the Parliament at Westminster, to embody the whole of the necessary draft legislation in a single Bill. This policy is manifestly right because it is straightforward. If the two elements were separated in the parliamentary proceedings here—if the provincial reforms were dealt with in one Bill at Westminster and the central reforms in another, without any certainty that the passage of the provincial Bill would be followed by the passage of the central Bill—then Indian public opinion would inevitably become suspicious again about the sincerity of British intentions, and the suspicion would be justified if the first Bill were eventually passed by Parliament and the second thrown out. On this account, the inclusion of both parts of the Indian reforms in a single parliamentary Bill is evidently the proper course. At the same time, the two elements in the scheme remain distinct in the sense that they present two different sets of problems, and these two sets of problems are not of the same order of magnitude.

By comparison with the central problem, the provincial problem is fairly plain sailing, though, on any other standard, this, too, might seem a difficult piece of navigation. In the Provinces, the change that has now to be

carried through—the change, that is, from dyarchy to responsible self-government within the limits of provincial powers—is, after all, a change in degree and not a change in kind. And when we examine how this problem of political construction stands on the technical side, we perceive that the Round Table Conference has, ready to hand, a considerable amount of building material which has already been hewn and shaped. The major problem here is that of the electorates; and the Round Table Conference has now before it in the Lothian Report, the British Government's Communal Award, and the agreed modification of this award as between the caste Hindus and the Depressed Classes, a set of proposals which cover the whole ground and have secured at least the passive acquiescence, if not the active approbation, of all parties concerned. With these materials to build with, the Round Table Conference and the Westminster Parliament, between them, should find no very formidable difficulty in framing that portion of the forthcoming Government of India Bill that will cover the affairs of the Provinces.

The formidable part of the task begins with the problem of the Central Government; for here there are two crucial difficulties that still have to be surmounted—the difficulty of arranging by agreement for the incorporation of the Indian States, side by side with the British Indian Provinces, in an All-India Federation, and the difficulty of finance.

The difficulty over the States is to find an acceptable means of substituting a federal relation between the States and the Provinces for the present treaty relation between the States and the Crown. The difficulty is patent; but it is perhaps unprofitable to speculate at this stage on the changes of surmounting it, for these chances depend upon the disposition of the Princes, and their disposition will only become apparent when the Conference gets down to work. All that can be said now is that, even in the untoward event of the Princes holding back from federation for the moment, this would not be a proper ground for dropping the whole scheme for a Federal Central Government. It should still be possible to arrange for the federation of the British Indian Provinces, with provision for the States to accede to the Federation later. Thus, even if the worst comes to the worst, the Central Government chapter of the forthcoming Bill ought not to fall through in respect of British India; and there is after all no reason to suppose that the scope of this chapter of the Bill will be reduced to that compass. The attendance of the representatives of the States at the session of the Conference next month is surely to be taken as an earnest of the Princes' intention to come into the federation on fair and reasonable terms.

When we come to the question of Central Government finance we are faced at once with the problem of guarantees. There are three principal points on which it has been suggested from the British side that guarantees, in the shape of continued control on the part of the Government at Westminster, may still be necessary. One point is the Government of India's existing obligations (bonds, contracts, pensions and the rest); another point is currency policy; and the third point is the upkeep of the Army. The first of these points should not be so difficult to settle; for "existing obligations" are, after all, something concrete, which can be scheduled and guaranteed, definitely, in articles of agreement between the British and the Indian Governments. The other two points are thornier, because, in both these other spheres, any kind of control would appear to involve day-to-day interference by one Government in the actions of another—and this on matters of high policy in which the essence of self-government is involved. In regard to the Army, for example, we may possibly succeed in defining a minimum standard of efficiency which an All-India Federal Government shall undertake to maintain; but can we possibly demand of a self-governing India that he shall implement this undertaking by allocating to the Army this or that annual amount, or this or that percentage of his annual budget? Similarly, in regard to currency policy, we may perhaps fairly stipulate that it shall be removed from the arena of politics by being placed in the hands of an autonomous reserve bank; but can we possibly dictate what the policy

of this bank shall be? What warrant shall we have for insisting upon a claim to determine the currency policy of India when we are so deeply divided among ourselves over our own currency policy in the United Kingdom. If we do insist upon this demand under these conditions, Indian opinion will interpret our insistence in only one way. It will be believed that we are insisting upon retaining our control in the interests, not of India, but of the United Kingdom. This reaction may be taken for granted, because this is the sense in which Indian opinion has already interpreted the currency policy that has been imposed on India by England since the war. Anyone who inquires into the motives that have rallied Indian industrial interests to the support of Congress will find that nothing has moved them more strongly than a conviction that the currency policy of the Government of India has been deliberately designed to favour the English manufacturer at the Indian manufacturer's expense. It will be seen that, in this matter of currency policy, the ground on which we have to tread is particularly dangerous and delicate.

Another aspect of the financial difficulty is the time factor—a factor which is also of the essence of the whole constitutional problem in every part of the world.

For the moment, and by comparison with the predicaments of other countries, the financial condition of India may be said to be fairly satisfactory. Thanks to the export of gold, it has so far proved possible to maintain the balance of India's foreign trade without the necessity of cutting down exports to a degree which would upset the balance of a budget that largely depends upon the Customs revenue. But when this has been said, it must be added that, although there is no reason to foresee that the current outflow of gold from India will cease, this is, nevertheless, a precarious unpredictable factor—a factor on which the Government of India cannot comfortably depend for weathering a world economic crisis which shows no signs of abating. And the crisis involves the time factor in the Indian financial problem, which can be formulated in the following way: it would be hard enough for the Government of India to weather the world crisis if there were no question of putting a strain on India's credit by transferring financial control from English to Indian hands. And, again, it would be hard enough for the Government of India to stand the financial strain which this transfer inevitably involves if there were no world crisis. But now the Government of India is being required to take the strain of the crisis and the strain of the transfer upon its shoulders at one and the same moment. Could Atlas himself stand up under so heavy a load as that?

The answer seems to be that Atlas must either stand the strain or perish; for the time factor has its political as well as its financial aspect; and for political reasons it is impossible to waste time on the road towards Indian self-government. For the moment, the position is, perhaps, as favourable politically as it is unfavourable financially for moving forward, because civil disobedience is temporarily in eclipse. But the movement towards civil disobedience will infallibly recur if the movement towards self-government is brought to a halt, or even if it is perceptibly slowed down. The truth seems to be that in this tremendous enterprise, standing still is the one thing that is undoubtedly more dangerous than moving forward.

SIR WALTER LAYTON AND THE GOVERNMENT.

IN view of the international policy that has been consistently advocated in these columns, the resignation of the Editor, Sir Walter Layton, from the Preparatory Committee of the World Economic Conference will come as no surprise to our readers. The reasons for this step are sufficiently explained in the following letters that have been exchanged between Sir Walter Layton and the Prime Minister:—

Letter of Resignation.

The Economist,
8, Bouverie Street, Fleet Street, E.C.4.
October 25, 1932.

DEAR PRIME MINISTER,—It is with very great regret that I find myself reluctantly compelled to ask you to accept my resignation from the Preparatory Committee of the World Economic Confer-

ence. When I agreed nearly three months ago to serve on the Committee, I did so subject to my being satisfied that the possibility of the success of the Conference would not be prejudiced by the policy of the Government. After discussing the matter with you on more than one occasion, I ventured in a letter, dated September 27th, to set out my views as to the plan of campaign to be adopted by Great Britain at the Conference itself and by her representatives at the forthcoming Preparatory Committee. I concluded by inquiring whether these general views were in accordance with those of the Government.

On Friday last I had the opportunity of discussing the points of my letter with the Chancellor of the Exchequer. The result of our discussion confirmed my apprehension that there was such a divergence of view between the Government and myself that I could not usefully represent it on the Committee.

On many important points there was common ground. We were agreed, for example—to quote the Basle Report of August, 1931—that "in recent years the world has been endeavouring to pursue two contradictory policies in permitting the development of an international financial system which involves the annual payment of large sums by debtor to creditor countries, while at the same time putting obstacles in the way of the free movement of goods." It follows—and here, I think, there is no difference between us—that at this critical juncture we must not repeat the mistake made ten years ago of trying to re-establish an international financial system without first making certain that the economic background is such that it can be maintained. It is also common ground that a settlement of the problem of war debts and the earliest possible removal of the special crisis measures that are causing a condition of virtual blockade in international trade are essential conditions for the smooth working of a new international financial arrangement.

But my interview with Mr. Chamberlain convinced me that there is a serious difference of opinion between the Government and myself as to what further action is required in order to restore reasonable freedom to the movement of international trade.

The Government view, I find, is that the desired result can be obtained through individual negotiations with foreign countries, within the limits set by the Ottawa agreements and subject to strict insistence on our most-favoured-nation rights.

Judging from past experience, however, I fear that the method of bilateral negotiation will make very little impression on the protectionist system of the world as a whole as it has grown up since the war. In my opinion, the financial situation in which Great Britain finds herself at this moment, taken in conjunction with the immense importance of the British market to the whole world, gives us a unique opportunity—in collaboration with countries already on a low tariff basis and those to whom the restoration of foreign trade is a vital necessity—to propound and press forward plans conceived on much bolder and broader lines.

Unfortunately, progress in the direction of effective action by a low tariff group is handicapped by certain features of Government policy. Among these handicaps—apart altogether from the growing tendency to introduce an element of permanence and rigidity into our tariff by various commitments—I would mention specially the introduction of the quota system in regard to meat, the implied endorsement in the Ottawa agreements with Australia and Canada of the principle of "compensatory" tariffs, and the unhelpful attitude adopted by Great Britain towards regional agreements in Europe, such as the Dutch-Belgian Convention initiated at Lausanne in July of this year.

As regards the purely financial matters that will arise at Geneva and, in particular, the monetary policy to be adopted in the immediate future, I do not anticipate that I should find myself at cross purposes with the Government. But financial and economic questions are inextricably interwoven. The answer to the problem, for example, whether, when and at what rate we should attempt to stabilise sterling depends essentially on the question whether we can secure a reasonable level of tariffs, or whether we must contemplate the indefinite continuance of conditions where international trade continues to be cribbed, cabined and confined.

Any attempt to deal with the monetary situation without a satisfactory solution of the commercial problem must sooner or later fail, and I personally have no confidence that such a solution can be reached along the lines which the Government are following.

In the absence of a radical change in the world's commercial policy—in which this country's attitude could be an almost decisive factor—I do not see the possibility of a really satisfactory outcome of the World Conference on the monetary side.

In the circumstances, it seems desirable that my place on the Preparatory Committee should be taken by someone who is in closer sympathy with the Government's policy.

Yours very sincerely,
W. T. LAYTON.

Premier's Reply.

10, Downing Street, Whitehall,

October 25, 1932.

MY DEAR LAYTON,—The Chancellor of the Exchequer and I have already told you how sorry we are that you feel that you cannot continue to represent us on the Preparatory Committee of the World Economic Conference. I was hoping that it would have been possible to have got your assistance, so that your known divergence of views, so far from hindering us, would really have helped us. Time is so short now that no immediate good could come out of a discussion as to whether the interpretation you put on various things in your letter is right or wrong. I think you are wrong on one or two rather important points, but I shall only mention one, lest, should I say nothing about it, the public may take that to mean that I agree with you.

You say that all we propose to do is to make commercial agreements with individual countries, using nothing but a strict insistence on our most-favoured-nation right to secure for us a maximum of good treatment. I cannot for a moment accept that as being accurate. I think the main difference between us is our varying estimates of securing progress on the lines you favour, which depends on the policy of other countries as well as of our own. I hope, however, as the Conference develops, that you will allow me to have your assistance on any points that may arise upon which I know you have well-considered views.

Believe me to be, yours always sincerely,

J. RAMSAY MACDONALD.

Three observations only need be added by way of personal explanation.

Firstly, the conditional acceptance of the invitation to serve on the Committee was given just after Mr Baldwin at Ottawa had clearly stated the desire of the British delegation, which in the event was not realised, to secure an improvement of international trade by a reduction of Empire tariffs as a prelude to effective action at the World Conference.

Secondly—as the dates mentioned in the correspondence show—an attempt was made over the last two months to obtain a definite statement of the commercial policy of the Government at the World Conference.

Finally, in order that there should be no question of lack of "accuracy" in the description of the Government's attitude in so important a matter, a draft of the letter of resignation was shown, on Monday last, to the Chancellor of the Exchequer, who accepted it as being a fair statement of the situation, suggesting only the omission of a single phrase which he thought might be misconstrued abroad. The draft was then submitted to the Prime Minister and was not sent in its final form until word had been received from his private secretary twenty-four hours later to say that he had no alteration to suggest.

W. T. L.

BRITISH BACON CONTROL.

THE general case, under existing and prospective world conditions, for the reorganisation and development of British agriculture is so overwhelming that, when any constructive proposals directed to that end are put forward, we are predisposed in advance to give them most favourable consideration. But since the Report of the Reorganisation Commission for Pigs and Pig Products, published this week by the Ministry of Agriculture, seems likely in many important respects to set a precedent for further schemes covering other branches of agriculture, the policy which it advocates demands scrutiny which is careful as well as sympathetic. If the impression which we derive from the perusal of the Report is that the proposals have many serious defects and involve elements of considerable danger, the reason is not that we dissent from all the recommendations—on the contrary, some points in the scheme commend themselves as sound—but that the Report fails to convince us that its signatories appreciate the damage which may be done to the country's interests if the Government, fortified by the expert opinion of such Commissions, proceeds with gusto to apply to agriculture the blessing of protective shelter regardless of considerations of economic efficiency.

The Commission was appointed under the Agricultural Marketing Act of 1931 to prepare a scheme "for regulating the marketing of pigs and any pig products," and it was instructed to investigate the manner in which the operation of any such schemes could be facilitated "by the quantitative regulation of imports." The situation which the Commission found to exist as regards the supplies of bacon and ham in the British market can be seen most clearly from the following table:—

U.K. BACON AND HAM SUPPLIES.
(Million Cwt.)

	Imports.					British Production.	Total Supplies.
	Danish.	Dutch.	Polish.	Other.	Total.		
1927	5.1	0.8	0.1	3.4	9.4	1.7	11.1
1928	5.4	1.1	0.1	3.2	9.8	1.7	11.5
1929	5.0	0.9	0.3	3.1	9.3	1.7	11.0
1930	6.1	0.8	0.5	2.8	10.2	1.7	11.9
1931	7.3	1.0	1.2	2.5	12.0	1.7	13.7

The figures point to a striking expansion in British consumption of bacon and ham during the past five years—an expansion based predominantly on a growth of imports from Europe, and particularly from Denmark, at prices which had fallen by July, 1932, to a level appreciably below those existing before the war. Since the decline in bacon prices has considerably outstripped that of the prices of pig-feed, the Commission are of opinion that the recent rate of Danish and other European output could not in any case be indefinitely maintained; but their view is that no progress can be made in the development of British bacon production unless the "readjustment to more normal price and supply levels" is brought about by positive steps of import regulation.

So far as domestic supplies are concerned, the Commission's proposals are complicated, but the general principles, with which we are now concerned, can be summarised fairly briefly. The Report suggests that, at the start, the pork market, in whose case the possibilities of expansion are held to be small, should be left unregulated, and that efforts at reorganisation should be concentrated on the market for bacon and hams. The Commission's aim is to secure both a development of British pig breeding and also a greater regularity of supplies. The main features of the recommended scheme are:—

(1) That a Pigs Marketing Board, representing producers, should negotiate with representatives of the bacon curers a national agreement on contract terms and prices, subject to arbitration in the event of disagreement by a Pig Industry Development Board. The contract price of pigs should be based on a minimum price formula "ex farm" for carcasses of standard specification, varying with the cost of feedstuffs in the four months preceding delivery, and including whatever additional sum representing the feeder's profit may be agreed by national negotiation.

(2) On the basis of the contract terms so arranged, farmers should be free to make contracts for the ensuing calendar year for delivery of pigs to any curer who is prepared to take the pigs. The Pigs Marketing Board should also retain a number of contracts with farmers in order to have a surplus pool from which to make good involuntary defaults by producers.

(3) The contracts thus concluded should be the basis for a home quota. The Pig Industry Development Board should report the sum total of home contracts to a Quota Advisory Committee who would make the home quota equal to the aggregate deliveries contracted for, subject to their right "to recommend an arbitrary increase or decrease in the home quota on grounds of public interest."

(4) Curers would not be permitted to purchase any home-produced pigs other than those covered by the contracts, whose voluntary non-fulfilment would be subject to penalties. Against the temptation of farmers to concentrate on the pork market, if pork prices were high just before the beginning of a contract year, there would be set the consideration that, the smaller the offers of bacon supplies, the lower would the home quota fall in the ensuing year.

The difficulty at once arises that the bacon curer is thus left in an unenviable position. He is to be required to purchase home-produced pigs at a price sufficient not merely to cover a "reasonably efficient" producer's costs and profit margin, but also to elicit greater home production; yet, in the absence of supplementary measures, he would have no guarantee that he would be able to sell his bacon in a free market at a price covering his own costs. Indeed, under the existing conditions of glut, with Continental producers under heavy pressure to maintain sales, he would be almost certainly involved in a serious loss. Accordingly it is proposed that the Quota Advisory Committee should determine annually the total United Kingdom requirements of bacon and hams and, having fixed the home quota, should recommend the import quota to be allocated by the Government to each exporting country. It is proposed that for the year beginning July 1, 1933, total supplies should be restricted to 10.7 million cwt., this being the average consumption in 1925-30. Quota certificates to foreign countries should be issued on a twelve monthly basis, at any rate for the present, and should be reduced in proportion as the home quota increases. It is suggested that the home quota should be permitted to increase automatically by 10 per cent. every four months, provided that the volume of contracts shows a corresponding increase. Finally, the Commission considers that "any preferential quota allocation given to a country in the British Empire should be at the expense of the foreign import quota and not of the home quota."

Reference to the foregoing table of supplies will show at a glance that even in the initial quota year a very considerable disturbance of imports is going to be involved.

In the first place, total imports will be reduced by some 3 million cwt. below their 1931 level. In the second place, Canada, whose shipments to this country in 1931 amounted to only 122,000 cwt., is to be accorded, under the Ottawa agreement, "free entry of Canadian bacon and hams of good quality up to a maximum of 2½ million cwt. per annum," while New Zealand, whose shipments were also negligible, is to be given "a reasonable share of the expansion made possible by the reduction of foreign imports" of bacon and hams. Thus, even if the initial home quota does not show any appreciable increase over the British production of recent years, it is evident that our imports from Europe must be drastically contracted.

This, however, is not the whole story. Given the present largely inefficient and badly organised methods of pig production in this country, as compared with those of Denmark and other European competitors, there will clearly be a constant pressure brought to bear by curers on the Quota Advisory Committee to safeguard their position by keeping foreign supplies so low as to make certain of an "adequate" rise in bacon prices. Thus, the scheme involves a serious risk that its application will result in deliberately starving the bacon market in the interests of the home producer; for the Commission themselves concede that though in their opinion 1931 supplies were abnormal, even larger quantities could without doubt be sold at a lower price level.

This being so, the final effect of this scheme must depend on the extent to which the economic development of British pig production is secured. What assurance is there that this objective will be realised? The Commission propose that the nationally negotiated contract should discriminate in price against carcasses of indifferent quality and unsuitable weight, and they recommend that every carcass should be graded and weighed by an official of the Pig Industry Board. They also recommend, *inter alia*, that the Pig Industry Development Board should undertake an educational campaign among farmers; that the Pigs Marketing Board should take steps to organise more orderly assembly and transport of contract pigs; and that the Development Board should be given powers to regulate the distribution of existing and new curing factories, and also, where necessary, to finance and construct bacon factories on public utility lines. All these suggestions are eminently sound, but it remains to be seen whether the Government, even if it accepts readily enough the very restrictive quota plans, will be prepared to push forward agricultural reconstruction, in the case of pigs or any other product, on lines which must involve, if action is to be effective, a considerable measure of State interference and guidance.

We are far from expressing satisfaction with a situation in which this country, with its appropriate agricultural resources, produces only 15 per cent. of its bacon requirements, and we are equally far from dissenting from the general propositions that the consumer cannot expect the indefinite continuance of supplies at prices below production costs. If better organisation on voluntary initiative is not forthcoming, we are prepared to see the State take a hand in stimulating it. But at best such action needs to be very carefully devised if it is not to end in subsidising in one form or another an industry whose competitive efficiency is left as defective as ever. The present scheme is open to the much graver general objection, that it sets out to improve the situation for a particular group of producers by deliberately reducing supplies and raising the price of a most important item in the dietary of the nation. This is, of course, a form of taxation of the consumer which reduces purchasing power in other directions as much as it increases the resources of the foreign and home producers of pigs; and it is particularly open to objection in this case because of the large proportion of imports which will be raised in price without even adding a penny to the revenue. From the point of view of our commercial policy as a whole, it involves an extension of the vicious quota system, the use of which by other countries is playing such havoc with our international trade. A direct subsidy would be a far smaller price to pay for the expansion of the British pig industry.

THE NATIONAL INCOME.

MANY definitions may be given of the National Income, but, for practical purposes and excluding minutiae, we may take it as being the value of the goods and services entering into consumption, plus additions to capital or to stocks and less deductions from stocks and allowances for depreciation and obsolescence; interest on internal Government debt and income paid to foreigners are deducted. It is clear that knowledge of income movements from period to period is of immense importance not only to politicians but to everyone concerned about the welfare of the community. Unfortunately, sufficient data for precise calculations are lacking, and the statistician has too frequently to utilise partial information which leads him sometimes to parlous estimates and occasionally forces him to make what are only intelligent guesses. When, however, we get consistent results from different authorities or obtained by different methods, and sufficient allowance is made for a range of error, we may consider that we have secured a proper measure. Thus, the estimate of £2,000 millions as the income of the United Kingdom in 1907, made by the Board of Trade in connection with the Census of Production, and the estimate of, roundly, £2,100 millions made by Professor Bowley for 1911, have generally been accepted as being in accordance with other current valuations.

Income estimates since the war begin with 1924, the year when industry appeared to be making a definite return to normality, but precise comparison with pre-war estimates is henceforward invalidated by the great change in values and, to a lesser degree, by the exclusion of the Irish Free State. For 1924 Sir Josiah Stamp and Professor Bowley, working on the income method, estimated (in 1927) that the national income (excluding pensions) of Great Britain and Northern Ireland lay between £3,700 millions and £3,900 millions, and in the following year Mr A. W. Flux, then head of the Statistical Department of the Board of Trade and President of the Royal Statistical Society, calculated that it was between £3,750 millions and £4,200 millions. The middle points of the two estimates differed by less than 5 per cent., and it is probably correct to say that most people have taken the two estimates as broadly confirming each other and as indicating that the national income in 1924 was in the neighbourhood of £3,800 millions or £3,900 millions.

Mr Colin Clark, University Lecturer in Statistics at Cambridge, in a recently published work ("The National Income, 1924-31," Macmillan and Company, 8s. 6d.) not only challenges the accuracy of the two previous estimates for 1924, but carries forward his own estimates for each year to 1931, except 1925. This implies no little daring, and Mr Clark has not only expended a vast amount of labour, but displays great ingenuity in devising ways and means for trying to bridge over those places where information ceases to be reliable. His book deserves the closest attention, and will no doubt receive it from his professional brethren, who will expound merits and demerits unseen to the ordinary reader, a person rather apt to take as authoritative all calculations. Here we can only indicate a few of the main points that come into consideration.

For 1924 Mr Clark gives an income of £3,586 millions, or over 6 per cent. less than the comparable Bowley-Stamp figure of £3,827 millions. It is worth while to try to bring these estimates closer together. Passing over the income-tax figures, where most people will be prejudiced in favour of Sir Josiah Stamp as an interpreter, we find that the main difference is caused by wages, which account for £1,600 millions in the Bowley-Stamp estimate and for £1,413 millions in Mr Clark's. The former utilised calculations based on the Population Census, but Mr Clark has substituted a very commendable analysis of the workers insured against sickness and unemployment, reaching a total of persons actually at work in 1924 nearly a million less than that estimated by his predecessors. We now know from Ministry of Labour figures that about a quarter of the difference is due to an underestimate by Sir Josiah Stamp and Professor Bowley of the number of unemployed persons, and, after allowing for unrecorded

unemployment, the remainder should be included in the class of persons who are neither wage-earners nor income-tax payers. This would lead to the conclusion that Mr Clark's estimate of the income of that class (£188 millions, instead of £267 millions) is too low. The Ministry of Labour's wage inquiries, together with other data as to wages of miners, railway servants, agricultural labourers, etc., afford a reasonable but incomplete base for calculations; but about a quarter of Mr Clark's total depends on estimates of the remuneration of domestic servants and miscellaneous classes of workers. On the other hand, the estimate of the Ministry of Labour that rates of wages in organised industries were 70 to 75 per cent. greater in 1924 than in 1914 also suggests that the Bowley-Stamp estimate was too high. Probably it will be best to take wages at about £1,500 millions and to maintain the Bowley-Stamp estimate for the intermediate class (here part of the discrepancy is only a matter of accounting). Total national income would then be between £3,700 millions and £3,800 millions.

Among Mr Flux's calculations Mr Clark is mainly concerned with the value of industrial production, put by Mr Flux as £2,478 millions at factory and free of excise duties, plus a possible addition of £19 millions. Mr Clark meticulously goes over several of the calculations (taking an unduly strict reading of Mr Flux's dealing with transport charges) and arrives at a total of £2,435 millions for the industrial output of 1924 free of Excise duties. This figure he seeks to confirm by calculating the values of the several classes of the final products of industry, a task which Mr Flux had declared to be impossible and in which Mr Clark seems to have under estimated the cumulative effect of repeated margins of error. Here, without disrespect, one may be pardoned for preferring to the academic statistician the distinguished official statistician who had a detailed knowledge of all the data collected in his department.

Passing away from 1924, Mr Clark calculates a gradually increasing income up till 1929, when it was £3,996 millions, or 11.4 per cent. above 1924; in 1930 there was a slight fall, and in 1931 a drop to £3,499 millions, or 2.4 per cent. below 1924. Between 1924 and 1931 wages are estimated to have fallen from £1,413 millions to £1,876 millions (or by 2.6 per cent.), profit and interest from £989 millions to £825 millions (or by 16.6 per cent.), and net income from overseas from £185 millions to £177 millions (or by 4.3 per cent.), while salaries rose from £741 millions to £808 millions (or by 9.0 per cent. on account of increased numbers), and rent from £258 millions to £313 millions (or by 21.3 per cent.). The small percentage reduction in the total income in 1931, and particularly the almost equally small reduction in the largest constituent, wages, must strike everyone as contrary to the general impression. It would seem that the London-Cambridge wage index, based on twenty occupations, which Mr Clark has used has been unrepresentative, and it is clear that, whatever may be the official difficulties, the Ministry of Labour must be forced to compile a comprehensive wage index; even if not absolutely complete, it would be better than the best efforts of private enterprisers.

Reading and re-reading his pages, one can only sympathise with Mr Clark over the estimates he is forced to make. He seeks to find confirmation for his income totals by carrying forward his estimates of industrial production based on the Censuses of Production. Unfortunately, he has used a price factor, "calculated separately for the final products of each industry from the average value of exported commodities." The assumption that the make-up of any category of exported goods is similar to, or represents, the make-up of the total British output of that class of goods is quite unsound, demonstrably so with regard to very many, if not most, classes, and if that assumption fails Mr Clark's confirmatory calculations fall to the ground. A great deal of work will have to be done before we can definitely accept Mr Clark's conclusions or reject them. Here we have only indicated a few points in dispute, but for the sake of comparison we note that the Board of Trade index of industrial production in 1931 was 6.2 per cent. below 1924 and the London-

Cambridge index was down by 15.7 per cent.; these indices do not cover the same ground, they are admittedly incomplete, and they represent volumes, but, at least, they offer presumptive evidence that Mr Clark has underestimated the fall in the money value of the national income in 1931.

It has only been possible to find space for a sketchy discussion of Mr Clark's main theme, and there are other chapters of his interesting book deserving and requiring examination which cannot be made here and now. Mention, however, should be made of his attempt to construct aggregate indices of "the price level of consumption goods and services and the price level of output as a whole." Three main points arise. For the gross cost of distribution he compares the Ministry of Labour's retail prices with wholesale prices, but the former relate to working-class trade, and (to take one example only) the averages of two cuts in the case of beef and mutton are not necessarily the true averages for the whole carcass sold retail. Secondly, for clothing and boots he has "calculated a wholesale price index from the average values of exported goods, reweighted according to their importance in internal consumption." But there is no reason to believe that the make-up of export categories is such that their average values indicate those of goods consumed at home. Thirdly, private services are valued on the basis of an investigation, of which he gives particulars; it is slender but praiseworthy, and the study group of the Royal Statistical Society should be helped to carry it farther. Finally, in his last chapter Mr Clark applies his preceding statistical work to Mr Keynes's theory of money, and, though he does not claim to have proved its validity, his attempt "to devise a statistical *experimentum crucis*" may be applauded.

TEXTILE FIBRES—RAW COTTON.

The past cotton season, ending on July 31st last, will be remembered by growers as the worst since the beginning of the century. The average price of "American Upland" during 1931-32 was 5.89 cents per lb., as compared with 17.24 cents per lb. during 1929-30, and a previous low record of 7.60 cents per lb. in 1899-1900. Two factors combined to bring about this disastrous situation. The world crisis had caused a drastic falling-off in the demand for cotton manufactures, while the yield of the world's cotton crop in 1931-32 was higher than in any year with the exception of 1925-26 and 1926-27. Official interference with the price mechanism in the United States and in Egypt proved of no avail in arresting the downward movement of prices. On the other hand, demand showed little response to the cheapness of the raw material.

The position is illustrated in the following table, showing world supplies, mill consumption and prices during recent years:—

(In Millions of Bales.)					
Season ended July 31st.	Supplies.			Mill Consumption (b)	Av. Price. New York Middling American cents per lb.
	Crop. (a)	"Carry-over." (b) (c)	Total.		
1924.....	20.3	5.1	25.4	20.4	31.1
1925.....	25.6	6.0	31.6	23.3	24.8
1926.....	28.7	9.7	38.4	24.7	20.6
1927.....	29.2	9.8	39.0	26.1	15.2
1928.....	24.8	7.8	32.6	25.5	20.4
1929.....	27.2	7.6	34.8	25.8	19.7
1930.....	27.1	8.8	35.9	25.2	16.6
1931.....	26.2	10.9	37.1	22.4	10.4
1932.....	28.3	12.2	40.5	22.3	6.4

(a) Bales of 500 lbs. (b) Actual bales. (c) Visible supplies plus mill stocks as reported by the Liverpool Cotton Association, Ltd., and by the International Federation of Master Cotton Spinners' and Manufacturers' Associations.

The above figures are not strictly comparable owing to variations in the weight per bale, and because of the fact that "mill consumption" does not include domestic consumption in India, China, Egypt, and in the smaller producing countries. There are no accurate figures for domestic consumption, which is usually estimated at about 1,250,000 bales per annum; but despite these

statistical difficulties, the course of prices during recent years points eloquently to the failure of consumption to overtake production.

Raw cotton is, of course, not a uniform product, and each variety has its particular market. The bulk of the world's cotton crop is produced in the United States, in Egypt and in India. Egyptian cotton is of a better quality than American cotton, while the larger proportion of Indian cotton is inferior in grade as compared with the fibre produced in the United States. The production and mill consumption of these varieties is shown in the tables below:—

PRODUCTION (in millions of bales of 500 lbs.).

Season ended July 31st.	U.S.A. (a)		Egypt.	India.	World (including other countries).
	Production	Proportion of World Production.			
1924.....	10.1	49.8	1.3	5.2	20.3
1925.....	13.6	53.1	1.5	6.1	25.6
1926.....	16.1	56.1	1.6	6.2	28.7
1927.....	18.0	61.6	1.7	5.0	29.2
1928.....	13.0	52.4	1.2	6.0	24.8
1929.....	14.5	53.4	1.6	5.8	27.2
1930.....	14.8	54.6	1.7	5.1	27.1
1931.....	13.9	53.0	1.6	4.8	26.2
1932.....	17.1	60.5	1.3	4.2	28.3

(a) Excluding linters.

MILL CONSUMPTION (in millions of actual bales.)

Season ended July 31st.	American.		Indian.	Egyptian.	Other Varieties.	Total.
	Mill Consumption.	Proportion of World Consumption.				
1924.....	11.1	54.4	5.4	1.0	2.9	20.4
1925.....	13.3	57.1	5.5	1.0	3.5	23.3
1926.....	13.7	55.4	5.6	0.9	4.5	24.7
1927.....	15.8	60.5	5.2	1.0	4.2	26.1
1928.....	15.4	60.4	4.5	1.0	4.7	25.5
1929.....	15.1	58.5	5.2	1.0	4.6	25.8
1930.....	13.0	51.6	5.9	0.9	4.9	22.4
1931.....	10.9	48.6	6.1	1.0	4.4	22.3
1932.....	12.1	54.3	4.7	1.0	4.4	22.3

It will be seen that the United States is still the dominating factor in the world cotton situation, though the proportion of United States cotton consumed to world consumption decreased steadily from 1927 to 1931, chiefly owing to its relatively higher price. This tendency has been reversed during the past season because of the relative cheapness of American cotton, and owing to the good quality of the huge crop harvested in the United States a year ago. Whether the United States will be able in future to hold her own against "outside growths" only time can show. The demand for Egyptian cotton, on the other hand, has shown little variation during recent years.

In addition to the negative policy of holding stocks off the market, both the American and Egyptian Governments have recently aimed at a reduction in acreage; the argument was that, in the absence of an expansion in demand or a series of crop failures, this was the only solution of the problem of excessive supplies and unremunerative prices. As a result, the acreage under cotton has been reduced by about 10 per cent. in the United States, and by nearly 20 per cent. in Egypt. Although the "carry-over" of United States cotton at the end of the past season was higher than ever, the publication of the first official report of the probable yield of the new crop caused a sharp advance in prices which has not yet been entirely lost. The official October estimate indicates a crop of about 11,425,000 bales, as against an actual yield of 17,096,000 bales in 1931-32. The Egyptian crop estimate, too, shows a substantial reduction on last year's harvest, namely, from 1,288,000 bales to 869,000 bales. If last season's rate of consumption is maintained during the current crop year, a reduction in the "carry-over" of American and Egyptian cotton can be expected at the end of the current season. Although the world supplies and probable consumption cannot as yet be estimated, it appears unlikely that cotton prices will fall back to the low levels established earlier in the year. On the other hand, a substantial and

permanent rise of prices in terms of other commodities in the near future is ruled out by the existence of huge stocks, unless acreage in the United States and elsewhere is further reduced. In this respect the raw cotton situation differs fundamentally from the outlook for wool. As almost the whole wool clip has been marketed readily, there has been no abnormal accumulation of this fibre in producers' hands. The cotton grower (or the taxpayer in the United States) will have to pay heavily for the artificial restriction of supplies before his crop becomes once more remunerative to him.

OTTAWA AND THE COLONIES.

THE Colonies, Dependencies and Protectorates within the British Empire were not officially represented at the Ottawa Conference, nor were they directly parties to the agreements there concluded. In preparing for the Conference, however, the extension of inter-Imperial trade between the Dominions and the Colonies had been definitely regarded as one of the more important ends to be promoted. The extent to which the Dominions were interested in the markets of the Colonies and the Colonies in those of the Dominions had been fully explored. Possible preferential arrangements for the purpose of promoting Dominion-Colonial trade had been discussed with the Colonies themselves and their views ascertained. In the end the Ottawa Agreements embodied certain principles and proposed certain schedules of preferences which were intended to further this object. In order to obtain a complete picture of the Ottawa Conference and its consequences a brief examination of the decisions there made, as they will affect the Colonies, is thus necessary.

The broad principle governing the articles of agreement as they affect the trade relations between the different parts of the Empire is contained in the formula "What A grants to B shall be granted also to D, E, F"; the principle of inter-Imperial most-favoured-nation treatment. In certain instances reservations were made to its general application. The preferential arrangements concluded by the Customs Agreement of 1930 between the East African Colonies and the Union of South Africa were treated as forming a small inner Customs group, the mutual arrangements of which would not be affected. In other cases existing treaties with foreign countries, as in the instance of the Congo Basin Treaty, had to be observed. Apart from exceptions of this kind, the Ottawa Conference has undoubtedly strengthened and extended the observance of the most-favoured-nation principle as between the Colonies and the Dominions.

On the side of the non-self-governing Colonies the obligation arising from the agreements is expressed in uniform terms. Each Colony is "invited" to give to each of the Dominions any preference accorded to any other part of the British Empire. It may be taken for granted that the invitation will be accepted. In certain cases the Colonies enjoy virtual fiscal autonomy. In others fiscal policy is determined by the British Government. As regards the former, it may be assumed that assurances of acceptance have already been obtained.

The obligation undertaken by the Dominions towards the Colonies is not, however, identical in each case. The form of obligation recognised by Canada and New Zealand is to give to the Colonies to which British preferential rates are accorded such preferences as are given to Great Britain. There is nothing in the agreements to preclude one Dominion from entering into special preferential arrangements with another Dominion. If such arrangements were concluded there is no provision for their automatic extension to the Colonies. Further, no obligation is recognised to extend a preference to a Colony that gives no preference to the Dominion, or to a Colony that gives a greater preference to some other Dominion. In the cases of Australia and South Africa and India the obligation will not be automatically operative, but will be recognised if the British Government so request.

In 1930 the total exports from the countries of the overseas Empire were valued at £697 millions. Of this total, 38.1 per cent. was consigned to the United Kingdom and 11.6 per cent. to other countries within the Empire.

To what extent the agreements, by generalising the effect of preferences, will increase the trade of the Colonies cannot be estimated. At least it represents a step in the right direction. Of more immediate interest are the new and special preferences which are to be introduced as between the Dominions and the Colonies. These have been agreed as the result of bargaining, and these bargains have to be scrutinised before their true character is revealed. Unfortunately it is evident that in too many instances these new preferences will mean a very material addition to the level of duties charged by the Colonies upon non-Empire imports as a condition of affording a preference to the Dominions. According to Schedule D of the Canadian agreement, for example, a number of Colonies undertake to impose a specific duty of no less than 1s. per pair in addition to their general *ad valorem* tariff upon rubber boots. The shilling is to be the margin of preference in favour of the Dominion product and it is aimed against the cheap rubber shoe produced in Japan. Such shoes are rapidly becoming articles of necessity among the poorer sections of people in the East. To impose a preferential duty, that in many cases cannot be much less than 100 per cent. *ad valorem*, upon such articles in order to benefit the manufacturers of the Dominions is protection of the worst kind. The case of cotton hosiery is nearly as flagrant. Upon the existing *ad valorem* duties a new specific duty of 6d. per pair is to be imposed in order to give a preference to the Dominions. Upon low grade cotton stockings such a duty must impose an extremely heavy burden upon the consumer.

If the corresponding schedules, embodying the new preferences which the Dominions are to extend to the Colonies are studied, it will be hard to find instances of corresponding advantage to the Colonies, or, to put it more accurately, instances in which equal hardship is inflicted upon the Dominion consumer for the benefit of the Colonial producer. A margin of preference over the intermediate tariff upon oils or asphalt of 10 per cent., or of 50 cents per pound upon cigars, is scarcely equivalent to duties that will materially raise the cost of living for the poorer inhabitants of many of our Colonies.

The Ottawa agreements, in so far as they affect the Colonies, are very largely on all fours with those clauses which more particularly affect this country. They contain provisions that do homage to the sentiment of "more and freer trade," but when these provisions come to be applied they are found in almost all important cases to result in the raising of tariff barriers against the non-Empire producer in order to give a preference, often a very large preference, to the Dominion producer at the cost of the Empire consumers outside the Dominions. The true meaning of these agreements will be, not more and freer trade, but fresh imposts upon the necessities of life in the interests of Dominion manufacturers.

Notes of the Week.

The American Election.—As polling day draws near, the Presidential election campaign is working itself up to a crescendo of activity, and statements by both candidates are coming so thick and fast that supporters of each are reported to be advising their protagonists to "stop talking." Republican campaigners are in slightly better heart than a week ago and believe that a good effect has been produced by their new slogan: "We're through the worst of the crisis. If you elect Hoover, happy days will soon be back again." Nevertheless, there is little indication that the brightness of the Democratic chances has been seriously dimmed, despite the advocacy of Mr Hoover's claims made by men of such eminence as Mr Coolidge and Mr Ford. By way of compensation, Mr Roosevelt has had for the first time the powerful platform support of Mr "Al" Smith, while the candidate has done no harm to the Democratic chances either by his level-headed treatment of the War Bonus question or by his dramatic pledge to repeal the eighteenth amendment. The latest figures of the *Literary Digest's* "straw vote" point as strongly as ever to Mr Roosevelt's victory, and Mr Hoover, even

if he has ceased to lose ground, does not seem to be regaining what he has lost. From the point of view of the outside world the most important feature of the recent campaigning is the prominence given to the tariff problem. Mr Hoover has implied in more than one speech that, if re-elected, he will favour "more and higher" tariffs, and he has announced that he has instructed the Tariff Commission to investigate the cases of industries which are injuriously affected by the depreciation of foreign currencies. Mr Hoover's repeated insistence on the need for high tariffs is taken to reveal his belief that American public opinion is moving further and further towards policies of isolation, and that his only chance of redeeming his desperate electoral position is to appeal to that sentiment. An echo of this election feature was heard in this country towards the end of last week, when Mr Mellon, the American Ambassador, delivered at Manchester a studious defence of American tariff policy. Mr Mellon was at pains both to expound America's imperative necessity to "build up the purchasing power of her people," and also to minimise the restrictive effect on world trade exerted by the American tariff. It is becoming very clear that a Republican victory would be a signal for further raising and extension of the already formidable Smoot-Hawley barrier. We could wish that it were equally clear that a Democratic victory would be followed by a strenuous tariff reduction. Mr Roosevelt, it is true, continues to revile the existing tariff and to advocate the negotiation of trade treaties with other countries. But, while campaigning in the West, he was constrained to reassure American farmers that such protection as they enjoy would not be taken from them, and it is by no means certain that some of his most influential supporters share his enthusiasm for tariff reduction even in the case of manufactures.

The War Debts.—The various accounts of M. Herriot's statement to the Foreign Affairs Committee of the French Chamber have done little to dispel uncertainties as to when and how the question of war debt payments to the United States will be raised by the European debtors. All that is certain is that, whether the initiative is taken individually or collectively, the question will be raised; it may also, we think, be taken for granted that before any payment is made on December 15th, the matter must come before the Parliaments of both France and Great Britain. No indication has yet been given in any quarter of specific proposals that may be made. We assume, however, that in any representations made to the United States the disturbing influence upon the balance of payments of the large transfers involved, and their consequent effect in contributing to the world crisis, will play a large part, just as was the case in the reparations discussions at Lausanne. In this connection, the position of Great Britain supplies striking figures not merely of the magnitude of these payments as they figured at the time when the payment schedules were agreed, but of the great increase in their burden under the conditions that obtain to-day. Thus, whereas the annual dollar payment fixed in our case was equal in 1923 to about £33 millions sterling, rising in 1932-33 to £38 millions sterling, the latter figure has now increased to nearly £56 millions sterling, owing to the fall in the pound. Moreover, as prices have also fallen heavily in the meantime, this £56 millions is equal in terms of goods to nearly £90 millions in the currency of 1923—a figure equal to three-quarters of the maximum total German annuity under the Dawes Plan! Even more striking is the extent to which the shrinkage of trade, in which the American tariff has undoubtedly played an important rôle, has made it more difficult to pay in goods. Consider these figures: The first annuity which we paid to America in 1923 was £33 millions sterling; in that year we exported to the United States £61 millions' worth of goods; the annuity was therefore equivalent to little more than six months' exports. The annuity which we are due to pay the United States in the ensuing year is £56 millions; our exports in 1931 were £17 millions, and in 1932 will be less; the annual annuity to-day therefore represents from three to four years' exports. But, however cogent these considerations may be, the hard fact remains that every dollar by which these payments are reduced is

a dollar lost to the assets side of the American Budget. It is clear that the task of persuading America of the economic advantage, both to herself and to us, of modifying her debt claims will be immensely eased if at the same time we can reach a disarmament agreement sufficiently far-reaching to make a substantial reduction in the annual burden of armed forces upon the American taxpayer.

Germany on Election Eve.—A week before the date on which the Reich is to be put through another general election, the political situation in Germany is more obscure than ever. Apart from the complications introduced, as our Berlin correspondent observes this week, by the Leipzig judgment, there are many unanswerable questions. Is there any truth in the rumour of dissensions in Herr von Papen's Government between the civilian Ministers and General von Schleicher? And if this rumour is untrue, which policy is in the ascendant? The policy of re-arming, or the policy of patiently persevering in the effort to bring the heavily-armed Powers down gradually towards the German treaty level? Or is the burning question in Germany at this moment not Armaments at all, but Import Quotas? Is the Government's import quota policy alienating the German business world? Is a movement on foot for bringing Dr. Schacht back into some position of financial authority in order that he may set Germany's financial policy on a new course? Is the von Papen Government seriously threatened by the prospect of a Nazi-Zentrum alliance in the cause of constitutional Government? And how does the Nazi Movement stand in the country? To what extent will its undoubted setback be registered in the forthcoming election returns? And, if the Nazis do lose some millions of votes, to whose benefit will those votes accrue? Will the Communists pick them up, or the Hugenberg Nationalists, or Herr von Papen himself in his personal capacity? It is not even clear whether the Chancellor will solicit support for the Nationalist Party—the only Party which supports him—or whether he will come before the electorate with a personal ticket of his own. On the present German system of proportional representation and automatic transfer of votes, this last manoeuvre is easily performed. There is no necessity for Herr von Papen to organise a genuine party, with a local branch in every constituency in person, he has to do is to stand in every constituency in person, with a list of "dummies" after his name to catch and retain, in his favour, the superfluous votes that pass to them from the star performer himself. If Herr von Papen has really made so great an impression on the hearts and minds of the German people that the millions who voted for Hitler will now give their votes to him, he can turn his personal popularity to parliamentary account in this very simple and convenient way. Here is a string of questions; but we wonder how many people, even in Germany, are able at this moment to divine the answers.

Disarmament and the Herriot Plan.—The official progress towards disarmament plods its weary way, with one step forward in this place, one step backward in that, and little or no movement at all on balance. At Geneva, they are compulsorily marking time; in Germany, the National Board for the Physical Training of Youth, which was created by President von Hindenburg last month, has now been actually appointed, and we fear that this can only be interpreted as a step backward. If there is any advance to be registered at all, we must look—and perhaps look through a magnifying glass—at what has been happening in London and Paris. In London, there have been conversations, over the week-end, between Mr MacDonald and Sir John Simon with Mr Norman Davis, the American delegate who is on his way to Geneva. In Paris, there have been discussions of the Herriot Plan which is to be substituted for the Tardieu Plan as the official French proposal to the Disarmament Conference. *A propos* these discussions in Paris, there have been rumours of dissension between Monsieur Herriot and General Weygand, which are as difficult to appraise as the similar rumours with

regard to Herr von Papen and General von Schleicher. It goes without saying that the French military experts have been submitting the French Cabinet's scheme to a searching examination; and it may be presumed that any alterations which they have asked for are in the direction of less disarmament and not more. But there seems no sufficient ground for believing that there has been a head-on collision between the Chief of the General Staff and the Prime Minister; and the presentation of the scheme has not been delayed. As originally promised, it is to come before the Disarmament Conference on November 3rd. As for the gist of the Herriot Plan, all forecasts confirm the outline which has already been given, provisionally, in the *Economist*. It appears to be a scheme for the simultaneous promotion of Disarmament and Security (in the French sense of security) in successive stages; and genuine pains, one gathers, have been taken not to ask the impossible of other nations. The proposed system of regional pacts, involving military sanctions, is only to apply to Continental European States. Great Britain is not to be asked to make any commitments in this sphere beyond those which she has already made at Locarno. But Great Britain's present inhibition upon the use of naval sanctions is to be overcome by an attempt to remove its cause. On the strength of the statement which Mr Stimson made last August, the United States is to be asked to renounce its neutral right of trading with a belligerent if the belligerent has placed himself in the position of an aggressor. When the exact terms of the plan are made public, we shall no doubt find formidable difficulties in it; but we hope that, unlike the Tardieu Plan, the Herriot Plan may at least be found to provide a possible basis for constructive work.

Signor Mussolini's Speeches.—Signor Mussolini spoke at Turin last Sunday, and again at Milan on Tuesday; and both speeches are worthy of attention. We may perhaps remark in passing that the Duce has never failed to command attention since he first secured his platform; but, as the years have passed, the way in which the world attends to him has changed a good deal. There was once a time when every speech from the Duce's mouth caused a flutter in the dovecots—a flutter which often hovered on the verge of becoming an "incident" and which only died down again thanks to the little saving clause which was invariably to be found in every speech, tucked away unobtrusively in a corner. To speak quite frankly, those were the speeches of a demagogue who rattled his sabre for the delight of Italian ears, but always clipped a silencer on to the scabbard for the easement of foreign nerves. But gradually and imperceptibly the demagogue has turned into a statesman; and this statesman is listened to nowadays not because his language makes a sensation and causes a commotion, but because he has important and constructive things to say about the great international questions that involve the destinies of the world. Therefore, the world is now inclined to take his speeches seriously and to ponder what he says, even when it may not altogether accord with the views of other Governments and other nations. To take his recent speech at Turin, we may not agree with Signor Mussolini when he intimates that the League ought to confine its attention to Europe, and that even in Europe the four European Great Powers ought to rule the roost in private conclave. But his plea for peace and disarmament on a basis of real equality between ex-victors and ex-vanquished has not only retained all its force, but has continued to grow in cogency and in urgency since the Duce first proclaimed it in the summer of 1928. In this context his summing up of Germany's position, in the Turin speech, is both sensible and pithy. "The German demand for juridical parity is fully justified. This must be recognised, the more precisely the better. At the same time, while the Disarmament Conference lasts, Germany cannot ask to re-arm herself in any degree. But when the Disarmament Conference is finished, and if it has given a negative result, then Germany will not be able to remain in the League of Nations if this difference, which has lowered her standard so far, is not eradicated. We do not want hegemonies in

Europe." These brief sentences contain not only an admirable statement of the actual situation, but also a timely warning to both Germany and France. As far as Italy's own policy is concerned, Signor Mussolini has announced at Turin that he intends to maintain her membership in the League, and he has announced at Milan that he intends to grant an amnesty, at home, to political prisoners and deportees. The first announcement is good hearing, in view of the temper recently shown by the Fascist Grand Council. The second announcement should prove—if the Fascist Government only lives up to it—to be one of the most effective steps that Signor Mussolini has taken yet to strengthen the foundations of his own regime.

Church and State in Spain.—Señor Azaña has celebrated the anniversary of his coming into office by tabling a Government Bill in the Cortes to translate into administrative regulations the separation of Church and State which was approved in principle last year. It is a precept of the Constitution that property may be taken over by the State for the benefit of "social utility" or if it is not being administered in the interests of the community. Church property—artistic treasures, ornaments, missals, etc.—can easily be said to come under this heading. So that the cry of "hands off" which the Church Party, in the country and in the Cortes, is raising, is not likely to have any effect. The Government are proceeding in accordance with the Constitution. There is an Article, moreover, which expressly authorises the State by a special law to return in full or in part any such property or rights of which the original possessor may enjoy the usufruct. And, having established the principle, this the Government will probably do. There is more substance in the charge that, until the Law for the Defence of the Republic has been abrogated and the Court of Constitutional Guarantees established, the Constitution cannot really be said to be in force. But the party liveliness which in July seemed to indicate a change of Government—new elections and a new Cortes less to the Left than the present—has almost entirely subsided as a result of the Government's firm handling of the Sanjurjo coup at Seville. And no alternative to the Azaña Cabinet is in sight. The Socialists have recently held their annual Congress and have agreed by a considerable majority to stay in the Government until all the supplementary legislation for applying the principles of the Constitution has been passed.

The "Hunger March."—London has been given a grim reminder of the gravity of the unemployment problem by the arrival in the capital this week of small detachments of workless men and women who, travelling on foot, converged from every quarter of Britain, the final objective being to join with the London unemployed in a monster demonstration in Hyde Park on Thursday. It is arguable that the organisers of this march might have learnt a lesson from the episode of the Bonus Army's adventures at Washington. The profound sympathy of the whole country with those who face another idle winter does not need any such demonstrations to kindle it; nor is it thinkable that Parliament, any more than Congress, could be intimidated into ill-considered action by the threat of disturbances. We can see no way in which good can come out of the toils and tribulations of this long trek. Harm, indeed, has been caused by it already; for the outside world, especially the Continent of Europe, has been treated to the most lurid and exaggerated stories of the scope and meaning of the "march," and distrust of Britain's position has thereby been engendered. Nevertheless, no matter how logically we may deprecate the organisation of this assembly, or how greatly we may deplore the clashes with the police to which it led, the fact remains that evil generates evil. And the core of evil here is the growing mass of unemployment.

The Fall in Sterling.—The further fall below \$3.80 in the exchange value of sterling, to which reference has already been made in our Money Market notes, has inevitably been treated this week with a certain degree of sensationalism by some sections of the Press; and the effect of speculative operations by real or imagined foreign "gangs" has been ridiculously exaggerated. To a not inconsiderable extent, no doubt, there has been speculative sales of sterling both on British and foreign account; and in some centres abroad a succession of adverse rumours, on which we commented last week, culminating in highly-coloured versions of unemployment disturbances, has acted as a depressing influence. Nevertheless, the factor mainly responsible for the depreciation of sterling, since the authorities somewhat belatedly removed the "peg" a fortnight ago, appears to be a seasonal demand for *devisen* on commercial account. In this connection it should not be overlooked that, so far as can at present be estimated, the adverse balance of Britain's foreign payments which the Government's fiscal policy was to set speedily to rights has been modified to some extent compared with a year ago, but has by no means disappeared. It is true, of course, that figures relating solely to the United Kingdom are not a real measure of the pressure on sterling *vis à vis* gold currencies—for this purpose an estimate embracing the whole sterling area is required—but, with this qualification, we would suggest that at the end of the year the contraction in the debit balance on merchandise and bullion account is likely to be largely offset by the diminution of "invisible" receipts. When allowance is made for the further consideration that a proportion of the proceeds of exports has become frozen in "blocked" accounts abroad, there need be little surprise that the pound, once our authorities decided to allow it to find a "winter equilibrium" without more than occasional support, should sink to a somewhat lower level than the \$3.45 at which it was "pegged."

