BERLIN.

Business was brisk in the early sessions, the general opinion being that the election results were as satisfactory as could have been expected. Interest gradually fell away, however, and prices weakened all round, though some mining shares were firm on Tuesday, and Siemens were active. Fixed-interest stock had a declining tendency. The market again hardened on Thursday.

OTHER CENTRES.

Irregular, but slightly more active, conditions prevailed on most of the minor European bourses. Frankfurt, like Berlin, opened with considerable strength, but lost ground subsequently. Brussels had a firm appearance copper shares being in special request, but all gains were not held. Milan became easier after initial strength and Stockholm turned dull after opening erratic.

INVESTMENT NOTES.

Course of Equity Share Values.—Our monthly share chart shows that, after a minor recovery in June, the prices of British equity shares rose within a few days of the announcement of the Government's War Loan conversion plans to the highest point touched since the beginning of April. The reasons were simple and unconvincing, the movement representing little more than a "boiling over" of the activity of the market for fixed-interest stocks, at a time when dealers and investors were

endeavouring to re-orientate their ideas to new and unlooked for conditions. Industrial news, however, was unfavourable, or at best neutral, and prices slowly sagged, after an over-steep rise, until the latter part of July, when a gradual but perceptible upward trend was renewed. The movement, probably, had its origin not in this country but in America where, after an uncomfortable period of "bumping along the bottom," equity shares became firmer than for some months past. The rise in New York may be deemed partly a reaction to firmer commodity prices, and partly the result of psychological and technical factors in a market where some recovery was overdue. It remains to be seen whether the American movement will continue, even over the next week or two, without interruption—both presidential candidates, naturally, would welcome a "good market" for their campaign—and, concurrently, whether British shares will do more than hold their present position in the quiet days of the holiday month, with a less active gilt-edged market.

Home Railway Uncertainties.—The Great Western and London and Northern Eastern statements complete the railways' dismal story for the first half of 1932, which is epitomised below:—

	Gross Receipts, Jan.-June, 1932.		Expenses, Compared 1931. (Approx.)	Net receipts compared 1931. (Approx.)	Int. Divs. paid, 1932.	
	Compared 1929.	Compared 1931.*			Stock.	% (Actual)
L.M.S.R.	-6,556	-2,309	-1,200†	-1,000	4% 1st Pref. } 5% red. pref. }	{ 1½ 2 2½
L.N.E.R.	-5,660	-2,188	-1,496	-924	4% 2nd guar.	
G.W.R.	-3,018	-1,175	-900†	-275	Ord.	
S.R.	-1,382	-916	-500	-500	All pref.	

* These figures relate to railway receipts only, for 26 weeks to July 3rd. According to railways' statements, the figures for the calendar half-year, after bringing in receipts from ancillary services, show the following declines as compared with 1931: L.M.S.R., £2,200,000; L.N.E.R., £2,420,000; G.W.R., £1,163,000; S.R., £990,000 approx. † Of which £420,000 due to reduced wages and salaries.

† Of which about £180,000 represents wage saving during the first three months under National Board Award.

The railways continue to make gratifying reductions in expenditure, but, except on the Great Western, whose savings have been on a larger scale than those of any other line, these economies have not, on the average, offset much more than half the decline in gross takings. Only the Great Western is paying a dividend (not fully earned) on its equity stock. The London and North Eastern has earned nothing on any of its preference stocks, and the half-year's dividend on its second guaranteed preference has involved a transfer from reserves. The Southern may eventually be able to retain "Chancery" status for its prior stocks by drawing on reserves for a nominal preferred ordinary dividend at the year-end; but the London Midland and Scottish, failing a sharp rebuttal in trade, appears doomed to join the London and North Eastern in the wilderness. That the showing for the second half of the year will be as good as for the first half is doubtful, for two reasons. First, the expenditure savings for the six months included certain non-recurrent items, since the National Wages Board Award did not come into force until the end of March, 1931. Secondly, receipts on all lines have been running in recent weeks appreciably below the average for the last six months:—

WEEKLY AVERAGE GROSS RAILWAY RECEIPTS, 1932, COMPARED 1931.

	Jan.-June.		Jan.-March.		April-June.		July 4-31.	
	£	£	£	£	£	£	£	£
L.M.S.R.	-89	-82	-75	-95	-116			
L.N.E.R.	-84	-75	-94	-104				
G.W.R.	-45	-34	-56	-53				
S.R.	-35	-25	-45	-59				

The comparison is partially affected by seasonal factors, passenger receipts, for example, being normally heaviest during the summer months. If, as is generally understood, the forthcoming recommendations of the committee on the relations of road and rail transport are unlikely to lead to really decisive changes, from the railways'

point of view, the prospects of junior railway stockholders must needs be bound up with developments such as the L.M.S. and L.N.E.R. "pooling" schemes and, above all, with a revival in general trade. In the meantime, railways in other countries are in an even worse plight; many of the strongest American companies showing declines of 30 to 60 per cent. in net earnings this year, while others are operating at a loss. The achievement of grouping, indeed, under the Railways' Act, 1921, has been of inestimable value to the British systems under conditions of unprecedented depression. In its absence, some of the weaker pre-war lines might by this time have been in receivers' hands.

Sugar Beet Company Results.—The reports for 1930-31 of the Anglo-Dutch group of sugar-beet manufacturing companies and of the Lincolnshire Sugar Company show that in three cases dividend payments have been reduced to a figure more suitable to a heavily subsidised industry, while in the other two cases no distribution has been made. Smaller net profits are returned by three of the companies, while the other two have recorded a net loss:—

Name of Company	Net Profit, 1930.	Ordinary		Net Profit, 1931.	Ordinary	
		Earned	Paid.		Earned	Paid.
Ely Beet Sugar Factory	£ 61,241	13.6	12½*	£ 14,422	3.2	6*
English Beet Sugar Corp.	124,090	24.8	20*	16,851	3.4	10*
Ipswich Beet Sugar Factory	62,047	15.5	12½*	Dr. 2,242	Nil	5*
King's Lynn Beet Sugar	45,487	10.1	10*	Dr. 16,483	Nil	Nil
Lincolnshire Sugar Co.	21,293	Nil	Nil	11,592	Nil	Nil

* Tax free.

It would be a mistake to judge the prosperity of the industry by the latest figures, since by agreement the entire net proceeds of the sale of sugar pulp and molasses produced by the Anglo-Dutch factories, after deducting the usual charges, were devoted to the payment for the beets delivered, nothing whatever being reserved for dividends,

YOU CAN BE SURE OF SHELL

Summer Shell petrol is specially blended to give the best results under Summer conditions

reserves or depreciation. Actually, the net proceeds of manufacture paid over to the growers amounted to £346,538 in the case of Ely Beet Sugar, £370,743 in the case of English Beet Sugar, and £140,781 and £138,106 respectively in the case of the factories at Ipswich and King's Lynn. It remains to be seen if any modification of this arrangement can be introduced in order to ensure a steady return on the capital of the manufacturing companies without, as in the past, financing high dividends through the subsidy.

Arthur Guinness.—The trading profits of this famous Dublin brewery company for 1931-2 show a fall of 35 per cent., in comparison with the previous year, at £1,505,822. Income from investments, on the other hand, has risen from £226,090 to £246,129. After deduction of the usual charges, net profit amounts to £1,605,980, compared with £2,380,356 last year. In view of the downward trend of all brewery earnings, and the uncertainties surrounding present and future Anglo-Irish relations, the directors' decision to pay an ordinary dividend (including bonus) of 29 per cent., of which some 2 per cent. is not covered by earnings, may be regarded as an indication of confidence.

	Year to June 30,		
	1930.	1931.	1932.
Profit	£ 2,447,826	£ 2,317,483	£ 1,505,822
Other receipts	252,055	241,908	278,224
Maintenance	125,767	126,510	125,299
Depreciation	35,000	35,000	35,000
Other expenses	12,034	12,525	12,767
Directors' fees	5,000	5,000	5,000
Net profit	2,522,080	2,380,356	1,605,980
Brought forward	642,356	807,436	960,417
Preference dividend	94,500	93,000	89,906
No. of times covered	26.7	25.6	17.8
Ordinary dividend:—			
Amount	2,062,500	2,034,375	1,629,844

Paid %	35	35	29
Reserve	200,000	100,000	...
Carried forward	807,436	960,417	846,647

No addition is made to reserve account this year and the carry-forward is reduced by £118,770. The balance sheet position remains impregnable strong, however, investments at £4,959,705 being valued below market price (before the July rise in gilt-edged values), while cash totals £1,341,769. The reserve fund stands at £2½ millions. At 75s. per £1 unit the ordinary stock yields £8 2s. per cent., less tax. A few weeks ago the units touched 62s.

Watney, Combe, Reid.—The decline in trading profit is less than that of Arthur Guinness, being a little over 14 per cent. Net profit is reduced by 23 per cent. Earnings, nevertheless, are sufficient more than to cover a repetition of the previous year's 19 per cent. deferred dividend. The directors, however, by contrast with the board of Arthur Guinness, have chosen, conservatively, to maintain a considerable margin between earnings and dividends, and the deferred stock receives only 15 per cent., against 19 per cent.

	Year to June 30.		
	1930.	1931.	1932.
Trading profit	£ 2,373,476	£ 2,241,068	£ 1,918,043
Other income	590,870	575,473	600,641
Expenditure	1,305,369	1,299,257	1,284,555
Interest	313,046	309,880	306,154

Expenses written off	3,127	...	...
Reserve	400,000	400,000	300,000
Carried forward	353,366	343,879	282,380

Some £250,000 from property improvement and contingency reserve has been appropriated for improvement, leaving the reserve of £673,455. General reserve totals £1,000,000, and reserve against subsidiaries £1,002,144. The balance-sheet position remains liquid. The deferred stock is quoted at £2 1s. 6d. per £1 unit, to yield about £7 12s. per cent.

Tootal, Broadhurst, Lee.—Thanks, mainly, to the non-recurrence of large writings-down of finished stocks, this pioneer of rationalised methods in the piece-goods trade made a satisfactory recovery in profits last year. Gross income rose nearly threefold, and net profit was more than doubled. The directors, presumably, are budgeting for the maintenance of this improvement, since they are paying out the whole of the year's earnings, after over-dividing in the previous year:—

	Year to June 30.		
	1930.	1931.	1932.
Profit	£ 100,426	£ 36,616	£ 95,089

Interest	11,808	11,746	10,723
Net profit	66,618	24,870	59,366
Brought forward	41,298	42,783	19,231
Preference dividend	15,750	15,500	14,750
No. of times covered	4.2	1.6	4.0
Ordinary and Emp. div.—			
Amount	49,383	32,922	47,790
Earned %	7.7	1.4	7.0
Paid %	7½	5	7½
Carried forward	42,783	19,231	16,057

Stocks are slightly higher this year at £603,956. Liquid assets largely exceed current liabilities, cash and trustee securities alone amounting to £531,792. Reserve fund stands at £300,000.

A. W. Gamage.—The profit and loss account of this famous London store is less informative and only a little more encouraging than that for last year. A net profit was recorded of £5,870, against a net loss for the previous year of £9,304. Against this total there has to be set £15,145, being the debit balance from 1931, £1,930 to cover liabilities formerly omitted, £65,828 to meet a Gamage (West End) bad debt, £1,685 for special expenses, £10,963, being the loss on sale of the company's Gough Street property, and £22,757 to cover the difference on the revaluation of the fixed assets. After transfer of the whole of the general reserve, amounting to £25,626, there remains a debit balance of £86,514 to go forward.

	Year to January 31st.

† See text.

Accompanying the accounts is a report from the shareholders' committee of five appointed in June last to investigate the position of the company. The report states that a substantial increase in sales took place during the year, and a number of re-arrangements and economies were brought into operation, the full effect of which should be felt in the current year. The directors have written off all known losses apart from the liability in connection with Gamage (West End) which is still expected to take some time to resolve itself. The report emphasises that

when this liability is settled, it will be necessary to write down the share capital of the company, and probably also to arrange for additional cash capital to be introduced. The committee is seeking its discharge, leaving its chairman, Mr J. T. Greenwood, to consult with the board, of which he is a member, on all further matters.

Anglo-Argentine Tramways.—Stockholders will find scant cheer in the latest accounts. Economic depression and omnibus competition have combined further to reduce traffic receipts by 11.3 per cent. Interest and sinking fund have been met on the three classes of debenture stock, but no distribution has been made to preference shareholders, whose dividend is already six months in arrear on account of 1930:—

	Year to December 31.		
	1929.	1930.	1931.
Traffic receipts	£ 4,602,117	£ 4,324,836	£ 3,840,368

Carried forward	91,476	7,287†	Dr. 371,223

* Half-year.

† After crediting £53,192 non-recurring income.

After crediting £7,287 brought in, a debit balance of £371,233 goes forward. Further economies have been made during the year, but the board is not sanguine that these can be appreciably extended. Since the advent of the new Government, negotiations have been reopened on the subject of operating conditions, and a scheme is under discussion for the formation of a combine to take over the whole of the transportation business in the city, in which both the municipality and the present owners would be represented.

Property-Owning Companies and the Slump.—As economic depression has grown increasingly severe, investors have tended more and more to regard real property as a species of financial haven, despite the large number of offices and flats which have been left vacant by the receding economic tide. The table which we print below, showing comparative results of sixteen property companies, tends in the main to bear out that view. Aggregate net profits have fallen in twelve months by less than 10 per cent., from £1,460,292 to £1,323,749:—

Name of Company.	Net Profit, 1930.	Ord. Div.	Net Profit, 1931.	Ord. Div.	Present Price.	Yield per cent.

* Tax free.

† Deferred.

The decline has been general, fourteen companies out of the group showing reduced earnings. Warner Estate registers a small improvement, and the profit for 1931 of Town Investments must be regarded as exceptional. Only one company failed to pay an ordinary dividend for 1930, and only one (a different company) in 1931. Three companies reduced their dividend last year, and two increased it.

New Company Registrations.—The statistical analysis of new company registrations during the half-year ended June 30, 1932, compiled by Jordan and Sons, Limited, of Chancery Lane, has a less discouraging appearance than might have been anticipated. The number of public companies registered was 108, with a capital of £5,254,458, compared with 135, having a capital of £6,380,672, in the corresponding period of 1931. Some 4,985 private companies were registered with a capital of £28,803,098, against 4,202 companies with a capital of £21,348,880. There was a marked increase in private company registrations during March and April, while public companies also displayed a certain liveliness, though in neither case was the promise of greater activity maintained. Only four companies were formed with capital exceeding £1,000,000, and three of these, Robert Fleming and Company, Philip Hill and Partners, and I.C.I. (Explosives), were private companies. The only "millionaire" public company was the British Tin Investment Corporation, with a capital of £1,250,000. A number of concerns which were incorporated with very small nominal capitals increased their capital during the half-year. Unlimited liability continued to enjoy a certain popularity for the purpose of property owning.

New Issues in July.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in July, and in recent periods:—

	(000's omitted.)			Total.
Monthly Average.	United Kingdom.	British Possessions.	Foreign Countries.	£
1924	7,051	6,023	4,370	17,444

INDIA COUNCIL REMITTANCES.
India: Remittances to the Home Treasury.—There were no remittances from the Government of India to the Secretary of State for India during the week ending July 30, 1932.—India Office, S.W. 1. August 3, 1932.BULLION.
The following statistics of imports and exports of gold for week ended August 4, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
France	Poland
Switzerland	Germany
Belgium	Netherlands
Italy	Belgium
U.S.A.	U.S.A.
Other countries	Other countries
Total declared value of imports	Total declared value of exports

GOLD MOVEMENTS.

The arrivals and withdrawals of gold, as announced by the Bank of England, have been as follows:—

	1932.	1931.	1930.
ARRIVALS.			
July 29	Nil	Nil	Nil
July 30	Nil	Nil	Nil
August 2	Nil	Nil	Nil
August 3	837,561	837,561	837,561
August 4	Nil	Nil	Nil
Total	837,561	837,561	837,561

Net arrivals, July 29, 1932, to August 4, 1932, inclusive, £837,561.
Messrs Samuel Montagu and Company write on August 3, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £137,725,916 on the 27th ultimo, as compared with £136,583,653 on the previous Wednesday. In the open market about £1,300,000 of bar gold has been sold for delivery this and next week. Some of the supplies were absorbed by the Continent, but the bulk has again been taken by an undisclosed buyer. Announcement is made to-day of the purchase by the Bank of England of £837,561 bar gold. Quotations during the week:—

	Per fine ounce.	of £ sterling.
July 28	116s. 7d.	14s. 6-9d.
" 29	117s. 8d.	14s. 5-3d.
" 30	117s. 5d.	14s. 5-6d.
Aug. 2	117s. 2d.	14s. 6-3d.
Aug. 3	117s. 2d.	14s. 6-0d.
Average	117s. 2-0d.	14s. 6-02d.

Shipments of gold from Bombay last week comprised £877,000 consigned to London and £25,000 consigned to Holland by the s.s. "Rajputana," £119,000 consigned to London by the s.s. "City of Eastbourne," and £70,000 consigned to New York by the s.s. "President Adams."

SILVER.

The influence of weaker sterling, together with stronger advices from America and the East, has led to the quotation of slightly higher prices during the past week. The peak was reached yesterday at 17½d. and 17½d. for cash and forward respectively, and today a fall of ½d. has been registered in each quotation. China has both bought and sold, whilst sales were effected on Continental account and some purchases have been a frequent feature. From America in the afternoons has been a frequent feature. The following were the United Kingdom imports and exports of silver registered from mid-day on the 25th ultimo to mid-day on the 30th ult.:—

	Imports.	Exports.
Soviet Union (Russia)	76,842	30,750
Belgium	20,682	8,500
Japan	7,603	6,130
France	15,000	7,000
Australia	8,568	4,846
Other countries	6,827	57,226

Quotations during the week:—

	IN LONDON.	IN NEW YORK.
Bar silver per oz. std.		
Cash	17½d.	17½d.
Two Months' delivery	17½d.	17½d.

OIL OUTPUTS.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LTD.—Production for the month of June, 1932: 12,661 tons = 88,627 barrels.

PHENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix group of companies for

February was 44,572 tons. Gross production of crude oil of the Phoenix group of companies for March was 58,501 tons. The gross production of crude oil of the Phoenix group of companies for April was 68,787 tons. Production for May, 1932: The gross production of crude oil of the Phoenix Group of Companies for May was 68,380 tons; June, 65,286 tons.

SERVICE PETROLEUM COMPANY, LTD.—Returns from Romano-Africana, S.A.R., show the production from the company's oil wells for the week ended May 22, 1932, totalling 1,535 tons (10,745 barrels). Production for the week ended May 29, 1932, totalling 1,407 tons (9,849 barrels). Returns from Romano-Africana S.A.R. show the production from the company's oil wells for the week ended June 5, 1932, totalling 1,267 tons (8,869 barrels).

Commercial Reports.

MARKET SUMMARY.

The outstanding feature of the principal international commodity markets has been the almost general upward tendency in prices. The advance was in many cases accompanied by a heavy turnover. A review of the course of prices in the United States reveals advances in many primary products. Among non-ferrous metals, copper, lead, spelter and tin have all been firmer. Rubber advanced further on American buying, and, among textile raw materials, cotton shows also a slight rise. Cereals are scarcely changed on last week. On the other hand, coffee and cocoa were dearer. Sugar was maintained at the higher level. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, continue to move in sympathy with gold prices. According to reports from various industrial centres, there has been a seasonal decline in the activity of many industries. Among those chiefly affected are the coal trade and the iron and steel industries.

THE COAL TRADE.

SHEFFIELD.—Heavy accumulations of stocks at South Yorkshire pits have necessitated a further curtailment of production, and large numbers of men were paid off at the week-end. So far as house coal is concerned this is due to the reluctance of the London merchants to stock for the winter trade. Holidays and the dispute in the textile industries have lessened the demand for industrial fuels, notably smalls. Best house is quoted at 20s. at pits. Best steams continue fairly steady at 16s. f.o.b., but this quotation is largely nominal. Export trade fails to expand. Rather more furnace coke is being exported, but the home demand is as poor as ever, and can be bought at 9s. and 9s. 6d. at ovens.

GLASGOW.—Lack of business is the main characteristic of the Scottish trade at the moment, and on the whole values have an easier trend. Despite the curtailment of output large coal remains plentiful, but the former factor to some extent affects the supply of washed nuts, singles being in relatively better demand. Irish business has not so far been influenced to the extent feared, but the outlook is, of course, none too bright. Shipment prices (f.o.b. district ports): LANARKSHIRE—Ell best, 14s.; splint best, 14s. 9d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 9d.; steam, 13s.; trebles, 12s. 6d.; doubles, 10s. 6d.; singles, 9s. 6d.; pearls, 8s. 6d.; dross, 8s. 9d. Fire 10s. 10s. 6d.; screened navigation, 16s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 3d.; trebles, 13s. 15s. 6d.; doubles, 10s. 3d. class steam, 10s. 3d.; singles, 9s. 9d.; pearls, 8s. 8d. LOTHIANS—Prime steam, 11s. 11s. 6d.; secondary steam, 10s. 6d.; trebles, 13s. 6d.; doubles, 11s. 11s. 3d.; singles, 9s. 9s. 6d.; pearls, 8s. 6d. Ayrshire—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 13s.; doubles, 11s. 6d.; singles, 9s. 9d. 10s.; pearls, 9s.; dross, 9s.

CARDIFF.—Owing to the stoppage of work at the collieries till Thursday morning very little business has been transacted on the Cardiff coal market this week. To cope with the exceptional pressure of contract commitments in the anthracite branch of the trade, coal loading operations were resumed at Swansea on Tuesday, but at the other ports they were suspended till Wednesday morning, and in these circumstances both the production of coal and the volume of the export trade have been considerably below the weekly average. The effect of any improvement in the negligible, and there is no indication of any improvement in the demand for bituminous grades. Contracts with Ireland are being carried out notwithstanding the 5s. import duty, the burden of which is falling entirely on the Irish importer and consumer. In some cases Irish merchants have asked the collieries to share the cost of the duties, but the requests have been refused. It is stated that the question of the centralisation of the sales of the principal groups of collieries in the coalfield has been under consideration, and that an announcement on the subject may be made in the course of the next few days. Quotations are nominally unchanged.

NEWCASTLE-ON-TYNE.—There are no signs of any improvement in the North-East coal trade. Shipments continue to show a decrease every week, and inquiry for both prompt and ahead is meagre. The Northumberland screened steam position is quiet, with ample supplies offering at minimum prices, whilst in Durham conditions are deplorable with production being curtailed every week. Import restrictions on the Continent are held responsible for the lack of export trade, as is proved by the fact that exports to Germany for the first six months of the year were 794,050 tons, compared with 1,119,491 tons for the same period of last year. A similar position exists with France and Belgium. To-day's f.o.b. prices for export are as follows: NORTHUMBERLAND—D.C.B. screened steam, 13s. 6d.; smalls, 8s. 6d.; Howards Bentinck screened steam, 13s. 6d.; smalls, 8s.; Tyne Prime large, 12s. 9d., Newbiggin screened, 13s., smalls, 8s.; Durham—smalls, 9s.; Hartley Main large, 12s. 6d., smalls, 11s.; Wear Lambton, South Hetton screened steam, 15s., smalls, 11s.; Wear Unspecial unscreened gas, 15s.; Holmside, Ryhope, Boldon unspecial unscreened gas, 14s. 6d.; second-class gas, 13s.; coking smalls, 12s. 6d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.

IRON AND STEEL.

MIDDLESBROUGH.—The demand for Cleveland pig iron does not show any improvement, and with the holiday month of August now commenced requirements are expected to be further curtailed. As far as this immediate district is concerned, the holidays occupy the week commencing 15th instant, when practically all the consuming works close down, but the blast-furnaces are usually kept in operation till the 6th instant, and as the plant includes four blast-furnaces producing Cleveland and basic, the output will be reduced to this extent and accumulation of stocks avoided. There will, however, be additions in other cases, as Scotland is not likely to take much iron just now and export demand is extremely light. Tuesday's market, though coming immediately after Bank Holiday, was not cancelled, but there was only a very poor attendance, and business was practically neglected. Official prices for Cleveland pig were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 pig were unchanged, viz.: No. 1, 61s. f.o.b. or f.o.t. Important foundry, 57s. 6d., and No. 4 forge, 57s. f.o.b. or f.o.t. Important concessions to Scotch consumers are still offered, and although the holidays in that area are now over, very little buying of pig iron has yet taken place, as the foundry trades there are still only indifferently employed. The hematite market at Pease and Partners, Normanby blowing out of the two furnaces in the district producing this class of iron, Works, only three remain in the district producing this class of iron. Two but substantial stocks are held at some producers' works. The two furnaces that are to go in at Ayresome works will probably not get into operation until after the holidays, towards the end of the month. The price for mixed numbers for early delivery is weak at 61s., and this price might be shaded only 6,388 tons, the lowest shipments of pig iron for July were only 6,388 tons, the lowest since the coal strike in 1926, and manufactured iron and steel showed a net loss of 903 tons on the previous month. The details are:—

	July, 1932.	June, 1932.
Pig iron	6,388	11,920
Manufactured iron	1,932	2,937
Manufactured steel	27,671	27,569
	35,991	42,426

The ore market shows no improvement, and it is extremely difficult to make sales. Best rubio is nominally 14s. 9d. c.i.f. for prompt, and freight Bilbao-Middlesbrough for early loading is 4s. 6d. Imports of all kinds of ore into Middlesbrough for July totalled only 40,795 tons, compared with 77,849 tons for the previous month. Coke continues to be freely offered, but there is a very poor demand. Good blast-furnace qualities are obtainable at 15s. 3d. delivered works, and possibly a shade less. The number of furnaces in operation in the district is at present 15, and this number will be reduced to 11 at the end of the week when the four at Skinningrove are damped down. There will then be three producing Cleveland, three hematite, and five other kinds.

SHEFFIELD.—Productive work has been almost at a standstill in the local steel trade this week. Works closed with few orders on hand or inquiries for bulk quantities. The number of workpeople temporarily suspended is larger than a year ago. Prospects at the moment are for resumption on the same basis as before the holiday. No substantial improvement is likely before the late autumn or winter. A feature of the situation is the cheapness of scrap, which now constitutes more than 60 per cent. of a steel furnace charge. The margin between the prices of scrap and of new material is in an abnormally wide one. Further economies are being carried out at some of the big works, mostly at the expense of staff personnel. Many clerks, chemists, draughtsmen and heads of departments have been dismissed during the last few weeks. These companies have been overstaffed for a long period. A number of working arrangements or amalgamations of steel business may be announced shortly. Leading steel firms in the country are said to have under consideration the adoption of the Bessemer basic process, as carried on in Belgium and Lorraine, for making the lower qualities of steel. Business continues acutely depressed in fine steels, tools, cutlery, and electro-plate, and unemployment is still going up.

GLASGOW.—While most of the works in the West of Scotland have now reopened after the holidays, there are still a number not in operation. The accumulation of orders is somewhat disappointing in practically every department, being mostly for small lots calling for early delivery. There is still a considerable amount of ship repair work on hand in Clyde yards, local makers supplying the material for this work. There is a slight falling off in the export demand for both black and galvanised sheets, and although the home demand is just about normal it has not been possible to keep all the local mills in employment this week. A number of small orders have been booked by structural engineers since resumption after the holidays which involve, in the aggregate, a not unimportant tonnage as things are at present. Things remain quiet at the tube works, and there is a good deal of unemployment in this industry.

CARDIFF.—The weekly meeting of the Swansea Metal Exchange was not held on Tuesday owing to the holidays, and the majority of the works were idle. Prices of tinplates have been firm at from 15s. to 15s. 6d. f.o.b. per basis box, and for steel bars quotations are unaltered at 95s. per ton net. The supplies of tinplates received from the works last week at Swansea were 106,120 boxes against shipments of 63,476 boxes, and stocks were increased to 193,378 boxes.

OTHER METALS.

TIN.—The market in metals has been buoyant and prices were driven up by a sharp increase in demand. The advance in tin prices is therefore due to a general upward movement in commodity prices rather than to the influence of factors peculiar to tin. The volume of business has been heavy, and Wednesday's turnover was the largest for several months. Sales on the London Metal Exchange totalled 625 tons on Tuesday, against 230 tons last week, and 1,350 tons on Wednesday, against 250 tons. In New York the metal was quoted at 21.90 cents per lb. on Wednesday, against 21.05 cents per lb. a week ago and 20.75 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £133 to £133 5s. per ton, compares with £127 to £127 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,179 tons, show a decrease of 43 tons on the week.

BARCLAYS BANK

LIMITED

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,050 Branches in England and Wales.

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:

BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

COPPER.—There was a burst of activity in the market for copper. Turnover was large and quotations advanced. Sales at the London Metal Exchange totalled 2,250 tons on Tuesday, against 700 tons last week, and 1,000 tons on Wednesday, against 500 tons. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £27 7s. 6d. to £27 10s., compares with £25 2s. 6d. to £25 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 16,317 tons, show an increase of 563 tons, while stocks of rough copper, at 919 tons, were 50 tons smaller.

LEAD.—Lead, too, was in active demand on Tuesday, but on Wednesday there was a slight reaction. Sales at the London Metal Exchange totalled 700 tons on Tuesday, as compared with 300 tons on the corresponding day last week, and 600 tons on Wednesday, against 500 tons. In New York the metal was quoted at 2.95 cents per lb. on Wednesday, against 2.80 cents a week ago and 2.80 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £10 1s. 3d. per ton for shipment during the current month, compares with £9 13s. 9d. on the corresponding day last week.

SPELTER.—The market in spelter opened strong on Tuesday in sympathy with other metals, and although quotations were easier on Wednesday, the metal recorded a substantial advance on the corresponding day last week. Sales totalled 700 tons on Tuesday (against 300 tons last week), and 400 tons on Wednesday (against 350 tons). Wednesday's quotation in New York, at 2.70 cents per lb., compares with 2.50 cents a week ago and 2.625 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling, for "good ordinary brands," was £12 6s. 3d. for shipment during the current month, against £11 17s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and platinum have been maintained at £95 per ton and £9 15s. per ounce respectively. Nickel was sold at £235-£240 per ton, against £230-£235 per ton last week. Foreign antimony advanced from £22-£22 10s. per ton to £22-£23 per ton. Quicksilver remained unchanged at £10 10s. to £10 15s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, July 28th to August 3rd (inclusive), are 42,506 bales, of which 25,208 bales are American, 5,109 Peru, 4,220 Argentine, 3,471 Egyptian, 1,430 African, 3,088 East Indian.

Manchester.—Although a fair miscellaneous business has been done in the market during the past week there has not been any real activity and to some extent trade has been interfered with by the holidays. Much uncertainty still exists with regard to the wages dispute and numerous manufacturers have been compelled to require a strike clause in contracts. In piece-goods for India the recently improved inquiry has been maintained and although operations have been somewhat irregular useful lines have been booked, especially in light bleaching descriptions, prints and fancies for Karachi and Calcutta. Rather more bids have been met with in dhooties for the latter outlet. Some reports from China have been rather better and more demand has been about in poplins, but very little has been done in standard makes. The offtake for Egypt and the Near East remains disappointing, but printing and finishing styles have been sold in moderate quantities for South America and West Africa. Home trade buyers have not been in the mood to purchase with any freedom. American yarns have moved off slowly at irregular rates. Owing to the stoppage at Burnley curtailment of production tends to increase. Most of the demand in Egyptian counts have been for specialities, and not more than odd lots have been put through in export numbers.

THE WOOL TRADE.—Bradford.—Nothing exceptional has developed in the wool trade during the past week, writes our correspondent, but the principals of all the leading firms are in a fairly optimistic mood. They are not perturbed by the ease in values at the last London sales or the subsequent ease in merino and fine crossbred tops. There has been some improvement in the position of dress goods manufacturers, and whilst other sections of the industry have admittedly nothing encouraging to report, it has to be acknowledged that, broadly speaking, the situation is sound. There is still some standing and partly-occupied machinery, and the outstanding problem is how to find sufficient new business to get it all running full time. Whilst it may not be possible to accomplish this, there are possibilities in the way of the development

of new business in partly and fully manufactured goods on both home and export account. Improvement in crossbreds is largely dependent upon larger sales of tops and yarns to Germany. No very big support to the wool market can be expected from Canada or the United States. The Bradford market is unchanged. Here and there a little business is being done in tops, and some rather pressing calls have been made for delivery, but this seems to be chiefly due to preparations being made for the forthcoming holiday. Quotations for all qualities of tops are quite steady. Here and there they are obviously protective, and whilst 21½d. is wanted for average 64's, 21d. is around the selling price.

THE JUTE TRADE.—Dundee.—Rather more interest has been displayed by buyers of jute cloth during the past fortnight. This was brought about by a rise in prices of the raw material. Rivers in India have been falling and there has been a consequent lack of steeping water, while the Indian mills have purchased fair quantities, which added to the firmness of values. The position has been so sensitive that very little would affect prices, which have ruled at a very low and uneconomical level. The raw fibre has advanced 20s. to 25s. per ton during the past week and the position is still firm, though a little irregular. Best First Marks are quoted at from £18 to £19 and good Lightnings at £17 for Triangle Jajodia to £17 10s. for Green Circle Ram, while Heart Ram tops are offered at £16 15s., August/September. Grade jute is offered at £17 5s. for First Marks, £16 10s. for Lightnings, and £15 12s. 6d. for Hearts, August/September. Daisee assortment rose to £16 5s. for full group, but £16 would have been accepted yesterday, while Tossa assortment was quoted at £16 15s., after being up to £17 5s. for full group, October/November. Calcutta hessians have advanced in sympathy with raw jute and values are about 9d. dearer for hessians and 2s. for heavy goods. The stocks of hessians at the end of July were down by 10 million yards to 151,500,000 yards, compared with the figures at the end of June, while stocks of sackings were increased from 111,610,000 yards to 122,638,000 yards during July. For 10 oz. 40 in. hessians sellers are now naming 18s. 1d. and for 8 oz., 14s. 6d., with Liverpool twills at 52s. 6d. and "B" twills at 46s., August to December. As from August 1st, the mills outside of the Indian Jute Mills Association are working 54 hours per week, compared with 80 hours per week formerly. A little business has been done in jute yarns, prices of which are very firmly held by spinners. On account of the advance of the loss already being made. Common 8 lb. cops are quoted at not less than 1s. 10d. and 8 lb. spools 1s. 11d., which have been paid, while twist is firm at 3½d. lowest for 3-ply 8 lb. Rove is not in much request and only small business has been done at the unchanged rates of £18 for 48 lb. and £15 15s. for 200 lb. Sacking yarns are very firm at 2½d. now lowest for 24 lb. west and 3½d. for 8 lb. chains. Fine yarns are quiet but firm at 2s. 6d. for second quality 8 lb. Rio warp, 2s. 2½d. for third and 2s. 0½d. for fourth. Carpet yarns have been bought to some extent at 3½d. for 14 lb. warp. Buyers of jute cloth appear to be slow in awakening to the fact that prices may be dearer, and so far there has not been much business done. It has been difficult for manufacturers to establish any increase on the rates of 2½d. for 10½ oz. 40 in. hessians and 1½d. for 8 oz., but there is not the same disposition to discount these terms. Linoleum hessians and heavy goods remain quiet.

THE GRAIN MARKETS.

WHEAT.—Nothing has happened during the past week to change the international wheat situation. At the beginning of the week, prices receded slightly under the influence of more favourable crop reports, but on Wednesday quotations hardened again, closing at the level of the corresponding day last week. On Wednesday, "September" futures were quoted at 50½ cents per bushel in Chicago, against 50 cents on the corresponding day last week and 49 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 29s. per 498 lbs., as compared with 29s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 9d., against 28s.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 3d., against 27s. 6d.; Australian, ex ship, 28s., against 27s. 6d. a week ago.

WHEAT FLOUR.—Business in flour has been active and the advance in quotations was maintained. North American shipments, at 173,000 sacks, showed an increase of 38,000 sacks, as compared with the previous week. Of this total, 72,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. per sack of 280 lbs., as compared with 24s. last week; delivered London, 24s., against 23s. as compared with 23s. 6d. a week ago; 25s. to 27s., against 25s. to 27s.; Manitoba ex store, 20s. to 21s., against 19s. to 19s. 6d. a week ago.

BARLEY.—The increase in the turnover on the Continent has been maintained. The chief source of supply was Russia. On Wednesday, "October" futures were quoted at 32½ cents per bushel in Winnipeg, against 35½ cents last week and 32½ cents a month ago. Quotations in London, Wednesday: "English feed-ling," f.o.r., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; "River Plate," landed, 24s. against 24s. 3d. to 25s. a week ago.

OATS.—After a period of inactivity a slight improvement has become noticeable in the demand for oats, and Argentine sellers stood at 17½ cents per bushel in Chicago, sold at 17½ cents per bushel on Wednesday this week, against 19½ cents per bushel. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., as compared with 17s. 9d. last week; "Plate," ex ship, 17s., against 16s. 9d.; "Chilean White," "River 23s. 6d. to 25s., against 24s. to 25s. 6d. a week ago.

MAIZE.—Maize has again been in good demand, and heavy shipments from Argentina have been readily absorbed at firm prices. Wednesday's quotation in Chicago for "September"

futures, at 31½ cents, shows a fall of ½ cent per lb. on last week, and a rise of 2½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 3d. per 480 lbs., compared with 21s. 3d. last week; "Plate," ex ship, 20s., as against 20s. 3d.; "Plate," July-August, 20s., as against 20s. 3d. Yellow maize, ex wharf, was quoted at £5 17s. 6d. per ton, against £5 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to July 30	Cwts. 29,662	Cwts. 25,067	Cwts. 68,712	Cwts. 33,950
48 weeks to July 30	3,756,472	4,881,325	9,488,794	9,657,299
Average price of English wheat per cwt.	s. d. 6 5	s. d. 6 5	s. d. 8 3	s. d. 11 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
July 23, 1932	Cwts. 28,451	Cwts. 2,031	Cwts. 4,487	s. d. 6 5	s. d. 8 8	s. d. 7 10
July 30, 1932	29,662	3,017	3,560	6 5	8 8	7 6
July 28, 1928	86,987	3,564	5,113	10 11	10 5	11 9
July 27, 1929	33,950	4,434	13,354	11 3	10 1	9 7
Aug. 2, 1930	68,712	5,238	10,800	8 3	6 6	6 0
Aug. 1, 1931	25,067	1,499	7,136	6 5	6 4	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Aug. 5, 1931.	Jan. 4, 1932.	July 27, 1932.	Aug. 3, 1932.
Winnipeg (No. 1 Manitoba)	148½	164½	52½	62½	59½	58½
Chicago (No. 2 Winter)	130½	79½	48½	55½	50	50½

The visible supply of wheat in Canada, at 69,391,000 bushels, shows a decrease on the week of 1,780,000 bushels. Supplies a year ago stood at 62,640,000 bushels.

OTHER FOODS.

SUGAR.—Raw sugar was an active market, both in London and in New York. Quotations fluctuated within narrow limits, and large quantities changed hands at firm prices. "September" futures in New York were quoted at 1.02 cents per lb. on Wednesday, against 1.01 cents per lb. a week ago, and 0.96 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 6s. 3½d. to 6s. 4d. per cwt., against 6s. 3½d. to 6s. 3½d., and "March, 1933," at 6s. 6½d. to 6s. 7d., against 6s. 6d. to 6s. 6½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	833	2,204	640	943	13,242	27,494
Liverpool	5,696	18,619	7,935	14,157	73,352	68,623
Total	6,529	20,823	8,575	15,100	86,594	96,117
Last week ...	5,161	4,932	16,313	14,153	88,640	90,394

COFFEE.—The New York coffee market was characterised by a good demand at firm prices. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents a week ago. Last week's movements of coffee in London were as follows: Brazilian, landed, 3,040 bags; delivered for home consumption, 923 bags; exported, nil; stocks, 19,804 bags, against 2,451 bags last year. Central American, landed, 276 packages; delivered for home consumption, 3,065 packages; exported, 1,668 packages; stocks, 106,033 packages, against 101,648 a year ago. Other kinds, landed, 26 packages; delivered for home consumption, 2,430 packages; exported, 768 packages; stocks, 76,502 packages, against 78,787 a year ago.

COCOA.—The advance in the price of cocoa was continued during the past week. The turnover was heavy, both in London and New York. "September" futures were quoted at 4.33 cents per lb. in New York on Wednesday, against 4.23 cents per lb. a week ago and 3.91 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 27s. 6d. per cwt., f.o.b. London contract, shows a rise of 1s. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 1,704 bags; delivered for home consumption, 5,786 bags; exported, 68 bags; stocks, 162,389 bags, against 222,450 last year.

TEA.—There have been no public auctions this week. The following table shows the average prices (compiled by the Tea

Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.						
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
July 30, 1932	d. 8-69	d. 7-44	d. 12-64	d. 7-09	d. 6-67	d. 4-23	d. 10-49
July 7, "	7-16	6-48	7-50	4-65	4-38	5-86	6-85
July 14, "	7-39	6-77	7-98	4-95	4-71	5-93	7-22
July 21, "	7-53	6-72	8-32	5-05	4-72	6-06	7-51
July 28, "	7-58	6-75	8-39	5-04	5-00	6-53	7-49

RICE.—The market in rice was quiet, but there was no further decline in prices. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 7s. 10½d. per cwt., remained also unchanged. Movements in London during the past week were as follows: Landed, 26 tons; delivered, 87 tons; stocks, 3,021 tons, against 741 tons last year.

POTATOES.—Although there was a steady demand for potatoes, prices declined further under the pressure of supplies. English kidney could be obtained at from 5s. to 6s. per cwt. at the London Borough Market, against 6s. to 7s. per cwt. a week ago, and 6s. 6d. to 7s. 7d. per cwt. a fortnight ago.

SPICES.—The market in pepper was steady. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 15 tons; delivered, 9 tons; stocks, 353 tons, against 583 tons last year. White, landed, 35 tons; delivered, 55 tons; stocks, 490 tons, against 536 tons a year ago.

MEAT.—There was a substantial rise in the price of both home-grown and foreign beef at the Smithfield Market. On the other hand, mutton is scarcely changed on the week. On Wednesday Argentine beef (chilled hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 3s. 6d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 2s. 10d. as against 2s. 2d. to 2s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,620 tons, as compared with 9,071 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.3 per cent. of the supplies, as against 85.8 per cent. a year ago; and imported mutton, mainly New Zealand, formed 77.9 per cent. of the total supply, as against 86.6 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets opened quietly after the holiday, but the tone is steady. The Ministry of Agriculture in Argentina estimates the unsold surplus of Plate linseed on July 31st at 782,000 tons. This is rather larger than the quantity actually shipped during the remainder of 1931. In addition, the quantity afloat for Europe is heavier and, including 6,500 tons from India, at 242,500 tons, is 4,000 tons higher than last week and compares with 166,200 tons a year ago. With what may come from Uruguay and India, the total is over a million tons, or a quarter of a million more than last year. Business in Plate for September shipment has been done at £8 5s. Current values for afloat and August is £8 to £8 5s. and for shipment to October, £8 2s. 6d. Cottonseed is firmer, and old crop Egyptian for August loading has been done up to £6 18s. 9d., and this, or slightly less, is about present value. New crop, November-January, is quoted 27. Trade in vegetable oils is slow, but here and there there is a firmer tendency. Linseed oil offers freely, and for August delivery is quoted £12 10s. per ton naked ex Hull mill, and for September-December £13. Cotton oil is firm, in sympathy with seed, crude Egyptian ex Hull being held for £22 and refined for £24. Soya oil is steadier. Oil cakes are in lessened demand and prices are barely maintained.

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

ARGENTINA—BRAZIL—COLOMBIA
CHILE—PARAGUAY—URUGUAY
PORTUGAL

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, TOKENHOUSE YARD, LONDON, E.C.2

MANCHESTER: 36, Charlotte St. *Affiliated to Lloyds Bank Limited.* BRADFORD: 33, Hustlergate.
And at NEW YORK, PARIS and ANTWERP

so, there was no chance of outside money becoming dearer, for borrowers can always sell short bills at the prevailing rates and so obtain money. Renewals were carried out at $\frac{1}{4}$ per cent. during the whole of the week.

Applications for Treasury bills rose from £47.8 millions to £60.2 millions, and with only £40.0 millions on offer, the average tender rate fell from 10s. 1.93d. to a new low record of 9s. 11.05d. per cent. Subsequently "hot" Treasury bills were quoted at $\frac{1}{16}$ per cent., and some business was done at $\frac{1}{8}$ per cent. by houses who only held few bills and who were not anxious to sell. The banks bought September and October Treasuries at $\frac{1}{16}$ per cent., while three months' bank bills were quoted at $\frac{1}{8}$ per cent., though sales to special quarters could be effected at $\frac{1}{16}$ per cent. Standstill bills were quoted at $\frac{1}{4}$ -2 per cent.

	July 21, 1932.	July 28, 1932.	Aug. 4, 1932.	Aug. 11, 1932.	Previous Rate and Date Changed

Market rate (standstill bills)	1-2 $\frac{1}{2}$	1-2	1-2	1-2	...

The Bank return shows that the holiday notes are beginning to return from circulation, for the note circulation has contracted during the week by £3.9 millions. Even so it still stands at £370.8 millions, against £366 millions in the early part of July, so that all that has happened is that the currency spent during Bank Holiday as distinguished from the August holiday season has returned. No changes in the Bank's gold holdings are reported, and so the reserve has risen by £3.9 millions. This has been more than offset by a contraction of £5.4 millions in Government securities held in the Banking Department, and so after allowing for minor fluctuations elsewhere, Bankers' Deposits are virtually unchanged at £85.3 millions.

The decrease of £5.7 millions in the Bank's Government Securities held in both departments combined contrasts with the appearance of £6.7 millions of Ways and Means Advances from the Bank shown in last Saturday's Floating Debt statement. Obviously this represented a purely temporary loan, which was in all probability repaid early this week before the Bank return was compiled. According to the revenue returns, £15.7 millions has so far been issued to meet the cost of the bonus payable under the War Loan Conversion scheme, and this in part accounts for an increase of £27.3 millions in the Floating Debt during the three weeks ended August 6th. Little importance need be attached to fluctuations of this limited size, especially as the money market could absorb many more Treasury bills if required. They certainly do not mean that the execution of the War Loan Conversion scheme is having any marked inflationary effect.

The July averages of the nine English clearing banks show a further increase of £38.7 millions in deposits. This is largely a seasonal movement, as deposits usually expand after March, when the collection of revenue has been completed. This year the July increase may have been accentuated slightly by the disbursement of the War Loan Conversion bonus.

Cash at £283.6 millions is slightly below the June average, which, however, may have been affected in a small degree by balance-sheet preparations at the end of the half-year. The extreme monetary ease is reflected in the increase of nine millions in call-money. Advances have recorded another heavy fall, and now stand at only 46.5 per cent. of deposits, compared with 51.3 per cent. a year ago.

Clearly there is ample bank credit available out of which to finance any revival in trade. In the absence of such a revival the banks have once more had to add heavily to their bill portfolios, which to-day are a most unremunerative way of employing their resources.

Notwithstanding the revival in activity on Wall Street, money remains very cheap in New York. Call money is still quoted at 2 per cent., a fact which alone shows that not much borrowing of funds for stock market purposes is yet taking place. Moreover, bank loans to members of the Stock Exchange against stock market collateral declined by \$2.0 millions during July to a new low record of \$241 millions, against the 1929 high record of \$8,549 millions. This suggests that buying has mainly been for cash. The only gold shipment of note was one of \$5,995,000 to France, earmarked stocks being reduced by the same amount. Since then further contractions of \$8,000,000 in earmarkings have been reported, and these were unaccompanied by any shipments. Gold imports of \$1.5 million from Canada and \$1.0 million from Belgium are also reported, so that America's gold stocks have been definitely strengthened during the current month.

The Foreign Exchange market during the past week was more active than recently, and turnover was on a somewhat larger scale, with some improvement in sterling during the current week. Dollars were in demand under the pressure of European purchases in the New York stock markets and were dealt in as low as 3.44 $\frac{1}{2}$. Since the week-end, however, the rate has advanced steadily and closed at 3.49 $\frac{1}{2}$. Canada, after touching 3.95, closed at 4.08. Paris closed at 89 $\frac{1}{2}$, against 89 $\frac{1}{2}$ a week ago, and the week's lowest quotation of 88 $\frac{1}{2}$. Brussels fell away to 24.87, but closed at 25.16, against 25.27 a week ago. Milan touched 67 $\frac{1}{2}$, but was better at 68 $\frac{1}{2}$ later. Madrid moved sympathetically with the other currencies, until Wednesday, when the news of the attempted monarchist revolution caused pesetas to be sold up to 43 $\frac{1}{2}$. They were 43 $\frac{1}{2}$ at the close, the market being nervous and erratic. Amsterdam closed at 8.67, after being 8.57, against last week's closing rate of 8.76. Dealings in German marks were recorded at 14.50, followed by 14.65. Switzerland gained 7 points on the week at 17.94, after being at 17.70. Among the Scandinavian currencies Stockholm was 19.48, against 19.50 last week, Oslo 19.97, against 20.00, and Copenhagen 18.72, against 18.61. The South American currencies remained nominal, Buenos Aires being 34 $\frac{1}{2}$ d. and Rio sellers at 5 $\frac{1}{2}$ d. Monte Video was unchanged at 29d. Among the Eastern exchanges rupees were 1s. 6 $\frac{3}{4}$ d. and yen 1s. 6d. Forward dollars were in better demand at $\frac{1}{4}$ cent discount for one and $\frac{1}{2}$ cent discount for three months. Paris forwards were also wanted at higher premiums of 2 cents and 5 cents. Forward belgas improved to discounts of 4 and 12 cents. Milan was at discounts of $\frac{1}{4}$ and $\frac{1}{2}$ lira. Amsterdam forwards were in good demand, closing at premiums of $\frac{1}{4}$ and $\frac{1}{2}$ cents. Madrid forwards were nominal and business very difficult, discounts of $\frac{1}{4}$ for one month and of $\frac{1}{2}$ for three months being quoted. Silver was steadily firm during the week, closing $\frac{1}{4}$ d. higher for both spot and forward positions at 17 $\frac{1}{2}$ d. and 17 $\frac{1}{4}$ d. respectively. Chinese silver currencies were dearer, Hong Kong being 1s. 4d. and Shanghai 1s. 9 $\frac{1}{2}$ d.

THE OTTAWA DILEMMA.

THE climax of the Ottawa Conference is near at hand. The British delegation have booked return passages for the end of next week. Only a few days remain, and there is no definite sign of inter-Imperial agreement on anything or even of bilateral agreements between the Mother Country and any one Dominion. The next week, it would therefore appear, will see one of two things. Either nothing—a result which, though always likely, will in many parts of the Empire stultify an intensive campaign of optimism and, consequently, bring a severe shock of disappointment. Or, agreements will hastily be patched up, which on maturer consideration may present serious disadvantages; for any trade agreement is so tricky an affair, that even prolonged scrutiny often fails to reveal more distant results. The position, clearly, is one of anxiety.

Towards the end of last week Mr Bennett presented to the British delegation the Canadian Government's proposals. They have not been published. All that we know for certain is that they were regarded as entirely unsatisfactory by Mr Baldwin and his colleagues and that the Canadian and British experts have occupied the week in statistical disputation over the alleged volume of trade advantage involved for British exporters, the Canadian estimate being some five-fold that of the British. There was no indication whatever that the wider preferences offered to certain classes of imports from Britain connoted any general reduction of tariff schedules, or, indeed, that Mr Bennett had moved one inch towards freer trade all round. Britain's plea for an advance towards freer trade all round. Towards the end of the week, if Ottawa despatches may be trusted, Mr Bennett made some substantial concessions, particularly in the matter of iron and steel, while, on the other hand, remaining adamant as regards textiles. Frankly, nothing has as yet emerged to suggest that Canada has offered anything which is worthy of consideration as a *quid pro quo* for the adoption of food taxes and food quotas by the Home Country.

We cannot doubt that the British Ministers will be as acutely unwilling as those of the various Dominions to return home empty-handed; for even here large expectations of Ottawa possibilities have been assiduously propagated. In particular, Mr Chamberlain and his Conservative colleagues would presumably go a long way to prevent the recognition, which failure at Ottawa would bring, that the conception of a grand Imperial Zollverein is, always has been, and always will be, no more than an illusive dream, which fades away with the dawn of realism. The danger of this natural unwillingness to admit failure is, of course, that it might induce the British delegation to agree to a bad bargain.

There are, we think, three or four main considerations which must guide the counsels of the British representatives in the coming week. If on the part of Canada and other Dominions concessions of a really far-reaching nature are offered to basic British exports, and above all, if a real all-round lowering of tariffs is proposed, giving the promise of a big stimulus to the volume of trade, then, although all hypothetical statistics of advantage must be discounted by the remembrance that trade diversion or transfer is not the same thing as the trade increase which we all seek, it would be necessary for Britain to weigh up very carefully the price which it is worth while paying for the possibility of a real step forward in fiscal freedom. We can conceive of circumstances in which it would be justifiable for Britain to offer certain market advantages to the produce of any Dominion which would agree so to lower its imposts upon basic manufactures as to leave the preferential rate charged on British imports at a very moderate level. On the other hand, it is altogether essential to the interest of this country and

its workers that adherence to three major principles should be stubbornly maintained:—

1. The essence of any bargain must be a drastic lowering of tariff schedules. A widening of British preferences unaccompanied by substantial reductions in general tariff rates is unacceptable.
2. No agreement must be signed which would so far tie Britain's hands as to ruin her chance of successful bargaining in forthcoming negotiations for lower tariffs in the European zone. Any forward fiscal move at Ottawa must be complementary to, and not exclusive of, future agreements between Britain and her chief foreign customers.
3. Britain cannot afford to make any concessions which would have the effect of raising substantially the cost of living and the costs of production in this country.

British interests demand that no jot or tittle of these main requirements should be abated. Whether any major agreements are possible in the face of full insistence upon them, the coming week will decide. Predominantly, the responsibility for the answer rests with Mr Bennett and the Canadian Government.

From one aspect it is unfortunate that, as in previous Imperial Conferences, the major efforts of the delegates, and all the publicity, have been concentrated upon the tariff problem. For quite outside the scope of that problem much good Imperial work is waiting to be done, in such directions as the establishment of machinery for closer and more continuous contact and the better diffusion of trade information. From another point of view the concentration upon the fiscal issue has been salutary. The Empire has at least had certain unreal and dangerous visions shattered. An object lesson has been given in the inherent difficulties of grandiose schemes of wholesale trade diversion. It has been demonstrated that the recent Dominion policy of establishing secondary industries, while it has not changed the fact that any real scheme of Imperial Preference demands food duties in Britain, has complicated the problem of Dominion concessions on large ranges of industrial imports. The old myth, that the Mother Country has done little in response to the Preferential favours accorded to her by the Dominions, has been exploded once for all; as has also the British platform slogan that, when once Britain had adopted Protection, the path to Imperial trade co-operation would be smooth and easy. At least some classes of primary producers in the Dominions have awakened to the fact that differential fiscal schemes have their dangers as well as their attractions. Whatever may happen next week, Ottawa will not have been quite in vain if it has served to shine the limelight upon these awkward facts, and so to permit the Empire and the world to gain a more realistic perspective of their trade problems.

If it should prove that the members of the British Commonwealth of nations, after a much-heralded session round the family council table, have been unable to agree upon any important means of approach towards the advancement of their mutual interests, the result will be deplorable from many points of view. It will be freely and loudly argued by the cynic that, if Mother and Sons cannot reach any accommodation on the fiscal issue, there is little hope of lower-tariff achievement in Europe. Against such cynicism would, however, be set the definite gain that Britain retains her freedom to lead the world, if she can, back to the paths of fiscal sanity. We still hope that Ottawa may produce some constructive move. But it is better that nothing should be done than that the cardinal conditions, which we have set out, should be abandoned.

THE U.S. AND WORLD SECURITY.

THE address which Mr Stimson delivered in New York last Monday before the Council on Foreign Relations was a pronouncement whose importance may be far-reaching. Bearing evidence of careful preparation and couched in terms which suggest the expression of deliberately considered American policy, this speech of the Secretary of State was clearly intended to serve two purposes—firstly, to prepare world opinion for the attitude which America will adopt in the likely event of the Lytton Commission reporting adversely to Japan's claim to continue her occupation of Manchuria; and, secondly, to counter the arguments of those who contend that there can be no confidence in "security" unless it be guaranteed by specific "sanctions" provided in advance by international agreement against any and every aggressor.

With regard to Manchuria, Mr Stimson reminded his hearers that in the summer of 1929, when hostilities threatened in that territory between Soviet Russia and China, the attention of those Governments was formally directed by the Powers, on the initiative of the United States, to their obligations under the Kellogg Pact, with the result that war was averted. Last year, when hostilities broke out between the armed forces of Japan and China in the same quarter of the world, the United States co-operated with the Council of the League of Nations in endeavouring to bring about a peaceful solution of the controversy. In spite of these efforts Japan had occupied the whole of Manchuria, but, Mr Stimson significantly added, the United States on January 7, 1932, formally notified Japan that it would not recognise "any situation, treaty or agreement which might be brought about by means contrary to the Convention and obligations of the Pact of Paris." This action on the part of the United States had been endorsed by assent of the League of Nations.

Why had America so acted? The explanation, according to Mr Stimson, was to be sought in the character of the Briand-Kellogg Pact, signed at Paris in 1928. In that treaty substantially all the nations of the world had renounced war as an instrument of national policy and had agreed that the settlement of all disputes or conflicts should never be sought except by pacific means. The Pact, however, did more than this; it entirely and permanently changed the pre-existing conception of the rights of belligerents and the obligations of neutrals. Henceforth war was no longer to be the source and subject of rights, but was declared to be an illegal thing. Under these new conditions the old doctrines of neutrality went by the board. In the event of an armed conflict occurring—a conflict in which one or both of the participants must be violators of the new treaty law—the matter became of moment to everybody concerned with the Pact. "All of the steps taken to enforce the treaty must be judged by this new situation."

This brought Mr Stimson to the question of how enforcement of the Pact could be secured. It provided for no "sanctions" of force, but rested upon the "sanction" of public opinion. "Any other course, through the possibility of entangling the signatories in international politics, would have confused the broad simple aim of the treaty and prevented the development of that public opinion on which it most surely relies." Effective invocation of the power of world opinion postulated discussion and consultation, as exemplified by the case of Manchuria in 1929 and 1931. From the American point of view the Pact was not a mere pious affirmation of purpose made unilaterally by each of the signatories; it carried with it the definite implication of obligation to secure by concerted effort the great peaceful purposes which the signatories of the Pact had multilaterally endorsed. Mr Stimson ended by expressing the hope that this "positive" interpretation of the Pact should go far to set at rest the misgivings of some of its well-wishers, for such a view of the Pact's meaning would become one of the great permanent policies of the United States. "It is a policy which combines the readiness to co-operate for peace and justice in the world, which Americans have always manifested, while at the same

time it preserves the independence of judgment and the flexibility of action upon which our people have always insisted."

It is easy, no doubt, to belittle this statement of American policy on the score of vagueness. The well-known opposition of influential sections of American opinion to the whole conception of "foreign entanglements"—an opposition which Mr Stimson's speech did not leave out of account—has created since the Great War an impression in many countries that the United States could not be relied upon in awkward circumstances not to wash its hands of the troubles of the outer world. It is an impression which Mr Stimson's address should do much to efface; but it is clear from French reactions to the Secretary of State's words that the advocates of specific "sanctions" for security will fasten on Mr Stimson's insistence on the need for "independence of judgment" and "flexibility of action" as a vital weakness in the promised security. The French Press, indeed, are already putting the case in the form of a dilemma. If, they say, the pressure of public opinion, on which Mr Stimson relies, is really going to be effective as a preventive of war, what objection can there be to undertakings to bring forcible "sanctions" to bear against aggression, since *ex hypothesi* the commitment would never require to be implemented? Objections to "sanctions" can only arise from fear of having reluctantly to employ them. In other words, the proponents of moral suasion have no real faith in their vaunted guarantee of security.

To chop logic in these terms is, we suggest, to mistake the real nature of the whole problem. Short of the creation of an irresistibly armed super-State, accompanied by unilateral national disarmament—and this is to postulate a condition outside the field of present practical politics—there can be no absolute, 100 per cent. guarantee against war-like aggression; human nature being what it is, any nation may turn mad-dog and attack its neighbour by armed force. What nations can do, however, is so to align their policies that the chances of successful aggression are reduced to a minimum and the deterrents against aggression maximised. The realisation of this desideratum depends on one single factor—common world determination to prevent aggression by any and every means. If this determination be present it matters not whether the means be specified categorically in advance; indeed, it may be an advantage not to have too much rigidity in the programme of action, but to give full play for the exercise in turn of diplomatic suasion, economic pressure and, only in the last resort, armed blockade, as the needs of the situation require. If, however, the determination to prevent or suppress aggression, even though a stiff price may have to be paid—as in all police work—for the ultimate enforcement of peace, be not present, then no treaty containing provisions for "sanctions," however specific, will be worth the paper on which it is written.

This, as we see it, is the realism of the problem of security; and we would suggest to France that in regarding Mr Stimson's declaration of America's determination to "support" the Kellogg Pact as a promise too unsubstantial to be of great value, she is making a mistake uncondemned to her own interests. Equally, we hope that the British Government will lose no time in aligning itself unequivocally with this declaration of American policy in regard to the preservation of peace. In doing so, however, let the British Government be under no delusion in respect to one issue which is likely to present itself forcibly and with no great delay. If Mr Stimson's speech means anything, it means that America is prepared to insist on the League's verdict on the Manchurian question being carried out, cost what it may. If we are not prepared to stand side by side with the United States in the leadership of world opinion and the mobilisation of world pressure in this test issue, we had better say so now. But if we thus decide that we are prepared in the last resort to let a case of proved aggression go by default or, equally, if the United States, when the time comes, pleads her right to "independence of judgment" and acquiesces in a breach of the Pact which she has now promised to make effective, then let us at least recognise the consequences. It will mean final forfeiture of any hope that those countries

whose position makes them nervous of external aggression may yet be persuaded to put their trust in the "collective will" to guarantee security unconditionally but without any specific undertaking to back the guarantee with specific pledges of so many armed units to be plunged into the scale against the aggressor.

THE RISE IN COMMODITY PRICES.

THROUGH months and years of economic depression the public have been incessantly taught that a rise in the world level of commodity prices would be the herald of approaching revival; and that so long as commodity prices continued to fall or remain stagnant, it was premature to scan the horizon for signs of real improvement. It is not surprising, therefore, that every upward swing in the price level is watched with eager attention, and when a movement attains the dimensions of that which we have witnessed in the past few weeks it is inevitable that large hopes should be based upon it. We do not propose to assume the rôle of prophet as to the continuance or durability of the present movement. It must, however, be admitted to have reached such proportions as to deserve careful examination, and we therefore present statistical data relating to the general trend and to the behaviour of individual commodities.

Let us begin with a study of the trend revealed by the first three columns of the following table:—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistik Reichamt, Germany.

Aug. 10th ...	101.0	108.6	88.5	...	...	...	...

The rise in gold prices of primary products between June 29th and August 10th was of the order of 9.9 per cent., while, despite the fact that this period saw a substantial depreciation in the gold value of the pound sterling, the advance in the sterling price level of primary products was slightly less—namely 9.4 per cent. The movement thus measured has certainly been both rapid and substantial in recent weeks; and in the case of gold prices has practically wiped out the fall that took place between the end of February and the end of June.

The movements in the *Economist* index number group since the abandonment of the gold standard, and in the last fortnight, as shown in the next table:—

"ECONOMIST" INDEX.

(1927 = 100).

	Sept. 18, 1931.	July 27, 1932.	Aug. 10, 1932.
Cereals and meat	64.5	69.3	67.9
Other foods	62.2	59.2	59.2
Textiles	43.7	45.8	48.1
Minerals	67.4	67.9	70.5
Miscellaneous	65.8	59.7	60.6
Complete index	60.4	60.1	61.0
1913 = 100	83.1	82.7	83.9
1924 = 100	52.2	51.9	52.7

The last fortnight's decline in the cereals and meat group is the net result of advances in foreign wheat and flour and bacon, seasonal declines in barley and potatoes, and some weakening in the quotations for beef and mutton. Among other foods, a fall in butter balances a rise in cheese. In the next two groups, textiles and minerals, the rise is general throughout cotton and other textile materials and in the minor metals. Changes in individual commodities since the end of June and since September 18, 1931, are shown below:—

	Inc. (+) or Dec. (-) per cent. compared with		Inc. (+) or Dec. (-) per cent. compared with

Since the turn of the half-year conspicuous among the proportional advances in individual commodities have been rubber, hides, tin, copper and spelter, cotton, jute and hemp.

It is worthy of notice that a very important part in the recent price advance has been played by commodities which are commonly the counters of international speculation. It cannot be said that the movement is related to any visible increase in the volume of world trade, for latest available economic indices give no indication that any such movement is as yet in progress. This fact by itself, however, does not conclusively prove that there is no foundation for the price rise, and it is open to optimists to argue that just as a sharp fall in the commodity price level preceded and heralded the world slump some months before the wane of industrial activity became visible, so, in turn, a sharp upspring in the price level may be the harbinger of a revival in trade.

The course of several important markets will in the near future be influenced, perhaps decisively, by the publication of crop estimates, which represent another factor baffling the prophet even of the near future. But if the present upward movement continues, a point will be reached, and might be reached before the curve has gone very much higher, when a new factor would come into play. All over the world consumers' stocks of a wide range of commodities (rubber being a prominent exception) stand at an exceptionally low level, traders having long waited to replenish their inventories until they felt some definite assurance that the bottom of the price curve had definitely been touched. Should the conviction spread widely enough, whether rightly or wrongly, that such assurance is now definitely available, a big, genuine buying movement might begin, and it is possible to imagine a rush to replenish which would carry the price curve up steeply for a time.

It must be remembered, however, that production in many primary industries has been reduced to levels, consonant with depressed world demand, at which few concerns are able to operate at a profit. A sharp upward twist in commodity prices might act as an inducement to producers to increase their output. The extent to which this factor might tend to check a recovery in prices might vary with different commodities. Almost all primary industries have a large "reserve" of productive power, but the rate at which this may be drawn upon, at relatively short notice, is not identical in all cases. The rubber industry offers an example of elastic conditions. Individual producers are bound by no agreements, gentlemanly or otherwise, to refrain from increasing their output as and when they think fit. Tin mining, on the other hand, is closely controlled by international legislation and collective undertaking, and production could be raised only in accordance with a prearranged schedule.

THE WOOL TEXTILE POSITION.

(BY A CORRESPONDENT.)

AN increased consumption of wool during the worst years of a world-wide depression in trade is the riddle presented by the wool textile industry. Recent reports on Australian conditions have called attention to the heavy clip last season and the estimated production of more than 3,000,000 bales in the season 1932-33, compared with 2,860,000 bales in the season 1928-29. This increase has occurred in years in which prices have proved so unprofitable for the growers that one might reasonably have anticipated a curtailment of production or a restriction of supplies to the market in an attempt to force up prices. Yet one of the largest clips ever produced has passed into consumption, and an advance in prices of 10 per cent. or more on June closing rates at the July sales in London indicates that there are no large stocks about in home and Continental manufacturing centres to check an appreciation in values which has been anticipated for the last six months.

The increased demand for wool noted by the Australians finds its counterpart in the increase of retained imports of wool in this country. In 1928 the total weight was 440

million pounds; by 1931 the figure had risen to 591 million pounds. An increased use of cheap wool in the heavy woollen areas in place of rags and shoddy has, undoubtedly, occurred, but the advance in imports is too great to be explained entirely by this substitution. And as the output of woven fabrics has not increased, the conclusion must be that a part of the extra supply of wool has found an outlet in the hosiery yarn trade. This conjecture is confirmed by the rising percentage of unemployment in the wool textile industry itself, for had the additional wool been going into woven cloths alone the rise between 1928 and 1931 would hardly have occurred. At the close of 1928, 13 per cent. of the insured operatives were unemployed. After a drop to just under 11 per cent. in the first quarter of 1929, there was an almost continuous rise until September, 1931, when the figure reached 35 per cent. Between October, 1931, and March, 1932, there was a sharp fall in recorded unemployment (to which the suspension of the gold standard and the revised conditions of national insurance benefits contributed), and in March the figure was 17 per cent. Since then a marked reaction has set in, and the latest available returns (for June) register 26 per cent. of unemployment. A closer examination of events during the nine months October-June throws considerable light on the problems and prospects of the industry.

The suspension of the gold standard in September raised hopes that the steady contraction of export trade would be checked, and once more business would be possible with foreign markets for which our goods had become too expensive. This optimism was strengthened by the fact that in Bradford and other wool textile circles the view had gained ground that the return to the gold standard in 1925 had proved the main factor in the loss of export trade. When the Abnormal Importations Duties were imposed in November-December, the prospect of filling a heavily protected home market with yarns and fabrics increased the optimism inspired in September, and, for the moment, the outlook seemed bright for both domestic and foreign trade. Speculative buying forced the pace, and mills suddenly became busy in anticipation of a strengthened demand for wool textile products.

It was soon realised, however, that optimism had over-rated the position. In October and November exports of yarns and fabrics showed little change; the move off gold had not brought a boom. The principal form of activity was the production of yarns for the hosiery trade to replace the imports which had been shut out by the Abnormal Importations Duties. Here, too, there was speculative production, for many topmakers and spinners relied on the maintenance of the duties until May 1st. When the duties were suddenly lowered about five weeks before that date there was great agitation, because it was feared that supplies of yarn and cloth from the Continent would flood the English market. Those fears have been falsified by the trade returns for May and June. Imports of woollen and worsted yarns in June were 105,000 lbs., compared with nearly two and a half million pounds in the month before the protective duties were imposed; imports of woollen and worsted fabrics in June were less than half a million square yards, compared with seven million square yards in November. These facts suggest that a 10 per cent. duty on yarns and a 20 per cent. duty on cloth are adequately protective, and they also bring out the marked restrictive effect on imports of the depreciation of sterling.

Preoccupation with the fillip in trade in the home market occasioned by emergency tariff action has not blinded wool textile producers to the urgency of the recovery of export business. The censuses of production have shown that the industry must sell about half its finished products overseas to maintain the full employment of its machinery and labour. Yet in post-war years export trade has fallen off very seriously. During the last slump (1920-1931) exports of woollen cloths fell from 108 million square yards to 56 million square yards, and exports of worsted cloths from 47 million square yards to less than 30 million square yards. In 1918 the exports of woollens and worsteds were 141 million square yards and 78 million square yards respectively. When sterling depreciated after the suspension of the gold standard the possi-

bility of making good this loss of trade was closely canvassed.

For seven years the whole emphasis had been on the recovery of export trade by cutting costs of production. Wages were the chief issue, and after much strife wages were reduced in 1930 and again in 1931, in all by from 15 to 20 per cent. An export bounty conferred by a depreciation of sterling seemed to offer the solution that attempts to adjust costs of production had failed to secure. And in a few instances good business has resulted, more particularly in trade with China. But the rapid multiplication of currency restrictions and quotas has nullified the benefits anticipated from the depreciation of sterling. Traders willing and able to sell are deterred from engaging in business because of the difficulty of securing payment for the goods they send abroad. The Greek declaration of a five years' moratorium, Danish banking restrictions and similar impediments to business forebode the cessation of trade with countries pursuing these policies, and a marked decrease in the volume of international trade.

In view of the burdens placed on overseas trade by quotas, currency "pools," surtaxes and the like, the question of competitive costs of production has, for the moment, become a secondary issue, for the obvious reason that a competitive price is of no value if remittances are not forthcoming for the goods sold. It is no surprise, therefore, to find that exports of wool textile products during the first six months of 1932 have not exceeded the monthly average for the year 1931. This means that the competition for business in the home market, already increased by the slump in exports since 1929, is being intensified. The trade in yarns with Leicester is closely contested, and in the piece-goods trade there are disturbing recurrences of price-cutting in the attempt to get business and liquidate stocks. It is clear that any replacement of the imports of fabrics by home-manufactured goods will not be sufficient to compensate for the loss of exports. The question arises, therefore, whether the scale of manufacturing (i.e., weaving) will not require to be reduced in keeping with the reduced outlet for fully manufactured goods. It would appear that the industry is undergoing a change in structure. More wool is being used in the country at the same time as less woven cloth is being produced. The preparatory processes, as far as spinning, are common to both cloth-making and hosiery. May not the future of wool-working lie in a closer alliance with the hosiery manufacturer? The idea has attracted attention, and in a field where the closest competition with the Continent is in fine counts and mixture yarns technical and scientific research may be invoked to give aid to the English producer.

Formal schemes of reconstruction or rationalisation of the wool textile industry are disliked, and there is little prospect of success along these lines. A strong traditional individualism and a deep-seated fear of the difficulties of financing combines and large-scale mergers account for this antipathy. Reorganisation is most likely to come piecemeal as the success of certain firms induces the copying of their methods. These firms have won success copying, to fashion study, and by close attention to joint-selling, to the introduction of the spreading of overhead costs by the introduction of shift working and automatic looms. The path of those who follow suit will not be smooth, for they will encounter trade-union opposition. But the choice seems to lie between planned reorganisation, including methods of operation, and adherence to the system of letting the most fortunate survive.

The best description of the position in the industry at the moment is that of perplexity born of the consciousness of handicaps arising from events beyond the control of the individual manufacturer and merchant. When an important manufacturer, dependent for 70 per cent. of his business on foreign trade, said: "Let the Government get the reparations and currency questions out of the way, then we can look after ourselves," he expressed a widespread feeling of dismay that the industry's pride in its ability to manage its own affairs should be so severely curbed by problems which, essentially, governments must handle. This explains the most insistent call of the day, that the Government must back up

BANKING

traders to enable them to handle such situations as have arisen in Greece, Denmark, and elsewhere. But as governments move slowly at best, no speedy or substantial abatement of restrictions on overseas trade can be expected. The prospect, therefore, is that of limited and difficult export trade with still keener competition in the home market. In the struggle it seems inevitable that more firms must succumb, unless co-operation tempers the individualism by which the industry has gained its successes in the past.

URAL INDUSTRIALISATION.

(BY OUR MOSCOW CORRESPONDENT.)

A TRIP to the main centres of new industrial construction in the Ural Territory which lies on the frontier between European Russia and Siberia brings home most vividly the reality and the scope of the large-scale industrial development which has been carried out under the Five-Year Plan. At Magnitogorsk, near the headwaters of the Ural River, where three years ago there was only a desolate steppe, over 75,000 workers are now toiling on the construction and operation of a steel plant that may some day become the largest in the world.

A huge mountain of rich iron ore, with total deposits estimated at over 300,000,000 tons, is the basis for the working of the Magnitogorsk plant, and the ore which is extracted from this mountain is to satisfy the needs, not only of the Magnitogorsk works, but also of the new steel plant at Kuznetzk, in Central Siberia. Although Magnitogorsk and Kuznetzk are separated by a distance of some 1,500 miles they have been inseparably linked by Soviet economic plans. Magnitogorsk has the richest iron resources in the Soviet Union and Kuznetzk is located in the heart of the largest-known Russian coalfield, although the development of the Kuznetzk coal is of comparatively recent origin and the yield of this field is still far behind that of the southern Donetsk coal basin. The exchange of Magnitogorsk iron and Kuznetzk coal is the backbone of the so-called Ural-Kuznetzk Combination, which is the official name for a large area, including the Ural Territory, Western Siberia, part of Kazakhstan and Bashkiria, that has been marked out for especially rapid development because of its rich mineral resources.

The ultimate capacity of the Magnitogorsk plant is estimated at 2,500,000 or 4,000,000 tons of pig iron a year, the range of production depending upon whether the capacity of its blast-furnaces is enlarged or not. Should it reach the figure of 4,000,000 tons, it will exceed in output the steel plant at Gary, Indiana, which now has the largest capacity in the world. Much, however, remains to be done before Magnitogorsk will be turning out even 2,500,000 tons of pig iron a year. At the present time the operating parts of the plant include a mine, an ore-crushing factory, two coke batteries, two blast-furnaces, the first part of the electrical power station and some subsidiary works. The finished plant will have eight coke batteries, eight blast-furnaces (each with a daily capacity of at least a thousand tone), and 28 Martens furnaces.

A few hundred miles north-east of Magnitogorsk, in Cheliabinsk, the largest heavy tractor plant in the world,

with an annual capacity of 40,000 10-ton 60-horse power caterpillar tractors, is approaching completion. The schedule calls for the opening of this plant on January 1, 1938. One finds a good deal of English equipment in this plant, and also in the new chemical works at Berezniki, in the Northern Ural, far up the River Kama. This plant, which began operation last spring, is equipped to produce 200,000 tons of chemical fertilisers every year, its main products being ammonium nitrate, ammonium sulphate, chlorine and nitric acid.

In the Ural capital, Sverdlovsk (the former Ekaterinburg), a whole new town with 60,000 inhabitants has grown up round the large new Ural machine-building works, comparable in scope and equipment with Krupp's famous factory at Essen. Not far north of Sverdlovsk, at Tagil, a steel plant and a goods-van works, with a capacity of 65,000 goods-vans a year, are under construction, while at Krasno-Uralsk, in a different direction from Sverdlovsk, a huge copper-smelting plant has been built. It is intended to yield 25,000 tons of copper during its first year of operation and to reach a figure of 100,000 tons after several years of functioning.

It should not be imagined that these big new plants are springing up in smooth and complete working order, as if at the wave of a magician's wand. Every one of them is an arena of struggle between the stubborn creative will of the Soviet leaders on one side and a great variety of obstacles, some human and some natural, on the other. The size, the complexity, the novelty of the new factories make the problem of effective operation formidable. All the new works have had their full share of what are commonly called here "children's diseases." The Magnitogorsk blast-furnaces stop much more often than they should; Berezniki blew out many of the tubes in its big boilers during the first weeks of operation; the Nizhni Novgorod automobile works, like the Stalingrad tractor plant before it, is rolling up a big bill in the shape of waste and breakage.

It is not only a question of finding capable executives, of training engineers and technicians, of teaching a young labour force, largely recruited from the peasantry, to fit into a conveyor system of production. There are further complications because the food situation, for reasons which are too complicated to be dealt with here, is distinctly unsatisfactory, and housing at the new construction sites is very inadequate, with the result that labour turnover is abnormally high. An article in a recent issue of the economic newspaper, *For Industrialisation*, gives a figure of 275 as the percentage of turnover in the enterprises of the Eastern Mining Industry in 1931. This extreme fluidity of labour makes it very difficult to train workers at a single definite task.

But, when one has made all reasonable allowance for the defects of the new gigantic Ural industrial plants, their contribution to the national industrial capital and potential military strength remains impressive. It is impossible to judge them by the standards of private capitalism, because behind each plant are the credit and resources of the State. This means that a year or two of losses and breakage that would bankrupt a private concern can be written off as part of the price of the rapid industrialisation of Russia, the price, of course, ultimately coming out of the popular living standard.

Most all the large Ural establishments have obvious military possibilities. The significance of steel and copper works in modern warfare scarcely requires emphasis. The Cheliabinsk tractor plant could easily be set to making tanks; the Berezniki chemical factory is already turning out one of the world's most powerful explosives, ammonium nitrate; the military value of the Ural machine-building works, closely modelled on Krupp's, is evident. Economically the Ural Territory, with its rich stores of iron, copper, timber, platinum, asbestos and potash, was predestined for expansion. Recent prospecting in the neighbourhood of Sterlitamak, in the Southern Urals, has aroused the hope that oil may be included among these riches. Strategically the Ural Territory possesses an admirable location. Two thousand miles away from the Soviet western frontier, it is almost impregnable, even against air attack.

Notes of the Week.

Germany at the Cross-Roads.—The situation in Germany is developing according to expectation, and the lull following on the inconclusive general election has been broken only by minor disorders. Nevertheless, events are clearly moving, and rapidly, towards a critical *dénouement*. The von Papen Government has taken two steps which illustrate its policy, first of vindicating its power to maintain law and order, and secondly not to make any high bid for Nazi support. The first step was the issue of an emergency decree aimed at suppressing terrorism, and, in particular, extending drastically the scope of offence for which the death sentence may be given; the second, the definite refusal to offer the Chancellorship to Hitler, who has apparently been given to understand that nothing better than lesser posts would be awarded to the Nazis in return for parliamentary support. Clearly the time is near at hand when a trial of strength will take place between Hitler's constitutionalist predilections and the revolutionary ideas of the radical section of his supporters, led by the ambitious and uncompromising Herr Goebels. It would cause little surprise if a definite split in the Hitler ranks occurs in the near future, with the result that Nazi extremists, flouting Hitler's authority, proceed to the attempt to seize by force what they have so far been unable to obtain by constitutional means. If that happens, then a second, and more vital, trial of strength will be staged, this time between the Government and Herr Goebels. In this case, severe disorder would be inevitable, but there is reason to suppose that von Papen and General Schleicher are in a position eventually to stamp out revolutionary attempts and restore order to the Reich. Germany, then, is approaching critical days. It is another very unfortunate and disappointing chapter in German history. In the view of the outside world Lausanne has just given Germany a final release from reparations, and has afforded her the chance to restore her credit-worthiness in the sight of all men. If this desirable development is to be frustrated by internal quarrels it is not the least of the many tragedies of the post-war period.

Japan and Manchuria.—The past week has been fruitful in new developments relating to the Japanese occupation of Manchuria. Mr Stimson's significant warning to Japan is discussed in a leading article on a previous page of this issue, and calls for no further reference. But from other quarters, also come reflections upon Japanese actions and policy. Sir Frederick Maze, Inspector-General of Chinese Maritime Customs, has issued a statement on the Japanese seizures of customs, which, to judge from cabled extracts, makes sensational reading. Not only have the internationally-controlled revenues at five ports been held up and funds accumulated in the banks seized, but the Commissioners, among whom were British and American representatives, were forcibly ejected from their posts. The report appears to be elaborated with details of forceful and indefensible actions, for which direct responsibility rests upon the Japanese authorities. Then from China comes the news that the crisis which has long been brewing in the Chinese Cabinet has come to a head. Following on the recent resignation of Dr. Wang Ching-wei, the Prime Minister, the entire Cabinet has resigned. The resignations are a protest against the action of Marshal Chang Hsueh-liang in abandoning Manchuria to the Japanese without any serious attempt at resistance. The sequel to the Cabinet's action has been the resignation of the Marshal himself. The result is likely to be the replacement of the Marshal by a general more acceptable to the Nanking Government and a revitalising of Northern opposition to Japan in Manchuria. Meanwhile, Mr T. V. Soong, the Chinese Finance Minister, has given an interview to the Press in which a violent denunciation of Japan is coupled with a fresh appeal to the Powers to act up to their responsibilities.

British Food Imports.—In view of reports which, it is fair to say, so far lack confirmation, that negotiations at Ottawa have tentatively approached agreements on a basis involving British import duties on beef, mutton, bacon, butter and eggs, we show in the following table the main sources of our imports of these commodities last year:—

Main Sources.	GROSS IMPORTS, 1931.				
	Beef.	Mutton and Lamb.	Bacon.	Butter.	Eggs in Shell.
Denmark.....	...	...	22.4	15.6	4.4
Poland.....	...	...	...	...	1.0
Belgium.....	...	...	...	...	1.2
Sweden.....	...	...	1.7	1.3	0.2
Holland.....	...	...	2.9	0.6	2.3
Finland.....	...	...	...	1.5	...
Irish Free State.....	...	...	1.2	2.1	2.3
South America.....	22.3	4.5	...	2.1	...
Australia.....	1.8	3.6	...	8.4	0.6
New Zealand ...	0.6	9.6	...	10.8	...
Canada.....	...	...	0.2	...	...
Total imports	25.6	18.4	33.1	46.4	13.8

The figures reveal strikingly the extent of our dependence on the foreign imports which, according to the reports aforementioned, are to be taxed. In the case of beef, substitution of Dominion for South American supplies is largely precluded by geographical considerations, having regard to the impossibility, so far, of transporting beef from the Antipodes in the superior "chilled" form. The market in imported mutton and lamb is already dominated by Australia and New Zealand. In the case of bacon and eggs, duties on foreign imports would mean penalising the British consumer to a wholly disproportionate extent unless there were an almost inconceivable diversion of trade from its natural channels. As for butter, it is by no means certain that a mere preferential duty would enable Dominion producers to obtain higher prices in view of the competition between Australia and New Zealand. Canada, it will be observed, hardly figures at all as a supplier of these five vital commodities which enter greatly into the British cost of living. Parenthetically, we would add that any appreciable exclusion of European, and particularly Danish, imports of bacon, butter and eggs would be a crowning blow to the solvency of Denmark, and would aggravate generally the Continent's agricultural crisis.

Horticulture's Permanent Protection.—Horticultural products, which during the winter were accorded the shelter of a wide range of emergency import duties, are now to enjoy a permanent tariff, which is to come into operation on September 1st. That is the important point revealed by the Orders issued this week under the Horticultural Products (Emergency Customs Duties Act), 1931, and the Import Duties Act, 1932. The Advisory Committee in the Report* give an undertaking that the tariff schedules now laid down will remain in force until 1934. So emergency duties, introduced on the plea that the "import balance" had to be reduced, pass into a permanent tariff (much of it on food) without even the formality of a Parliamentary debate and almost without public notice. This is precisely what we expected; that is the way Protection works. But is it what the public expected when temporary fruit duties were pressed forward as a crisis measure a few months ago? May it not seem strange to many that the new Orders, constituting a permanent tariff, are issued, not only during the Parliamentary recess, but even during the absence of the Minister for Agriculture at Ottawa? Perhaps, however, the apparent permanence of this new tariff may be less solid than it appears. For we venture, with due deference, to suggest to Sir George May and his colleagues that not even they can tie the hands of the Cabinet or prevent Mr Humeiman from entering upon the policy of tariff bargaining with other countries. A mushroom duty, even if decreed for a set period by the Advisory Committee, can hardly be regarded as inviolate if it stands in the way of major fiscal negotiations.

A Short-lived Spanish Rebellion.—We are as yet too near to the date of the Spanish change from Monarchism to Republicanism to expect that that country has become permanently free from the danger of Monarchist disturbances. It is a cause, therefore, of little surprise that a rebellion broke out this week. The movement was heralded by the suspension of a prominent Monarchist newspaper and a number of Nationalist clubs, accompanied by a campaign of political arrests. This seems to have been the signal for outbreaks of fighting in Madrid and in Seville, which for the time being appeared to threaten grave consequences. In fact, the rebellion has been quelled with unexpected celerity, and on Thursday morning the end of the revolt was marked by the arrest of General Sanjurjo, the leader of the insurrection at Seville. It can hardly be expected that the volcanic potentialities of Monarchist resentment have as yet finally expended their latent force, but the success of the present regime in quelling what appeared at one time to be a major ebullition of dissatisfaction suggests that subsequent risings will have progressively less chance of creating a *coup d'état* as time goes on.

Seven Months' Overseas Trade.—The July trade returns, of which preliminary figures appear in this week's *Board of Trade Journal*, show that the downward trend of imports is continuing, for the figures show a decrease of £5.6 millions since June (when admittedly imports were relatively high) and are also the lowest for the year. Exports were relatively better maintained.

MONTH OF JULY.					
(000's omitted.)					
	1932.	Increase or Decrease as compared with			
		July, 1931.		July, 1930.	
	£	£	%	£	%
Imports	51,921	- 18,225	- 25·8	- 33,245	- 39·1
British exports	29,294	- 4,958	- 14·5	- 21,452	- 42·3
Re-exports	3,305	- 1,631	- 33·1	- 3,358	- 50·4
Total exports	32,599	- 6,589	- 16·8	- 24,810	- 43·2
Excess of imports over total exports	19,322	- 11,636	- 37·6	- 8,435	- 30·4

FIRST SEVEN MONTHS OF YEAR.					
(000's omitted.)					
	1932.	Increase or Decrease as compared with			
		1931.		1930.	
	£	£	%	£	%
Imports	411,833	- 76,102	- 15.6	- 214,933	- 34.1
British exports	216,327	- 17,081	- 7.3	- 139,250	- 39.4
Re-exports	32,635	- 8,009	- 19.7	- 23,307	- 41.1
Total exports	248,962	- 25,090	- 9.1	- 162,557	- 39.2
Excess of imports over total exports.....	162,871	- 51,012	- 23.9	- 52,376	- 24.8

The most disquieting feature of the returns is a sharp contraction of £2.7 millions between June and July imports of raw materials, and this is accentuated by the fact that the June figures were not abnormally large. This may be due to the approach of the holidays, but it is significant that no such decrease occurred a year ago. There was also a slight decrease of about £500,000 in exports of manufactured goods. The adverse trade balance is definitely better than in previous years, but this result has only ensued as a result of a disastrous shrinkage since two years ago upon both sides of the account.

Unemployment in July.—According to the latest figures issued by the Ministry of Labour, the number of insured persons in employment on July 25th was 9,317,000. This showed a decline of 77,000 as compared with June and was 16,000 less than in July, 1931. The total number of insured persons registered as wholly unemployed on July 25th was 1,995,453, as compared with 1,961,769 on June 27th and 1,877,543 a year ago. Those temporarily without employment numbered 721,552 on

July 25th, against 688,878 last month and 724,690 in July, 1931. The unemployed among persons usually in casual employment amounted to 94,777, and was 2,419 less than a month ago and 16,840 less than a year ago. The total registered unemployed on July 25th therefore amounted to 2,811,782, as compared with 2,747,943 in June and 2,713,350 in July, 1931. The Ministry of Labour states that the decline during the month was partly accounted for by the trade dispute in the cotton industry and by extended holiday stoppages in the Dundee jute industry. Other industries contributing to the decline were building, public works contracting, coal-mining, general engineering, iron and steel manufacture, shipbuilding and repairing, and the tailoring trade. It should be borne in mind that there is normally a slight seasonal falling off in employment between June and July, and the present decrease of 64,439 compares not unfavourably with reductions of 147,388 and 105,964 respectively, recorded between June and July, 1930 and 1931.

Cotton Trade Wages.—The wages negotiations between the employers and the operatives in the weaving section of the Lancashire cotton industry broke down after a joint conference—one of a series—which was held in Manchester on Tuesday. In the official statement to the Press made by Mr John Grey, the chairman of the Manufacturers' Association, it was shown that the employers had lowered their demands and had proposed a wage reduction equal to 10 per cent. off current wages. This compares with a first demand made when the negotiations started of approximately 16 per cent. off current rates. The negotiations, however, did not break down on the question of wages, which the employers considered to be the major issue. The deadlock was actually created on the question of a reinstatement of discharged operatives. In explanation, writes our Manchester correspondent, it must be stated that in many towns where the operatives had refused to work the more looms system or had come out on strike where employers had posted notices of a reduction in wages, the employers discharged the weavers after giving them due notice that their positions would be filled if they did not accept the terms and conditions. During the negotiations in Manchester, which were held for six hours on Friday last and were continued on Tuesday for five hours, the operatives had insisted on the employers reinstating all discharged weavers, but the employers very plainly stated that they could not accede to this proposal. The employers held the view that it was a roundabout attempt to destroy the "more looms to a weaver" system by stipulating that it should be one of the conditions of settlement on the general wages question. The operatives, in their official statement, replied that the reinstatement question was a vital one to them, and they could not discuss a wage reduction settlement unless the employers agreed to their suggestion. One of the trade union leaders, however, added that they had not promised to accept the proposed 10 per cent. wages cut even should the employers agree to reinstate all operatives. Important developments on the wages question are likely to take place during the week-end. There is a possibility of the Weavers' Amalgamation deciding to support a general strike policy and attempt to shut down all manufacturing firms.

American Cotton Crop.—At the beginning of this week, writes our Manchester correspondent, there was a good deal of nervousness in cotton trade circles as to the probable effect upon prices of the crop statistics published by the Government at Washington. Late on Monday afternoon it was reported that the growth had been estimated at 11,306,000 bales, or about 1,000,000 bales below market expectations. Owing to the bullish character of the forecast, prices in Liverpool and New York advanced smartly, there being a rise on the day of over ½d. per lb. Since then rather wider fluctuations have occurred, with some reaction. The Department of Agriculture has given the condition of the crop as 65.6 per cent., compared with 74.9 per cent. a year ago, while the yield per acre is given as 149.6 lb., against 185.8 lb. this time last year. A year ago the crop was estimated at 15,584,000 bales, and the

final yield was 17,095,000 bales, the yield per acre for the season being 201.2 lb. The Government, in a supplemental report, states that the prospects for the crop are more uncertain than usual owing to weevils being in greater numbers than in any year since 1928. The infestation is general practically throughout the belt, but is worst in the delta lands along the Mississippi River. The plants, however, are generally blooming and fruiting well, and a period of hot, dry weather would materially improve prospects. It is pointed out that the amount of fertiliser applied this season is much less than for several years, and the plants in many places are smaller than usual. In Lancashire trade circles there has been an inclination to discredit the low crop estimate of the Government; clearly, everything depends upon the weather in the belt during the next couple of months. It is realised that owing to the carryover from last season being 13,000,000 bales, there is no possibility of any real scarcity of supplies even should the new crop be comparatively small, and it is all a question of fixing a price for the article under the conditions existing. Many traders would accept the rise in prices with more enthusiasm if there were indications of any definite increase in world consumption.

United States Deficit.—A detailed statement of the realised revenue and expenditure of the Federal Government of the United States for the fiscal year ended June 30, 1932, is now available. The chief items in the accounts during the past two years are shown in the following table:—

REVENUE.			
(In millions of £.)			
Item.	1930-31.	1931-32.	
Income tax	1,860	1,057	
Indirect taxation	947	831	
Miscellaneous revenue	510	233	
Total revenue	3,317	2,121	
EXPENDITURE.			
General expenditure	2,293	2,496	
Public debt: Interest	512	599	
Sinking fund*	440	413	
Miscellaneous expenditure	875	1,499	
Total expenditure	4,220	5,007	
Deficit	903	2,885	
Deficit after deducting sinking fund payments	463	2,473	

* Including debt retirements.

The deficit for 1931-32 exceeded by \$762,000,000 the estimate of \$2,123,000,000 presented in the annual report of the Secretary of the Treasury at the end of last year. Expenditure exceeded the estimate of \$4,482,000,000 by \$524,000,000, while revenue failed by \$288,000,000 to reach the anticipated figure of \$2,859,000,000. As compared with the previous financial year, total revenue, at \$2,121,000,000, showed a decrease of 36 per cent. Expenditure, on the other hand, rose by 17 per cent., from \$4,220,000 to \$5,007,000,000. Total revenue from income tax, at \$1,057,000,000, was \$83,000,000 lower than estimated, and showed a decrease of 48 per cent. as compared with the year ended June 30, 1931. The heavy decline in miscellaneous revenue was due chiefly to the suspension of the debt service of foreign Governments as a result of the Hoover moratorium. The increase in expenditure was due mainly to the authorisation by Congress of the purchase of \$500,000,000 of the capital stock of the Reconstruction Finance Corporation, and of the subscription of \$125,000,000 to the stock of the Federal Land Banks. The salient feature emerging from these figures is that no less than 58 per cent. of the total expenditure was financed by borrowing. As a result, the Federal public debt (gross debt less net balance in general fund), at \$19,070,000,000 on June 30, 1932, shows an increase of \$2,741,000,000 during the past fiscal year.

The 1930 Census of Production.—Volume XVI of the preliminary reports of the Census of Production of 1930, published in a recent issue of *The Board of Trade Journal*, covers the shipbuilding, hardware, brass, paint and fancy

articles trades. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee	
	1924.	1930.	1924.	1930.	1924.	1930.
Shipbuilding	Thous. £ 51,001	Thous. £ 57,103	Thous. £ 22,758	Thous. £ 25,807	£ 169	£ 210
Hardware, hollow-ware, and metallic furniture	23,275	27,371	12,576	14,038	189	178
Finished brass	9,979	10,636	5,654	5,601	179	177
Paint, colours and varnishes	16,948	18,773	7,350	8,266	397	401
Ivory, horn and fancy articles	5,066	3,301	2,568	1,843	183	170

The value of ships and boats wholly constructed in 1930 was £13,799,000, against £6,212,000 in 1924, while the estimated value of the work of new construction on vessels not wholly completed was £26,804,000, as compared with £27,789,000. The total value of the repair work done on ships and boats, at £15,328,000, showed a decrease of £881,000 on the previous census year. The returns reveal a substantial expansion in the hardware and paint and colour trades. The average number of persons employed in the hardware, hollow-ware and sheet metal trades rose from 66,606 in 1924 to 78,978 in 1930. Similarly, the average number of employees in the paint, colour, and varnish trades increased from 18,502 to 20,616. As far as can be seen from the returns, the finished brass industry appears to have held its own, but the ivory, horn and fancy articles trade suffered a substantial setback between 1924 and 1930.

London Bread Prices.—The report of the Committee appointed by the Food Council to inquire into London bread prices has now been issued. The terms of reference to the Committee were to determine whether the sliding scale of bread and flour prices laid down by the Food Council in 1925, or the scale modified by 2s. per sack of flour in the bakers' favour, should be followed in the future. Both scales provide that the retail price of bread should be increased by ½d. per quarter loaf for each 4s. increase in the price of flour per sack, but in the bakers' scale the price of flour was consistently 2s. lower than in the Food Council's scale. The bakers' case was that since 1925 their costs had been increased because of a decline in consumption, increases in the proportion of bread delivered to customers, and in the proportion of paper-wrapped bread, and, finally, because of an alleged deterioration in the quality of standard straight run flour. The Committee found that decline in consumption had been overstressed by the bakers, and they rejected the allegation of the deterioration in quality. On the other hand, they found that there had been a definite increase in the cost of distribution, including paper-wrapping, which they estimated at ½d. per 4 lb. loaf. This led the Committee to recommend that the Food Council's scale should be modified in the bakers' favour by 1s. per sack of flour. The result is a new scale which comes exactly halfway between the two scales referred to the Committee—apparently a reasonable compromise.

Share Markets — Treasury Deficit — Railways —
Commodity Prices.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 3.

FIRMER tendencies in commodity prices and the persistent strength of bonds have made possible a three weeks' rally in shares sufficient to show a gain of 35 per cent. In percentage the recovery in share markets dur-

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK

LIMITED

41 LOMBURY, LONDON, E.C.3

ing July was the sharpest seen in recent years, and prices have recovered almost to the levels of last April. Numerous shares have doubled and tripled in price, especially in the railroad and oil groups, as compared with the lowest levels of a month or so ago. More recently the copper group has been prominent. Naturally, Wall Street is sceptical of the permanence of the improvement, since the statistics of business fail to reveal any basis for lasting recovery. However, much of the trouble is paralysis of enterprise and a reluctance to spend money by those who have plenty of it, and rising markets always act as a tonic in such cases. As usual, the rise in wheat and in securities in the midst of presidential election campaigning has started rumours of artificial support, but the markets undoubtedly are in a better position to advance than they have been at any time since the depression began.

Hope for a revival of company financing is entertained because of the strength in bonds. Recent new offerings of public utility issues have gone well, and the best grade bonds of utilities and railroads are difficult to secure in quantity. Public utility issues in July totalled \$90 millions, and brought the month's financing to the largest in over a year. Oversubscription to the Treasury's August 1st issues of two- and four-year notes for \$650 millions was eight and a-half times, and the allotment was put at \$710 millions. The Treasury has stepped up its maturities from two to four years in the past nine months, which it is believed explores the way for a long-term issue.

The needs of the Treasury in the coming year will be heavy. The July deficit amounted to \$263 millions and the public debt amounted to \$19,611 millions, against \$19,487 millions at the end of June and \$16,801 millions a year ago. Total new financing in the first six months was \$650 millions, exclusive of Government borrowing and refunding. The new capital issues were less than a third of those of the same period last year and one-sixth the volume of the first half of 1930 and 1929. Loans by the reorganised Reconstruction Finance Corporation probably will increase considerably in the next few months, and they will make the largest addition to the public debt.

Business casualties have been less numerous of late, particularly in the banking field, and the banks are fairly certain to receive more prompt aid from the R.F.C. in future. Another small railroad, Norfolk Southern, has gone into receivership, bringing the depression total to half a dozen, all but one being in southern territory. The outlook for some others seems hopeless, but their reorganisation will do more good than harm, since under changed conditions of competitive transportation some railroads can never expect to carry enough traffic to cover

fixed charges. The railroads are making further salary cuts, and most of them appear cool to the proposal that they secure large loans from the R.F.C. for expenditure on new equipment, new trackage and repair of old facilities. On the whole the railroads have sufficient equipment in good order to take care of all traffic in sight, and they do not care further to add to their financial burdens, merely to give a few industries stimulation.

The Federal Reserve system, while diminishing its purchases of U.S. Government bonds, nevertheless, finds excess member bank reserves again on the increase, thanks to rising gold stocks and the return of currency from circulation. These excess reserves for the country are estimated by the New York Reserve Bank at \$250 millions, and for the New York district at \$100 millions. However, the fact that member bank borrowings are still around \$500 millions indicates to the authorities that many smaller banks have not yet felt the money ease of the large centres. The country's gold stock gained \$55 millions net in July, principally due to release of metal from earmark, following the slump in European currencies against the dollar and the need for payments here in dollars. Some gold also has come in on purely exchange transactions, and this market has proved at times to be a more profitable one than London for gold sales.

The new money market influence, i.e., issuance of national bank notes under the new law granting circulation privilege to Treasury bonds bearing 3½ per cent. coupons or less, is bringing some increase in the national bank note circulation (limited in any case to about \$900 millions as unused capital of national banks), but is unlikely to bring any rise in total circulation. The new notes simply mean that the banks lift their reserves by repaying the Federal Reserve system its own currency notes. Demand for currency is not rising.

So far the principal use of inflationary credit operations has been to reduce debts. Some commodity prices have risen, but the cause does not seem to have been inflation. Last week, for the first time since the end of March, there was a slight rise in member bank credit, coming mostly from larger Government bond investments by New York banks. The Federal Reserve system, for the first time since the June tax date, failed to increase its total credit in use.

The bases for the better feeling are the passage of the Tax Bill, followed by removal of the soldiers' bonus threat; the stoppage of the gold drain and the curb to currency hoarding with the credit aid of the R.F.C.; the adjournment of Congress, the rise in commodity prices, and, finally, the Lausanne agreement. It looks to most Wall Street observers that however the case may be with politicians, the trend of public opinion is in the direction of facing realities. That gives rise to strong hopes that European debt reduction as a means of furthering the interests of this country will be acceptable when Congress again convenes.

Commodity prices have joined the bond market as a sustaining influence on speculative sentiment. The Dun's and Bradstreet indices for July show gains of 1 to 2 per cent. in wholesale prices, the rise taking place largely in farm products, where it was most needed. In its current bulletin the National City Bank offers this comment on the rise in commodity prices: "The only explanation seems to be that the combination of decreasing stocks, reduced production and low prices has at last induced an increase of buying by dealers. It shows that prices are still responsive to changing relations between supply and demand, and producers are cheered to have a demonstration of this kind. Now, while there is no prospect of scarcity in anything, there is a new-born feeling that at last constructive influences may be getting the upper hand." Copper interests are talking 7 cent copper, on the idea that it will be just as easy to sell at the higher price as it has been at the low prices, but actual conditions in the industry are little changed.

FRANCE.

National Defence — Population — Budget — Franco-Irish Trade.

(FROM OUR CORRESPONDENT.)

PARIS, August 10.

WITH reductions in national defence expenditure totalling 1,440 million francs as provided by the recent Emergency Finance Act, and due to come into force during the financial year beginning on January 1st, Nationalist opinion is beginning to show some nervousness as to what the effect may be of a further all-round cut of 5 per cent. in military estimates, which is to be made under the Budget for 1933. There are already signs that strong opposition will be offered to any further substantial reductions, either under the Budget or as a result of the pending discussions of the Disarmament Conference, and it is evident that the task of M. Paul-Boncour, who fills the double rôle of French War Minister and of one of the principal French delegates at Geneva, will be an unusually difficult one. The Geneva disarmament discussions will reveal whether M. Paul-Boncour has been able successfully to accomplish, like MM. Millerand and Briand before him, his evolution from an extreme Socialist into an orthodox French political leader of the normal moderate type.

An interesting article by M. Emile Borel (a former Minister for the Navy), which is published this week, calls attention to facts which suggest that, merely by the inevitable decrease of population, a substantial reduction of French military strength may be automatically brought about. Next year France will enter on a five-year period during which the direct effects of the comparative sterility of the war years will make themselves evident. During 1933 the potential mothers born in 1915 will attain marriageable age at eighteen, and their diminished numbers will be reflected in fewer births during the coming twelve months. In 1935 the pre-destined soldiers born in the same year will reach conscriptable age, but in such diminished numbers that the year is expected to reveal a drop of something like 100,000 in new effectives. M. Borel estimates that the decrease in population directly due to "war-time sterility," during the next five years will total 1,200,000 units, giving an annual shortage of about 120,000 of each sex. French nervousness in this connection has been somewhat allayed by a declaration by the German savant Burgdoerfer, to the effect that Germany has no longer an increasing population, and that, if the present drop in their birth rate continues, the nation will in a very few years begin to decline in population to an unpredictable extent. M. Sauvey, the French statistician, estimates that, even if the French birth rate continues at its present level and the death rate decreases appreciably, the population, which in 1930 totalled 40,700,000, will by 1980 have dropped to 38,900,000 and that unless the death rate is improved, it may have dwindled to 29,000,000.

The Budget, which is now under elaboration, is expected to furnish several disagreeable surprises for the taxpayer, but so far strict reticence is being observed as to the nature of the proposals to be put forward. The deficit is estimated at between 7,000 million francs and 7,500 million francs. Providing the economies and adjustments stipulated under the recent Emergency Finance Act prove effective, reductions and upward revisions which have already come into effect, or will do so in October or January, should provide for 2,300 millions francs of the shortage, and a further saving of 1,200 million francs is expected as a result of the proposed Rentes conversion plan. This will still leave between 3,500 million francs and 4,000 million francs to be secured to obtain a balance. Unfortunately, this figure can be regarded only as a minimum. Yield from income tax during the last quarter was only 5,000 million francs, or 23 per cent. below the corresponding period of last year, whereas Budget estimates forecast a yield of about 10 per cent. smaller. It is also to be feared that income tax declarations next February will show a still greater drop than those for 1931 earnings. Part of these shortages have already been recognised, as has also the disappearance of between 1,700 million

francs and 2,000 million francs of foreign debt payments which would have been due in 1933 but for the general moratorium.

It is officially announced by the Finance Ministry that the loans of 354 million francs to Hungary and 250 million francs to Yugoslavia, issued by the Treasury since June 30, 1931, are guaranteed in the case of Hungary (to the subscription of which the Treasury contributed), by the surplus revenue (*pari passu* with the similar bonds issued in 1924) allocated to safeguard the 7½ per cent. loan of 1924, by gross Customs receipts, and by the sugar tax and the net revenue from the tobacco and salt monopolies, and in the case of Yugoslavia (subscribed by the Treasury) by the surplus revenue of the national monopolies. The money required for Hungary was drawn from the Treasury balances in New York, and that for Yugoslavia from the Treasury account at the Bank of France. The money was advanced in francs, in the form of credits, in an account opened at the Banque de l'Union Parisienne in the name of the Hungarian National Bank and on the books of the Bank of France in the name of the Yugoslavian National Bank. No help was asked in either case from the Caisse des Dépôts et Consignations, or from the Caisse d'Amortissement.

Inquiries made here indicate that France is one of the countries in which Mr de Valera is hoping to find a fresh outlet for Irish products, to replace the British market. Unfortunately for the Sinn Féin leader, France is interested only in the possibility of furnishing Ireland with a proportion of the cotton piece-goods, woollen yarns, boots and shoes, hats, gloves and other manufactured goods which Ireland has hitherto obtained almost entirely from Great Britain. Entries of agricultural products, which constitute Ireland's entire exports, are already held strictly in check here under a quota system in the interest of French agriculture. There appears to be some agitation among French manufacturers in an attempt to bring pressure on the Government to open the doors to Irish cattle and other farm products, in exchange for imports of French industrial products into Ireland, but so far without the least prospect of success. Negotiations between the French Minister in Dublin and the Free State Minister for Commerce, however, are reported to be still in progress.

GERMANY.

Political Situation — Economic Trend — Butter Imports — Deutsche Bank Bonds.

(FROM OUR CORRESPONDENT.)

BERLIN, August 9.

PRELIMINARY informal negotiations for building a Parliamentary platform for the Papen Cabinet began immediately after the Reichstag elections. With the return of the Chancellor from his vacation they are now being carried on intensively. The situation is extraordinarily complicated. The Centre desires that the National Socialists should take over responsibility, but it is not willing to give them such a powerful position as to leave the entire guidance of the State in their hands. But, since it would mean a great sacrifice for the National Socialists if they were compelled, by the entrance of members of their party into the Cabinet, to ratify the Papen Government's Emergency Decrees, and even still more unpopular measures, they will not content themselves with a shadow of power. Hence it cannot to-day be foreseen whether an agreement can be reached between them and the Centre. But it is just as impossible to see how the Government can be carried on if National Socialists and the Centre do not come to an understanding, and if one or both of the two parties, by remaining in opposition, make any Government majority impossible.

Germany is watching with the greatest attention every happening in the world which could be regarded as the forerunner of coming economic improvement. Hence the bull movement on the American Exchange and the relatively favourable situation of the world market for com-

modities have been followed with keen interest. In Germany, also, many symptoms seem to indicate that the lowest point in the economic depression has nearly been reached. The "Institut für Konjunkturforschung," however, issued only a few days ago a very unsatisfactory prognosis. Isolated signs of improvement, it declared, were due to causes which have nothing to do with general economic development, as, for instance, Soviet Russian orders to German industry. That the downward movement in commodity prices had come to a standstill meant for Germany that she could not count on any further reduction in the cost of raw materials which she must buy in the world market. The outlook for German exports, it was declared, was very unfavourable, for even if an economic improvement takes place elsewhere, the first to profit by it would probably be the districts overseas which produce raw materials, and, in the second place, England, who is the chief exporter of industrial commodities to those districts. However, this view of the Konjunkturinstitut has met with sharp disagreement in Germany. There is a large body of opinion which believes that the fall of prices had throttled all desire to make investments or to buy goods as everyone calculated that they would be able to buy materials and other commodities for less money by waiting a few months. Hence, it is declared, the present arrest of the downward course creates the first condition precedent for considerable orders.

The tariff on butter and the question of the butter quota have in the last few months been the cause of great anxiety in German trade policies. At present every country exporting to Germany is restricted to 5,000 tons a year, irrespective of whether the country in question formerly sent much or little butter to Germany. The butter imported into Germany under this quota pays a duty of 50 marks per double hundredweight (metric). Every 100 kilogrammes in excess of this amount must pay 100 marks. But since the duties are calculated on a gold basis, countries with a debased currency, such as Denmark and Finland, pay 86 marks for butter falling within the quota, and the duties for imports in excess of this reach the prohibitive figures of 136 marks for Denmark and 170 marks for Australia and Canada. This regulation has evoked sharp retaliatory measures against German exports in the butter-exporting countries. The warnings issued by the chambers of commerce against the continuance of this policy have increased, and now even the Rhenish mining industry, which in general is strongly in favour of a high protective tariff, has come out in favour of an understanding with foreign Governments in order to ease the pressure on German exports. The German Government has entered into discussions with the foreign Governments concerned, and has declared its willingness to substitute for the rigid quota proportionate amounts based on the butter exports formerly sent to Germany by each country in question. Heretofore Germany has regarded herself as bound by the most-favoured-nation clause, but it is not a satisfactory application of that clause when Denmark, which exported 30,000 tons of butter to Germany in 1931, receives only the same quota as that given to Estonia, with an export of 6,000 tons. The adoption of the principle of proportional quotas has, therefore, resulted in a more favourable basis for negotiations between Germany and the larger exporting countries. This has been particularly noticeable in the case of Denmark, who obviously desires to reach an understanding with Germany, since she fears that the Ottawa Conference will give special preferences to New Zealand, Australian and Canadian butter on the English market. Denmark even appears to have offered to make satisfactory compensation to the smaller exporting countries—in particular to Finland, to whom the 5,000-ton quota is assured by commercial treaty—if the new agreement with Germany can be reached in this way. The German Government is ready not only to introduce proportional quotas but also to abandon the extra charges to meet currency depreciation and to introduce a uniform rate of duty for all countries. But here difficulties with Holland arise. This country, as the second largest supplier of butter to Germany, was handicapped by the uniform quota, but benefited by the lower duties, for, since its currency is stable, Holland's butter was not required

to pay any valuta supplement, and thus enjoyed an advantage over Danish, Lettish and other competitors. Holland would agree to a uniform rate of duty if that rate were made low enough. But here there is strong opposition from German agriculturists. It is questionable whether an understanding can be reached with Holland—the negotiations have for the time been broken off—and whether in these circumstances an entirely new regulation of butter imports into Germany can become effective. German butter duties and quotas have to-day acquired the same importance for the country's whole trade policies as the duties on grain in pre-war days.