The Iron and Steel Tariff.—The latest report of the Import Duties Advisory Committee on the iron and steel tariff is a disappointing and disquieting document. Last April, it will be recalled, the Committee recommended not merely a 20 per cent. duty on a wide range of manufactured iron and steel products, but a temporary duty of 33½ per cent. on imported "semis." The latter duty was originally intended to have only a three months' duration, but by June the Advisory Committee had come to the conclusion that while "protection would not suffice to place the industry in a position to play its proper part in the national economy unless it was accompanied by a considerable measure of reorganisation," they deemed it advisable to continue the 33½ per cent. duty for a further three months, ending October 25th, "provided the industry was prepared to carry through a satisfactory scheme of reorganisation." At a conference on June 3rd with representatives of the industry, the Advisory Committee had arranged that a national committee, with area and sectional sub-committees, should be set up to prepare a reorganisation scheme. The Advisory Committee now make public the report, which they have received from the national committee. For reasons which seem to us singularly unconvincing the appendix to the report, summarising reorganisation progress, is suppressed. All that we are told in this connection is that "the arrangements with regard to prices and supply have proceeded more rapidly than the far more difficult and laborious process of reorganisation." The report claims that in the case of many crude products the foreign makers are still selling in the British market below their own cost of production and that, as a result, it is "impossible to secure the full co-operation of the consumers on a national basis," so that the producers, lacking "the volume of production such co-operation would provide, . . . are quite unable to proceed with their schemes of reorganisation." The suggestion is therefore made that "the desired result might perhaps be achieved by imposing temporary duties at specific rates supplementary to the general level of 33½ per cent." This suggestion the Advisory Committee have so far not adopted, but they appear to be sufficiently impressed with the

assurance of the national committee that "progress is being made," to feel justified in recommending a greatly extended continuance of the high 33½ per cent. duty. Though they admit that the imports to which the duty is applicable had declined in the third quarter of 1932 by more than 45 per cent. as compared with the corresponding period of 1931, nevertheless they are convinced that "the practical cessation of dumping of foreign iron and steel is an essential prerequisite" to reorganisation. Hence the duty is to be continued for a further two years, and "if by the time a satisfactory scheme is ready, the two years' extension has not achieved this result (i.e., the cessation of dumping) we shall proceed . . . to recommend such further protective measures as are necessary." Thus, a scheme of high protection, whose effects have been a drastic fall in imports combined with a substantial decline in home production and an appreciable though smaller shrinkage of exports, is to be fastened on the country for a very considerable period ahead. The spur towards reorganisation which was to be given by the temporary application of the tariff is immeasurably weakened; and we are apparently faced with the prospect that, so long as the iron and steel industry can convince this complaisant Advisory Committee that foreign competition is impeding its progress along the lines of internal reorganisation, the industry is entitled to claim the indefinite continuance of high, and possibly increased, tariff shelter.

Mr Norman's Speech.—After a break last year, due to the national crisis, the series of annual Bankers' Dinners was resumed at the Mansion House on Thursday of last week. In the absence of the Chancellor of the Exchequer, detained at the House of Commons, Sir E. Hilton Young delivered a review of the financial position, while the Governor of the Bank of England made one of his all too rare appearances as a public speaker. The main emphasis of Mr Montagu Norman's speech was laid upon the grave of obstructing the recovery of trade:—"Obviously one of the great things which we, speaking technically, wish to dispose of are the frozen credits throughout Europe. I think there is nothing which impedes the business and prospects of bankers to the same extent as those." Mr Norman did not propound any solution; but turned instead to make a plea for future co-operation among the bankers in the matter of making short-term loans abroad—a plea which we hope will not fall upon deaf ears. Unfortunately the peroration of Mr Norman's speech, dealing very briefly in general terms with the crisis and the outlook, was interpreted abroad as an expression of blank pessimism. "The difficulties," said Mr Norman, "are so vast, the forces so unlimited, so novel, and precedents are so lacking, that I approach this whole subject not only in ignorance but in humility. It is too great for me." In America, in particular, these words conveyed the impression of despairing defeatism. Had the whole speech been studied, this impression might have been softened, for the Governor expressed the hope that a year hence "we shall see clearly where we are going, and be sensible of the rapid pace towards the goal at which we are proceeding." And again, "I look forward in the near future to a growth, development and improvement in the industry of this country . . . upon which we can rebuild the eminence which we enjoyed and received from our fathers."

The Canadian Free List.—The Parliamentary debates on the Ottawa agreements have continued this week drearily and to little good purpose. Opposition criticisms of point after point were brushed aside unanswered, with the mere assertion that the Ottawa bargain was an integral whole not susceptible to any modification. On Wednesday night Mr Thomas explained that Irish imports would lose from November 15th their immunity from the taxes imposed under the Import Duties Act; these would be additional to those imposed for special "land annuities" collection. Otherwise few fresh features emerged. Meanwhile, however, a curious side-

light on the Ottawa agreements has been thrown by the decision of the Canadian Government to impose a duty on imports of regenerated cellulose. Hitherto imports from Britain have been admitted free of duty and foreign imports taxed 10 per cent. The new Order provides for a 20 per cent. tariff against British imports, with a 35 per cent. general tariff. Under Article 14 of the Ottawa agreement, the Canadian Government undertook "that no existing duty shall be increased on United Kingdom goods except after inquiry and the receipt of a report from the Tariff Board." Though this Article made no specific reference to British imports hitherto on the Free List, the general understanding created was that Canada, except after reference to a Tariff Board, would not raise further barriers against British goods. Apparently this is not the case, and the much-advertised Free List may be whittled down to nothing at the Canadian Government's discretion. The absence from the Canadian agreement of the provision agreed to by Australia that "no new protective duty shall be imposed" now takes on an unpleasant significance. Truly Mr Bennett has written a bonny postscript to his agreement.

Cotton Spinning Wages.—Our Manchester correspondent writes:—"The wages dispute in the spinning section of the Lancashire cotton industry was settled, at the eleventh hour, last Saturday, when the operatives' representatives accepted a reduction of 14 per cent. in standard piece price list rates, equal to a cut in earnings of 1s. 6.4d. in the £. The negotiations had lasted nine days, and on the last two days the negotiators sat continuously for 17½ hours and 14 hours respectively. The different trade unions whose members are involved in the spinning section held meetings this week to ratify the proposals, and the formal signing of the full agreement is expected to take place in Manchester on Monday, October 31st. On that date the wage reduction will come into operation. The two sides, however, have yet to discuss the question of reinstatement, though this is only a minor issue. The full agreement has not yet been finally drafted, but it will embody the following provisions:—

- (1) Agreement to set up a conciliation committee with an independent chairman and independent members to supplement the existing machinery for joint discussion.
- (2) The restoration of the 48-hour normal working week.
- (3) Agreement to discuss and settle under the new conciliation procedure means of securing maximum production, which means the deduction of oiling and cleaning time, which now takes from 2 to 3½ hours weekly, from working hours.
- (4) Agreement to consider without delay "claims to exceptional wage rates," and to review "anomalies in regard to working conditions."

Moves have been made this week in the manufacturing section to make arrangements for the reopening of discussions on the "more looms per weaver" question; but though wages and hours agreements have now been reached in both the spinning and manufacturing sections many questions have yet to be settled, and it will probably be months before every subject is finally cleared up. The two conciliation committees with independent chairmen have yet to be appointed, and the subjects which remain to be considered will first be dealt with by the existing machinery.

Idle Shipping.—The latest quarterly return of the Chamber of Shipping, giving the amount of tonnage laid up and out of commission in United Kingdom ports on October 1st, records no alleviation of the deep depression in the shipping industry. We give below the figures of unemployed tonnage in this country at quarterly intervals since the beginning of 1931:—

	(Thousand Net Tons).	
	1931.	1932.
January 1st	1,593	1,966
April 1st	1,890	1,800
July 1st	2,044	2,196
October 1st	2,089	2,182

Although the October figure shows a small improvement of 0.7 per cent. as compared with July, the increase on

the year is over 90,000 net tons, or 4.4 per cent. The total of 2,181,695 net tons includes twelve foreign vessels of 29,448 net tons, so that the British tonnage laid up in United Kingdom ports on October 1st consisted of 859 vessels of 2,152,252 net tons, representing nearly 3½ million gross tons, or about 5½ million deadweight tons. Included in the total figure are 330 vessels of 925,134 net tons which have been out of commission for a year or longer.

Anglo-South American Bank.—Sir Bertram Hornsby, the chairman of the Anglo-South American Bank, had a difficult task to perform at this week's annual general meeting. On the broad question of the causes of the bank's present difficulties, he pointed first to the unparalleled world depression and its consequences, but then proceeded to say, as his personal view, that the bank was working in countries where banking risks were much greater than they are in this country, that profits were proportionately greater, that it would have been more prudent to have allocated larger sums to reserves in the past, that the bank's liquid resources were not sufficiently large for the volume and kind of business it was doing, and consequently that when the storm broke the ship was overcrowded with sail. After expressing this frank view of the causes of the trouble, he said that as a consequence of the arrangements made last June by which the bank was relieved of a demand liability for a very large sum and new capital of £1,000,000 was put into the business by an important group of banks, the position has been very much altered for the better, and already in these last three months the board has had evidence of the good effects on the bank's trading which those arrangements have produced. Discussing the bank's balance sheet, Sir Bertram explained that the contraction of over £9 millions in acceptances was mainly due to the transference to the banking group of the £7,500,000 of the bank's nitrate liabilities, this being the main provision in the arrangement of last June. The fall in deposits was due in part to the various adverse rumours in circulation a few months ago, while the reduction in advances was due partly to collection of outstanding debts and partly to allowances for bad and doubtful debts. As regards the appropriation of both the general reserve and the special reserve created a year ago, Sir Bertram admitted that by June 30th last it had become clear that both sums would be required in their entirety, and also a substantial allocation from the current year's profits, to cover depreciation of investments and bad and doubtful debts, and that even so, an amount of £1,414,875 representing depreciation of capital employed abroad was still outstanding. On the other hand, last year's gross profit of £1,866,508 showed that the business still possessed an earning capacity, and while running expenses showed a reduction of only £28,000 below those of the previous year, their failure to show more was explained by the depreciation of sterling and also by the fact that the economies adopted last year had not had time to produce their full effect. Sir Bertram made no promise that the board would not make a call on the partly paid shares, and could only say once more that every effort would be made to avoid it. If shareholders supported the bank and refrained from panic selling, such a display of confidence would render a call less likely. The general impression left by Sir Bertram's speech is that while he has given a full and frank explanation of the bank's present difficulties and position, it will take even under the most favourable circumstances a long time for the bank to make good the losses of the past few years.

Chilean Finance.—A correspondent writes:—Since the coup d'état in Chile in June last, economic conditions have become so chaotic that legislative decrees have been issued almost daily to deal with the situation. For example, on August 20th last, a Decree (No. 295) was promulgated authorising the Banco Central de Chile to sell exchange for foreign countries up to a limit of 5,000,000 Chilean gold pesos in excess of the amount it may have purchased, for the sole object of effecting payments for the importation

of goods of prime necessity or raw materials, as approved by the International Exchange Commission and the Board of the Banco Central de Chile. In this connection, a further Decree Law (No. 646) was published on September 26th authorising the Banco Central to sell, during the current year, foreign exchange in excess of its purchases, such foreign exchange also to be utilised for acquiring articles of prime necessity. The "over-sold" drafts may not exceed 10,000,000 Chilean gold pesos, without prejudice to the authorisation granted by Decree Law No. 295, which remains in force. While the strict regulations for the control of foreign exchange transactions continue to be applied, transactions take place in the outside, or "street" market, at rates considerably higher than those officially quoted. For example, at the beginning of October, the official rate was 56.86 pesos per £1, but the "street" rate was 204, and the "barter" rate 207. The latter is the rate quoted by exporters who transfer the proceeds of their sales in foreign currencies to importers. The Control Commission does not interfere in the fixing of these rates, but must authorise the transaction. The Banco Central fixes official buying rates for United States dollars daily, and other foreign currency rates are based upon that quotation. Sales by the Central Bank take place each week on the basis of their average buying rate for the previous week. A charge of ½ per cent. is made on all purchases, but sales take place free of commission. Local banks charge ½ per cent. commission on purchases, of which ¼ per cent. is for account of the Banco Central. On sales they charge ¼ per cent., such sales being subject to the authorisation of the Exchange Control Commission. All rates quoted above are for sight drafts. Details of other Decrees are as follows:—Under Decree No. 596 of September 9th, the President of the Republic was authorised to contract loans to a total of 150,000,000 pesos, the maximum period being five years, with amortisation at the rate of 20 per cent. per annum payable at quarterly intervals, and interest at 3 per cent. per annum in respect of the bonds placed with commercial banks or the public. Operations made with the Banco Central will be subject to interest at the rate of 1 per cent. only. Subsequently, a further Decree Law (No. 645) was issued on September 29th, the purpose of which was to relieve commercial banks from any difficulty in respect to cash holdings arising from their participation in the above-mentioned loan. Treasury bills delivered to the commercial banks under the terms of Decree No. 596 may be discounted by the Banco Central, subject to the approval of the Superintendent of Banks. A Decree (No. 1,183) of August 8th last made provision for the application of the "Fomento" Law (No. 127) in respect to the Instituto de Crédito Industrial. This Decree authorised the Institution to discount or re-discount up to 40,000,000 pesos in bills or documents of industrial origin. The Decree also provides for advances to be made to various industries, including a sum of 10,000,000 pesos to the nitrate industry. The establishment of an autonomous institution to attend to the payment of principal and interest of both internal and external obligations of the State and Municipalities, was provided for by Decree Law No. 595, published on September 9, 1932, but, for the time being, the scheme outlined in this Decree remains in abeyance. Decree Law No. 592, of September 12th, contains provisions for increasing considerably the rates of income tax under various sections of the Chilean Income Tax Act No. 172 of February 24, 1932. The "additional" tax payable by absentees from Chile and upon profits earned in Chile by foreign companies, etc., is increased from 3 per cent. to 6 per cent. A further Decree (No. 594) placed heavy increases on Stamp Duties and particularly in regard to Stock Exchange operations, but, following suspension of operations by the Stock Exchange as a protest, the Decree was replaced by Decree Law No. 644 ameliorating the charges on Stock Exchange transactions, the tax on forward share operations being now 4 centavos per cent., instead of an increase to 25 centavos per cent. This new rate compares with an original basis of 20 centavos per mille. The tax on transfers of nominative shares has been changed to 10 centavos per cent., instead of an increase to 50 centavos per cent., and an original basis of 5 centavos per cent.

The 1930 Census of Production.—Volume XIX of the preliminary reports of the Census of Production of 1930 published in a recent issue of the *Board of Trade Journal*, deals with the drink industries. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924	1930	1924	1930	1924	1930
Brewing and malting ...	Thous. £ 157,578	Thous. £ 140,884	Thous. £ 121,641	Thous. £ 114,112	£ 797*	£ 725*
Spirit distilling	6,804	4,827	2,469	1,869	553	516
Spirit rectifying, com- pounding and methy- lating	5,842	5,524	944	674	1,140	931
Wholesale bottling	33,590	45,791	8,175	10,355	479	533
Aerated water, cider, vinegar and British wines	8,685	8,427	4,866	5,171	321*	317*

* Exclusive of duty.

The returns show a substantial decline both in the gross and in the net value of the output of the brewing and spirit distilling trades between the two census years. The quantity of beer, ale, stout and porter brewed in 1930, at 18,735,000 standard barrels, shows a reduction of 1,667,000 standard barrels on 1924, and the average number of persons employed in the industry declined from 65,916 to 59,754. The total quantity of spirits distilled in Great Britain was returned at 34,374,000 proof gallons in 1930 and at 34,882,000 proof gallons in 1924. The decline in the total value of the output of spirits is due chiefly to the fall in the average net selling value from 8.2 shillings per proof gallon to 2.3 shillings per proof gallon. The figures for the wholesale bottling industry show an increase in the quantity of beer, ale, stout and porter bottled from 52,901,000 gallons in 1924 to 82,318,000 gallons in 1930. Similarly, the production of table waters advanced from 26,732,000 gallons to about 35,000,000 gallons, and the output of cider and perry, at 6,486,000 gallons in 1930, shows an increase of 621,000 gallons on 1924.

Atlas Insurance Company.—This company was due to make a declaration of bonus at the beginning of this year in respect of the triennium ended December 31, 1931. In view of the very abnormal financial conditions then existing, however, it was decided to postpone the declaration but in the meantime to give interim bonuses at the rate of 48s. compound in respect of each of the years 1929, 1930 and 1931—but not for 1932. The directors have now announced that they have declared a bonus for the triennium 1929-31 at the rate of 48s. per cent. per annum compound. No reference has been made, however, to interim bonuses for the years 1932 and 1933, and some statement on this point will be awaited with much interest. The rate of bonus declared, the cost of which appears to be amply covered by the trading surplus of the triennium, would be considered unusually high even in more normal times; if the rates of interim bonus for 1932 and 1933 are on approximately the same level as the rate now declared the company's agents will be provided with a weapon of great competitive power. The declaration has been made as, in the opinion of the directors, the abnormal financial conditions existing at the beginning of the year have now passed, but the amount of the recovery in the market values of the assets is not mentioned. The total depreciation in the assets of the life fund in 1931 was £967,000, which was met by writing down book values to market values on December 31st and by establishing a temporary investment reserve fund of £500,000. Of this depreciation £400,000 is known to have been recovered by March 31st of this year and it is probable that little, if any, of the remaining depreciation still exists. After providing for the cost of the new bonus and cancelling the temporary investment reserve of £500,000, the present market values of the assets are probably sufficient to enable approximately £500,000 to be carried forward. Additional actuarial reserves exist, over and above those

provided by the published basis, of about £350,000. The sum of these two items, it is true, amount to less than the depreciation shown in the crisis year 1931, but most authorities would consider the position a strong one for all practical purposes. The company and its policyholders are to be congratulated on the excellent bonus which has been declared, not only because of its amount but chiefly because the current surplus earned and the condition of the life fund appear to justify the course that has been followed. Such a high rate of bonus can hardly be expected, in these times of falling interest yields, to continue indefinitely, but a similar difficulty must be faced by all life offices.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal for the month of September amounted to 961,501 ounces of fine gold as compared with a record output of 991,322 ounces in August. The output during September, 1931, was 916,024 ounces of fine gold. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	796,270	839,782	843,857	876,452	882,801	914,576	936,784
February	753,924	779,339	816,133	815,284	818,188	839,937	914,012
March	834,340	860,511	877,380	866,529	889,370	910,998	960,035
April	803,303	824,014	825,907	872,123	868,606	882,337	949,796
May	849,214	859,479	886,186	897,598	916,213	910,279	965,644
June	852,145	855,154	862,363	856,029	887,867	897,750	959,011
July	860,139	851,861	867,211	889,480	912,532	916,843	991,160
August	843,854	863,345	891,863	889,601	921,081	915,425	991,322
September	839,939	842,118	857,731	849,553	903,176	916,024	961,501
October	853,296	855,743	897,720	888,690	926,561	945,113	...
November	840,276	848,059	872,484	861,593	884,753	900,510	...
December	836,157	851,225	859,761	851,134	908,492	923,353	...
Total..	9,962,852	10,130,630	10,358,596	10,414,056	10,719,760	10,874,145	...

The following table shows the number of natives employed at the mines during the past nine months:—

	Jan., 1932.	Feb., 1932.	March, 1932.	April, 1932.	May, 1932.	June, 1932.	July, 1932.	Aug., 1932.	Sept., 1932.
Gold mines	215,752	216,171	214,024	214,334	215,926	217,077	217,525	217,658	216,398
Coal mines	12,394	12,177	12,009	11,943	11,972	11,833	12,050	11,727	11,642
Diamond mines	1,598	1,363	Nil	Nil	Nil	Nil	Nil	Nil	Nil
Total..	229,744	229,711	226,033	226,277	227,898	228,910	229,581	229,385	228,040

The number of natives employed at the gold and coal mines showed a decline on the month.

UNITED STATES.

Money Rates — Canadian Tariff — Foreign Trade — Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 19.

BUSINESS and most financial markets are merely marking time pending the outcome of the November election. No well-informed man in Wall Street expects the outcome of the election to make much real difference in business prospects, the argument being that while politicians may do something to bring on a trade slump, they can do nothing to change a depression into prosperity. At the moment Wall Street guessing is largely on the side of a victory for Mr. Roosevelt, but many think President Hoover is beginning to gain.

The increasing over-supply of short-term money has brought abandonment of the 2 per cent. call money renewal rate which had been posted on the Stock Exchange for several months, and a 1 per cent. charge has been substituted. Little, if any, money was borrowed at the pegged rate, and the same was true of the 2½ per cent. charge made from January to July. For months the

supply of call funds at from $\frac{1}{4}$ to $\frac{3}{4}$ per cent., depending on quality of collateral, has been much in excess of demand. In defence of the artificial rate it was said that bank deposits from interior institutions would be withdrawn if the market were allowed to take its course. If it ever were valid, this argument is no longer tenable.

A more potent reason for maintaining a fictitious charge for call money was the custom of brokers to charge on their clients' debit balances an interest rate corresponding to the average call money renewal rate as posted on the Exchange for the month, plus an additional "service charge." With a 2 per cent. posted renewal, the total charge to the customer trading on margin and with a debit balance ranged from $3\frac{1}{4}$ to 5 per cent., and this was in itself a source of revenue to brokers, who were able to secure all the accommodation they needed at 1 per cent. or under.

Time money has weakened with call funds, and is now available up to six months at three-quarters of 1 per cent., and a cut of a quarter of 1 per cent. has been made in bill rates, which are far below the New York Federal Reserve Bank's discount rate of $2\frac{1}{4}$ per cent. This official charge is "high and dry," but Wall Street is uncertain as to whether it will be changed in the near future. About the only practical effect would be the lowering of bank charges on customers' loans, and this sort of business is now at a minimum.

Announcement of the new tariff schedules by Canada was disliked by the markets, although, of course, the element of surprise was lacking. The chemical and steel trades fear they will be hurt, although steel makers think some offset will be found in their capacity to ship more promptly than British makers and their greater ability to meet the Canadian market requirements. Still, Wall Street holds the tariffs as another warning as to what this country must expect so long as it maintains its own high tariff walls. In effect, Governor Roosevelt, while advocating in a speech several weeks ago a lowering of tariffs via the conference route, has more recently said that he did not propose any lowering of tariffs against countries where labour costs were cheaper or living standards lower than in this country. Early action, even in the event of a Democratic victory, is scarcely to be expected. A new Congress will not meet until next year; and, assuming that a new Tax Bill is passed by the Congress which will convene this December, such matters as prohibition, foreign debt adjustments, relief appropriations, and the Soldiers' Bonus must necessarily delay work on a new tariff schedule.

Foreign trade figures for September were more favourable. Merchandise exports rose to \$132 millions, the best figure since last May, and imports were slightly higher than those for August, reaching \$98 millions. Larger exports had been foreshadowed by the gain in cotton exports reported for last month, and in any case a rise in September is seasonal. Exports were less than three-fourths those of the same month of last year and were less than half the shipments of 1930. The steel trade is endeavouring strenuously to invoke the anti-dumping provisions of the law to increase tariffs on steel.

Industrial activity has risen somewhat further, but apparently the peak of seasonal improvement has passed, and the advance is slackening. Steel mills are reported at around 19 $\frac{1}{2}$ per cent. of capacity, but the scrap iron market is weakening, and no early orders on a large scale are in sight. Railroad traffic has expanded two weeks beyond the usual seasonal top, carloadings for the middle week of October reaching the best figure of the year. Electric energy output also increased further for that week. The rise in railroad traffic finds reflection in the September earning statements now coming in. Several roads report modest gains in earnings. Conferences on wages have been postponed until after the November elections.

Industrial company reports for the third quarter are proving to be somewhat better on the whole than was anticipated, although none has come yet from the hardest hit industries, such as mining and steel. Some of the

food companies have done better than a year ago. Commodity prices, however, are somewhat shaky. For the first week in October the Bureau of Labor Statistics index fell from 65.4 to 64.9. The monthly average for September rose one-fifth of 1 per cent. to 65.3. Compared with a year ago prices were $8\frac{1}{4}$ per cent. lower.

FRANCE.

American Debt — Budget Problem — Tax Revenues.

(FROM OUR CORRESPONDENT.)

PARIS, October 26.

INTEREST in the political world is dominated by three great outstanding problems, namely, European debts to America, disarmament and the Budget position. As to the first of the three, all shades of opinion are in agreement (1) that Europe's debt has been so indissolubly bound up with German reparations payments, under the conditions embodied in the Young Plan and the Lausanne Agreements, that the cessation of reparation payments by Germany necessarily involves a suspension of European debts to America, and (2) that, just as Mr Hoover insisted that it was impossible to restore normal economic conditions to the world unless Germany's burden were lifted, regardless of the effect this might have on her creditors, so the American doctrine must with all the more justice be applied to the European debt to the United States. To this thesis the Herriot Ministry is irrevocably pledged, and any material weakening in this respect would almost certainly prove fatal to the present or any succeeding Cabinet. For the moment and at least until the American presidential election is over, the problem will for two reasons apparently remain unsolved. The first reason is that, notwithstanding the so-called European "single front" created at Lausanne, no agreement for common action appears yet to have been arrived at between Great Britain and France. Secondly, the French leaders realise fully the delicacy of the present situation, and are anxious at present not to raise positive issues unnecessarily. Opinion has been greatly relieved by unofficial assurances received here from reliable and friendly American sources asserting that the European debtor countries are already much nearer attaining their objective than they imagine.

The payment by France to the United States of \$19,261,000, which falls due on December 15th, is exciting enormous interest, as the line this country will take on the subject is regarded as indicating its probable future policy. Questioned closely on the subject by the Chamber Finance Commission during the past week, M. Herriot is understood to have bound the members of the Commission over to strict secrecy before replying, and this pledge has apparently been kept. The Finance Minister, M. Germain Martin, asked by M. Mandel on Friday what the Government's intentions were in regard to meeting the December payment, evaded a direct reply. M. Palmade, the Budget Minister, is understood to have assured the Commission that the Government fully recognises that it has in any case a moral obligation to seek the authorisation of the Chamber before the payment in question, or any other on the same account, is actually made, and that such authorisation will be demanded in the present instance. It is understood that the question will be brought formally before the Chamber early in December. In certain unofficial quarters it is suggested that a distinction shall be made between the "political" portion of the debt and the "commercial" part of it, as represented by the \$400 millions which France agreed to pay for the American war stocks left in Europe, the interest on which would approximate fairly closely to the payment due in December. This, however, is a mere coincidence. By the Mellon-Bérenger agreements of 1926 the French political and commercial debts were absolutely merged under one heading so that any attempt to tender an interest payment on a portion of the debt may be regarded as impracticable. More feasible are suggestions to the effect that, in order to keep the door open for positive negotiations, a provisional payment should be made in December pending definite settlement later; or that—as

appears to be in every way more suitable—agreement should be reached for a complete moratorium for a period of three years, to run parallel with that created at Lausanne for German reparation payments. The subsequent payment due under the Washington Agreement would be one of \$40,738,000 on June 15, 1933, which would complete the annuity of \$60 millions for the full twelve months.

No official detailed statement of the Government's Budget proposals will be made until November 10th, but it is announced that the programme drawn up by the Finance and Budget Ministers and discussed at length at last week's Cabinet Council, was, after certain modifications, approved for examination by the Chamber Finance Commission on Thursday last. M. Palmade, the Budget Minister, in his statement to the Commission, announced that the deficit to be met would be 12,000 million francs at least. Measures adopted before Parliament rose for the summer recess will provide, it is estimated, 4,000 million francs of new revenue during the coming year, which leaves a minimum of 8,000 million francs to be found. The following may be regarded as a fairly reliable forecast of the Government's proposals, as so far tentatively put forward for discussion:—

	Estimated Yield (Mill. frs.)
Reinforcement of control and repression of fiscal frauds, notably by verification of bank deposits, proof of identity by holders of coupons, &c.	1,000
Readjustment of succession duties and repression of frauds	200
Application of taxes on transport on roads by heavy motor waggons.....	800
"Sacrifices demanded from persons" (reduction of public servants' pay by from 2 to 10 per cent., &c.), administrative economies and pension revision.....	1,445
Elimination from the Budget of new capital expenditure on public works and (by transfer to a "Caisse des Pensions") of expenditure on war pensions.....	3,700
Estimated total.....	7,145

It will be noted that it is proposed to raise one-half of the amount needed by transferring existing Budget expenditure, partly to the new autonomous National Pensions Office (the cost of starting which will be the subject of a loan operation), and partly by incorporating present expenditure on public works in a programme for further new public works, which is to be financed by a separate loan. The proposal to raise 1,445 millions by "sacrifices demanded from persons" will have to face bitter opposition from the Socialists and an appreciable section of M. Herriot's own party, who last summer succeeded in forcing the Government to drop a series of similar proposals. It is understood that the words "revision of pensions" refers in part to a proposal to raise the qualifying age for pensions of *anciens combattants*, who fought in the war, from 50 to 55, and in the case of pensions of 1,200 francs a year to 60. This is likely to meet strong opposition from the huge army of former soldiers, as well as from postmen, State railway employees and other powerful bodies.

At the time of writing it appears probable that the expected full-dress debate in the Chamber on the Government's foreign policy will be postponed until after the pending National Congress of the Radical Socialist Party at Toulouse, which is expected to have considerable influence on the present Cabinet's future tenure of office. As matters stand, it does not appear to be possible for the Budget discussion to begin in the Lower House until the beginning of December, which will render a long series of *douzièmes provisoires*, or monthly votes on account, practically certain.

Meanwhile the revenue returns continue to reveal that the yield of taxation is suffering seriously from the increasing pressure of economic circumstances. Total recoveries in September, from "normal and permanent" sources, were only 2,510 million francs, as compared with 3,157 million francs in the previous month, 3,618 million francs in September last year, and 3,414 million francs in September, 1930. Total recoveries for the month were not only 1,100 million francs below September, 1931, but 579 million francs below Budget estimates, resulting in the

largest monthly deficit for many years past. The deficit for the first six months of the present nine months' financial year now totals 2,018 million francs, which will appreciably increased when the October returns are completed. The direct taxation yield in September was 746,500,000 francs (or over 65 per cent.) less than in the corresponding month of last year. Unofficial forecasts suggest a yield for the present financial year representing a deficit of around 4,000 million francs, and that a further deficit of 10,000 million francs may be expected during the twelve months beginning on January 1st next.

GERMANY.

Landesbank — Quotas — Leipzig Court's Award.

(FROM OUR CORRESPONDENT.)

BERLIN, October 26.

THE Landesbank of the Rhine Province got into difficulties in July, 1931, about the time of the Danatbank's troubles, chiefly through financing large loans to municipalities through short-term credits with banks and savings institutions. Not until now, some 15 months later, has a plan been submitted for rehabilitating it. The Reich and Prussia are willing to guarantee to the Landesbank a minimum income from interest and amortisation from the municipal debtors to the amount of 15 million marks for four years if the creditors consent to reduce their interest rate and to let the principal stand for that period. It is believed that the municipalities will be able to recuperate within that period sufficiently to discharge their capital obligations gradually. In addition, the Rheinischer Provinzialverband assumes as its own debt 50 millions which the Reich placed at the disposal of the Landesbank last year in one-year Treasury certificates, and thus increases by that amount the capital resources of the Landesbank. The Reichsbank will furthermore, through the Bank for Acceptances, grant further liquidation aid to the extent of 34 millions. From this 10 per cent. of their claims will be paid out to the creditor banks—but not to the savings banks. The claims of the banks amount to about 150 millions, so that some 15 millions will be required. The Landesbank participates in the "standstill" agreement to the sum of 50 millions. In addition, cash repayments are to be made to certain social insurance institutions. The largest part of the Landesbank's debts are not affected by this plan. These include especially the large deposits of the savings banks, against which, however, there still stand more than 700 millions of the Landesbank's claims against municipalities, the time of whose repayment cannot be predicted in view of the municipalities' great financial difficulties, which can be adjusted only with the help of a sweeping financial reform. It seems probable that the Government will compel these municipalities to sell a part of their holdings in plants and stocks of public utilities as soon as possible in order to pay off a part of their debts.

The crisis brought about in Germany's trade policies by the demand for import quotas has been alleviated by the conclusion of an agreement with Finland and Denmark for quotas of butter. Butter imports to Germany were subject to quotas before, but the quota could be exceeded on payment of heavier import duties. This is no longer possible. Germany has secured the right to establish fixed quotas, but these are more justly apportioned and the higher rates of the former import duties are abandoned. The duty is fixed in the case of Denmark and Finland at 750 marks a ton, whereas the amounts imported under the quota formerly paid 500 marks (proportionately increased for countries with a debased currency), and imports in excess of the quota paid 1,700 marks a ton. The rate of 500 marks would have been done away with sooner or later in any case. The fixing of the duty at 750 marks was plainly so important for both the countries with which the negotiations were carried on that they were willing to accept the drawbacks of the rigid quota. Imports of butter into Germany, which amounted in 1931 to 100,000 tons, and would undoubtedly have exceeded 70,000 tons in 1932, may in

future not exceed 55,000 tons—an amount which would obviously be very small in economically more favourable times. A special reason why Denmark consented to this figure is the fact that the new apportionment of the quotas is much more in accord with the interests of countries with heavy butter exports than was the previous regulation. It is probable that Holland for the same reason will not refuse to consent to the agreement. That country finds itself economically in a strong position in its battle against the German quotas for the reason that it is a very important buyer of German goods, but juridically and morally its position is weak because it has itself introduced quotas to a large extent, and as against Germany it has a legalistic argument in this question—on the basis of the most-favoured-nations clause—only as long as Germany does not abrogate in the case of other countries the obligations that stand in the way of introducing quotas.

Butter was from the beginning the most important of all articles affected by the quota policy. The other articles now under consideration in this connection are mainly vegetables, fruit and wood. The advantages which German agriculture can secure from the proposed quotas are at best so extraordinarily small that one can fairly expect that the Government, after the election, will be careful not to let the question develop into a trade conflict with other countries. Placing butter under quota restriction will probably soon lead to an increase in German butter prices. But this increase is likely to be small as long as no action is taken against margarine, the strong competitor of butter among almost all classes of the people. In view of this, the idea of a State monopoly for fats, which would restrict the production of margarine, is being canvassed. But the difficulties attending such a plan are extraordinarily great. Nevertheless, agriculturists and Government Departments are giving much time to its consideration.

The "Staatsgerichtshof" in Leipzig has given its decision in the dispute between the Reich Government and the former Braun-Hirtsiefer Prussian Cabinet. The judgment is of the greatest importance for the present political situation and also for the future development of the German Constitution. The Court, which is composed of members of the Supreme Court (Reichsgericht) and high judicial officers of the German States, with the President of the Supreme Court as presiding justice, finds that the President of the Reich acted legally in appointing a Reich Commissar and giving him the authority to administer Prussia's State business. It holds, however, that the Commissar acted in violation of the Constitution in trying to depose the Prussian Ministers, and in trying to deprive them of (a) the right to name and instruct the representatives of Prussia in the Federal Council, and (b) the right to appear before the Reichstag and the Council of State and to conduct negotiations with other German States.

Thus the Gerichtshof finds neither party completely in the right. For even though the former Prussian Government did not deny that the Reich had the right to name a Commissar, and, for example, to make the police force subject to him, it refused to regard as permissible the taking over of the Ministers' functions by the Commissar in matters not directly connected with the maintaining of public order, such, for instance, as the functions of the Ministries of Commerce, Public Welfare, etc. Of leading importance is the fact that the Staatsgerichtshof confirms the power of the Commissar to depose officials in the same circumstances as those under which the Constitution and other laws grant this power to the regularly appointed Ministers. On the other hand, a heavy blow is dealt to the Reich Government by the decision that the former Prussian Cabinet still exists as the legal State Government, even though it may have no other powers to exercise than to guard the rights of Prussia in legislative bodies.

The Court finds expressly that it was the intention of the Reich Government to depose the Braun-Hirtsiefer Cabinet finally, and it rules that the Government had no power to do this, since no duty owed by the Prussian Government to the Reich Government had been violated. The Reich Government obviously had not realised to the full the importance of this part of the Court's finding

when it announced, immediately after the verdict was made public, that "the judgment corresponds with the standpoint of the Reich Government."

The Court's decision will for the present make no change in the administration of Prussia's State affairs. But the Chancellor's authority is shaken, for it is now decided that he proposed to the President of the Reich a measure which is held by the highest Court to be in violation of the Constitution. In addition to this, new difficulties are created for the Government's plans in respect to a revision of the Constitution. The von Papen Cabinet expected to find support for these plans—against a Reichstag which will probably oppose them—in the Federal Council, which represents the States. If the Leipzig Court had held that the Commissar has the right to represent Prussia in the Federal Council, Herr von Papen would have been able to operate on a broad basis there. But now that this right is denied, the road for putting through his plans for constitutional reform is probably blocked.

Important as the case itself is, it has a further importance in that the decision undoubtedly strengthens the sense of law and justice in Germany. It shows that there is a tribunal which, paying no heed to the viewpoints of an erroneous *raison d'état*, adjudges as illegal the measures of the Reich Government, and even of the President of the Reich, when it finds them to be illegal. This would be a matter of course under normal conditions of a State's life, but it is important and noteworthy in the situation of Germany to-day, when, as a result of the supremacy of extreme parties, the people's representative body has become unable to function, and thus the powers of the executive branch of Government have increased to a degree limited only by the independence of the Courts.

AUSTRIA.

Budget — Bank Return — Unemployment.

(FROM OUR CORRESPONDENT.)

VIENNA, October 25.

WITHIN the last few days the Government have been exposed to various attacks in regard to the "agrarian course" of their economic policy. Against these reproaches the Cabinet has maintained that earnest measures have been taken or are being prepared with a view to protecting equally the interests of the whole country, among these being measures to balance the Budget and alleviate partially the foreign exchange restrictions.

As for the Budget, it is true that the estimates for 1933 include no fresh taxes or increases of taxes, the reason being that a supplementary Budget was accepted in August with considerable augmentation of taxation, including the doubling of the merchandise turnover tax. Nevertheless, the figures of the Budget are bigger than ever. As compared with the supplementary Budget for 1932, next year's expenditure and revenue are to rise from 1,965 to 1,974 million schillings, so that there will be a surplus of 0.2 million. The proceeds from taxes, duties and other imposts are to be increased from 848 to 883 million schillings. It is expected that the direct taxes will bring in less than in 1932, but a big increase in the revenue from the merchandise turnover tax is hoped for (not on account of any increase in turnover, but on account of the doubling of the tax itself), in addition to a considerable increase of revenue from the sugar tax, although the sugar consumption index in September was only 67.6 against 102 in August and was, therefore, the lowest recorded for years.

It remains to be seen to what extent these hopeful estimates are correct; and the expectation of an unaltered motor spirit tax revenue, a beer tax revenue only 20 per cent. lower and a scarcely reduced Customs revenue also indicates optimism. On the expenditure side the strong tendency to retrench is unmistakable, but this will have little effect, because social insurance calls for an increase of 26 millions, making this expenditure 167 million schillings. This is attributable chiefly to the special measures for the benefit of the unemployed, to the cost of the

voluntary labour service, and to the care of the aged. Another item of expenditure, on which the Governments have tried in vain to save, is the debt service. As it is hoped that the proceeds of the Lausanne loan will shortly be available, 30 million schillings has already been entered in the Budget for the service of this loan; and, in addition, the agreement, which has just come into force, concerning the conversion of the bill debt of the Credit-Anstalt into a State debt has run up costs of about 14 million schillings.

The heaviest burdens are the Federal Railways and the other State enterprises. The Federal Railways, it is true, are a so-called commercialised enterprise, but the State has to stand the deficit, which for next year is estimated at 80 million schillings. It is therefore no wonder that the demand should again be heard that the enterprises should cease to be under the State. Moreover, the estimates covering the enterprises are optimistic, for it is extremely doubtful whether the General Post Office, which records a marked falling off in the service as a consequence of the last increase in its charges, will be able to convert the deficit of 26 million schillings for the present year into a surplus of 0.05 million, in accordance with the estimates. It must further be remarked that the almost complete elimination of capital expenditure, which is not to exceed a total of six million schillings, may mean endangering the very existence of several branches of industry.

The other claim to merit, which the Government make, is less doubtful, for the foreign exchange regulations have certainly been made easier within the last few days. Previously, exporters had to surrender an average of 25 per cent. of their *devisen* proceeds to the National Bank at the official rate. The portion has in general now been reduced to 12 per cent. At the foreign exchange discount prevailing at the moment in Vienna, namely 22 per cent., this means to the exporters an effective loss of about 2½ per cent. of the invoice value. Further, the National Bank has made certain concessions in regard to exportation of merchandise against schilling invoices, which was previously expressly forbidden. In particular, this has set free for the purposes of export trade the schilling accounts which foreigners have in Vienna and which were previously "blocked." It must be said that many proofs are required and that the procedure is correspondingly complicated. Still, it is hoped that in this connection, too, concessions will also be made in time.

The National Bank took the above-mentioned steps, which undoubtedly mean an important concession to the wishes of business people and industrialists, just when it effected important changes in its return. The coming into force of the above-mentioned agreements between the bank and the State concerning the conversion of the bill debt of the Credit-Anstalt into a State debt, as also the simultaneous coming into force on October 12th of a change in the statutes, of which the most important is a reduction of the minimum cover from 24 to 20 per cent., give the return of the National Bank a completely different aspect. From the bill portfolio, which in the last return amounted to 870 million schillings, 571 million schillings, representing the acceptances of the Credit-Anstalt, have been taken out. For this sum the State formerly gave a guarantee, and it is now included, under three different headings, with the debt of the State to the National Bank, which recently stood at only 91 million schillings. A total of 261 million schillings can now figure as "cover," so that the ratio is increased from 19.2 to 23.3 per cent., which means that, in accordance with the new "cover" regulations, there is no further obligation to pay the banknote tax, to which 195 million schillings, or over 20 per cent. of the banknotes in circulation, were still subject at the beginning of October. Naturally, these changes are a mere matter of book-keeping, but the apparent improvement is of psychological importance. On the other hand, another figure, less favourable, unfortunately corresponds completely to the facts. Unemployment is increasing rapidly, for in the first half of October it has gone up by 7,000 to 285,000. This means an increase of 72,500 over the corresponding figure for last year. There is also an increase of 8,000 in the figure for the unemployed not in receipt of the dole.

POLAND.

Stresa Conference — Prices — Agricultural Debtors — Relations with Russia — Foreign Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, October 22.

THE Polish press has found no cause for enthusiasm over the resolutions adopted by the Stresa Conference, the more so as several months at least must elapse before there can be any practical outcome of these resolutions. Every week now increases the danger of a complete economic collapse in Eastern Europe, and, in the opinion of many keen observers, if positive action is not taken soon to relieve the debtor countries—or, at least, to make it possible for them to pay their debts without adding to the intense poverty which now prevails—salvation will come too late.

Recent authoritative announcements have emphasised that the Polish Government are determined to continue the policy of maintaining the gold value of the zloty and forcing down the price of manufactured goods in order to narrow the wide disparity which still exists between agricultural and industrial prices. The latest data published by the Institute for Economic Research show the general index of wholesale prices as 64.9 (1928 = 100) with the index of goods sold directly by farmers as 44.6. The index of all industrial commodities is 67.7, cartelised raw materials and semi-manufactured industrial goods being 103.2. Articles bought by the farmers are indexed as 82.1. In brief, the domestic price structure is completely out of balance, with the scales weighted heavily against the agriculturist.

By a Decree published on September 30th powers have been conferred on the Ministry of the Interior to fix prices of a number of products in accordance with production costs. Concurrently, the alcohol, tobacco and salt monopolies have lowered their selling prices, and action has been started to persuade, if possible, or otherwise to compel, the industrial cartels to make their contribution to the deflationary movement. The latter now number more than 100, and comprise every industry of any importance in Poland. It is going to be no easy matter for the Government, therefore, to force price reductions throughout industry, especially as such action, if it is to be completely successful, must inevitably result in a large number of bankruptcies.

In the meantime relief has been made possible for agricultural debtors—and virtually all farmers in Poland to-day are debtors—by a series of decrees which have recently been promulgated. These decrees confer powers on district courts to lower interest rates on outstanding indebtedness, and even to suspend debt services in certain contingencies; they prevent forced sales of land and agricultural property; establish penalties against usury; and furthermore give agriculturists the same right as industrial and commercial concerns in applying to the courts for judicial surveillance when the debtor becomes insolvent. Debts and taxes owing to the State or to State financial institutions are for the most part exempt from what is virtually an indefinite moratorium for the farmers. While these measures are helpful to the farmer in respect of indebtedness already contracted, they make it extremely difficult for him to obtain new credits, since lenders and suppliers of goods are naturally reluctant to grant credits when the protection afforded to them by law in regard to previous credits is so weakened.

Since the signing of the Non-Aggression Pact between Poland and Soviet Russia last June there has been a noteworthy increase in orders secured by Polish concerns from the Soviet Government. Poland's exports to Soviet Russia increased rapidly from 1928 to 1930, attaining in the latter year 129 million zlotys, these exports being mainly iron and steel products from the Upper Silesian foundries. Exports in 1931, largely on contracts booked in the previous year, amounted to 125 million zlotys, but in the first seven months of the present year exports to Soviet Russia amounted to less than 9 million zlotys, Russia at the same time exporting to Poland 18 million zlotys' worth of merchandise. During the four years 1928-31 Poland imported from Soviet Russia goods to a value of 160 million

zlotys, exporting at the same time to the amount of 374 million zlotys. The German banking collapse in the summer of 1931 appears to have been primarily responsible for the check to Poland's exports to Russia owing to the fact that a substantial part of the Soviet notes received by the German-owned mills of Polish Upper Silesia were discounted in Berlin. Subsequently efforts to find a market for these notes in Paris and London were not successful, with the result that Soviet purchases in Poland from the middle of 1931 to June, 1932, were very much curtailed. The revival in business since the signing of the Non-Aggression Pact in June is due, apart from political reasons, to the ability and willingness of the Polish Government to facilitate the placing of Soviet notes with Polish banks—aided, no doubt, by the fact that paper obtained for shipments made in the latter part of 1930 and the early part of 1931 is now maturing in substantial amounts.

The foreign trade figures for the month of September show a surplus of exports over imports amounting to 23 million zlotys. The "active" balance in August was 19 millions, and for the first nine months of the present year the balance in favour of Poland amounted to 161 million zlotys—with exports at 793 and imports at 632 million zlotys. For the first nine months of 1931 exports amounted to 1,446 millions and imports to 1,154 millions, giving an "active" balance of 292 million zlotys. Despite Poland's ability so far to maintain a substantial surplus of exports over imports, notwithstanding the trade and exchange restrictions adopted by all her neighbours and many other countries, the Polish authorities are alive to the fact that official control over foreign trade is becoming increasingly imperative for the maintenance of an "active" balance. Numerous transactions of a barter character (notably with Austria, Brazil, Holland, Hungary, Norway and Soviet Russia) are now reported to be under consideration, and several organisations have recently been established for the purpose of arranging and facilitating merchandise-clearing transactions. Armed with the new Customs tariff published on October 10th (but which does not take effect until October 11, 1933), with the import contingent system now in force, and other restrictive measures at their command, the Polish Government is in a strong position to insist that imports into this country must be on a reciprocal basis.

GREECE.

Elections — Exchange Reserve — Trade Balance — Revenue.

(FROM OUR CORRESPONDENT.)

ATHENS, October 7.

As was foreseen, the elections held on September 25th under the proportional system did not give an absolute majority to any political party. Consequently, the formation of a new Cabinet has been difficult, and there is already talk of holding early next year new elections under the majority system. The election has had two important results, however, which will give a new turn to the political life of the country. The Venizelist Party, which in the preceding Chamber had 185 seats out of a total of 250 deputies, came out of the election with its forces reduced to 102 deputies, losing thus the control of Parliament. On the other hand, the Royalist Party, headed by Mr Tsaldaris, whose strength was 19 deputies only in the dissolved House, will have 91 members in the new one. The small parties of the Left will have 31 deputies (of whom 10 are Communists), against only 15 (with no Communists at all) in the foregoing Parliament.

According to a statement to the Press made by the Prime Minister, the reserve of the Bank of Greece in gold and foreign exchange amounted in the last part of September to \$11,062,000. The sum to be paid in cash to the holders of the foreign debt of Greece—30 per cent. of the year's interest—amounts to \$8,767,438. As a further sum of \$885,150 is required for other foreign obligations of the country, the reserve of the bank, after payment of all these liabilities, will be reduced to \$6,409,744. This reserve, it is hoped, will increase during the remaining

months of the year through the proceeds of exports, while no other transfer on account of interest on the debt will be made abroad up to the end of the year. Considering that, besides deferring the service of the debt, the country has, since the abandonment of the gold exchange standard, also postponed the payment of its commercial debts, or paying only small instalments on account, the transfer question remains unsolved, and cannot be solved save by new borrowing abroad.

Meanwhile efforts continue to be made to increase exports, and thus reduce the commercial deficit of the country, by bilateral commercial agreements. The latest development in this direction was the agreement signed a few days ago with Yugoslavia. In virtue of it, Greek exports to Yugoslavia will hereafter correspond to 35 per cent. of the value of Yugoslavian imports to Greece, against 7 per cent. only until now. Further, a committee has been set up to study the possibility of increasing exports to Turkey, which are at present entirely insignificant compared with imports from that country. Moreover, a syndicate has been formed by the Bank of Greece, the National Bank and the Agrarian Bank, with a view to fostering exports to Austria—with which country, as with some others, a "clearing" system is already in operation. As regards trade with the United Kingdom, the establishment of a working system to facilitate exchanges under the present regime of transfer restrictions is advisable. In this connection it is reported that the Government are studying a proposition submitted to them by an English firm, undertaking to supply to Greece coal up to a value of £1,000,000, to be paid for as to one-third by the proceeds of Greek exports (chiefly currants and tobacco) to the United Kingdom, and as to the other two-thirds by instalments within a period of one or, possibly, two years.

The improvement of the commercial balance continues in the meantime. Trade returns for August show imports of 134,520 tons of goods, of a value of Drs. 541 millions (against 197,470 tons, valued at Drs. 705 millions in August, 1931), and exports of 20,803 tons, valued at Drs. 228 millions (against 104,085 tons, valued at Drs. 189 millions in August, 1931). For the first eight months of this year imports totalled 1,627,153 tons, of a value of Drs. 4,886 millions, and exports 240,379 tons, of a value of Drs. 1,955 millions, against 1,641,761 tons, valued at Drs. 5,916 millions, and 871,670 tons, valued at Drs. 2,272 millions, of exports and imports respectively in the corresponding period of 1931. Thus the trade deficit was reduced from Drs. 3,644 millions to Drs. 2,931 millions.

The effects of the crisis are clearly reflected in the revenue receipts of the State's Budget. According to provisional returns just published, income from recurring revenue amounted in August last to Drs. 398 millions, against Drs. 446 millions in August, 1931. For the first five months of the current financial year revenue aggregated Drs. 2,856 millions, against Drs. 3,358 millions for the corresponding period of the past financial year. As regards the revenue assigned for the service of the foreign debt controlled by the International Financial Commission, receipts for the period January-August, 1932, totalled Drs. 2,201 millions, against Drs. 2,620 millions for the corresponding period of 1931. One of the first and more serious duties of the new Government will be to take the necessary measures for restoring the equilibrium of this year's budget.

In an extraordinary meeting of the shareholders of the National Bank of Greece, held the other day, the absorption, by purchase, of the Banque d'Orient was approved.

BULGARIA.

Balance of Payments — Foreign Exchange Holdings — Politics.

(FROM OUR CORRESPONDENT.)

SOFIA, October 22.

In connection with the investigation in Geneva into Bulgarian economic conditions, a statement of the balance

of payments was drawn up for the period 1929-1932, a summary of which is given below:—

(In million leva.)				
	1929.	1930.	1931.	1932. (6 mos.)
<i>A. Current items (merchandise, trade, services, interest, &c.)</i>				
Credits	7,202	7,036	6,055	2,025
Debits	10,415	6,686	6,449	2,518
	-3,213	+350	-394	-493
<i>B. Movement of capital.</i>				
Credits	3,491	1,240	1,160	495
Debits	278	1,590	766	2
	+3,213	-350	+394	+493

The balance under A is determined mainly by the balance of trade. The 1929 deficit was covered from the foreign exchange reserves of the National Bank of Bulgaria, as well as by sums received from post-war State loans and new trade and bank credits obtained abroad. The year 1930 shows a substantial decrease both in the trade deficit and the bank credits. It was during this year that the withdrawal of foreign capital began, but, thanks to the sums received from State loans, and the active trade balance, this did not cause serious inconvenience. The withdrawal of capital continued during 1931 and, together with the deficit of the balance of trade, absorbed the last sums received from State loans and the remainder of the foreign exchange reserves at the National Bank of Bulgaria. During 1932 the deficit in Part A of the balance of payments has been met by the new trade credits accruing from delayed transfers on commercial liabilities.