The offer by the Deutsche Bank to the holders of its dollar bonds due on September 1, 1932, either to make repayment in a blocked mark account, or to prolong them for three years and give a bonus of 2 per cent in dollars, seems to have been unfavourably received abroad, although the offer, in German opinion, represents a just compromise between the interests of the bondholders and German difficulties. Various foreign newspapers do not appear to realise that the offer is in line with the interests of all foreign creditors of Germany. The reserves of gold and *devisen* of the Reichsbank have shrunk to 894 million marks, and of these 567 millions are offset against short-term credits and are not disposable. The experiences of the last few months have shown that the German export surplus is at most adequate only for the transferring of interest payments on debts abroad, and that every single repayment of capital falls in full on the gold reserves. (This was the case with the instalment payment on the Lee Higginson and the Gold Discount Bank credits). If Germany should continue to make such repayments, the cessation of interest payments would within a short time be unavoidable. As a result of this situation the Reichsbank refused to meet the wish of the Deutsche Bank to repay the bonds in foreign currencies.

The directors of the Reichsbank are above all striving to maintain the transfers of interest. Moreover, a repayment of the Deutsche Bank bonds would have been against the interests of the "standstill" creditors, since these cannot count on any repayment of capital in the near future and must, despite the short-term nature of their claims, content themselves with prolongation. The prolongation of the Deutsche Bank bonds affects only a relatively small sum, since, roundly, half of the original loan of \$25,000,000 is now in the possession of the bank or of other German holders who will be repaid in marks. The prolongation of the remaining sum is not a profitable transaction for the bank. Taking into account the 2 per cent. bonus and the further three years that the bonds run, the 6 per cent. loan costs the bank 6½ per cent. a year, which is a high interest rate for bank money in present circumstances. For this reason a higher conversion premium was out of the question. Germany expects that the foreign holders of loans will understand these considerations, and that the credit of the largest German private bank, which is able to meet all claims in marks, will not suffer as a result of the prolongation.

AUSTRIA.

Coal Bill — Financial Position — Hungarian Trade Treaty

(FROM OUR CORRESPONDENT.)

VIENNA, August 8.

THE management of coal in Austria is being placed upon an entirely fresh basis by an Act imposing permits upon the importation of hard coal, hard coal briquets and coke. Future experience will determine whether the matter will be taken a step farther and a coal monopoly created. The strongest advocates of this are the Federal Railways, for they believe that a coal monopoly would increase their revenues. It has also been decreed that consumers of coke and anthracite for household purposes in Vienna and seven other towns must accept 50 per cent. of Austrian gas coke in their deliveries. In order still further to promote the consumption of Austrian coal, a mixture of

lignite with coal for household purposes has been prescribed. In Vienna the admixture amounts to 20 per cent., but it rises in the Federal areas, in which lignite is produced, up to as much as 90 per cent. It is expected that these measures will lead to an increase in the annual consumption of Austrian coal for household purposes of about 250,000 tons. Traders in foreign coal, however, are beginning to combat these regulations, and there have already been personal attacks upon various responsible Government officials, calling for the intervention of the Public Prosecutor and the police. As the new law means the loss of the greater part of the Austrian market to them, the excitement of the vendors of Polish, Czechoslovakian and German coal is understandable. In some cases the consumer, too, has no reason to be pleased, for Austrian coal is not first-class, and will necessitate the alteration of fireplaces and furnaces. But, owing to the admixture of inferior coal in deliveries, prices to the consumer have been lowered.

The fight over Lausanne and the loan continues, and, as is only to be expected from such a prolonged summer session, the House is nervous, so that a Government crisis may easily occur. The National Bank still continues to allot only 1 per cent. of the amounts of the invoices for which foreign means of payment are demanded. In the matter of foreign-exchange management the position at the moment is highly unsatisfactory. In official clearing low exchange rates prevail. The National Bank apparently wants to have private clearing extended, whereby much higher rates are given for the foreign means of payment than are permitted in official exchange. On the other hand, if in buying or selling foreign values anybody demands the exchange rates which are used in private clearing he is promptly arrested. The National Bank is still keeping to the high Bank rate, and it takes the view that only when important Bills of an economic character have been passed by Parliament and the Lausanne Bill has been accepted can it set about reducing its rate. In regard to the service of the Federal Loan of 1930, which is not covered abroad, the Financial Administration has now decided to remit the corresponding value in schillings to the National Bank. The sums in schillings will be entered in a "blocked" account in favour of the trustees.

During July there were 338 compositions with creditors and 108 bankruptcies, or about the same number as a year ago. The disposition of the banks to grant further credits is checked because there is again a political movement in favour of reducing the margin between loan rates and deposit rates. The banks themselves admit that the margin is large, but they point out that their other business prospects are slight. There is but little change in the position of unemployment. The Alpine Montangesellschaft has used up some of its stocks, and therefore intends very shortly to start a furnace again. It is of importance to the iron industry that a provisional trade treaty has been arranged with Hungary, so that trade between the two countries, which had come to a standstill, will begin again. Hungary was accorded the right to send to Austria a certain quota of flour, fruit, vegetables, poultry, eggs and cattle. In exchange for this right Hungary has declared herself prepared to accept from Austria certain quantities of timber, cellulose, paper pulp, paper, fine steel, tools and machines, and to make good the difference in turnover to Austria by putting the necessary foreign money at the disposal of people intending to travel in Austria. The farmers have won another victory in preventing the importation of rather large quantities of provender barley.

Great excitement in economic circles has been aroused by a Government Bill, which has probably been elaborated by the National Bank. It is called a Bill for the protection of the currency, and aims at punishing publishers not only of false reports, but, under certain circumstances, of true reports calculated to cause disquiet. It is hardly to be expected that such a Bill will be passed by Parliament.

ITALY.

New Finance and Corporation Ministers — Regulation of Cartels — Sicilian Sulphur Consortium.

(FROM OUR CORRESPONDENT.)

TURIN, August 1.

THE appointment of Signor Jung as Minister of Finance in the place of Signor Mosconi passed without comment in the daily Press. The Budget situation, owing to the last issue of Treasury bonds, is strong from the point of view of cash in the Exchequer; but from the liability point of view, Signor Jung must solve a difficult problem. The current deficit for the fiscal year closed on June 30th amounted to 4,274 million lire. Other losses will have to be incurred by the State, before a final settlement of the frozen assets of the Banca Commerciale is reached. These assets have been passed on to the Società Finanziaria Industriale (SOFINDIT), which in its turn ought to pay their price by pledging them to the Istituto Mobiliare Italiano (IMI), presided over by Senator Mayer. Very reasonably, Senator Mayer intends to advance money only to sound industrial concerns, because he can obtain the necessary money only by selling bonds to the market, and to this end savers must be persuaded that bonds are guaranteed on conservatively valued and profitably run industrial concerns. The first experiment on how the market will absorb the IMI bonds will be made by a 150 million lire loan to the Società Italiana Gaz, the great holding company reconstructed by Senator Frassati. After scaling down the capital from 260 to 26 million lire, the IMI should complete the reconstruction by converting the overdrawn banking account into a 150 million lire funded loan. Electrical, shipping and chemical industries also need long-term loans to ease their banking accounts and, therefore, the task of the IMI, to be completed, requires appeals to the market to the tune of billions of lire. The task of the new Finance Minister should be to eliminate competition between the needs of the Exchequer and of the IMI, with a view to the country's limited saving capacity. Signor Jung, who was by profession a banker and, until yesterday, President of the Export Institute and of the SOFINDIT, was probably selected for his qualifications as a man capable of finding a solution to the problem.

Speculations as to the causes of the resumption by Signor Mussolini of the Corporations Department are more uncertain. The names of the new Under Secretaries, Signori Asquini, a professor of commercial law, and Biagi, a labour organiser, are not so conspicuous as to afford a clue to the motives which led to the resignation of Signor Bottai. On the employers' side, there was a certain discontent against Bottai, due to utterances which could be interpreted as too collectivist.

The Government's powers to create compulsory cartels in the iron and steel industries were extended to February 28, 1933, and a committee was appointed to advise before the end of the year as to the best methods of organising the industry. On the other hand, two old compulsory cartels were subjected to severe criticisms. The old "Camera Agrumaria," created at Messina to unify the sale of calcium citrate, had accumulated a stock of 8,500 tons, valued, at current prices, at 20 million lire. The board of directors was accused of maintaining a policy of too high prices and thus stimulating the imports of foreign synthetic citric acid. The board was therefore dissolved, and a new board charged with the invidious task of finding remedies. More complex was the problem of the Consorzio Solifero Siciliano, a thirty-year-old compulsory cartel for the sale of Sicilian sulphur. The 1923 agreement between Sicilian and American producers for the division of the world's markets did not prevent the gradual decrease of Sicilian sales and the increase of unsold stocks from 5,000 tons in 1928 to 200,000 tons at the present time. The Consorzio, which had advanced the price to producers, was thus saddled with a debt of about 60 million lire, and the industry with a threat of ruinous prices in the event of big stocks being put on the market. The situation could be solved either by the extension of the cartel to those non-Sicilian producers who

had in the meantime entered the field, or by a return to free competition. Contrary to the new cartellisation policy, the latter was the preferred solution. The Consorzio was dissolved, producers being free to sell at market prices as from August 1, 1932. To prevent a slump in prices, the present stock will be purchased by the Liquidating Consortium, with the financial aid of the Bank of Sicily and of the Palermo Saving Bank, at the average price of 300 lire per ton. As the sale price cannot possibly cover the purchase price with interest and other costs, the loss will be borne by the State Exchequer, and for this purpose a yearly sum of six million lire has been inscribed in the Corporation Budget. This is the end of the most important experiment made in compulsory cartellisation of industry.

The reorganisation, by a decree of June 30th, of the stock exchanges puts brokers under a stricter Government supervision, and presidents and members of the boards are in future to be appointed by the Finance Minister. Their activity will be rigidly limited to brokerage, to the exclusion of all jobbing transactions. The right of buyers to claim immediate delivery of securities purchased for end of the month settlement is abolished. The Finance Minister, however, can, in exceptional circumstances and for given securities, grant such a right (the so-called *diritto di sconto*).

ROUMANIA.

General Election — Economic Reorganisation Harvest Prospects.

(FROM OUR CORRESPONDENT.)

BUCHAREST, July 24.

IN the general elections which followed the resignation of the Jorga-Argetoianu Cabinet the National Peasant Party obtained a fraction over 40 per cent. of the votes, the remaining 60 per cent. being divided among the numerous groups and factions into which the ambition and private aims of the political leaders are splitting up Roumania. The Liberals, the principal opponents of the National Peasants, and the only party besides these worthy of the name, have polled about 13½ per cent. of the votes. It should be mentioned, however, that they obtained an important majority in Bucharest. The curious Roumanian election law secures for the party which obtains a minimum of 40 per cent. of the total votes an important allotment of seats in the Chamber, and the National Peasant Party will, therefore, have 272 seats against an opposition of 114, in which the Liberals, under Mr Duca, are represented by 28, and the Liberal section under Mr G. Bratianu by 14. The result of the election for the Senate is not yet available, but it is expected here also that the National Peasant Party will have a substantial majority. The present Government, having completed its task of presiding over the elections, will now resign, and a new Cabinet will be appointed, which, in all probability, will consist of members of the National Peasant Party. The King is credited with the intention of forming a Cabinet of concentration, composed of members of all groups; but it is unlikely that he will succeed in view of the uncompromising attitude of the Liberal Party. There is a considerable amount of speculation as to who will be Prime Minister. Mr Maniu, who withdrew a few years ago from official political activity, still remains the dominant factor in the National Peasant Party, but it is said that he refuses to re-enter the arena. On the other hand, there is a striking lack of unity among the other principal members of the National Peasant Party. In business circles the Party does not inspire too much confidence. It is remembered that it was they, when previously in power, who began ill-advised measures which aimed at the protection of bankrupt debtors, interfered with private contracts, and resulted in the destruction of credit. The more level-headed section of public opinion is anxious to see how the burning questions of the day will be tackled.

There are three main problems which confront the authorities and which are more or less intimately connected: the revision of the year's budget; the payment of

interest on the public debt, and of salaries and pensions; and the maintenance of the value of the currency. Hopes of obtaining a foreign loan have dwindled to zero, and this is not to be regretted, for although it would give temporary relief to the Treasury, the loan would imply an additional burden which could not possibly be met. Roumania will have to rely on her own resources, and in this respect the outlook is very dark. It is true that Treasury receipts have been rising lately, but they are not yet up to the budget estimates—not to mention the substantial deficit in the receipts for the first half-year. The only hope for this country lies in the revival of its economic activity. There is talk of receiving funds by means of concessions; in this connection the spirit monopoly is mentioned. The payment of State salaries and pensions for May, June and July has been made possible by the manipulation of funds at the disposal of the Treasury for other purposes. There remain the debts to local industries, for which there is no prospect of settlement in sight. The rate of exchange is protected by the National Bank with draconic severity, and this causes considerable disorganisation in commerce. As is natural, there is a great deal of clandestine dealing in foreign exchange, and in this market "devisen" command a premium of about 5 to 10 per cent. over the official rates of the National Bank. There is a great deal of talk about economic reorganisation under the auspices of the League of Nations. Two representatives of this body, Messrs. Avenil and Loveday, have paid a short visit to the country, and it is reported that experts of the League will arrive here in August to study the situation and work out a reorganisation plan. It is, however, improbable that any suggestions made can be put into application before the autumn session of Parliament.

Reports concerning the harvest are conflicting. The long winter, the subsequent floods and now rust are said to have caused much damage to the wheat crop. The total production of wheat is provisionally estimated at 200,000 wagons, against 358,000 wagons in 1931 and an average of 280,000 wagons during the last five years. As a result of the reports, the price of wheat is rising. There is hardly any of last year's crop to be found. The official price for old wheat is 33,750 lei per wagon, but market reports show that as much as 35,000 to 36,000 lei have been paid. These prices compare with 30,000 lei for wheat of this year's harvest, and show a substantial increase over those ruling a few months ago. Figures regarding barley, oats and rye are not yet available, but it is feared that they will, on the whole, be disappointing. The area under maize is larger than last year, and reports as to the condition of the fields vary according to districts.

NORWAY.

Effects of Lausanne — Banking — Unemployment.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, July 30.

It is a long time since the outcome of any political world conference had such an effect in Norway as that of the Lausanne Conference. There was no immediate or marked increase in the turnover or the influx of fresh orders in trade, commerce and industry, but there was a decidedly brighter tone in business circles and a touch of what would appear to be a more well-founded optimism than previous political or economic events have engendered. The Bourse, otherwise quiet and dull during the two previous months, has been quite active all through July. Industrials have been items of special interest, some of them registering a rise of about 50 per cent. on June rates. Banking, insurance and shipping also improved, while whaling failed to attract attention. Bonds have been very firm, especially those payable in foreign currency, and, in particular, dollar bonds. Compared with the rates now obtainable in foreign centres, Norwegian gilt-edged stock seem to offer favourable features for investment purposes, and there is certainly a growing demand for these particular bonds among Norwegian investors.

According to official figures deposits with private banks showed a decline during June of about 4 million kroner,

while loans and discounts increased by about 11 million kroner. During the half-year deposits declined by nearly 75 million kroner and loans by about 1 million kroner. Deposits with savings banks decreased during the half-year by 20.5 million kroner. It has been stated that this rather heavy decline is probably accounted for by the fact that depositors have been forced by the present untoward economic conditions to use their bank deposits to provide for their daily requirements, and also that the State and Municipalities have been drawing rather heavily on their bank balances.

Unemployment figures for July 15th show a decrease of 2,000 since June 15th, the number now being 25,750, as compared with 20,869 on July 15, 1931. A further 60 per cent. should be added to the above figures to account for those districts where there are no labour exchanges.

A strike of road workers has just been brought to a conclusion through the intervention of the Public Mediator. The strike has lasted for about three months, and the roads have consequently been in a terrible state, since no repairs were made when the frost was thawing and the roads were in the most urgent need of constant attention.

Weather conditions have hitherto been very favourable, especially in the middle and northern parts of the country, and large crops of hay of very good quality have been housed. Crop prospects as regards cereals and roots are also very favourable, and are estimated to equal those of an average year.

As regards political developments, public attention is chiefly focussed on the dispute between Denmark and Norway concerning East Greenland. The matter has been brought before the International Tribunal at The Hague, and Norway's request for preliminary precautions while the case is before the Tribunal is now awaiting judgment. Whatever the final outcome of this dispute may be, the two nations will, of course, accept the findings of the Tribunal as absolutely binding.

JAPAN.

Banking — Capital Issues — Trade.

(FROM OUR CORRESPONDENT.)

Tokyo, July 11.

SEVERAL important Government measures, which had been introduced in the May-June session of the Diet, were passed in their original forms; the new tariffs took effect in the middle of June, and the exchange restrictions and the Bank Charter came into force on July 1st. To the advisory board to the court of the Bank of Japan, created under the new Charter, were appointed the President of the National Chamber of Commerce, representatives of the three big joint-stock banks, and a former deputy-governor of the Bank of Japan. The maximum fiduciary issue was raised abruptly from 120 million yen to 1,000 million yen, but no actual expansion occurred under the new currency regulation. The Bank return for the end of last week shows that the note circulation was 981.9 million yen, and gold holdings stood at 429 million yen. This means that the total circulation fell nearly 450 million yen short of the statutory maximum. Despite the demand for Bon Festival settlement, monetary conditions have become easier since the turn of the month. The Tokyo clearing banks' committee agreed upon a reduction in the minimum short loan rate from 4½ per cent. to 4 per cent., and the new rate took effect on Monday.

The new capital raised during the first half of the year, including issues for refunding purposes, was 628.9 million yen, as compared with 485 million yen in the corresponding period of last year. The increase is mainly accounted for by the Government borrowings, which rose by 217.6 million yen. But, apart from Government issues, the other capital-raisers were unprecedentedly inactive, and the total new money invested in industry amounted to only 40 million yen, or a decrease of over 100 million yen upon a year ago. This is the lowest ever recorded in the annals of the new capital market, and shows the reluctance of industrialists to launch into new capital expenditure and to bring out new capital issues.

Commodity prices moved downward with undiminished severity. The Bank of Japan's wholesale index number for June registered a further sharp drop of more than 2½ per cent. on the month, reducing the total to 146.4, which is the lowest since January, 1930. The gain made during less than three months after the departure from the gold standard has been more than offset by the continuous fall since March.

The trade returns for last month show that, as compared with June, 1931, imports rose in value by 6,366,000 yen, and exports increased by only 1,364,000 yen. The increase in imports in June, when the heavy import season would otherwise come to a close, was to a great extent due to the speeding up of entries before the coming into force of the new duties in the middle of the month, and increases occurred markedly in wheat, iron and steel, and oils. On the export side increases in cotton manufactures, rayon products, and wheat flour were largely offset by the heavy decline in raw silk. The total value figures for the first six months of the year reveal that, in comparison with the corresponding period of last year, imports increased by 125,801,000 yen, or 18.6 per cent., while exports fell by 27,729,000 yen, or 4.8 per cent., the excess of imports over exports amounting to 266,874,000 yen, as against 113,344,000 yen.

Business has been affected by a series of fresh adverse factors. The recent violent fluctuation in the yen exchange has greatly interfered with trade as a whole, though a certain section of the export industry has benefited by the depreciation of the currency. Increased shipments of Fushun coal are underselling the home coal, and the colliery-owners' association is lodging a strong protest with the South Manchuria Railway. Raw materials from Manchuria have thus proved, if only temporarily, a menace to the Japanese industry. The agitation for the relief of the distressed farmers is gathering influence. A special session of the Diet, to be convened in early autumn for remedial legislation, may, it is feared, result to some extent in deviation from sound financial policy and "a modification of the capitalist system," and this apprehension is doing much harm to the return of confidence. In consequence there is a fresh slump in the stock market and business is limited, despite the ease of money.

CANADA.

Wheat Crop — Business — Foreign Trade — St. Lawrence Waterway.

OTTAWA, July 27.

THE all-important western wheat crop has been passing through its most critical stage, and it has survived it so successfully that authoritative grain experts who have toured most of the prairie country now estimate its volume at 430 million bushels, which is only 20 million bushels less than the ten-year average. The export movement of wheat in June, placed by the Bureau of Statistics at 18,428,802 bushels, was the largest since December, 1931, but it was 4½ million bushels below the figure for July, 1931, and unless there is an abnormal gain in the shipments for the last week of July the carry-over of Canadian wheat will be in excess of 130 million bushels.

Business conditions remain more or less stationary, but if anything there has been a slight improvement in July, attributed largely to hopes raised by the reasonable crop prospects in the West. Wholesale trade remains quiet and substantially below last year's level, but in retail trade there is a fair demand for seasonal goods. In the industrial world silk production is being well maintained, but activity in other textile factories has fallen off, and both footwear and furniture factories are short of orders. The new programme of building construction is still very small, and operations in iron, steel and railway equipment plants remain at low level. There has been a slight improvement in the export sales of newsprint, but the general state of the industry is still unsatisfactory, and there is a very serious depression in the lumber industry as the result of the new American duties. The production of

motor cars has been disappointing, and only for the lower-priced models has there been any demand.

The trade returns remain unsatisfactory, and for June imports were valued at \$40,743,105, as compared with \$52,508,534 in June, 1931; domestic exports were valued at \$41,701,000, as compared with \$54,348,421 in June, 1931. In the twelve months ending June 30th total exports exceeded imports by \$31,000,000, as compared with an excess of imports of about \$64,000,000 in the previous twelve months.

On July 18th the Canadian Government signed a treaty with the Government of the United States for the co-operative construction of the international section of the St. Lawrence Deep Waterway, and, except in Quebec, the terms of the treaty are considered very satisfactory to Canada. Indeed, the Americans seem to have conceded most of the points insisted upon by Canada; they have agreed to the two-stage development on the international section suggested by the Canadian engineers instead of the one-stage development favoured by the American engineers. They have made Canada a most generous allowance of \$128 millions for her expenditure on the construction of the New Welland Canal, they have consented to the regulation of the diversion of water from Lake Michigan for sanitary purposes by Chicago, and they have accepted provisions which adequately safeguard all Canada's existing rights on the St. Lawrence waterway. The works which are to be constructed on the international section for power and navigation purposes will be carried out by a Commission on which both countries will be equally represented. There will be two navigation canals, one of which, on the Canadian side at Crysler Island, will be built and financed by Canada, as will be the allied rehabilitation works. Upon their completion Canada will own and operate this canal free from any control or supervision by United States. Upon the same terms the United States will build the canal locks and rehabilitation works on the American side at Barnhart Island. All the cost of the river works will be met by the United States, but for those on the Canadian side Canadian engineers, workmen and material will be employed, and they will upon completion be owned, maintained and controlled by Canada. The national or Quebec section of the waterway, part of whose development has already been undertaken in the construction of the Beauharnois Canal, will be developed by Canada with Canadian labour and material and no control or supervision, direct or indirect, will be exercised by the United States over this undertaking. In the Upper Lake section between Lake Superior and the River St. Clair the United States will complete the work of deepening the navigation channels and improving facilities. The development of all three sections will proceed simultaneously.

The net capital cost to Canada, according to estimates of a joint board of engineers, will be \$38,071,500 and to the United States \$243,661,000. The discrepancy in the share of expenditure which each country is to bear is accounted for by the fact that the United States has made to Canada a very generous allowance for the cost of the Welland Canal. The bill of the Canadian Federal Government is further cut down by the fact that it will receive a sum of roughly \$67,000,000 from the Province of Ontario for the one million horse power which will be developed on the Canadian side of the international section and which will be turned over to the Hydro-Electric Commission of Ontario. When the waterway is completed it will offer a 27-foot channel through which ocean-going ships can carry cargo without interruption through to the Great Lakes. On the whole the Treaty has had a very favourable Press, and the only serious hostility comes from the Province of Quebec, where the Liberal Provincial Government has denounced the pact and threatened to take legal action to thwart the scheme. The *Gazette*, the great Conservative paper of Montreal, is also hostile; but the Treaty is strongly supported by Liberal papers like the *Toronto Globe* and the *Manitoba Free Press*.

It is announced that Lord Beaverbrook's plan for the reorganisation of the financial structure of the embarrassed newsprint corporation, Price Bros. and Company, has been rejected by a powerful group of security holders and

creditors and that he has now withdrawn it. The scheme was also very unpalatable to other newsprint interests, as, if carried out, it would have formed an obstacle to the ambitious merger of newsprint companies for which negotiations have been carried on for months past.

Letters to the Editor.

TARIFFS IN CENTRAL EUROPE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the *Economist* of August 6th Herr Julius Meinl combats the argument that Austria is obliged to defend herself and that the balance of her trade with Hungary shows such a serious deficit. Herr Meinl is repeating a theory, which he has often preached in Austria, namely, that our only salvation lies in free trade and that a balance of commodity trade between two States cannot be arrived at by means of figures. It is his practice to beat on open doors with this theory, for everybody in Austria knows that a real improvement for Austria is only possible if the frontiers are thrown open and free trade with the States of Central Europe is practised. Austria is, however, the economically weakest State in Central

Europe, and it is dependent upon its neighbours and their trade policy. It is therefore useless for Austria to go to an extreme liberality in its commercial policy. This has been clearly shown in recent years, for the liberal customs policy observed by Austria until quite recently did not put a stop to the deterioration in the economic position; on the contrary, it tended to hasten the process. Austrian economy cannot be saved with theories which have no practical applicability. In a country, in which—as was the case in the first half of 1932—in spite of a decline in foreign trade by 35 per cent., the deficit for the year on the balance of trade amounted to no less than about two-thirds of the total fiduciary circulation, there is surely no justification for the statement that “the ‘Balance of Trade’ argument had by this time been exploded.” The attitude of Austria towards Hungary, even though it is chiefly dictated by agrarian interest, has nevertheless led to a more accommodating attitude on the part of Hungary, while the public discussion has shown clearly that the Hungarian Government had to face much more severe criticism in its own country on account of the tariff conflict than had the Austrian attitude in Hungary or even in Austria. The extent to which Herr Meinl is wrong in his pessimism and his theoretic attitude is apparent from the fact that the Hungarian Government, contrary to the fears he expresses in his letter in regard to the foreign tourist traffic in Austria, is now offering more means of payment for this purpose than it was doing before the conflict.

Yours, etc.,
Vienna.

BOOKS OF THE WEEK.

An Economic History of Modern Britain.

PROFESSOR CLAPHAM is the most industrious of historians. Here is the second volume* of his monumental economic history of Great Britain from the time of the Industrial Revolution; and, like the first volume, it is compact with immense learning based on an extraordinary amount of material carefully arranged and documented. In certain respects, indeed, this second volume is an improvement on the first. It gives a clearer position of the conditions which it sets out to describe, and shows a greater sense of the relative values of different sources of information. Professor Clapham is still sometimes inclined to make his readers bore their way through a mass of detail to the real significance of the major tendencies and events; but, despite the greater abundance of material for the period with which he is now dealing, he does this less than in his earlier volume. It is most noticeable in his treatment of the development of joint stock organisation; for from the wealth of information which he gives it is impossible to piece together any clear explanation of the nature of the new joint stock system based on limited liability, or of the effects of the successive Acts passed by Parliament for its regulation.

Like Mr Lipson in his recent history of the Age of Mercantilism, Professor Clapham, instead of dividing his period chronologically, breaks it up into a number of separate subjects—Industry, Trade, Communications, Commerce, Agriculture, Money, State action, Labour and so on. This method, as far removed as possible from that of the annalist, simplifies the handling of the immense mass of material with which he sets out to deal, and makes greatly for the value of his book as a work of reference. But it also serves to obscure the course of economic development within the period as a whole. The differences between conditions in the 'fifties, 'sixties, 'seventies and 'eighties are never clearly brought out: there is no generalised presentation of the successive ebbing and flowing of economic activity, and no broad comparison between conditions before and after, say, the middle 'seventies. Doubtless the materials are there in his book for a judgment on the reality of the so-called “Great Depression” of the 'seventies and 'eighties; but the reader has to collect them for himself from many different chapters.

* *An Economic History of Modern Britain. Free Trade and Steel, 1850-1880.* By J. H. Clapham. London. Cambridge University Press. 25s.

Almost as much as in his first volume, Professor Clapham appears to abhor a generalisation.

The greatest weaknesses of his book, apart from this broad criticism of his method, are in the chapters dealing with “The Economic Activities of the State” and with the Trade Union movement. The account of the growth of social legislation is singularly jejune, and fails to bring out the significant contrast between the period between 1850 and 1867, the crowded decade following the Reform Act of 1867, and the years of the “Great Depression.” Nor has Professor Clapham clearly presented the essential differences in the Trade Union movement between the craft unions of skilled artisans in the building and engineering trades, with their insistence on apprenticeship and their reliance on industrial action and negotiation, and the miners and cotton operatives, with their continuous agitation for State action to remedy industrial grievances. Nor again does he do justice to the Trade Union developments of the 'sixties and early 'seventies, or point the contrast between Trade Unionism before and after the great fall in prices set in during the middle 'seventies.

But, despite these faults, his book as a whole is a most impressive piece of work. He is surveying in it the decades during which the pre-eminence which Great Britain had won for herself in the Industrial Revolution was most triumphantly displayed and least open to challenge over the whole world. He stops short just as the challenge to that pre-eminence is effectively beginning, with the rise of competitive production abroad and the spread of anti-capitalist doctrines and movements at home. He takes the story to the threshold of modern Socialism and modern Imperialism; and there he rightly breaks off, leaving us to wait and see how he will tackle the far more formidable tasks of presentation and selection which will confront him in his third volume.

SHORTER NOTICES.

“The Recording Angel: A Report from Earth.” By J. A. Hobson. (London) George Allen and Unwin. 12s. 6d.

Mr. Hobson, unlike some of his fellow-economists, wields a pretty pen, and this short satire, in which a Celestial Messenger makes his centennial report to the Recording Angel upon the economic, political and social conditions of the planet Earth, makes agreeable and vigorous reading, even if one reflects

occasionally that the present state of the aforesaid planet needs no satirising. Here, however, is a specimen of the satire.

“What you say is very interesting,” says the Recording Angel. “If a man sells more than he buys, he receives less than he gives. Yet I understand you to say that Christian ethics are disregarded by the workaday practice of business men. But this eagerness to sell and this reluctance to take payment surely betokens a philanthropy that seems incompatible with your earlier statement. Am I to understand that the business men of some nations are in the habit of giving away their goods?”

“There,” says the Messenger, “Your Honour touches upon an interesting point in current controversy. It is charged against certain nations that they indulge in a practice called Dumping, which means that they sell to other nations goods that cost them more to make than the price which they receive for them. In part, at any rate, these goods are given away. But this, it is maintained, is far from being an act of Christian benevolence; it is held to be an act of malice designed to injure the recipient nation.”

This is a neat and caustic comment upon human folly; and the description of man's social life—from polis to megalopolis, from megalopolis to necropolis—such has been the story of countless civilisations—is, alas, only too true. Mr. Hobson, in spite of an indictment which comes nearer in spirit to extreme Socialism than any of his previous writings, does not, like many Socialists, despair of humanity. His dialogue ends on a note of hope, though it is not a very defined hope, but on a faith that some latent horse-sense in humanity will stop it just in time from committing the final folly of world suicide. Let us hope so.

“Contributions to the History of Statistics.” By Harold Westergaard. P. S. King. 12s. 6d.

There is only one history of statistics in English besides this volume—the monumental “History of Statistics” published by the American Statistical Association in 1918. Professor Westergaard's work is much slighter than the American compilation, and less comprehensive in scope. It stops at the end of the nineteenth century, and it does not deal at all fully with the official statistics published by governments. It is, indeed, more concerned with the progress of statistics as a branch of science than with the content of the available statistical information. Even so there is a formidable amount of ground to be covered; and at times Professor Westergaard's work reads too much like a catalogue of names. He also devotes a disproportionate space to the history of the international statistical congress held during the middle of the nineteenth century, and far too little to the evolution of trade statistics and the development of the use of index numbers. His book is indeed more adequate in the dealing with vital than with economic statistics; and he has much more to say of the applications of the theory of probability than to the development of the technique of measuring complex phenomena.

One penalty of trying to mention too many names is that the major events in the growth of statistical method fail to stand out with sufficient clarity. Professor Westergaard gives an adequate though brief account of “Staatenkunde,” and of the change in the meaning of the term “statistics” from information useful to the student of public affairs to information possessing a numerical character. He also deals more fully with the growth of “political arithmetic” in England, from Graunt and Petty to Gregory King, Davenant and Price. But the effect of this book is greatly to underrate the amount of statistical information available in the eighteenth century about trade and prices. For example, he makes no mention of the various parliamentary returns of English and Scottish trade, or of the figures used by Anderson and Macpherson in their trade annals. Again, in the early nineteenth century it is astonishing to find no reference at all to Tooke's “History of Prices”; and Porter's work, though mentioned several times, does not seem to have been adequately studied, while John Marshall and Colquhoun are not mentioned at all. Nor, at a later date, is Mulhall. Tooke is obviously the most serious of these omissions; for the effect of leaving him out is to make it look as if the technique of price-measurement had hardly been developed at all till the latter part of the nineteenth century.

Nevertheless, we must be grateful to Professor Westergaard for a book which is useful, even though it is lopsided and incomplete. Statistics have come to play so large a part in the technique of the social services in our day that a brief history of its development is badly needed; and it is clearly desirable to look at it from the international, rather than the purely national, point of view. The English can lay good claim to have been the founders of political arithmetic, and to have been

ever since well to the fore in the development of statistical technique. Nor need they be ashamed of having been far more cautious than the Americans in trusting to the use of such methods as correlation and other applications of the theory of probability to the handling of sociological facts. In statistics above all the simplest methods of presentation and analysis are apt to be the best.

OTHER BOOKS RECEIVED.

Die Industrie Österreichs Während des Krieges. By Richard Riedl. (London) Oxford University Press. 374 pp. 17s. 6d. net.

Die Einwirkung des Krieges auf Bevölkerungs-Bewegung, Einkommen und Lebenshaltung in Deutschland. By Rudolf Meerwarth, Adolf Gunther & Waldemar Zimmermann. (London) Oxford University Press. 474 pp. 25s. net.

Two of the series of books on the war published by the Carnegie Endowment for International Peace. The former deals with trade and industry in Austria during the war. The second is an analysis of the effect of the war on the German population and its standard of living.

Business Forecasting. By William Wallace. With an Introduction by Sir Walter Layton. Third Edition. (London) Pitman and Sons, Limited. 125 pp. 7s. 6d. net.

This edition brings up to date the author's previous clear statements on the best methods of forecasting the trend of business activity.

National and World Planning. Edited by Ernest Minor Patterson. (Philadelphia) American Academy of Political and Social Science. 298 pp. \$2.50.

The Stock Exchange.

THE WALL STREET REVIVAL.

THE recovery in Wall Street markets has proceeded far enough to show its serious intent. It has been sharp and spectacular and has provoked a great deal of discussion. The conservative investor can see nothing to support it: the bull party can see nothing to stop its further advance. Such slight checks as the market has sustained have represented only consolidation before a further advance. Before reviewing the causes of this surprising movement and its probable future course, let us first examine the extent of the gains which have been secured.

Measured in percentages from the abnormally low levels ruling on July 8th—the low points for the year—the rises in individual stocks may appear fantastically exaggerated. How is it possible, it may be asked, to justify rises of from 50 per cent. to 100 per cent. in three weeks, during which there has been no absolute change in business conditions? But measurement by percentages is misleading. It must be remembered that, in the middle of July, 21 out of 30 leading railroad stocks and 55 out of 120 leading industrial common stocks were quoted under \$10. Naturally, under such conditions, any appreciable buying will bring about sensational percentage advances. It would, therefore, be wiser to measure the advance in terms of the number of points gained by a reliable index. The following table gives the indices of the Standard Statistics for the present recovery and for the four previous recoveries which have taken place since the crash in the autumn of 1929:—

WALL STREET RECOVERIES IN LAST THREE YEARS.
(Standard statistics: 418 common stocks. 1926=100.)

Date.	Duration.	No. of Points Rise in Index.
November, 1929–April, 1930.....	21 weeks	44
June–July, 1930.....	4 weeks	14
December, 1930–February, 1931..	10 weeks	20
May–July, 1931.....	5 weeks	12
July, 1932, to date.....	5 weeks	20

It will be seen from this table that, ignoring the first recovery in 1929–30, when Wall Street believed that the depression could be eliminated in twelve months, the present recovery is entirely normal. It is certainly no greater than would be expected at the end of a financial crisis. It is from this point of view that the movement should be regarded.

There is no doubt that, with the rising of Congress and the return of confidence in the dollar, Wall Street had come to the conclusion that the financial or banking crisis had been overcome. The Reconstruction Finance Corporation, in spite of much political criticism, had succeeded in its most urgent task, which was to preserve the banking structure and put an end to hoarding. A recrudescence of banking trouble in Chicago at the end of June significantly failed to have extensive repercussions. Congress rose with the passing of two important Bills—the Home Loan Bank Bill, allowing a potential currency expansion of \$995 millions and designed to alleviate the real estate and mortgage situation, and the Relief Bill, providing for an increase in the resources of the Reconstruction Finance Corporation by \$1,800 millions. The success of the Treasury Note issue of \$600 millions showed that the Government had no difficulty in obtaining funds to finance the Federal unemployment relief programme. It was apparent by this time—the end of July—that the Government's measures to end the financial crisis would not be barren of result. Moreover, by the end of June it was already clear that the dollar was safe. The export of gold, which had amounted to \$900 millions since September, 1931, had reached insignificant proportions, and yet there were still \$942 millions of gold in excess of legal requirements. By the middle of July, in fact, money began to return to New York for investment, including not only American, but foreign and, in particular, British

resources. The movement of funds to New York came at an appropriate moment. At the beginning of June a company had been formed, under the name of American Securities Investment Corporation, with an initial capital of \$100 millions, with the object of supporting the bond market. This was a banking concern with the house of Morgan and Kuhn, Loeb as manager. The so-called "bankers' pool" started the recovery in the bond market. There is little doubt that the British buying of both dollar bonds and preferred shares, which came on top of the bankers' operations, prepared the way for the recovery in common shares.

As is usual with Wall Street recoveries, an outside political event intervened to give a final impetus to the bull movement. The Lausanne Agreement impressed America as the first constructive move which Europe had taken to end the slump. Senator Borah completed the good work by declaring that, given an agreement on currency and armaments, he would be prepared to recommend the cancellation or revision of war debts as a business proposition for America. The acceptance by the Washington Government of the invitation of Great Britain to attend the world economic conference confirmed the optimists in their opinion that genuine steps were at last being taken to end the world trade depression. Thus, with the conviction that the financial crisis had passed, and that the trade crisis would be taken in hand by international action, the bulls began to buy the heavily depressed equity stocks of America. The results were sweeping.

As regards the future course of the market, it is clear that sentiment alone, however justified some optimism may now be, will not sustain a bull movement indefinitely. Some business recovery must materialise if a reaction is to be avoided. So far there has only been the word of the Department of Commerce that business has improved. Statistics do not show any evidence of such a movement. Steel operations remain at the low level of about 14 per cent. of capacity. Freight car loadings have been falling persistently until the end of July, when a small increase was due to larger coal and coke shipments. Motor car production has declined abruptly and is now showing much less than the normal seasonal movement. The optimists, however, are prepared to ignore business statistics for a time and to concentrate on commodity prices. On an earlier page we discuss the recent check to the downward tendency in prices. The sharpest movement has been seen in cotton, following upon the first crop report of the U.S. Department of Agriculture, which was 1,000,000 bales below expectations. It was reported last week that a syndicate was being formed by the principal cotton mill interests to take over from the Federal Farm Board three million bales of cotton. More significant is the report that the Reconstruction Finance Corporation is to be empowered to make loans up to \$500 millions to trading interests to replenish their stocks of commodities. A Commodities Finance Corporation is being organised, with funds of \$100,000,000. Meanwhile stocks of commodities in consumers' hands are low, in numerous cases. Here is undoubtedly the possible makings of a substantial rise in commodity prices which would give a further fillip to the equity share markets. But we must emphasise the essentially speculative character of such a movement.

If the rise in commodity prices makes no further headway, Wall Street will again be dependent upon the genuine investor for its support. This should not imply any serious reaction, for on a dividend-yield basis American bonds, preferred and common shares, even after the recovery, are still comparatively attractive to the international investor. The following table shows the rises

which have occurred in representative bonds and preferred shares and equity shares and the yields obtainable on the basis of existing dividends:—

BONDS AND PREFERRED SHARES.					
	Lowest Price, 1932.	Price, July 25.	Present Price.	Yields.	
American Gas and Electric 5% Debs., 2028.....	62½	80	81	4-18	
National Dairy, 5½% Debs., 1946	71½	81	89	5-90	
Shell Union 5% Debs., 1943.....	47	70	83	6-02	
Colgate Palmolive 6% cum. pfd.	65	75	84	7-15	
Consolidated Gas \$5 cum. pfd.	55	86½	90½	5-52	
National Power and Light \$6 pfd.	35	50	68	8-82	
Public Service of N.J. 5% cum pfd.	62	78	98	5-10	

EQUITY SHARES.						
	1932, Low.	Price, July 25.	Present Price (Aug. 10).	1931 Earn- ings.	Present Div. Rate.	Div. Yield.
Drug	23	27½	41½	5-55	4-0	9-61
National Dairy Prods.	15½	16½	22½	3-47	2-60	11-62
Woolworth	23½	25½	39	3-19	2-40	6-86
National Biscuit	27½	28½	39	2-86	2-80	7-28
Cons. Gas of N.Y.	33½	36½	56½	4-94	4-0	7-09
American Tobacco B.	45	50½	78½	9-07	6-0	7-64
General Foods	20	20½	28½	3-44	3-0	10-45

For the British participant the recent recovery in Wall Street has coincided with a depreciation in the sterling exchange, which has given him additional profits. Further, the result of the War Loan Conversion operation "safety-having" reduced the yield obtainable on British "safety-having" stocks has given an additional attraction to American investments. Moreover, there are still numerous American industrial bonds and deferred shares which are standing at comparatively low levels which should attract the investment buying. On the whole, one may expect the recovery in American fixed-interest securities to be maintained or even advanced, while the future course of equity shares, which have attracted speculative rather than investment buying, remains a gamble upon the next movement in commodity prices.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
August 23.

ACCOUNT.
August 25.

A WEEK of unseasonable activity saw the Ottawa Conference and European developments displaced, as leading market factors, by influences arising out of the continued activity of Wall Street. As we show in a Note on page 321, a significant reaction in gilt-edged values was associated with the transfer of funds from Europe to America, but with the movement was checked in mid-week after threatening to become dangerous. British buying of American securities remained considerable, but tended to be concentrated less on bonds and preferred stocks than on equities. The market in home industrials was "freer" than for some time, but prices showed only a slight advance. Speculation in mining and oil shares, in which both New York and the Continent played a part, became more widespread and less discriminating with the further advance of commodity prices.

All the long-term British funds shared in the early weakness and subsequent recovery of the gilt-edged market, with the exception of Unassented War Loan, which was treated purely as a short bill. India loans trended downwards in sympathy with British stocks. Dominion issues were weak, Australians, in particular, losing ground despite the substantial export surplus shown by the twelve months' trade figures to June 30th last.

Though uncertainty continued to surround the progress of the Brazilian insurrection and the prospects of a peaceful Bolivian-Paraguayan settlement, South American stocks showed, on the whole, a tendency to recover. Chinese bonds were uninfluenced by the resignation of the Government, but Japanese remained on offer. Fears regarding the maintenance of order and the possible inclu-

sion of Nazi members in the German Cabinet were reflected in the downward course of "Dawes" and "Young" bonds.

An incipient revival of activity in home rails, on the approval of the L.M.S. and L.N.E.R. pooling schemes (which are discussed on page 321), was checked by a further batch of depressing traffic figures. The majority of ordinary and "depressed preference" stocks tended, in fact, to be regarded mainly as speculative counters whose possibilities of appreciation were bound up with a recovery in general trade. Higher wheat prices and an improved peso exchange encouraged speculative purchases of South American railways, but the hazardous condition of the weaker lines, somewhat unduly magnified in unofficial reports, prevented the movement from going far. Canadian Pacific were active, but became reactionary on the postponement of the dividend (discussed on page 322).

Interest in the industrial market was mainly centred upon international counters, which fluctuated sharply in sympathy with New York sentiment. Among home shares, textiles were strong on the spectacular improvement in raw cotton prices at the beginning of the week, but lost ground on the breakdown of negotiations between the Lancashire weaving employers and operatives. Steel shares were steady on rumours of pending Canadian concessions at the Ottawa Conference. Electrical issues were well maintained. Little interest was taken in motor shares, except Ford, which further improved on American buying. Breweries remained a dull market, on the issue of further reports showing a general reduction in profits. Tobacco shares, however, were relatively firm, though prices moved within narrow limits. Hopes of improved world trade found expression in any increased demand for shipping shares, which was somewhat damped by the July overseas trade figures. Bank shares attracted little interest, and insurance shares were lower in sympathy with gilt-edged stocks.

The rubber share market continued moderately active under the influence of a rising commodity price, but a substantial volume of selling was brought out by higher quotations. Tea shares opened active, Ceylon as well as Indian descriptions being in demand, but a setback occurred later. Oil shares remained under the influence of American and Continental speculation, the market being strong enough to withstand more than one bout of profit-taking.

The mining share market opened active, became quieter on fears of a check to the rise in metal prices, and recovered when the upward movement was resumed. South Africa supported Kaffirs and joined in a substantial market movement in Rhodesian copper shares, which was further assisted by support from Paris. Other copper shares were irregular. Only a moderate interest was taken in tin shares, despite the consistent firmness of the price of the metal. Burma Corporation failed to hold an early rise, although the dividend announcement exceeded market anticipations.

NEW YORK.

The whole market remained strong and active, with growing public participation and consistent activity by large speculative operators. The pace slackened from time to time, but profit-taking was never sufficient to permit of more than temporary consolidation of the ground won in an advance reminiscent of 1928-29. Bonds again enjoyed a sweeping rise advance, headed by railroad issues, while speculative purchases of equities became less discriminating qualitatively as they increased quantitatively. The basis of the movement remained chiefly psychological, the market sharply responding to developments like the jump in cotton prices after an unexpectedly low Bureau crop estimate, and the publicity given, in not altogether disinterested quarters, to the decision to organise a Commodities Finance Corporation with initial funds of \$100,000,000. Speculative activity, seeking new fields, spread to utilities and, particularly, to oil shares. The market was in no mood to stress news of an unfavourable nature, such as the reduction of 68,466 in the Steel Corporation's unfilled orders, at the end of last month, to a new low record level of 1,966,302 tons, and a further decline in the national output of electricity. Steel operations were reported at 14 per cent. of capacity, but the industry continued to profess confidence in an autumnal recovery. Automobile output in July was estimated at 112,600 units (including Canadian production), the total showing an unexpectedly sharp reduction of 41 per cent. as compared with the June figure. For the present, trade conditions are not a market factor, but, in the opinion of the more conservative sections of the market (who fear that the present movement will become topheavy if this week's pace is long maintained), their influence may eventually be decisive in putting a brake on speculative exuberance.

PARIS.

Prices moved upwards in sympathy with Wall Street, but many dealers were inclined to take a cautious view. Renten were quiet, but there was a substantial demand for the leading arbitrage issues. Egyptian Foncier were favourably affected by the rise in cotton. In mid-week an appreciable reaction occurred. German bonds in particular showed sensitivity to wholly unsubstantiated reports of the possible appointment of Herr Hitler to the Chancellorship. On Thursday, however, the market renewed its earlier firmness.

BERLIN.

Transactions at the beginning of August were fewer than for months past. This lethargy was explainable, not by seasonal conditions, but by the fact that German holders, regarding their stocks as a species of guarantee against any currency inflation, were unwilling to sell. The formation of domestic capital is too small to make considerable buying orders possible. Only loose contacts still exist with foreign exchanges, but small purchases with "standstill" money have helped decisively to improve the level of quotations. Political events have tended to cause complete public abstention from security dealings, which was particularly obvious after the taking over of the Prussian Government by Herr von Papen on July 20th and after the Reichstag elections. The bull movement in New York has caused a slight rise of quotations. The best showing among German stocks has been made by electrical and artificial silk stocks (AEG, Berliner Kraft und Licht, Aka, etc.), while shipping securities and Stahlverein have become considerably weaker. The bond market had a more confident tone in July on hopes of a reduction in the rate of discount. Later weakness was due, not only to the unsatisfactory monetary situation, but also to rumours regarding Government plans for a compulsory reduction of all interest rates and additional granting of credit by the Reichsbank. Quotations improved slightly after an energetic denial of these rumours by the Government.

† Ex-dividend.

AMSTERDAM.

The Bourse was buoyant in the early sessions, leading industrials like Royal Dutch, Philip's Lamps and Unilever being in strong demand. Rubber shares were active, and Amsterdam Trading advanced. Iron and shipping shares were firm. In mid-week public profit-taking produced a fairly general reaction, but the firmness of London and New York prevented the movement from going far. Considerable activity was displayed by oil shares on Thursday.

	Aug. 11, 1932.	Aug. 8, 1932.	Aug. 4, 1932.
2½% Dutch Loan	66½	65½	65½
2½% German	45½	45½	42½

Union	134	142½	147
Java Outcrop			

OTHER CENTRES.

Conditions were firm on most of the minor European Bourses, despite spells of profit-taking. Brussels was particularly active, with a large turnover and wide price fluctuations. Stockholm shared in the general improvement, but Frankfurt was unsettled and, on the whole, weaker.

INVESTMENT NOTES.

Gilt-edged Reaction.—The reaction in the gilt-edged market early this week proceeded far enough to cause a certain disquietude to holders of British Government stocks. Assented War Loan, which had risen above par last month, fell to 97½, or 8½ points below the non-assented stock, before recovery to 99 on Thursday. The setback may be attributed to technical rather than to fundamental causes, and, in particular, to the Wall Street recovery, which was the signal for the return of American money which had taken temporary refuge in London during "the attack on the dollar." The return of American money followed upon a flow of British funds for investment in New York, attracted by the comparatively high yields obtainable on dollar bonds and preferred shares. The gilt-edged market, reacting in sympathy with sterling, was further affected by the withdrawal of speculative funds, which had previously been attracted by the boom in Government stocks and now sought a fresh hunting ground. The market was also influenced by adverse rumours regarding the extent of the response to the Conversion offer and the "holiday" increase in the note circulation. These, however, were partially allayed by an Exchequer return which suggested that something like three-fourths of the total War Loan had been converted before the last days of the bonus period, and by more complete understanding of the non-inflationary factors behind the increased note issue. Thursday's Bank return, indeed, showed that the latter had been reduced. A recovery in gilt-edged prices began on Wednesday and made headway on Thursday:—

	July 21st.	August 9th.	August 11th.
Consols 2½%	72½	68½	71
Consols 4%	105½	103	105
Conversion 3½%	99	97½	98½
Funding 4%	107½	106	107
Local Loans 3%	85½	82	83½
Victory 4%	106½	105	106
War Loan 5%	101½	101½	101½
Assented War Loan	100½	97½	99
Australian 5%, 1946-75	100	99	100
India 3½%	80	75	79½

There would seem to be no reason why holders of long-dated stocks should become alarmed. If the Treasury were to disclose the amount of War Loan converted up to July 31st, and to announce the terms of its short-term bond issue to take care of the redeemable stock, the market would quickly recover confidence. A successful issue of Treasury bonds would probably lead to a further rise in the gilt-edged market, provided interest rates had shown in the meantime no signs of hardening. The long-

term outlook, however, is more difficult to forecast. Much may depend upon the extent and direction of the activity in Wall Street and the behaviour of commodity prices. The Government, at least, was soundly advised to launch its conversion scheme at the beginning of last month. As events have turned out a month's delay might have been fatal.

Railway Pooling.—The announcement of Ministry of Transport sanction of the London Midland and Scottish and London and North-Eastern Railways' scheme for the pooling of receipts from traffic between competitive points emphasises the change in public opinion since the days when a Midland and London and North-Western amalgamation agreement was vetoed on the ground that a diminution in inter-railway competition would be harmful to the public interest. A pooling agreement has for some years been a *fait accompli* as between the Great Western and the Southern Railways, and the heads have been mutually agreed of a similar London Midland and Scottish and Great Western scheme. Agreement between these doughty historical rivals will mark the virtual disappearance of internal competition from the British railway system. Each line will have considerable "exclusive" sections of territory, unaffected by the latest schemes, but between all overlapping points receipts will be pooled and redistributed on an agreed formula. Co-operation, however, has every incentive, under present conditions, for going farther, and covering the joint use of locomotives and stocks, joint organisation of services, and joint efforts to secure traffic. These arrangements cannot be regarded as implicit in the "grouping" policy of the Railways Act of 1921—the draughtsmen of that measure, indeed, were at pains to rebut the impression that competition had received its death-blow. The Act, nevertheless, has greatly facilitated a process whose indispensability has been emphasised by the depressed conditions of recent years. Presumably, the inability of consumers to play off one company against another will tighten the railways' attitude as regards the future granting of exceptional rates. It would be interesting to know how far Sir Josiah Stamp's estimate of savings under the L.M.S.-L.N.E.R. schemes, running possibly into seven figures and affecting about half the L.M.S. gross receipts, was based on consideration of the scheme's possibilities on the "supply" and how far on those of the "demand" side. The "protection" afforded to the trader by competitive road facilities will obviously vary according to distance and nature of traffic. The chief objection to the L.M.S.-L.N.E.R. scheme at the Committee hearings came, significantly, from bodies like the National Federation of Iron and Steel Manufacturers and the Mining Association. The greater interest attaches to the new definition of the legislative and economic relations between road and rail transport, recommended, presumably, by the Salter Committee, whose findings were laid before the Cabinet by the Minister of Transport last week.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8, Bouverie Street, E.C.4

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

South American Bonds.—A review of the price movements of South American bonds shows that, under the present "nominal" market conditions the internal troubles of that unquiet sub-continent have had comparatively little effect upon values. It might well have been expected that the threat of war between Paraguay and Bolivia would have considerably reduced the already low quotations for South American stocks, and that insurrectionary troubles in Brazil might also have had an adverse influence. The following table of representative stocks, however, shows that although falls have taken place these have been less severe than might have been expected:—

	June 29.	July 27.	Aug. 10.
Argentine 4% resc.	62½	60	57½
B.A. Prov. 3½%	32	30	29
Brazil 5% ind., 1914	57½	63	60
Brazil 6½%, 1927	31½	34	32
Chile 6%, 1929	10	15	15
Peru 7½%, 1922	30	30	28
San Paulo, 7½%	60	55	57½
Antofagasta ord.	6½	7½	14
B.A. Great Southern ord.	19½	19½	25
Central Uruguay ord.	9½	9	9

Conflicting reports on the possibility of an Argentine moratorium still persist, although early this week the Finance Minister gave an emphatic assurance that no alteration, even of the smallest extent, would be made in the interest or amortisation services of either the foreign or internal debt. This declaration has by no means allayed market doubts as to Argentina's ability, with the best will in the world, to continue to remit the service of her foreign debts. Unofficial reports have been current of voluntary offers of assistance by foreign bankers, to which United States interests are described as being strongly opposed, though British interests are said to be more favourable.

Trend of Brewery Profits.—Investors have not far to seek for the causes of the sharp reduction in brewery earnings during the last few months. The "historic" decline in beer consumption has been intensified by the effects of reduced purchasing power among beer consumers, accentuated since September, 1931, by increased beer taxation. We show, in the following table, the last two years' results of fifteen companies, covering many different areas:—

Name of Company.	Date of Balance Sheet.	Net profit, 1930-31.	Ord. Div.	Net profit, 1931-32.	Ord. Div.	Present Price.	Yield per cent.

* Tax free.

† Three per cent. tax free.

The aggregate decline in earnings has been severe, the total profits of the fifteen companies having fallen from £8,069,783 in 1930-31 to £4,584,137 in 1931-32, or by nearly 25 per cent. Arthur Guinness (whose earnings show a more than average decline) has possibly been affected by special considerations, though at the company's annual meeting Lord Iveagh particularly stressed the part played by the beer tax. Twelve of the fifteen companies have reduced their ordinary dividend, though profits in numerous cases would have covered a repetition of the previous rate. The industry—wisely in our opinion—has apparently decided to persevere with the policy of financing important structural improvements out of revenue.

Drapery Trust.—This company, which is controlled by Debenhams and holds ordinary share interests in numerous drapery and departmental stores, reports decline of 38 per cent. in gross receipts for the year to May 31st last. Net profit has declined from £241,237 to £102,767. The ordinary dividend is passed, and the preference dividend due on August 31st postponed:—

	Year to March 31, 1930.	1931.	1932.
Income	381,414	310,916	193,381

Carried forward	147,265	145,502	80,269

* Including £6,443 Lloyds Bank, settlement suspense account.

Of the total fall in profits, £117,472 is due to the decrease in dividends received from subsidiaries, £17,390 to increase in interest payable, and £6,443 in respect of the redemption of 5½ per cent. Notes. The company, in a period of declining profits, is experiencing all the disadvantages of a "high-g geared" capital structure, accentuated by the fact that depression came before its programme of extensive structural alterations and improvements had been anything like completed. The business continues to absorb substantial amounts of new money. The company's loan from an associate (presumably Debenhams) has increased from £380,817 to £520,634, and its own loans to subsidiaries have risen from £190,841 to £272,408. The accounts as they stand are largely uninformative, and 7 per cent. preference shareholders (whose shares are now quoted at 8s. 9d.) are entitled to a clear statement of the position from the chairman at next week's meeting.

Canadian Pacific Railway.—For the first time for over 35 years the Canadian Pacific Railway has postponed the payment of a dividend on its common shares, after last year reducing its rate from the "traditional" 10 to 5 per cent. The decision should not have come as a surprise to the market, which was aware that gross receipts for the first seven months of this year had fallen 20 per cent. below an already depressed 1931 level, and that net earnings for the half-year were only \$5,252,000, against \$6,807,000 in the corresponding period of 1931. The company has continued to make Herculean reductions in expenditure (the 10 per cent. cut in salaries and wages, for example, has now been extended throughout the system) which have taken up about nearly 90 per cent. of this year's decline in gross receipts. Last year, however, the company earned only 2½ per cent. on its common shares. This came entirely from "Special Income," from investments and ancillary services, which has been further reduced this year. In view of the uncertain immediate outlook, the directors have chosen to conserve resources by paying no dividend on a common capital which has earned nothing. That contemporary conditions have thus afflicted a railway whose stocks a few years ago appeared to be in an impregnable position is eloquent testimony to the severity of Canadian depression. Despite Mr Bennett's preoccupation at Ottawa with the tariff apprehensions of Canadian manufacturers, it is the plight of the farming community which has most prejudicially affected C.P.R. results. During the past twelve months Canada has marketed the lowest wheat crop for years at starvation prices. Happily, a firmer tendency in the wheat market has coincided with an estimate of a crop of 400 million to 450 million bushels this season, against a final figure of 304 million bushels last year. Whenever Canada's

staple industries revive, the C.P.R. will be well placed. Some of the reductions in expenditure, achieved since 1929, are more appropriate to depressed than to normal times, but many could be maintained without lowering the efficiency of the system.

Nitrate Position.—The obscurity which has overhung the affairs of Cosach ever since its pre-natal quickening has been partially deepened by the coincident, but uncorrelated, progress of two sets of confidential negotiations. The more general, which have been conducted in Paris, Berlin, London, Amsterdam and Scheveningen, are, in fact, the latest of the cartel meetings which have been held every summer since 1929. As the cartel broke down last year, however, with serious effect on nitrate prices, this year's meeting is of more than usual interest. At the moment it seems that an agreement may be reached under which prices will be fixed slightly above the low levels touched this year and Chile will be given an export quota (to be reconsidered next year) of perhaps as much as 1,000,000 tons. The precise amount of the quota, however, appears to be the chief outstanding bone of contention. The second series of negotiations has so far been carried on only in London and New York, but seems likely soon to be transferred to Chile. The negotiators are concerned with the financial breakdown of Cosach itself, which we forecast in an article appearing on May 14th. Five separate interests are attempting to share whatever can be salvaged from the wreck of the Chilean nitrate industry—the English bankers, the bondholders, the Guggenheim group, the pre-Cosach companies, and the Chilean Government. The conversations are strictly private. The Guggenheim group, however, appears to have encountered more resistance from the British bankers than was expected, and is now inclined to seek the support of the Chilean Government for its own solution. Agreement between London and New York has been nearly, but never quite achieved. There does not yet appear much hope of an early solution. It would seem to be incumbent on all concerned to use every endeavour to put an early end to this last and most regrettable phase of the Cosach imbroglio.

Recovery in Metal Prices.—The firmer tendency of mining share quotations on buying both from London and the Continent has reflected the onset, since the end of July, of a strong upward movement in the values of copper, tin, lead and spelter. In spite of a marked absence of support by consumers, the movement has reached considerable proportions. Perhaps the most spectacular improvement, writes a trade correspondent, has been seen in copper, where the gain has amounted to about 25 per cent. Part of the rise is attributable to the weakness of sterling. The movement appears largely speculative, but users on the Continent are showing an enhanced interest, Germany in particular having bought freely. In this country the trade seems to have been caught napping. By the time works reopened after the August holiday the quotation had shot up by £4 from the bottom. Buyers, however, held off in the firm conviction that a reaction would occur. This came in the early part of this week, but proved of short duration. The trade is now wondering if copper has really taken a turn for the better at last. Behind this change of outlook is an American movement towards the easier purchasing of commodities, and a presumption that as far as sales in Europe are concerned the competing copper producers have buried the hatchet. Values in the United States are appreciating under the spur of the 4 cent duty, while the London market is showing some apprehension lest a tax be levied on foreign copper coming into this country. Undoubtedly buyers in Europe are still rather bare of copper. Whenever consumers can bring themselves sincerely to believe that the bottom has been passed, the way may be cleared for the establishment of a higher ruling level of prices, not only of copper but of other metals.

Industrial Profits.—During July we received 152 company reports, aggregate profits showing a decline of 34.31 per cent., compared with 21.80 per cent. in June:—

Reports.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
Published in 1931—		
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26
November	147	— 35.59
December	157	— 68.54
1932—		(1932 compared with 1931).
January	127	— 19.65
February	211	— 6.81
March	210	— 13.37
April	244	— 13.66
May	196	— 33.30
June	235	— 21.80
July	152	— 34.31

We set out below the figures for various industrial groups, according to reports received during the past month:—

INDUSTRIAL PROFITS—JULY 1932.

Group.	No. of Com- panies.	Net Profit (after Payment of Debenture Interest). Reports received during Month of July, 1932.		Increase or Decrease.
		1930-1931.	1931-1932.	
		£	£	
Breweries	10	4,365,037	3,474,161	- 20.43
Electric Lighting and Power ..	1	16,826	19,190	+ 15.44
Financial, Land and Investment ..	12	292,980	198,782	- 32.15
Hotels and Restaurants	1	89,617	42,850	- 52.19
Iron, Coal and Steel	8	352,365	94,245	- 73.24
Motor and Cycle	1	25,706	Dr. 19,569	- 88.85
Oil	2	211,943	23,649	- 88.85
Rubber	35	Dr. 123,188	Dr. 231,119	- 27.77
Shipping	4	529,000	382,127	- 27.77
Shops and Stores	6	490,056	463,589	- 5.40
Tea	15	1,181	Dr. 59,190	- 57.62
Telegraphs and Telephones	4	1,850,129	784,124	- 57.62
Textiles	5	215,032	345,433	+ 60.65
Tramways and Omnibus	2	144,750	Dr. 376,287	- 14.92
Trusts	11	387,571	329,624	- 14.92
Waterworks	1	8,843	2,329	- 21.05
Other Companies	34	2,576,472	2,034,111	- 34.31
Total	152	11,429,120	7,508,049	- 34.31

The largest contributor to the total decline was Cables and Wireless, whose profits fell from £1,302,385 to £636,168. Other large companies reporting reduced profits included Associated Newspapers, Anglo-Argentine Tramways and Distillers' Company. The Union Cold Storage Company, on the other hand, virtually maintained its earnings, and Lovell and Christmas showed an encouraging recovery in earning power.

Shell Union.—The greatly improved results of the Shell Union Oil Corporation for the second quarter of the year suggest that the American oil companies may, after all, be able to operate on a profitable basis this year. Allowance must, of course, be made for the fact that the second quarter of the year always compares favourably with the first, which is the worst quarter of an oil company's trading year. Nevertheless, a loss of only \$193,126 for the second quarter of 1932, as compared with a loss of \$2,742,301 for the first, augurs well.

	1931. Total, Six Months	1932. Total, Six Months	1st Quarter	2nd Quarter
Gross Operating Income	\$ 86,781,973	\$ 78,324,620	\$ 37,152,255	\$ 41,172,365
Operating and general expenses	81,942,724	60,613,286	29,315,268	31,298,018
Gross income	4,839,249	17,711,334	7,836,987	9,874,347
Depreciation and depletion, &c.	22,710,369	17,885,626	9,156,664	8,728,962
Interest and discount	3,115,380	2,742,656	1,414,717	1,327,939
Minority interest	27,485	18,479	7,906	10,573
Net loss	20,959,512	2,935,427	2,742,301	193,126

A few comments on this table are necessary. The item of depreciation, depletion and drilling expenses includes book depreciation as well as actual drilling expenses—in what proportions it is impossible to say. Any saving on actual

greatly suffer, and the provision of better service for the public be retarded.

This unbearable taxation of beer has caused acute irritation and sullenness among consumers which, in such times as the present, ought to have been avoided.

EFFECTS ON AGRICULTURE.

Beyond the discontent of the beer consumer, surely in these days of languishing industries we cannot afford to add to their embarrassments. Above all, should we avoid anything detrimental to the great industry of agriculture, which is the key to the future relief of our over-urbanised population, so many of whom are now walking the streets waiting for jobs in manufacturing industries which cannot possibly offer them work. It is vital that those who are already engaged in agriculture should be assisted to gain such prosperity as will attract to them unemployed workers from our towns.

How utterly foolish was it then to impose such repressive taxation on the brewing industry as to rapidly diminish the demand for what have been, and what should be, the most profitable productions of agriculture. Barley has been looked upon as the most profitable crop a farmer could grow, and hop growing requires the greatest volume of labour. It has been stated by a representative of the Farmers' Union that between 1921 and 1930 there has been a decrease in the acreage of barley of over 600,000 acres. When I tell you it is estimated that beer production since the imposition of this higher duty has decreased approximately 22 per cent., you will realise how much greater this decrease in the acreage of barley will become. The Agricultural Return for 1932 states it is already the lowest on record.

REPORT OF ROYAL COMMISSION ON LICENSING.

On January 8th of this year the Report was issued of the Royal Commission on Licensing (England and Wales), which was appointed towards the end of 1929, and after affording the fullest facilities for all taking an interest in the temperance question to appear before it and express their views, the majority of the Commissioners report that "no witness suggested prohibition of the sale and manufacture of alcoholic liquors as a practical proposition for present application to this country."

They also came to these very important conclusions:—

With regard to Local Option "many of the arguments are not peculiar to the liquor question but find root in a general faith in the merits of decision by local referendum. It is, however, contended that questions relating to the sale of intoxicants are specially suited for local decision by popular vote. We do not accept this contention."

As to Sunday Closing they state: "We have been urged to consider the question of the abolition of facilities for obtaining intoxicating liquor on Sundays in England. Alternatively, it has been suggested that some measure of local option in this matter is desirable. In our view, however, no sufficient case has been made out for any such step. We recognise that Sunday closing might be a boon to those employed in the licensed trade. We do not, however, think it would be acceptable to the general public."

In this connection I would say that it is the convenience of the public which has first to be considered, and the licensee must render to the public that service which he has been licensed to provide.

I attained 50 years as a brewer last month, and I am deeply sorry that I have had to present you this morning a balance sheet which, although it still exhibits the operations of a sound concern, yet records a year's trading results badly mutilated through causes beyond your board's control. We can only hope our trade will be granted such redress during the current year as will permit your board to present a more pleasing report at our next annual meeting.

I hope I have manifested the gravity of the position, and I earnestly appeal to every shareholder to approach their Member of Parliament and to endeavour by all the means in their power to bring about the relief so urgently necessary.

With these remarks I beg to move the adoption of the report and balance sheet, and will ask Mr Herbert W. Bainbridge to second the resolution.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

WATNEY, COMBE, REID AND COMPANY, LIMITED.

THE BURDEN OF TAXATION.

The ordinary general meeting of Watney, Combe, Reid and Company, Limited, was held, on the 11th instant, at the Windsor Castle Restaurant, Victoria, London.

Colonel O. P. Serocold, C.M.G. (the chairman), said that the past year had been fraught with difficulties for the brewing trade. They had had to contend with the adverse circumstances consequential to the universal commercial depression, with unemployment still rife and rates of wages tending to fall. Those factors alone would have adversely affected the prosperity of their business, but they were plunged into a first-class crisis in September last when the Emergency Budget imposed a further increase on the beer duty, which had thrown the wholesale and retail trades into confusion.

In not opposing the original imposition of the excess tax and in not resorting to extremes in connection with the Budget of 1932, he might compare the trade's patriotism with that displayed by the holders of War Loan who had so readily assented to the conversion of their holdings when requested by the Government. The trade had felt that a tax which was not only unjust but was also unsound from the point of view of the Exchequer could not stand. They had relied on its being rectified in the Budget of April, 1932.

LOSS TO THE EXCHEQUER.

During the year under review, which included nine months of the increased beer duty, the Chancellor had collected from the company £13,287 more duty. On the other hand, the higher rate of duty was the main factor in the reduction of their profits by some £280,000. The Exchequer would lose in income tax on the company's profits alone a sum far in excess of the amount of the extra beer duty collected in the past year. Taking that argument a stage further, the reduction in their dividends must mean a further loss to the Chancellor in sur-tax, while the drop in the market valuation of brewery stocks carried with it a still further loss to the Chancellor in death duties.

Surely those simple facts showed how unsound it was to keep that heavy additional burden on the trade. The Press had prophesied a reduction of the duty to the level of the year before; therefore the disappointment to all of them, wholesaler, retailer, and consumer, had been all the deeper when the new Chancellor announced in the April Budget that the tax would be re-imposed. They were therefore obliged to recognise that that unfair burden on their business would remain until the next Budget.

They must trust that the financial situation would have improved by next April to a point where the paramount necessity no longer existed and where the remission of the extra duty could be granted. Although the tax had been in existence for only nine months out of their financial year ended June 30th, its effects on the company's profits was apparent in the accounts, while the injury inflicted on the retail trade could not be any less grave. Even if the tax was removed next April, they thought that the damage would not be easily repaired. A great brewery served all classes, but particularly the working man. It was wrong that a wholesome beverage should be denied by its almost prohibitive price to those who most wanted it but who could least afford to pay for it.

IMPROVING THE PUBLIC HOUSES

They had faithfully carried out their policy of improving their public houses and their service, and it was the unanimous opinion of the board that that policy should be continued. They were intent upon providing the best service to the public, and in that respect they would give place to none of their competitors. The improvement of public houses was recommended by the Licensing Commission, and the recommendation had received the almost unanimous and widespread praise of the Press and at Brewster Sessions throughout the country. It had been publicly approved by many leading men of the day, including prominent leaders of the Church.

With regard to the company's accounts, after mentioning that they had converted their War Loan, although their holding was not a very large one, he went on to say that the trading profit was down by £300,000, for the reasons already explained, but on the other hand interest on investment was £24,000 up, which was accounted for by the transfer from cash to gilt-edged securities. Rents were slightly up, which, in view of the difficult times through which they were passing, was very satisfactory. Although they were paying 15 per cent. dividend on the deferred ordinary stock for the year, it might interest stockholders to know the percentage return on the whole of the money engaged in the business, including the free use of the sums held in the various reserve funds on which no interest was payable. It worked out at less than 7 per cent., which was not an unreasonable figure for a commercial business which was subject to the fluctuations inseparable from the brewing trade.

The report and accounts were adopted.

BENGAL IRON COMPANY, LIMITED.

IMPROVEMENT IN CURRENT YEAR'S TRADING.

The fourteenth ordinary general meeting of the Bengal Iron Company, Limited, was held, on the 5th instant, at the Hotel Victoria, Northumberland Avenue, London.

Mr Wm. Turner MacLellan, C.B.E. (chairman and managing director), who presided, said:—Ladies and gentlemen,—I regret to have again to put before you a poor report, but, in view of the state of matters in the iron trade, of which you are well aware, one can hardly expect otherwise.

There are no very great changes in the balance sheet. The reduction in stocks and sundry debtors is reflected by the increase in liquid assets.

The shortage of demand for pig iron throughout the world has not enabled us to consider further the restarting of our blast furnace plant, but it could be started at very short notice with any revival of trade.

So far this year the trading results indicate an improvement on last year and our foundries are still kept fairly busy, but absence of orders from the railways, who are doing all they can to economise, still continues to be a severe handicap.

Our staff has been considerably reduced, and those remaining with us have worked most loyally in trying to help us through the trying time.

REVERSION TO BIMETALLISM URGED.

Our interests lie in the East, and I agree with Lord Desborough and Sir Robert Horne that the most hopeful method of improving trade and increasing credit throughout the world, and particularly in the East, is a reversion to bimetalism.

During the first three-quarters of the last century, when bimetalism was in vogue, silver varied very slightly round 5s. an oz., but in 1873 Germany, by collaring two hundred millions of French gold for reparations, disorganised the financial world, and bimetalism went by the board.

Since then the fluctuations in silver have been very severe. "Empty mangers make biting horses," and the countries to suffer most were Mexico and China, and much of the trouble in these countries, I think, has been really due to the silver fluctuations.

If the principal countries of the world restored silver on a basis of, say 2s. 6d. an oz., it would stabilise finance among about half the world's population, and the reflex action on the rest of the world would be enormous, owing to their increased purchasing power on a fixed basis, and hoarding would be reduced.

The Chairman concluded by moving the adoption of the report and accounts.

Mr C. A. Bendix (deputy-chairman) seconded the motion, and it was carried unanimously.

The Chairman proposed the re-election as a director of Mr F. G. Roberts, who had been appointed since the previous meeting. In doing so he said that Mr Roberts was resident in Calcutta, and they would therefore have the advantage of having a director constantly on the spot.

The resolution was unanimously approved; the directors retiring by rotation were re-elected, and the auditors were reappointed. The proceedings then terminated.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended August 6, 1932, amounted to £13,514,000 against ordinary expenditure of £23,135,479. After allocating £230,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £164,901 the operations for the week, as shown below, increased the National Debt by £10,076,000 to £7,678,291,000—

(000's omitted.)		(000's omitted.)	
Bank of England Advances.....	+ 6,780	National Savings Certificates...	200
Public Department Advances ...	+ 1,650	Issues under Finance Act, 1931 ..	3,201
Treasury Bills	+ 3,367		
By 3% Treasury Bonds	+ 1,200		
Land Settlement Acts Repayments	+ 10		
	+13,477		— 3,401

A complete analysis of the National Debt at June 30, 1932, was printed in the *Economist* of July 2, 1932.

NOTICES.

Williams Deacon's Bank Limited give notice that in order to prepare the Interest Warrants on the Wolverhampton Corporation 3 per cent. Stock, 1924-54, the books will be closed from August 18 to August 31, 1932, inclusive.

Company News.

REPORTS AND NOTICES.

We are informed that the scheme for reduction and reorganisation of capital of Hollins Mill Company, Ltd., was accepted at a meeting held on July 25th.

GOVERNMENT, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1, to June 30, 1932, compared with those for the same period of 1931:—

	*Monopolies, Tobacco, Stamps, and Piræus Customs.	Piræus Customs.
	Drachms.	Drachms.
Gross receipts, June, 1932.....	15,714,485.00	39,247,585.80
Gross receipts, June, 1931.....	19,992,470.75	76,709,937.90
Estimated receipts for 6 months (Law of Control)	14,450,000.00	5,350,000.00
Actual receipts for 6 months, 1932	100,160,808.75	461,107,439.00
Actual receipts for 6 months, 1931	111,113,764.65	476,880,103.00
Difference between estimated and actual receipts for 6 months:		
1932	+85,710,808.75	+455,757,439.00
1931	+96,663,764.65	+471,530,103.00

* Exclusive of increases in duties and selling prices not subject to the system of plus-values.

NOTE.—Of the surplus over the estimated receipts from the monopolies, tobacco, stamps and stamped paper, 49½ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1891 to 1893.

ENGLISH CHINA CLAYS, LTD.—In view of the fact that there is no apparent improvement in the depressed conditions of world trade, as reported at the last annual meeting, the directors are unable to recommend any payment of dividend in respect of the preference shares of the company. The total china clay trade returns for the half-year to June 30, 1932, show a further decline, but the directors are pleased to again report that the finances of the company remain unimpaired, and that its share of existing trade is being more than maintained.

OIL OUTPUTS.

STEAUA ROMANA (BRITISH) LIMITED.—Production of the Steauna Romana Company, Bucharest, for the month of February was 80,394 tons. Production for the month of March was 88,677 tons. Production for the month of April was 89,930 tons. Production for the month of May was 91,182 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during March, 27,050 tons; oil purchased during March from other companies, 49,100 tons. Oil produced during April, 25,600 tons; oil purchased during April from other companies, 50,800 tons. Oil produced during May, 31,050 tons; oil purchased during May from other companies, 49,000 tons. Oil produced during June, 28,950 tons; oil purchased during June from other companies, 48,400 tons.

Commercial Reports.

MARKET SUMMARY.

The remarkable advance in the price of the leading primary products has proceeded further during the past week. Turnover was again on a large scale. In the United States, non-ferrous metals, including copper, lead, spelter and tin, have all been firmer. Cotton jumped ahead following the publication of a bullish crop report. Rubber was bought heavily at rising prices. Among cereals, wheat gained about 10 per cent., but other cereals, too, recorded advances. Coffee was slightly dearer, sugar rose on substantial buying, and cocoa advanced by about 4 per cent. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, were in sympathy with and therefore to international centres show a gold prices. Reports from various industrial centres show a seasonal decline in the activity of most industries. The coal trade is slack, and transactions in the iron and steel industry are few in number. The advance in the price of raw cotton has stimulated activity in Manchester, but wool and rayon manufacturers are less active.

THE COAL TRADE.

SHEFFIELD.—The customary holiday quietude is this year being accentuated by the prevailing depression. Production remains still at an abnormally low level. Export trade as a whole does not improve although there have lately been increased shipments to several Continental markets. Industrial demand is adversely affected by holiday stoppages in numerous trades and there are large stocks of small fuels on hand. The house coal market is dead. The export demand for furnace coke is a little better and prices are rather firmer at 9s. and 9s. 6d. at ovens. Best steams for export command 16s. f.o.b., and best house 20s. at pits.

GLASGOW.—A decline in weekly shipments reflects the quieter market conditions, and, despite the steady reduction of output, large coal is in plentiful supply. As a result of its slow movement, however, washed smalls are scarce, and although demand is only moderate, are commanding firmer prices. So far, business with Ireland has not been greatly affected by the 5s. tariff imposed on imports to the Irish Free State. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 14s. 9d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 9d.; steam, 13s.; trebles, 13s.; doubles, 11s. 6d.; singles, 10s.; pearls, 8s.; dross, 8s. 9d. FIFE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 3d.; trebles, 14s. 6d. to 15s. 6d.; doubles, 12s.; singles, 10s.; pearls, 7s. 9d. to 8s. LOTHIAN.—Prime steam, 11s. to 11s. 6d.; secondary steam, 10s. 6d.; trebles, 14s.; doubles, 11s. 6d.; singles, 9s. 6d.; pearls, 8s. 3d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 13s. to 13s. 3d.; doubles, 11s. 6d.; singles, 9s. 9d. to 10s.; pearls, 9s. 6d.; dross, 9s.

CARDIFF.—The most important development in the South Wales coalfield during the past week has been the formation of an association of all the principal groups of steam and bituminous colliery companies with a view to co-operative selling. Under Part 1 of the Coal Mines Act the sale of coal at prices lower than those specified in the minimum schedules is statutorily prohibited, but in spite of this condition there has been considerable competition, particularly in connection with c.i.f. contracts, and it is generally agreed that this internal under-bidding has resulted in the disposal of coal at prices lower than would have been the case under a centralised or co-ordinated sales system. The new association

does not create for South Wales a centralised sales agency for the steam and bituminous districts; the agreement reached does not interfere with the mining, financial or selling arrangements of the constituent companies, but it does aim definitely at the prevention of underselling as well as at combined efforts in the future marketing. The market otherwise has been featureless. The exports in July were the largest for any single month during the current year, but they were 13,500 tons less than those in the corresponding month last year. The depressed condition of the market for locomotive coals has been accentuated by the virtual embargo on shipments to the Irish Free State, and on Tuesday only two tips were working at the Newport docks. Anthracite coals continue very firm, but among steam qualities the only grades showing any strength are washed nuts, beans, peas and cobbles, and even in this case the firmness of the market is due mainly to the reduction in the outputs of the collieries under the quota scheme. Patent fuel is firm, and the volume of trade is better than it was at this period last year; pitwood prices are also a shade higher, but coke is featureless. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; French nuts, 40s. to 48s. 6d.; rubbly culm, 11s. to 11s. 6d.; foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 22s. 6d. to 24s.

NEWCASTLE-ON-TYNE.—For some time there has been a certain amount of evasion in the regulation of minimum prices in the Durham coking section, so this week the local committee agreed to bring unscreened down to the same minima as smalls. This is sixpence per ton less, which makes the price of prime coking unscreened or smalls 13s., ordinary classes 12s. 9d., and seconds 12s. 6d. f.o.b. The dispute in the mining industry of Belgium, where work has ceased at a number of mines, is having little effect upon the Durham and Northumberland position. There are ample supplies of all classes, and inquiry continues to be very limited. With the lack of homeward trade in the freight market, bunkering is quiet, and all classes of unscreened are offering at minimum values. To-day's f.o.b. prices for export are as follows: NORTHUMBERLAND.—D.C.B. screened steam, 13s. 6d.; smalls, 8s. 6d.; Howards Bentinck Newbiggin screened, 13s.; smalls, 8s.; Tyne prime large, 12s. 9d.; smalls, 9s.; Hartley Main, large, 12s. 6d.; smalls, 8s. DURHAM.—Lambton South Hetton screened steam, 15s.; smalls, 11s.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s.; coking unscreened or smalls, 12s. 6d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland pig iron remains very quiet, and there is not likely to be any change for the better until the holidays terminate at the end of the month. Next week all the consuming works in this district will be closed down, but it is expected that the few furnaces that are now in operation will be kept in blast, which will mean iron being put into stock while the stoppage of consumption lasts. The four furnaces at Skinningrove Works that have for some considerable time been producing Cleveland and basic iron were damped down last week-end, but they are expected to get into blast again at the end of a fortnight, when certain works alterations and additions are completed. There was only a small attendance at Tuesday's weekly market, and little business was transacted. Official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t., except in the case of Scotland, where substantial concessions are made on these figures. The demand for hematite does not expand, and purchases are confined to early requirements, which makers offer quite freely in mixed numbers at 61s., and have accepted slightly less in some cases. There are only three furnaces producing hematite in the district at the present time, but the two at Ayresome Works are expected to get into operation after the holidays. Whether the market will be able to absorb this extra production is doubtful, as trade does not show much prospect of expansion and there are large stocks at different works. Shipments of pig iron this month are only moderate. The quantity cleared to 9th instant is 2,762 tons, compared with 2,139 tons to same date in July. In the finished trades new orders of importance are scarce. Practically all the works will be closed down next week, and it is hoped that there will be a good accumulation of work for the restart. Steel prices for home under the rebate scheme are unchanged, viz.: Plates, 28 15s.; angles, 28 7s. 6d.; joists, 28 15s. per ton. Other manufactures are iron crown bars, 29 15s.; heavy steel rails, 28 10s.; 24-gauge galvanised corrugated sheets, 29 5s., and 24-gauge black sheets, 28, all for home consumption. The ore market continues almost idle. Best rubio is nominally 14s. 9d. c.i.f. for prompt, and the freight Bilbao-Middlesbrough is 4s. 6d. Coke is weak. Good blast-furnace qualities are now offered at 15s. delivered consumers' works, but there is a very limited demand. The number of furnaces in blast in the district is now 11.

SHEFFIELD.—The resumption after the holidays on Monday was only partial at the heavy steelworks and the stoppage is of longer duration than last year. The absence of numerous managers and proprietors on vacation is an adverse factor. The present position affords no clue to future developments, but owing to the exhaustion of stocks in every part of the world a substantial revival of buying in September is anticipated. Orders for tools are coming in more freely than for a long period. Several of these

have been captured from foreign sources owing to exchange advantages. The outlook for some classes of tools is more hopeful. Prices of iron and steel material, although easier, are not quotably lower. There is no life in the scrap market. Extreme stagnation obtains in plate and cutlery. Australia has extended its prohibition of the import of silver and electro-plated goods, with the exceptions of spoons, forks and cutlery.

GLASGOW.—In the West of Scotland there is little change in the situation this week. There is still much idle plant and an accumulation of stocks. There is a certain amount of steel required for the ship repair work which is being carried out in Clyde yards, and the requirements of structural engineers are being filled largely by supplies from local makers, but the market for heavy material is very limited. Users of semi have in most cases large stocks, and there is little demand for either home or foreign material. In the sheet trade, while local mills are not fully employed, bookings for export show some improvement, and inquiries for thin gauges are more numerous than they have been for some little time.

CARDIFF.—Owing to an increase in the volume of shipments, the stocks of tinplates at Swansea have been reduced to 130,235 boxes, compared with 193,378 boxes the previous week and 198,549 boxes in the corresponding week last year. Last week production was very considerably restricted by the holidays. Tinplate prices are ruling at between 15s. and 15s. 3d. per basis box, but the market has lacked animation. Welsh steel bars are quoted at 95s. per ton net, while foreign bars are ruling at delivered prices ranging from 80s. to 82s. per ton. Over 13,000 tons of foreign bars were imported into South Wales during July, and during the past week the rate of importation has been slightly higher.

OTHER METALS.

TIN.—The market in non-ferrous metals has again been active. Tin advanced further on speculative buying, and a large quantity of the metal changed hands. Sales on the London Metal Exchange totalled 1,000 tons on Monday, 875 tons on Tuesday, against 625 tons last week; and 1,750 tons on Wednesday, against 1,350 tons. In New York the metal was quoted at 22.85 cents per lb. on Wednesday, against 21.90 cents per lb. a week ago and 21.00 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £140 5s. to £140 10s. per ton, compares with £133 to £133 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,872 tons, show a decrease of 107 tons on the week.

COPPER.—The speculative demand for copper drove up prices in New York and in London during the past week. At the beginning of this week profit-taking was in evidence, but the advance in quotations was maintained. Sales at the London Metal Exchange totalled 1,600 tons on Monday, 2,350 tons on Tuesday, against 2,250 tons last week, and 1,400 tons on Wednesday, against 1,000 tons. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £29 1s. 3d. to £29 2s. 6d., compares with £27 7s. 6d. to £27 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 16,317 tons, show an increase of 563 tons, while stocks of rough copper, at 919 tons, remained unchanged.

LEAD.—After a substantial rise last week, lead opened easier on Monday under selling pressure. On Tuesday and Wednesday, however, the price rose again on a good demand met with reserve by sellers. Sales at the London Metal Exchange totalled 600 tons on Monday, 800 tons on Tuesday, as compared with 700 tons on the corresponding day last week, and 1,050 tons on Wednesday, against 600 tons. In New York the metal was quoted at 3.10 cents per lb. on Wednesday, against 2.95 cents a week ago and 2.70 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £10 12s. 6d. per ton for shipment during the current month, compares with £10 1s. 3d. on the corresponding day last week.

SPELTER.—The market in spelter was quieter on Monday, but on Tuesday and Wednesday substantial quantities changed hands at higher prices. Sales totalled 700 tons on Monday; 1,100 tons on Tuesday (against 700 tons last week), and 1,300 tons on Wednesday (against 400 tons). Wednesday's quotation in New York, at 2.80 cents per lb., compares with 2.70 cents a week ago and 2.55 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling, for "good ordinary brands," was £13 3s. 9d. for shipment during the current month, against £12 6s. 3d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and platinum have been maintained at £95 per ton and £9 15s. per ounce respectively. Nickel was sold at £240-£245 per ton, against £235-£240 per ton last week. Foreign antimony advanced from £22-£23 per ton to £22 10s.-£23 10s. per ton. Quicksilver declined from £10 10s. to £10 15s. per flask to £9 10s.-£9 15s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week 4th to 10th (inclusive) are 35,223 bales, of which 16,789 bales are American, 8,949 Peru, 104 Argentine, 3,743 Egyptian, 131 African, 4,758 East Indian, and 749 sundries.

Manchester.—The event of the week has been the rise in prices due to the bullish American crop estimate. All spinners and manufacturers have had to revise their quotations in an upward direction. Business has been very difficult, as the majority of buyers have not been willing to pay advances, but in certain quarters the hardening movement has stimulated activity. There

has been a considerable inquiry in piece goods for India, and some fair lines have been booked in dhooties for Calcutta and in light whites and prints for Karachi and Bombay. Demand for China has tended to improve, especially in fancy, and more contracts have been arranged in poplins for Shanghai and Hong Kong. In miscellaneous fabrics, increased support has been met with from several minor outlets, buyers being on the lookout for stock lots. Towards the close of the week, home trade buyers have displayed more interest in prices. Quotations in American and Egyptian yarns have been put up to meet the higher cost of the raw material, and although most buyers have not been prepared to pay the full advance, a rather better turnover has taken place, and spinners welcome the appreciation in the value of stocks.

THE WOOL TRADE.—Bradford.—Though the wool market presents a quiet appearance, writes our correspondent, the prospects for the maintenance of values are good. The prospective big supplies are not beyond the capacity of manufacturing machinery to absorb in a reasonable length of time. There is no big surplus of merino wool, either Australian or Cape, and inquiries forthcoming suggest that buyers in London will be quite ready for the offerings when the next series commences towards the end of this month. Shortly afterwards the first sale of the Australian season will be held, and a good demand is likely to arise. Cape merinos offered here have recently shown a definite improvement in value, and it looks as if all fine wool will be wanted. The figures published by Dalgety and Company, Ltd., relative to production and sales in Australia and New Zealand during the last season have shown what progress has been made since the early days of the industry. The average price of Australian wool during the past season was 8½d. per lb., and that of New Zealand wool 8½d. per lb. The position among topmakers and spinners shows no change, but prices for tops and yarns are quite firm. There has been some pressure on machinery in anticipation of holidays, and when these are over it is expected that the activity will be fully maintained.

AUSTRALIAN WOOL.—The National Council of Wool Selling Brokers of Australia, in a telegram to their London committee, give the following particulars of disposals and stocks of wool for the 1932-33 season for the month of July last. The figures for July, 1931, are shown for purposes of comparison:—

	July 1-31, 1932.	July 1-31, 1931.	Increase.
Bales.	Bales.	Bales.	Bales.
Received into store	104,522	76,301	+ 28,221
Sold	2,111	927	+ 1,184
Shipped from brokers' stores (un-offered and withdrawn)	5,632	565	+ 5,067
On hand	96,779	74,809	+ 21,970

In addition, 15,756 bales of wool carried over from the 1931-32 season have been disposed of in the period under review.

THE GRAIN MARKETS.

WHEAT.—Wheat prices have been driven up sharply by speculative buying, particularly in the United States. The advance forms part of the general upward movement of commodity values and security quotations, and is not due to any substantial improvement in the wheat situation. The August crop estimate of the Crop Reporting Board of the Bureau of Statistics of the United States Department of Agriculture was somewhat larger than expected. At 723,000,000 bushels, the estimate shows a decline of 14,000,000 bushels on the July estimate, and one of 169,000,000 bushels as compared with the actual yield of last year. The Canadian crop, too, has suffered deterioration, and private estimates, which vary between 400,000,000 bushels and 450,000,000 bushels, are considerably smaller than a month ago. The British crop has improved under the influence of favourable weather. On Wednesday, "September" futures were quoted at 55½ cents per bushel in Chicago, against 50½ cents on the corresponding day last week and 47½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 30s. 3d. per 496 lbs., as compared with 29s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 3d., against 27s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 9d., against 27s. 3d.; Australian, ex ship, 28s. 9d., against 28s. a week ago.

WHEAT FLOUR.—Although the demand for wheat, both in this country and on the Continent, has been on a small scale, quotations for flour were raised in sympathy with the advance in wheat prices. North American shipments, at 117,000 sacks, showed a decrease of 56,000 sacks, as compared with the previous week. Of this total, 24,000 sacks have been consigned to Europe. Quotations

in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 25s. last week; delivered London, 24s. 6d., against 24s. Manitoba patents, ex store, 25s. 6d. to 28s., against 25s. to 27s.; and Australian, ex store, 20s. to 21s., against 20s. to 21s. a week ago.

BARLEY.—Trading in barley has been quiet. Russia was the chief but reserved seller, while Danubian countries offered freely. On Wednesday, "October" futures were quoted at 35 cents per bushel in Winnipeg, against 32½ cents last week and 32½ cents a month ago. Quotations in London, Wednesday: "English feeding," i.o.r., per 448 lbs., 26s. to 27s., as compared with 27s. to 28s.; "River Plate," landed, 24s. 6d., against 24s. a week ago.

OATS.—Oats have been in better demand and quotations show a slight advance. "September" futures, which last week stood at 17½ cents per bushel in Chicago, sold at 17½ cents per bushel on Wednesday this week, against 19½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 3d. per 320 lbs., as compared with 17s. 9d. last week; "River Plate," ex ship, 17s. 3d., against 17s.; "Chilean White," landed, 24s. 6d. to 25s. 6d., against 23s. 6d. to 25s. a week ago.

MAIZE.—Maize continues to find willing buyers in Europe despite the slight advance in quotations. Wednesday's quotation in Chicago for "September" futures, at 31½ cents, shows a rise of ½ cent per lb. on last week, and one of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 9d. per 480 lbs., compared with 21s. 3d. last week; "Plate," ex ship, 20s. 6d., as against 20s.; "Plate," September-October, 20s. 9d., as against 20s. 3d. Yellow maize, ex wharf, was quoted at £6 per ton, against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

Aug. 3, 1929	40,833	4,743	10,109	12 0	9 11	9 5
Aug. 9, 1930	75,560	3,906	11,495	8 4	6 4	5 11
Aug. 8, 1931	21,284	1,156	4,314	6 6	6 9	6 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Aug. 12, 1931.	Jan. 4, 1932.	Aug. 3, 1932.	Aug. 10, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	56½	62½	58½	61½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	50½	55½	50½	55½

The visible supply of wheat in Canada, at 69,356,000 bushels, shows an increase on the week of 5,965,000 bushels. Supplies a year ago stood at 61,648,000 bushels.

OTHER FOODS.

SUGAR.—The market in raw sugar has been active and firm owing to substantial buying by trade interests. The turnover, both in New York and in London, was large. "September" futures in New York were quoted at 1.10 cents per lb. on Wednesday, against 1.02 cents per lb. a week ago, and 1.03 cents per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 6s. 7d. to 6s. 7½d. per cwt., against 6s. 3½d. to 6s. 4d., and "March, 1933," at 6s. 8½d. to 6s. 9½d., against 6s. 6½d. to 6s. 7d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	20	1,127	609	763	12,653	27,858
Liverpool ...	*	21,417	*	12,530	*	77,510
Total	20	22,544	609	13,293	12,653	105,368
Last week ...	6,529	20,823	8,575	15,100	86,594	96,117

* Last week's figures not available.

COFFEE.—The demand for coffee in New York has been steady and prices remained firm. On Wednesday, Rio No. 7 (cash) was

OVER ONE HUNDRED YEARS OF SERVICE.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ASSETS EXCEED - £15,600,000

FIRE. LIFE. ACCIDENT. MARINE.

Edinburgh: 35, St. Andrew Square.
London: 5, Walbrook, E.C.4. and 4, St. James's Street, S.W.1

quoted at 8½ cents per lb., against 8½ cents a week ago. A little more interest was shown by buyers at the public auctions in London, which were resumed on Tuesday. Last week's movements of coffee in London were as follows: Brazilian, landed, 384 bags; delivered for home consumption, 632 bags; exported, 137 bags; stocks, 19,419 bags, against 2,101 bags last year. Central American, landed, 1,658 packages; delivered for home consumption, 2,184 packages; exported, 1,649 packages; stocks, 103,858 packages, against 99,844 a year ago. Other kinds, landed, 954 packages; delivered for home consumption, 1,950 packages; exported, 1,205 packages; stocks, 74,301 packages, against 79,175 a year ago.

COCOA.—There was a further advance in the price of cocoa, both in London and New York, where sales reached substantial proportions. "September" futures were quoted at 4.51 cents per lb. in New York on Wednesday, against 4.33 cents per lb. a week ago and 4.14 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 28s. 6d. per cwt., c.i.f. Continent, shows a rise of 1s. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 1,376 bags; delivered for home consumption, 2,267 bags; exported, 67 bags; stocks, 151,431 bags, against 225,127 last year.

TEA.—Public auctions were resumed in London this week. The quantities catalogued for this week's auction comprised 45,049 packages of Indian, and 29,435 packages of Ceylon tea. The cheaper grades of the new season's Indian tea offered on Monday met with a good demand, but finer sorts were irregular. The Ceylon sales passed quietly on Tuesday. At Wednesday's Indian sales, demand was slow except for outstanding qualities, and substantial quantities were withdrawn.

RICE.—The market in rice was quiet, but forward quotations were slightly higher. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 8s. per cwt., show a rise of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 87 tons; delivered, 126 tons; stocks, 3,054 tons, as against 1,031 tons last year.

POTATOES.—Under the pressure of increasing supplies, prices gave way further at the principal markets. At the London Borough Market, "King Edward" was sold at 5s. 6d. to 6s. per cwt., against 7s. to 8s. per cwt. a week ago.

SPICES.—The pepper market was dull, and prices were easier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ½d. per lb. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 2 tons; stocks, 356 tons, against 566 tons last year. White, landed, 11 tons; delivered, 19 tons; stocks, 482 tons, against 517 tons a year ago.

MEAT.—The tendency of prices at the Smithfield market was irregular. British-grown beef and mutton were cheaper, but there was a sharp rise in the quotation for Argentine beef. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. 8d. to 5s. 2d. per 8 lbs., against 3s. 10d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 2s. 10d. as against 2s. 2d. to 2s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,970 tons, as compared with 6,560 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.6 per cent. of the supplies, as against 86.2 per cent. a year ago; and imported mutton, mainly New Zealand, formed 84.8 per cent. of the total supply, as against 81.4 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—The market has a much better tone and prices have shown a tendency to rise. Linseed is firm in sympathy with wheat, but demand here is small, although business to the Continent is reported. Substantial arrivals have reduced the quantity afloat to Europe to 210,300 tons, or 32,000 tons less than a week ago. Actual business in Plate, September loading, to Hull, has been done at £8 6s. 3d. Current values afloat and August shipment are £8 2s. 6d. and later positions up to £8 7s. 6d. Calcutta to London is quoted around £10 10s. Cottonseed remains firm and has further advanced. Old crop Egyptian for August loading has been done at £7 5s., but sellers are now asking £7 7s. 6d.; while for new crop £7 7s. 6d. is also quoted. Vegetable oils have a firmer feeling. Raw linseed oil is in good request and for August delivery ex Hull mill has advanced to £13 5s. and September-December to £13 10s. Cotton oil is firm and dearer in sympathy with seed, and crude Egyptian ex Hull is held for £23 and common edible for £25. Oilcakes and meals are firm and dearer, but demand continues disappointing.

HIDE, LEATHER AND ALLIED TRADES.—Sales of hides and skins from home-slaughtered cattle were resumed this week after an interval of a fortnight, and from the trend of prices it was realised that the market was firm to a slight upward tendency. The only alteration that occurred at the Manchester sales was an advance of ½d. per lb. in the price of second clear and first warbled

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

ox and heifers 50/59 lbs., and first clear heavy cows. Calfskins also were a slightly better market, the two top weights in both firsts and seconds making ½d. per lb. more money. Advances recorded at the Leeds sales held on the same day as those at Manchester were rather more numerous, several weights in ox and heifers and cows changing hands for more money, while here again two weights in calfskins sold for better prices. Quotations for sheepskins on average are unchanged. Since the resumption of business an improved tone has been noticeable in the foreign hide market, and although sales are not for large quantities regular business has been transacted of sufficient size to have a slight upward influence on values. South American wet-salted hides are now firmer in price, business having been done in Argentine ox at 3½d., while 4½d. has been paid for cows and 4½d. for Montevideo ox. Dry hides from the same origin are also quoted fractionally higher, 5½d. being asked for B. A. Americanos, 3½d. for B. A. Inservibles, and 6d. for M. V. Americanos. Most descriptions of African hides are firm in price, with dry Capes selling at 5½d. and 4½d. for firsts and seconds, and 5d. and 4d. for the same selections in dry salted. Mombasas are still quoted at 4½d. for heavies, but ½d. per lb. above this figure is being asked for unbathed Adis Abebas. Australian hides are steady with rather more inquiry about. Although sales of leather have not yet returned to pre-holiday dimensions there has been a fair demand this week for several lines, and from the amount of interest being taken in the market it appears that consumers are watching the trend very carefully. A fairly satisfactory trade has come to hand for English and wet-salted blends, but so far manufacturers of footwear have not resumed any extensive buying of dry hide stock. Offal also has inclined to drag with the exception of pinned shoulders, sales of which have been moderate. Small parcels of upper stock have changed hands, principally glacé kid and willow calf. Inquiry, however, is coming along for box calf and patent, and it is hoped that better business in regard to these latter will mature soon. Kip leathers are a limited sale and are generally confined to one or two particular lines.

RUBBER.—The market in rubber has again been active and prices rose further on substantial American buying. In New York, Wednesday's spot price for rubber, at 3½ cents per lb., shows a rise of ½ cent on the week. Wednesday's official closing price for

standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for April-June, 1933, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,471 tons; delivered, 671 tons; stocks at the end of last week, at 106,999 tons, show an increase of 800 tons as compared with the preceding week.

THE MONEY MARKET.

SUBSTANTIAL movements of funds occurred early this week. On Monday the final call, amounting to £93.0 millions, fell due upon the 3 per cent. Treasury bonds issued last May, but it is believed that in actual fact only just over £10.0 millions had to be paid up, the balance having been prepaid under discount. The same day the outstanding £64.6 millions of 4 per cent. 1931-33 Treasury bonds were redeemed, and this operation supplied the market with fresh funds, though probably the full amount did not

become available, as a portion of the bonds would have been held internally. Any increase in the supply of funds, however, was largely offset by the absence of Treasury bill maturities on Monday and Tuesday, owing to the fact that Whitsun fell three months before.

In the aggregate these movements made practically no impression upon the market. Renewals have remained at a steady $\frac{1}{2}$ per cent. during the whole week, while up to Wednesday afternoon new money commanded rates which were generally $\frac{1}{2}$ per cent., though at times lower. On Thursday the calling by the clearing bank of the day made money a little more usable, and $\frac{1}{2}$ per cent. became the commonest rate, though money was still obtainable in places at $\frac{1}{2}$ per cent. A rather less keen demand for Treasury bills was in evidence at last week's tender, and as the amount of bills offered was increased from £40.0 to £45.0 millions, the average rate rose from 9s. 11.05d. to 10s. 6.75d. per cent. September and October Treasury bills have been quoted at $\frac{7}{8}$ per cent. all the week, but while "hot" Treasuries were quoted at $\frac{1}{2}$ early in the week, by Thursday the rate had risen to $\frac{1}{2}$ per cent. in sympathy with the firmer tendency of money. Three months' bank bills are quoted at $\frac{1}{2}$ per cent., and the general rate on standstill bills is given as $\frac{1}{2}$ -2 per cent., though in one case standstills are reported to have been missed at $\frac{3}{4}$ per cent.

The only changes of note in the Bank return are a further contraction in the note circulation balanced by an almost equivalent increase in Bankers' Deposits. The note circulation has fallen by £4.8 millions to £366.0 millions, and is now back at its level of last July. This effectually disposes of the rumour that the payment of the War Loan Conversion bonus was causing mild inflation, especially as the latest floating debt statement shows that the Bank's Advance on Ways and Means has been repaid. Bankers' Deposits have increased by £4.4 millions to £89.8 millions. It is obvious that the operations that occurred at the beginning of the week cancelled each other out, and that all that has happened is that the banks have replenished their balances which were depleted by the withdrawal of currency by the public for use during the holidays.

Inquiries in the market show that cotton bills are now coming forward in greater number. When these bills were first drawn some time ago, it proved most profitable for them to be drawn in dollars and discounted in New York, the exchange being covered forward at the same time. This was because of the heavy discount then ruling upon forward dollars, for dollars could then be bought forward against the maturity of the bills at rates which were so cheap as to materialise the cost of discounting the bill. The discount upon forward dollars has now almost completely disappeared, while London discount rates are now just below those of New York. In consequence, renewals of these bills are now being drawn in sterling and discounted in London, in accordance with the usual practice. The significance of this change is that it means that the seasonal pressure upon sterling is now making itself felt.

The somewhat greater resistance displayed by sterling has given rise to suggestions that the pound is being

officially supported. Neither in London nor in Paris is there any direct evidence of substantial intervention on the part of the authorities. The balance of the Treasury's franc credit which matures next month must have been covered long ago, and so there is no need for special action in connection with its repayment. Again, it is probable that less European money is now going into Wall Street, and indeed a certain amount of profit-taking and repatriation of funds may already have taken place. So there is no reason to believe that sterling is in need of support.

Heavy gold movements are reported from New York this week. Imports include \$1.5 millions from China into San Francisco and \$1.5 millions from England. On Wednesday the shipment of \$6.0 millions to France was announced. It is in earmarkings upon foreign account, however, that the biggest changes have occurred, for on Monday a decrease of \$28.5 millions was reported, it is thought as part of the operations covering the maturity of P.L.M. Railway dollar bonds. Wednesday's gold shipment to France was more than offset by a release from earmark of \$9.0 millions, and altogether it is estimated that since the middle of June net imports of gold have amounted to \$32.0 millions and releases from earmark to \$72.0 millions, or a total net gain of \$106.0 millions. Money rates are unchanged. Call money is still 2 per cent. and 90-day bankers' acceptances $\frac{1}{2}$ - $\frac{1}{2}$ per cent.

The Foreign Exchange market was quiet, and turnover on the small side. Monday last was a general holiday on the Continent, and this contributed towards the general inactivity. Sterling was slightly easier on balance, but displayed considerable resistance to Continental and American profit-taking sales, and its psychological improvement on the published conversion results was quickly overcome in the face of somewhat heavy Continental selling. New York, after touching 3.49, closed at 3.47 $\frac{1}{2}$, compared with 3.40 $\frac{1}{2}$ last week. Canada eased off to 4.00. Paris was $\frac{1}{2}$ franc better than a week ago at 88 $\frac{1}{2}$, and Brussels improved to 25.03, as against 25.27. Milan was a quiet market, closing at 67 $\frac{1}{2}$. Amsterdam fluctuated in sympathy with other gold exchanges and closed 4 cents better at 8.63. Spanish pesetas were less erratic than during last week, but the depreciation consequent upon the attempted Monarchist revolution has not yet been recovered. The close was steady at 48 $\frac{1}{2}$. German reichsmarks were quiet at 14.60. Switzerland gained 11 cents on the week at 17.83, after being quoted at 17.90. Among the Scandinavian currencies, Stockholm and Oslo were steady, closing at 19.48 and 19.96 respectively, but Copenhagen further depreciated to 18.77. South American exchanges were nominal, Buenos Aires at 34 $\frac{1}{2}$ d., Rio at 5 $\frac{1}{2}$ d. Montevideo was unchanged at 29d. In the Far Eastern exchanges, rupees were steady at last week's level of 1s. 6 $\frac{1}{2}$ d., but Japanese yen were very weak, falling away to 1s. 4 $\frac{1}{2}$ d., with buyers scarce. In the forward market dollars were again slightly on offer, being $\frac{3}{4}$ cents discount for one month and $\frac{1}{2}$ cent for three. Paris forwards were slightly more offered at premiums of 1 and 3 centimes. Forward Belgas fluctuated without much business, and closed at 6 cents and 16 cents discount for the two periods. Forward guilders were less in demand, being quoted on a par with spot. Forward pesetas were more on offer at discounts of $\frac{1}{2}$ peseta and $\frac{3}{4}$ peseta. Silver reacted from last week's sudden rise in price, but closed above the lowest at 18 $\frac{1}{2}$ d. for spot, and 18 $\frac{1}{2}$ d. for forward positions. Chinese silver currencies were again dearer, Shanghai being 1s. 9 $\frac{1}{2}$ d. and Hong Kong 1s. 4 $\frac{1}{2}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bouverie Street, London, E.C.4.

A FINANCIAL TRIUMPH.

THE result of the Conversion operation which the Treasury announced on Monday night is more than a success—it is a triumph for the Government and the nation. It affords justification for boldness in leadership, and gives yet one more proof of the willingness of large sections of the British people to make a big effort, when the interest of the nation as a whole gravely requires it. From the public point of view the result is a new chapter in the story of patriotic co-operation, which began with the overwhelming return of the National Government and continued with the cheerful acquiescence in sacrifices and the conscientiously punctual discharge of increased tax liabilities. To the Chancellor of the Exchequer and his advisers—among whom must not be forgotten Lord Snowden, whose plans Mr Chamberlain inherited—goes full credit both for courage and for strategy. Confounded are the wiseacres who feared that by choosing a 3 $\frac{1}{2}$ per cent. basis—a yield level lower than that achieved by Government stocks at the time of the Conversion announcement—the Treasury was courting an almost certain failure. Nor is the merit of having chosen the psychological moment lessened by the criticisms of cynics who believe the Government to have been "very nearly too late." It is surely now a work of supererogation to shake dubious heads over the "might have beens." The triumph is there, staring us in the face.

The actual statistics announced by the Treasury are given on a later page. They reveal that of the £2,080 millions of 5 per cent. War Loan nearly 89 per cent. has actually been converted. Moreover, even that huge proportion will be increased substantially out of the holdings of those who have chosen not to apply for conversion but to let Conversion come automatically, and there will be smaller additions to the converted total from other directions. Clearly the amount remaining to be paid off will be so comparatively small that the Treasury can easily meet it by cheap re-financing, and the fear, prevalent in some foreign quarters, that the operation would drive the Treasury into inflationary courses has been definitely allayed. The prestige of British credit has been enhanced, and an inspiration has been given to other countries with debt-laden budgets to "go and do likewise."

Even this does not exhaust the significance of this gigantic financial operation. The voluntary acceptance of a substantial income sacrifice on so vast a sum of capital may well be the beginning of a world-wide recognition that a general lowering of interest rates, connoting an important alleviation of the burden of fixed charges, is an essential part of the financial and economic evolution necessary to recreate the conditions of returning prosperity. A successful chapter has been closed. But equally we are witnessing the opening of a new chapter of re-adjustment.

It is certainly as true of a nation, as of an individual, that the moment of triumph is always a suitable time for sober reflection, and usually also a time of danger. It is a human failing to take success, once achieved, for granted, and to rest on one's oars after a big effort. We trust, therefore, that those who rule our financial destinies will eschew the complacency of the successful and will give careful thought both to the conditions which have rendered success possible and to the further measures which it behoves them to take if the full future fruits of the Conversion operation are to be allowed to ripen for the benefit of the nation in general. To put it bluntly, a successful Conversion on this scale was only possible because times are bad, business at an exceptionally low ebb, and the demand for money stagnant. One might almost say that the Conversion result is explained by the existence of nearly three million unemployed. In the eternal working of the law of compensation, the times of distress make possible those re-adjustments which are essential precedents to the return of pros-

perity. The War Loan Conversion is an example of this truth. But even this gigantic re-adjustment, although a grand step in the right direction, will not of itself go very far towards curing the underlying conditions which rendered it feasible. But with this step taken, further steps become possible. It is something to have lightened the Budget directly by £23 millions and indirectly by further savings on short-term debt facilitated by the lowering of money rates, but this in itself is not sufficient to promise any substantial alleviation of the present tax burden. This saving must not be regarded as a substitute for wise economy, but as wise economy's complement. We are not, and have never been, advocates of indiscriminate and unselective root-and-branch economy. Nevertheless, we believe that over and above the question of disarmament, on the pursuit of which the efforts of the Cabinet must be redoubled, the national expenditure still affords a wide field for practical and constructive economy, and unless this field is relentlessly explored there will be little hope of the adequate tax relief which business requires or of the lightening of the burden which the individual has richly earned this year by his stupendous income-tax effort and his no less notable War Loan sacrifice.