After careful study of the balance of payments, the Finance Committee of the League of Nations came to the conclusion that conditions have deteriorated since the beginning of the year. The Committee therefore recommended that the Bulgarian Government should negotiate with the holders of Bulgarian bonds for the extension of the period of relief, which came to an end on September 30th. An agreement has already been reached whereby the former agreement is extended until November 15th. The Committee expressed the opinion that the National Bank of Bulgaria has been strict in granting in foreign currencies, but it must be borne in mind that in grappling with this problem the Bank has been handicapped by the exchange policy of certain countries where Bulgarian holdings of *devisen* accruing from the import of goods have been continually "blocked," even when these holdings exceeded the obligations of Bulgaria. Thus on August 31st the net foreign exchange reserve (without the gold) amounted to 167 million leva. Bulgaria, however, has had at her free disposal only 58 million leva. The Committee is working in the right direction in recommending an agreement with the countries in question, with the stipulation that only part of the Bulgarian holdings should be "blocked" for the purpose of meeting the new and old trade liabilities of the country, and that the balance be placed at the free disposal of Bulgaria to enable her to meet her international obligations.

The Finance Committee has also insisted upon fresh attempts being made to balance the Budget. The Government is already considering measures that should be adopted, but, meanwhile, the development of political events has complicated its internal position. Particularly significant were the elections of the Sofia municipal councillors at the end of last month, when the Communists won by a clear majority. This success is easily explained by the fact that the 32,000 votes of the Bourgeois Parties were split up among many candidates, while the 16,000 votes of the Communists were united. At the same time the elections showed the strengthening of the Nationalist Party of M. Tzankoff. Although the elections in Sofia do not indicate the parties' strength in the country as a whole, they are, however, symptomatic. The Government has firmly decided not to deliver the municipality of the capital into the hands of the Communists. Far more important, however, is the question of the influence the results of these elections may have in general upon the internal policy of the Government and on the mentality of the whole Opposition.

SOUTH AFRICA.

Gold — Interest — Wages — Population.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, September 14.

In the general atmosphere of depression the position of the Transvaal gold mining industry stands out as a striking contrast. Owing primarily to the ample supply of native labour, but also to important advances in technical details in recent years, the industry is experiencing a level of activity unique in its history. Four months—March, May, July and August—in the present year have each yielded returns which were records at the time of declaration. The August return of 991,000 fine ounces may even yet be beaten. At the present rate of output the year's final figures should amount to some £48,000,000 at standard value. The tonnage crushed on the Witwatersrand to the end of August exceeds by 1½ millions the corresponding figure for last year and by three millions the figure for 1928. At the same time the number of natives employed is greater than ever before, while the number of Europeans was only slightly greater for a short while some twenty years ago at a time when there was a great deal of construction work in progress. Comparing the position to-day with that five years ago, there have been increases of 24 per cent. in a year's development, 13 per cent. in tonnage crushed per annum, and over 8 per cent. in numbers employed. In spite of the fall in the cost of living, the average wage-level of European employees remains stationary, with a tendency to increase. This, however, is probably due to the effect on the average of changes in the numbers of various classes of men employed, as there are constant developments in organisation, with a tendency to progressive mechanisation of the processes. As will be judged from the foregoing figures, the wage per unit of work done is decreasing with the increasing efficiency.

At the beginning of the month the Prime Minister opened a conference "to consider the relations between creditor and debtor." He expressed the opinion that the country is facing an improving situation, and dwelt on the importance of the restoration of confidence. It is rather fashionable, here as elsewhere, to dwell on the psychological aspects of the depression. Doubtless the point has its importance, but there are some very awkward facts in addition. Apart from mining, the business on which the Union mainly depends is farming. Many of the farms are mortgaged, and many more were bought at inflated land values. The farmer is therefore burdened with a load of fixed charges of which he cannot divest himself, although the amount of his produce which it represents is multiplied several times since he incurred it. It will take a good deal of conferring to dispose of this difficulty. Roughly 30 per cent. of the adult male population of the Union are farmers, according to the last Census figures. A large number of these are in ordinary

times indebted for more or less substantial amounts, though they are solvent and even prosperous. Apart from the farmers, South Africans are not exceptional among the citizens of new countries in being unduly optimistic as to the future, even if they are not actually improvident. Credit has in the past been sought and granted too freely. The conference was representative of financial, commercial, industrial and agricultural interests, and dealt with problems arising from indebtedness under bonds, overdrafts, bills of exchange and similar obligations. Broadly, its objects were to devise machinery for the assistance of the class of debtor, ordinarily in sound business, that the State regards as important to the country's welfare. The conference was held in committee, but apparently it is excluding from consideration any general debt or interest reduction, and also all moratorium proposals.

The agreement governing wages in the building trade in South Africa expired on August 17th, and in negotiations opened some time previously employers and men found themselves unable to agree on new levels. An arbitrator assisted by two assessors with experience of the trade has now given an award which approximates to a 10 per cent. reduction throughout the Union. In its details the award tends to reduce the differences previously existing in wage levels in different parts of the country. The argument of the building trade workmen against reduced wages was that they had not had any advantage from falling prices because of the increase in unemployment and broken time. Their spokesmen said that in the present state of credit in the country the increase in building likely to result from a moderate reduction in wages would be small. The ordinary citizen is bound to feel that the move is in the right direction. The new rates on the Witwatersrand are 9s. per hour for all trades except painting and glazing, which receive 2s. 10d. In Cape Town the rates are 2s. 8d. and 2s., and in Durban 2s. 10d. and 2s. 6d.

During the six months ended June 30th, European immigrants exceeded emigrants by 373, the figures being 1,642 and 1,269 respectively. British-born emigrants exceeded immigrants by 166. From a study of these figures over some years, it is apparent that the proportion of British blood in the population is slowly diminishing.

Letters to the Editor.

ARGENTINA AND OTTAWA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Among the causes which have led to the present miseries of the United States is her treatment of her European debtors. Not understanding that debts could be discharged by the export of goods, and that these particular debts could not be discharged except by the export of goods, she adopted the contradictory policy of (a) demanding payment from Europe and (b) increasing by tariffs Europe's difficulty in delivering the goods. Not only did she help thereby to impoverish her own debtors, but she searched out the only path they could travel to pay her what they owed; and having found it, she barricaded it. The imprudence of her policy is agreed, I take it, not only by Free Traders but by such Protectionists as Mr Runciman and Sir John Simon.

Studying your most valuable Ottawa Supplement (on which, if I may, I would offer you respectful but very hearty congratulations) it occurred to me that what is admittedly folly as between New York and Europe may also be folly as between, say, London and the Argentine.

According to the D'Abernon mission the amount of British capital invested in the Argentine is between £500,000,000 and £600,000,000, as against £460,000,000 invested in Canada. On this vast sum the Argentine has to pay us interest and dividends which she can do only by exporting her goods; and of late she has (as most of us know to our cost) found it very difficult to keep her exports up to the required figure. Now our

statesmen have determined by artificial restrictions to increase her difficulty in paying us what she owes. From your Supplement I take the following figures of our imports from the Argentine which were taxed by us in 1930, the corresponding figures for 1932 before Ottawa, and again in 1932 after Ottawa:—

IMPORTS FROM ARGENTINA TAXED BY BRITAIN.			
	Value		Per cent. of whole imports.
	£		
1930	Nil	—	—
1932.			
Before Ottawa	9,812,000	17.3	
1932.			
After Ottawa	18,826,000	33.2	

And that is not all. In addition to the duties we are imposing a quota on Argentine meat of which we took in 1927 over £25,000,000 worth. In the future we shall not allow her to send us in payment of her debts more than a percentage of her 1931-32 shipments—a maximum of 100 per cent. of chilled meat and 65 per cent. of frozen. To show what this means I extract from the Annual Statement of the Board of Trade our imports of chilled and frozen meat from the Argentine since 1927:—

	Cwts.		
	Chilled.	Frozen.	Total.
1927	9,986,205	1,562,208	11,548,413
1928	8,644,551	768,512	9,413,063
1929	8,174,800	900,393	9,075,193
1930	7,713,349	750,082	8,463,431
1931	7,911,175	658,972	8,570,147

The effect of restricting our debtor to a percentage of unusually low figures is obvious. We have already suffered severely by the reduction of our invisible exports, and we are now deliberately closing the right of way to one of the most important of them. The barricade raised by the United States against her European debtors is now being raised by Great Britain against her Latin-American debtors and with this difference—that the United States politicians did not understand what they were doing.—Yours, etc.,

Lloyd's.

D. E. W. GIBB.

October 24, 1932.

COMPENSATORY TARIFFS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your "Ottawa Supplement" of October 22nd you express a view which, much as I agree with your general conclusions, I cannot but think will not bear critical examination. On page 19 of the Supplement you write: "We have given our approval to the vicious principle of 'Compensatory Tariffs,' a principle whose application, if logically carried out, would destroy the entire basis of all international exchanging of goods"; and the same view was expressed by Sir Arthur Salter in a recent letter to the *Times*, in which he claimed that, theoretically, compensatory tariffs would eliminate foreign trade *in toto*. Is this view correct? I assume that a compensatory tariff is one calculated to remove or adjust differences in selling price due to cost of production, locality, wages and cost of living. On that assumption it seems to follow from your argument that no two manufacturers of the same article in the same country, whose costs of production may be regarded as equal, could theoretically exist side by side. That is to say that a boot manufacturer in Leicester and another in a neighbouring town could not both supply the London market. This, of course, is patently untrue, and I submit that the same conclusion applies *mutatis mutandis* to two manufacturers, say one in England and another in Canada competing for the trade of, say, Montreal. It seems to me that there are two essential conditions under which international trade can be done—demand, on the one hand, and supply at an economic price on the other. I suggest with some diffidence, being always in general agreement with your views, that the theoretical result of compensatory tariffs by means of which prices are equalised, is not as you claim, the necessary destruction of international trade, but the division of trade between the producers of one country and those of another.

Despite this conclusion it need scarcely be said that I am not in any way an advocate of this comparatively new principle of "compensatory tariffs." I believe that the country imposing these tariffs stands to lose in exactly the same way as we should lose if we imposed a compensatory tariff say on West Indian pineapples in favour of our own home-grown hot-house variety, but I do deprecate the presentation of an argument which con-

fuses the true issue and needlessly puts a psychological weapon in the hands of the advocates of Protection and the opponents of Free Trade.—Yours, etc.,

FRANK MORRIS.

Constitutional Club,
Northumberland Avenue, W.C. 2.
October 25, 1932.

[We are glad that Mr Morris accepts the validity in practice of our conclusions; but, even so, he does less than justice to the "theoretical" argument. Firstly, the English and Canadian manufacturers competing for the Canadian market are not comparable with the boot manufacturers in two English provincial towns competing for the London market. The factor of proximity as between seller and buyer comes in. Would Lancashire boots sell in Leicester, if the Leicester tariff exactly equated their price?

Secondly, there is no such thing as a single English or a single Canadian cost for a given commodity. There is a whole range of costs dependent on (a) different degrees of productive efficiency, and (b) geographical selling point in the given market, in each case. If it brings up the most efficient English manufacturer's cost to the level at which the least efficient, farthest west Canadian producer can deliver at Canada's most easterly town, what scope remains in the Canadian market as a whole for the "compensated" English goods? This equating of the most "dangerous" (i.e., efficient) foreigners with the least efficient home producer is, in fact, what tends to happen. In practice a reduced volume of imports is at first permitted, but thereafter imports are gradually whittled down by convincing proof that some home producers are being undersold.—Ed., Econ.]

THE IRISH DEADLOCK.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the present state of public information I suggest that it is premature to attempt to apportion blame for the breakdown of the recent Anglo-Irish negotiations. The White Paper dealing with the arguments on either side is yet to come.

But, upon the broader aspect of the controversy, is there not occasion for a fully informed judgment? I suggest that the following state of facts exists, and that it cannot, and will not, be ignored by those who are concerned with the discussions and the ultimate findings of the pending Economic Conference. Can it be denied

(a) that the old-established and very valuable Anglo-Irish trade is being destroyed by the tariff war between the two countries;

(b) that the introduction of tariff regulations discriminating against the one country only and for the enforcement of a political objective was the act of Great Britain and not of the Irish Free State;

(c) that Great Britain's complaint in regard to the Irish Free State relates to things done after notice and in pursuance of a claim of right which the Government of the Irish Free State declared itself willing to submit to impartial arbitration;

and, if it cannot be denied, who is to blame for the tariff war?

Let it be recalled that such tariffs as were previously imposed by the Irish Free State were imposed on financial and economic grounds, and were, I believe in all cases, mitigated by preferential rates in favour of British and Empire goods. Is it not a fact, then, that it has been the National Government, specially elected to combat the financial crisis caused by extreme economic depression, that is directly responsible for the sabotaging of Anglo-Irish trade in order that economic hardship may crush its small neighbour into submission?—I am, Yours faithfully,

Dublin.

HENRY HARRISON.

October 24.

THE TROUBLE IN JUGOSLAVIA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As your Yugoslav correspondent I feel bound to write to you about the article "The Trouble in Yugoslavia" in your issue of October 15th, which I sincerely feel to be too one-sided and partial to be consonant with the high standard of critical integrity set by the *Economist*.

It is not my intention to quarrel with the statement that the Serbs have been the dominant partner in the new kingdom, that they have frequently misused that position, and they have thus contributed to the present trouble. Those things are unfortunately true. It is a question, however, whether those things were not inevitable in a community in which the Serbs are the most numerous and compact group; in which they had

the initial advantage of a State with all the necessary machinery; in which the reactionary regime of Pashitch, which sowed the first seeds of mistrust, was maintained as much by foreign as by national aid as a bulwark against "The Reds"; and in which the Serbs are, after all, the most determined and vital, although slightly cruder element. Nor do I wish to quarrel with the statement that these initial mistakes have to be fully redressed before internal confidence can be restored and full equality attained.

But I feel bound to protest when these facts are painted in a distorted picture in which the Serbs are "rough people," "grim," "arrogant" and "scorpions" crushing under their heel the saintly Croats. Statements such as these and others throughout the article, in which the dice are again and again heavily loaded only against one side, are hardly calculated to help the reader in a critically constructive examination. Would it not, in fact, be just as easy to oppose to each statement a counter-statement? Would it not be possible to counter the accusation of political dominance by the Serbs by the fact that Croatian banks with the help of foreign capital have achieved just as important a dominance in industry and national economy? Could one not oppose to the statement that the present trouble in Croatia is chiefly one of political dissatisfaction the fact that much earlier this year, in April, similar conflicts occurred in Serbia proper between peasants and the police? Further, can one really, in apportioning blame for the present trouble, leave out the Croatian Opposition which, with an unparalleled political ineptitude which is the despair of all its well-wishers, has again and again let slip golden opportunities to achieve real constructive results which would have made much of the present friction unnecessary?

I do not wish to indulge in counter-recrimination; for, as a true Yugoslav, I am pained at least as deeply as your writer by the present happenings. Nor do I wish to enlarge upon the topic, since without a detailed presentation of the case I may run the risk of being misunderstood. All I hope to do is to show that the problem is by no means as simple and one-sided as your writer, in the wish to drive home his points, has represented.

One thing certainly is regrettable, and that is the presence of censorship. Were it not for its existence it might have been perhaps more easy to ascertain who is in the right—your writer, who believes that the present trouble is chiefly political and of a magnitude which might spell the disintegration of the Yugoslav State, or I, who believe that it represents a series of natural, spontaneous outbursts of peasantry in the poorest districts under the stress of economic difficulties, outbursts in which political reasons play but a secondary part, and are but a counterpart of similar outbursts in Serbia proper.

Yours, etc.,

YOUR CORRESPONDENT IN JUGOSLAVIA.

[We gladly publish this letter from our correspondent in Yugoslavia, and can assure him that we are free from any "anti-Serb" or "pro-Croat" bias. We addressed ourselves, in our article, to the Serbs, because the initiative lies in their hands as the politically dominant element, at the moment, in Yugoslavia. As we read his letter, we find that on many points he is not in disagreement with us, though he may be inclined, naturally enough, to use milder language in making the same statements of fact. He does differ from us in his suggestion that the present outbreak in Croatia is entirely due to economic causes and has no political motive; but on this point the Yugoslav Government appears to take our view rather than our correspondent's; for, while his letter was in the post, a welcome report appeared in the press to the effect that the Government in Belgrade was proposing to counter the revolt by offering a large measure of regional autonomy to the non-Serb parts of the kingdom. This, we feel sure, is the right solution.—Ed., Econ.]

The Stock Exchange:

ARGENTINE RAILWAYS.

EVENTS, unfortunately, have confirmed the diagnosis which we made at this time last year, that the potentialities for immediate expansion of the leading Argentine railways had been sharply checked, and that their securities, pending a revival in general trade, must remain in the speculative category. Argentina, by general admission, has made the best showing of all the South American Republics during the last twelve months. The accession of General Justo to the Presidency, last February, marked the complete restoration of normal constitutional practice and internal tranquillity. The country has punctually honoured all its foreign obligations, though it has been compelled to issue an internal "Patriotic Loan" to cover a budgetary deficit. Its exports, in the twelve months to June 30th last, expanded in volume by over 27 per cent, but in value by only 8 per cent., thanks to the continued fall in prices of primary products which has been, and is, Argentina's greatest bugbear. The achievement, during the same twelve months, of an "export" balance of 237 million gold pesos, against an "import" balance of 46 million pesos in the preceding twelve months, has facilitated the meeting of overseas payments, but has been accompanied by a 37 per cent. decrease in the value of imports, and by stringent exchange control. The impoverishment of the farming community by low world prices, and the considerable decline in "inward" traffic fully account for last year's further reduction in railway receipts, which, even in the previous year, had dropped below the level of 1922-23.

The following comparison of the last two years' results on the four largest British-owned railways reveals the extent to which depression has prejudiced the position of junior stockholders:—

GENERAL RESULTS, 1930-32.

	B.A. Great Southern.	Central Argentine.	B.A. and Pacific.	B.A. Western.
Gross receipts:

* After adding other income and deducting other expenses (interest, &c.) and exchange losses.
† "Rents payable" included with debenture interest.
‡ After deducting income tax, £123,639.
(a) Under scheme of arrangement, £350,398 of total debenture interest of £817,795, and £229,517 of total rents payable of £863,696, remain unpaid.
(b) In 1930-31, first preference received full year's dividend, other preference stock half-year's dividend. No preference payments were made in 1931-32.

None of the four railways earned as much as one per cent. on its equity capital last year. Two failed to earn their full preference dividends. One, the Buenos Ayres and Pacific, did not earn its debenture requirements, and

was compelled, last July, to carry a scheme for eighteen months' postponement of payments. The decline in gross receipts, in fact, was slightly less steep than in the previous year, when takings on the Buenos Ayres Great Southern dropped by 7.1 per cent., on the Central Argentine by 3.2 per cent., on the Buenos Ayres and Pacific by 10.0 per cent. and on the Buenos Ayres Western by 2.4 per cent. The Great Southern was the victim of general economic conditions, despite last season's good harvests. The Central Argentine achieved slightly higher receipts, mainly as a result of a 34 per cent. increase in the tonnage of maize transported. In the case of the Western, similarly, a very considerable recovery in the volume of goods traffic went far to offset a serious falling off in passenger receipts. This line, which took the impact of depression somewhat earlier than some of the other companies, has the lowest ratio of fixed charges to total capital of any of the four, while the Pacific Company has the highest. The last-named has had special troubles to bear. Last April, a tariff deadlock between Argentina and Chile resulted in the closure of the Transandine line, while last November the most disastrous frosts on record damaged over 90 per cent. of the wine harvest of the Province of Mendoza.

The most serious feature of 1931-32, however, from the viewpoint of stockholders, had no direct connection with railway operations. Our table suggests that in every case economies were effected in working expenses which were not incommensurate with the drop in revenue. Net receipts, consequently, showed a slight rise on the Central Argentine and the Western, and only a moderate fall on the Great Southern and the Pacific. If Argentina's currency had been maintained on a par with sterling, ordinary stockholders of the two largest railways would have suffered only a moderate recession of dividends during the last two years. Their position in this respect, indeed, would have compared favourably with that of the junior stockholders of most British railways. The great disparity, however, between the percentage decline in net receipts and in earnings for fixed charges, which is strikingly revealed by our table, is a measure, mainly, of the losses which stockholders are suffering through the depreciation of Argentina's currency. The average value of the peso was 37.67d. in the twelve months ended June, 1931, and 36.09d. in the twelve months ended June, 1932, against a parity of 47.62d. It is the practice of British-owned Argentine railways to publish their working accounts in sterling, taken at par of exchange, and subsequently to make adjustments for currency depreciation, not only in respect of remittances home, but also as regards floating assets. These exchange losses were particularly heavy seven or eight years ago, but at that time the railways were earning relatively high profits. Their recrudescence, on an almost unprecedented scale, in a period of diminished prosperity, has introduced an element of uncertainty into near future prospects, from the viewpoint of stockholders, which goes far to render nugatory any estimate based on probable operating results.

The extent of the last two years' exchange losses, both absolutely and as a percentage of ordinary capital, is shown in the next table:—

EXCHANGE LOSSES.

	B.A. Gt. Southern.	Central Argentine.	B.A. & Pacific.	B.A. Western.
Loss on remittances ... 1930-31	£ 635,560	£ 789,915*	£ 330,387	£ 197,039
... 1931-32	527,520	1,013,875*	476,500*	303,996
Other Exchange differences (depreciation of floating assets, &c.) ... 1930-31	430,892	...	99,442	103,848
... 1931-32	631,657	...	...	19,729
Total Exchange losses ... 1930-31	1,066,452	789,915	429,829	300,887
... 1931-32	1,159,177	1,013,875	476,500	323,725
Equivalent percentage 1930-31 (%) on ordinary capital	3.3	2.8	4.3	1.7
... 1931-32 (%)	3.6	3.6	4.3	1.9

* Includes all exchange differences.

If Argentina can avoid further depreciation of her currency, or can regain the improvement which, unfortunately, was checked last February, how far can investors look for further economies in railway expenditure, or a recovery in receipts? The following table throws some light on the first part of this question:—

WORKING RECEIPTS AND EXPENSES.

	B.A. Gt. Southern.	Central Argentine.	B.A. and Pacific.	B.A. Western.
	1931-32	Compared 1930-31	1931-32	Compared 1930-31
RECEIPTS.				
Passengers—				
Number (thous.)...	55,924	-6.0	47,585	-3.0
Receipts (£'000)...	2,676	-12.6	2,671	-11.2

Maintenance of locomotives, coaching stock and goods stock... (£'000)...	1,102	-4.4	1,431	+6.1
Total working expenses (including other items) (£'000)...	7,420	-6.7	8,227	+0.6

* Also wine, 478,000 tons, a decrease of 11.9 per cent.

The most serious drop in revenue occurred last year on the passenger side and was due much more to the impoverishment of the Argentine community than to road competition. In the preceding year the companies had largely succeeded in maintaining the volume of their passenger traffic, though the length of the average journey declined, and net receipts showed an appreciable fall. Last year, however, passenger traffic suffered a marked decline in volume. This tendency must needs be accentuated, if depression is prolonged. Less than one-third of total Argentine railway revenue, however, is normally obtained from passenger traffic, and the position on the goods side, depressed as it is, is relatively more reassuring. Livestock traffic, for the last three years, has held up higher in 1930-31 than in the previous year of bad harvests, and last year showed a further increase on every line. The decline in total goods receipts, in fact, may be attributed almost exclusively to Argentina's lower consumption of imported products and constructional materials. It follows that a revival in railway earnings must chiefly come, initially, by way of the restoration of Argentina's ability to import rather than to export. Whether, in the event of an appreciation of prices for primary products in the world market, the process of recovery may be facilitated by the granting of foreign loans and credits to Argentina is a question of intimate concern to railway stockholders.

Reference to the table reveals that reductions in expenses which may be directly related to the volume of traffic have been satisfactory but not spectacular. The railways have so far been unable to secure appreciable wage reductions, nor is it likely, given the present temper of organised labour, that they will be able to obtain, in the near future, much more than a reinstatement of the short-time arrangements which were instituted between August and November, 1931, and partially suspended at the end of last January. A year ago, almost all the companies reported large savings in maintenance charges, but further "cuts" last year were on a much more moderate scale. Scope for still further reductions is greatly limited, and though a somewhat lower standard of maintenance

may legitimately be applicable to bad times to good times, expenditure under this heading must now be regarded as having reached a condition of relative inelasticity, if the physical condition of railway properties is to be maintained unimpaired. The B.A. Western last year, indeed, made no allocation from revenue to renewal funds, and it is doubtful whether the board would have deemed itself justified in adopting this policy, in the absence of a windfall resulting from the sale of the Railway Power House, which allowed the strengthening of the renewal funds by £216,256.

The Stock Exchange is taking a more hopeful view of Argentine railway prospects to-day than a few months ago, as our final table shows:—

MARKET QUOTATIONS.

	Highest, 1929.	Highest, 1931.	1932.			Yield at Present Price.

Although quotations in every case have recovered very considerably from the lowest, the market is sharply differentiating between the stocks of the B.A. Pacific and of the other three systems. This tendency will continue so long as the company is unable to meet its full debenture charges. It may be inferred that the market, which values the senior debenture stocks of the other three lines on a yield basis of under 5½ per cent., is convinced of the unlikelihood that depression will penetrate sufficiently far to endanger their future service. Yields of 8 to 9 per cent. on preference stocks are eloquent of a near future "dividend risk." On the other hand, the quotation of prices, ranging up to 30, for ordinary stocks with no early prospects of a dividend, suggests that many investors have confidence in ultimate recovery, and are willing to pay more than mere option money for the equity.

The market's view is probably correct. Until economic conditions improve, it is difficult to see how the Argentine railways can avoid, at least, a moderate further decline in revenue. They possess, however, valuable and well-managed properties, in good physical condition, in the most stable State in South America. The latter may be expected to resume its natural economic expansion on the removal of unfavourable world conditions, not of its own making, which have reduced the value but not the volume of its productivity. A rise in the exchange value of the peso would be a natural concomitant of economic recovery. The currency position is not in itself unsound, for the present gold reserve represents as much as 44 per cent. cover for the note circulation. Till better times arrive, however, investors can only stand and wait. They will closely follow, meanwhile, the efforts of the various managements to secure operating efficiency. In particular, they will trust that the recommendations made by British and American railway experts to the boards of the Great Southern and the Western will be of tangible assistance in tiding over the waiting period.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
November 8. November 10.

THE continued weakness of the pound affected sentiment in all markets. Business tended to contract, but quotations remained much more stable than might have been expected. Between October 20th and 27th, the "Gilt-edged" index of the *Financial Times* declined by only 0.8 per cent. A certain amount of speculative support was withdrawn from the gilt-edged market, but there was no institutional selling and certainly no sign of a "flight" from fixed-interest stocks. How far the rallies which followed every drop of one-quarter or half-a-point in British Government stocks were "supported" was a question on which opinion was divided. It was generally agreed, however, first, that large investors were suspending action rather than selling, and, secondly, that judgment, in any case, should be suspended until after the American election.

In the gilt-edged market gains were recorded on Wednesday by Old Consols and the Conversion Loans, but Assented War Loan closed lower after going ex dividend. Quotations at Thursday's opening were about $\frac{1}{2}$ lower, but some recovery followed. India loans were irregular, several of the short-dated issues being marked down. Dominion stocks were fairly active, though leading Australian issues suffered from scattered realisations. Home corporation stocks were steady on the whole.

The Chinese salt loans were the brightest feature of the foreign market, but the Boxer Loan showed weakness on Wednesday after earlier strength. Japanese bonds were undecided. Some selling of Young Bonds was experienced. Austrian, Greek and Roumanian Seven per Cents. all found support. Argentine loans remained heavy under the influence of moratorium rumours, but Buenos Aires provincial issues were steady. Brazil bonds sagged. The new 40-year funding issue being noticeably weak.

A further heavy batch of home railway traffic losses put an end to talk of a belated autumnal improvement. The junior stocks relapsed further, interest being again transferred to the prior charges. The new Southern debentures established a small premium. Metropolitan were sold on reported fresh opposition to the carrying over of the Passenger Transport Bill to the next Session. This matter is dealt with in an Investment Note on page 794. Argentine rails developed marked weakness on further unfavourable traffic returns.

Industrial shares were irregular and inclined to weakness. Wall Street was undecided, and scattered sales came from the Continent, where exaggerated reports were current of the "Unemployed March" on London. Electric and Musical Industries fell sharply on the report, discussed on page 795. Cables and Wireless were dull. Textiles were helped initially by the settlement of the dispute, but prices turned reactionary later. Breweries had a stronger appearance, but tobacco shares lost ground. The Celanese group were on offer. Sudan Plantations responded to a favourable report (discussed on page 797). Decca Records declined following the publication of reconstruction proposals. Stanton Ironworks was a weak feature on reconsideration of the interim announcement, while Horden Collieries was also marked down following

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

the dividend reduction. Woolworth found support. Bank shares were a shade easier, and insurance shares quiet.

The oil share market was heavy on the interim dividend announcements of leading oil companies (described on page 797). Moderate selling from Paris was sufficient to depress prices. Eagle issues were lower, and Anglo-Per-sian eased a fraction, while Shell and Royal Dutch both fell in mid-week. There was practically no public interest in rubber shares, and the commodity failed to give any lead. Tea shares reacted after the recent moderate improvement, the "restoration" negotiations being, apparently, at a less advanced stage than the market had anticipated.

Gold shares had a dull week in spite of the continued fall in sterling. Some improvement occurred on Wednesday and again on Thursday, but Johannesburg displayed more indifference than activity. Gold Fields and "Johnnies" were weaker, though Crown Mines and Sub Nigel both touched new high levels. Wiluna improved after initial weakness. Tinto were sold heavily at one time, but rallied subsequently on "bear" repurchases. Lake View and Star weakened on a disappointing dividend.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The market is facing a quiet period until the elections are over. The volume of business has markedly fallen off, total daily share transactions being under the million. Prices, however, have changed little, on the average, over the last fortnight. The election campaign, following tradition, has become an affair of personalities rather than policies in its later stages. The market is already canvassing possible Cabinet names out of diverse elements making up the Democratic party, in the event of a Roosevelt victory. The Steel Corporation decision to pay its full preferred dividend, though better than had been expected in some quarters, caused little quickening of business. The fact that the Corporation reported a net third quarter loss of \$20,871,709, compared with a debit of \$20,452,173 in the second quarter and of \$3,973,835 in the third quarter of last year, was regarded as an indication that no real improvement in the steel trade had taken place. Current steel output remains just below 20 per cent. of capacity, but other indications suggest that business activity continues slightly to increase against the seasonal trend. Freight-car loadings for the week ended October 15th reached a new peak for this year at 650,400, an increase of 25,000 as compared with the previous week. Electric power production continues to improve, the textile industries are maintaining increased activity, and trade in some retail lines is back

approximately at the level of 12 months ago. Though bonds have been erratic and have tended to lose ground, railroad shares are firm in sympathy with the car-loading figures. Technically, the market in industrial equities appears to be stronger than for some weeks, and bear selling, in sympathy with the downward trend of commodity prices, has been absorbed without difficulty. Weakness, where prominent, has generally been due to special causes, this week's break in Drug Incorporated, for example, reflecting the difficulties which subsidiary companies are meeting in obtaining reductions in rentals.

CANADA.

The markets have failed to sustain the upward movement which began early in August. Since the middle of September the decline in prices, though interrupted by short upward bursts, has been progressive and severe. A local adverse factor has been the fall in grain prices which has decreased the purchasing power of the rural community and impaired the prospects of better earnings for firms with Western interests. The report of the Duff Commission on transportation problems has not been interpreted as particularly favourable to the Canadian Pacific Railway. The tariff reductions announced on October 12th as part of the Anglo-Canadian fiscal agreement have been construed as a bearish factor for certain textile and other industrial stocks, but are expected to benefit companies in industries like lumbering, salmon packing and fruit canning. The bond market remained reasonably

strong until the end of September, but has since weakened, partly owing to the imminence of another Dominion Government issue. The mining market has also experienced a sharp setback. The Bureau of Statistics "Investors' Index" of all common stocks declined from 62.2 on September 8th to 53.6 on October 6th.

PARIS.

The weakness of sterling and unfavourable advices from abroad had a depressing effect upon the Bourse. The market opened with buyers nervous and inclined to await further developments before operating. Internationals sagged, and but for powerful official support of French Rentes, the market would have been seriously affected. Towards the close there was a large amount of profit-taking. This was chiefly caused by the withdrawal of official support for Rentes. In the industrial market, sellers predominated. At the close there was slight recovery in Internationals. Rio Tinto were a firm feature and moved up smartly on bear covering.

BERLIN.

The Berlin Bourse opened dull and the continued drop in sterling further depressed the market. Buyers, except in the case of a few fixed-interest securities, were few. Pessimism was also aroused by large declines in certain Swiss investments. Reichsbank opened firm, but dropped back, recovering slightly towards the close. Practically all mines were lower. Rheinische Braunkohlen fell $2\frac{1}{2}$ to 158½. Dye Trust were better, but the market for electric shares was negligible.

AMSTERDAM.

Amsterdam was again weak, but, despite the fall in sterling, a better tone prevailed towards the close. Royal Dutch had another hectic week, falling to 113½ on the dividend decision. Rubbers were well maintained on news of reduction of London stocks, Amsterdam Rubber being quoted at 59½. Sugars were lower and Amsterdam Trading fell 2 to 176½. Among industrials Unilever N.V. gave way 1 to 112, and Philips Lamps 1 to 123. Tea shares were exceptionally firm on restriction hopes, and rose several points.

OTHER CENTRES.

Business on the minor European bourses was mostly dull. Milan was active and closed steady. Weakness again obtained at Brussels and price movements showed little change. Quotations moved only slightly during the week and were mostly downward. Frankfurt and Stockholm were quiet. A heavy tendency prevailed at Oslo and Copenhagen.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

London Passenger Transport Bill.—The motion to suspend further proceedings on the London Passenger Transport Bill till the next session of Parliament was debated and carried in the House of Commons on Thursday. It is generally expected that this Bill will be passed next session, seeing that the main Conservative objection to the Bill as a Socialistic measure has been met by taking the appointment of the Transport Board out of the hands of the Minister of Transport and assigning it to a body of non-political public men, acting as a sort of voting trust. Nevertheless, there will undoubtedly be a good deal of opposition. The Motor Hirers and Coach Services Association have issued a statement this week against the Bill on the grounds that its keynote is the exclusion of competition. If this is the sole ground of opposition there is no doubt that the Bill will be passed, for it is designed to deal with the chaos to which unrestricted competition has reduced the streets and traffic ways of London. The main parties to the Bill are all in agreement. The Metropolitan Railway has secured terms enabling holders of its ordinary stock to receive £67 10s. of the "C" stock of the London Passenger Transport Board for every £100 Metropolitan, with the option to convert into a new guaranteed stock, of a nominal amount equal to the par value of their present holding, bearing interest at 3½ per cent. for fifteen years and 3½ per cent. for the next ten years. This option is a valuable one, and there is no doubt that the Metropolitan shareholders will join with the Underground group in pressing for the passage of the Bill. Since the Bill was first introduced, the decline in traffic receipts has made it all the more important for the Underground group to secure the co-ordination of London traffic. The original estimates, made by Sir William McIntock, of the receipts of the London Passenger Transport Board must, of course, be revised in the light of the trade depression and the decline in traffics. They allowed for a surplus, after meeting all fixed charges, of an amount sufficient to pay a dividend at the rate of 5 per cent. on the "C" ordinary stock for the first two years, increasing thereafter to 5½ per cent. and finally 6 per cent. These interest payments are dependent entirely on earnings, and it is not expected that the Board will be able to pay at the outset a higher dividend than 2½ per cent. to 3 per cent. The Underground Electric ordinary shares have fallen to 18s. 6d., following upon the reduction in the interim dividend from 3 per cent. to 2 per cent. in July. The final last year was 4 per cent., but it is not expected that more than 2 or 3 per cent. will be paid in respect of the current year. Metropolitan Railway ordinary stock has, however, been a firm market on account of the option accruing to holders under the terms of the agreement with the promoters of the Bill. In spite of the reduction of the interim dividend from 1 per cent. to ½ per cent. (a total of 2½ per cent. was paid in respect of 1931), Metropolitan ordinary stock remains about 65, which would not appear high if the guaranteed stock were issued in exchange.

"Cosach's" Problems.—At last Monday's meeting of shareholders of the Anglo-South American Bank the chairman, Sir Bertram Hornsby, recalled that the greater part of the capital depreciation suffered by the bank had arisen in Chile, but refrained from committing himself to any statement as to the bank's attitude in the negotiations with the Chilean authorities for the future of "Cosach," the unhappy nitrate combine. Sir Bertram's remark that the Chilean Government seemed unready to agree to a definite solution until a normal constitutional regime had been re-established has been interpreted in some quarters as an indication that the Government, at least, has refused to accede to the Guggenheim proposals, under which the bank's position would be anything but favourable. Meanwhile an informative contribution to discussion of the conditions which have led up to the present *impasse* has been made by a contributor to *The Financial News*, who signs himself "Amigo de Inglaterra," but is obviously no friend of "Cosach" under its present auspices. The writer frankly admits that on the outbreak of the great war the Chilean industry had become inefficient. He severely criticises the Chilean Government for maintaining the export tax at a time when other countries were building up their own synthetic nitrate industries. The allied blockade during the war and high freight rates for some years subsequently, lost Chile her best customer—Germany. Successive Chilean Governments continued to regard the industry as a milch-cow even when Chile's share had shrunk to 27 per cent. of the world's nitrogen output. The industry was endeavouring slowly and painfully to rationalise itself when the Guggenheims, hitherto interested only in Chilean copper, appeared on the scene with a new process. The latter, as an example of heat engineering, was impressive, but before the Maria Elena plant, run by the Anglo-Chilean Company which the Guggenheims had acquired, had been working long, two formidable difficulties became apparent. Capital costs were too high and the company's grounds were being worked out at an alarming rate. At this moment the large British-owned Lautaro Company found itself under an obligation to find £2,000,000 and to erect new plants capable of a large output, and, being unable to raise the money by other means, accepted an offer of the Guggenheims to supply the necessary funds in return for the handing over of virtual control to them. The compulsory imposition on the industry of a scheme involving the financing of stocks, by producers, through every stage to the retailer, resulted in the whole industry's becoming heavily indebted to the Anglo-South American Bank. The formation of Cosach apparently offered a way out of the difficulty, and was duly consummated, though neither the Anglo-Chilean nor the Lautaro companies were absorbed, but remained as separate subsidiaries. Unfortunately, the world crisis then supervened, and the policy of those in control, based on concentration of production in the Guggenheim plants, caused a heavy displacement of Chilean labour. The writer suggests that as the real interests in Cosach itself are mainly British, while those in the two subsidiaries are mainly American, the best solution of present difficulties would be the entire separation of the latter from the former, with an equitable distribution of assets and liabilities. The merger company, presumably, would endeavour to achieve its own salvation under British control, using the "Shanks" process, in order to employ the maximum of labour at a minimum cost, for part of its output. This proposed solution offers numerous difficulties, and would obviously encounter bitter opposition from the American side, but it would seem to deserve further consideration, particularly by the institutions which have guaranteed £7,500,000 of the Anglo-South American Bank's interest in the Chilean nitrate industry.

Protection for Shareholders.—Though the fraudulent promoter is by no means an extinct species, company history, ancient and modern, suggests that, in the long run, shareholders lose more as the victims of incompetence than of roguery. The figures of the Macmillan Report are still fresh in the public memory. They showed that in 1928 the total amount subscribed for the capital issues of 248 companies was £117,000,000. At May 31, 1931, the

total market value of these issues was £66,000,000, about 70 of the above companies had been wound up and the capital of 36 others had no ascertainable value. The investors' losses in these enterprises were not, of course, entirely due to mismanagement. Industrial and financial depression also contributed, but the figures are a striking commentary on the inability of individual shareholders, particularly small shareholders, to control inefficient directors. They emphasise the desirability of a body like the new Shareholders' Protection Association, formed last week. The Association's objects are excellent. It proposes (1) to obtain legal advice for its members; (2) to report on the management or accounts of companies in which they are interested; (3) to concern itself with all amalgamation or reconstruction schemes; and (4) to represent its members, as a proxy holder, at meetings. Where advice and assistance can be any use to a company the Association will gladly give it. Where, however, the policy of those in control is inimical to the interest of the shareholders, the Association will offer strong opposition. It is obvious, however, that if the Association is to be really effective a large measure of support will be needed. Unless the Association controls sufficient voting power to make itself unpleasant, it may receive scant consideration from directors of a certain type. The annual subscription is 10s., and if the scheme realises even a tenth part of the objects of those responsible for its inception, investors will consider their money well spent.

Investment Trusts.—The reports of investment trust companies which we have recently analysed make somewhat cheerless reading. Of seven companies whose financial years ended in July to September this year, only two disclosed any substantial "break-up value" for the ordinary stockholders on the market valuation of investments—and one of these, not because it had suffered less depreciation than the others, but because it had no preference capital. The following table gives the book value of the investments, the percentage depreciation and the break-up value of the ordinary stock, which is arrived at by deducting debentures, bank loans and preference capital from the market value of the investments:—

	Date of Formation.	Year Ended	Investments at Book Value.	Percentage Depreciation.	Break-up Value of Ord. Stock.
Second Edinburgh ...	1902	31/8/32	£ 1,793,625	21.4	33½%
Mid-European ...	1924	31/7/32	1,834,234	35.7	Nil
London and Strathclyde	1928	31/8/32	877,049	41.0	Nil
Southern Stockholders	1928	15/9/32	1,197,696	44.7	46.7%
Capital and National			970,112	42.2	Nil
Trust ...	1927	31/7/32	1,799,139	37.9	Nil
City and International...	1926	31/8/32	1,474,107	59.7	Nil
Second American ...	1926	31/8/32			

* Exclusive of holding in Lothbury Continental Company, whose investments showed a depreciation of 64.83 per cent.

The profit and loss accounts showed a reduction in net income varying from 17.8 per cent. in the case of Capital and National to 46.9 per cent. in the case of Southern Stockholders. In all cases ordinary stock dividends have been reduced to the level or below the level of current earnings, while in the case of Second American and London and Strathclyde, whose ordinary stock earnings were negligible, dividends have been passed entirely.

	Net Income.		(Last Two Years.)		Price.	Div. Yield %.
	1930-31.	1931-32.	Earned.	Paid.		
Second Edinburgh ...	£ 53,749	36,540	14.1	7.2	12.0	7.0
Mid-European ...	107,482	69,843	8.8	4.2	6.0	4.0
London and Strathclyde	19,881	12,520	5.4	0.7	2.5	Nil
Southern Stockholders	37,452	19,879	4.9	2.7	4.0	2.5
Capital and National ...	24,042	19,754	8.0	5.8	5.0	2.5
City and International...	60,933	43,483	8.6	3.7	5.0	2.5
Second American ...	35,498	22,549	6.2	0.4	5.0	Nil

* No London quotation.

The position of the companies analysed varies considerably. Mid-European Corporation was formed in 1924 to invest funds primarily in Central Europe. At the date of the last balance sheet 81½ per cent. of the portfolio was invested in Germany and 58.35 per cent. in all Euro-

pean countries, excluding Great Britain. City and International Trust is also heavily interested in European countries, which account for about 36 per cent. of the total portfolio. The directors, however, point out that the company's interests in Central Europe, although considerable, are by no means disproportionate, having regard to the main lines of the programme laid down at the time of the company's formation. Central Europe accounts for 28 per cent. of this company's funds, but over 80 per cent. of these holdings are in Government and Corporation loans. London and Strathclyde and Southern Stockholders have suffered chiefly from the fact that they were formed in June, 1928, nearly at the apex of the boom. Both these companies publish full lists of investments. The preceding table, giving the present market prices and dividend yields, shows that in all cases the market is valuing the ordinary stocks generously both from the point of view of earnings and break-up value. It is, however, fair to point out that the position of all these trusts has been greatly improved by the rise in security values since July. For example, the directors of Capital and National Trust point out that whereas the depreciation at July 31st was 42.16 per cent., on September 30th it was only 35.3 per cent.

Electric and Musical Industries.—Quondam shareholders of the Gramophone and Columbia Graphophone companies will reflect upon the mutability of prosperity on reading the first accounts of the merger company, Electric and Musical Industries, Limited. In the year to June, 1930, the Gramophone Company declared a profit of £841,931, and the Columbia Gramophone a profit of £580,159—a total of £1,422,090. For the period from April 20, 1931, to June 30, 1932, however, the merger company disclosed a net profit from dividends and other income of only £16,115. This was reduced to £2,315 by the payment of an interim dividend for the six months ended December 31, 1931, on the 6 per cent. preference shares. Even so, the aggregate losses of the Gramophone Company and Columbia Graphophone Company and their subsidiaries have been dealt with in the accounts of the respective companies out of reserves, and have not been taken into account in arriving at the diminutive profit shown in the trading of Electric and Musical Industries. The shareholders will not have been altogether unprepared for this bad showing. In an interim report issued on November 27, 1931, the directors of Electric and Musical Industries stated that profits had been seriously affected by the financial crises in various foreign countries. Nevertheless, substantial economies in manufacture had been effected and the profit for the year ended June, 1931, of the two merged companies amounted to £160,893, a dividend of 3s. per ordinary share having been paid by the two operating companies at the end of July. The deterioration in trading conditions since the date of this report must, therefore, have been rapid. According to the directors the business of the foreign subsidiaries has been

WALL STREET.

Moody's Investors Service Ltd., acting as agents for their New York organisation, can supply immediately a complete statistical service on American Companies (up to date to the current week), company analyses for circularising, or any special service.

MOODY'S INVESTORS SERVICE LIMITED,

King William Street House,
Arthur Street, E.C.4.
Tel.: Mansion House 7685.

affected by the smaller margin of profit and by the decreased purchasing power of the public. The effect of the depression has been less marked in the sales in Great Britain, but exports from the English as well as the foreign factories have been greatly diminished by embargoes, high tariff walls, quotas, fluctuating exchanges and restrictions in the movements of currencies. Altogether the losses of the wholly-owned subsidiaries for the year ended June 30, 1932, amounted to £741,084, which had been provided for out of reserves and surpluses, but no mention is made of the losses of the partly-owned subsidiaries. Further, £2,094,155 has been transferred in the books of the subsidiaries to contingency reserves in order to provide for exceptional losses on factories closed, depreciation of investments and writing-down of plant. A comparison of the results of the merger company with pre-merger results of the operating companies follows:—

	Year to July 30, 1930.	Year to June 30, 1931.	Period April 20, 1931, to Sept. 30, 1932.
Gramophone net profits.....	841,931		16,115*
Columbia Graphophone net profits	580,159	160,893	

* Exclusive of £741,084 trading losses and £2,094,155 to meet exceptional losses, provided for out of reserves in subsidiaries' accounts.

It is a matter for regret that the company does not see fit to publish a consolidated trading account of its subsidiaries. Under the Companies Act a holding company is not required to do so, and Electric and Musical Industries has clothed its operations with still greater secrecy by converting the Gramophone and Columbia Graphophone companies into private companies whose accounts will not be available to the public at all. However, a combined balance sheet of the Gramophone and Columbia Graphophone companies is given as at June 30, 1932. This shows a liquid financial position, cash being £190,389, Government securities £1,192,206, and debtors £596,655, a total of £1,979,251, as against creditors of £1,180,235, a surplus of £799,016. This, however, shows a big decline from the surplus on June 30, 1931, which was £2,175,756. The ordinary shares of the merger company have fallen to 10s. 9d., against a maximum of 23s. 6d. earlier this year.

United Dairies.—A further advance in profits is shown in the report and balance sheet of the United Dairies for the year ended June 30, 1932. Revenue has increased by £42,778, the actual figures being £548,739 and £591,517 respectively. The dividend on the ordinary shares has been increased, and is now 12½ per cent., against 11 per cent. and 10 per cent. for the two preceding years respectively:—

	To Years ended June 30.		
	1930.	1931.	1932.
Net profit	578,489	548,739	591,517
Preference dividend.....	195,000	195,000	195,000
Ordinary { Amount	222,797	245,300	278,750
{ Earned %	15.8	16.3	17.8
{ Paid %	10	11	12.5
Written off investments, &c.	100,000	79,850	...
Investment reserve.....	...	10,000	...
Reserve for pensions	...	20,000	30,000
Reserve fund	...	50,000	80,000
Inc. or dec. in carry-forward	+692	-51,411	+7,767

The liquid assets of the company are substantially higher than last year. Cash is up from £121,002 to £175,057. Investments in British Government securities stand at £222,318, an increase of £107,514. Fixed assets total £3,435,612, against £3,290,202. A noticeable feature of the report is that while it is proposed to place £80,000 to general reserve and £30,000 to a pension fund, nothing has been written off holdings, nor has anything been added to investment reserve account. The present price of the £1 ordinary shares is 50s., which, allowing for the final dividend of 7½ per cent., gives a yield of about £5 11s. per cent., less tax.

Waring and Gillow Position.—The task of dismantling and reconstructing this once-prosperous business was carried a step farther at the statutory first meetings of creditors and shareholders last week, when resolutions were passed appointing Mr H. G. Judd, C.A., as liquidator with a committee of inspection consisting of four creditors and two shareholders. Mr E. T. A. Phillips, the Official Receiver, referred to agreements between Lord Waring and the company, and gave particulars of its subsidiary activities, including its connections with the Prince's Theatre site, the Titchfield Syndicate, the Martinez Hotel, Cannes, and the Picardy Hotel. It was stated that various subsidiary companies have been formed, the principal being Waring and Gillow (Paris), Waring and Gillow (Brussels) and Pioneer Stores. Details were offered of Lord Waring's indebtedness to the company, which was returned at £97,815 on the books at January 31, 1931. Against this debt the company held various charges, and if realisation of his properties could be effected at the values placed upon them, there would apparently be enough to enable the company to recover the whole amount outstanding. It had been agreed after discussion that the company should obtain judgment for £75,000 with the right to argue the balance. Mr Sanderson, the purchaser of the goodwill and assets of the company, attributed the failure to trade depression, but the Official Receiver was disposed to the opinion that the collapse was largely due to the depletion of the company's resources by its activities in connection with property deals in subsidiary companies, and by financing its customers and one of its directors—all of which were outside the scope of its regular trade. It was stated that the prospects of any payment to the shareholders were non-existent, and their only hope of eventual return was by way of subscription for preference shares in the new company.

Pritchard's Restaurants Deal.—In the *Economist* of October 1st last we discussed the proposed sale for cash of the ordinary and preference shares of Pritchard's Restaurants to an unknown purchaser, and the opposition which certain features of the scheme had aroused among large preference shareholders. The directors of the company have now issued another circular, in which they state that the purchase of "more than 50 per cent. of the shares" has now been completed at the agreed prices, and voting control has passed into the hands of the new owners. As a measure of the directors' achievement, this announcement is not impressive, for "more than 50 per cent. of the shares" may mean little more than the whole of the ordinary shares, whose holders would naturally be expected to accept the proffered terms with alacrity. Messrs. Grahams Rintoul, who are acting for dissenting preference shareholders, affirm that the opposition represents over 50 per cent. of the preference capital and over 30 per cent. of the issued capital. They repeat that 10s. is an inadequate price for the preference shares in view of the fact that 5s. 6d. has been obtained for the ordinary shares and that "there appears no reason why under the new management the company should not be successful." The last business in the preference shares was effected on October 18th at 11s. 3d. Preference shareholders would appear to be well advised to retain their shares and await developments. As the potential buyers have now obtained voting control, their identity might well be disclosed.

Central Argentine Railway.—Earnings for the year to June 30th last would have provided a moderate dividend for ordinary stockholders had the company not found it necessary to provide no less than £1,013,875 to meet exchange differences. Gross receipts were £209,080 higher at £1,405,739, and net receipts rose from £3,014,755 to £3,178,438. After all deductions, however, net profit stood at £925,773, compared with £1,196,078 last year. No ordinary dividend is paid, but all preference requirements have been met:—

Year to June 30.	1930.	1931.	1932.
Gross receipts	11,567,717	11,196,659	11,405,739
Working expenses	8,639,856	8,181,904	8,227,301
Net receipts	2,927,861	3,014,755	3,178,438

Reserve	Nil	Nil	200,000
Carried forward	285,230*	533,131†	542,597

* After bringing in £248,487 from certain specific reserves.

† After bringing in £90,000 from certain specific reserves.

The company continues to extend its services. Additional electrified suburban lines were opened for traffic on December 1st last. A further 63 miles on the Villa del Rosario and Forres line were opened on December 17th and on August 20th the North and South sections of this extension were joined up. The position of the four leading Argentine railways is reviewed in a leading article on page 788.

Sudan Plantations.—An excellent recovery has been made in the twelve months to June 30th. Last season's cotton crops in the Gezira and at Zeidab were "highly satisfactory," the Gezira producing 168,198 bales, against 47,403 bales in 1930-31 from virtually the same area. Spot and forward sales of the Gezira crop have been up to expectations, and more than half the Zeidab crop has been sold:—

Year to June 30.	1930.	1931.	1932.
Revenue	442,007	209,356	443,189
Expenditure	205,739	198,388	179,221
Depreciation	8,921	432,919*	41,429†
Taxes	...	65,000	...
Net profit	227,347Dr.	486,951	222,539
Brought forward	484,605	486,951	Nil
Dividend—			
Amount	225,000	Nil	Nil
Earned %	10.1	Nil	9.9
Paid %	10	Nil	Nil
Carried forward	486,951	Nil	222,539

* Including £279,935 reserve against advances to Gezira tenants, £38,540 written off Gezira 1929-30 cotton stock, and £101,649 reserve for depreciation of investments.

† Including £32,000 reserve against advances to Gezira tenants.

Stocks of cotton unsold have been valued in the accounts on a conservative basis. Government securities have been taken at the market prices obtaining on June 30th, and the appreciation of £11,187 over book cost has been utilised in writing down other investments. The Kassala cotton subsidiary secured an exceptionally good yield at 5.17 kantars per foddan. Another subsidiary, Parana Plantations, is making headway, the extension of the Sao Paulo-Parana Railway having been completed to Jatahy, on the River Tibagy. The £1 shares of Sudan Plantations are quoted at 30s., against a high level for this year of 37s., and a low level of 16s.

Oil Dividends.—Following the precedent set last year, the Shell Transport and Royal Dutch are paying no interim dividends this year, though the cash resources of the group have continued to increase. It was hoped in the market that the recent increase of 8d. per gallon in the price of petrol would enable the companies to declare

a small interim. As the advance, however, has come at the end of the peak consumption period, only one-quarter of the expected increase in receipts will be realised this year. A well-known firm of brokers, reporting on the oil situation, expresses the opinion that the additional revenue which it is reasonable to expect from the new petrol prices in Great Britain represents the following percentages on the ordinary capitalisation of the two combines:—

	1932.	1933.
	3 months.	Full Year.
	Per cent.	Per cent.
Royal Dutch.....	1	4
Shell Transport.....	1.6	6.5
Anglo-Persian	5	20

These estimates of additional revenue are conservative, since they do not take into account increases in Continental and other markets. They are based, however, on the assumption that the 3d. advance in prices will be held for one year. This, of course, is guesswork, and it may be significant that the recent advance in Mid-Continent crude oil prices in America, which followed upon the tightening up of restriction, has not been followed by the major crude oil purchasing companies. On the strength of this increase in crude oil prices, the companies on the Eastern coast of America have advanced gasoline prices, but there is no strong feeling that the advance will be held in the winter months. On the whole, a conservative view is taken of the oil outlook. A pleasant surprise was, therefore, occasioned by the announcement of the Venezuelan Oil Concessions, Limited, that an interim dividend of 5 per cent. would be paid on the preference and ordinary shares in respect of the current year. Last year no interim dividend was paid and the market is canvassing the possibility of a total dividend of 10 per cent., or 12½ per cent. for the twelve months. The company sells its crude oil to the "Shell" group on the basis of fuel oil prices ruling in America, and the recent increase in fuel oil prices may have enabled the directors to revise their estimates of revenue. The decision of Mexican Eagle and Canadian Eagle to postpone consideration of preference share dividends due on October 31st came as a disappointment to the market. The preference dividends of both companies were originally postponed (the last payment having been in May, 1931) on account of a lawsuit with the Mexican Government regarding the company's titles in the Amatlan fields. It was understood that the company has lost its appeal in this case, but that some extra-legal agreement had been arrived at with the Mexican Government to enable the company to proceed with its production activities. Nothing, however, has been announced, and it may be presumed that the matter has not yet been finally settled.

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

Industrial Profits.—During September we received 82 company reports, aggregate profits showing a decline of 15.69 per cent., compared with 26.66 per cent. in August:—

Reports.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
Published in 1931—		%
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26
November	147	— 35.59
December	157	— 68.54
1932—		(1932 compared with 1931).
January	127	— 19.65
February	211	— 6.81
March	210	— 13.37
April	244	— 13.66
May	196	— 33.30
June	235	— 21.80
July	152	— 34.31
August	69	— 26.66
September	82	— 15.69

The returns for the whole of the past quarter were discussed in our issue of October 15 (page 675). The monthly figures, given for the sake of continuity, suggest that, despite the unfavourable nature of recent results, there has been a tendency for decreases in aggregate profits to "flatten out" during the last few weeks. In view, however, of earlier disappointments, and the relatively small number of companies included in the September returns, this suggestion should be received with caution.

Wiluna.—A Western Australian Minister of Mines, on a visit to London in 1928, declared that Wiluna was "an investment, not a speculation." The subsequent price record of the shares has not entirely justified that description, writes a correspondent. Holders, however, have had some recompense for numerous setbacks as a result of a movement which has carried the £1 shares up from 6s. 6d. to 48s. 6d. in the past twelve months. The New Consolidated Gold Fields, Ltd., in December, 1930, were left to take the major part of an issue of 10 per cent. notes, repayable at 20 per cent. premium in seven years, or alternatively convertible at holder's option into ordinary shares. The auditors signed the March 31, 1931, balance sheet subject to a reservation regarding the value of the company's interest in the subsidiary operating concern. Simultaneously power troubles, unexpected ore hardness and metallurgical difficulties appeared. Finally, poor developments on the East lode carried the price down to a few shillings in August, 1931. Mr Carl Lindberg was sent to report. He revised earlier estimates of proved tonnage and development in a downward direction, but expressed confidence in the outlook. Matters have since taken on a rosier aspect. The poor development on the East lode turned out to be only a bad patch, the West lode has shown good values, plant troubles have been largely overcome, and monthly profits in Australian currency have grown to the substantial figure of £29,136 (September). On this basis, dividend prospects on the 1,000,000 £1 shares are not unpromising, since £300,000 6 per cent. notes of the operating company and £300,000 10 per cent. notes of the Wiluna Corporation are, apparently, the only prior obligations. The market has been further encouraged by rumours that sections of the property (which has recently been added to, on the strength of development work, and covers a distance along the strike of the lodes of more than two miles) may be floated off separately. The depreciation in the Australian pound has also helped results. Last month some 28,339 tons were crushed at a cost of 20s. 9d. per ton (excluding forward development redemption). This represented a total working cost, in Australian currency, of £29,283. The yield of gold was 7,969 ozs., worth £38,868 at 85s. per oz. It would seem, therefore, that but for the currency premium and the gold bonus, actual results so far would still be well on the wrong side of the 1930 official estimates of a working profit of 10s. (gold) per ton.

Western Rand Extensions.—Our mining correspondent writes:—The publication last week-end of the details of the Gold Fields' activities in this region came as somewhat of an anti-climax. The official communiqué was certainly couched in conservative terms. It intimated that the extension of the main reef series had by geophysical survey been proved forty miles beyond its present known western limit; that the payability of the extension remained to be proved; that options had been acquired by the New Consolidated Gold Fields, which was offering participations to other Kaffir finance houses; and that a company with a capital of £500,000 would be formed to carry out the initial prospecting work. Actually, the existence of gold-bearing reefs in the district has long been known, and various undertakings have tried their luck. For example, the Potchefstroom Exploration and Gold Mining Company, founded in 1889, acquired 24,000 acres freehold, and after the expenditure of its working resources sat down and awaited the results of exploration on neighbouring properties. Later the Coronation Syndicate secured the lease of farm Luipaards Vlei No. 10, adjoining the Randfontein area. Owing to the unsatisfactory results, work was suspended. Part of the ground now under option to the Gold Fields was formerly owned by the Western Rand Estates. This company put down several boreholes with varying results; it went into liquidation in 1916 owing to the exhaustion of working capital. With modern mining methods and ample resources the new company will not succumb to the difficulties which brought down its predecessors. Even should exploratory work yield only one Randfontein the outlay will be amply rewarded. It is quite conceivable that the action of the Gold Fields may have been influenced to some extent by the flattening of the reef lately shown in several Western Rand properties. It is also conceivable that the official statement may have been designed to damp down ultra-optimistic anticipations. The co-operation of numerous finance houses is a particularly satisfactory feature.

Foreign Land Companies.—A falling off is inevitable in the revenue of companies exploiting large estates overseas during periods of intense economic depression. During recent months sales of land have proved less lucrative; rents have been more difficult to collect in full and investment income has diminished. The consequences for nine typical companies are shown in the table below:—

Name of Company.	Net Profit, 1930-31.	Ord. Div.	Net Profit, 1931-32.	Ord. Div.	Present Price.	Yield.
Argentine Land & Investment (£1)	£	%	£	%	£	% d.
Argentina Northern Land (1/-)	44,604	4	40,876	4	17/6	4 11 0
Australian Agricultural (4/5)	2,413	Nil	1,664	Nil	5/-	Nil
Australian Estates & Mort. (5/-)	1,065	2 1/2	Dr. 1,904	1 1/2	3 1/2	2 6 9
Forestal Land (£1)	Dr. 54,176	Nil	Dr. 622	Nil	25 1/2	Nil
Leach's Argentine Estates (10/-)	355,527	6 1/2	Dr. 131,788	Nil	7/-	Nil
New South Wales Land (10/-)	29,671	Nil	60,057	Nil	1/-	Nil
Port Madrya (Argentina) (10/-)	6,539	8	4,610	8	11/3	7 2 3
Rio Negro (Argentina) (£1)	6,209	5	4,004	5	6/3	8 0 0
Tecka (Argentina) Land (£1)	Dr. 7,838	Nil	Dr. 5,266	Nil	8 1/2	Nil
	4,326	5	5,253	5	17/6	5 15 0

Aggregate net profits have fallen from £388,340 in 1930-31, to a debit balance of £23,006 last year. The figures, however, are heavily weighted by the Forestal Land results, which were adversely affected by the necessity of allowing a liberal sum for depreciation of tanning extracts. Five companies have paid an ordinary dividend this year, against six last year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Buenos Ayres and Pacific Railway, Buenos Ayres Western Railway, Buenos Ayres Great Southern Railway, Central Uruguay Railway of Montevideo, Anglo-South American Bank, Russian Corporation,

Raphael Tuck and Sons, and Cam and Motor Gold Mining. At the annual meeting of Cam and Motor Gold Mining Mr L. E. B. Homan said that the tonnage milled had again constituted a record, and though they had discarded the oil flotation and the blast furnace, the total extraction had been approximately 1 1/2 per cent. higher, owing to the reduced percentage of antimony in the ore stoped and the free gold in the lower level development rock. Presiding at the annual meeting of the Anglo-South American Bank, Sir Bertram Hornsby told shareholders that as a consequence of arrangements made last June, by which the bank was relieved of a demand liability for a very large sum, and new capital of £1,000,000 was put into the business by an important group of British banks, the position had been very much altered for the better. Reference is made to the speech on pages 776 and 794. Referring to the difficulties which beset the railway at the annual meeting of the Central Uruguay of Montevideo, Mr Frank Henderson observed that a very disquieting feature was the recent appearance of large swarms of locusts, which had come over from the province of Entre Rios, in Argentina. The position of the Argentine railways is considered in a leading article on page 788.

CAPITAL ISSUES.

THE authorities are reported to be insisting that every large issue of trustee or equivalent character shall be absorbed before the next appears. Only one offer, this week, has followed the Southern Railway Company's loan of last week. The borrower is the Union of South Africa, which has made an issue of 3 1/2 per cent. stock with a maximum life of forty years at a price of 96 1/2. The running yield is £3 12s. 6d. per cent. and the yield, including redemption at the latest date £3 13s. 4d. per cent. Although South Africa is among the best regarded borrowers in London, the loan, on its first announcement, obtained a somewhat perfunctory welcome. It was suggested that the borrower, taking advantage of the admitted shortage of trustee stocks in the market, had cut the rate rather fine. Some unofficial quarters were inclined to stress the irony of a situation in which the largest of the world's gold-producing countries, which had resolutely refused to abandon the gold standard, was an applicant for resources (whose acquisition would certainly not reduce its ability to remain on that standard) from a country which had abandoned it, and was suffering many of the exchange difficulties attendant upon an inconvertible currency.

Public Offers.

Union of South Africa.—Issue of £8,000,000 3 1/2 per cent. inscribed stock, 1953-73, at 96 1/2 per cent., repayable in London at par on June 1, 1973, the Government of the Union of South Africa having the option to redeem the stock, in whole or part, at par, on or after June 1, 1953, on three months' notice. Trustees may invest in this stock. The loan is raised for railways, harbours and other public works. The net public debt of the Union is £244,000,000. Imports in 1931 were £53,015,058 and exports £71,839,814, including £46,190,715 of bullion and specie.

South Metropolitan Gas Company.—Issue by tender of £850,000 4 per cent. preference stock, minimum price £101 per £100 stock. The proceeds of the issue will be utilised for the repayment of loans and for general purposes. Profits available for distribution during the past five years have been: 1927, £41,435; 1928, £353,208; 1929, £479,313; 1930, £489,571; 1931, £469,621. The net revenue remaining after paying interest on the debenture stocks for the year 1931 was more than four times the amount required to pay the interest on the preference stocks, including the present issue.

Stock Exchange "Introductions."

Meccano Limited.—Issued capital £300,000 in 100,000 7 per cent. cumulative preference shares of £1 each, and 200,000 ordinary shares of £1 each. Issued and outstanding debenture stock, £200,000. Net profits, after income tax, for the past five years, have been: 1928, £58,702; 1929, £53,887; 1930, £30,715; 1931, £32,671; 1932, £40,617.

Wanderer Consolidated Gold Mines.—Issued capital £575,000 in 550,000 £1 shares, fully paid, and 50,000 £1 shares, 10s. paid. The company was registered in England in June, 1928, to acquire and work gold mining claims in the Selukwe district of Southern Rhodesia. Working profits for the twelve months to June 30, 1932, were £60,155.

Results of Issues.

J. G. Graves, Ltd.—The Charterhouse Investment Trust, Limited, announce that letters of acceptance of tenders in respect of their recent offer for sale of 800,000 25 per cent. participating preferred ordinary shares of J. G. Graves, Limited, have been posted. Owing to the very heavy over-subscription, allotments have had to be reduced very drastically.

South Staffordshire Waterworks Company.—Higginson & Co. announce that letters of allotment and regret in connection with the issue of £200,000 ordinary stock, class "B," have been posted. Tenders at prices in excess of £157 1s. 6d. have received a full allotment and those at that price have received a 90 per cent. allotment.

Sutton District Water Company.—Tenders amounting to £500,500 were received for the issue of £80,000 five per cent. debenture stock (irredeemable) of the Sutton District Water company. The average price obtained was £130 18s. 10 1/2d. per cent. and allotments ranged from £129 12s. 6d. to £132. Allotment letters were posted on October 22nd.

Calls Due on October 31st.

The grand total of calls falling due in October, 1932, is £4,827,802, which compares with £2,397,913 which fell due in October, 1931. The following calls fall due on October 31st, 1932.

	Due Date.	Call.	Already Paid.	No. of Shares or Amount.	of Call.
Chungloong Rubber Estate (1932), 2s. shares, credited with 1s. 6d. paid, offered to shareholders of Chungloong Rubber Estate	Oct. 31	2d.	1s. 8d.	200,000	1,666
Great Marlow Water, 2% Debenture Bonds, offered at minimum of 106%	Oct. 31	50%	50% + 6% p.m.	£8,050	4,025 1/2
Pedanaulia Rubber, preference £1 shares	Oct. 31	2/6	10s.	23,800	2,975
Tonghurst Rubber Estates (1932), 2s. shares, credited with 1s. 6d. paid, offered to shareholders of Tonghurst Rubber Estates	Oct. 31	2d.	1s. 8d.	275,000	2,391
Wiggins, Teape & Co. (1929), 7% cumulative preference £1 shares, offered at 23s.	Oct. 31	9s.	11/ + 3/ p.m.	270,000	121,500

COMPANY MEETINGS, &c.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

SIR BERTRAM HORNSEY'S REVIEW.

The forty-fourth annual general meeting of the Anglo-South American Bank, Limited, was held, on the 24th instant, in London.

Sir Bertram Hornsey, C.B.E. (the chairman), in the course of his speech, said:—With one or two minor exceptions, in every country where we have branches there is some form of exchange control, of varying degree of severity. In addition to this strangulation of foreign trade, in some countries internal trade is gravely hampered by the existence of a moratorium which protects debtors against creditors—though banks generally remain liable to meet all the demands of their depositors. Moreover, in some cases discrimination against foreign creditors, either open or disguised, is not unknown. All these may be described as artificial attempts to evade or postpone the many real difficulties from which the whole world is suffering through a general fall in the price level. To that element of disturbance two others must be added: first, that until three years ago almost every country in South America was increasing its debt; and, second, that when some partial remedy might have been found in a general increase of the world's trade, exchange controls and import restrictions appear on the scene and play their disastrous part.

Compared with the previous year, the total of the balance sheet shows a very considerable reduction. This is due in part to the fact that assets amounting to £7,500,000, and liabilities for the same amount, were taken out of the accounts in virtue of the arrangement which I explained to you in June last, and in part to withdrawal of deposits in consequence of the various rumours which were in circulation a few months ago.

On the liabilities side of the balance sheet, deposits, notwithstanding the withdrawals which I have just mentioned, stand at over £25,500,000—which shows that our business holds well together. On the assets side, we have available in cash and other liquid assets £10,600,000.

PROVISION FOR DEPRECIATION AND DEBTS.

Last year the directors transferred a sum of £2,275,000 from the reserve fund to a "special reserve for depreciation of capital employed abroad and other possible losses." It then appeared that this sum would prove sufficient for the purpose. Since that time, however, conditions have deteriorated to a degree which could not have been foreseen. As soon as the branch returns for the half-year ended December 31st were available I caused a careful and independent examination of the position to be made, and it seemed from those returns that the balance of the reserve fund would have to be earmarked as further provision, but that with the removal of the nitrate accounts which formed the object of the June arrangement these two reserves would practically cover everything that could reasonably be needed. The final returns as at June 30th revealed, as much to my own disappointment as to that of anybody, that still further provisions ought in prudence to be made, which meant that though the reserves plus the allocation from this year's profits would cover what ought to be provided for depreciation of investments and for bad and doubtful debts, they would not cover the depreciation of capital employed abroad amounting to £1,414,875.

EVIDENCE OF EARNING CAPACITY.

The profit and loss account shows that even in a year such as that we have passed through the bank has been able to make a gross profit of £1,866,508. It is true that this figure makes no allowance for bad and doubtful debts, but nevertheless it does give evidence that you possess a business with earning capacity, and with possibilities of profit if abnormal bad debts can be avoided. The net profit of £465,892 has been dealt with as shown in the appropriation account. Charges show a decrease of about £28,000, but I should explain that the various measures of economy taken in the course of this last year have not yet begun to produce their full effect.

The situation with which shareholders are to-day faced cannot by any stretch of optimism be described as other than unfortunate for them, though perhaps not quite so unfortunate as the present market price of the shares would appear to indicate. As a consequence of the arrangements made last June, by which the bank was relieved of a demand liability for a very large sum and new capital of £1,000,000 was put into the business by an important group of banks, the position has been very much altered for the better, and already in these last three months we have had evidence of the good effects on the bank's standing which those arrangements have produced.

Shareholders themselves can play their part in maintaining the bank's position, by showing their own confidence in the future. Rightly or wrongly, the price at which a bank's shares are quoted

has an important effect on its credit and standing. Panic selling of shares, with the consequent fall in price, has had a very detrimental effect on your business. I know that the fear of a call has been the motive of many such sales. As to that, I can only say that your board is most anxious to avoid a call, and will make every effort to avoid it.

The report and accounts were unanimously adopted.

CAM AND MOTOR GOLD MINING COMPANY (1919) LIMITED.

SATISFACTORY POSITION AND PROSPECTS.

The ordinary general meeting of this company was held, on the 24th instant, at Winchester House, London.

Mr R. Roy Meldrum read the notice convening the meeting. Mr L. E. B. Homan (the chairman) said that the profit and loss account called for no comment beyond reference to the very satisfactory reduction in working costs to 19s. 6d., compared to 22s. the previous year and 23s. 1d. for the year before. The balance available for appropriation was £293,323. Mine development had been reduced to £89,424, so that the ore reserves of a million tons now stood in their books at less than 2s. per ton. Shareholders had received in dividends during the year £168,750, so there was a balance to carry forward of £38,342.

The feature of the year's development work had been the opening up of the various quartz reefs met within the crosscuts south from the circular shaft, on the twenty-third level Motor lode, and the proving of their existence down to the twenty-seventh level. The values exposed were high in the main, and would give satisfactory averages over the probable stoping width.

The ore reserve tonnage was 122,000 tons higher, and, even if the amount taken from the reserves each year was increased to 250,000 tons, they could see at least four clear years ahead of the mill, apart from what was below the present workings. The reduction in the value of ore reserves had as nearly as possible been met by a reduction in costs, which since June 30th showed a further reduction to 18s. a ton.

The tonnage milled had again constituted a record, and, though they had discarded the oil flotation and the blast furnace, the total extraction had been approximately 1½ per cent. higher, owing to the reduced percentage of antimony in the ore stoped and the free gold in the lower level development rock.

For the current financial year to June 30th development results at depth continued to be satisfactory; the cable published on the 18th instant had given news of a highly satisfactory nature. In the view of the directors the company's profits would continue at the present rate of about £16,000 per month, with something thrown in at the end of each half-year, and to those profits must be added at the end of each quarter the amount realised by way of premium on gold. Presuming that the premium lasted for a year or two, he would make bold to give a final forecast that the dividends would not only be maintained on their present basis, which had shown an improvement on all previous records, but that a position would be built up entitling shareholders to an even higher rate of dividend, a picture attractive enough for present purposes to all the shareholders in their great mine.

Analysing the past results of the company, the Chairman emphasised what the mine had done to support the Government of Southern Rhodesia and the country itself; and, while they had not cried out against the special taxation imposed for the current year—amounting to roughly 15 per cent. of the premium—the directors felt that a limit had been reached. They were thankful for the fact that Southern Rhodesia, following the lead of Great Britain, went off the gold standard, as that put them in a more favourable position than their neighbours, the Union of South Africa, shareholders in Rand companies enjoying only the exchange difference to note that this company was not only paying large sums to the Treasury, but was also providing a proportion of the money ex-crushing was expected to commence before the end of the year, and also in opening up a property known as the Gwangwaba Reef. The board felt that, in helping to explore new propositions, they might look for some return; but such work must always be of a speculative nature, and heavy taxation put a limit on the amount set aside for such purpose.

The report and accounts were unanimously adopted; and at an extra-ordinary general meeting a resolution providing for the reduction of the capital of the company from £750,000 in shares of £1 each to £468,750 in shares of 12s. 6d. each, and the return of 7s. 6d. per share to the shareholders, was unanimously approved.

RAPHAEL TUCK AND SONS, LIMITED.

REVIEW OF COMPANY'S ACTIVITIES.

The thirty-first annual general meeting of Raphael Tuck and Sons, Limited, was held, on the 26th instant, at Raphael House, Moorfields, London.

Mr Gustave Tuck (Chairman and Managing Director) said it would have been indeed surprising if this company, which did a world-wide business, had succeeded in evading the storms which had swept industry to an extent which he thought was unprecedented within living memory; and yet they had much to be grateful for, and, he ventured to suggest, much to give them cause for satisfaction and optimism. Whereas in distant countries overseas they had perforce felt the effects of trading restrictions, due to tariff barriers and political situations, which carried in their wake the fact that 35 nations had actually prohibited money leaving their countries, they had, so far as their home trade was concerned, almost maintained their turnover of the preceding year. This, he thought shareholders would agree, was gratifying.

CHRISTMAS AND NEW YEAR CARDS.

Referring to Christmas and New Year cards, the Chairman said that this, the oldest and most important, section of the business continued to maintain its progress, and the beautiful publications it issued were meeting with ever-growing demand.

The production of books for children was to-day an entirely different proposition from what it was when he first assumed the organisation of the company's book department. In those days children were children. Nowadays the child remained a child for nothing like as long. The company had kept this modern development well in view, and a glance at their list of children's books showed to what extent they had met this situation. Their old friends, "Tuck's Annual," now in its thirty-fifth year, and "Father Tuck's Annual for Little People," were as popular as ever, and, in their up-to-date guise, made ideal children's gifts. They had been privileged to publish four official books on the cathedrals of England—Westminster Abbey, Canterbury, York and Peterborough—and would shortly add Durham to this list. These books, each written by the appropriate and distinguished authority, and illustrated by magnificent photographs, specially taken, revealed with reverence and scholarship the historic interest and architectural beauty of the cathedrals.

CALENDAR DEPARTMENT.

A large staff of artists had again been busily engaged upon the production of the company's 750 different calendars. They had had the privilege of reproducing a portrait of Her Majesty the Queen, by A. T. Nowell, R.I.—the fine painting had a place of honour in Windsor Castle—and also excellent portraits of T.R.H. the Duke and Duchess of York, painted in his inimitable style by Philip de Laszlo. There was something distinctive and personal about a calendar. It was not merely a temporary greeting from friend to friend, but its presence on the wall or in the boudoir throughout the year was a continual reminder and token of friendship.

Having mentioned that Tuck's postcards continued to carry their share of the world's correspondence, the Chairman referred to the pictorial advertising department, and said he was glad to be able to report marked progress in this enterprising sphere of their activities. The standard of work it produced was the admiration of many of the largest advertisers in the country. The work they produced in the paperware department was unrivalled for quality and artistic excellence, and the beautiful gift boxes of doilies and serviettes.

Having dealt with the accounts and stated that it was proposed to pay a balance dividend, making 5 per cent. for the year, and to carry forward £7,480, the Chairman, in conclusion, said that the motto of Raphael Tuck had been at all times to produce the best and to give the best to the public, and from that policy they had never departed.

On the motion of the Chairman, seconded by Mr Desmond Tuck, the report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED.

VISCOUNT ST. DAVIDS ON CONDITIONS IN ARGENTINA.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 27th instant, at Winchester House, Old Broad Street, London.

The Viscount St. Davids (the chairman) said that there was no disguising the fact that they were presenting to the shareholders a very bad report. There were general conditions that affected their railway like every other Argentine railway, and there were, however, two things in which their railway had had exceptional blows. In the November of last year, firstly, there was a terrible frost in the Mendoza Province which absolutely destroyed the season's harvest of grapes; and a second factor which had adversely affected their railway, but would not affect any other railway, was the trans-continental traffic—the tourist traffic. That had been affected, first of all, by the bad conditions in the United States, as no Americans were now travelling about the world on pleasure as they used to do, and also by the great political and economic troubles in Chile. They had put tariffs against the Argentine which had made it impossible to keep the Transandine Railway open, but there were signs that that state of things might end, and, if so, they might be able to open the line.

As to traffic figures, the big decreases in the amount of lime and bricks, and also of stone and gravel carried were worth noting as indicating that no building was being done, and that the municipalities had not the money to spend on paving. Those two things explained the whole picture better than anything else to which he could call attention. As against that, there were a few good points. In good times and bad times the planting of new fruit orchards in the Cuyo Province proceeded, the manufacture of dried fruits and preserves was steadily increasing, and the olives that were planted some years ago were now just coming into bearing, and a factory for the manufacture of olive oil was to be put up. Lastly, and perhaps more important still, a certain amount of development in petroleum and asphalt was going forward; the Government was taking the matter up and making borings. He would say no more at the moment than that prospects were favourable. If oil was developed in quantity at the very end of the Pacific line under the Andes, it might very soon put a new face altogether on the picture for them.

On the question of wages, the board had been advised by cable that one section of the workmen had agreed to arrangements which should secure some economy, while negotiations with the drivers were now taking place. As to the prospects, at the present moment wheat was looking well, but it was far too early to talk about maize. They were hearing great tales of locusts in the North of the Republic, and they could only hope the locusts would not come their way. In any case, he was afraid that, as far as could be judged, the estimated gross receipts for the year were likely to be less than the gross receipts for last year.

The report and accounts were adopted.

RUSSIAN CORPORATION, LIMITED.

DIVIDEND OF FOUR PER CENT. MAINTAINED.

The eighteenth ordinary general meeting of the Russian Corporation, Limited, was held, on the 27th instant, at 25-31 Moorgate, London.

Mr Norman Holden (the chairman) said that the corporation had suffered a reduction in interest and dividends, as net revenue was £19,702, compared with £25,013 for the previous year. The directors had come to the conclusion that, as the corporation had earned 5 per cent. on the ordinary stock, the dividend of 4 per cent. that had been paid for the last three years should be maintained. Although it was very probable that a further curtailment of their revenue would result in the current year, it was felt that as consistent a record as possible should be followed.

The auditors had made a note in their report to the effect that they were unable to form an opinion of the value of the Russian securities which were shown in the balance sheet at £25,000. As to their present value it was impossible to say, but as they consisted of £402,300 State of Moscow Treasury Bills and \$2,500,000 Imperial Russian Government Treasury one-year Notes, there was always a possibility that ultimately they might receive something from the Soviet Government.

The following analysis showed how their investments were spread geographically: British Empire, 32.57 per cent.; United States of America, 9.21 per cent.; Austria and Hungary, 4.74 per cent.; Germany, 11.30 per cent.; France, 1.08 per cent.; Italy, 1.02 per cent.; Russia, 3.90 per cent.; other European countries, 12.70 per cent.; South America, 21.03 per cent.; and China and Japan, 2.45 per cent. It was impossible to forecast what the future might

bring, but prices of securities had risen considerably from their lowest points and although there were few signs yet that there was any decisive improvement in world trade, he believed that the developments during the past year pointed to the probability that economic recovery, however halting it might prove to be, had begun, and a confident although conservative expectation existed that trade would be unmistakably on the up-grade in the not too far distant future.

The report and accounts were unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

LARGE ECONOMIES EFFECTED.

Presiding at the annual meeting of this company, held on the 26th instant, Mr H. C. Allen, the chairman, said that economies in salaries and wages had been put into force, beginning at the top. The directors and the whole of the London office staff submitted willingly to an all-round reduction of 10 per cent. in their remuneration. The senior members of the staff of the railway in Argentina made a similar sacrifice. In numerous other directions economies were effected, so that the actual direct expenditure for the year showed a decrease of no less than £686,000 compared with the previous period. Against this they had to take into account contributions which they had made to the general renewal fund equal to the expenditure debited thereto during the year, so that the net decrease in working expenses amounted to £538,000.

In some quarters there has been a tendency to criticise the investment of money anywhere but within the British Empire and to attack and disparage external trade in foreign countries, however friendly. He hoped that the shareholders did not attach too much importance to such an isolated attack on British and Argentine interests. The bulk of the press of this country held broad and balanced views, and regarded with sympathy those British men and women who had taken the arts and crafts of British culture and the high standards of British commercial principles to lands outside the boundaries of the Empire. A greater amount of British capital had been invested in the Argentine than in any British Dominion, and it was the duty of the board and all other similar bodies to safeguard that capital to the best of their ability. As to the future, he said that past experience convinced him that as the world depression lifted Argentina would be one of the first countries to recover prosperity.

The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY LIMITED.

BETTER CROP PROSPECTS.

The forty-third ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 25th instant, at River Plate House, London.

Mr Follett Holt (the chairman), in moving the adoption of the report and accounts, said that the past financial year had proved to be a bad year for them in almost every direction. They were again unable to pay any dividend on the £17,000,000 of ordinary stock, which represented 54 per cent. of the total issued capital, and this was a result which no sane person either here or in the Argentine could point to with any form of satisfaction.

The traffic receipts again showed a decline, but this was more than retrieved by a further reduction in working expenses. The £45,000 thus gained was unfortunately more than swallowed up by an increase of £107,000 in loss in exchange on the funds remitted to this side, but, fortunately, other exchange differences charged to revenue were not so heavy. After having met all obligations and preference charges, the year ended with a slightly better balance to carry forward.

He thought the ordinary stockholders, although deprived, he hoped only temporarily, of their dividend, could take some measure of comfort from the fact that not only had no new charges been placed in front of them, but that prior charges had been substantially reduced during the past few years. Exchange during the year varied between 60.9 per cent. and 89.2 per cent. of its par value, the actual amount lost by the company in remitting funds reaching the high total of £304,000.

With regard to the current year, receipts so far had shown a further decline, and this had been expected, for, apart from the continued restriction of commerce, they were facing the results of a bad maize crop. Exchange, however, was now much better than at this time last year, and present prospects for the new crops were satisfactory, so that they hoped the present year would mark a turn in the fortunes of the Western Railway.

The report was unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTEVIDEO, LIMITED.

EFFECT OF LOW EXCHANGE.

Presiding at the annual meeting of this company, held on the 25th instant, Mr Frank Henderson (chairman) said that one might search in vain through the annals of the company to find conditions parallel to those which had ruled throughout the past year. They showed for the past year decreases in practically every item of traffic, but the most important and the most damaging factor which affected their business was the depreciation in the sterling value of the Uruguayan dollar. In view of the adverse balance of trade, drastic measures were taken by the Government to reduce imports, and high Customs tariffs were put upon incoming articles that were not considered of prime necessity. A rigid control of the sale of sterling and foreign currencies was exercised, and a system of rationing was also adopted. These measures, whilst hampering trade on the one hand, certainly saved the country from something very much worse. Whilst, therefore, a calamity of major magnitude was averted, the loss the company had sustained by the low exchange had had a profound effect on the year's results. The total working expenditure was less by £383,000, or 43 per cent., compared with the previous year.

Finally, he said that he could not forecast future prospects. Much depended on a recovery in world conditions and commodity prices. All he could say was that Uruguay would quickly respond to any favourable reaction. A very disquieting feature was the recent appearance of large swarms of locusts which had come over from the province of Entre Rios, in Argentina.

What they all fervently hoped for was a speedy restoration of the currency value and a freer exchange market, which in themselves would imply an improvement in trade conditions.

The report and accounts were unanimously adopted, and corresponding resolutions were also carried unanimously at meetings of the Central Uruguay Northern Extension Railway Co., Ltd., and the Central Uruguay Eastern Extension Railway, Ltd., which followed.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended October 22, 1932, amounted to £13,728,000 against ordinary expenditure of £5,781,000. After allocating £164,600 to Sinking Fund and having allowed for an increase in Exchequer Balances of £236,553 the operations for the week, as shown below, reduced the National Debt by £7,546,000 to approximately £7,885 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

(000's omitted.)			
National Savings Certificates ...	£ 150	Public Department Advances ...	£ 4,850

Messrs Samuel Montagu and Company write on October 26, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,094 on the 19th instant, showing no change as compared with the previous Wednesday. The moderate amounts of gold available in the open market during the week have been taken for the Continent. As a result of the further weakness of sterling,

the price advanced rapidly and the quotation of the 25th instant—125s. 4½d. per fine ounce—was the highest since December 9th last, the price on that day being 126s. 6d.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
October 20	121s. 10½d.	13s. 11.3d.
" 21	121s. 7d.	13s. 11.7d.
" 22	121s. 11½d.	13s. 11.2d.
" 23	122s. 11½d.	13s. 9.8d.
" 24	125s. 4½d.	13s. 6.6d.
" 25	124s. 3d.	13s. 8.1d.
Average	123s. 0.0d.	13s. 9.8d.

Gold shipments from India last week amounted to about £749,000. The s.s. "President Garfield" carries £461,000 consigned to New York and the s.s. "Carthage" £242,000 consigned to London and £46,000 to Holland.

SILVER.

The week opened quietly and prices were inclined to ease on offerings from the Continent and resales by the Indian Bazaars, 17½d. for cash and 17½d. for two months being quoted on the 22nd instant. On the 24th instant, the next working day, the renewed weakness of sterling was followed by buying from China and America, which resulted in prices advancing sharply to 18d. and 18½d. for the respective deliveries. Although there was a further slight advance of ½d. in the forward quotation yesterday, a larger upward movement was anticipated in view of the situation with regard to the exchanges; buyers, however, did not press and both prices fell ½d. to-day, mostly due to a lack of support.

The tendency is uncertain, but owing to the heavy stocks, the market finds it difficult to maintain any appreciable advance in prices.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 17th instant to mid-day on the 24th instant:—

IMPORTS.		EXPORTS.	
Australia	33,530	Hong Kong	32,400
British West Africa	21,521	British India	29,900
Germany	23,050	Poland	23,275
Japan	20,628	Belgium	13,884
Trinidad and Tobago	16,387	Germany	5,054
French Somaliland	10,000	French Possessions in India	5,500
Canada	6,159	Other countries	6,846
Salvage from s.s. "Egypt"	4,307		
Other countries	2,500		
	141,191		116,859

Quotations during the week:—

IN LONDON.		IN NEW YORK.

† Free of income tax

GLASGOW.—Shipments are maintained at the recently improved volume, and as inland demands show a seasonal expansion, washed nuts and screened coals are becoming increasingly scarce. In Fifeshire and the Lothians, particularly, supplies are eagerly taken, and some collieries have ceased operations for the time being so as to avoid exceeding the production quota, which in other areas also is proving a handicap to business. Prime splints are a firm Lanarkshire quality, but navigations are still plentiful. Shipment prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 14s. 6d.; splint best, 15s. 6d.-16s.; splint second, 14s.-14s. 6d.; navigation, 14s.-14s. 3d.; navigation second, 13s.-13s. 3d.; Hartley, 15s. 6d.; steam, 13s.; trebles, 14s. 6d.-15s.; doubles, 12s. 6d.; singles, 11s.;

SHEFFIELD.—Disappointment is felt at the continued absence of substantial orders for heavy steel castings and forgings and semi-manufactured steel. No considerable expansion can be reported, and the aggregate turnover of local industry this month is rather less than that of September and not much more than that of August—usually the quietest month of the year. There is still a fair inquiry for steels required in the newer industries of the country, these including cold-wrought steel for aeroplanes, stainless steels, permanent magnets, automobile forgings and castings,

machine knives, scissors and safety-razor blades. These departments are working nearly full time. There are also to be found a number of individual firms who are escaping the general depression, notably in tools. Unemployment shows no sign of abating. The publication of the tariff changes embodied in the Ottawa agreements have checked the transaction of new business temporarily in a good many cases. Plants supplying steel for ships, railways and collieries are extremely short of work. The cutlery and plate branches report little seasonal trade this year. Large quantities of cheap goods are in demand for the bazaar trade. Contracts for plate and cutlery for the coupon trade are below the levels of former years. Later developments indicate some improvement in the outlook. The restarting of two idle blast furnaces in Lancashire suggest an increasing demand for sheet and tinplate bars and other classes of steel. Steelmakers are showing increased interest in the market for the ferro-alloys which they use. In this department there is more inquiry and an expanding consumption. These symptoms have restored a good deal of lost confidence in the steel industry.

WORKINGTON.—The North-West Coast hematite pig-iron trade has taken a more favourable turn, demand having increased sufficiently to compel the lighting of an additional furnace at Millom, and there is a prospect of another furnace being required to be lighted next month in West Cumberland. All the iron needed for the steelworks at Barrow, where railway material has been rolled for several months on end, has been taken out of store, and at other plants, whether idle or in partial operation, stocks have also been reduced. The improvement in the position is due in some measure to the rise in local consumption, but it is also due to the expanding needs of the Midlands and other home markets. Unfortunately, however, trade with the Continent has diminished slightly and hardly any business is coming from the United States or Canada. Still, there is a considerable volume of overseas inquiry in circulation, and hopes are entertained that some of it will be translated into orders. The situation as a whole is one that enables makers to maintain their prices, and Bessemer mixed numbers are quoted this week at £3 12s. 6d. per ton at Glasgow, £4 1s. at Manchester, £4 3s. 6d. at Sheffield, and £4 4s. 6d. at Birmingham. Low-phosphorus iron is from 2s. 6d. to 5s. per ton above these figures, and malleable iron is a fair trade at £5 17s. 6d. per ton delivered at Birmingham, but ferro-manganese is dull at from £10 15s. to £11 5s. per ton home. In the steel market the tendency is likewise more favourable, and orders that have been booked are anticipated to yield three weeks' working in four of the rolling mills at Workington, which are engaged on South African sleepers and home rails, billets and slabs. Native ore, at from 16s. to 18s. per ton, is in stronger local request. What is going to the East Coast and to Scotland is only a negligible tonnage.

GLASGOW.—In this district the outlook in the iron and steel trades is brighter this week. In the heavy trades, tonnage placed by home consumers is greater than for some time past, and the impression is general that the announcement of the continuance of the import duties for a further period of two years has inspired confidence. Much satisfaction is felt that four of the West of Scotland steelmakers have secured a share of the Soviet Government's steel order. It is understood that the tonnage involved amounts to about 12,000 tons and that this will give regular employment to several thousand workers at the plants concerned for two weeks at the very least. The market for semis is not very considerable at present, but such business as is going is being secured by home makers, who in many sections are at the moment able to compete very favourably with Continental makers. Despite the increased prices of sheets for home consumers, the bookings of both black and galvanised show some increase this week, and export business also shows some advance, a pleasing feature being the demand for thin sheets for Eastern markets. It is announced this week that Messrs Denny, of Dumbarton, have secured an order from the Southern Railway Company for a passenger steamer having accommodation for some 900 passengers.

CARDIFF.—Under the influence of seasonal demand the prices of tinplates have hardened, and on the Swansea Metal Exchange on Tuesday they were quoted at from 15s. 9d. to 16s. 3d. per basis box. Exports last week totalled nearly 91,000 boxes, compared with 61,073 boxes the previous week, and 84,228 boxes in the corresponding period last year; but apparently production has increased, for stocks at Swansea now amount to 154,819 boxes, as against 138,975 boxes the previous week. Welsh steel bars are unchanged at 95s., but foreign bars have been a shade easier at round about 82s. Galvanised sheets are unaltered at £10 per ton f.o.b.

OTHER METALS.

TIN.—The market in non-ferrous metals was dull. Tin opened easy on Monday in London, improved a little on Tuesday following the decline in the gold value of sterling, but fell back on Wednesday to a level below that of the corresponding day a week ago. Sales on the London Metal Exchange were 160 tons on Monday, against 200 tons last week; 450 tons on Tuesday, against 225 tons last week; and 175 tons on Wednesday, against 650 tons last week. The New York quotation on Tuesday was 23.40 cents per lb., against 24.10 cents a week ago and 24.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £162 2s. 6d. to £152 5s., compared with £153 2s. 6d. to £153 5s. last week. Stocks in London and Liverpool at the end of last week were 31,245 tons, a decrease of 43 tons on the week.

COPPER.—There was a sharp break in copper prices in the United States, owing to the failure of demand to show any improvement. Despite the fall in the value of sterling, Wednesday's quotation in London showed a substantial decline on the week. Sales at the London Metal Exchange were 1,000 tons on Monday, against 300

tons last week; 900 tons on Tuesday, against 500 last week and; 500 tons on Wednesday, against 700 last week. Domestic spot was quoted 5½ cents per lb. New York on Tuesday, against 6½ cents a week ago and 6½ cents a month ago. Wednesday's official closing price for standard cash in London was £30 12s. 6d. to £30 13s. 9d., compared with £32 6s. 3d. to £32 8s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 25,134 tons, show an increase of 1,324 tons, and stocks of rough copper, at 4,946 tons, an increase of 940 tons.

LEAD.—Lead was in poor demand in London on Monday, but on Tuesday and Wednesday turnover was on a larger scale, and prices closed very slightly below the figure of a week ago. Sales at the London Metal Exchange were 300 tons on Monday, against 200 tons last week; 800 tons on Tuesday, against 450 tons last week; and 850 tons on Wednesday, against 800 tons last week. The New York quotation on Tuesday was 3.00 cents per lb., against 3.00 cents a week ago and 3.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £11 12s. 6d. for September shipment, compared with £11 18s. 9d. last week.

SPELTER.—Spelter, after a quiet market on Monday, encountered a better demand on Tuesday at higher prices. On Wednesday the market was slow, but the closing price stood above the figure for last week. Sales were 400 tons on Monday, against 500 a week before; 400 tons on Tuesday, against 350 the week before; and 450 tons on Wednesday, against 1,200. The New York quotation on Wednesday was 3.00 cents per lb., against 3.00 cents the week before, and 3.25 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 1s. 3d. for September shipment, against £14 18s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was again quoted at £100 per ton. Nickel rose from £240-£245 per ton to £250-£255 per ton. Quicksilver was slightly higher at £9 15s.-£9 10s. per flask, against £9 10s.-£9 17s. 6d. a week ago. Platinum was again quoted at £9 10s. per ounce, against £9 5s. per ounce last week. Foreign antimony advanced from £23-£23 10s. per ton to £24-£24 10s. per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool. —Imports for the week, October 20th to 26th (inclusive), are 42,355 bales, of which 32,955 bales are American, 3,019 Argentine, 460 Peruvian, 5,413 Egyptian, and 508 East Indian.

Manchester.—Partly owing to the settlement of the spinners' wages dispute without a stoppage of machinery the market this week has presented a rather more cheerful appearance. More determined efforts have been made in certain sections to arrange contracts and the danger of deliveries being interfered with has been removed. The inquiry in piece-goods for abroad has been extensive and although numerous offers are still on a very low basis a very fair miscellaneous business has been done. India has again purchased light bleaching descriptions, prints and fancies from day to day, and a few more transactions have been put through in dhooties for Calcutta. There has not been any general activity for China and the response to prices wired out has been rather disappointing. Some useful lots in printed and dyed goods, however, have been booked for Hong Kong and the Straits Settlements. A few more offers have been mentioned in bleached goods for Egypt and the Near East and further buying has taken place in printing and finishing styles for the Continent. Some makers have experienced a rather improved turnover in home trade fabrics. Quotations in American yarns have been generally steady and a fair turnover has taken place in coarse and medium counts. A fair trade has been put through in Egyptian spinnings.

THE WOOL TRADE.—Bradford. —The outstanding feature of the wool trade, writes our correspondent, is the influence which the raw material exerts over every other department of the industry. A good deal of criticism could be made about the running of the spinning, weaving and other machinery. There is not the activity period there is seen among Bradford combers. For a considerable period these have been extremely busy turning out merino and fine crossbred tops, and have recently experienced an improvement in the output of medium and low qualities. Looked at from this standpoint, the situation is distinctly encouraging, for there is no accumulation of merino and fine crossbred tops, and it points to a very large consumption of wool. Reports from Australia and other overseas markets also show that there is still a good demand for wool, though Bradford is not responsible for forcing the pace. A good deal of reserve has been shown by that section this season, there apparently being a determination not to overstep the mark.

To be published on Tuesday November 1

The BRITISH INDUSTRIES NUMBER

of

THE TIMES

Fully Illustrated

ON Tuesday next THE TIMES will publish a special British Industries Number. It will contain a comprehensive review of the principal industries of Great Britain. Leading authorities will discuss the present position and lines of possible future development of the industries with which they are associated. Problems arising out of the various branches of industrial activity will be fully and fairly examined in the light of present conditions.

In addition to technical articles on a wide variety of subjects there will be special contributions on Cooperation in Industry: Industry and Taxation: Application of Tariffs: Banking: Recruiting for Industry.

Among many other contributors will be:

A. L. Ayre
D. A. Bremner
Sir Edward Crowe
R. S. Dalglish
Frank Farrell
Dr. F. A. Freeth
Sir Francis Goodenough
Sir Alfred Herbert
Engineer Rear Admiral W. Scott Hill

G. H. Locock
Professor Henry Louis
A. C. Macdiarmid
Charles Mitchell
Julian Piggott
Colonel Sir Thomas Purves
Sir Josiah Stamp
Professor W. E. S. Turner
Victor Watlington
W. B. Woodhouse

so far as the initial cost of the raw material is concerned. The depreciation in sterling has had a rather disturbing effect. It is making buying abroad more difficult, having apparently stopped operations in South America, though there cannot be much doing there until the new clip begins to be offered in about a fortnight. Bradford market presents a rather slack appearance. Merino tops have been sold this week at reasonable prices, though quotations have been advanced about 1d. per lb. There is plenty of inquiry both for wool and tops, and a good deal of the interest is still on export account. Medium and low crossbred tops are rather irregular.

THE JUTE TRADE.—Dundee.—Business in the jute trade is still of a retail character and prices are not receiving much of a test. The general tendency has been in a downward direction, but during the past day or two a steadying influence has been imparted through an advance in values of raw jute. Though the forecast figures estimated a short crop, the arrivals of the fibre into Calcutta this season so far have been fairly heavy and in excess of those of last year. The value of Daisee assortment went down to £15 10s. accepted for the full group, but recovery has been made to £16 2s. 6d., with fours quoted at £15 5s., while Tossa assortment rules at £17 2s. 6d., or 7s. 6d. advance on the lowest touched last week, and fours were sold at £15 12s. 6d., now named at £16 5s. October/November. Good First Marks were offered at £18 10s., but £18 15s. is now quoted, while Lightnings have risen from £16 15s. to £17 5s. for good marks, and Hearts offered at £16, October/November. Spinners have purchased a few thousands of bales in the fear that they might miss their market. Calcutta goods were again declining steadily until this week, but the tone has again become firmer. The lowest points touched were 18s. 10d. for 10-oz. 40-in. and 15s. 6d. for 8-oz., October, and 18s. 9d. and 15s. 4d. November/December, but the prices are now 19s. 1d. and 15s. 7d. respectively for October, and 18s. 10d. and 15s. 6d. November/December. The stocks of hessians in Calcutta at the end of September were reduced to 112,627,643 yards, and stocks of sackings to 82,636,411 yards, compared with 127,279,260 yards and 123,464,944 yards respectively at the end of August. The total production of the Indian jute mills during September this year was 69,530 tons of hessian and sacking, compared with 71,692 tons during August. Jute yarns have ruled very quiet and spinners have been unable to maintain their prices. Common 8-lb. cops can be bought at 1s. 11d. and 8-lb. spools at 2s., but only in a few cases, the majority still asking 2s. and 2s. 1d.

respectively. Twist has been sold at 3½d. for 3-ply 8-lb., and sacking yarns are quiet at from 2½d. for 24-lb. warp and 3½d. for 8-lb. chains. Several sales of rove have been carried through at from £16 for 200-lb. and £19 5s. for 48-lb., but the finer yarns are now more or less nominal in the absence of business at 2s. 8d. for second quality 8-lb. Rio warp, 2s. 5d. for third and 2s. 3d. for fourth. Carpet yarns are dull at 3½d. for 14-lb. warp. Only trifling lots of jute cloth are being bought to satisfy immediate needs. There has been an improved inquiry for light weight hessians, but buyers are reluctant to purchase larger quantities. Prices rule from 2½d. for 10½-oz. 40-in. and 2½d. for 8-oz., and the medium widths can be had at these rates, but anyone with a decent order for the narrow widths would be able to obtain concessions. Linoleum hessians and heavy goods are very quiet.

THE GRAIN MARKETS.

WHEAT.—The past week's break in wheat prices was not unsuspected. It was partly the result of a renewed wave of pessimism which drove down the prices of most primary products, and partly a consequence of the realisation that there is little probability of a decrease in the "carry-over" at the end of the season. Prices gave way under heavy liquidation and on the announcement that the Canadian Government would not renew the payment of a bonus to farmers for the 1932 crop. International trade has not been on a large scale. As very little wheat is offered for export by the United States in the hope of better prices in the future, and in the absence of substantial shipments from Russia, Canada continued to dominate the export market. On Wednesday, "December" futures were quoted in Chicago at 44½ cents per bushel, against 49½ cents the week before, and 52½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. 3d. per 496 lbs., against 28s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 9d., against 27s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 27s. 6d.; Australia, ex ship, 28s. 3d., against 28s. 3d. a week ago.

WHEAT FLOUR.—The demand for flour has been slow, although quotations in exporting countries were reduced in sympathy with the decline in wheat prices. North American shipments were 119,000 sacks, compared with 143,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 25s. per 280 lbs., against 25s. last week; delivered London, 24s., at both dates. Manitoba patents, ex store, 24s. to 25s., against 23s. 6d. to 25s. 6d. Australian, ex store, 20s. 6d. to 21s. 6d., against 20s. 6d. to 21s. 6d. last week.

BARLEY.—Business in barley has been limited. "October" futures were quoted in Winnipeg on Wednesday at 26½ cents per bushel, against 25½ cents last week and 27 cents a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r. per 448 lbs., 22s. to 24s., against 22s. a week before.

OATS. Foreign oats have been in poor demand in this country, but the Continent is still absorbing the larger proportion of Argentine shipments. In Chicago, "December" futures were quoted at 15½ cents per bushel on Wednesday, against 16 cents per bushel a week before and 15½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., against 17s. 9d. a week ago; "River Plate," ex ship, 16s. 9d., against 16s. 9d.; "Chilean White," landed, 23s.-25s., against 23s.-24s. a week earlier.

MAIZE.—There has been no improvement in the demand for maize on the Continent, and Argentine exporters were obliged to accept lower prices. "December" futures in Chicago were quoted on Wednesday at 24½ cents per bushel, against 25½ cents on Wednesday of last week and 26½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 20s. 3d. last week; "Plate," ex ship, 19s., against 19s. 3d.; "Plate," December-January, 19s. 9d., against 20s. Yellow Maize, ex wharf, was quoted at £5 12s. 6d. per ton, against £5 15s. a month ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to October 22	Cwts. 357,285	Cwts. 99,688	Cwts. 128,777	Cwts. 263,144
8 weeks to October 22	1,871,516	449,411	1,036,919	2,228,577
Average price of English wheat per cwt.	s. d. 5 7	s. d. 5 9	s. d. 6 11	s. d. 9 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Week ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Oct. 15, 1932	Cwts. 360,142	Cwts. 356,237	Cwts. 69,372	s. d. 5 8	s. d. 7 11	s. d. 6 3
Oct. 22, 1932	357,285	384,157	67,487	5 7	7 9	6 3
Oct. 20, 1928	344,046	673,814	86,539	9 8	10 9	8 8
Oct. 19, 1929	263,144	624,463	79,442	9 5	10 3	7 10
Oct. 25, 1930	132,210	528,955	55,159	7 0	10 0	6 1
Oct. 24, 1931	98,451	429,907	66,381	6 1	9 0	6 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Oct. 28, 1931.	Jan. 4, 1932.	Oct. 19, 1932.	Oct. 25, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	62½	62½	48½	45½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	57½	55½	49½	44½

The visible supply of wheat in Canada, at 92,576,000 bushels, shows an increase on the week of 585,000 bushels. Supplies a year ago stood at 48,135,000 bushels.

OTHER FOODS.