Again, it is highly desirable that there should be as little delay as possible in allowing the benefits of the Conversion operation to be extended to British industry. During the progress of Conversion a ban on new issues was accepted as necessary, but it was generally hoped that as soon as Conversion had proved itself successful the ban would be lifted and the British borrower with current needs for refinancing or for new capital would be allowed at once to reap the benefit of the sound financial policy of the Government and the patriotic effort of the nation. Considerable misgiving has arisen in the City this week over rumours that the ban is to be maintained, or rather that the new capital market is to be opened only to prospective borrowers selected and favoured by the authorities. We hope that these rumours are untrue. A ban for a special period of emergency is one thing; a discriminating dictatorship of the capital market by the Treasury a very different and a very dangerous one. If the process of investment is to be consciously guided in the interests of the community (a hypothesis which itself raises far-reaching issues, a decision on which could be taken only after anxious and exhaustive consideration), then such guidance should come from a public Investment Board whose judgment would be based on economic merit and not upon political influence. It is difficult to believe that the Treasury really contemplates a selective dictatorship of the capital market. If it does not, then, in our view, it would be well advised to set at rest the rumours to which we have referred; for, if they are allowed to go unanswered, they will be commonly accepted as true. On the other hand, it is only fair to remember that the Chancellor of the Exchequer is abroad and that there may be reason to await his return before making any definite announcement.

In a few weeks we shall be commemorating the first anniversary of the great financial storm which swept upon this country in August and September, 1931. It may well seem to the historian to be incredible that one short year should have seen such giant strides towards the re-establishment of British credit and stability. With the success of the Conversion scheme, British credit is raised to the point of highest prestige which it has held since the outbreak of war. For this let us be duly grateful, but let us think of this striking turn of events not so much as an achievement as an opportunity. We have passed a definite and important stage upon our journey, but the point which we have reached should be regarded not as a goal, but as a hard-won jumping-off ground from which, under wise policy, Britain may move further along the road of progress.

THE INDIAN COMMUNAL AWARD.

ADDRESSING the Minorities Committee of the Round Table Conference last autumn, the Prime Minister expressed the fear that if the British Government, in the absence of agreement between the communities, had to arbitrate on the communal problem in India any award which it might make would probably fail to satisfy the desires of all the communities. It was with an understandable reluctance that the Government eventually agreed to undertake the rôle of arbitrator in an issue wherein nothing save agreement between the parties concerned could result in a generally acceptable solution; but since the Minorities Committee reached a complete deadlock the Prime Minister was constrained at the close of the second session of the Round Table Conference to announce that in the last resort, if disagreement on the communal problem should prove to be a stumbling block to constitutional advance, His Majesty's Government would themselves devise and apply a provisional scheme. By the middle of March last the Government was advised that the continued failure of the communities to reach any sort of accord was proving, as had been feared, an insurmountable obstacle to progress in constitution building; and a thankless but unavoidable task had accordingly to be faced. The award, which has been issued this week in the form of a White Paper,* has already had a hostile reception not only from the Hindus, but, to a less extent, from the Moslem communities. In a question so controversial and so confused an ideal solution embodying the unchallengeable principle of absolute justice was scarcely distinguishable by human vision. The Government are to be congratulated on finding a solution which, in our opinion, should not only provide a workable basis for the provincial legislatures, but should also appeal to all moderate-minded men as a sane and judicial settlement.

One major issue of principle—the question of the necessity for separate electorates—has been taken for granted by the Government; by common consent their continuance for the time being, however much they may conflict with conceptions of pure democracy, was essential. Thus, with the North-West Frontier Province already raised, as the Moslems desired, to the status of a Governor's Province, and with the separation of Sind from the Bombay Presidency already approved in principle, the problem which the Government had to decide was simply the question of the mathematical distribution of seats in the provincial legislatures among Hindus, Moslems, Sikhs, the Depressed Classes and other minority interests. In provinces where one community was obviously entitled to a clear majority of seats on a population basis the problem was comparatively simple. Thus, in the North-West Frontier Province the Moslems are to have 36 seats out of 50 and in Sind 34 seats out of 60, while in Madras, the United Provinces, Bihar and Orissa, the Central Provinces and Bombay (excluding Sind) the Hindus, who are to vote in so-called "general" constituencies, will have an assured predominance of seats. In these five Hindu provinces the Depressed Classes are to vote in a "general" constituency, but they will also have for the next twenty years a supplementary vote in special constituencies designed to give them effective representation in the legislature. For example, in Madras they are to have 18 and in the United Provinces 12 reserved seats.

The crux of the communal difficulties has always lain in the Punjab and Bengal. In the Punjab, where the Moslems represent just over half the population, their demand has been for an absolute majority in the legislature, while the situation has been complicated by the special position of the Sikhs, who are everywhere in a minority in the province but yet, in the words of the Government of India, are "a distinct and important people." Indeed, the Sikhs have gone so far as to claim one-third of the seats. The award provides that out of a total of 175 seats in the new legislature the Moslems are to have 86 seats, the Hindus 48, the Sikhs 32, and other minority interests 14. The last-named category

includes five reserved seats for land holders, four of which are to be filled from special constituencies with joint electorates. Thus the results in these four constituencies would in fact determine whether or not the Moslems have a clear majority in the Punjab, otherwise they could only carry legislation if they secured the co-operation of the nine members representing variously European, Anglo-Indians, Indian Christians, the Universities and Labour.

In Bengal, where the Moslems have also claimed an absolute majority on a population basis, the Moslems are to have 119 seats out of a total of 250, while the Hindus are to have 80 seats, from which a number still to be agreed will be reserved for the Depressed Classes. This would seem to place the Moslems in a strong position, but in this province the minority seats are to amount to no less than 51, of which 11 are to be European seats and 19 reserved for representatives of commerce, industry mining and planting, of whom 14 will probably be Europeans. Thus, unless the Moslem majority can attract the support of the Anglo-Indians (4), the Indian Christians (2), and the representatives of Labour (8), the Europeans will tend to hold the balance of power. Finally, in Assam, out of 108 seats, 48 are to go to the Hindus (including four reserved for the Depressed Classes) and 34 to the Moslems, while the balance of power will lie with nine representatives from backward areas and 11 representatives of commerce, industry, etc., of whom eight are likely to be Europeans. In short, the tale of ten provinces is to be made up by two predominantly Moslem, five predominantly Hindu, and five mixed provinces where the majority of the legislature will be dependent on the goodwill and co-operation of miscellaneous minority seats. In all provinces a number of special women's seats, divided proportionately between the various main communities, are provided.

Thus, with considerable ingenuity, the British Government has produced a scheme which provides India provisionally with an electoral system, open perhaps to criticism on the score of its complexity, but one which in all the circumstances is probably the best that can at present be devised. In any case, the Government has made it clear that, while they are not prepared to negotiate modifications of their scheme with individual communities, they are ready in the case of any province to substitute for their plan any alternative scheme that is generally agreed upon and put forward by all the communities concerned. In fact, the question whether the present settlement proves workable or not will depend less upon its intrinsic merits than on the capacity of India to develop a real will to make a constructive experiment in constitutional government within the limits of what is to-day practically realisable. Given reasonable tolerance and goodwill on the part of the leaders of the Hindu and Moslem communities, the Government's award gives a fair opportunity for the work of constitution making in India to go forward unobstructed in future by the bitter controversy of provincial electorates. It must, however, not be forgotten that the infinitely more difficult question of the distribution of seats in the Central Legislature still remains to be faced.

ROAD v. RAIL.

THE report of the Conference of representatives of railways and of commercial road interests, invited last April by the Minister of Transport to examine the rights and wrongs of the battle then raging between their respective services, represents, in its unanimity, a remarkable lying down of the lion with the lamb. If, after perusal of its findings, we are left with a certain doubt as to how the consumer will fare as a result of this truce, so admirably stage-managed by Sir Arthur Salter, this is not to say that, within certain limits, the Conference has not performed a commendable and useful piece of work.

The Conference, under its terms of reference, proceeded first to consider the principles which should govern the determination of the charges on commercial motor transport, and obtained complete agreement between the rail-

way representatives and their road competitors. The former asked no more than that road transport should pay its fair share of the cost of the roads used by it as "permanent way"—a contention accepted by the road representatives. On this basis the Conference proceeded to ascertain what proportion of the total expenditure of the road system should be regarded as chargeable to mechanically-propelled vehicles. It concluded that the factor represented by "community use"—i.e., by uses other than those of motor transport—might fairly be set off against the consideration that contemporary road users enjoyed a very substantial "legacy from the past," in respect both of the highway system existing before the motor era, and of subsequent heavy capital expenditure on the roads. The report suggests, therefore, that the total contribution payable by all classes of mechanically-propelled vehicles (whether in the form of licence duty or of petrol duty) should be equal to current expenditure on the roads, including future loan expenditure but excluding the service of past loans. An examination of figures for the last five years, after allowing for expenditure contributed directly to unemployment relief works, suggests that annual current road expenditure, including the cost of traffic police, may be put at a round figure of £60 millions.

In order to allocate this sum between the different classes of mechanically-propelled vehicles, the Conference devised a criterion based broadly on estimated ton-mileage, corrected by the factor of petrol consumption, coupled with an annual franchise charge for use of roads. The result was the conclusion that £23½ millions of annual taxation should be borne by commercial goods vehicles and £36½ millions by all other mechanically-propelled vehicles (private cars, motor-cycles, passenger coaches, buses, taxis, etc.). The charge of £23½ millions to be placed on mechanically-propelled commercial goods vehicles is about £2½ millions more than the present yield of licences and petrol duties from this class of road transport. The application of the Conference's "wear and tear" criterion, however, results in a recommendation that the licence duty on petrol-driven goods vehicles up to two tons unladen weight should remain substantially unaltered, but that there should be a large progressive increase in the duty on the heavier types of vehicles. Thus, a petrol-driven lorry of between 9 and 10 tons unladen weight, fitted with pneumatic tyres, is to pay a licence duty of £226 per annum as compared with the present duty of £48. Though the increase appears drastic, at first sight, the situation now existing is anomalous. When the present scale of duties was introduced it was not, apparently, contemplated that there would be any road vehicles weighing more than five tons unladen, and the maximum duty was reached at that point in the tonnage scale. As for goods vehicles using other forms of fuel than petrol and so escaping the petrol duties, considerably higher licence duties are recommended from beginning to end of the tonnage scale. Thus a Diesel-engined lorry of one ton with pneumatic tyres is to pay £27 against £15 and one of nine tons £332 against £48.

Having thus laid down what is believed to be a fair competitive basis, the report next deals with the question of regulation. It is proposed that road transport concerns should in future be divided into two categories—(a) public hauliers, who convey the goods of others, and (b) "ancillary users," who own motor goods vehicles for the conveyance of their raw materials or the distribution of their products, but carry only their own goods. The report recommends that both hauliers and "ancillary users" shall in future hold an operating licence, whose issue shall be conditional upon payment of reasonable wages and observance of proper conditions of service in respect of the driver, and upon an undertaking by the owner that the vehicles shall be maintained in a proper condition of fitness. It is suggested that the duty of ascertaining and publishing information regarding local standards of wages, etc., should fall on local licensing authorities. It is recommended that there shall be no restriction on the granting of a licence to an "ancillary user" subject to the fulfilment of the above conditions. In the case of a haulier, however, a licence shall be granted subject to the satisfaction of the licensing

authority that the grant will not be against the public interest, on a consideration of the following factors:—

- (1) Any excess in the existing transport facilities suitable to meet the public requirements to be served by the applicant; and
- (2) Any actual or prospective congestion or overloading of the roads.

There is to be a right of appeal from the decisions of the local licensing authorities, who are to act, generally, subject to directions from the Minister of Transport, advised by a permanent Central Advisory Committee of "appropriate composition." The licensing authority is to have the right of access to information as to rates charged by an applicant for a licence, while the Minister of Transport is to examine the question of the publicity and control of rates, in consultation with the Central Advisory Committee. The further recommendation is made that the Minister of Transport shall obtain powers to prohibit by regulation the transfer to the road of classes of traffic which are borne by rail, "and which, having regard to the character of the commodity and the distance together, are unsuitable for road haulage." There is no suggestion, however, that the road hauliers shall become "common carriers" in the legal sense. Though the report loosely refers in one place to "road and rail common carrier services," it is clear that the road hauliers, unlike the railways, are to remain free to pick and choose between traffics offered to them, outside the prohibited categories.

Having carried agreement thus far, the Conference turned its eyes to the more general problem of the ultimate relationship of road and rail goods transport—but only for a brief glance. The real long-range issues it stoutly refused to face. The report observes, very properly, that negative action by way of prohibition and exclusion should not determine division of function, except to a relatively limited extent, and that transport should divide itself, as between road and rail, according to the demand of those who require it, and the facilities offered. It assumes, in fact, a "deliberate effort of those engaged in road and rail transport to co-ordinate their services and give the public the full advantages of complementary service." In short, the Conference ended its work with an invitation to the parties concerned to get together for the common good on the fair competitive bases now proposed.

Here, as we see it, lies the weakness in what is in many ways an admirable report. The Conference's proposals with regard to the new scale of licence duties seem severe but sound. Though the Road Haulage Association's initial reactions to the report have been, not unnaturally, critical, the interests concerned will doubtless appreciate the force of the veiled threat, in paragraph 133 of the report, that if one part of the recommendations is rejected, the signatories will not necessarily remain agreed upon the remainder. Experience in the sphere of commercial passenger transport suggests, again, that the licensing system may, in certain circumstances, be used with unduly restrictive effect, and the Conference leaves the question of what would constitute "excess transport facilities," "prospective congestion" and traffic "unsuitable for road haulage" in a dangerously vague condition. There will, however, be general approval of the principle that some sort of order, particularly with regard to working hours, should be introduced into the present unregulated mass of predominantly "tramp" goods transport by road. What we look for in vain is any indication of policy such as to ensure that the development of the two branches of goods traffic continues in a way most conducive to the national interest. In what shape, in fact, did the Conference envisage the future? The report throws little or no light on the question. It deprecates the belief that the proposals would have the effect of greatly throwing traffic back from the road to the rail, but makes no positive proposals for greater road and rail collaboration.

If we may hazard a guess as to the probable course of development, we are inclined to think that this "burying of the hatchet" precludes extensions into the sphere of goods of the railway's invasion of the roads. The problem of acquiring financial control of services is, owing to the

* Cmd. 4147. H.M. Stationery Office. 2d.

multiplicity of ownership, much more complicated in the case of road goods transport than it was in the case of road passenger transport. We have little doubt, however, that, whether by acquisition of existing vehicles or by development of competitive services, the railways during the next few years will become an increasingly large factor on the roads, so far as certain categories of goods traffic are concerned. If their position became dominating, in regard to the great majority of their unorganised and, for the most part, poorly capitalised competitors, a far-reaching question might arise. Should co-ordination and development of goods transport by road, having regard to the interests of the community, be left predominantly to the railway companies, whose managements are bound to be largely influenced in their judgment by consideration of the great sums of capital invested in their permanent way, or should the State, acting through some form of public utility, undertake the task of co-ordination? We cannot share the complacent belief of the Conference that the freedom of the "ancillary user" to employ as many vehicles as he desires will remove all fear "that any form of semi-monopoly which may develop... will be against the public interest."

The question is one on which it would be premature to attempt, at this stage, to reach a final conclusion. At the moment we would merely suggest that though Sir Arthur Salter's Conference has laid down very fairly the lines on which the State should tax road goods vehicles and negatively regulate their operation, the public is still in need of guidance from an expert commission on the vital question of the most economic distribution of goods traffic as between road and rail. It is a question to which no *ex parte* answer can be satisfactory.

THE DIRECTION OF OVERSEAS TRADE.

THE Board of Trade figures showing the distribution of our overseas trade during the first half of this year show a further development of the tendencies to which we called attention in commenting on the corresponding figures for the March quarter, that is, a reduction in imports from Europe greatly in excess of the average reduction in all imports, coupled with a fairly evenly distributed decrease in exports. Total imports for the half-year, at £359,972,149, were 13.8 per cent. lower than in the first half of 1931; imports from European countries were 29 per cent. lower, those from foreign countries outside Europe 9 per cent. lower, and Empire imports increased by 3 per cent. Exports of British produce and manufactures amounted to £187,033,336, a reduction of 6 per cent. on the 1931 level, and the percentage declines in exports from Europe, foreign non-European countries and the Empire respectively were 7½, 8½ and 4.

Trade with European countries and their dependencies is shown in the table below:—

* Including dependencies.

The very heavy decline in imports from Europe, which was even more marked in the second quarter than during the first three months of the year, was very largely a reflection of the heavy import duties on manufactured goods, and, as will be seen from the table, if Russia and Denmark be excepted, the decline was most marked in the trade with the industrial countries; imports from France, Germany, Switzerland and Czechoslovakia, for example, were practically halved. The only countries from which we imported more than in the first half of 1931 were Finland, Norway, Greece and Roumania. Whereas during the first quarter exports to European countries showed less than the average decline, during the half-year as a whole they declined slightly more than the average, though less than exports to other foreign countries. Considering the steady tightening of the network of restrictions on imports into European countries, however, the European market is showing a degree of resistance which substantiates its claim to exceptional significance for this country. Among individual countries there were a few unimportant increases—Russia, Finland, Denmark and Roumania—and the declines were not spectacular, though reductions of £2 millions in our exports to France and £3 millions in those to Germany cannot be regarded with equanimity.

The next table shows our trade with non-European foreign countries:—

* Including dependencies.

Increases and decreases in imports seem to have been distributed impartially over the various parts of the world, though the decreases far outweighed the increases. Turkey, Egypt, Persia, Japan and Cuba sent us more goods than in the first half of 1931, China and the United States far less, while among Latin-American countries Mexico, Peru and Argentina increased their sales to us, and imports from Chile, Brazil and Uruguay were lower. Exports showed many small increases, including exports to the United States, Japan, China and Brazil, but these were far outweighed by the very heavy declines in our exports to Chile, Uruguay and the Argentine.

Trade with British countries, in consequence largely of political conditions, manifested definite changes, as the following table shows:—

TRADE WITH BRITISH COUNTRIES.
First Half Year.
(000's omitted.)

	Imports from				Exports to			
	1913.	1930.	1931.	1932.	1913.	1930.	1931.	1932.

Branches and Agencies throughout the East.

INTEREST ALLOWED ON DAILY CREDIT BALANCES.

Imports from British countries were 3 per cent. greater than in the corresponding period of 1931, but it is noteworthy that the first quarter of the year accounted for practically all this increase. During April-June, Empire imports were only fractionally higher than in 1931. The increase on the half-year is the net result of a number of increases and decreases, which reflect the political situation somewhat closely: declines of about £2 millions each in imports from the Irish Free State and from India and Ceylon were more than offset by increases of £2½, £1 and £4 millions respectively in imports from Australia, New Zealand and Canada. Exports to British countries were better maintained, relatively to other groups of exports, than in the past; small increases in sales to the Irish Free State, West Africa, India, the Straits Settlements, Australia and the West Indies partly offset the decline in exports to South Africa, New Zealand and Canada.

Our last table shows re-exports to the principal countries:—

* Including dependencies.

These have diminished all round, and their distribution shows no changes of particular significance.

The foregoing statistics make it very evident that the distribution of our overseas trade is still in a state of flux. The disturbing influences of tariff changes (our own and other people's), monetary conditions and uncertainties as to the future trend of international policy have for the time being brought about certain changes in the rate of flow along the various channels of our external commerce. To what extent these changes are likely to be permanent it is at present impossible to say.

THIS WORLD OF OURS.

STATISTICS are not every man's meat; but there are few who will not find an absorbing interest in some of the figures contained in the Statistical Year-book of the League of Nations.* The volume covers so wide a range of facts in various economic, social and demographic fields that it is impossible even to mention them all; but it will suffice to illustrate the fascinations of a world study by examining Table 2, which surveys the area and population of the world.

The figures there given, which are estimated as nearly as possible as at the last day of 1930, show that at last the world's population has exceeded the 2,000 million mark. Some ten years ago, the first attempt by the League Secretariat showed a figure of about 1,500 millions. But it must not be assumed that the difference between these figures represents the rate of growth in a decade, for in a number of cases the totals have been

* "Statistical Year-book of the League of Nations, 1931-32." Geneva, 1932. Authorised Agents in Great Britain: George Allen and Unwin, Ltd.

increased by closer estimation. Indeed, in a number of countries the censuses are still a matter of guesswork and the present totals are, therefore, only approximately true; but they give in outline an interesting figure picture of the world in which we live. If the men of old thought it a sin to number the people, a world census at least tells us who and what we humans are and how many mouths there are to be filled.

These two thousand millions of humanity divide into approximately equal quarters, viz.:—

The British Empire, with 496 millions;

Europe—excluding Great Britain, but including all Russia—with 490 millions, of whom one-third, i.e., 162 millions are Russians;

China and Japan, with 545 millions, including Korea and other Japanese dependencies;

Other countries, with 481 millions, of whom 124 millions are Americans, 120 millions live in Central and South America, 160 millions in Asiatic countries other than Russia, India and China and Japan, and 70 millions in African countries outside the British Empire.

These four quarters of the human race differ enormously in material wealth, and the year-book gives a great many statistics which could be used to illustrate this. But let us confine ourselves to Table 2. Taking these groups in order, the first outstanding feature is that India, with its 352 millions, accounts for nearly three-fourths of the population of the Empire; and, if the remainder of the countries predominantly inhabited by coloured people are grouped together and the census figures analysed a little more closely, the amazing fact emerges that only one-seventh (say, 72 millions) of the Empire population consists of white men, the bulk of whom (50 millions) live in the British Isles. This leaves 22 million white men to 424 million coloured folk in the rest of the Empire or one in twenty. But twenty millions of these are in Australasia and Canada—the white men's dominions—leaving two millions to govern, trade with, educate or attend to the spiritual or physical wants of 424 millions—a proportion of a half of one per cent.

Excluding Russia—of whose 161 millions 34 millions live in Asiatic Russia—the remaining 329 millions who inhabit Continental Europe are, roughly, divided as follows:—Latin races of Western Europe, 112 millions; Germany and Austria, 71 millions; nations of Central and South-Eastern Europe, 70 millions; Poland, Finland and the Baltic States, 41 millions; Scandinavia, Holland and Belgium, 28½ millions. Of the Sino-Japanese group 453 millions are in China and its dependencies, and 92 millions in Japan, Korea, etc. Finally, the last "Quarter" includes the most miscellaneous collection of peoples and races from the Dives among the nations in the United States to the Lazaruses in Africa and the Caribbean Sea.

But now let us turn to another and novel analysis suggested by the classification in Table 2. It certainly cannot be said that every nation that is not classed as a dependency or a mandated territory is politically "free"; but it is interesting to see to what extent the people of the world are "dependent" and in what continents. For the purposes of the following classification we return to geographical boundaries—that is to say Great Britain

reverts to Europe and Siberia to Asia. The Dominions—including India—are here shown in a separate column:—

POPULATION IN MILLIONS.

	Independent Countries.	British Dominions.	Dependencies, Protectorates, and Colonies.	Mandated Territories.
Europe...	501.6	3.0	0.3	0.8*
Asia.....	605.6	352.4	137.8	7.5
Africa ...	22.7	8.1	99.0	12.6
America..	236.1	10.6	4.8	...
Oceania	...	8.0	1.2	0.6
	1,366.0	382.1	243.1	21.5

* Sear territory administered by the League of Nations.

Thus, while the Mandate system devised after the war of tutelage of backward peoples by more advanced nations as "a trust for civilisation" is a mere frill affecting one per cent. of the world's population, some 12 per cent. of the world's population are in a condition of "dependency." Of these, Britain, France and Holland are responsible for about 60 millions each, Japan for 27½ millions, the United States for 14½ millions, Belgium 10 millions, Portugal 8½ millions, Italy 2½ millions and Spain—which once claimed to divide the dominion of the world with Portugal—one million. The picture, however, would look very different if India is included in the "dependent" group. The vastness of this political problem is evident from the fact that the population involved is nearly half as large again as that of all the other "dependent" peoples added together and raises the proportion of "dependency" to nearly one-third of the world's population. The transfer, moreover, reduces the population of the British Dominions to a paltry 80 millions and even this includes some eight millions or so of coloured folk.

Finally, let us look at the way the 132 million square kilometres of the world's land area are divided among these peoples. Taking the figures first in continental groups, we find that the density of population in the five continents varies as follows:—

	Area in million kilometres.	Population in millions.	Inhabitants per square kilometre.
Europe.....	11.4	505.7	44.3
Asia.....	41.9	1,103.3	26.3
Africa.....	30.0	142.4	4.7
America.....	40.7	251.5	6.2
Oceania.....	8.5	9.9	1.2
The World	132.5	2,012.8	15.2

Except in the case of Oceania, however (Australia has less than one person per square kilometre) the continental figures conceal big variations. Even in the case of America, density of population varies from one per square kilometre in Canada, two in Bolivia, and between four and five in the Argentine and Brazil to over eight in Mexico and 16½ in the United States. Similar differences exist in Africa, where density varies from less than one and a half in French Equatorial Africa and two in Angola and the Sudan to nearly 15 in Egypt and 28 in Nigeria. But it is in Europe and Asia that the high densities are to be found. In Asia the figures vary from a little more than two in Asiatic Russia to 41 in China, 74 in India and 169 in Japan; while in Europe the figures run from nine in Finland and Norway to 22 in European Russia, 76 in France, 138 in Italy, 137 in Germany, 185 in Great Britain, 288 in Holland and 270 in Belgium. Outside of Russia, the average density in Europe works out at about 70 per square kilometre. This is an area two-thirds as great as that of the United States but carrying three times the population.

Finally, reverting to the British Empire, the quarter of the world's population comprised within it occupies rather less than a quarter of the earth's surface (80 million square kilometres). But if India and Great Britain are excluded, its 90 million people occupy between them one-fifth of the world's land surface, while the 20 millions in the Dominions possess some 19 million square kilometres—or one-seventh of the territory of the globe. Here is indeed a grave responsibility to use for the general good so large a proportion of the natural resources of the earth.

How long the balance here shown will continue no one can foretell; but one simple fact concealed in a footnote serves to remind us that the problem of organising the world's future is not one of statistics but of dynamics; and that is that the population of Russia, which also occupies one-seventh of the world's surface has increased by 14 millions in four years—i.e., at a rate equal to the whole white population of the British Dominions every six years. There is still ample room in the immense territories of Asiatic Russia, but the British Dominions still remain the great empty spaces of the world.

Notes of the Week.

Last Days at Ottawa.—It is hard to find many "comfortable words" which may be spoken with truth of the closing stage of the Imperial Conference. Though the proceedings have continued in the same curious semi-secrecy—an absence of official *communiqués* compensated by many thousand cabled words of Press reports—it has been obvious that all idea of constructive Empire co-operation for the greater freedom and enlargement of trade has been submerged in bitter bargaining over formulæ designed to save the face of one Imperial statesman or another. Mr Bennett, it appears, was forced, last week-end, reluctantly to make some further concessions (their precise nature was not disclosed) by way of lower tariffs on certain British goods; and it was reported that he had agreed provisionally that the Canadian preferential tariff should be placed on a "compensatory" basis—in itself a highly questionable principle. In return, the British delegation was understood to have promised preferences on wheat, lumber and copper, with talk of quotas for meat. Up to Tuesday it was expected that an agreement on this basis might be reached in time to permit the final plenary session of the Conference to be held on Thursday; but difficulties were yet to emerge. The Australians, offered quotas on mutton, lamb and frozen beef, began at the last moment, it would seem, to demand restriction of British imports of "chilled" Argentine beef. Mr Bennett, assailed by his high tariffists for having given away too much, promptly raised the question of Russian "dumping," and pressed for an undertaking that Britain would prohibit, or curtail, imports of wheat and timber from the U.S.S.R. in the interests of the Canadian producers. We go to press before the final outcome of this trafficking in tariffs and quotas is known (indeed, it appears uncertain whether complete details are to be vouchsafed, lest "forestalling" ensue, even when the Conference ends). Whatever comes of Ottawa, it should be judged by the test whether the restrictions on the world's trade will have been increased or lessened. The essential objective of the Conference was to begin in the Empire the task of levelling the down tariffs all round to a reasonable maximum. The realisation of that principle would have been the only justification for an extension, for preferential purposes, of the scope of the British general tariff. For final judgment we must await such elucidation as comes from to-day's plenary session; but it is difficult to retain the hope that the Conference can end in anything but "failure" in the only intelligible sense of the word in this application.

Deadlock in Germany.—President von Hindenburg's uncompromising rejection of the Nazi leader's claim to the Chancellorship and absolute control of the Reich Government has, for the moment, settled one question in Germany: General von Schleicher and his associates are clearly in no mind to surrender tamely to Herr Hitler, or rather to the turbulent forces behind that demagogue's back. But, save for this one point, the obscurity of the German political situation, which our Berlin correspondent analyses on a later page, remains unrelieved. What is to happen when the Reichstag meets at the end of this month? The von Papen Government can count on a mere handful of votes. Will it adjourn or dissolve the Reichstag, and endeavour to rule as long as possible by emergency decree? Such a course, involving the further

straining of the Constitution by the President, would be beset with dangers. Alternatively, is there a possibility of a Nazi-Centre Coalition—a union between a Fascist party ready to make bonfires of a dozen constitutions, and a minority in whose eyes the Constitution is an absolutely essential safeguard? We cannot readily picture such a development. With the prospect of stale-mate in all directions, will the Nazis in the Reichstag tolerate, after all, the continuance of the von Papen Government? Possibly; but hardly unconditionally. And the desire to retain such conditional support might easily lead the Government economically in strange directions whither the President of the Reichsbank, to say nothing of the Finance Minister, might well decline to march. Rarely in history can a great country have been placed in such political confusion or so near to a "steep place."

President Hoover's Platform.—It is abundantly clear that in the coming contest for the Presidency of the United States, the major issue, barring unforeseen developments, will be, not war debts nor any other aspect of foreign policy, but the burning question whether American citizens are again to be permitted to consume liquor, and, if so, under what conditions. The Democratic Party Convention went "soaking wet"; the Republican Convention was less definite. Mr Hoover, in his address announcing his acceptance of the Republican nomination and declaring his general policy, has trimmed his sails with what we suspect to be good judgment of the wind. The Eighteenth Amendment had resulted in degeneration and crime in areas where majority sentiment was unfavourable to Prohibition; on the other hand, the old notorious "saloon," with its political and social corruption must never be brought back to life. Subject to the continuance of a Federal veto on "saloons," each State should have the right to handle the liquor problem in its own way. Whether Local Option is suitable for application to the United States we do not presume to say; but Mr Hoover has made an ingenious attempt to suit the book of as many interests as possible. In the predominantly "wet" States the thirsty will have their liquor somewhat cheaper than hitherto. In the "dry" States there will still be a terrain for the bootlegging and hi-jacking industries. In both, the Prohibitionists are still left scope for plenty of fun with their propaganda. Everybody should therefore be pleased; and this, after all, is the main thing in an election address. Its other, and more sonorous sections, in the light of their context need not, we hope, be taken too seriously. Otherwise they would be a poor augury for the world's economic future; for Mr Hoover declares that he is "squarely for a protective tariff," and that the war debts "must not be cancelled or the burdens transferred to our people." The President's suggestion that the European debtors could dispose of the debt problem by economising on armaments is a little naïve, and would appear to betray a disquieting inability to appreciate the effects of the process of transfer; but it is something at any rate that he should have left himself a convenient loophole. If, he said, for any particular annual payment there were offered some other tangible forms of compensation, such as an expansion of markets for American products and the restoration of American prosperity, then such a proposition would be considered. The proviso could doubtless be stretched to cover a good deal of writing off; but in any event Mr Hoover is talking with an eye not to Europe but to the American voters. Outsiders would probably be well advised not to intrude on that political *tête-à-tête*, or pay undue attention to the observations on the world at large which are primarily intended for home consumption.

Reds and Whites in the Free State.—Vague rumours of the reopening, via Ottawa, of Anglo-Irish peace *pour-parlers* has so far, unhappily, lacked confirmation. On the other hand, there appears to be little room for doubt that, in the Irish Free State itself, developments economic and political are taking an increasingly ugly turn. Mr De Valera is probably content to have a good excuse in the British retaliatory tariff for pursuing his

dream of a self-sufficient Ireland; but whether fate will permit him to walk peacefully along the Sinn Féin economic path is another matter. While the I.R.A. seem to be drilling with less and less concealment, the arena of potential conflict has now seen the incursion of a new organisation, the Army Comrades' Association, under the leadership of Mr O'Higgins. This White Guard, drawn from the ranks of property owners "with a stake in the country," is doubtless intended to make good the Government's weakness in dealing with the Republican Irregulars, but it remains to be seen whether its emergence (it is reported to be attracting strong support) may not precipitate, rather than restrain, armed violence. There are disquieting accounts, too, of the subterranean activities of the would-be architects of a Workers' Republic; in short, Southern Ireland seems to be well on the way towards becoming a battlefield for Red, White and Green forces manœuvring round a small regular force whose allegiance to the present Government is probably not unconditional. We wish Ireland well, and we have held throughout that the British Government has assumed a terrible responsibility in provoking these troubles by its attitude over the annuity arbitration; but, the facts being as they are, Mr De Valera bears an ominous resemblance historically to M. Kerensky.

Baltic Relations.—Two developments fall to be recorded of some possible importance in their future bearing on relationships in the more troubled Baltic centres. The Permanent Court of International Justice has given its decision in the Memel v. Lithuania dispute. It has ruled that Herr Böttcher, the late President of the Directory, did, in fact, violate the Statute of Memel by negotiating in Berlin about the foreign relations of Memelland (are pigs a "foreign relation," or did Herr Böttcher talk of more than pigs?), and that his dismissal and the appointment of a new President by the Lithuanian Governor was in order. Where the Governor erred was in dissolving the Diet on the advice of the new President before his Directorate had received a vote of confidence from the Diet. We should require to have much fuller details of the judgment and, still more, of the evidence before being satisfied that this award is unassailable in the eyes of abstract justice, but it should perhaps serve to keep some sort of tolerable *modus vivendi* going in Memelland. Much more important, and of clearer good augury, is the news that the increasingly strained relations between Poland and Danzig have been relieved by a settlement on two, at least, of the many points of dispute between them. A protocol signed on Friday of last week regulates, in a manner favourable to Poland, the entry of Polish warships into Danzig harbour; while in a second protocol it is agreed that the Polish Government will try to influence the Poles to discontinue the economic boycott of Danzig, if the Free City on its part discountenances attacks on Polish citizens within its confines. How sincerely meant all this may be remains to be seen; but it looks like a glimmer of returning sanity and human decency in an embittered quarter.

Empire Monetary Policy.—The Committee of the Ottawa Conference set up to consider Monetary and Financial Questions had the distinction, last week-end, of being the first committee to issue its report, but it has not carried things much further. The report is, in general, a vague and innocuous document, and the absence of any signs of inclination to champion bi-metallism or other popular currency *nostra* need cause no regrets; but there are a number of big questions left unanswered. The Committee consider a rise in the world level of wholesale prices to be desirable and to demand international action, in which the various Empire Governments are ready to co-operate. Failing, however, a rise in gold prices, there are "limitations on what can be done for sterling." Cheap short-term money can be continued? Certainly; and its influence should be valuable. All members of the Commonwealth should follow the recent policy of the London authorities so far as lies in their power. At the same time (this, presumably, with an eye to the Anti-

podes), "favourable monetary conditions must be achieved, not by the inflationary creation of additional means of payment to finance public expenditure, but by an orderly monetary policy"—not excluding deflationary contraction of any violent speculative up-swing. Nor should it be forgotten that some of the obstacles to trade expansion are non-monetary in character (was it impossible, at Ottawa, to say "high tariffs"?), while another difficulty is instability of exchange rates. As a remedy for the last-named evil a satisfactory international monetary standard would be very welcome, but the task of defining "satisfactory" is remitted to the World Economic Conference. In any case, the Committee consider that conditions precedent to the re-establishment of any international standard are:—

(i) A rise of prices to a level "more in keeping" with the level of costs, including fixed charges.

(ii) The adjustment of the factors, political, economic and financial, which "crashed" the gold-standard.

Meanwhile, the Report observes that the British Exchange Equalisation Account is designed to minimise fluctuations of sterling against gold. As for fluctuations between various Empire currencies and sterling (or each other)—and this surely was the primary business of the Committee—all that the Committee can put forward is the suggestion that the task of preserving stability (e.g., in the London-Australia-New Zealand triangle) would be easier if prices were higher. Exactly; but while we are glad that the British delegation in advance of the World Conference, is not committed to any inconvenient or patently unsound pledges, we cannot feel that this string of platitudes was particularly worth while putting together. The Report, in fact, as published, is at once harmless, unhelpful and unimportant. We wish we could say the same of Mr. Chamberlain's opening speech before the Committee, a summary of which appears to have been published in the Canadian Press. According to cabled extracts received in London, the Chancellor seems to have advocated, as a durable method of ensuring price stability, a system not merely of import quotas, but of output quotas to be applied to the production of the world's staple goods. We cannot imagine any conception better calculated both to injure Great Britain, by riveting upon her ring upon ring of uneconomic prices, and to arrest entirely, in one vast, complicated rigidity, the world's whole future economic development. If this really be the considered policy of the Government, it is a very serious matter.

A Lancashire Crisis.—Our Manchester correspondent writes:—The move to reduce wages of the operatives in the Lancashire cotton industry has now spread from the manufacturing section to the spinning branch. Both sides, however, are acting separately, but this does not necessarily mean that the employers will not join hands before the dispute is finally settled. With regard to the manufacturing section, the Northern Counties Textile Trades Federation, which represents the trade unions involved, decided at a meeting on Monday that if there was no change in the situation notices would be posted on Saturday, August 20th, withdrawing all labour from the mills on the following Saturday, August 27th. This move permitted eleven days' grace and hope is not entirely lost that the employers and the operatives will eventually be drawn together again in joint negotiations. The situation in Lancashire, however, is daily becoming more grave. The strike at Burnley continues, and strikes are also taking place in Preston, Bolton, Haslingden and Fails-worth. These stoppages are actually against the advice of the trade union leaders, for the Textile Federation by its decision on Monday will not withdraw labour until August 27th. Statements made during the present week by responsible leaders of the Cotton Spinners' and Manufacturers' Association do not increase hopes of an early resumption of negotiations. The joint conferences broke down not on the wages issue—this point was practically agreed upon—but on the question of the reinstatement of discharged operatives, and Mr John Grey, the chairman of the Cotton Spinners' and Manufacturers' Association, stated only on Wednesday that the employers would not consider the question of reinstatement nor would they

accept outside intervention. On this point it was reported in Manchester that Mr Ramsay MacDonald, the Prime Minister, contemplated making an appeal to both sides to "get together." At the time of writing, however, no official communication to this effect had been received at the headquarters of the employers' organisation. The general position is becoming more chaotic, but the real crisis will not arise until a few days before the strike notices lapse. With regard to the spinning section, the General Committee of the Federation of Master Cotton Spinners' Associations at a meeting in Manchester on Tuesday decided to give one month's notice to all operatives reducing wages by 25 per cent. off the lists, equal to a cut of 2s. 9d. in the £. At the same time, the representatives of the trade unions were invited to attend a joint meeting to discuss the claim. This meeting will probably be held next week. When the present wages issue is settled the Master Spinners' Federation will then seek to revise the present agreements in force with the operatives to alter certain anomalies regarding working conditions and wage reductions. Altogether roughly 850,000 workpeople are affected by the present wages move.

New Brooms in Roumania.—The absence of Dr. Iuliu Maniu from a National Peasant Party administration in office at Bucharest is a remarkable omission; but so matters have been arranged. The new Cabinet in Roumania includes such National Peasant leaders as M. Madgearu and M. Mihalache, who both stood out of the recent provisional Government, pending the elections; but it is headed by Dr. Vaida Volvod once more. Dr Maniu, as in 1919, remains in the background, though he is understood to have assured Dr. Volvod of his unconditional support. The motives behind Dr. Maniu's tactics are obscure; but we are inclined to suspect that of two possible reasons—desire to be in a position to act as independent *liaison* between Throne and Parliament, and unwillingness to assume, save in the last resort, the responsibility for getting Roumania out of a horrible mess—the latter is probably the more cogent. Roumania is likely to need all the good advice which the League's experts can give it.

Imperial Standardisation.—A correspondent writes:—Among the less spectacular but none the less important matters which have been discussed by the Imperial Economic Conference is the advancement of industrial standardisation within the British Empire. It may be recalled that during the 1930 Imperial Conference an expert conference on standardisation was held simultaneously, its resolutions being accepted by the main Conference, and that since then the scope of the former British Engineering Standards Association has been enlarged to include chemicals, textiles and building materials, and its title changed to the British Standards Institution, while contact has been established with similar organisations in the Dominions and directly with overseas purchasers. At Ottawa a sub-committee on industrial standardisation was appointed under the committee on methods of economic co-operation, and held a number of meetings at which representatives from every participating country were present. The sub-committee had conferences with trade representatives regarding commercial standards and practices in the steel, chemical and lumber industries, and also discussed with interested parties the question of agricultural standards in the matter of wood and other containers, as well as interchangeability of wearing parts or components of agricultural machinery. Apart from these direct contacts, progress was made towards the foundation of institutes of standards in those parts of the Empire where none already exists, including Canada, and it is legitimate to hope that before long the British Institution will have sister organisations in every Dominion. The sub-committee urged the Governments concerned to take an active and possibly a financial interest in the work of these institutions while leaving them to conduct their affairs under the initiative and control of industry itself. The report also recommended the establishment of a

central committee in London to link up and supervise the work of the different national organisations throughout the Empire. Evidence was forthcoming that Dominion interests were anxious to buy British material in preference to foreign, despite a disadvantage of price, on account of its better quality, but have been deflected from that intention by their inability to rely on standard specifications, especially as concerns repeat orders, while on the other hand instances have been cited of the loss of orders by British tenderers through arbitrary and un-notified variation of specifications in the requirements of Dominion importers. If the result of the efforts of the sub-committee at Ottawa is to mitigate these troubles it may prove to have done as much as any other part of the Conference to further trade within the Empire and to improve the efficiency of British manufacturers everywhere.

The Rayon Position.—A correspondent writes:—After the brisk buying movement in the closing months of 1931 and the early months of the current year, when following the change-over from the gold standard rayon production and consumption reached record levels, the industry is passing through a quiet period. Actually consumption is still at a high level compared with previous years, and good progress is expected for the autumn. Stocks have tended to increase during the past few months and there has been a certain amount of "weak selling." The position is not, however, regarded as serious, and if the producing companies can give consumers grounds for expecting price stability, considerable forward buying may be expected in the immediate future. Perhaps the most interesting feature of the past twelve months has been the way in which yarn producers, great and small, have tackled the problem of reducing costs of production to bring them into line with the low level of selling prices. Speeds in the spinning department have been increased, the number of workers reduced; and new processes introduced which enable more direct processing to be adopted. On the viscose side much more "continuous working" is taking place than formerly. Some of the small producers, while still finding the price level very low, have done considerably better owing to more efficient working and a larger turnover. The leading company has doubtless done relatively well in the home market and has probably a larger share of the total business than at any time since the flood of new companies poured their production on to the market. The American plant, however, has had a very difficult time during the current year and there has been large-scale curtailment of production to meet the difficulty of heavy stocks. As far as British consumption is concerned the outlook is giving rise to considerable optimism. The rapidly improving quality of British rayon fabrics and garments is leading to a much more general use of the fibre. Since the change-over from the gold standard many types of rayon goods, which were previously obtained on the Continent, are now manufactured in this country. The new additional duties on rayon products have little effect except in the case of stockings and knitted goods. In the case of cheap Continental hose and underwear, the new duties based on weight work out very formidable. Rayon is becoming more and more of a utility fibre, and parallel with this its intrinsic charm, which has always been a strong selling factor, continues to improve. The new process for rendering rayon fabrics uncreasable is likely to prove important for the dress goods and lingerie trade. It is, however, only applicable to viscose and cuprammonium rayon, and cloths derived from cellulose acetate cannot be treated with the new process.

The 1930 Census of Production.—Volume XVII of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the textile finishing, canvas goods, coir fibre, asbestos and packing trades. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms),

YOUR WILL

is drawn to your requirements—why not also your Insurance contract?

The new "SAFEGUARD" Policy can be adapted to every need and GUARANTEES your dependants an INCOME of 15%—£3 per week free of Income Tax from every £1,000 Assured, in the event of your death.

Write for particulars to the
LEGAL & GENERAL ASSURANCE SOCIETY LTD.
10 Fleet Street, London, E.C.4
Established 1836. Assets Exceed £25,000,000
General Manager: W. A. WORKMAN

and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Textile finishing	Thous. £ 41,357	Thous. £ 28,633	Thous. £ 27,058	Thous. £ 18,133	£ 250	£ 185
Canvas goods and sacks	6,906	4,428	1,757	1,186	202	167
Coir fibre, horse hair and feathers	2,225	1,643	874	655	193	186
Engine and boiler packings and asbestos	3,681	3,787	2,044	1,869	322	262
Packing	3,008	1,458	1,605	819	215	160

The returns for 1930 reveal a setback in the net value of the output in each of this miscellaneous group of industries. In the textile finishing trade, the quantity of cotton yarns bleached and dyed declined from 178,563,000 lbs. in 1924 to 128,829,000 lbs. in 1930. Similarly, woollen and worsted yarns, bleached and dyed, decreased from 27,426,000 lbs. to 18,957,000 lbs., and linen yarns, at 20,089,000 lbs., show a decline of 6,259,000 lbs. The quantity of woollen and worsted piece-goods, including flannels and delaines treated in 1930, shows a decrease of 17 per cent., and the square yardage of cotton piece-goods declined by 35 per cent. On the other hand, the square yardage of rayon piece-goods treated increased from 48,960,000 to 178,231,000 between the two census years. The results for the canvas goods and sack trade show an increase in the number of sacks made from 7,052,000 dozen to 8,617,000 dozen. The decline in the total value of the output of this industry is due mainly to a fall of 55 per cent. in the value of repaired second-hand sacks and bags. The output of asbestos manufacturers advanced from 68,760 tons to 93,140 tons, but the net value of the engine boiler packings and asbestos trade fell from £2,044,000 to £1,869,000. The heavy decline in the value of the output of the packing trade may be ascribed to the falling-off in the export of cotton piece-goods.

Iron and Steel Production.—Holiday influences, accentuating the general depression, are reflected in the figures of production of pig iron and steel for July recently issued by the National Federation of Iron and Steel manufacturers. The number of blast furnaces in operation at the end of the month (56) is 13 less than at the end of the previous month and fewer than at any time since the coal stoppage of 1926; it is understood, however, that eight of these are only temporarily "damped down." Production of pig iron amounted to 292,600 tons, compared with 311,400 tons for the previous month, and 317,000 tons a year ago, while steel production amounted to 430,300 tons, compared with 459,300 tons in June and 428,700 tons a year ago. Imports of iron and steel, which in June were lower than in any month since 1923, still further declined in July to 118,700 tons. The item chiefly responsible for the decline of 7,400 tons was sheet and tinplate bars, which declined from 34,700 tons to 24,300 tons; imports of pig iron declined from 11,500 tons to 7,700 tons. Exports of iron and steel increased slightly to 158,200 tons, and for the fifth month in succession were in excess of the imports. The increase was almost wholly due to increased exports to Russia, for the returns show an increase in the exports of plates from 3,900 tons to 19,600 tons and of hoops and strips from 4,600 tons to 9,200 tons, the bulk of which were for Russia. On the

other hand exports of pig iron declined from 12,700 tons in June to 5,000 tons in July, which is the lowest figure since the coal stoppage of 1926. Iron and steel prices remained steady throughout the month, the Board of Trade price index standing at 102.8 for July (1913=100), compared with 102.9 for June and 108.0 a year earlier. It was expected that the strike in the Belgian coal mines, caused by the continued wage reductions, would have led to an increase in Belgian prices, but the Belgian manufacturers realised that, with iron and steel in such low demand, any attempt to raise prices would only lead to business being lost to France and Luxemburg. Continental prices therefore fluctuated slightly during the month, and any depreciation in sterling is promptly discounted by a further decline in gold prices f.o.b. Antwerp. In the Belgian coal industry wage reductions took place on six occasions between July 6, 1930, and March 20, 1932, inclusive, five of which were of five per cent. each and one of four per cent. In iron and steel wages were reduced on seven occasions commencing with December 1, 1930, the cumulative effect being that wages are now eighteen per cent. less than in October, 1929.

The Growth of Middlesex.—In view of the construction of new tube railways, the extended use of the motor car, and the general desire of many Londoners to move out of the centre of town into the outer ring, where better living conditions are available, it is not surprising that the population of Middlesex should have greatly increased between the census of 1921 and 1931. Even so, the actual increase in the county's population by 385,726, or 30.8 per cent., during these ten years is so great that it will come as a surprise to many. The truth is that for all practical purposes Middlesex is now a part of London; to-day only two rural districts are left in the county, and the remainder in fact as well as in name is now definitely urban. Naturally the increase is most marked in those parts of the county where the new tubes have been built. Following the extension of the Hampstead tube from Golders Green to Edgware, the population of Hendon has doubled, while that of the adjacent district of Kingsbury has increased from 1,856 to 16,636; but increases of over 10,000 were registered by most of the dormitory areas such as Ealing, Edmonton, Finchley, Southgate, Tottenham, Wembley and Willesden, and also by the more remote district of Uxbridge. The growth in the population of Middlesex is by no means at an end, for the extension of the Piccadilly tube to Cockfosters in the north and its linking up with the District Railway in the west will undoubtedly bring a fresh influx of population into those parts of the county. Some may feel that it is now anomalous for Middlesex to exist as a separate county and that the time is becoming ripe for London to extend its boundaries so as to embrace all those whose business interests lie in town, and also so as to merge together the different boundaries that now exist for administrative, postal and police purposes. Force is also added to this argument by the fact that considerations of space have driven the London County Council to carry out its housing schemes beyond its boundaries, with the result that certain administrative complications, with the need for delicate negotiation, have from time to time arisen. There are, however, other important considerations. One is the obvious danger that the London County Council might become too unwieldy a body, entrusted with duties exceeding its capacity. Another is that, notwithstanding the attractions of London, Middlesex and its constituent towns still possess a certain local patriotism which it would be a pity to impair. Finally, any attempt at the extension of London would raise such thorny questions regarding rates and the burden of local expenditure that there is much to be said for leaving well alone, at least for the present.

A Canadian Banking Centenary.—Last week the Bank of Nova Scotia celebrated its centenary, for on August 10, 1832, the Halifax Banking Company was founded by a group of business men as a protest against the banking monopoly then existing in Halifax. For a time the new

bank made but slow progress, but in 1876 Thomas Fyshe became cashier (i.e., the chief executive officer), and under his control, which lasted for twenty-five years, the bank extended until it owned 37 branches in Canada. In 1901 it moved its head office from Halifax to Toronto. The next great period of expansion came in 1910-25 under the ægis of Mr Richardson, for during these years it absorbed successively the Bank of New Brunswick, the Metropolitan Bank, and the Bank of Ottawa. Meanwhile it had extended its activities beyond Canada. In 1894, following the Newfoundland banking crisis, it established itself in that Dominion, and it also operates many branches in the West Indies, and is one of the note-issuing banks of Jamaica. To-day it is one of the chief Canadian banks, with an office in London and several offices in the United States. Its deposits exceed \$200,000,000, and alone among the Canadian banks it has a reserve fund of twice its paid-up capital. The Canadian banking world has fittingly marked the bank's centenary by electing its general manager, Mr J. A. M'Leod, to the Presidency for the year of the Canadian Bankers' Association.

The Cost of Living in July.—According to the latest figure issued by the Ministry of Labour, there was a fall in the cost of living during July. On August 2nd the Ministry's index number stood at 41 per cent. above the level of July, 1914, as compared with 43 per cent. on July 1st and 45 per cent. a year ago. For food alone the corresponding indices were 28, 25 and 28 per cent. respectively. The decline during July is mainly accounted for by a seasonal reduction in the price of potatoes.

Overseas Correspondence.

FRANCE.

International Politics — Prices — Production — Money.
(FROM OUR CORRESPONDENT.)

PARIS, August 17.

FRENCH opinion now appears to be less disturbed by possible untoward developments in Germany than by the line of policy to which Mr Hoover appears to be binding himself under Presidential election pressure. So far as Germany is concerned, the advent to power of the war party leaders, and the apparent partial suppression of Hitler and his somewhat incomprehensible programme, has been received almost with relief, as having to some extent clarified the outlook by leaving henceforward no doubt as to Germany's real intentions, and thus to have largely settled the present Radical Cabinet's future attitude towards disarmament. Mr Hoover's opening speech in his electoral campaign, however, has been received with serious annoyance and indignation. What possible practical value can there be, it is asked, in Mr Hoover's declaration that he will accept a certain reduction of war debts, but only on condition that the United States be given an extension of its foreign markets as compensation. In the same breath, it is pointed out, the retiring American President repeats his unswerving adhesion to a policy of rigid and absolute protection—which will render the entry of European exports into America impossible. Moreover, while demanding a "draconian reduction of world armaments," Mr Hoover insists on maintaining United States' military power at a level which will make it impossible for any foreign soldier to land in America. Does Mr Hoover, it is asked, believe we are still living in the time of Columbus, and that a European armada might lay siege to New York, or that Canada or South America will cast covetous eyes on United States territory? Finally, it is pointed out, Mr Hoover "will refuse to recognise any title to the possession of territory conquered in violation of the peace pacts, a doctrine which was accepted by all nations during a recent crisis and which gave tangible proof of the authority and influence of public opinion."

"Does anybody imagine," one French commentator asks, "that Japan cared a button about public indignation when she was on the way to Mukden or Shanghai?"

As usual at this season, speculative interests have once more been alarming the agricultural industry by pessimistic forecasts of the effect the expected bumper harvest may have on wheat prices. Unfounded reports that the Government proposes to abandon the protective policy hitherto applied to agriculture, and to force down selling prices systematically, have already caused many growers to dispose of their crops at sacrificial prices and have brought down wheat quotations with a rush. This has undone much of the careful work of the present and previous Governments to assure to agriculturists a reasonable return for their labour. The policy of the Government so far has been to stimulate absorption of existing stocks before the new crop is harvested. To this end the proportion of foreign wheat allowed for bread-making purposes has been reduced since June from 50 per cent. to 30 per cent., largely because of the fact that, in view of increased import duties on corn, growers have been encouraged to put under wheat this year some 300,000 hectares more than in 1931. The Minister for Agriculture stated last Sunday that, in order to enable growers to avoid having to throw their wheat too hurriedly on the market, the Government has worked out, in conjunction with the Bank of France, the agricultural credit banks, the Ministry of Finance, and representatives of the growers, a plan for financing the harvest, to enable growers to stock their wheat and market it by instalments in ratio with normal consumption requirements. A reduction of the officially fixed retail price of bread is also to be applied.

The unweighted index of French wholesale prices at the end of July is 404 (1914 = 100), against 408 in the previous month, 466 in July, 1931, and means of 543 in 1930 and 623 in 1929. The weighted index for retail prices in Paris (34 common household articles) declined 7 points at the end of July (547, against 554 the previous month, 617 in July, 1931, and means of 618 in 1930 and 621 in 1929). The index representing the cost of living for a Paris working-class family of four persons, at the end of the March-May quarter, is returned as 535 (1914 = 100), against 584 at the end of February, and means of 569 in 1931, 581 in 1930 and 556 in 1929.

Industrial production indices for June show further small fractional declines in all the nine leading industries except engineering, which remains unchanged on the month at 93 (1913 = 100), as against 140 in June, 1931, and textiles and leather, which have each improved a point. The general index is returned at 93, or a single point lower on the month, as against 126 in June last year and means of 140 in 1930 (high record level) and 139 throughout 1929. Motor car construction is returned at 394, against 400 in the previous month, 565 in June, 1931, and means of 640 in 1930 and 657 in 1929. The textile figure's improvement of a point on the month, following one of three points in May, is due to increased demand for home manufactured goods, under the stimulus of import restrictions. Cotton yarn output in June rose from 1,290 kilos per spindle to 1,450 kilos (against 1,230 kilos in June, 1931, and 2,113 kilos in 1929). Cotton piece-goods production was equivalent to 4.02 kilos per loom, against 4.25 kilos in May, 4.48 kilos in June, 1931, and 5.89 kilos in 1929.

Railway receipts increased in June, with an average of 235,000,000 francs per week (against 225 millions in May, 226 millions in April, and 230 millions in March), and have since still further improved to 245½ millions (last week in July), but are still substantially behind the average of 260 millions registered in June, 1931. The fact, however, that the mean level of weekly receipts recorded in 1929 was not larger than 299 million francs indicates that the general economic condition of the country still remains less critical than certain other partial data would imply. The daily average of trucks loaded in June was 47,200, against 45,900 in May, 54,900 in June, 1931, and 65,100 and 65,400 in 1929 and 1930 respectively. Inward shipping tonnage in June

was 4,541,000 tons, against 4,686,000 in May and a mean of 4,806,000 tons throughout 1931. Outward tonnage was 3,914,000 tons, against 4,205,000 tons in May, and a mean of 4,022,000 in 1931.

Business failures in June touched a new high record total of 914, as compared with 635 in May, 782 in April, 528 in June last year, and means of from 598 in 1929 to 602 throughout 1931. Provisional figures for July indicate a total of only 757, or an improvement of over 17 per cent. on the month. Unemployment figures for July indicate that the total number in receipt of relief was 262,600, or 30,000 more than the June average, and 123,273 more than in the corresponding week of 1931, but still 12 per cent. fewer than the total of 303,000 registered in March last.

Money rates continue contradictory. Following the recent further lowering of interest rates on Defence Bonds to 2½ per cent., the rate payable on Treasury Bonds has been lowered (as from August 13th) by one-quarter per cent. all round, as compared with the 1½ per cent. to 2½ per cent. fixed on May 14th, in accordance with terms of the bonds (which vary from three months to eight months or over). On the other hand the average rate of interest offered on new bond issues during July moved up to 6.10 per cent., as compared with 5.35 per cent. in June, 4.90 per cent. in May, 4.25 per cent. in April, 5.22 per cent. in March last, and 4.60 per cent. in July, 1931. Mean rates in 1929, 1930 and 1931 respectively were 5.36 per cent., 4.69 per cent., and 4.68 per cent. The average rate for carrying over money, which has been either ½ per cent. or even ⅙ per cent. for some months past, was raised to ¼ per cent. for the end of July and mid-August settlements in the official market. There is again some talk of the Bank of France rate being brought down to 2½, or possibly 2 per cent., from the 2½ per cent. level at which it has stood since the beginning of the year. Exactly what effect these widely differing factors may have on the Government plans for Rente conversion is now a subject of much speculation. Bourse quotations are again steadily improving. The index representing prices of 300 French issues at the end of July (1913 = 100) is returned at 233 against 220 in May, 274 in March, 309 in July, 1931, and averages of 437 in 1930 and 507 in 1929.

GERMANY.

Politics — Government's Prospects — Centre — Stock Exchange.

(FROM OUR CORRESPONDENT.)

BERLIN, August 16.

In the course of last week two possible means were explored of arriving at a solution of the political crisis. First of all the Centre tried to come to some understanding with the National Socialists, or rather to develop the understanding, for which the way had been paved in earlier conversations, to some concrete end. They encountered, however, a complete refusal. Immediately afterwards began the negotiations between the Chancellor and Hitler, for which also a way had been opened by conversations between General von Schleicher and the National Socialist leaders. They ended with Hitler's refusal to enter the von Papen Government or any "Presidential Government" of similar construction, or to allow leading members of his party to enter it. Instead, Hitler demanded that the formation of a new Cabinet, in which he would hold the office of Chancellor, be handed over to him. For a moment it almost looked as though the Chancellor would consider this proposal, but the President rapidly put an end to all doubts. In his address to the National Socialist leaders on Saturday President von Hindenburg declined to "hand over the entire Government exclusively to the National Socialist movement, which intends to make one-sided use of it." The fact that Hitler had meanwhile actually increased his demands, and was now asking for the same measure of power as Mussolini received from the King of Italy after the march on Rome, and therefore far more than the constitution allows a German Chancellor, may have given Herr von Hindenburg a further ground for the decision he had already

taken, for nothing could have emphasised more unmistakably the fact that the National Socialists would abuse the "leadership" for which they were asking to establish a Fascist dictatorship.

The greatest political result of this discussion is the establishment beyond doubt of the fact that the National Socialist Party cannot be "tamed" by being given a share of power. They are aiming at exclusive control of the reins of Government, which cannot, according to constitutional principles, be given them, for 60 per cent. of the German electorate has declared against them. They offer no guarantee of a loyal exercise of power, so that even a National Socialist minority Government would be intolerable.

These negative conclusions, important though they are, do not, of course, resolve the German political tangle. The von Papen Government has no support in Parliament beyond the 37 German Nationalists, who may perhaps be supplemented by a dozen deputies from the remnants of the moderate Conservative parties. They will not, therefore, unless the political situation changes, be able to command even a tenth of the votes in the Reichstag when the votes of no confidence and the motion for the suppression of emergency decrees are brought forward. Thus they cannot possibly avoid a parliamentary defeat on an unprecedented scale unless they once more dissolve the Reichstag, and even this would only postpone this issue, since there is no prospect of a decisive change in the balance of the parties.

As the political prospects of the Government seem at the moment almost hopeless, they intend to try to extend their foundation in public opinion. As they have little to gain from the Left, they propose to compete with the National Socialists in appealing to the imagination of the despairing masses. This course is very dangerous, for the slogans which are popular in Germany to-day cannot commend themselves to any Government which does not wish entirely to abandon the path of reason. The demands which make the widest appeal are self-sufficiency, compulsory reduction of interest, debt conversion, and the provision of employment on a grand scale by means of supplementary credits. It is hardly possible to imagine that the von Papen Government will allow itself to be forced into such a course, especially as it would first have to fight a hard battle with Dr. Luther, and would probably also lose their own Finance Minister at the same time, for such a policy would inevitably endanger the mark and violate the rights of creditors, and Dr. Luther and Count von Schwerin-Krosigk would take no part in that. The President of the Reichsbank is at present the most important guarantee that the Government, in the popularity campaign to which it feels itself driven, will not leave the narrow path of economic reason.

In forming a complete picture of the political possibilities of the immediate future, the position of the Centre Party must be considered with particular care. The Centre is opposed to Hitler, but it is at least an equally sharp opponent of Herr von Papen. The greatest desire of the Centre Party, however, is to avoid any breach of constitutional form. This Catholic party, which represents a religious minority among the German people, is acutely conscious of the fact that minorities can only be protected if the law, and especially the laws of the constitution, is regarded as inviolable. Now it is feared in Catholic circles that the present Government, if the parliamentary situation becomes evidently hopeless, may perhaps allow themselves to be forced into unconstitutional action—for that reason the Centre is prepared to make the sacrifice of entering into a coalition with the National Socialists if they make it in any way possible. It intends by this means to oppose to the von Papen Government a parliamentary majority which can not only reject the plans of the Cabinet but will be able itself to assume the Government. The Centre Party therefore endeavoured to prepare the ground for negotiation with the National Socialists even before the consultation between the President and Hitler, and it is not certain that they regard the first refusal of the National Socialists as sufficient reason for completely giving up these attempts. The Centre are, however, in this respect in the same difficulty as the Presi-

dent: because they desire an absolutely constitutional Government they can make no real concessions to Hitler's aspirations after a dictatorship. The representatives of the Centre in party negotiations are indeed much more experienced and versatile than Herr von Papen, but all their attempts at compromise are foredoomed to failure by the very nature of the National Socialist Party, which is not even a parliamentary opposition party, but only wishes to make use of parliamentary forms in order to destroy democracy.

The German security markets have shown a firm tendency in recent weeks, owing primarily to the effect of the New York rise, which provoked purchases on the share markets in Germany, especially after the collapse of the attempt to include Hitler in the Government. The latest rise in German shares, however, cannot unfortunately be wholly attributed to the effects of more optimistic views as to the economic situation, for it was partly due to purchases made for quite different reasons. Uncertainty as to the economic plans of the Government caused a tendency to convert ready cash into investments of more stable value—that is to say, into shares of leading German industrial undertakings. In consequence of fears of a further compulsory reduction of interest, fixed interest securities also were exchanged for shares, so that German loans had no share in the rise. Building and engineering shares were especially in demand, as an improvement in these industries was expected from the Government's plans for providing employment. Public utilities were also popular, as foreign stand-still creditors are showing interest in them. All the same, only a few million marks of stand-still credits have so far been invested in shares. By far the greater number of the stand-still creditors have made no use of their right to acquire long-term investments in place of the credits.

AUSTRIA.

Credit-Anstalt — Timber — Banking.

(FROM OUR CORRESPONDENT.)

VIENNA, August 15.

NEGOTIATIONS with the foreign creditors of the Credit-Anstalt have been interrupted, and it is not definitely settled when they will be resumed, but it is possible that they will be continued in Paris or London. The foreign creditors will have to recognise that they must be much more accommodating in regard to Austria than they have been up to the present, for the ability of the State and of the individual citizen to carry on is about exhausted. If the creditors believe that apart from obligations, amounting to over 100 million schillings, which are to be delivered to them by a holding company representing the foreign engagements of the Credit-Anstalt, they may demand a considerable portion of the shares of this holding company, and also an important part of the new share capital of the Credit-Anstalt itself, they must exercise a certain modesty in regard to their further demands. In addition to the annuity, which the Austrian State is to pay and which increases in the course of twenty-five years, the creditors want a further special guarantee. They desire the National Bank to assume a guarantee through the bills of exchange of the Credit-Anstalt, which are gradually being redeemed by the State. Such exorbitant demands cannot possibly be put through the Austrian Parliament, and it will therefore favour the development of the whole affair if the creditors take a very accommodating attitude towards Austria, as otherwise they are sure to augment anti-capitalistic tendencies in Austria. When the National Council has ratified the agreements between the National Bank and the State, the extraordinary general meeting of the bank of issue will probably be convoked. The question of possible distribution of a dividend, which was postponed at the last general meeting of the bank, will then be settled. In any case, if a dividend is to be distributed, it will not be paid in gold schillings. In parliamentarian and economic circles the demand for a reduction of the bank rate is growing. The management of the bank is, however, making this step dependent upon

the ratification of the Lausanne agreement and upon the approval of the supplementary budget and of the agreement between the State and the National Bank in regard to the bills of exchange of the Credit-Anstalt. The fund, consisting of payments in schillings by Austrian debtors in favour of foreign creditors, is to be managed in such a way that the National Bank will credit equally to proper claimants any profit which may accrue when the money is used.

The difficulties with which the Austrian timber industry has to contend in export trade still obtain; nevertheless, it appears that the strenuous efforts to force exports have met with some success. For the second half-year France has allotted to Austria a quota of 9,216 wagons for importation, though it is unlikely that the whole of this quota will be used on account of the difficulty of finding partners in clearing business and of the very poor prices paid in France. Exportation to Italy has not shown the anticipated increase, but sales to Switzerland, on the other hand, have become brisker in view of the check placed upon Swiss importation from Germany. In June, Austria was again the most important vendor of timber to Switzerland. Endeavours are also being made to have the foreign currency debt of Austria to Switzerland transferred to a new Swiss mortgage bank, which might issue mortgage credits against Austrian forest holdings. Exports of wood to Germany leave much to be desired. In sawn timber they amount to about 6 per cent. of the quantity which was exported in 1928. It is surprising that the Donawitz Works of the Alpine Montangesellschaft has practically closed down on account of the present lack of orders. The works has been closed for fourteen days, and in consequence it will be very difficult to avoid a big increase of unemployment in Styria during this period. On the other hand, it is a pleasant surprise that tourist traffic this summer is proving much better than was anticipated. In the first place, Austrians themselves are not going abroad, and are spending their holidays in the Alpine areas. Further, price reductions at all the health resorts are proving a great attraction.

There have again been rumours about fusion plans among the Austrian banks, but, so long as the Credit-Anstalt affair is not clear up in detail, such plans cannot be executed, for the other banks, which come into consideration in such a transaction, would in their own interests oppose amalgamation. The commercial activity of the Vienna banks this year continues to be very slight. The emission business on the stock exchange is non-existent, the public is neither buying nor selling shares, and is keeping its money for minor trade speculation. The investment market will deserve more attention in the autumn if flotation of a domestic loan in Austria is really intended. For the time being the preliminary condition is that extensive modifications should be made in the matters of taxation and foreign-value regulation, if it is to have the character of a premium loan. In any case, the Ministry of Finance, which is already engaged upon preliminary work for the coming budget, will not have an easy task. The steady decline in consumption in all businesses, including those which up to the present have been unaffected by the crisis, is certain to cause a drop in State revenue, in spite of insufferable taxes and heavy duties.

HUNGARY.

Politics — Finance — Agriculture — League Loan.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 9.

THE findings of Mr Tyler's last quarterly report, especially his strong plea for sound finances, made an unusually profound impression on public opinion. So bitter were the attacks of the Opposition that the Prime Minister deemed it necessary to state publicly that there are no differences between the views expressed in the League representative's report and the aims of the Government's fiscal policy. Count Karolyi's unreserved endorsement

of Mr Tyler's recommendations is very welcome indeed, provided that it will not remain merely verbal, but will be translated into action. It is obvious that the present level of public expenditure cannot be maintained; there is no hope whatsoever that either the State or the local budgets could be covered from current revenues in the present financial year. Competent observers estimate the probable deficit at at least 100 million pengő for the current financial year, of which only 40-45 million pengő have been provided for by the issue of Treasury bills. Considering the Treasury has borrowed more than 100 million pengő from the banks since July, 1931—apart from the 95 million pengő obtained from abroad a year ago—which directly or indirectly found their way to the National Bank, and increased the bills portfolio to more than 600 million pengő, it is clear that this practice cannot be continued without the gravest consequences to the currency. The price level is already somewhat inflated, and the failure of immediate cuts in public expenditure—both State and local—will soon jeopardise the financial structure of the country.

In view of the fact that more than 30 per cent. of the national income is paid in public contributions, no more taxes, except a small capital levy, can be imposed in the hope of increasing the yield. On the other hand, expenditure can be further curtailed, because 273.7 million pengő are still earmarked for personnel services, against 234.1 million pengő in 1926-27, although the number of the recipients has somewhat decreased in the past six months. In view of the plight of the farmers and small tradesmen, their discontent against the public salaried classes is steadily growing, and has found expression in two recent by-elections which went against the Government, returning candidates of the rising Independent Farmers Party. This new party, which emerged from economic distress, has in less than a year trebled its membership in the present Parliament, and with its 25 adherents it is becoming the second largest party in the House of Deputies. Though Parliament has been adjourned until the end of October, the Independent Farmers, in collaboration with the Social Democrats and the other Opposition members, have been able to collect 50 members' signatures necessary to convoke the House of Deputies to an extraordinary meeting at the end of this week, the agenda of which will include the Austrian commercial treaty difficulties and the plight of agriculture. The Farmers will demand from the Government the extension of the recently decreed agricultural moratorium and also relief for the districts damaged by rust. At a time when Central Europe is so much infected with the extreme political doctrines of Hitlerism, the democratic programme of the Independent Farmers and their Puritan Conservative leader, M. Gaston Gaál, has much to commend itself, save for their dangerous slogan for a general moratorium, which is becoming so popular in the land that peasants often refuse to pay taxes and interest on their debts.

Crops are better than expected. The latest estimates of the Ministry of Agriculture, compared with last year's results, are as follows:—

(In million quintals).

	1932.	1931.
Wheat	15.83	19.75
Rye	7.80	5.50
Barley	6.42	4.76
Maize	23.03	15.17
Potato	22.80	14.47

The damage which has reduced the yield of wheat by 4 million quintals is more than counter-balanced by the abundant returns of rye, maize and potato. It is true that the wheat exports will scarcely amount to more than 2.5 million quintals, markets for which are already secured in Italy, Germany and Switzerland; but what is more important, Hungary need not import maize and potatoes, as she was compelled to do in recent years. At the present time, when agricultural exports are hindered by ever-increasing barriers, it is fortunate that crops are evenly distributed according to the domestic needs. There is little hope of a satisfactory commercial treaty with Austria. A *modus vivendi* is in operation for two weeks until August 19th on a compensation basis, and will in all probability be prolonged, although it does not meet

Hungary's interests. Other compensation and clearing treaties are constantly being negotiated.

The Government's communiqué emphasising the priority of the 7½ per cent. State Loan service and the accompanying statement of the League Loan Committee in London were favourably received here. Every dispassionate observer admits not only the juridical but also the moral priority of the League Loan, which was contracted at a critical time in 1924 and paved the way for Hungary to obtain other loans from abroad. However, the feeling is expressed that, as a *quid pro quo*, the League bondholders would act both in their own and in other foreign creditors' interests if they would lose no time in initiating a general scaling down of the intolerably high interest burden of the country before she is driven into a general moratorium and wholesale defaults. In order to avoid open default, the Treasury will in all probability suspend the 30 million pengő earmarked for the service of the State Debt, which is a much needed saving, and would make it easier for the Government to maintain at least the interest payments on its debts, amounting to about 70 million pengő in the 1932-3 budget.

POLAND.

Pact with Russia — Gold Losses — Coal Exports — Crop Outlook.

(FROM OUR CORRESPONDENT.)

WARSAW, August 4.

M. PATEK, on behalf of the Polish Government, signed in Moscow on July 25th the Non-Aggression Pact with Soviet Russia, the terms of which were provisionally accepted by both Governments in the latter part of 1931. Some misapprehension seems to have arisen because it had been assumed that Poland would not sign this Pact until her ally, Roumania, was ready to conclude a similar treaty. Assurance has been given Roumania, however, that the Polish Parliament will not be asked to ratify the Pact until the Roumanians have negotiated their treaty, and it is assumed, in the meantime, that the good offices of Poland are being used to smooth out the difficulties still standing in the way of a Soviet-Roumanian Pact. With the German situation so full of uncertainties, the desire of the Polish Government to have the Non-Aggression Pact with Soviet Russia made legally binding as soon as possible can be well understood.

The Budget deficit in June amounted to 39.2 million zlotys, with expenditure only slightly reduced at 187.0 millions and income considerably lower at 147.8 millions. The deficits reported for April and May were 4 and 15 million zlotys respectively, so that for the first quarter of the present financial year expenditure exceeded revenue by 58 million zlotys. The deficit has been met partly by borrowing from the Bank of Poland; and the Exchequer's non-interest-bearing overdraft now stands at 50 million zlotys. It is very evident that there will have to be a further considerable contraction in expenditure unless financial aid can be obtained from France. Renewed representations, since the termination of the Lausanne Conference, are reported to have been made to the French Government to expedite the issue of the second instalment of the loan for work on the new railway from Upper Silesia to the port of Gdynia. As further Budget economies would have to be mainly at the expense of military efficiency, confidence is felt that France will come forward with support as soon as her own situation permits.

From June 1st to July 20th the Bank of Poland parted with a further 76 million zlotys in gold bullion and 9 millions in foreign *devisen*, the respective holdings on the latter date being 479 and 147 millions. This continued loss of gold and *devisen* is causing much more concern in financial circles than the Budget deficit. Government officials, however, have given renewed assurance during recent weeks that no artificial restrictions on the transfer of money abroad are contemplated, and it is certain that the Government will hold out to the very last moment before imposing such restrictions.

Coal is Poland's principal source of foreign valuta, having brought in more than 1,000 million zlotys during the past three years. Concern is accordingly felt at the great contraction in revenue from this source which has taken place during recent months. Coal exports during the first six months of 1931 were valued at 158 million zlotys, while this year the value is only 103 millions. This is in part due to the decreased external value of sterling compared with a year ago, Poland's largest coal customers (the Baltic and Scandinavian countries) still purchasing in depreciated pounds. The decline is mainly due, however, to an actual decrease in the amount exported. During the period January-May, 1932, Poland shipped in the aggregate 1,091,000 metric tons of coal to Norway, Sweden, Denmark and Finland, as against 2,289,000 tons in the same period of 1931. So far this year exports to Esthonia are only about 20 per cent. of last year's figure, and to Latvia less than 25 per cent. There has also been an appreciable decline (but much smaller comparatively than in the case of the Northern countries) in shipments to Austria, Czechoslovakia and Hungary, which are relatively high-price markets and easily reached from the Upper Silesian mines.

Neither the Government nor the colliery owners have the remotest intention of abandoning the Northern markets to British coal exporters, and it is certain that strenuous efforts will be made to regain the ground lost in the first half of this year. The Government are now being strongly urged by the mineowners to permit further wage reductions and a lowering of the social burdens—such as unemployment insurance, etc.—imposed by law on industry. Administrative expenses and overhead costs are being continually lowered, and, when the industry has completed its deflation, the Government will no doubt give any further necessary assistance by cutting railway rates. In a relentless competition based on a lowering of standards of living the British can never wear out the Poles. What is obviously wanted is an agreement between the British and Polish industry (Germany, of course, would have to be included to make it completely effective) for the division of the Northern markets on a profitable price basis. That would not only benefit British coal exporters, but also British shipbuilding and shipping, since their Scandinavian rivals now get their coal virtually for nothing, current prices barely covering the carrying charges.

With five representing excellent, four good and three medium, the crop condition indices at July 5th are given as 3.3 for winter wheat, 3.4 for winter rye, 3.6 for barley, 3.4 for oats and 3.5 for potatoes. Except for wheat, the crop condition of all cereals is slightly better at this time than in either 1931 or 1930. The crops are now being harvested under normal conditions, and the final results are expected to be favourable—that is, with a small surplus available for export. Cereal prices are also better than they were a year ago, but not so much so as materially to improve the situation of the farmers.

BULGARIA.

Budget — Trade Balance — Foreign Loans.

(FROM OUR CORRESPONDENT.)

SOFIA, August 15.

The ordinary Budget of the State for the fiscal year 1932-1933 has been voted by the House of Parliament as follows:—

Expenditure	5,998 million leva.
Revenue	6,000 " "

Compared with the Budget of the past fiscal year, both expenditure and revenue have been cut by 400 million leva. Bearing in mind that the revenue of the past fiscal year actually totalled 5,200 million leva, the probable deficit for the current fiscal year is estimated at about 800 million leva. An important reform has been made in the revenue Budget. The land tax on agricultural holdings of less than 100 dekaras (constituting four-fifths of the holdings in the country) has been temporarily cancelled. This reform will tend to increase the deficit, although the

returns from the land taxes have dropped to 150-200 million leva. The Government hope to solve the problem of the deficit chiefly by economies and curtailment of expenditure in the Direction of Public Debts. The expenditure of the Direction—Service Foreign Debts—amounts to about 1 milliard leva. The relief Bulgaria has received and will receive in the payments of reparations and annuities of the State loans has not been included in the State Budget. The total for the Direction of Public Debts in comparison with the past year has been passed without great changes. The question of abolishing the wheat trade monopoly enjoyed by the Direction of Grain Exportation has been brought to the fore with the new Budget. In future the Direction will not pay premiums to the producers, but will make purchases at fixed prices, with a view to supplying food to the population in large cities and non-productive regions. In order to make good the losses the State has sustained through the Direction, the Government is introducing the taxation of bread offered for sale. In general, it may be said that the Budget is a workable one, and, should the Government hold strictly to it—which it hesitates to do because of social considerations—it would bring about good results.

The balance of trade for the first six months of the year shows a 150 million leva deficit, against the 688 million leva surplus received for the same period last year. A characteristic of the balance of trade is the great drop in exports—from 3,108 million leva for the months of January-June last year to 1,683 million leva for the same period this year. The change is due mainly to the drop in tobacco exports, which alone amount to 1 milliard leva. Luckily, the tobacco market revived at the end of June, and the 1931 crop has been practically bought up; about 10 million kilogrammes have been sold abroad, leaving some 10-15 million kilogrammes with the local purchasers to be exported later. The new crops are expected to yield about 22 million kilogrammes. Though a large part of the exported tobacco has been sold in compensation for past and future imports, the revival of the tobacco market will have a favourable influence upon general business conditions. This will, unfortunately, be neutralised by the damages the wheat crops have sustained in Northern Bulgaria, which will frustrate further exportation of wheat (amounting to 300 million leva during the first six months of the current year). The unfavourable development of the exports has had bad effects upon foreign currencies at the National Bank of Bulgaria, which reached during the month of July the lowest point since the beginning of the depression, namely, 163 million leva. The fact that, in spite of all this, the National Bank of Bulgaria has lost during the entire period of the first six months only 34 million leva of foreign exchange shows how strictly the bank distributes the currencies at its disposal.

The Government has succeeded in coming to terms with the holders of foreign loans. In accordance with the agreement, the holders are to accept the recommendations of the League of Nations, and the whole question is to be reconsidered in September, when the holders of the pre-war loans will ask the League for an interpretation of certain conditions concerning the use of the blocked holdings of leva, and the holders of post-war loans will insist that preference be given them before all other creditors.

GREECE.

Foreign Draft Conversion — Public Finances — State Railways.

(FROM OUR CORRESPONDENT.)

ATHENS, August 1.

By a law promulgated on July 30th all debts in foreign currencies contracted before April 26th last, when the stabilisation of the Greek currency was legally abandoned, are converted (and payable as they fall due) in drachmas at the rate of 100 drachmas per 1 dollar or at equivalent rates for the other foreign currencies. Bank deposits are included among such debts, but the following debts and

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

deposits in foreign currencies and *devisen* are excluded from this forced conversion:—(a) debts due abroad and arising from commercial transactions; (b) debts due from abroad to persons residing in Greece; (c) debts arising from the financing of import trade; (d) debts under insurance contracts; (e) deposits by foreigners residing permanently abroad, as well as deposits of members of the diplomatic body in Greece and of foreign missions; (f) debts due abroad and arising from bonded or other sinking fund loans of Greek corporations, and similar debts due in Greece, but raised abroad by Greek banks or other corporations or guaranteed by the State or the National Bank of Greece. Exceptionally, debts due to mortgage banks in Greece and emanating from mortgage loans granted by them (almost entirely in foreign currencies) are converted at the rate of 425 drachmas per pound sterling, or at equivalent rates for other foreign currencies. The State guarantees to the Greek mortgage banks the difference needed to make up the amount required in foreign currencies for the payment of interest and sinking fund on their mortgage loans issued abroad (principally in London). Any exchange left in the hands of the banks from this forced conversion of their assets and liabilities in foreign currencies accrues to the State and will be credited to the fund supplying the mortgage banks with the above-mentioned sums.

The Minister of Finance has stated that, by so arranging the question of internal debts in foreign money, the debtors are relieved without unjustly damaging the creditors; for while the external value of the drachma at present rates has fallen by as much as 46 per cent., the purchasing power of the drachma within the country shows a diminution of only 10 per cent. On the other hand, the position of all the banks working in Greece is adjusted by this measure, and future risks are obviated. "Without overlooking the fact," the Minister added, "that it is an entirely extraordinary measure that we have taken under the force of circumstances, we are convinced that it will contribute to blunting the inequalities entailed by the depreciation of the currency and to smoothing the course of national economy, especially in the present acute crisis." The measure is, however, severely condemned by some people as ruining the credit of the country.

In consequence of Press publications regarding the circulation of bank notes, the Bank of Greece issued a *communiqué* stating that from May 23rd to July 23rd the note circulation has increased by Drs. 300 million, the balance outstanding at the latter date amounting to Drs. 4,319,787,237. This increase is due to purchases of foreign exchange and gold (presumably at the current high rates). The Bank finds this increase "physiological" and "sound," and declares itself ready to continue supporting the market in this way, and, in addition, to grant help to foreign trade in the coming months. The International Financial Commission has deposited with the Bank a sum of Drs. 1,100 million, and the trading banks Drs. 463

million, and should these deposits be withdrawn, the circulation would automatically increase to Drs. 5,882 million.

The Budget deficit for the year 1931-32 is now estimated at Drs. 210 million. Treasury receipts from recurring and non-recurring revenue for the first three months of the current financial year amounted to Drs. 1,739 million, against Drs. 2,044 million for the corresponding period last year, a decline for the three months of Drs. 305 million. On the other hand, receipts from revenues assigned for the service of the foreign debt amounted in the first six months of the year to Drs. 1,697 million, against Drs. 1,948 million for the corresponding period last year. It is reported that the International Financial Commission, with a view to securing the service of the loans, and, in addition, a margin for a possible further depreciation of the drachma, is withholding substantial amounts which otherwise would have been paid over to the Greek Treasury. As this action of the Commission embarrasses the latter, negotiations are being conducted between the Commission and the Government for a solution of this question.

The railway expert who came to Greece at the suggestion of the Council of the League of Nations has submitted his report for the reorganisation of the Greek State Railways. It is understood that he recommends the handing over of their management to a private corporation on the lines adopted in 1926 by the Belgian railways.

ARGENTINA.

Public Debt — Santa Fé Loan.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 29.

THE Argentine Corporation of Bond and Shareholders has published its eighth annual report. Attention is again drawn to the excessive disparity between administrative expenditure and the amount of the national revenue. Allusion is also made to the cost of meeting internal and external indebtedness. Officially, this calls for an expenditure of \$251,200,000 paper; at the present rate of exchange this sum is manifestly insufficient and must be increased to something like \$800,000,000 paper, whereof 50 per cent. corresponds to the service of the external debt. Most outspoken are the comments on the debts themselves. It is pointed out that not only must the policy of borrowing for the purpose of liquidating prior obligations be abandoned once and for all, but it must also be realised that the whole question of foreign loans calls for reconsideration. Emphasis is also laid on the fact that the floating debt has been largely built up through successive budgetary deficits, and the 1932 Estimates, which call for an expenditure of \$839,263,375 paper, are condemned as giving evidence of a complete want of comprehension in official circles of the gravity of the present position. There is, indeed, a very real danger already evident as regards the 1932 Budget. A deficit cannot well be avoided; and although the Minister of Finance has declared that further economies will be effected, if necessary, it is plain that they cannot be carried out to a sufficient extent at short notice. Compared with three years ago, Argentina's indebtedness, reduced to paper pesos at par, reads as follows:—

	1929.	1932.
Nation	2,708,361,144	3,871,572,000
Provinces	954,268,177	1,154,710,765
Municipalities	226,946,935	371,593,570
	3,889,576,256	5,397,876,335

As these figures are taken as from June 30th in both years, a certain amount of the increased indebtedness corresponds to the Irigoyen regime. Unfortunately, the figures for 1930 are not available, but if comparison is made with those of 1931 it is found that the grand total last year amounted to only \$4,701,637,761 paper. The floating debt of the nation, as on May 31, 1932, is also given in detail, its total amounting to \$1,474,000,000 paper.

Internal consolidation is suggested as the best means of getting this latter item under control, but, unfortunately, the general financial position of the country makes this difficult at the present time. The widely advertised "Patriotic Loan" closes with \$500,000,000 paper asked for, but barely \$150,000,000 paper actually subscribed. Hence rediscount of the remaining bonds in the Conversion Office is almost a certainty. Moreover, as the above-mentioned report is careful to point out, the country is now paying almost usurious interest for external debts which it ought never to have contracted, and, furthermore, owing to exchange difficulties, repayment and interest charges are being exacted at a rate almost equivalent to two dollars for every dollar that Argentina originally received. On August 5th there falls due a short-term loan amounting to \$5,000,000 U.S. taken from the Chemical National Bank of New York by the Province of Santa Fé. It will perforce be renewed, but it is of interest to note that the Government of that Province has asked the legislature to sanction a partial moratorium of three years where the service of external indebtedness is concerned. Presumably this would mean that local deposits of the par equivalent of amounts due would be made here by the Province in question, and no less a person than Dr. Lisandro de la Torre has openly advocated the adoption of this course and its extension to national obligations. In a pithy letter published on the front page of *La Nacion* this gentleman openly states what is more or less being generally said *sotto voce* in all commercial circles, namely, that by its present policy the Government is absorbing all the export paper, rendering it almost impossible for commercial and private financial engagements abroad to be remitted at all. He even goes so far as to say that, while the official quotation for \$100 U.S. is \$388 Argentine paper, anyone having a good draft or other document of value in United States dollars can readily dispose of it privately at a rate of \$450 Argentine paper per \$100 U.S. From all of which it will be realised that the present financial position in Argentina is fraught with considerable anxiety, and, at the time of writing, great curiosity exists as to what course the promised Government deliberations will take.

SOUTH AFRICA.

National Accounts — Reserve Bank — Provincial Councils.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 19.

WHEN the Minister of Finance introduced his Budget immediately before the Easter recess he estimated that the proposals which he placed before the House would increase the previous year's revenue by £3,500,000. Approximate figures covering the period from April 1st to June 30th have just been published, and show that so far this estimate, only four months old, was so optimistic as to bear no relation at all to facts as they have since materialised. The total revenue for April-June, 1931, was £5,547,427, whereas the revenue for the corresponding period of the present year was £4,959,884. The position appears, moreover, to be developing unfavourably, as the total revenue for the month of June was over £2,000,000 in 1931 and £1,600,000 in 1932. The heaviest shortfall is in Inland Revenue, but the income tax figures in the early part of the year do not, of course, reflect the position as it will appear later. During the three months Customs and Excise show a shortfall of £36,000, whilst Posts, Telegraphs and Telephones are down by £116,000. The final position is that, instead of an increase in revenue, there has been an actual shortfall of £586,000 as compared with the corresponding period of last year. On the expenditure side of the account the figures are not quite so depressing as there has been a material saving, amounting to some £300,000 in the three months. The great risk to the expenditure side of the country's finances is the increase in unemployment, and the very serious difficulties in which even people hitherto moderately prosperous are finding themselves in increasing numbers.

The twelfth annual meeting of the stockholders in the South African Reserve Bank possessed even more than its usual interest this year. The Governor stated that the decision of the Government to remain on the gold standard accorded with the views of the board of the bank. After reviewing the course of events since September last, he dealt with the relationship between the bank and the Government. The Minister of Finance has agreed to the dividend of 6 per cent. being cumulative, and has allowed the bank to transfer holdings of Union Stock from the London to the local registers. The Bank's Act has been altered so that it may become a shareholder in the Bank for International Settlement, should it be invited to do so.

As regards the figures in the accounts, the capital is now restored to its original figure of £1,000,000, while the reserve fund stood at £8,818 on March 31, 1932, and will be built up in due course. Notes in circulation on March 31st last amounted to £8,422,038, the figures in previous years being:—

March 31,	Notes. £
1929	9,604,807
1930	8,980,567
1931	8,366,821

Deposits amounted to £5,760,000, a drop of £2,500,000 compared with last year's figures. Bankers' balances are £1,000,000 lower and Government balances £1,500,000. On the assets side, gold coin and bullion amounted to £6,521,000, a ratio to liabilities of 48.1 per cent. Bills discounted amounted to £4,469,000—a heavy drop of £3,800,000. Foreign bills are down by £7,700,000, while domestic and Union Treasury bills are greater by £3,900,000. Union Government stocks amounted to £1,845,000, loans to the Government £2,650,000 and balances with other central banks £107,000. The fixed property is undervalued at £222,000, and will be written down to a nominal amount in time.

The Governor defended the bank's exchange rate policy of some months ago, stating that the bank had to guard against fresh losses, and that its policy "had the further advantage of discouraging imports." He also made some interesting remarks on the general banking position during the year. The liabilities of the banks decreased by £13 millions, and advances increased by £3.9 millions, so that about £17 millions of banking credit was utilised. During the years 1927-1930 the Union had an average debit balance of payments of £8 millions. In 1931, for which no figures are yet available, it may be assumed that the balance, met from deposits and not from overseas borrowing, was perhaps £7 millions. This leaves £10 millions as an estimate of the efflux of capital. (The Governor's figure is lower than some others which have been given.) The Governor expressed the opinion that the impression of tight money is partly based on psychological reasons, and he attributed the troubles of the country entirely to our participation in those of the world at large.

The Government recently appointed a Commission "to investigate and report upon the question as to what system of administration and local government should be substituted for the existing system of provincial legislation, should Parliament pass an Act abolishing such system in any province." The system of Provincial Councils (who are responsible for primary and secondary education, roads, hospitals, control of municipalities, and some minor matters) lies almost at the root of the constitution of the Union. The weakness of the system has been the arrangement for Union Government subsidies and the limited taxing powers of the Councils—the result being the spending by the Councils of money which they do not have to raise. The Councils have been out of favour for some time past, but provincial feeling has prevented the Central Government from taking action until the bankruptcy of the Free State Council. Now the remaining councils have boycotted the Commission, forbidding their members and servants from business with it as members or as witnesses. The reasons appear to be based partly on disapproval of the membership and partly on disapproval of the whole attitude of the Government. The matter cannot be left where it is, but developments are difficult to foresee.

AUSTRALIA.

National Finances.

(FROM OUR CORRESPONDENT.)

MELBOURNE, July 15.

THE financial year ended June 30th closed with a net deficit of £18,509,526 for the seven Australian Governments, the Commonwealth showing a surplus of £1,320,896, but every State a deficit—New South Wales £13,253,347, Victoria £1,610,000, Queensland £2,075,180, South Australia £1,074,000, Western Australia, £1,557,895 and Tasmania £260,000. The large deficit of £13,253,347 in New South Wales, as against last year's estimate of £5,910,000, is the outcome of the policy of the late Labour Government in that State to resist financial reform. As regards all States, one of the chief causes of the actual deficits has been the shrinkage in railway revenue, although the States and Commonwealth have alike been affected by the exchange premium on interest payable abroad. The Commonwealth surplus of £1,320,896 is due to adventitious causes, including the suspension of interest and sinking fund payments on the debt to the British Government in accordance with the Hoover moratorium and the arrangement made with the British Government. These payments had absorbed £5,548,810 in the 1930-31 financial year. The Commonwealth Government has also been helped by large income tax receipts, which amounted to £13,482,000, or £3,662,000 more than the estimate for 1931-32, and by larger receipts from land tax and from the profit on note issue than were expected. Customs and Excise revenue amounted to £28,405,758, including Customs at approximately £17½ millions. The last-mentioned figure compares with £18,224,227 received in 1930-31 and £30,157,040 in 1929-30. Against the increases in the tariff are to be set the reduced purchasing power of the country owing to low prices and the check to external borrowing, which have resulted in a drastic decline in imports. The foregoing figures are subject to slight revision when the final results are presented in the budget speeches.

The estimates for the 1932-33 financial year as first presented to the late Premiers' Conference by the seven Governments showed deficits aggregating £21,000,000, but the Conference decided on modifications which reduce the aggregate to £9,000,000, the carrying out of this arrangement being dependent upon the various Governments and Parliaments. The total of £9,000,000, as explained by the Commonwealth Prime Minister, Mr. Lyons, includes £6,450,000 as provision for sinking funds.

The borrowing requirements of the Governments for 1932-33 consist of £9,000,000 to balance revenue deficits, £6,000,000 for expenditure on public works and £7,000,000 as a special loan for unemployed relief to be devoted to works for that object. The total borrowing programme of £22,000,000 for 1932-33 follows the increase of £25½ millions which took place in the aggregate public debt during the nine months ended March 31, 1932 (complete figures for the twelve months are not yet available), and the steady increase in debt which is thus in progress means a fresh increase in the annual interest payable as an offset against the saving effected by the forced conversion of internal debt last year.

The announcement of the British Conversion Loan, the Lausanne agreement and the improvement in the wool market as shown by the London sales have combined to produce a more buoyant feeling, and the Stock Exchanges have been more active with a pronounced advance in Commonwealth Government securities and some improvement in shares. The latter, however, are influenced by anticipations of the results to be shown by balance sheets to be issued during the next few months, which are expected to show more or less lean results. The improvement in Government securities is taken as foreshadowing an attempt to issue a loan on the Australian market.

Letters to the Editor.

CANADA'S TEXTILE TARIFF.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My attention was recently drawn to a paragraph entitled "Canada's Textile Tariff" in your issue of July 2nd, in which a Canadian correspondent, after citing particulars of the duty paid by him on a consignment of English cloth, goes on to speak of the attitude of Canadian industrialists—"an attitude which has recently led to the refusal by the Federal Government of a grant to a co-operative fruit-growing settlement in British Columbia because it was proposed to install a British cold-storage plant."

Knowing Canada as I do, and feeling sure that no such animus against British goods, as suggested by your correspondent, existed in the Dominion, I immediately cabled to Ottawa for a full story of the facts. I have now received from the Hon. H. H. Stevens, Federal Minister of Trade and Commerce, the following reply, and having regard to the widespread quotation and comment which your paragraph has received I shall be glad if you will extend to me the courtesy of your columns, even though the length of the explanation may trespass somewhat unduly on your space.

The Minister writes as follows:—

"Cold Storage Warehouses receiving financial assistance from the Government under the provisions of the Cold Storage Act, 1907, are required to use as far as possible equipment of Canadian origin. This is Clause 12, which is signed by the Minister of Agriculture and by individuals or firms receiving assistance under the Act:—

"That all supplies, materials, machinery, fittings, etc., used in the construction and equipment of the said warehouse shall as far as possible be of Canadian origin and manufacture, and in case the contractor of the second part considers that any such supplies, materials, machinery, fittings, etc., of Canadian origin and manufacture cannot be procured, no purchase or purchases of such supplies, materials, machinery, fittings, etc., of other than Canadian origin shall be made without the consent of the Minister.

"Contracts for the payment of subsidies under the Cold Storage Act, which contracts contained the above Clause, have been signed with the Oliver Co-operative Growers Exchange of Oliver, B.C., and with the Berwick Fruit Company, Ltd., of Berwick, N.S. After the contracts were signed, these two companies asked that they be permitted to install equipment purchased in the United Kingdom, and it was alleged that the reason for wishing to install the equipment produced in the United Kingdom was that that equipment was cheaper than the equipment produced in Canada.

"The representative of the firm in the United Kingdom whose equipment these two Canadian firms expressed themselves as desiring to install called at the office of the Dairy and Cold Storage Branch and was asked to give confidential information as to prices of the equipment which would be supplied by his firm. This was desired so that a comparison could be made with the prices quoted by Canadian firms. The representative of the firm in the United Kingdom declined to give such information, but stated that he would take the matter under consideration and possibly in the course of a few days would supply it by letter. The information has never been received.

"In a further effort to secure information as to comparative prices, the two firms desiring to install this equipment from the United Kingdom and whose names are given above were written and asked to give the specifications on which each of the tendering firms quoted and the amount of the tender of each firm. One of the companies mentioned above failed to reply to the letter and the other firm replied stating that they did not consider the giving out of this information, even to the Department which was paying 30 per cent. of the cost of the warehouse and equipment, would be ethical.

"Had the information on which a comparison of costs could be made been forthcoming and had the information indicated that the Canadian equipment was higher in price than it should have been, there is no doubt that the Minister would have given consent to purchase other than Canadian-produced equipment.

"Yours very truly,
(Signed) H. H. STEVENS."

As you will see from the foregoing, the Government had no other option than to follow the provisions of the Act under which the subsidy was made.—Yours, etc.,

F. P. BURDEN,
Agent-General for British Columbia.

British Columbia House,
1 and 3, Regent Street, S.W. 1.

LONDON TRANSPORT "A" STOCK.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I do not think the terms of conversion into London Transport 4½ per cent. "A" stock of the debenture stocks of the Metropolitan and Metropolitan District Railway companies and the 3 per cent. rent charge of the latter company are generally known to or understood by the holders of these stocks, or the same protests would have been made against them, for to my mind they partake of confiscation.

The injustice seems to me so great that the Bill should not be allowed to pass unless these terms are altered.

I will offer two instances: £100 of 3½ per cent. debenture stock of the Metropolitan Railway will become £77 15s. 7d. London Transport 4½ per cent. "A" stock and £100 of Metropolitan District 3 per cent. rent charge will get £66 13s. 4d. of the same security; the dividend, of course, will be the same, but under the Bill the 4½ per cent. "A" stock is redeemable at par in 1985, which means that every £100 Metropolitan debenture will be paid £77 15s. 7d. and every 100 of the 3 per cent. rent charge of the Metropolitan District Company will get £66 13s. 4d. This is, to my mind, a most inequitable proposal, and I do not think it is yet realised by these stockholders what lies before them or their heirs. If left alone they might both return to the prices at which they were issued or at which they stood some thirty years ago, when I bought both for my marriage settlement.

With the conversion of the 5 per cent. War Loan we are facing a new standard of values, and I think the holders of Metropolitan and Metropolitan District debenture stocks and rent charge stock should be allowed to benefit by it instead of suffering confiscation.—I am, yours faithfully,

Lady Place, Sutton

CHAS. ROBERTSON.

Courtenay, Berks.

August 15th.

[We comment on this letter in an "Investment Note" on page 363—Ed., Econ.]

TARIFFS IN CENTRAL EUROPE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter published in your issue of August 13th your Vienna correspondent writes that "the Austrian economy cannot be saved with theories which have no practical applicability." This sentence exposes with the greatest clearness the prevalent mentality in the Danubian countries towards economic questions. It was in the belief that for some reason or other [never clearly stated] economic laws and economic theories are not applicable in their special circumstances that the Danubian countries committed the greatest blunders in the field of economic policy.

If Danubian economic history of recent years has taught us anything, it is not that—as your correspondent seems to imply—economics ceased to be applicable on the Danube; but, on the contrary, that no success can be expected from measures which are theoretically unsound. If the adversity of the Austrian foreign trade balance has actually become greater while the volume of trade rapidly declined, surely this is a point in favour and not a point against a liberal and rational economic policy. It merely proves that in the absence of any measures acting upon prices the balance of trade cannot be adjusted with measures destined to restrict imports, as each restriction of imports leads to a still more formidable decline of exports. Nobody questions the necessity of adjusting the balance of trade in a country which, like Austria, has large foreign payments to make and no new loans to receive. But so long as the Danubian countries continue their "have-the-cake-and-eat-it" policy in matters of currency and credit, so long as they are loth to take the necessary steps, either by deflation or by currency depreciation, to adjust their prices to the point of equilibrium with world prices, their foreign trade, save, perhaps, on the point zero, will never balance; on account of artificial measures to adjust it, it will merely deteriorate.

The Austro-Hungarian Customs incident was regrettable, mainly because it has introduced a most dangerous principle in commercial treaty negotiations, which latter, if it finds general application, is apt to increase manifold the already existing evils of Protection. If countries will stir, from now onwards, to adjust their balance of trade with each of the foreign trading countries separately, the scope of international trade will again be tremendously restricted. If the claims of the Austrian Government—as your correspondent notes—have not aroused so much opposition in Hungary as could have been expected, this was not because these claims could be regarded in any sense as rational or just, but simply because Hungary is just as much afflicted with the prevalent Protectionist mentality as Austria, and it seemed quite natural that an unfavourable trade balance with Hungary should be resented.

—Yours faithfully,

Budapest V., Gèza ucca 7,

NICHOLAS KALDOR.

Hungary.

The Stock Exchange.

A RUBBER REVIVAL?

A RISE in the London spot price of rubber from 1½d. to 2½d. per pound, in the last six weeks, has produced a stirring in the dry bones of the share market. The recovery has not gone very far, buyers both of the commodity and the shares being oppressed by the fear that a moderate improvement will bring out substantial selling. An optimistic market minority, on the other hand, declares that rubber, like wheat, cotton and metals, has clared touched bottom and is due for a major revival. Where does the balance of probability lie?

The main landmarks in the situation have a melancholy clarity. Between 1929 and 1931, the world's absorption of crude rubber declined from 807,000 tons to 671,000 tons, while production (measured by net exports from the East and Brazil) fell only from 861,000 tons to 797,000 tons. World stocks between the end of 1927 and of 1931 rose from 317,000 tons to over 645,000 tons. The London price of ribbed smoke sheet averaged 10½d. per pound in 1929, and has been as low as 1½d. this year. The *Investors' Chronicle* index of rubber share prices (December 31, 1923 = 100) touched 250 in the 1925-26 boom, stood at 192 in 1929, and has now recovered to over 300. Rubber, under stress of world depression, has revealed a curious tendency. While the trend of production and consumption has suggested a temporary loss of equilibrium, capable of correction whenever demand resumes its pre-slump dimensions, the behaviour of prices and share values has argued a wide-spread belief that rubber has fallen like Lucifer, never to rise again. Such a "psychology" is characteristic of the advanced stage of depression in all industries. The an advanced stage of depression is facing a new set of conditions, peculiar to itself, and insufficiently appreciated three or four years ago, has sufficient substance to warrant closer inquiry.

On the demand side, recent economic troubles have accentuated a long-term tendency for the United States to yield to the rest of the world some of the "long start" to yield to the rest of the world some of the "long start" she obtained in rubber consumption before and during the war. Between 1920 and 1929, the world's annual absorption of crude rubber is estimated to have risen, on balance, by 496,000 tons, but whereas America took 69 per cent. of the rubber consumed in 1920, her share in 1929 had

fallen to 58 per cent. In the subsequent slump American consumption showed its customary elasticity, falling from 470,000 tons to 349,000 tons—i.e., by 121,000 tons—between 1929 and 1931. The consumption of the rest of the world, however, was remarkably stable, declining only from 337,000 tons to 322,000 tons—i.e., by 15,000 tons. Thus, America's proportion of total absorption, last year, was only 52 per cent.

The following table, based on data compiled by the Department of Commercial Research of the Rubber Growers' Association, throws an interesting light on the recent development of demand, inside and outside America:—

Country	Absorption of Crude Rubber, (000 tons.)			No. of Motor Vehicles in Use. (Thousands.)			Proportion of Total Rubber Used in Tyres, 1931.
	1926.	1929.	1931.	1926.	1929.	1931.	
United States	365	470	349	22,137	26,501	25,986	% 82
United Kingdom.....	40	72	77	1,083	1,460	1,581	71
Canada	20	35	25	837	1,168	1,188	68
France	36	62	55	891	1,296	1,695	76
Germany	23	49	39	309	659	688	64
Belgium	2	9	11	92	143	151	64
Italy	10	16	10	138	241	285	84
Japan	18	34	43	46	64	104	12
Russia	7	13	31	13	31	64	12

In the United Kingdom, Canada, France, Germany, Japan and Russia, a very rapid increase in rubber consumption has been associated with the growth of motor transport, but the proportion of the total rubber used in the tyre industry, nevertheless, is demonstrably lower in these countries than in the United States of America. The figures suggest, indeed, that the industry may be on the threshold of a far-reaching change—that the Old World may be coming in to redress the balance of the New. One country, and one product, may never again monopolise rubber consumption as they did ten years ago, when the United States absorbed nearly three-fourths of the world's rubber and used five-sixths of her takings for motor tyres.

Holders of cautious views admit that the world may have scarcely begun to realise the possibilities of a pro-

* Years ended Mar. 31, 1930, and 1931, respectively. † Quick assets less current liabilities. ‡ Approximate figures, receipts from minor subsidiary crops being included. ** 15 months in 1930-31. § 11 months' tapping. (a) Years ended June 30, 1930, and 1931, respectively.

duct for which Nature seems to have designed innumerable uses, but maintain that the industry itself has been equally slow in appreciating her extreme bounty in its provision. Supply, they declare, may well have achieved, at the moment, a painful balance with reduced demand. World stocks declined, on balance, by 12,000 in the first six months of 1932. The estate section of the industry, however, has shown greater readiness to lower its costs than its output. Last year's slight decrease in shipments came entirely from the "native" side. In the first five months of this year, as compared with the corresponding period of 1931, some 16,000 tons of a world reduction of 33,000 tons originated in the Dutch East Indies, and only 6,000 tons in Malaya. Of the D.E.I. "cut," "native" shipments accounted for 15,000 tons and estate shipments for only 1,000 tons. In Malaya, exports from small holdings of under 100 acres (mainly Asiatic-owned) showed a contraction of 11,000 tons, while shipments from the larger estates actually increased by 5,000 tons. If comparison is made with 1930, however, it will be found that while Malayan shipments have been relatively steady, those of the Dutch East Indies have appreciably increased.

These figures may be discounted by the consideration that only at the end of last March was the industry compelled squarely to face the implications of the final refusal of the Dutch and British Governments to intervene in its affairs. In May the mature area "out of tapping" in Malaya rose sharply from 284,000 acres to 316,000 acres, and extensive curtailment plans have since been announced from the Dutch East Indies. But however the industry may damp down its current capacity, its "reserve" of future production is far too considerable to be neglected on a long view. At the end of 1930, according to figures compiled by the Rubber Growers' Association, there were in the East, on an average, 54½ acres of immature rubber to every 100 mature.

Further in the background looms the problem of the permanent place of "capitalism" in rubber-growing generally. A number of important producers are to-day seriously considering the implications of a proposition set out in these columns a year ago—that the estate side of the industry (which in a few years' time will own not much more than half the total mature acreage) should aim at a maximum number of trees to the acre, minimum upkeep costs, and the lowest possible selling price.

We show, in a table on the preceding page, a number of figures relating to the financial position of a very mixed assortment of the larger companies. The rise in share values, from this year's nadir, has been based on a relatively small number of dealings, inspired by a rise in price which may well be maintained, seeing that only in America are manufacturers carrying more than a bare minimum of rubber stocks. The improvement in quotations has not come out of due time, since eleven of the fourteen companies, in their last financial year, produced their rubber at a loss, and many concerns are not well provided with working capital. An early resumption of dividends, in any case, is unlikely, since "costs" at present are frequently on a non-economic basis, and may rise appreciably as conditions return nearer to normal.

Buyers of rubber shares for a revival are, in effect, bulls of American trade recovery. On a longer view, they are subscribers to the thesis that more "balanced" world consumption, and new uses for rubber, will eventually overcome the obstinate fecundity of the rubber tree.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.	
TICKET.	ACCOUNT.
August 23.	August 25

THOUGH the volume of business remained large for a holiday month, the tone in all markets was quieter. The American movement lost its first impetus, the rise in commodity prices was checked, and conditions generally favoured an orderly and not unhealthy recession, without

any serious loss of basic confidence. The splendid War Loan Conversion figures, announced on Monday evening, paradoxically produced the impression that the Treasury had tapped the sources of gilt-edged improvement so effectively as to leave little scope for further immediate improvement. Assented stock was not maintained at par. No serious decline was looked for, however, since it was generally assumed that large institutions desirous of reducing the proportion of long-term to total stocks in their portfolios would liquidate gradually, to avoid the spoiling of their own market.

Strong reports that the new issue embargo would be maintained for some time in the interests of Dominion Conversion operations had no appreciable supporting effect on gilt-edged stocks, but encouraged a firm tendency in Commonwealth issues. A substantial decline in India Loans was not regarded as directly connected with the publication of the Government's findings on the Communal question.

The Foreign Bond market was irregular and inactive. Uneasiness over the Brazilian situation was somewhat accentuated by the announcement that the publication of San Paulo Coffee bulletins had been suspended. Japanese stocks showed further weakening, though Chinese remained steady. Uncertainty over Nazi policy induced a heavy tendency in Germans, but the market, prematurely, put Austrian Bonds better on the passing of the Loan Agreement by the Lower House by a single vote majority.

The report of the Salter Conference (discussed in a leading article on page 840) had scarcely a perceptible effect on home railway stocks. The market shared the Conference's view that no large retransfer of traffic from road to rail would follow its adoption. The Report's publication coincided, further, with a batch of traffic returns showing no trace of an improving tendency. A few buying orders for Argentine railways early in the week found the market rather bare of stock, but prices reacted on the issue of unfavourable traffic returns.

The industrial share market had a confident tone which was not adequately reflected in the course of prices. Dealings, though fairly active, were two-way. There was an increasing disposition to take profits in Trans-Atlantic issues. Textile shares were not responsive to increasing anxiety over the labour outlook in Lancashire, one or two leaders, like J. and P. Coats, even improving on balance. Electrical shares remained fair on moderate but steady investment buying. Steel shares were maintained on a limited provincial business. The shares of heavy motor vehicle manufacturers, however, were sharply written down in view of the stiff increases in taxation proposed by the Road-Rail Conference. In spite of pessimistic chairmen's speeches at the Watney, Combe and Mitchells and Butlers meetings, brewery shares found some support on the argument that the industry's spokesmen were not unaware of the possible effect of their pronouncements on Inland Revenue policy. Tobacco shares were steady after initial selling. A fair inquiry was received for newspaper shares. Bank shares were irregular, but Insurance shares slightly higher on a limited volume of dealings.

Business in the rubber share market was maintained, generally, at the increased level of recent weeks. After prices had risen appreciably, however, the movement's progress was checked by the easier tendency of the commodity. Conditions in the tea share market showed no improvement, both Indian and Ceylon shares suffering from liquidation. Oil shares, after opening active and strong, were subjected to profit-taking by professional operators in New York, while the Continent maintained a neutral attitude. Mining shares remained fairly active, but interest was concentrated on a limited number of issues. Paris gave intermittent support to Kaffirs, and Johannesburg was a brisk bidder for certain stocks, particularly West Rand, on private reports that good values had been encountered in the Southern portion of the property. Rhodesian shares were more subdued, dealings remaining almost entirely professional. Other copper shares made no marked headway. Tin shares remained quiet, despite a few investment inquiries. The market showed some anxiety regarding the commodity position, for the reasons discussed in a note on page 365. In the Western Australian market a large speculative business

was done in Wiluna, which was believed to emanate from a large Australian group, acting on inside information.

NEW YORK.

The upward movement suffered a sharp reaction at the end of last week, when the gains of the previous few days were cancelled, except in the bond market, where prices remained fairly steady, though the volume of trading declined. Much of the lost ground was recovered in the declined. Dealings, however, failed to reach last week's proportions, and bouts of profit-taking became more frequent. The market showed little tangible evidence of over-buying, but the spontaneity of the earlier movement was lacking, and it was generally believed that a period of rest would do no harm. The commodity price rise was checked. Conflicting rumours were current regarding the course of negotiations for a Commodities Finance Corporation. The balance of credence inclined to the report that, after a division of opinion between participating banks, the project would probably be completed, but no aggressive action would be taken unless prices showed a definitely declining trend. Though steel operations were increased last week by ½ per cent. to 14½ per cent. of capacity, a substantial revival in the industry was held to be unlikely before various relief projects were well under way, at the beginning of October. Apart from some improvement in activity in the textile and shoe trades, basic industries continued to show "recovery-resistance." A meeting of railroad executives was called at Chicago on Thursday to consider the advisability of efforts for a further wage cut on the expiry, next February, of the present agreement.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 359.)

Speculative support was given to Royal Dutch, selected South African mining shares and De Beers preferred. Rentes continued firm, but most other sections suffered a moderate setback on Thursday.

BERLIN.

The Bourse, after Hitler's abortive Presidential interview, showed a reassuring confidence in the Government's ability to maintain order. The new unemployment proposals were also favourably received. Reichsbank shares were in demand from "standstill" creditors. A moderate amount of public buying for cash was recorded. A mild setback occurred, however, on the publication of unsatisfactory July foreign trade returns.

AMSTERDAM.

The Bourse showed evidence of a technical reaction in the earlier sessions, though losses were small. Royal Dutch were sold, and Sugar shares were weak, Amsterdam Trading remaining out of favour. Brighter conditions obtained, however, in the middle of the week, when many leading shares were in steady demand. Rubber shares strengthened with the commodity. A further decline finally occurred on mild profit-taking.

Address.....

OTHER CENTRES.

"Mixed" conditions prevailed on the minor European bourses. Stockholm quotations were marked down at first, but steadied later. Brussels was quiet, with few significant price changes. The trend at Copenhagen was downward. Frankfurt, however, like Berlin, was mainly firm, political developments being regarded as of good omen.

INVESTMENT NOTES.

Conversion Result.—The Treasury announced on Monday evening that the amount of 5 per cent. War Loan converted with the benefit of the cash bonus approximated to £1,850,000,000. This amount was exclusive of a number of delayed applications to be received from holders resident abroad. Applications for redemption in cash amounted to only £48,000,000. The national implications of this statement are discussed in a leading article on an earlier page. The total "Assents" so far represent over 88½ per cent. of the nominal value of the Loan and the "Dissents" less than 2½ per cent. Some £189,000,000 remains unaccounted for, of which part may be eventually "converted by default." If this represents, say, 5 per cent. of the loan, the maximum of cash the Treasury will require to find on December 1st will be about £138,000,000—a figure almost identical with the lower of our two estimates made three weeks ago. The result is a tribute to a remarkable national effort (in which the element of individual self-sacrifice may not have been negligible) and to the skill with which those responsible for the scheme's publicity have succeeded in making effective contact with over 2,000,000 War Loan holders. The market's reception of the figures, however, has given point to the arguments of those who maintain that the operation, by the magnitude of its success, has tended to discount an upward tendency in gilt-edged values which might normally have taken some weeks or months to achieve its full effect. The weaker tone of Assented stock after a recovery to par early in the week, may, possibly, be interpreted in this light. On the other hand, an important section of market opinion believes that gilt-edged prices, however they may fluctuate in the near future, will maintain an upward trend, on balance, for some little time to come. This school interprets the Report of the Monetary and Financial Committee at Ottawa as having committed the British delegates to the maintenance of cheap money until early trade recovery is firmly established. In any case, it is argued, in all earlier periods of depression abnormally low money rates have persisted even after industry has been well advanced in the primary stage of recovery. While such considerations as these may be relevant to the medium- or long-term outlook for gilt-edged stock, Assented War Loan holders should not be alarmed if the market in the next few weeks reflects the desire of some large buyers for conversion during the "bonus period" to restore a normal balance between the short- and long-term securities in their portfolios.

Building Society Interest Rates.—The reduction in general interest rates, on which the Government's War Loan triumph sets the seal, has created a pressing problem for building societies. The decision of four large London societies, taken soon after Mr Chamberlain's conversion announcement, to limit new investments to small individual proportions, was obviously an interim measure. The formulation of more permanent policy cannot be indefinitely postponed. Accordingly a meeting was held last Tuesday, in London, of representatives of certain leading societies, both provincial and metropolitan. The lines of possible policy were discussed, but no public announcement can be expected pending a further meeting, whose date has not as yet been fixed. The societies, naturally, are convinced that a lowering of rates to investors (which have generally been higher in London than outside) is inevitable, if they are not to be deluged with unwanted money, at a time when its continued employ-

ment on the scale and at the price of recent years is more than doubtful. The corollary would be a reduction in mortgage rates to new borrowers. Legally, the societies would have the right to maintain existing mortgages at their covenanted interest rates. In practice, however, this might cause serious discontent, and—if general interest rates remained low for a considerable period—a possible tendency towards the repayment of mortgages and their effective transfer to some of the building societies' competitors. One or two societies have already announced reductions, which, in one case at least, apply to existing mortgages. Among the larger organisations, the Leeds Permanent is stated to have reduced its interest rates to South of England borrowers from 6 per cent. to 5½ per cent. Apart from the views of individual but powerful leaders, it is unlikely that the movement will make any hasty decision on the point. The fact that in the last three years a "record" amount of new mortgage business has been done, on which the percentage of advances to the current market values of the properties is still relatively high, must tend to produce caution as regards the taking of any step which, directly or indirectly, may influence the future of housing values.

Insurance Against Drawn Bonds.—In the search for investments of an attractive yield (writes an insurance correspondent) investors have been turning towards a combination of stock buying and insurance by which they may secure themselves against loss by drawings at par. The device is not new. It has been tried in the past, for instance, in connection with certain Continental bonds which, having now fallen below par, no longer need the special protection given by a policy. The inquiries recently have mostly been connected with Victory Bonds, and the rate quoted has varied in accordance with the terms of the cover. In one form of policy the premium is charged on the full value of the bonds, and the policy pays the difference between redemption price and market price at time of redemption. On this policy the usual rate is 2s. 6d. per cent. In another form of policy the premium is charged, not on the full value of the bonds, but on the sum that the investor wishes to recover from the underwriter, who agrees to pay the issued value of whatever may be the price of the bonds at the time of drawing. The rate in this case is 1½-2 per cent. The market is narrow, and though a good deal of interest has been taken in the scheme, and a large order on Victory Bonds is in contemplation, it is believed that little firm business has been done so far. Other bonds, however—notably Belgian 7 per cents.—are the subject of current inquiry. Some theoretical discussion has taken place on the working of the law of assign in these notes, on the question whether very large lines can prudently be written, and whether large bonds are a worse risk than small bonds. On these matters, however, there is as yet no general agreement.

London Transport "A" Stock.—Although the London Passenger Transport Bill has still to complete its arduous journey to the Statute Book, its chances of arrival have been increased by the Metropolitan Railway stockholders' acceptance, last month, of terms for the withdrawal of opposition to the measure. Though those in charge of the Bill's fortunes may be correspondingly reluctant to consider significant changes at this hour, there is point in the contention of a correspondent (whose letter appears on page 356) that a basic rate of 4½ per cent. for London Transport "A" stock has been rendered somewhat anomalous by recent market developments. At the time of the Bill's drafting it was not foreseen that a speedy and successful Government Conversion operation would open up the prospect of a future long-term basis of around 3½ per cent. for trustee stocks. It is more than probable that, if the Bill were being drawn up *de novo*, a lower basic rate than 4½ per cent. would be taken for the "A" stock. The point is of more than academic interest to holders of stock such as 8½ per cent. Metropolitan Railway debenture and 8 per cent. Metropolitan District Railway Rent Charge. From the income point of view, the nominal interest rate on Transport "A" stock is immaterial to such holders, since, in any case, the amount of stock they receive will be

so adjusted as to give them precisely the same interest as they are receiving at present. But whereas their current stocks are perpetual, London Transport "A" stock is redeemable, at the option of the Transport Board, after 1985. Thus the heirs of a present holder of £100 Metropolitan 3½ per cent. debenture stock will eventually receive only £77 15s. 7d. in cash. But at the time of repayment, if present views as to the future of interest rates are sound, their stock would otherwise be standing at a considerable premium. If it were decided to issue London Transport stock carrying a lower rate of interest, the amount of cash to be found, after 1985, by the Transport Board would, of course, be increased on the same assumption. While our readers may not go so far as to regard the present arrangements, in our correspondent's words, as "partaking of confiscation," the responsible authorities may care to consider whether the recent change in the long-term interest outlook has provided an equitable basis for some modification of the Bill's terms, in the interests of all potential holders of Redeemable Transport stock.

Brewery Profits and the Beer Tax.—At the annual meeting of Watney, Combe, Reid, last week, Colonel O. P. Serocold attacked last year's increase in the beer duty in more reasoned fashion than the majority of brewery chairmen. He pointed out that whereas the Chancellor of the Exchequer had collected from his company £13,287 more duty during the past than the previous year, the Exchequer would lose in income tax on the company's profits alone a sum far in excess of the extra duty collected. In addition, there would be a further loss in surtax and death duties. Colonel Serocold's argument is sound, however, only if it can be proved that the fall in income tax receipts from brewery profits is due solely, or mainly, to the increased beer duty. Actually, the barrellage charged with duty for the nine months ended September 30, 1931 (before the imposition of the higher duty), was 12,830,000, compared with 14,229,000 for the corresponding period of the previous year, so that output was already seriously affected before the new duty was imposed. Additional evidence on the point is provided by the following table, showing the profits quarter by quarter of a representative number of breweries, before last year's emergency budget:—

NET PROFITS (AFTER DEBENTURE INTEREST).
(£'000's.)

Reports issued in Quarter ended March 31. (21 companies.)			Reports issued in Quarter ended June 30. (14 companies.)			Reports issued in Quarter ended September 30. (20 companies.)		
1930	1931	Change %	1930	1931	Change %	1930	1931	Change %
1,791	1,804	+ 0.7	3,815	3,455	- 9.4	8,603	8,003	- 7.0

In the light of these figures it would not appear legitimate to attach to the increased duty the entire responsibility for lower brewery profits. Earnings, it is clear, were already adversely affected by industrial depression before the increase took place. The latter, of course, may well have significantly accelerated a tendency which would probably have strengthened, in any case, with the deepening of depression.

Manitoba, Vancouver, ex ship, 28s. 6d., against 28s. 9d.; Australian, ex ship, 28s., against 28s. 9d. a week ago.

WHEAT FLOUR.—International trade in flour has been on a small scale. North American shipments, at 109,000 sacks, showed a decrease of 8,000 sacks, as compared with the previous week. Of this total, 32,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 24s. 6d., against 24s. 6d. Manitoba patents, ex store, 25s. 6d. to 28s., against 25s. 6d. to 28s.; and Australian, ex store, 18s. 9d. to 20s., against 20s. to 21s. a week ago.

BARLEY.—Business in barley has been quiet, particularly on the Continent. The chief sources of supply were Russia and the Danubian countries. On Wednesday, "October" futures were quoted at 33½ cents per bushel in Winnipeg, against 35 cents last week and 31½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 26s. to 27s., as compared with 26s. to 27s.; "River Plate," landed, 23s. 6d., against 24s. 6d. a week ago.

OATS.—The market in oats has been less active, though Argentine varieties continued to find an outlet in Continental countries. The demand for Canadian has been on a smaller scale despite concessions in price. "September" futures, which last week stood at 17½ cents per bushel in Chicago, sold at 16½ cents per bushel on Wednesday this week, against 17½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 3d. per 320 lbs., as compared with 18s. 3d. last week; "River Plate," ex ship, 17s. 6d., against 17s. 3d.; "Chilean White," landed, 24s. to 25s. 6d., against 24s. 6d. to 25s. 6d. a week ago.

MAIZE.—Although the demand for maize, particularly on the Continent, was again active, prices suffered a slight setback owing to increased offerings from Argentina and elsewhere. Wednesday's quotation in Chicago for "September" futures, at 31½ cents, shows a fall of ½ cent per lb. on last week, and a rise of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 3d. per 480 lbs., compared with 21s. 9d. last week; "Plate," ex ship, 20s. 3d., as against 20s. 6d.; "Plate," September-October, 20s. 3d., as against 20s. 9d. Yellow maize, ex wharf, was quoted at £6 per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to August 13	Owts. 28,217	Owts. 25,824	Owts. 62,816	Owts. 32,181
50 weeks to August 13	3,811,519	4,928,433	9,627,170	9,769,375

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Aug. 19, 1931.	Jan. 4, 1932.	Aug. 10, 1932.	Aug. 17, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	48½	62½	61½	58
Chicago (No. 2 Winter)	130½	79½	55½	55½	55½	50½

The visible supply of wheat in Canada, at 64,117,000 bushels, shows a decrease on the week of 5,239,000 bushels. Supplies a year ago stood at 61,438,000 bushels.

OTHER FOODS.

SUGAR.—The New York market in sugar opened easier on Monday, but subsequently advanced again on bear covering, an increased demand for raw sugar and the news of an advance in the quotations for refined grades. The course of prices in London followed closely the development in New York. "September" futures in New York were quoted at 1-10 cents per lb. on Wednesday, against 1-10 cents per lb. a week ago, and 1-02 cents per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 6s. 7½d. to 6s. 7½d. per cwt., against 6s. 7d. to 6s. 7½d., and "March, 1933," at 6s. 11½d. to 7s. 0½d., against 6s. 8½d. to 6s. 9½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below.

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.

Total	394	12,527	1,227	14,196	11,820	103,699
Last week	20†	22,544	600†	13,293	12,663†	105,368

* Not available.

† London only.

COFFEE.—The New York market in coffee was characterised by a steady demand at rising prices. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents a week ago. The improvement which became noticeable at the public auctions in London last week was maintained on Tuesday. Demand was good and some varieties advanced in price. Last week's movements of coffee in London were as follows: Brazilian, landed, 20 bags; delivered for home consumption, 537 bags; exported, 734 bags; stocks, 18,168 bags, against 1,927 bags last year. Central American, landed, 626 packages; delivered for home consumption, 1,902 packages; exported, 2,074 packages; stocks, 100,508 packages; against 98,381 a year ago. Other kinds, landed, 1,837 packages; delivered for home consumption, 2,012 packages; exported, 527 packages; stocks, 73,599 packages, against 79,569 a year ago.

COCOA.—Last week's sharp advance in the price of cocoa in London and New York gave way to a slightly easier tendency this week. "September" futures were quoted at 4-35 cents per lb. in New York on Wednesday, against 4-51 cents per lb. a week ago and 4-07 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 28s. 3d. per cwt., c.i.f. Continent, shows a fall of 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 4,662 bags; delivered for home consumption, 3,251 bags; exported, 94 bags; stocks, 152,748 bags, as against 224,003 last year.

TEA.—The quantities catalogued for this week's auction comprised 49,294 packages of Indian, and 28,864 packages of Ceylon tea. This week's tea auctions were characterised by a good demand at steady prices for common and superior teas, and a neglect of medium varieties. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

RICE.—The market in rice was a little more active. Spot prices remained unchanged, but forward prices showed a slight advance on last week. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 8s. 1½d. per cwt., show a rise of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 5 tons; delivered, 162 tons; stocks, 2,897 tons, as against 1,009 tons last year.

POTATOES.—The principal markets have been well supplied with potatoes, and prices declined further. At the London Borough Market, "King Edward" was sold at 5s. to 6s. per cwt., against 5s. 6d. last week and 7s. to 8s. per cwt. a fortnight ago.

PEPPERS.—The market in pepper was quiet, and prices failed to recover. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the corresponding day last week. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 11 tons; stocks, 350 tons, against 570 tons last year. White, landed, 43 tons; delivered, 46 tons; stocks, 479 tons, against 493 tons a year ago.

MEAT.—The outstanding feature of the course of prices at the Smithfield market this week was the sharp fall in the quotation for Argentine beef. British-grown beef and mutton and New Zealand mutton remained substantially unchanged. On Wednesday,

HIDE, LEATHER AND ALLIED TRADES.—There has been a further upward movement in the price of hides this week, and although business for some sorts may not have been quite so large as has been the case lately a steady trade has been passing most of the time. At the Manchester sales of English hides, ox and heifers sold at last figures to an advance of 1/4d. per lb., as was also the case with cows. Calveskins were unchanged in value, and there is little in the present state of the sheepskin market to warrant higher prices being realised for these. Imported hides are distinctly firmer, and would seem to have arrived at a level where tanners are less disposed to pay the figures asked. In the South American market wet-salted Argentine ox are quoted at 4d., while 4 1/2d. has been paid for cows and 4 1/2d. for Montevideo ox. Dry hides from the same origin have gained in value, B. A. Americanos being offered at 5 1/2d., Inservibles at 3 1/2d., Cuyabanos at 4 1/2d., and M. V. Americanos at 6 1/2d. African hides have inclined to be on the quiet side with the exception of Capes, sales of which have been made at 5 1/2d. and 4 1/2d. for first and second dries, and 5d. and 4d. for dry-salted in the same selection. Small transactions have taken place in regard to Australians, values for which are slightly firmer. No large business has transpired in the leather market, but a very respectable amount of inquiry has come to hand for stock, in addition to which regular sales of small parcels have been made from day to day. Interest this week has been chiefly concerned with English and wet-salted bends in the light and medium weight, and in some directions sales have totalled up to quite a fair aggregate. Moderate transactions have also been negotiated in regard to bends made from dry hides in certain grades, but there has been no improvement in the inquiry for heavy weight bends in both sorts. Sales of offal have been fair for pinned stock, but rough bellies and shoulders continue a quiet market. Little alteration has taken place in the state of the market for upper leathers. Orders have usually been for parcels of glacé kid and willow calf, in addition to which inquiries have been made for box calf and patent leather. Semi-chrome upper leather and real and imitation reptiles are a slow sale.

RUBBER.—The market in rubber was firm under active support from the United States. Consumption in that country declined from 39,116 tons in June to 28,272 tons in July. In New York,

Wednesday's spot price for rubber, at 3 1/2 cents per lb., shows a fall of 1/4 cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2 1/4d. per lb., against 2 1/2d. per lb. on the corresponding day last week. In forward positions, business has been done at 2 1/4d. for April-June, 1932, as against 2 1/2d. to 2 3/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 951 tons; delivered, 2,475 tons; stocks at the end of last week, at 105,475 tons, show a decrease of 1,524 tons as compared with the preceding week.

DEATH DUTIES

Seventy Million Pounds are taken out of capital each year to meet Estate Duties alone.

The only satisfactory method of meeting the capital loss is by LIFE ASSURANCE.

Write for special booklet "Provision for Death Duties at Minimum Rates."

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2.

Established 1844 Funds Exceed £10,000,000

£1,300 instead of £1,000?

Under the Institution's *Distinctive System* of Whole Life Assurance the Premiums are on so moderate a scale that at early and middle ages the yearly sum charged elsewhere for £1,000 (with profits) will here secure from the first as much as £1,300 or thereby, with right to Bonuses. The additional £300 is equivalent to an **Immediate and Certain Bonus of £30 per cent.**, as large as can be looked for in other Offices only after many years.

Full particulars of the *Distinctive System* will be sent on receipt of a postcard addressed to:

THE SCOTTISH PROVIDENT INSTITUTION,
6 ST. ANDREW SQUARE, EDINBURGH.

Founded in 1837 Funds exceed £22,000,000

BANCA COMMERCIALE ITALIANA.

Limited Company Incorporated in Italy.

Established in 1894. Head Office: MILAN.
Capital 700 million Lire. Reserves 580 millions.
Deposits 8,220 millions.

Branches in every centre of commercial and industrial importance in Italy; also in London, New York, Istanbul (Constantinople), and Izmir (Smyrna).

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czechoslovakia, Poland, Yugoslavia, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc.

London Office:

32, Threadneedle Street, E.C.2.

A. JOEL, Manager.

Correspondents to the Italian Treasury.

THE MONEY MARKET.

This week money became distinctly more usable. It is true that little change occurred at the week-end, and new money was then quoted at 1/4 per cent. and renewals at 1/2 per cent. The absence of Treasury bill maturities on Monday, however, coupled with payments for new bills, brought the rate for new money up to 1/2 per cent., and also caused a firmer tendency in discounts. On Tuesday the excess of Treasury bill payments over maturities curtailed the supplies of funds still further, and raised

the rate for new money to $\frac{1}{2}$ per cent. This stringency persisted on the two following days, for although maturing Treasury bills were beginning to fall due, there was fairly heavy calling by one of the clearing banks. The result was that by Thursday afternoon a full $\frac{1}{2}$ per cent. had to be paid both for old money and new, while the market was having to borrow a fair amount from the clearing banks at their minimum rate of 1 per cent.

Discount rates have responded to the increased monetary stringency. Last week's offerings of Treasury bills were again £45.0 millions, and the average tender rate moved slightly more in favour of applicants at 11s. 3.2d. per cent., against 10s. 6.57d. per cent. the week before. "Hot" Treasury bills were quoted over the week-end at $\frac{1}{2}$ per cent. During the current week lack of buying by the banks and the harder tendency of money gradually drove the rate up until on Thursday afternoon hot "Treasury" bills were quoted at $\frac{1}{2}$ per cent. and over, while the following day's tender rate was expected to be $\frac{1}{2}$ or even $\frac{3}{4}$ per cent. Three months' bank bills were quoted at $\frac{1}{4}$ per cent. on Thursday and German standstill bills at $\frac{1}{2}$ per cent.

The Bank return records the return of a further £2.1 millions of notes from circulation, and in the absence of any gold movements the Reserve has increased by the same amount. There were small changes, amounting in the aggregate to a net increase of £6 millions, in the earning assets held by the Banking Department, but the main change was in deposits. The discrepancy between Treasury bill issues and maturities caused an increase of £12.4 millions in Public Deposits to the unusually large figure of £22.2 millions, while the same cause reduced Bankers' Deposits by £9.9 millions from £89.8 to £79.9 millions. This last change explains the increased stringency apparent in the market.

	Aug. 4, 1932.	Aug. 11, 1932.	Aug. 18, 1932.	Aug. 25, 1932.	Previous Rate and Date Changed
Bank Rate	% 2	% 2	% 2	% 2	2½ (June 30, '32)
Banks' Deposit Rate..	1	1	1	1	1 (May 12, '32)
Discount / Call	1	1	1	1	1 (May 12, '32)
Houses / Notice ...	1	1	1	1	1 (May 12, '32)
Market rate ("hot")	1	1	1	1	1 (May 12, '32)
Treasury bills).....	1	1	1	1	...
Market rate (3 months' bank bills)	1-1	1	1	1	...
Market rate (standstill bills)	1-2	1-2	1-2	1-2	...

The general market impression is that this sudden stringency is purely temporary, and may well be succeeded immediately by a further period of ease. It can safely be said that there has been no change in monetary policy, and while bill brokers naturally welcome the higher discount rates, they are largely powerless to maintain them. At the same time, it is pointed out that while money rates are abnormally low, money is not really plentiful. Under present conditions the withdrawal of £10,000,000 or so is sufficient to drive the market into the clearing banks, and the banks themselves do not appear to have over-much to lend. One market view is that the clearing banks are at the moment carrying an unusual quantity of gilt-edged stocks, and so tend to have a narrower margin of call and short money than usual.

Another cause of higher discount rates is that this week the clearing banks have been buying bills less freely than usual. The market argument is that the main function of the discount houses is to act as a "mixer"—that is, to collect bills from all quarters and to marshal them into parcels suitable for the clearing banks' needs. It follows that the discount houses can only function if the banks are prepared to buy, and any failure on the part of the banks to take up bills throws the whole market out of gear. On the other hand, to judge from the latest available clearing bank returns, the banks' bill portfolios

are considerably greater than they were a year ago, and, in any case, the banks are governed in their policy by the requirements of their customers. Thus the bank that called heavily this week may well have had to meet important drawings by a customer, who may even be some overseas Government or other public body. It does not follow that the banks will not resume buying next week, when the period of pressure may have passed.

This week's floating debt statement shows a rather mysterious increase of £53.5 millions in the Treasury bill issue. The cause of the increase is clear, for the week covered the redemption of the 4 per cent. 1931-33 Treasury bonds, for which £58.6 millions were required. There is, however, no trace of these additional Treasury bills having reached either the Bank or the market, and it is this that has caused some comment as to their holders. A probable explanation is that the bulk of the maturing Treasury bonds were held by Public Departments, which have taken Treasury bills in exchange.

On Saturday last New York reported a gold shipment of \$6.0 millions to France, but this was exactly balanced by an equal reduction in gold earmarked on foreign account. Since then there have been further reductions of \$10.4 millions in foreign earmarkings, together with imports of about \$1.0 millions. The Reconstruction Finance Corporation increased its loans by \$46.7 millions during the last ten days of July. This figure includes 437 new loans and increases on previous loans. The Secretary of the Treasury has been conferring this week with New York bankers and bond dealers, presumably in preparation for the new Government financing due September 15th. \$712 millions of maturing Treasury certificates must be dealt with, and it is believed that a further \$300 millions will be required by the Reconstruction Finance Corporation.

The Foreign Exchange market was extremely quiet this week, and the tendency of the principal currencies was unfavourable to sterling. The New York rate fell from 3.47½ to 3.46, and Montreal from 3.99½ to 3.92. Paris moved less sharply against us to 88½. Brussels improved from 25.08 to 24.90. Milan improved fractionally at 67½, as did Madrid at 48.00. Amsterdam was two points better at 8.60, and Berlin improved sharply from 14.60 to 14.53. Switzerland was firmer at 17.80. The Scandinavian currencies were less unfavourable, Stockholm gaining a point at 19.47 and Oslo being unchanged at 19.97; but Copenhagen lost a point at 18.78. The South American currencies are still largely nominal, Rio being quoted at 5½d. (sellers), Buenos Aires at 84½d. (nominal), and Montevideo unchanged at 29d. In the Far East the feature was the continued weakness of the yen, which fell away from 1s. 4½d. to 1s. 3½d. The rupee was very steady at 1s. 6½d., or no change from last week. Batavia was quoted at 8.70. In the forward market dollars were firmer at $\frac{1}{4}$ cent discount for one month and $\frac{1}{8}$ cent discount for three. Paris was unchanged at 1 and 3 centimes premium. Belgas were weaker at 9 and 22 centimes discount. Milan was quoted at discounts of 1½ lira and 1½ lira for one and three months respectively, and Madrid at discounts of $\frac{1}{4}$ peseta and $\frac{1}{2}$ peseta. Amsterdam was at par for both deliveries, or unchanged from last week. Switzerland was quoted at par for one month, but was at $\frac{1}{4}$ centime discount for three. Silver prices advanced on Indian and Chinese buying, by ½d. to 18½d. for cash, and by ½d. to 18½d. for forward, after being higher. The China silver exchanges were again dearer, Hongkong rising from 1s. 4½d. to 1s. 4½d., and Shanghai from 1s. 8½d. to 1s. 9½d.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

THE HARVEST OF OTTAWA.

It may, or may not, be unfair to accuse the statesmen lately assembled at Ottawa of the intention deliberately to mystify the public as to the fruits of their negotiations. Whether hasty drafting be pleaded in defence, or whether the British delegation, conscious of their initial optimistic declarations, felt uncomfortably aware, as they surveyed the concrete results of Imperial affection, that "there's the beggary in the love that can be reckoned," the fact remains that the Ottawa agreements, summarised on a later page of our present issue, yield a significantly "dusty answer" to those who seek for certainties in the shape of solid economic advantage. There is so much in the way of ambiguous phraseology, so much detail to be filled in where glaring gaps obtrude, that it is still impossible finally to appraise the harvest reaped at this lime-lit conference. Yet this may be said: the draft agreements, incomplete as they are, reveal sufficient indications of the trend of the concerted policy to warrant the conclusion that, from the standpoint of particular British interests and that of the world advantage alike, much more has been lost than has been gained.

Let us endeavour, without partiality or fiscal prejudice, to see what can be set down on the credit side of the Ottawa ledger. It is to the good, admittedly, that the educative experience of this Conference has exploded finally the futile delusions of the Empire Free Trade campaign; that, notwithstanding heated weeks of haggling and log-rolling, an accord of sorts has been patched up whereon the conception of Imperial economic unity may, however precariously, repose; and that, above all, Great Britain has not been forced completely to abandon her ability to maintain at least the position of being, potentially, a low-tariff country. For these mercies we are duly grateful; but, when all is said, there is little enough comfort to be derived from such negative blessings. Positively—and this is the real test—the Conference, as we see it, has failed utterly to realise its only worth-while objective—the expansion, as opposed to the mere diversion, of trade.

On the barren question, which side—Britain or the Dominions—has "won," we do not propose to dwell unduly. Until we know precisely what Dominion duties are to be altered in our favour, it is difficult to assess the value of even the limited "concessions" which we have apparently been promised. Given perpetuance of restrictive tariffs, it is something that our industrialists should have the right to a hearing before Dominion tariff boards. Indeed, if the tariff boards act impartially and their recommendations are adopted by Dominion parliaments, we may find that a check is to some extent imposed on the upward march of tariffs against British goods. At the same time, the agreed principle of compensatory tariffs (with "infant industry" reservations) is in itself a denial of the only sound conception of specialised international exchanges of goods; and we have still to be convinced that the proclaimed "opening" of the Dominion markets to British manufactures will have more than a trivial effect on employment in this country. Yet, as a price for these doubtful gains, we have assumed a fiscal burden, and surrendered our own negotiating power, for a lengthy period and to a far from negligible extent. We are pledged, over the wide range of our existing tariff, to maintain for five years a 10 per cent. preference in the Dominions' favour, with the single reservation that in the case of dairy produce our domestic agriculturists, after three years, may be granted fiscal shelter even against Empire producers. Our diminishing free list is further curtailed by the imposition of duties on foreign wheat, copper, linseed and one special type of maize. On a number of commodities our existing duties are to be raised in order to give greater Imperial preference. In the case of meat and (subject to the Pig Commission's findings) bacon, we are committed to the pernicious folly

of import quotas, combined with approval of producers' cartellisation at the exporting end.

Thus, irresistibly generous or naively "had for a mug," the British Government has gone some way to turn this country fatally into a high-price, high-cost island, in return for promises whose implementation is questionable and whose value, at best, is far from substantial. It has had, on any showing, the worst of the bargain. But this is not the gravamen of the real count against Ottawa. Weighty though the objections may be against the perpetuation and extension, to which we are committed, of our present sweeping tariff, the British Government can still plead successfully that, with certain exceptions, it is free to negotiate reciprocal arrangements with foreign countries on the basis, at any rate, of mutual 10 per cent. duties, thus establishing a minimum standard of fiscal decency. Equally, it can argue that, save for the almost prohibitive proposed copper duty and the tariff on linseed, its new excursions into preferences may not seriously affect British costs. For example, the wheat duty, unless Canada establishes a cast-iron selling pool (and the preference is conditional on sales at the "world price"), will probably hurt the British consumer as little as it benefits the Canadian producer; and the proportion of "flat white" maize in our total maize imports is inconsiderable. In these instances and, it may prove—when the "programme" is published—in the case of meat also, the practical results may turn out to be less harmful (and equally less profitable to any vested Dominion interest) than the essentially vicious principle set up. Where the real failure of Ottawa lies is in the total absence of any vindication of the truth that economic progress is to be sought in the general lowering of tariff barriers. Nowhere in the agreements—and our judgment is confirmed by Mr Bennett's loudly Protectionist exultation—do we detect any evidence that the Dominions have modified in essentials their adherence to the policy of high protective tariffs. Where "general" tariffs are to be altered, they are actually to be raised.

This said, there is little to be added. When silence falls on the nauseating symphony of Imperial wind-instruments braying "triumphal success," the Ottawa agreements stand as the limited achievement in £. s. d. bargains realisable by Great Britain in negotiation with an Empire resolutely determined to protect its own manufacturing industries. They involve, on the one hand, the likelihood of some damage both to our own interests as a food and raw material importing country and to those of our important foreign customers whose goods, to some extent, are to be excluded from this market. On the other hand, though the relatively restricted scope of the agreements may comfort those who feared that Ottawa might seek to create an Empire ringed universally by an impenetrable tariff wall against the outer world, the mere fact that Great Britain has refused, for the most part, to impose, for preferential purposes, inordinate duties, is scant solace to those who hoped that the Conference might justify Mr Baldwin's promise that it would give a lead to "freer trade" throughout a tariff-ridden world. Stripped of their equivocal verbiage—the British right to sales at "world prices," the Dominions' right to "reasonable" protection, the agreement to prohibit imports frustrating "by State action" the proposed preferences—all of which is likely to involve acrimonious controversy hereafter, the Ottawa agreements in substance are narrow and sterile. As a prelude to the World Economic Conference (at Ottawa the bond of sentiment was surely a factor not to be paralleled at Geneva) they are a bitter disappointment. For, if the verdict may be summarised in a sentence, the only visible result of Ottawa is that the Empire has, in part, been humbugged and, in part, so far as concerns Britain's power to pursue policies of fiscal sanity, ham-strung.

POST OFFICE REFORM.

COMPELLED to acknowledge that much of the recent criticism of Post Office administration does not lack substance, but rejecting the main contention put forward by the critics—that the Post Office should be, in whole or in part, “de-nationalised”—the Committee appointed under the chairmanship of Lord Bridgeman to “enquire whether any changes in the constitution, status or system of organisation of the Post Office would be in the public interest,” has presented this week a report* which is in the nature of a cautious compromise. Starting from the premise that the Post Office, as an integral whole, must remain a department of State, the Committee have endeavoured to make suggestions for reorganisation designed to imbue such a department with a spirit of commercial efficiency, and to provide incentives whereby a State-controlled Post Office should be induced to pursue the ideal of progressive development and optimum service to the public. Within their limits, the Committee’s recommendations appear to be on unquestionably sound lines; if adopted, as they deserve to be, by the Government, they should go far to remedy existing defects in many directions. If the report is open to criticism, it is because, in our opinion, its signatories, while indicating promising lines of reorganisation, have not fully faced the real problem, whose difficulty is patently considerable, of laying down the basic principles which should govern the operation of a “commercially-minded” department of State whose objective ex-hypothesi is to be maximum economic efficiency.

In rejecting the proposal that the Communication Services of the Post Office (i.e., excluding its functions in relation to Savings, Pensions, etc.) should be transferred, either in whole or in part, to an independent authority of the public utility company or statutory corporation type, the Committee make out a strong case for their conclusions. As they point out, there are obvious reasons why the Government should be in a position to control the Postal Services; and if the telephone and telegraph services were now to be divorced from the mails and conducted by an independent administration, there would either have to be a wasteful duplication of premises, or, if the existing buildings housed two separate administrations, serious internal friction and administrative difficulty would ensue. Moreover, though we do not attach great weight to the Committee’s view that existing Parliamentary control has much value as a protection to the public using the Post Office Services, there is substance in the Committee’s suggestion that independent management of the Communication Services would by no means infallibly result in the disappearance of the defects which have given rise to complaint. In short, a vast public utility with monopoly powers might not achieve a better organisation, or treat the public with greater consideration, than a Government department.

With regard to the existing shortcomings of the Post Office, the report pays a tribute to the work which the Post Office is performing, and it dismisses, as wholly unfounded, the idea that the personnel can fairly be charged as a whole with either inefficiency or lack of a spirit of willing service in its attitude towards the public. Nevertheless, though their criticisms are judicious and kindly, the Committee are constrained to acknowledge that there is a real need for improvement in many respects. It is admitted, for example, that the high cost of telephone installations, resulting in low telephone density, is working in a vicious circle, hampering development; there are hints in the report that standards of construction are sometimes needlessly expensive; and a significant reference is made to the superior results achieved by the American Telephone and Telegraph Company by methods of “systematic staff training” which the Committee would like to see paralleled in this country. The Committee, however, do not enter very deeply into details of possible improvements; their main finding is that in order to secure greater efficiency there should be

reforms in (a) the relationship of the Post Office to the Exchequer, and (b) the existing internal organisation.

So long as existing financial arrangements continue whereby the Post Office net surplus automatically accrues to the Exchequer, so long, in the Committee’s opinion, “will the tendency to regard the Post Office as a revenue-producing instrument obscure and impede its primary function, which is the service of the public.” It is therefore proposed that the Exchequer should receive from the Post Office a definite annual contribution, and that the residue should be made available for the improvement and development of Post Office facilities. The Post Office, it is suggested, should pay for services rendered to it by other departments (e.g., the Office of Works and the Stationery Office), and, similarly, Postal Services at present rendered free of charge to other departments should, in future, be paid for. On this basis, after an adjustment in respect of pension payments, and after providing that net receipts from wireless licences should be credited to the Exchequer, the Committee estimate that for 1932-33 the net surplus of the Post Office should be £12.3 millions. In the light of these figures, the Committee propose that the “fixed contribution” for the next three years should be £11.5 millions, plus 50 per cent. of any excess over that figure. This arrangement appears to us to be on sound lines; but, we would strongly suggest, the basic figure of £11.5 millions is put considerably too high. The resulting “free surplus” of the Post Office would be less than £500,000 a year; and though the Committee doubtless felt precluded from suggesting, in the present circumstances of the Budget, that the Treasury should forego any large proportion of the increment which it has come to draw from its Postal milch-cow, we see no reason why the fixed contribution should not be limited, even now, to £10 millions, with provision for its progressive reduction, in more propitious circumstances for the Treasury, to a considerably lower figure. If the Committee are really convinced that the Post Office must be given, financially, both incentive and opportunity to promote expansion of its services, they have scarcely displayed, in the financial basis which they recommend, the courage of their convictions.

It is in respect to organisation that the Committee’s proposals are most far-reaching. Analysing the present system, they put their finger emphatically on what is beyond doubt the essential weakness—the fact that in an over-centralised machine the three main functions of administration, finance and engineering run parallel throughout the structure, and are co-ordinated only at the top in a bureaucratic secretariat which has little practical experience of work “in the field,” and little contact with the public. The report observes that individual members of the secretariat possess considerable administrative ability, and it is not proposed to supersede the present methods of recruitment of administrative staff. The recommendation, however, is strongly made that, in place of the present control of the secretariat, there should be substituted a board of management representative of the various branches of the service, and presided over by the Postmaster-General as chairman, and, as deputy chairman, by a Director-General who would, in effect, be General Manager. The function of the new board of management would be to consider and determine broad issues of policy, while greatly extended powers should be delegated to Regional Directors presiding over similar local boards of management, and exercising jurisdiction over all the Services in the locality. Finally, there should be complete fluidity of interchange of staff between headquarters and the provinces; promotion to the higher grades should be by suitability rather than by seniority; and technical personnel should be eligible to rise to the highest administrative posts. Thus reorganised, with closer liaison between engineering and administration, and with the Accountant-General’s department no longer confined to *ex-post facto* criticism, but actively participating in the management, the Post Office, in the Committee’s view, should be set on the road towards greater commercial efficiency and better service to the public.

Such are the main conclusions of the report, though reference should perhaps be made to the not unimportant

subsidiary proposal that the telegraph service should be completely amalgamated with the telephone service. We trust that the Government will lose no time in putting into effect the Committee’s recommendations as a minimum programme of not unpromising reforms. The question, however, remains to be answered—and the answer can only be given by the proof of experience—whether even on its projected basis the functions of the Post Office are clearly enough defined. The difficulty, as we see it, is this: the Post Office is still to be asked to perform two self-contradictory functions, namely, to develop its facilities on commercially efficient lines, and, at the same time, to provide certain social amenities for which purely commercial justification is lacking. In other words, the high cost of postal facilities, which in itself is a handicap on their economic expansion, is due in part to the necessity of financing out of postal revenues the loss on services (e.g., in thinly-populated areas) which cannot be made to pay their way. Under a purely commercial management such services, the Committee object, would tend to be restricted. The implication is that the national interest would thereby suffer. But, though this is doubtless so, does it follow that the burden of financing the “losing services” should fall solely upon users of postal facilities, with the resulting adverse reactions on the development of cheap services? Would it not be more desirable that a reformed Post Office (whose present tie, incidentally, with the Office of Works and the Stationery Office should, in our view, be completely severed) should separate from the rest its unremunerative accounts in detail, and that, if the Government should decide in the national interest that particular unremunerative installations and services should be preserved, then the cost should fall upon the Exchequer? It is only on this basis that we feel confident of the Post Office, however ably administered, being in a position to develop its functions on really sound commercial lines.

NON-FERROUS METALS: TIN.

THE post-war development of the tin-producing industry resembles that of the copper, lead and zinc industries (surveyed in our issues of July 9th, July 16th and July 23rd last). Demand reached its peak in 1929, but expansion in productive capacity, chiefly due to improvements in metallurgy, overtook it two years before the débacle in the United States, and prices were driven down. When industrial activity began to decline, producers vainly tried to stem the torrent by restriction of supply. The following table shows the course of prices in London and New York during recent years:—

	Average.	London. “Standard Cash” (per long ton).		New York. “Straits” (per lb.).
		£	s. d.	Cents.
1913		201	13 7	44.25*
1925		261	1 8	57.89
1926		291	3 0	65.28
1927		289	1 5	64.35

* “Standard” tin.

The quantitative importance of the chief sources of supply, in 1929, expressed as a proportion of world output, was as follows: Malaya, 36 per cent.; Bolivia, 24 per cent.; the Dutch East Indies, 19 per cent.; Nigeria, 7 per cent.; and Siam, 5 per cent. Together these countries account for about 90 per cent. of the world’s mining output of tin. In the next table we give a picture of the mine production and of the smelter production of tin during recent years:—

(In thousands of metric tons.)

	Mine Production.				Smelter Production.		
	British Malaya.	Dutch East Indies.	Bolivia.	World.	Straits Settle- ments.	United Kingdom.	World.
1913	52.7	21.2	26.8	135.7	66.4*	22.7	132.5
1925	48.9	35.2	32.7	146.2	76.0	42.0	146.9
1926	48.6	33.5	30.5	144.9	77.1	40.4	147.9

In the East Indies and Nigeria, where tin is found chiefly in alluvial deposits, mining costs have recently been halved by the installation of huge dredges with jigs, which, reaching depths of 80 ft. and more, have permitted the exploitation of deposits hitherto unworkable at the current price. In the Federated Malay States, tin mining is still carried on by a large number of independent units, the number of tin-ore mines operated at the end of December, 1931, being 1,118. Since 1928, however, the Anglo-Oriental Mining Corporation, Limited, has acquired control of a substantial proportion of capacity, both in Malaya and in Nigeria. Production in the Dutch East Indies and Bolivia is concentrated in the hands of a few large interests. The chief producing concerns in the Dutch East Indies are the Government enterprise in the

island of Banka, the Billiton Mij, and the Singkep Tin Mij. Bolivian production is largely controlled by the Patiño Mines and Enterprises Consolidated, and the Caracoles Tin Company (Guggenheim Group).

The industry's structure is not marked to any great extent by vertical combination. The smelters, who act as independent intermediaries between producer and consumer, are located chiefly in the Straits Settlements, Great Britain and the Dutch East Indies, these areas, in 1929, accounting for 55 per cent., 30 per cent. and 7 per cent. respectively of the world's smelter output. Straits Settlement production, largely controlled by the Straits Trading Company, Limited, and Consolidated Tin Smelters, Limited, draws supplies chiefly from Malaya and the Dutch East Indies. The smelting industry in this country, in which Consolidated Tin Smelters, Limited, have an important position, mainly uses Bolivian and Nigerian tin concentrates. Smelting costs have been substantially reduced by various technical improvements, the chief being the introduction of pulverised coal-firing.

Tin is used chiefly in the manufacture of tin plate andterne plate, solder, babbitt and bronze. Tin plate andterne plate represented 42 per cent. of the total tin consumption of the United States in 1930. The recent development of tin consumption is shown below:—

(In thousands of metric tons.)

	U.S.A.		United Kingdom.	Germany.	France.	World
	Consumption.	Proportion of World Consumption.				
1913	45.0	36.9	25.1	19.9	8.3	121.9
1925	77.2	50.0	25.3	11.1	11.1	154.6
1926	77.2	51.0	19.0	8.3	11.4	151.4
1927	70.3	44.9	21.9	15.3	8.7	156.9
1928	76.7	43.7	29.3	14.6	11.0	175.3
1929	86.1	46.5	25.2	16.4	12.1	185.5
1930	75.0	45.6	19.7	14.6	11.9	164.5
1931	63.8	45.0	19.0	12.0	11.0	141.9

Source: Metallgesellschaft.

Tin mining, like copper, lead and zinc, has endeavoured to counter excessive capacity by the deliberate output restriction. The existing state of affairs began with the formation of the Tin Producers' Association on July 11, 1929. In June, 1930, an international committee decided on voluntary restriction, involving a minimum two or three months' suspension, but the world's visible supplies increased during 1930 from 33,400 to 47,700 metric tons, and the average price per long ton decreased from £204 to £143.

A new scheme which came into operation on March 1, 1931, however, received the sanction of the Governments of Malaya, Nigeria, the Dutch East Indies and Bolivia, which in 1929 had produced 164,742 metric tons, or 86 per cent. of the world's total output. Siam became a member in September, with a quota of 10,159 metric tons. The International Tin Committee, set up to supervise the scheme, started with an initial output schedule of 128,098 metric tons per annum from March 1, 1931, subsequently reduced to 107,780 metric tons from June 1, 1931, and 92,542 metric tons from January 1, 1932. During 1931 however, cuts in production consistently lagged behind decreased consumption, and world stocks increased to 60,600 metric tons. On August 1, 1931, an International Tin Pool was formed "to work in close co-operation with the International Tin Committee," and to acquire a "substantial proportion of the world's existing stocks." Its holdings were over 21,000 metric tons at the beginning of 1932. The Pool is to release 5 per cent. of its metal when the price reaches £165 per long ton and remains at that level for one month, and a further 10 per cent. when the quotation reaches £176 per long ton.

After the annual rate of production had been reduced to 72,225 metric tons, as from June 1, 1932, a drastic programme of curtailment was put into operation on July 1st, under which production during July and August, 1932, was to cease, or to be held up under control, the ore or metal being released at the rate of 10 per cent. a month. A new quota was fixed of 54,914 metric tons per

annum (excluding Siam, which retained its original quota), or one-third of the output of 1929. It is understood that the market has received "inside" support during the sharp rise in prices this month. Since definite revival in world activity might see a rapid and not altogether healthy rise in tin prices under the strict output control exercised by the British, Dutch and Bolivian Governments, it may be hoped that the scheme will be administered with due regard to the consumers' interests.

PARAGUAY AND BOLIVIA.

(BY A CORRESPONDENT.)

THE name of Chaco, which has recently become familiar through the frontier dispute between the two inland Republics of South America, is primarily a geographical and not a political description of a little-known region about 700 miles long by 300 miles wide, lying between the right or west bank of the Paraguay river and the Andean foothills. The name is probably a corruption of "charco," meaning a stagnant pool, applied by early travellers to that portion of the ground overflowed by the river in annual floods, which seep through its sluggish water-courses and remain imprisoned in the flat, alluvial plains of the interior, covering at times thousands of square miles. The Chaco is actually an extension northward within the Paraguay basin of the Pampas which surround Buenos Aires. As the influence of the moist Atlantic winds is left, the climate takes on a continental character; a dry, sunny winter alternates with sub-tropical summer heat, relieved by heavy thunderstorms which, with Andean snows swelling the beds of the rivers, convert the plain into a maze of hardwood forest and thorny undergrowth. It is these violent alternations of flood and drought which, in addition to limiting travel, give the Chaco its peculiar character and sinister reputation. Moreover, the half-dozen Chaco Indian tribes, of an equally inhospitable nature, made exploration of the Chaco difficult and even dangerous, long after the Argentine Pampas and Paraguay proper had been criss-crossed by railroads.

By this time, the district had become a natural refuge for fugitives from justice. Even to-day, over most of the region, every man is in the last resort a law to himself. But the gradual improvement of communications, due, chiefly, to the motor car, has been breaking down the isolation of the Chaco. The regions formerly known as the southern, central and northern Chaco became identified as the Argentine, Paraguayan and Bolivian Chaco. The Argentine Chaco now contains more than 1,400 miles of State, private and lumber railroads. It grows annually 100,000 bales of cotton, pastures nearly a million cattle, and is a large exporter of quebracho extract and timber. Quebracho and cattle are, in fact, the basis of value of all the Chaco lands which front the Paraguay river and extend for 100 miles inland.

The profits of the timber and cattle trade, which had already been proved in the Argentine Chaco, combined with the low price at which large blocks of land, with river frontage, could be acquired in Paraguayan currency and with titles issued from Asuncion, brought many private interests into the Central (i.e., Paraguayan) Chaco. To-day practically the whole of the frontage on the Paraguay river, from the Argentine boundary 700 miles north to Bahia Negra, where the river enters Brazilian territory, is in private hands, together with thousands of square leagues of the interior. Bolivia's claims clearly affect the validity of many of the titles so obtained; and, since Argentine trade with Paraguay is important, the interests of Argentine citizens, together with those of the foreign nations who hold land and are domiciled at Buenos Aires or Asuncion, naturally are on the side of Paraguay, although the Argentine State maintains an attitude of strict neutrality.

The area of Paraguay proper, that is, of Paraguay east of the river, is only 196,000 square kilometres, which puts her territorially in the same class as Ecuador and Uruguay. The lands which she now claims in the Chaco would double her area. They would also enhance her

prestige with both Argentina and Brazil, to whom she has been subordinate, both politically and economically, since her defeat in the Paraguayan War of 1865-70. Her population is estimated at slightly over 1,000,000, including the Chaco Indians, and, taken as a whole, is 90 per cent. Mestizo and Guarani Indian (i.e., river and lowland Indian) stock.

Bolivia has a population of three times that number; but, although the Indian proportion is about the same, the Bolivian Indians are of Aymara and highland race, dwelling in the Andean plateau, with a scattering of purely Indian tribes in the Amazon hinterland and perhaps 350,000 persons of white and riverine types in the department of Santa Cruz, which lies in the Upper Paraguay valley. Bolivia's area of 1,332,000 square kilometres makes her third in area in the continent, while her other unpopulated regions, especially in the Amazon valley, make it improbable that she can for many centuries utilise properly all her present holdings. But she smartly under the memory of previous losses of territory, first to Chile and Peru, which deprived her of an outlet to the Pacific, and later to Brazil, which seized the Acre Territory in the Upper Amazon. As a consequence, it is now impossible for her to reach free navigable water at the above points except by railroads leading through her neighbours' territory. Again, in the loss of the River Plate outlet, she finds her only access to the Paraguay River is at Port Suarez, opposite Corumba (Brazil), 1,862 miles upstream from Buenos Aires, and with a precarious navigation in these upper waters limited to 3-ft. draught. National pride, rather than actual necessity urges her to demand a "corridor," or preferably the acquisition of all intervening territory to a point on the Paraguay River as far south of Port Suarez as possible, and in this contention she is enthusiastically backed by the inhabitants of her Santa Cruz territory, which lies directly to the north of the Chaco.

Actually, the present exports of Bolivia are almost entirely confined to minerals, chiefly tin, which are mined upon the tablelands and the surrounding ranges of the Cordillera, and already find ample accommodation on the three railroads connecting Bolivia with the coast at the ports of Antafogasta, Arica and Mollendo. But a new factor has been introduced into the Chaco question by the discovery and extraction of oil in Salta Province, which embraces a portion of the Argentine Chaco lands, at a point close to the Bolivian border around latitude 22 degrees south. Investigation of the Bolivian eastern frontier over the past twenty years, chiefly conducted in American interests, shows it to be highly probable that the proved oil fields of Argentina may be assumed to continue along the Bolivian foothills, where these impinge upon the Chaco plains. It remains for actual work in the field to prove the full value of surface seepages, trial borings and other indications of oil in the western Chaco, but sufficient is already known, or conjectured, to make this once-despised and uninviting area well worth retaining. It is more than coincidence that the new and rectified frontier which Paraguay claims, and where the recent outpost clashes have occurred, marches within the sight of the Bolivian foothills for 400 miles north of the Argentine frontier, through a region logically in line for oil development.

THE OTTAWA AGREEMENTS.

For the convenience of our readers we print below a summary of the agreements, as far as they have been published, which were concluded at Ottawa between Great Britain and other members of the Empire.

Great Britain and Australia.

The United Kingdom undertakes:—

(A) To continue (Article 1) after November 15, 1932, the free entry of Australian goods. As regards eggs, poultry, butter, cheese and other milk products, the United Kingdom reserves the right, if necessary in the interests of the home consumer, to review the basis of preference after three years and either impose a duty on produce of Australia while maintaining existing preferential margins or include Australian produce in a system for quantitative regulation of supplies from all sources.

(B) To impose (Article 2) on foreign goods duties shown in Table I, column 1.

(C) To secure (Article 3) to Australian wine not exceeding 27 degrees of proof spirit a margin of preference of 2s. per gallon.

(D) Not to reduce, without Australian consent (Article 4), the duty of 10 per cent. on foreign goods specified in Table II, column 1.

(E) To invite (Article 7) the Governments of the non-self-governing Colonies and Protectorates to accord to Australia any preference accorded to any part of the British Empire, and to invite certain of them to accord new and additional preferences on certain specified commodities not yet published.

Australia undertakes:—

(F) To make (Article 8) tariff changes necessary to give increased preferences of the United Kingdom over a wide range of commodities not yet published, subject to the right to reduce existing margins in certain cases.

(G) To give tariff protection (Article 9) only to industries which are reasonably assured of sound opportunities of success.

(H) To keep (Article 10) protective duties to a level which will give United Kingdom producers full opportunity of reasonable competition on the basis of the relative costs of economical and efficient production, subject to a reservation in the case of infant industries.

(I) To revise (Article 11) existing duties, on review by the Tariff Board, in accordance with Article 10.

(J) Not to impose or increase duties in excess of recommendation of the Tariff Board (Article 12).

(K) To allow (Article 13) United Kingdom producers audience before the Tariff Board in respect of matters arising under Articles 11 and 12.

(L) To repeal (Article 14) as soon as practicable certain prohibitions and surcharges and primage duty.

(M) To accord (Article 15) to colonies and protectorates and the mandates of Tanganyika, the Cameroons and Togoland certain specified preferences and also preferences granted to the United Kingdom, if the United Kingdom so requests. (Subject to right of refusal if colony, except where precluded by international obligations, fails to give Australia preferences, or accords to some other part of the Empire preferences not accorded to Australia.)

MEAT IMPORTS.

The following agreement is concluded (Article 6):—

In order to co-operate with the United Kingdom in the policy of developing home production of meat and of giving the Dominions an expanding share of meat imports, Australia agrees to limit exports of frozen mutton and lamb to the United Kingdom in 1933 to the amount exported in the year ending June 30, 1932. In return, the United Kingdom is to regulate imports of frozen mutton, lamb and beef, and chilled beef in accordance with an "agreed programme," and to regulate imports of bacon and hams upon receipt of report of Commission on Pig Industry. She is to undertake not to restrict imports of any Australian meat during currency of "agreed programme," and upon its expiry, if no permanent policy has been agreed upon, she is to continue to regulate imports of foreign meat and to have regard to policy of home development and Empire preference. The United Kingdom Government may temporarily remove restrictions at any time in the event of a shortage.

Great Britain and New Zealand.

The United Kingdom undertakes:—

(A) To continue (Article 1) free entry after November 15, 1932, as in Australian agreement (A).

(B) To impose on foreign goods (Article 2) duties shown in Table I, column 2.

(C) Not to reduce without consent of New Zealand (Article 3) 10 per cent. duty on foreign goods specified in Table II, column 2.

(D) To invite colonies and protectorates to accord to New Zealand any preference granted to any other part of the Empire (Article 5).

New Zealand undertakes:—

(E) To substitute specified duties for duties now leviable on certain commodities not yet published (Article 6), and to exempt all United Kingdom goods from application of surtax.

(F) To grant protection by tariffs (Article 7) against United Kingdom goods only to industries which are reasonably assured of sound opportunities of success.

(G) To (Article 8) reduce duties as soon as possible to a level which will place the United Kingdom producer in the position of a domestic competitor with full opportunity of reasonable competition on the basis of a relative cost of economical and efficient production.

(H) To give United Kingdom producers a hearing (Article 9) in connection with Article 8.

(I) Not to reduce (Article 10) existing margins of preference which do not exceed 20 per cent., and not to reduce below 20 per cent. those which now exceed 20 per cent., without consent of the United Kingdom.

(J) Not to increase (Article 11) existing primage duty of 3 per cent. on United Kingdom goods which are otherwise duty-free, and to remove it as soon as financial conditions permit.

(K) To grant (Article 12) colonies and protectorates certain preferences, also any preferences granted to the United Kingdom on same terms as in Australian agreement (M).

* There is a reservation in the case of Northern Rhodesia.

MEAT IMPORTS.

An understanding has been reached (Article 4) between the two Governments in regard to frozen mutton, lamb and beef.

Great Britain and Canada.

The United Kingdom undertakes :—

- (A) To continue (Article 1) free entry after November 15th, as in Australian agreement (A).
 (B) To impose (Article 2) on foreign goods the duties shown in Table I, column 3.
 (C) Not to reduce (Article 3) without Canada's consent the 10 per cent. duty on foreign goods specified in Table II, column 3.
 (D) To modify (Article 5) the restrictions on cattle importation on agreed lines.
 (E) To regulate (Article 6) on receipt of report of Commission on Pig Industry, supplies of bacon and hams from all sources, and to provide in such regulations for free entry of Canadian hams and bacon up to 2½ million cwt. per annum.
 (F) To secure (Article 7) for Empire tobacco grown or manufactured in Canada existing margin of preference for ten years. If duty on foreign unmanufactured tobacco falls below 2s. 0½d. per lb., margin to be equal to the full duty.
 (G) To invite (Article 8) colonies and protectorates to extend preference to Canada (v. Australia (E)).

Canada undertakes :—

- (H) To grant (Article 9) a new or increased margin of preference to the United Kingdom in respect of 220 items of the tariff, including cutlery, machinery, wire products, linens, cotton and woollen fabrics, chemicals, flat glass, toilet accessories, gums, tableware and leather.
 (I) To protect by tariffs (Article 10) against United Kingdom products only those industries which are reasonably assured of sound opportunities for success.
 (J) To give United Kingdom producers (Article 11) a fair chance of competition. (v. Australia (H)).
 (K) To constitute (Article 12) the Tariff Board forthwith and alter tariff (Article 13) in accordance with its report, to give effect to principles of Article 11.
 (L) Not to increase existing duties (Article 14) without inquiry by Tariff Board and to give (Article 15) United Kingdom producers a hearing at such inquiry.
 (M) To ensure (Article 16) a minimum of uncertainty, delay and friction in connection with tariff and provide machinery for prompt and impartial settlement of disputes.
 (N) To abolish (Article 17) surcharges on United Kingdom imports as soon as possible and to consider ultimate abolition of exchange dumping duty on United Kingdom products.
 (O) To modify (Article 18) regulations on import of pedigree stock in manner agreed upon.
 (P) To accord (Article 19) to Colonies, Protectorates and Mandated Territories at present enjoying British preferential rates, and to Zanzibar, the preferences granted to the United Kingdom and certain others not yet published subject to same qualification as in Australian agreement [v. Australia (M)] and without prejudice (Article 20) to Canada-West Indies agreement of 1925.
The agreement is subject (Article 21) to the condition that if either Government is satisfied that any of the preferences is likely to be frustrated by direct or indirect State action on prices by any foreign country, that Government shall prohibit the entry, as long as necessary, of the foreign goods concerned.

Great Britain and South Africa.

The United Kingdom undertakes :—

- (A) To continue (Article 1) free entry after November 15, 1932, as in Australian agreement (A).
 (B) To impose (Article 2) on foreign goods the duties shown in Table I, column 4.
 (C) To secure (Article 3) a preference on wine as in Australian agreement (C).
 (D) Not to reduce (Article 4) 10 per cent. duty on goods shown in Table II, column 4, or existing preferential margin on sugar and wine, without South Africa's consent.
 (E) To give (Article 6) preference on tobacco, as in Canadian agreement (F).
 (F) To include (Article 7) in quantitative regulations provision for the import of South African mutton and lamb.
 (G) To invite (Article 8) colonies and protectorates to extend to South Africa preferences granted to any other part of the Empire.

South Africa undertakes :—

- (H) To secure (Article 9) to the United Kingdom specified margins of preference for certain goods not yet published.
 (I) To impose (Article 10) specified duties on certain foreign goods and not to alter British duties on such goods in such a way as to decrease margin of preference.
 (J) Not to lower (Article 11) existing margins of preference on certain other goods.
 (K) To accord (Article 12) to colonies, protectorates and mandated Territories of Tanganyika, the Cameroons and Togoland, specified preferences and also preferences accorded to the United Kingdom if the United Kingdom Government so requests. Subject to same reservation as specified in Australian agreement (M).

For the purposes of this agreement the Mandated Territory of South-West Africa shall be deemed to be part of the Union of South Africa.

Great Britain and Southern Rhodesia.

The United Kingdom undertakes :—

- (A) To continue (Article 1) free entry after November 15, 1932, as in Australian agreement (A).
 (B) To secure (Article 2) preference for tobacco (as in Canadian agreement (F)), and to take steps to assist the marketing of Southern Rhodesian tobacco.
 (C) To impose (Article 3) on foreign goods duties shown in Table I, column 5.
 (D) To secure (Article 4) a margin of preference of 9s. 4d. per cwt. for Southern Rhodesian coffee.
 (E) Not to reduce (Article 5) 10 per cent. duty on foreign asbestos, ground nuts, Kaffir corn and meal and potatoes without the consent of Southern Rhodesia.
 (F) To invite (Article 7) the colonies and protectorates to extend to Rhodesia any preferences granted to any other part of the British Empire, and to invite them to give a preference upon cigarettes and manufactured tobacco made within the Empire from Empire-grown tobacco.

Southern Rhodesia undertakes :—

- (G) To grant (Article 8) to the United Kingdom the following margins of preference :—Butteries, typewriters and parts thereof, 15 per cent.; electrical material (except cable and wire), 10 per cent.; wireless telegraphy and telephony instruments and apparatus used in the working thereof, except batteries, 15 per cent.; cutlery, not gold or silver or gold or silver plated, 20 per cent.; glassware (except bottles and jars and plate and window glass), 15 per cent.; motor cars, increased preference when advantage to exporters caused by rate of exchange has ceased, and to amend existing duties upon certain foreign textiles so as to provide for alternative specific duties.
 (H) To consider (Article 9) further preferences when budgetary conditions permit.
 (I) To extend (Article 10) to colonies, protectorates and mandates of Tanganyika, Cameroons and Togoland the following preferences :—Tea, 2d. per lb.; raw coffee, 1d. per lb.; raw cocoa, 1d. per lb.; cigars, 2d. per lb.; rum and bitters, 3s. per imperial proof gallon, and also any preferences accorded to the United Kingdom if the United Kingdom so requests.

Great Britain and Newfoundland.

The United Kingdom undertakes :—

- (A) To continue (Article 1) free entry after November 15, 1932, as in Australian agreement (A).
 (B) To impose (Article 2) duties of 1s. 4d. per gallon on foreign cod-liver oil and 1½d. per lb. on foreign chilled or frozen salmon.
 (C) Not to reduce (Article 3) without consent of Newfoundland the 10 per cent. duties on foreign cod and marine shell-fish.
 (D) To invite (Article 4) the Colonies and Protectorates to extend to Newfoundland any preference accorded to any other part of the British Empire.
 (E) To give (Article 5) United Kingdom goods a margin of preference, in most cases of 10 per cent., on 61 tariff items, as from July 1, 1933.
 (F) To provide (Article 6), as from July 1, 1933, for more favourable conditions in regard to the valuation of the pound sterling for Customs purposes.
 (G) To give (Article 7) Colonies, Protectorates and Mandated Territories a preference on five items, and also to extend to them preferences granted to the United Kingdom if the United Kingdom so requests. Subject to same reservation as in Australian agreement (M).
 (H) To retain (Article 8), where these are higher, margins of preference provided under terms of Newfoundland-Jamaica agreement.

All these agreements are to continue in force for five years, and, if not denounced six months before the end of that period, until six months after notice of denunciation has been given by either party. Provision is made in each case for consultation between the two Governments concerned, in the event of circumstances arising which, in the opinion of either Government, necessitate a variation in the terms of the agreement.

United Kingdom and India.

The United Kingdom undertakes :—

- (A) To continue to give free entry to all Indian goods within the scope of the 10 per cent. duty. In addition, higher British duties imposed, or to be imposed, on foreign goods will give India enhanced preferences.
 (B) To impose a 10 per cent. duty on foreign linseed.
 (C) To co-operate in any practicable scheme agreed to by the United Kingdom cotton industry and the Indian growers for promoting a greater use of Indian cotton by Lancashire.

India undertakes :—

- To give a 7½ per cent. preference on certain classes of motor vehicles and a 10 per cent. preference on a very large number of manufactured goods, articles of food, drink, and oils. These preferences may be given either by an increase of duties on foreign goods or by a reduction of duties on United Kingdom goods, or by a combination of both methods.
 The preference on many of the manufactures is subject to certain specified exceptions to be announced. It does not extend to commodities to which protective duties are applicable, to those which

are free of duty at present, or to those on which, on grounds of national policy, a specially low rate of duty has been imposed.

In the class of textiles the duty extends only to articles of apparel, haberdashery and millinery which are dutiable at 25 per cent., and woollen manufactures with specified exceptions in each case. The decisions on cotton, silk and artificial silk goods have been deferred until after consideration of the recommendations of the Indian Tariff Board, but when the decisions have been reached the 10 per cent. preference will be extended to these goods with the exception of artificial silk yarn and articles on which protective duties may be imposed.

Arrangements have been made for an exchange of preferences with the Colonies and Protectorates. These will include the grant of preferences to India on cotton manufactures, tea, coffee, oil-seeds and vegetable oils, paraffin, wax, carpets and rugs. Preferences granted by India will include certain gums and resins, oil-seeds, vegetable and essential oils, unground spices, coconuts and their products, fish, fruit, vegetables, sage and tapioca.

The agreement is to continue in force until six months after notice of denunciation has been given by either party. Provision is made for consultation if either party notifies a desire to change any of the rates of duty or the margins of preference. If no agreement is reached within six months of such notice, the original party may bring the revised rate or rates into operation after a further six months' notice of his intention to do so.

TABLE I—NEW DUTIES.

	Duties to be imposed by Great Britain by agreement with :—				
	Australia.	New Zealand.	Canada.	South Africa.	Southern Rhodesia
Wheat, per quarter	2/-	...	2/-	...	...
Maize, flat white, % ad valorem	...	15/-	15/-	15/-	15/-

Grapes, other than hothouse (February 1st to June 30th), per lb.	1½d.	...	...	1½d.	...
Raw peaches and nectarines (December 1st to March 31st), per cwt.	...	...	...	14/-	...
Raw plums (December 1st to March 31st), per cwt.	...	...	...	9/4	...

TABLE II—PERPETUATED PREFERENCES.

Existing duties in respect of which continued 10 per cent. preference is promised to—

AUSTRALIA.	NEW ZEALAND.	CANADA.	SOUTH AFRICA.
Leather.	Leather.	† Zinc.	Sausage casings.
Tallow.	Tallow.	† Lead.	Asbestos.
Canned meat.	Canned meat.	Asbestos.	Dried fruits, other than currants, not specified in Table I.
† Zinc.	Dried peas.	Timber of all kinds imported into the United Kingdom in substantial quantities from Canada, in so far as now dutiable.	Wattle bark and tanning extracts therefrom.
† Lead.	Casein.	Fresh sea fish.	Potatoes.
Barley.	Meat extracts and essences.	Canned fish.	Maize products.
Macaroni.	Copra.	Canned salmon.	Fruit preserved by chemicals or artificial heat, except fruit preserved in sugar.
Wheat flour.	Sugar of milk.		Fruit juices.
Dried peas.	Sausage casings.		Whale oil and whale products, not produced in British floating factories.
Dressed poultry.	Grass and clover seeds.		Crab fish.
Casein.	Gums, other than gum arabic, gum tragacanth, shell-lac, sticklac and seedlac.		Fresh hake.
Eucalyptus oil.			Oyster shell grit.
Meat extracts and essences.			Ground nuts.
Copra.			Goat skins.
Sugar of milk.			Ostrich feathers.
Sausage casings.			Lucerne seed.
Wattle bark.			Kaffir corn and meal.
Asbestos.			Box wood.
Dried fruits, other than currants, not specified in Table I.			

* In addition to duty in respect of sugar content.
 † Conditional on Empire producers offering these commodities on first sale in the United Kingdom at prices not exceeding the world price and in quantities sufficient to meet the requirements of United Kingdom consumers.

Notes of the Week.

Another German Election?—If the forecast of our Berlin correspondent be correct, Germany is apparently fated to be thrown once more into the turmoil of yet another electoral contest. Faced with the certainty next week of a vote of no confidence, the von Papen Government, in our correspondent's opinion, will take the initiative, and forthwith dissolve the Reichstag; but it will continue to act within the limits of the constitution by holding new elections, and summoning, in due course, a new Parliament, whose probable composition promises a continuance of the existing parliamentary stalemate. A breathing-space thus gained, the Government will continue to function as "an administration of caretakers," with the handicap or advantage (both points of view are arguable) that, in the existing parliamentary deadlock, the Government seems likely to "mark time," so far as programmes of financial and economic reconstruction are concerned. Indeed, though the problems of unemployment during the coming winter and of the budgetary position loom menacingly on the horizon, the Government's immediate overriding preoccupation is likely to be the task of vindicating its claim to recognition as the guardian of law and order in the face of threatening Nazi violence aroused by the Beuthen sentences. In the unhappy dilemma of having to enforce executions which, however justifiable as retribution for an atrocious crime, will, nevertheless, be denounced by more than half the nation as brutality, or of risking the charge of partiality or cowardice, if it commutes the sentences in the face of Nazi threats, the German Government must surely rue the day when it repealed Dr. Brüning's ban on the private armies whose activities are now menacing the fabric of German civilisation.

Japan and Manchuria.—When the League Council meets next month to consider the Manchurian problem in the light of the Lytton Commission's report, it will at least have no ground for complaining that Japan has failed to make clear in advance her attitude. Addressing the Diet on Thursday, Count Uchida, the Japanese Minister for Foreign Affairs, stated roundly that in a region "regarded as the first bulwark of Japan," in which interests vital to Japan's national existence were involved, no remedy for conditions previously unsatisfactory to Japan could be effected by having recourse either to the League of Nations or "to any other organ of what might be termed the machinery of peace." After rehearsing the conventional lines of Japan's defence of her Manchurian policy, Count Uchida announced that Japan would never consent to any solution re-investing China with any sort of power over Manchuria, nor would she agree to any "patching-up" plan. She intended definitely to recognise the Manchukuo Government. Thus, from one angle, the problem before the League Council and the United States is sharply defined: a challenge to the League's authority, which can scarcely be ignored, has been thrown down.

Aftermath in Spain.—The boomerang effect of sporadic acts of rebellion against the Republic in Spain, as represented by Señor Azaña and his colleagues, is now clearly visible. The authors of the ill-timed revolt to which General Sanjurjo was persuaded to lend his name were obviously a motley crowd—Army officers itching to play the pretorian game in the good old way, bourgeois elements hoping to get back positions from which, for one reason or another, they had been ousted, a handful of aristocrats fearful of the "Socialist" leanings of the Government, even syndicalist malcontents, in the provinces of Seville and Granada, making one last desperate bid for power. Not one of them, it is safe to say, cared much for the person of Alfonso XIII or was acting under his direction. Yet it became easy for the Government to label the rebels "Monarchists," and to represent partisan measures as necessary for the defence of the

Republic. The suppression of newspapers of the Right—including the Catholic *Debate*, which has studiously refrained from supporting a Restoration—is a case in point. In the Bill, however, for confiscation of the property and estates of well-to-do persons implicated in the rising—passed with very few dissentients in the Cortes last Saturday—the Government has been able to achieve a positive and not merely a negative piece of work. There is a provision in the Constitution whereby private property may be confiscated without compensation for social objects. By seizing the feudal inheritance of a number of landowners denounced as privy to the Sanjurjo plot, the Government placates its extremists and at the same time acquires extensive areas that can be made available for the communal holdings and State tenancies contemplated in the Land Reform Bill. General Sanjurjo and his principal associates are undergoing trial by summary jurisdiction as we write. The General has been condemned to death for treason, but it is expected that he will be promptly reprieved by the President of the Republic acting on the advice of his Ministers. His defending counsel has taken the line that the General had no thought of overthrowing the Republican regime, but was only seeking to carry out the widespread desire for "a conservative Republic" which the present holders of office, owing to their "Socialist" connections, had defrauded. However that may be, it is clear that the defenders of the rights of property have played into their opponents' hands.

A Censored War.—With the Federal Forces blocking the State of Sao Paulo, and maintaining a rigorous censorship over the cable communications between Rio Janeiro and the outer world, there is little authentic news of the progress of events in Brazil. This week, rumour has succeeded unconfirmed rumour—first of an important Federal victory over the insurgents, and later of a successful Paulista counter-blow. In the absence of confirmation of these reports it is impossible to forecast the outcome of a rising whose roots lie in the fundamental divergence between the interests of the Federal finances of Rio, and the Sao Paulo producers, whose exports—particularly of coffee—have been hard hit by increased taxation and the appreciation of the milreis. Perhaps the most significant indication of the week has been the emergence of fairly definite signs that opposition to the Federal Government, expressed in sporadic unrest, is spreading to Rio Janeiro itself.

The Lancashire Crisis.—With a strike of 200,000 operatives timed to begin at noon on Saturday, and with both sides adopting a stiff, unconciliatory attitude, the Lancashire cotton industry had drifted, by the middle of this week, very near to the rocks of a disastrous stoppage. Happily, on Wednesday, the intervention of the Deputy Mayor of Manchester resulted in a joint meeting under his chairmanship. At the close of the day's proceedings Alderman Titt stated that they had found a medium by which the difficulties could be discussed. Certain misunderstanding had been wiped out which had made it possible to resume negotiations in a more promising atmosphere. The chief obstacle to progress was the question of the reinstatement of discharged operatives, but the issue at stake has evidently been narrowed. When the previous negotiations broke down on August 10th the employers stated that they looked upon the operatives' attitude on the reinstatement question as a roundabout method of destroying the "more looms" system, and that was the principal reason why they would not agree to reinstate discharged workers. It now appears that the workers' representatives demand the re-instatement, not of the operatives (mainly in the Burnley district) who refused to work the six-loom system, but only of those who struck legitimately against wage-cuts and alterations of hours imposed by certain employers before the 1919 agreement expired on June 11th. As we go to press it is reported that a negotiating committee has been set up to discuss this question. It is one on which the employers would do well to yield;

for, apart altogether from the operatives' obstruction to the "more looms" innovation, employers acting in breach of a collective agreement are in no position to refuse reinstatement of labour displaced by their action. If a settlement on this issue can be reached, the hopes of peace look brighter; for, since the operatives have offered to concede a $\frac{1}{2}$ per cent. wage reduction, they will hardly be inclined to involve the industry in a suicidal struggle over the difference between their offer and the employers' 10 per cent. demand, even if they wonder, as others outside the industry must do, what economic utility is to be gained in Lancashire's present situation by such a wage-cut unaccompanied by reorganisation.

The Copper and Maize Duties.—The terms of the draft agreements reached in Ottawa include the recommendation of duties of £18 13s. 4d. per long ton on copper and of 10 per cent. *ad valorem* on flat white maize imported into the United Kingdom from foreign countries. The proposed duty on copper is to be conditional on the Empire producers continuing to offer this commodity "on first sale in the United Kingdom at a price not exceeding world prices." It is to apply to copper, unwrought, whether refined or not, in ingots, bars, blocks, slabs, cakes and rods. The duty, which amounts to the prohibitive rate of about 60 per cent. at the present price of the metal, is obviously meant to exclude foreign copper from the British market. The exclusion can scarcely benefit Empire producers to a great extent, as Empire production already exceeds consumption. Its only advantage is that Empire producers will secure a definite outlet for a large proportion of their current output. In view of the huge stocks in America, which might be thrown overboard at any moment, this advantage must not be minimised. On the other hand, the duty will probably result in increased competition and lower prices on the Continent and in the remaining free markets. In view of the price clause inserted in the draft agreements, Empire producers may find debits as well as credits in the account. Contrary to what might appear, the proposed duty on maize is quite unimportant. Flat white maize is imported in negligible quantities, chiefly from South Africa, Egypt and Portuguese East Africa. It is not used as a feeding grain, but for special purposes, such as the production of beer and spirits.

Sterling and Gold Prices.—During the past fortnight, gold prices, as measured by our short index number, have risen by nearly 1 per cent., as compared with a rise of over 5 per cent. in the preceding fortnight. Not only has the rate of recovery slowed down, but the movements of leading commodities have been irregular. Wheat, maize, oats and bacon have all declined, and the rise in the index figure is almost wholly attributable to a sharp advance in the price of American cotton. Moreover, as may be seen from the following table, the only one of the four foreign indices to show an upward tendency by August 10th was that for the United States.

With regard to sterling prices, textiles and metals showed a general advance, but the prices of cereals and meat had

a reactionary tendency. Fuller details of the complete *Economist* index are given below:—

	"ECONOMIST" INDEX. (1927 = 100).		
	Sept. 18, 1931.	August 10, 1932.	Aug. 24, 1932.
Cereals and meat	64.5	67.9	65.5
Other foods	62.2	59.2	61.2
Textiles	43.7	48.1	50.8
Minerals	67.4	70.5	72.9
Miscellaneous	65.8	60.6	60.7

1913 = 100	83.1	83.9	85.2
1924 = 100	52.2	52.7	53.5

Though there are signs of an expansion of speculative dealings in the commodity markets, it still remains to be seen how far purchases are for actual consumption. The basis for recovery is still somewhat intangible.

London Omnibus Wages.—When, some time ago, the London Underground group of companies put forward proposals for wage reductions, they had to be submitted to all the trade unions representing the various interests among the employees of the group; thus neither an early nor a uniform decision seemed likely. In the main the unions have accepted the proposals, though with natural feelings of reluctance, but as regards the omnibus men the position is not so clear. The Underground put forward two proposals. The first was for reductions in the wages of drivers by $\frac{1}{2}$ d. an hour, or 1s. 6d. a week, and in those of conductors by $\frac{1}{2}$ d. an hour, or 1s. a week, together with reductions of $\frac{1}{2}$ d. an hour for craftsmen and $\frac{1}{2}$ d. an hour for general hands. The second proposal was for variations in the condition of the guaranteed 48-hour week for the whole of the spare staff, in order to obviate the seasonal discharge of 600 men by the end of September. These proposals were submitted by the unions to ballot by their members, and the result was their rejection by very substantial majorities. The company at once dropped the second proposal, and the discharges have been postponed to the end of the year. It has been decided, however, to enforce the proposed wage reductions, and the necessary month's notice was given on August 23rd, together with three months' notice of changes in certain conditions of employment. A notice of changes in the London omnibus men is to be delegate conference of the London omnibus men is to be held on Monday next to consider this decision, which apparently embraces not only wages, but also such matters as the speed of journeys—matters, incidentally, in which the rights of other road users come ahead of the claims of both parties to the discussion, and in which the effects of any decisions should be carefully scrutinised by the authorities. For the moment, there is no need to take a pessimistic view of these developments, and it is certainly premature to talk of a strike. If the omnibus company takes the men's representatives fully into its confidence as to the undertaking's financial position, and if, as unfortunately seems likely in these difficult days, the facts prove conclusively that the proposed distinctly moderate reductions are necessary, the employees in a relatively well-paid "sheltered" occupation will surely think twice before resorting to direct action in an issue in which the public will not be inclined to support their case.

International Trade.—The latest statistics reveal that the strangulation of international trade is still proceeding apace. How far this process has already gone in leading foreign countries will be seen from the following table, showing the trend of exports in France, Germany, and in the United States:—

Period.	France. Million frs.	Germany. Million Rm.	U.S.A. Million \$.
1929 total	50,136	12,663	5,160
1930 "	42,835	11,328	3,780
1931 "	30,421	9,206	2,376
1932—January	1,806	530	147
February	1,768	527	151
March	1,720	516	152
April	1,742	472	132

Germany's exports from the first seven months of the current year, at Rm. 2,753 millions, show a reduction of 37 per cent. on the corresponding period in 1931. Although her imports of manufactures formed only 16 per cent. of the total value of purchases abroad, her export surplus declined from Rm. 1,229 millions during the January-June period, 1931, to Rm. 668 millions in the current year. Owing to the virtual cessation of foreign lending, the balance of commodity trade has grown more unfavourable in France and less favourable in the United States. The value of French imports during the first seven months of the current year, at Frs. 17,667 millions, shows a reduction of 34 per cent. on the corresponding period a year ago. Exports declined by 38 per cent., from Frs. 18,654 millions to Frs. 11,512 millions. Similar figures for the United States reveal a fall in imports, from \$1,282 millions to \$827 millions, while exports, at \$948 millions, show a decline of \$549 millions.

British Production.—The physical volume of production in the United Kingdom in the second quarter of 1932, as estimated by the Board of Trade, was 1.1 per cent. smaller than in the first quarter of the current year, but 2.2 per cent. above that of the corresponding quarter a year ago. The following table shows the comparative figures for the various industrial groups:—

INDEX OF PRODUCTION (1924 = 100).					
Group.	Year 1930	Year 1931	June Quarter 1931	March Quarter 1932	June Quarter 1932
1. Mines and quarries	91.3	81.6	79.7	83.0	77.4
2. Iron and steel and manufactures thereof	88.8	65.9	62.9	70.4	66.6
3. Non-ferrous metals	119.1	100.1	110.9	97.8	93.4
4. Engineering and shipbuilding	116.6	94.9	98.7	90.7	89.8
5. Textiles	79.5	77.0	75.0	91.1	85.9
6. Chemical and allied trades	102.2	96.8	95.1	103.2	103.6
7. Leather and boots and shoes	101.4	99.3	99.1	99.6	96.6
8. Food, drink and tobacco	104.9	103.7	101.9	94.1	101.7
9. Gas and electricity	138.7	142.2	(a)	(a)	(a)
Total of manufacturing industries (2-9)*	106.3	96.8	95.3	98.2	98.4
Total of all groups (1-9)*	103.3	93.8	92.1	95.1	94.1

* Including also various industries not specified above.
(a) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.

The index for manufacturing industries shows a rise of 0.2 per cent. on the March quarter. This is somewhat surprising, since in Groups 2-9 only the food, drink and tobacco index shows an appreciable rise, in contrast to marked falls in iron and steel, metals and textiles. As compared with the corresponding quarter a year ago, the indices for coal, non-ferrous metals, engineering and shipbuilding, and leather, boots and shoes show a substantial decline. On the other hand, the figures for iron and steel, textiles and chemicals, reveal a considerable improvement in these industries. More recent information suggests that activity has slowed down in June in a number of industries, and the index for the third quarter will therefore probably be somewhat lower.

Schober and Seipel.—A correspondent writes:—The death of Dr. Johann Schober who, after bitter experience of his country's helpless position in the present political structure of Europe, had returned to his post as Chief of

Police, removes from Austrian politics perhaps the one man capable of composing the present factional strife. Dr. Schober had made his name as a distinguished public servant in pre-war Austria, and his rôle, at the time of the upheaval of 1918, was similar to that of General Groener in Germany. The Republic was consolidated with a minimum of bloodshed, thanks chiefly to Dr. Schober. Again, in 1929, after two years of bitter struggle and recrimination between the Socialists and the Heimwehr, he was once more called upon to save the State. It was inevitable that such a man should become involved in politics, however reluctantly. He did, in fact, after a failure in 1921 to negotiate the urgently required financial assistance from abroad, succeed in making a satisfactory settlement of reparations as part of the general settlement at The Hague in January, 1930. But it soon became clear to him that foreign loans, on the only terms on which they were available, were no remedy for Austria's chronic distemper. (He expressed himself in this sense only a few days before his death with regard to the latest makeshift, the Lausanne Protocol, which was finally ratified on Tuesday by the Austrian Chamber of Deputies by two votes.) Consequently, after giving due warning to the Assembly at Geneva (1930), sending out very careful feelers in the various capitals, and also actually paying a special diplomatic visit to France, Dr. Schober yielded to the pressure of opinion and brought out the plan for a Customs union with Germany. The fate of that project only serves to underline the impossible nature of the task to which the leaders of present-day Austria are committed. By comparison with Dr. Seipel, whose death preceded his own by less than a fortnight, Dr. Schober was a simple patriot, endeavouring, according to his lights, to translate into policy the aspirations of Austrian democracy. Dr. Seipel had, on occasion, come out also as a supporter of the *Anschluss* with Germany. But he was first and foremost a Catholic Chancellor in the Richelieu tradition, who saw Austria's future rather in terms of a revived Catholic federation which should include many of the peoples composing the old Austro-Hungarian monarchy, and also that South Germany, which has so little in common with the Prussia that has made Germany great. In home politics, Dr. Seipel was a moderate Conservative and an opponent of all "revolutionary" movements. But his principal function was that of an opportunist, able eloquently to plead his country's cause whenever there was hope of financial assistance from the Powers. Johann Schober, on the other hand, under happier conditions, might have removed the antagonisms of class and creed which make Austria a battleground only less grim and sinister than the Germany of 1932.

The Political Situation in Greece.—Our Athens correspondent writes:—Rumours of a possible militarist intervention in politics, and even of an impending *coup d'état*, have been persistently appearing for some time now in the Press and invariably denied by the authorities. It would seem, however, that these rumours are not entirely without foundation, at any rate if one should judge from evidently inspired statements published in certain newspapers, to the effect that if, as a result of the forthcoming elections—which will take place on September 21st—the Republic regime be endangered by a success of the Royalist Party, the "national republican army will do its duty." Such a danger, however, does not appear to be imminent, for the Government of M. Venizelos, wishing to forestall a possible victory of the Royalists at the polls, recently changed the election law. As a result of this change the elections will take place under the proportional instead of the majority system, and thus a return of the Royalist Party with a majority over the combined Republican parties seems to be excluded. Besides, M. Tsaldaris, the chief of the Royalists, in a speech delivered recently in Salonica, has declared that, should his party come to power, it would not even think of concerning itself with the question of the political regime. While it is possible that all this talk of militarist intervention may serve only as a deterrent to prevent people from voting for the Royalist Party, it appears none

the less true that certain higher officers in active service, and retired ones, notorious for their past interference in politics, are again trying to meddle in the political life of the country. In fact, according to Press reports, two distinct movements seem to exist: the one, to which most of the officers would adhere (and which may easily prevail as it would have the support of every Republican), is said to favour interference only to protect the Republican constitution in case of danger; the other, however, believed to comprise a few diehards only, is reported to want immediate action and to be turned against all the political parties, the Venizelist Party included, for it considers Parliamentarism as responsible for the present bad situation, which it intends to improve by a military dictatorship. Now, whether such an experiment, if really attempted, would succeed in enlisting the support of the whole or even of an important part of the army—to say nothing of the navy, which is reported to be determined to withstand any interference of armed forces in politics—remains to be seen. The Government is making frequent reassuring statements that a militarist revolt is impossible. On the other hand, it is well known that personal rivalries exist among the politico-generals, while the people, whose apathy in former cases helped their plans, exasperated now by the economic crisis, and instigated constantly by a section of the Press, would hardly remain indifferent in the event of a militarist movement towards establishing dictatorship. All these considerations, and the determination of M. Venizelos to combat any attempt at a militarist dictatorship, seem to exclude the possibility of such an attempt being made, or, if made, of meeting with, at the worst, more than a short-lived success. Anyhow, it is unfortunate that by the decline of M. Venizelos's popularity and power, as a result chiefly of the economic crisis, and, to a certain extent, of his own Government's faults in internal and especially in financial policy, the political stability enjoyed for nearly four years by this country threatens to disappear at a moment when the great economic problems confronting Greece make its existence more than ever necessary.

Chilean Finance.—A correspondent writes:—At the cost of default on her external debt service, Chile was enabled to maintain the gold standard up to last April, when the Government then in office was obliged to recommend the suspension of the convertibility of the note issue. Thereafter exchange was quoted on New York at around 16.50 pesos per United States dollar, equivalent to approximately 80 pesos to the £ sterling, as compared with the 40 pesos rate fixed in October, 1925. Internal commodity prices in the Republic and values of securities on the local stock exchanges rose in consequence, but the relief afforded was insufficient to prevent disturbances in the political sphere, and the Government was overthrown on June 3 by a *coup d'état*. A governing Junta of advanced political texture was then formed, and announced certain measures, largely of a confiscatory character. This Junta, however, was short-lived, and a number of rapid changes in the governing body ensued. These ephemeral Governments have all been imbued with similar ideas for the alleviation of unemployment, the assistance of agriculture and of national commerce in general. Lacking other resources, such proposals have been based largely on the provision of finance derived from more or less direct inflation. For example, the late Minister of Finance recommended the redemption of all mortgage bonds by extraordinary amortisation at par, debtors for mortgage advances signing loans rediscountable at the Banco Central de Chile. The Government, however, has apparently given preferential consideration to a scheme involving the issue of 150,000,000 pesos in *vales de tesorería*, to be secured on special new taxes to be created on the increment in currency value of shares and property. It is not proposed to make such *vales* rediscountable, although this is advocated in some quarters. Rather than accept the alternative scheme, the Minister of Finance resigned, and his successor has been appointed. Further, a Decree Law was promulgated in Santiago on July 8th, of which the leading purpose is to place the

reserves of the Banco Central de Chile on a paper basis and to enable the Banco Central to place funds at the disposal of the leading finance institutions in the country's trade and industry, the Caja de Crédito Agraria, Instituto de Crédito Industrial, Caja de Crédito Minero, Caja de Colonización Agrícola, and the Instituto de Comercio Exterior. At the same time, the gold reserves of the Banco Central are to be revalued, the amounts in pounds sterling on deposit in London and forming part of the legal gold reserves being taken at the arbitrary rate of 40 Chilean pesos to the £. The activities of the new Instituto de Comercio Exterior will include banking and commercial business, propaganda, insurance, etc. The terms of the above Decree Law in regard to the computation of the gold reserves of the Banco Central on a paper basis have already been applied. Whereas the balance sheet of the Banco Central on July 8 last showed a reserve against the Note circulation and deposits combined of 27.93 per cent., the succeeding weekly balance sheet, dated July 15th, showed a corresponding ratio of 55.45 per cent.

American Cereals.—The Crop Reporting Board of the Bureau of Statistics of the United States Department of Agriculture has issued its August estimates of the cereal crops. The figures are shown below, together with the July estimates and the actual yield of last year's crops:—

	(In millions of bushels.)		
	August 1st.	July 1st.	1930-31.
Wheat: Winter	442	432	787
Spring	281	305	86
Total	723	737	892
Maize	2,820	2,996	2,557
Oats	1,215	1,217	1,112
Barley	303	312	199
Rye	43	44	33
Linseed	15.8	18	11

It will be seen that the crops suffered a slight deterioration during the past month. It is now certain that the wheat crop will be substantially below the actual yield of last year. An official estimate of the Canadian wheat crop will not be issued until September. Private estimates show a probable yield of between 400,000,000 and 450,000,000 bushels, as against an actual yield of 304,000,000 bushels a year ago. The total North American wheat crop may therefore be somewhat below last year's yield. The estimates of the United States maize, oats, barley, rye and linseed crops, though lower than a month ago, show a substantial increase on last year.

International Movements of Wages.—The question how far wage-rates have responded to changes in the level of prices is one of considerable interest. In the following table, compiled from the May Bulletin of the International Labour Office, we show the movement of hourly wage-rates since 1928 in Canada, France, Germany, the United States, and in this country:—

	1929 = 100.				
	Canada.	France (Paris).	Germany.	U.S.A. (c).	U.K. (a).
Certain Industries.	Industries.	Mines, Industries, Public Services.	Industries.	Agriculture, Mines, Industries, Public Services.	
Men and Women (skilled and unskilled).	Men (chiefly skilled).	Men and Women (skilled and unskilled).	Men and Women (skilled and unskilled).	Men and Women (skilled and unskilled).	
Average, 1928...	99.5	86.1	95.3	98.3	100
" 1929...	100	100	100	100	100
" 1930...	100	108.9	100.9	100.9	99
" 1931...	97.5	108.6	95.4	95.8	98
" 1932...	...	...	(b) 84.9	(c) 88.7	(d) 96

(a) Indices of weekly rates. (b) January. (c) February. (d) March.
(e) Index of hourly earnings compiled by the National Industrial Conference Board (U.S.A.). The annual figures refer to the second quarter of each year, except those for 1931, which refer to June.

Despite the sharp fall in wholesale prices during 1930, there was no corresponding decline in the level of wage-

rates. Even in 1931 the figures reveal only a slight reduction; and it was not until the present year that the downward movement appears to have become pronounced. The question to-day is whether equilibrium between the price of manufactures and that of primary products is to be restored by an advance in the price of primary products or by a further downward adjustment in wage-rates and other costs of production.

Overseas Correspondence.

UNITED STATES.

Prices — Industry — Banking — Presidential Speech.
(FROM OUR CORRESPONDENT.)

NEW YORK, August 17.

FIRMNESS of commodity prices is the principal sustaining influence on security markets, and furnishes nourishment for the hope of trade improvement in the next few months. While Wall Street suspects that the rise in wheat and cotton has not been entirely a natural phenomenon, outside these highly speculative markets the advance has had little or no artificial stimulation. Actual consumption of the principal commodities has failed to increase to any extent, but the low prices and general inertia have reduced production and stocks on hand. The position seems to be one which could improve rapidly once potential demand for goods became actual, but which might also continue as it has been for a long time. The oil industry has recently been feeling the effects of the depression through a drop in gasoline consumption, at the peak of the season. This has led to price-cutting in some parts of the country, and promises to damp the hope of considerable gains in profits for the remainder of the year. Steps are being taken to cut down production further as a means of holding prices in the face of declining consumption; and they will probably be successful. Sales of copper are reported at prices under those officially quoted, and mining activity is showing no signs of reviving. Commodity price advances, as the table below shows, are principally in farm products, where they were most badly needed:—

(1926 = 100.)

	July, 1931.	June, 1932.	July, 1932.
All commodities	72.0	63.9	64.5
Farm products	64.9	45.7	47.9
Foods	74.0	58.8	60.9
Hides and leather products	89.4	70.8	68.6
Textile products	66.5	53.9	52.7
Fuel and lighting materials	62.9	71.6	72.3
Metals and metal products	84.3	79.9	79.2
Building materials	78.1	70.8	69.7
Chemicals and drugs	78.9	73.1	73.0
Housefurnishing goods	85.7	74.7	74.0
Miscellaneous	69.7	64.2	64.3
Raw materials	64.3	53.2	54.7
Semi-manufactured articles	69.3	57.6	55.5
Finished products	76.1	70.0	70.5
Non-agricultural commodities	73.5	67.8	68.0
All commodities other than farm products and foods	73.9	70.1	69.7

Virtually all the usual weekly and monthly statistics of business show further declines. Foreign trade in July, a seasonal low point, fell sharply. Exports of \$107 millions were slightly under those of June, and were the smallest for any month since July, 1908. Imports dropped to \$79 millions, the smallest for any month since July, 1904. Shipments of copper and oils into the country in May and June, to anticipate the new tariffs, were partly responsible for the slump in imports, but the figures confirm well enough the evidence of the slump in domestic trade.

The steel industry continues at around 14 per cent. of capacity. Hope is still sanguine of autumn improvement, and the scrap iron market, regarded as a good barometer, continues firm. If more steel is to be sold, presumably, much of the demand will come from Government building projects. The railroads as a body have rejected the suggestion that they borrow money from the Reconstruction

Finance Corporation to buy new equipment and make repairs, but a few may do so. The Pennsylvania has already announced its intention of spending money to keep men employed, and the matter is being rather favourably considered by the Baltimore and Ohio. Railroad traffic is still falling, and as yet has felt no stimulus from the usual crop movements. The motor industry is doing worse this month than in July. The Ford plants are reported as closed down until early September and other makers are quieter than usual in August. Electrical output is still running about 13 per cent. under last year, and nearly 16 per cent. under 1930.

Cotton consumption last month was only 278,656 bales, compared with 320,783 bales in June and 450,884 bales in the same month of last year. Exports, on the other hand rose to 449,476 bales, against 360,205 and 259,059 in June, and July, 1931, respectively. The Census Bureau estimated the total supply for the cotton year ending July 1st at 23,170,000 bales, a gain in the year of 4,856,000 bales, or a little more than the estimated decline in the new crop as compared with last year. The position would seem to be somewhat stronger, given either an increase in domestic consumption or higher exports. Cotton futures meanwhile have advanced to the highest prices of the year.

Plans for the proposed commodities credit pool have undergone considerable change. The scheme at best has met with only lukewarm support in some banking quarters here, though it has the active backing of the Administration. Some maintain that the necessity for it, now that commodity prices are rising, is not so pressing as it was, and if an organisation finally operates it will be strictly as a credit-lending body for the purchase of raw materials by such consumers as are unable to obtain accommodation otherwise. In effect, the pool will simply be a means of mobilising excess bank reserves in New York with the hope of putting them to work in the interior.

Bank reserves are now rising rapidly, with the more rapid return of currency from circulation and the continued gain in gold, partly from imports and partly from releases from earmark. Some gold from earmark is going to France this week, but the movement will be completed in two or three more shipments. Stocks of earmarked gold have been reduced by over \$180 millions since the beginning of the year. Total gold stocks are now nearly \$100 millions above the low point reached at the middle of June, and now stand a little above \$4,000 millions. For the third week in succession the Federal Reserve system has cut down the volume of its credit outstanding. So far, the reduction has come about in repayment of member bank discounts, but it is expected that from now on the Reserve will stop buying Government bonds and may even sell some, in order to check too great a rise in member bank excess reserves. Reporting city member banks last week cut their loans and investments moderately, but the decline was largely due to repayment of bank loans from investment purchases of new issues of Chicago public utility bonds, mostly former Insull properties, and from pressure by the banks on their customers to seize the market rise for liquidation of collateral loans which had been undermargined.

Mr Secretary Mills has given some figures on R.F.C. loans. From February 2nd to July 31st, the corporation made 6,345 loans to 4,947 institutions, involving \$1,219 millions, of which \$786 millions went to 4,190 banks. The rest went to insurance companies, building and loan associations, federal land banks, agricultural credit associations and to 43 railroads and railroad receivers, the railroad portion being \$230 millions. Meanwhile the Secretary of Agriculture has lent \$65 millions to farmers out of the \$97 millions made available from a special appropriation. The maximum lending capacity of the R.F.C. is now \$3,800 millions.

President Hoover's speech accepting the Republican nomination for the Presidency made a favourable impression, not only in Wall Street, but throughout the country. The President's gesture for prohibition amendment and his admission that the experiment had been a failure were calculated to cement for him the wet votes in his own party, without alienating those holding opposite views.

The economic clauses of the address were generally sound, and Wall Street particularly liked his restatement of opposition to Government control of public utilities. On the subject of foreign debts, there was some disappointment. President Hoover expressly declared against cancellation, which doubtless he felt obliged to do as a political measure, but at least he left the door open for reduction in suggesting that payments for any particular year would not be insisted upon, and that debt might be "traded" with Europe for purchases of goods in this country. Now that both Roosevelt and Hoover have spoken on the subject, and that Borah has announced his stand, it is no longer political suicide to mention reduction as possibly a good thing all round.

FRANCE.

Loan Conversion — Budget — Trade — American Trade Treaty.

(FROM OUR CORRESPONDENT.)

PARIS, August 24.

THE brilliant success of the British War Loan conversion operation has been welcomed here with admiration, and as an example which both the Government and Rente holders are urged to follow as speedily as circumstances permit. Unfortunately, France cannot expect to achieve the degree of success attained in England. The French war loans still include 6 per cent. and even 7 per cent. issues, whose existence both impairs French credit and hurts the country's *amour propre*. On the other hand, the total mass to be converted is much smaller than the British—about 80 milliards, as compared with over 180 milliards of francs—and the general circumstances are such that what the MacDonald Cabinet has been able to accomplish in Great Britain the Herriot Ministry should shortly be able to do here, where the budget is even more urgently in need.

To-morrow's *Journal Officiel* will promulgate the first of the decrees necessary to bring into operation the Emergency Finance Act which was approved on July 15th. Under Article 6 of that Act, administrative expenditure of all kinds, as from October 1, must be cut down by an amount equal to 5 per cent. of the pay of the nation's civil and military personnel, calculated on the bases of the various departmental credits opened under the Finance Act (Budget) for 1932. To-morrow's decree fixes the cuts to be made in the Budget of the Finance Department for the last quarter of the current year, which will total 24,307,000 francs. Other decrees applying to the rest of the departments will follow. The total economy effected by this means during the quarter is estimated at 125,000,000 francs, and during 1933 at 500,000,000 francs. Greater cuts are practically certain to be made under the Budget for the coming year, which is now being prepared for submission to the Chamber.

The revenue returns for July, which are issued to-day, indicate a sharp slowing down in the yield from taxation. Total yield from all "normal and permanent" Budget sources during the month was 3,722,770,000 francs, against 5,489,000,000 francs in July last year and 5,502,500,000 francs in July, 1930. The yield from income tax, which in July is normally the largest during the year, was only 489½ millions, or 1,013 millions less than in July, 1931. The total yield from all sources was over 33 per cent. less than in the corresponding month of both 1930 and 1931, and 1,077,000,000 francs (or over 25 per cent.) below Budget estimates for the month. Turnover tax was 17½ per cent. below July last, and the yield from Customs and taxes on securities was in each case over 124,000,000 francs smaller. The yield from the tax on Bourse operations, which was raised 50 per cent. in the recent Emergency Finance Act, was only 6,555,000 francs, or over 30 per cent. less than in July last year.

French foreign trade in July was the smallest registered since the revalorisation of the franc. The total volume was 3,817,000,000 francs, against 6,065,000,000 francs in July, 1931, and 6,058,000,000 francs in July,

1930. Imports totalled 2,388,500,000 francs (against 3,634 millions in July, 1931, and July, 1930) and exports 1,428 millions (against round figures of 2,420 millions in the corresponding month in each of the previous two years). Both imports and exports marked new low levels for recent years.

Newspaper commentators are now advocating the calling of a "French Ottawa," comprising representatives from all parts of the "French Colonial Empire," for the purpose of studying means for increasing commercial relations between the Mother Land and "Overseas France." The recent long list of French colonial loans, designed almost entirely for economic development, may be regarded as having a similar object. In the case of a French Ottawa becoming an accomplished fact, there would be no tariff problems to be dealt with. A quota system exists, mainly in regard to colonial agricultural products entering France (for the protection of the all-powerful home agricultural interests), but otherwise trade between the Mother Country and the colonies, and between colony and colony, is as free as between points in France.

At the request of the United States Government, conversations began at the Ministry for Commerce on Monday between French and American representatives, with a view to the preparation of a new commercial treaty between the two countries. The conversations will be resumed next Friday, but it is generally regarded as unlikely, in view of the new world situation now existing, largely as the result of the British change of policy in regard to protection, that any definite decisions will be speedily arrived at. What is regarded in some quarters as most probable is that the present conversations may prove a useful prelude to the World Economic Conference. The great difficulty which this country has hitherto had to face, in connection with tariff negotiations with Washington, is that the United States Government has invariably insisted on being given the benefit of a M.F.N. treatment, and at the same time has eluded a plain issue by protesting that American law renders it impossible for her to concede such treatment to other countries.

GERMANY.

Politics — Foreign Loan Service.

(FROM OUR CORRESPONDENT.)

BERLIN, August 23.

THE Government have apparently decided immediately to dissolve the Reichstag, in which they do not command a majority, before it forces them to a formal resignation by carrying a vote of no confidence. They will duly hold the new elections, and summon the new Parliament within a month, as required by the constitution. In so doing they are taking the only course which remains open to them if they do not wish to violate the constitution or to leave the way to Government open to the National Socialists, which would also of course mean the rapid destruction of the constitution. This course would be impossible for the Government if they were confronted by a Parliament which was capable of providing a majority for any Government, but the negotiations opened by the Centre with the National Socialists with this object seem to have no prospect of success.

Probably the only result of this dissolution will be to gain time for about three months. The Press goes so far as to regard it as absolutely certain that there will be no essential change in the composition of the Reichstag. It is, however, possible that some changes may result from the fifth election of the year, as this weariness may not show itself equally in all parties. It is, however, scarcely possible to assume that a majority capable of assuming Government could arise from a shifting of this nature. This method of setting Parliament aside, and the open proof that Parliament is incapable of action, will certainly do the Parliamentary system serious damage in the opinion of the public. The Government, too, will be crippled, as without Parlia-

ment they cannot carry out any of the reforms they had planned, notably the remodelling of the relations between the Reich and the States. Thus the probability is that—in the absence of violent disturbances—a period of stagnation in German politics lies ahead, in which a Government of little authority will discharge the duties of administration with the aid of semi-dictatorial methods. That disturbances are, however, always possible in the meantime has just been shown by the case of the Beuthen judgment against members of the Nazi "storm detachments." These adherents of Hitler had murdered a Communist the night after the coming into operation of the new emergency decree. Although the deed was accompanied by very great brutality, the state of excitement in which they were at the time might, before the imposition of more severe penalties by the emergency decree, have been taken into consideration, and they might possibly have escaped with imprisonment. As, however, the emergency decree imposes the death penalty even for the unpremeditated killing of a political opponent, the Special Court had to sentence five Hitlerites to death, and the Government are now confronted with the difficult political decision whether they will allow this sentence to be carried out, which would expose them to the most violent attacks by the National Socialists and perhaps lead to serious disturbances, or whether they will disown their own emergency decree.

From the political point of view this prospect is thoroughly unpleasant. Nor can it help the economic situation to have the tension prolonged, and even intensified, without any solution being found. One economic danger has, however, been removed. The Government are no longer under the temptation to go before Parliament with an impressive programme in order to make it difficult for the Reichstag to turn them out. They have realised that not even this course could save them, so that they can allow themselves for the present to make their decisions on purely practical grounds. The unanimity of opinion between the Cabinet and the Reichsbank on the question of the provision of work undoubtedly means, though details are not yet known, that the Government do not intend to finance by means of supplementary credit any comprehensive programme for the provision of employment. It may be taken for granted that the same discretion will be shown in connection with debt policy.

Both German and foreign newspapers have recently contained disquieting statements to the effect that Germany might suspend or limit the transfer of the interest on her foreign debts. In spite of the many standstill agreements and exchange restrictions, the interest and annuities have so far been transferred without restriction in the currency of the foreign creditors. Even the private foreign holder of German securities or other German investments has, so far, been able to use as he liked the interest on dividends which were payable in marks. The total amount of interest payable abroad by Germany was estimated at the beginning of this year at Rm. 1,600 millions per annum, but thanks to the lower rates of interest abroad, which have given rise to a reduction of the interest on the standstill credits, the amount of interest to be transferred in 1932 should be considerably less. When, however, the latest trade balances are compared with the interest payments, they reveal a discrepancy. In May, June and July the active trade balances were only 87, 80 and 66 millions respectively. In these circumstances it is impossible to set aside the fear that in the course of the next few months the transfer of interest may encounter difficulties. The gold and exchange reserves of the Reichsbank have already contracted so seriously that they can hardly be drawn upon for this purpose. What course will Germany take, if a deterioration in the balance of payments forces her to new decisions? The representative of the Government who

can speak with most authority on this question, Dr. Warmbold, the Minister of Economics, answered this question, in a recent interview, as follows:—

"If the question arises of a reduction in the rate of interest on Germany's private foreign debt, Germany will certainly not take one-sided action in this direction, but will endeavour to reach an agreement with her creditors. It is my confident hope that a transfer moratorium may be reached by agreement with Germany's private creditors."

Germany's foreign creditors and the foreign holders of German bonds can thus be reassured that the German Government will only consider a reduction in the transfer of interest as a very last resource in the event of extreme need; and even in this event there will be no question of one-sided action, but only of a joint agreement with the creditors for a temporary relief.

The above statements of the Minister refer only to the transfer question and not to the ability of each individual German debtor to meet his obligations. Even if Germany is in a position to carry out the transfer of her interest obligations without friction, individual German borrowers might, in consequence of the crisis, encounter insuperable difficulties in raising the interest. The Minister of Economics made some reference to this possibility. The German Government takes the view "that it is the business of the German private debtors to make their own arrangements with their foreign creditors if they feel that they can no longer meet the service of their debts." The Rudolf Karstadt A.G. was the first German debtor in respect of a foreign loan to open negotiations with the holders of its bonds; whether other German firms will be driven to a similar course or not depends upon whether the economic crisis in Germany abates or grows worse. One thing is certain, that the overwhelming majority of German undertakings which have raised loans abroad will not even have to consider this question, for in spite of the decline in markets and prices they have remained in a position to pay.

AUSTRIA.

Exchange — Foreign Trade — Banking.

(FROM OUR CORRESPONDENT.)

VIENNA, August 22.

At breakneck speed the Austrian Parliament has passed 100 Bills in order to enter upon its vacation. Among these there are some regulations very depressing to trade. The merchandise turnover tax and the crisis tax have been greatly increased, and postage is dearer. The much-disputed Lausanne Agreement for a loan has been approved by the narrowest majority. The Government and the business interests were afraid to take the responsibility of rejecting the Agreement, and, as the National Bank declared it to be one of the preliminary conditions for the modification of the bank rate, the Bill was passed. Austria now awaits the proceeds of the loan.

The National Bank has eased its position somewhat by favouring and facilitating private clearing. At present clearing is centralised at the Giro- und Kassenverein, whereas formerly a number of agents were acting as intermediaries for importers and exporters. There are, however, complaints concerning the height of the charges payable for the services of the banking institute. On the other hand, the Giro- und Kassenverein urgently needs these fees, as its former activity in the settling of Stock Exchange arrangements has practically ceased. If the reconstruction of the Credit-Anstalt had been advanced sufficiently, that bank would undoubtedly have had to take over the function which is now being performed by the Giro- und Kassenverein and the profits would then have accrued to the State. It is also becoming more and more evident that the maintenance of artificial exchange rates for foreign means of payment at the National Bank will be eliminated in practice. In private clearing quotations are 15 to 20 per cent. higher than at the National Bank.

Foreign trade is still unfavourable. In the coming months the restriction of coal imports will show greater effect, for, apart from the big contract which the Federal Railways have made for Ruhr coal, coal importers have seen placed on considerably shorter rations, a fact which

is a great help to the Austrian lignite mines. In spite of the dismissal of so very many employees, the level of wages has been fairly well maintained. It is, however, automatically affected by the crisis tax, the increased income taxes and the higher merchandise turnover tax. Further, the existing agreements in certain branches of trade in regard to minimum wages and minimum salaries are valid for some little time still, so that no attack can be made upon them for the present.

As the hopes which were pinned upon the revival of business with Russia have not been fulfilled, endeavours are being made in industry and particularly in the metal trade to create a guarantee institute after the German pattern to relieve the State as far as possible of risk ensuing from possible commercial losses. Complaints from economic interests in Austria about the procuring of credits are still heard. Some attribute this difficulty to the policy of the National Bank. According to the figures published for the middle of August, the total circulation in Austria has receded to 1,070 million schillings, and in comparison with the level at the end of December, 1931, it has suffered a recession of 241 millions, or 20 per cent. It is true that during the same period the cash holdings have also fallen from 317 to 190 million schillings. The bill portfolio has, however, diminished only from 908 to 887 millions. The explanation is that the holdings of Credit-Anstalt bills of exchange could not be disposed of, and only upon the basis of the agreement, which has lately been arrived at between the State and the National Bank, is a gradual redemption to be effected. The National Bank is also most reluctant to accept as collateral securities bearing fixed rates of interest. The loans against collateral amount to scarcely 27 million schillings, and these are mostly against rentes which are deposited by savings banks desiring ready cash immediately. From private persons the National Bank accepts as collateral, only under very exceptional circumstances, securities bearing fixed rates of interest. These transactions take market rates far below officially quoted prices. The mortgage institutes will also have to take steps to prevent artificial prices from being formed. Several of the prices in question are 20 per cent. lower than the figures in the official quotations. On the other hand, private people are in many cases granting credits where the savings banks have refused them, as the savings banks want cash in hand, because for many weeks withdrawals have been in excess of fresh deposits. This is not due to fear but merely to the fact that people are obliged to fall back on savings during the period of bad trade.