SUGAR.—After a period of steadiness lasting for several months, raw-sugar values gave way substantially under the influence of heavy selling by Cuban interests, liquidations, and hedging operations. December futures were quoted in New York at 0.99 cent per lb. on Tuesday, against 1.08 cents a week before and 1.06 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 9½d. to 5s. 10d. per cwt., against 5s. 11d. to 5s. 11½d. a week before, and "March, 1933," at 6s. 0½d. to 6s. 1½d., against 6s. 2½d. to 6s. 2½d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,158	...	1,306	990	11,104	8,667
Liverpool	16,094	2,715	14,610	12,916	56,956	22,538
Total	17,252	2,715	15,916	13,906	68,060	31,205
Last week ...	15,384	6,103	15,162	15,828	66,724	42,396

COFFEE.—The New York coffee market was dull and "Brazilian" quotations declined further. On Tuesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents per lb. on the corresponding day a week ago. Tuesday's London auctions were characterised by a steady demand, but prices were easier in sympathy with American quotations. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 24 bags; exported, nil; stocks, 6,677 bags, against 2,891 bags a year ago. Central American, landed, 2,507 packages; delivered for home consumption, 2,394 packages; exported, 2,000 packages; stocks, 65,344 packages, against 73,767 last year. Other kinds: Landed, 6,591 packages; delivered for home consumption, 2,339 packages; exported, 376 packages; stocks, 60,350 packages, against 56,048 last year.

COCOA.—Cocoa prices declined sharply during the past week, thus losing almost the whole of its advance during recent months. December futures were quoted at 3.99 cents in New York on Tuesday, against 4.20 cents a week ago and 4.44 a month ago. Accra, November-January, at 26s. 4½d. c.i.f. Continent, shows a fall of 4½d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 1,272 bags; delivered for home consumption, 4,632 bags; exported, 347 bags; stocks, 124,401 bags, against 162,409 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 60,695 packages of Indian and 30,691 packages of Ceylon tea. Keen competition at Monday's and at Tuesday's auctions drove up prices of most grades of tea, but at Wednesday's "Indian" sales the market was easier. The reason for the recent advance in tea prices is to be found in the renewed effort of a section of British and Dutch growers to agree on a restriction scheme. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.
Oct. 22, 1931	d. 12-91	d. 9-99	d. 18-15	d. 8-87	d. 7-41	d. 6-73
Sept. 23, 1932	10-75	6-28	10-05	4-74	4-09	Nil
Oct. 6, "	10-25	6-50	10-45	5-22	4-34	5-69
" 13, "	10-57	6-74	11-07	5-78	3-91	5-38
" 20, "	10-82	7-37	11-58	6-10	5-09	6-06

RICE.—The market in rice has been quiet and easier. The spot price was 10s. per cwt., against 10s. 3d. per cwt. a week ago, while the forward quotations at 7s. 10½d. per cwt. show no change. Movements in London during the past week were as follows: Landed, 553 tons; delivered, 243 tons; stock, 2,508 tons, against 1,253 tons a year ago.

POTATOES.—Although supplies of potatoes at the principal markets were ample, prices hardened a little. At the London Borough Market, "King Edward," light soil, were quoted at 6s. to 6s. 6d. per cwt., against 5s. 6d. to 6s. a week ago.

SPICES.—Pepper was in quiet demand at unchanged prices. Spot pepper, "Black Singapore," was again quoted at 6½d. per lb. on Wednesday. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 60 tons; delivered, 4 tons; stock, 317 tons, against 402 a year ago. White, landed, 75 tons; delivered, 68 tons; stock, 593 tons, against 424 a year ago.

MEAT.—There was a substantial decline in beef prices, particularly of Argentine meat, at the Smithfield market. Mutton failed to recover. Wednesday's quotation for Argentine beef, chilled

hindquarters, was 3s. to 3s. 10d. per 8 lbs., as compared with 3s. 4d. to 4s. 2d. last week. New Zealand frozen mutton was 2s. 2d. to 2s. 8d. per 8 lbs., against 2s. 2d. to 2s. 8d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,834 tons, against 9,926 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.2 per cent. of the beef supplies, against 83.1 a year ago. Imported mutton, mainly New Zealand, formed 69.2 per cent. of the total supply of mutton and lamb, against 73.0 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions prevail, and on the part of consumers there is little or no disposition to do business beyond covering immediate requirements. In regard to linseed, interest centres on the Ottawa proposal to impose a 10 per cent. duty, and the demand of crushers that if this is carried into effect there must be an increase in the import duty of 10 per cent. now levied on foreign linseed oil and cakes. In anticipation of the latter, oil made on the Continent is pressing on the market, and large quantities have already come to hand. Linseed is quoted higher, following the depreciation in sterling, but is still easy, and in very poor demand. Current value of Plate affloat and shipment to December is around £8 12s. 6d., while new crop, January-February, is quoted somewhat lower. Good arrivals and moderate shipments have reduced the quantity affloat for Europe to 187,700 tons (including 6,600 tons from India), which is 10,500 tons less than last week, and compares with 155,000 tons a year ago. Cottonseed is neglected and easy, new Black Egyptian for November loading being quoted £6 12s. 6d., with later positions at a discount. Trade in vegetable oils is slow, and consumers hesitant or indifferent. Raw linseed oil for October-December delivery has declined to £16 per ton, naked, ex Hull mill, but demand is still small. Cotton oil is very quiet, and crude Egyptian offers at £22 and refined at £24 ex Hull. Other seed oils are about unchanged and quiet. Oilcakes and meal are in smaller demand than usual at this time of the year, owing presumably to the open weather and the reduced requirements of cattle rearers.

HIDE, LEATHER AND ALLIED TRADES.—Further reductions in the price of hides from domestic slaughtered cattle were recorded at the auctions held this week. At Manchester several weights in both the clear and warbled classes were from ½d. to ¾d. per lb. cheaper, while calfskins were generally steady at the previous week's figures. At the Leeds sales practically all weights and classes of ox and heifers, cows and bulls made ½d. per lb. less money, in addition to which there was a slightly easier tendency in regard to calfskins. The market for sheepskins also shows signs of weakening, prices being from 1d. to 2d. per skin lower. Although the tone of the foreign hide market has perhaps been a little better as compared with the last few weeks, values have again moved in favour of purchasers for many descriptions. For instance, wet-salted Argentine ox have been dealt in at a fraction under 4d., while Montevideo ox have changed hands at 4½d. Dry hides from the same origin also show a downward trend, as B. A. Americanos are now quoted at 5½d., Inservibles at 3½d., and Montevideo Americanos at 6½d. In the African market dry salted Capes have been offered at 5½d. and 4½d. for firsts and seconds, while dries are to be obtained at 6½d. and 5½d. Moderate business has been done in Mombasas, which have been selling at up to 5d. for heavies. Turnover in connection with sole leather has been rather less this week. Demand for English and wet-salted bends has been mostly for the medium weights and in these fair business has been done. Light dry hide bends have also received attention, in addition to which there has been a moderate call for rough shoulders and pinned bellies. Glacé kid and calf leather continue to be the most asked-for lines in the upper leather section of the market, but at the same time a regular call is experienced for reptile skins, and to a lesser degree for patent leather. Heavier types of upper stock remain a rather poor market.

THE TIMBER TRADE.—This year's importation of sawn softwoods is a trifle larger in volume than that of last year to date, whilst present stocks in the country are more moderate than has been the case for long past. But against that this year's consumption is smaller, principally on account of the exceptionally bad state of the building trade. The spot market for soft timbers has been fitful over the past month. Prices, which have been falling throughout the year, should have advanced weeks ago; and although the tone has been better of recent weeks, trade is disappointing to all sellers. At this time of year there is usually much to think of as regards buying for next year's delivery—especially what the Russian "cut" for the United Kingdom will amount to, who will handle it here,

and the opening prices for Russian first-open-water goods, which affect quotations for other European timber. But with the National Government's notice of the ending of the trade agreement with Russia at the end of the statutory six months it is useless to think of such things. American hardwoods have been firmer for spot and forward business over the past month. That is no occasion for surprise; the demand is increasing in the U.S.A., dry stocks have decreased, and United Kingdom imports are declining. Japanese shippers are booked up with United Kingdom orders extending well into next year; they have not only the advantage of the U.S.A. exporters by being off the gold standard, but the yen is lower than sterling. Cheap European oak is being offered to British buyers, so that, and especially whilst the pound is so low compared with the dollar, the imports of States lumber are likely to rule low until conditions get nearer to normal. Of course, neither Europe nor Japan can supply the United Kingdom with anything like the quantities received from the States, but generally with the quiet demand here, and the competitive forces at work amongst the world's shippers, sufficient sawn hardwoods are likely to come forward at moderate rates. The upward movement in mahogany log imports from British Empire sources is still maintained, but the stocks in the country are not in sufficient volume to meet the increasing demand that is likely to arise with the gradual "come back" of mahogany (British) furniture, to the disadvantage of foreign oak. Teak and the choice woods from India are almost neglected, as well as the bulk of the fancy woods, whatever the source of origin. Of the Canadian shipments to the United Kingdom this year, the hardwoods have increased, but the softwoods, even with the 10 per cent. preference, have made but little progress in import compared with two years ago, last year's Canadian shipments to the United Kingdom being exceptionally low. Plywood is making a record year for imports—where it all goes to in these difficult times is a problem. But the bulk of it is mainly European, including much Russian material, hence business for futures cannot be healthy until the plywood trade—as the softwood trade—knows actually "the best" or "the worst," according to the respective viewpoints of its members.

RUBBER.—The market in rubber has been quiet but steady. In New York, Wednesday's spot price for rubber, at 3½ cents per lb.,

shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for April-June, 1933, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,299 tons; delivered, 2,118 tons; stocks at the end of last week, at 1,007,471 tons, show a decrease of 815 tons as compared with the preceding week.

THE MONEY MARKET.

TREASURY bill maturities last week and dividend payments on November 1st have made money extremely comfortable, and practically no new money has had to be borrowed this week from the clearing banks. Over the week-end surplus balances were available at rates running down to ¼ per cent., and although the absence of Treasury

bill maturities on Monday and Tuesday made money a shade more usable early in the week, the big Funding Loan and 5 per cent. Conversion Loan dividend payments on the latter day quickly made money again very easy, with $\frac{1}{2}$ per cent. the general rate. Last week's Treasury bill issue again came as a disappointment to the market. All the £50.0 millions of bills on offer were allotted, but even so the average tender rate at 13s. 2.84d. per cent. showed a slight decline below the previous week's rate of 13s. 7.36d. per cent. Early this week hot Treasury bills were quoted at $\frac{1}{2}$ per cent., but the announcement of the new Conversion Loan offer was the cause of a gradual weakening of the rate, so that on Wednesday the clearing banks were able to buy a few bills at $\frac{1}{8}$ per cent., while on Thursday purchases by a bank were reported at $\frac{1}{4}$ per cent., while elsewhere sales at as low as $\frac{1}{8}$ per cent. were mentioned. Three months' bank bills were quoted on Thursday at $\frac{1}{8}$ to $\frac{1}{4}$ per cent., and standstills at 1-2 per cent.

Market rate (standstill bills)	1-2	$\frac{1}{2}$ -2	1-2	1-2	...

This week's Bank return records several wide changes. In the Issue Department, the Bank's gold holdings are unchanged, but end-of-the-month currency requirements are responsible for an expansion of £3.0 millions in the note circulation. The Banking Department's Reserve has consequently fallen by the same amount. Other big changes in the Banking Department's assets and liabilities are an increase of £11.9 millions in Government Securities, a decrease of £18.4 millions in Public Deposits and an increase of £25.3 millions in Bankers' Deposits. The last item now stands at the very high figure of £102.7 millions. The total outside liabilities of the Banking Department have increased by £8.2 millions, so that, allowing for the contraction of £3.0 millions in the Reserve, the Proportion has fallen from 41.8 to 37.3 per cent.

Up to a point it is easy to see what has happened. The payment of the Funding Loan and 5 per cent. Conversion Loan dividends has forced the Government to draw upon its funds held on deposit at the Bank to the extent of £18.4 millions, and also to borrow upon Ways and Means, this last operation helping to explain the increase of £11.9 millions in Government Securities. Conversely, the encashment of the dividend warrants by recipients who are customers of the clearing banks has added substantially to Bankers' Deposits. The total dividend payments, however, only amount to about £15 millions, while the withdrawals from Public Deposits and additions to Government Securities together add up to £30 millions. There is thus a discrepancy of £15 millions, but this is probably explained by Treasury bill maturities towards the end of last week and by various Government disbursements, including some which customarily occur at the end of the month. The fact that these movements have left Bankers' Deposits at the very high figure of £102.7 millions means that the market can easily lose the application money on the Conversion Loan issue without feeling any stringency, especially as the prospectus provides that in case of partial allotment the balance of the application money will at once be refunded by cheque.

The foreign exchange market was less busy this week owing to holidays on the Continent, but fluctuations were at times frequent and wide, the general tendency, however, being in favour of sterling. The New York rate was especially erratic, and moved from 3.28 $\frac{1}{2}$ to 3.30, after

touching 3.26 and 3.33 $\frac{1}{2}$. Montreal lost two points at 3.64. Paris, after 84, went to 83 $\frac{3}{4}$, against 83 $\frac{1}{2}$. Brussels at one time touched 24.00, but closed at 23.62, a loss of two points on the week. Milan was $\frac{1}{8}$ cheaper at 64 $\frac{1}{2}$ and Madrid $\frac{1}{2}$ at 40 $\frac{1}{2}$. Amsterdam lost two points at 8.18, Berlin six at 13.56 and Switzerland five at 17.05. The Scandinavian currencies were variable, Stockholm gaining twelve points at 19.06, Oslo losing thirteen at 19.73 and Copenhagen only one at 19.21. The South American currencies remain at nominal quotations, Rio being $\frac{1}{2}$ d. weaker at 5 $\frac{1}{2}$ d. offered, Buenos Aires gaining $\frac{1}{2}$ d. at 35 $\frac{1}{2}$ d., and Montevideo being unchanged at 29d. In the Far East the rupee was steady at 1s. 6 $\frac{3}{4}$ d., but the yen weakened by a penny to 1s. 3 $\frac{3}{4}$ d. Batavia fell away from 8.10 to 8.22. In the forward market dollars were more on offer at $\frac{1}{2}$ cent and $\frac{3}{4}$ cent discount. Paris went from 4 and 9 centimes premium to one and three centimes discount. Brussels was less in demand at wider discounts of 4 and 12 centimes. One month's Milan was unchanged at $\frac{1}{8}$ lira discount, but was $\frac{1}{8}$ weaker at $\frac{1}{4}$ lira discount for three months. Madrid moved similarly, being unchanged for one month's delivery and weaker by $\frac{1}{8}$ at $\frac{1}{4}$ peseta discount for three. Amsterdam remained at $\frac{1}{2}$ cent premium for one month, but weakened by $\frac{1}{2}$ to $\frac{1}{4}$ cent premium for three months. Switzerland was weaker at 1 and 2 $\frac{1}{2}$ centimes premium. The silver market reacted chiefly to the movements of sterling, business being small. Cash was $\frac{1}{2}$ d. cheaper at 18 $\frac{1}{2}$ d. and forward unchanged at 18 $\frac{3}{4}$ d. The China silver exchanges remained at last week's levels, Hong Kong being quoted at 1s. 4 $\frac{1}{2}$ d. and Shanghai at 1s. 9 $\frac{1}{2}$ d.

With regard to the prospects of sterling, it is known that when the pound first broke a few weeks ago, there was an immediate rush by importers and others who needed dollars and other currencies towards the end of the year to cover their requirements forward; and the view is expressed that, as a result, most of this autumn's purchases of exchange have been compressed into the past few weeks. It must also be remembered that as banks and other sellers of forward exchange immediately cover themselves by buying spot, the impact of forward purchases falls on the exchange rate at the time when the deal is made and not at the time of settlement. It may, therefore, be the case that the worst of the seasonal pressure upon the pound is now over. At the same time foreign advices are to the effect that Paris expects a further fall in the pound, while Amsterdam is looking for a rise, and with these two centres pulling in opposite directions, further fluctuations may well occur. This week it is reported that the control in London was buying dollars at \$3.33 and reselling when the rate fell to \$3.30, though some of the resales were made for francs. It must not be inferred from the control's operations that any attempt is being made to peg the pound at the level indicated by the above rates.

Money rates in New York remain unchanged, with call loans quoted at 1 per cent., and 90-day bankers' acceptances at $\frac{1}{2}$ per cent. Gold movements this week were very limited. Imports amount to \$2.2 millions, of which \$1.5 millions were from Canada and practically the whole of the balance from China. Releases from foreign earmark were only \$1.4 millions, as compared with \$25.9 millions the week before. The National City Bank has just issued its calculations of industrial profits for the third quarter of the year. Reports of 205 companies show an aggregate loss of \$14.0 millions, compared with profits of \$90.0 millions for the third quarter of 1931. The figures for the first nine months of each year were profits of \$364 millions for 1931 and only \$18 millions for the current year.

With this issue of the "Economist" we publish an abridged version of the Lytton Report on Manchuria. Our supplement will be obtainable in pamphlet form from the usual booksellers on Monday, price 1s., or from the Publisher of the "Economist," 8 Boulevard Street, E.C.4.

THE PLAN OF CAMPAIGN.

THE task of preparing for the World Economic Conference has begun. The public will not be able to follow the course of the discussions of the Preparatory Committee which met this week, for the meetings are quite properly to be held in private, and we must therefore wait until the Committee's report is published before we can hope to judge of the prospects of the Conference itself. One point, however, has already emerged, namely, that the expectations of those who thought that this Committee could draw up an agenda in a few days, and thus enable the Conference to meet to put the world to rights before the end of the year or early in January, will certainly be disappointed. According to our correspondent in Geneva, it is expected that the present session will last three weeks, and that the Committee itself will adjourn until January, when it will put its report into shape. This, of course, means that the full Conference cannot be held before the spring.

The delay is unfortunate, for though there are a few small signs of a reassuring description in the economic outlook—for example, the check to the increase in unemployment in this country—the depression continues throughout the world on an appalling scale. Three great countries alone have between them over 20 millions—representing probably a population of 80 millions—in idleness. The indices of production in a number of countries show a curtailment of industrial activity of one-third; while the shrinkage of international trade, the figures of which we have frequently given, has resulted in the laying up of some 13 or 14 million tons of shipping, or rather more than the whole tonnage sunk during four-and-a-half years of war. Even of the ships that remain at sea a large proportion are half empty, and at the present rate the shipbuilding industry will soon be closed down altogether.

Nevertheless, the delay in the summoning of the World Conference is inevitable; it would be a mistake for it to assemble before conditions are ripe for co-operative action. The situation to-day in this respect does not differ very much from that which confronted the Wiggan Committee which met in Basle in August, 1931. That Committee was asked to inquire into the credit needs of Germany and the possibility of converting a portion of the large volume of her short-term credits into long-term credits, in the hope of staying the crisis. The Committee agreed that, in the general interest, as well as in that of Germany, a conversion of this kind was necessary. But the process could not begin until two conditions were satisfied. The first was that, until the political risk involved could be removed, there could be no assurance of continued and peaceful economic progress; the second was that the balance of Germany's international payments, swollen as they were by the great reparations charge, should be reduced to manageable proportions. These two problems have not yet been dealt with for the world as a whole, and until the politicians have done their part, an economic solution cannot be effectively adopted.

This means that the grave crisis of the world must be tackled in accordance with a carefully timed plan. The first item on the list is political appeasement. So long as a serious political risk continues, credits will not flow freely; so long as there is danger of war, nations will tend to hoard gold, instead of using it strictly in accordance with its proper function as the base of an international monetary system; so long as the nations think that they require war industries, they will hesitate to move in the direction of greater economic interdependence; and so long as the business world sees that Governments still envisage the possibility of war, there will be no confidence in a world revival, and that revival will, therefore, not take place. Finally, international strain is often a cause of internal political unrest, as has been the case recently in Germany; and this, in its turn, is fatal to recovery. The Disarmament Conference, therefore, with its associated problem of the recognition of Germany's equality of status—the latest phase of which is dealt with in the succeeding article—comes at the head of the agenda.

Next comes the question of the political debts. It would be idle at the moment to consider what form the discussions that must follow the Presidential election will take; but that the matter will be raised there can be no doubt, not merely because a failure to secure some revision of these debts would hold up, perhaps indefinitely, the ratification of the Lausanne Agreement on reparations, but chiefly because of the disturbing effects which they have had and will continue to have in increasing measure on the economic situation. We gave last week some figures illustrating the case of Great Britain the enormously increased burden of the payments involved and the difficulty of their transfer. The figures showed that whereas the annuity paid in 1923 represented a value equivalent to six months' exports of Britain to America, the annuity payable this year represents nearly four years' exports at the present rate. We may supplement these figures by considering the payment due from Britain in December. The half-year's interest plus principal amounts, at the current rate of exchange, to some £30 millions. In the last six months for which statistics are available we purchased imports from the United States worth nearly £44 millions, a volume of importation which makes us by far the largest customer of the United States. Our balance of payments with America is already heavily weighted against us, for against this importation we only sold to the United States British goods valued at £8 $\frac{1}{2}$ millions. This left an adverse balance of £35 millions to be liquidated by indirect trade through other countries, by the earnings of British shipping or by other invisible items. The payment of the sum due in December would approximately double this adverse balance, and there is nothing whatever in the statistics of our exports generally, or in the state of our shipping or other British activities to suggest where resources in foreign currency can be earned by us.

In any case it is obvious that, if the payment is made, it must be taken from our gold reserve or from our reserve of foreign currencies. If these are used to pay America, it will *pro tanto* diminish our resources for controlling the movements of sterling and delay the date of its stabilisation. This is one of many reasons for saying that a revision of the debt payment will be in the interests of the United States no less than that of the rest of the world. No plan of reconstruction can be launched till this matter is settled. But we have mentioned this problem as second, not first, on the agenda for the reason that, as we pointed out last week, it is evident that the American taxpayer will be more likely to take a broad view of the problem if at the same time he sees some relief to the American Budget through a reduction of armaments.

It is only when these two matters are out of the way that we can hope to get down to the problems of the World Economic Conference. The alignment of forces at that Conference is already apparent from the opening proceedings of the Preparatory Committee. As was to be expected, the first response to the suggestion that obstacles to international trade should be removed has been the demand that sterling should first be stabilised—which means, in effect, that it should be re-linked to gold.

We are not among those who have ever minimised the disturbance to the world of our departure from gold or the unsettling effect of uncertainty as to the future of sterling. It is true that we have suffered less from the last phases of the depression than some other countries; but there can be no doubt that our departure from gold, and still more the erection of our tariff system, have created new difficulties for other nations and plunged them farther into depression, and by so doing have increased our own difficulties. The position is very well revealed in the situation of our international payments account. The falling pound, together with the import duties, has greatly reduced our imports. But, as we foresaw a year ago, this has by no means corrected our adverse balance,

for though our exports have fallen rather less than our imports, our shipping earnings and other invisibles have undoubtedly slumped heavily through the growing difficulties of our customers and the shrinkage of trade. This does not mean that the pound sterling is now, or has ever been, a deficit currency *vis-à-vis* gold countries; for much of our adverse balance is in relation to countries such as Australia, which are either linked to sterling or are, at all events, detached from gold; and the current account between sterling and gold has therefore to be calculated on a much wider basis than that of British trade alone. The figures of our own trading account, however, serve to illustrate the fact that we cannot change the basis of trade without ourselves feeling very severe reactions.

But, however advantageous it might be to world trade if the pound was stabilised, we cannot undertake the responsibility of maintaining any parity with gold, even though disarmament and a revision of debts were achieved, until certain other conditions are realised. The chief of these on the monetary side are—that an upward movement of wholesale prices, measured in gold, should be at least under way, and an understanding reached that the monetary policy of the chief countries of the world shall be such as to permit a certain measure of reflation of prices; that, whether by the process of trade, or by lending or by their use in part as an international reserve, the excessive accumulations of the world's gold in a few countries must become more generally available; that there must be sufficient common action in the monetary policy of the different countries of the world to ensure that future movements in the world's monetary reserves shall correct the balance of payments by influencing the price level in different countries and not merely sterilise these reserves in one or two countries; and, finally, that the movements of short-term money between country and country must be much more fully revealed by means of adequate statistics than in the past, so that, if necessary, action may be taken before excessive credits become a menace to the whole system.

Even these conditions, however, will not suffice unless a reasonable freedom in the movement of goods is assured. This can only be brought about by the rapid abolition of crisis measures of restriction and control and by a much more liberal commercial policy than has obtained in the last decade. We shall have other opportunities of considering the way in which this last condition can be achieved. The correspondence published in the *Economist* last week showed a rather radical divergence between the policy of the *Economist* and that of the Government. It is, however, pertinent to observe that though a decisive rôle, in our opinion, could be played by Great Britain in initiating a new commercial policy, the course which we shall in fact pursue will unquestionably be influenced to a very large extent, by the attitude of foreign countries. It is true that our tariff policy has blocked their access to the greatest international market in the world; but whether this process is carried further or is relaxed will in the long run be determined by British opinion which, in turn, will be greatly influenced by the trend abroad. For this reason we welcome the statement recently made by the French Minister of Commerce, who has indicated this week his intention to bring about a new reorientation of French fiscal policy. The introduction of quotas by France last year, he told the Chamber, may have been necessary, but they have inevitably caused reprisals, from which it may be assumed that in his view France is losing more from a system which is "petrifying international trade" than she is gaining. But M. Durand went further and said that France is ready to adopt a more moderate tariff policy towards those countries which are prepared to treat her in a similar manner. This tendency is in line with the activities of the Union of Exporting Industries, noted in a later column. Such tendencies suggest that the lessons of experience are being learned; if the postponement of the World Conference enables them to gather strength the delay will be worth while, for it will enable opinion to crystallise, to become vocal and to influence Governments, so that the reconstruction of the world's economic life may yet be based on sure foundations.

THE HERRIOT PLAN.

M. HERRIOT's much-canvassed project for bringing about a reduction of armaments was presented to the French Chamber by the Prime Minister himself on the afternoon of Friday, October 28th; and in the small hours of last Saturday morning it received the approbation of the Chamber by a vote of 425 to 25. By the time the present issue of the *Economist* is in our readers' hands the Herriot Plan will probably have been expounded—at least in broad outline—by the French Minister of War, M. Paul Boncour, to the Disarmament Conference at Geneva. At present, we can only judge the proposals in the light of the reports of M. Herriot's speech in the Chamber. Taking these reports at their face value, we have the impression that the Herriot Plan seems likely to prove to be by far the most important step which any French Government has yet taken towards bringing about a really substantial measure of disarmament. We sincerely trust that this impression will be confirmed and strengthened, rather than impaired, when the full text is available for study. But, in this vital matter of disarmament, there is so many a slip between the cup and the lip that we cannot altogether dismiss the unpleasant possibility that optimism may be damped when fuller details of the Plan are known. With this caveat, we may now embark on the unusually pleasant task of enumerating the promising points which, on M. Herriot's showing, the Herriot Plan presents.

One supremely important fact seems certain. At last we have a French Government in office which is not simply taking its stand on the legal basis of the sanctity of the peace treaties. And this Government, in this new stand, has an overwhelming parliamentary majority behind it. The proposal to bring Germany back from a long-term professional army to a short-term conscript army basis is perhaps the most conspicuous point in which the Herriot Plan involves a modification of the Treaty of Versailles. M. Franklin Bouillon, the leader of the reactionary opposition to the Government in the Chamber, proposed an amendment to the effect that "all the stipulations of the peace treaties must be respected." The amendment was thrown out. This incident points to a psychological change in French political circles which is surely of profound importance.

Equally interesting are the grounds on which, in the course of the debate, M. Herriot defended his policy. He replied to M. Franklin Bouillon that, if France and her allies relied on force to defend the treaties, Germany and her friends could resort to force in their turn. The French could not be sure, he added, after the lessons of the late war, that the balance of force would always be in their own favour. It seemed to him that the greatest possible danger for France would be to find herself isolated in face of a free Germany, and this was why his reply to the new threat [from the German side] was a new effort to organise peace. If the Disarmament Conference were to fail, the French Prime Minister asked the French Chamber, could France compete in armaments against Germany, with her population and her industry?

The motives of policy which have thus been proclaimed by M. Herriot, together with the Chamber's vote, are evidence that, in putting forward the Herriot Plan, France is making a vigorous attempt to find the way to a solution of the disarmament problem. This conclusion is borne out by the terms of the Plan itself, as far as these are precisely known at the time of writing.

The essential features of the Plan seem to be the following. In the first place, France still adheres to her thesis that a reduction of French armaments can only be offered in exchange for a proportionate increase in French security—in the French sense of the term. On the other hand, France is not this time making any demands for additional security which are bound, *a priori*, to be rejected. There is, indeed, to be a new treaty under which the contracting parties will be bound to come to one another's assistance, with their armed forces, in case any one of them is a victim of aggression. But this new treaty is to be confined to the Continental countries of Europe. Great Britain is not to be asked to enter into any commitments

of this kind beyond those which she has already undertaken in the Covenant of the League and the Locarno Pact. Again, the United States would simply be asked "to give the guarantees of security which they themselves have suggested." This apparently refers to Mr Stimson's statement of last August, in which he suggested that the status of neutrality was now obsolete. The French idea seems to be that, if and when a case of alleged aggression arises, the United States Government should be prepared to enter into consultation with the other parties and to go so far towards determining the aggressor as to intimate that it will not insist upon neutral rights if the other parties decide to treat such-and-such a country as the aggressor and to take coercive measures for bringing that party to book. The French do not expect the United States herself to join in such coercion, but they do expect that a waiving of neutral rights on the United States' part will set Great Britain free, without fear of American complications, to bring into action her power of blockade in implementation of her undertakings under the Locarno Pact and the League Covenant.

The Continental European States will be required to implement the new Continental pact of regional assistance by maintaining expeditionary forces, powerfully equipped with offensive weapons, for action against an aggressor. These striking forces are to form a combined international army for the suppression of aggression, under the direction of an international general staff; and they are only to be called out when the machinery of the collective system of security brings them into play. They are not to be employed by the nations providing them on these nations' own initiative as instruments of national policy.

Continental national armies, at the disposal of the national governments, are to be purely for the purpose of national defence and are to be so trained and equipped that they will be unsuitable for offensive use. These are to be short-service conscript armies, without offensive equipment. Their numerical strengths are not to be automatically in proportion to population, but are to be based on a calculation of the geographical position and defensive needs of each Power. Presumably this means that France is to have at least as big a national defensive army as Germany, though it is arguable that Germany's geographical position is more dangerously exposed than that of France.

As for Great Britain and the United States, they are not asked to substitute conscript armies for their existing professional armies, and they are not asked to contribute contingents to the international army, though it is hoped that Great Britain may voluntarily offer her Air Force for this service.

Countries possessing colonies are to be allowed to retain adequate colonial armies in addition to their home defence armies and their contingents in the collective army. Otherwise, all professional armies (e.g., the Reichswehr) and private armies (e.g., the Stahlhelm or the Fascist Militia)

on the Continent are to be disbanded except in so far as they may be incorporated in one or other of the two legitimate forces.

All States members of the League will be asked to honour their obligations under Article 16 of the Covenant, and to accept compulsory arbitration. There is to be a compulsory international control over all armaments; and to this all countries are to be subject without exception. The German claim to equality of military status is to be met by placing the German national defence army on the same footing of short-term conscription as all the other Continental armies of this class, and by allowing Germany to contribute a contingent to the international striking force.

On the face of it, this Herriot Plan is sincere and realistic. It refrains from asking the impossible of England and the United States; it gives Germany the essence of what she has demanded; and it opens the way for a really substantial measure of disarmament which ought to have beneficent psychological, political and economic effects. But before we can venture to give the Herriot Plan our blessing outright, we must perforce await the answer to certain pertinent questions. In the first place, what is to be the ratio between the national defence force and the national contingent of the collective striking force? Unless the striking force is to be kept down to a mere tithe of the defence force, and unless the total strength of the two forces in the aggregate is to be substantially less than the total strengths of existing national forces, then the proposed military reorganisation will—as a measure of disarmament—be illusory. In the second place, what is to be the basis of compulsory arbitration? Unless Article 19 of the Covenant, which provides for the revision of existing treaties by agreement, is at last brought out of cold storage, this arbitration clause may be a stumbling block. Finally, what measure of aggregate reduction of material does the Plan contemplate? These important queries, as well as a number of minor points, inevitably present themselves in our minds pending fuller light. Perhaps the light, when it comes, will dispel our doubts. We hope so, indeed; for the Herriot Plan, as we now see it in outline, seems so promising on the whole that it will be heartbreaking if it fails, after all, to stand the test of complete enlightenment.

AMERICA'S NATIONAL DEBT.

On the morrow of the election, early next week, of a new United States President, the vexed question of Anglo-American indebtedness arising out of the war, tacitly shelved in recent weeks out of consideration for the susceptibilities of the presidential protagonists, will enter upon its final stage. In view of the repercussions on the financial mechanism of the world which are likely to attend any decision, it may be useful to consider the position of

the greatest creditor country in relation, not to her foreign debtors, but to her own internal creditors.

A study of the development of America's national debt reveals a clearly-defined trend throughout. On the eve of the United States' entry into the war her gross indebtedness was not more than \$1,282 millions. During the two years which followed, the burden was multiplied by twenty, so that in August, 1919, the debt had reached \$26,594 millions, the highest amount ever recorded. Thereafter, a succession of budget surpluses made possible a steady improvement. During the eleven years to June 30, 1930, no less than \$8,136 millions of interest-bearing public debt were retired, some 40 per cent. of the total reduction being effected through Treasury surpluses. The sinking fund during this period contributed \$3,187 millions and foreign repayments \$1,489 millions.

The trend was abruptly reversed in 1931, when the effects of the financial collapse of 1929 became disturbingly apparent. For the first time the Federal budget revealed a deficit of \$902 millions, while in the fiscal year ended June 30, 1932, the deficit figure had risen to no less than \$2,885 millions. Expenditure in 1931-32 rose by 17 per cent. from \$4,220 millions to \$5,007 millions, and of this increase the purchase of capital stock of the Reconstruction Finance Corporation accounted for \$500 millions. According to a recent statement, the Corporation made advances to banks, insurance houses and other associations from the time of its inception to September 30th last totalling \$1,016 millions. As a result of these factors, the national debt total has taken a sharp upward turn in recent months, the return for September 30, 1932, being \$20,611 millions, against \$17,320 millions twelve months before. Of the total figure, \$8,201 millions are accounted for by the First and Fourth Liberty loans of 1932-47 and 1933-38 respectively, of which \$6,268 millions carry interest at 4½ per cent.; Treasury bonds contribute \$5,259 millions, Treasury notes \$3,031 millions and certificates of indebtedness \$2,385 millions.

Summing up the changes of recent years, it may be said that the United States national debt, as a result of the post-war prosperity wave, fell by 39 per cent. from the peak of August, 1919, to the lowest figure since the Armistice, recorded for June 30, 1930, and at the present time, despite the recent additions, is still 21.7 per cent. below the highest recorded figures.

In the following table the movements which have occurred since the outbreak of the war in the national debts of the United States and Great Britain are shown side by side.

* Estimated; and including £150 millions borrowed for Exchange Equalisation Fund.
† Maximum figure.

The relative significance of the respective burdens is more readily understood by a comparison of the amount of debt per head and of the ratio in each case between debt and national income. Taking the American debt at \$20,600 millions and the United Kingdom debt at £7,434 millions, the former works out at approximately \$187 per head and the latter at £162 per head. Moreover, the national debt of Great Britain was almost double her national income in 1929, taking an approximate figure of £4,000 millions as being the pre-slump income, while America's debt was only a quarter of her national income,

reckoning that item at around \$85,000 millions at that time.

Returning to the table, we should point out that the rise in the United Kingdom debt in the later months of 1932 is more apparent than real, since the sum of £150 millions borrowed for the Exchange Equalisation Fund is included for June and September, while the increase apart from that factor is entirely to be attributed to the seasonal variation in the flow of revenue. The American figures cannot be explained away by considerations of this kind, but reflect the fact that the budget is definitely on a deficit basis.

The debt movements recorded in the United States over the whole period are in general more extreme than those in the United Kingdom. Whereas the American debt, which was negligible in 1915, was increased twenty times for war purposes, the already high British debt was increased only twelve times. Subsequently the retirement of the American debt was regular and large, but the fall in British indebtedness was hesitant and inconsiderable. In the United Kingdom the peak was reached on the returns for March, 1920, and the lowest figure touched, £7,413 millions in March, 1931, was only a little more than 5 per cent. below the peak, against the 39 per cent. in the case of America. Though the upward turn since the beginning of the depression has been practically negligible in this country, the outstanding deadweight debt of the United Kingdom for 1932 is barely below the highest total ever recorded, twelve years ago, while America has still the consolation of knowing that her present indebtedness is only three-quarters of what it was in 1919.

On the other hand, it may be regarded as certain that a further increase will occur in the national debt of the United States unless in the meantime financial exigencies force a major change in policy. Budgetary deficits in the region of \$3,000 millions per annum may not be repeated (though the deficit in the present fiscal year already amounts to \$629 millions, against \$674 millions for the corresponding period of last year), but failing an early revival in world trade, for which there is little present augury, it seems likely that financial equilibrium will only be attained after recourse to further borrowing.

It is too early to say how deeply the United States Treasury will eventually be involved in the "reflationary" activities of the Reconstruction Finance Corporation, but the predicaments of the major financial and industrial institutions hardly give one to suppose that there will be any early curtailment of the demands for liquid resources resting on Government credit. Moreover, if no substantial reduction takes place in the numbers of America's great army of unemployed, it may well be that the Federal budget, which is already hit so severely on the revenue side, may have to shoulder fresh expenditure for dealing with the situation, even if it does not take on the task of direct maintenance. And new expenditure for dealing with unemployment probably means new loans, which may quickly run into large figures. America's easy budget situation and small dead-weight debt in proportion to her wealth has hitherto been a cause of envy to other nations. But even the most well-to-do cannot afford to ignore altogether the danger signal of current expenditure uncovered by receipts from taxation.

TEXTILE FIBRES—SILK AND RAYON.

Raw silk is one of the oldest and, next to wool, the most important of animal textile fibres; but, to a much greater extent than is the case with wool, its production is dependent on special conditions. In the first place, for the rearing of silkworms the climate must be suitable for the growing of mulberry trees, from whose leaves the Bombycidae moths derive their food. Secondly, the preparation of raw silk demands not only a large and cheap supply of labour, but also great skill at every stage. Thus, although climatic conditions are suitable in many countries, including parts of the United States, the rearing of the silkworm is confined to comparatively few areas, of which China and Japan are the most important.

In view of the popularity of silk fabrics and the scarcity of the supply of raw silk in relation to demand, many

efforts have been made to produce a substitute. At last, towards the end of the past century, human ingenuity devised a process somewhat similar to the performance of the silkworm, and artificial silk, or rayon, was produced from wood fibre. It took, however, many years to perfect this process, and it is only since the war that rayon has become a serious competitor of natural silk.

The challenge of chemistry has been taken up by the producers of natural silk, particularly in Japan. The expansion in the output of silk since the war, though smaller than that of rayon, was far greater than the increase in the production of wool and cotton. As we showed in an article in our issue of October 8th, the output of silk has almost doubled since the war, while the production of wool and cotton has increased by 18 per cent and 20 per cent. respectively. It is true that rayon shows an advance of over 1,600 per cent., but it must be borne in mind that the pre-war output of the artificial fibre was almost negligible. The substantial increase in the output of silk has been brought about largely by an improvement in the technique of production, particularly in Japan. How great this improvement has been is illustrated by the fact that between 1924 and 1930 the yield per unit of eggs incubated shows an increase of 31 per cent. The consequent decrease in the cost of production of raw silk enabled the silk producer in those years to dispose without difficulty of his rapidly increasing output despite the increasing competition of the artificial fibre. In 1930, however, the silk producer was faced with a sudden shrinkage of consumption, and found himself unable to market the whole output even at unremunerative prices. In vain did the Japanese Government attempt to arrest the decline in prices by withdrawing large quantities of stocks from the market and by enforcing a reduction in the activity of factories. Some light on the present position of the silk-producing industry is thrown by the following summary of the recent development of production, Japanese exports, imports into the United States, stocks and prices:—

(In Millions of lbs.)

Year.	Production.			Exports from Japan.	U.S.A. Imports.	World's Visible Supply.	Average Price.
	Japan.	China (Ex-ports).	World.				
1924	62.6	17.6	97.2	49.3	44.3	...	6.25
1925	68.5	20.4	105.0	58.0	49.7	18.8	6.57
1926	75.6	20.2	111.8	58.6	53.8	20.9	6.19
1927	81.5	19.5	119.0	69.0	61.8	23.2	5.44
1928	87.4	21.1	128.0	72.7	64.1	32.0	5.07
1929	93.1	20.9	134.3	76.9	69.8	30.1	4.35
1930	93.9	16.2	131.5	63.1	59.9	35.7	3.41
1931	96.0	13.5	126.0	73.4	83.9	41.4	2.40

The table shows that while Japan is the principal exporter of raw silk, the United States is the chief consumer. In 1930 there was a sharp contraction in the imports of the United States, but in 1931, under the stimulus of low prices, her imports established a high record. Nevertheless, prices continued to decline to a low average of \$1.19 per lb. in June, 1932. The turning-point came in July, when quotations began to advance in view of the sharp contraction in the output of raw silk in Japan. The average price in August was \$1.65 per lb. There has since been a slight setback, but as a result of a more favourable statistical position the outlook for raw silk appears a little more hopeful than a year ago.

Rayon, too, has been suffering from a maladjustment of supply to demand, but under the influence of lower prices and a continuous improvement in quality, consumption has been steadily increasing despite the trade depression. Artificial silk, though manufactured in small quantities before the war, is essentially a post-war product. The industry shows all the virility of youth and exhibits the characteristics of a new and expanding branch of activity. Improvements in manufacturing technique and the improvement in the quality of the fibre have been accompanied by a progressive reduction in selling prices. It is a fiercely competitive industry, in which the battle is to the strong, but the identity of the latter is becoming more easy to discern. The

1929	37.0	45.0	59.0	18.0	56.9	123.1	408.0
1930	40.8	44.0	66.0	26.4	48.8	130.4	418.0
1931	38.3	52.0	74.0	47.5	54.6	144.4	468.0

It will be seen that the world's output of rayon yarn reached 468,000,000 lbs. in 1931, as compared with a production of raw silk amounting to about 126,000,000 lbs. The course of prices during recent years has been as follows:—

Period.	Bleached Rayon Yarn, 150 Denier.		
	United Kingdom (duty paid).		United States.
	Standard Filament.		New York.
	Viscose.	Acetate.	Viscose.
	Per lb. s. d.	Per lb. s. d.	Per lb. s. d.
1924	Not available	Not available	2.11
1925	9 2(a)	11 1(a)	2.00
1926	8 5	10 9	1.81
1927	7 11	9 9	1.49
1928	7 1	7 10	1.50
1929	5 8	7 3	1.24
1930	4 9	6 3½	1.05
1931			0.75

(a) Average September-December.

Despite the astonishing advance of the rayon industry, its output forms as yet only a very small proportion of the total world production of textile fibres. As rayon is not only competing with silk, but also with cotton and wool, the potential demand for this artificial fibre is enormous. The profit-earning capacity of the rayon industry reveals, however, a different story. While demand increased by leaps and bounds, productive capacity increased even faster. The fight for markets has been intense since 1928 and prices have consequently been driven down continuously, thus leaving little or no margin between cost and selling price. Many of the smaller concerns, however, have been driven off the field, and although some time may elapse before equilibrium is re-established between supply and demand, the future profit-earning capacity of the industry seems ultimately assured.

CANADIAN RAILWAY REFORMS.

(BY OUR CANADIAN CORRESPONDENT.)

THE full text of the Report of the Duff Commission on Railway and Transportation problems has now been submitted to Parliament. It is a very illuminating document, and offers most damning evidence of the extravagant management of the State-owned Canadian National system and the extent to which political interference has contributed to this evil. For example, it cites the year 1929—with a general election looming on the horizon—as evidence of what political and public pressure

were able to accomplish. In the fiscal year 1929-30 the sums authorised by Parliament on Canadian National account reached a total of \$192,000,000, and the net increase for 1929 in the funded debt of the Canadian National Railway due to the public was \$144,670,459, whereas the annual increase for the previous six years had averaged slightly under \$29 millions. The Commission found that "a red thread of extravagance" ran through the whole management of the Canadian National Railway and made the following observations about political interference:—

When considering the scale upon which branch line extensions and acquisitions, as well as hotel expenditures, were made and railway and steamship services duplicated, it is impossible to avoid the conclusion that the board of directors and the management of the C.N.R. were amenable to political influence and pressure which it would have been in the public interest to withstand.

The Report finds that, when faced with the challenge of the State-owned system and its ambitious projects of expansion, the Canadian Pacific Railway felt compelled in its own interests to meet the challenge; but the Commission, while admitting the difficult position of the Canadian Pacific Railway, is severe in its strictures upon some of its business adventures and asserts that it is impossible to absolve it "from a share in the general competitive folly."

With regard to the future, the Commission is profuse in its recommendations. If these do not exactly offer any certain hope of a solution of the railway imbroglio, they do promise, if they are carried out, to effect some reductions in the Dominion's annual transportation bill. The Report outlines a plan for the more efficient management of the Canadian National Railway system whereby a board of three trustees would be substituted for the present cumbersome directorate of seventeen and given almost autocratic powers, subject only to responsibility to Parliament; under it the possibilities of political interference and community pressure would be, if not eliminated, greatly reduced, and the only relation of Parliament to the railway would be the duties of scrutinising the reports of the trustees and voting each year the sum required to meet any deficits.

The conviction is expressed that the capitalisation of the Canadian National Railway, which is placed at \$2,669,926,371, should be drastically written down to manageable dimensions in reasonable keeping with its annual earning power; but it is added that the present time is not opportune for such a step. The Report urges that there should be a cessation of the aggressive and uncontrolled competition which has prevailed between the Canadian National Railway and the Canadian Pacific Railway; it gives various examples of wasteful duplications of services and points out that if some scheme of co-operation had existed during the last nine years, it should have been possible to avoid one-third of the expenditure of \$162½ millions incurred by the two railways in the period 1923-31 on the construction and acquisition of branch lines. It proposes that a statutory duty should be imposed upon the two systems to co-operate for the avoidance of senseless duplication of services, and that for this purpose directors of the Canadian Pacific Railway should at regular intervals hold conference with the Canadian National Railway trustees. But, conscious that sharp divergences of opinion may arise on the question which party is to make sacrifices in the interests of economy, the Commission makes the suggestion that an arbitral tribunal of three should be set up, with the Chief Railway Commissioner as chairman, to function in the rôle of referee about all disputes.

The Report devotes a whole chapter to the competition of other transport agencies, notably the motor vehicle, which is admittedly an important contributory cause of the railways' difficulties. It finds that the transfer of passenger traffic from the railways to the motor coach has not yet reached in Canada large dimensions, but that the private motor car has the main responsibility for the diversion of traffic to the highways, with the result that the short-distance passenger traffic of the railways has

shrunk to small proportions and their long-distance passenger traffic is threatened. Moreover, the motor truck, chiefly the privately-owned vehicle, has made serious inroads upon the short-distance freight traffic of the railways. The Commissioners admit that this diversion of traffic is due in many cases to the fact that conveyance by road is either intrinsically a more suitable, more convenient or definitely cheaper form of transport; but they feel that in so far as the diversion is due to lower costs as a result of motor vehicles not bearing their fair share of the cost of highways or enjoying immunity from regulations analogous to those imposed on other forms of transport, such diversion may well be opposed to the best interests of the country. The opinion is therefore expressed that a fair basis of competition between these two transport agencies must be found.

The Report points out that the freight-rate structure of the Canadian railways was established on the assumption that the transportation of freight was to all intents and purposes a monopoly of the railways; and upon this hypothesis tariffs and tolls have been fixed upon a comparatively high scale for the carriage of short-distance package freight and for express services, and upon a lower and less remunerative scale for the transportation of heavy and bulky commodities which are generally conveyed over long distances. So the suggestion is advanced that, if the railways lose a large part of their profitable short-distance traffic to the roads, a readjustment of the whole freight rate structure may be necessary, with a possible increase in the rates charged for the long-distance and heavy traffic. This suggestion is naturally viewed with considerable suspicion in the western provinces, where the farmers fear it may foreshadow an attempt to secure higher rates on grain.

The Commission is opposed to any restrictions which would unfairly prejudice the use of roads, but it holds that the railways should be empowered to provide and operate services of road vehicles and also that they are entitled to a measure of protection from long-distance road competition and an equalisation of the conditions under which short-distance traffic is conducted. But in view of the fact that, under the Canadian constitution, the regulation of road transport falls within the exclusive jurisdiction of provincial authorities, the Commission finds it inadvisable to make any specific regulations about the regulation and taxation of motor transport. It proposes simply that the Federal and Provincial Governments should hold a joint inquiry into the problem and try to reach a measure of agreement upon the general principles which should govern the regulation and taxation of motor vehicles, and that the application of these principles should be left to a consultative committee formed by the Federal and Provincial Governments.

The Report declares that the competition of aviation services remains too negligible to merit any special treatment, but it discusses the competition of waterways at some length and finds that it has not been an important factor in producing the present difficulties of the railways. It holds that the imposition of tolls on the inland canals which are now free would not help the railways, and that the position of the railways is not likely to be seriously prejudiced either by the Hudson Bay route or the projected St. Lawrence Waterway. The Commission also devoted some attention to the general question of freight rates and tolls, and while declaring that any adjustment of them was inadvisable at the present juncture, it propounded the view:—

That even under more favourable circumstances the financial position of the railways may be such as to demand that the whole question of tariffs and tolls in its widest sense should be the subject of special investigation with a view to determining whether or not the existing rates charged for the conveyance of freights are just and reasonable both to the railways and their customers.

On the whole, the Commission's Report has had a favourable press and its terms have come rather as a relief to the supporters of public ownership, who are pleased about the recommendation to preserve the integrity of the Canadian National system.

A OUR MANCHURIA SUPPLEMENT.

THIS week the *Economist* publishes, as a Special Supplement, an abridgement of the Lytton Report. It is our hope that by thus facilitating the study of an admirable and important State paper, which is to be dealt with this month by the League of Nations, we may be contributing usefully to the fuller understanding of a complex and critical problem. At the same time, readers of the *Economist* may find it convenient to remind themselves of the genesis and *raison d'être* of the Lytton Commission.

The Sino-Japanese dispute in Manchuria, which had broken out into open conflict on September 18-19, 1931, was a matter of concern to other parties, besides the two protagonists, in virtue of the Covenant of the League of Nations and the Multilateral Pact of Paris (the Kellogg Pact) and the Washington Nine-Power Treaty regarding the integrity of China. In the action taken to deal with the Manchurian crisis the States Members of the League have been acting under the Covenant, and the United States under the Kellogg Pact.

In the Covenant there are two alternative Articles which can be invoked in a dispute of this kind. The milder alternative is Article 11, which does not commit the League to taking any specific kind of action, and which requires a unanimous vote of all parties represented on the Council, including both the disputants, before any action can be taken at all. The other alternative is Article 16, on which action can be taken by a unanimous vote of the Council not including the two disputants. This Article requires League members to apply at least economic sanctions against any party which has committed an act of aggression against the territorial integrity and existing political independence of any State member (Article 10) or which has resorted to war in disregard of its covenants under Articles 12, 13 or 15.

China has now invoked all the relevant Articles of the Covenant, but her original appeal, on September 21, 1931, was made solely under Article 11, and her invocation of the other Articles was not made until after the Lytton Commission had been appointed.

When the dispute was formally brought to the attention of the Council of the League by this appeal of China under Article 11, the Council tried to follow the policy which they had already applied to the Græco-Bulgarian dispute of 1925 and to the Bolivian-Paraguayan dispute of 1928-9. They called on the parties to cease fighting and to return to the military and political *status quo ante* before taking up the substance of the dispute on its merits. They also decided to communicate all their proceedings to the Government of the United States as an interested party under the Kellogg Pact and the Nine-Power Treaty.

On September 30, 1931, a unanimous resolution (including the Japanese vote) was secured on the Council which took note of a Japanese statement that Japan had no territorial designs in Manchuria and that she was withdrawing her troops as rapidly as possible. In this resolution the date of the next meeting was fixed for October 14th, but the date was anticipated because the Japanese troops, so far from withdrawing, extended their occupation in the interval.

At the meeting of the Council which thus opened on October 13, 1931, a United States assessor sat with the Council, at the Council's request, to consider matters arising under the Kellogg Pact. This invitation was opposed by Japan, but was voted, over Japan's head, as a matter of procedure, i.e., as implying no more than the communication of the Council's proceedings, to which Japan had already assented, in an oral form.

At this session there was a deadlock; for Japan refused either to name a date for the completion of the withdrawal of her troops or to negotiate on the substance of the dispute in the forum of the League. She declared that she would only negotiate with China *à deux*, and that she would only withdraw her troops after such negotiations had resulted in agreement—conditions which China refused.

Thereafter, a committee of all Council members, other than the two disputants, drafted a resolution calling upon

Japan to withdraw her troops completely before the next meeting of the Council, which was fixed for November 16th. On October 24th a Japanese counter-project was rejected by 13 votes to 1, but on the same date the draft resolution of the "Committee of Twelve" was vetoed by the single vote of Japan against the 13 votes cast in favour of it.

At the next meeting of the Council, which duly opened in Paris on November 16th, no American assessor sat with the Council, though General Dawes was in Paris, on the United States Government's behalf, while the Council was in session.

In the meantime the Japanese had not only refrained from acting on the (invalid) draft resolution of October 24th, but had actively extended the area of their occupation still farther.

It was in these circumstances that the Japanese delegate proposed to the Council on November 21st "that the League of Nations should send a commission of inquiry to the spot"; and on December 10th a resolution embodying this proposal was passed by the Council unanimously, including the votes of both Japan and China.

This was the genesis of the Lytton Commission. The members appointed were drawn from five nationalities (British, French, German, Italian, American), but they were appointed as individuals and not as representatives of their respective countries. The Commission left for the Far East on February 3, 1932; the history of subsequent developments, including the Shanghai fighting, is given in the Report itself.