HUNGARY.

Deficit — Austrian Treaty — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 21.

THE last report of the Finance Minister revealed that the deficit for the financial year 1931-32 (ending on June 30th) was 160 million pengö, that is 20 million pengö more than was estimated a few weeks ago, on account of the heavy losses of the State undertakings. The deficit of the State Administration proper amounted to 81.9 million pengö, that of the undertakings 53.7 millions, the Boletta Fund (wheat and rye subsidy) showed a deficit of 14.6 million pengö, and other sundry items on balance cost the Treasury 10 million pengö, making a total of 160 million pengö, excluding the deficit of 10 millions of the Social Insurance Fund and another 20 million pengö economised on the service of the Public Debt by suspending amortisation.

The provisional results of the State undertakings for 1931-32 disclose a net revenue of 362.3 million pengö and an expenditure of 416 million pengö. The heaviest losses were sustained by the State Railways, whose receipts of 217.6 million pengö remained 44.3 millions short of an expenditure of 261.9 million pengö. The Iron, Steel and Engineering Works of the State incurred an expenditure of 29.9 million pengö, as against 16.4 millions current receipts. The Post Office is the only important self-balancing State undertaking. Its receipts amounted

to 103 million pengö, against 98.9 millions spent. The other sundry undertakings balanced at 25.3 million pengö. Considering that the budget of the State undertakings for the current financial year is estimated to balance at 401.1 million pengö, it is obvious that the estimates, so far as revenue is concerned, cannot be realised. The Treasury will be fortunate if receipts do not fall below the 362.3 millions actually collected in 1931-32. In view of a threatened deficit of 50-60 millions for the undertakings, the only way to sound finance is to curtail the expenditure, estimated at 401.1 millions, at least by 10 per cent. There is plenty of scope for immediate economies both in the material and personnel expenditure, especially in the case of the State Railways. Unfortunately, there is little evidence that the Government is prepared to take the necessary steps in time.

Foreign trade returns in July are very disappointing. Exports amounted to 22.9 million pengö, as against 40.2 millions in 1931, and imports to 23.7 millions—just one-half of the 47.3 millions imported in the corresponding month last year. There is little doubt that the mischievous effects of the Customs war with Austria, which began on July 15th and lasted until August 4th, have already made themselves felt in the July returns. In the absence of a regular commercial treaty the *modus vivendi* which was in operation from August 4th till 19th was extended and enlarged, so far as the quotas are concerned, for another six weeks until October 2nd. It is not quite clear yet what the monthly quotas to Austria will amount to, as the what the monthly quotas to Austria will amount to, as the approximately 4 million pengö imports allotted hitherto are scarcely one-fourth of the average monthly exports of the second half of 1931 to Austria. The importance of normal trade relations with Austria can be best gauged from the statistics relating to the distribution of foreign trade in the first half of 1932. Out of total exports of 151.6 million pengö, 57.5 million pengö went to Austria, more than to Germany, Czechoslovakia, Italy, France and Switzerland altogether, as exports to these five next most important outlets amounted to only 52.7 million pengö. The average monthly exports to Austria in the first half of 1931 amounted to 12 million pengö, in the second half of 1931 amounted to 15 millions. In the first six months of 1932 the average was 9.5 millions, and, taking into account the seasonal increase in the second half of the year under normal trade relations, exports ought to average 12 million pengö per month, but at best 6.7 million pengö can be expected under the provisional treaty.

ITALY.

Prices — Sugar Beet and Wine — Bank and Liquidations.

(FROM OUR CORRESPONDENT.)

TURIN, August 15.

EVEN before the Stock Exchanges were closed for the holidays business was very quiet, with no sign of revival. Optimistic prophecies from the United States are greeted hopefully, but wholesale prices continue to fall, going down in the first week of August to 78.7 per cent. of the pre-war level. Hindrances to international trade are bearing their evil fruits: during the first half of 1932 goods carried by sea to and from Italy decreased by 7.65 per cent. Goods carried by railways decreased from 48,615,000 tons in the fiscal year 1930-31 to 40,404,000 tons in 1931-32. Recent agreements between Italy and France increasing the very limited import quotas are therefore welcomed as a sign of possible relaxation.

The rainy spring and summer months, while reducing the wheat yield, promise an abundant beet crop, poor in sugar content, so the associations of beet growers and of the sugar makers have agreed to increase by 15 per cent. the quantity of beet which must be purchased by sugar makers. The rest will be used as cattle food. As the alcoholic content of this year's vintage threatens to be low, it was decreed in the last Cabinet Council that the minimum alcoholic degree required from red wines on sale shall be raised from 9 to 10 per cent., and that from white wines from 8 to 9 per cent. It is hoped that many low-content wines will be withdrawn from direct consumption to distillery.

The campaign for the collection of gold has brought the Bank of Italy's reserve from 5,627.9 million lire on March 31 to 5,700.4 on July 31. During the same period the gold exchange reserve decreased from 1,533.6 to 1,390.2 million lire. As, however, the note circulation decreased from 13,871.6 to 13,492.3 million lire, the percentage of the gold cover to circulating notes increased from 40.57 to 43.49 per cent. More interesting, perhaps, are the changes in the discount and advances items from 5,637.9 million lire on March 31 to 6,819.3 on May 31, and 5,974.6 on June 10 and 5,685 millions on July 31. At the same time advances from the Bank to the Liquidations Institute increased by degrees from 1,613.1 million lire on March 31 to 1,789.5 on July 20. This figure ought to have decreased instead at some intermediate date by 800 million lire, which the State Exchequer paid to the Institute to enable it to reduce its debt to the Bank of Italy. The inference is that the reduction has taken place, but at the same date, probably after May 31, the Bank of Italy transferred an equivalent sum from the discount item to the debt of the Institute. Frozen assets remain thus at the same level; and in banking circles the opinion is current that this is not the end of the process of the liquidation of past inflationist errors. Other frozen assets or losses must be transferred from banking and others concerned to the Bank of Italy, and thence to the Liquidations Institute to be amortised in time with State Exchequer or special fiscal grants. The miracle is that so gigantic a process of liquidation, which amounts already to 5 or 6 billion lire, has been carried out without increasing or even with a gradual decrease of the note circulation. It may be said that notes should have decreased even more, or that the process has been possible only through the successful issue of Exchequer bonds; but at all events the winding-up process has gone on, and still continues, successfully, without dislocating the foreign exchanges. In its turn, the stability of the lira has reacted on public psychology, stopping or reducing the export of capital and even provoking not a few capitalists to recall balances formerly held in foreign countries.

CZECHOSLOVAKIA.

Industry — Banking — Trade — Finance.

(FROM OUR CORRESPONDENT.)

PRAGUE: August 8.

THE general economic depression in Czechoslovakia has shown a little improvement since the end of April. The growth of unemployment came to a stop in the second half of March, and since April its decrease is noticeable. The number of unemployed persons at the end of March was 633,907, at the end of April 555,832, in May 484,604 and in June 458,287. This decrease is due partly to the seasonal absorption of labour, especially in the building trade and its ancillaries, and partly to the improved possibilities for some industries which cater for the home market. The depression in the export trade continues unchanged. Exports of glass, textiles and ready-made articles of clothing in particular are suffering through the increasing difficulties and barriers.

The general economic depression is naturally very clearly reflected in the output of coal and iron, notwithstanding a slight revival in the last month. The output of iron and steel shows an extraordinary decrease against the year 1931, which was itself far from favourable, and the export in the first half of 1932 dropped to barely one-third of the 1931 level. The iron trade is employed to only 25 per cent. of its capacity. The situation in the iron trade is made still more difficult by the fact that just before the crisis much capital was invested in it. The wholesale gold price index on May 1st fell for the first time under the level of 1914 to 99.5 and in June to

97.8, but on the whole there are signs of greater price stability.

The French loan brought some relaxation of the money market, and also the supply of foreign bills at the National Bank rose on April 23rd by 470.15 million Cz.K., though before this date it showed a continuous decline. Since then the foreign bill supply has decreased less, and recently a little increase has been noticeable, probably as a result of the stricter control over foreign exchanges. The decline in savings deposits, which takes place regularly in the spring, was more apparent this year as a result of the livelier building activities, and also owing to a certain amount of hoarding by the public.

The results of the Lausanne Conference contributed to combat the distrust and calm the sentiment on the Stock Exchange. No evidence of apprehension as to the development of politics in Germany is apparent on the money market. The Stock Exchange, which witnessed a considerable decline in quotations in the spring on the announcement of dividends, manifested lately a better spirit, and the Stock Exchange index rose between April 22nd and July 22nd from 71.98 to 76.4.

The new Bank Act has made the regulations much stricter, and has created a special advisory board. It also provides for assistance to certain banks badly hit by the crisis, and creates special funds for the purpose. The reorganisation of some of these banks is also under consideration.

Foreign trade, hampered by exchange and other restrictions, has further declined in volume. In the first half-year imports amounted to 3,956.4 million Cz.K., against 5,546.7 millions a year ago; exports only to 3,731.1 millions, against 6,384.4 millions a year ago. The general situation is aggravated by payment difficulties in some countries, and consideration for the safeguarding of the currency calls for an extension of the control over imports. Unification of this control, which has been vested in special commissions at the Ministry of Finance and of the control exercised still by the Ministry of Commerce over some items of imports will be introduced shortly. A large proportion of the import trade is being carried on at present by means of compensations; it is also partly paid for by frozen credits abroad, which are liquidated to a certain extent in this way. With some countries a clearing agreement has been arranged or is being contemplated.

To regulate the import of corn and flour, and at the same time to stabilise the prices of these commodities, an Import Syndicate has been constituted, in which central agricultural organisations, together with those of consumers, trade and interested industry are participating. The Syndicate is empowered to import corn or flour on the strength of a special agreement with the Government.

The lasting economic depression is naturally manifested in increased State expenditure on unemployment subsidies and in declining revenue. The Minister of Finance estimates that the budget deficit for this year is likely to be 1,700 million Cz.K. To balance it strict economies in the administration have been carried out and new revenues are being sought. The turn-over tax was raised by 50 per cent. last April. In July an increase of income tax, retrospective for the year 1931, was imposed, despite protest and criticism, and a yeast tax was introduced. Most of the energies of Government and Parliament have been concentrated on the economy, and a Government commission is to be charged with the task of effecting lasting economies in the general public administration.

CANADA.

Crops — Business — Newsprint Industry.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 9.

THE western grain harvest has now begun. In Manitoba the wheat crop promises an average yield, but during the past fortnight there has been a substantial deterioration

in the Saskatchewan crop, particularly in the southern and west central sections of the province, which suffered so badly from drought in 1931. In these districts excessive heat, combined with the lack of reserve moisture in the parched subsoil, have taken a heavy toll, and the yield will not run to more than an average of 10 bushels per acre. But the northern sections of the province have fared better, and the province's aggregate wheat crop will be substantially larger than a year ago. In Alberta, except in the northern section of the Peace River Country and in the extreme southerly portion of the province, crop conditions are satisfactory, and something better than an average yield is forecast. The reports of the grain experts agree that all hopes of a bumper wheat crop have vanished, but that, if reasonable weather conditions are vouchsafed during the next fortnight, the yield should still be in excess of 400 million bushels. The oat and barley crops are reported to be poor, and in Manitoba large areas of oats have had to be cut prematurely to save them from the ravages of grasshoppers.

There was a sharp decline of 8 million bushels in Canadian grain stocks in the week ending July 29th, and on that date they were placed at 121,469,701 bushels, as compared with 110,731,356 on the corresponding date of 1931, so that the carry-over at the end of the crop year is only 10 million bushels above the figure for the previous year. This is better than was anticipated. During the past week the western farmers have been greatly heartened by a sharp rise in grain prices, and the advance is expected to continue until wheat, which is now selling at 61½ cents per bushel (No. 1 Northern) in Winnipeg, climbs to at least 70 cents. This rise will be particularly welcome to the Federal Government, as it is an open secret that the process of liquidating the stocks of the central selling agency of the wheat pools had involved it in heavy financial responsibilities, and two weeks ago was facing it with the prospect of a heavy loss unless grain prices improved.

In general business conditions there have been some signs of improvement. Both wholesale houses and retail stores report a slight but definite gain in business, and in several lines of industry, such as food-canning and lumber and mineral manufactures, there has been increased activity. The car-loading figure for the week ending July 30th, at 36,548 cars, shows a decline of 229 cars as compared with the previous week and of 10,844 cars as compared with the parallel week of 1931, but the comparatively poor showing is attributable to a sharp decline in grain loadings, and there is evidence of a gain in the movement of merchandise. The July employment figures of the Bureau of Statistics again showed a slightly downward tendency, and the index number was 89.7, as compared with 89.1 in June and 103.8 on July 1, 1931. But the decline was trivial compared with the shrinkage in recent months.

The difficulties of the newsprint industry are increasing; although there was recently a slight gain both in output and exports, its financial position is almost desperate. Last month three important units of the industry, the Abitibi Power and Paper Company, Price Brothers, and the Lake St. John Pulp and Paper Company were compelled to admit default upon their bond interests obligations, and receiverships seem in prospect of all three. Lord Beaverbrook's scheme for the reorganisation of Price Brothers has collapsed as the result of the opposition of powerful groups of security-holders. At present only two pulp and paper companies operating in Eastern Canada, the Mersey Pulp and Paper Company and the International Paper Company, are meeting interest on their fixed charges. In the difficulties of the others certain banks are known to be deeply involved, and reports from Montreal indicate that they are again bestirring themselves to achieve a drastic reconstruction of the whole financial fabric of the industry through a merger on a comprehensive scale. Whether they will be able to reconcile the conflicting interests remains problematical.

The Stock Exchange.

TEA—A CHANGED OUTLOOK?

THOUGH tea has not plumbed the depths sounded by rubber, it has lately suffered increasing depression and taken it ill, as a strong man hates a sick bed. Some past "crises" have dissolved after a season or two's conservative plucking, but to-day's malady is more obstinate. The industry, with growing disillusionment, has tried one remedy after another. It has experimented with output restriction, and abandoned it. It has had Empire preference, lost it, and regained it. Some estates and areas have consistently aimed at quality and others at quantity production; some have sedulously "nursed" the market, and others thrown supplies on it with little compunction and less dignity. A few months ago, the achievement of approximate equilibrium of world supply and demand seemed to promise the beginning of convalescence. Prices, however, have remained unsatisfactory, and a large section of the industry, having reduced its costs to levels deemed impossibly low a few years back, is operating under unprofitable conditions.

Shareholders seeking the relation between cause and effect may conclude that while the industry, like many others, has been a victim of world forces outside its own control, demand for its product has, in the circumstances, been surprisingly well maintained. Tea imports for home consumption into 48 countries were 817 million lbs. in 1928, 857 millions in 1929, 862 millions in 1930, and are estimated to have shown no considerable falling-off last year. Nor has production increased appreciably since the abandonment of restriction at the end of 1930. Exports from the chief areas (excluding China and Japan) for the last four years have been:—

Exports from China have tended, if anything, to decline, and the unimportant Japanese contribution has increased very slightly. During 1932, so far, there has been no great increase in exports from India and Ceylon (though more tea has come to Great Britain) and arrivals of Java and Sumatra teas to this country, in the first seven months, have been rather lower than in the corresponding period of 1931. London stocks (on a 100 per cent. basis), which rose from 241 million lbs. at the end of 1928 to 289 millions at the end of 1929, were 290 millions a year later, and showed a net decline to 272 millions at the end of 1931. The figures have a seasonal swing, and after being as low as 190 million lbs. at the end of April (after Budget forestalling), have since shown an innocuous rise to 204 millions. The figures are trade estimates, not official computations, and there are no means of ascertaining the extent of "hidden" stocks, held by distributors, etc.

In short, demand has been checked rather than retarded by depression. Supply, after threatening to run ahead in 1929, was damped down by restriction in 1930, and has been kept down by hard times. The industry's troubles are due, not to lack of contemporary balance, but to the ruinous sacrifices, by way of lower selling prices, which have been necessary to attain and maintain equilibrium. The following table of London auction averages suggests why tea company dividends have recently tended to shrink or to disappear:—

The table showing the recent results of a number of tea companies, given at the foot of the preceding page, affords a commentary on the cost of these price-sacrifices to some of the best operating concerns in different areas. The present plight of companies in a worse situation may be inferred from the fact that nineteen concerns in Cachar and Sylhet made a loss (after fixed charges) equal to 20½ per cent. of their ordinary capital, even at the price-levels of 1930. Reference to the table suggests that the margin between cost price and selling price was significantly narrow in most cases, last year, and that ability to earn a profit, at current market levels, is bound up with the extent of subsequent reductions in costs. That these have been made is common knowledge, but their scope is limited. Labour and wage conditions are relatively inelastic. Tea plants cannot be left untended for even a moderate period without permanent damage. Drastic curtailment of all expenditure will have undesirable effects if long maintained. Tea company shares are now selling, on the average, at about one-third of their value during the Stock Exchange boom, but the decline appears merely to have discounted actual or prospective reductions of dividend.

Shareholders may neglect the more ephemeral factors in the industry's present situation. For example, recent sharp fluctuations in tea prices have reflected pre- and post-Budget influences. The excise of 2d. a pound on existing stocks came as a complete surprise, and temporarily crippled new buying power. Northern Indian quotations have had a firmer tendency in the last few weeks, and may be more than maintained as the new season's teas come forward. The new budgetary duty of 4d. per lb., with an Empire preference of 2d., does not seem to have seriously checked consumption—though it is early, as yet, to speak with confidence. The duty, plus the exchange factor, may already be limiting Dutch offerings, to some extent, in London. The effect of Ottawa, and the attitude of Australia and other Dominions towards tea imports from various sources, are also uncertain factors.

It is with more distant prospects that investors in tea shares are chiefly concerned. What will be "normal" future conditions? Must producers, say, in Northern India, abandon their traditional ideas on the rôle of "quality," and, having regard to the present submergence of all but the very best teas from all areas, stake their fate on a "quantity" economy? They have a sufficient reserve of productive power to take up a substantial recovery in consumption. Such a policy might well, therefore, be incompatible with any sustained rise in prices, apart altogether from its reactions on their Dutch competitors. As regards the latter, again, British companies may have to make a difficult choice. They may elect to use their privileged position in the Empire (which, outside India's own consumption, absorbs two-thirds of the world's tea imports) to "drive out" the Dutch grower by relentless exploitation of preferences and exchange depreciation, at the cost of increasingly bitter competition elsewhere, especially in the "on-gold" countries. Conversely, they may regard Dutch producers as probably better disposed, at heart, to suggestions for future "co-operation," and more ready to implement them, than for a long time past.

Tea producers may be facing a "new" outlook, in the sense that the high profit margins of other days may never return. Estate ideas may call for corresponding reorientation. Is the traditional segregation of the producing and distributing trades to be maintained? Producers, naturally impressed with the excellent financial record of the distributors, may toy with the idea of establishing their own direct contact with the consumer, but their plans are unlikely to go very far. The distributive interests are compact and well entrenched. They know their market, and on the whole have served it well.

Whatever tightening of the belt may be appropriate to future contingencies, tea-growers have one advantage over their colleagues in the rubber trade. There is no suggestion of their industry "going native." They are not driven to justify their existence. Even in the Dutch East Indies, native production remains chiefly on a "capitalist" and not a "family" basis. The industry's destiny is in its own hands.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
September 6. September 8.

THE leading factor in the consistent firmness of markets this week was not the Ottawa agreements (of whose purport investors were able to form only a hazy idea), but the renewed strength of Wall Street. Many British operators had anticipated a sizeable American reaction, but the evidence of public buying which accompanied the fresh rise of prices seemed to suggest that the movement still had great vitality. At home, the gilt-edged market continued to improve without making much real headway, immediate interest being centred rather on the prospects of Australian stocks, in anticipation of an early refunding issue (discussed in a Note on page 400). A selective investment demand for industrials was fostered by the issue of company reports suggesting that higher earnings, thanks to internal economies, might precede higher industrial activity. Commodity prices remained firm, but the volume of new business in speculative shares was less than had been anticipated.

Gilt-edged stocks were liquidated at the outset, but recovered on moderate but steady demand from small investors. Assented War Loan found support but failed to touch 99. Long-dated India loans appreciated, and Australian issues found new buyers for a pre-conversion profit.

Brazilians were depressed through anxiety regarding the effect of continued civil strife on national productivity. Among European stocks, Austrians made no further gain on the final ratification of the Debt Agreement. Germans remained moderately steady, despite Nazi turbulence. Chinese loans, particularly that of 1913, were in moderate demand, but Japanese declined with the yen.

Home rails made a slightly better showing, particularly the prior charges. The modest improvement in last week's traffic returns was ascribed in part to the good holiday weather. Underground shares remained steady, the market refusing to believe that the busmen's rejection of the company's terms portended a strike. Argentine railways were quiet but steady in the face of further unsatisfactory traffic figures. Canadian Pacific were an active market under Trans-Atlantic influences, to the accompaniment of nebulous post-Ottawa rumours.

Though the rise in values of British industrial equities was modest by contrast with Wall Street's movements, the market had a consistently favourable tone. The fruitful intervention of the Deputy-Mayor of Manchester in the Lancashire weaving dispute coincided with the publication of greatly improved results by Calico Printers analysed on page 402), and all the leading textile shares showed measurable gains. British Celanese improved on reports of more successful trading by American Celanese. An increased business was done in electrical shares, investment demand producing a fresh rise in Enfield Cable. Provincial support was given to selected iron and steel issues, and motor shares had a firm appearance. Tate and Lyle were prominent, and catering shares in fair request. Breweries were firm in the absence of further chairmen's speeches. Tobacco shares, however, were irregular, apart from intermittent demand for Carreras. Bank shares, particularly those of institutions in the Dominions, were marked higher, but insurance shares showed little change.

Activity in the rubber share market declined perceptibly. Little stock came on the market, but there was no recrudescence of the earlier spurt in demand. Tea shares continued to be neglected, after signs of slightly increased activity early in the week. The outlook for this industry is discussed in a leading article on an earlier page. Dealings in oil shares were not particularly active. American influences were mainly bullish, but the Continent was in an uncertain mood.

Mining shares had a firm undertone, but the expected growth of activity following the publication of the Ottawa agreements failed to mature. A fairly large turnover took place in copper shares in view of the prohibitive duty

proposed on non-Empire metal. Business, however, was almost entirely professional and prices failed to show a corresponding rise—for reasons which are suggested on page 403. Dealings in other base metal share markets were limited by the absence of a steady upward trend in metal prices. "Kaffirs" were in demand largely from Johannesburg, Robinson "B" finding favour, while West Rand continued to be actively dealt in. Johannesburg Consolidated were supported from Paris. Trading in West Australians was much quieter, Wiluna making no further headway.

FOREIGN STOCK EXCHANGES.

NEW YORK.

In defiance of the augurs, and of Mr Roosevelt (who, in a public address, urged Federal regulation of the stock security markets), the upward movement on the Stock Exchange was resumed on Monday, when prices enjoyed a sharp and broad advance. Buying was mainly, though not entirely, domestic, and was based on appreciable public support, as well as pool activity. The movement was helped by a further spectacular rise in cotton, on re-washed fresh deterioration of the crop. The tempo of the share markets was not completely maintained on succeeding days, and the bond market, after breaking new high ground for the year, showed a slight and not unhealthy reaction. Rails came back into favour, particularly roads included in the proposed Eastern merger. Delaware and Hudson were especially in the public eye, owing to rumours of an early public announcement of the acquisition of a substantial stock interest in New York Central by purchases below \$10. Generally, the earnings outlook for most railroads was regarded as having improved, owing to internal economies and expectations of a moderate traffic revival. The completion was announced

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

of the organisation of the Commodity Finance Corporation by twenty New York banks, under the presidency of Mr Mortimer Buckner. The corporation, with resources of \$50,000,000, is forbidden itself to purchase commodities. It will function through subsidiaries, its nationwide operations including loans to mills, manufacturers, &c., for the purchase of basic commodities. Internal trade still shows few tangible signs of betterment. Steel production remains around 14 per cent. of capacity, and electrical power production last week was 12.9 per cent. below the level of the corresponding week of last year. Freight-car loadings, however, have shown a slightly more than seasonal gain in the last two weeks.

* 2-hour session.

PARIS.

The Bourse was sluggish at the outset, activity being confined to Rentes and one or two Internationals. Later, the volume of business increased considerably, the strength of Wall Street being reflected throughout the market. Some slight profit-taking followed, but on Thursday Rentes exhibited renewed strength, while there was considerable activity in the more speculative sections.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

on radio, are still in the development stage. The next period of market activity seems likely to see the flotation of numerous new radio concerns, good and bad, and it may be some time before the industry settles down into quiet "respectability."

Calico Printers.—A gratifying increase in earnings is announced by this Lancashire "finishing" company in a preliminary statement. After providing £359,970 for maintenance, repairs and renewals, and £128,000 for debenture interest, the accounts for the year to June 30th last show a profit of £157,458, against a loss in the previous year of £175,289. The directors are paying the dividend on the 5 per cent. preference shares which was deferred last February:—

	Years to June 30,		
	1930.	1931.	1932.
	£	£	£

Carried forward.....	29,917	3,823	(a)

(a) Figures not yet published.

The company is understood to have benefited from extensive economies, from the impetus to exports following the abandonment of the gold standard, and from the greater stability of inventory values. The £1 5 per cent. cumulative preference shares rose from 10s. to 14s. on the preliminary statement.

Triplex.—A satisfactory report was issued this week by the oldest of the safety glass companies, which has practically maintained its earnings for the year to June 30th last at the previous year's level:—

* Written off assets, after crediting £38,161 profit on sale of investments.

The development of improved methods of manufacture has resulted in an exceptionally heavy charge for obsolescence, of which £21,929 has been taken from profits. A profit of £38,161 was made by the sale of investments during the year, and this was credited to profit and loss account. The items of goodwill (£28,750), shares in subsidiaries (£12,500) and an amount owing by a subsidiary (£10,070) have, consequently, each been written down to £1. Government securities to the value of £102,718 were sold during the year to provide cash for a reduction of capital by a repayment of 10s. per £1 share. The shares are quoted around 88s. 9d.

Quarterly Reports—A Sound Example.—Messrs. Wiggins, Teape and Company (1919), Limited, have set the largest British companies an example in helpful financial publicity. This company, which has a total issued debenture and share capital of £8,668,668, controls

numerous subsidiaries in the specialised paper-making trades. Shareholders have every reason to be satisfied with its recent progress, for ordinary dividends have risen from nil in 1925 to 10 per cent. for the last three years. The company has long taken an enlightened view of its duty towards its proprietors. For some years its reports have been supplemented by a complete list of subsidiaries and a consolidated balance sheet, incorporating their audited figures after eliminating inter-company shareholdings and debts. The statement has also showed the date of each subsidiary balance sheet and given comparative figures for the previous year. In the accounts for 1931, presented last May, the directors went further, for they included a summary of the consolidated profit and loss and the appropriation accounts of the parent and subsidiaries. At the general meeting the chairman announced that the possibility of issuing quarterly progress reports was being investigated, and the first of these has now been issued. It gives, not a coloured directorial appreciation of recent trading, as in the case of certain notorious British "progress statements," but an accountant's figure of approximate profits. These are shown for the half-year to June 30th last (after depreciation and allowance for outside shareholdings, etc.) at £161,904, against £138,898 in the corresponding period of 1931. After debenture and preference requirements, net earnings for ordinary shareholders are put at £93,180, or £18,567 more than in the corresponding period of last year. In future these reports will be issued not more than seven weeks after the end of the quarter to which they relate. We congratulate Col. W. R. Portal and his fellow-directors on their pioneer wisdom in crediting their proprietors with a healthy financial interest and a knowledge of elementary arithmetical principles. In the words of a contemporary, "*O si sic omnes!*"

Barrow Haematite.—The accounts for 1931 serve to emphasise the necessity for the scheme of arrangement which was finally sanctioned by the court on July 20th last. The year's trading showed a small loss, and a debit of £54,066 was carried forward.

Carried forward	Dr. 38,802	Dr. 32,461	Dr. 54,066

The company's capacity was only partially employed last year, and losses on idle plant more than absorbed the profits made. The reconstruction scheme should produce certain economies during the current year, but a major improvement in earnings will be contingent on revival in the heavy industries. The £4 10s. ordinary shares were last dealt in at 2s. 9d., and the £4 10s. second preference shares at 5s. 9d., but the market in both is nominal at present.

Swedish Match Position.—A message from Stockholm purports to summarise the findings of the Reconstruction Committee on the Swedish Match Company. These will command general support among British investors, who were recently shown to hold 13½ per cent. of the "A" capital and 44.7 per cent. of the "B" capital of the company. The committee believes that the company has a fair prospect of survival as a profitable concern if the banks, who are its chief creditors, will grant it time in which to repay its loans. A scheme is proposed under which interest, during the "reconstruction period," will be paid regularly, but amortisation will be governed by the extent of the company's annual earnings. A balance sheet is submitted, suggesting that the company's tangible assets approximately equal its liabilities. The valuation adopted is conservative, the company's extensive holdings of foreign bonds being taken at current depressed price levels, while no value is placed upon monopoly rights. The reconstruction scheme predicates an effective separation of the company's industrial activities, and its financial interests as

a cosmopolitan holder of securities. It avoids the necessity for forcing the company's monopoly rights to a sale on an unwilling market at rock-bottom prices. The company's capital will be 90,000,000 kronor, but this will be purely a book-keeping figure, the committee accepting no responsibility for the nominal valuation of the shares' at 25 kronor. Application will be made for a three months' extension of the present moratorium from August 30th next, in order that the various interests concerned may have ample time to come to a definite decision. The company's situation corresponds, essentially, to that of the Royal Mail group before the passing of this year's scheme, though it may be, happily, one degree less involved. The scheme has, presumably, been drawn up with the co-operation, in Stockholm, of the British Protective Committee's representative, and if the summary of its provisions which has reached this country is accurate, British shareholders will doubtless give it a favourable reception. It offers them no prospect of a resumption of dividends for some years, but it meets the view of the Protective Committee that the maintenance of the business and goodwill of the Swedish Match Company (in which 64 per cent. of British "Kreuger" holdings are invested) is "worth a struggle."

Mining Shares and the Copper Tariff.—Rhodesian mining shares, after recent activity, have lagged somewhat since the announcement in the published list of the Ottawa agreements of a tariff on foreign copper entering the United Kingdom of 2d. per lb. At the ruling price for copper, in fact at any level at all probable in the near future, this duty is prohibitive, and, in effect, reserves the British market for Empire metal. Why have mining shares failed adequately to respond? Presumably because of the "price" proviso, by virtue of which copper, like zinc, lead and wheat in grain, must be "offered on a first sale in the United Kingdom at prices not exceeding the world price." If selling values in Britain are to march in step with those ruling on the competitive markets in Europe, the more optimistic section of the market may be compelled to revise its recent idea of prospective mining profits. Competition for Continental demand from producers in Chile, Japan and the Congo will, naturally, be intensified, and possible developments in Russia cannot be overlooked. Price-cutting of a fairly drastic nature may, in fact, occur. If the safeguard of the Ottawa "price clause" is to work effectively in the interests of British consumers and export traders, copper must be made available for sale here at the same level as on the Continent. For the moment, this aspect is obscured, partly by uncertainty regarding the official interpretation of the term "world price" and partly by the current upward tendency in copper values, which displays certain speculative symptoms. Sooner or later, however, the implications of the Ottawa decision must be faced.

Total declared value of imports ...	2,118,806	Total declared value of exports ...	2,221,433

Messrs. Samuel Montagu and Company write on August 24, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £138,728,339 on the 17th inst., as compared with £138,563,483 on the previous Wednesday. In the open market, the Continent secured the moderate amounts of gold available. Offerings included about £80,000, part of the salvage from the s.s. "Egypt" to which we referred last week, and now shown in the weekly import and export figures given below.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
August 18 ...	118s. 7d.	14s. 3-9d.
" 19 ...	118s. 10d.	14s. 3-6d.
" 20 ...	118s. 9d.	14s. 3-7d.
" 22 ...	119s. 1d.	14s. 3-2d.
" 23 ...	118s. 11d.	14s. 3-5d.
" 24 ...	118s. 11d.	14s. 3-5d.
Average ...	118s. 10-2d.	14s. 3-6d.

The s.s. "Maloja," which sailed from Bombay on the 20th inst., carried gold to the value of £387,000 consigned to London and £36,000 to Holland.

SILVER.

There have been further fluctuations in prices, but the movements were not so wide as those recorded last week. Business has been general, and both China and America have bought and sold, whilst the chief supporting factor has been the Indian Bazaars, who have made purchases for forward delivery. Small amounts have been sold on Continental account, and there have been some speculative operations both ways.

The market is sensitive, and it is likely, therefore, that prices will continue to fluctuate. With the various factors perhaps less decided in their attitude at the moment, the immediate outlook seems somewhat unsettled.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 15th inst. to mid-day on the 22nd inst.:—

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Aug. 26, 1931.	Jan. 4, 1932.	Aug. 17, 1932.	Aug. 24, 1932.
Winnipeg (No. 1 Manitoba).....	148½	56½	55½	62½	58	55
Chicago (No. 2 Winter).....	130½	79½	47½	55½	50½	50½

The visible supply of wheat in Canada, at 64,135,000 bushels, shows an increase on the week of 18,000 bushels. Supplies a year ago stood at 54,373,000 bushels.

OTHER FOODS.

SUGAR.—The remarkable upward movement of raw-sugar prices which took place during recent weeks appears to have been arrested. During the past week, turnover was on a slightly smaller scale, and prices were a shade easier. "September" futures in New York were quoted at 1-08 cents per lb. on Wednesday, against 1-10 cents per lb. a week ago, and 1-00 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 6s. 5½d. to 6s. 6d. per cwt., against 6s. 7½d. to 6s. 7½d. and "March, 1933," at 6s. 7½d. to 6s. 7½d., against 6s. 11½d. to 7s. 0½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.

Last week ...	23,387	12,527	16,665	14,196	90,374	103,699

* Unavailable.

COFFEE.—The market in coffee has again been firm in New York and Brazilian grades were dearer. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents a week ago. Tuesday's London auctions were again well supported by buyers and many varieties realised higher prices. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 377 bags; exported, 247 bags; stocks, 17,544 bags, against 1,847 bags last year. Central American, landed, 521 packages; delivered for home consumption, 1,474 packages; exported, 2,473 packages; stocks, 97,082 packages, against 96,443 a year ago. Other kinds, landed, 233 packages; delivered for home consumption, 2,114 packages; exported, 1,198 packages; stocks, 70,520 packages, against 77,267 a year ago.

COCOA.—Last week's reaction in the price of cocoa in New York was followed by a slight advance, but in London quotations are scarcely changed on the week. "September" futures were quoted at 4-43 cents per lb. in New York on Wednesday, against 4-35 cents per lb. a week ago and 4-23 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 28s. 3d. per cwt., c.i.f. Continent, shows no change on the week. Last week's movements of cocoa in London were as follows: Landed, 5,125 bags; delivered for home consumption, 3,577 bags; exported, 227 bags; stocks, 154,069 bags, against 219,098 last year.

TEA.—The quantities catalogued for this week's auction comprised 45,057 packages of Indian, and 29,924 packages of Ceylon tea. Monday's "Indian" auctions opened with a good demand for common and finest qualities, while the demand for medium grades was irregular. Tuesday's "Ceylon" auctions and Wednesday's "Indian" sales showed the same tendency, common and finest qualities realising higher prices. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

AVERAGE PRICE PER LB.

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
August 20, 1931 ...	12-14	7-46	14-33	6-32	6-38	6-11	11-58
July 21, 1932 ...	7-53	6-72	8-32	5-05	4-72	6-06	7-51
July 28, ...	7-68	6-75	8-39	5-04	6-00	6-53	7-49
August 11, ...	7-71	6-61	8-07	4-71	4-22	6-28	7-24
August 18, ...	9-75	6-36	7-92	4-83	4-45	6-20	8-11

RICE.—The market in rice was steady, and "spot" prices were slightly firmer. Wednesday's "spot" price, at 9s. 6d. per cwt., shows a rise of 3d. per lb. on last week, while forward positions, at 6s. per cwt., show a fall of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 12 tons; delivered, 239 tons; stocks, 2,570 tons, against 983 tons last year.

POTATOES.—The demand for potatoes at the principal markets was quiet, and, in view of the large supplies, prices were a little easier. At the London Borough Market, "King Edward" was sold at 6s. to 6s. 6d. per cwt., against 6s. to 6s. per cwt. last week and 5s. 6d. to 6s. per cwt. a fortnight ago.

SPICES.—The market in pepper was quiet but prices remained steady. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the corresponding day last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 22 tons; stocks, 328 tons, against 571 tons last year. White, landed, 5 tons; delivered, 39 tons; stocks, 445 tons, against 514 tons a year ago.

MEAT.—The sharp decline in the price of Argentine beef last week was followed by a further fall, although British-grown grades remained generally unchanged. English mutton was a little dearer at the Smithfield market, but there was no change in the quotations for New Zealand meat. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 6d. to 4s. per 8 lbs., against 4s. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 2s. 10d., as against 2s. 2d. to 2s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,249 tons, as compared with 7,648 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.9 per cent. of the supplies, as against 86.8 per cent. a year ago; and imported mutton, mainly New Zealand, formed 77.6 per cent. of the total supply, as against 78.0 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Rather variable conditions operate in the markets for oilseeds and their products, but business in some sections is on a fair scale. The Ottawa proposal to tax foreign linseed 10 per cent. to give India a preference is regarded as giving an advantage to Dutch and other Continental crushers, who, it is assumed, would continue to import linseed duty-free. The suggestion is therefore made that the present duty on linseed oil imported into Great Britain should be considerably increased so that English customers should be adequately protected. Linseed is firm but demand is poor. Plate on passage is quoted £8 12s. 6d., and shipment to October £8 10s. to £8 12s. 6d. Calcutta is neglected, August to September quoting £10 10s. to London. The quantity of linseed afloat for Europe is 178,800 tons, or 18,500 tons less than last week, and compares with 158,000 tons a year ago. Cottonseed is neglected and lower, old crop Egyptian offering at £7 and new (September loading) at £7 5s. Linseed oil is in good demand and a further rise in values has to be recorded. Raw oil ex Hull for August delivery has advanced to £15, and September-December to £15 5s. per ton. Crude cotton oil is quiet and easier, crude Egyptian ex Hull being available at £23 and common edible at £25 10s. prompt. Oilcakes are in moderate demand and late quotations are maintained.

HIDE, LEATHER AND ALLIED TRADES.—Improved conditions are observable this week in both the domestic and foreign hide markets, and quite an appreciable amount of business has been transacted at higher figures than have been obtainable of late. At the Manchester auctions all 49 lbs. and under ox and heifers realised ½d. per lb. more money, while the three top weights in second warbled hides recorded an advance of a similar amount. Cows were unchanged from the previous week's prices, but several weights of calfskins made ½d. per lb. more in face of the rather better demand. At the Leeds sales the upward tendency of values was more pronounced than at Manchester; the majority of ox and heifer hides were from ½d. to ½d. per lb. higher in price, while with the exception of the two top weights all cows appreciated by ½d. per lb. Calfskins, however, were practically unchanged, and there has been little alteration in the position of sheepskins. Business in foreign hides has also been more active, and here also higher prices have been the rule. For South American wet-salted just over ½d. has been paid for Argentine ox, while cows have sold at 4½d., and Montevideo ox at round about 5d. Dry hides from the same source are a firm market, and 5½d. is the figure now asked for B. A. Americanos; 6½d. for M. V. Americanos, and 7d. for Sierra Cordobas. African hides have also shared in the improvement, and sales of dry Capes having been made at 6d. and 5d. for firsts and seconds, with 5½d. and 4½d. paid for drysalted. Unbathed Adis Abebas are quoted at from 4½d. to 5½d., and Nigerians at 5½d. Business in regard to Australians has been slightly better and here again the tendency of values is upward. Turnover in sole leather this week has been larger, and the tone of the market is firmer than it has been for some time. Shoe manufacturers have been making inquiries for supplies of light and medium weight dry hide bends, and it would appear that several good-size parcels have been changed hands. English and wet-salted bends, however, have been the best sale, the orders received covering most weights. Business in regard to offal has usually been confined to pinned sorts, for which there has been a moderate call, but no improvement has yet been experienced for rough bellies and shoulders. Producers and distributors of upper leathers have met with a rather better inquiry for box and willow calf in addition to which a steady trade has been done in glacé kid. Reptiles and patent, however, have been rather less sought after, but there has been a little more movement in kips leathers for shoe upper purposes.

THE TIMBER TRADE.—The world is knocking at our door offering at remarkably cheap prices wood that we ought to have, and use, but consumers are few. The building trade is terribly slack at a time when it should be busy on housing work, which is still far behind the needs of the community. Three months ago United Kingdom importers eased off buying European building and joinery woods largely in consequence of our poor building trade, but the arrivals of both the sawn and planed varieties are still larger than last year's, although the consumption has dropped. Spot selling has been so poor this month that the comparatively modest holdings in the country have not created sufficient strength to keep selling prices up to a fair level. Although forward buying has been seriously curtailed it is likely to brighten up before long, as European

A BINDING-CASE
FOR
The Economist.

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are now able to offer our readers a new binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, its special cork spine does away with tags, laces, and metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

Price 5/- each, post free
(LETTERED BACK & FRONT)

from

THE ECONOMIST

8, BOUVERIE STREET, LONDON, E.C.4.

The Economist,
WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor

THE MONEY MARKET.

As had been expected, last week's stringency proved short-lived, and both money and discount rates have again become easier. At the same time, money has remained fairly usable this week, and the very cheap conditions of the first three weeks of August have by no means been restored. Money displayed its usual ease over the week-end, with new loans at $\frac{1}{2}$ and $\frac{1}{4}$ per cent., but on Monday the absence of any Treasury bill maturities made credit none too plentiful, and a full $\frac{1}{2}$ per cent. had to be paid to outside lenders. Conditions on Tuesday were uneven with rates at $\frac{1}{2}$ and $\frac{1}{4}$ per cent., but on Wednesday money

was again very usable at $\frac{1}{2}$ per cent. The following day $\frac{1}{2}$ per cent. was the ruling rate in the morning, but conditions eased as the afternoon progressed. At the same time, the clearing banks were still re-lending a portion of their previous loans, which shows that money was not in excessive supply.

Thursday being September 1st, on that day the half-year's Victory Bond dividend was paid, and there was a general belief that this would make money easier. In actual fact this dividend is not large enough to have much effect upon credit supplies. Its gross amount is only £5,000,000, and this figure not only includes income tax which is deducted at source and so is never paid out at all, but also the portion of the dividend accruing to internal holders, such as the National Debt Commissioners. Recent experience has shown that such factors as discrepancies between Treasury bill payments and maturities can exert a far more potent influence upon the market.

The result of last week's Treasury bill tender reflected the temporary hardening of money, for, in spite of an increase in applications from £56.1 to £64.7 millions, the average tender rate rose sharply from 11s. 3.2d. to 16s. 7.45d. per cent. This caused an immediate hardening of discount rates, and "hot" Treasury bills were initially quoted at $\frac{3}{8}$ per cent. During the next few days it became apparent that a certain number of people had missed the tender, and they began to compete for bills in anticipation of cheaper money after the end of August. As a result, the rate on "hot" Treasury bills gradually sagged, until by Thursday afternoon they were quoted at only $\frac{1}{8}$ per cent. October Treasury bills were quoted on Thursday morning also at $\frac{1}{8}$ per cent., and these low rates were registered, notwithstanding the absence of any demand from the clearing banks. Prime bank bills were quoted Thursday at $\frac{1}{16}$ per cent. and standstill bills at $\frac{1}{2}$ per cent.

	Aug. 11, 1932.	Aug. 18, 1932.	Aug. 25, 1932.	Sept. 1, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (June 30, '32)
Banks' Deposit Rate.....	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$ (May 12, '32)
Discount (Call).....	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$ (May 12, '32)
Houses (Notice)	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$ (May 12, '32)
Market rate ("hot") Treasury bills.....	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	...
Market rate (3 months' bank bills)	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	...
Market rate (standstill bills)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...

The Bank return this week registered comparatively few changes. There was a moderate increase of £1.4 millions in the note circulation, probably due to fresh holiday demands, and it must be remembered that during August this year notes have been returning from circulation a little more quickly than might have been expected. Gold holdings show little change and the Reserve is £1.2 millions lower. A small increase of £1.9 millions in Government Securities is offset by an equally small decrease in Other Securities. Public Deposits have only fallen by £1.5 millions during the week and still stand at the relatively high level of £20.7 millions. The payment of the Victory Bond dividend may reduce them by a few millions, but it must be remembered that in September as in August there will be no Monday Treasury bill maturities. Bankers' Deposits are unchanged on the week at £79.5 millions, against £89.8 millions a fortnight before.

At the moment the money market is mainly interested in the outlook for general trade on the one hand and for gilt-edged stocks on the other hand. In certain quarters there is a disposition to hold that if trade improves this autumn, money rates must become higher, so that gilt-edged prices will tend to weaken. It is argued that a 2 per cent. Bank rate is abnormally low and cannot be

expected to persist in face of a normal demand for funds. Against this theory must be set the recent declaration of the Government in favour of the maintenance of cheap and plentiful money with the deliberate object of fostering a far bigger rise in commodity prices than has yet occurred; and it has also been recalled that Bank rate remained at 2 per cent. for a period of over two years from February, 1894, to September, 1896, and this in face of a revival of trade which began in the middle of 1895. Thus it by no means follows that the usual theory that expanding trade means dearer money and cheaper Government stocks is going to hold good, especially as trade to-day is so very depressed and credit plentiful to the point of redundancy.

From abroad, this week's most encouraging news is that of the improvement of Scandinavian finances. The relaxation of the Danish foreign exchange restrictions is dealt with on a later page, but this has been followed by reductions in the Norwegian Bank rate from $4\frac{1}{2}$ to 4 per cent. and in the Swedish Bank rate from 4 to $3\frac{1}{4}$ per cent. Independent accounts have already confirmed the belief that Swedish credit is recovering from the effects of the Kreuger failure, and that the Riksbank is once more able to control the foreign exchange market. These discount rate reductions show that the improvement has now reached a stage which permits of the establishment of short-money rates more in consonance with those in force in other important centres.

This week's gold imports into the United States include small shipments from India and Mexico, \$986,000 from England, \$1,847,000 from Canada and \$1,327,000 from China at San Francisco. Further heavy reductions have been made in the quantity of gold ear-marked on foreign account, the total announced during the first three days of the current week being \$15.0 millions. It is now being suggested that the Treasury is considering carrying out its September financing of \$1,000 millions by the offer of five-year tax-free bonds, with the object of getting them taken up by the banks, which are already replete with Government securities. Some bankers argue that the consent of Congress is necessary before more tax-free bonds can be issued, and the proposal is also criticised on the ground that it is equivalent to a fresh artificial inflation of credit.

The Foreign Exchange market was again exceptionally quiet this week, and most of the movements were against sterling, though some signs of recovery were apparent earlier in the week. The New York rate went from 8.47 $\frac{1}{2}$ to 8.46 $\frac{1}{2}$, and Montreal from 3.99 $\frac{1}{2}$ to 3.87. Paris again moved less sharply against us at 88 $\frac{1}{2}$, as did Brussels at 24.97. Milan exceptionally was weaker by $\frac{1}{8}$ at 67 $\frac{1}{8}$. Madrid gained $\frac{1}{4}$ at 43. Amsterdam was firmer at 8.61, as was Berlin at 14.56. The Scandinavian currencies, except Copenhagen, which weakened considerably from 18.78 to 19.85, were little changed, Stockholm gaining a point at 19.46 and Oslo two points at 19.95. The South American exchanges are still largely nominal, and remained unchanged at last week's quotations. In the Far East the rupee was firm at 1s. 6 $\frac{1}{2}$ d., and the yen, after early weakness, gained $\frac{1}{4}$ d. on balance at 1s. 8 $\frac{1}{2}$ d. Batavia was unchanged at 8.70. In the forward market dollars were weaker by $\frac{1}{4}$ at $\frac{1}{2}$ cent discount for one month, but remained unchanged at $\frac{1}{2}$ cent discount for three. Paris went to par for both deliveries. Brussels was better at narrower discounts of 7 and 20 centimes. Milan improved by $\frac{1}{8}$ for both periods at $\frac{1}{2}$ lira and $\frac{1}{2}$ lira discount, but Madrid weakened by about the same margin to $\frac{1}{8}$ peseta and $\frac{1}{8}$ peseta discount. Amsterdam went to par for both periods for three. Switzerland went to par for both periods. Silver prices advanced by $\frac{1}{8}$ d. for cash to 18 $\frac{1}{8}$ d. and by $\frac{1}{4}$ d. to 18 $\frac{1}{2}$ d. for forward as a result of support from China and the States and some speculative buying. The China silver exchanges were little affected, Hongkong and Shanghai both improving by $\frac{1}{4}$ d. to 1s. 4 $\frac{1}{4}$ d. and 1s. 9 $\frac{1}{4}$ d. respectively.

REPRIEVE OR RECOVERY?

RETURNING to the world of affairs at the end of a month traditionally regarded as the holiday season, most business men this year must have taken note of a distinct change in the psychological atmosphere since they left, for brief rest or recreation, the markets on which their attention normally centres. During the past few weeks an appreciable recovery of bond and share quotations on Wall Street has imparted a firmer tone to the world's principal bourses; an upward tendency evidenced first in the market for that economically sensitive animal, the United States hog, has spread to other leading commodities such as cotton, non-ferrous metals and rubber; even such sufferers from the depression as sugar, coffee and cocoa have recovered substantially from the low levels recorded in June; and, stimulated by a heartening chorus of American voices proclaiming that "the corner is turned," markets generally have assumed a complexion whose brightness, patchy and chastened though it be, contrasts strikingly with the unrelieved pallor of the depression only a few weeks ago. Small wonder if the "plain" business man and the investor, in this and other countries alike, rub their eyes in perplexity, and ask themselves whether, after all, they have been misled by counsellors who have exhorted the nations to recognise that fundamental reconstruction is a condition precedent to world recovery. Has recovery set in, without much conscious effort of statesmen, bankers or industrialists, like a tide which begins almost imperceptibly to flow again from its low ebb?

The question is one of supreme importance; and, as an approach to the task of assessing the influence of factors immediately visible, we commend to our readers careful study of the admirable *World Economic Survey*, 1931-32,* prepared by Mr J. B. Condliffe on the basis of data collected by the Economic Intelligence Service of the League of Nations. This volume, which is the first of a projected annual series, and continues the analysis of "The Course and Phases of the World Economic Depression," directed by Professor Ohlin and presented to the Assembly last September, carries the story of the crisis up to July, 1932, and endeavours to make a tentative estimate of the economic situation as it existed at that comparatively recent date. With the *Survey's* retrospect of the background and development of the crisis we cannot deal here in any detail. In ten lucid and fully documented chapters it marshals the evidence for its central thesis that the decade following the war witnessed, in effect, the failure of the first post-war effort to reconstruct once more a stable system in a world thrown by the war off its pre-war centre of gravity, and hesitating between the contradictory principles of international co-operation and economic nationalism, free enterprise and State regulation. In that failure the essential features—latent long before 1928, but finally revealed by the débâcle of the autumn of 1929—were the disequilibria which developed in the structure of production and prices, the confusion and irregularity in the vital flow of capital movements, and the final breakdown of the monetary mechanism. Briefly, a history now painfully familiar reached, in 1932, a final phase which took the form of the increasing economic isolation of countries, and the shrinkage of all international exchanges.

Coming to the situation as it existed six weeks ago, the *Survey* draws attention to the emergence of certain policies, both national and international, then in process of development. Among these it instances the first steps towards economic co-operation begun at Lausanne, the large-scale measures of "reflation" initiated in the United States, the Conversion operation in Great Britain, the freer trade agreement concluded between the Belgian and Dutch Governments, and the then imminent Conference at Ottawa. It observes that though the full effect of these policies will not be known for some months at least, their influence "may perhaps be traced already

in certain psychological reactions, particularly of the stock markets." Moreover, though all the available statistical information showed that economic activity deteriorated greatly in the second quarter of 1932 and commodity prices continued to decline, certain more encouraging facts could be noted. In countries which had abandoned the gold standard there were signs already of greater resistance to the continued pressure of deflation. Further, in some countries, e.g. Australia, a considerable measure of readjustment to lower price levels had been achieved. Again, though it was too soon to judge whether the policy of credit expansion in the United States would be pursued with sufficient vigour to cause an early upward movement of prices, there were at least grounds for hoping that American banking policy would ultimately both produce a rise in the domestic price level and facilitate the pursuance of cheap credit policies by other countries without undue risk to their exchanges. The *Survey* closes on a note of cautious optimism:—

The downward slope of the crisis has seen reversion to the more primitive forms of economic nationalism in unprecedented degree; the upward slope awaits and will itself facilitate a return to the realities of interdependence. . . . It is hoped that further disaster may have been averted, but the problems still awaiting solution are many and difficult. Even when business enterprise is freed from the political and psychological burdens that have weighed heavily upon it, the reconstruction of economic activity will still entail laborious and continued effort.

This is a reading of the situation with which we find ourselves largely in agreement; and if this judgment be correct, it follows that the results of future attempts at international co-operation, and, in particular, of the forthcoming World Economic Conference, will determine whether the present revival, in some directions, of business confidence preludes real recovery, or is merely a passing upward fluctuation destined to be followed either by reversion to decline, or, at best, an indefinite prolongation of subnormal conditions. We do not share the opinion of those who would dismiss the recent Wall Street recovery as a piece of purely electoral stage management in the interests of President Hoover. In the case both of stock market securities and of sensitive commodities the psychological motives which have led to speculative buying are not unique to the United States; and though the basis for recovery is as yet somewhat intangible, and evidence of increased consumption or expanding industrial activity is hitherto lacking, there are, nevertheless, some factors in the situation which justify, at any rate on a short view, a "bullish" attitude on the part of speculators. By one means or another, the depressing influence of accumulating world stocks has been largely removed; visible supplies of leading raw materials remain exceptionally heavy, but except in the case of wheat it is questionable whether there is appreciable current over-production; manufacturers' and distributors' stocks of finished and semi-finished articles have in most instances been run down to abnormally low levels, and the process of re-stocking to satisfy even the minimum wants of a world whose essential needs of life still continue when all is said, might easily produce at any rate the temporary appearance of consumption once more outrunning primary production. On the other hand, it should not be forgotten that in cases where supply now more closely approximates to demand by contraction of output or diminished harvest, even a sizeable recovery of prices on a smaller volume of sales would not increase the aggregate purchasing power of primary producing communities, whose first task in any case must be the liquidation of banking and other indebtedness. Equally, unless there were a sustained recovery of consumption, any considerable advance in commodity prices would be likely to elicit a relaxation of restrictions on output sufficient to swamp markets once more in glut.

To conclude: it is conceivable that in such a large, nearly self-contained, unity as the U.S.A., a substantial restoration of economic activity might develop as a result of existing natural forces, backed by the stimulus of controlled inflation now being applied. Elsewhere we see

* Allen and Unwin; cloth, 7s. 6d., paper, 6s.

the possibility of a temporary upward turn this autumn which should be regarded as a breathing space from disaster, and an opportunity to carry forward the work of rebuilding. We do not see grounds on which to hope for a major recovery automatically engendered by the normal influences operative at the conclusion of past slumps. Save only perhaps for the case of the United States, the revival of consumption, on which alone it is possible to base sure hopes of a sustained recovery of prices, production and employment, depends essentially on the restoration of international trade; and, given the present obstructions arising out of the complexes of economic nationalism and international indebtedness, it is idle to look for the re-establishment of a sustained flow of commerce between countries except as the fruits of determined efforts on the part of the Governments of the peoples of the world.

WHO WINS IN GERMANY?

THOUGH the obscurity surrounding the political situation in Berlin is still far from being completely clarified, the developments of the past week suggest that Germany at this moment resembles politically a country of the blind in which the single-eyed man is king. Whereas the numerically small group from whose ranks the present administration is drawn clearly entertain the unequivocal conviction that their function in life is to retain office and govern Germany according to their lights, with law and order as the first plank in their programme, neither the National Socialists nor the Centre, from whose Parliamentary co-operation alone could a stable majority result in the Reichstag for an alternative government, have any such "sweet simplicity" of positive aim to guide them. The Centre's concern is in the main the negative one that parliamentary institutions in Germany should not perish; the Nazis, however little regard they may have for the structure of parliament or democracy, are evidently unwilling to face another election whose result would probably underline their inability to secure a clear majority of the country for their party, while recourse to a *putsch* as an alternative to electoral victory is as little to their taste. Thus, when it became known that the Chancellor had returned last week-end from Neudeck with the President's authority in his pocket to dissolve the Reichstag at need and hold fresh elections, Germany witnessed the ironic spectacle of the cohorts on the Nazi benches listening in decorous silence to a flaming Communist harangue from Frau Zetkin, and palpably endeavouring, by some sort of arrangement with the Centre, to demonstrate that the present Reichstag is not "unworkable."

How far these tactical manoeuvres will succeed in relieving the Reichstag from the threat of dissolution which hangs, like the Sword of Damocles, over its head, remains to be seen. Even were it possible to bring about a Nazi-Centre coalition, the basis for the administrative co-operation between two such incompatible elements would be so artificial and unreal that President Hindenburg might think twice before he found it within his conscience to entrust the control of the Reich to a cabinet jointly manned by them. It seems more likely that any Reichstag not prepared to "tolerate" the present administration will have short shrift. Thus, with the numerically preponderant parties in this, or any likely succeeding parliament united only in their dislike of the present Government and fundamentally opposed to each other in all other respects, the von Papen-Schleicher faction has strong cards in its hands. Backed by the prestige and authority of the President, and controlling now not only the Reichswehr but the Prussian police as well, it looks to-day to have a better chance than seemed possible a few weeks ago of continuing for an indefinite time ahead to control the destinies of Germany.

The only question is what price Germany and Europe may have to pay for the piper whose tune Freiherr von Papen is permitted, in this strange German parliamentary impasse, to call. There are two dangers. One is that in preserving a semblance of parliamentary government—and the President appears to have set his face against an undisguised dictatorship in breach of the constitution—the von Papen Government, whether the present Reichs-

tag is allowed to live on terms, or a fresh Parliament is brought into being by a new election, might seek to outdo the Nazis in dangerous economic schemes directed towards the illusory aim of German autarchy. The other is that it might try to take the wind out of the Nazis' sails by outravelling them in foreign policy and attitudinising in the rôle of ultra-nationalistic Chauvinism.

So far as their domestic programme in the economic field is concerned, the complete intentions of the Government have yet to be revealed, but an instalment at least of their policy has been made known this week. It is neither very dangerous nor very impressive. As will be seen from the detailed account given by our Berlin correspondent on a later page, the Government propose on the one hand that there should be a still greater reduction of the wage level; and, on the other hand, that there should be a certain "reflation" of industrialists' credit by two devices. Firstly, employers who take on additional workers are to receive an annual wage subsidy of Rm. 400, paid by the State, not in cash, but in the form of promissory notes which are to be valid for the payment of taxes other than income tax in 1934-38, and are to be immediately negotiable or discountable. In the second place similar promissory notes are to be given in respect of a proportion of the turnover tax, land tax, and industrial profits tax, paid in the fiscal year 1932-33 to the value of Rm. 1½ milliards. In so far as these notes are not negotiated or discounted the immediate relief to the taxpayer and the consequent hoped-for stimulus to enterprise will obviously be nil, though the German budget will have to face an annual loss of about Rm. 500 millions in 1934-38. To the extent that they are discounted, and the taxpayer thus relieved from present payments, the result will be a limited inflation, since the State will in effect be borrowing from the banks on the security of the taxpayer's ability to meet the taxes which would normally be levied on him in the four succeeding years. In short, the Government is mortgaging heavily, and not without an element of risk, the future taxable capacity of Germany. Time will prove whether the risk was justifiable, but the fact that the Government should have framed a plan whose success depends upon German participation in world economic recovery confirms the opinion which our Berlin correspondent expresses that their objective is at any rate not the "self-sufficiency" which has been the slogan of the National Socialists.

In the field of foreign relationships the real question is whether the present rulers of Germany mean to play their part—and it is potentially a very important one—in helping the world along the road towards renewed prosperity—a road on which the milestones are disarmament, the stabilisation of the world monetary system, and the removal of obstructions to trade—or whether we are destined to see Europe turning once again into armed camps and the final blasting of the hopes of economic reconstruction. In this connection there has been much fluttering in the dovescotes as the result of the presentation to the French Ambassador in Berlin of an *aide mémoire* demanding the recognition of the principle of equality of status in armaments, if Germany is to take any further part in the Disarmament Conference. This has created considerable alarm in certain French circles, who regard it as a demand that Germany shall be allowed to re-arm; but on cooler consideration there is no need to take this step too tragically. After all, there is nothing very new in this statement. It has been made abundantly clear again and again during the course of the disarmament proceedings that Germany is unwilling to be a party to any disarmament convention which does not concede this principle. It was the subject of the unfinished conversations between Mr Stimson and the British, French and German Premiers in Geneva last April, and it is a matter on which the Governments earnestly desire to meet the wishes of Germany, though it would obviously be jumping out of the frying pan into the fire to do it in any way that would provide a sense of insecurity in France, or, indeed, anywhere else in Europe. At first blush it is difficult to see how these two conditions are to be harmonised, but on closer examination the problem may be found by no means beyond the possibility of solution. It is clearly very desirable that matters should be settled in

principle, if possible, before the conference reassembles, and it has been understood that private conversations would take place. There can be little doubt that Sir Herbert Samuel, who took an active part during July in the Geneva negotiations, and who has just been spending some time with the Prime Minister, discussed the matter with M. Herriot when they met in Jersey this week.

The essence of the matter is not that Germany should have the same number of effectives as France, or *pro rata* to her population, or even that there should be a return to conscription—though a modification of the twelve years' service system is undoubtedly desired. Indeed, any land disarmament agreement will have to be based not on a simple formula as regards numbers, but on the more complicated consideration of the existing military system, the requirements for internal order, length of frontier, and a number of geographical and other considerations. Germany's claim is rather that her military situation should be governed by the same international convention as is to apply to all the other States of the world, and not by the exceptional procedure of a peace treaty applying only to her. The Geneva Conference has already gone some way towards applying universally the prohibition of certain weapons which appears in the Versailles Treaty. The problem is to find, through the medium of a general disarmament agreement, the basis for a security which Germany, as well as France, requires, and by so doing to give satisfaction to this demand for equal status. What Germany now asks is that the Powers shall undertake to do this. On the answer which they give may depend to a great extent the character of the forces which ultimately win the day in Germany. The most immediate task to which statesmen can bend their energies is for the chief Powers to reach an understanding on this matter, for it is undoubtedly the next step in international recovery.

THE COTTON STOPPAGE.

THE disaster which has overtaken Lancashire is as unmitigated as it is irrational and needless. The abortive end, last Friday night, to the conference convened by the Deputy Mayor of Manchester removed the last hope of a settlement between the weavers and the employers. At noon on Saturday the strike notices became operative; and by the middle of this week the Textile Trades Federation was able, in terms tragically reminiscent of the grim phraseology of war, to claim that the response of its members to the strike call had been "magnificent." With the stoppage incomplete in a number of centres, particularly in the southern half of the county, the precise degree of effectiveness of the strike in its first stage is difficult to judge; but by Wednesday it was estimated that the number of weavers who had definitely ceased work was in the region of 150,000, a figure sufficiently large to bring about to all intents the paralysis of the industry. Meanwhile the employers had announced last week-end that they saw "no hope of coming together again"; and the Minister of Labour, in a letter to the Member for Burnley, had excused himself from intervening on the ground that "intervention could only be useful with an atmosphere of goodwill." In this setting the contesting forces appeared to be aligned for a bitter struggle of attrition in which both sides stand to incur the maximum of economic loss.

In the final negotiations, whose rupture led to this deplorable stoppage, the break came on an issue which the weavers represented as a point of principle, but whose importance the employers sought to minimise—the question of the reinstatement of some 2,000 operatives, who had withdrawn their labour at the Federation's behest in resistance to wage cuts imposed by individual employers before the general abrogation of the county agreement on June 11th, and who had been replaced by non-union labour drawn from the ranks of the numerous unemployed. Even here the difference to be bridged was surely not insuperable. The employers, conscious presumably that those of their members who had acted in breach of the county agreement were not on strong ground, accepted apparently the justice of the claim that there should be

re-absorption, if not juridical "reinstatement," of the displaced workers. They offered at least that no outside operatives should be engaged until the old operatives were absorbed, and that at the end of six months there should be joint investigation of any means that could be employed to speed up re-absorption of any of the displaced workers still out of employment. The weavers' representatives demanded that the agreed period for reinstatement should be limited to four weeks. This demand was refused by the employers as "altogether unreasonable," and, though the Deputy Mayor of Manchester endeavoured to promote a compromise by the suggestion that after a 6-8 weeks' experience of the results of re-absorption on the employers' basis, a joint committee should be charged with the task of finally clearing up the reinstatement problem, the negotiations broke down in disagreement on this isolated and, to some extent, extraneous issue. Better statesmanship on the employers' part would surely have averted such an upshot.

In industrial strife, however, it is frequently the case that the breaking point comes on a side issue which conceals the real point of dispute. It is difficult to believe that the employers would have allowed a rupture to occur on a reinstatement question affecting 1 per cent. of the operatives had they had not been determined to press to a conclusion on this occasion the whole of their demands for the cheapening of Lancashire production at the operatives' expense. Equally it is almost inconceivable that the Textile Trades Federation would have stood so rigidly in defence of their reinstatement claim had they not felt that their members would be really fighting for the restoration of a new county agreement which preserved their "rights" in the matter of wages, working hours, and the operation of the "more looms" system.

Any impartial observer who glances in retrospect at the background from which this stoppage has arisen must be struck with the utter confusion of the issues and of the policies which the two parties to the dispute have followed. In an industry overstuffed and overplanted, whose essential needs are orderly contraction and concentration of production, better methods of marketing and the elimination of "weak selling," the employers' fitful and largely abortive efforts at rationalisation during recent years were scarcely calculated to appeal to the operatives as convincingly meriting mutual co-operation at the cost of sacrifice on their side. Yet, though this may be pleaded in the workers' defence, the vacillating and obstructive attitude of the Weavers' Amalgamation to the introduction of the "more looms" system went far to justify the employers in feeling that one logical road to the restoration of Lancashire's competitive efficiency was being blocked by trade union intransigence. The protracted and never finally composed disagreement on this question had a not unnatural consequence in the decision of the employers to press for a county reduction of wages as an alternative means of economy. Which would the weavers at heart prefer—the wider introduction of the "more looms" system, or a general wage reduction, if displacement of labour as a result of working more looms per weaver were thereby obviated, or at least mitigated? The public is singularly ill-informed as to this question. All it knows is that the weavers were apparently prepared at one stage to concede a wage reduction of 6½ per cent. in place of the 10 per cent. which the employers finally demanded. Nor does it know what purpose the employers imagine would be achieved by a wage reduction which was not accompanied by a wholesale reorganisation of the structure of the cotton industry. Though clearly, in an internationally competitive industry, no particular level of wages has the right to be regarded as sacrosanct, it is at least arguable that a general wage reduction might have little effect except to perpetuate "weak selling"; and the idea that a close approximation of wages in Lancashire to those in Japan is socially or politically possible cannot for a moment be entertained. If there is to be a general wage reduction in Lancashire, there is much to be said for the proposal that the amount of labour costs so saved should be pooled as part of a fund, to which the employers would equally contribute, to further the rationalisation of the industry.

Be that as it may—and we have yet to be told in this obscure conflict what are the real conceptions of the industry's future which the disputants have in mind—there is one thing crystal clear: the country can in no circumstances afford to watch this struggle drift on to a bitter conclusion of exhaustion and impoverishment. In the first seven months of this year our cotton exports represented close upon one-fifth of our total exports, and one-fourth of our exports of manufactured goods. Our balance of foreign payments is none too secure for its impairment by the loss of our exports of cotton textiles to be contemplated with any sort of equanimity. Nor can we as a nation afford to witness the spread of destitution throughout Lancashire, and the ruin at this juncture of the county's municipal finances. This disastrous stoppage constitutes a serious threat to the country as a whole; and we find it difficult to condone the Government's failure to intervene, even at the eleventh hour, in an endeavour to avert the strike. Where the good offices of the Deputy Mayor of Manchester could not succeed, the intervention of a skilled negotiator representing the Government might have succeeded. Even to-day it is not too late for the Government to act before the damage done to Lancashire becomes almost irreparable. It is idle for the Minister of Labour to plead that he cannot detect "good will" between the two sides. Such a sentiment is not readily to be found at the commencement of industrial war, but it is the business of impartial intervention to promote it. Some day this stoppage will end one way or another; but, in our judgment, the promptness with which the Government decides to intervene and bring both sides together, will be the factor determining whether the strike ends in bitterness and chaos likely to defeat all hopes for many years of better days for a reorganised Lancashire, or whether counsels of sanity and co-operation can be made to prevail before it is too late, and before the irrevocable loss of still more export business makes it certain that many thousands of those weavers who have now left work will never again enter a weaving mill.

NON-FERROUS METALS: ALUMINIUM, NICKEL, MERCURY.

OWING to the rapid progress of aviation and other aluminium-using industries, the expansion in the demand for this metal during the past twenty years has been out of all proportion to the increase in the consumption of other non-ferrous metals. Expressed as a percentage of the average of 1909-13, the production of aluminium in 1929 showed an advance of 458 per cent., as compared with an increase in the output of copper, spelter, tin and lead of 101 per cent., 68 per cent., 61 per cent. and 51 per cent. respectively. The development of world production and consumption of aluminium, together with the course of prices during recent years, is shown in the following table:—

Period.	(Thousand metric tons.)			Average Price (98%-99% fine).	
	World Production of Bauxite.*	World Production of Aluminium.*	World Consumption of Aluminium.*	New York.	London.
1913	539	65.3	66.1	23.64	£ 80 0 0
1925	1,384	181.2	175.9	27.19	122 0 0
1926	1,381	195.8	186.5	26.99	116 0 0
1927	1,772	219.7	199.9	25.40	107 0 0
1928	1,844	256.0	238.0	23.90	98 0 0
1929	1,868	276.3	276.0	23.90	96 0 0
1930	1,715	267.0	209.7	23.39	83 0 0
1931	1,062	217.6	175.3	22.90	87 7 0
1932, Aug. 30	...	...	...	22.90	95 0 0

The principal sources of bauxite, the ore from which aluminium is extracted, are France, the United States, British and Dutch Guiana, and Italy. The respective proportions of the world output of these countries in 1929 were: France, 36 per cent.; the United States, 20 per cent.; British Guiana, 10 per cent.; Dutch Guiana, 11 per cent.; and Italy, 10 per cent. The proportion of the com-

bined output of France and the United States of world production declined from 97.5 per cent. in 1913 to 56 per cent. in 1929. Great progress has been made since the war in the method of refining bauxite by the hydro-electric process. Refineries are, therefore, to be found in localities where cheap water power is readily available. Of a total production of 276,800 metric tons of aluminium in 1929 the United States was responsible for 102,100 metric tons, Canada for 42,000, Germany for 32,700, France for 29,000, Norway for 24,400, Switzerland for 20,700, and the United Kingdom for 13,900 metric tons. In order of importance, the chief consumers were: the United States, Germany, the United Kingdom and France.

The industry is controlled by a small number of relatively large concerns, of which the British Aluminium Company Limited is not the least important. Horizontal combination and vertical integration are a feature of the industry. For years the European Aluminium cartel has exercised a strict control over production, marketing and prices. In 1931, the cartel was reorganised by the formation of the Alliance Aluminium Company, and, after the adherence of Canada, its position was strengthened considerably. The United States aluminium industry stands outside the cartel, and is protected from foreign competition by an import duty of 4 cents per lb. In contrast to other attempts at price control, the Aluminium cartel has so far successfully weathered the storm. Its success has been due to an enlightened policy, whose chief object has been to stimulate consumption by passing on to the consumer the benefit of the substantial reduction which has taken place in the cost of production since the war.

Similarly, the nickel-producing industry, in which the American-controlled International Nickel Company of Canada, Limited, has a virtual monopoly, has succeeded in maintaining the price of the metal despite a heavy drop in demand. During the past six years the price of nickel in the United States and in this country was maintained at 35 cents per lb. and at £170 (gold) per long ton respectively. Owing to its non-corrosive properties, nickel has found an increasing use in the production of alloys. About 75 per cent. of the total consumption of this metal is employed in the production of nickel steels, which are less liable to rupture under stresses than ordinary steel. It is also used extensively in the production of cooking utensils and other food handling equipment. The chief source of nickel is the "pentlandite" ore deposits in the Sudbury district of Canada. While world production rose from 30,900 metric tons in 1913 to 66,500 metric tons in 1929, Canada's output increased from 22,500 metric tons to 58,500 metric tons. In 1931, world output and Canadian production amounted to 49,800 metric tons and 40,600 metric tons respectively. The world's consumption has been estimated by the American Bureau of Metal Statistics at 61,800 metric tons in 1929, 40,000 metric tons in 1930, and 38,100 metric tons in 1931. Although the International Nickel Company of Canada, Limited, has recently been working at a loss, this is probably due to the heavy slump in the value of copper, of which the company is the chief Canadian producer, rather than to the decline in the demand for nickel.

The recent history of the mercury or quicksilver producing industry provides an outstanding example of the disastrous consequences following an attempt to keep prices at an uneconomically high level. The development of production and prices during recent years is shown in the table below:—

Period.	Production.* Metric Tons.				Average Price per Flask of 76 lbs.†	
	Italy.	Spain.	United States.	World.	New York.	London.
1913	1,004	1,246	688	4,026	39.54	£ s. d.
1925	1,834	1,277	312	3,562	85.13	7 9 2
1926	1,871	1,594	260	4,001	91.90	15 13 6
1927	1,995	2,432	384	5,100	118.16	21 7 11
1928	1,988	2,195	616	5,072	123.51	22 6 1
1929	1,998	2,476	816	5,582	122.15	22 5 2
1930	1,933	663	743	3,730	115.01	21 15 8
1931	1,241	673	853	3,267	87.35	19 16 2

Every description of Banking Business transacted.

The chief property of mercury, recovered from cinnabar ore deposits, is its liquidity at ordinary temperatures. World production between 1913 and 1929 showed a much smaller advance than that of other non-ferrous metals. Stimulated by a substantial rise in prices between 1922 and 1927, productive capacity outside the United States was developed out of all proportion to the potential demand. A disastrous collapse in prices in the autumn of 1928 was staved off by the formation, on October 1st, by the Italian and Spanish producers, of a cartel known as "Mercurio Europeo." By establishing a central selling agency, the cartel was able to maintain prices at a high level until June, 1931. In contrast to the aluminium cartel, "Mercurio Europeo" adopted the short-sighted policy of exploiting what amounted in 1927 almost to a monopoly of production, and maintaining prices at an inflated level. As a result, the ratio of the combined output of Italy and Spain to world production declined from 88 per cent. in 1927 to 80 per cent. in 1929 and 59 per cent. in 1931. Based on actual sales, the position of the cartel has even further deteriorated in view of the fact that its stocks had risen to 5,170 metric tons as early as at the end of 1930. Further, owing to the high level of prices, the use of substitutes has increased considerably during recent years. For instance, substitutes have been devised for mercury used in the form of fulminate in explosive caps, in the mirror industry, and in the manufacture of disinfectants and radio valves.

The consequences were inevitable: in June, 1931, prices collapsed. Quotations in London declined from £22 7s. 6d. per flask in May to £18 10s. per flask at the end of last year. After a temporary recovery to £18 17s. 6d. per flask in February, the downward movement in prices continued, reaching £9 10s. per flask on August 22nd and \$49 per flask in New York. The cartel has, therefore, not only failed in its object of maintaining prices, but, by encouraging indirectly the use of substitutes, it has permanently damaged the market for its product.

AN OTTAWA IMPRESSION.

(BY OUR SPECIAL CORRESPONDENT.)

OTTAWA, August 22.

THE tumult and the shouting dies. Armed with red coats and large revolvers, Royal Canadian Mounted Policemen, whose want both of mounts and of Stetson hats must have been a great disappointment to some of Ottawa's visitors, still guard a remnant of delegates. But the Château Laurier, for a month achoked with Ministers, secretaries, experts, lobbyists and newspaper men, has reverted in a few hours to its usual summer rôle of momentary home for commercial travellers and American tourists. Ottawa has that "morning after" feeling, sick with a surfeit of too much official and unofficial entertainment and of reflected glory from a multitude of the Empire's great men assembled in one of the smaller of its cities.

Of the feelings of the departing great one can only guess the gist. That the British delegates were glad to be quit of Ottawa, despite their official expressions of gratitude and regret, and despite the unstinted hospitality with which they were treated by Government and private citizens alike, their mien on departure bore eloquent testimony. The weather, though too hot for some of them, had been fine; it was the Conference that had been stormy, and the thunders not of Jove but of Dominion statesmen that had drawn the lines of care and weariness on their foreheads. The most enthusiastic Imperialists among them return the most disillusioned and disheartened, while the more sceptical, never having expected much, are not disappointed, but instead profess an enlargement of their hopes. Whatever diversion of trade the Ottawa Conference proves to have caused, it has been but a faltering step towards the ambition of Imperial economic unity which Mr Chamberlain has inherited from his father, "whose almost inspired vision," declared Mr Bennett at the closing session, "made possible to-day the realisation of his hopes." The sting, perhaps, was in the "almost"; at least it is certain that Mr Joseph Chamberlain must have turned many

times in his grave as the haggling arguments proceeded here, sometimes between Messrs. Chamberlain and Bennett their worthy selves.

The leading financial paper of Canada appears this week (having gone to press before the Conference concluded) with the headline "Conference Amazed at Britain's Refusal to Put Empire First." The exchange of the like politenesses between the press of the Dominions and the Mother Country has, of course, been one of the more entertaining, if less fortunate, features of the Conference, but one can say with fairness that, on the contrary, the Conference was nearly wrecked on the Canadian Government's determination to stick to "Canada First." There was a moment, halfway through the Conference, when it seemed that Mr Bennett would have to face the failure of the Conference to achieve any agreement between Canada and the United Kingdom (with all the political consequences which such an exposure of his responsibility would have meant for him and his party) or, if he chose, to split his Cabinet and party by plunging for a policy of lower tariffs, and seeking his support rather in the West and among the farmers than in the East among the industrial elements of the country. But the show-down was never forced, and in the end a compromise emerged, in which, while Canada conceded some immediate advantages and a principle whose working out may or may not prove satisfactory to British industry, she did not go far enough to justify the grant of more than a portion of Mr Bennett's original demands. The timber industry, for instance, wanted a tariff of 20 per cent., and at least a quota on Russian imports; what it got was a guarantee of the continuance of the actual 10 per cent. preference and a generally worded undertaking to deal with frustration of the preference through State action on the part of any foreign country, if and when it occurs. The most curious item in the agreement, from the political point of view, is the duty of 2s. a quarter to be imposed on foreign wheat imported in Great Britain, with the proviso that the duty will be repealed if Empire supplies are not made available at world prices. Representatives of the grain producers of Canada were almost unanimous in their agreement with those of Australia that neither preference nor quota could really help an industry dependent on foreign countries for markets, even if Great Britain were to buy the whole of her requirements within the Empire; presumably, then, all that the preference can do, in the eyes of the wheat farmers themselves, is to secure an uneconomic diversion of trade and render competition with foreign producers all the more keen in non-British markets. Yet up it bobs in the Ottawa agreements, apparently for one reason alone, that Mr. Bennett dared not go back to the farmers of the Western prairies and confess that his long-boasted plans for the amelioration of their lot had come to nothing because, on examination, they had been shown to be worthless.

There were those who hoped, a few weeks ago, that the Canadian Prime Minister would take for himself the rôle of the Man Who Made the Ottawa Conference. An autocrat by nature, he has on occasion in the past taken bold steps in the face of opposition from within his own camp, and he was capable, if any Conservative leader was, of playing Sir Robert Peel in Canada's political drama. But the hopeful were disappointed. Tribute must be paid to the navigational skill with which Mr Bennett negotiated the straits between the outright failure of the Conference and the resignation of part of his Cabinet, but his was the

course of compromise rather than of courage. Moreover, the compromise was achieved, not by splitting the difference, but by blurring it. To what lobbying, to what quarrels between Dominion and Mother Country, have we not to look forward over the clause relating to State action in frustration of preferences, intended as it is by the two parties to the agreement to mean quite different things? What prospect is there that Messrs. Cahan and Ryckman and their fellow high-protectionists in the Canadian Cabinet will be content to let the new Tariff Board operate with genuine independence or even be manned with any but those of their own opinion? And what variety of practical interpretations could not be placed on the phrases "industries which are reasonably assured of sound opportunities for success," "full opportunity of reasonable competition," "relative cost of economical and efficient production," "industries not fully established," which appear in the compromise-beaten formula on which British industry is to rely for the future of its markets in Canada? Perhaps even the expression "protection by tariffs" is susceptible of *double entendre*. Those who recall that Imperial sentiment and blood ties did not prevent the trade agreement between the New Zealand Government and Mr Mackenzie King's Administration, later denounced by Mr Bennett, from heralding a two years' tariff war between the two Dominions are inclined to wonder whether the cement with which, our tariff enthusiasts assure us, the Ottawa Conference has bound the members of the British Commonwealth in ever faster union will not prove after all to be dynamite.

In the topical discussions over food taxes, dumping, tariff boards, quotas, preferences and so forth it tends to be forgotten that the greatest innovation that the Ottawa Conference has wrought is the commitment of the United Kingdom, through inter-Governmental agreements having the form of treaties, to maintain specific rates of duty for a period of years. We have treaties, it is true, pledging us to much more serious obligations, with which no one would quarrel on the point of political principle; but in foreign policy proper we have managed to maintain a great measure of continuity between successive Governments, partly because these affairs touch only remotely and hypothetically on the daily lives of the people. We have, too, a large number of commercial treaties with foreign countries; but they are couched in general terms and do not pledge us to tax ourselves in any specific manner. Even the undertaking of Mr Baldwin's first Government in 1923 to impose certain duties for the sake of the corresponding Empire preferences was conditioned by the reservation of budgetary liberty. That birthright, the freedom of every Parliament to tax the people it represents as it pleases, we have sold for a mess of promises. That is not a very apt way of encouraging a hesitant Opposition to place their faith in the Imperial ideal.

It would have been entertaining and valuable to have organised simultaneously an Imperial Economic Conference at which the Parliamentary Oppositions and not the Governments of the several members of the British Commonwealth would have been represented. It is not obvious what line the rump of the Labour Parties of Australia and New Zealand would have taken, though presumably Mr Scullin might have assumed the part of Mr Bennett as the confirmed protectionist reluctant even at the point of threats to reduce local tariffs. With Mr Cosgrave in Mr O'Kelly's chair, of course, the whole face of the relations (which publicly were non-existent) between the two Mother Countries would have been changed. The Nationalist Opposition in India was actually represented, but in that country there is always a powerful opposition to the Left of every Parliamentary party, and, in spite of their satisfaction both at their bargain and at their treatment as spokesmen of an equal nation, the Indian delegation doubtless go home to face bitter opposition from conscientious objectors to Imperial preference. General Smuts might have gone a little further in granting tariff concessions to the United Kingdom, but it would have been in the monetary deliberations that his substitution for Mr Havenga would have made the greatest difference, no doubt to the embarrassment of the Chancellor of the Exchequer, who found in

South Africa's defence of the gold standard at least moral support for his own natural conservatism. What Mr Mackenzie King could have done would have depended on whether the starting point was the present or the previous Canadian budget, for in no public pronouncement before the Conference did the leader of the Opposition pledge the Liberal Party definitely to go beyond the Dunning schedule, to which, it is stated in some rather optimistic quarters, the Canadian tariff will approximate after the specific changes are carried out and the Tariff Board has had its say. As for the Opposition in Great Britain, what is its Imperial economic policy? Let us hope that there will be a positive answer, for these are not days in which purely negative criticism will restore the world, the Commonwealth included, to economic sanity.

Notes of the Week.

A Peep into the Bag.—Though the Ottawa cat is still carefully shut up in the bag, the Cabinet were permitted to peep at it in a special meeting to which members were summoned back from holiday last Saturday. What the Cabinet thought of it has not been disclosed—certainly the Prime Minister's telegram to Mr Baldwin did not give anything away. Indeed, the only comment that has emerged is the astonishing statement attributed to Mr Thomas that the King is satisfied. Naturally such an unconstitutional declaration, reported in the mysterious way in which such distorted rumours grow, has been promptly denied by Mr Thomas. Though no official statement has been made, it is evident that the Cabinet has not made up its mind or digested the mass of detail involved in the new agreements. Nor has a decision been reached about the early summoning of Parliament, and Ministers have gone away to think things over. This is not surprising. The followers of Lord Beaverbrook are thoroughly dissatisfied with what they consider a lost opportunity; the centre party, represented by Mr Baldwin—and perhaps we should add to-day Mr Neville Chamberlain—are distressed at their failure even to have laid down the principle that the Empire arrangements are to lead to lower tariffs generally and remove obstructions from world trade; while those who have no Protectionist commitments in the past are free to criticise more bluntly the additional obstructions which Ottawa has erected in the way of trade, and the feebleness of the safeguards which have been attained. The indictment is indeed an overwhelmingly heavy one. If the agreements go through as proposed, Parliament will surrender its control over fiscal policy in many directions for a number of years. We shall have to impose duties on a number of common articles of food consumption, and on raw materials, and submit the vital trade in meat to one of the most ineffective methods imaginable of Government control. True, these agreements are subject to the paper qualification that they shall lapse if this country cannot obtain adequate supplies at world prices: but such provisions have almost invariably proved abortive in practice. What concessions to British trade have been obtained in return we still do not know; but it is evident that the Ottawa delegates place their greatest confidence not in tariff reductions actually made, but in what, we fear, is the utterly valueless right of this country for its industrialists to be heard before the Dominion tariff boards and to require that the Dominion tariffs against British goods shall not exceed the amount required to place our products on a competitive level. We have called this provision valueless because the only meaning to attach to the formula is that the duty should equal the difference in cost of production in the two countries. It is almost impossible to calculate this cost, and experience—particularly that of the United States Tariff Commission, which was given precisely this formula as its guiding rule—shows that this doctrine can be used to justify, and in fact has been used to justify, the highest tariffs in the world. One crumb of comfort in the agreements is that the Dominions undertake not to put on tariffs in excess of those recommended by their boards—a provision which is some safeguard for sanity. But there is

nothing whatever in the agreements to suggest that the rates will be such as to permit more trade to pass, or that the tariff boards will interpret their instructions any differently from the way in which it has been done in the past. We do not know whether the returning delegates explained to the Cabinet how they propose to harmonise these agreements with any plan for promoting a lower tariff movement at the World Conference. But, in the absence of a plan on this vital point, the Ottawa agreements must give the Free Trade members of the Cabinet very serious food for thought.

East Africa.—The long-incubated project of closer union between the various British mandated territories, protectorates and colonies in East Africa has been put into cold storage pending the return of times more auspicious for hatching it out. This appears to be the meaning of the White Paper published last week (Cmd. 4141), which contains correspondence between the Colonial Office in Downing Street and the Governors of the several territories concerned with regard to the Report of last year's Joint Select Committee of both Houses of Parliament. That report itself, it will be remembered, was preceded by the report of a Royal Commission, and by another report by an eminent civil servant who was subsequently sent round in the Royal Commission's track to make sure that the Commissioners had made no mistake. So it cannot be said that the question of closer union in East Africa has not been thoroughly threshed out. It is, of course, a question in which big issues are involved—as is shown by the wide difference of opinion as to the consummation in which this project will eventually result. In the vision of a great federated British East African Dominion, some people see a new India and others a new South Africa; but it is the ambitions implied in this second expectation that have probably been the main driving force behind the recent investigations. At any rate, both Uganda and Tanganyika have shown a certain uneasiness, through the device of closer union, they may both come to be dominated by a Kenya in which the tiny white minority in the local population might succeed in playing the dominant rôle. In other words, the project has been the subject of a possible means towards enabling some ten thousand white people to dominate a quarter of the Black Continent. If these suspicions are in any degree justified, then the postponement of closer union is decidedly to be welcomed. But, quite apart from the political considerations, the case for closer union, on its merits, as a technical improvement in administration, does not appear to have been made out—at any rate, not in the present state of development of the several territories to which the project applies. For the present, the genuine need for consultation and co-ordination in such matters as communications and scientific research is to be met by the common-sense method of periodic Governors' Conferences, like those which, in French North Africa, have been held for a number of years past, between the French Governors of Algeria and the French Residents in Tunisia and Morocco. We need not quarrel with this provisional solution of the somewhat similar problem in our own East African territories.

Japan and Manchuria.—Last week we had to record the statement of Count Uchida foreshadowing the recognition of Manchukuo by the Japanese Government, whatever the League might say or do. The speech was oddly reminiscent of successive speeches which fell from the lips of successive German Chancellors, from von Bethmann-Hollweg onwards, during the Great War: "We have acted in defence of our vital interests." But the present Japanese Foreign Minister, like Bethmann-Hollweg and his kind, finds himself between two fires; and the veneer was scorched off his apologia next day by an interpellation from a fire-eating member of the Diet to whom it was intolerable that the Foreign Minister should so far defer to the rest of the world as to go through the motions of pretending that Japan was not violating her international undertakings—a violation in which the interpellator professed to glory. Since then a forecast of

the terms of the imminent treaty between Japan and Manchukuo has been made public. According to this report, the military defence of Manchukuo is to be taken over by Japan in form as well as in fact, and the administration is to remain staffed—as it is now—by Japanese officials. There is to be complete freedom of residence, travel and commerce in Manchuria for Japanese citizens. Extra-territoriality is to be abolished; and all the railways in the country are to be operated by the South Manchuria Railway, which is, of course, a Japanese concern. The treaty, it is said, is to be signed before the meeting of the League of Assembly (which has been put off to the close of this month in order to give time for the completion of the Lytton Report). And thus the Assembly, when it comes to consider the Lytton Report, is to be confronted with a *fait accompli*. If the Assembly endorses the censure of Japan's conduct which the Report is expected to contain, Japan will renounce her precious membership in the League. And how, the Japanese argue, could the Assembly be so foolish as to expose itself to this dreadful loss for the luxury of a vote of censure which cannot undo accomplished facts? We do not presume to prophesy what rejoinder the League will make to this rather naive and barbaric Japanese insolence, or what America will say to the abolition of extra-territoriality, or Russia to the seizure of the Chinese Eastern Railway; but we cannot refrain from pointing out that no facts are ever accomplished for good and all, and that the accomplishment of these Japanese facts in Manchuria seems precarious, to say the least of it. The most important fact of all is that the Manchurian adventure has cost Japan her trade in Manchuria itself, and in the whole of China into the bargain. It is also a fact that the present session of the Diet at Tokyo has been convoked for the passage of relief bills to deal with Japan's desperate economic plight. The end is not yet, and when it comes it may not turn out to Japan's liking.

Danish Exchange Control.—Following upon the report that foreign credits have been raised by the Danish National Bank in Stockholm, Basle and London for amounts of kr. 10,000,000, frs. 20,000,000 and £1,500,000 respectively, modifications have been made in the Danish foreign exchange restrictions. Exporters have now been freed from the necessity of handing over to the National Bank the foreign currency proceeds of their sales, and henceforward are only prohibited from depositing them abroad. Power to buy and sell foreign exchange is still granted only to the National Bank and to banks and brokers authorised by it. The system of controlling imports by licence and quota is to continue, but it is understood that this control is necessitated for the time being by the fact that imports are relatively heavy at this time of year; and it is conceivable that later on it will be possible to withdraw or modify these restrictions. Apparently Denmark's foreign exchange commitments, which grew substantially heavier as the result of the suspension of the gold standard and the consequent reluctance to make use of foreign commercial credits, have now been brought within measurable bounds, and according to one estimate only amount to kr. 80,000,000 or to the cost of one month's imports. The banking position is also very liquid and the national finances are in a satisfactory condition. Hence there was no obstacle in the way of the modification of the restrictions; and it is understood that the intention of the authorities is to make foreign exchange available for all legitimate business and to encourage the use once more of normal lines of credit. Immediately after this announcement the Danish exchange on London reacted from kr. 18.80 to kr. 19.60. This movement simply reflects sales of kronen which hitherto had been immobilised by the restrictions, and so marks the establishment of a normal in place of an artificially controlled rate. Incidentally it brings the Copenhagen rate into line with the Stockholm rate. Denmark is to be congratulated on being one of the first countries to make a move, even though at present limited in scope, in the direction of freer international trade.

Cotton and Ottawa.—The Lancashire Cotton Trade Delegation to the Imperial Economic Conference at Ottawa has this week issued its report on the work done. The statement, writes our Manchester correspondent, is written in as optimistic a tone as is possible under the circumstances, but reading between the lines one detects an undoubted feeling of disappointment at the results obtained. It is mentioned that the delegates found that the industrialists of some Dominions, and of Canada in particular, enjoyed a freedom of access to their Ministers and a corresponding influence in the discussions which were denied the industrialists from the United Kingdom. It was also clear that although the dominating note of the Conference was a cry for help from the primary industries of the Dominions, the better organised forces of the Dominions' secondary industries were still able to hold their own. On the whole, the delegation received most encouragement from their discussions with the representatives of India. It is stated that the Indian delegation wished to be helpful and constructive in considering the problem of Lancashire's trade with India. It was their desire to improve the position of the Indian agriculturists. They pointed out that in any proposals which could be put forward for the benefit of Lancashire and which would not injure the Indian industry, the fullest regard must be given to their effect on the agriculturist. They were seriously concerned by the possibility that an increased preference for Lancashire goods in India might be followed by a fall in Japan's purchases of Indian cotton, partly through the restriction of the market for Japanese cotton goods and partly as an act of retaliation. The Lancashire delegates discussed this point very fully, and emphasised the fact that Japanese cotton importers, like other business men, buy their supplies wherever it is most advantageous to do so. The Indian delegates, however, were insistent that it would be useless for them to put forward any recommendation intended to increase the sale of British cotton piece goods in India unless they were able at the same time to show that Lancashire was prepared to increase substantially its consumption of Indian cotton. It was pointed out that, although the use of Indian cotton in Lancashire was undoubtedly spreading, there were difficulties in regard to quality, quantity and market facilities which must be overcome before Lancashire could safely become dependent on India for a really large part of her supplies. The Lancashire delegates, however, promised that this point should be thoroughly investigated by the Lancashire industry, and it was suggested that some form of joint inquiry representing both Lancashire and Indian interests would be most likely to be effective. The Lancashire delegates undertook to urge on their respective organisations an early and adequate examination of the question of increasing the consumption of Indian cotton.

Indian Cotton Import Duties.—Our Manchester correspondent writes:—During the last few weeks private messages have been received in Lancashire from India indicating the probability of a revision in the import duties on cotton piece goods, and it is now announced that the Government has decided upon an immediate increase on all non-British goods from 8½ per cent. to 50 per cent. *ad valorem*, with a minimum duty in the case of plain greys of 5½ annas, as compared with 4½ annas. This decision affects chiefly Japanese goods, which will now have to stand an import duty of 50 per cent. against 25 per cent. for British goods, and Lancashire has now a preference of 25 per cent., against 6½ per cent. previously. This news has been received in Lancashire with considerable satisfaction, and it is hoped that this country may now be able to regain some of the trade lost to Japan. It is unfortunate, however, that this windfall should accrue to Lancashire at a time when cloth production is practically stopped and contracts cannot be arranged owing to the impossibility of manufacturers guaranteeing delivery within a specified time.

The London Omnibus Dispute.—Although the delegate conference of the London omnibus employees decided last Tuesday to reject the Omnibus Company's proposals for

reduced wages and changes in working conditions, it did so in such a way as to hold out distinct hopes of agreement. Firstly, it was announced by Mr Bevin, the General Secretary of the Transport Workers' Union, that the decision did not preclude further negotiations with the company. Secondly, an agreement has been reached, in the face of last week's adverse ballot, on the question of redundant staffs. Under this agreement the guaranteed week is to be reduced from 48 to 40 hours for all spare men with less than three years' service, and the notices of dismissal to the redundant staff, which were issued last week, have been withdrawn. This compromise, with its avoidance of discharges, is a good omen for the future. As for the main issue, it will be recalled that the company has both given notice of reductions in the standard hourly rate of pay, and is also seeking to vary the conditions of service, and in particular to reduce the maximum time worked each day from 9 to 8½ hours. It is also putting forward proposals for the speeding up of services. These last proposals will also affect an employee's gross earnings as distinguished from his standard wage, and the opposition to them is therefore comprehensible. Apart from the grave inconvenience that would be caused by a stoppage, the public is interested in these negotiations in two ways. One is the question of safety, and here the public will undoubtedly support the company's contention that it is necessary to reduce maximum working hours because of the increased strain thrown upon drivers by the recent growth in the size and power of the omnibuses. Equally, the authorities should subject to severe scrutiny the proposals for the speeding up of services, and the public will sympathise with Mr Bevin's plea that both drivers and conductors merit fuller consideration than he alleges is found in the company's terms. The other question is of a more general economic character. There is no record of any recent reduction in fares, and, if the company's income has fallen to a point which necessitates wage reductions, the obvious inference is that fewer passengers are being carried. If so, it is conceivable that the streets are being congested with redundant omnibuses; and this suggests that the true line of economy might lie in the withdrawal of surplus omnibuses with their staffs. The whole question is admittedly highly technical and complex, for the problem of "peak loads" at the rush hours at once obtrudes itself. We have no doubt that this aspect of the question is present in the minds of both parties to the dispute; and all we are concerned to point out is that the public is interested in the negotiations in more ways than one. In view of the spirit of accommodation that has now appeared, hopes of equitable settlement need by no means be dismissed.

Overseas Government Loans.—The current issue of the statistical summary compiled by the Bank of England contains some new calculations by Sir Robert Kindersley showing the geographical distribution of British loans to overseas Governments and municipalities. A summary of this table is reproduced below:—

	1929.*		1930.*	
	Capital.	Av. Rate of Interest.	Capital.	Av. Rate of Interest.
	£ mn.	%	£ mn.	%
British Empire ...	1,020.2	4.5	1,028.4	4.6
Europe	109.3	5.8	102.9	6.0
South America	129.2	5.3	125.2	5.2
Central America.....	2.3	4.9	2.2	4.8
Rest of world.....	105.7	4.9	100.6	5.0
Total	1,366.7	4.7	1,359.3	4.8

* Excluding issues made during the year referred to.

Taking the figures for 1930, out of a total of £1,359.3 millions, 76 per cent. is represented by loans to various members of the Empire, and of the remaining 24 per cent., 8 per cent. has gone to Europe, 9 per cent. to South America, and 7 per cent. to the rest of the world. Of the Empire total of £1,021.4 millions, Australia has taken

£429.6 millions, India £224.0 millions, and South Africa, New Zealand and Canada (with Newfoundland) about £100 millions each. The average rate of interest ranges from 5.0 per cent. for New Zealand and 4.8 per cent. for Australia to just under 4 per cent. for India, Canada and Newfoundland. These rates are not dependent solely upon the relative credit of the various borrowers, but also upon the dates at which the loans were first raised. Thus Canadian borrowings were largely pre-war, and so were made on cheaper terms. Coming now to Europe's total, this is well spread. The leaders were Germany (£19.9 millions), Greece (£14.9 millions), Hungary (£11.2 millions) and Belgium (£8.3 millions). Most of these totals arise from post-war reconstruction loans, and so it is not surprising to see that interest rates have ruled high. Thus Germany's average rate is 7.4 per cent., and those of Austria and Hungary just over 6 per cent. Greece, however, has been able to escape with 5.8 per cent. The three big South American borrowers are Brazil £64.6 millions), Argentina (£32.4 millions), and Chile (£21.4 millions), and the average interest rates range from 4.5 per cent. for Argentina to 5.5 per cent. for Chile and Brazil. Here, again, the date and circumstances of each individual loan are a determining factor. Finally, the total of £100.6 millions for the rest of the world is made up chiefly by loans of £57.9 millions to Japan and £25.9 millions to China, all at an average rate of 5 per cent. Taking the world as a whole, British capital has in the long run been available to overseas Governments and municipalities at an average rate of 4.8 per cent. It would be interesting to see this average divided into separate figures for pre-war and post-war borrowing, and also to form some idea of the rate that is likely to be charged in the future. At the moment, of course, foreign, as distinguished from Empire, borrowing is in abeyance, and the table shows that as long ago as 1929 foreign repayments of outstanding debt were in excess of fresh borrowings.

Germany's Foreign Debt.—Recently-published statistics of Germany's external debt as at February 29, 1932, writes our Berlin correspondent, show the total of foreign investments in Germany at a round 26 milliard marks, of which Rm. 10.15 milliards are long-term debt (due within a year); 10.47 milliards are short-term debt (due within a year); 10.47 milliards are long-term debt; and 3½ milliards shares and industrial participations; and 2 milliards foreign holdings of German real estate. Almost half the short-term debt is subject to the standstill agreements; 3½ milliards of it are owed by German financial houses and 1½ milliards by industry, commerce, etc. Of the short-term debt 5,210 millions are accounted for by the banks (including the Reichsbank and the Golddiskontbank), 815 millions by public corporations, and 4,128 millions by private businesses. The long-term debt, on the other hand, is divided as follows:—Banks debt, only 1,496 millions, public corporations 3,525 millions, and private businesses 5,449 millions. The following table shows the division of the debt by creditor countries; the figures in brackets show the short-term debt according to the census taken in respect of the amount outstanding at July 28, 1931, for purposes of comparison:—

GERMAN FOREIGN DEBT AT FEBRUARY 29, 1932. (In millions of marks.)			
	Short Term.	Long Term.	Total.
U.S.A.	3,227 (3,143)	5,165	8,392
Netherlands	1,661 (2,069)	1,914	3,575
Switzerland.....	1,615 (1,878)	1,146	2,761
Great Britain	1,286 (2,054)	1,129	2,415
France	474 (656)	482	956
Sweden	136 (205)	167	303
Other countries*	1,754 (1,964)	467	2,221
Total	10,153 (11,969)	10,470	20,623

* Including B.I.S. holdings in Germany and issue banks' credit to Reichsbank under the leadership of the B.I.S.

The interest burden of this debt is calculated at 1,225 millions and the amortisation at 213 millions, so that the current obligations amount to Rm. 1,438 millions. In addition there are the fixed, non-recurrent redemptions, which amount to about 200 millions for 1932-33, and

finally the income of about 15 millions received by foreigners from German securities of real estate, so that the German balance of payments for the current year is burdened with at least 1.7 milliards from these sources.

Roumania and Oil.—In petroleum circles, writes our Bucharest correspondent, the situation is considered to be a little more hopeful since the return of the Roumanian delegation from the Paris Conference. The principle of collaboration with the international group has been established, and the Roumanian delegation has been able to obtain an agreement that further exports from Roumania should be based on the export period from July 1, 1931, to June 30, 1932, instead of that of 1929, as was proposed by the international group. In 1929 the exports of crude oil and various petroleum products amounted in all to 2,822,900 tons on a production of crude oil of 4,827,278 tons. On the other hand, during the period admitted as a basis, 4,667,860 tons were exported on a production of 6,387,597 tons. The Roumanian groups has therefore obtained the right to export 65 per cent. more than was originally proposed by the international group. If in any of the countries which import Roumanian petroleum products the consumption fixed for each product separately increases or diminishes, the quota which can be imported into this country by the Roumanian group will be increased or diminished proportionately. It remains now for the Roumanian producers and refineries to reach an agreement as regards the share of each individual concern in the export. Only after this agreement has been reached can the accord with the international group be signed and put into operation. The definite reply of Roumania was to reach Paris by August 15th, but this period has now been prolonged to September 15th. Negotiations among the companies of this country are proceeding. Petroleum production has increased to 2,200 wagons per day. In the first six months of this year the exports amounted to 2,678,953 tons, as against 2,413,380 tons in the same period last year.

Crop Damage in Poland.—Our Warsaw correspondent writes:—Earlier reports that the cereal crops were being harvested under favourable conditions have had to be modified by the discovery of rust in the principal wheat-growing areas, namely, the districts of Lwow, Tarnopol, Lublin and Volhynia. These districts normally provide about one-half of Poland's total wheat crop, and it is estimated that the cereal in these areas is affected by rust as to at least two-thirds of the crop. The grain in other districts is also affected, but apparently not to the same extent. It must be anticipated, however, that not less than 25 per cent. of the anticipated wheat crop, if not wholly lost, will be practically useless. Poland last year produced slightly over two million tons of wheat, out of which about 10,000 tons were exported during the second half of the year. If this year's yield of sound grain is 25 per cent. less, there will manifestly be none available for export, and it may even be necessary to impose milling restrictions so as to conserve the supply until next autumn. Rye, however, is the cereal mainly used by the Polish peasantry, and even by a large part of the urban population, and it will be no hardship to increase the consumption of "black bread" and restrict the use of wheat. Fortunately, the rye crop—as well as barley and oats—had almost attained maturity before the rust attacked the grain areas, and the damage from this pest is much less than in the case of wheat; but rye in certain districts where the grain had been cut and not harvested is believed to have suffered considerable damage by heavy rainfalls during the latter part of July and early August. Until threshing is finished, however, the full extent of the loss will not be known, but sufficient evidence is already available to show that this season's grain export surplus will be a very small one, and that the impoverishment of a large number of farmers has been intensified by the wheat disaster.

Australasian Banking Finance.—Our Melbourne correspondent writes:—The principal figures of the quarterly average returns to June 30th of the banks in the Australian Commonwealth (exclusive of the Commonwealth Bank) and in New Zealand compare with those of the previous quarter and a year ago as follows:—

	June 30, 1931.	March 31, 1932.	June 30, 1932.
Australia:			
Deposits	259,864,648	282,268,171	277,050,557
Advances, &c.	241,280,900	228,351,889	229,309,492
Government and municipal securities	21,476,582	40,001,952	43,707,735
Coin and bullion	1,962,822	2,172,472	1,958,714
Australian notes and cash with Commonwealth Bk.	51,160,531	51,009,023	47,827,451
New Zealand:			
Deposits	54,996,125	53,336,885	54,013,299
Advances, &c.	53,849,455	50,598,752	50,978,070
Government securities, &c.	4,582,471	6,597,824	9,153,181
Coin and bullion	6,926,030	6,598,701	6,207,587

Both in Australia and New Zealand there has been a reduction in trading advances as compared with a year ago, accompanying the reduction in imports and the small volume of business generally. At present the tendency is for possible borrowers to refrain from fresh enterprise in face of high costs, though there is still the regular demand for current production. On the other hand, the banks have been assisting the Governments, and their holdings of Treasury bills (included in securities shown above) have been considerably enlarged, partly to meet deficits on ordinary revenue and expenditure accounts and partly to provide for Government expenditure on public works, a policy which should not be continued indefinitely. A preliminary official summary of public accounts for 1931-32 shows deficits of the Australian States aggregating £20,147,000, including £18,570,000 in New South Wales), against which is a Commonwealth Government surplus of £1,921,000, leaving a net total deficit of £18,826,000. The result is worse than was anticipated twelve months ago, owing mainly to the drift in New South Wales under the late Labour Ministry. The short-term debts of the Commonwealth and States in Australia and London have risen to a total of £82,315,000 at June 30, 1932, against £58,695,000 a year ago.

Overseas Correspondence.

UNITED STATES.

Finance — R.F.C. — Banking — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 24.

THE Secretary of the Treasury and the Governor of the Federal Reserve Board have been discussing with the bankers here the plans for financing the September tax date. The Treasury has to meet on September 15th short-term maturities of approximately \$712 millions, and the needs of the Reconstruction Finance Corporation will considerably increase the figure for new borrowing. The Treasury this year has penetrated steadily into longer term borrowing, and Wall Street bankers anticipate that at least a part of the September financing will take the form of five-year issues, possibly at between 8½ and 8¾ per cent. interest rates. Some of the maturities also will no doubt be met with shorter term, probably one-year, notes.

It is also expected that before long, and possibly next month, the R.F.C. will make a direct bid for money, having so far obtained all its funds directly from the Treasury, which is the cheaper method. Another subject of consideration is the calling of the First Liberty 4½ per cent. bonds. They are outstanding to the amount of \$586 millions, and may be called on three months' notice at any interest-paying date. If the present period of extremely cheap money and strong bond markets is not utilised for December 15th retirement, the Treasury will

have to wait at least until June 15th. On the other hand, the Treasury already is faced with December 15th maturities of \$600 millions, and over a billion at that time might be considered too heavy.

Only mild interest was caused by publication of the names of the banks, insurance companies and railroads which have borrowed money from the R.F.C. in the first ten days after the date of the new Relief Bill which provided for the reporting of such information to Congress. President Hoover has maintained that he had the assurance of Congressmen that this information would be kept secret, but the clerk of the House of Representatives ruled otherwise, and furnished the information to the Press. It was found that from the 21st to the end of July the R.F.C. had lent \$49.7 millions to 450 applicants, the bulk going to banks. None of the institutions were important, with the exception of one in San Francisco and two or three in Ohio cities.

The market had had time to prepare for this revelation, and, anyhow, it was generally known that no large bank's name would be on the list. Some have obtained funds from the R.F.C., as, for instance, the Dawes Bank in Chicago, but publication of borrowers' names was not provided for to cover the period before the enactment of the Relief Bill. Recently Secretary of the Treasury, Ogden Mills, stated that total loans of the R.F.C. from the beginning to the end of July aggregated \$1,219 millions. Wall Street is now inclined to think that publication of names from now on may do no great harm, for besides acting as a deterrent to unnecessary borrowing, it may have a reassuring effect in cases of rumoured difficulties.

While there has been no change in the purpose of Federal Reserve Bank policy, there has been some change in method. Last week no further additions were made to holdings of U.S. Government bonds, purchases of which for several weeks have been dwindling. It is considered possible that the Reserve may even sell a few, inasmuch as the rapid deflation in member bank borrowing, the return of currency to the banks and the growth in the monetary gold stock, coupled with further deflation in loans, are maintaining excess reserves of the banks at a high figure, ranging around \$250 millions. Federal Reserve credit outstanding, with last week's decrease of \$13 millions, has diminished for four successive weeks. Reporting city member banks continue to liquidate loans, both on securities and on commercial paper. For the week of August 17 their loans were down \$50 millions, but investments rose slightly. Advantage is being taken of the strong markets to close out under-margined collateral loans which the banks had unwillingly been carrying. The banking picture is one of growing strength and liquidity, with no appreciable rise in demand for credit.

The industrial outlook continues to be a conglomeration of drab news on actual operations and of cheerfulness in outlook. Steel buying from the motor industry, the railroads and the farm implement manufacturers is at a standstill, and steel mill operations are still under 15 per cent. of capacity. It is expected by some observers that the Ford Motor Company will resume operations after the Labour Day holiday in September, but this month marks a new low record in motor car buying. The steel industry is becoming more concerned over imports of foreign steel, and is moving for higher tariffs under the anti-dumping clause of the General Tariff Act.

The selection of Robert Lamont, former head of the Department of Commerce, to be president of the American Iron and Steel Institute is the first step toward this end. A petition to the tariff commission for higher duties on numerous steel products already has been filed. The chief competitors aimed at are those of Belgium, France, Germany and Czechoslovakia. Under the anti-dumping Act the President may raise the tariff by a maximum of 50 per cent., if it can be shown that foreign steel is being sold here at less than cost of production.

The Steel Institute also is moving to have the R.F.C. stipulate as a condition for its loans for construction pur-

poses that only American-made materials be used. It is said that the agreements reached at Ottawa have spurred on the steel makers to seek relief at Washington. Some members of the steel trade estimate that the American producers will lose \$50,000,000 annually because of preference given Great Britain, but others think this figure much too large. In general, the results at Ottawa are not regarded here as much of a menace to American trade. The markets have been remarkably indifferent to the Conference all along, and individual business men are showing little concern.

The railroads are preparing to seek further wage reductions when the 10 per cent. reduction agreement expires next February. Meanwhile they are considering asking for lower freight rates. Next March the special increases granted by the Inter-State Commerce Commission will expire, and many railroad men feel that, instead of asking for extension of the present schedules, a reduction of base rates to promote freer movement of goods should be made. It is fairly clear that the higher rates were a mistake.

FRANCE.

Budget — Treasury Position — Coal.

(FROM OUR CORRESPONDENT.)

PARIS, August 31.

THE problem of balancing the Budget still awaits solution, and no hint has yet been given from official sources as to the methods by which it is proposed to secure the necessary resources. Total Budget expenditure, which amounted to 39,500,000,000 francs in 1927, when the franc had already been stabilised *de facto*, although not *de jure*, is, for the current year, 53,000,000,000 francs, which represents an increase of over 33 per cent. on the six years, in spite of the fact that meanwhile the Caisse d'Amortissement has taken over between 1,900,000,000 francs and 2,000,000,000 francs of annual debt service charges formerly covered by the General Budget. According to a statement made last February by M. Pietri, the then Budget Minister, Budget taxation is now equivalent to 30 per cent. of the French national income (as compared with 22½ per cent. in Great Britain, 20 per cent. in Germany, and 10½ per cent. in the United States, recent increases of taxation in the latter country not included).

In these circumstances it is difficult to see how the 5,500,000,000 francs still required to balance the 1933 Budget can be obtained except by drastic cuts in expenditure. Whether this will be found practicable is doubtful, judging from the unfortunate experience of the present Ministry's recent first attempt to cut down Budget expenditure. It will be recalled that M. Germain-Martin's original economy proposals, after having been approved by the Cabinet as a whole, and forthwith made known to the public (on the assumption that only formal approval by the Chambers was necessary to transform them into law), provoked an open revolt of the bulk of the Radical deputies against their own Party Leader. It is whispered that advantage is being taken of the long summer recess for informal conversations between some of the party leaders, both within and outside the present Ministerial combine, with a view to testing the possibility of evolving a more stable majority, which will be less exposed to dictation from the Left, and which would ensure the accomplishment of the necessary reductions of expenditure by which a balanced Budget can alone be rendered possible. One of the outstanding factors of the situation is that 20,500,000,000 francs, or nearly 40 per cent. of the nation's present Budgetary expenditure, is in respect of the public debt. In such circumstances it is evident even a successful conversion operation (estimated to result, on a 4½ per cent. basis, in a saving of some 900,000,000 francs a year) would only moderately contribute towards an estimated present deficit of six times that volume. It is semi-officially announced to-night that the Chamber may be specially convoked before the end of September for the

purpose of authorising application of the conversion plan.

The Treasury problem now appears to have been satisfactorily resolved. Last week's Bank of France return showed that the Government's balance, which for some weeks at the end of June and the beginning of July hovered round purely nominal figures, stood on August 19 at 1,192,000,000 francs, and the future is now also amply provided for. The situation is admittedly far from that which prevailed three years ago, when the Treasury was gorged with available cash. The bulk of this huge accumulation was utilised for paying off the Kreuger Loan, financing the first portion of the programme for re-equipment of the national economic plant, supporting threatened banking institutions, and loans to foreign governments, while a further portion, representing successive Budget surpluses, was handed over, as stipulated by law, to the Caisse d'Amortissement. A substantial part of the total, it will be noted, represents productive investments, the capital value of which should sooner or later return to the Treasury. From the Treasury's resources, further, have been met the 7,500,000,000 francs of deficits on the last two Budgets, and a further 2,500,000,000 francs to 3,000,000,000 francs have been utilised to compensate the shortage on the current Budget. Still further sums have been absorbed by communes and departments suffering financial difficulties due to the present crisis. On the whole (as M. Frédéric Jenny points out in the *Temps*), it is somewhat surprising, not that the Treasury recently found itself in difficulties, but that these difficulties did not develop earlier. It is now clear, moreover, that but for the fact that no real attempt has been made to balance recent Budgets, the Treasury would not only not have found it necessary to borrow money by issuing bonds, but would have still been able to preserve some milliards of available funds.

The Treasury's present satisfactory situation is due to laws voted at the end of the last session of Parliament. These authorised supplementary Treasury Bond issues up to 2,000,000,000 francs; enabled the Government of Algeria to repay immediately nearly 1,500,000,000 francs of advances; and relieved the Treasury of 300,000,000 francs imposed upon it in respect of the deficit on the current Budget. These measures increased the Treasury's available resources to about 5,000,000,000 francs, to meet liabilities, down to the end of the year, of only 3,450,000,000 francs. The only apparent risks facing the Treasury at present are that it may not be in a position, unless further steps are taken, to reimburse its bond issues at maturity, especially if it is to be called on to furnish further large sums to meet a Budget deficit during 1933. The former is a purely negligible risk; the latter depends entirely on whether the Budget for the coming year is to be really and soundly balanced. In any case, relief has already been foreshadowed in the preamble of the recent Bill authorising additional Treasury Bond issues, which provides for the eventual consolidation of these bonds, if necessary, into funded debt.

Coal production figures for July, which have been announced this week by the Coalmasters' National Association, indicate a total output from the mines in French territory of 3,796,000 tons during the 25 working days, against 3,838,000 tons in June (28 days), 4,114,000 tons in July last year (26 days), and a monthly mean of 4,586,000 tons throughout 1930, when output was at its highest level. Metallurgical coke production by the colliery plants was 265,832 tons, against 258,849 tons in the previous month and 359,000 tons in July, 1931. Figures for the first half of 1932 show that the total output of coal and lignite from the French mines was 23,108,828 tons, to which must be added 2,733,973 tons made available from the Saar area (after deducting local consumption), and 8,937,585 tons representing imports into France. The total available for consumption was, therefore, 34,780,000 tons. Imported coal during the six months included 4,637,000 tons from Great Britain, 2,047,000 tons from Germany, 1,399,000 tons from Belgium-Luxemburg, 442,000 tons from Holland, 295,000 tons from Poland, 38,570 tons from Russia, 14,000 tons from Switzerland, 2,284 tons from the United States, and 59,000 tons from Indo-China.

GERMANY.

Politics — New Economic Programme.

(FROM OUR CORRESPONDENT.)

BERLIN, August 30.

At the time of writing the political situation is still completely obscure. The President and the Chancellor are, in the words of the official communiqué, in agreement as to the political situation, which may be interpreted to mean that the President has authorised Herr von Papen to dissolve the Reichstag. Meanwhile, however, the Centre and the Nazis are continuing their efforts to combine in the formation of a parliamentary majority. The outcome of these efforts is still completely uncertain, and it is also uncertain whether, even if they were successful, the President would give the coalition his blessing by appointing as Chancellor the man they expected. Meanwhile, it is only thanks to the hopes which the National Socialists attach to their parliamentary influence, and to the interest which they have for that reason in securing an effective Parliament, that the opening meeting of the Reichstag was conducted peaceably. The National Socialists listened quietly to the speech of Frau Clara Zetkin, the Communist who presided at the opening of the Reichstag by virtue of seniority, only to elect their colleague Gohring to the presidential chair immediately afterwards. Herr Gohring and the new Vice-President, Herr Esser, a member of the Centre Party, have come to Neudeck, presumably to represent to President von Hindenburg the dangers of a Government policy directed against the Reichstag.

The economic programme which the Chancellor announced last Sunday, at a meeting of Westphalian farmers in Münster, came as a surprise to the German people. The programme is very complicated, and its importance will depend to a large extent on the way in which it is carried out, but it will also depend a good deal on world economic developments and on developments in Germany while it is being put into effect. According to the plan expounded by Herr von Papen, the Government will issue to all taxpayers who are liable for land tax, taxes on industrial profits or industrial property, turnover tax or transport tax, a promissory note of the Government for a part of the amount of the tax. The idea of this is that the economic situation really calls for a tax reduction, but that as the Exchequer is not in a position to forgo the money for the moment, a part of the revenue from taxation is to be regarded as a loan from the taxpayers. The promissory notes will be redeemed by being accepted in payment of taxation during the years 1934-38. The value of the notes to be thus issued will be about Rm. 1½ milliards, and this will be increased to 2.2 milliards by other payments which will also be made in the form of promissory notes. This will involve a loss of about Rm. 500 millions of revenue in each of the years 1934-38, and the plan, of course, involves the assumption that economic conditions, and consequently public finance, will by then have recovered sufficiently to make this deficiency easy to bear. The issue of the promissory notes is to take place in the year beginning October 1, 1932, and the notes are to bear 4 per cent. interest.

Apart from the desire to effect a reduction in taxation, another consideration has played a large part in the evolution of the plan. The advance of the crisis has set free a large quantity of working capital in Germany, and scope has developed for an extension of credit which, in the opinion of the Government, is not taking place, largely because the industrialists who would like to avail themselves of the credit cannot offer suitable security. The Government now hope that these promissory notes will prove suitable collateral, and that it may be possible in this way, with the help of short-term money from the banks, to set going, on the initiative of private business, undertakings which have hitherto been idle.

To this end, a further incentive is to be offered by the Government. Every employer who takes on additional workers in his factory is to receive from the State an annual wage subsidy of Rm. 400, representing the sum saved in relief, to be paid him, not in cash, but in

these same promissory notes. Further, every employer is to be authorised to reduce tariff wages in a specified proportion if he makes possible, by a reduction of working hours, the employment of more labour. This last provision has already evoked sharp protests from the trade unions, for it means the possibility of the imposition of a double sacrifice on those workers who are still in employment: if the employer takes advantage of it they will both work fewer hours and receive a lower rate per hour. In addition, the Government intends to instruct the arbitration authorities, in the drawing up of tariff agreements, to include provisions for the payment in emergency cases of less than the tariff wage, in order to keep businesses at work which would otherwise be threatened with failure.

The Chancellor has, though certainly with an inconspicuous reservation, led the public to expect that work will be forthcoming for 1½ million unemployed as the result of this plan, but the objective critic finds little justification for such optimism. The chief result to be anticipated from the plan is its psychological effect: it has been favourably received by the public in general, and has already led to a sharp rise on the Stock Exchange. It is hardly to be supposed that the new securities will lead to any substantial extension of credit. The number of cases in which lack of collateral has prevented the granting of credit is probably not so great as the Government believe, and the bulk of the promissory notes will probably be held by the taxpayers to whom they are issued, or sold on the stock exchange, where, as a 4 per cent. bond, they will be at a heavy discount, since even the 6 per cent. inscribed Government stock, which is the most nearly comparable security, stands at only 76. The Reichsbank will only make advances against these promissory notes to a very limited extent, and will not buy them at all. That, however, means also that Herr von Papen's programme will not have an inflationary effect. Should a recovery in world economic conditions set in, the optimism engendered by the plan might hasten the extension of the improvement to Germany. If there is no such recovery, the plan will remain a fruitless and rather expensive, but perfectly safe, experiment.

In his Münster speech the Chancellor also gave some other not unsatisfactory indications of the Government's intentions. It appears that the Government are not contemplating any further compulsory reduction of interest rates. They merely intend to co-operate with the Reichsbank in an endeavour to secure the consent of the B.I.S. to a reduction of the German discount rate. Nor were the serious fears as to the trade policy of the Government which were widely held before this speech confirmed. The Government is indeed admittedly contemplating the regulation by quotas of a number of imports, but they do not intend to introduce this system generally, nor in the form which the advocates of self-sufficiency would like.

AUSTRIA.

Discount Rate — League Report — Exchanges.

(FROM OUR CORRESPONDENT.)

VIENNA, August 29.

THE Austrian National Bank has at last reduced its discount rate from 7 to 6 per cent. Actually a certain relaxation of the strain in the money market position has been noticeable for some weeks, but the management of the National Bank wished to wait till the Loan Protocol was definitely passed by Parliament. In some quarters misgivings were also entertained concerning a further reduction of the rate of interest, which at present amounts to 4 per cent., on savings deposits. In May and June savings deposits declined from 1,441 to 1,410 million schillings and financial circles are anxious to avoid all steps apt to further this retrograde process. For this reason the rate of interest payable on deposits is likely to remain unchanged, and the effect which the reduction of the bank rate will have on Austria's economic life will in the main be limited to a lowering of interest rates on

HUNGARY.

Politics — Standstill Negotiations — Banking.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 29.

overdrafts. These rates are extremely high, and firms of good standing are charged at least 12 to 14 per cent. Mortgage credits also command not less than 9 to 10 per cent., and are with difficulty obtainable even at those rates, as capitalists are reluctant to engage their funds for long periods. On the other hand, the reduction of interest rates on debit balances diminishes bank earnings.

No objection can be raised against the reduction of the bank rate from the viewpoint of capital movements; for, with the exchange restrictions in force, foreign capital would not be placed in Austria in any case. This is also one of the chief reasons why the Vienna bourse has benefited to a small extent only from the firm tendency prevailing on most stock markets. However, some improvements of prices have been recorded here too, and, of the stocks better known abroad, Alpine Montan advanced from 9.50 to 10.35, Donau-Save-Adria Prioritäten from 56 to 70 and Felten from 110 to 115. The reduction of the discount rate has no influence on the standstill negotiations of the Austrian banks. In financial quarters it is considered a mistake that the National Bank compelled private banking institutions, who by their own efforts had reduced their foreign short-term obligations to the relatively insignificant amount of 15 million dollars (against 33.7 millions one year ago), to make a standstill agreement. The agreement expired in July and negotiations for an extension are being conducted in London. It is stated here that English creditors are accommodating, while the American banks maintain an uncompromising attitude.

The representative of the Financial Committee of the League, Dr. Rost van Tonningen, has published his report covering the second quarter of the year. The undertone of the report is rather pessimistic. Dr. Rost foresees new difficulties arising from the suspension of transfers, but does not say that the suspension could have been avoided. Rather the opposite inference can be drawn from his observations, as he strongly urges the lender countries to ratify the loan agreement and to provide the funds as soon as possible. Above all the cash situation of the Government is considered unfavourable, though State revenue at 940 millions was only 16 millions below the estimate in the first half-year. The unsatisfactory treasury position is the reason why the Government had to refrain from the handing over the total revenue of the customs and of the tobacco monopoly earmarked for the service of the International Loans of 1923 and 1930 to the trustees, a fact which was very severely commented upon by them. In the course of June and July 66.8 millions were withheld from the blocked account for these loans. It is also evident from the report that the Austrian Government made every effort to continue the loan service because since the introduction of foreign exchange restrictions in October, 1931, 190 million schillings have been allotted for this purpose against only 243 millions for the requirements of production and commerce. The influx of foreign exchange was much smaller, so that the net outgoings amounted to 150 millions. The allotments of foreign exchange through the National Bank in the last months before the suspension of the transfer were limited almost exclusively to the sums required for the foreign loan service; for commercial purposes not more than 12.4 millions were made available in June. In this month only 34 per cent. of the allotment in the last quarter of 1931, when the apportionments were already severely curtailed, were placed at the disposal of production. The delay in the loan will greatly increase the arrears of the debt service, which are estimated to amount to 148 millions at the end of 1932.

The National Bank, in an agreement with Italy concerning the liquidation of the Austro-Italian clearing convention, has made the concession that the claims of Italian suppliers shall be satisfied, not at the official clearing rate of the Austrian National Bank, but at the schilling rate of the Berlin and Zurich bourses. This is tantamount to a recognition of a 20 per cent. discount in the schilling. The majority of Austrian economic interests are opposed to an increase of the schilling rate to the parity level through a continuation of deflation measures. Even the official Institute for the Study of Trade Cycles has raised its voice against such a policy.

THE prestige of the Karolyi Government was seriously impaired by the defeat of its Minister of Agriculture in a by-election, the date of which almost coincided with the first anniversary of the Government's access to power. This is the third successive by-election held within two months, all in different rural districts, and all three seats have been captured by the rising Independent Farmers' Party, in spite of the open ballot vote. In political circles it is taken for granted that the defeat of a Cabinet Minister is bound to have far-reaching consequences, the more so because the Karolyi Government has always been rather suffered than supported by the majority of Count Karolyi's own party. The inertia of the Government is blamed for the successive defeats of the party, the members of which want their leader, Count Bethlen, to return to power. It is difficult to tell, indeed, whether the want of comprehension of financial realities or the lack of courage to take the necessary unpopular measures to restore budgetary equilibrium is more responsible for the inactivity of the Government. The fact remains that after being more than twelve months in office the Government cannot claim to have achieved the purpose for which it was expressly appointed a year ago—that of rehabilitating the national finances—and that the country is becoming aware of it. Therefore the autumn outlook, in spite of the good crops, is full of uncertainties both of political and financial nature.

All the banking institutes domiciled in Budapest have published their half-yearly balance sheets. The aggregate resources of the 22 institutes disclosed in the composite balance sheets amounted to 2,271.2 million pengő as at June 30, 1932, as compared with 2,359.5 million pengő at the end of 1931. Cash at hand and sight deposits with the National Bank and other banks decreased to 153.3 million pengő, as against 182.7 million pengő six months ago. The total amount of short-term assets is returned at 1,237.9 million pengő, against 1,284.5 million pengő, of which bills represented 624.8 million pengő and other debtors 608.1 million pengő. Most of the short-term advances are frozen as, in spite of the greatly reduced volume of business, the banks were unable to liquidate their claims, and could not repay any part of the 300 million pengő rediscount facilities accorded to them by the National Bank in the second half of 1931. The most unsatisfactory item of the composite balance sheet is that of participation in syndicates and security holdings at 222 million pengő, exactly the same amount as six months ago, showing that no provision has been made for the depreciation of these assets.

There is a slight decrease in the banks' own capital and disclosed reserves which amount to 392 million pengő, as against 403 million pengő six months ago, which is caused

by the capital reductions of two small institutes which have been repurchasing their own shares. Creditors amounted to 1,355 million pengö, against 1,412.5 million pengö at the end of 1931. The decrease is almost entirely due to savings deposits, which dropped from 491.3 million pengö to 448 million pengö. Current accounts show no change at 638.5 million pengö, and other creditors, mostly representing foreign acceptance credits, are returned at 273 million pengö, as against 277.5 million pengö. The long-term mortgage and communal loans granted amount to 514.4 million pengö, against which there are 372.2 million pengö mortgage and communal bonds issued in circulation and 78.5 million pengö ceded on mortgages.

The ten principal Budapest banks and savings banks are responsible for approximately 2,000 million pengö out of the total figure of 2,271.2 million pengö disclosed for the twenty-two institutes. But these figures do not tell the whole story, as the banks do not show their rediscounts with the National Bank, which amount to probably around 500 million pengö. The short-term loans borrowed from abroad are also not disclosed in full, and neither are the guarantees. It is also objectionable that the banks did not disclose separately the accrued interest on their foreign short-term debts, because the inclusion of these amounts among the creditors obscures the movements in deposits and current accounts. Assuming about 500 million pengö foreign frozen debts, the meagreness of the credit resources is amply illustrated by the fact that internal deposits and current account balances amount to only 800-900 million pengö.

From the above figures it is evident that the reorganisation of banking balance sheets and the writing off of bad debts and of depreciated security holdings has been again postponed. However, in all fairness it must be pointed out that in Hungary the Treasury, far from being able to assist the reorganisation of the banks with State funds, is straining their liquid resources to the utmost limit. The only way towards the reconstruction of the banks is the conversion of about half of the 600 million bills portfolio of the National Bank into State Debt in exchange for the Treasury's debts to the banks and the acceptance by foreign creditors of either its long-term bonds or preference shares for their frozen balances.

HOLLAND.

Tariff Treaty — Capital Issues — Stock Exchange.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, August 16.

THE favourable impression created in June by the news of the convention concluded between the Netherlands, Belgium and Luxembourg for the reciprocal reduction of tariffs, has now been fully confirmed by the publication of the complete contents of the treaty. The pact comprises four positive principles:—

1. No new import duties and no increases in existing duties.
2. Reduction of the existing import duties by 10 per cent. each year.
3. No additional restrictions on import and export which are not imperative for protecting the safety, morals and health of the public, the protection of plants and livestock from disease, or for certain similar objects detailed in the pact.
4. In the event of abnormal circumstances making it imperative to enforce quota restrictions on imports, the quota shall not be fixed at less than 100 per cent. of the import in normal years, thus preventing disguised protectionist measures.

This convention should not be regarded as a new Customs union in embryo, but as a movement in which every well-meaning nation can participate and will be heartily welcomed. "As long as countries, without having joined in the pact, nevertheless, do observe the stipulations thereof, the benefits provided for in the treaty will apply to such countries." In fact, the contracting parties go still further in their goodwill towards those not participating, by agreeing in principle "not to resort to any increases of a protectionist nature in their import duties, nor to the enforcement of new safeguarding duties, towards other States with which they are associated by

commercial treaties." It is rumoured that Poland is to join the convention.

Little change is shown in the balance of trade in the Netherlands for July, as will be seen from the following comparative table showing the value in millions of guilders (gold and silver omitted):—

	July,		January-July,	
	1931.	1932.	1931.	1932.
Imports	165	96	1,152	773
Exports	115	63	792	480
Percentage of imports covered by exports.....	69.5	64.9	68.8	62.1

The export trade of the Netherlands continues to encounter serious obstacles. Our butter exports, in particular, are still being severely handicapped by Germany, owing to the regulation that only 5,000 tons a year may be imported into Germany at the import duty of 50 marks; the imports in excess of that quantity are charged with a duty of 100 marks. Negotiations between the two countries on this subject have so far failed to yield a satisfactory solution. Again, the export of coal is being menaced by the quota measures in Belgium, involving a reduction in the importable percentage from 52 per cent. to 28 per cent. Negotiations on this subject are in progress with the Dutch collieries, and the Dutch Government is contemplating measures for the purpose of relieving the distress in this branch of industry as much as possible. The possibility of a reduction in the railway rates in general is under examination, and pressure is once more being exerted to encourage the consumption of Dutch fuel by all public bodies in this country.

Very gradually, but, nevertheless, perceptibly, confidence is reviving, and at the same time the prospects of a resumption of issue business, which has been at an almost complete standstill for about a year are improving. With declining capital rates, advancing prices for bonds, and, last, but not least, the extensive capital requirements, especially by public bodies, the necessary conditions for a revival seem present, and it is probable that there will be a pronounced increase in activity on the issue market in the not far distant future. During the past month, however, the issue business was of very modest dimensions, totalling a trifle less than 5½ million guilders. In the corresponding month of last year, issues to a total of 26 million guilders were offered for subscription, and in June, 1932, issues of 102 million guilders were offered, thanks to the second series of the 5 per cent. 1932 State Loan. The State is once more availing itself of the capital market by the issue of Exchequer bonds for 75 million guilders; these yield 3 per cent. interest. The new municipal loans issues, including that of Amsterdam, have been successful lately. Sterling bonds, however, were weak, under the influence of the drop in the sterling rate of exchange. The share market has joined in the international bull movement, and it was noticed that the public is beginning to participate.

BELGIUM.

Strike — Industry — Public Finance.

(FROM OUR CORRESPONDENT.)

LOUVAIN, August 23.

BELGIUM has encountered in recent weeks the first social disturbances which are directly due to the economic crisis. In the beginning of July the pitmen of the Borinage (Mons district) refused to agree to wage reductions which had been accepted by the miners' trade unions. They thus became involved in a strike against the advice of the trade union leaders and the movement grew rapidly. By the middle of July it had brought about a general stoppage of production in the whole Province of Hainault, and given rise to riots. The extension of the strike and the accompanying violence are to be ascribed partly to the weakness of the Government, which has regained meantime the ground lost, but the movement is also evidence of the magnitude of the sacrifices which have already been imposed upon the workmen and especially upon the coal

hewers. The situation is complicated by the exhaustion of the Southern coalfields, which will make it necessary to abandon certain collieries. The strikers returned to legal methods as soon as the Government took the necessary measures, but they have continued the strike, although no success at all can reasonably be foreseen. About one-fourth of the pitmen have remained at work, and the collieries have forwarded regularly the quantities ordered by drawing upon their reserves. The strike has caused the Government to abandon the Bill for protection of wheat, which would have raised the price of bread 15 centimes per kilo (½d.).

The position of agriculture, though far from prosperous, has seemed much better than last year. Costs have been greatly reduced, mainly because of the fall in fertilizer prices and wages. Crops are abundant and of good quality. In certain parts of the country 4,000 kilos of corn will be obtained per hectare, and the average yield for the whole country will not be far below 3,000 kilos. The position of industry has, however, been anything but satisfactory. In the coal industry it has been so bad that it has given rise to an acute conflict. In the iron industry the outlook was very dull till the middle of August, but the firmer trend in the stock exchange and the slight rise of prices in America, have improved the outlook.

Unemployment has remained at about the level which it had reached at the end of this spring, and has involved the Government in heavy expenditure. It is estimated that the State will spend about 750 million francs on this item, to which Communes and Provinces add about 300 millions. This charge is one of the causes of the budget deficit.

The most important of the present difficulties of the Government is the financial situation. Despite the measures taken in March, 1932, the budget shows a deficit estimated at 2½ milliard francs. Public opinion has been aroused by the Press, and the Government has been forced to face economies, but these are very difficult to effect, since they involve new reductions in fees, in pensions, in wages, and perhaps in unemployment allowances. The difficulty of carrying such measures, when a General Election is to be held in May, 1933, is considered so serious that the dissolution of Parliament is contemplated so that the General Election would take place this autumn.

A milliard-franc 5 per cent. loan is to be issued at par on behalf of the Crédit Communal, which provides time and short-term money on terms very satisfactory to the Communes. This loan, redeemable by drawings, also carries 30 million prizes per annum, for five years only. Subscription is still open, and it is not yet possible to say whether this venture will be successful, but it will certainly not enjoy a success comparable to that of its predecessor of last spring, for the Belgian public has, not without reason, become uneasy on the subject of loans and of public finance in general.

SPAIN.

Military Rising — Stock Exchange — Railways.

(FROM OUR CORRESPONDENT.)

MADRID, August 18.

THE resentment of certain elements, especially the Army officers, against the Government culminated in a rising which took place simultaneously in Madrid and Seville on August 10th. The movement was suppressed in the capital within a few hours and the more successful rebellion in Seville was also defeated after a short period of supremacy. The defeat of the rising in Madrid was a foregone conclusion. While many Republicans are opposed to the present Government, they were afraid of being drawn into a plot to bring back the Monarchy. There is no doubt that the position was serious at one time, as the prestige of General Sanjurjo, who took charge of the movement in Seville, was still high, especially in the South, but the failure of Madrid to second the rebellion considerably facilitated the task of the Government. The mobilisation by the latter of large forces and the

announcement of severe repressive measures will doubtless restore normal conditions within a very short time, but there will probably be an undercurrent of unrest for some time to come.

Contrary to expectations, the Stock Exchange did not respond to the excitement caused by the military rebellion; though the volume of business was very small, quotations were comparatively firm, especially for State issues. On the other hand, the peseta has weakened, and it is stated that for the time being no attempt, other than an accentuation of the current restrictions on exchange operations, will be made to sustain rates.

A recent Decree, affecting those railways which were taken over by the State because they were being worked at a loss, states that in future such lines will be closed down unless the municipalities or other corporations which may be interested in the continuance of the lines, help to meet the deficit on their working. In view of the growing importance of motor bus services throughout the country it is probable that many local lines will be discontinued by the Government, unless it is decided, after the experiments which are at present being carried out, to substitute railway motor cars for steam trains.

The measures recently taken in France, with regard to imports of fruit from this country, caused considerable confusion and large quantities of produce accumulated at the frontier, thereby causing considerable losses to Spanish exporters. The Government is endeavouring to put the matter in order and has nominated representative committees in the principal producing areas affected, with the object of regulating the export of fruit and vegetables over the French frontier.

The recent military rising has apparently facilitated the passing of the Catalanian Statute as well as the Agrarian Reform Bill; opposition to the Government has, for the time being, become mild, and there is every indication that the whole of the Government programme will be carried through much more rapidly than had been anticipated.

The Stock Exchange.

THE OIL OUTLOOK.

ACCORDING to some market observers, the turn in the American oil situation came in June, preceding the rise in other commodities by at least a month. According to others, the turn came too soon and will have to be corrected by a lowering of the oil price structure. We may recall that in April, last, the price of mid-Continent crude oils was advanced by nearly 20 per cent., and that, following on this lead, wholesale gasoline prices were advanced until the average price in June stood at 6 cents per gallon as compared with 3.79 cents per gallon in June, 1931. Present oil prices are for the most part higher than the average prevailing in the first six months of 1932. Mid-Continent crude oil of 36° gravity is now 92 cents a barrel at the well, as compared with an average of 86 cents a barrel for the first six months of 1932. Californian crude oil was late in following the advance begun in the mid-Continent districts, but to-day 25° gravity Californian crude oil is 93 cents a barrel as against an average of 72 cents a barrel in the first six months of 1932 and an average of 82 cents a barrel in the first six months of 1931. The following table shows the range of prices of various grades of crude oil and gasoline, as given in "The Oil and Gas Journal":—

	Present Price.	Average, First 6 Months, 1931.	Average, First 6 Months, 1932.	Average, 12 Months, 1931.	Present Price — Increase over 1931. Average.
Crude: (dollars per barrel)					%
Mid-Continent crude, 36° gr.	0.92	0.63	0.86	0.67	+ 37.3
Pennsylvania crude, 25° gr.	1.97	1.77	1.90	1.81	+ 8.8
California crude, 25° gr.	.93	.82	.72	.76	+ 22.4
Gasoline (cents per barrel):					
Mid-Continent, ex refinery	4.50	3.35	3.81	3.45	+ 30.4
Tankwagon, average 50 cities, exclusive of taxes	14.21	13.57	13.34	13.09	+ 8.6

The most important advance in gasoline prices was that of 2½ cents per gallon in the price of Californian gasoline in June. Colour, however, has been lent to the suggestion that the oil price structure is unstable by last week's reduction of 1 cent per gallon in the price of Grade III California gasoline. The oil shareholder would therefore do well to consider the price outlook carefully. A considerable change for the better will obviously be shown by the trading accounts and balance sheets of oil companies at the end of this year, if inventories can, in the meantime, be written up by 20 to 30 per cent.

The recovery in American oil prices in the first half of the year has been, to some extent, artificial. It has followed upon the tightening up of voluntary restriction of output in the main producing fields of America—East Texas, the Mid-Continent and California. In spite of test cases in the courts, which have gone against the controlling authorities, restriction has been maintained and, at the moment of writing, California and Oklahoma are producing below their allowable outputs, and East Texas only slightly above its quota. The following table suggests the significant extent of the recent decline in production of these fields, and of the whole of America:—

DAILY AVERAGE CRUDE OIL PRODUCTION (Barrels).

	Oklahoma	California	E. Texas	America, Total.
Highest, 1930	707,550	806,000	...	2,722,050
" 1931	632,450	542,400	848,450	2,608,250
Beginning of 1932	493,300	499,700	290,900	2,209,100
End of March, 1932	435,900	492,100	327,750	2,163,050
End of June, 1932	426,900	460,400	331,800	2,156,100
End of July, 1932	394,550	469,200	330,800	2,137,500
August 20, 1932	390,600	474,100	328,850	2,110,800

The production of crude oil in America has been reduced by 19 per cent. since the peak of 1931 and by 4½ per cent. since the beginning of 1932. That the enforcement of restriction, being voluntary, is somewhat precarious, may be appreciated from events in California. The executive committee for the curtailment of crude oil production in California announced in the second week of June that unless crude oil prices were raised by a minimum of 25 cents per barrel, further restriction could not be secured. The Standard Oil Company of California thereupon declared that, provided the output of the State were restricted to 476,000 barrels a day, it would advance the price of crude oil by 25 cents per barrel. The producers actually reduced their output to 460,000 barrels a day by the end of June, and the advance in prices was put into effect, after the whole restriction programme had been in danger of breaking down.

Restriction in crude oil output has, unfortunately, been accompanied by a fall in consumption, so that the actual reduction in the total stocks of all oils in America has not been large. This is revealed by the following table of supply and demand, prepared by the United States Bureau of Mines:—

U.S. SUPPLY AND DEMAND OF ALL OILS (Thousand Barrels).

	First Six Months, 1931.	1932.	Increase or Decrease, %
Domestic production	444,794	416,938	- 6.0
Imports	44,793	54,520	+ 21.8
Total new supplies	489,587	471,458	- 3.7
Domestic consumption	440,529	418,846	- 5.0
Exports	63,823	57,702	- 8.5
Total consumption	504,352	476,548	- 5.4
Stocks on hand (end of June)...	652,897	626,487	- 4.1

In the case of gasoline, the most important product of the oil industry from a revenue point of view, there has actually been no decline, but a small increase in stocks, as will be seen from the next table. This gives the American production and imports, together with domestic consumption and exports of gasoline, for the first six months of 1931 and 1932:—

U.S. MOTOR FUEL SUPPLY AND DEMAND (U.S. Bureau of Mines Figures) (Thousand barrels).

	First Six Months, 1931.	1932.	Increase or Decrease, %
Production	211,869	200,255	- 5.55
Imports	7,033	7,634	+ 8.5
Total new supplies	218,902	207,889	- 5.0
Domestic consumption	191,908	181,785	- 5.3
Exports	23,783	21,251	- 5.7
Total consumption	215,691	203,036	- 5.8
Stocks: Increase	3,211	4,853	...
Stocks on hand	(a) 43,309	56,265	...

(a) These stocks figures are not comparable with those of June this year, as the latter figures include "Terminal and Transit" stocks.

A decline of 5½ per cent. in the domestic consumption of gasoline in America in the first half of 1932 is not remarkable in view of the trade depression. Preliminary reports, however, indicate that the domestic consumption in July has fallen off by 15 per cent. as compared with

THE TREASURY'S INTENTIONS.

WE view with some misgiving the Treasury's decision regarding the capital market, which has been disclosed by two official announcements this week. The first, somewhat disingenuously, thanks the market for "acceding to Mr Chamberlain's request," and maintains the embargo on new issues (subject to review after October 1st) except as regards issues involving "a mere exchange of one class of security for another class of security without change of ownership" and new securities issued to replace others whose final redemption had, before July 1st last, been fixed for a date earlier than December 1st. In both cases the operations must relate only to British (including Empire) sterling issues, domiciled in London, and must involve neither the provision of new cash nor underwriting.

The second announcement relates to the repayment, on December 1st next, of the outstanding £12,804,341 of 4½ per cent. War Loan, 1925-45, and £140,418,035 of 4½ per cent. Treasury Bonds, 1932-34. On the same date cash repayments of 5 per cent. War Loan, which may total about £130,000,000, will fall due. The Treasury's aggregate requirements, under these three headings, may thus be in the neighbourhood of £280,000,000. Next February, however, the Government is due to repay £14,076,340 of 4½ per cent. Treasury Bonds, and has an option of repayment of £114,607,893 5 per cent. Treasury Bonds. If the Treasury decided to combine the refinancing of all these stocks in a single operation, a total of approximately £412,000,000 would be indicated. Thereafter the Treasury would be clear both of maturities and repayment options until 1934, when £50,757,042 of 4½ per cent. Treasury Bonds would fall due on February 1st, and £105,000,000 of 4 per cent. Treasury Bonds might be redeemed on April 15th. The next significant conversion opportunity would not arise until 1940, when £316,838,281 of 4½ per cent. Conversion Loan might be redeemed.

A large section of the gilt-edged market believes that the Treasury is anxious to exploit the present period of cheap money to the utmost extent, and will endeavour to obtain as large as possible a Conversion into a moderately long-term stock, to be issued early in October. The strength of gilt-edged securities this week has reflected the expectation that "due preparations" will be made for an issue on a basis, possibly, as low as 3½ per cent. The continued embargo on all issues which involve underwriting or the provision of new cash will effectively keep out of the market, in the meantime, all other would-be converters who do not already possess sufficient cash of their own to pay off dissentients.

If this view is correct, it would appear that the Government, contrary to previous expectation, has resolved that charity, in the issue market, shall begin at home, and that even potential Empire borrowers like Australia (who has £11,363,858 of New South Wales 5½ per cent. stock maturing on November 1st) must wait upon the satisfaction of its own requirements. No one can blame the Treasury for wishing to make hay while the sun shines, and if it succeeds in issuing substantial amounts of medium-term stock at an even lower rate than the new Conversion Loan it will set the seal on the movement successfully initiated in the summer. But there is not the same merit in a transaction in a manipulated market as in the sudden offensive of last June, and there is not much at stake from the budget point of view.

There are, however, very important considerations to be weighed on the other side. Time is immensely important if the offensive against depression is to be driven home. It would be most valuable, psychologically, to give practical proof that cheap borrowing is available not merely for the Government but for the private trader as well; and the best possible encouragement that could be given from this point of view would be a few successful private issues on really favourable terms. There is little danger of the market's being denuded of capital by an avalanche of new issues, and the competition of such comparatively small sums as are likely to be issued in 1933.

July, 1931, which is a serious matter. Estimates prepared by trade authorities indicate that gasoline consumption in the Atlantic Coast and Middle Western areas will show a reduction this year of 15 per cent., in the Pacific Coast a decline of 8 per cent., and in America as a whole a decline of 14 per cent. In view of the falling off in consumption, the stocks of gasoline are uncomfortably large. Since the beginning of April gasoline stocks have declined only by 9,468,000 barrels, and are nearly 3,000,000 barrels higher to-day than a year ago. It is true that the remarkable change in business sentiment in America could not have been translated into terms of motoring statistics by July, but the seasonal decline in gasoline consumption is now beginning, and the oil industry will be faced with increasing stocks. At best it may be said that the oil industry in the matter of stocks compares not unfavourably with other mining industries.

The effect of the recovery in oil prices this year is strikingly shown in the following table of earnings of leading American oil companies for the first half of 1932 as compared with the corresponding half of 1931:—

U.S. OIL COMPANY NET EARNINGS, FIRST SIX MONTHS OF 1931 AND 1932.

	1931. Net Earnings available for Common Shares.	1931. Per Common Share.		1932. Net Earnings available for Common Shares.	1932. Per Common Share.	
		Earned.	Paid.		Earned.	Paid.
Atlantic Refining Co.	\$ 4,012,962 loss	\$ Nil	0.50	\$ 3,185,000	\$ 1.18	0.50
Barnsdall Corp.	1,815,498 loss	Nil	0.50	359,945 loss	Nil	Nil
Phillips Petroleum Co.	2,674,153 loss	Nil	0.50	872,492 loss	Nil	Nil
Shell Union Corp.	\$2,055,697 loss	Nil	Nil	2,935,427 loss	Nil	Nil
Standard Oil Co. (California)	5,643,968	0.43	1.25	6,916,241	0.52	1.00
Tide Water Assoc'd	3,275,636 loss	Nil	0.30	81,989	0.01	Nil

As regards the earnings of the international oil groups, in which the British shareholder is principally interested, an important factor is the concerted move which has been made to reduce competition in the world's markets outside America. At the conference held in New York in June, which was attended by American, British and Russian oil exporters, the American and Anglo-Dutch groups were brought into closer contact. Although the conference failed, on account of the intransigence of the Russian representatives, the conversations were resumed in Paris, and an agreement has been reached which, if ratified, and an agreement has been reached which has should put an end to the cut-throat competition which has been taking place in European and Eastern markets. Ratification of the agreement by the Roumanian group has been held over for a month in order to secure the consent of individual Roumanian producers, whose output is to be curtailed by about 30 per cent. If this is secured, it is expected that an immediate rise in petrol prices will follow in Great Britain and on the Continent. Such a move would be of the highest importance to the shareholders of Royal Dutch, Shell Transport, Anglo-Persian holders of Royal Dutch, Shell Transport, Anglo-Persian and, indirectly, Burmah Oil. The expectation of this advance is largely responsible for the recent recovery in oil share values:—

	1932 Prices.		Present Price.	1931.		Div. Yield. Per cent.
	High.	Low.		Earned.	Paid.	
Anglo-Persian £1...	44/-	23/9	43/9	3.7	5.0	2 5 9
Burmah Oil £1...	61/3	32/9	60/-	22.4	17.5	5 16 8
Canadian Eagle (n.p.v.)	8/-	4/1½	6/7½	0.76	Nil	Nil
Lobitos £1...	56/7½	16/3	49/-	15.2	12.5	6 5 0
Mexican Eagle £4...	8/6	4/8	7/7½	Nil	Nil	3 12 9
Royal Dutch Fl.100	20½	10½	15½	6.1	6.0	3 1 6½
Shell Transport £1	51/7½	29/4½	48/9	7.3	7.5†	...

† Free of tax. a £4 2s. 1d. per cent. gross.

Investors will appreciate that, if the anticipated advance in petrol prices fails to occur, the revenue accounts of international oil companies for 1932 will not be at all favourable. Already the season of maximum consumption is drawing to a close, and gasoline prices ruling in British and European markets have been on an unprofitable basis. The rise in share values must therefore be held to discount the position in which the international oil companies hope to find themselves some time in 1933.

immediate future would not affect the rate of Treasury financing by more than a fraction of a point, while a few private issues would do something to check the search for profitable investments abroad and thus help the exchange position. For reasons such as these, we hope that the Treasury will not attempt to hold the field for longer than the rest of the holiday season.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
September 6. September 8.

INTEREST tended, slowly, but surely, to shift this week from the "American" and the equity markets towards gilt-edged stocks. The Treasury's announcement, early in the week, showed that industry had little to gain from early capital market operations, and the Government a good deal to gain from a further strengthening of gilt-edged prices before October. Faith in the indefinite continuance of the Wall Street rise, in the absence of a revival in American industry, grew more dim, while the Continental markets, after starting with an impressive show of strength, became hesitant when the rise in commodity prices showed signs of faltering. This slightly reactionary atmosphere, however, was not translated into falling share prices, where the pace, for peculiar technical reasons, had previously been abnormally rapid.

The Treasury's statement at the beginning of the week discussed in a leading article on the preceding page) produced a marked change of tone among gilt-edged stocks. All the funds were in keen request, Assented War Loan rising to the neighbourhood of par on Thursday. India loans improved in sympathy. Australian stocks, however, after being speculatively bought at the beginning of the week, attracted less interest, in view of the impossibility of a London conversion issue until the British Treasury had relaxed its terms for the maintenance of the new issue embargo.

Among foreign bonds, Germans enjoyed a fair recovery, the market being impressed both by Von Papen's economic programme, and by its apparent support by the President. Unfavourable Brazilian news was again reflected in bond prices. Chinese loans were quiet but firm, and Japanese improved on a moderate recovery in the yen.

The home railway market was depressed by the Lancashire cotton dispute and the worst series of traffic figures published since the end of May, particularly on the Midland and Scottish and the North-Eastern. The resulting sales affected prior charges, as well as stocks in the "danger zone." Underground were slightly easier on the threatened busmen's dispute. Argentine rails were heavy, traffic figures remaining unfavourable. Canadian Pacific were unfavourably affected by the unsatisfactory July earnings statement and the recession in North American rails generally.

Speculative support for industrial shares, at the beginning of the week, was checked by the irregularity of New York, the stoppage in Lancashire, the suggestion of an unfavourable industrial turn contained in the railway traffic statements, and the usual tendency to close commitments before the carry-over. Textile shares were marked lower on Lancashire news, with the conspicuous exceptions of Courtaulds and Celanese, which responded sharply to rumours of an advance in yarn prices in America. Efforts to raise iron and steel share prices were thwarted by a series of unfavourable dividend statements. Buying of Cables and Wireless had spent itself by mid-week. Transatlantic issues weakened on selling orders from Wall Street. Motor shares were dull, particularly Ford. Electrical issues held their ground, but business fell off perceptibly. Breweries had a steady appearance, and Gallaher were favoured among tobacco shares. Dunlop and Imperial Chemical suffered from profit-taking. Little interest was taken in Bank shares, and Insurance shares were slightly lower where altered.

The rise of rubber to 8d. a pound was a signal for a sharp marking up of rubber shares in the first half of the week, a keen speculative demand finding the market bare of stock. The reaction which these conditions invited came quickly upon the subsequent decline in the price of the commodity. Tea shares were more active, the market realising that the abnormal conditions of the post-budget period had largely passed. Oil shares were quiet and easier in the absence of support from New York. The outlook is dealt with in a leading article on an earlier page.

The mining share markets, losing their mainspring—faith in higher metal prices—tended to settle into their former semi-quietude. Rhodesian copper shares, on the whole, held their recent rise fairly well, but tin shares lost their activity in mid-week, on the decline in the price of the metal. Support of Kaffirs from Johannesburg and Paris was intermittent, and centred upon a limited number of issues. Continental belief in a revival in the diamond industry, however, caused a moderate amount of buying of De Beers.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets were buoyed up, at the opening, by the strength of commodity prices, under the leadership of wheat. Unfortunately, speculative support, in itself, was insufficient to maintain the movement, cotton, for instance, losing the whole of an extensive gain, on Monday, after the issue of a private estimate putting the crop well above the official figure. The share markets became irregular, upward price movements were progressively narrowed in range and scope, and profit-taking increased. Several groups of shares, including rubber, copper and railroad issues (particularly of roads included in the proposed Eastern Trunk merger), fought a strong re-treating battle, but quotations as a whole slowly gave ground. Investment opinion as a whole tended to the view that the rise had gone about as far as "psychology" could carry it for the present, and was inclined to await tangible evidence of business improvement before undertaking new commitments. The statistical indicators were particularly difficult to interpret. Electrical power output rose last week from 1,481.9 million to 1,486.4 million kilowatt-hours, and railroad freight car loadings showed a modest, if welcome, further gain of 6,211 cars. The end-August figure of U.S. Steel Corporation unfilled orders was

expected to show an appreciable gain over its predecessor. On the other hand, steel operations for the whole industry declined from 14 to 13 per cent. of capacity, and opinion remained sceptical of any striking improvement this month. There was an appearance of increased activity in some of the textile trades, especially in rayon, but the existence of speculative influences was generally admitted. Altogether, if the continuance of firm Stock Exchange conditions depends on increased support from the industrial side, clearer indications of revival would be welcome.

* 2-hour session.

PARIS.

The Paris Bourse enjoyed an all-round advance early this week, with a considerable accumulation of orders. Favourable news from other centres stimulated the better tone. On Tuesday, profit-taking tendencies appeared, but quotations quickly rallied and business again became active. Rentes were firm and Banque de France improved. A sharp rise occurred in Rails. Turkish issues improved on new hopes of a debt settlement. The check to the rise of commodity prices, however, and the easier tone of New York, caused a recession on Thursday.

BERLIN.

The Berlin Bourse gave a markedly favourably reception to Chancellor von Papen's economic programme. Practically all industrial issues improved, building and electrical shares being outstanding in an active market. Quieter conditions subsequently prevailed, a number of issues being subjected to professional profit-taking. Siemens lost ground but Reichsbank were maintained.

AMSTERDAM.

The buoyance of markets, at the outset, was ascribed to rising commodity prices and a better international atmosphere. Rubber shares were particularly active, prices rising sharply on a marked shortage of stock. Amsterdam Rubber were in keen demand and rose eight points in a day. The bourse was closed on Wednesday for the "Queen's Birthday" holiday.

OTHER CENTRES.

Firm conditions prevailed on most of the minor European bourses, with a fair increase in the volume of business. Frankfurt improved in sympathy with Berlin, and a certain liveliness was in evidence at Brussels, though profit-taking occurred in mid-week. Dealings at Stockholm were stimulated by the reduction in the discount rate.

INVESTMENT NOTES.

Course of Equity Share Values.—The activity of the equity share markets, in New York and London, last month, lends special significance to our monthly chart, shown at the bottom of this page. Clearly, the upward tendency in both markets dates from the end of June, or beginning of July, but whereas London discounted a large part of the ultimate gain by a few days' premature enthusiasm on the announcement of Mr Chamberlain's War Loan scheme, New York's advance has been spread over the better part of the two months. Since the middle of July, indeed, the "gradient" of the Wall Street rise has been remarkably consistent. Early in August the movement appeared to be getting out of hand, but the short, sharp and undoubtedly healthy reaction, which followed, left prices, if anything, "below the trend." The subsequent upward tendency, though nearly as steep as its pre-

decessor, merely carried quotations to the point which might have been forecast by an extension through August of the curve of the last two weeks of July. The rise in London has been much less striking, but the experience of the two markets over the last six months has shown a remarkable similarity. Both touched bottom, in the present "secondary cycle," before the end of May. Both have now returned, broadly, to the levels of six months ago. Each has still an appreciable way to go before regaining the high points of ten months ago. Early in November, 1931, the British index touched 70.4 and the American index 53.4.

Wall Street Outlook.—The forward drive in the American stock markets is losing, as we write, some of its impetus, but the reactions which have occurred since the start of the bull movement in July have been in the nature of the temporary pause which allows a market to consolidate its gains. The present reaction may, however, be more prolonged than the last, as there is an increasing disposition to await tangible evidence of an improvement in business. Steel operations are reported at 18 per cent. of capacity as against 14 per cent. in the previous week. On the other hand, there is a slight increase in pig-iron production and the figures of electrical power production show improvement in all sections of the country, although the total is still more than 12 per cent. below the level of August, 1931. An improvement is also expected in the railway net revenues for August as compared with the previous month, and it will be surprising if steel operations in September do not show a considerable advance on the present abnormal figure of 18 per cent. of capacity. The movement in commodities, however, still appears to be of a highly speculative character. At the moment,

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, March to August 1932. (1928=100)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks—Daily Figures.

the commodity markets are being subjected to a bout of profit-taking. On the New York Stock Exchange the advance in the industrial "leaders" has now plainly discounted an industrial recovery of some considerable extent, for few of the dividends being paid are now being earned. The following table shows the low prices of July 8th and the present prices of representative stocks in the industrial, public utility and railroad industries, together with the dividend yields on the basis of current dividends:—

	Prices, 1932.	Dividends.	Yield
	Low.	Present.	%
Railways.			
Atchafalpa and Santa Fe.	17 1/2	53 1/2	Nil
N.Y. Central Railway	8 1/2	29 1/2	Nil
Union Pacific	27 1/2	78 1/2	6
Industrials.			
American Smelting	5 1/2	22 1/2	Nil
American Can.	29 1/2	57	4
Allied Chemical	42 1/2	80 1/2	6
Drug Inc.	23	45 1/2	4
National Dairy Prod.	14 1/2	22 1/2	2
National Biscuit	20 1/2	42	2-80
General Motors	7 1/2	15 1/2	1
General Foods	19 1/2	30 1/2	2
General Electric	8 1/2	20 1/2	0-40
Public Utilities.			
Consol. Gas N.Y.	31 1/2	60 1/2	4
Pacific Gas and Electric	16 1/2	31 1/2	2
American Telephone and Tel.	71 1/2	113 1/2	9
United Gas Imp.	9 1/2	20 1/2	1-20

The wide variation in dividend yields suggests that income expectations count for little in the present phase of the market.

Building Society Mortgage Interest.—The Halifax, Abbey Road Co-operative, National and Woolwich Equitable Building Societies have announced this week that the rate of interest to be charged on new mortgages by the London societies will be reduced by half per cent. The "normal rate" charged by London societies has heretofore been 6 per cent. The Halifax Building Society will charge a "normal rate" of 5 1/2 per cent. to occupier-purchasers of suitable private houses in the London district. This step is the outcome of the discussions upon which we commented on in our issue of August 20th, last (page 382). Its general effect will be to bring the rates of the London societies and the rate charged in the London area by the largest society with provincial headquarters (which is also the largest society in the country) nearer to the average of the provincial societies generally. This was an obvious step. The question of modification of interest rates on existing mortgages is more difficult, and has been reserved for later decision. The significance of this week's announcement, indeed, lies less in its own content than in the grouping of the societies concerned. The last important statement of policy (involving drastic limitation of new deposits and investments) was made in July by the same four London societies, with which the Halifax has now associated itself. The five societies together, at the end of last year, held £166,000,000 of assets out of a total of £419,000,000 for the whole building society movement. It is obviously advantageous to have a species of "Committee of Action" at a time when vital decisions must be taken with maximum celerity. Where such decisions, however, closely concern the movement as a whole—this week's has chiefly a metropolitan context—it will be advantageous if additional provincial societies can be induced to associate themselves with the present "Big Five."

German Bonds.—The market in German bonds has been surprisingly firm in view of the political crisis in that troubled country. Indeed, there has been a disposition to advance prices on the theory that the Nazi movement has passed its peak and that the country will settle down to work under the decorously disguised dictatorship of the Von Papen Government. The fact that President Hindenburg has intimated that a dissolution of the Reichstag must be accompanied by another general election within the constitutional period of sixty days has not perturbed the market, which is apparently confident that if new elections are held the Nazis will lose heavily

in votes. The following table shows the improvement in market quotations over the past ten days:—

	Prices.		Flat Yield
	Aug. 23.	Sept. 1.	Per cent.
German 5½%	66	69½	£7 19 0*
German 7%	82	83	£8 8 10
Berlin 6%	45	47½	£12 13 0

* Without allowing for profit on exchange in gold interest payments.

Nevertheless, it cannot be denied that the threat of a partial moratorium or a scaling down of external interest payments hangs over the market in German Government, municipal and commercial bonds. In 1931 Germany's payments by way of interest and sinking fund on external debt amounted to about £75 millions, which was amply covered by her export surplus of £150 millions. This year, however, the export surplus for the six months on merchandise account was only £30 millions, and it seems unwise for foreign creditors to expect both to be able to keep out German goods by means of higher tariffs and to receive from Germany payments on her external debt—a fresh analysis of which will be found on page 425 of this issue—at the rate of £70-£75 millions per annum.

Textile Companies and the Strike.—The decision of some 145,000 operatives in the weaving section of the cotton industry to cease work this week (whose implications we discuss on page 419) is the more to be deplored because, since the departure of Great Britain from the gold standard, a slow but steady improvement has occurred in the fortunes of the leading textile manufacturing companies. The following table indicates how the share market has reacted to the unfavourable news:—

Name of Company.	High, 1932.	Low, 1932.	Price, Aug. 26.	Price, Aug. 29.	Price, Aug. 30.	Price, Aug. 31.	Yield %
Heacham (£1)	15/6	7/6	13/1 1/2	12/1 1/2	12/6	12/6	£ s. d.
British Cotton and Wool Dyers (£1)	4/10 1/2	2/9	4/9	4/3	4/3	4/3	4 6 0
Calico Printers (£1)	11/3	5/6	11/3	10/7 1/2	10/7 1/2	10/7 1/2	Nil
J. and P. Coats (£1)	47/3	35/7 1/2	46/3	45/-	45/-	45/-	4 9 0
English Sewing Cotton (£1)	38/9	22/-	38/9	37/6	37/6	37/6	5 6 9
Fine Cotton Spinning (£1)	18/6	10/-	16/3	15/-	16/3	16/3	Nil

Before the announcement, prices were, in several cases, at the highest of the year. The market fears of appreciably reduced earnings caused a sharp decline in quotations on Monday, followed by a moderate recovery later in the week.

Singer and Company.—The report of this company for the year to July 31st last is a perplexing document. Three months ago, in a progress report, the directors oracularly described results as "not entirely unsatisfactory." In the event, trading profits are shown to have fallen from £160,114 to £77,618, and net profit (after crediting sundry income and meeting all charges and depreciation) from £42,792 to £1,493. The directors, who

conservatively refrained from paying an ordinary dividend last year, when 2.2 per cent. was earned, are this year recommending a distribution of 5 per cent., absorbing £25,004, when earnings have not even covered preference dividend. Some £100,000 is being transferred from reserve account:—

Last year, when the price of Singer shares was 10s. 7½d., the chairman expressed the opinion that they should not be sold for less than 8s. He considered the shares "a sound and promising investment," and "the market price convincingly untrustworthy." This year a further analysis of the assets valuation is made, and shows that, after provision for all liabilities and preference and ordinary capital, there is a surplus of £356,419. The market, however, will probably persist in valuing the shares on a basis, primarily, of earning capacity, and not on an assets "break-up" figure. The company's earning power has declined continuously in the last four years, and a lengthy directors' report gives little confident indication of substantial recovery in the immediate future. Whether the company can regain its former competitive position in the market may depend considerably upon the success of the new "Singer 9" model, which began to be marketed last March. An additional debenture of £65,000 (making £200,000) has been issued, which provides the capital (£70,850) expended on jigs and tools during the year. The directors have written off from reserve account a number of fairly heavy items of past expenditure, some of which, presumably, have proved unremunerative. The present price of the ordinary £1 shares is 8s., to yield about £14 6s. per cent. on a 5 per cent. dividend.

Rubber Share Outlook.—Some remarkable share movements followed the rise in rubber from 1½d. to 8d. per pound (with a subsequent reaction to 2½d.):—

	Highest, 1927-31.	Highest, 1932.	Lowest, 1932.	Price, June 30, 1932.	Present Price.
Linggi Plantations (£1)	2½	½	½	½	½
London Asiatic (2s.)	½	½	½	½	½
Malacca Rubber (£1)	4½	½	½	½	½
United Serdang (2s.)	½	½	½	½	½
Rubber Plantations Trust (£1)	2½	½	½	½	½

The primary cause of the steepness of the rise in values has been shortage of stock, in a market which for months has been practically "dead." Some of the best producers may be able to make a small profit with rubber slightly above 8d., though whether they would be justified in paying out dividends, based on a level of costs which is abnormally low, and cannot be indefinitely maintained, is another matter. We see no reason to modify the cautious view of the outlook we expressed in a leading article a fortnight ago (see the *Economist*, August 20th, page 857). The latest figures of the Commercial Research Department of the Rubber Growers' Association show a world export of rubber, in the first six months of this year, of 857,000 tons, against an estimated absorption of crude

rubber, in the same period, of 850,000 tons. In other words, supply and consumers' demand are now approximately in equilibrium, whereas, in the first six months of 1931, exports were estimated at 898,000 tons, against a world absorption of 858,000 tons. The damping down of production in the last twelve months, however, has come almost entirely from the "native" side. Rubber production on Malayan estates, of 100 acres or over, was 119,000 tons in the first half of this year, against 113,000 tons in the corresponding period of 1931, whereas the calculated figures for small holdings were 79,000 tons this year, against 96,000 tons last year. Exports from estates in the Dutch East Indies were almost identical, at 80,000 tons, in the two periods. Dutch "native" exports, however, were only 26,000 tons, against 46,000 tons last year. A price of 8d. might not be sufficiently high to induce a significant increase in tapping in native areas, but any further substantial rise would probably bring in larger new supplies than the market could well accommodate. Rubber manufacturers in countries outside America may, in some cases, have allowed stocks to run low, but their demand, as we showed in our earlier article, has been steadily maintained throughout the depression. It is unlikely, therefore, to show a spectacular rise even in the early stages of economic recovery. Demand in America has been, and is, sub-normal, but America has 12½ months' supply in hand at her present rate of absorption, against 7½ months' supply in June, 1931. Shareholders, on the whole, may therefore be wise to discriminate carefully between the position of different producing companies, particularly as regards their costs and working capital, and to be prepared for periods of reaction after every sharp increase in share values.

Meyer and Charlton Liquidation.—This famous gold mining company, incorporated in the Transvaal in 1888, has entered the last stage of its existence. At the annual meeting, in May last, Sir George Albu pointed out that the time when the mine would be obliged to close down was very near at hand, and in the last quarterly report it was made clear that mining operations would be concluded before the end of July. In an announcement last week it was stated that meetings are to be held in Johannesburg on October 7th and October 31st next for the purpose of placing the company in voluntary liquidation. A complete clean-up of the plant is now in progress, and arrangements have been put in hand for the realisation of the plant, buildings, fixed property and all other assets. The Meyer and Charlton has had a memorably successful career. It was originally formed with a capital of £40,000 to work a property of seventeen Main Reef claims, on the farm Doornfontein. The size of the working and the amount of the capital were subsequently increased to 199 claims and £200,000, respectively. During its life of forty-five years no less than £3,855,809 has been distributed to shareholders, representing a return of 2,455 per cent., or 49½s. per £1 share.

TAYLORS (CASH CHEMISTS) TRUST, LTD.—The directors regret that, after careful consideration, they are unable to pay the full half-year's dividend due on August 31st on the cumulative preferred ordinary shares. The accounts of the company for the two years ended March 31, 1931, and March 31, 1932, showed that it was necessary to enable the full dividend on these shares to be paid, to transfer in each of these years £10,000 from the reserve to revenue account. As this reserve has now been reduced to £10,000, the directors consider that it should not be further depleted. It is, however, estimated that the profits available are quite sufficient to enable the directors to declare a dividend for the half-year at the rate of 3 per cent. per annum. The financial years of the trust's main subsidiaries, namely, Taylors Drug Company, Ltd., and Taylors (Cash Chemists) Midland, Ltd. (formerly Squire and Company (Birmingham), Ltd.), do not end until October 1, 1932, and as soon as the accounts of these companies are available, which should be towards the end of November, the directors will again communicate with shareholders. In the meantime, the directors are satisfied that all the company's subsidiaries are sound and are earning reasonable profits under the present trading conditions.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended August 27, 1932, amounted to £7,847,100 against ordinary expenditure of £4,981,400. After allocating £425,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £483,178 the operations for the week, as shown below, reduced the National Debt by £2,924,000 to £7,664,449,000:—

(000's omitted.)

Treasury Bills	+ 3,655	Public Department Advances	— 6,450
National Savings Certificates	+ 250	Issues under Finance Act, 1931	— 125
3% Treasury Bonds	+ 46	P.O. and Telegraph	— 300
	+ 3,951		— 6,875

A complete analysis of the National Debt at June 30, 1932, was printed in the *Economist* of July 2, 1932.

• REPORTS AND NOTICES

The Bank of England give notice that on and after Thursday, September 1st, fully-paid scrip certificates of 3 per cent. Treasury bonds may be lodged at the Loans Office, 5-6 Lombard Street, to be exchanged for the definitive bonds.

MISCELLANEOUS.

LAMBERT BROTHERS LTD.—At class meetings of the preference and ordinary shareholders and at an extraordinary general meeting of Lambert Brothers, Ltd., held July 26th at Southern House, Cannon Street, the resolutions embodying the proposals for a repayment of capital, and the restoration of the capital to the former figure were adopted.

BARCLAYS BANK

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,050 Branches in England and Wales.

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet setting terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:
BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

Commercial Reports.

MARKET SUMMARY.

Following last week's irregular tendency, prices of primary products at the principal commodity markets resumed their upward movement. Although speculators again accounted for a large proportion of a generally heavy turnover, consuming interests were in evidence. It appears that there has been a tendency for consumers to begin replenishing their stocks, which had been allowed to fall to a low level during the long period of declining prices. In the United States, non-ferrous metals advanced under the influence of substantial buying. Copper, lead, spelter and tin were all higher. Similarly, raw cotton shows a further advance on the week, and rubber recorded a substantial rise. Among foodstuffs, cereals recovered from last week's setback. Cocoa advanced sharply while raw-sugar and coffee maintained their recent advance. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices. An outstanding feature is the improvement in wool values, but hides and leather were also dearer. The improvement in the demand for tea was maintained, but meat and dairy produce are scarcely changed on the week. According to reports from various industrial centres, the coal trade is making little headway. Transactions in iron and steel continue on a small scale, but the increase in the number of inquiries suggests that a slight improvement may take place in the near future. The cotton industry has been disorganised by the strike. There has been no expansion as yet in the demand for wool manufactures, but business in rayon fabrics appears to have been well maintained.

THE COAL TRADE.

SHEFFIELD.—The cotton dispute is certain to injure the coal industry, especially in the small fuel department. The bulk of the boiler fuel produced in the South Yorkshire coalfield is consumed by the textile factories. Best steams for export are firm, and rather better prices than of late are current. The opening of the winter trade in house coal is disappointing. Merchants are not buying for stock in anything like the quantities usual at the beginning of September. Prices have been increased nominally, but some undercutting is reported. Demand for blast-furnace coke is as poor as ever, as sales and production of pig iron remain on a reduced

basis. Best steams for export command 17s. per ton f.o.b., best ordinary house, 21s. to 22s. at pits, and best brands of furnace coke, 9s. at ovens.

GLASGOW.—Coastwise business maintains fair proportions, but with export and home requirements small, large coal remains plentiful despite the reduction in output. The last-named circumstance accounts for a scarcity of washed nuts, which maintain firm prices. First Fife steam is about the only variety of round coal to move with any freedom. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s.; splint best, 14s. 9d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 9d.; steam, 13s.; trebles, 13s.-13s. 6d.; doubles, 11s. 6d.; singles, 10s.; pearls, 8s. 6d.-9s.; dross, 8s. 9d. FIRE.—Screened navigation, 16s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 3d.; trebles, 14s. 6d.-15s. 6d.; doubles, 12s.; singles, 10s.; pearls, 7s. 9d.-8s. LOTHIAN.—Prime steam, 11s.-11s. 6d.; secondary steam, 10s. 6d.; trebles, 14s.; doubles, 11s. 6d.; singles, 9s. 6d.; pearls, 8s. 3d. Ayrshire.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.; doubles, 11s. 6d.; singles, 10s.; pearls, 9s. 6d.; dross, 9s.

CARDIFF.—Export business in South Wales coals proceeds quietly, and so far there is no indication of the autumn revival in demand. Inquiries from France improved slightly owing to the issue of September licences, but from other markets business matured very slowly. The South Wales Coal Exporters Association has been informed that there is no truth in the report that the Polish coal import quota into France has been increased, and under which Polish imports would be increased from 40,000 to 100,000 tons per month. Restrictions on the Continent are proving a serious handicap to the export trade, and the exporters are awaiting a reply to a request that the Government should receive a deputation which is to urge action to secure reciprocal trade agreements aiming at a removal of restrictions. In the anthracite trade, shipments are proceeding actively to Canada. Approximate current prices per ton f.o.b. are as follows:—Best Admiralty, 19s. 6d.; second best Admiralty, 19s. to 19s. 4½d.; ordinary Cardiff, 18s. 3d. to 18s. 6d.; best dry, 18s. 6d. to 18s.; ordinary dry, 17s. 9d. to 18s. 3d.; Monmouthshire Black Vein, 18s. 3d. to 18s. 6d.; Monmouthshire Western Valley, 17s. 9d. to 18s.; Monmouthshire Eastern Valley (best), 17s. 7½d.; Monmouthshire Eastern Valley (ordinary), 17s. 3d. to 17s. 6d.; best steam smalls, 13s. 6d.; good bunkers, 12s. 6d. to 13s.; cargo smalls, 11s. 6d. to 12s. 6d.; inferior qualities, 11s. to 11s. 6d.; dry nuts, 23s. to 26s.; foundry coke, 20s. to 22s. 6d.; furnace coke, 16s. to 18s. 6d.; patent fuel, 20s.; anthracite 6d.; best large, 36s. to 38s. 6d.; Red Vein large, 27s. to 34s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.

NEWCASTLE-ON-TYNE.—With the approach of autumn it is expected that there will be an increase in the home demand for Northumberland steams. There is, however, little prospect of an increased inquiry in the export market, and the latest ascertain- ment for this county shows a considerable fall in output due to the decline in this section of the trade, which has affected the economic yield so seriously. In Durham there are a few inquiries circulating for gas coals, principally from Scandinavia, but there is little volume, and it is with the utmost difficulty collieries can maintain a full working week. Bunker trade remains very quiet, the prime brands being offered at 13s. 6d. per ton f.o.b. the usual bunkering points. The prime brands of foundry coke remain steady on the basis of 16s. f.o.b. To-day's f.o.b. prices for export are as follows:—Northumberland: D.C.B. screened steam, 13s. 6d.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin, screened, 13s.; smalls, 8s.; Tyne prime large, 12s. 9d.; smalls, 9s.; Hartley Main large, 12s. 6d.; smalls, 8s. Durham: Lambton, South Hetton, screened steam, 15s.; smalls, 11s.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s.; coking unscreened or smalls, 12s. 6d.; prime un- screened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.; prime foundry coke, 16s.; Newcastle and District gas coke, 18s.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland pig iron continues depressed, and there are no signs of an early improvement. Local requirements are on a reduced scale, and there are few sales to Scotch consumers, in spite of the substantial concessions in prices. Similarly, the export trade is on an exceedingly low scale. Only a moderate business has been transacted during the week, and on Tuesday the weekly market was quiet, although the tone was somewhat improved. Makers announced no change in the official prices, which remain No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. with special concessions for Scotland. The hematite market is also quiet, and only small sales are reported for early delivery. There are still only three furnaces producing this class of iron in the district, but the two at Ayresome Works will be started during September. Makers have been booking ordinary mixed numbers for early delivery at 60s. per ton, but consumers are not yet tempted to enter into forward purchases, for which slightly more is asked, following the improved tone in the steel trades. Shipments of pig iron are a little ahead of last month, the total to 30th inst. reaching 7,275 tons, against 6,388 tons for the whole of July. In the finished trades new business is of small volume, and several departments are badly in need of new orders. Cargo Fleet Iron Company, Ltd., have secured orders for 1,430 tons tramway rails for Liverpool, and 180 tons for Sheffield. A few orders have been secured by other firms for bridge work, &c., which will involve two or three thousand tons of steel material. Prices are generally unchanged from last week, except that 24-gauge galvanised corrugated sheets are now quoted 5s. dearer at £9 7s. 6d. f.o.b., owing to the advance in the price of spelter. The ore market continues practically stagnant. Best rubio is nominally 14s. 6d.

c.i.f., and the freight Bilbao/Middlesbrough is 4s. 3d. Coke is freely offered, and is weak in price at 14s. 6d. delivered at the furnaces. The number of furnaces in blast in the district remains at 15.

SHEFFIELD.—The construction of the new cruisers for the Admiralty will bring a certain amount of work to Sheffield in the shape of armour plate and steel castings and forgings. This district, however, no longer possesses a monopoly in heavy armament work. Apart from this feature, the local trade position is unchanged. In all branches a condition of lifelessness prevails, with no signs of an early recovery. Unemployment tends to increase. In the Lincolnshire district the largest steel works is running full time, the others reporting "no change." Makers of finished goods report that export business is still being crippled by embargoes on the export of currency imposed by overseas Governments. The withdrawal of the prohibition of the import of silver and electro-plated goods into Australia is good news for the trade concerned. The embargo was imposed two and a-half years ago, and during that period no silver or plated table ware (except spoons and forks) has entered the Commonwealth, causing a serious loss of turnover to a number of local firms. The Birmingham district will also benefit by the concession. The plate and cutlery industries are still in the dead season. Buying usually sets in during the first week in September, and there should be increased work forthcoming next month.

GLASGOW.—The official announcement that the contract for the machinery for one of the three new cruisers of the 1931 naval programme has been placed with Messrs. Beardmore, of Dalmuir, was welcome news, and there are expectations that further orders will be placed with Clyde yards at an early date for vessels for which tenders have already been submitted. Quite an important volume of ship repair work is at the moment on hand at Clyde yards. At the steel plants there is much unemployment owing to the absence of shipbuilding specifications, but the feeling seems to be general that work will be more plentiful during the coming winter. Continental prices, both of semis and finished steel products, are firmer, and little business is being done here with Continental makers. At the tube works business remains quiet, although here also there are more inquiries on the market, and increased export trade is anticipated. Sheet makers are better placed than many other branches, but there is still much idle plant. Local machinery makers are fairly well employed, and recent bookings are satisfactory.

CARDIFF.—Steady conditions prevail in the Welsh steel and tin-plate industries, and prices generally remain unchanged. The 33½ per cent. duty on foreign bars appears to be having some effect. There is practically nothing doing in this market, the quotation being nominally 78s. to 80s. per ton delivered. Welsh bars are 95s. per ton net delivered South Wales and Monmouthshire, and tinplates remain at 15s. to 15s. 3d. basis, with high speed canning plates being 1s. basis extra. Galvanised sheets, corrugated in bundles, 24-gauge, are slow at £9 per ton f.o.b. Last week 52,486 boxes of tinplates were exported, as against 74,282 boxes in the previous week, and 85,814 boxes in the corresponding week of last year.

OTHER METALS.

TIN.—The market in tin opened on Monday with a strong demand at advancing prices, which were maintained on Tuesday, despite a smaller turnover. On Wednesday, profit-taking caused a slight reaction. Sales on the London Metal Exchange totalled 1,225 tons on Monday, against 100 tons last week, 800 tons on Tuesday, against 500 tons last week; and 750 tons on Wednesday, against 375 tons. In New York the metal was quoted at 23.80 cents per lb. on Wednesday, against 23.00 cents per lb. a week ago and 21.90 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £148 to £148 2s. 6d. per ton, compares with £142 15s. to £142 17s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,580 tons, show an increase of 59 tons on the week.

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

And at NEW YORK, PARIS and ANTWERP

COPPER.—Following a slight improvement in the demand for copper in the United States, prices rose at the London Metal Exchange, reaching the highest level touched since February. Sales at the London Metal Exchange totalled 1,200 tons on Monday against 1,700 tons last week, 2,100 tons on Tuesday, against 1,600 tons last week, and 1,700 tons on Wednesday, against 1,850 tons. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £35 15s. to £35 17s. 6d., compares with £34 5s. to £34 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 18,198 tons, show an increase of 1,034 tons, while stocks of rough copper, at 969 tons, were 50 tons larger.

LEAD.—The London market in lead was subject to considerable speculative activity this week. Turnover was heavy, and prices rose substantially. Sales at the London Metal Exchange totalled 1,000 tons on Monday, as compared with 50 tons on the corresponding day last week, 1,600 tons on Tuesday, against 900 tons, and 2,500 tons on Wednesday, against 500 tons. In New York the metal was quoted at 3-60 cents per lb. on Wednesday, against 3-40 cents a week ago and 2-95 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £13 8s. 9d. per ton for shipment during the current month, compares with £11 15s. on the corresponding day last week.

SPELTER.—Spelter, too, was in good demand at advancing prices. Sales totalled 1,200 tons on Monday (against 350 tons last week); 1,000 tons on Tuesday (against 800 tons last week), and 600 tons on Wednesday (against 600 tons). Wednesday's quotation in New York, at 2-75 cents per lb., compares with 2-75 cents a week ago and 2-50 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling, for "good ordinary brands," was £14 2s. 6d. for shipment during the current month, against £13 17s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and platinum have been maintained at £95 per ton and £9 15s. per ounce respectively. Nickel was again sold at £240-£245 per ton. Foreign antimony again changed hands at £24 15s.-£25 5s. per ton, against £23 10s.-£24 10s. a week ago. Quicksilver remained unchanged at £9 7s. 6d.-£9 12s. 6d. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week August 26th to 31st (inclusive) are 7,406 bales, of which 970 are American, 678 Peruvian, 3,836 Argentine, 480 African, 1,218 East Indian and 197 sundries.

Manchester.—Conditions in the market during the past week have been very unsettled. The strike in the weaving section has disorganised business. The reaction in raw-cotton rates after the stiff advance has also had a disturbing effect. The general situation has been against activity and there are not likely to be any favourable developments until the outlook is clearer. India merchants have welcomed the revision of the import duties, and, but for the strike, trade would probably have broadened. A very fair inquiry has come through for Calcutta, Karachi and Bombay, and some useful contracts have been arranged in light fabrics and fancies. Most of the demand for China has been for dyed goods. Stock lots have attracted rather more attention for several outlets, but in all directions difficulties have been experienced in arranging contracts. The labour deadlock is regretted, and it is feared that a settlement will not be reached in less than a month. Very irregular conditions have prevailed in the yarn section. A restricted turnover has taken place in American and Egyptian counts for home consumption, but rather more demand has been about in fine numbers for export purposes.

THE WOOL TRADE.—Bradford.—The outstanding event during the past week, writes our correspondent, was the opening of the Australian selling season at Sydney. As there has been a substantial advance in values compared with the close of the previous season, a good lead has been given to the consuming end, both in Yorkshire and on the Continent. It is also an encouraging sign for the commencement of the South African selling season next Monday. There is not a big offering for the Port Elizabeth sale, and, judging from the interest shown on French account in the balance of the old clip, as well as the general outlook for the disposal of merino supplies, there should be some fairly keen competition. As regards Sydney, prices have remained quite firm since the opening, and the cost of tops is about ½d. to 1d. per lb.

above the selling price here. The chief benefit derived from the strong opening of the season is that there is a better prospect of the stocks of fine wool belonging to last season being absorbed without loss. The complaint of spinners and manufacturers is that the movement is coming chiefly from the raw material end. Reports from worsted manufacturers in various parts of Yorkshire are rather discouraging. They are not yet getting anything like the amount of new orders sufficient to keep their machinery running full time, and it rather looks as if it will be a woollen season next year, so far as manufactured goods are concerned. The Bradford market for tops and yarns is rather quiet, but it is possible to make rather more money for both average and super merino combings; 58-60's are exceedingly firm, and here and there better prices have been realised, as these qualities are scarce.

THE GRAIN MARKETS.

WHEAT.—The international wheat markets have been a little more active, and quotations have hardened in view of the almost general advance in prices. Import requirements have been satisfied chiefly by Canada. The international wheat outlook is now becoming a little clearer as the number of countries, whose current production is known, is steadily increasing. Thus, according to the International Institute of Agriculture, the European harvest (excluding Russia) will exceed last year's by about 4½ million quarters. The crop has been a partial failure in the chief European exporting countries, but the chief importing countries (France, Germany and Italy) all show an increase in yield. According to Mr G. Broomhall, the world's visible supply at the end of the season (July 31st) amounted to 408 million bushels, as compared with 462 million bushels a year ago, and 411 million bushels in 1930. On Wednesday, "September" futures were quoted at 52½ cents per bushel in Chicago, against 50½ cents on the corresponding day last week and 50½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 30s. per 496 lbs., as compared with 29s. 3d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s., against 28s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 9d., against 28s.; Australian, ex ship, 29s., against 28s. 9d. a week ago.

WHEAT FLOUR.—There has been a more active demand for flour and American export prices have been raised. North American shipments, at 185,000 sacks, showed an increase of 51,000 sacks, as compared with the previous week. Of this total, 64,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 24s. 6d., against 24s. 6d. Manitoba patents, ex store, 25s. 6d. to 28s., against 25s. 6d. to 28s.; and Australian, ex store, 19s. 9d. to 20s. 6d., against 20s. to 20s. 6d. a week ago.

BARLEY.—Feeding barley has been in better demand on the Continent and in this country. Russia and Danubian exporters supplied the larger proportion of requirements. On Wednesday, "October" futures were quoted at 32½ cents per bushel in Winnipeg, against 31½ cents last week and 33½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 24s., as compared with 26s. to 27s.; "River Plate," landed, 23s. 6d., against 23s. 6d. a week ago.

OATS.—Business in oats has been on a small scale on the Continent, but a little more interest was shown in the cereal in this country. "September" futures, which last week stood at 15½ cents per bushel in Chicago, sold at 17½ cents per bushel on Wednesday this week, against 17½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 3d. per 320 lbs., as compared with 18s. last week; "River Plate," ex ship, 17s. 6d., against 17s. 3d.; "Chilean White," landed, 23s. to 24s. 6d., against 24s. to 25s. a week ago.

MAIZE.—The declining tendency in the demand for maize which became noticeable recently has not been arrested. Nevertheless, quotations were slightly higher than a week ago, owing to the absence of selling pressure by Argentine exporters. Wednesday's quotation in Chicago for "September" futures, at 30½ cents, shows no change on last week, but a fall of 1½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 20s. 7½d. per 480 lbs., compared with 20s. 6d. last week; "Plate," ex ship, 19s. 7½d., as against 19s. 6d.; "Plate," September-October, 20s. 1½d., as against 19s. 10½d. Yellow maize, ex wharf, was quoted at £5 17s. 6d. per ton, against £5 17s. 6d. a week ago.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to August 27	Cwts. 40,854	Cwts. 21,500	Cwts. 103,890	Cwts. 137,370
52 weeks to August 27	3,878,606	4,974,713	9,808,016	9,967,256
Average price of English wheat per cwt.	s. d. 6 2	s. d. 6 3	s. d. 8 3	s. d. 10 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Aug. 20, 1932	Cwts. 26,233	Cwts. 3,518	Cwts. 7,667	s. d. 6 7	s. d. 6 9	s. d. 7 6
Aug. 27, 1932	40,854	9,003	16,148	6 2	7 5	6 11
Aug. 25, 1928	80,132	122,300	51,024	9 9	14 0	9 4
Aug. 24, 1929	60,511	15,907	26,544	11 5	9 10	8 10
Aug. 30, 1930	103,890	8,360	29,296	8 3	7 3	6 2
Aug. 29, 1931	21,500	2,625	6,751	6 3	9 2	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Sept. 2, 1931.	Jan. 4, 1932.	Aug. 24, 1932.	Aug. 31, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	56½	52½	62½	55	56
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	45½	55½	50½	52½

The visible supply of wheat in Canada, at 64,469,000 bushels, shows an increase on the week of 334,000 bushels. Supplies a year ago stood at 50,954,000 bushels.

OTHER FOODS.

SUGAR.—There was a lull in the principal raw-sugar markets during the past week. Despite the smaller demand, prices were well maintained. "September" futures in New York were quoted at 1-09 cents per lb. on Wednesday, against 1-08 cents per lb. a week ago, and 1-00 cent per lb. a month earlier. Wednesday's week ago, and 1-00 cent per lb. a month earlier. Wednesday's sales of "raws" in London include "December delivery" at 6s. 5½d. to 6s. 6d. per cwt., against 6s. 5½d. to 6s. 6d., and "March, 1933," at 6s. 7½d. to 6s. 8½d., against 6s. 7½d. to 6s. 7½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	581	43	470	946	11,023	25,214
Liverpool	13,892	8,191	15,297	14,271	79,044	69,093
Total	14,473	8,234	15,767	15,217	90,067	94,307
Last week	17,160	11,898	16,173	14,069	91,361	101,290

COFFEE.—The New York market in coffee has been steady, and prices fluctuated within narrow limits. On Wednesday, Rio No. 7 (oash) was quoted at 8½ cents per lb., against 8½ cents a week ago. Tuesday's London auctions comprised only 1,030 packages, which were partly sold at steady prices. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 294 bags; exported, 72 bags; stocks, 17,178 bags, against 1,790 bags last year. Central American, landed, 362 packages; delivered for home consumption, 1,710 packages; exported, 1,862 packages; stocks, 93,872 packages, against 94,478 a year ago. Other kinds, landed, 185 packages; delivered for home consumption, 2,214 packages; exported, 1,731 packages; stocks, 66,760 packages, against 75,122 a year ago.

COCOA.—Cocoa prices rose sharply on heavy buying at the beginning of the past week. On Monday, sales in New York amounted to 178,000, and on Tuesday to 128,000 bags. "September" futures were quoted at 4-60 cents per lb. in New York on Wednesday, against 4-43 cents per lb. a week ago and 4-33 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 29s. 6d. on per cwt., c.i.f. Continent, shows an advance of 1s. 3d. per cent. on the week. Last week's movements of cocoa in London were as follows: Landed, 2,609 bags; delivered for home consumption, 4,296 bags; exported, 136 bags; stocks, 152,246 bags, as against 212,236 last year.

TEA.—The quantities catalogued for this week's auction comprised 59,403 packages of Indian, and 29,719 packages of Ceylon tea. Monday's "Indian" auctions were characterised by a general demand for all qualities. At the "Ceylon" sales on Tuesday, common and finest grades were well supported, but medium qualities

were neglected. On Wednesday, "Indian" teas again found ready buyers. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasaland.
Aug. 27, 1931	d. 14-97	d. 7-84	d. 14-73	d. 6-45	d. 6-45	d. 4-89
July 28, 1932	7-58	6-75	8-39	5-04	5-00	6-53
Aug. 11,	7-71	6-61	8-07	4-71	4-22	6-28
Aug. 18,	9-75	6-36	7-92	4-83	4-45	6-20
Aug. 25,	10-50	6-65	8-22	5-22	4-53	5-94

RICE.—The market in rice was active, and prices advanced under the influence of a good demand. Wednesday's "spot" price, at 10s. per cwt., shows a rise of 6d. per lb. on last week, while forward positions, at 8s. 4½d. per cwt., show a rise of 4½d. per cwt. Movements in London during the past week were as follows: Landed, 15 tons; delivered, 104 tons; stocks, 2,636 tons, as against 939 tons last year.

POTATOES.—The principal markets were well supplied with potatoes, but demand was less brisk. At the London Borough Market, "King Edward" was sold at 5s. to 5s. 6d. per cwt., against 5s. to 5s. 6d. per cwt. last week and 5s. to 6s. per cwt. a fortnight ago.

SPICES.—The market in "spot" pepper was quiet, but "forward" business was more active at higher prices. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the corresponding day last week. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 6 tons; stocks, 329 tons, against 573 tons last year. White, landed, 20 tons; delivered, 46 tons; stocks, 421 tons, against 512 tons a year ago.

MEAT.—The past week's meat quotations at the Smithfield Market show little change on the week, and Argentine beef has not recovered from the recent fall in its price. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 6d. to 4s. per 8 lbs., against 4s. to 4s. 8d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 2s. 10d., as against 2s. 2d. to 2s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,179 tons, as compared with 8,050 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86·3 per cent. of the supplies, as against 85·4 per cent. a year ago; and imported mutton, mainly New Zealand, formed 75·3 per cent. of the total supply, as against 77·7 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Rather better, though somewhat irregular conditions prevail in the markets as a rule and a fair volume of trade is reported. Linseed is slow on United Kingdom account, but a fair business has been done to Continental destinations. Demand here has been mainly for seed afloat or shipping, and values have advanced to £8 17s. 6d. for Plate on spot and passage, and £8 15s. October loading, with September at a slight discount. Indian linseed is more or less neglected, and Calcutta to London is held for £11. The quantity of linseed afloat for Europe has undergone further reduction, and at 164,800 tons is 14,200 tons less than last week, and compares with 157,300 tons a year ago. How the proposal to give Indian linseed a 10 per cent. preference would work out in practice is open to doubt, since India's production of linseed is only one-fifth that of Argentina, whence our main supplies are drawn. Cottonseed is in very poor demand, and old crop Egyptian, after some fluctuations in sympathy with Alexandria, has again declined, current value being around £7 2s. 6d. No transactions in new crop are reported. The feature of the market for vegetable oils is the sharp advance in linseed oil, which has gained £3 per ton in a month. Raw oil for September delivery, ex Hull mill, is now quoted £15 12s. 6d. per ton, naked, and October-December £15 15s. Cotton oil is very quiet, but steady. Crude Egyptian, ex Hull, being held for £23, and refined for £25. Oilcakes are in fair demand, and late mill prices are upheld.

HIDE, LEATHER AND ALLIED TRADES.—Further advances in prices for hides and skins from home slaughtered cattle were recorded at the auctions held this week, most weights of ox and heifers at

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

the Manchester sales making 1d. per lb. more money. All cows advanced 1d. per lb., while the lighter weights in calfskins realised more money. The market at Leeds was, if anything, firmer than that at Manchester, as in the case of the former an advance of 1d. per lb. was made on several weights. There has been very little improvement in the position of sheepskins, the market for leather made from this type of raw material continuing quiet. Although orders from tanners in this country for imported hides have not not been large, there has been sufficient business forthcoming from other quarters to maintain values at a very firm level. In the South American market sales of Argentine ox have been made at 4 1/2d. per lb., while just under 4 1/2d. has been paid for cows, and the same figures for Montevideo ox. Dry hides from the same source have also ruled firm in price, with B.A. Americanos quoted at 5 1/2d., Inservibles at 3 1/2d., and Cuyabanos at 4 1/2d. African hides have been disposed of at 5 1/2d. and 4 1/2d. for first and second drysalted Copes, with 1d. per lb. more asked for the same selections of drys. For unbathed Adis Abebas sellers are now asking for 4 1/2d. to 5d., and the former figure for Mombasas, while heavy Nigerians are offered at 6d. A fair amount of business has been done in Australians, and prices are somewhat higher. A steady trade has again been done in most descriptions of leather this week. The call for English and wet-salted bands has covered most weights, and it would seem that quite an appreciable amount of stock has been moved off. Light weight dry hide bands have not been quite such a good market, but a trifle more interest has been taken in some of the heavier selections, with a moderate amount of business done. The market for rough offal has again ruled quiet, but further improvement has taken place in sales of pinned sorts, both bellies and shoulders being wanted. Trade in upper leathers has been confined chiefly to box and willow calf and glazed kid. For the former inquiry has come to hand more freely for some of the heavier grades, in addition to which slightly better business has been passing for certain lines of patent. Reptile skins are not an active market, but at the same time something in this direction is being done all the time, as is also the case with other lines of fancy upper leather.

RUBBER.—The market in rubber was again very active, and under the influence of a strong demand the quotation was driven up to 8d. per lb. In New York, Wednesday's spot price for rubber,

at 4 1/2 cents per lb., shows a rise of 1/2 cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2 1/2d. per lb., against 2 1/4d. per lb. on the corresponding day last week. In forward positions, business has been done at 3 1/2d. to 3 3/4d. for April-June, 1933, as against 2 1/2d. to 2 3/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 931 tons; delivered, 959 tons; stocks at the end of last week, at 104,500 tons, show a decrease of 28 tons as compared with the preceding week.

Last week's Treasury bills went at an average tender rate of 18s. 4.99d. per cent., against 16s. 7.45d. per cent. the week before. Subsequently "hot" Treasury bills were dealt in at $\frac{1}{2}$ per cent., but the rate quickly sagged until by Thursday it stood at $\frac{3}{4}$ per cent. for both buyers and sellers. Only a few bills were taken by the clearing banks, and the rate has been driven down by competition inside the market—competition which responsible market opinion regards as harmful and unnecessary. October and November Treasuries were quoted at $\frac{1}{2}$ per cent. The general rate on three months' bank bills was $\frac{1}{2}$ per cent., but there was some special buying at $\frac{1}{4}$ per cent., and this rate was heard of in one or two other quarters. Standstill bills were quoted at $\frac{1}{2}$ -2 per cent.

This week's Bank return records two wide changes. The first is a reduction of £13.1 millions in Public Deposits from £20.7 to £7.6 millions, balanced by an increase of £12.0 millions in Bankers' Deposits from £79.5 to £91.5 millions. These changes largely represent the payment of the Victory Bond dividend and the repayment of drawn bonds at the beginning of the month, against which the Government had been accumulating funds during August. They are also explained by the very common discrepancy in date between Treasury bill payments and maturities. In fact, while Public Deposits are now on the low side, they are much nearer their normal size than they were a week ago.

The other movement in the Return is of greater interest. It consists of a reduction of £11.1 millions in Other Securities held in the Issue Department balanced by an equivalent increase in Government Securities. The movement is the first large one of its kind to occur since the transfer of *devisen* from the Issue Department to the Exchange Equalisation account at the beginning of July, and is very likely explained in great degree by the repayment of the franc bills, amounting to about Frs. 2,500 millions and due on September 10th, issued by the British Treasury in support of sterling a year ago.

It is obvious that preparations for their redemption have had to be made several days ahead, and that these preparations involve the mobilisation of the francs required for this operation. These francs have for some time probably been in the possession of the British authorities, being held either by the Bank of England or by the Exchange Equalisation Account; but it has probably been necessary to transfer them to some special account which can be drawn upon for the repayment of the bills. To the extent that francs have had to be withdrawn from the Bank's holdings of *devisen* in the Issue Department, the decrease in Other Securities is readily explained, and as the total fiduciary note issue is unchanged, the void has been made good by Government Securities.

The main feature of the foreign exchange market this week has been the strength of sterling, and on Thursday there were signs of a little official buying of dollars. Normally sterling should be displaying weakness at this time of year, but the seasonal demand for dollars is being offset by the repatriation of profits earned in the recent Wall Street activity, by sales of dollars by commercial interests who had over-estimated their needs, and possibly by the flow of foreign money to England due to the general con-

fidence in British financial stability. The strength of the Canadian dollar possesses no particular significance, but probably reflects short-money movements from New York to Montreal, or possibly transfers in connection with loan operations.

At the half-yearly General Court of the Bank of England, to be held on September 22nd "to consider of a dividend," certain changes in the by-laws will be proposed. These are (a) to require that candidates for the office of Governor, Deputy-Governor or Director be previously nominated; (b) to authorise the exclusive employment of any Member of the Court at a salary; and (c) to amend certain out-of-date administrative provisions. The only one of interest is the second. It is clearly desirable that the Bank shall be free to employ anyone best fitted to act for it, regardless of the salary that it has to pay, and the present limit of fees payable to a Member of the Court to £500 is obviously inadequate.

Money remains easy in New York. Ninety-day bankers' acceptances are still quoted in the open market at $\frac{1}{2}$ per cent., while the increased stock market activity has not affected call rate, which remains at 2 per cent. Both these rates have not altered since July. According to the New York Stock Exchange calculations, brokers' loans expanded during August by \$99.0 millions, the closing figure for the month being \$331.7 millions. These figures show that most of the recent buying of stocks has been for cash and not on margin. Gold imports for the week amount to \$2.1 millions, of which \$1.3 millions came from England. There were no exports, but \$12.2 millions of gold was released from ear-mark on foreign account, so that there was a total gold gain of \$13.5 millions. This week the Treasury carried through its second financing operation of the year. This took the form of \$750 millions of 5-year $3\frac{1}{2}$ per cent. notes and \$400 millions of one-year $1\frac{1}{2}$ per cent. notes. This offer met with a better reception than had been expected, and was over-subscribed.

The exchange market was quiet during the past week, but turnover was slightly more active than recently. Sterling was in demand in most centres. The New York rate rose to 3.50 on the 8th inst., and after a slight reaction was at 3.49½ against 3.46½ a week ago. Montreal continued in demand, and closed at 3.85. Paris was steadily on offer throughout the week, and closed Fr. $\frac{1}{2}$ up at 89½. Heavy sales of Belgas took the rate to 25.23 as compared with 24.97 last week. The Milan rate moved up to 68½, and Amsterdam to 8.71. Berlin at 14.70 showed a depreciation of 14 pfennigs on the week. Madrid was slightly more on offer at 43.7½. Switzerland was strongly offered against sterling, and the rate closed at 18.11. Among the Scandinavian exchanges Stockholm was slightly more offered at 19.49, and Oslo was steady at 19.94. Copenhagen reacted after the sudden depreciation a week ago, and was 4 öre better at 19.31. In the Far East the rupee was steady at 1s. 6½d., and the yen gained further ground at 1s. 4½d. Batavia was quoted at 8.76. The South American exchanges remained nominal, Buenos Aires being 84½d. and Rio 5½d. sellers, with Monte Video unchanged at 29d. Forward dollars were offered at discounts of $\frac{1}{2}$ cent and $\frac{1}{4}$ cents for one and three months respectively. Paris forwards moved to discounts of 3 cents and 8 cents, it being reported that this market is carrying a bull position in sterling. Forward Belgas were freely offered, and moved to discounts of 10 and 30 centimes for the one and three months periods. Milan was quoted at discounts of $\frac{1}{2}$ lire and $\frac{1}{4}$ lire. Forward pesetas remained at last week's levels. Forward Amsterdam and Switzerland were quoted at par. Silver continued to improve, but closed below the best at 18½d. for spot and 18½d. for forward delivery. Hong Kong was at 1s. 4½d. and Shanghai 1s. 9½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

NATIONALISM v. RECOVERY.

"Europe is preparing for another great war! It is useless to say that the peoples of the world would not endure another conflict. . . . The inherent wickedness of man, the restless ambitions of vigorous nations, the memories of quarrels and injustices which history has bequeathed to us—give the cause what name you like—there is in human nature an ungovernable urge to war.

"When the war comes we are likely to be involved in it. . . . Our position will then be one of deadly peril.

"The lesson of all this is plain: We must learn to grow our food at home before our enemies teach us to starve at home! . . . All that is needed is a realisation of the danger. . . . We can begin to make Britain self-supporting now!"

Thus Lord Beaverbrook in his Sunday journal.

What the Dominions, who have been persuading us to rely to an increasing extent for our bread, butter and meat upon supplies from the most distant parts of the world will think of this new version of Imperial Free Trade can well be imagined. There is little enough excuse in these days for public men in any country to imagine that the doctrine of "autarchy" can lead to anything but a most serious setback to the standard of living of civilised peoples. There is no excuse at all for a British publicist, with the lesson before him of the Great War, in which the international extension of our economic life was the rock which proved the main support of the Allies, who were financed by our foreign investments and fed and provisioned with the materials of war by our merchant marine.

At the same time, it would be a fatal mistake for statesmen to ignore the existence of a frame of mind of which Lord Beaverbrook is one of the few representatives in this country. Mass misrepresentation of the situation and intentions of other nations, for example, among the 150 millions of Russia—where the use of gas masks is part of the curriculum of schools and associations of young people—is creating a psychology of suspicion which it will require very great wisdom and patience to eradicate. At the other extreme, in spite of the lessons of the recent past, the conception is still widespread among the people of the United States that they should leave the world to stew in its own juice and devote themselves to exploiting and living on their own economic resources.

It is, however, natural that an international outlook and its expression in the policy of nations should make least headway in great Continental masses, as contrasted with those parts of the world where nations live cheek by jowl, or whose main frontier is the sea. If the Nationalism to which Lord Beaverbrook gives expression is to be broken down, it must be done in the main by the influence of the peoples of Western Europe and of the maritime nations. It is for this reason that the future of the world largely depends upon events in Germany and her relations with the rest of the world.

The text of the statement in which Germany has once again put forward her claim for equality of status in armaments was published in Berlin on Tuesday. This document, on the main theme of which we commented last week, puts forward the German claim in moderate terms. Its main thesis is not, as has been so freely suggested, that Germany should re-arm to the level of other nations, but that other countries should carry out the intention, declared by the Allies in 1919, before the signing of the Versailles Treaty, to reduce their armaments and bring them into relation with those that were then imposed upon Germany. Following what is believed to be the general line of the conversations that took place last April in Geneva, Germany indicates that the time has come when, as a recognition of her equality of status, the same instrument should govern both her own and other nations' armaments, and the general principles applied to German armaments should apply to other countries—a condition which the Disarmament Conference has not yet achieved. Further, she expresses the wish that in a new agreement

her own system of defence should be modified more in accordance with what she holds to be her national requirements, having regard to the economic and social character of the country and the maintenance of internal law and order, but in the belief that later conventions will produce successive reductions in the armaments of the highly-armed States, she clearly indicates that she does not immediately demand an equality in numbers. She is, moreover, prepared to discuss plans for ensuring the security of all other States. If this document stood alone it would make a very powerful appeal to reason, and, indeed, its general thesis is one with which this country should most certainly associate itself. But, unfortunately, it has been accompanied by statements, notably by General von Schleicher, emphasising significantly what would be done for the defence of East Prussia in a manner suspiciously like the sabre rattling of pre-war days. This sort of invasion talk in East Prussia, which a *Times* correspondent reminds us was once roundly condemned by Herr Braun "as a criminal form of playing on the nerves of the population for political ends," is, in part, no doubt, the result of internal politics, and in part due to national strain and irritation. Although all Germans are keenly anxious for recognition of equal status, a great mass of opinion in Germany is fortunately still suspicious of anything that would lead back to military adventure.

Similarly, if we look at the economic sphere we find the German Government declaring, and doubtless with entire conviction, that Germany, for whom "autarchy" contains no hope of salvation, must devote her whole endeavour to re-creating a position for Germany in the international economy of the world. But almost at the same moment she is imposing additional duties on industrial imports, and taking steps to restrict her agricultural purchases. It may be, as our Berlin correspondent suggests in a later column, that the former represents a manoeuvre for position in negotiating with Great Britain; but all these incidents illustrate that in Germany, as in other countries, these rival influences towards nationalism on one hand, with all its dangers to the world, and the re-establishment of an international order on the other, are struggling for mastery.

The forces in favour of international co-operation are stronger than ever before in history. Indeed, although it sometimes seems that our scientific achievements occasionally run away with us and get beyond our control, they are inevitably leading to an international civilisation, and we must find a way to organise it. But if this secular trend is not to suffer a prolonged setback, it is clearly the first task of Governments to create the international conditions necessary for revival, and further, by acting quickly, to generate in the minds of the public a confidence that this reconstruction of international life is not only possible, but will, in fact, be accomplished.

Let us add that this is not a matter that concerns only the political field. At the moment the markets of the world are showing an upward trend and people are beginning to ask whether this is the end of the great crisis, or whether it is merely a temporary reaction from excessive pessimism which will once more fade away into dull depression. Whatever the answer to this question, it must be obvious that no final recovery can take place in the presence of political unrest, or in the face of economic policies destructive to international trade. Failure to grapple with these difficulties; the propaganda which keeps alive suspicion and distrust; inability to understand and meet the preoccupation of nations with whom we have to live and trade—these things will destroy the effect of the most carefully-thought-out endeavours in the financial or industrial field. As to which road we take—whether humanity is to accept the fatalism of Lord Beaverbrook or courageously to control its own destinies—is an issue which affects the personal future of every business man, investor and wage earner. It is a question to which he can personally help to supply the answer.

"A BARREN CONFERENCE."

"It's an ill wind that blows nobody any good," is an adage that may well be on the lips and in the minds of the organisers of the Trade Union Congress, which has been in session this week at Newcastle-on-Tyne. This gathering promised to be one of the dulllest in the long series of annual "chatauquas" held by the Trade Union movement, and it was only the ill-wind of the cotton strike which blew into it any appearance of topical interest. Circumstances had, indeed, seemed to conspire to rob the Newcastle Conference of any outstanding importance either politically or industrially. Politically the National Government is more firmly in the saddle than ever. The achievement of a Reparations agreement at Lausanne, and our Prime Minister's personal share in that achievement, initiated a rise in the Government's prestige, which was effectively accelerated by the triumph of War Loan conversion, while it has even proved possible to persuade a large section of the Press that the result of Ottawa was a success for the British Cabinet. At the same time the political Labour Party shows no signs of recovering its strength from the shattering blows dealt to it last autumn. It lacks leadership, is barren of constructive ideas, and deficient in new blood. The vitality essential for quick recovery from overwhelming defeat is not in evidence. New programmes attractive enough to banish from the public mind the failures of the last Labour Government are not forthcoming. All this being so, the prospect of the continuance of the National Government in office and of the Labour Party in the wilderness for a long spell is becoming every day more certain.

On the industrial side the long continuance of the economic depression and the prevalence of large-scale unemployment have inevitably sapped the strength and drained the resources of organised labour and reduced the membership of its various units. It was inevitable, therefore, that the delegates at this week's meeting should assemble in a spirit of dullness and discouragement, and with the expectation of listening to nothing more than the story of a dismal year and passing pious resolutions on the inefficacy of the capitalist system and the impotence of the present Government to cure economic diseases. It was solely the coincidence of the conference with the deplorable struggle in the Lancashire cotton industry that gave the delegates the opportunity to stifle their yawns and pledge their support to their cotton trade comrades; to pass a resolution condemning the "reactionary policy" of the Lancashire employers; and to cheer Mr Hayday and Mr Pugh, when the former described the cotton dispute as "marking a new cycle of the attack on the workers" and the latter when he said the fight involved "the sanctity of agreements and the fundamental principles on which the Trade Union movement had developed." The decision was taken to raise a fund of £500,000 to support the strikers, but there is little indication at the moment that anything like so large a sum will be subscribed.

Yet even the cropping up of the cotton trouble failed to lend distinction to the proceedings of the Congress. As our readers are aware, the *Economist* has not minced its words in commenting upon the clumsiness and intransigence with which the cotton controversy has been handled by both sides—employers as well as employed—and the degree of verbal bellicosity indulged in at Newcastle by no means exceeds the limits which might reasonably be expected. Nevertheless, it is a little disappointing that the Trade Union Council confined themselves merely to a perfectly natural condemnation of the employers and sympathy for the workers, and failed to make any use of the occasion of the Congress session to initiate statesmanlike steps for the conclusion of a struggle which, every day that it lasts, is imposing fresh losses and sufferings, not only upon Lancashire, but upon the whole country—and this at a time when brighter opportunities might appear to be slowly opening up in the textile world. The opportunity, as well as the occasion, for a move in the direction of settlement was afforded by the letter addressed by the Minister of Labour, Sir Henry Betterton, to both sides—but it was neglected. Although the Minister of Labour did not go to the length of offering the definite mediation

of the Government—a fact which in London inspired pessimistic estimates of the width of the gulf separating the disputants—his letter, to which reference is made in a Note of the Week on a later page, couched in language of impartiality and responsibility, included passages which appeared to afford either side the chance to initiate a peace move without any loss of dignity or surrender of tactical position. The Council of the T.U.C., being fortuitously gathered together at this moment, surely lost a golden chance of raising their prestige in the eyes of the nation by leaving it to the Lancashire employers to make the first—albeit, grudging and tentative—response to the Minister's appeal.

So the Newcastle Conference was barren according to expectations, and barren in spite of unexpected opportunity. Its barrenness regarding matters of general policy was foreshadowed by the opening address of its President, Mr Bromley, to whom the passing years, though they have mercifully mollified an earlier explosiveness, do not appear to have brought the blessings of balanced judgment. Mr Bromley threw away what is normally the biggest opportunity of the year for a Labour leader to influence public opinion. His speech divided itself into two parts. In the first he decried the morality and motives of the moves which overthrew the successful Labour administration and substituted the ineffective National Government—a re-chewing, this, of oft-chewed and unsatisfying political cud. In the second, he proclaimed his remedy for the economic crisis, namely, shorter hours to distribute existing jobs more widely. He had the courage, it is true, to admit that this policy would entail a rise in the costs of production, which industry was in no position to face; but he propounded no solution of the dilemma. Even the address delivered by Mr George Lansbury aroused only a passing flicker of enthusiasm; and it merited no more, for, although the Leader of the Opposition coloured his time-worn attack on the bankers with picturesque phrases, and called for "revolution, not reform," his effort was no more than a traditional platform essay in destructive criticism, which, though momentarily warming to the political temper, is cold comfort to the long-suffering searcher for the means of economic improvement. A grim comment on the whole proceedings is that the biggest headlines which the Congress achieved arose out of a march of unemployed workers on the hall in which it was sitting, and the refusal of the Council to interview their leaders.

THE AUSTRALIAN BUDGET.

ON September 1st, Mr Lyons, the Australian Prime Minister and Treasurer, opened the Commonwealth Budget for 1932-33. As was to be expected, it was framed on conservative lines, excluding the imposition of any fresh taxation, and while it necessarily inflicts certain hardships, it is calculated to improve Australian credit and to assist Australian producers. Mr Lyons began with a review of the actual results for the financial year 1931-32, and immediately found cause for encouragement. As originally cast, this Budget had an estimated deficit of £1,118,000, but, thanks to increases of £3,661,000 in the income tax yield, £356,000 in the land tax yield, and £706,000 in the profits of the note issue, the year ended with a surplus of £1,314,000—this notwithstanding increases in expenditure amounting to over a million.

Mr Lyons thus started the new year with a surplus of £1,314,000, which he at once made use of to relieve the burden of taxation. In presenting his Budget Mr Lyons began with his revenue estimates. These he placed at £27,600,000 for Customs, £8,250,000 for the sales tax, £13,240,000 for direct taxation, £12,796,000 for receipts from Government-owned business undertakings, and £4,100,000 for other receipts. These made a total estimated revenue of £65,986,000, and are apparently arrived at after making due allowance for the effects of the proposed remissions of taxation outlined below. Expenditure was originally estimated at £68,767,000, but on the direction of the Government further measures of economy have been applied, with the result that the total has been

reduced to £67,288,000. This total consists of £40,685,000 for departments and general services, £13,253,000 for the cost of business undertakings, £915,000 for the Territories, and £12,434,000 for payments to or on behalf of the States. Comparing estimated revenue with expenditure, there is a deficit on the year of £1,302,000, but, after bringing last year's surplus of £1,314,000 into account, there is left a small estimated surplus of £12,000 to be carried forward to 1933-34. Mr Lyons was careful to add that the 1932-33 Budget did not make provision for any war debt payment to the United Kingdom. Had the appropriate allowance been made, there would have been a deficit of £4,900,000.

This Budget contains no additional taxation, but the Government is conducting a review of the incidence of taxation, while at the Government's request Mr Justice Ferguson is carrying out a special investigation into the question of tax assessments. Several important tax concessions are proposed, both to relieve producing interests and also to reduce the tariff in certain respects. Thus a large number of articles used by the agricultural, pastoral, dairying and mining industries are to be exempted from prime duties and the sales tax. All import prohibitions imposed by the late Government in order to correct the adverse trade balance are removed. The special 50 per cent. increase in the ordinary Customs duties, imposed for the same purpose, is being repealed in the case of seventeen items. A new tariff schedule, providing for a lower scale of duties, has been introduced, applying to a long list of articles, including textiles, machinery, certain electrical apparatus and some building materials. Further revisions will be made as and when the Tariff Board presents additional reports, while a full new schedule of duties will be issued as soon as possible after the return of the Minister of Customs from Ottawa, in order to carry out the terms of the Ottawa Agreement.

The economies contained in the Budget come under five main headings. The first was the suspension of the gold bounty. This was originally fixed by the Act of 1930 at £1 per ounce fine on all gold produced in excess of the average annual production for the three years 1928-30, and was due to take effect as from January 1, 1931. The depreciation of the Australian pound against sterling led to an immediate revision of the terms, and the Financial Emergency Act, 1930, reduced the bounty to 10s. per ounce fine, so long as the exchange remained at £130 Australian per £100 sterling. This Act also contained a sliding scale, providing for increases in the bounty above the basic figure of 10s. per ounce in the event of an appreciation in the Australian pound against sterling. The depreciation of sterling against gold has now permitted the suspension of the bounty, and Mr Lyons hinted that its restoration would only be considered if the Melbourne Mint price of gold fell to £5 an ounce.

As regards other economies, the wine export bounty, which last year cost £181,000, is to be limited to £96,000. Further drastic reductions have been made in allowances

to Ministers and Members of Parliament. The income limit, beyond which the maternity allowance ceases to be payable, has been reduced from £250 per annum to £4 per week. A further cut of £8 per employee has been made in all public service salaries and wages. Finally, a reduction of 2s. 6d. per week has been made in all invalid and old age pensions, the maximum pension thus being reduced from 17s. 6d. to 15s. per week.

Mr Lyons concluded with a brief review of the national debt. On June 30, 1932, the aggregate debt of the Commonwealth and States amounted to £1,187,300,000. This represented an increase of £31,800,000 during the preceding year. In explanation of this increase Mr Lyons pointed first to the wheat bounty, which cost £3,300,000, next to £5,000,000 of debentures issued in reduction of London overdrafts, then to the increase in nominal internal debt liability as a result of the recent conversion operation, and finally to the issue of £19,200,000 Treasury bills to finance deficits and loan expenditure, less sundry redemptions. It will be seen that part at least of this so-called increase is only the substitution of one form of debt for another, and Mr Lyons also stated that the internal debt conversion of £556,000,000 had resulted in an interest saving of £6,500,000.

While Australia's debt burden still remains relatively heavy, and while last year's increase is a little disquieting, it is possible in some respects to view her financial position with greater assurance than before. It is necessary, however, also to watch the State budgets, for while the departure of Mr Lang from office has removed one of the main threats to Australian financial stability, the position of the State finances is by no means unquestionably assured. There is, however, reason for hoping that the producer is now through his worst time. The rise in world commodity prices, which began two months ago, will, if sustained, be of great benefit to him, while the tax concessions contained in the new Budget will be a very welcome relief.

We welcome most heartily the tentative steps taken in this budget in the direction of lower tariffs. The removal of many of the emergency restrictions upon imports was obviously the first move to be made. It is difficult to base any considered judgment upon cable reports, as full details are lacking, and we have also still to learn the nature of the forthcoming findings of the Tariff Board and also what is the real extent of the tariff reductions conceded by Australia as part of her share in the Ottawa Agreement. The Australian tariff has also risen to such an inordinate height that we greatly fear that the implementing of all the hints and promises contained in Mr Lyons' speech will still leave room for many further substantial cuts. One thing we hope is that the Government will not be deterred by Australia's dependence upon Customs duties for her revenue. A genuine reduction in her tariff is both calculated to increase the total yield of her Customs revenues and also, by stimulating business, to add to the productivity of other taxes. Thus a definite

movement towards freer trade is not only good business, but sound finance.

The next step in the amelioration of Australian finances clearly lies in London, for Mr Bruce is here to arrange for the flotation of a big Conversion Loan in the late autumn. There is no doubt that, on technical grounds, such an operation possesses a far greater chance of success than it did until quite recently, but we would add one further consideration. In his Budget speech Mr Lyons uttered the definite warning that Australian imports from Great Britain will still be limited by the margin between the proceeds of her exports and the funds required to meet her external debt obligations, both public and private, and so one cannot rule further restrictions upon imports entirely out of account. Clearly, any lightening of Australia's external interest burden would at once be reflected in an increase in her ability to import. Thus we commend to the City of London and to the British creditors of Australia the thought that the successful execution of a conversion scheme would bring to us the direct benefit of a recovery of some of our lost export trade to Australia.

LANCASHIRE'S PROBLEMS.

THE dangers of facile generalisation about the major economic problems of to-day have seldom been more clearly illustrated than in the industrial survey* just completed for the Board of Trade by the Universities of Liverpool and Manchester. Whereas the tendency has been to think of Lancashire as a declining region, with a vast body of unemployed consisting mainly of cotton operatives and coal miners, and in process of being superseded by the new industrial regions of the South, this report brings out clearly that Lancashire consists of clearly differentiated regions, a few almost derelict, a few relatively prosperous, and the rest representing various intermediate degrees; that in 1929, the last "normal" post-war year, only 85 per cent. of the total insured persons in the area surveyed (which was not exactly coterminous with the county) were attached to the cotton industry, and 40 per cent. of the total number of insured persons unemployed belonged to other industries than the main four (cotton, coal mining, general engineering, and textile finishing); and that Lancashire is one of the best-equipped industrial and commercial areas in the country, with her full share of the new industries which are popularly supposed to be almost the exclusive property of the South.