The Report of the Commission falls into two parts—(1) findings on facts; and (2) recommendations for action. The first eight chapters give an objective picture of the situation. Starting with a lucid account of the relations between Manchuria and (a) the rest of China, and (b) other countries, the Report traces the origin and growth of economic and political friction with Japan. The evidence in the matter of Captain Nakamura's murder in September, 1931, is examined, and the Japanese military operations which followed that incident are carefully noted. The part played by Japan in the formation of the new State of "Manchukuo" is analysed; and consideration is given both to the attitude of the people of Manchuria and the interests of other parties—China, Japan, Russia and other countries—in that region.

Chapters IX and X, whose text we reprint almost *in extenso*, contain the principles and suggested procedure on whose lines, the Commission consider, a solution is to be sought. The Report emphasises, on the one hand, the necessity of orderly government in Manchuria and the avoidance of a recurrence of past troubles; on the other hand, it is pointed out that continuance of the present régime of "Manchukuo" would create an "irredentist problem," contrary to the best interests of all concerned and in contravention of the principles of international obligations. An attempt is, therefore, made to formulate conditions under which the "rights" of China can be reconciled with the legitimate "interests" of Japan and other countries; a solution is propounded whose aim is at once realistic and in conformity with the provisions of the Covenant, the Kellogg Pact and the Nine-Power Treaty. Manchuria should be accorded, under Chinese sovereignty, a large measure of local autonomy, with the assistance of foreign advisers; new treaties defining "rights" should be concluded; and the Japanese army should withdraw.

From the point of view of the immediate problem which will confront the League this month, matters are complicated by the fact that on September 15, 1932, after the Lytton Commission had left the Far East, though not without the Commission's foreknowledge, the Japanese Government recognised "Manchukuo," and a protocol was signed between the two Governments whereby "Manchukuo" confirmed all existing Japanese "rights" and claims. It is evident that the solution which the Lytton Report advocates clashes with the declared intentions and overt acts of Japan. The question which the League has to decide is whether, and how, Japan is to be constrained to accept the findings of a Commission for whose appointment Japan herself originally asked.

Notes of the Week.

The Full Tale of Conversion.—With this week's successful issue of £300 millions of 3 per cent. 1948-53 stock at 97½—an issue whose market attractions we discuss in an Investment Note on a later page—the Government has completed a series of Conversion operations whose aggregate results merit a brief survey in retrospect. The story is continued in two chapters—Preparation and Fulfilment. In Chapter I fall, first, the March 16th re-financing, when holders of some £116 million of 4½ per cent. Treasury Bonds maturing on April 15th were offered, alternatively and at proportionate terms, either 4½ per cent. Conversion Loan or 4 per cent. Consols; and secondly, the April 29th issue of 3 per cent. 1933-42 Treasury Bonds redeemable by annual drawings—an operation which at once tested the short-term market and put the Treasury in possession of ready funds for general purposes. The Fulfilment Chapter can be summarised in the following table:—

Stock.	Amount Outstanding.	Redeemable.		Interest Rate.	Required for Annual Interest.
		Earliest.	Latest.		
<i>Position as at June 30, 1932.</i>	£'000			%	£'000
War Loan	2,084,994	1929	1947	5	104,250
War Loan	12,804	1925	1945	4½	576
Treasury Bonds	140,313	1932	1934	4½	6,314
Treasury Bonds	14,076	1933	1935	4½	633
Treasury Bonds	114,608	1933	1935	5	5,730
Total	2,366,795	...	...	...	117,504
<i>Position as at Feb. 1, 1933.</i>					
War Loan	1,920,000	1952	...	3½	67,200
Treasury Bonds	150,000	1935	1938	2	3,000
Conversion Loan	300,000	1948	1953	3	9,000
Total	2,370,000	...	...	...	79,200

Little more by way of conversion can be done until the 4½ per cent. Conversion Loan (£373 millions outstanding) becomes "callable" in 1940; but, even so, the results achieved in the past four months are noteworthy. Over 96 per cent. of the nation's internal debt has been converted from an interest rate averaging not far short of 5 per cent. to one of less than 3½ per cent.; and the gross saving in interest is approximately £38 millions per annum. Allowing for loss in income-tax receipts, the Budget is lightened by roughly £30 millions. Considering that, four months ago, the Government's credit was on a 4 per cent. basis, at best; that sterling has undergone since mid-summer a serious depreciation; that fully 4 per cent. is still obtainable on high-grade bonds abroad; and that the Budget is balanced precariously enough, even if we pay no more on War Debt account to the United States—the Treasury is entitled to praise for its boldness, adroitness and success. Yet, ungrateful though such an addendum may appear, honesty compels us to append one qualification to this story of financial achievement. *C'est magnifique, mais ce n'est pas la prospérité.* Welcome though the relief to the Budget may be, the fact remains that there is a reverse to the medal. Balancing the budget was a key move; but, having made it, the Government have been able to re-borrow so cheaply, not because of restored well-being in Great Britain, but because the unparalleled depression of trade, intensified by their own commercial policy, has resulted in a sterile glut of idle funds unable to find productive employment. Unless and until the Government's policy succeeds in revivifying industry, the potentially enormous indirect benefits of the lowering of the rate of interest on "riskless" borrowing will be barren when measured against the scale of unemployment and destitution.

U.K. and I.F.S.—The memoranda fired at each other in artillery fashion, during October, by the Governments of Whitehall and Dublin serve only to strengthen the impression that the unbridged gulf in respect of the financial issues is almost unbridgeable between disputants who approach the matters at issue from such very different points of view. We have no mind to rehearse in detail the tale of these frustrate arguments; the sorry

record (Cmd. 4148) is available (H.M. Stationery Office, 4d. net) for those who will to study. Many of Mr de Valera's arguments—for example, that the Irish Free State is entitled to reparation for excessive tax payments made since the Act of Union, and that Southern Ireland suffered material damage from the suspension of the gold standard in 1931—lack substance and sense; and the pleadings submitted by Dublin against the British case in respect to the Land Annuities are, to say the least, finely drawn. But, when the last word is said in this splitting of legal straws, this ransacking of ancient history for grievances, the fact remains that, rightly or wrongly, Southern Ireland, represented accurately enough in this connection by Mr de Valera, feels deeply and sincerely that the financial agreements of 1923 and 1926 were inequitable, and that since they were never submitted by the Cosgrave Government to the Dail for ratification—the alleged reason being that Mr Cosgrave knew he had bowed to *force majeure*—they are not valid. To answer this argument, as the British Government have done, by citing simply "the recognised practice" of nations making treaties is, in Irish opinion, not to answer it at all; and, equally, the blunt British negative to all the Irish financial counterclaims leads only to a complete deadlock. Here, surely, was a case for compromise which might have won a response from the Irish people if a more generous British gesture, involving a comparatively trifling money cost, had been made. The legal rights of the case are unimportant in relation to the fact that, whether the British tariff war reinstates the Cumann-na-Gaill and drives Fianna Fail from power at the cost of widespread Irish starvation, or the Republican movement triumphs amid the ruins, nothing is now gained by the present clash—not money, nor British prestige, nor anything but mutual impoverishment and bitterness over an issue which we could well afford to settle liberally, without futile punctilio or insistence on endlessly disputable "rights."

Anglo-Egyptian Relations.—The first move towards a fresh attempt to negotiate a settlement of Anglo-Egyptian relations appears to have been taken some weeks ago when the present Prime Minister of Egypt, Ismail Pasha Sidki, had a conversation with Sir John Simon at Geneva. On October 28th, Mr. Eden stated, in reply to a question in the House of Commons, that the British Government "make no reservation in regarding the present Egyptian Administration as one with which Anglo-Egyptian relations both have been and may continue to be developed at the time in the manner which appear most suitable for the purpose." The same evening, at Cairo, Sidki Pasha referred, in a public speech, to his conversation with the British Secretary of State, declared that the meeting had taken place on Sir John Simon's initiative, announced that they had found themselves in agreement as to the need for further Anglo-Egyptian negotiations, and added that Sir John Simon had praised his (Sidki Pasha's) administration and had expressed his readiness to negotiate with the Sidki Government as a suitable representative of Egyptian interests. All this is very like the opening moves in the negotiations between Sir Austen Chamberlain and Sarwat Pasha and in the subsequent negotiations between Mr Arthur Henderson and Muhammed Pasha Mahmud, and thereafter with the Wafd Administration, under Nahhas Pasha, by which Mahmud Pasha's Government was superseded. These two attempts both fell through; but it may be added that they have not been labour lost; for, between them, they provided agreement on the greater part of the issues outstanding between Egypt and this country, and the Henderson-Nahhas negotiations came within an ace of achieving a comprehensive settlement—breaking down at the eleventh hour over the question of Egyptian immigration into the Sudan. On that occasion, it was expressly promised on the British side that any fresh negotiations should start from the point which these last negotiations had reached; and, since agreement had been attained on the question of the stationing of British troops in Egyptian territory in the Canal Zone, the Sudan remains the one outstanding crux (albeit a formidable crux) that remains to be dealt with.

There is, however, a difficulty apart from the questions at issue between the two countries; and this is the connection between Anglo-Egyptian relations and Egyptian internal politics. Hitherto, the usual course of events has been for the Egyptian Government conducting negotiations to be pushed by the Egyptian Nationalist pressure into taking a stand which has eventually caused a breakdown, and then to be thrown out of office on account of its failure to carry the negotiations through. This happened in turn to Sarwat Pasha and to Nahhas Pasha, and Sidki Pasha is Nahhas's successor. The trouble is that while the Wafd party, which Nahhas represents, discredited itself in office (rather like the Kuomintang in China), it is at the same time true that the Wafd is the only political force in Egypt that can fairly claim to have a wide measure of popular support behind it. Ismail Pasha Sidki really represents nobody but King Fuad. He came into power by riding rough-shod over the former constitution, and the constitution has since been drastically revised in an anti-democratic direction. The imprimatur which the Sidki Government has now received from the British Government will doubtless strengthen its position in Egypt; and, in return for this friendly office, it is conceivable that Sidki may show himself more accommodating over the Sudan than his predecessors. The question is whether an Anglo-Egyptian treaty negotiated on this basis is likely to outlast Sidki Pasha's tenure of office; and if there is any analogy in the recent history of Turkey, the future lies in Egypt, on a long view, with the Wafd, and not with the Palace.

The New Government in Czechoslovakia.—The Cabinet Crisis in Czechoslovakia was solved last Saturday on lines of compromise which have made it possible to form a parliamentary administration instead of resorting to the old pre-war Austrian expedient of a Cabinet of officials. In the present case there would have been some irony in the use of this device, since the difficulty which threatened to produce a parliamentary *impasse* was the opposition of the Social Democrats to the proposed cuts in the pay of Civil Servants. On the compromise that has been arrived at, about four-fifths of the cuts proposed by the late Government have been accepted. The balance, amounting to some 150 million Czechoslovak crowns, will have to be provided for either by cuts under other heads or by increased taxation, since it is common ground that the Budget must be balanced. The new Government, which has been formed by the Speaker of the Chamber, Mr Malypetr, does not differ very greatly in personnel from its predecessor; and, in foreign eyes, the most interesting point of identity is the fact that Dr. Benesh retains his portfolio as Foreign Minister, though it may be assumed that in any case Dr. Benesh would have continued to represent Czechoslovakia at the Disarmament Conference. It is a noteworthy symptom of healthiness in the internal politics of Czechoslovakia that in this crisis, which was concerned with a social question, the parties should have divided on social and not on national lines—the Czech and the German Social Democrats acting together throughout. To some extent, no doubt, this may be ascribed to the severity of the pressure of the economic crisis. But a comparison with the contemporary situation in certain other "successor States" shows that even the crisis does not avail, in all circumstances, to put Nationalism in its place. The Czechs are to be congratulated on having pursued, since the birth of Czechoslovakia, a policy of moderation towards the non-Czech minorities in the country. This policy has certainly been justified by results.

M. Herriot's Visit to Madrid.—For two generations it has been the ambition of the Spanish intelligentsia to "europeizar" their country—by which is meant that Spain should escape from her cultural isolation and take her full share in progressive and international activities. It is against that psychological background that we have to consider the effusive welcome which M. Herriot received on his visit to Madrid this week. The close relations of the Left Government in France and Repub-

lican Spain are natural enough. But the time has gone past when Liberalism in Spain is to be identified with support of French policy in Europe in all circumstances. Hence the somewhat pained surprise which M. Herriot has expressed at finding an undertone of criticism of French policy with regard to disarmament. For the same reason—namely, that the majority of the Spanish people would not stand for it—it is not necessary to attach much credence to the suggestion of a secret agreement for a Franco-Spanish alliance to meet the danger of eventual conflict between France and Italy. At the same time, this has to be borne in mind as a possibility of the future in the event of a failure at Geneva. And the voting at this moment of a special credit in the Cortes for dredging the harbour of Port Mahon (Minorca) may conceivably cause some heartburning in Italy.

Nemesis in Bolivia.—Among the distracting anxieties that are pressing upon the minds of all peoples all over the world, we have been apt to forget lately that, for some months past, the dismal region of the Gran Chaco, in the feverish heart of South America, has been the theatre of "a sort of a war." The recrudescence of hostilities in the territory disputed between Paraguay and Bolivia has not been prevented by the peace-making efforts of the League of Nations or the Pan-American Organisation or individual friendly Powers; and, as far as can be made out, the bellicose party on this occasion, at any rate, has been not Paraguay but Bolivia. Trusting in their larger population and their somewhat greater ability to purchase armaments on credit, the Bolivians have insisted upon attempting to solve their dispute with their neighbours by force of arms; and it is therefore satisfactory to learn that the fortune of war has been going against the aggressor. The Bolivian superiority in numbers and equipment appears to have been outweighed by the distance of the theatre of war from the Bolivian base, and also, perhaps, by the climatic factor, which is more unfavourable to the Bolivian mountaineers than to the Paraguayan lowlanders. As a result of the fighting which the Bolivian Government has provoked, the greater part of the disputed territory appears to have fallen into Paraguayan hands; and the news of these reverses is having its psychological effect in La Paz. On October 28th, a motion of censure against the Government was introduced in the Chamber. The Government succeeded in evading it by staging an *émeute* and arousing the passions of the crowd by calling its critics traitors and promising victory at an early date. For the moment, the Salamanca Government remains in power at La Paz; but it is beyond its power to ensure the victory which it has undertaken to win; and unless there is a very great change in the military situation in the Gran Chaco within the next few days, President Salamanca's bellicosity may recoil upon the war-maker's head.

The Municipal Elections.—The main interest of this year's municipal elections lay in whether or not they would show a noticeable recovery by Labour from its *débacle* of last year. At first sight this year's result would appear discouraging to Labour, for while they escaped last year's almost unprecedented collapse, they were only able to win a net 11 seats on Tuesday last. This compares un-

favourably with their previous years' record, which, after a heavy débâcle in 1922, was one of rapid and uninterrupted progress from 1923 up to and including 1929. In interpreting the results, however, there are two important facts to be borne in mind. The first is that in contrast to the position in, say, 1927-29, Labour was faced either with Liberal-Conservative pacts or with non-party opposition, which comes to much the same thing; moreover, in certain cases Labour had also Communist or "unemployed" candidates to contend with on its own flank. The second fact is that the seats contested this week were last filled in 1929, for three years is the Councillor's term of office. Now 1929 was cumulatively Labour's "peak" year. Thus, in an unusually large number of cases Labour this year was on the defensive, having a great deal to lose and very little to win. In these circumstances the fact that Labour has improved its position—as a result, doubtless, of the means test and the continuance of severe unemployment—must be regarded as ominous by Labour's opponents.

Trade Prospects and Policy.—The signs and omens of the course, present and prospective, of world trade make a dubious showing. Materially, the recent slight improvement registered by some of the salient trade indicators in the United States has been replaced by evidence of a seasonal recession, and the commodity markets have been overshadowed by the fresh slump in wheat prices. More generally, the indications are little more encouraging. Germany is still at loggerheads with her neighbours over her new quota proposals; and though French opinion, as evidenced by the present policy of the Union of French Exporting Industries, seems more inclined to recognise the necessity of positive action to bring about the progressive lowering of trade barriers, there are disquieting signs in Great Britain of a tendency to acquiesce in defeatist acceptance of theories of narrow, impoverished "autarchy." Thus, to give a significant instance, the latest F.B.I. quarterly bulletin, which issues a warning against "premature optimism" and reminds its readers that no definite steps have been taken to resuscitate international trade from its present stagnation, contains in addition a thesis pointing to the abandonment, temporarily at least, of all hope of restored freedom of foreign trade. For the near future, it is argued, we must accept the fact that world output has out-run consumption in many crucial directions: "the forces of production must for a time at least be controlled." Hence, failing international agreement to limit output, countries must "take steps definitely to exclude from their territories products of foreign plants in cases where domestic capacity is sufficient for domestic needs"—either by manufacturers' cartel arrangements, or by tariffs and quotas, or by a mixture of both methods. The "possible outcome" is to be the organisation of the peoples of the world "into a series of self-sufficing groups or countries." Heaven help us! We willingly concede the desirability of greater "planning," nationally and internationally, of production; but if this pernicious nonsense, which mistakes—in face of the whole history of the nineteenth century—a condition of artificial, crisis-induced glut for a fundamental state of world inability to consume production, and disregards completely society's capacity for readjustment of supply and demand, is to become the accepted doctrine of British industry, the future is dark indeed.

The Copper Duty.—The brief debate upon the duty of 2d. per lb. upon foreign copper proposed in fulfilment of the Ottawa Agreement sufficed to show the many practical difficulties created by this undertaking. The original intention was that the duty was to be removed "if at any time Empire producers... are unable or unwilling to offer these commodities on first sale in the United Kingdom at prices not exceeding the world price and in quantities sufficient to supply the requirements of United Kingdom producers." Obviously both the terms "first sale," and "world price" were extremely vague, while the diffi-

culties attending the duty were further increased by the fact that, so far, Canada can supply only half the British requirements of electrolytic copper, while the Empire cannot supply fire-refined copper at all. In order to find a way out of these difficulties a joint meeting of Empire producers and British consumers was held at the Board of Trade, and the terms of the agreement there reached were announced in a written answer by Mr Runciman on October 28th. In brief, the duty on electrolytic copper is to be imposed only on such a date as the Government may decide in the light of a report, to be made by the joint committee not later than November 5th, as to the availability of adequate Empire supplies, while the duty upon other sorts of copper is to be suspended until Empire producers can fully supply the market. The consumers have agreed to co-operate with the producers to ensure a progressive change-over from non-Empire to Empire copper, and a technical committee is to be maintained to discuss any relevant problems, such as impurities in Empire copper. A joint committee of producers and consumers is also to sit to review the position at intervals of not more than three months. It has been agreed to define the "world price" as being the London Metal Exchange quotations for copper, exclusive of duty, provided that (a) if separate quotations are made for Empire and non-Empire copper, the latter shall be the "world price"; and (b) that this definition can be abandoned if it does not provide the safeguards contemplated by the Ottawa Agreement. On the question of differentials in the case of fire-refined and Bessemer copper, British consumers shall not be placed at a disadvantage as compared with foreign consumers. "First sale" shall mean sale by producers and/or their bona fide agents to any consumer. In last Monday's debate Mr Hore-Belisha claimed that this agreement met all practical difficulties and represented a most promising interpretation of the spirit of the Ottawa Agreement by the representatives of a great industry. So far, so good; but it remains to be seen how it works out in practice, and already the Government have had to concede in the Bill that Empire copper may enjoy the preference, even though refined outside the Empire. Our first impression is that if the agreement is properly carried out, the duty on fire-refined copper will remain in suspense for an indefinite period, and we notice that this view is shared by no less an advocate of Protection than Mr Amery. In the debate Mr Amery also had some practical remarks to make on the difficulty of defining the world price of a commodity, and for once we find ourselves in agreement with him. While we congratulate the Government on having secured the initial co-operation of representative producers and consumers, we are afraid that their copper troubles are only just beginning.

Cotton Spinning Stoppage.—A lamentable stoppage of work in the spinning section of the Lancashire cotton industry started on Monday last. The decision to refrain from working at mills which attempted to put into operation the wage reduction of 1s. 6d. in the pound—this being the figure provisionally agreed upon between the leaders of the employers and the operatives during the previous week—was reached at a delegate meeting of the Operative Spinners' Amalgamation in Manchester last Saturday. Branch and shop meetings had been held to consider the settlement terms, and the three chief spinning centres—Oldham, Bolton and Rochdale—instructed their delegates to oppose the wage reduction. As these three areas held a sufficient number of votes to carry the day, the result of Saturday's meeting was a foregone conclusion. By an overwhelming majority a strike was declared, with the result that, according to official returns received by the Master Spinners' Federation, 97 per cent. of the mills were shut down. The operatives, two trade unions—the Operative Spinners' Amalgamation and the Cardroom Workers' Amalgamation—are now taking a ballot of their members on the issue. The results will be declared in Manchester on Saturday and it is expected, writes our Manchester correspondent, that an insufficient number of votes will be cast in favour of continuing the strike. In the case of the Operative Spinners'

Amalgamation, a majority of 80 per cent. has to be obtained if the stoppage is to be continued. The Executive Committees of the two trade unions have issued circulars accompanying the ballot forms, strongly urging all members to vote against the strike. The leaders state that the reduction of 1s. 6d. in the pound is the best that could be obtained and that, if the agreement is ratified, it will guarantee the 48-hour week, and will also provide for the discussion of the wage rates of low-paid operatives. The Ministry of Labour will not take any further action in the matter until the ballot results are known. If the strike is called off, Mr P. W. Leggett will return to Manchester at the beginning of next week for the formal signing of the wages agreement and also to resume discussions on such questions as conciliation, machinery, reinstatement, and rates for low paid operatives.

Sterling and International Prices.—During the past fortnight international "gold" prices, led by wheat, have fallen violently to a fresh record low level. Since the "peak" of the recovery touched on September 7th the decline has amounted to over 16 per cent.

SEPTEMBER 18TH, 1931 = 100.

* These figures relate to October 26th.

Since October 19th the exchange value of sterling against the dollar has depreciated by a further 10 cents, and the level of sterling prices, as the foregoing table shows, has in consequence not reflected fully the fall in international prices in terms of gold. Between September 7th and November 2nd the aggregate fall in the complete Economist index has been of the order of 4 per cent. only. Sectional figures are given below:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Oct. 19, 1932.	Nov. 2, 1932.
Cereals and meat	64.5	62.2	61.8
Other foods	62.2	63.8	63.9
Textiles	43.7	50.4	50.1
Minerals	67.4	75.3	74.7
Miscellaneous	65.8	62.4	62.2
Complete index	60.4	62.3	62.0
1913 = 100	83.1	85.7	85.3
1924 = 100	52.2	53.8	53.6

During the past fortnight the majority of the items included in our index have cheapened slightly, but the index on balance has fallen by only one-half of 1 per cent., the fall in the primary products index being just over 1 per cent.

Industrial Reorganisation.—A correspondent writes:—The inability of the Import Duties Advisory Committee to report any progress in the reorganisation of the steel industry months after its much-belauded achievement in securing the appointment of a national steel committee for this purpose; the disclosure that the colliery owners are still discussing, without any apparent enthusiasm, the limited proposals for amending the quota and price-fixing system; and the almost complete silence that has fallen on the various cotton reconstruction schemes, make it difficult to hold any optimistic views about the

Next week's Economist will include a special Supplement dealing with

THE WAR DEBTS

and analysing the history of these obligations and the immediate problem.

future of these great staple industries. The main trouble is common to all three. It is the persistence of an individual as opposed to an "industry" outlook, and the consequent impossibility, until a radical change occurs, of harmonising conflicting interests sufficiently to bring about united action over a wide field. Those who are familiar with the currents of feeling in the steel industry have good reason for the inference that the impotence of the national committee is due to failure to obtain agreement on policy rather than to the persistence of low-price imports, which provides the Import Duties Advisory Committee with a ready excuse for yielding to the importunities of the steel manufacturers. The bodies representing the coal industry do not find it easier, with similar opposing interests, to win acceptance for what may fairly be described as tinkering proposals than they would for a scheme of fundamental reorganisation. The suggestion of the president of the Miners' Federation that, while reorganisation is necessary, the immediate need of the industry is a wider market at economic prices (that is, for coal provided at present production and distribution costs) seems to imply acquiescence in a price-raising policy in the effort to secure national consideration of wages. The cotton employers will probably sit down to await the results of lower wage costs, and later on the process of elaborating new schemes of reorganisation, or revising old plans, will begin again. It is a dispiriting spectacle of the shelving of a task which sooner or later, and perhaps too late, events will compel either the three industries, or a Government confronted with serious social dangers, to carry through.

The Volume of Overseas Trade.—Last week's Board of Trade Journal contained the usual quarterly article, revealing the trend in the value of our overseas trade by the elimination of changes in prices. The table below shows the volume and value figures for retained imports and domestic exports in 1924 and since 1930:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS.

Period.	Retained Imports.				Exports of Domestic Produce.			
	Declared Values.	Index of Average Values.	Values in terms of 1930 Values.	Index of Volume.	Declared Values.	Index of Average Values.	Values in terms of 1930 Values.	Index of Volume.
	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.
	Million £.	Million £.	Million £.	Million £.	Million £.	Million £.	Million £.	Million £.
1924	1,137	135.0	842	88.0	801	120.8	663	116.2
1930	957	100.0	957	100.0	571	100.0	571	100.0
1931.								
1st quarter	192.5	84.5	227.7	95.2	103.3	93.2	110.9	77.7
2nd "	189.7	82.0	231.2	96.6	95.8	90.8	105.6	74.0
3rd "	191.0	79.1	241.5	100.9	93.2	87.8	105.2	74.4
4th "	225.0	79.0	284.8	119.0	96.8	86.0	112.5	78.8
1932.								
1st quarter	177.3	78.4	226.1	94.5	92.3	84.4	109.4	76.7
2nd "	153.3	75.3	203.7	85.1	94.7	84.3	112.3	78.7
3rd "	150.5	72.7	207.1	86.5	84.1	82.0	102.5	71.9

The salient feature brought out by this calculation is the sharp drop of 8.6 per cent. in the volume of domestic exports in the third quarter of the current year despite a reduction of 2.8 per cent. in average values and the further depreciation in the gold value of the pound. Clearly, the boomerang effect of the Government's tariff policy is already making itself felt to the detriment of

British exporting industries. Revalued on the basis of average values in 1930, domestic exports of wholly or mainly manufactured goods declined from £87,765,000 in the second quarter to £79,230,000 during the July-September period. Partly manufactured goods, at £11,535,000, showed a reduction of £800,000 on the second quarter. The volume of retained imports, though slightly higher than during the abnormal period following the imposition of the new import duties, shows a reduction of 13 per cent. on the corresponding quarter in 1931. As compared with the second quarter of the current year, retained imports of food, drink and tobacco, as revalued by the Board of Trade, increased from £110,663,000 to £115,441,000, and those of wholly or partly manufactured goods, at £45,275,000, show an advance of £3,128,000. On the other hand, and this is ominous, retained imports of raw materials declined from £48,750,000 to £45,193,000.

The 1930 Census of Production.—Volume XX. of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the paper, printing and publishing trades. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms) and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Printing, bookbinding ...	Thous. £ 56,033	Thous. £ 54,916	Thous. £ 35,885	Thous. £ 36,091	£ 214	£ 222
Printing and publication of newspapers & periodicals	45,298	50,205	31,291	35,649	552	518
Manufactured stationery	10,656	10,490	5,264	5,816	134	134
Cardboard boxes	7,048	10,352	3,851	5,242	170	164
Pens, pencils	2,115	2,317	1,288	1,341	179	176

In contrast with the case of many industries, the results of the census of 1930 in the paper, printing and publishing trades compare favourably with 1924. The average number of persons employed in the printing, bookbinding, stereotyping, engraving and kindred trades declined from 167,355 in 1924 to 162,940 in 1930. There was a decrease in the value of the gross output of the industry, but the value of the net output increased from £35,885,000 to £36,091,000, chiefly as a result of an increase in the output per person employed. The expansion in the production of newspapers and periodicals has been substantial. The gross value of daily newspapers alone advanced from £26,187,000 in 1924 to £30,045,000 in 1930. The average number of persons employed in this industry increased from 56,724 to 68,888. Despite the decline in the selling price of stationery, amounting to 23 per cent. in the case of notepaper and pads, the total value of the net output of this trade was considerably higher than in the earlier census year. The production of paper and cardboard boxes increased from 3,156,000 cwts. in 1924 to 3,839,000 cwts. in 1930.

Hongkong Trade.—Our Hongkong correspondent writes:—The question exercising the minds of those engaged in commerce here is whether Hongkong and South China are at last beginning to feel the effects of the world depression. The past few months have seen a perceptible slowing down in trade generally. Prices of merchandise of all descriptions are declining alarmingly, new business is on a hand-to-mouth basis, and the export of China produce is at a very low ebb. Money seems to be plentiful, but much of it is lying idle on deposit with banks. There is little incentive to employ it on the Stock Exchange, for most local shares have been sagging badly, and there seems to be no demand for trade purposes. Remittances from abroad by Chinese, normally a very important factor in the trade balance, have fallen to a negligible figure, and until there is a revival in the rubber, tin and plantation industries of the Straits and Java these remittances are not likely to regain their

former volume. The virtual cessation of trade with Japan, the revolution in Siam, and the further political unrest in Canton, are all contributory causes of depression, while the higher Chinese Customs tariff, coupled with ever-increasing taxes, are imposing a severe check on trade with the interior. The outlook at the moment is certainly gloomy, and faith in China's powers of recuperation is by no means as firm as it was in the past. The statistics of Hongkong trade for the first half of 1932 show a decline in local currency values but an appreciable increase in sterling, as follows:—

	January-June, 1932.	January-June, 1931.
Imports	\$335,400,000 (£22,100,000)	\$367,000,000 (£17,700,000)
Exports	\$242,300,000 (£16,000,000)	\$272,700,000 (£13,200,000)

Imports from the United Kingdom for the first half of this year were \$46,439,000, an increase of \$2,300,000 compared with the first half of 1931. The percentage of British to total imports rose from 12 to 13.8. On the other hand, exports from Japan fell from 10 per cent. of the total for the first half of 1931 to 2.9 per cent. for the corresponding period of this year. During the past half-year there have been some big movements of treasure, the imports being valued at \$43 millions as compared with \$26 millions for the first half of 1931. The corresponding figures for exports were \$54 millions as against \$60 millions. The buying season for cotton fancy piece-goods for next spring opened early in the month. At the time of writing very few transactions have been brought to book. Local dealers have been offering on a ridiculously low basis, and although in the meantime exchange has improved from 1s. 3½d. to 1s. 4½d., Manchester prices have advanced by a greater proportion. Last year well over 20,000 packages were booked, but clearances were disappointing, and it is estimated that the carry-over is between 6,000 and 7,000 packages. The strike in Lancashire will jeopardise shipments, and it is not unlikely that business will be brought to a standstill. The reluctance of dealers to place their orders earlier can be accounted for by the experience of the last few years, when Manchester prices declined as the buying season advanced, so that dealers booking later were at an advantage over those who had done so in the early part of the season. From the importer's point of view the piece-goods business has been so unremunerative for the past few years that dealers' offers which show no reasonable margin are being being declined even if it means the lapsing of well-established "chops." The general feeling is that the smaller the quantity booked this season the better prospect there will be for clearing off old stocks next spring.

German Film Finance.—Our Berlin correspondent writes:—The Universum-Film A.-G. (Ufa) is one of the few German industrial concerns able to declare a dividend for the business year 1931-32. A dividend of 4 per cent. is declared on the stock capital of Rm. 45 millions, against 6 per cent. last year. Ufa's net profits have hardly decreased, a fact which astonished the German public the more because in the last few weeks no less than four fairly large German film producers were compelled to stop payment. Tobis, the head undertaking for the Continental sound film patents, was compelled to reduce its capital from 12 to 6 million marks because of the heavy losses it had sustained through bad debts. The attendance at cinemas has not decreased, but a reduction of prices has brought in lower receipts. However, the majority of German film producers are not speculative undertakings dependent on the success or failure of one film. Ufa alone, as the largest film concern in Europe, has distributed its risks in a healthy manner and it has an assured market, since it controls a great number of cinema theatres not only in Germany, but also in neighbouring countries. Its foreign business plays an important rôle. Almost 40 per cent. of its receipts come from the sale of German films in foreign countries; for the German sound film has succeeded in taking the lead in many other countries, especially in Switzerland and the Austro-Hungarian Succession States.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — The Herriot Plan — Economic Conference.

(FROM OUR CORRESPONDENT.)

GENEVA, November 1.

THE new French disarmament and security plan has awakened a great deal of interest, and M. Boncour's explanation of it when the Bureau of the Conference resumes on Thursday is keenly awaited. It is not known whether he will disclose any more than is now available, or whether it will be on similar lines to what has already been told of it; for it is not anticipated that the full terms of the plan will be submitted until M. Herriot comes to Geneva. Mr Norman Davis is here, but there will be no German statesman until the Council meeting on November 21st to deal with the Lytton Report. There will, therefore, be opportunities for preliminary conversations during the next three weeks which should give some indication of how matters are likely to go. Despite the subdued satisfaction expressed officially about Mr Davis' conversations in London, the impression is that not much progress has been made; and now that we are also promised a Japanese plan, it seems that the British Government will be faced with a variety of choices before it has made up its mind to any initiative of its own. In fact, there is a feeling that the naval side of the problem is now lagging behind the land side, and Japan is likely to be another nigger in the wood pile. But, at all events, there is movement.

On the whole it can be said that the French plan has been rather sympathetically received in Geneva. It differs greatly from previous French plans in being more elastic and in facing more frankly the political realities. It is an admission that it is no use trying to work at present along the lines of the 1924 Protocol, and still less of the Tardieu plan, that it is not feasible to get any British extension of the Locarno commitments, and that nothing can be achieved so long as there is a rigid insistence on the Versailles Treaty. The advantage of the scheme is that it tries to make the best of things as they are, and there is ample room for fruitful discussion. Even more important politically, as Germany has perceived, is the plan's implication of a readiness to talk outside the Versailles Treaty, coupled with M. Herriot's plain acknowledgment of the difficulties of maintaining French security by armed force alone. To belittle these factors would be unwise and unhelpful.

It may be said at once that there is not the least intention to foist conscription on England or to ask England to extend her Locarno engagements to Eastern Europe. What England is asked to do, with all other members of the League, is to recognise that Article XVI is not a dead letter. England must do so or take the only other honest course—ask for the suppression of the Article. M. Herriot, in this connection, properly attaches importance to Mr Stimson's declarations regarding the necessity of consultation under the Briand-Kellogg Pact, and of admitting that in face of its violation, neutrality on the part of the rest of the signatories would be incompatible with their obligations. If this be formally accepted, England has no further excuse for running away from Article XVI while it exists, though there might be something to be said—if there were to be no substantial reduction of armaments—for having that Article in much more general terms, not excluding resort to economic and financial, and eventually even military, sanctions. That would perhaps be preferable to retaining it in its present form and tacitly ignoring it.

That, however, is a large question; any possibility of changing the Article now is doubtful, but if the French plan is accompanied by a really substantial reduction of armaments, the whole controversy on Article XVI would be enormously simplified. So to arrange things that defence is widely strengthened and the power of attack

greatly reduced remains the fundamental contribution to be made to the political relations of the world. On that, the French plan, so far as it is known, remains at present silent, and it will be a grave error of judgment and psychology on the part of the French if they do not indicate what they will be ready to do in that respect. Man-power is the only feature mentioned apart from the political features, and man-power is of less importance than material.

The most serious criticism so far advanced concerns the suggestion that Germany should be allowed to return to conscription—the one point which, in itself, has apparently been most sympathetically received by the powers that be in Germany. It is argued that this would be the first step towards the militarisation of the German people, and that, if the French General Staff had reservations on the point, they were right. On the other hand, France certainly will not give up conscription, and how, therefore, is the German claim to equality of status to be met? Perhaps it could have been met by a less apparently drastic concession. But if, as proposed, the plan provides for a reduction of periods of service to eight or nine months, it makes possible—if coupled with substantial reduction of material—the establishment of really non-aggressive national police forces. Unprofessional soldiers of eight months' training cannot provide the nucleus for storm troops, especially if they are deprived of mechanical means of aggression.

It is here that some danger arises over the suggestion for the provision of specialised national contingents immediately available and possessing powerful war material as the components of the collective force to suppress aggression. The full and faithful acceptance of the general sense of the plan should make that provision unnecessary, for, whatever may be said of it in detail, the honest acceptance of some such plan would be an earnest of a sincere policy of peace. To insist too much on the ideas of collective force and sanctions might jeopardise the great occasion which the French now have to make a vital contribution to peace and to test the devotion to peace professed by the leaders of Germany. It is the only way to disarm Germany, in the proper sense of the term. The upshot would be: national police forces on short-term service, equality of legal status for all, substantial reduction of offensive arms, and a strengthening of all defensive arms. The French may not be so far from that, if others are prepared to take a hand.

It is important to observe that one of the bases of French policy is the interdependence of all forces—on land, sea, and in the air—and the naval and air elements are not easy matters. In fact, nearly everything on the sea will depend upon the outcome of the Manchurian crisis, and it is no mere academic theory to say that if this goes wrong, if naval reductions consequently become replaced by naval competition, and if Japan is allowed to break loose, the whole disarmament effort falls to the ground, with disastrous results. The trouble is that some Governments and many people fail to comprehend this stark possibility. There is some uncertainty about what M. Herriot meant when he said that if the French scheme did not succeed, they would have to "fall back on the Hoover Plan." Presumably he was thinking of the part dealing with effectives, and it does seem, on the more generous and larger interpretation, that the French proposals go further in this connection. But, otherwise, "falling back" scarcely seems the appropriate term.

The Preparatory Committee of Experts for the World Monetary and Economic Conference has started work under the presidency of the Dutch member, Mr Trip (one of the representatives of the Bank of International Settlements). It has had no general discussion, and has immediately divided up into monetary and economic sub-committees. The former has begun with a discussion of the general conditions of a return to the gold standard, and the latter with a discussion of import restrictions—quantitative limitation of imports by prohibitions, quotas, permits, and indirect limitation by currency control. It is not yet decided whether the Committee will confine itself to drawing up a list of the questions to be put on the

agenda of the Conference or whether it will make an attempt to prepare draft agreements on certain questions. It is first examining the list. The Committee is strong on the financial side, but not so strong on the economic. The reasons for Sir Walter Layton's resignation are fully understood here, and they have not added to the hopes of a successful readjustment of economic relations. No foreigner accepts for a moment the English Government's idea that Ottawa is a contribution to the world problem. It is said that the Preparatory Committee will sit for about three weeks, adjourn, and meet again, very likely in January. If so, the Conference will take place later than was at first supposed.

FRANCE.

Radical Congress — Spanish Visit — Departmental Expenditure — New Rentes.

(FROM OUR CORRESPONDENT.)

PARIS, November 2.

THE Chamber adjourned on Saturday, after less than a week's session, until next Tuesday, to permit the Premier and the rest of the Radical Parliamentarians to take part in the annual National Congress of their party, which is to be held at Toulouse during the last three days of the current week. This party caucus is expected to have a decisive effect, one way or the other, on the future policy of the Socialistic Radical Party, and consequently on the fate of the Herriot Cabinet. The sense of party discipline is particularly strong among the French Radicals, and the rank and file seldom ignore their power of dictating policy to their leaders. Thursday's proceedings will be occupied with the question of the general policy of the party, and will doubtless see a keen fight between the "Cartellists" and the "Concentrationists." On Friday, when M. Georges Bonnet will present his report on Radical financial policy, the rock to be avoided will be the fact that the Cabinet's economy proposals, now before the country, include an all-round reduction in the pay of 770,000 public officials, ranging from postmen to high permanent officials. The powerful Civil Service trade unions, flushed with their success last July, when they compelled the hasty withdrawal of similar proposals, have already declared war on the Cabinet, and are strongly represented among the 2,000 Radical delegates at Toulouse. The equally powerful associations of ex-soldiers, who are threatened with cuts in their pensions, have placarded the country with posters insisting that no steps against their interests shall be taken until senators and deputies take the lead by voting reductions in their own salaries, and until ruthless economies are imposed on every Government department, except those concerned with national defence.

M. Herriot's friendly visit to Spain has had a stimulating effect on all sections of opinion, as it is regarded as portending a valuable extension of French influence and strength in Europe. Reports in a London newspaper to the effect that the real object of the French Premier's visit to Madrid was to attempt to bring about a working arrangement with Spain—if not an actual alliance—with the object of ensuring the transport of the French African forces, in case of war, across the narrowest part of the Mediterranean and over Spanish territory to this country have been semi-officially denied. The suggestion, nevertheless, has caught French imagination to a remarkable degree and reawakened a general desire for closer relations between the two countries. M. Herriot's Spanish trip has apparently led to an increase of confidence here in his power to strengthen the group of Powers friendly to France, and has compensated to some extent for the nervousness felt by a large section of opinion as to the new French disarmament proposals. The weakest point in the latter, it is remarked here, is that the whole scheme is dependent on effective international control being exercised, and many Frenchmen feel that Germany would find means of evading this.

In view of the pending Budget debates, the following comparative figures, drawn up by M. Piétri, are of special interest:—

	Ratio to Total Expenditure.	
	1913.	1931-2.
National defence	39.0	24.2
Education	6.6	5.5
Administration	10.0	10.0
Social expenditure	3.4	3.6
Public debt	26.0	30.0
Economic expenditure	2.8	4.7
Pensions and annuities	7.0	17.5

Since these figures were drawn up certain of these percentages have been slightly modified as the result of cuts in national defence expenditure last July and the recent Rentes conversion operation.

The new $\frac{4}{5}$ per cent. Rentes were introduced to the Bourse to-day at 96½ for the account and 97 for cash, as had been generally expected. The new stock is divided into two distinct sections, quoted as "Tranche A" and "Tranche B" respectively, the difference between the two categories being due to the fact that the half-yearly interest payments for the one section fall due at periods of the financial year when nothing is payable in respect of scrip belonging to the other section, so that the total interest charge is spread practically equally over each quarter. The initial quotation rates, it is understood, were fixed at the level quoted in order (1) to leave an attractive margin "for the rise," and (2) to prevent a repetition of the speculation which occurred in respect of the issues just retired by conversion.

Coal production figures for September indicate an increase of 48,000 tons on the month. Total output was 3,916,000 tons, as compared with 3,868,000 tons in the previous month and 4,154,000 tons in September last year.

GERMANY.

Prussia and the Reich — Budget — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, November 1.

PRESIDENT VON HINDENBURG summoned Chancellor von Papen and Herr Braun at the end of last week for a joint discussion regarding the powers of the Reich Commissars and the Prussian Government. The President exhibited a spirit of friendly compromise, and Premier Braun gave assurance of his loyalty; but the attempt to reach agreement with the Chancellor failed. On the preceding day the Reich Cabinet had decided on a reform of the Prussian Central Administration, which included, among other features, the abolition of the Welfare Ministry. The plan contemplated the administration of some of the Prussian Ministries by Commissars of the respective Ministries of the Reich and the appointment of other Commissars as Ministers of the Reich without portfolios. At the President's instance these decisions were not officially made public before the conference with Herr Braun, and the Chancellor was obviously unwilling to negotiate on them with the Prussian Premier. Herr Braun, thus faced by a *fait accompli*, protested, but was powerless to prevent it. Nevertheless, the Reich Government had to some extent to alter its plan. Dr. Bracht was named Commissar for the Prussian Ministry of the Interior and Dr. Popitz, former Secretary of State, as Commissar for the Prussian Ministry of Finance, but the placing of the Prussian Ministries under the respective Ministers of the Reich was limited to the unimportant case of the Prussian Ministry of Agriculture, at whose head Baron von Braun, Reich Minister of Food Supplies and Agriculture, was placed as Commissar. It is not without interest to speculate as to how has a thorough acquaintance with the Reich's financial system, will divide the work of this Ministry with Count von Schwerin-Krosigk, since the purely Prussian sphere of activity will hardly content him. There is undoubtedly a danger of much friction in this direction.

The goal aimed at by the von Papen Government is the combining of the Governments of Prussia and the Reich. There is opposition to such a union in Southern Germany, since the fear exists that it would bring too great an influence of Prussian ideas and interests to bear on the administration of the Reich. If the Reich Cabinet had reached an agreement with the Braun Government, it would have been possible to overcome this opposition. Since, however, this was not achieved, and since the South Germans feel that what Herr von Papen is now attempting against Prussia could also sooner or later be attempted by some Government against them, the end of last week brought a sharp protest from the Bavarian Government, which was supported also by Baden and Wurtemberg.

This compelled the Reich Government to abandon its plan of combining the Ministries to the extent at first contemplated. But their action does not do away with "dualism" between Prussia and the Reich. The von Papen Government, in view of (1) the German Nationals' demand that the Braun Cabinet be prevented from exercising any real functions of government, (2) President von Hindenburg's strict warning to respect the decision of the Staatsgerichtshof in Leipzig in all circumstances, and (3) the opposition of the South German Governments to its Prussian policy, to-day possesses less freedom of action in domestic affairs than ever before, and it is impossible to see how the coming elections can alter this situation.

An acute difficulty for the Reich Government arises from the fact that a committee of the Reichsrat (Federal Council) will hold a meeting on November 3rd (i.e., before the elections). The Reichsrat is made up of representatives of the various State Governments, and has a voice in the legislation and administering of the Reich's affairs. This meeting will probably voice strongly the States' lack of confidence in the Reich Cabinet, and it will be difficult for Herr von Papen to escape defeat. This illustrates the political importance of the Leipzig judgment, which returned to the Braun Cabinet its right to appear in the Reichsrat.

The first six months of the fiscal year, which began on April 1st, brought in tax receipts to the Reich of 3,352.89 million marks, or almost 500 millions less than in the same period in 1931, and 380 millions less than half the budget estimates for the whole fiscal year 1932-33. If the second half of the year shows the same falling off, the result will be a deficit for the twelve months of 750 millions. It is difficult to predict whether this will happen. In respect of seasonal conditions the second half of the year is somewhat more favourable, and in so far as the economic situation is concerned, it can perhaps be expected that, as a result of the relative improvement in the labour market, the tax on wages and the consumption taxes will bring in somewhat greater amounts in the coming months than in those gone by. On the other hand, receipts from income taxes on companies may fall off. Since the expenditure during the second quarter is not yet known, all that can be said at present is that the Reich Minister of Finance will in any event have to reckon with a not inconsiderable deficit for the current budget year. In addition to this, there are the financial difficulties of a number of municipalities, the extent of which was recently pointed out by Dr. Bracht, the Reich Commissar. The Prussian municipalities have not transferred to the State Treasury the 130 million marks collected by them for the State, because they needed these funds for their own most urgent payments. The Reich, therefore, will have to give more assistance in this direction than has previously been the case.

Following the promotion of M. Avenol to the post of Secretary-General of the League of Nations, Dr. Trendelenburg, formerly Secretary of State in the Reich Ministry of Economics, has been appointed Under-Secretary of the League. He will have charge of the economic and financial department of the League's Secretariat. Dr. Trendelenburg was responsible for German economic policy when it was most markedly liberal. The reason for his leaving

the Ministry of Economics is the conflict between his liberal ideas and the tendencies followed by the present Government.

The Reichsbank report for October 22nd again shows a great improvement in the position. Holdings of negotiable paper decreased again by Rm. 130 millions to a total of Rm. 2,617 millions. They are thus Rm. 1,050 millions lower than at the same time last year. It may be assumed that the total holdings of negotiable paper to-day include hardly more than a thousand millions of genuine commercial bills. The note circulation, including daily liabilities, has decreased by a round thousand millions against the same period last year. An equally encouraging fact is that the ratio of "cover" is slowly improving. Holdings of gold and foreign currencies have increased steadily from Rm. 892 millions on July 15th to Rm. 934 millions. For many weeks offerings of *devisen* and demands for it have offset each other with but small variations. It would seem that, as long as no new and important disturbances arise in foreign trade, and no great repayments of capital become necessary, the German balance of payments can be brought into equilibrium. The greatly improved situation of the Reichsbank indicates the very liquid condition of the open money market. The Bank for Acceptances has thus been able in the last few months to place steadily increasing amounts of commercial paper on the market. The banks are also in a more liquid condition. The result is that there is again strong public pressure on the Reichsbank to lower its discount. But it is unlikely that the Reichsbank will submit to this. The present discount rate of 4 per cent., for a country in financial and currency situation such as Germany's, is low, and regarded as too low in many centres abroad. The Reichsbank might change its mind if the Bank of England reduced its rate, but for the time being a margin of 2 per cent. between Berlin and London is regarded here as absolutely necessary.

ITALY.

Budget — Savings — Railways — Unemployment.

(FROM OUR CORRESPONDENT.)

TURIN, November 1.

In past days the Fascist regime has been taking stock of its achievements in the ten years during which it has ruled over Italy. From the economic point of view, the leading idea in public speeches has been that achievements such as roads built or improved, lands reclaimed, harbours enlarged, waterworks and electric plants multiplied, railways electrified, towns beautified have been many and great, and they will in due time bear fruit. In the meantime, people must have faith and face the crisis courageously.

It is, indeed, unfortunate for Fascism, as for any other present Government, that such achievements are apt only to make themselves felt in the long run, while things are very indifferent in the short run. Italian economic indices clearly cannot be very different from those of other countries. Beginning with the State Budget, the period of post-war deficits was succeeded, from 1924-25 to 1929-30, by a series of Budget surpluses; but in 1930-31 a deficit reappeared at 504 million lire, increasing to 4,274 million lire in 1931-32 and to 1,054 million lire in the first quarter of 1932-33. Hence the public debt, which had decreased from 95,544 million lire at June 30, 1923, to 83,675 million lire at June 30, 1927, increased again to 95,893 million lire at September 30, 1932. As the debt is not wholly dead-weight, but partly productive, it is hoped that in the long run the increase will bring in revenue to cover the interest charge.

Huge sums have lately been voluntarily entrusted to the State, about 6,000 million lire coming from the working and middle classes, eagerly bent on buying Post Office bills. Savers, excepting those who invest in their own houses or lands or businesses, lend exclusively to the State

or other public bodies. The Association of Joint Stock Companies, which has just issued its year-book, shows that the amount of deposits and correspondent credits, which at the end of 1929 stood at 32,204 million lire in 278 joint-stock banks, had decreased at the end of 1931 to 27,033 million lire in 225 banks.

Railway goods traffic, a very sensitive index, is going from bad to worse. From over 60 million tons in 1929, it had fallen to 27.6 million tons in the first nine months of 1932, as against 33.6 million tons in the corresponding period of last year. The decrease is to the extent of some two-thirds due to the slump, and may therefore be considered of a temporary character, while the remaining one-third may be attributed to motor transport competition. On October 25th Signor Mussolini opened a new motor road between Turin and Milan, which cost about 125 million lire, a splendid work which will, however, increase the competition against the State railways. Similarly, a magnificent new road between Genoa and Turin and Milan for goods traffic will provide a timely outlet for excessive traffic in Genoa, when it is forthcoming, but in the meantime is proving a source of loss to the railways.

The growth in unemployment seems somewhat checked, the total increasing from 945,972 at the end of August to 949,408 at the end of September, as compared with a rise of from 693,273 to 747,764 in the previous year. The figures relate to unemployed reporting to the employment offices. The number receiving relief is much smaller. Up-to-date figures do not exist, but the latest published point to an increase from a monthly average of 2,395,602 "relief man-days" in 1930 to 4,016,948 in 1931 and 5,492,129 in the first quarter of 1932, corresponding to a yearly expenditure of about 250 million lire—not a large figure, but one to which must be added the relief given by local and co-operative bodies from sums raised by popular subscriptions.

HUNGARY.

Mr Tyler's Report — Agricultural Debts — Foreign Creditors.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 31.

THE fourth quarterly report of the League Representative in Budapest, dealing with the July-September quarter, states that Hungary's economic position has further deteriorated during the last three months. The report is a serious indictment of the defective financial policy of the outgoing administration and a grave warning to the new Government that inflation can only be avoided if immediate steps are taken to redress the budgetary situation. The provisional returns for the first three months of the financial year that began on July 1st indicate that the voted Estimates, balancing at 806 million pengő for the administration and at 401 million pengő for the undertakings of the State, cannot be realised so far as revenue is concerned. The League Representative, therefore, urges that drastic economy measures should be taken to restore the budgetary equilibrium.

It is not reasonable to expect a revenue of more than 740 million pengő for the administration, as against 780 million pengő collected in 1931-32; and, as to the State undertakings, at best 335 million pengő can be reckoned with, as compared with 362 million pengő in the previous year. Thus there is a prospective deficit of 100-125 million pengő for the current financial year, as compared with 160 million pengő shown by the provisional returns for 1931-32, and some 400 million pengő disclosed by the audited accounts for 1930-31. Actual budgetary expenditure in July-September amounted to 163.7 million pengő, and actual receipts to 167.7 million pengő, showing a surplus of 4 million pengő. But, as Mr Tyler states, the actual receipts and expenditure figures do not afford a complete picture of the position, because the difference of 81 million pengő between the actual expenditure of

163.7 million pengő and the "provided" expenditure of 194.7 million pengő in the monthly estimates of the Treasury does not constitute a real saving; it is chiefly deferred expenditure. The last monthly report of the Finance Minister has just revealed that the Treasury did not pay 14.8 million pengő into the Foreign Creditors' Fund—payments which were already due in the July-September quarter on account of the State debt service other than the League loan service.

Mr Tyler considers that one of the most urgent steps to be taken in the direction of sound financial practice is to exact stricter budget methods from the State undertakings. Relatively to the magnitude of the sums involved, their budgets have drifted much farther away from reality than has that of the administration. Indeed, for more than half of the probable deficit of 100-125 million pengő in the current financial year the State undertakings will be responsible. Whereas the deficit of the administration of some 50 million pengő might be met by the suspension of the amortisation of the State debt service and by other immediate savings, there is no scheme yet in sight for eliminating the undertakings' deficit. In view of the precarious financial position of the undertakings, Mr Tyler advocates the discontinuance of the State iron-works, and, with regard to the railways, recommends that their management should be examined by some entirely independent authority in order that no possibility may be neglected of decreasing the heavy losses which the State is now called upon to make good.

The first agricultural moratorium expired on October 31st. The Government, recognising the inadvisability of attempting, at present, any definitive settlement of agricultural indebtedness, decided by Order-in-Council to prolong the moratorium for twelve months, protecting certain classes of agricultural debtors against forced sales of their landed estates if they pay punctually their taxes and interest on their debts. There is little doubt—as Mr Tyler observes in his report—that such measures can only result in depriving agriculture in general of any chance of obtaining credit, even for its most legitimate needs, thus penalising the solvent farmers, who constitute the great majority. On the other hand, the political aspect of the question cannot be ignored. Farmers all over the country have been incited by various political party propagandists not to pay taxes, interest, etc., and the new Government had little choice but to extend the duration of the moratorium. It is to the credit of the new Finance Minister, however, that by extending the agricultural protection for another year he at last tackled the intricate problem of long-term debt annuities owed by the farmers. By another Order-in-Council simultaneously decreed, the Government afforded a temporary relief to the mortgaged landowners, providing that, until a definite agreement can be made with the foreign creditors, their annuities should be reduced by 2 and 2½ per cent. on debts contracted at 7 and 7½ per cent., respectively. This measure is the forerunner of the Government's plan to appeal to all foreign creditors to scale down the high interest rates—mostly 7 and 7½ per cent.—on Hungary's post-war debts.

The Foreign Creditors Fund, into which the untransferable annuities of mortgaged and other long-term debt services are paid, will naturally be affected by the agricultural debt reduction, although banking institutions are required to pay the original annuity of 7 and 7½ per cent. as hitherto. But the coupons presented to the fund for payment in pengő will henceforward be redeemed at 5 per cent. only—as partial payment. The remainder will be lent by the fund to the banks. The bondholder who accepts 5 per cent. as partial payment on his 7 and 7½ per cent. coupons will not forgo his rights for the rest, and will be remitted his coupons, on which the partial payment is earmarked. There is no discrimination between foreign and domestic bondholders. This measure is of particular interest to the British and American investors, who bought almost all the Hungarian mortgage bonds, as these were issued mostly in London and in New York in £ and \$ denominations. Although a considerable portion of them was repatriated, it is estimated that about half of the

outstanding bonds are still possessed by British and American investors.

According to Mr Tyler's report, the untransferable pengő equivalent received by the Foreign Creditors Fund from December 22, 1931, till September 30, 1932, amounted to 76.1 million pengő, and the arrears amounted to 26.3 million pengő. Considering that the arrears are increasing at a dangerous pace, the decision of the Government to reduce the cash amount paid for the 7 and 7½ per cent. coupons to 5 per cent. is very welcome, because the less paid out of this fund the better, as it is very questionable whether the amount actually paid into the fund could be considered as real money in view of the fact that the expected deflationary effect of the transfer moratorium has not materialised. The note circulation was about the same in September and in October as a year ago, and the bill portfolio of the National Bank has increased since the operation of the transfer moratorium by approximately the same amount as the sum paid into the Foreign Creditors Fund.

SWITZERLAND.

Industrial Activity — Foreign Trade — Budget.

(FROM OUR CORRESPONDENT.)

GENEVA, October 31.

MUCH has recently been written regarding the economic situation of Switzerland, which some papers abroad describe as "utterly hopeless." That judgment is exaggerated; but it is true that the present situation is bad. Switzerland was not submerged as early as other countries by the tide of the world's depression, but she is now severely affected by the consequences of the crisis, and signs of a recovery are scarce. A recent inquiry concerning the situation of Swiss industry led to the conclusion that the activity of 7 per cent. of the industries could be defined as "good," that of 44 per cent. as "satisfactory," and that of 49 per cent. as "bad." Seasonal improvement this year has not been as great as expected, and the industries supplying the home market, which constitute the backbone of Swiss national economy, are now also hit by the slump. The branches which are suffering most are the watchmaking industry, certain branches of the textiles industry, embroidery, and, to a lesser extent, the machine and paper industry, while, on the other hand, building, the graphical arts and wood industries show a more normal activity. The hotel industry and transport undertakings are seriously affected and the Government is considering means of helping them.

The balance of Swiss foreign trade showed a slight improvement in July, August and September, when deficits of 74 million francs, 74.4 and 70.6 millions respectively were recorded. Exports, after reaching their lowest level in June at 58.4 millions, rose to 58.7 millions in July, 59.7 millions in August, and 63.5 millions in September. The numbers out of work totalled about 80,000 at the end of September, 49,000 of whom were wholly unemployed. It should, however, be recalled that during the crisis of 1922-23 there were over 100,000 out of work, 65,000 of whom were wholly unemployed.

The financial situation of the Confederation, though strongly influenced by the depression, is nevertheless sound; and the Government is making a big effort to curtail all unnecessary expenditure. Receipts for the current year show a general decline as compared with 1931, and it is probable that the deficit at the end of 1932 will be about 70 million francs. The Budget for 1933 estimates expenditure at roughly 444 million francs, and receipts at 374 millions, thus leaving a further estimated deficit of 70 millions. The situation is grave, but not without hope. The Swiss National Bank has a gold reserve of 2,637 millions, against a banknote circulation of 1,495 millions, and there is no prospect of the country leaving the gold standard in the near future. The national debt represents a sum of 1,200 francs per head of population, which is not excessive.

CANADA.

Crop Conditions — Wheat Marketing — Ottawa Agreements — Foreign Trade — Business.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 8.

WESTERN Canada has already had its first taste of winter, and consequently the final stages of the harvest have been impeded. Twenty per cent. of threshing in Alberta still remains to be done, but except in some backward districts of Northern Saskatchewan it is finished in the other two prairie provinces. But the grain-growers have been dismayed by the further slump in grain prices, which has taken wheat to a record low level. Under the pressure of their debts they have been delivering enormous quantities of wheat, with the result that stocks are piling up rapidly, and on October 27th they reached a total of 209,230,663 bushels, a gain of 11 million bushels for the week and 75 million bushels in excess of the figure for the corresponding date of 1931. On the other hand, the export movement since the new crop year began has been much stronger than a year ago, and for the first ten weeks ending October 7th it had reached a total of 46½ million bushels, as compared with 26½ million bushels in the previous parallel period.

In many districts on the prairies the farmers are now getting little more than 30 cents a bushel for No. 2 Northern wheat, and their lamentations have been increasing. Accordingly last week a conference was held at Winnipeg between Premier Bracken, of Manitoba, Premier Brownlee, of Alberta, Mr Macpherson, the Provincial Treasurer of Saskatchewan, and representatives of the provincial wheat pools, at which the position of the wheat market was the main subject of discussion. It is an open secret that the Dominion Government is already substantially involved in the wheat market through responsibility for the transactions of the Central Selling Agency of the wheat pools, which has been engaged in liquidating the commitments left over from its operations connected with the marketing of the crop of 1930. This agency is supposed to be carrying at the present time several million bushels of futures for which the banks have made advances under governmental guarantees. So the Federal Government is thought to be vitally interested in maintaining wheat prices. The delegates to the conference decided to ask for a bonus on wheat production for another year; at the same time they resolved to suggest to the Federal Government the advisability of calling a conference of representatives of the Governments and producers of the chief wheat exporting countries to consider all phases of the wheat situation.

The Ottawa Conference agreements have been the subject of close scrutiny throughout Canada, and while the verdicts on them are naturally coloured in many cases by partisan sentiment, the prevalent impression among impartial students is one of surprise that the British delegation were ever induced to sign the Anglo-Canadian agreement in view of the fact that the tariff concessions to British trade are so trivial. Defenders of the agreements argue that the full value of Canada's concessions will only be realised when the proposed Tariff Board has worked out the schedules for a fair competitive tariff, but the critics contend that the chief beneficiaries of the agreement will be the Canadian manufacturers, who get a substantial increase of their protection against American and other competitors without making any serious sacrifices either for the benefit of the Canadian consumer or the British manufacturer. At present the Liberal papers and politicians are in full cry against the agreements, and the *Toronto Star* has published the following illuminating *exposé* of the comparative tariff rates on a list of household commodities as imposed (1) by the 1930 tariff of the Dunning Budget; (2) by the tariff of 1932, and (3) by the tariff as amended by the Anglo-Canadian agreement. It will be seen from these figures that the only two items in which any serious reductions have been made are linen tablecloths and linen pillow cases, and the *Star* points out that

the climatic conditions preclude the manufacture of these goods in Canada:—

	1930.	Old Tariff, 1932.	New Tariff, 1932.
Unbleached cotton fabrics	13.7	39.7	38.6
White cotton flannelette	16	48.3	46
Cotton printed piece-goods	19	48.2	45.6
Cotton fabrics with cut pile (velvets)	17	38.2	29.3
Coloured cotton lace	19.2	34	33.7
Cotton pillow cases	16	49.3	47.5
Cotton sheets	16	50.7	48.5
Cotton towels	15	53.6	51
Cotton lace curtains	19.2	40.3	40
Linen crash towelling	19	40.7	43.6
Linen tablecloths	19	46	15
Linen pillow cases	20	45.2	14
White linen towels	19	48	48
Celluloid and cotton novelties	21.5	48.3	48.3
Cotton and art silk bedspreads	21.5	49	49
Wool blankets	21	92	66.2
Wool piece-goods in the grey	11	49.3	46.5
Wool overcoatings for manufacture	24	89.5	75.7
Wool piece-goods	26	55.7	54.5
Wool overcoating	26	93	81
High-grade wool suitings	25	60.7	57.2
Wool suitings	24	62	55.7
English worsted suits	26	56.6	54.7
Wool blazers	26	61	58.3
English wool coats	26	62.5	59.2
Artificial silk fabrics	22	68.5	68.5
Cotton and art silk fabrics	25	73	73
Artificial silk lace curtains	23.7	44.5	44.5
Knitted sweaters	19	43.5	43.5
Wool hosiery	23	79	71.7
Gloves (cape)	21.5	43.6	43.6
Ladies' hats	21	40.2	40.2
Axminster carpets	23	92.5	71.5
Earthenware articles	19.2	43.5	43.5
Silverware	20	49.2	49.2
Plated articles	21.5	49.3	49.3
Boots and shoes	16.2	39.2	39.2
Fancy pins, buckles	21.5	49.2	49.2

The trade returns continue to make very depressing reading. The following are the figures for September, with comparative data for 1931 and 1930:—

	1930.	1931.	1932.
Exports	\$ 81,046,227	\$ 48,991,385	\$ 42,186,815
Imports	\$ 87,900,201	\$ 45,379,099	\$ 34,504,129
Total trade	168,946,428	94,370,484	76,690,944

As compared with September, 1931, the unfavourable balance has increased from roughly \$3½ millions to \$7½ millions.

There is comparatively little change to report in the general business situation. In Montreal and some other cities there has been a moderate expansion in retail sales of autumn clothing, blankets, etc., but the continuance of mild weather has kept the public from purchasing their winter goods. Industrial conditions are still very "patchy," and only the textile mills are reasonably busy, while the primary iron and steel plants, the farm implement factories, and the machinery firms are deplorably idle. The building trades are also inactive, and new construction is of very modest dimensions. There has, however, been some improvement in the lumber trade, and, although stocks are still considerable, a larger cut is planned for the present winter.

In Eastern Canada a vigorous agitation, which has the support of prominent politicians like the Hon. Senator Rodolphe Lemieux, is in progress about the current price of coal, which has experienced practically no decline in a time of falling prices. It is alleged that the Canadian consumers of anthracite coal, which is utilised in heating central furnaces, are being seriously exploited by a combination of American and British coal operators. It is claimed that the competition of British anthracite should have forced down the price of the American product long ago, and the fact that it has not done so is due to some secret agreement. The *Montreal Star* asserts that Welsh anthracite coal, after allowance is made for freight rates and depreciated currency, can be laid down at Montreal at a cost of \$6 a ton, and yet the price at Ottawa and Montreal ranges from \$15 to \$17 a ton. It is claimed that this margin leaves excessive profits for the vendors of coal, and the Federal Government is being pressed to undertake an inquiry under the Combines Investigation Act.

JAPAN.

Budget — Prices — Foreign Trade — Profits — Agriculture.

(FROM OUR CORRESPONDENT.)

TOKYO, October 13.

THE new items of expenditure for 1932-33 submitted by the spending departments to the Treasury amount to the unprecedentedly large sum of close on 1,200 million yen, which is largely accounted for by the new military and naval programmes, the expeditionary force in Manchuria, and the farm relief scheme. Of these departmental claims, 800 or 900 million yen must be sanctioned in view of the urgent nature of most of the demands; and this, together with fixed charges, will bring the total national expenditure for the next fiscal year up to 2,300 or 2,400 million yen. On the other hand, as revenue is estimated at less than 1,400 million yen, the deficit will amount to about a thousand million yen. To meet this, fresh taxation and new large scale borrowing will be unavoidable.

The Bank of Japan's wholesale index number for last month registered a very sharp rise of 7.4 per cent. on the month—the largest single advance that has occurred since September, 1923, immediately after the great earthquake in Tokyo. The advance is all round; forty-nine out of fifty-six commodities advanced, five remained unchanged, and only two, rice and building-stone, declined. The rise is attributable largely to the further depreciation of the currency, seasonal influences and anticipated inflation.

Foreign trade figures for the past month are more encouraging. The September returns show that, as compared with a year ago, imports increased by 1.8 million yen, or 1.9 per cent., while exports rose by 40 million yen, or 39.7 per cent. The expansion in exports is divided among all classes, but the rise is largely accounted for by textiles; raw silk increased by 16 million yen, cotton manufactures by 12.5 million yen, and rayon products by 2.8 million yen. The total value figures for the first nine months of the year reveal that, in comparison with the first three quarters of 1931, imports and exports increased by 88.2 million yen and 48.6 million yen respectively, the apparent adverse balance being 115.9 million yen, as against 76.8 million yen.

According to Mitsui Gomei Kaisha's half-yearly analysis of profits of Japanese joint-stock banks and industrial joint-stock undertakings, the aggregate net profits of 250 banks for the first half of this year totalled 68,180,000 yen, a marked increase of 55,723,000 yen upon the second half of 1931. The increase, however, may be simply explained by the fact that in the preceding half-year larger institutions wrote down drastically their investment holdings. Net profits of 1,000 industrial companies amounted to 166,316,000 yen, representing the considerable increase of 29,898,000 yen, as against those earned by the same concerns in the preceding half-year. Many groups disclosed a welcome recovery in net profits, and only trading companies and stores and public utilities showed decreased earnings, while shipping, shipbuilding and rubber continued to record losses. The ratio of net profits to cent., as compared with 3.9 per cent. in the second half of last year.

The Department of Agriculture and Forestry's forecasts of the rice crop for the country as at September 20th placed the year's crop at 61,559,000 koku, a substantial increase of 6,844,000 koku (+ 11.5 per cent.) upon last year's actual yield, and 748,000 koku (+ 1.2 per cent.) above the five years' average. The Korean crop prospects are also reported to be comparatively satisfactory, and are put at 16,528,000 koku, a moderate increase of 655,000 koku (+ 4.1 per cent.) upon the actual yield of last year. The wheat, barley and rye crops have again been good this year. The yield of wheat and allied grains (excluding those of Hokkaido) totalled 20,432,000 koku, an increase of 433,000 koku (+ 2.2 per cent.), as against last year, and 264,000 koku (+ 2.6 per cent.) above the quinquennial average.

According to the report of the same department, the output of spring cocoon totalled 46,881,000 kamme, a

heavy decline of 6,286,000 kamme (-11.9 per cent.) against last year, and its value was estimated at 111,899,000 yen, disclosing a sharp decrease of 42,934,000 yen (- 27.7 per cent.). The estimated crop of summer and autumn cocoon was put at 40,083,000 kamme, a decrease of 4,321,000 kamme (- 9.7 per cent.) upon the actual output of a year ago. The combined cocoon production for the year amounted to 86,464,000 kamme, as compared with 97,072,000 kamme for 1931. The decrease is solely attributable to curtailment of cocoon-raising due to unprofitable prices.

Letters to the Editor.

A WORLD IN CHAOS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the first six months of 1932 the international trade of the world shrank to approximately 40 per cent. of what it had been worth in the first six months of 1930. The trade of many regions showed an even greater decline than the average. In the United States and Canada the value of overseas trade has shrunk to about a third of its normal value. Between individual countries also there are some extraordinary disturbances of commodity interchange because of the erratic operation of treaties, clearing agreements, quota systems and the like.

The reason for this tragic situation is not far to seek. An incomplete listing of the restrictions imposed upon international trade during the eleven months from September, 1931, to July, 1932, gives the following result:—

Twenty-two countries abandoned the gold standard and thereby reverted to fluctuating exchange rates;

Twenty-six countries instituted controls of foreign exchange, the regulations being changed in some cases as many as five times in the eleven months. The text of the various regulations is compiled by the Bank for International Settlements in a loose leaf folder, which already contains some hundreds of closely printed quarto sheets, and is constantly being added to;

Two countries established export bounty systems;

Twenty-one countries have raised their tariffs all round, one of them twice;

Thirty-eight countries have increased the customs duties on particular items of import, usually on many items, nearly all of them more than once, and some of them as many as six times in less than a year;

Twenty-two countries have imposed licensing systems or import quotas, most of them altering the system several times;

Six countries have new milling regulations designed to encourage the use of home-grown cereals;

Seven countries have instituted new import monopolies of one sort or another;

Seven others have prescribed certain groups of imports on prohibited lists;

In nine countries moratoria have been declared on the service of external public debt, and in five similar moratoria have been declared on the service of external commercial debt.

This bald and summary statement is far from doing justice to the complexity and incomprehensibility of the regulations and controls by which international trade has been placed in a strait-jacket which is constantly being laced tighter. The "plain" business man may well be excused if he finds himself unable to follow the bewildering changes that are rung upon the varied instruments of economic nationalism. Clearing agreements, blocked accounts, tariff preferences, Customs formalities and fees, import and export bond systems, official and "black" exchanges, add to the hazards of his enterprise. Nowhere, in a world driven almost to desperation by the vagaries of politics, is the madness of political interference with honest trade and industry more manifest.

What is there to be placed on the credit side? What gain has there been from the hamstringing of world-trade? We are told that the various controls are necessary to "right the balance of payments" in almost every individual case; but the process strongly resembles the "bleeding" so freely indulged in by mediæval pre-physicians. The fever was allayed but the patient died. Increased unemployment, falling consumption, unused capital, are a sorry result of so much well-meant regulation.

Nor is it clear that the maintenance, nominally, of the gold standard is worth the price in many countries. If the balances of payments cannot be maintained in equilibrium except by throttling international trade and finance, far better to recognise the fact that the currency is in reality depreciated. The world has come to its present pass largely from lack of courage in facing such unpleasant facts. Absurd international indebtedness and political obligations were camouflaged by almost equally absurd loan policies; bankrupt businesses were propped up by public assistance, impossible price and wage levels were bolstered by banking policies. Such shifts and subterfuges are an impossible basis for real economic recovery.

There are, fortunately, some rays of light in the situation. Some countries, notably the Scandinavian, show a disposition to take off the more burdensome of the controls. Australia also has shown a more rational tendency by removing prohibitions and lowering some tariff duties. Belgium and Holland have given a bold lead in the direction of lower tariff policy and have invited collaboration. There are many signs that important British markets, including the Scandinavian countries and the Argentine are disposed to conclude freer trade agreements with Great Britain. There is no direction in which a bold act of leadership would more immediately and more durably promote the economic well-being of the participating countries and of the whole world. Great Britain is the one country which might effectively give a lead in this direction at or even before the forthcoming World Economic Conference. Or must one say "might have been," if it had not been for the commitments into which we were led at Ottawa?—

Yours, &c.,

INTERNATIONALIST

Books and Publications.

BOOK OF THE WEEK.

The Social History of England.

DR. GILBERT SLATER's revision* of his well-known and very useful book on *The Making of Modern England*, is, as his publishers claim, "virtually a new work altogether." In the first place it is very much longer than its predecessor; in the second, it has a very much greater range in time, covering now practically the whole of the period from 1700 to the present day; and, in the third, by the addition of much new matter and the rearrangement of old, it now approximates very nearly to what every teacher of economic history has been vainly awaiting for many years, viz., a real "social and economic history" of Great Britain during the industrial period which shall be at once full enough to give a fairly complete picture and written with sufficient selection of facts and vigour of style to be in itself interesting reading. In fact, the least

* "The Growth of Modern England." By Gilbert Slater. 621 pp. With Maps and Diagrams. London. Constable. 15s.

interesting parts of this absorbing book are those which were previously treated in *The Making of Modern England*. Dr. Slater is obviously so keenly interested in what he has studied since, particularly in the early eighteenth century (which is still too inadequately treated in most books on English economic history) that he has given less thought and enthusiasm to what he may have pardonably presumed he knew already, so that his history of the Victorian labour movement, for example, is too narrowly based on the work of the Webbs, without adequate assimilation of later studies, and his account of the development of Victorian industry and commerce a little on the episodic side. It is perhaps significant that only one book of the late Dr. Lilian Knowles is mentioned, and that, naturally, the one which deals exclusively with England; the international and imperial aspects of English economic and social life, particularly after 1870, receive, on the whole, an inadequate stress.

It may also be urged in criticism that Dr. Slater, like all lively and comprehensive writers, is a little apt to emit rather hasty *obiter dicta* upon matters of recent history;

and that there are small points upon which his accuracy may be questioned—e.g., Thomas Attwood's views on currency reform are not "quite forgotten" among economic historians, at all events, but rather better known and understood than those of any currency reformer before or since. But it is comparatively easy, in dealing with a work of the scope and breadth of Dr. Slater's, to pick unimportant holes; what is less easy is to do justice to the amount of learning, lightly worn, which has gone to its making, and to the power of analysis and synthesis which has resulted in the production of so readable and integrated a book. Too long have we suffered from political historians who thought, as did the bulk of the contributors to the *Cambridge Modern History*, that economic history was a sordid preoccupation whose entry into a real historical work called for apology; and too many economic historians, in revulsion, have presented us with books from which the captains and the kings had been so thoroughly banished as to produce the impression that nothing in the age of the Reform Act counted in men's minds but the growth of factory industry, and nothing, in that of Gladstone and Disraeli, but the manufacture of steel, the price of corn, and the rise of consumers' co-operation. Dr. Slater, by his short introductions to the political problems and history of any period, and no less by his treatment of such subjects as local government, and the growth of feminism, both of which can be called political or economic or social, or all three, has done very much to correct undue bias on either side. (Surely, however, any account of the women's trade union movement should have contained some mention of Mary Macarthur?)

Dr. Slater is not a colourless historian, nor a historian of whose opinions there is any doubt. Some will certainly draw vigorous attention to his "unorthodoxy"; and there are many points at which such comment may be made, not necessarily to the advantage of orthodoxy. To mention only a few, he questions the desirability, even upon strictly economic grounds, of the enclosure movement of the late eighteenth century; he inclines to think that the Speenhamland policy of subsidising wages out of the poor rates, which has been the target of all economists, was on the whole the best that could have been adopted under the circumstances; he is very dubious about the Bank Charter Act of 1844 and its effect upon industry and industrial life; and, in general, he dislikes the attitude towards finance and financiers which may be said to have been initiated by the formation of the Bank of England and the constitution of the National Debt. One passage may be quoted to illustrate both the trend of Dr. Slater's mind and his trenchancy of phrase in dealing with that of which he does not approve.

"Thus," he says of the financial arrangements of William III.'s reign, "the Government itself set the example of observing those principles of financial rectitude which are a necessary part of the ethical code of a plutocratic society. An even more striking exemplification of the same principle was the reform, between 1695 and 1699, of the currency, which then consisted of coins in various stages of deterioration and diminution by clipping. They were all called in, and new coins of full weight and standard fineness substituted, at a cost to the nation of £2,703,174, more than one year's revenue. Queen Elizabeth, long before, had carried through a similar reform, but the new coins she re-issued were only to be of the average silver content of those called in, and, that being estimated conservatively, she made a small profit on the transaction. She, no doubt, would have considered it morally wrong and politically inexpedient to sacrifice public to private interests, but subsequent commentators have agreed to applaud the policy of William's Ministers, by which owners of specie were granted a vast donation out of the national revenues. It was to meet the consequent deficit that the Window Tax was imposed, that peculiarly effective measure for lowering the general standard of health. It was to be only a temporary tax. It was repealed in 1851." Many may disagree with the implications of this passage; none can deny it force or the quality of giving people to think.

SHORTER NOTICES.

"An Economic History of Soviet Russia." By Lancelot Lawton. Macmillan. 2 vols. 610 pp. 25s.

Mr Lawton's long chronicle of the economic history of Russia from 1917 onwards would be easier to follow if he were not quite so enthusiastic a partisan. He is quite confessedly confirmed that all the acts of the Bolsheviks are vile, and this conviction both makes his book rhetorical and difficult to read, and also precludes any real evaluation of the very different trends of Soviet policy at successive stages. For where all is evil, how shall one distinguish? The result is that the policy of War Communism, the N.E.P., the Stalinist agricultural policy of 1929-30, and the Five-Year Plan, are all indiscriminately condemned; and it is really difficult to find out, from Mr Lawton's diatribes, what were the salient characteristics of any of them. The reader who is anxious to study, for example, the unfortunate results of the third of these experiments, will find a much more telling, because more sober and documented, criticism in Calvin Hoover's book; and the same applies throughout. It is unfortunate, because Mr Lawton's earlier work on the Revolution was written in a much more detached and balanced frame of mind; and it is also unfortunate because Mr Lawton, in his passionate hatred of the Revolution, fails to provide any answer to the question, which many are urgently asking, why the Soviet Government continues to survive. There is a great deal of research in this book, and a large number of figures, rather uncritically used; but it is as clear propaganda as the official documents of the Communist Party.

The Stock Exchange.

PREFERENCE SHARE RIGHTS.

INDUSTRIAL preference shares have lagged badly in this year's race for the fixed interest altitude trophy. At the end of last month, according to the Actuaries' index, British Government stocks were nearly 24 per cent. and home corporation securities 34 per cent. above the level of December 31, 1928. Representative industrial debentures were a modest 8 per cent. above, and industrial preference shares actually 5 per cent. below the datum level. It is true that a year earlier, when Britain had just left gold, the percentage depreciation of the same preference shares was as much as 24 per cent. This type of security has participated in the recovery common to all fixed-interest stocks over the intervening year. The "gap," however, between preference share values and those of other members of the fixed-interest family is appreciably wider to-day than twelve months ago.

This is a serious matter, for preference shareholders, who relinquish equity rights for the sake of priority, hope to be compensated for their sacrifice of earnings in good times by the additional security of their capital and income in bad times. Unfortunately, their position, in this latter respect, is far from watertight, as the experience of recent months has shown. Their dividends, unlike the interest of debenture holders, do not become legally due after an agreed interval of time, but are payable out of profits at the directors' discretion. The piling up of arrears may confer voting powers on preference shareholders, who are normally disfranchised. These may or may not give them a majority interest, but in no case do they entitle them to physical control of the assets. It is this last disadvantage which has probably contributed most to the relative unpopularity of the preference share at the moment. Debenture holders must ever be tenderly treated lest, being intimidated, they put in a receiver. Preference shareholders may, and frequently are, asked to jettison valuable rights without equitable compensation. There is always the possibility that they may accept the terms offered. At worst, they can only reject them. The terms of certain recent schemes have, in fact, been so remarkably unfavourable to preference shareholders as to suggest the advisability of a wider understanding of the principles on which all such schemes should be based.

Clearly, the degree of sacrifice a preference shareholder should be asked to make must depend primarily on the losses a company has suffered as regards its assets and its earning power. The preference shareholders in the companies involved in the Royal Mail reconstruction scheme have, at present, no rights on which any actuarial value can be set, for their companies are entirely in the hands of their creditors. The owners of £1,200,000 of £1 7 per cent. cumulative preference shares of the Ebbw Vale Steel Company last September found themselves in a position only one degree less unfavourable. The company's reorganisation scheme (sanctioned on September 29th) appeared at first sight to deal hardly with them, for they lost nine years' dividend arrears and had 15s. written off each of their £1 shares (or, in other words, had their preferential dividend rights reduced from 7 per cent. to 1½ per cent. per annum. They also had £1,075,045 of 8 per cent. "A" cumulative participating preference capital placed in front of them. Yet the Ebbw Vale scheme was eminently fair in its incidence. The company was deeply in debt and could not meet its prior obligations. The alternative to reconstruction was the appointment of a receiver, and, in a liquidation, the preference shareholders would probably have received nothing. Claimants ranking before the latter holders made considerable sacrifices, and preference shareholders themselves received, as a *solatium*, a claim on the fruits of a possible future rehabilitation of the company, for they were given 20 per cent. of the equity and voting rights.

Similarly, the terms offered to and accepted by holders

of £300,000 7 per cent. cumulative preference shares of the British Electric Transformer Company last July were, if not exactly generous, at least rational. The unfortunate preference shareholders lost 3½ years' dividend arrears and, in effect, had their dividend rights reduced from 7 per cent. to 2½ per cent. They also relinquished their rights over half their original capital in a winding-up. The company, however, had failed for some years to earn enough to cover its preference dividends. A much stronger concern, Crompton, Parkinson, Limited, undertook to provide new money, which the Transformer Company urgently required for the continuance of its business, and guaranteed the new preference dividend. The preference shareholders, therefore, were given a not unequitable choice between a guarantee of less than a half a loaf and the prospect of little or no bread in the event of liquidation.

Both these cases illustrate the compelling power of *force majeure*. It is not unreasonable to ask for comparatively far-reaching amendments of preference shareholders' rights, when such sacrifices alone can obviate a winding-up, which would render those rights practically valueless. Entirely different criteria apply, however, when preference shareholders are asked to ensure, not a company's continued existence, but its ability to resume dividend payments. In such a case one rule should be laid down and strictly adhered to. Preference shareholders should not be asked to make sacrifices whose benefit will inure to ordinary shareholders. If a company which has contracted to pay out a fixed annual sum of money, when available, to its preference shareholders, anticipates that future profits will cover that sum, with any arrears, preference shareholders are entitled to demand its full payment before a penny is distributed to ordinary shareholders. If, at the same time, heavy capital losses make it advisable, say, to write 10s. off every £1 preference share, after reducing the ordinary shares to a purely "token value," then preference shareholders are entitled (a) to a doubled dividend rate on their halved capital (i.e., to unchanged money income), and (b) to the right to the return of £1, and not 10s., in a winding-up. If it is doubtful whether future earnings will recover sufficiently to permit of preference dividends at the old rate, shareholders have a choice of two policies. They may ask that reconstruction be postponed until a firm estimate of earning power can be made. Alternatively, they may ask for a share in the equity, so calculated as to afford them, if the company regains its prosperity, (a) a balance sufficient to raise their reduced preferential dividend to its original amount, plus (b) a further sum to compensate them for the risk assumed by relinquishing part of their priority rights.

The scheme put forward last month by Goodson's Mantle and Costume Company (1920), Limited, exemplifies the correct application of these principles. The 8 per cent. cumulative preference shareholders were asked to make an equitable contribution to the writing off of a total loss equal to half the company's issued capital, but retained unimpaired their rights in a winding-up. They relinquished nearly three years' dividend arrears, and, in substitution for priority in profits distributed up to £32,000 per annum, cumulative, accepted priority for £14,000, cumulative, and a further £6,000, non-cumulative. In return, however, they took over half the equity from the ordinary shareholders. If future divisible profits rise above £44,000, they will receive more, on an ascending scale, under the new arrangements than under the old.

A similar judgment cannot, unfortunately, be pronounced with equal confidence on certain other recent schemes. We have had occasion to comment on the opposition offered by a group of large preference shareholders to a scheme for the purchase by an unknown buyer of Pritchard's Restaurants, Limited, and the

division of the cash consideration so as to give the preference shareholders 10s. and the ordinary shareholders 5s. 6d. for each £1 share, respectively. The preference shareholders have maintained, with reason, that in a winding-up they would be entitled to 20s. in the pound before the ordinary shareholders received one penny.

Offers of this type are somewhat unusual. More "normal" features are embodied in a scheme made public this week, under which the participating preferred ordinary shares of Willys Overland Crossley, motor manufacturers, which were reduced from £1 to 12s. nominal value in 1926, are to have 2s. 6d. per share returned in cash, and to suffer a further reduction to 6s. The shares, in fact, are to lose half their preferential and participating rights alike, though they retain their rights as regards dividend arrears and will be entitled to £1 per share in a winding-up. The ordinary shareholders, thus directly benefited, make a purely nominal sacrifice by submitting to the writing down of their shares from 2s. to 6d., since their equity rights are untouched.

Possibly the most portentous of all the schemes carried through recently has resulted in a reduction of the issued preference capital of Rylands and Sons, Limited, an old-established Manchester textile business, from £1,500,000 in 8 per cent. cumulative shares to £1,000,000 in 6 per cent. cumulative shares. This has been effected:

- by a return of one-third of the original preference capital to holders in cash; and
- by giving preference shareholders, in compensation for the reduction of the fixed cumulative dividends on their remaining capital from 8 per cent. to 6 per cent., first, participating rights for a further 2 per cent. when ordinary dividends exceed 5 per cent., and secondly, a premium representing the loss of dividends for ten years ahead, and voting rights (with less than a majority interest) whenever less than 8 per cent. is distributed.

The scheme's avowed *raison d'être* was not that the company anticipated future inability to meet preferential requirements, but that the directors regarded an 8 per cent. dividend as out of harmony with prevailing interest rates. This opens up a very far-reaching question. All preferential capital issued by British companies before the legalisation of the redeemable preference share by the 1929 Companies Act, is necessarily irredeemable so long as a company remains a going concern. From the resulting annual "fixed charge," there is no relief, however irksome the payment may appear in changed circumstances, except by liquidating a company and giving its successor a new capital structure—an inconvenient and somewhat costly process. The spokesman for the opposition party in the Rylands scheme revealed that the threat of such a possibility had been a material fact in the securing of ultimate agreement. The result, however, is not an impressive commentary on the ability of directors to secure lower preference charges by "peaceful persuasion." After paying off one-third of its preference capital in hard cash, the company has, in effect, been compelled to bind itself to pay the original rate on the remainder whenever it wishes to distribute more than a small dividend on its ordinary shares. To secure even this facility, it has found it necessary to make preference shareholders an immediate cash present equal to 20 per cent. of their reduced capital.

The rights of preference shareholders, indeed, are twofold. It may be significant that, in recent months, much greater opposition has generally been forthcoming, than in the past, to modifications which have appeared to be inequitable. Is a position likely to arise, in which preference shareholders may be asked for sacrifices, on broad economic grounds, which they would have every right to refuse on a narrow legalistic interpretation of their rights? If general interest rates remain low, many high yielding preference shares may go to a high premium, if their "industrial risk" is moderate. If the irredeemability of the preference share imposes a barrier against the "passing on" of lower interest rates, the latter's beneficial industrial effects may be undesirably limited.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. November 8. ACCOUNT. November 10.

ALL markets were favourably affected by the successful completion of the Government conversion campaign, signalled by the Three per Cent. Conversion issue, the terms of which were made known on Tuesday night. The new loan was well received, the lists being closed soon after mid-day on Thursday. Activity outside the gilt-edged market was moderate but steady. The stronger tone of sterling had a beneficial effect, but only sound stocks, with reasonably assured earning power, attracted investment interest. The volume of business showed some slight expansion, but dealers avoided new speculative commitments on the eve of a fresh account.

The gilt-edged market was steady on Monday, but advances were sharp and general on Wednesday morning. Quotations then reacted sharply, selling being encountered from holders who wished to apply for the new loan, in view of its definite redemption provisions. Local loans and Old Consols were prominent, and Conversion 8½ per cent. were active. Long-dated India stocks moved up with the Funds, but subsequently encountered profit-taking. The New South African scrip touched 2 premium, and the Australian 3½ per cent. loan rose to 100. Home Corporation issues were firm.

Foreign bonds had an idle appearance. One or two Chinese issues were inquired for, but the Boxer Loan declined on the rise in sterling. The Brazilian Funding Loans held their ground, and Argentine bonds were firm on the improved revenue return for October. Scattered selling of Chilean bonds was attributed to the absence of prospects of an early "Cosach" settlement. German 7 per cent. rose fractionally, and Austrian Sixes advanced, but Greek Sevens declined on reports of an earthquake.

In the Home Rail market prior charges were supported in sympathy with Government stocks. Slightly better traffic returns and the fall in unemployment during October helped the ordinary stocks. Foreign Rails, however, were depressed, the Argentine Big Four declining on a further poor batch of traffic receipts. San Paulo found support, but Leopoldina was unchanged.

The Industrial share market had a moderately active week. Business was concentrated at first on prior charges, but on Thursday a fair demand arose for "seasoned" ordinary shares. Spillers, Imperial Chemical, Radiation, Joseph Lucas and Woolworth were prominent. Wall Paper deferred were bought on the satisfactory report (analysed on page 846). Guinness led an improvement in brewery shares. Textile shares, however, were marked down on the cotton spinning dispute, and rayon shares were easier in sympathy. Radio shares were heavy. Though Wall Street advices were not encouraging, Drug Incorporated was firm on the quarterly dividend announcement. Cables and Wireless preference were in steady demand. Bank and insurance shares were firm with the gilt-edged market.

Little business was done in oil shares. American news had an adverse influence. Though crude oil production was lower last week, seasonal factors were responsible for a further rise in petrol stocks. Shell and Royal Dutch were sold, in the absence of Continental support. The Rubber share market was practically deserted and prices were depressed by a few small sales. Ten shares were lower, almost without exception.

Mining shares were quiet and irregular. In the "Kaffir" market, however, a sharp rise occurred in Kleinfontein on persistent South African buying. City Deep and West Rand were also active. Copper shares were adversely affected by the relapse in the metal, the market being still unable to assess the probable effect of the Ottawa treaties on world prices, or on the future of international production agreements. Rhodesian issues remained out of favour. Little interest was taken in tin shares. Indian gold shares were easier.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The public continue to hold off the market. Dealings on Monday, in fact, were the lowest recorded on any full day since June, 1924. The markets are waiting, not so much for the result of next week's election—a Roosevelt victory has already been discounted—as for an indication of the prospective new President's policy and the per of the sonnel of his Cabinet. In the limited time the country can spare from politics in the last few days before an election, attention has been given to the trade position, which is less favourably regarded than a month ago. Freight car loadings in the week ended October 22nd, at 642,000, showed a decline of 8,400. Though limited importance attaches to a single week's figure, the majority of commentators regard the upward movement as having passed its peak, for the present, in mid-October. Railroad stocks, consequently, have been on offer. The St. Louis-San Francisco Railroad passed into a receiver's hands on Wednesday. The weakness of commodity prices, particularly wheat, has also affected market sentiment. Possibly undue significance is being attached to the car loading returns, for other industrial news is not unfavourable. Steel operations, for example, have further advanced to 20 per cent. of capacity, and electrical power production is being well maintained. Company earnings' reports for the third quarter continue to make a doleful showing, but the market has been cheered by satisfactory dividend announcements, including those of General Motors, which has declared its regular quarterly payment of 25 cents, and Drug Incorporated, the maintenance of whose pay-

ment of \$1 was well above general expectation. The immediate share outlook is, however, uncertain and somewhat unpromising. Perceptible signs of weakness, particularly in the Westinghouse and General Electric group, caused a sharp marking down of prices in the last hour on Wednesday. On Thursday, the market was dull and irregular.

* 2-hour session.

PARIS.

The market was closed on Monday and Tuesday, and reopened in a quiet mood, though prices were generally steady. Interest centred mainly on the introduction of the 4½ per cent. Rentes, which were dealt in on the Parquet for the first time. At the close, both "A" and "B" issues were quoted at 97, though at one time the stock fell to 96½ in dealings for the account. Foreign securities were unsettled, and public funds fell sharply. Industrials and Internationals were steady to firm. On the Coulisse diamond shares met with a fair inquiry, De Beers deferred improving by 11 to 362. Gold-mining shares rose slightly, but oils and rubbers were irregular.

BERLIN.

The proximity of the General Election had an adverse effect upon most sections of the Berlin Bourse. The new Tax Certificates were introduced, and under their lead business revived slightly, but fell away immediately on the beginning of profit-taking. Official quotations for the new certificates ranged from 90.25 for those maturing in 1934 to 71 for those maturing in 1936. Foreign securities were rather unsettled, and industrials further receded, Farbenindustrie falling back to 94.75 and Harpener to 70.10. Steels were a trifle weaker at 23.

AMSTERDAM.

Listless conditions prevailed. Prices opened at somewhat lower levels than last week, but remained steady. Tin shares were an exception, and increased slightly on a small decrease in visible supplies. Rubber shares were steady, despite lower American prices for the commodity. Royal Dutch were again erratic, finishing 1 down at 189½. Industrials were practically unaltered, though irregular, Unilever N.V. being marked up 1 at 112½.

was closed for the first two days of the week, and there was little activity when it reopened. Quotations were lower and continued to move downwards until near the close. A slight recovery then occurred, but most issues finished below previous levels. At Frankfurt a slightly brighter tone prevailed, but the close was heavy. Stockholm and Copenhagen were irregular, the general tone being unsettled.

INVESTMENT NOTES.

New Conversion Loan.—The Government ensured an immediate response from the City to the terms of the new Conversion Loan. The lists, in fact, were closed at 12.15 on Thursday. The Loan appeared at first sight somewhat dear, but it was quickly appreciated that the comparative shortage of supply of medium-dated Government stocks would render it scarcely less popular with the private investor than with the joint stock banks. The yield offered, indeed, is not out of line with the yields obtainable on other medium-dated Government stocks. At the issue price the yield to final redemption, in 1953, is £3 3s. 4d. per cent. If the loan is redeemed at its earliest date, the yield will be £3 4s. 1d. per cent., which is approximately the same as that returnable on Conversion 5 per cent. Loan, if the latter is called at its earliest date—May, 1944. It also compares favourably with the yield on Transvaal 3 per cent., 1923-53 (with a probable life of 14 years), which are quoted in the market at 100. It is reasonable to expect that, in view of its fixed date of redemption, the new loan will stand relatively higher than the long-dated Government securities. It may be interesting to consider, first, the prices to which the long-dated securities must rise if the market is now to offer generally a 3 per cent. yield basis, and, secondly, what falls would result if the market reacted to a 3½ per cent. yield basis. It will be found that the new Conversion Loan is much less vulnerable to a reaction than the "longs."

	Price to yield 3%.	Price to yield 3½%.	No. of points fall from (1) to (2)
Consols 2½%	83½	66½	16.67
War Loan Assented 3½%	116½	93½	23.33
Conversion 3½%	116½	93½	23.33
Locals Loans 3%	100	80	20.00
Conversion 3%, 1948-53	100	89½	10.67

* Allowing for redemption at par in 1953.

The new conversion loan completes the great conversion operations of the National Government. The maturities which will arise in the next few years are not of major importance:—

£51 millions 4½% Treasury Bonds	Due February 1, 1934.
£105 millions 4% Treasury Bonds	Callable on April 15, 1934.
£373 millions 4½% Conversion Loan	Callable January 1st, 1940.
£325 millions 5% Conversion Loan	Callable May 1, 1944.

The Government may conceivably be inclined later on to take advantage of any further rise in the gilt-edged market by offering the new 3 per cent. Conversion Loan on some attractive terms to holders of 3½ Assented War Loan. There are many private investors anxious to exchange from a virtually irredeemable stock to one with a fixed date of redemption. The Government may wish somewhat to reduce the great mass of 3½ per cent. War Loan, especially if it regards the number of potential sellers as large enough to create a weak technical position in the long-dated stocks, and so to react against a further fall in the long-term interest rate.

Course of Equity Share Values.—Gilt-edged stocks, rather than equity shares, occupied the centre of the stage in the first part of October, but the undertone remained firm enough to suggest that the strength of fixed-interest

stocks was not due to any considerable withdrawal of investment resources from other markets. The sagging tendency of ordinary share prices, indeed, was quite definitely checked, both here and in New York, before the month had gone far. The chart reproduced on this page shows, indeed, that the reaction after the July-September rise attained nothing like the dimensions in London as in New York, even if allowance be made for the notoriously wider amplitude of price fluctuations in the latter centre. British quotations, at their lowest point before the mid-October recovery, had yielded less than a quarter of their net gain of ground since the end of June, while in Wall Street nearly half the advance had been wiped out. The subsequent recovery, which carried the British curve back very nearly to the September peak, was not entirely a healthy movement, its origin being not unconnected with the depreciation of sterling on the removal of official "control." The corresponding movement in America (again allowing for the normally greater elasticity of that market) was appreciably less extensive. A fresh recessionary tendency in both centres was, happily, arrested before it had gone very far. At present the undertone for seasoned industrial shares, in this market, is distinctly firm. In America, the public seems to be holding off till the elections are over. Though signs of uneasiness have appeared since the end of the month, it is hoped that the possibility of a Democratic presidential victory has been at least practically discounted. Incidentally, the Actuaries' Index computes the present dividend yield on British industrial shares at under 4½ per cent., while the corresponding American figure, according to the Standard Statistics Company, is as high as 6 per cent.

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, May to October, 1932.

(1928=100)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks—Daily Figures.

Australian Loans.—The magnitude of British Government conversion operations has not obscured the intense efforts which are being made in Australia towards a reduction in the interest charge on the internal debt. A new 10-year loan of £8 millions has just been authorised, in 3½ per cent. stock at par, which is to provide, as to £4 millions, for the funding of floating debt, and as to the balance, for unemployment relief works. It is stated that the majority of the Loan Council favoured a £20 millions loan at 4 per cent, but opposition came from New South Wales to the size of the loan, and the trading banks insisted on a lower rate of interest. At a time when 4 per cent. internal loans are quoted in Melbourne at over par, it is significant to compare the yields obtainable on the Australian Government Loans in New York and London respectively:—

Dollar Loans.	Maturity.	Price.	Flat Yield (%)
			(a) (b)
Australia 5%	1955	78	6.41 5.57
Australia 4½%	1956	72	6.25 5.43
New South Wales 5%	1957	75½	6.60 5.73
Sydney 5½%	1955	70½	7.83 6.80

Sterling Loans.	Maturity.	Price.	Yield (%)
			Flat. With Redn.
			£ s. d. £ s. d.
Australia 5%	1975	106½	4 15 6 4 10 0
New South Wales 5%	1965	104½	4 15 6 4 10 0
New South Wales 4½%	1945	101	4 9 2 4 8 0

(a) Assuming that sterling exchange remains constant.
(b) Assuming that sterling exchange rate rises from \$3.30 to \$3.80.

It will be seen that, even if allowance be made for a hypothetical improvement in the sterling exchange rate from \$3.30 to \$3.80 to the £, the yields obtainable on the

Australian dollar bonds are entirely out of line with yields obtainable on the sterling bonds—or *vice versa*. The exchange risk is operating at the moment against a rise in the prices of the dollar bonds, but the disparity between the two markets seems too great to remain indefinitely.

Cheap Money and Industrial "Conversions."—In the *Economist* of July 30th last we discussed the opportunities which would be available to certain industrial concerns, under a regime of lower interest rates, for the conversion of their fixed-interest charges to a lower interest basis. For the first few weeks after the announcement of the War Loan Conversion scheme the "embargo" on new issues was strictly enforced. Even after the partial raising of the ban, as from the beginning of October, official approval was not forthcoming for issues, for the optional replacement of existing obligations, which involved either underwriting or an invitation to subscribe new cash. Whether this restriction will now be raised remains to be seen. That it is not watertight is obvious, since it does not appear to prevent "conversion" issues from being taken up by a subsidiary or affiliated company, which subsequently obtains public subscription for an issue of its own. Examples of both methods are afforded by the "Rothermere group" financing, details of which will be found on page 846. For the most part, however, the ban has been effective in limiting "conversion" activity to companies with sufficient liquid resources to finance such operations internally without resort to normal market machinery. Examples are given below:—

Name of Company.	Stock Converted.		New Stock.	
	Description.	Old Rate.	Amount.	Conversion Conditions.
Bovril	Eight-year Notes (second series).	5½	£ 343,100	200,000 new Preference shares out of 250,000 authorised, to be issued primarily to shareholders at a premium.
Dickins & Jones	First Mortgage Debenture stock.	6	979,690	Issue of £973,980 new Debenture stock. Holders of the 6 per cent. stock will be entitled to receive an equal nominal amount of new stock, plus cash payment of £2½.
Lipton	Debenture stock.	6	600,000	Issue of £600,000 new 4½% stock, 1945-70. Holders of 6 per cent. stock entitled to an equal nominal amount of new stock, plus cash payment of £4 15s. 9d. per cent.
Lever	First Mortgage Debenture Stock.	5	3,268,780	Issue of £2,288,146 consolidated Debenture stock at 98. Holders of 5 per cent. stock entitled to convert 70 per cent. of their holdings and to a cash payment of £2 3s. 10d. per cent.
Portsmouth and Brighton United Breweries.	First Mortgage Debenture Stock.	6	410,000	Issue of £410,000 first Mortgage Debentures. Holders of 6 per cent. stock entitled to convert an equal nominal amount and to a cash payment of £3 10s. per cent.
Tamplin & Sons Brewery.	First Mortgage "Smithers" Deb. Stock.	5½	293,820	Issue of £300,000 Debenture stock. Holders of old stock entitled to convert an equal nominal amount of the new stock and to cash payment of £2 10s. per cent.
Tamplin's Licensed Properties.	First Mortgage Debenture Stock.	6	328,280	Issue of £350,000 Debenture stock. Holders of old stock entitled to convert into equal nominal amount of new stock and to cash payment of £2 10s. per cent.

The decision of Bovril to repay its eight-year notes does not fall strictly within the conversion category, since the "switch" is into a new type of stock, rather than to a lower interest rate. The largest transaction is being carried through by Lever Bros., who are repaying £3,268,780 of debenture stock and saving nearly 1 per cent. on the deal. We have excluded from our table Dunlop Rubber, which announces that it will redeem the whole of the 6 per cent. second debentures outstanding in February, 1933, at 103 per cent. without a new issue, and also Olympia, Limited, which is seeking authority to issue

you owe it to your heirs ..

to make provision for Death Duties. Let the Scottish Widows' shoulder the burden for you. An adequate Death Duties policy automatically cancels the Government demands on your estate. Write for booklet which gives valuable hints on this subject.

£1,000,000 first mortgage debentures "on the best terms available at the time of issue" to repay the existing £500,000 5 per cent. mortgage debentures and to provide cash for further extensions. The raising of the official ban would doubtless see a considerable increase of "conversion" activity.

Wall Paper Manufacturers.—Although trading was quiet, with a certain amount of short-time working, in the year to August 31st last, shareholders have every reason to be satisfied with results. Net profits have more than maintained the previous year's level, and, after an unchanged dividend of 10 per cent. on the deferred capital, some £100,000 is to be appropriated to the writing down of goodwill:—

	Year ended August 31.		
	1930.	1931.	1932.
	£	£	£
Profit	672,916	592,636	608,148
Income tax	47,147	55,302	66,350
Staff funds	20,000	10,000	10,000
Debenture interest	40,569	40,569	40,569
Net profit	565,200	486,765	491,229
Brought forward	295,796	260,996	272,762
Preference dividend	60,000	60,000	60,000
Ordinary dividend (10%)	140,000	140,000	140,000
Deferred dividend	300,000	200,000	200,000
Earned %	19.2	15.8	16.1
Paid %	15	10	10
To reserve	100,000	75,000	100,000
Carry forward	260,996	272,761	263,991

The Canadian company, in which the English company holds a substantial interest, suffered a loss on the year's operations. The parent company's position is liquid. Its assets include British Government securities and other investments of £1,481,653—an advance of £243,109 on

the year. Cash has risen to £146,488, while stocks have fallen to £715,624, compared with £758,498. The £1 deferred shares, which were as low as 19s. 6d. last year, are now quoted at 88s. 9d., to yield £6 8s. 8d., less income tax.

Associated Newspapers New Finance.—The end of the "provincial newspaper war," and the reduction in general interest rates have enabled the Rothermere group to fund the financial obligations, bequeathed by the provincial campaign, on much more favourable terms than seemed possible a few months ago. Northcliffe Newspapers, the group's spearhead in the provinces, which in the year to June 30, 1931, made a loss of £62,566 (apart from the losses of certain subsidiaries) is to be wound up. The greater part of its assets, consisting of provincial newspaper properties, are being taken over by Associated Newspapers, Limited. The £3,000,000 of 5½ per cent. Debenture Stock of Northcliffe Newspapers will be paid off, and Associated Newspapers and Daily Mirror Newspapers released from their guarantee of interest and principal. The necessary finance is being provided (a) by an issue of £1,500,000 Associated Newspapers 4½ per cent. Ten-year Notes, not specifically secured, which have been sold at 98½; (b) by a new issue of 1,500,000 5s. deferred shares of Associated Newspapers, taken by Daily Mail Trust at 18s. (the Trust is to make an issue of its own shares, for cash, to provide the required funds); and (c) as to about £500,000 out of the liquid resources of the group. Certain properties of Northcliffe Newspapers, of which Daily Mirror Newspapers was part owner, are among those taken over by Associated Newspapers, the consideration in this case being the allotment of 561,350 of the latter's deferred shares to Daily Mirror Newspapers at £1. Thus the group has liquidated the liabilities left by its excursion into new and debatable fields without placing, in front of its own capital, any preferential payments, which cannot be paid off within ten years. The Berry newspaper group, with its heavier burden of prior charges, has, so far, been less successful. An issue of 2,000,000 6½ per cent. £1 cumulative first preference shares, made by Allied Newspapers at par, last June, was designed to fund part of the loans, from bankers and others, of Allied Northern Newspapers, the provincial subsidiary. The issue, however, was not underwritten, and apparently only 1,225,514 shares were taken up.