The main purpose of the survey was to ascertain the volume, nature and causes of the surplus labour in Lancashire without splitting hairs over the meaning of the term or attaching too serious importance to the difficulties of exact statistical measurement, which do not affect the trend of the conclusions; to discuss the extent to which the situation may right itself, and to suggest methods of aiding and accelerating the adjustment by the application of a deliberate policy. For this purpose the year 1929 is taken as representative of post-war conditions before the onset of the present depression. In that year about 160,000, or 12 per cent., of the insured population in the region were unemployed, of whom 120,000 were males. The cotton industry accounted for 17 per cent. of the unemployed males and 66 per cent. of the females. One-fifth of the total unemployment was concentrated in the cotton-weaving belt of the North-East. This large surplus of labour owed its existence to the rapid increase in the population available for employment, but an increase of 9 per cent. in the employment capacity of the region between 1923 and 1929 improved the unemployment situation to some extent during that period. Migration has afforded little relief to the district as a whole, but there has been some redistribution of population within it, and the population of the areas in which unemployment has been highest has actually declined. The report does not hold out very much hope of reduction of the labour surplus by migration to any great extent in the future, but suggests that a substantial and permanent contribution would be made if the school-leaving age were raised.

The characteristics of the labour surplus are examined

in greater detail for each of the principal industries. The cotton industry presents especial problems because of the preponderance of females and the large number of women who continue in employment after marriage. This makes for a high degree of labour immobility which greatly reduces the possibility of improving the situation by redistributing the population, and it is actually stated that in certain branches of the clothing trades expansion is held in check by a shortage of skilled female machinists in the neighbourhood of Manchester, where the industry is mainly concentrated. Another characteristic of the labour surplus is the large number of workless between the ages of 18 and 24—a disastrous age at which to experience prolonged unemployment. This is attributed partly to the fact that workers in this group began their industrial life during a period of high unemployment, so that many of them have never had long enough periods of continuous work to acquire the skill and experience proper to their age, and partly to the fact that as the entrance of juveniles to the industry was continued at a far greater rate than was called for by the prospects of the industry, there was a "banking up" of young workers who, in more favourable circumstances, would have been promoted to more responsible positions. This steady inflow of juveniles continued right up to 1929, apparently because these young entrants saw no hope of employment elsewhere.

The report makes certain suggestions for dealing with this surplus, of which the principal are the keeping of records of employment for juvenile workers, in order to prepare the way for regulating entry to the trade; the attempt to secure to every entrant an adequate period of skilled instruction; the abolition of such short-time working and under-employment as is the result of the existence of permanent surplus capacity of capital equipment, and the seizing of every opportunity to distribute the burden of unemployment in such a way as to minimise the damage it inflicts. That the industry will again attain even the employing capacity it had in 1929 is very problematic, especially in view of the technical developments, examined in some detail in the report, which may be expected to reduce the demand for labour in the future.

The position of the coal industry is somewhat different. The increase in unemployment during the post-war years has taken place concurrently with a decline in the number of insured workers, but this movement out of the industry has been for the most part unassisted; the report states that more than half the miners who were moved under the industrial transference scheme between January, 1929, and March, 1930, have since returned home. In direct contrast to the labour surplus in the cotton industry, the 20,000 unemployed miners in the years 1928-30 were mostly adult males and 60 per cent. of them were unskilled. The conclusion reached as a result of the survey is that the industry will be fortunate if it succeeds in maintaining the 1929 level of employment, so that the problem of finding new employment for the surplus miners, most of whom are concentrated in a small area, will have to be handled. A similar, though numerically smaller, task is presented by the general engineering industries.

The survey thus brings into clear relief the fact that there was in Lancashire in 1929 a large surplus of labour in the staple industries, and that, as recovery from the present depression to the 1929 level seems to represent the upper limit of what may be hoped for, it is extremely unlikely that any of this surplus will be reabsorbed into its former employment. Experience has shown that assisted migration to other parts of the country is not a very successful method of handling the problem, so that the solution will have to be sought in the expansion of the other existing industries, and the introduction of new industries, within the area. Fortunately, the survey reveals that conditions are by no means unfavourable for this. In addition to local government and the distributive trade, both exceedingly large employers of labour, the electrical industries, street transport and the clothing industry have all expanded very rapidly since 1923, and the same is true of a number of smaller industries. The forty-two industries which expanded most rapidly in Great Britain and Ireland between 1923 and 1929 expanded, taken together, at almost the same rate in the region covered by the survey, though they lost ground during the exceptional depression

of the cotton trade in the two years which followed. The report, however, draws attention to certain less satisfactory aspects of the present position: first, that certain areas, especially in the North-East, are not sharing in this growth; second, that the present organisation of the distribution of electricity is defective in several ways; third, that the decline in the old industries has been very much greater than the expansion of the newer. On the other hand, the long experience which the survey region has had in catering for almost every type of industry, and in handling both home and export trade, has led to the development of unique facilities which render the area an exceptionally suitable centre for industrial expansion.

The principal objections which are apt to be raised against Lancashire as a centre for the establishment of new industries are dismissed in the report as of little importance. The difference in cost attributed to differences in local rates is said to be infinitesimal; labour costs, having regard to the higher quality of Lancashire labour, are not higher than elsewhere; there is no lack of sites offering an attractive environment; and the idea that labour is difficult to handle has, according to the report, little foundation.

It appears, therefore, that Lancashire already possesses much more than the nucleus of the solution to her own problems, but the development of that solution does not lie in her own power, since local development councils in different parts of the country would inevitably cancel, to a great extent, the effects of each other's activity. The chapter in which the possibility of some form of national industrial planning is touched upon is perhaps the most interesting in the report. The overwhelming argument in favour of such a course, which is persuasively represented in the report as less drastic than might at first sight appear, is the appalling waste involved in the reduplication of labour, since many people, especially women, who formerly did not work for wages, are being drawn into the labour market in South-East England and thereby complicating the unemployment situation.

Whatever is to be done, it must await the passing of the present general depression, for the remedies sought are essentially remedies for a permanent and localised evil. But when the tide has turned, and these rocks of localised unemployment again stand out and challenge attention, determined action will have to be taken, and the probability is that it will have to be taken along the lines which this survey has suggested. The principle of town-planning having already been accepted, there is nothing revolutionary in the idea of extending it to cover the wider area of the nation.

IMPRESSIONS OF AMERICA.

(BY A CORRESPONDENT.)

As I made the rather tedious journey in the slow train from the lower storey of New York Grand Central Station towards my destination in the north-western corner of Massachusetts, I kept my ears open to the snatches of conversation around me. This was at the beginning of August; and I had travelled by the same slow train to the same place, at the same "silly season," just seven years before. Comparisons were inevitable; for, that last time, I had watched America soaring on an upward flight of prosperity which was already carrying her, in foretaste, into the Elysium. How was she faring now that the wings had turned out to be no better than inflated gasbags—and not fool-proof bags at that? But let us hear what is passing between the conductor and my fellow-passengers as the train lingers at this wayside station; for we are just entering the cotton-manufacturing district of Western Massachusetts—a decentralised industrial region of small towns with two or three mills in each. "Are these mills working here?" they ask the conductor. "Why, one of them is," he answers, "but only for three days a week." The anxiety in their voices and the gloom

currency transactions.

SKANDINAVISKA KREDITAKTIEBOLAGET

in his—it was incredibly and uncannily familiar. Shut your eyes and transpose the sound of the voices from the New England accent into the speech of Yorkshire or Lancashire, and it might be an August echo, across the Atlantic, of conversations to which I had been listening in England in July. And I was to hear much more of the same talk in other New England towns before the month was out. "Ichabod: the glory is departed from Israel," is the cry that goes up from New England, as well as from Lancashire, to-day; and it makes little difference whether the trade has migrated to Osaka or Ahmedabad from Oldham, or to North Carolina from North Adams. In either case, the shock to the sense of security and the self-respect of an old-established industrial community—long since convinced that it was the chosen people of the God of Spindles—is equally painful and profound. . . .

My next experience was to find myself translated in a moment of time from New England to New York and taken up into an exceeding high mountain—the magician being the express elevator of the Empire State Building. As I stepped out on to the crown of that dizzy pinnacle and peered gingerly over the parapet, I had, for an instant, the strange illusion that I was looking upwards instead of downwards. For the lights of New York, as they twinkled in the void right up to the horizon, seemed as numerous and as distant as the host of heaven, while the diffused light on the waters of the Hudson counterfeited the milky way. The illusion vanished as the traffic, stopped dead for a moment by ten thousand red lights, was suddenly set in motion again by ten thousand green; and I became aware that the starry heavens below me were being threaded by motor cars no bigger than beetles and people no bigger than ants. Thus human megalomania stultifies itself by reducing Man himself to insignificance as it magnifies Man's handiwork. My spirit rebelled against this Empire State Building; and my imagination set to work to take its stature down a peg. Was this *chef d'œuvre* of New York sky-scrapers really such a Goliath as it claimed to be? Supposing, for instance, that those creeping, crawling, swarming figures below were really not men and women but ants or termites: would not the pinnacle on which I was standing be nothing accounted of in their termite eyes? A sketchy operation of mental arithmetic assured me that this pretentious Empire State Building would have to be half as high again before its altitude exceeded the stature of a man by the same measure, scale for scale, in which a ten-foot-high termites' nest exceeds the stature of a termite. And this steel-and-concrete obelisk was also dwarfed into insignificance, in another way, by the infinitely loftier pile of monetary inflation which had been reared upon it. I suddenly beheld the whole material sky-line of New York as the stumpy foundation of an airy structure of incomparably greater altitude. But whither had those cloud-capped towers of credit vanished? The unsubstantial pageant had faded; but it had not been so obliging as to leave not a reek behind. The reckoning was there in the eighty-storeys of unrented office-room below my feet, and in the de-valuated mortgage-bonds in the safes of exasperated creditors.

Would the same gorgeous palaces be run up again, with the same baseless fabric, at the first temptation? The question was pertinent; for on that night, last month, when I was up aloft on the Empire State Building, a boomlet was being promoted down there in Wall Street. The price of hogs had started to rise, and everybody was

in a flutter of pleasing expectation. Were they really going to repeat the performance of 1929? I spent most of the rest of my time in America in looking out for the answer to that particular question.

There were certain phenomena which pointed to an answer in the negative. One morning, for instance, I happened to be assisting at a meeting in a New England summer-school where "South American Investments" were the agenda, and the business was being discussed between the audience and the representative of a New York issuing house. This gentleman should have been more careful; for his very surname—which approximated to "Booster"—was enough in itself to excite the suspicions of his audience. All the same, Mr "Near Booster" had the temerity to suggest that the soundness of a foreign investment was the investor's look-out and was not the responsibility of the issuing-house which happened to handle the transactions for him. And at these rash words the audience "went off the deep end." I have never seen so sedate a company so astonishingly transformed. I can only compare their behaviour with the conduct of the Jews when St. Paul came to the provocative passage in his speech from the stairs of Castle Antonia, and they lifted up their voices and said: "Away with such a fellow from the face of the earth," and cried out and threw dust upon their heads.

I came away from that meeting convinced that this generation would have to pass away before the investing public of the United States could be induced to burn its fingers in that kind of business again. But the Old Adam dies hard; and the very next day my conviction was shaken by an anecdote which was served up to me, piping-hot, by a friend just arrived from New York itself. This friend of mine had a brother on the New York Stock Exchange; and this brother, like every member of his profession, had been bearing the brunt of the slump until he was stony broke. By grace of the August boomlet, he had been refreshed by a faint breeze of business in his dead-alive office for just a week, when he was rung up by an agent for the Lincoln car. "Wouldn't Mr Featherhead allow him to drive him home from the office that evening in the new model, to demonstrate its excellences?" Taken thus unawares, Mr Featherhead was righteously outraged, and explained to the enterprising agent over the telephone, with some asperity, that, so far from contemplating the purchase of a new car of an expensive model, it was as much as he could hope for if he could avoid having to sell off his old car and find himself left with no car at all. But the Lincoln agent was not so easily intimidated. "There is no commitment involved," he had answered blandly, "so I shall call for you this evening all the same"; and Mr Featherhead, the stockbroker, had sulkily capitulated. "And the joke of it is," said my own Mr Featherhead, in telling me the story, "that the agent knew well what he was about. For that was a week ago; and yesterday, when this boom on the Stock Exchange had lasted out for another seven days, my brother actually said to me: 'Well, really, you know, I have done good business again this week; I am not sure that I shall not buy that Lincoln car after all. The new model is really rather attractive.'" As we shook our heads together over this tale in solemn but impotent depreciation, I wondered whether the Rip Van Winkles of the American *ancien régime* had learnt anything or forgotten anything after all.

Well, I fancy there is one thing which a good many Americans have learnt: and this was borne in on me as I watched the faces of a distinguished audience that was listening to Mr Stimson, the Secretary of State, while he was making an important statement on the 8th of last month about the principles of American foreign policy (a statement to which the *Economist* has already done justice in its comment). I believe the American people has been cured of its former habit of regarding the troubles of the world with the eyes of spectators who feel themselves immune and consequently superior. They are no longer inclined to thank God that they are not as other men are, but are rather in a mood to beg for a share of God's mercy to sinners. This is one recent English observer's reading of the present American state of mind, as far as a passing visit can reveal it. And if that reading is correct, it is

surely of good augury. For when all the nations of the world begin to realise that they are in the same boat, we may begin to have a glimmer of hope that the boat will be piloted through the storm by its motley crew with at least sufficient accord to save it from capsizing.

Notes of the Week.

Next Steps in India.—In the speech in which he opened the new session of the Indian Legislative Assembly at Simla on Monday, the Viceroy made some important announcements in regard to future policy. The Consolidated Ordinance is to be dealt with, when it expires at the end of the current calendar year, by incorporating "a considerable number" of its provisions in the ordinary law, while other provisions will be incorporated in provincial legislation where this is thought to be required by local conditions (the chief case in point being Bengal). How far these proposals will meet the objections which the Ordinances have evoked from moderate as well as extremist opinion remains to be seen. In regard to the implementing of the constitutional reforms, His Majesty's Government have now given up the project, announced in June, for a discussion of its proposals between a joint select committee of Parliament and a consultative committee of selected Indian representatives. The new plan is for a small body of Indian representatives—whose status is to be that of the delegates to the Round Table Conference—to meet the Government itself in London in November. And, after an informal discussion in this form, specific recommendations are to be submitted by the Government to a joint select committee of Parliament and thereafter to Parliament itself. The Government are, of course, right in their determination to make all possible speed in bringing the new regime in India into operation; but they will defeat their own ends if they fail to carry with them a sufficient nucleus of enlightened Indian opinion to put the new constitution into operation with some prospect of success. They have done well, therefore, to modify their procedure in a way which will make it possible for the Indian Liberals to co-operate.

The Stress Conference.—This week has seen the addition of yet another international conference to the long list of such gatherings. The meeting at Stress, which brings together representatives of Western European creditors and Central and Eastern European debtors (not for the purpose of discussing debts but with the aim of seeking solutions of economic and financial difficulties), owes its existence to a resolution passed at the Lausanne Conference; and, judging by the amount of space devoted to it in the *Continental Press*, it falls little short of Lausanne in its appeal to European public interest. The early days have been devoted to prepared statements, first by the French chairman, M. Bonnet, and afterwards by the official delegates of all the other countries represented. These statements, inevitably perhaps, do more to show up the difficulties of the problems to be faced in connection with the rehabilitation of Eastern Europe than to suggest the means of attaining the end. Inevitably, too, stress has been laid upon the conflicting interests of the predominantly agricultural and the predominantly industrial countries, and between the importers and exporters of particular commodities; while the appeal of the British representative, Mr Addison, for the lowering of tariffs and the abolition of exchange restrictions, was coldly countered by arguments from several delegates that sweeping or sudden movements of the kind were impossible. If this were all, the prospect of any concrete achievement at Stress would be small indeed. But hopes of something better are perhaps permissible in several directions; firstly, in the opening speech of M. Bonnet, in which he declared that the time had passed for temporary expedients, and that the task of the conference was to devise a durable basis for economic recuperation; secondly, in the consensus of views expressed that it is in the economic sphere that first and drastic action should be taken; and thirdly, in the generally admitted recogni-

tion that the sands are running out and something constructive must be done immediately. This recognition is the more welcome because it is one of the inevitable disadvantages of the holding of successive conferences that the participating Governments are apt to delay unpleasant internal measures in the Micawber-like hope that "something will turn up." The conference has now split up into committees and is getting down to its muttons. The distressed countries will expect it to produce results.

Government and the Cotton Strike.—Our Manchester correspondent writes:—The Minister of Labour intervened in the dispute in the weaving section of the cotton industry on Tuesday by sending a lengthy communication to the leaders of the employers and the operatives, in which it was suggested that "in order to examine the facts and to reach conclusions on the different subjects in dispute it might be desirable to appoint committees to make recommendations to the main body, and I would commend to them for consideration the appointment of special committees for such matters as wages and conciliation, which have operated with great success in other industries. I wish to suggest that the two sides should meet as early as is practicable in order to discuss the line of approach I have suggested above, and to make a new effort to avoid a further waste of the resources of the industry and those engaged in it." The letter from Sir Henry Betterton was considered at a meeting of the Central Committee of the Cotton Spinners' and Manufacturers' Association on Wednesday, following which an official statement was issued saying that "The employers feel that they cannot refuse to take notice of an invitation from the Minister of Labour to attend a meeting, and, if invited, would accept such invitation in order to hear from a representative of the Ministry in greater detail what is the purport of the suggestions the Minister puts forward in his letter." A reply to this effect has been despatched to Sir Henry Betterton. Whether the operatives will follow suit is a question still under deliberation as we go to Press, but it is believed that such a step is likely and imminent. If that should happen Sir Henry Betterton would presumably lose no time in calling a conference at which the leaders of both sides would be present, and hopes of a settlement would begin to run high. Against this, unfortunately, has to be set the result of Thursday's ballot of the operatives in the spinning section of the cotton industry, which revealed a very large majority in favour of cessation of work.

More Import Duties.—Once more the Import Duties Advisory Committee has laboured and another litter of mice has appeared. Their latest list of additional duty recommendations, which has promptly been given effect to by a Treasury order, embraces gloves, paints and colours, wood screws, scissors, hair combs, lined strawboard, wrapping paper, poultry and meat pastes and sausages, and glacé, etc., cherries and candied or drained peels. This list itself is sufficient to recall Mr Baldwin's famous saying that the schedule of Key Industry Duties in the 1921 Safeguarding Act reminded him of a marine store dealer's stock-in-trade. As regards leather gloves, the Committee consider that a "moderate" (sic) increase in the duty from 20 to 30 per cent. is justifiable; but, ironically enough, fabric gloves, which were a storm-centre of the safeguarding debates of ten years ago, have been turned down on the very proper ground that it would take a very heavy duty to provide effective protection, and that this would entail a considerable increase in price, a serious contraction of consumption, with adverse reactions on the yarn industry of Lancashire, which provides fabric glove manufacturers with their raw material, wherever they may happen to be. Truly the Free Trade arguments of the early 'twenties have come home to roost with a vengeance. Indeed, the Committee proposes to examine the question of the removal of the additional duty of 10 per cent. to which glove fabric is now subject. The Committee has next proceeded to include within the purview

of the additional duty on paints and colours, printers' ink, varnishes, lacquers and enamels, which previously had been exempted as a matter of caution, and also (but with certain exceptions) pigments and extenders. One exception relates to pigments coming within the terms of the Dyestuffs (Import Regulation) Act, on the ground that these are already subject to licence. On the next item, wood screws, the Committee clearly felt some qualms, for the home manufacture is under the control of a single group of manufacturers; nevertheless, they allowed themselves to swallow this group's assurance that an adequate degree of protection will enable them to reduce their prices, and so recommend a total duty equivalent to 3d. a lb. or 1½d. a gross, whichever is the greater, for screws not over 8 gauge, and 2d. a lb. for screws over 8 gauge. Here we would remind the Committee of the existence of the clause in the Import Duties Act providing for the immediate removal of any duty in the event of any abuse by home manufacturers. Various specific duties upon scissors are recommended, equivalent approximately to 20 per cent. *ad valorem*; but secateurs are to be exempt. This, however, has to satisfy the Sheffield Cutlery Manufacturers' Association, for their application for additional duties upon other cutlery has been rejected. Certain amendments of the scope of the additional duties on hair combs and lined strawboards are proposed, while the British wrapping paper industry is to receive "further support" by the increase of the duty on certain kinds from 20 to 25 per cent. The duty on meat pastes and sausages is to be raised from 20 to 30 per cent., while the additional duty over the sugar customs and excise duty on glacé cherries and candied or drained peels is, on the ground that these are luxury articles, to be 25 per cent. for cherries and 20 per cent. for peels. Another modest essay is thus made in food taxation. Many of the articles dealt with in the new schedule are of minor importance. But the general tendency of the work of the Advisory Committee is profoundly disquieting for two reasons. Slowly but surely it appears to be yielding to the insidious urge for raising duties, and to be entering on the slippery tariff path that leads from "moderate" to "high" and from "high" to "prohibitive." Equally surely our growing and widening tariff is increasing the already grave number of impediments to the growth of international trade.

The First Drawback Order.—We turn with some degree of relief from the Import Duties Advisory Committee's list of new duties, discussed above, to their first recommendation of a drawback in respect of the re-exportation of certain commodities, given effect to by the Treasury in the Import Duties (Drawback) (No. 1) Order. It is a sign of grace that the Committee have not entirely overlooked the importance of our entrepôt trade, and that they are aware that the present facilities available for

enabling goods intended for re-exportation to be dealt with without payment of duty are not sufficient to meet the needs of the re-export trade. In particular the Committee calls attention to the need that imported articles should be displayed to buyers for export on the importer's premises, often in conjunction with British goods, and the report implies that the Committee recognises that our re-export trade and export trade are of mutual assistance to each other. The Committee, therefore, recommends a drawback, to extend to the general and additional duties, in respect of blankets, shawls, coverlets and travelling rugs; carpets and floor coverings; handkerchiefs; table and bed linen, towels, curtains, cushions and tapestries; certain other textile materials; articles of apparel of all kinds, complete or incomplete; boots and shoes of all kinds; and fur skins, dressed. The Committee calculates that this schedule will cover re-export trade amounting to nearly £5,000,000 at the level of 1930. As our total re-exports for that year amounted to £87,000,000, this can only be regarded as a very small first contribution to meet a pressing need. It is greatly to be hoped that the Committee will extend its labours in this direction rather than in that of devising fresh additional duties.

The Resignation of Mayor Walker.—The resignation, on Friday, September 2nd, of Mayor Walker of New York City is a triumph for Mr Franklin Roosevelt, the Governor of New York State and the candidate of the Democratic Party for the Presidency of the United States. Mayor Walker's administration has long been notorious; but latterly his alleged misdemeanours had become so flagrant that—even on the tolerant American standards in such matters—it became necessary for something to be done about it; and, by the constitution of New York State, it was incumbent upon the Governor to bring the Mayor of New York City to book. Thus Mr Roosevelt was faced with a critical choice within a few days of his nomination, at the Democratic Convention, as his party's presidential candidate. Should he evade a conflict which might ruin his own chances of the Presidency and split the ranks of his own party into the bargain? In favour of inaction it might have been argued that, however irregular Mr Walker's conduct might have been, there was no reason to suppose that he was doing anything worse than what had been done with impunity by many of his predecessors in office. Moreover, Mr Walker was the nominee of Tammany Hall; and there were many things about him—his elegant clothes, his affability, and the facts that he was a Catholic and that he had risen from humble origins—which endeared him to large sections of the New York populace, without regard to his official record. In spite of these considerations, Governor Roosevelt decided, to his credit, not to "play politics" but to do his duty. And the sequel seems to be showing that, in taking the courageous and honourable line, the Democratic presidential candidate has shown sound political sense as well as public spirit. What Governor Roosevelt did was to summon Mayor Walker to Albany, the capital of New York State, and subject him to a searching cross-examination. The text of the proceedings, reported in full, filled whole pages of the American press for days; and the effect upon the Mayor's position was shattering. It was in vain that he employed the ablest counsel to use every legal quibble for delaying the proceedings, or that he stage-managed enthusiastic greetings from sympathetic crowds, or that he had himself photographed attending mass with his wife on Sundays. His resignation signalises his discomfiture; and even the Hearst Press has thought it provident to declare against him. This conflict has been a family affair in the bosom of the Democratic Party; for Mr Seaburn, the counsel for the Municipal Affairs Committee of the New York State Legislature, who has been Mr Roosevelt's right-hand man in the conduct of the Walker inquiry, is also a Democrat, like the Mayor and the Governor. The result of this affair ought to strengthen the hands of the Democratic Party, and it should also improve the chances of Mr Roosevelt himself, for he has gained a personal prestige which should outweigh in electoral value the resentment of an already lukewarm Tammany. How much it will do

for the cause of honest administration in American municipal government is another question. It is to be feared that little genuine progress can be made in this field until there is a wide and deep change in American public opinion.

Latin-American Convulsions.—If the present "boomlet" in the United States really presages the beginning of economic recovery, it is to be hoped that the beneficent effects of this turn of the tide in North America will be felt without delay in the Latin countries of the New World. For these unfortunate countries are paying the price of the world depression not only in economic, but also in political coin. The severity of the slump in Latin-America may be measured by many statistical indices: e.g., by the decline in the foreign trade of the Argentine. It may be measured in political terms by an atavistic return to the chaotic political conditions of the last century, which, in the "A B C" States at least, appeared to have been definitely transcended. The present bout of Latin-American revolutions began in the summer of 1930; and the most lamentable feature of the phenomenon is that there can be no finality about it so long as the world depression goes on. These Latin-American countries are falling out of one revolution into another, as a victim of fever tosses first to this side and then to that side of his bed and only aggravates his malady by the convulsive movements in which he vainly seeks relief. The outstanding example of this vicious circle of slump and revolution and worse slump leading to fresh revolution is the United States of Brazil: the largest, and, in normal times, the wealthiest of the Latin-American Republics. After having been through one severe civil war as recently as October, 1930, Brazil plunged into another internal conflict this July, when the vanquished of two years ago rose in arms against the victors—calculating, no doubt, that twenty months of office under slump conditions was quite enough to have sapped the strength and exhausted the popularity of any Federal Government at Rio de Janeiro. In Brazil, the civil war, on both occasions, has taken a geographical shape. The question at issue is which State or States, in this unwieldy Confederation, is to sway the Federal Government or (in terms of the slump) to be saddled with the Federal burdens. Hitherto, Federal politics at Rio have usually been controlled by the nearest and wealthiest of the States: the coffee State of Sao Paulo. The revolution of 1930 represented a successful attempt, on the part of the outlying States of the north and the south in coalition, to deprive Sao Paulo of its traditional hegemony. At the present moment, the Paulistas are fighting to throw off the yoke of the Federal Government which the Revolution of 1930 brought into power. The Paulistas are standing on the defensive because, once again, they are fighting a lone hand. All the same, they have better prospects than before of getting their way, since this time the Southern States—Minas Geraes and Santa Catharina and Rio Grande do Sul—are remaining neutral, and are leaving their nominees at Rio to fight their own battles. Unhappily, however this latest civil war in Brazil may turn out, there is little hope of its ending in any permanent peace, because it manifestly cannot bring prosperity, but can only aggravate the economic troubles which Brazil is suffering in common with the rest of the world. It is the same story in Ecuador, where a "Conservative" revolt in Quito, the Federal capital, has just been stamped out after several days' fighting, which is reported to have cost eight hundred lives. Meanwhile, Bolivia and Paraguay are still hovering on the brink of a formal war in the Gran Chaco over the possession of a river frontage which the now fast ebbing tide of international trade had barely touched at its full flood. It is a melancholy spectacle that is revealed by a survey of Latin-America to-day.

Ottawa Interpreted.—There is so much surmise about the details of Ottawa agreements which have not yet been published that any reference by a member of the Government to the real meaning of what has been done merits careful notice. From the *Times'* report of a speech

delivered in North Lanarkshire on Saturday by the Attorney-General, Sir Thomas Inskip, we extract the following:—

Ottawa, he said, was not a policy of isolation. It merely represented the action the British Empire had taken for lowering tariff walls within its own confines in the sure and certain hope that other nations would see the advantages of being admitted to the same close trade relations.

Our comments upon the proceedings at Ottawa would have been very different had we seen any reason for believing that such an interpretation as that quoted above will be justified when all the facts are known.

Sterling and Gold Prices.—The past fortnight has witnessed a substantial increase in both sterling and gold wholesale prices. The *Economist* primary products sterling index has risen by 7.5 per cent., while the gold index of primary products has risen by 6.0 per cent. The advance is most noticeable in the case of butter, cotton, and non-ferrous metals, but it is by no means confined to these commodities, and, indeed, is spread over practically the whole field.

* These figures relate to August 31st.

As is to be expected, the fuller index numbers, both British and foreign, which include a proportion of semi-finished goods as well as primary products, have moved in more sober fashion. The *Economist* British complete index number has risen by 4.5 per cent., while the foreign index number has risen by 1.5 per cent., while the foreign index number has risen by 1.5 per cent. Recent calculations published in the *Financial Times* show that, while since the bottom of the price curve the sterling price of 24 raw materials has risen by 18 per cent., the corresponding increase in more finished goods is only 2 per cent., and this discrepancy both explains the relative stability of the complete *Economist* index number and also suggests that the lag of finished goods prices operates during a rise as well as during a fall. Details of movements in the *Economist* index during the past fortnight are given below:—

	"ECONOMIST" INDEX.			
	(1927 = 100).	Sept. 18, 1931.	June 29, 1932.	August 24, 1932.
Cereals and meat	64.5	68.9	65.5	66.7
Other foods	62.2	57.6	61.2	64.4
Textiles	43.7	43.7	50.8	55.0
Minerals	67.4	67.4	72.9	78.0
Miscellaneous	65.8	58.4	60.7	62.0
Complete index....	60.4	58.8	61.9	64.7
1913 = 100	83.1	80.9	85.2	89.0
1924 = 100	52.2	50.8	53.5	55.9

The table also includes the figures for June 29th last, the date on which the bottom of the curve was reached. It will be seen that the subsequent improvement has been most marked in the textiles and minerals groups, and that cereals and meat have actually lost ground.

The Unemployment Figures.—According to the figures issued by the Ministry of Labour this week, the number of insured persons aged 16-64 in employment at

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK
LIMITED
41 LOTHBURY, LONDON, E.C.5

August 22nd was 9,280,000, a decline of 37,000 on the month and 85,000 less than in August, 1931. The unemployment figure at the same date was 2,859,828, made up of 2,040,078 wholly unemployed, 719,295 temporarily stopped and 100,455 normally in casual employment. The total was 48,046 more than in July and 126,046 more than in August last year. The increase in unemployment since July is too great to be accounted for by purely seasonal causes; that a considerable part of it is due to the effects of the cotton trade dispute is illustrated by the fact that in the London and South-Eastern district the figure has fallen since July.

International Cotton Statistics.—The International Federation of Master Cotton Spinners' and Manufacturers' Associations has published the annual statistics relating to consumption and stocks of raw cotton for the season ended July 31st last. The consumption of all kinds of cotton throughout the world during the twelve months was 22,323,000 bales, against 22,488,000 bales in the previous year. It is significant that an increase of 1,411,000 bales took place in American cotton and 127,000 bales of Egyptian cotton, but there were decreases of 1,074,000 bales in Indian qualities, and 629,000 bales in sundry cottons. It is evident, therefore, that numerous spinners have turned from Indian to American descriptions owing to the relatively lower prices of the latter qualities. Mill stocks of all kinds of cotton on July 31st last were 4,483,000 bales, against 4,313,000 bales a year earlier, and in this connection the figures for American qualities are 2,559,000 bales, against 1,871,000 bales. The Federation announces that, on July 31st last, compared with January 31st, there was a decrease in the number of spinning spindles throughout the world from 162,070,000 to 161,016,000. The Federation has published the usual statistics relating to short time working in the mills. It is reported that in Great Britain the stoppages during the half year ended July 31st last were equal to 10.32 weeks of 48 hours, against 10.51 weeks in the previous half year. With regard to Japan, the short time in the second half of the season amounted to 15.57 weeks of 48 hours, as compared with 14.42 weeks in the previous six months, whilst in China the stoppages during the half year ended July 31st last were equal to 15.95 weeks of 48 hours, against 5.67 weeks in the previous half year.

World Conference Arrangements.—Four nations and the B.I.S. have now nominated their representatives for the experts' preparatory meeting at Geneva, at which the

preparatory spade-work for the World Economic Conference will be done. The list is as follows:—

B.I.S.: Dr. L. J. A. Trip and Mr. Leon Frazer.
 BELGIUM: Sir Frederick Leith Ross and Sir Walter Layton.
 ITALY: Signor de Michelis and Signor Bianchini.
 BELGIUM: M. Franconi and M. van Langenhove.
 JAPAN: Mr. Kawai and Mr. Tushima.

The representatives selected by the Council of the League have also been chosen. In his capacity as President of the Lausanne Conference, Mr Ramsay MacDonald has thus informed the Secretary-General of the League of Nations of the agreement by the Powers concerned that this meeting should take place at Geneva and open in the latter half of September. The volume of work before this preparatory conference will be heavy and it depends upon the speed with which the experts are able to "clear the ground" how early a date will be a practical possibility for the holding of the plenary Statesmen's Conference.

Science in Doubt.—A remarkable address was delivered at York, on the last day of August, by Sir Alfred Ewing, who is this year's President of the British Association for the Advancement of Science. The occasion was historic; for the British Association was celebrating its hundredth anniversary in the city where it was born, while Sir Alfred's own memory covered more than half the span of the Association's life. He told his fellow-members that he had actually attended his first meeting of the Association sixty-five years before, as a boy of twelve. In reviewing a century of scientific achievement, this year's President was thus speaking with authority, and it is significant that he ended on a note of doubt—a curious change from the dogmatic and aggressive tone of self-complacency and self-confidence which mere laymen and humanists have grown accustomed to hearing in the voice of physical scientists speaking *ex cathedra*. The new-born doubt of which Sir Alfred Ewing has made his frank and dignified acknowledgment is really two-fold. It has both an intellectual side and a moral. On the intellectual side, physical science appears to be baffled at the moment by the intellectual consequences of its own most recent discoveries, which it finds itself unable at present to formulate in the precise and concrete terms of its nineteenth century classical age. This state of intellectual doubt is nothing new in the history of modern physical science; and the precedents indicate that it is a natural immediate consequence of a sudden spate of discovery. This kind of doubt, then, seems likely to be transcended as soon as science has invented new formulæ and notations and concepts to convey its new knowledge. It is otherwise with Sir Alfred Ewing's moral doubt; for this resembles rather the doubt which ancient science inspired in the hearts of Socrates and the Stoics and the Epicureans and the Christians, and this doubt was longer lived than ancient science itself. "In the present-day thinkers' attitude," he said, "towards what is called mechanical progress, we are conscious of a changed spirit. Admiration is tempered by criticism; complacency has given way to doubt; doubt is passing into alarm. There is a sense of perplexity and frustration. . . . An old exponent of applied mechanics may be forgiven if he expresses something of the disillusion with which, now standing aside, he watches the sweeping pageant of discovery and invention in which he used to take unbounded delight. . . . We are acutely aware that the engineers' gifts have been and may be grievously abused. In some there is potential tragedy as well as present burden. Man was ethically unprepared for so great a bounty. In the slow evolution of morals he is still unfit for the tremendous responsibility it entails. The command of Nature has been put into his hands before he knows how to command himself." This confession, coming from this source and made on this occasion, is very striking. If our scientists begin to speak this language, we laymen may begin to feel that they have something really valuable to teach us.

Overseas Correspondence.

UNITED STATES.

Finance — Industry — Railroads — Banking.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 31.

WALL STREET has paid no great attention to the visit here of Mr Montagu Norman, Governor of the Bank of England. It has been inclined to accept the explanation of George Harrison, Governor of the Federal Reserve Bank of New York, that Mr Norman's stay of a few hours here, when he met no Treasury officials, and only a few close friends, had no special significance. It has been explained that Mr Norman did not travel under an assumed name, and that his principal object was to see old friends. However, the Hearst Press has seized the opportunity to see in the visit a plot to cut foreign debts at the expense of the American taxpayer, and is giving much space to all sorts of fantastic rumours, including one that bankers are discussing a \$3,500 million international loan to commercialise all war debts. That story is regarded in good quarters here as highly imaginative.

Meanwhile the Treasury is about to announce its tax date financing. It is now expected that upwards of \$1,000 millions in refunding and new money (including \$250 millions for the R.F.C.) will be done on September 15th, with the inclusion of a five-year note. There has also been discussion of a Liberty Loan conversion operation. The opinion is now prevalent that nothing will be attempted at this time in view of the complex financial picture already presented for next month. However, it is possible that some sort of voluntary conversion offer may be made for First Liberty Loan, as that would not affect the markets.

The newly-formed Commodities Finance Corporation has begun operations; it has approved one loan and is considering applications for about \$15 millions. Its capital is \$50 millions, which will make the basis for lending on the ordinary trade basis of about \$600 millions. It is thought this will be ample, although the Corporation will have access both to the Federal Reserve and to the Reconstruction Finance Corporation funds. The so-called commodity pool will not purchase commodities for its own account, or make loans which do not appear to be based on sound business reasons. Its credit will be used almost entirely in sections where ordinary bank accommodation cannot be obtained.

The operations of the R.F.C. continue to win applause and bring down censure. The reluctance of the Corporation to approve wholesale loans to municipalities simply on the plea that employment will be increased is generally approved, but opinion is divided on such loans, as, for instance, one announced this week for \$50 millions to cotton-holding organisations. The outlook in the Southern States has improved greatly with the rise in cotton to 10 cents a pound, but the trade generally feels that the R.F.C. is merely carrying on the work of the Farm Board in interfering with markets.

In few industries can any signs yet be seen of better business. Textiles are operating more vigorously, and railroad traffic is beginning to increase slightly, but the motor industry is still depressed, and steel is now lower at around 13 per cent. of capacity. A new credit organisation has been formed by the railroad equipment manufacturers. It will advance credit to the extent of 90 per cent. of value of new equipment to the railroads, relying on R.F.C. loans, but railroad equipment purchasing as a result is likely to be slow. The roads have more equipment in good order than they can use and are reluctant to add to their financial obligations.

Railroad executives have completed plans for seeking wage reductions. It has been decided to ask for a 20 per cent. cut—which will mean 10 per cent. from the present rates. Last February, by agreement, a 10 per cent. reduction was set for one year. By beginning now a pro-

cedure under the legal provision for arbitration it may be possible to arrive at a decision on the expiry of the present agreement. On the basis of current payrolls, it is estimated that a 20 per cent. cut in the basic scale would save the roads \$175 millions annually. Railroad net earnings for July were down over 70 per cent. from a year ago, and the seven months' earnings were off nearly 60 per cent.

Financially the position continues to strengthen. Dividend omissions in August were fewer than for any month in the past twelve, amounting to 94, and reductions on 69 stocks also were the smallest since last year. A handful of stocks increased their payments and one, South Porto Rico Sugar, resumed dividends. Business failures also decreased, but not as sharply as is usual in August, and there were a few large receiverships. The Interborough Rapid Transit in New York (the principal underground and elevated system) was a casualty, but politics were largely to blame for this. Earnings are more than sufficient to pay charges, but it is desired to rid the underground lines of the burden of the unprofitable "elevated" service, and perhaps force action on unification of all the city's rapid transit lines. No major receiverships are anticipated in the next few months at least.

August brought a gain of approximately \$110 millions in the country's gold stocks, of which \$90 millions was metal released from earmark. That was double the gain in July and was the largest for any month since last November. Gold additions are increasing member bank excess reserves, along with reduction in currency outstanding, so that as yet there has been no inflation in spite of inflationary trends in credit. Last week the Federal Reserve system again cut its credit in use, by \$23 millions, and member banks reduced their borrowings.

Member banks also continue to deflate their loans, city banks for the week of August 24th reporting a drop of \$81 millions, while investments were unchanged. About half the deflation was in loans on stocks and bonds and is explained partly by substitution of R.F.C. credit for bank loans and partly by the rise in markets, which have thawed out frozen loans of the undermargined variety, but it is also true that business demand for credit, or at least the satisfaction of it, is not rising.

In spite of the efforts of farmers in Iowa and other sections of the Middle West to force further increases in their products, the farm country generally is feeling much more cheerful over the gains in commodity prices, largely agricultural. Politically this means an advantage to the Hoover administration, but the outlook in the West still is considered doubtful, and some uneasiness is arising over the impetus which the soldiers' bonus movement is gaining. Meanwhile the new taxes are proving insufficient to keep the Budget in balance, and as many have anticipated, Congress in December will have to consider new ways of finding revenue. The question of a general sales tax is bound to come up again.

FRANCE.

Improved Outlook — Conversion Hopes — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, September 7.

THE revival at the Lausanne Conference of a good understanding with Great Britain may now be regarded as the keystone of French foreign policy, whether it concerns international disarmament, Germany's demands to be liberated from the obligations of the Versailles Treaty, international debt payments or any other problem. The recent rapprochement between the two countries under the pressure of their common interest in American debt payments, has so largely changed the whole international outlook that, as the present tone of practically all sections of the Paris Press shows, purely party bickerings have ceased to enjoy their former prominence. The anxieties and uncertainties manifested a year ago have been largely allayed, and have been replaced by an appreciable return of confidence and a feeling that a settlement of European

ills, under the joint leadership of the ex-Allies, is now within the range of practical politics. The certitude of an abundant harvest, the indications that the economic crisis has reached turning point, the feebleness and incoherence of both American and German governmental and diplomatic efforts and the slow but apparently sure trend of the domestic political world towards the formation of a really national Cabinet, independent of Socialist dictation, are other factors which have contributed towards the present calmer and more confident outlook.

The launching of the Government Renten conversion plan before the end of October now appears to be certain. The closest secrecy is being maintained as to the conditions of conversion to be proposed. It is understood, however, that the issues to be dealt with will be the following:—

	Capital Value, Oct. 31, 1931. Francs.
5% 1915-1916	16,737,000,000
5% Amortissable, 1928	18,500,000,000
6% 1920	25,655,000,000
6% Amortissable, 1927	17,662,000,000
6% Obligations, 1927	4,570,000,000
7% Treasury Bonds, 1927	2,750,000,000
	85,874,000,000

The total capital value to-day, after allowing for extinctions by the Caisse d'Amortissement during the past ten months, may be taken as amounting, in round figures, to 85,000,000,000 francs, or around (at present sterling value) £970,000,000. Two of the above six issues—the 1927 6's and the 7 per cent. Treasury bonds—are convertible at par, plus the accrued proportion of their redemption premiums, which would be equivalent to 2 per cent. in the case of the former and 3 per cent. for the latter. The remaining four issues are convertible at par. In the nature of the case, anything like exact estimates of the saving to be effected by conversion are at present impossible. Assuming, however, that the conversion rate will be not lower than 4 per cent. and not higher than 4½ per cent., and that only the three 6 per cent. issues and the 7 per cent. Treasury bonds are dealt with, the operation should result in a saving of anything between 1,000,000,000 francs and 1,250,000,000 francs a year.

Official estimates of the current wheat harvest, as announced by the Ministry for Agriculture, place the total yield from metropolitan France at 90,182,000 quintals, or within a shade of 24 per cent. larger than last year, 45 per cent. more than in 1930, and only 1½ per cent. below the high record harvest of 1929. Normal domestic consumption requirements are usually estimated at around 90,000,000 quintals. In an exceptionally cautiously-worded communiqué, apparently designed to prevent nervous growers from falling victims to unscrupulous speculators, the Minister for Agriculture states that the figures "do not appear to suggest that the present harvest exceeds the various needs of national consumption."

Iron and steel production returns for July, according to the figures issued by the Comité des Forges de France, remain practically unchanged on the month. Total output of pig iron was 453,000 tons, as compared with 452,000 tons in June (the lowest figure registered since the present depression set in), 679,000 tons in July last year, and a monthly average of 864,000 tons in 1929, the year of largest output. The number of blast furnaces in activity

was 81, against 79 in both May and June, and 115 in July, 1932. Crude steel output was 468,000 tons, against 465,000 tons in the previous month, 651,000 tons in July, 1931, and a monthly average of 808,000 tons (highest) in 1929. Both iron and steel figures would appear to suggest that the worst of the crisis has been reached, and even that the tide has actually begun to turn. Other indications tend to confirm this view. The general industrial situation, however, is still so obscure that analysis is difficult.

Silk prices have risen 30 per cent. during the past two months, and further improvement is expected during September and October. The situation of this industry is complicated by the fact that Japan, this country's most serious competitor, has accumulated enormous stocks of raw silk, which will probably check any real progress. The French textile industries as a whole are suffering greatly as the result of the abandonment of the gold standard by Great Britain (which proved a deadly blow to both Lyons and Roubaix) and of the fall in the yen. So far as cotton is concerned, French domestic and colonial consumption could probably, if necessary, absorb the entire native production. It is indispensable, however, that from two-thirds to three-quarters of the French output of silks and woollen goods should find buyers in the foreign markets. Reprisals against the French quota system, particularly by Switzerland and Holland, have hit this country's textile industries more than any other, if only for the reason that textiles constitute the principal category of French exports.

Manufacturer's stocks of raw materials and retailer's supplies of goods ready for sale have, naturally, been kept down to skeleton proportions for many months past, and there is still little sign of any modification in the universal policy of living from hand to mouth. The key to the situation seems to lie in the fact that China, India and Russia, which together constitute about one-half of the consuming world, have practically ceased to exist as markets. Meanwhile, French industry is finding a solution of the problem unusually difficult. Business men appear to be agreed that a drop in production costs is imperative, but are sceptical as to its possibility. Taxation seems impossible of reduction, industrial and commercial rents have become prohibitive, and reduction of production costs by adoption of improved manufacturing plant appears impracticable, owing to the lack of available long-term capital. The majority of industrial undertakings have been drawing on their reserve funds for some 2½ years. Many of them have suffered serious capital losses in the various financial crashes, while another large section is now suffering from the burden of heavy increased capital charges, incurred imprudently during the more prosperous years. The sole path open towards lower production costs appears to be in the direction of substantial wages cuts. This, however, is dependent on a drop in the cost of living, which is admittedly unlikely to prove practicable under the present regime of high protection for agriculture.

GERMANY.

New Economic Programme.

(FROM OUR CORRESPONDENT.)

BERLIN, September 9.

THE German people are showing great confidence in the new economic programme of the Papen Government. After all they have suffered, they are eager to believe in any way of escape suggested by responsible persons, but the way in which the programme has been constructed must convince every objective critic that it has been thought out with much greater conscientiousness and with incomparably greater knowledge of economic conditions than any of its innumerable predecessors. In addition, there is the very well-founded feeling, strongly reinforced by the recent relatively optimistic report of the Konjunkturinstitut, that economic developments are taking an upward turn, so that the Government can count upon the transition, in the course of the coming year, of the artificial measures for the increase of economic activity into a natural economic revival. This disposes of many adverse criticisms which would otherwise have to be made of

attempts at artificial stimulation of trade. Protests against the programme, which was put into force by presidential decree on September 4th, have come almost exclusively from the Socialists, and are only directed against the proposed reduction of wages. The hopes which are being pinned to the programme are reflected in the sharp rise on the Stock Exchange, which has spread during the past week from shares to fixed-interest securities.

In spite of all this there can be no doubt that the emergency decree will lead to a number of serious difficulties. It holds out to employers the prospect of a wages subsidy if they "employ, during a calendar quarter between October 1, 1932, and September 30, 1933, in a domestic business, a higher average of workers than their average for June, July and August, 1932." This subsidy, which is to be paid in "taxation vouchers" (that is in vouchers which can be used for the payment of taxes in the years 1934-1938) is normally to be 100 marks per worker per quarter. Employers in receipt of these subsidies may at the same time reduce the wages of their employees below the tariff rates, and this reduction at its greatest, that is when the number of employees is increased by 25 per cent., amounts to 12½ per cent. This double advantage means that the additional workers only cost the employers in general 25 per cent. of their wages, while 75 per cent. is borne by the original workers in the form of wage reductions, and by the State. This calculation, however, is somewhat too favourable, as the taxation vouchers will not be marketable at par.

Such a stimulus to the employment of labour is, of course, enormously powerful. For that very reason, however, any business which does not qualify for it will be at an extraordinary disadvantage against its competitors. The engagement of additional labour will be much easier for those undertakings which, until this summer, were ruthless in discharging all workers who were not absolutely necessary. Employers, on the other hand, who kept on as many workers as possible, even though on short time, will now be unable to increase their staffs, and will in many instances be unable to withstand the competition of their rivals who have shown less consideration for their workers and are now, in consequence, able to avail themselves of the advantages of the emergency decree. A consequence which is still more serious, because it will probably occur more frequently, is the almost inevitable prospect that some firms will secure these advantages quite illegitimately. A large concern can easily so distribute its orders that the employment of additional labour in one works is compensated by dismissals in another, thus qualifying for the subsidy without contributing anything to the diminution of unemployment. The decree does, indeed, provide for the withholding of the subsidy in such cases, but in order really to expose such proceedings a much more extensive inquiry would be necessary than is practicable in most cases.

A further difficulty is presented by seasonal industries, which would be enjoying additional labour during the next few weeks in the natural course of events. It would obviously be unfair to give them the subsidy without qualification, so they are required to show that the increase in the number of their employees is more than seasonal, but as science has never solved the problem of distinguishing the effects of purely seasonal causes in the case of individual firms, there is little hope of this working out satisfactorily.

The Government has included in the emergency decree a general clause empowering the authorities to sanction the payment, by firms whose existence is threatened, of 20 per cent. less than the tariff wages. This will have to be utilised in particular by those firms which cannot, without getting into debt, qualify for participation in the advantages which their competitors are enjoying. The decree imposes, however, such a monstrous volume of work upon the Government offices concerned that one cannot but doubt whether it will prove possible to deal with the proposals in time. The arbitration authorities whose normal business is to deal with industrial disputes have been assigned the task of inspection, of dealing with special proposals, and the like. They are undoubtedly the most

expert authorities, but it is to be feared, in spite of the provision which has already been made for special assistance, that they will be confronted with a completely unmanageable flood of proposals, which every day that the hardships and injustices continue is a threat to the existence of the firms suffering from them. Never, even during the period of progressive social policy, has the State undertaken so intensive a regulation of wages according to the needs of individual undertakings, and it has, therefore, never been so doubtful whether its apparatus and its officials are adequate to such tasks.

The Government are well aware of this, and the official explanation of the new decree contains the following passage: "The Government are by no means unaware of the danger that the employment subsidy may be abused, but they will deal with abuses in supplementary regulations. For the sake of their object, and in confidence of the success of the measures, the Government believe it their duty to take the risk of abuse." If the Government succeed in bringing about a general improvement in economic conditions within a short time, that will outweigh all injustices, for in that event almost all employers, and indirectly employees also, will share in the improvement in some way or other. The only question is whether this upward movement will come promptly enough and with sufficient force.

The emergency decree contains a number of other measures. The communes are empowered to levy the poll tax, which was originally to be raised only in the first half of the year, during the second half also, at a 25 per cent. lower rate. An inquiry is to be made into the salaries paid to the directors and other high officials of firms subsidised by the State or by other public corporations. Guarantees and subsidies are to be given to the credit societies and consumers' associations, as some of these organisations would otherwise collapse owing to the withdrawal of deposits by their members. Guarantees by the Reich are also to be placed at the disposal of some manufacturing firms.

The official *communiqué* on the objects of the emergency decree contains a few sentences in which the Government announce their intention of limiting the import of important agricultural products by means of quotas. For this purpose they intend to "get into touch with the principal countries concerned." It is thus evident that the quotas are not to be introduced one-sidedly but in contravention of existing agreements. All the same, it is impossible not to recognise that this means a further turn of German trade policy in the direction of protectionism. This is also illustrated by the list of recent increases in industrial duties. These are directed to a large extent against imports from England, but it may safely be assumed that most of these increases are not final and would be dropped if England would make similar concessions to the German export industries at the forthcoming commercial treaty negotiations.

HUNGARY.

Stress — Exchange Restrictions — Foreign Creditors.

(FROM OUR CORRESPONDENT.)

BUDAPEST, September 5.

THE Hungarian delegates have left for Stresa, but the outcome of the conference is received here with great scepticism. There is little doubt that preferential commercial treaties between the Danubian countries are highly desirable, and Hungary especially—in view of the present deadlock with Austria and Czechoslovakia—would welcome any agreement designed to further trade. It is realised here that Austria and Czechoslovakia, the two industrial countries of the former monarchy, cannot absorb the agricultural surplus products of Hungary, Roumania and Yugoslavia, and, therefore, great importance is attached to the attitude of Germany and Italy, whose Governments, as it will be remembered, held out hopes to the Danubian countries at the recent London Conference. Unfortunately these hopes did not materialise in the four months that have elapsed since,

Just Out.

WORLD ECONOMIC SURVEY, 1931-32

328 pages.

Price: in wrappers, 6s. net; cloth, 7s. 6d. net.

The Survey contains a brief summary of the economic developments of the first decade after the war, in order to provide a background for an understanding of the crisis which developed in 1929.

The second chapter gives a brief description of the course of the depression. This narrative and the detailed chapters which follow are brought as close up to date as possible, information being given in many instances up to the middle of 1932. After the narrative of events, different aspects of economic life in the depression are examined in successive chapters. Starting with the production of commodities, the Survey proceeds to discuss the fall in prices, the shrinkage of international trade, difficulties in balancing international accounts, changes in banking structure and policy, wages and unemployment, public finance and commercial policy. A final chapter surveys the economic situation in July, 1932, and various proposals made for its alleviation.

as both Germany and Italy show very little willingness to buy Hungarian agricultural products. It must be emphasised that wheat preferences alone, even if granted, would not do much to help Hungary, as the exportable wheat surplus is very small; on the other hand, the advantages of the good maize and fodder harvest will be lost unless markets for livestock and slaughtered animals can be secured in Stresa.

The desirability of the gradual removal of foreign exchange restrictions in order to revive trade is admitted by everybody, but it is realised by the authorities that the strict control of currency transactions cannot be eased until the budget is balanced and arrangements are made with the foreign creditors regarding the huge short-term debts. Unhappily, the national finances show a big deficit—exceeding 100 million pengő for the current year—which no international conference can undo. Much as these international conferences might contribute to the better understanding of the financial and economic difficulties of the almost insolvent Danubian countries, they suffer from a defect whose importance is often overlooked in that they delay the application of the remedy where national action is more essential than international, as, for example, in the case of budgetary retrenchment, because they make it easier for Governments to postpone unpopular cuts from one conference to another. Unless the budgetary aspect is properly faced in Stresa—as all Danubian budgets are unbalanced—the conference can contribute very little to the lasting recovery of the distressed Danube Valley.

In spite of the long duration of the transfer moratorium which was decreed on December 22, 1931, and the ban on capital repayments on foreign debts which came into force on July 14, 1931, the foreign creditors have failed so far to appoint a duly representative body to open negotiations with the Hungarian Government for a reasonable debt settlement. The repeated requests of the Finance Minister to this effect voiced both in Parliament in Budapest and at the sittings of the League Financial Committee in Geneva have met with no response. Apart

from the London Committee for the bondholders of the loans issued under the auspices of the League of Nations, with which arrangements were made for the service of the State Loan of 1924, the other long-term bondholders have not yet formed a protective committee, although about 1,000 million pengő mortgage and communal bonds have been issued, mostly in London and in New York, since 1924, and most of these are still outstanding.

The foreign short-term debts, aggregating more than 1,500 million pengő, fall into three main categories. Firstly, the 148 million pengő debt of the National Bank to the B.I.S. and other central banks, obtained in June and in July, 1931, and renewed every three months; and the Treasury Bills issued in November, 1930, and in August, 1931, amounting to 78 and 95 million pengő respectively. The Treasury Bills which have just matured will be renewed for another six months subject to the approval of the holders, who are mainly British, American and French financial houses. The short-term debts of the Treasury and the National Bank, totalling about 320 million pengő, will have to be consolidated first, probably on the lines worked out by the League and the creditor Powers for Austria, on a moderate interest basis.

To the second category belong the short-term debts of the private banks, and to the third the merchandise debts and other obligations. The debts of the private banks were estimated in October last in the League report at more than 800 million pengő, the merchandise and other debts at about 500 million pengő. There is little doubt that the merchandise debts were overstated, and a great deal has also been wiped out by bankruptcies and private settlements since. The main issue now is the consolidation of the debts of the private banks. Unfortunately, the negotiations for a new Standstill Agreement have made very little progress since the expiry of the old agreement on August 1st. The main difficulty is the difference which has arisen between the Hungarian authorities and the British and American creditors about the demand of the Anglo-Saxon bankers to mobilise the pengő equivalent of their frozen debts within Hungary. Considering that a goodly part of the short-term loans borrowed from abroad had been devoted to purposes (sometimes with the knowledge of the lender) which ought to have been financed from long-term loans, their unfreezing—even in pengő—is quite impossible, as it would either put further strain on the National Bank's huge bill portfolio or else it would break the debtor banks, as they cannot recover their advances owing to the agricultural moratorium and their frozen industrial investments.

ROUMANIA.

Government — Swiss Loan — Cereals — Agricultural Conversion.

(FROM OUR CORRESPONDENT.)

BUCHAREST, August 23.

AFTER protracted negotiations the Cabinet crisis has been brought to an end by the appointment, under the presidency of Mr Vaida Voievod, of a National Peasant Party Government, composed of members who, with one or two exceptions, have held office in the previous administration of this party. Mr Maniu, who has been at last persuaded to accept again the leadership of the Party, has declined the Prime Ministership, but he is at present the dominant personality in Roumanian politics, and it is to be hoped that by virtue of his important position he will exert a restraining influence on the too-demagogic propensities of certain ministers. In its programme the new Government promises measures modifying the laws of Agricultural Conversion and of judicial liquidation, the two principal mistakes of the Jorga-Argetoianu administration. This will be very difficult, as by virtue of these laws certain situations have already been created which it will not be easy to change without making the legislative confusion still greater than it is already. In view of the decrease in incomes it is intended to reduce taxation. The valorisation of cereals by internal organisation and by commercial

treaties is to have the especial attention of the Government. The reorganisation of industrial, production, and of the agricultural and industrial credit banks, is also fore-shadowed. The stabilisation of the currency is to be maintained, the budget to be balanced, and economic and financial reconstruction is to be seriously taken in hand in accordance with the advice of the experts of the League of Nations.

To tide over the immediate shortage of money the Government has succeeded in obtaining a loan from a syndicate of banks headed by the Union des Banques Suisses. The amount is 50 million Swiss francs, and may be increased to 70 million francs. The loan is made in the name of the Forest Institute, one of the State Régies, which will sign bills for that amount. Interest is fixed at 4½ per cent., payable every three months, plus ½ per cent. commission and expenses. The latter are fixed at 250,000 Swiss francs. The loan is repayable in two and a-half years, unless by October 1st next the syndicate fixes another date; this, however, is not to be before July 1, 1933. The operation is effected through the National Bank of Roumania, which is to receive interest at 2 per cent. for its services; as this charge is borne by the State, it is hoped to prevail on the National Bank to forgo it. The loan is to be repaid by monthly instalments, beginning on October 1st. As the services of the National Bank are resorted to, it seems likely that the money will be made available by an increase in the note issue covered by the bills drawn against the new credit. The fact that the syndicate will not part with any money accounts for the low rate of interest. With the present Treasury receipts the loan will carry the State over the next three or four months. Within this breathing space the Government will, therefore, have to cut down expenses, find new revenue and make further financial arrangements. From the declarations made by the Minister of Finance in Parliament it appears that important negotiations are being carried on to obtain further financial assistance. On the other hand, much depends on the report which will be made by the representatives of the League of Nations, who are expected to arrive in Bucharest towards the end of this month in order to study the situation. The Council of the League will consider the question in the early autumn, so that before that time no developments are likely to take place.

On account of the shortage of the crop, prices of wheat have risen rapidly. The best quality is quoted now at 55,000 lei per wagon of 10,000 kgms.; other qualities are sold at 44,000 to 48,000 lei. In view of this situation an import tax of 320 lei per 100 kgms. has been imposed. There is no wheat left of last year's crop on account of the very active export in the second half of 1931 under the impetus of the export premium which was abolished last spring, and in respect of a considerable proportion of which the State is still in debt to the exporters. This year's harvest of barley and oats is expected to cover the deficit of the wheat production. The maize promises very well indeed. According to the statistics of the Ministry of Agriculture, the production will be the most important of the last ten years, with the exception of the bumper crop of 1929.

The situation created by the law of Agricultural Conversion has caused the country banks to take desperate action. All Roumanian credit institutions in Transylvania by common consent have held extraordinary general meetings, and have authorised the boards to demand judicial liquidation. Further, at a meeting held on July 31st, the United Banks of Roumania, an association comprising practically all provincial and the smaller banks of old Roumania and Bessarabia, resolved that all the provincial banks were to call meetings to be attended by the shareholders, the depositors, the parliamentary representatives of the provinces and the large agricultural debtors, to discuss the situation and the manner in which the law of Agricultural Conversion could be changed. The problem of judicial liquidation was dealt with, and it was declared that members of the association should be encouraged to make use of this law so as to protect themselves against any action which may be taken against them by their creditors.

ARGENTINA.

Exchanges — Trade — Finance.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, August 19.

PRACTICAL evidence of the intention of the present Minister of Finance to adhere strictly to Argentina's foreign debt engagements has been given by providing the funds necessary to meet services due in Great Britain, Spain and the United States of substantial amounts. In order that this might be done the exchange market has been almost swept bare of export paper, with the natural result that private commerce is suffering severely through its inability to make payments which fall due. That this state of affairs is proving exceedingly harmful to trade as a whole becomes more and more apparent; at the same time, in justice to the Government, it should be pointed out that, even if official requirements were taken off the market, there would still be an insufficient supply of export paper to cover the demands of remitters. What is evident is that the value of the Argentine peso has been pegged far too high, and that nothing short of a miracle will prevent it from slipping away to lower levels, if a change in the financial policy of the Government is announced.

All the statistical information available confirms the result of every-day observation bearing upon the diminution of trade movement. Gross traffic receipts on the railways, the monthly clearing house returns on the banks, and the retail movement of the big department stores all illustrate the depression through which Argentina is passing. Everyone feels the situation to be extremely grave, and it cannot be said that popular opinion, either in financial or commercial circles, re-echoed to any extent worth mentioning the cheerful optimism embodied in an official statement made by the Minister of Finance after the Cabinet had met to debate upon the financial situation. It is felt that, on the figures now available, there must be a heavy Budget deficit at the end of the year. The Minister of Finance himself admitted a possible shortage of \$40-\$50 millions paper; taking revenue receipts for the first eight months of the year as a base for calculation this figure will be at least doubled, and may even be trebled, when the 1932 accounts are finally closed. Nor was the airy suggestion that any deficit might easily be met by increasing taxation received with pleasure in business circles. For, apart from Customs dues, inland revenue taxes and the land tax, Argentina's machinery for collecting direct taxation at short notice is almost non-existent. Income tax is down to yield \$51,000,000 paper in 1932; it is doubtful whether much more than a tenth of that sum will be received from this source before the year ends; while the tax on transactions, down for forty odd million pesos, has so far only brought in something under a fifth of that amount. Excessive import duties have killed trade in many lines, and, with the trade, have killed the revenue obtained therefrom in normal times. The motor-car industry is a case in point. Here enhanced duties have combined with the impossibility of remitting proceeds of sales to force shippers in the United States to consider the advisability of shutting down on this market for an indefinite period; indeed, it is freely rumoured that one firm of world-wide fame has actually taken this decision, and will send nothing further to be assembled here until such time as the heavy sums awaiting remittance—running into several million dollars paper—can be transferred to the United States.

This is not a pleasing picture, and unfortunately the few bright lights that can be seen are both distant and evanescent. Improvement in cereal quotations is one favourable symptom, but grave doubts are entertained as to the result of the coming crops of linseed and wheat. Locusts are worse than they have been for something over twenty years, and, although high prices may in one sense compensate for poor yields, the effect upon trade in general of a small crop at the present time would be overwhelming. It is highly probable that the state of the nation will shortly be again referred to Congress; this body will be asked to sanction various measures of an official nature

designed to help in the work of reconstruction. The possibility of a moratorium is still present, but popular opinion is veering round to the view that everything possible ought to be done to prevent the Government, at any rate, from having recourse to this means of relief. Nevertheless, inasmuch as one of the greatest drawbacks to the improvement of the internal trade is the long-overdue debts of the Government to local creditors, it is reasonably certain that the national administration must be put in funds without further delay, and this can only be done by using the re-discount facility up to the hilt, and allowing the conversion office to take over the balance of the Patriotic Loan. If this is done, and if the remaining debt services falling due this year can be met by gold shipments, the situation will be eased to a considerable extent.

SOUTH AFRICA.

Foreign Trade — Mining Returns — Maize.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, August 10.

THE outstanding feature of the trade situation in South Africa is the striking fall in imports during the present year. For the first six months of 1932 imports were valued at £16,434,217, whereas the figure for the first half of 1931 was £26,707,008. For June this year's figure of £2,597,954 compares with £4,276,383 in June, 1931. In spite of the exchange dumping duty and the 7½ per cent. surtax, duties this year are only £3,827,259, against £3,975,249 in 1931. As the special imposts were for the purpose of subsidising exports, and the existence of the Government depends on the continuance of the subsidies to farming exporters, the fall in imports has many implications.

Exports in the first half of 1932 were £34,384,877 and in 1931 £36,616,402. From a comparison of the import and export figures it appears that the South African "favourable balance of trade" has reached quite abnormal proportions. In ordinary years exports exceed imports in value by figures in the neighbourhood of £20 millions. It will be seen above that this year the difference on six months' trade is £18 millions. This factor would seem to have some indirect bearing on the much-argued point of the export of capital. If some of our exporters are retaining and utilising their returns overseas, the figures of bank transactions, of which much has been made before the Select Committee and elsewhere, are obviously not a complete reflection of the situation. It is a source of satisfaction in many quarters locally that interest rates in England are so low. In the meantime many people feel that this great excess of exports must be redressed sooner or later, and therefore argue that trade in the Union is likely to improve shortly.

Cost-of-living figures are still falling here as elsewhere. The increases in the cost of food, fuel, light and rent compared with corresponding local costs in 1914 are now 3.77 per cent. on the Witwatersrand and 26.76 per cent. in Cape Town. The figures including "sundries" (i.e., clothing, household hardware, etc.) are higher; but are, of course, affected to a much greater extent by Union tariff

policy. The figures are noteworthy on account of the fact that increases at the coast have been so much greater than in the larger centres of the interior. Years ago there were important differences in living costs between various centres in the Union, but the tendency has been for these to be smoothed out, the coastal districts not participating in the post-war fall to the same extent as inland districts.

One of the most important Government returns of the year is the annual report of the Government mining engineer, whose issue dealing with the year 1931 has just appeared. The output of gold constituted a new record at £46,205,858 (standard value). Of the 10,877,777 fine ounces produced in the Union, 10,351,828 ounces came from the Witwatersrand. Apart from the production of gold, the year was a disappointing one for the mineral industry. In spite of an increase of £700,000 in the value of gold produced, the value of all minerals was down by £4.5 millions; there were no important increases to balance the decreases in diamonds, coal, copper or asbestos. As regards the diamond position, the figure for metric carats sold was down from 1,892,954 to 1,448,531, whilst the price of 37s. 8d. was the lowest since 1911. Last year's figure was 63s. 2d. The Government revenue from gold-mining leases was £2,228,755 in the year 1930-31 and is estimated to be £2,833,341 in the current year. With the new leases now being entered into, and the commencement of production by Daggafontein and East Geduld, the tendency will be for this figure to increase. The Government policy is bound to take cognisance of its heavy and increasing personal interest in the main industry of the country. All branches of the base metal industry are suffering severely from the currency position.

The total amount of maize estimated to be available this season is 17,500,000 bags (of 200 lbs.), of which 16,500,000 bags is from current production. It is estimated that some 10,000,000 bags will enter the trade, and that of these 5,500,000 will have to be exported. This makes the export quota under the Maize Control Act 55 per cent., against 33½ per cent. last year.

IRISH FREE STATE.

Economic War — Railways.

(FROM OUR CORRESPONDENT.)

DUBLIN, August 31.

It is impossible to discuss the course of economic events in the Free State at present without constant reference to political conditions which still continue unsettled. The rupture between the British and Irish Governments has not yet been healed, and only optimists believe in the possibility of any settlement in the immediate future. Meanwhile a good deal of anxiety is being caused by the recrudescence of activity by various armed organisations. Rumours are rife that arms are being landed around the coast, shooting affrays have taken place in different parts of the country, and "a certain liveliness" has been reported on the I.R.A. front. The establishment of a second semi-military force composed of ex-national army men has still further complicated the situation and has given rise to growing uneasiness among the ordinary peace-loving and law-abiding members of the community.

In view of the meagre results obtained at Ottawa by the Dominions most eager to advance the cause of Imperial co-operation, the return of the Free State delegates from the Conference with practically empty hands has caused neither surprise nor disappointment. The only part of the Empire with which fruitful agreements could be

made by the Free State is Great Britain, and the conclusion of such agreements could hardly be expected in view of the continuance of the "economic war." The agreements entered into by Great Britain with the other Dominions are not such as to injure the Free State when normal conditions return. The concessions to the Canadian cattle trade do not amount to much in practice, and the arrangements regarding dairy products and meat are too contingent and vague to give rise to any alarm. A question of more importance is whether the exemption of the Free State from the British import duties which are due to expire in November will be continued, a matter which will depend upon the settlement of the existing political differences.

The prolongation of the "economic war," however unpleasant it may be to farmers and traders, is probably regarded as a blessing in disguise by the Government, which looks on external trade as a necessary evil that should be reduced to the smallest possible dimensions. The interruption of Anglo-Irish trade will make easier the pursuit of the policy of self-sufficiency which is so dear to the Government and its advisers. An elaborate scheme for the subsidising of wheat and other cereals is being prepared with the object of cutting down the importation of human and animal foodstuffs. Proposals for the artificial encouragement of wheat cultivation were exhaustively examined in 1928 by a very representative committee, by a majority of which they were decisively rejected. Every argument justifying the rejection of these proposals four years ago has been greatly strengthened by the fall in wheat prices which has since taken place.

Such arguments, however, do not persuade the present Government, which holds to its own course in spite of all expert advice. For example, there has just been published a very elaborate report by the Tariff Commission refusing to recommend the protection of the bacon and ham industries on the ground that such protection would injure the poorer classes of consumer without conferring any equivalent advantage on farmers. But, for all the practical effect it will have, this thoughtful report might as well have never been prepared, as almost prohibitive duties have been already imposed on bacon, ham and other pig products on the Government's own initiative.

The full stress of the economic war will be felt during the autumn when the purchase of feeding stuffs will necessitate heavy cash outlay by farmers. If the interruption of the live stock trade continues much longer financial embarrassments among farmers may be expected to develop. A sum of two million pounds has been placed at the disposal of the Government for the relief of emergency distress, but it is possible that the demand will be made for a general moratorium for all agriculturists who find difficulty in paying their annuities, rates and bank advances. Such a proposal would give rise to very serious problems, and would doubtless be received with much criticism, if not with positive opposition, by the banks, which would naturally regard the freezing of a large part of their assets with grave concern. The unquestionable soundness of the Irish banks has in the past proved one of the country's most valuable assets, and any tampering with the banks is the last expedient to which any responsible Irish Government would resort.

The position of the railways in the Free State continues to deteriorate, and it is possible that the lines may be closed down if some relief is not forthcoming. The railways are suffering on the one hand from a diminished income caused by the growth of road competition, and on the other hand from rigid costs which they are unable to reduce. In these circumstances the realisation of a profit has become impossible, and dividends are in arrear. Something must be soon done by the Government if the public is not to be completely deprived of the services of the railways. Either the companies must be relieved of their statutory burdens and restrictions and allowed to compete freely with their rivals on the roads, or the railways must be nationalised, or some central authority must be set up to control and rationalise all forms of transport in the Free State. The last course is probably the one that will be adopted.

HOME AND WORKSHOP.

SINCE the days of William Gaskell's strictures on the contemporary industrial revolution, the wage-earning woman has been the subject of much literary attention. The differential operation of the Factory Acts, the peculiar difficulties presented by women to the trade union organiser, and the generally lower level of their earnings have all helped to mark women wage-earners out for treatment as a distinct economic category. In our own time the administration of unemployment insurance has focussed a new measure of public attention upon the woman worker qua woman, and now in the matter of health insurance her fate appears to be shaping in the same direction. The war period, of course, was the occasion for a flood of special studies on the subject, occasioned by the substitution of women for men on an unprecedented scale, and by the contingent problem of reconciling this headlong process with a network of long-established and somewhat anti-feminist trade union regulations. There was the double problem of how to fit women into the new emergency industrial order, and how, subsequently, to get them out of it when the time came to resume pre-war practices.

Now in all these discussions—as one would reasonably expect—the figure of the woman wage-earner is shadowed by another figure: that of the woman home-maker. Indeed, it may be argued that this continued shadowing is the major factor which constitutes women a category in the industrial arena. It is undoubtedly a far more potent factor than the muscular inferiority whose industrial implications are becoming progressively less significant in our mechanised age. On occasions, as in the War Cabinet's Report on Women in Industry, the fact of this shadowing receives little emphasis. In more abstract and general discussions of the economic position of women, such as are associated with the names of Charlotte Perkins Gilman and Olive Schreiner, it has received due attention. And now in Mrs. Anthony's recently published book, *Women's Place in Industry and Home*,* it receives the kind of attention it really deserves. Seldom have the kind of problems of woman as wage-earner been more closely or more thoughtfully integrated with the problems of woman as economic dependent. In dealing with the concrete facts and figures of women's industrial employment in Great Britain in the year of grace 1932, Mrs. Anthony is at every turn acutely aware of the ubiquitous shadowing of potential marriage, home duties, and domestic tradition. Moreover, she has as part of her intellectual background Miss Rathbone's *Disinherited Family*—that long-delayed recognition of the economics of dependency; and in this respect she has the advantage of her predecessors. Thus equipped, and with first-hand experience of earning and home-making, Mrs. Anthony has succeeded in making a contribution to a knotty problem of our time, in which she unites careful analytical thought, a wide range of knowledge, and an effective literary technique. If her suggested remedies seem at first sight small and tentative in relation to the magnitude of the inequity and wastage which she describes, that is to some extent the measure of her objectivity and readiness to face difficulties which more passionately feminist writers tend sometimes to ignore.

In so comprehensive a volume there must be, of course, ample scope for criticism. In the volume under review criticism would take the form of questioning certain of the author's values. The word birth-control, for instance, commands three references in the index; but each of these is, in fact, no more than a passing allusion. One doubts, therefore, whether the writer has accurately gauged the enormous significance of a rapidly spreading knowledge of contraception in the closely integrated problems of woman as wage-earner and woman as home-maker. It is obvious, for instance, that birth-control—and by methods more

* *Women's Place in Industry and Home*. By Sylvia Anthony. (London) Routledge. Pp. 243. 10s. 6d. net.

drastic than we are prepared to sanction in Great Britain—is regarded as a pivotal factor in the contemporary Russian experiment of the industrialisation of women and the "liquidation" of economic dependence. And of the interest and significance of the Russian experiment Mrs. Anthony is acutely conscious.

But in Great Britain we have as yet no Russian experiment. Nor have we the fully plastic social and economic conditions precedent to such an experiment. We have instead, as Mrs. Anthony is able to show, a long-established industrial system, in which the economic relationship of the sexes is dominated by customs, social traditions, moral tabus, and a slowly evolving body of law, all inherited from earlier ages and only partially reconcilable with the economic and social aspirations of twentieth-century womanhood. She has gone far towards enabling us to analyse and appraise these multifarious factors, to the end that the feminists of her own time may select with due precision their "improvement areas" and their "clearance areas" for demolition and replanning.

The Stock Exchange.

STOCK EXCHANGE REVIVAL?

Six weeks ago, the London Stock Exchange welcomed the activity of New York as a second string, after the conclusion of the War Loan "bonus" period had withdrawn immediate interest from gilt-edged stocks. To-day the market is asking, with one accord, whether the subsequent upward movement of values—maintained, as yet, without a check—is the beginning of the major revival for which investors have waited three-and-a-half years. In the last ten weeks the Standard Statistics index of American common stocks has risen 81 points—much the largest gain since the abortive rise of 44 points at the beginning of 1930, when America refused to believe that depression could be true. British industrial equities, in the same period, have recovered all their losses since last November. The average yield on the 182 industrial shares in the Actuaries' Index, which in mid-June was over 6 per cent., is now under 4½ per cent. In the same period the yield on representative American industrials has dropped from 10 to under 5 per cent. In some of the more "speculative" share markets on this side the dimensions of the rise in values (from greatly depressed levels) has approached the spectacular. According to the *Investors' Chronicle*, oil shares have appreciated, during the last two months, by 59 per cent., rubber shares by 95 per cent., and tin shares by 32 per cent.

Technical conditions may well have played a significant rôle in determining the extent of the rise in values, for even a moderate increase in demand has frequently shown the markets to be bare of stock. There has unquestionably, however, been a noteworthy expansion in the volume of business transacted, as is shown by the following computations of the total numbers of bargains "marked" in the London lists:—

STOCK EXCHANGE "MARKINGS."

Week Ended.	No. of Bargains.	Average Week in June = 100.
June 3	25,650	102
" 10	25,511	101

" 26	33,632	134
September 2	36,251	144

* Computed by *The Financial News*. † Excluding Saturday markings. ‡ Bank Holiday week.

It was Mr Chamberlain's conversion announcement which first shook the markets' lethargy, but throughout July its influence was waning. That business, most unexpectedly, begun to re-expand from the middle of August, the holiday month, was due to the impact of two new factors, unconnected with Treasury strategy—the revival in Wall Street and the rise in commodity prices. The Chancellor may have played an involuntary Baptist's part and smoothed the way for the new movement, by driving many holders into strange markets in search of a higher income than 3½ per cent. The motive force for the latest revival, however, has undoubtedly come from outside. Two questions arise, of crucial importance for investors. Is the movement "healthy"? Does it presage a major recovery?

A conservative section of the market declares that the improvement, in fact, has little behind it but "better psychology," which must sooner or later be halted by hard economic facts. Holders of this view emphasise the part played, in America, by "reconstruction finance" measures, which in normal times would be frankly dubbed inflationary. They dwell upon the absence of any

symptoms of growing industrial activity either in the Old World or the New, and point out that the latest survey of the Federal Reserve Board records an actual decline in American production and in order books during July and the first half of August, while unemployment has lately shown more than a seasonal increase in Great Britain, and the downward trend of the railway traffic returns is ominous. They declare that an impressive rise in world prices of commodities like wheat, cotton, copper, tin and rubber has been fostered by speculative interests, and, having caught consumers with attenuated supplies, has started a "re-stocking" movement, which may reduce visible market stocks without necessarily involving increased absorption by the ultimate consumer. Finally, the danger of speculative excess, inviting speedy correction, is argued from the over-rapid rise of values in certain markets, such as that for rubber shares, where the majority of companies cannot yet be regarded as on a profit-earning basis by any stretch of the imagination, and from such outward evidence as the noisy boom on the Berlin Bourse this week, after presidential sanction of a national economic programme, whose implications few, if any, operators were able to understand.

This view is controverted by an influential and growing "bull" party, who declare that it both exaggerates the part played by psychological factors in the present movement and underestimates their indispensable rôle in eventual recovery. They assert, first, that cheap money, the historical solvent of trade depression, is at long last beginning to permeate finance and trade. In Great Britain its beneficial effects were delayed by the events accompanying the departure from gold, while in America it required injection under pressure from the "reconstruction" force pump. Nevertheless, in Britain, under a 2 per cent. Bank rate, the clearing banks, on the statement of one of their number, could lend at least another £100,000,000 before reaching the ratio which advances bore to deposits a few years ago. In America, currency hoarding has ceased, bank failures are normal, the rise in bond values has gone far to restore the position of all financial institutions, large and small, and a considerable Stock Exchange revival has produced only a moderate increase in brokers' loans.

A second pre-requisite of recovery, it is declared, has been fulfilled by the re-attainment of approximate equilibrium between current supply and demand in many primary industries. This inference has been drawn from recent movements in visible stocks of commodities, examples of which are given below:—

	Jan., 1929.	Jan., 1930.	Jan., 1931.	July, 1931.	Jan., 1932.	July, 1932.
Wheat ... Mill. bushels	568	584	583	443	609	445
Sugar Thou. tons	5,134	6,486	8,275	8,104	8,577	8,069
Tea Mill. lbs.	241	286	288	223	269	202
Cotton..... Thou. bales	7,319	8,098	9,897	7,572	10,193	8,208*
Tin Thou. tons	31.4	37.4	52.6	62.0	61.7	61.0
Lead Thou. tons	1	48	100	138	148	177
Spelter..... Thou. tons	43	72	140	144	137	140
Rubber..... Thou. tons	297	383	508	546	644	644
Petroleum Mill. barrels	570	624	603	687	656	652

* 7,793 in August.

† Not available.

The figures, which appear in the Bank of England's "Statistical Summary" for August, relate mostly to supplies in the world's chief markets and afloat. Allowing for seasonal variations in some instances, they strongly suggest, *prima facie*, that the check to the process of piling up unsold stocks dates, not from the last month or two (when "re-stocking" by merchants and manufacturers may have been associated with rising prices), but from a much earlier period. In few cases were visible stocks last July—i.e., before the price movement had well begun—higher than in July, 1931.

Lastly, it may be argued that changes in Stock Exchange sentiment do not normally accompany, but precede, major up- and down-swings in trade. The 1929 break in security values antedated the beginning of the industrial slump by about ten months in Great Britain and four or five months in the United States. To attribute the present recovery partly to "psychological" causes is not to decry it, but to describe its function in the "cycle" of revival. In any case, there is still ample scope for returning confidence to take up the abnormal depreciation in security values bequeathed by fear and forced selling.

We leave readers to make their choice between these theses, merely indicating our own opinion that the latter appears to be a broadly correct diagnosis of the facts of the present market recovery, while the former rightly emphasises the danger that the most promising movement may ultimately be checked if international trade barriers are maintained, if internal discrepancies in industrial costs are left uncorrected, if medium- or long-term interest rates prove insufficiently low to restore a healthy demand for capital goods, or if the primary industries find "equilibrium" too dearly bought by adjustment to a painfully attenuated demand. Investors may welcome a revival which, coming hard upon a rise in sound fixed-interest stocks, has already materially improved the portfolios of many financial institutions, while maintaining an open, if hopeful, mind as regards its continuance. What is now required is a perceptible autumnal quickening in the tempo of industry, first, possibly, in the United States and, subsequently, in Europe.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

TICKET.	SETTLING DAYS.	ACCOUNT.
September 20.		September 22.

The market developed greater all-round strength this week than at any time since the beginning of revival. Gilt-edged stocks, moving against the trend of sterling, lost ground slightly, and interest was chiefly centred on industrial shares. Investors ignored factors like the continuance of the disastrous Lancashire dispute, the August increase in unemployment, and the absence of more than a minor recovery in the traffic figures in the goods-carrying railways. That the market was discounting the position of industry, at best, some months ahead was obvious, but investors were more largely swayed by considerations such as are discussed in our leading article. Tuesday and Thursday were particularly active days, and a reactionary tendency on Wednesday was quickly checked.

Gilt-edged stocks obtained their normal share of day-to-day interest, and no more. Four per cent. Consols were in moderate request, but Assented War Loan eased slightly. India loans were irregular, but Australian issues remained firm, unofficial reports suggesting that the forthcoming conversion operation would embrace the issue of 4½ per cent. stock around 97.

A better tone obtained among foreign bonds. Japanese issues further improved in sympathy with the yen, and Chinese were firm on uninspired rumours of Japanese "feelers" for a rapprochement. South-eastern European issues reflected optimistic expectations from the Stresa Conference, and even Brazilians were slightly better, despite the serious state of affairs described in a Note on page 476.

Except on the Southern, the railway traffic figures, though better than the previous week's, were not encouraging. The market, however, became very active, particularly as regards prior charges, buyers being attracted by the possibility of a substantial increase in net revenue on a moderate future recovery in gross receipts, thanks to large reductions in expenditure and to savings from "pooling" schemes (to which reference is made on page 475.) Argentine rails were better, bad traffic figures, similarly, being disregarded and attention given chiefly to the wheat position and the intention of the Argentine Government to draw on its gold reserve for

oversea payments. Canadian Pacific were strong on the first increase in receipts for many months.

The new Account started auspiciously in the Industrial share market, the impetus for the week's rise in values coming perceptibly less from New York and more from domestic investors than at any earlier stage. Textile shares were influenced rather by the strength of cotton prices then by developments in the Lancashire weaving dispute. Rayon shares were again in demand on rosy intimations from the American side. The drastic Ebbw Vale reorganisation scheme failed to check inquiry for the better situated steel companies. Electrical issues were higher on a moderate business, and motor shares were well maintained, apart from a temporary reaction in Ford. Breweries made a mixed showing, but Tobacco shares remained well supported. Shipping shares showed increased activity, the latest announcement of the Cunard Company being held not to preclude an early resumption of work on "Ship No. 534." Unilever were in demand from Holland. Imperial Chemical gained further ground, and the rise in Dunlop was unchecked. "International" issues, like Electric and Musical Industries and Brazilian Traction, were strong, both in the "House" and in the Street. Bank shares, particularly of overseas institutions, were firm, and Insurance shares rose slightly, apart from Sun Life of Canada, which reflected the omission of the quarterly dividend.

The rise in rubber caused renewed activity in the share market, quotations rising in response to appreciable demand from the outside public—supported, in some cases, by French operators. Tea shares, by contrast, became weak after a cheerful start, prices at the Mincing Lane commodity auctions showing an unexpected decline. Oil shares, despite sharp fluctuations, scored further gains, the Continent giving firm support.

(Continued on page 471.)

Although all the mining share markets remained steady in sympathy with the firmness of metal prices, interest became increasingly concentrated on gold shares, mainly owing to unconfirmed but persistent reports of South Africa's intention to devalue her currency. Low-grade mines, consequently, came in for special attention, and all the finance shares were good. The record dividend of Nundydroog stimulated business in Indian gold mining shares, but Western Australian issues were slightly less active.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The public continued to be interested in the markets' revival, and the upward march of prices, resumed last week-end, continued after Monday's "Labour Day" holiday. Profit-taking was heavy from time to time, a whole day's gains being wiped out, for instance, on Tuesday afternoon. The movement, however, showed no signs of having exhausted its impetus, though it occasionally appeared to be not altogether sure of its economic bearings. The strength of the bond market continued to afford satisfaction in high quarters. Government stocks advanced on the success of the new Treasury issues, which were largely over-subscribed. The relation of the present phase of security market activity to the economic situation remains uncertain. There are few signs of increasing consumer demand for finished products. Woolworth sales in August were 16 per cent. below those of August, 1931. Bank clearings in 95 cities outside New York were 14 1/2 per cent. lower in August than in July. This decline was much more than the seasonal average. Steel operations have risen from 18 to 14 1/2 per cent., and are being talked up to much higher figures, but sources in close touch with the trade are not optimistic regarding the state of order books. Electric power production last week was 1,465 million kilowatt-hours, against 1,436 millions in the previous week. Car loadings for the week to August 27th were 587,978, an advance of 19,881 cars on the previous figure. On Thursday, the markets suffered a severe reaction, on a break of \$5 a bale in cotton prices, following a Bureau crop forecast of 11,810,000, which was about 500,000 bales above private estimates.

General Motors sales to domestic consumers increased by 4,381 units, but sales to dealers and "world" sales reached new low records.

PARIS.

Prices showed a substantial advance, though professional operations remained sensitive to the tone of New York. Fairly heavy profit-taking was absorbed with relative ease on Tuesday, and less readily on Wednesday, but conditions again became buoyant the next day. An increasing interest was taken in London's possibilities, the market closely following the movement, particularly, of gold-mining shares.

BERLIN.

The Chancellor's speech in Münster on August 28th caused such a rise on the Berlin Bourse next day as has not been seen since 1927. This shows how very much optimistic tendencies have been predominating in Germany since Lausanne. At all events, the Stock Exchange

has given the Government's economic programme a good reception. Purchases were not due to professional speculation, which has been very much restricted by lack of funds and by nervousness induced by last year's losses, but to commissions from the public all over Germany. People are hoping that the new programme will mark a turning point in the crisis. They are discounting the increased earning power of industry which will result from the taxation vouchers and the saving of wages, and comparing this with the often grotesquely low panic quotations which have been current in recent weeks. The greatest surprise, however, came in the middle of the week, when the upward movement spread with great violence to the market for fixed-interest securities, which had hitherto been neglected. Rentes, communal bonds, industrial bonds and mortgage bonds rose several points a day, and in many cases allotments had to be rationed on account of inadequate supply. The violent nature of the rise naturally occasions some fears of a relapse. The banks are doing little to regulate the upward movement. They are indeed selling during the first few days many holdings which they had bought at lower prices, but since then they have been holding back in the hope of higher rates. On the other hand, they are certainly not encouraging speculation by the granting of credits. The business which is going on consists almost exclusively of purchases by the public for cash, and it appears that many notes which were hoarded in last year's panic are now being brought out and used for the purchase of securities.

* End June.

AMSTERDAM.

The public evinced a lively interest in prospects of a large-scale revival, and the week opened with a burst of strength. Rayon issues were singled out for special attention, and other market leaders, particularly Philips Lamps, Unilever N.V., and Royal Dutch were extremely active. The pace was not consistently maintained, but the market successfully withstood several sharp bouts of profit-taking.

OTHER CENTRES.

Other European bourses shared in the general optimism, a significantly increased volume of business being done at advancing prices. Brussels showed more than its customary interest in transatlantic counters, but Milan was chiefly attracted by Government stocks. Stockholm continued firm and active, after a brief setback in midweek.

INVESTMENT NOTES.

New Issues Under the Embargo.—Attempts by industrial borrowers to act within the terms of the embargo on new issues have been conspicuous by their unimportance. The first industrial company to make a conversion issue under conditions involving the absence of underwriting or the provision of new cash has been the Portsmouth and Brighton United Breweries. This company is proposing to replace its 6 per cent. first mortgage debenture stock, repayable at 108 on three months' notice, by a similar

amount of 4 1/2 per cent. first mortgage debenture stock dated 1933, for which the authority of the holders of the 6 per cent. Steyning debenture stock has to be secured. The later are offered a bonus, increasing their interest from 6 per cent. to 7 per cent. for the year ending October 15, 1932, only. The amount of 6 per cent. debenture stock to be converted is only £410,000. The second "conversion" issue is that of the Anglo-Dutch Utilities Company 6 per cent. guaranteed first mortgage debenture stock, holders of which have received from the Java Investment Loan and Agency, Limited, the trustees of the issue, notices to tender stock for redemption at a price. As the debenture stock is guaranteed by the controlling company, Anglo-Dutch Plantations of Java, whose receipts were sufficient to cover the debenture interest last year, there is no reason why the holders should tender for repayment at any price around the present market level of 50. Of this stock there is only £434,231 outstanding. It is clear that the restrictions laid upon the new issue market are preventing industrial borrowers from taking full advantage of the decline in long-term interest rates. Small unimportant issues of the kind we have described may be made, but important conversions involving millions of capital cannot be made without underwriting. There can be no permanent improvement in trade without a revival of new capital enterprise, and this waits upon the renewal of activity in the capital market under the stimulus of cheap money. As we suggested last week, the best possible encouragement which could be given to industry at the present time would be a few successful private issues of the conversion type.

Railway "Pooling."—A month ago (see the *Economist*, August 13, 1932, page 321) we discussed the position arising out of the sanction by the Ministry of Transport of a scheme, drawn up by the London Midland and Scottish and London and North Eastern Railways, for the pooling of traffic between competitive points. According to Sir Josiah Stamp, the savings expected under this scheme on

SHELL
for a quarter
of a
century
has had the
same good name

the L.M.S. system will run possibly into seven figures, and affect about half the company's gross receipts. It is now announced that conversations between the L.M.S. and the Great Western for a pooling of traffic on redundant services, maintained by the two companies, are progressing favourably. It is hoped that a scheme will be submitted to the Ministry of Transport by the end of this month. It is understood that, although the outstanding points are concerned mainly with matters of detail, a small number of more important issues are involved, but these are not expected to present insuperable difficulties. The numerical importance of the traffic covered by the prospective agreement will be less than that included under the L.M.S.-L.N.E.R. arrangements. In the early days of Great Western expansion, competition in the area between Birmingham and the Mersey was exceptionally keen, but the northward extension of North-Western and Midland interests, under post-war "grouping," has taken the centre of gravity of the L.M.S. system largely out of the Great Western area. The new arrangements will apply to important traffic in the Midlands and along the Birkenhead-Liverpool routes, but other points of contact between the two railways are largely in areas of secondary industrial importance. The L.M.S., for instance, carries considerable traffic northwards from the South Wales area, but in this district the Great Western is unquestionably the paramount power. The Bristol and Somersetshire traffic, again, is important, but, on the whole, it is the Midlands area which makes the pooling scheme worth while. As a pooling agreement has already been effectively in operation for some years between the Great Western and the Southern, the conclusion of the present scheme will mark the virtual demise of direct inter-railway competition in Great Britain, since competitive routes between the Southern and the two "Northern" groups are virtually non-existent.

Foreign Defaults.—A table of default on foreign Government and municipal loans has been compiled by the Council of Foreign Bondholders from the Stock Exchange daily list of officially quoted securities. The record is taken as on June 1, 1932. The total of sterling loans in default amounts in principal to £137,906,000, the unpaid interest being £9,650,000, and unpaid sinking funds £8,860,000. In addition, there are dollar loans in default amounting for a principal sum of \$11,182,000, on which the unpaid interest and sinking fund now amount to as much as the principal. The Council has excluded from this table the defaults of Russia and Mexico on account of their long duration, and also the loans of the Federal Government of Brazil, for while all the interest payments in connection with Brazilian Government loans have been suspended, bondholders are receiving payments in scrip which can be realised at a price in the market. The following table gives a summary of the Council's figures:—

	Defaulted Amounts Outstanding.	Interest in Default.	Sinking Fund Defaults.
Sterling.			
Foreign governments	120,597,624	6,534,082	7,208,123
Foreign corporations	17,308,550	3,116,569	1,151,817
Total	137,906,174	9,650,651	8,359,940
Dollar.			
Foreign governments	11,181,900	9,867,563	2,459,900

It is pointed out in a footnote that the failure to provide the amount of interest and sinking fund shown in this table does not cause a corresponding loss to this country, as a proportion of the bonds may be held abroad. On a first consideration of these figures the amounts in default appear surprisingly small. According to Sir Robert Kindersley's estimates, however, total British investments in foreign Government loans in 1930 amounted to £820.1 millions, and in foreign municipal loans to £36.7 millions—a total of £856.8 millions. The total amount of principal in default therefore represents nearly 40 per cent. of the total British holdings in this class of foreign investment—apart from foreign holdings included in the "default" total. Moreover, of the interest payments due since January 1,

1930, amounting to £9,650,000, the defaults account for £8,991,000. The figures of the Council of Foreign Bondholders do not, of course, give the whole story of the decline in our income from foreign investments. Sir Robert Kindersley estimated for 1930 a total foreign investment of £3,424.8 millions, which included Dominion or Colonial as well as foreign Government and municipal loans, together with investments in railways, public utilities and other foreign industries. In addition, he placed unquoted investments and private holdings at £80 millions. Our own estimate for 1928-29 amounted to £3,391 millions, plus about £700 millions of unquoted securities, etc. It is on our railway and industrial overseas investments that we shall suffer the heaviest loss of income this year. Sir Robert Kindersley has estimated that our total income from quoted securities was £212,400,000 in 1929, £192,200,000 in 1930, and (tentatively) £156,000,000 in 1931—a decline of 26 per cent from the 1929 "peak."

Brazilian Bonds.—In spite of the civil war in Brazil the market in Brazilian bonds remains remarkably firm as may be seen from the following table:—

	Prices, 1932.			Flat Yield%
	High.	Low.	Present.	£ s. d.
Brazil 5% Fdg., 1898	84½	68½	73	6 17 0
Brazil 5% Fdg., 1914	69	50½	52½	9 10 4
Brazil 7½% (Coffee Security), 1922	105½	99½	105½	7 2 4
Brazil 6½% 1927	49½	28	31½	Paid in 20 yrs. scrip
Brazil 5% 20-year Fdg. Bonds, 1931	...	...	46	10 17 5
Brazil 5% 40-year Fdg. Bonds, 1931	...	...	34	14 14 2
San Paulo 7% Coffee Realisation, 1930	91	72½	77	9 1 6

It is doubtful whether investors have fully appreciated the serious nature of the San Paulo revolt against the Federal Government. The causes are economic and deep seated, rather than political and superficial, for the San Paulo commercial interests are hard hit by the Federal Government's economic policy. The liquidation of the credits advanced by the American merchants, Hard, Ranc and Company, against consignments of coffee from the Brazilian Government, together with the Government exports of coffee to meet the barter agreement with the United States Farm Board have resulted in a serious reduction in the coffee trade available for the commercial interests in San Paulo. At the same time, the rise in coffee prices, as the result of the destruction policy, and the recent support of the milreis, has had the effect of handing over more of the world trade in coffee to producers in Colombia. The following figures show the recent decline in coffee shipments from the principal Brazilian ports:—

	(Bags of 60 kilos.)		
	Santos.	Rio.	Victoria.
1932.			
March	768,719	257,694	116,636
April	849,624	324,846	75,417
May	760,426	325,468	116,931
June	446,000	306,000	104,000

Since July, Santos has been blockaded by the Federal ships and exports have ceased. The Government, in its present straits, cannot afford either the loss of revenues from its richest State or an expensive guerilla war. It is to be hoped that an early cessation will obviate recourse to inflationary financial measures.

Ebbw Vale Scheme.—The overdue financial reorganisation scheme of the Ebbw Vale Steel, Iron and Coal Company distributes inevitable sacrifices equitably. The 6 per cent. debenture holders waive half their interest until 1937, and allow the creation of a further £23,000 of debentures ranking *pari passu*, and a maximum of £202,000 8 per cent. prior lien debenture stock ranking in front of them. In return, they are to be given an undertaking that no dividends will be paid in the interim, and that their sinking fund will be restored in 1937, so as to provide for redemption in 1954. The Inland Revenue authorities are to take

£75,000 in cash and 260,791 in "A" preference shares (see below) in satisfaction of claims totalling over £660,000. The company's bankers are to provide £75,000 cash, and to reduce the interest on their advances to 3 per cent. for five years. As security they will take £75,000 of prior lien debenture stock and £23,000 of debentures. For any additional finance given in the future, the bank will take prior lien debenture stock. Of the £3,000,000 8 per cent. Notes in issue, the principal and interest of £1,326,875, held by subsidiaries, are to be cancelled. Holders of the remaining £1,673,125 are to lose two-thirds of their principal, and to take for the remaining third, plus accrued interest, a new class of 8 per cent. participating "A" preference shares. The latter are entitled to 30 per cent. participation in surplus profits and full voting rights. Holders of £1,200,000 7 per cent. preference shares are to lose 15s. per share and all interest arrears. In effect their preferential dividend is being reduced from 7 per cent. to 1½ per cent., but in compensation they receive a share in the equity, for their new "B" preference shares are entitled to 20 per cent. of surplus profits, and to voting rights. Ordinary shareholders, finally, are to make a nominal sacrifice by having 19s. written off their £1 shares, and a real sacrifice by relinquishing half the equity to the "A" and "B" preference shareholders. The necessary meetings will be held on September 29th, and the various interests affected will probably accept the terms, for theirs is largely Hobson's choice. It is regrettable that a reorganisation scheme was not brought forward much earlier. For the last eight years the company and its subsidiaries have, on the whole, been "breaking even," as regards trading profits and overheads (except in the year of the Coal Stoppage and under last year's depressed conditions). They have, however, become increasingly in debt, chiefly through the payment of debenture and other interest, though actual payment on the 8 per cent. Notes has been withheld since 1926-27. The company now has a debit to profit and loss of £2,187,108. It owes its bankers £750,000 and has guaranteed bank advances to subsidiary companies of £1,400,000. The 6 per cent. debentures rank ahead of the bank, except that the latter holds £171,400 of them, and has a first charge on 400,000 railway wagons. In turn, some £70,000 of Inland Revenue claims, and £100,000 of preferential claims in respect of Workmen's Compensation, etc., rank in front of the 6 per cent. debentures. The whole financial position is complex, and those who have drawn up the scheme deserve congratulation on their ingenuity in fulfilling a thankless task. If the scheme goes through, the company will be relieved of about £230,000 of interest and redemption charges during each of the next five years, and about £150,000 per annum thereafter. It escapes the Receiver's hands, but as last year's aggregate result was a net deficit of £308,266 (including £270,000 8 per cent. Note service, debited, but not paid), a sizeable increase in trading profits will be necessary if the company is to run on an even keel during the next five years. The scheme thus falls short of what might have been possible even a few years ago, but represents the best that can be done in the circumstances.

Frederick Lawrence.—The latest accounts of this house-furnishing business, which was registered in its present form in 1928, are highly creditable to all concerned. They show a net profit of £22,173, compared with £19,327 for the previous twelve months. The ordinary dividend of 8 per cent. is well covered by earnings:—

	Year to June 30,		
	1930.	1931.	1932.
Net profit	25,270	19,327	22,173
Brought forward	3,938	6,788	7,408
Preference dividend	12,000	9,600	9,600
Rate %	10	8	8
Ordinary dividend:—			
Amount	8,325	4,440	4,440
Earned %	26.5	15.9	18.3
Paid %	15	8	8
Expenses written off ...	2,095	4,650	...
Reserve	...	...	7,500
Carry forward	6,788	7,425	8,041

Sales for the year were the largest on record. The business in London is being extended still further, the company having obtained the freeholds of two premises at Westbourne Grove. The 1s. ordinary shares were last dealt in around 1s. 3d.

Hawthorne, Leslie.—Few investors expect a shipbuilding and engineering company on the North-East coast to make a profit in the worst period of world trade depression, but all desire to know the extent of its losses. This the directors of Messrs. R. and W. Hawthorne, Leslie refrain from revealing in their report for the year ended June 30th last. They state briefly that the year's trading has resulted in a loss "which has been somewhat relieved by a conservative valuation of work in progress in previous years," while "some gain was made" on the sale of investments in connection with the capital repayment of 10s. per £1 share. The larger part of this gain has been retained as a reserve against the book value of the remaining investments, and "a small balance" has been credited to the profit and loss account. The results compare with those of the previous year as follows:—

	Year to June 30,	
	1931.	1932.
Gross profit	42,497	21,414
Expenses, and prior charges ...	7,099	6,986
Net profit	35,398	14,428
Ordinary shares:—		
Earned %	5.0	4.0
Paid %	5	6
Carry-forward	18,176	11,107

It is not obvious why the directors should choose to raise the dividend from 5 per cent. to 6 per cent., seeing that earnings were only 4 per cent., except, possibly, that the distribution involved a smaller cash payment, being paid on £358,275 instead of £716,550 of ordinary capital. The balance sheet shows the effect of the repayment of capital, British and Colonial Government securities standing at £333,343 against £714,865. The company remains in a liquid position and is clearly able to benefit from any revival in the shipbuilding industry. The 10s. ordinary shares are quoted at about 7s., and the debenture stock, on which the interest was raised from 4½ per cent. to 5 per cent. last November, is quoted nominally at 85.

AUTUMN IN SOUTHWOLD.

THOSE requiring a restful change amid beautiful surroundings should visit SOUTHWOLD on the SUFFOLK COAST. The town itself, with its wonderful Church and attractive open "greens" and great high common commanding extensive views over sea and land, is different from the usual seaside resorts.

During the Autumn months the weather is generally good up to Christmas; and during the Autumn SOUTHWOLD provides specialities such as: "Longshore herrings" (as delicate as fresh caught trout, and infinitely superior to the ordinary deep sea fish); freshly cured mild bloaters; unrivalled brown shrimps (so superior in flavour to the red); delicious small soles (the sea here is called "Sole Bay" from earliest records); and sprats in the later Autumn.

SOUTHWOLD provides excellent Sea Angling (also trawling with local fishermen); and there is an attractive 18-hole Golf Course.

By road it is 105 miles from London. By train it is about a two-hour run to SAXMUNDHAM (14 miles), and a little more to HALESWORTH (9 miles), where motors from hotels meet visitors by appointment.

There is the SWAN HOTEL (Tel. No. 5) (h. and c. in all bedrooms), a well-known comfortable old coaching house, with old local prints and furniture, now under new management of Miss Baker (formerly of The University Arms Hotel, Cambridge; and The Eplandale Hotel, Seaford).

There is also the smaller CROWN HOTEL (Tel. 53), an early Georgian House, recently partly re-constructed, under the management of Miss Constantine (late of The Royal Crescent Hotel, Ffiley).

At both Hotels the beds are from Heals, and most comfortable; and the food is excellent, and the menus English.

Whitworth and Mitchell.—The accounts for the year ended June 30, 1932, of Whitworth and Mitchell, the well-known designers and distributors of textile fabrics, show a decline of 20.5 per cent. in net profits at £140,286. This reflects the strangulation of world trade through tariffs, exchange restrictions, blocked accounts and other scorpions of the international financial crisis. In spite of these restrictions, the company was able to do an increased business in the Far East, Scandinavia and several European markets. The turnover in "Wemco" products was the highest ever attained. The fall in commodity prices brought the value of trading sales down from £232,671 to £195,277, as will be seen from the following table:—

	Years to June 30.		
	1930.	1931.	1932.
	£	£	£
Total trading profits	231,858	232,671	195,277
Net, after overhead expenses.....	188,414	175,756	140,286
Gross preference dividends.....	30,000	30,000	30,000
Ordinary shares:			
Earned %.....	37.2	34.3	26.2
Paid %.....	22½	22½	22½
General reserve fund	50,000	50,000	25,000
Carry forward	29,202	29,333	20,870

The balance sheet shows a satisfactory liquid position, but out of a balance-sheet total of £1,321,700, goodwill accounts for £364,806. The reserve account, to which £25,000 was credited this year, as against £50,000 in the two previous years, now amounts to £160,000, so that adequate provision is being made against this intangible item on the assets side. With regard to the future, the directors do not believe that a trade revival is imminent, and declare that, until world-wide trade has been restored and British taxation has been reduced, there is no possibility of an upward movement. The ordinary shares have participated in the recent recovery in the industrial share market and now stand at 58s. to return a yield of £8 9s. 9d. per cent. These shares have been as low as 42s. 8d. this year.

Second Alliance Trust.—The report for the year ended July 31, 1932, of the Second Alliance Trust, which is under the same management as the well-known Alliance Trust of Dundee, makes satisfactory reading. In spite of widespread bond defaults and dividend reductions, revenue has been fairly well maintained, so that the company has been able to maintain a distribution of 22 per cent. on its ordinary stock with a comfortable margin. The company was originally interested in the real estate and mortgage business in America, but this now represents only 5 per cent. of the company's investments—which is gratifying, seeing that mortgage conditions remain extremely unfavourable in America. The company's holdings in bonds and other Stock Exchange securities represent about 95 per cent. of the invested funds, and were spread over 848 different investments. The depreciation at July 31st was only 20½ per cent. The results for the past two years compare as follows:—

	Year to June 30.	
	1931.	1932.
	£	£
Income	215,790	203,402
Expenses and taxation	50,304	47,675
Interest charges	60,733	60,863
Earned for ord. dividend	80,341	71,141
Paid in ord. dividend	59,676	57,991
Ordinary stock—		
Earned %	33.0	29.5
Paid %	22	22
Contingent reserve fund	20,000	Nil
Debiture expenses written off	779	817
Carry forward	11,031	24,369

The company's interest payments and preference dividends are well covered by earnings, but the directors warn shareholders that a further reduction in net revenue is to be expected in the current year.

Tea Outlook.—The latest advance edition of "Wilkinson's Tea Share Manual, 1933,"* includes an informative survey by Mr. R. P. Wilkinson, a foremost authority on the industry, which holders of tea shares may be recommended to read in the light of our leading article of August 27th last (page 396). Mr. Wilkinson on the whole, is reassuring. He regards the surplus of productive power in the industry, even under present conditions, as of moderate dimensions, and sees no reason why the situation should not right itself in due course. Fine plucking, and the reduction or cessation of manuring, should hasten the recovery of equilibrium, for past manuring in many cases raised crops from 400 pounds to approximately 550 pounds per acre. Already nearly 6,000 acres, at present unremunerative, have gone out of cultivation among the 800 undertakings dealt with in the "Manual." Expenses have been significantly reduced—not out of due time, since costs had practically doubled since the war. Nevertheless, the recent recovery in tea share prices, in Mr. Wilkinson's view, has discounted a substantial rise in the price of the commodity, since most companies are now selling their teas at a loss ranging from 1d. to 4d. or 5d. per lb. Some 181 companies, mainly in India and Ceylon, with an ordinary capital of £30,000,000, earned only £969,000 (after expenses and preference dividends) last year, against £2,867,000 in 1930, and £5,180,000 in 1929. Readers will regret that Mr. Wilkinson, in his preface to an indispensable reference work, has not seen fit to mention the influence of the Dutch factor in the industry's equation, though, on a long view, investors cannot afford to ignore it.

Tin Position.—Tin has been among the first of the basic commodities to experience the effects of manufacturers buying in advance of consumer demand. In the past week the London price has risen from £149 to £157 15s. per ton. This has followed upon the reduction in visible supply last month of 3,071 tons. There appears to have been a change in the attitude of American consumers, for deliveries in America amounted to 2,585 tons, as against 2,265 tons in July last, as the following table shows:—

	1932.	
Deliveries.	July.	August.
	Tons.	Tons.
United Kingdom	881	623
United States	2,265	2,585
Continent	1,375	1,989
Other countries	286	379
Total	4,807	5,576

Against an increase of total deliveries in the month of 769 tons, Straits shipments showed a reduction of 956 tons. The total visible supply at the end of August amounted to 48,551 tons, a reduction of 2,024 tons—or, if the carry-over in the Straits shipments be included, the total visible supply was 56,766 tons, a reduction of 3,044 tons. The following figures are taken from the statistical summary of Messrs. A. Strauss and Company:—

	July 31, 1932.	August 31, 1932.
	Tons.	Tons.
Total U.K. stock and afloat	33,729	33,011
Total Continent and afloat	7,788	6,955
Total, other countries	7,058	6,585
	48,575	46,551
Carry-over in Straits Settlements	11,235	10,215
Total visible supply	59,810	56,766

It is difficult to estimate the possibilities of a further advance in prices until the tinplate and motor industries show clearer evidence of recovery. Manufacturers must have been, to a large extent, understocked, and no doubt they have been taking up this slack. It may be recalled that the tin pool, under the terms of its constitution, is empowered to realise 5 per cent. of its holding when the

* "Wilkinson's Tea Share Manual, 1933." Advance Edition. Compiled by R. P. Wilkinson (London) "The Investor's Chronicle," 20 Bishopsgate, E.C.2. Pp. 412. 3s. 6d. nett.

London quotation is £165 per ton. This may obviously check the advance. Tin producers, however, will probably claim that the market is under strong control, and that no substantial reaction is expected.

Recovery in Diamond Shares.—Our mining correspondent writes:—The recent demand for diamond shares, largely for Continental account, is explained by advices from Amsterdam of an improvement in the trade. Sales on the part of the Diamond Syndicate were suspended during August. As a result prices rose from 10 to 15 per cent., small outside dealers making relatively substantial sales. In London, also, a revival is reported. The improvement is attributed to the changed conditions in the United States in conjunction with a disposition amongst dealers generally to replenish stocks in anticipation of the Christmas trade. The Stock Exchange has been by no means slow in discounting betterment. De Beers £2 10s. shares are now quoted around 8½ for the preferred and 5½ for the deferred, as against the year's lowest of 2½ and 1½ respectively. Gains of striking extent have occurred in the Premier and Jagersfontein issues. Consolidated Diamond ordinary have rallied from 1s. to 5s. 6d., and the preference from 1s. 3d. to 7s. 9d. The De Beers company's mines, it may be recalled, were closed down at the end of March. No dividend has been paid on the preference since 1930 and on the ordinary since 1929, when the distributions totalled 30 per cent. The dividend on Premier preference is in arrears since April, 1930, while the deferred have received nothing since the 250 per cent. for 1926-27. The new Jagersfontein disbursed 10 per cent. in respect of the year ended April, 1930, and nil since. The Consolidated Diamond of South-West Africa has been out of the list for two years and a-half, the shareholders receiving 12½ per cent. on account of 1929, as against 10 per cent. for each of the two preceding periods. The market, so far, appears to have gone well ahead of the mines.