Beer and Spirit Production.—Particular interest attaches to the recently-published returns of the 1930 Census of Production relating to the liquor trades, in view of the tendency of many brewery chairmen to lay the blame for the decline in consumption during the last twelve months entirely on the higher duties imposed by the Emergency Budget of 1931. That the origins of the decline, in part at least, go back much earlier is suggested by the fact that, even in 1930, the quantity of beer, ale, stout and porter brewed by firms employing more than ten persons showed a decline, at 18,735,000 standard barrels, of 8 per cent., as compared with the corresponding figure of the Census of 1924. The value, at £126,741,000, registered a fall of 10 per cent. These figures include Excise duty (except as regards beer for export), but the average duty in 1930 was only slightly higher than in 1924. The total value of plain spirits distilled was £3,427,000 in 1930, against £5,210,000 in 1924, both exclusive of duty. Within the trade, bottled liquors appear to have gained ground, substantially, at the expense of the "draught" varieties. The total value of liquors bottled in 1930 was returned at £45,368,000, and in 1924 at £38,016,000. "A substantial part" of the difference is accounted for by more complete enumeration of the bottling activities of breweries, though this qualification does not apply to the rise in the value of bottled spirits from £17,065,000 in 1924 to £22,989,000 in 1930. Nevertheless, in view of the decrease in beer output as a whole, it is clear that the increased popularity of bottled beers is a factor of considerable importance. It has an intimate bearing on such questions as the relative con-

sumption of liquor on licensed and on private premises, the position of the more localised *vis-à-vis* the "nation-wide" breweries, and the growing importance of "quality" factors in total demand. Incidentally, the quantity of British table waters manufactured in 1930, at slightly over 34,547,000 gallons, showed an increase of 29 per cent. over the 1924 figure, though the value of the output, at £4,126,000, rose by only 11 per cent.

Rubber Company Results.—Between the end of June and of September the Stock Exchange quotations of a dozen typical rubber plantation shares, as measured by the *Investors' Chronicle* index, rose by as much as 125 per cent. This rise was based less on economic prospects than faith, and less on faith than pure optimism. The absence of any further improvement in the price of rubber, or of any check to the increase in American "visible" stocks of the commodity (despite the slight reduction in stocks in Malaya and Great Britain) has brought the upward movement in share values largely to a standstill. Under present conditions, few shareholders can hope to receive any income on their investment, for the great majority of companies are working at a negligible profit, or even at a loss, although they have cut down their administrative and plantation upkeep expenses to a minimum. The results of twelve companies, whose reports have recently been issued, are given below:—

Name of Company.	Net Profits.			Share Prices.		
	Year 1929-30.	Year 1930-31.	Year 1931-32.	Dec. 30, 1931.	June 30, 1932.	Nov. 2, 1932.
Anglo-Java Rubber (2/-)	£ 38,924	£ 7,388	£ 3,593	9d.	4½d.	6d.
Bajo Kidol Rubber (2/-)	21,188	3,332	2,788	13/9	6/5	15/-
Gelang Besar Rubber (2/-)	Dr. 5,040	Dr. 4,761	Dr. 429	3d.	3d.	3d.
Laras (Somatra) Rubber (2/-)	10*105	Dr. 15,516	Dr. 6,168	4½d.	2½d.	3d.
Kamuning (Perak) Rubber (2/-)	14,538	4,701	5,811	1/9	1/-	1/9
Malayalam Plantations (1/-)	71,861	8,151	Dr. 11,268	9/6	4/6	10/-
Sable (North Borneo) Rubber (1/-)	Dr. 3,997	Dr. 13,323	Dr. 6,315	2/6	1/6	2/3
Sengat Rubber (2/-)	3,781	Dr. 1,834	Dr. 1,920	4½d.	3d.	4½d.
Singapore Para Rubber (2/-)	3,350	Dr. 1,120	Dr. 2,133	10½d.	5½d.	7½d.
Tanjong Rubber (1/-)	Dr. 1,121	Dr. 10,585	Dr. 10,351	6/3	3/9	6/3
Tanjong Malim Rubber (1/-)	29,205	10,025	Dr. 1,378	13/9	7/6	10/7½
Tebrau Rubber (1/-)	7,072	3,750	2,657	11/3	4/4	10/7½

In the aggregate, the twelve companies show a net deficit of £55,083 in their latest financial year, against a loss of £15,782 for the previous twelve months, and a profit of £189,866 in 1929-30. Only four companies were able to record a credit balance this year. The appended list of share prices brings out the significant fact that, even after the recent recovery, values in many instances are below the levels prevailing at the end of last year.

United of Havana.—The results of this railroad and warehouse company for the year to June 30th last make unhappy reading. Railway receipts fell from £1,943,199 to £1,895,823 to £1,843,083, its total exceeded the year's income. The profit on the working of warehouses and wharves was £44,882. A final deficit of £714,049 raises the debit balance carried forward to £1,601,007:—

Year to June 30.	1930.	1931.	1932.
Railway receipts	£ 3,207,177	£ 1,943,199	£ 1,302,985
Railway expenses	2,856,821	1,895,323	1,343,083
Special receipts	33,705	42,316	88,556
Interest	127,186	121,062	84,831
Taxes, &c.	173,614	188,331	183,557
Debenture interest	663,911	614,884	663,782
Net profit	Dr. 326,278	Dr. 591,965	Dr. 714,049
Brought forward	120,141	Dr. 294,443	Dr. 886,958
Preference dividend	88,856	Nil	Nil
Carried forward	Dr. 294,993	Dr. 886,958	Dr. 1,601,007

The reserve account still amounts to £1,199,617, but the company's position is no longer liquid. An additional scheme of arrangement relating to the debenture stocks was sanctioned last June, under which the company was authorised, for the purpose of securing the re-

payment of advances, to mortgage the property and assets of the company in priority to existing charges. So far, however, it has not been found necessary to use the additional borrowing power.

Italian Stock Exchange Conditions.—The low-water mark in the Italian stock exchanges was reached on July 1st, writes our correspondent, when the general index calculated by the Milan Statistical Office (December, 1925 = 100) touched 39.84. From that date an upward movement began, which culminated early in September, with the general index at 50.28. Quotations afterwards sagged, the movement having spent its force. The rise was unevenly distributed. In the banking group, the Bank of Italy took the lead. Shipping and textile shares were firm, but electrical issues showed a more limited rise. Agricultural and real estate issues were firmer after the collapse of a weak concern, the Società Bonifiche Ferraresi. The improvement failed, however, to interest the investing public. Transactions, if no longer strictly limited to professionals and to the financial groups (which are somewhat overburdened), did not extend beyond the speculative investor. Progress is being made with the financial reconstruction of some large companies. The Italgas, after selling its Milan Gas subsidiary to the Edison Company for 163 million lire, has been able to reimburse onerous banking debts. The Fondi Rustici has sold, for 47 million lire, the "Bonifiche Pontine," a big reclamation enterprise which would have required further huge investments from its embarrassed finances. The public is buying fixed-interest securities to a large extent. A first issue of 100 million lire 5 per cent. bonds of the new Institute Mobiliare Italiano was readily subscribed privately. The rate of interest on new issues of mortgage bonds has been reduced to a maximum of 5 per cent. These are all good omens for the future, but there is no sign of a revival in equity shares.

New Issues in October.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in October, and in recent periods:—

	(000's omitted.)				
Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	Total.	
	£	£	£	£	
1924	7,051	6,023	4,370	17,444	
1925	12,918	5,077	1,356	19,351	
1926	10,765	4,431	4,036	19,232	
1927	17,240	8,318	4,039	29,597	
1928	21,965	5,263	3,526	30,754	
1929	16,502	5,081	2,186	23,769	
1930	14,220	5,121	2,975	22,316	
1931	4,542	3,209	761	8,512	
Monthly Total.	Govt. Other.				
May, 1931	1,450	381	10,045	11	11,887
May, 1932	107,689	7,847	1,918	Nil	117,454
June, 1931	1,100	12,107	4,983	2,850	21,040
June, 1932	1,400	12,291	2,077	Nil	15,768
July, 1931	1,600	2,265	2,856	Nil	6,721
July, 1932	Dr. 1,700	407	60	27	Dr. 1,206
August, 1931	750	740	Nil	60	1,550
August, 1932	Nil	20	22	Nil	42
September, 1931	Dr. 50	750	Nil	21	721
September, 1932	150	Nil	Nil	Nil	150
October, 1931	Dr. 1,350	684	49	Nil	Dr. 617
October, 1932	Nil	6,595	7,880	Nil	14,475

The new issue market did not regain its normal stride last month, an effective if somewhat diluted version of the official "embargo" being still in force. The list of borrowers, nevertheless, included some influential names. The British Government's issue of 2 per cent. Treasury Bonds is not included in our figures, the entire proceeds being destined for conversion purposes. Sales and encashments of National Savings Certificates were in balance. The Australian Commonwealth and South African Governments came into the market, and being,

as always, well "looked after," obtained full satisfaction. Other successful borrowers were the Southern Railway and a large real property concern, Covent Garden Properties. Despite the ban on non-Government conversion issues requiring underwriting or cash subscription, a number of well-known companies succeeded in replacing higher- by lower-yielding stock, including various brewery concerns, Lever Brothers, and Dickins and Jones. The more speculative industrial borrowers, at the foot of the list, included a mail-order business, a garden-implement concern, and two "greyhound" enterprises.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Argentine Great Western Railway, Bengal Nagpur Railway, Central Argentine Railway, Kassala Cotton, Debenhams, Imperial Smelting Corporation, and United Dairies. At the annual meeting of the Imperial Smelting Corporation, Sir Robert Horne declared that, from a metallurgical point of view, the company had made considerable progress. The capacity of the Corporation's zinc white works had been raised to over 30,000 tons of lithopone per annum. At the annual meeting of Debenhams, Sir Frederick Richmond said that although demand had tended to flow to the cheaper goods, there had been no serious contraction in the value of goods handled. Taking the three West End businesses together, the number of transactions was only about 2 per cent. less than last year. At the annual meeting of United Dairies the chairman stressed the steady progress made by the company's engineering factories. Sales of bottle discs, for example, had reached a hundred millions.

CAPITAL ISSUES.

THE issue market for gilt-edged stocks was reserved this week for the *British Government*, whose £300 million 3 per cent. Conversion Loan offer—the coping-stone of the Treasury's programme which opened on June 30th with the War Loan conversion announcement—is discussed on pages 824 and 842. Among lesser borrowers, the Stock Exchange "introduction" is finding favour, and financial ingenuity is discovering effective means of driving a coach and four through the "embargo" on subscriptions for conversion purposes. Thus *Associated Newspapers*, whose new finance is discussed on page 846, is obtaining, in effect, the money to pay off the debenture stock of a subsidiary company by selling a block of notes for "placing" by a Stock Exchange firm, and disposing of some of its own newly-created deferred shares to another company in the group. The latter, in turn, will issue its own shares, for cash, to pay for them. The machinery of Stock Exchange "placing" has also been utilised by *Selfridge*

WALL STREET.

Moody's Investors Service Ltd., acting as agents for their New York organisation, can supply immediately a complete statistical service on American Companies (up to date to the current week), company analyses for circularising, or any special service.

MOODY'S INVESTORS SERVICE LIMITED,

King William Street House,
Arthur Street, E.C.4.
Tel.: Mansion House 7685.

Provincial Stores for an issue of £650,000 5 per cent. first mortgage debenture stock and by the **Birmingham District Investment Trust** for £600,000 of 4½ per cent. debenture stock. Of the issues made direct to the public, the offer by **Portsmouth Newspapers** of redeemable preference shares was not underwritten. The company owns some old-established properties, circulating mainly in the South Coast area, whose profits, though not progressive, have fluctuated remarkably little in the last few years. The yield of under 5 per cent., however, is not particularly generous, seeing that the company apparently has power to issue debentures ranking in front of the shares at any time. We cannot find extenuation for the present outbreak of "greyhound" issues in the fact that many of the companies concerned are "little ones." Indeed, the resulting narrow market is an additional potential disadvantage. This week's issue was made by **Dumpton (Thanet) Greyhounds**, a company with a capital of £50,000.

ISSUES OF THE WEEK.

THE TREND OF BUSINESS

Experienced business man and economist prepared to offer exceptional service of information on trends of trade at home and abroad to commercial or financial concern; long experience interpreting underlying trends of business; exceptional sources of information. Moderate annual fee. Apply Box 98, The Economist, 8 Bouverie Street, Fleet Street, E.C.4.

Public Offers.

3 Per Cent. Conversion Loan.—Issue of £300,000,000 3 per cent. conversion loan, 1948-1953, at 49½ per cent. Redeemable at par on March 1, 1953, or at any time on or after March 1, 1948, in whole or part, at the option of H.M. Treasury, on three months' notice. The principal and interest are a charge on the consolidated fund of the United Kingdom. Trustees are authorised to invest in the loan. Interest will be paid half-yearly, and a first payment of 11s. per cent. will be made on March 1, 1933. Applications are for £100 or multiples thereof. Holdings may be in the form of inscribed stock, registered stock or bonds to bearer.

Portsmouth Newspapers.—Issue at par of 240,000 5 per cent. cumulative redeemable preference shares of £1 each, redeemable at 21s. 6d. per share, on or after March 31, 1938, on three months' notice. Any of the preference shares not previously redeemed will be redeemed at 21s. 6d. on March 31, 1960. The company was formed for the purpose of purchasing, from September 30, 1932, the business of the Evening News and Hampshire Telegraph Company. The purchase price has been fixed by the vendor company at £331,917, to be satisfied as to £120,000 in fully-paid ordinary shares and as to £211,917 in cash.

Dumpton (Thanet) Greyhounds.—Issue of 300,000 Ordinary shares of 2s. each at par. The company has been formed to purchase and develop freehold land and property of the Dumpton Greyhound Racing Track at Ramsgate and equip the same with an electric automatic totalisator. Net profits of the Greyhound Racing Association (Isle of Thanet) 1929, Limited, which formerly carried on the business, were:—1929-30, £4,368; 1930-31, £3,615; 1931-32, £4,925.

South Suburban Gas Company.—Sale by tender of £300,000 4 per cent. perpetual preference stock, minimum price £101 per £100 stock, and £100,000 4 per cent. perpetual debenture stock, minimum price £103 per £100 stock, to rank *pari passu* with existing debenture stocks. Sales of gas during the past ten years have increased by 59 per cent.

Stock Exchange "Introductions."

Associated Newspapers.—Particulars are given of an issue of £1,500,000 4½ per cent. 10-year registered notes, repayable on August 1, 1942, at 103 per cent. The company will have the right at any time after February 1, 1936, to pay off at 107 per cent. the whole of the notes on three months' notice. The object of the issue is to enable the company to acquire new properties from Northcliffe Newspapers, Limited.

Birmingham and District Investment Trust.—Particulars are given of an issue of £600,000 4½ per cent. debenture stock. Notice has been given to redeem the whole of the outstanding first debenture stock on May 15, 1933.

Selfridge Provincial Stores.—Particulars are given of an issue of £850,000 5 per cent. first-mortgage debenture stock, which is the first charge on over £1,000,000 of property, of which some £800,000 is freehold.

Forthcoming Issues.

Bovril, Limited.—The directors propose to redeem the £343,100 5½ per cent. eight-year notes (second series), to create 250,000 6 per cent. preference shares and to issue, in the first place to shareholders, 200,000 of those shares at a premium.

Cow and Gate.—The directors are offering 825,000 Ordinary shares of 1s. each at par, in the proportion of one new share for every two ordinary shares now held.

Carlton Main Colliery.—Underwriting arrangements are being made in connection with an offer of £450,000 6 per cent. secured debentures of the Carlton Main Colliery Company, Limited, at 98 per cent.

L. McMichael, Limited.—Underwriting arrangements are being made in connection with an issue of ordinary and deferred shares in L. McMichael, Limited, wireless engineers, of London and Slough.

Olympia, Limited.—An offer for sale will be made of £1,000,000 4 per cent. First Mortgage Debenture Stock at 95 per cent.

Results of Issues.

3 per cent. Conversion Loan, 1948-53.—The lists were closed at 12.15 p.m. on Thursday.

Union of South Africa 3½ Per Cent. Inscribed Stock.—The list was closed at 12.35 on October 27th. It is understood that the issue was fully subscribed.

Dumpton (Thanet) Greyhounds.—Issue of 300,000 2s. shares was oversubscribed by 10.15 a.m. on Thursday.

Calls Due November 1st to November 12th, 1932.

The grand total of calls falling due in November, 1932, is £3,190,271, which compares with £461,812 which fell due in November, 1931. The following calls fall due November 1st to November 12th, 1932, inclusive.

CAISSE DE LA DETTE PUBLIQUE EGYPTIENNE.—The Egyptian Public Debt Commission announce that the coupon of the United Debt falling due November 1, 1932, will be paid in paper. In the event of a decision to pay this coupon in gold, holders will receive the difference between the sum actually collected and that payable to them if calculated on the basis of gold parity. For this purpose at the time of collection certificates will be delivered to them showing their right in that event to the difference in question.

COVENT GARDEN PROPERTIES.—The Directors propose to convert the 950,000 Preferred Ordinary 10s. shares into 475,000 shares of £1, and the 6,500,000 Deferred 2s. shares into 650,000 shares of £1.

DOMINION-SCOTTISH INVESTMENTS, LTD.—The directors of the Dominion-Scottish Investments, Ltd., have declared a dividend on the 5% cumulative redeemable preference stock (par value £50) of the company at the rate of 2 per cent. per annum for the quarter ending October 31, 1932, payable on November 1, 1932, to shareholders of record at the close of business on October 20, 1932.

THE BENGAL-NAGPUR RAILWAY, LIMITED.

THE WAGES QUESTION.

The seventy-fourth ordinary general meeting of the Bengal-Nagpur Railway, Limited, was held, on the 3rd instant, at 32, Gresham House, Old Broad Street, London.

Sir Trevredyn Wynne, K.C.S.I., K.C.I.E. (chairman and managing director), said that last year he expressed the opinion that, until trade revived, he could not see much chance of their gross receipts increasing. Trade in India had been showing spasmodic signs of revival, but it could not be said, at the present time, that the rate of improvement was likely at an early date to be as rapid and as steady as Indian railways would like.

While the financial position of Indian railways was at the present time sound, their receipts from April 1st to September 3rd of the current year had been 132 lakhs less than in the corresponding period of last year, and from figures given in the Railway Budget of the Government of India it seemed that working expenses must be still further reduced.

There were two items of expenditure on which no attempt at saving had so far been made. The first was the provident fund. The second was the present high scale of salaries and wages.

It seemed that it would be difficult to avoid a temporary suspension of annual increments to all employees, and, in the case of officers, also the withdrawal, temporarily, of the Lee concessions until such time as trade had really improved approximately to conditions of the past. That opinion was supported by the action now being taken by railways in England, where one cut in pay had already been made, and railway companies were now obliged to ask for a further cut. Again, in the recent report of the Commission on the Canadian National Railways, one of their recommendations had been that they should be economists on a scale to reduce the burden of the Canadian National Railways to reasonable dimensions, which meant economies in both works and pay.

Regarding competition, the amalgamation he had suggested last year would tend to reduce it, as well as result in large savings in cost of administration. That policy had been adopted in America recently.

The report and accounts were unanimously adopted.

KASSALA COTTON COMPANY, LIMITED.

IMPROVED RESULTS.

The ninth ordinary general meeting of the Kassala Cotton Company, Limited, was held, on the 3rd instant, at Winchester House, London.

The Hon. A. M. Asquith, D.S.O. (the chairman), in the course of his speech, said: Our balance sheet, as compared with last year, shows a very considerable improvement. Turning to the profit and loss account, you will see that for the single crop of 1931-32 our gross cotton and other profits are £63,619, as against £83,417 for the two crops of 1929-30 and 1930-31 taken together, and that, after deducting expenses, our profit balance for the year is £14,259, as against £6,445 for the previous eighteen months. We come into the year with a carry-forward of £13,103, and we go out of the year with a credit balance of £30,575.

The board would much like to be able to recommend the payment of some dividend, if only upon the preference shares, but, having regard to the stock of cotton still unsold and to other considerations, we have no doubt that we ought to postpone any action of the sort for the time being, and to be guided in this matter by the course of cotton sales and of cotton prices and by the progress of the current season's crop.

You will be glad to see that we had an exceptionally good crop. The yield per feddan of 5.17 kantars of cotton compares with 4.45 kantars in 1930 and with 1.87 kantars in 1931, and is the best yield yet obtained from so large an area in the history of cotton growing in the Gezira. Although the release of sterling from gold has somewhat improved the position, cotton prices are still low, and, in these circumstances, a bumper crop was particularly welcome. It was also welcome as an encouragement to our tenants after the disappointing results of the preceding season, and as a confutation of the forebodings of those pessimists who, after the preceding season, had been belittling the potentialities of the Gezira as a cotton-growing area.

Regarding the current season's crop, the cotton is later—and there is more blackarm and leafcurl about—than at the same date last year. We must remember that even in our best years we have not been without blackarm. It is, of course, much too early to make any positive predictions, but, if conditions remain favourable and these pests do not increase, there is no reason why we should not have an average crop.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended October 29, 1932, amounted to £8,591,700 against ordinary expenditure of £7,273,700. After making no allocation to Sinking Fund, but having allowed for an increase in Exchequer Balances of £105,309, the operations for the week, as shown below, reduced the National Debt by £788,000 to approximately £7,884 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,094 on the 26th ultimo, showing no change as compared with the previous Wednesday. Most of the gold available in the open market was secured for a destination not disclosed, but some of the purchases were also made on Continental account. As a result of a sharp movement in the exchanges, adverse to sterling, the price rose 1s. 5d. on the 27th ultimo, being quoted at 125s. 8d., at which figure it remained for three days.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling
October 27	125s. 8d.	13s. 6-2d.
" 28	125s. 8d.	13s. 6-2d.
" 29	125s. 8d.	13s. 6-2d.
" 31	125s. 5½d.	13s. 6-5d.
Nov. 1	124s. 3d.	13s. 8-1d.
Average	125s. 4-2d.	13s. 6-6d.

The Southern Rhodesian gold output for September last amounted to 50,198 fine ounces, as compared with 49,254 fine ounces for August, 1932, and 42,846 fine ounces for September, 1931.

A press bulletin issued from the office of the High Commissioner of Canada states that, according to a report issued by the Dominion Bureau of Statistics at Ottawa, the Canadian gold output in August last amounted to 262,590 ounces, an increase of 5.9 per cent. over the July production of 247,894 ounces. The output for the first eight months of 1932 amounted to 2,011,304 ounces, as compared with 1,724,089 ounces for the corresponding period of 1931.

Gold to the value of about £617,000 was shipped from Bombay last week. The s.s. "Rawalpindi" carries £169,000 and the s.s. "Britannia" £448,000, both shipments being consigned to this country.

SILVER.

A rather firmer tendency has been shown, and owing to the continued weakness of sterling at the beginning of the week, prices on the 27th ultimo rose sharply to 18½d. for cash and 18½d. for two months' delivery, representing rises of ½d. and ¼d. respectively as compared with the quotations of the previous day. At about this level the market remained steady, China support being very consistent and sellers inclined to hold back, although there has been some reselling by speculators.

America, although less active than recently, has been more inclined to buy than sell.

The market appears steady at the present level, but the tendency is still uncertain in view of possible fluctuations in exchanges.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 24th ultimo to mid-day on the 31st ultimo:—

	Imports.	Exports.
British India	26,425	
Canada	48,433	
Japan	11,588	
Poland	20,404	
Germany	19,200	
Portuguese East Africa ..	6,800	
British South Africa	3,544	
Other countries	3,660	
	140,054	57,986

Quotations during the week:—

	IN LONDON.	IN NEW YORK.
	Bar silver per oz. std. delivery.	Cash Two Months' delivery.
October 27	18½d.	18½d.
" 28	18½d.	18½d.

Commercial Reports.

MARKET SUMMARY.

Following last week's sharp reaction in the gold price of the chief primary products, the course of prices has been irregular, but the tendency was still downwards. A glance at the movement of quotations in the United States shows a further drop in the price of copper. Other non-ferrous metals are scarcely changed on the week. Raw cotton continued its downward movement. Rubber, after a period of relative steadiness, declined afresh. Among cereals, maize and oats have been steadier, while rye was slightly lower and wheat established a new low record. The downward movement in coffee prices was not arrested, and cocoa showed a further drop on the week. On the other hand, sugar to grading and therefore to international arbitrage, moved in sympathy with gold prices. Reports from various industrial centres show a slight improvement in the coal trade, but there is little evidence of the expected revival in the activity of the iron and steel industries. The cotton industry has been dislocated by the unexpected strike in the spinning section. The demand for rayon fabrics has not shown much improvement, and buying of Bradford goods remains quiet.

THE COAL TRADE.

SHEFFIELD.—The shortage of supplies of best steams for export is causing prices to stiffen, and the latest quotations have gone up to 18s. 3d. f.o.b. Industrial demand remains steady and below normal. Secondary and small fuels are in excessive supply. Public utilities, however, are taking increased and substantial tonnages. Sales of house coal are poor for the time of the year, best qualities being quoted at 23s. and 24s. at pits. There is an increased demand for furnace coke, much of it relating to supplies for central heating. The price of blast-furnace sorts is about 10s. at ovens.

GLASGOW.—The market maintains recent strength. On the whole, however, the position is less satisfactory, for while the scarcity of shipping supplies resulting from the quota reduction has forced prices to higher levels, these have advanced to an extent which is now restricting business. Meantime the collieries are busy on contract work, and all classes of coal, save perhaps navigation, are being readily taken up. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s.; splint best, 16s.; splint second, 14s. 6d.-15s.; navigation, 14s. 3d.; navigation second, 13s. 3d.-13s. 6d.; Hartley, 16s.; steam, 13s.; trebles, 14s. 6d.-15s.; doubles, 12s. 6d.; singles, 11s.; pearls, 10s.-10s. 6d.; dross, 9s. FIFE.—Screened navigation, 16s.-16s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.-12s. 6d.; trebles, 17s.-18s. 6d.; doubles, 13s.-14s. 6d.; singles, 11s.; pearls, 10s.-10s. 6d. LOTHIAN.—Prime steam, 12s. 6d.-13s.; secondary steam, 12s.; trebles, 15s.; doubles, 12s.-13s.; singles, 10s. 6d.-11s.; pearls, 10s.-10s. 6d. Ayrshire.—Unscreened navigation, 15s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 15s.; doubles, 12s. 6d.-13s.; singles, 10s. 9d.; pearls, 10s.-10s. 6d.; dross, 9s.

NEWCASTLE-ON-TYNE.—The accountancy ascertains of proceeds and costs in the Northumberland and Durham coal-mining industry for the month of September, which nominally controls the wages of miners, indicates considerable improvement in trade compared with previous months of this year. Northumberland is well supplied with trade for screened coal both from home and abroad, and all classes of graded coal are being moved freely. Smalls, which up to a few weeks ago were almost unsaleable, are in better demand. The Durham position is fairly steady, with a seasonal demand for unscreened gas, but coking classes are offering freely and more trade would be welcomed. Prime bunkers are comfortably placed. To-day's f.o.b. prices for export are as follows: NORTHUMBERLAND.—D.C.B. screened steam, 14s.; smalls, 8s. 6d.; Howards, Bentinck, Newbigin screened, 13s.; smalls, 8s.; Tyne Prime large, 13s. 3d.; smalls, 9s.; Hartley Main, large, 12s. 6d.; smalls, 8s. DURHAM.—Lambton South Hetton screened steam, 15s.; smalls, 11s.; Wear Special unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s.; coking, unscreened or smalls, 12s. 6d.; Prime unscreened bunkers, 14s.; second-class unscreened bunkers, 13s.; Prime foundry coke, 16s.; Newcastle and District gas coke, 18s.

CARDIFF.—There has been an increase in the volume of the coal export trade during the past few days. The weekly returns of the Great Western Railway Company show that the shipments in the week ended October 29th last totalled 420,435 tons, compared with 381,365 tons the previous week, and 438,227 tons in the corresponding week last year. At Swansea and Port Talbot the demand for anthracite coal continues exceptionally active, and the dock authorities have been compelled to take steps to prevent the congestion of wagons near the dockside at Swansea. Loading operations have also been a little more active at the eastern ports, and information was received on Monday that the French authorities had authorised a further increase of 25,000 tons in the monthly quota. The Portuguese State Railways have placed a contract for 270,000 tons of small coals and the British Admiralty and one of the French railways are inviting tenders for their usual requirements. There are sharp differences of opinion among the colliery owners over the suggested amendments to Part I. of the Coal Mines Act, and the reply of the executive board to the Central Council has been deferred for a month. The largest coal-exporting organisation at Cardiff has declared itself opposed to the proposal to establish an export subsidy by a levy on the inland coal market. Prices are nominally unchanged, and the following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 9s. 9d. to 10s. 6d.; special foundry coke, 32s. 6d. to 34s.; patent fuel, 20s.; pitwood, ex ship, 21s. 6d. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—The important orders recently placed in this district have caused a better feeling in the pig iron markets, and a little more business has been done recently. With the closing of the Skinninggrove works at the end of this week the remaining production of ordinary foundry iron will be reduced to three furnaces, but in spite of the poor demand, this cannot long be sufficient for the ordinary trade, and it will probably be found necessary to increase the make at other works. In Cleveland iron a little more business has been done during the past week, but mostly for early delivery, and a few more lots were purchased at the weekly market on Tuesday, when official prices were unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge 57s. per ton f.o.b. or f.o.t. Iron is still offering to Scotch consumers at the low prices recently accepted, but the business transacted is disappointing, only 3,007 tons being shipped in October, against 3,536 tons in September. In hematite also, there is a little more doing, but orders are still

only for moderate quantities for early delivery. Makers are rather firmer, as costs of raw materials threaten to stiffen, and are not now inclined to go below 59s. for ordinary mixed numbers for early delivery, which price they are obtaining without difficulty. Shipments of all kinds of pig iron for October were 8,272 tons, manufactured iron 554 tons, and steel 26,479 tons, against 5,639 tons, 991 tons, and 23,702 tons respectively for September. In the finished departments there is a better outlook, and the contracts recently secured will give more employment in many departments. The West Ham viaduct will be commenced by Messrs Dormans as soon as sanction from the Ministry is obtained, and other contracts are stated to be under negotiation. All steel prices are unchanged. Best rubio ore remains nominally 14s. 6d. c.i.f., but sales are few. The freight Bilbao/Middlesbrough is 4s. 3d. Imports of all kinds of ore into Middlesbrough during October amounted to 41,122 tons, compared with 29,013 tons in September. Coke continues in full supply, and good blast furnace qualities are offering at 14s. 6d. per ton delivered consumers' works. After the changes at the Skinninggrove and Normanby works at the end of this week there will be 15 furnaces left in blast, three of which will be producing Cleveland, seven hematite, and five other kinds.

SHEFFIELD.—October turnover in the heavy steel branches fell below those of two preceding months. There was a gain in shipments to British Dominions, but sales to foreign markets fell off. Traders are still confident of a revival, but do not expect much development until the new year. Discussions relating to the reorganisation of the iron and steel industry of the country are creating an uncertain feeling, as it is believed the plans involve the closing of several large works, it being recognised that surplus output capacity is one of the most important factors in the present unsatisfactory position of industry. At the Firth-Brown works was recently produced the largest specimen of hollow steel-rolling ever attempted. Consisting of a reaction chamber for the oil cracking process, it measured 50 ft. long by 6 ft. diameter, and weighed close upon 70 tons. It was forged in a single piece by the modern process. A fair amount of activity is to be found in the newer developments of the steel trade, such as stainless steel, cold wrought strip and magnets. Makers of cutlery and electro plate are now experiencing some seasonal orders. This special trade was late to arrive, and is not expected to last long. Information to hand indicates the exhaustion of stocks of iron and steel materials of many kinds all over the world, and it is felt the suspension of railway renewals and extensions in South America, India and elsewhere must shortly come to an end. Local trade in locomotives, wagons, carriages and railway stores, has for months stood at the lowest level in recent history.

GLASGOW.—There is more business doing in the West of Scotland this week, and orders are on a more satisfactory scale than the "hand-to-mouth" variety, which has been a feature of the steel trade buying during recent months, and plants in operation are more regularly employed. Unfortunately, the demand for shipbuilding material still remains negligible, although there is a good deal of repair work in the yards of Clyde ship repairers. Continental competition in practically all semis can now be met by home producers, but the demand is small at the moment. Bookings of sheets, both black and galvanized, have been considerable during the present week, the export business being largely in thin black sheets, and more mills are in operation this week than have been running for some months past. It is believed that makers have a few weeks' work on hand now. At a meeting of the Scottish Steel Bar Re-rollers Association held this week it was agreed to advance the basis price of mild steel bars to £7 5s. per ton Glasgow delivery.

CARDIFF.—There has been no material change this week in the condition of the tinplate trade. On the Swansea Metal Exchange on Tuesday quotations were steady at 15s. 9d. to 16s. 3d. per basis box; while local steel bars were stationary at 95s., and foreign bars at from 80s. to 82s. per ton delivered. Galvanized sheets were quiet, but a shade firmer, at from £10 to £10 10s. per ton for 24-gauge corrugateds in bundles. Shipments of tinplates at Swansea last week totalled 107,936 boxes, compared with 90,977 boxes the previous week, and stocks totalled 136,440 boxes, compared with 154,819 boxes.

BARCLAYS BANK

LIMITED

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,050 Branches in England and Wales.

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:

BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

HIDE, LEATHER AND ALLIED TRADES.—There was a further decline in the price of hides from home-slaughtered cattle at

BARLEY.—There has been a slight improvement in the demand for barley. Canadian quotations were somewhat higher than a week ago. "December" futures were quoted in Winnipeg on Wednesday at 28½ cents per bushel, against 28½ cents last week and

sales held in Manchester this week, most weights and classes of ox and heifers realising from 1/4d. to 1/2d. per lb. less money. Cows also were 1/4d. per lb. cheaper, but there was no alteration in quotations for bull hides. Calfskins showed a fractional decline on two weights. The Leeds market also exhibited a weaker tendency for clear hides, those in the warbled class not being sold. Fellmongers continue to find trade difficult in regard to both wool and pelts, and as a consequence sales of sheepskins have to be made at lower figures. For some sorts of imported hides prices show an advance, particularly in connection with wetsalted South Americans. During the week sales have been made of Argentine ox at 4 1/4d., while lights have sold at a fraction under 4 1/4d. and Montevideo ox at 4 1/4d. Prices for dry hides from the same source have also moved up a trifle, B.A. Americanos now being quoted at 6 1/4d., Inservibles at 3 1/4d., and M.V. Americanos at 6 1/4d. Quiet conditions have been met with in regard to African hides, with dry Capes offered at 6 1/4d. and 5 1/4d. for firsts and seconds, and drysalted at 5 1/4d. and 4 1/4d. Heavy Nigerians have changed hands at 6 1/4d., and unbathed Adis Abebas at 5d., while Mombasas are on offer at 4 1/4d. Australian hides have again been a poor market. There does not appear to have been any increase in the turnover of sole leather and consumers generally are only taking sufficient to meet present requirements. Demand for English and wetsalted bends has been moderate, with the best call for the medium weights. In regard to dry hide bends, inquiry has been centred mainly on the lighter weights and in some directions quite good business has been negotiated. Medium weights have also come in for attention, but there has been little trade passing on account of the heavier descriptions. Pinned shoulders and bellies have continued a steady market, but the turnover in rough sorts has been very limited. In the upper leather section of the industry a reasonable amount of business has been forthcoming for box and willow calf and glaze kid, but the inquiry for patent leather has been less marked. In other lines turnover is fairly well maintained, with business made up of numerous small parcels.

RUBBER.—Following the slight improvement of a week ago, the market in rubber has again been dull and easier. In New York, Wednesday's spot price for rubber, at 3 1/2 cents per lb., shows a fall

of 1/2 cent per lb. on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2 1/2d. per lb., against 2 1/4d. per lb. on the corresponding day last week. In forward positions, business has been done at 2 1/4d. to 2 1/2d. for April-June, 1933, as against 2 1/4d. to 2 1/2d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,096 tons; delivered, 1,521 tons; stocks at the end of last week, at 100,316 tons, show a decrease of 425 tons as compared with the preceding week.

this affected credit supplies, so that again $\frac{1}{2}$ per cent. had to be paid by some borrowers. The fundamental cause of such moderate shortage of funds as occurred is to be found in the temporary withdrawal from the market of £15.0 millions, representing the 5 per cent. application money upon last week's Conversion Loan issue. This, together with certain other inequalities between Government receipts and disbursements, has enabled the Exchequer to repay its previous borrowings from the Bank and also to add to its resources.

The discount market has again been idle. Last week's Treasury bill issue was for £50 millions, but the market expected that as had happened in previous weeks, the full amount would not be allotted. To make sure of getting their bills, many brokers put in tenders at varying rates, but when the result of the issue was announced, it was found that the full £50 millions had been allotted, and that practically all the market's applications had been satisfied. The average tender rate also worked out at 10s. 11.16d. per cent., which was the worst rate from the market's point of view since September 23rd. Early this week a position of stale-mate developed in the discount market, for the banks were not buyers at less than $\frac{1}{2}$ per cent., while brokers did not wish to sell at a loss. Ultimately the slightly harder tendency of money caused brokers to give way, and at least one bank was able to buy a fair quantity of January and February bills at $\frac{1}{2}$ per cent.

Three months' bank bills also hardened slightly towards the middle of the week in sympathy with money, and on Thursday the ruling rate was $\frac{1}{2}$ per cent. Standstill bills are still quoted at 1-2 per cent. As the monthly returns of clearing bank acceptances show, the total number of bills coming forward for acceptance and discount has been steadily decreasing, and during recent weeks a further contraction in the total volume of bills has been caused by the repayment of a few standstill bills. On the other hand, accepting houses have noticed a slow but steady increase in the volume of inland bills, and apparently home business houses are beginning to discover that it is now cheaper to draw bills on their customers than to give indefinite credit financed by bank loans. So far the movement is very slow, for many houses to-day know very little about the technique of financing their business by means of bills of exchange, while others still fear that resort to bills will be regarded as a reflection upon their financial stability. Still it is of some significance that the growth in the case of inland bills has proceeded far enough to have become apparent in the money market.

This week's Bank return reflects mainly the consequences of the payment of the £15.0 millions application money on the Conversion Loan, together with certain other excesses of Government receipts over disbursements. Public deposits have expanded by £13.4 millions, while Government Securities are lower by £10.8 millions. As a result of these two big changes and minor movements elsewhere, Bankers' Deposits have been reduced by £22.8 millions to the more normal figure of £79.9 millions. Thus approximately £23 millions have been turned over to the Government, and the withdrawal of this money from the market amply explains the slightly harder tendency of money towards the middle of the week.

Business on the foreign exchange market was patchy this week and less active, with New York closed on November 8th. Sterling improved considerably in the earlier stages, but fell away towards the close. The New York rate fell from 3.30 to 3.28 $\frac{1}{2}$, after 3.31 $\frac{1}{2}$. Montreal weakened sharply from 3.64 to 3.76. Paris was little changed at 83 $\frac{1}{2}$. Brussels fell away by three points to 23.65. Milan was $\frac{1}{2}$ better at 64 $\frac{1}{2}$, and Madrid was also firmer by $\frac{1}{2}$ at 40 $\frac{1}{2}$. Amsterdam gained $\frac{1}{2}$ at 8.7 $\frac{1}{2}$, and Berlin four points at 13.82. Switzerland was unchanged at 17.05. The Scandinavian currencies were variable, Stockholm improving sharply from 19.06 to 18.88, as did Oslo from 19.73 to 19.60, whilst Copenhagen only gained one point at 19.20. The South American currencies are still nominal, Rio being unchanged at 5 $\frac{1}{2}$ d. offered, Buenos Aires losing $\frac{1}{2}$ d. at 35 $\frac{1}{2}$ d., and Montevideo being unchanged at 29d. In the Far East the rupee was steady at 1s. 6 $\frac{3}{4}$ d., but Japanese yen fell from 1s. 3 $\frac{1}{2}$ d. to 1s. 3d., after touching 1s. 2 $\frac{1}{2}$ d. at the week-end. In the forward market, one month's dollars remained at $\frac{1}{2}$ cent discount, but three months' weakened by $\frac{1}{2}$ to $\frac{3}{4}$ cent discount. Paris was at one centime and three centimes premium. Brussels weakened to 6 and 18 centimes discount. Milan was unchanged at last week's levels. Madrid was weaker at $\frac{1}{2}$ peseta and $\frac{3}{4}$ pesetas discount. Amsterdam went to par for one month, and $\frac{3}{4}$ cent premium for three. Switzerland was one centime and two centimes premium. The silver market was firm on Chinese and speculative buying, and prices improved by $\frac{1}{2}$ d. to 18 $\frac{1}{2}$ d. for cash and 18 $\frac{1}{2}$ d. for forward. Among the China silver exchanges, Hong Kong was unchanged at 1s. 4 $\frac{1}{2}$ d., whilst Shanghai was dearer by $\frac{1}{2}$ d. at 1s. 10d.

The weakness in sterling on Wednesday afternoon and Thursday was due to unfounded rumours regarding the American debt position, and possessed no further significance. Some weakness has also been displayed both by the Canadian dollar and the Japanese yen. The fall in the Montreal rate is discussed on a later page, while the weakness of the yen is apparently due to the disclosure of preliminary estimates of national revenue and expenditure, which have been accepted in some quarters as constituting the new Japanese Budget totals. The figures in question are, total revenue of Y. 1,330 millions and total expenditure of Y. 2,110 millions, thus leaving a deficit of Y. 780 millions. Inquiries show that at the most these figures were prepared to provide a basis of discussion between the Departments and the Treasury, and that the details of the Budget, which is only due about the New Year, are far from settled. Furthermore, while it seems clear that a large deficit will have to be dealt with, the recent rumours of an impending Japanese loan are so far unfounded. The low level of the yen is in one sense justified, for Japan is clearly in a difficult financial position, but the particular causes of this week's fall appear to possess no immediate foundation.

Money rates are unchanged on Wall Street, with all money quoted at 1 per cent. and 90-days' bankers' acceptances at $\frac{1}{2}$ per cent. The gold exchanges have moved in favour of the dollar. French francs were 3.92 $\frac{1}{2}$ cents on Wednesday last, against 3.93 $\frac{1}{2}$ cents the week before; belgas 13.88 cents, against 13.92 cents; Swiss francs 19.28 $\frac{1}{2}$ cents, against 19.29 $\frac{1}{2}$ cents; and Dutch florins 40.17 cents, against 40.24 cents. The Montreal rate has fallen from 90 $\frac{1}{2}$ to 87 $\frac{1}{2}$ per cent. of parity, this movement being in favour of New York. Gold imports for the week ended November 9th amount to \$4.2 millions, and include \$690,000 from Canada, \$232,000 from England and \$3,200,000 from India. Gold under foreign earmark increased by \$301,000 on Wednesday, this being the first increase since June.

WAR DEBT SUPPLEMENT.

With this Issue of The Economist we publish a special Supplement dealing with the history of the War Debts and analysing the economic questions involved, and the problem of their readjustment.

THE NEW PRESIDENT.

WHATEVER implication may be read into its tone, the voice of the American electorate has been expressed with a decisiveness which is sensational. Although the final figures are not available as we write, the extent of the Democratic victory may be measured by the fact that Mr Roosevelt—with over 17 million votes polled in his favour, as compared with less than 12 $\frac{1}{2}$ millions accorded to Mr Hoover—will have between 470 and 480 of the 531 votes in the Electoral College; and further, he will have at his back a House of Representatives controlled by a Democratic majority of over one hundred and a Senate in which a safe working majority has also been secured for his supporters. Whereas, four years ago, President Hoover won 444 votes in the College and Mr Alfred Smith only 87, this year only six States, whereof but two—Pennsylvania and Connecticut—are of major importance, upheld the Republican cause. Outside this tiny staunch oasis the electoral sand-storm has overwhelmed President Hoover throughout the East, West and South.

With what desire at heart did the American elector thus cast his vote in a way that sends Mr Roosevelt to the White House next March with a record majority behind him? It is fairly safe to say that the answer can only be framed in negative terms. Positive determination to secure repeal or modification of the Volstead Act may have played a not inconsiderable part; but in a contest in which, to foreign eyes, there was no very clearly drawn line of demarcation between the constructive policies of the two parties, and in which the personal appeal of the two protagonists does not seem to have been a significant element, there can be little doubt that the desire of the American people was, in essence, that there should not be a further continuance of an Administration which, rightly or wrongly, had to bear the brunt of responsibility for an unparalleled economic depression. Four years ago Mr Hoover's supporters proclaimed that "Hoover is good for four more years of prosperity." The promise was unfulfilled; and the American elector decided, with surprising emphasis, that, if he did not know quite what else he wanted, he wanted a change.

However sincerely we may commiserate with Mr Hoover over a defeat whose magnitude approaches the point of humiliation, we have little doubt that the retiring President would share what must be the general view of the world, namely, satisfaction that, at a juncture when it is supremely important that the American Administration should feel that it has behind it the unqualified backing of popular opinion, Mr Roosevelt will enjoy this advantage to a degree which probably exceeds the most optimistic expectations which he dared entertain. The disabilities that can be created by the American constitution when the executive, with a fixed tenure of office, does not command a majority in the Legislature, have been apparent more than once in the history of the post-war period; and Mr Hoover, we are confident, would not wish his successor to undergo a repetition of the difficulties which he himself encountered over the passage of the Budget last spring. As it is, Mr Roosevelt should be able to act in the great issues of domestic and foreign policy which will confront his Administration with an authority and power of leadership unhindered by having to manoeuvre, as might have been the case, a hostile Senate or House of Representatives. And, in his fortunate situation as triumphantly successful contestant at the presidential poll, he has an unique opportunity of manning his Administration from the considerable list of talent which is available to his hand without the distraction of nice points of political tactic. With all domestic impediments—save perhaps local divergences of interest within the Democratic Party itself—swept out of the way, Mr Roosevelt's position reminds us inevitably of that of the National Government in this country when it was carried triumphantly into power by a great popular vote a year ago. In both cases the victors' hands were practically untied and the only charge was to save the country.

What reorientation, if any, of American policy is foreshadowed in domestic affairs by Mr Roosevelt's victory,

we find it hard to predict. From the definite Democratic tendency towards "liquor" relaxation we may expect presumably an early amendment of the Volstead Act, permitting at least the consumption of light wines and beer—a step which would at one stroke enable the Federal Budget to be restored to better health through increased Excise revenue. Otherwise the Democratic policy in internal affairs has not been defined with great exactness. Mr Roosevelt has declared himself in favour of various schemes for the reorganisation of railroads and public utilities, and he has talked, during the election campaign, of plans for the relief of agriculture which appear to be aimed primarily at the lightening of the present heavy burden of mortgages. How far such projects will be translated from the vague promises of an electoral campaign into concrete legislation the event will show. Having regard to the record and calibre of the men, such as Mr Owen Young, Mr Newton Baker and Mr Norman Davis, who may be expected to be associated with Mr Roosevelt in his Administration, we do not anticipate that any very radical experiments will be made. We doubt whether Mr Roosevelt, in any attempt which he may make to lift America from the depression "by her own boot-jacks," will succeed in evolving measures very different from those formulated and applied during the past two years by Mr Hoover, or will escape the limitations which confronted the last Administration in its endeavours to foster the recovery of prosperity in America independently from the rest of the world.

It is naturally the question rather of the foreign policy of the new Administration on which attention abroad will centre. Here, again, we must wait for the event; but the omens are not discouraging. Whereas Mr Hoover, particularly during the latter stages of the Presidential campaign, appeared to be falling back on the worst excesses of Republican high tariff protectionism, Mr Roosevelt, true to the traditions of the Democratic Party, has throughout evinced a welcome appreciation of the importance and significance of international trade, and of the part which the United States is called upon to play in the politics and the economy of the world. In the matter of disarmament there has never been any material divergence of view between the two great American parties; but on the general question of American co-operation with the leading nations for the maintenance of peace and the settlement of the many vexed international problems of the day we should expect to see the Roosevelt Administration acting with welcome vigour and understanding of world problems.

This brings us at once to the problem which, chronologically, is the first that must be dealt with by the United States *vis-à-vis* the rest of the world—the unresolved problem of the war debts. With this issue of the *Economist* we print a special supplement dealing with the history of the war debts from their origins, and endeavouring to present the problem and the way out in their true light. Here we would merely add that, as has been emphasised in these columns many times, the essence of the war debt question at present is not that payment of the debts is intensifying the world economic crisis—for since July, 1931, no transfers have taken place—but that, until a final workable settlement has been realised, it is impossible for the World Economic Conference to begin with any hope of success an approach to the monetary and commercial reconstruction which must be undertaken. So long as these huge obligations remain as a potential factor in the debtor nations' balances of payments there can be no hope of restoring stability of currencies or of securing an agreement on fiscal and commercial measures to end the present strangulation of world trade.

In this respect it would be idle to minimise the difficulties presented by the fact that the new Congress does not meet or the new Administration take office until next March. Between now and then the defeated President remains at the White House and in charge of America's affairs. Nevertheless, we are glad to note that Mr Hoover, in his generous message of congratulation to Mr Roosevelt, promised that "in the common purpose of all of us I shall

dedicate myself to every possible helpful effort." Friendly co-operation between the retiring President and the President-elect could do much to alleviate the disadvantages attendant on a four months' interregnum at such a critical time as this. If Mr Hoover and Mr Roosevelt can in some degree act together in the councils of the State during the coming winter, so that the attitude of the future Administration in the vital issues of disarmament, war debts and the programme for the World Economic Conference may become, to all intents and purposes, effective now, a great gain will be secured.

THE STATE AND THE UNEMPLOYED.

THE Final Report of the Royal Commission on Unemployment Insurance, which had been delayed by a vain attempt to attain unanimity, has at last been published in a sturdy volume of several hundred pages. A detailed summary of its contents will be found on page 870 of this issue. The Majority Report carries the signatures of all but two members of the Commission. It is a serious, though not perhaps a very bold attempt to grapple with the all but insoluble problem of applying any system of insurance to a live register of three million souls, representing nearly 25 per cent. of the industrial workers of the country. The attempt to embrace the whole of the unemployed population of this country in a single scheme of insurance which shall be financially solvent has long broken down, and the Commission has been forced, as every one knew it would be, to devise a dual scheme compounded partly of genuine insurance, and partly of a scarcely disguised form of poor relief called Unemployment Assistance. The duality is clearly dictated by the actual nature of unemployment, which may be divided, roughly, into two kinds; intermittent unemployment, the appropriate method of dealing with which is obviously some form of insurance; and long-continued or nation-wide unemployment, which can only be palliated by some form of relief. The Report, accordingly, recommends soundly enough that the Unemployment Insurance Fund shall be made to stand on its own feet as an actuarially solvent entity. In order to start the Fund with a clean balance sheet the accumulated debt is to be placed in a separate account and amortised over a period of 65 years, the annual charge being met mostly by the Exchequer but partly by the Fund. With a live register of 3 millions, and with the present rates of benefit as reduced by the National Government (and slightly amended), and the present rates of three-fold contribution by employers, employed and the Exchequer, the incomes and outgoings of the Fund are made to balance with a small estimated surplus by varying the period of benefit from 13 weeks minimum to 39 weeks maximum, according to the number of contributions paid, and by applying an earnings test for workers employed only during certain days in the week.

The Unemployment Assistance Scheme, which is to take the place of transitional benefit, and also, presumably, of a considerable portion of the present poor law relief is based on entirely different principles. It embraces all able-bodied unemployed workers under 65 years of age who are unemployed, including both insured workers who are no longer entitled to benefit under the insurance scheme and workers in trades not at present insurable, such as agricultural workers (but not railwaymen). The rates of benefit proposed are the same as those payable under the insurance scheme, but whereas insurance benefit is unconditional, Unemployment Assistance is made subject to definite conditions such as willingness to work and a proof of need in the shape of a means test based on the resources of the household. The conditions suggested for the means test include allowances for savings such as investment, and house property, which are substantially more generous than those which have been proposed by the Government, but they can hardly be said to err on the side of laxity, in view of the enormous importance, both social and economic, of working-class

thrift. Unemployment Assistance is to be administered by Local Authorities, but the Commission is careful to keep it entirely separate from the Poor Law—a concession to the well-known susceptibilities of the majority of the working population of this country—and the administration is to be supervised not by the Ministry of Health, but by the Ministry of Labour. The resources required are to be provided partly from a flat fourpenny rate and partly from an Exchequer grant. It is estimated that in most areas a 4d. rate will cover the cost, but in depressed areas the proposed rate will obviously be utterly insufficient. The Report recommends therefore that the Exchequer grant, which is fixed at £58 millions (the estimated cost of transitional payments in 1933) be divided up according to their needs among the local authorities in whose areas the cost of unemployment assistance exceeds the product of a 4d. rate.

This dual scheme—insurance as well as assistance—is to be placed under the supervision of an independent Commission in order as far as possible to take the whole question "out of politics." But the Commission is apparently to be merely an advisory body, and the final responsibility is to rest with the Minister of Labour. The analogy of the Tariff Board at once suggests itself—none too happy a precedent—but it is difficult to see how the responsibility for so vast and important a branch of administration could be made to rest anywhere except upon ministerial shoulders.

The thesis of the Minority Report may be dismissed in a few sentences. It is obviously based upon the recommendations of the Trades Union General Council, and the principle of unconditional "compensation for loss of employment," except that it does not venture to put the whole cost on to the taxpayer, but retains the contributory principle. It, however, proposes to abolish the distinction between insurance and relief, and substitutes for it a general benefit on the scale existing prior to the economy cuts and without a means test. Clearly, its cost would be prohibitive.