New Issues in August.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in August, and in recent periods:—

	(000's omitted.)

August, 1931	750	740	Nil	60
August, 1932	Nil	20	22	Nil

The Spartan maintenance of the Treasury ban reduced last month's new capital issues to negligible proportions. Sales of the new series of Savings Certificates, placed on issue at the beginning of the month, were balanced by encashments of certificates of earlier series, and the Treasury, otherwise, remained out of the market. Two companies alone made issues to shareholders, to a total of £42,000. The aggregate new money involved in capital issues of all kinds in 1932, to the end of last month, was £168,000,000.

Telsen Electric Company, Limited.—Authorised share capital, £250,000. Issued and paid up in shares of £1 each, £160,000. The company has not issued any debentures, debenture stock or other loan capital. The Midland Trust, Ltd., acted as agents in sale of 60,000 shares referred to in the offer for sale of May 18, 1932, and no part of such shares were underwritten. The option over 50,000 shares at the price of £2 10s. per share held by Mr. Macnamara extends until May 31, 1934, and no part of such option has been exercised.

Calls Due Next Week.

The grand total of calls falling due in September, 1932, is £5,103,125, which compares with £5,161,600 which fell due in September, 1931. The following call is due in the week from September 10th to September 17th, 1932 inclusive, and is calculated on the amount of stock or shares offered.

COMPANY MEETINGS, &c.

SINGER AND COMPANY, LIMITED.

OUTSTANDING MERIT OF THE 1933 MODELS.

The twenty-fourth ordinary general meeting of Singer and Company, Limited, was held on the 7th instant, at Coventry.

Mr A. C. Bourner, F.C.A. (the Chairman), said that shareholders, like the directors, would be disappointed with the revenue results of the year, but no doubt they would agree that conditions had to a very large extent been extremely unusual. The fact was that to-day the sale price of a car was much too low, and had reached bedrock.

The directors had given careful consideration to the value of the assets and to the extent of the liabilities, and had formed the conclusion that the financial position was very strong, and warranted consideration of the shareholders' right to a reasonable distribution of unappropriated profits and reserves if necessary. The dividends they declared were not out of reserves, but came entirely out of the carry forward from last year. The fact that £100,000 had been transferred from reserve to profit and loss account did not alter the immediate financial position, but ensured the directors being able to consider the payment of dividends for at least the next two years. There were still left as reserves £197,553, which also was available for the equalisation of dividends if the directors should so decide.

Dealers who had seen the 1933 models stated they were of outstanding merit, and were very materially increasing their orders for cars. Shareholders must all be proud that the company's productions were good and in demand. In view of the solidity of its assets, its nominal liabilities, its managerial capacity, its fine products, its magnificent record of performance, its past long period of handsome revenue returns, its present models of outstanding merit, Singer and Company, in this carefully considered opinion, had splendid prospects for the current year, and he knew of no obstacles to its continued progress and prosperity.

Mr W. E. Bullock (managing director) said that their 1933 models had been extremely well received by all their dealers. For 1933 they had redesigned cars, competitive both in price and performance with any other make.

The report and accounts were unanimously adopted without question or comment.

Dividends of 7 per cent. on the preference shares and 5 per cent. on the ordinary shares were declared; the retiring director, Mr A. C. Bourner, F.C.A., was re-elected; the auditors were reappointed; and the proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 3, 1932, amounted to £9,604,100 against ordinary expenditure of £15,781,700. After allocating £1,729,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £292,147 the operations for the week, as shown below, increased the National Debt by £8,200,000 to £7,672,649,000:—

Total declared value of imports	1,852,664	Total declared value of exports	2,590,456

GOLD MOVEMENTS.

The arrivals and withdrawals of gold, as announced by the Bank of England, have been as follows:—

1932. ARRIVALS.		1932. WITHDRAWALS.	
Sept. 2	Sept. 8	Sept. 2	Sept. 8
Bars bought	1,709	Sept. 2	Nil
" 3	Nil	" 3	Nil
" 4	Nil	" 4	Nil
" 5	Nil	" 5	Nil
" 6	Nil	" 6	Nil
" 7	123,510	" 7	Nil
" 8	260,797	" 8	Nil
Total	385,016	Total	Nil

Net arrivals, September 2, 1932, to September 8, 1932, inclusive, £385,016.
 Messrs Samuel Montagu and Company write on September 7, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £138,906,143 on the 31st ultimo, as compared with £138,728,341 on the previous Wednesday. Purchases of bar gold to the total value of £125,219 were announced by the Bank during the week. In the open market, substantial amounts of gold were available and were taken for the Continent and the United States of America. The gold saved from the s.s. "Egypt," to which we referred last week, is now shown in the import and export figures given below as of the value of £183,095; of this amount, about £80,000 was disposed of in the open market during the week.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
Sept. 1	118s. 11d.	14s. 3.5d.
" 2	118s. 9d.	14s. 3.7d.
" 3	118s. 7d.	14s. 3.9d.
" 4	118s. 4d.	14s. 4.3d.
" 5	118s. 6d.	14s. 4.1d.
" 6	118s. 3d.	14s. 4.4d.
" 7	118s. 3d.	14s. 4.4d.
Average	118s. 6.7d.	14s. 4.0d.

The s.s. "Comorin" sailed from Bombay on the 3rd instant with £569,000 of gold consigned to London and £62,000 consigned to Holland.

SILVER.

The reaction seen at the end of last week continued until 18 1/2d. for cash and 18 1/4d. for two months' delivery were quoted on the 2nd instant. Thereafter, the tone became considerably firmer and silver followed the harder tendency of other commodities. Buying by the Indian Bazaars and speculators caused prices to advance by three successive rises of 1/4d. to yesterday's quotation of 18 1/2d. and 18 1/4d. for the respective deliveries. Poorness of offerings helped the rise, which was not altogether followed by the China exchanges and offerings from China and America to-day caused a fall of 1/4d. in both quotations.

In view of the small offtake and heavy stocks, the recent rise was hardly justified, the level reached seeming too high for the time being. Reaction, therefore, may be expected, although, owing to the large speculative element, a great deal depends upon whether the trend of outside events offers encouragement or otherwise to bulls.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 29th August to mid-day on the 5th instant:—

IMPORTS.		EXPORTS.	
	£		£
Belgium	41,920	Roumania	270,455
Germany	23,200	British India	20,927
British India	24,896	Straits Settlements	4,300
Australia	21,529	Germany	1,814
Salvage from s.s. "Egypt"	5,850	Other countries	3,132
British South Africa	3,492		
Other countries	5,774		
	126,661		300,628

Quotations during the week:—

IN LONDON.		IN NEW YORK.	
	Bar silver per oz. std. ounce		Cents per ounce
Sept. 1	18 1/2d.	Sept. 1	28 1/2

IMPERIAL CHEMICAL INDUSTRIES LIMITED.—The Directors, after reviewing the net income for the six months ended June 30, 1932, have declared an interim dividend as at October 15, 1932, in respect of the trading year ending December 31, 1932, of 2 1/2 per cent. actual on the issued ordinary capital of the company. This dividend will be payable (less income tax at 4s. 9 1/2d. in the pound, being United Kingdom income tax at 6s. in the pound less Dominion income tax relief at 2 1/2d. in the pound) on December 1, 1932, to shareholders on the register on October 15, 1932. For the purpose of the payment of this dividend transfers to be lodged at the company's registered office not later than October 14, 1932.

LEAD.—The London market in lead opened quiet on Monday, but last week's advance was maintained owing to the reserve of sellers. On Tuesday and Wednesday, quotations rose under the influence of an active demand. Sales at the London Metal Exchange totalled 700 tons on Monday, as compared with 1,000 tons on the corresponding day last week, 1,800 tons on Tuesday, against 1,600

tons, and 1,800 tons on Wednesday, against 2,500 tons. In New York the metal was quoted at 3.60 cents per lb. on Wednesday, against 3.60 cents a week ago and 3.10 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £14 7s. 6d. per ton for shipment during the current month, compares with £13 8s. 9d. on the corresponding day last week.

SPELTER.—The relatively favourable statistical position of this metal provided a background for a substantial advance in price. This was brought about not only by speculative purchases, but also by a tendency of consumers to begin replenishing their stocks. Sales totalled 750 tons on Monday, against 1,200 tons last week; 1,500 tons on Tuesday, against 1,000 tons last week, and 1,400 tons on Wednesday, against 600 tons. Wednesday's quotation in New York, at 3.40 cents per lb., compares with 2.95 cents a week ago and 2.80 cents a month earlier. Wednesday's official closing quotation in London in terms of sterling, for "good ordinary brands," was £16 10s. for shipment during the current month, against £14 2s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and platinum have been maintained at £95 per ton and £9 15s. per ounce respectively. Nickel was again sold at £240-£245 per ton. Foreign antimony changed hands at £24 10s.-£25 10s. per ton, against £24 15s.-£25 5s. a week ago. Quicksilver rose slightly from £9 7s. 6d.-£9 12s. 6d. per flask to £9 10s.-£9 15s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week, September 1st to 7th (inclusive) are 43,398 bales, of which 22,788 bales are American, 1,672 Peruvian, 906 Argentine, 10,757 Egyptian, 5,341 African, and 1,934 East Indian.

Manchester.—Very unsettled conditions have prevailed in the market during the past week. The strike in the weaving section continues to disorganise production, and trade has also been hampered by the wide fluctuations in raw material prices. There has not been any shortage of inquiry in piece goods for abroad, but the utmost difficulty has been experienced in arranging terms of fresh contracts. Numerous buyers have been prepared to agree to a strike clause, but customers abroad have been slow in raising their offers. Miscellaneous sales have occurred for the several outlets of India, chiefly in light bleaching descriptions. Only limited operations have been received from South America and certain countries of Northern Europe. Stock lots have moved off rather more freely, and most manufacturers and distributors have now effected considerable clearances. There has not been much activity in home trade fabrics. Irregular conditions have prevailed in the yarn market. Sales of any importance in home counts have been scarce. Rather more inquiry has been met with in export numbers for India and the Continent.

THE WOOL TRADE.—Bradford.—During the past week, writes our correspondent, there have been some encouraging developments. The enhancement in the market value of the raw material has been accompanied by an improvement in the demand for yarns, both for new business and for an increased call for delivery against contracts. This indicates that the situation at the consuming end is by no means as bad as some of the worst reports have suggested. Meanwhile, some of the latest news about wool comes from South Africa, where the season has commenced in a very different fashion from twelve months ago. The opening of the last season was a fiasco, and selling did not get going properly until several weeks later. Exchange rates, uncertainty about the gold standard, and other annoyances, caused serious loss to growers and selling interests. To-day the Cape market is quite as healthy as the Australian, and there is every probability of current values being maintained. A good deal of the demand for wool in Sydney has come from the Continent and Japan. The latter has shown surprising activity, but the home trade has given valuable support, and as the season proceeds it may be expected that this section will continue to take a large share of the offerings in other centres. More interest is being directed to medium and low qualities, particularly the latter. There has been a stiff advance in quotations for South American crossbreds, and as the consumption of fine wools continues, lower qualities may be expected to come more into their own. There is a very strong tone in Bradford. Though topmakers find that spinners' ideas of prices for tops range around 23d. for average 64's and 23d. for warp, the cost of tops made out of wool bought in Australia and South Africa is nothing below

24d. to 25d. for the best 64's. Prices for yarn are gradual following the advance in tops, and whilst wholesale houses are resisting paying any more money for cloth, it is beyond question that they will have to do so eventually.

THE JUTE TRADE.—Dundee.—The market at the moment has become very strong on account of a short crop forecasted by the district returns of the jute-growing districts. Yesterday's figures were received from Calcutta, indicating an outturn for season 1932-1933 of 5,844,600 bales, compared with the forecast of last year of 5,559,000 bales. The total quantity actually received last season to June 30, 1932, was 6,541,000 bales, or nearly a million bales in excess of the forecast, but there was a big carry over from previous crops, which augmented the supply. The world's consumption is in the vicinity of eight million bales, so the present quantity forecasted is much under requirements, and this will mean that about two million bales will require to be taken from stocks or from the unsold supply in-country in India. The first effects on the market were a sharp advance in prices, Calcutta rising 20s. per ton and London 17s. 6d., while prices here were a more or less nominally raised 15s. per ton, and sellers showing considerable reserve, making few offers. In one case, where a shipper quoted unchanged rates from those ruling prior to the forecast, all the jute he offered was sold, amounting to about 5,000 bales. The value of Daisee assortment rose to £19 17s. 6d. and Tossa assortment to £20 12s. 6d., October-November. Good First Marks were advanced to £21 10s. to £22, and Lightnings to £20 10s. to £21, the latter price being paid for Red H quality Jute yarns are very firm, and the lowest possible price for common 8-lb. cops is now 2s. 2d., and for 8-lb. spools 2s. 3d. Buyers are not keen to pay these rates, as they have bought fair quantities up to 2s. 1d. for cops and 2s. 2d. for spools. Twist rules at from 34d. for 3-ply 8-lb., and sucking yarns are strong at 24d. lower for 24-lb. twist and 34d. for 8-lb. chains. Rove is dearer at £2 for 48-lb. and £17 for 200-lb., while the finer yarns are tending dearer at 2s. 10s. for second quality 8-lb. Rio warp, 2s. 6d. for 14-lb. and 2s. 4d. for fourth. Carpet yarns are firm at 34d. for 14-lb. warp. Jute cloth business has improved, and manufacturers are inclined to quote higher prices. For 10½-oz. 40-in. hessians 3d. is now the rate, and 24d. for 8-oz., and only in exceptional instances where orders might be suitable in the narrow widths would these rates be shaded. Buyers are showing considerably more interest. Linoleum hessians are quiet, but firm, and heavy goods are still moving off moderately. Calcutta goods have gone dearer in sympathy with the raw material, being sold yesterday at 21s. 11d. for 10-oz. 40-in., and 17s. for 8-oz., September, though quotations are usually higher.

THE GRAIN MARKETS.

WHEAT.—The chief event during the past week was the announcement on September 6th by the chairman of the United States Farm Board that the wheat controlled by that organisation would be held off the market until 1933. As a result, prices showed a hardening tendency at the principal wheat markets. The volume of international trade in wheat was not very large, as crops have already been harvested in some of the chief importing countries. Canada supplied most of the requirements of the past week. Crop reports are now assuming a more definite form, and Mr S. Broomhall has published his preliminary estimate of supplies and probable requirements during the current season. He estimated exporters' surpluses at 120,500,000 quarters, against 125,500,000 quarters a year ago. His forecast of importers' requirements is 88,000,000 quarters, as compared with 97,000,000 quarters last year. According to these estimates, the surplus of supplies over demand during the current season therefore amounts to 32,500,000 quarters, against 28,500,000 quarters for the season ended July 31, 1932. On Wednesday, "September" futures were quoted at 53½ cents per bushel in Chicago, against 52½ cents on the corresponding day last week and 55½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 30s. 9d. per 496 lbs., as compared with 30s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 9d. against 29s.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s. 3d. against 28s. 9d.; Australian, ex ship, 31s. against 29s. a week ago.

WHEAT FLOUR.—Quotations for flour have risen in sympathy with wheat prices, but business was not on a large scale. North American shipments, at 147,000 sacks, showed a decrease of 38,000 sacks, as compared with the previous week. Of this total, 42,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 25s., against 24s. 6d. Manitoba patents, ex store, 25s. to 28s., against 25s. 6d. to 28s.; and Australian, ex store, 20s. to 20s. 9d.; against 19s. 9d. to 20s. 6d. a week ago.

BARLEY.—Business in feeding barley was quiet, but, owing to the absence of selling pressure from Russia and Roumania, prices were maintained. On Wednesday, "October" futures were quoted at 31½ cents per bushel in Winnipeg, against 32½ cents last week and 34½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 24s., as compared with 24s.; "River Plate," landed, 23s. 6d., against 23s. 6d. a week ago.

OATS.—The markets in oats experienced a small turnover, but quotations hardened because of smaller shipments. "September" futures, which last week stood at 17½ cents per bushel in Chicago, sold at 16½ cents per bushel on Wednesday this week, against 17½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 19s. per 320 lbs., as compared with 18s. 3d. last week; "River Plate," ex ship, 18s., against 17s. 6d.; "Chilean White," landed, 23s. to 24s. 6d., against 23s. to 24s. 6d. a week ago.

MAIZE.—Following the easier tendency which had become noticeable recently, this cereal experienced a good demand towards the

end of last week. As Argentine shipments are now smaller, and in the absence of selling pressure from Danubian countries, prices advanced slightly. Wednesday's quotation in Chicago for "September" futures, at 30½ cents, shows a rise of ½ cent on last week, but a fall of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 6d. per 480 lbs., compared with 20s. 7½d. last week; "Plate," ex ship, 20s. 6d., as against 19s. 7½d.; "Plate," September-October, 20s. 9d., as against 20s. 1½d. Yellow maize, ex wharf, was quoted at £5 17s. 6d. per ton against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933	1931-1932	1930-1931	1929-1930
Estimated sales of home-grown wheat—				
1 week to September 3	Cwts. 90,165	Cwts. 42,758	Cwts. 129,208	Cwts. 229,935
Average price of English wheat per cwt.	s. d. 5 9	s. d. 5 1	s. d. 7 8	s. d. 10 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 27, 1932	Cwts. 40,854	Cwts. 9,003	Cwts. 16,148	s. d. 6 2	s. d. 7 5	s. d. 6 11
Sept. 3, 1932	90,165	21,658	34,734	5 9	8 2	6 7
Sept. 1, 1928	92,404	209,912	67,341	9 5	14 1	9 3
Aug. 31, 1929	137,370	44,697	57,057	10 11	10 1	8 4
Sept. 6, 1930	129,208	33,625	31,959	7 8	8 4	6 0
Sept. 5, 1931	42,758	22,454	17,859	5 1	10 2	5 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NABARET FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Sept. 9, 1931.	Jan. 4, 1932.	Aug. 31, 1932.	Sept. 7, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	51½	62½	56	55½
Chicago (No. 2 Winter)	130½	79½	47	55½	52½	53½

The visible supply of wheat in Canada, at 65,898,000 bushels, shows an increase on the week of 1,429,000 bushels. Supplies a year ago stood at 48,301,000 bushels.

OTHER FOODS.

SUGAR.—The sugar markets of New York and London have been a little less active. Although prices for "spot" transactions were unchanged, "future" quotations sagged slightly under the influence of realisation. The publication of Dr. Mikusch's August estimate of the European beet crop for the season 1932-33 had little effect on the market. His estimate, at 5,397,000 tons (excluding Russia), shows a reduction of 3,229,000 tons on the actual yield of the previous season. Russia's output is forecast at 2,000,000 tons, against a harvest of 1,979,000 tons a year ago. Estimates for other countries are: Germany, 1,175,000 tons, against 1,143,000 tons harvested last year; Czechoslovakia, 670,000 tons, against 1,143,000 tons; France, 900,000 tons, against 460,000 tons. "September" Kingdom, 340,000 tons, against 1.07 cents per lb. on Wednesday, futures in New York were quoted at 1.01 cent per lb. a month against 1.09 cents per lb. a week ago, and in London include "December" earlier. Wednesday's sales of "raws" in London were 6s. 5½d. to 6s. 3½d., and "March, 1933," at 6s. 6d. to 6s. 6½d., against 6s. 7½d. to 6s. 8½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
London ..	Tons. 3,280	Tons. 301	Tons. 1,197	Tons. 973	Tons. 13,106	Tons. 24,542
Liverpool ..	7,035	15,975	15,537	13,733	70,542	71,335
Total ..	10,315	16,276	16,734	14,706	83,648	95,877
Last week ...	14,473	8,234	15,767	15,217	90,067	94,307

COFFEE.—Brazilian coffee advanced sharply in New York during the past week. The rise was due partly to the reduction in visible supplies and partly to a substantial volume of buying. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., against 8½ cents a week ago. Tuesday's London auctions were characterised by a good demand at firm prices. Last week's movements of coffee in London were as follows: Brazilian, landed, 5,317; delivered for home consumption, 1,045 bags; exported, 5,850 bags; stocks, 15,600 bags, against 2,018 bags last year. Central American, landed, 2,155 packages; delivered for home consumption, 1,963 packages; exported, 2,167 packages; stocks, 91,897 packages, against 92,924 a year ago. Other kinds, landed, 3,517 packages; delivered for home consumption, 1,919 packages; exported, 1,534 packages; stocks, 66,824 packages, against 75,138 packages a year ago.

COCOA.—Last week's advance in cocoa prices was followed by a further upward movement this week under the influence of a strong demand, chiefly in the United States. "September" futures were quoted at 5.03 cents per lb. in New York on Wednesday, against 4.60 cents per lb. a week ago and 4.51 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 31s. 3d. per cwt. c.i.f. Continent, shows an advance of 1s. 9d. per cent. on the week. Last week's movements of cocoa in London were as follows: Landed, 2,298 bags; delivered for home consumption, 6,124 bags; exported, 295 bags; stocks, 148,125 bags, as against 206,666 last year.

TEA.—The quantities catalogued for this week's auction comprised 52,893 packages of Indian and 34,444 packages of Ceylon tea. Competition at this week's auctions was less keen, and the tendency of prices was easier. Monday's "Indian" auctions opened with a good demand for common grades, but medium and finest varieties were irregular. At the "Ceylon" sales on Tuesday all except finest teas realised lower prices. On Wednesday all grades of "Indian" tea showed reductions on Monday's prices. Owing to the prospect of larger supplies and a slight deterioration in quality. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.
Sept. 3, 1931	d. 15.54	d. 8.07	d. 15.35	d. 6.60	d. 6.07	d. 5.74
August 11, 1932 ...	7.71	6.61	8.07	4.71	4.22	6.28
August 18, " ...	9.75	6.36	7.92	4.83	4.45	6.20
August 25, " ...	10.50	6.66	8.22	5.22	4.53	5.94
Sept. 1, " ...	11.67	6.64	8.84	5.05	4.50	5.74

RICE.—The market in rice has been quiet, but the recent rise in prices was maintained. Wednesday's "spot" price, at 10s. per cwt., shows no change on last week, while forward positions, at 8s. 4½d. per cwt., also remained unchanged. Movements in London during the past week were as follows: Landed, 26 tons; delivered, 198 tons; stocks, 2,464 tons, as against 944 tons last year.

POTATOES.—In view of the heavy supplies available at the principal markets, prices declined slightly. At the London Borough Market, "King Edward" was sold at 4s. 9d. to 5s. 3d. per cwt., against 5s. to 5s. 6d. per cwt. last week.

SPICES.—The market in pepper has been a little more active, and prices were a shade firmer. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a rise of ½d. per lb. on the corresponding day last week. Movements of pepper in London during the past week were as follows: Black, landed, 8 tons; delivered, 31 tons; stocks, 306 tons, against 576 tons last year. White, landed, 34 tons; delivered, 52 tons; stocks, 403 tons, against 475 tons a year ago.

MEAT.—Meat prices at the Smithfield market show little change on the week. The only development of note was a substantial advance in the price of Argentine beef. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 10d. to 4s. 6d. per 8 lbs., against 3s. 6d. to 4s. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 2s. 10d., as against 2s. 2d. to 2s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,350 tons, as compared with 8,618 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.5 per cent. of the supplies, as against 85.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 73.5 per cent. of the total supply, as against 77 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets have assumed a stronger tone and there has been an almost all-round advance in values. In anticipation of the Ottawa recommendation of an import duty on foreign linseed being adopted, demand for seed afloat and for early shipment has been active and quotations have steadily improved until £9 7s. 6d. has been reached for Plate on spot at Hull and £9 5s. to £9 7s. 6d. for shipment. The Continent also being a good buyer has likewise helped prices to stiffen. The quantity of linseed afloat for Europe is still substantial, and at 165,800 tons is slightly larger than last week and compares with 140,700 tons a year ago. The area under linseed in Argentina is stated to be 15 per cent. less than last season. Meanwhile, current supplies are ample, the estimated total yet to be shipped this year from Argentina and India being around 770,000 tons, against 528,000 tons actually shipped in the remainder of 1931. Cottonseed is dull and in small request, with prices of old crop Egyptian about unchanged. Dealings in new crop are only just beginning, current value for October loading being about £7 5s. In sympathy with the rise in seed, accompanied by a good demand for both near and forward delivery, linseed oil has sharply advanced, September delivery ex Hull mill now being quoted £16 5s. and October-December, £16 15s. Cotton oil is firm but quiet, crude Egyptian ex Hull offering at £23 and refined at £25. Oilcakes are in fair request and late mill prices are maintained.

HIDE, LEATHER AND ALLIED TRADES.—Further advances in prices for hides and skins have occurred this week, and the market for both domestic and imported sorts remains very firm. At the auctions held at Manchester, most weights of cattle hides realised 4d. per lb. more than they did the previous week, the exceptions being all first clear ox and heifers and bulls. The demand for calfskins was very active and prices were higher by from ½d. to

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

4d. per lb. The Leeds sales, held on the same day, found prices continuing their upward course, particularly in regard to second clear and first warbled ox and heifers, for supplies of which 4d. per lb. more money had to be paid, while calfskins were dearer by from 4d. to 4½d. per lb. Although tanners in this country have not shown unusual interest in the position of the foreign hide market, the amount of business done with the United States and some Continental countries has had the effect of further strengthening the position of these goods. For instance, wetsalted Argentine ox are now being quoted at 4½d., while cows have sold at 4½d., and Montevideo ox at 5d. Dry hides from the same origin have appreciated in value in face of the demand from the Continent, and 6½d. is now being asked for B.A. Americanos, 3½d. for In-servibles, up to 5d. for Cuyabanos, and 6½d. for M.V. Americanos. Improved business has also transpired in regard to African hides, with dry Capes sold at 6½d. and 5½d. for firsts and seconds, and 5½d. and 4½d. for drysalted. Heavy unbathed Adis Abebas are offered at 5d., Mombasas at the same figure, and Nigerians at 6d. per lb. Inquiry for Australians has been better, and slightly higher prices have been realised on sales. Although there has not been much improvement in the demand for heavy weight sole leather, a steady trade has been done, and turnover generally has been well up to that of recent weeks. For English and wetsalted bends some good orders have been received for the lighter weights, in addition to which the call for dry hide bends of the same average has been satisfactory. Pinned offal also has been moved off in fair quantities, although it cannot be said that the demand for rough bellies and shoulders has improved. In upper leathers business is still confined mainly to box and willow calf and glacé kid, although here and there inquiry for some of the heavier types of upper stock is a trifle better. Small business has also been done in parcels of black suede and reptile skins, while distributors of patent leather report slightly more inquiry for certain lines.

RUBBER.—Towards the end of last week a slight reaction became noticeable in the London rubber market, but on Monday and Tuesday quotations advanced again on increased buying, chiefly by speculators. On Wednesday activity subsided, but the quotation closed slightly higher than a week ago. In New York, Wednesday's spot price for rubber, at 4½ cents per lb., shows no change on the

week. Wednesday's official closing price for standard ribbed smoked sheet in London was 3d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 3½d. to 3¾d. for April-June, 1933, as against 3½d. to 3¾d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,640 tons; delivered, 1,078 tons; stocks at the end of last week, at 106,062 tons, show an increase of 562 tons as compared with the preceding week.

much affected. The increase in the offer is intended simply to meet current Government requirements, and possesses no further significance. The clearing banks have now begun to buy bills again, and as a result the rate on "hot" Treasuries has been driven down to $\frac{1}{2}$ per cent., while shorter dates have been bought by them at $\frac{1}{4}$ per cent. The generally quoted rate on three months' bank bills has eased to $\frac{1}{4}$ per cent., and clearing bank purchases at $\frac{1}{2}$ per cent. are reported. Standstill bills are quoted at 1-2 per cent. This rate is a little firmer than those of previous weeks, the harder tendency being due to some increase in the supply of bills.

This week's Bank return shows that holiday currency is still returning, for the note circulation has fallen by £2.8 millions to £362.3 millions. This last figure is four millions below the July level, so that the return of the holiday notes is apparently now completed. As a result of this movement, the reserve is £3.1 millions higher. Securities held by the Banking Department are practically unchanged, but Public Deposits have increased by £5.3 millions to £12.9 millions. This increase is probably fortuitous, being due to the familiar cause of discrepancies between Treasury bill payments and maturities, and it is quite possible that it will be reversed by next week. In the meantime it has more than offset the rise in the reserve, so that Bankers' Deposits have fallen by £1.7 millions to £89.8 millions.

This week's revenue returns and floating debt statement throw further light upon the consequences of the repayment of the Treasury's Paris bills, amounting to 2,500,000,000 francs, issued a year ago. Under the heading "repayment of the principal of British Government loans abroad" there is an entry of £28.1 millions for the week, bringing the total for the financial year since April 1st to £33.8 millions. To finance last week's repayment the floating debt had to be increased by £28.7 millions. £4.75 millions borrowed from the Bank the week before were repaid, and £2.55 millions were borrowed from Public Departments, but the main source of borrowing was an expansion of £30.9 millions in the Treasury bill issue. As issues by tender to the market were not out of the ordinary, it is clear that most of these extra bills were issued privately—presumably to the Exchange Equalisation Account and the Issue Department of the Bank of England in exchange for the *devisen* needed to cover the repayment of the franc bills.

The August averages of the nine English clearing banks show a further big increase of over £100 millions in deposits. Acceptances, however, have fallen by £5.8 millions and advances by £19.8 millions.

These three movements taken together show that so far the improvement in prices has not been reflected in fresh enterprise, and it may be that the suspension of the new capital issue market has caused idle funds to accumulate in the banks. Conversely, the absence of any increase in bank advances denies the existence of any pressing demand for new capital. From the banks' standpoint, the changes shown by the August figures hardly signify increased earning power, for the lack of more remunerative means of employment for their funds has forced them to add another £56.9 millions to their bill portfolios.

The Foreign Exchange market continued quiet in tone during the past week, and turnover was on a small scale. Sterling reacted slightly after its sharp rise of a week ago, but the undertone remains steady and against Paris distinctly strong. The New York rate fell away to 3.47½, against 3.49½. Paris was 88½, compared with 89½; but a considerable volume of sterling has recently been purchased by Paris in excess of normal current requirements, and the fall in the Paris rate was consequently checked. Canadian dollars were not in such consistent demand, being 3.85½, compared with 3.85. Belgium improved in sympathy with other gold exchanges to 25.10, as did Italy to 67½, Holland to 8.66 and Switzerland to 18.02. Madrid was only fractionally better than a week ago at 48½, but German reichsmarks improved from 14.70 to 14.62. Among the Scandinavian currencies Stockholm was 19.51 and Oslo 19.87. Copenhagen continued its recent improvement, closing at 19.28. In the Far East rupees were firm at 1s. 6½d., while the yen was steady at 1s. 4½d. Batavia was quoted at 8.67. The South American exchanges remained nominal and unchanged from last week. Forward dollars were at discounts of $\frac{1}{2}$ cents and $\frac{1}{4}$ cents for one and three months. Paris continued at last week's discounts, and no improvement was apparent in forward belgas, which were offered at discounts of 10 and 30 centimes. Forward Milan was quoted at discounts of $\frac{1}{2}$ and $\frac{1}{4}$ lira, and forward pesetas were at the same level as last week. Forward Amsterdam moved from par to a discount of $\frac{1}{2}$ cent and forward Switzerland from par to premiums of $\frac{1}{2}$ cent for one month and 1 cent for three. Silver was steadily weak, and after falling to 17½d. for spot, closed at 17½d. for spot and 18d. for forward delivery on Chinese and Indian buying at the close. Among the silver exchanges Hong Kong was 1s. 4½d. and Shanghai 1s. 9½d.

Thus, little change has occurred in the principal exchange rates, and there is a general impression that the New York rate is not likely to move outside the limits of \$3.47 and \$3.50. For one reason or another, speculative operations are very limited as compared with the days before the restoration of the gold standard in 1925. The prevailing discount upon forward francs is now equivalent to a return upon French balances in London of $\frac{1}{2}$ per cent., making, with the yield on sterling bills of about $\frac{1}{2}$ per cent., a total return of one per cent. It is reported that Paris houses have been offering money in London at $\frac{1}{2}$ per cent., but without any success, as outside the gilt-edged market there is so little scope for the employment of funds.

Money remains easy in New York, with call money still at 2 per cent. and 90-day bankers' acceptances at $\frac{1}{4}$ per cent. in the open market. Brokers' loans increased last week by \$26.0 millions to \$371.0 millions. A further increase in monetary gold stocks is reported this week. Ear-markings on foreign account were reduced by \$11.2 millions, while imports amounted to \$4.5 millions, mainly from India and Canada. As there were no exports, the total increase amounts to \$15.7 millions. Current improvements in business show that progress is very slow. The latest indication is an increase in steel mill operations to 15.5 per cent. of capacity, against 14.5 per cent. last week. This shows how very slow the actual recovery, as distinguished from commodity and security price movements, is proving.

IS IT REVIVAL?

THERE is no business man in the world who is not asking himself this question, or whose plans and hopes do not depend upon the answer. What is the immediate meaning, and what the promise for the future, that may be read into the recovery in the stock markets and the rise in commodity prices which we have been witnessing in the past two months? Is this movement no more than a flash in the pan, or does the advance possess any of the indispensable attributes of durability? May we believe that we see before us an outward and visible sign of the approach of a real improvement in the volume of trade, production and employment? This week's shake-out in the markets may be taken as marking a definite stage in the movement, and affords an opportunity to pause and review objectively the main factors in the situation.

One significant sign is the almost universal tendency to take a rather rosier view. The letters from our foreign correspondents in recent weeks, and again in the current number, speak in definitely more hopeful terms of the situation in various parts of the world, including the depressed countries of Central Europe. Even in the case of Germany, those who have been recently in touch with opinions in Berlin have returned with slightly more hopeful, if qualified reports, to the effect that the German financial and business world is not so alarmed or so hopeless as they had expected to find it. A very general market flutter might be expected to follow from so substantial a stimulus as that which has been given in recent weeks from New York and London; but that there has been even a sentimental response at least indicates that a less tragic view is being taken of the difficulties which still lie ahead.

As to the extent of the movement which has taken place, it may be summed up by saying that if we leave out of account the somewhat violent movements of the past week, the rise in the case both of our international index of gold prices and of the prices of Stock Exchange equities that has taken place since June approximately cancel the fall that took place during the first six months of the year. This is in itself a great gain, for it has relieved anxiety in many board rooms throughout the world; made conditions more liquid and reduced or eliminated losses on current working. On the other hand, if we look for tangible results in the field of production, employment and trade, frankly there are none. In this country unemployment is at the highest figure ever recorded, while August exports are the lowest in British history since the war.

Clearly, then, the present phenomenon can mean only one of two things—either it is merely a recovery of stocks and of commodity prices from an abnormally low level due to distress and fear of bankruptcy to a level which still represents severe depression, but not panic and acute crisis; or, alternatively, though actual production and other figures always take time to respond to psychological improvement, the present movement may be the forerunner of recovery. In times past upward and downward movements in the stock and commodity markets have preceded the major movements of the trade cycle. Are we once again witnessing an example of intelligent anticipation by investors and speculators of an economic movement which can only be detected in the first instance by almost imperceptible signs, such as the transfer of stocks from producers' hands to merchants and consumers; an improvement in the order books; a discussion of projects for expansion, and a spreading conviction that prices have passed their lowest point?

The phase through which the world has been passing has been so much more acute than any similar experience, and political considerations have played so much larger a rôle than in normal times, that we hesitate to apply ordinary tests; but if economic considerations alone are to be taken into account, there would, in our opinion, be sufficient grounds for thinking that we had definitely entered upon an upward phase of business conditions. The most substantial evidence of this is that in a number of directions production has adjusted itself to the present

level of consumption; stocks are not rising and are in some cases tending to fall, and may be expected to drop farther if the conviction persists that the bottom of the price curve is passed. In some important industries the level of production is down to or below that necessary to provide replacements, apart altogether from normal expansion. In the financial field also most countries have made a serious and, in many cases, a successful attempt to deal with their public finances; and, though the position of debtor countries, particularly in Central Europe, is still extremely embarrassed, there is much less fear of a currency débâcle, and a slowly growing conviction that, if adjustments may still have to be made in the matter of international commercial obligations, there is no reason why these should not be dealt with in a deliberate and orderly manner, without involving a threat to the stability of the chief creditor countries.

But if in these respects the ground for revival has been prepared, there remain grave elements of doubt due to difficulties in international public policy, the two aspects of which are the political situation, and the economic and financial relations between nations. Events have driven home the lesson with such force that it is unnecessary to develop in these columns the argument that no continued recovery can take place unless both these aspects are dealt with by the world's statesmen. Indeed, there is almost a dangerous unanimity in the declarations of public men that it is a vital necessity for the welfare of all nations to seek security through disarmament, and to break down the barriers to international trade and the movement of capital, for words are common, but action rare. Something, however, has been done. Whether it was a coincidence or not will no doubt be a point debated by historians, but the fact is that the present upward turn dates from the Lausanne Conference, and there is little doubt that the rather slow realisation throughout the business world that the Lausanne Conference did in fact, if not in name, settle the Reparations question once and for all undoubtedly played a part not only in European countries but in America. But with the Stresa Conference making rather heavy weather, there is at the moment no tangible evidence that the good work of Lausanne is being adequately followed up. Indeed, the internal and external political difficulties of Germany have created a less favourable atmosphere for international co-operation. There is urgent need of a new effort and of fresh achievements in the struggle against the forces of disintegration and anarchy.

In the circumstances, those who attempt to see the course of economic events in the near future are asking some rather searching questions. Is it possible for a number of countries in the world to begin a forward march without waiting for all to fall into line? After all, did not the American continent in the middle twenties enjoy very great prosperity for several years, long before Europe had begun to settle down to normal activities? Is there not a hope, indeed, that over a large part of the world, as the fever of the present depression burns itself out, the natural forces of expansion will gather way, without waiting for the politicians? And if so, is there not some reason to believe that with better trade the politicians will find it easier to solve their difficulties? There is something to be said for the view that in the long run economic life will start again whatever muddles the politicians may make; but the time is not yet. There is no continent which is yet free of its political difficulties, and there is no country whose economic life is still not vitally affected by the unprecedented dislocation of which the slump in prices is the index. If steps are not quickly taken to restore international intercourse on the basis to which the world has grown accustomed, we must look to years of painful readjustment. It is those who are responsible for State policy who will determine whether we make a relatively short return to recovery or have to face a prolonged depression, the course of which it is impossible to foresee.

THEN AND NOW.

It is difficult for those whose memory or knowledge goes back over sixty years to resist the uneasy sense that history may be repeating itself in the events now going forward in Europe. For, sixty years ago, the seeds were sown of the fatal contention which led in due time to the Great War. Then, as now, the quest of security by armaments was the avowed object of the victorious Power, and all the catchwords with which we are now familiar were in the mouths of its statesmen, who regarded them as self-evident and infallible truths. The statesmen of these times should be encouraged to re-read that history. Let us consider a few of the principal landmarks in it.

At the end of the Franco-German War no country in the world looked safer than Germany. She had built up a great Empire out of a mob of States; all her enemies were in the dust; her military power was beyond challenge. Yet in Bismarck's eyes she was beset with many and great dangers. She had done too much for reconciliation to be possible, and not enough to dispose permanently of her principal enemy, who, as he kept reminding himself, was more populous and wealthier than Germany, and might easily become a deadly menace if left to recover undisturbed. His conclusion was that this enemy—France—must be isolated by a combination of Powers acting together to keep her permanently in a subordinate position, and that Germany in the meantime must have and keep an unchallengeable military superiority. He often regretted that the Treaty of Frankfurt had not imposed disarmament on France, for that would not only have increased German security, but have removed temptation from any other Power which might toy with the idea of making friends with her. (In Bismarckian Europe friends were attractive just as enemies were formidable, in proportion as they were armed.) But, apart from this, he had one very powerful weapon to use in his effort to reduce her to the position of a pariah nation. The overthrow of the Empire, the commune, and the establishment of a republic in France had thrown the Tsar and the Austrian Emperor into a state of nervous alarm, and he played on their fears to such effect that, by the time French territory was evacuated, he had persuaded them to join the German Emperor in the "League of the Three Emperors" for the defence of the monarchical principle against the "disreputable anarchy," as he called it, then prevailing in France.

His leading thought during these years was to brand France with an inferiority of status which would prevent her from becoming eligible as an ally (*bündnisfähig*) for any other reputable Power, and his indignation knew no bounds when he discovered that von Arnim, the German Ambassador in Paris, favoured a monarchical restoration in France, and was on intimate terms with the Legitimist leaders. "I am convinced," he wrote angrily to the Ambassador, "that it would not enter the head of a Frenchman to help us back to the blessings of a monarchy, if it had pleased God to afflict us with a republican anarchy. The practice of that kind of benevolent solicitude for the fate of a hostile neighbour is an entirely German idiosyncrasy." The Ambassador was instructed to throw the whole weight of German influence on the side of Thiers and the Republican Party in France, and later, and for the same reason, Gambetta became a warm favourite with Bismarck. The German documents paint a lively picture of his policy and strategy in these respects.

But the idea of three great Powers working together for the isolation of France and the greater glory and security of Germany was doomed from the beginning. The fear of anarchy passed; the other two Emperors had other things to do, and they were perpetually quarrelling with each other about the Near East and involving Germany in their disputes. In 1875 the Tsar joined Queen Victoria in protesting against Bismarck's supposed intention of renewing the attack on France, and three years later he was in a high state of indignation because Bismarck, as he asserted, had given his casting vote to Austria at the Berlin Congress. The history of the next ten years is that of the extraordinary devices by which Bismarck sought to keep the three Emperors within the German fold. It is

an astonishing story of secret treaties and conflicting obligations undertaken with each of his partners in turn, behind the other's back; and if cunning, chicanery, duplicity, intrigue are legitimate instruments in the handling of State affairs, it is a masterpiece of diplomatic virtuosity. Its breakdown is commonly attributed to the fall of Bismarck, but by the year 1893 he was at the end of his resources, and his last and most perilous stroke, his Reinsurance Treaty with Russia, had landed him in great difficulties. His successor, Caprivi, was well justified in saying that he was altogether unequal to the continuance of these games.

The games must in any case have come to a speedy end, for the Tsar Alexander III. was by this time convinced that the dedication of the three Powers to German security and the isolation of France meant in effect a German hegemony in Europe. Substantially he was right, for this grouping could only have been effective for these German purposes if both the other Powers had been willing to subordinate their interests to those of Germany and to take their orders from Berlin; and Russia, at all events, was not willing. So on a summer day in 1891 the French fleet came to Cronstadt, and, greatly as he detested the "Republican anarchy," the Tsar received them in person and stood bareheaded while a Russian band played the battle hymn of the Revolution. He had moments of repentance and reaction, and the young German Emperor tried his blandishments on his friend, Nicholas, the heir to the Russian throne, but from 1891 onwards the Franco-Russian Alliance was in the making, and early in 1894 it was an accomplished fact.

Thus within twenty-three years of the signing of the Treaty of Frankfurt the German dream of security through the isolation and subordination of the former enemy was shattered; and, Italy having in the meantime joined the German group, Europe was divided into the two camps, Triple and Dual Alliance, whose competition in policy and armaments was to bring the Great War. The German dream was always a vain one. Nations in general cannot be induced to devote themselves for more than a brief period to the security of one of their members, and still less to the permanent subjugation or disarmament of another of their members. Policy apart, there is an international sentiment in favour of the underdog which statesmen cannot afford to ignore. At the end of Bismarck's reign there was widespread sympathy with France for what she had suffered at his hands, and no small satisfaction at the turn of events which had provided a corrective to the overweening power of Germany. The ultimate and tragic consequences of this method of balancing power were not yet perceived.

The circumstances during the fourteen years since the end of the Great War are, of course, not exactly parallel, but they present many of the same features. The parts are now reversed, but the idea of making French security the pivot of European policy and of grouping other Powers about France as a guarantee for that country against the recovery of her former enemy has worked powerfully in the French mind, as formerly the parallel idea in the German mind. On these lines the French would as surely fail as the Germans did before them; and their failure would bring us to another great divide, with the resumption of competing armaments as its immediate and war as its final consequence. All the elements for such a division are at hand—on one side the Powers which are satisfied, and on the other the Powers which are dissatisfied, with the post-war treaties; Russia for the moment inscrutable, but ten years hence no more improbable an ally for Germany than France was for Russia fifty years ago; Germany protesting, as France did in the former years, that she will not submit to an "inferior status."

Our one security against the repetition of this history is the League of Nations; and we hope the statesmen who are trustees of the great common interests embodied in that institution will keep their eyes steadily on the drift of events and not be distracted by the incidents of the hour. It is no doubt an untoward circumstance that the question which the Germans have put to the other Governments in their *aide-memoire* communicated to the French last week comes from von Papen and his Junkert

and not from Herr Brüning and a more acceptable Government. But it is a legitimate question which could not have been postponed for more than the briefest period, and it has behind it the solid backing of the German people. They are unanimous that they will not accept the "inferior status" of being the one disarmed people, while the other nations refuse to reduce their armaments. If the handling of this question were such that Germany left the League and proclaimed her intention of standing alone or seeking support elsewhere, we should be very near another division into two camps; and the League, instead of being the organ of all the Powers, would then be in extreme danger of becoming only the instrument of one group of Powers against which there would surely grow up another group. These dangers can be averted, but only by taking them seriously and looking ahead. It is not too much to say that the pursuit of security for one Power is fatal to the security of all the Powers. There must be security for all or there will be security for none.

MR GANDHI'S ULTIMATUM.

ON the morrow of the announcement of the projected renewal of Round Table discussions in London, a new embarrassment has arisen in the Indian situation. Mr Gandhi has informed His Majesty's Government that he intends to starve himself to death—beginning his abstinence from food on the 20th of this month—unless the Government withdraws that part of its Communal Representation Decision which relates to the representation of the Depressed Classes. The correspondence, which was published on Tuesday of this week, began with a letter from Mr Gandhi to Sir Samuel Hoare as long ago as March 11th, when the Lothian Committee was still conducting its investigations in India; and it has ended with a reply from Mr Gandhi, dated September 9th, to a letter from the Prime Minister. Thus Mr Gandhi's decision cannot be said to have been hasty, and it is to his credit that the sense of the correspondence—and even the fact that it was taking place—has been kept secret over this long period of time. At the same time, the facts of the situation, which are a matter of public knowledge and which are brought out once again in a series of letters now made public, do seem most decidedly to show that Mr Gandhi's decision is not only painful but also unreasonable.

Consider, for instance, the circumstances in which the communal decision has been made: it has had to be made by the British Government because the Indian Communities have failed so far to make it by agreement among themselves, while, if no arrangement about Communal Representation were forthcoming now from any source or on any authority, the progress of India towards self-government would be completely arrested. Hence the British Government's action. But this decision made at Westminster is subject, by its own terms, to being replaced at any moment by an agreement between the Indian Communities themselves. That, however, is quite a different thing from replacing the Westminster decision, or any section of it, by terms dictated by a representative of one only among the Communities concerned. Mr Gandhi claims to speak for the Depressed Classes as well as for the caste Hindus; but the Depressed Classes, after all, have their own organisation and their own representatives, who have expressly demanded separate electorates; and it is no more fair or reasonable to brush these aside and leave it to Mr Gandhi to decide their fate than it would be to give the leaders of the Depressed Classes the last word about the representation of the caste Hindus.

So much for the point of principle; and on the point of substance, the British Ministers are surely right in their view that Mr Gandhi has mistaken the meaning and effect of the Westminster decision as far as it affects the Depressed Classes. The terms of this decision do not recognise the Depressed Classes as a separate community on the same footing as the Muslims or the Sikhs, and they do not provide them, like these non-Hindu minorities, with a separate electorate. Hindus belonging to the Depressed Classes are everywhere included with the caste Hindus in general constituencies, in order that the intro-

WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

duction of parliamentary institutions into India may not have the effect of breaking the unity of the Hindu community. At the same time, the Westminster decision seeks to guard the Depressed Classes against the danger to which they are exposed by the transfer to the Hindu community as a whole of new political powers which, in the first instance, will inevitably fall almost wholly into the caste Hindus' hands in the general constituencies. In order to ensure that the Depressed Classes shall have a minimum number of their own representatives in the new legislative bodies from the outset, the Westminster scheme provides for the double enfranchisement of a certain proportion of the Depressed Classes by creating a certain number of special constituencies—in addition to their inclusion in the general constituencies—for a probationary period. The number of these special seats does not (as the numbers of Muslim or Sikh seats do) bear any numerical proportion to the percentage of the Depressed Classes in the population of India, and the probationary period is twenty years: a term within which it will have become manifest whether or not the Depressed Classes can secure fair representation in the general constituencies in which they will also have been voting, and standing as candidates, all the time. This scheme seems to us an ingenious and sincere attempt to get over an immediate political deadlock without compromising the future and without sacrificing the vital interests of any party. We deeply deplore Mr Gandhi's inability to see the Westminster decision in this light.

Nevertheless, however illogical and indefensible Mr Gandhi's attitude and however strong and correct the British Government's position may be, it remains true that Mr Gandhi's threat of self-imposed martyrdom creates awkward possibilities. Mass opinion in the East is not so decisively influenced by the logic of facts, and is far more liable to be affected by "whispering campaigns" of false propaganda than is public opinion in Western countries. It is even conceivable that world opinion might be unreasonably stirred by a spectacular self-immolation of a fanatical idealist. For this reason alone it is of essential importance that the convincing facts upon which the British Government's case rests should be made known to the whole world in the clearest possible terms; for the support of world opinion, though intangible, is an important factor.

As regards the effect of the Mahatma's move on Indian opinion, it is too early yet to make predictions. It is not without significance that Mr Patel and some other leading members of the Congress Movement have deprecated Mr Gandhi's threat, and that Dr Ambedkar, the leader of the Depressed Classes, refuses to be impressed. All the same, the reaction on majority Hindu opinion remains to be seen, and there is a danger that Mr Gandhi's colleagues might be able to gain credence for the claim that Mr Gandhi has a solution, that Britain is trying to divide the Hindu forces in order to weaken India, or, alternatively, that the British Government is merely proving once more that it does not understand India and her problems. Another important question that arises is whether Mr Gandhi's suicide—if his threat is really to be carried out—would not weaken the forces in the Hindu ranks, which stand for "non-violence."

On the other hand, there are happier possibilities. Hindu leaders must be painfully aware that the incident has once more shone the limelight on their inability to find

a solution for their own problems. As the *Times* of India points out, they are now presented with the opportunity to make a gesture to the "untouchables" which would remove the chief difficulties of the present situation. It may even be that the dramatic nature of Mr Gandhi's ultimatum will stimulate the party leaders in India to reach a voluntary agreement. If they have the vision to use for this purpose the occasion of this strange incident—arresting in its dramatic appeal whether it be regarded as political lunacy or high mysticism—they will be universally regarded as having made a serious effort to modify a condition of affairs which for generations has been a blot on India's fair name. Nothing that they could do would make a more powerful appeal not only to British, but to world opinion.

EIGHT MONTHS' OVERSEAS TRADE.

COMPARED with the preceding month, imports for August at £53.3 millions show a slight increase of £1.4 millions, while exports of British goods have fallen by £0.7 million to the lowest figure of the current calendar year. Re-exports at £3.5 millions were fractionally greater than in July. The figures for August and for the first eight months of the year are summarised in the following tables:—

MONTH OF AUGUST. (000's omitted.)					
	1932.		Increase or Decrease as compared with		
	August, 1931.		August, 1930.		
	£	%	£	%	%
Imports	53,313	-11.968	-18.3	-26,540	-33.3
British exports	28,552	-585	-2.0	14,225	-33.3
Re-exports	3,491	-359	-9.3	2,851	-45.0
Total exports	32,043	-944	-2.9	17,076	-34.6
Excess of imports over total exports	21,270	-11,024	-34.2	-9,464	-30.8

FIRST EIGHT MONTHS. (000's omitted.)					
	1932.		Increase or Decrease as compared with		
	August, 1931.		August, 1930.		
	£	%	£	%	%
Imports	465,943	-87,151	-15.8	-240,617	-34.1
British exports	244,879	-17,666	-6.7	-153,496	-38.5
Re-exports	36,126	-8,368	-18.8	-26,159	-41.9
Total exports	281,005	-26,034	-8.5	-179,655	-39.0
Excess of imports over total exports	184,938	-61,117	-24.8	-60,962	-24.8

The latest trade returns, and more particularly those for August, will no doubt be scrutinised carefully in the hope that they will provide additional evidence of a coming trade revival. Those who wish to use the returns in this way are doomed to disappointment, for they show a further slight decrease in exports, while the improvement in imports is confined to manufactured goods. With the notable exception of cotton, the August raw material imports as a whole give no indication that British manufacturers are yet restocking in more than a moderate degree. The expansion in raw cotton retained imports to 827,000 centals, against 687,000 centals in July and 476,000 centals in August last year, occurring as it did in face of the strike, does, however, reveal a spirit of greater confidence among manufacturers.

The fact is that whether or not a revival is imminent, there has been no time yet for it to be reflected in raw material imports, still less in British exports, and this would be true even if August had not been the holiday month. The chief lessons from the August returns are to be derived by comparing them with past months with a view to searching for any change in the recent downward trend.

Imports for 1930—a year, be it noted, of declining prices—varied from £101.8 millions in January to £78.6 millions in September, with a monthly average of £87.0 millions. They fell heavily in the first part of 1931 to £65.8 millions for August, but then came the period of tariff forestalment, which swelled them to £80.7, £88.2 and £77.0 millions for the last three months of the year. There

was a further month of forestalment in February, 1932 (£70.2 millions), but then with the tariff in force came the drop to returns of £52 to £57 millions for the period March to August inclusive. The slight upturn in August may mean the end of the reaction after the months of forestalment, but the movement is too slight to possess much significance.

Comparing the first eight months of 1931 and 1932, raw material imports show a relatively moderate drop of £4.4 millions, or 3.8 per cent. Such a small decline is far from discouraging. Imports of manufactured goods are less by £59.1 millions, or 35.8 per cent. This decrease is fairly well spread, with the exception of an increase of £1.3 millions in oils, fats and resins, which are really raw materials. It is most noticeable in such classes as woollen and worsted goods and apparel, which were subject to the prohibitive Abnormal Importation Duties early in the year and later to additional duties under the tariff; and also in iron and steel, non-ferrous metals and miscellaneous articles. The decrease of £5.5 millions in iron and steel imports is fairly well spread over the constituent items of the group.

So far, it is possible to claim that the suspension of the gold standard and the tariff have helped to rectify the adverse trade balance, for there is no doubt that the import curve received a sudden twist downwards immediately after the forestalling early this year; and this is more noticeable in the case of imports from such foreign industrial countries as Germany, Belgium, France, Czechoslovakia and the United States. This improvement, however, has been bought at a price, and the price paid is that our export trade has largely failed to react to the stimulus of the suspension of the gold standard. All that has happened is that the export curve, which had a downward trend from £58.3 millions in January, 1930, to £29.1 millions in August, 1931, only recovered to £32 millions a month for the closing quarter of 1931, and has since, with the fortuitous exception of £34.8 millions for April, slowly sagged to its latest figure of £28.6 millions.

A survey of our staple exports leads to conclusions which at the best only afford moderate encouragement. Take first the coal trade. The total figures for the first eight months of each year are:—1930, 37.1 million tons; 1931, 28.0 million tons; and 1932, 26.3 million tons. In certain markets, notably Scandinavia, business has shown some recovery over last year, but over the rest of the Continent the decline has continued. Iron and steel exports, after falling from 2.3 million tons for 1930 to 1.8 million tons for 1931 (first eight months), are again 1.8 million tons for 1932, so that here the decline has been arrested. Galvanised sheets and tinplates show an improvement over last year, but exports of pig iron are worse, and those of railway material at 60,000 tons, against 300,000 tons in 1930, are simply lamentable.

Cotton piece-goods exports are definitely better than last year, and are not far off the 1930 level, such as it was. The actual figure for the eight months, in millions of square yards, are:—1930, 1,853; 1931, 1,169; and 1932, 1,527. Trade with India has improved slightly (361 million square yards, against 285 in 1931 and 667 in 1930), and, thanks to the Japanese boycott, exports to China have shot up from 36 million square yards in 1930 and only 24 in 1931 to 63 million square yards for this year. There are a fair number of increases over last year in other markets, including Norway, Denmark, Egypt, West Africa, Iraq and the Argentine among foreign countries; and all the Empire outlets, except South Africa, Ceylon and Canada.

Woollen and worsted exports have done no better than hold their own in comparison with last year. Recoveries are shown in exports to Holland, Denmark, the Irish Free State, India, New Zealand and countries not separately specified, but business with France and South Africa has deteriorated, and a large number of countries confirm the level trend of the total figures. A final survey of other sections of the returns shows a heavy drop since last year from £5.8 to £3.7 millions in exports of electrical goods; and no big change either way in cutlery and hardware (£3.7, against £3.5 millions last year), machinery (£20.8, against £21.9 millions last year), and chemicals (£12.0,

against £11.6 millions last year), and a serious decline from £22.2 to £14.2 millions in exports of vehicles, including locomotives, rolling stock, motors, aircraft and ships. Thus, while the returns as a whole contain many elements of encouragement, they do not yet point to a major or general reversal of last year's downward trend.

The August returns are the first to reveal the effects of the tariff war with the Irish Free State. These are summarised in the following table:—

		August, 1931.	July, 1932.	August, 1932.
		1931.	1932.	1932.
Imports from Ireland:—				
Bacon	cwts.	31,736	11,349	10,904
Pork	cwts.	14,034	6,365	3,788
Poultry	No.	99,432	39,298	56,239
Cattle, live	No.	57,816	28,194	12,182
Sheep, live	No.	95,780	77,969	39,848
Swine, live	No.	32,989	19,556	15,918
Butter	cwts.	67,920	65,837	36,815
Eggs	gt. hundreds	303,517	337,276	253,541
Exports to Ireland:—				
Coal	tons	166,564	226,082	120,880
Galvanised sheets	tons	1,466	1,075	273
Cotton piece-goods	sq. yds.	1,563,900	2,393,300	1,954,800
Woollen tissues	sq. yds.	299,500	266,700	292,400
Worsted tissues	sq. yds.	49,000	42,400	28,100
Boots and shoes	doz. pairs	20,493	19,712	13,931
Private motor-cars	No.	358	448	249

So far our blockade appears to be the more effective of the two, and the Irish Government will clearly experience considerable difficulty in making the Free State economically independent of Great Britain. All the same, it is a lamentable business.

OTTAWA AND THE LOAF.

PARLIAMENT is to reassemble on October 18th, more than a week earlier than had been planned, in order that legislation arising out of the Ottawa agreements may be disposed of as expeditiously as possible. This legislation may well be heavy in volume and will certainly bristle with controversial points, and it is essential that the Government will allow the House of Commons ample time for the detailed scrutiny which is very desirable. In some quarters there are disquieting hints of an "omnibus" Bill so framed as to minimise the opportunities for criticism; but we doubt whether even the present House of Commons, with its huge Government majority, would tolerate such treatment. At Ottawa the Government have signed away our fiscal freedom, saddled us (on paper at any rate) with taxes on our staple foods, and have agreed to the creation of a variegated pattern of preferential tariffs. Matters of such vital importance in principle and of such intricacy in detail demand the fullest possible Parliamentary discussion, and the clearest Ministerial exposition. Parliament must be told precisely what it is to which it is asked to commit the country.

Questions about Ottawa that remain to be answered are many. Of them all the most perplexing concerns the wheat preference. It was apparently inserted, in the Canadian agreement at any rate, only because of the persistent personal pressure of Mr Bennett. An influential section of the Canadian grain growers did not want it and said so. They showed themselves to be entirely aware that, since in every normal harvest year they are compelled to sell a large proportion of their grain outside the Empire, a British preference which would throw additional foreign wheat into non-Imperial markets might prove a double-edged sword. A section of the Canadian Cabinet was definitely opposed to it, yet the Prime Minister would have it—presumably for what he considered to be sound electoral reasons. All that we know at present is that the British Government has undertaken to impose a duty of two shillings a quarter on foreign wheat entering the home market, but that it is allowed to remove that duty should adequate Dominion supplies not be available at world prices. At first sight the imposition of a two shilling wheat duty appears to be a major breach of the pledges of many leading Ministers not to impose taxes on the staple foods of the people. But they will tell us, we suppose, that, since supplies are to be made available at world prices, there is no fear of the consumer paying more for a loaf than before. From the point of view of the Canadian farmer, where is the advantage? His necessity to sell in

the outside world continues, and he will get no better price in Britain. Where then is the use or merit of this arrangement from anybody's point of view? We have yet to see a satisfactory answer to that question. Such answers as have been made are by no means convincing. For instance, the current monthly letter of the Royal Bank of Canada tries as follows:—

It is not quite clear whether it will be the British miller or the Canadian farmer who will receive the benefit of the tariff preferential when there is a world surplus, but in normal years it seems likely that the Canadian farmer will secure the 3d. preference tariff on this commodity. In any case, the preferential will result in an increase in the proportion of Canadian wheat used in Great Britain. If this threepence is not mythical, who is going to pay it except the British consumer? It would look as though responsible Ministers both here and in Canada will be hard put to it to prove that the wheat preference (unless there is another big chapter of the story which we have not yet been allowed to hear) is a mere piece of pettifogging political hoodwinking.

But if the plan means anything at all, or is to be followed by new demands, we must not overlook the fact that from the point of view of Britain's vital interests any arbitrary interference with the world's wheat trade must be regarded in a very serious light. It is important for Britain to be assured of her supplies of food at the lowest world prices. That may be may not be safeguarded by the present arrangement. But a fact that is often overlooked is that it is at least equally important for Britain to have free and unfettered access to all the chief sources of wheat supply. In so far as any preferential arrangement tends artificially to divert the normal channels of the wheat trade, it is a danger to this country, one of whose advantages in the past has been the power to procure its breadstuffs from those parts of the globe in which the harvests in any particular year happen to be good and from which it happens to be most convenient to obtain. In the five pre-war years 1909-13 our average imports of wheat and flour, in millions of bushels, were as follows:—From the United States, 48.7; from Canada, 42; from Argentina, 31.6; Australia, 23.2; and British India, 36.2. These figures alone show how our wheat purchases are spread in a normal period. In individual years the percentages taken from any given source have varied substantially according to the harvest weather in the two hemispheres, and the variations are surprisingly large, as the following tables show:—

CANADA.						
Period.	Area.	Production.	Yield per Acre.	U.K. Imports from

* Area sown, not harvested.

It will be noted that it is precisely in the cases of Canada and Australia, with whom new preferential arrangements are being made, that the production and yield per acre are liable to the widest variations. Since 1920 the yield per acre in Canada has varied from 11.6 bushels to 28.5 bushels, and in Australia from 8.5 bushels to 16.1. Study of the tables will show that our takings from particular sources do not always vary in direct proportion with variation in the size of the crops harvested, although they bear of necessity a considerable relation to it.

Two things that Ottawa could not do were, firstly, to arrange for the control of the weather in the grain-growing areas of the Dominions, and, secondly, to assure Dominion growers better prices in the British market without imposing a burden on the British consumer. One thing, however, that Ottawa may lead to, unless Parliament gives to this matter its most critical attention, is an upset of the complex and delicate machinery of the world's wheat trade, which has been built up by decades of experience and which has hitherto worked in a manner advantageous to the interests of every household in Britain. It is simply because we have not had all our eggs in one basket that our industrial population has had the immense benefit of a steady supply at steady prices.

Notes of the Week.

Europe at Cross Purposes.—The French reply to the German *aide-mémoire* (on which we commented last week) was despatched to Berlin last Sunday and was made public in Paris on Tuesday. The Government of the Reich is still considering it as we go to press; but we fear that this exchange of notes on the disarmament problem between the two Powers whose views are farthest apart has perceptibly increased the danger that a break-down of the disarmament conference may produce a situation in which the whole problem will escape once more from rational control and will pass out of the field in which a reasonable settlement is possible. The French reply is couched in courteous and sometimes conciliatory language; but its hard kernel is its categorical refusal to entertain the suggestion that "a general limitation of armaments should involve the lapse of the permanent stipulations of the Treaty" of Versailles in regard to the unilateral disarmament of Germany. It also takes the line that the German proposal is a proposal for the rearmament of Germany, and not for a general reduction of

armaments all round to the present German basis. This, of course, is not the sense of the German *aide-mémoire*, as is plain from a study of the crucial paragraph 6. But the French note not unfairly refers, for an interpretation, to a batch of statements by General von Schleicher; and unhappily the German Reichswehr Minister's personal pronouncements are as much more menacing than the German Government's note as Monsieur Herriot's (though not Monsieur Paul-Boncour's) speech last Sunday at Meaux was more constructive than the note which the French Government was in the act of despatching to Berlin on that very day. It is to be feared that both parties may ride off on the juridical point, on which any approach to agreement between them is virtually impossible. The pity of it is that, on the questions of substance, the two Governments are not divided by an impassable gulf. The French note admits that Germany has a right to her national security; and the German *aide-mémoire* declares that, if Germany's right to an armament level adequate to her national security is written into the Disarmament Convention as a point of principle, she will not insist upon attaining *de facto* equality with her late opponents at this stage, because she looks forward to a second convention which will go much farther in the reduction of the armaments of the States that are at present highly armed. Surely the distance between these two points is not unbridgeable?

But a Gleam of Hope.—The condition for success is clearly that substantial progress should be made at the Disarmament Conference. In this connection it is significant that in the French reply there was nothing which suggests an organised international army or making disarmament contingent upon the force available for the League of Nations; but the doctrine laid down in the *aide-mémoire* is that "we must aim not at individual disarmament, but at general and regulated disarmament." This phrase is being interpreted in Paris as an abandonment of the Tardieu thesis which was that disarmament could only be possible in proportion to the degree of security obtainable, and that while that security was not attainable each nation must determine its own means of defence. The Tardieu thesis of an international force made no headway at Geneva. If M. Herriot has the intention of exploring new lines, there is hope of obtaining more fruitful results than the very inadequate resolution of July last which precipitated the issue in Germany. But, in any case, this country must take a hand and must act quickly—if need be by declaring unambiguously its attitude towards the German claim. We cannot escape our share of responsibility for the dire results that would follow if this question is allowed to drift.

The Dissolution of the Reichstag.—The scene in the Reichstag on Monday would have been a fine political comedy, if high tragedy were not lurking just round the corner. The Communists—who, of course, represent a small and semi-ostracised fraction of the House—moved a vote of censure on the von Papen Government. The 82 Nationalist supporters of the Government in the House failed to stay these proceedings, though a single adverse vote would have sufficed for the purpose according to the Reichstag's rules of procedure. The Nazis and the Centre decided, during a short adjournment for consultation, to give the Communist motion their support. When the sitting was resumed, Herr von Papen—who was present with the intention of making a declaration of policy—asked for the floor the moment that the Nazi President of the House, Captain Goerig, announced that a vote on the Communist motion would be taken. Captain Goerig ignored the Chancellor, and then refused to take the dissolution decree which the Chancellor tried to hand to him. Thereupon the Chancellor and his Ministers left the Reichstag, the vote was duly taken, and the result was a censure of the Government by 518 votes to 82, with 5 abstentions. Captain Goerig now announced that the dissolution decree was null and void, since it had only been handed in when the vote which had now overthrown the

Government was in the act of being taken. He appointed another sitting for the next day—only to find that the Social-Democrats and the Centre were unwilling to back him up. The Government, on their part, denounced Captain Goerig's refusal to give the Chancellor the floor as unconstitutional. But the victory—and it is a victory—of the Barons over the Reichstag has not turned on fine points of law, but on the Government's command of military force. As for the Chancellor's statement, which he had been precluded from making in the Reichstag, he made it over the wireless, the same evening, to a larger audience. It is an extraordinary situation. The parties of violence in Germany are manoeuvred into the position of championing constitutional government, and are thereupon hoist with their own petard—and all this by a gang of Barons from the *ancien régime* who had seemed as dead as mutton and who even now have no appreciable following in the country. The von Papen Government has somehow discovered the art of keeping its saddle; but everything else in the present political situation in Germany is obscure.

Liberal Ministers.—When the tariff was introduced in the spring it was touch and go whether Sir Herbert Samuel and his Free Trade Liberal colleagues would resign their posts in the Government. That they did not do so was due to two things: firstly, the representations of the Prime Minister that the need for a "united front" was as great as ever, and secondly, to the unprecedented arrangement by which liberty was accorded to them to speak and vote against the Government's fixed proposals. Now, the Ottawa agreements have taken our tariff one stage farther away from the "experimental" or "emergency" stage and commit us to a "five-year plan" during which Parliament must surrender the right to modify taxation except with the consent of the Dominions. The agreements have, also, made it more difficult to use our tariffs to persuade other countries to reduce theirs. Therefore the question of resignation arises again, and it is more likely this time that the step will be taken. Certainly the pressure from the constituencies is all in this direction. In our view this is the proper course for the Ministers to take. The argument for entering the Coalition Cabinet was a very powerful one last September, but at best there are great disadvantages in a Government which tries to straddle so wide a section of political opinion stretching from the Right to a point well towards the Left. The system of democratic government, which in these days is finding it very hard in many countries to cope with exceptional difficulties, thrives on frank criticism and open discussion. At times of crisis it may be right to reconcile differences behind closed doors, but the crisis argument has greatly weakened. Every day we are dealing less with matters of the immediate and urgent present and more with matters that will affect the trend of our evolution for years to come. Not only matters of fiscal policy, but foreign affairs generally call for freer discussion in Parliament than has recently been the case. To a very large extent Mr Baldwin, Mr MacDonald and Sir Herbert Samuel have common hopes and aims in regard to the great international questions which are still pressing for attention. If the Liberal Ministers leave the Cabinet they will be in the main a friendly Opposition in these matters, or, perhaps we should say that their rôle will rather be that of speeding up the coach in the direction in which it is laboriously travelling. We do not think there is any risk of their resignation being misunderstood abroad or being interpreted as a weakening of the national will in this prolonged depression. Its effects at home would, we think, be to make their own criticism more effective and to enable public opinion to play a more active part in the determination of our national policy.

The Maine Election.—If the result of this week's general election in the State of Maine is not a portent, it is at least an omen of good cheer to the Democratic Party in America and a serious warning to Mr Hoover's supporters that there is no room for slackness or complacency. This latter

fact has already been recognised by the President, who has telegraphed to the chairman of the Republican organisation a message calling for a redoubling of campaign effort. What has happened is that Maine, which has been all-Republican since 1914, has elected a Democrat Governor and two Democrat Congressmen. Further than that, Maine, traditionally the driest of the "dry" States, has voted "wet." In reviewing the prospects of the Presidential election in the *Economist* some weeks ago, we ventured to suggest that the election would turn mainly on the liquor question, and that, although there are normally more Republicans than Democrats in the United States, the lesson of this contest might be that there are equally more "wets" than "drys." Maine seems to point that way. It would, however, be rash to assume that the old saying, "What Maine says to-day America says to-morrow," will be true in this case. Much may happen in the next seven weeks. In all probability Mr Hoover will be driven to make some pronouncement going nearer to a "wet" position than he has so far moved. On the other hand, Mr Roosevelt cannot much longer delay a statement which he has so far evaded on the question of the Veterans' Bonus, and it may be that the issue will be decided by these two pronouncements by the respective candidates. Nevertheless, Maine has certainly brightened Mr Roosevelt's prospects. Should we not regard a Labour victory at Bournemouth or Eastbourne as being likely to presage a big swing to the Labour Party?

Japan and Manchuria.—A fresh encounter between the League and Japan over the question of Manchuria cannot be averted if the League is to do its duty, and it certainly ought not to be evaded by diplomatic finesse (to give it its least uncomplimentary name)—however unpalatable the recrudescence of the Manchurian crisis may be to His Majesty's Government in this country. During the last few days the Japanese Government has resumed the diplomatic offensive. It has asked the League to postpone consideration of the Lytton Report until it has received the Japanese observations on that document; and this means a delay which would effectively prevent a discussion of the Report at the forthcoming session of the Assembly—thereby frustrating all the efforts that have been made to present the Report in time for that purpose. At the very moment when it is thus attempting to delay the publication and discussion of the Lytton Report, the Japanese Government has seen fit to issue, on its own account, a highly tendentious forecast of what the Report will say. These manoeuvres need no comment—except to say that they ought not to be permitted to achieve their manifestly illegitimate purpose. The Japanese *précis* of the Lytton Report asserts, among other things, that the Report recommends the League to take into account any important modifications of the situation which may have taken place between the drafting of the Report and its discussion. And this alleged postscript to the Report is interpreted by the Japanese Foreign Office, in its statement, as referring to the then imminent recognition of Manchukuo by Japan (now actually proclaimed). The Chinese Minister in Tokyo has informed the Japanese Government that the Chinese Government would regard such a step as an unfriendly act. The Japanese Government has replied that Japanese policy in Manchuria cannot be altered; that Chinese propositions cannot be considered; and, in fine, that Manchuria is *tabu* as a subject of discussion between the two Governments. At this moment, it seems that the one place where Japan is not having her way over Manchuria is—Manchuria itself. The anarchy into which these Chinese provinces have fallen since the Japanese Army overthrew the local Chinese administration twelve months ago is growing worse and worse. And it was brought home last week to British onlookers by an act of banditry which was perpetrated at Newchwang last Wednesday, the 7th, at the expense of two British subjects: Mrs Pawley and Mr Charles Corkran. These two victims of the situation which Japan has created in Manchuria were captured by bandits while they were out riding in the neighbourhood of the city, and so far neither the puppet Manchukuo Government nor the Japanese authorities,

who pull the strings, have succeeded in rescuing them. This outrage is a more illuminating commentary on the true state of affairs in Manchuria than any amount of Japanese propaganda.

The Catalan Settlement.—The Catalan Statute was voted by the Spanish Constituent Assembly (in the same sitting as the Land Reform Bill) on September 9th. The majority was decisive—314 votes to 24 out of a house of 470 deputies—and the result has been received with equal enthusiasm in Catalonia and in the rest of Spain. The enthusiasm is justified; and the statesmen—Castilian and Catalan—who have achieved this settlement are to be congratulated on their handiwork. At a moment when we are eagerly on the look-out for any symptoms of a turn in the tide of world affairs, we may fairly see, in this Catalan current, a significant slackening of the dangerous current of Nationalism. Catalan Nationalism has all the well-known characteristics of Nationalism everywhere: a historic grievance; a memory of past political greatness; present economic discontent; a cult of local colour in manners and customs and linguistics. Yet, here, for once, this problem of Nationalism has found a moderate and not a catastrophic solution. The repression of the local individuality of Catalonia by Castile has been brought to an end, after two centuries, without a secession of Catalonia from the Spanish body-politic. The Catalans have not even insisted upon anything so far-reaching as Dominion self-government, but have accepted a form of home rule which meets their Catalan *desiderata* without appearing to their Castilian fellow-citizens to involve a disruption of the Spanish Republic. The common interest in the preservation of order and in the maintenance of economic relations between Catalonia and the rest of Spain has been recognised and has prevailed. By the terms of the new statute, Catalonia receives her local autonomy in an area comprising all the four Catalan provinces. She is to have her own Parliament, Executive Council and President, and to maintain her own local social services, including local police, transportation and public works. On the other hand, the Catalan authorities will put into force the common legislation of the Spanish Republic with regard to railways, the Press, and agriculture, as well as all international conventions to which the Government at Madrid adheres. In all parts of Spain, Catalan and non-Catalan citizens are to enjoy the same personal rights. Castilian, as well as Catalan, is to be an official language in Barcelona; and schools are to be maintained in Catalonia by the All-Spanish as well as by the Catalan education authorities. The Madrid Government retains the right of local intervention in Catalonia for the maintenance of public order; the relations between the Catalan and the All-Spanish police are to be co-ordinated by a standing mixed committee; and conflicts of jurisdiction between Catalan courts and courts in other parts of Spain are to be dealt with by the Supreme Court of the Spanish Republic. Taxes earmarked for Madrid will be collected in Catalonia by the local authorities on behalf of the All-Spanish Ministry of Finance. The whole proceeds of certain taxes, and a percentage of others, are preserved for the Catalan Government, which may also create new sources of revenue—though not, it would seem, in the form of tariffs against imports from other parts of Spain. (An internal tariff-wall would, of course, hurt Catalanian industries more than Castilian agriculture.) The whole arrangement breathes a spirit of mutual goodwill and equal common-sense; and, in making it, Spain has not only turned a dangerous corner in her own path of national reconstruction, but has given a valuable and timely example to the world.

The Cotton Strike.—Our Manchester correspondent writes:—Important developments have taken place in Manchester this week in connection with the settlement of the strike in the weaving section of the cotton industry. On Tuesday morning a joint conference took place between representatives of the Cotton Spinners' and Manufacturers' Association and the Northern Counties Textile Trades' Federation with Mr F. W. Leggett, the principal

assistant secretary in charge of the Industrial Relations Department of the Ministry of Labour, in the chair. Mr Leggett explained in more detail the different points raised in the letter which the Minister of Labour sent last week to the organisations concerned. The representatives of the employers and the operatives then held separate meetings to consider the proposals put forward. In the afternoon, on Mr Leggett's suggestion, a sub-committee was appointed of six representatives from each side, and it was arranged that this sub-committee should meet on Wednesday to draw up an agreed agenda of matters to be discussed by the larger committees. The sub-committee was successful in obtaining agreement as to the agenda embodying the matters at issue to be discussed between the parties, and the larger committees met to consider the agenda on Thursday morning. At the time of writing the outlook for a settlement is brighter, but it is recognised that many details have to be considered, and the deliberations may go on for some time. At the end of last week the Master Spinners' Federation decided to postpone for one month the notices of a reduction in wages of 25 per cent. on list rates, which is equal to 2s. 8½d. in the £, in order to begin negotiations with the representatives of the workpeople. A joint conference began in Manchester on Tuesday, and was continued on Wednesday and Thursday. It is understood that the employers have withdrawn their claim as previously put forward, and that the two sides are discussing the general question of a wage reduction; and although agreement on several important points remains difficult, definite progress has been made towards the settlement of the weavers' strike. The week ends with hopes of peace in the ascendant.

American Cotton Crop.—Our Manchester correspondent writes:—At the end of last week the Agricultural Bureau of the United States Government created a surprise by estimating the cotton crop for this season at 11,810,000 bales, as in market circles it was expected that the forecast would not be more than 10,700,000 bales. The report was interpreted as being very bearish, and compares with 11,306,000 bales a month ago. This development, together with the slump on the New York Stock Exchange and less favourable political news, has resulted in a decline in the price of cotton of over 1½d. per lb., January futures in Liverpool now being round 5½d. per lb., compared with the high price of 7d. last week. The system of the Agricultural Bureau has been somewhat criticised, and some traders cannot understand how the estimate of the yield can be the same as a month ago when during that period there has been a decline in the condition of 9 per cent. and a reduction of 2 lb. in the production per acre. It may be pointed out that the abandonment of acreage at 1.8 per cent. is smaller than usual, and it is reported that whereas during August prospects declined in practically all States, in the Eastern and Central portions of the belt, where the weevils were quite active, the information from Texas and Oklahoma is considerably above the forecasts for August 1st, due largely to favourable moisture conditions in the Western portions of these States. In Lancashire cotton trade circles the sharp fall in prices has had a disturbing effect, but it is believed that if the new basis of values can be stabilised there will be more disposition on the part of buyers of yarn and cloth to operate freely given an early settlement of the weavers' strike and the wages question in the spinning branch.

Iron and Steel Production in August.—The production of pig iron in August showed a further decline to 259,400 tons (July, 292,600 tons), but the number of blast-furnaces in operation at the end of the month was one more than at the beginning, and it is understood that two further furnaces have been blown in since. Steel production was affected by the holiday period, and amounted to 361,500 tons, compared with 432,000 tons in July and 357,800 tons in August last year. In the case of pig iron the August production was the lowest since September last, when production was only 248,200 tons; the departure from the gold standard then gave a slight stimulus to the industry

and production gradually increased to a level of 335,600 tons in March last, since when there has been a steady decline to the figures given above. Imports of iron and steel in August amounted to only 105,100 tons, and were the lowest recorded since November, 1923: in quantity this represents a decrease of 48 per cent. compared with August, 1931, but, owing to the continued fall in prices, the reduction in value is 63 per cent. Almost all the items contributed to the decline, the most important exceptions being pig iron, which rose by 1,000 tons to 8,700 tons, most of which, presumably, came from India, and hoops and strips, which rose by 5,000 tons to 9,400 tons. Exports of iron and steel in August, at 156,200 tons, were at much the same level as in July and some 12,100 tons, or 8 per cent., higher than in August, 1931: the increase in value compared with a year ago is only 3 per cent. The influence of the Russian orders is seen in the comparatively high exports of plates and sheets (not under ½ in.) of 20,300 tons, and of hoops and strips of 9,700 tons, compared with an average of 5,600 tons and 3,700 tons respectively in the first six months of the year. British prices of iron and steel remained steady throughout the month, the Board of Trade price index (1913 = 100) being 102.6, compared with 102.8 in July, but the most encouraging feature was the rise in Continental prices: steel bars, for instance, which had fallen since January last by about 11s. 6d. per ton to £2 2s. per ton (gold) f.o.b. Antwerp, rose by 5s. 6d. per ton in the second half of the month: plates also rose by 5s. per ton, and, after allowing for the depreciation of sterling and adding the 3½ per cent. duty, the difference between Continental and British prices must have been narrowed considerably. As Continental makers are still losing money at these figures, further rises may be expected.

Australia's Overseas Trade.—Our Melbourne correspondent writes:—The Commonwealth trade returns for the financial year ended June 30th show an excess of exports over imports of £40,193,000, against a similar excess of £27,944,000 for 1930-31. A comparison, reckoning British currency values, is as follows:—

	1930-31.	1931-32.	Increase (+) Decrease (—)
Imports:			
Merchandise.....	60,560,787	44,082,013	—16,478,774
Bullion and specie ...	398,846	647,812	+ 248,966
Total imports	60,959,633	44,729,825	—16,229,808
Exports:			
Merchandise.....	75,857,000	74,773,000	— 1,084,000
Bullion and specie ...	13,047,000	10,150,000	— 2,897,000
Total exports	88,904,000	84,923,000	— 3,981,000

The official statement also shows exports in Australian currency values at £107,885,791, including £12,695,339 bullion and specie, of which gold appears as £11,890,054. This does not, of course, represent the actual amount of gold produced for shipment during the twelve months. The gold shipments are largely from stocks, but, according to the official statement, the twelve months' production of gold is estimated at 3½ millions "sterling," and, adding this to the excess of merchandise exports £30,700,000, the balance in favour of Australia would be approximately £34 millions sterling (British). This, it is officially estimated, is enough to meet public obligations abroad and leave about £7,000,000 for private interest, dividends, etc. This calculation is based partly upon the effect of the Hoover Moratorium, the Australian Government being relieved from the annual payment to the British Government. Exports from Australia during 1932-33 will be large in quantity as the result of a favourable producing season, though the value will depend upon the course of world prices. Gold shipments, however, cannot count in future in the same manner as in recent years, as even if further shipments were made from the stocks still remaining in the hands of the Commonwealth Bank the proceeds would require to be held in the form of

sterling assets as part of the note issue reserve. Some principal exports are given below:—

	1930-31.	1931-32.
Wool and tops.....	32,003,305	32,086,820
Wheat and flour	18,258,041	22,972,218
Frozen beef, lamb and mutton	4,341,492	5,081,891
Butter	8,120,165	9,812,827
Hides and skins	3,636,954	3,330,620
Lead	2,419,461	2,200,924

The increase in wheat and flour is due to the large shipments during the second half of 1931 of the balance of the exportable surplus of the harvest reaped at the beginning of that year. The balance of the latest harvest available for export during the second half of 1932 is on a smaller scale. An appreciable proportion of both wool and wheat exports has gone to Far Eastern destinations, thus relieving pressure on European markets.

The Mechanics of the Trade Revival.—At a time when the whole world is eagerly scanning the omens for signs of a trade revival, any theory as to how it is to come about is of unusual interest. Professor Lionel Robbins, in a paper read before the British Association, has put forward some distinctly intriguing ideas. In brief, he rejects the arguments that trade depression is due to under-consumption, and so by implication he is opposed to arbitrary inflation. Instead he holds that falling prices, if due to increased productivity and not to deflation, are beneficial, and concludes that the real cause of trade collapse is to be found in excessive consumption at the expense of saving. He begins by assuming some expansion in the effective circulation of money, and also assumes that this new spending power first takes the form of producers' credit. This new money will flow into the industries making producers' goods, while the lower interest rates will make this form of activity more profitable. With increased demand for these products their selling prices will improve, and they will absorb more labour. The next stage is the spread of the new spending power, first to wage-earners in those industries, and so to the market for consumers' goods. The industries making consumers' goods will share in the increased activity, and will begin to compete for labour, with the result that labour costs generally will go up. This will upset the calculation of the manufacturers of producers' goods, so that to carry on under the altered conditions they will require still more credit. After a time, further supplies of credit will begin to fail, and interest rates will rise. Thus prices, wages, and costs generally will be rising simultaneously, and in the end the boom in the producers' goods or constructional industries is inevitably broken. This leads to a general collapse. What Professor Robbins is really arguing is that trade activity is dependent upon a continuous process of saving, so that the activity of the constructional industries can be maintained. At any given moment of time, the demands for producers' and consumers' goods are competitive, and it is necessary by abstinence from over-consumption to maintain a fair balance between them. Professor Robbins claims that recent history supports his thesis, and calls attention to the maintenance of consumption in the early days of depression and to the tendency of retail prices to go on rising after the business curve has turned downwards. As an example, he claims that the collapse of German business towards the end of the inflation period coincided with the beginning of a rise in consumers' goods prices relative to those of producers' goods. Too much importance should not be attached to a German example taken from a time when all prices were rising with extreme rapidity, and, apart from this, Professor Robbins' theories need to be brought to a more complete test of historical fact, having regard to the fact, for example, that booms may start as they have done in the past, by a revival in the demand for such consumers' goods as textiles for the Indian market. The present depression has also brought into being so many obstacles against and restrictions upon commerce that radical changes are being forced upon world trade; in such circumstances it is impossible to diagnose and prescribe remedies along the normal lines. Professor Robbins' challenge to the view that credit inflation as urged by many to-day and practised by the United States during

the past few months is a simple, certain and universal remedy will have done a real service if it helps to direct attention to a realistic study of what can or may happen at a turn of the tide.

Greece's External Debt.—A *communiqué* was issued on Tuesday night setting out the terms of an agreement between the Greek Treasury and representatives of the Council of Foreign Bondholders and the League Loans Committee (London). The essential paragraphs of the *communiqué* read as follows:—

The Greek representatives explained that, while they had instructions to say that their Government recognised the full liability on their external obligations, the Government were not at present in a position to furnish the means necessary to provide the service of the sinking funds of their external loans, and that they were convinced that they would not be able to meet more than a limited amount of the interest charges on these loans during the Greek fiscal year ending March 31, 1933, as hereinafter stated. The balance of the interest would constitute an obligation in foreign exchange of the Greek Treasury; the form and terms of the interest-bearing scrip or other documents to be issued in recognition of this obligation would be fixed in the course of later negotiations.

In the present circumstances the Greek Government, as an earnest of their endeavours to provide an equitable settlement for the bondholders, were prepared to make payments amounting to 30 per cent. of the total annual interest service on each of the respective loans during the fiscal year 1932-3, such payments to be applied to the first half-yearly or first two quarterly coupons of each loan either already due or falling due in that fiscal year unless already met. For this purpose the Greek Government will forthwith place the necessary sums in foreign exchange at the disposal of the paying bankers, through the appropriate channels, for distribution as stated.

The Council and the Committee consider that the bondholders would be well advised to accept these arrangements, which are, however, temporary, for the composition only affects the half-year's interest, or rather two quarterly coupons, and further discussions are to take place in November next in order to re-examine the position of the country and to ascertain the capacity of Greece to make further payments in respect of the interest charges maturing in the fiscal year 1932-33. Disappointment will be felt in some quarters at the partial and temporary nature of this settlement, but it is at least something to the good that the Greek Government has put on record its recognition of its external obligations and that an end has been put to an unlimited and unsettled default.

Yokohama Specie Bank.—The accounts for the half-year ended June 30, 1932, reveal a welcome recovery in net profits. The actual results for the past four half-years, in thousands of yen, are summarised below:—

	Half-year ended			
	Dec. 31, 1930.	June 30, 1931.	Dec. 31, 1931.	June 30, 1932.
Brought forward	6,354	6,636	5,638	4,878
Net profit	6,582	5,402	5,340	6,350
To reserve	1,500	1,200	1,100	1,150
To dividend	5,000	5,000	5,000	5,000
Carried forward	6,436	5,638	4,878	5,078

The dividend has been maintained at 10 per cent. per annum during the whole period, but during 1931 it was only just covered out of net profits, and the appropriations to reserve were to some extent neutralised by a decline in unallocated profits. The past half-year has reversed this trend, for the net profits not only covered the dividend and reserve allocations, but left an additional ¥. 200,000 to be carried forward. Balance-sheet details are not yet available, so that it is impossible to tell how this improvement came about.

France and Poland.—Our Warsaw correspondent writes:—M. John Pilsudski, as Minister of Finance, and M. A. Kuhn, who was both Minister of Communications and of Public Works, have resigned from the Polish Cabinet and been replaced respectively by M. Zawadzki, Vice-President of the Council of Ministers, and M. Budkiewicz. M. Pilsudski has been appointed Vice-President of the Bank of Poland, and M. Kuhn manager of the Warsaw tramway system. Although denied by the Government newspapers, the unexpected change at these "key" Ministries is understood to mean that France has definitely refused for the time being to lend Poland the 800 million francs as a second instalment on the railway loan arranged about eighteen months ago for the construction of the new

line from Upper Silesia to the Baltic port of Gdynia. M. Kuhn is known to have objected strongly to the conditions of this loan when the original contract was submitted to him, and to have accepted them only because of the insistence of M. Matuszewski, the Minister of Finance who preceded M. Pilsudski. The contract requires the French banking group, which appears to be under the domination of the Schneider armament concern, to issue the second of three loan instalments this year "when and if market conditions are favourable." Construction work on the new railway has come almost to a standstill because no further funds are available for this purpose, and the resignation of M. Kuhn, who is a very capable railway administrator, is to be deplored; the more so as it is presumed to indicate that Schneider will not permit the French banking group to provide further financial support until other conditions not yet known—but suspected to involve metallurgical enterprises in Upper Silesia in which Schneider is interested—have been accepted.

Record Transvaal Output.—The output from the gold mines of the Transvaal created a fresh record in August, exceeding the previous record output in July by 10,162 ounces. The March and May outputs also exceeded previous records. Production in August amounted to 991,922 ounces, as compared with 981,160 ounces in July. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
January	796,270	839,782	845,887	876,452	882,801	914,876	936,794
February	753,924	779,339	815,153	815,284	818,188	839,931	914,012
March	834,340	860,511	877,380	866,529	889,370	910,998	960,935
April	805,303	824,014	825,907	872,123	868,606	882,337	949,796
May	849,214	859,479	886,186	897,598	916,213	910,279	965,644
June	852,145	855,154	862,363	856,025	887,887	897,760	959,011
July	862,134	851,861	867,211	889,480	916,652	916,843	981,160
August	841,864	865,345	891,865	895,601	921,081	916,424	991,922
September	838,939	842,418	857,131	849,553	903,176	918,024	...
October	865,296	855,743	897,720	888,690	926,561	945,113	...
November	840,276	848,099	872,484	861,593	884,783	900,510	...
December	836,167	851,225	859,761	851,134	908,492	923,353	...
Total.	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	10,874,148	...

The following table shows the number of natives employed at the mines during the past nine months:—

	Dec. 1931.	Jan. 1932.	Feb. 1932.	March 1932.	April 1932.	May 1932.	June 1932.	July 1932.	Aug. 1932.
Gold mines	211,592	215,762	216,171	214,024	214,334	215,926	217,077	217,525	217,658
Copper mines	12,260	12,394	12,177	12,009	11,943	11,972	11,833	12,056	11,727
Diamond mines	1,402	1,598	1,563	Nil	Nil	Nil	Nil	Nil	Nil
Total	225,254	229,754	229,711	226,033	226,277	227,898	228,910	229,581	229,385

The native labour figures show little change on the month.

Shipping Freight Index.—After steadily declining since April, our index number of "tramp" shipping freights, based on average quotations for the month, rose by approximately 2 per cent. during August. The current figure of 81.7 was, however, 5.6 per cent. lower than in the corresponding month of last year. Particulars of the index number are given below:—

AVERAGE 1898-1913=100.					
	Average, 1913.	Aug. 1931.	June 1932.	July 1932.	Aug. 1932.
European Waters	110.0	80.6	83.3	82.6	81.0
North America	113.1	82.3	87.4	80.9	82.0
South America	123.4	88.3	77.1	78.7	74.8
India	106.3	88.4	93.1	90.7	90.7
Far East and Pacific ..	117.4	87.3	82.3	79.5	81.8
Australia	127.9	92.6	76.6	71.2	80.1
Total	116.3	86.6	83.3	80.1	81.7

Outward coal business was again dull and featureless, and rates underwent a further decline. Homeward chartering from the ore ports was extremely limited, and only a very moderate amount of carrying space was taken up from the Black Sea and Danube. Apart from some activity from Montreal, the North American market was quiet, and though Argentine requirements found employment for a fair number of vessels, rates were at times difficult to maintain. The brightest feature of the month was a

slightly improved inquiry in Far Eastern waters, and, ready tonnage being in short supply, values moved in favour of owners on several important routes, including Australia to Europe. Movements of the various sections of our index number are shown in detail below:—

AVERAGE 1898-1913=100.					
	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	71.7	- 3.0	South America—outwards	65.5	- 0.6
Bay—outwards	91.7	- 1.9	South America—homewards	84.2	- 1.0
Bay—homewards	82.3	...	India—outwards	84.2	- 2.1
Mediterranean—outwards	81.4	- 4.3	India—homewards	97.3	+ 2.1
Mediterranean—homewards	87.3	+ 2.4	Far East, &c.	81.8	+ 2.3
North America	82.0	+ 1.1	Australia	80.1	+ 8.9

Expressed as a percentage of the average for 1913, the total figure of our index number for August works out at 70.3, compared with 68.9 in July and 74.4 a year ago.

UNITED STATES.

Election Prospects — Wheat and Cotton — Railroads — Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 7.

THE Labour Day holidays, traditional milestone on the road from summer dullness to autumn activity in business and security markets, have passed without marked change in the position. However, Wall Street men returning from their vacations feel for the most part rather cheerful over the prospects. They note improvement here and there in the Eastern States, rebirth of hope in the South on the important rise in cotton, and at least no turn for the worse in the West. The outcome of the November Presidential election is still doubtful. As Wall Street sees it, the election of Mr Roosevelt would spell no calamity, but it might retard recovery. Much would depend on the independence shown by the Democratic candidate in the event of success at the polls. The majority of business men and financiers are, as usual, favouring the Republican candidate, this time partly because they dislike a change of mounts in the middle of the stream. It is safe to say that the rally in markets, particularly in wheat and cotton, has recaptured many votes apparently lost to the Administration. If the advance holds until the election, or if in the next two months marked revival in business takes place, President Hoover's chances of success will be greatly increased.

Further evidence that the Federal Government, if not actually aiding directly, is in full sympathy with the rising commodity markets, is seen in the recently announced decision of the Farm Board to hold its cotton and the remainder of its wheat (said to be no more than 3,000,000 bushels) off the markets for the remainder of the year. While the Farm Board received only a small new appropriation from the last Congress, its financial ability to carry its stocks of commodities and make further loans for holding purposes is strong as ever. The Reconstruction Finance Corporation is providing the necessary funds. As seen in Wall Street, the wheat market is more susceptible to attack than is cotton. Shortage in the American wheat crop is made good by the increase in Canadian and other harvests, but undoubtedly the cotton crop will be much smaller this year.

Cotton is the great cash crop of a fourth of the States, and the doubling of its price in recent weeks has made a great difference in business activity in the South. Cotton mills are little, if any, more active than they were in the summer, but the whole foundation of Southern credit has been lifted. While a short time ago the Press fairly outdid itself in prominent display of scattered reports of

business improvement, it now is showing more restraint and balance. This seems to be because confidence in an upturn is greater, but the public is still sceptical. At any rate, rising commodity prices are coming after much has been accomplished by manufacturers and distributors in deflating their business costs.

Trade statistics are not entirely devoid of improvement. Electric current output for the week ended September 3rd rose to a level only 10 per cent. under a year ago. During the summer the decline averaged about 13 per cent. The steel trade, which sagged to about 12 or 13 per cent. of capacity last week, has recovered to 14 or 15 per cent., and though orders on hand are negligible, at least a minimum of activity seems to have been reached. Pig-iron inquiry is rising and scrap steel prices are hardening. Pig-iron output in August was 7.3 per cent. under that for July, being at the daily rate of 17,115 tons, against 41,308 tons a year ago.

Railroad freight-car loadings rose again last week, making three successive weeks of gain, the rise being about as much as is considered seasonal. A new organisation has been formed to provide credit for railroads desiring to purchase or repair equipment, but it is unlikely that much advantage will be gained from it until traffic increases a good deal more. Machinery has been set in motion to secure a 20 per cent. wage cut, beginning February 1st. Western railroads are voting on the question of selecting a dictator to suggest ways of saving through lessening duplicated services. The railroads have so deflated their expenditures that they could translate a moderate increase in gross revenues into sharp gains in net income, but few of them this year are likely to cover their fixed charges. However, the R.F.C., the Railroad Credit Corporation, and the banks will continue to carry them along, and no major receivership is anticipated.

Treasury financing plans for the September tax date were about as expected. Subscriptions were asked to \$750 millions of 3½ per cent. five-year notes and \$400 millions of 1½ one-year certificates. Of this money \$712 millions will go to meet maturities. The issues were well taken, and it is likely that the Treasury will allot about \$1,200 millions, so that the total new money will be close to \$500 millions. Most of that will go to the Reconstruction Finance Corporation. Current collections are running behind current expenditure, so that not only is it probable that the Treasury will have to increase its discount bill sales over the amount needed to retire maturing bills, but it is generally expected that the new Congress which meets in December will have to find new sources of revenue.

The financial position is far stronger than it was a year ago. This week's Federal Reserve system show a continuance of the recent trend, with a further influx of gold, and a stationary Government bond portfolio. Credit in use rose slightly, on month-end demands, but the return of currency from circulation continues to exceed seasonal expansion. Reporting city member banks show a rise in loans and investments, but it was accounted for in full by larger purchases of securities, mostly Government bonds, by the New York banks. The larger New York banks have declared their third quarter's dividends, at rates unchanged from three months ago.

FRANCE.

Conversion Plans — Prices and Production — Indices — Employment.

(FROM OUR CORRESPONDENT.)

PARIS, September 14.

THE Chambers have been convoked to meet on Friday of this week in the "extraordinary session," for the purpose of approving the application of the first portion of Government's plan for Renten conversion. It is expected that the session, which will not begin until after practically the whole of the world's stock markets have closed for the week-end, will not exceed two days. The Lower House is expected to dispose of the Bill during Friday

night, so that the Senate will be able to complete examination of the project during Saturday, in time for the decree authorising the application of the conversion scheme to be promulgated by the *Journal Officiel* on Monday morning at the latest. Beyond the fact that this portion of the conversion plan will almost certainly be limited to the list of issues set forth in these columns last week, no details of the scheme will become public until the Chambers are actually in session. The operation, however, will in many respects be quite different from the recent British conversion scheme. As regards the amount of economy that will result, much will depend on the conversion rate or rates, and also on whether the new replacing issue or issues will be of a redeemable or irredeemable type. Assuming that the new issue will take the form of $4\frac{1}{2}$ per cent. stock, the saving in interest alone should be around 1,000 million francs per annum. A further saving would, of course, result if the new issue took the form of irredeemable stock, as present sinking fund provision would no longer be necessary in respect of the 1927 Sixes and the 1928 Fives. This supplementary economy, however, would not directly benefit the budget, as these two issues are now entirely in the hands of the Caisse d'Amortissement, the saving by which in this connection would be around 400 million francs a year. In effect, therefore, the budget for 1933 should benefit in principle (directly and indirectly) by a saving of about 1,500 million francs.

The actual rate or rates of conversion to be proposed are the subject of much speculation. The simplest method would obviously be conversion at par, which would resolve the operation for most of the issues into a mere exchange of stock bearing a higher rate of interest for new stock yielding a lower rate. In the case of two of the issues, holders will also have the right to receive either 2 francs or 3 francs, representing the accrued proportions of redemption premiums. If conversion at par be adopted it will be necessary not only to fix the rate of interest, but also to decide whether the new stock shall be redeemable or irredeemable. In present circumstances an irredeemable issue would be preferable for its immediate advantages. From the point of view of sound finance, however, it is in every way advisable that a large proportion of the public debt should consist of reimbursable loans, which would oblige the State to follow as large an extinction policy as possible. It is probable that a middle course may be adopted by making the new issue redeemable at slightly above par, which would allow the fixation of a fractionally lower interest rate and thus compensate for increased redemption charges by an economy of supplementary arrears. At the same time, the issue of the new stock slightly below par would perhaps tend to bring about a substantial unification of the public debt at an interest rate substantially lower than that of a conversion at par. The inconvenience of such a policy, however, would be to arrange whether the difference between the value of the old issues at par and the issue price of the new stock should be paid in cash or stock, which would be difficult for both parties concerned, owing to the smallness of the sums involved. In view of these and other difficulties, banking opinion seems to be mostly in favour of the adoption of the simplest possible system that can be devised, namely, conversion at par. The financing of the operation is to be provided by an issue of 5,000 million francs of Treasury bonds, which it is considered will be ample in the present general circumstances to pay off holders who do not wish to convert and to enable this first portion of the conversion plan (involving some 85,000 million francs of nominal capital) to be successfully carried through.

One knotty point to be discussed during the special session will be the question of what shall be done in the way of compensating small holders (*petits rentiers*) who have suffered loss through the devaluation of the franc by subscribing to former issues. It was stipulated by the Finance Bill of 1928 that this should be done in connection with the taking of any future parliamentary decisions in regard to Renten conversion. The law, of course, refers only to original small subscribers who are still holders of Renten issued in the former gold franc denominations. Difficulty is anticipated in finding an acceptable defini-

tion of the term *petits rentiers*. It is possible that this law embraces both French and foreign original holders of Renten. It also apparently concerns holders of other issues than those involved in the present operation. It is understood that, in consequence of the break in the holidays caused by the extraordinary session, the re-assembly of the Chambers will be adjourned until the middle of November.

The unweighted general index figure representing wholesale prices at the end of August (45 commodities), which was issued by the Statistique Générale at the end of last week, is returned as 394 (July, 1914 = 100), against 404 at the end of July, 455 in August last year and means of 543 in 1930 and 623 in 1929. The August index works out in gold at 80, as against equivalent figures for the end of July of 71 in Great Britain (Board of Trade), 92 United States, 96 Germany, 82 Italy (Milan Chamber of Commerce), 74 Belgium and 94 Switzerland. The index for French products is returned as 445, against 468 for July and 521 for August last year, while that for imported products is placed at 304, against 290 in July and 335 in August, 1931. The general figure for food-stuffs shows a drop of 35 points on the month (472 to 437), while that for raw materials has moved up 12 points (after being stationary in June and July) from 346 to 358. The index representing vegetable prices has risen 27 points to 378 on the month, and that for meats has dropped from 488 to 474, sugar, coffee and cocoa prices having remained almost unchanged during the last three months. Among raw materials (25 commodities) the index for minerals and metals has risen 17 points on the month to 342, while textiles have improved 23 points to 269. The figure for the 12 other categories of raw materials moved up only two points (from 419 to 421).

Industrial production indices for July indicate various tendencies, which appears to confirm the prevalent opinion that the bottom of the crisis has been reached. The general figure covering the nine great industries has declined a further point to 92 (1913 = 100), as compared with 123 in July, 1931. The new general figure is the lowest registered for some years, and represents a decline of 48 points from the record high level of production touched in 1930. Metallurgy, textiles, extractive industries and leather, however, all indicate an improvement of a point; while motor car output improved 8 points on the month (from 399 to 407). Building, which had an index of 123 in July last year, fell back 3 points to 98 on the month, and shed a further point before the close of August. The paper industry, which had an index of 112 in July, 1931, fell off 4 points on the month to 100 in July, and rubber output closed the month 13 points lower. Cotton spinning did not share in the one point rise in general textile output in July, average production per spindle dropping from 1,450 kilos. to 1,277, while weaving output declined from 4.02 100-metre pieces per loom to 3.83. Orders in hand, however, were larger, the quantity of cotton piece-goods orders in hand rising from 11.88 100-metre pieces per loom to 13.11.

The number in receipt of unemployment relief, which had dropped from 303,000 in March to 232,000 in June, stood at the end of August at 263,000, but has since again begun to decline. The number of workers employed at the beginning of August, in the whole of the French concerns with a labour force of over 100 units, represented 80 $\frac{1}{2}$ per cent. of the total employed at the corresponding period in 1930, as compared with 82 per cent. at the beginning of the previous month and 92.8 per cent. in July, 1931. The percentage of workers in the same undertakings who were employed less than 48 hours a week was 49.3 per cent., as compared with 50 $\frac{1}{2}$ per cent. in July this year and 35 $\frac{1}{2}$ per cent. in July, 1931. Applicants for employment who failed to find work through the labour bureaux in July averaged 295,000 per week, against 304,500 in June and 50,000 in July, 1932. The number of jobs vacant and unfilled in July averaged 5,750 per week, against 6,239 in June and an average of over 19,000 in 1929. Bankruptcies in August numbered 1,007, against 1,375 in June, 805 in August last year, and a monthly average of 756 in 1930.

GERMANY.

Political Crisis — Disarmament.

(FROM OUR CORRESPONDENT.)

BERLIN, September 13.

THOUGH the dissolution of the Reichstag was not unexpected, the circumstances in which it took place have aroused the greatest political excitement, and the relations between the parties are more confused than ever. Nobody knows how things are likely to go between now and the new elections.

For weeks the Nazis and the Centre have been trying to prove to the Government that they were capable of assuming the leadership of the new Parliament, and thereby to remove the justification for a dissolution. The Chancellor was obliged to recognise, after the conversations with Hitler on August 13th, that the National Socialists were by no means prepared to protect his policy, and this was only confirmed by a subsequent conversation between Hitler and General von Schleicher. It was equally clear to the Government that the Centre Party was irreconcilably opposed to them. The two objects which the President had in view in replacing Dr. Brüning by Herr von Papen, namely, those of including the National Socialists in the responsibility of Government and of continuing the responsibility of the Centre Party, were thus shown to be unattainable. Instead, Herr von Papen found himself increasingly forced into the position of having to fight the parties in Parliament, renounce any idea of an alliance that would give him a majority, and, finally, supported by the confidence of the President, to win over a large enough section of public opinion to keep himself at the helm. At first Herr von Papen hoped that the agreement between the Centre and the Nazis would be gradually decided to remain in office even if the Reichstag should prove able to present the President with a ministry capable of commanding a majority in Parliament, and with that decision the probability that the newly-elected Reichstag would again be dissolved became a certainty. The announcement of the economic programme and the putting it into force by emergency decree was the most important expression of this policy of the Chancellor. With that announcement the Government put the question to the people whether they would follow them in carrying out the programme even if the Reichstag were prorogued. The programme was not without influence in the Reichstag itself. In the still inchoate "Black-Brown" Coalition there developed a disposition to evade a dissolution of the Reichstag at first, and merely to watch the working of the Papen programme. It must, however, have seemed more than doubtful, even last week, whether such complicated parliamentary tactics could succeed.

Such was the background against which the events of September 13th were enacted. The tactics of the Nazis and the Centre collapsed completely at the first test, and it is only thanks to the likewise very maladroit handling of the situation by the Chancellor that the incident cannot be hailed as a victory for the Government. All the parties of the Reichstag, with the exception of the Communists, had intended to begin by listening to the Chancellor's exposition of his programme. The Centre and the Nazis considered it important that the conference with the President which their leaders had been promised should take place before the decisive division, but the Communists, immediately upon the opening of parliamentary business, moved the vote of no confidence and the cancellation of the emergency decree. The Social Democrats, who indeed have nothing to gain by the holding of new elections, but who also had no interest in the success of the proposed tactics of the Centre and the Nazis, supported the motion. As even the Nazis and the Centre were unwilling to expose themselves to the reproach of having tolerated the unsocial provisions of the emergency decree, none of them spoke against the Communist motion, especially as they expected that the Nationalists would do so. The Nationalists, however, wanted a dissolution and welcomed the motion as the

promptest means of achieving it. The change in the order of the day was therefore accepted. As a matter of fact the Nazis and the Centre agreed, during a pause which followed, to protest against this change, but upon the news, whether true or false, that the Chancellor intended after what had happened to dissolve the Reichstag forthwith, the National Socialists would hear no more of this decision. The Nazi President of the Reichstag, Herr Göring, declared the House once more in session and put the Communist motion to the vote immediately. The Chancellor asked to be allowed to speak, in order to read the dissolution decree, but Herr Göring refused this request. Herr von Papen therefore laid the decree upon the President's desk, where it was swept aside by Herr Göring and taken charge of by a Nationalist secretary. The Government left the House, but the President of the Reichstag carried the division through and the vote of no confidence, together with the demand for the cancellation of the decree, was carried by the enormous majority of 512 to 42 with 5 abstentions. The moral importance of the fact that the Cabinet has received a vote of no confidence from more than five-sixths of a newly-elected Reichstag—and one elected at their own instance—cannot be overlooked, even if the vote itself is constitutionally invalid.

None of the parties has a very effective battle-cry for the election, except the Communists, who hope to make capital out of the consequences of the crisis. The Nazis will appear as the champions of the liberty of the people against "reaction," but this rôle does not become them particularly well in the light of their past history. The Centre has compromised itself in several quarters by its association with the Nazis. The Nationalists may gain a little, but it will be very little unless the Government manages by some extraordinary means to increase its popularity, for they will represent the only Government party. The Social Democrats are suffering from a very violent Communist agitation, reproaching them that their entire policy of "toleration" of the Brüning Government has been fruitless, that they have not even been able to maintain their position in Prussia, and that all they have done have been to pave the way for reaction. It is true that the Social Democrats will be in opposition to the Papen Cabinet, but the Cabinet is rendered difficult to attack by the fact that it will be represented in the election campaign by no large party. The real enemies of the Social Democrats, the National Socialists, seem almost to be their allies in this campaign. In order to overcome these difficulties, the Social Democrats have prescribed a referendum demanding the withdrawal of the unpopular labour law clauses in the last emergency decree. They can now concentrate their canvassing mainly on this referendum and the Nazis will be obliged either to support it, and thereby place themselves under the leadership of the Social Democrats, or refuse to have anything to do with it and thereby expose themselves to the charge of not being in earnest in their opposition to von Papen and his emergency decrees.

On the evening after the dissolution the Chancellor broadcast the speech which he had intended to make in the Reichstag. He again stressed his intention of conducting an "independent Government." He, therefore, intends no longer to allow Parliament to play the part assigned to it by the Weimar Constitution. The forthcoming constitutional reform will raise the voting age and make other, only vaguely indicated, changes in the electoral laws, the principal of which will be the amalgamation of the Prussian Government with that of the Reich, without "destroying the Prussian State, which has become historic." The Chancellor did not speak in detail on the economic programme, but said that it was both the duty and the interest of employers to support it, for if it failed, those forces would gain the upper hand "which are aiming at the subjection of economic life to Government regulation."

The Chancellor spoke emphatically of the Government's standpoint on the disarmament question: "We desire disarmament; nobody would rejoice more than Germany if all States would fulfil their moral and legal obligations to disarm and would reduce their armaments

according to the provisions and standards laid down by the Treaty. We would even accept the most drastic disarmament proposals for Germany provided that they were to apply equally to all States, but it is intolerable to us to continue to be treated as a second-class nation and to stand defenceless among the States of the European Continent while they bristle with arms." The Disarmament Conference had been, said the Chancellor, a cruel disappointment to Germany, and Germany could take no part in its further proceedings until her demand for equal treatment had been recognised. In this connection the Chancellor referred to the famous article in which Signor Mussolini conceded the German claim to equality of rights and security.

AUSTRIA.

Trade Improvement — Stock Exchange — Agriculture — Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, September 12.

For the last two weeks the Vienna Stock Exchange has been definitely firm, and, even though latterly there was some reaction on profit-taking, in the main the movement during the past three weeks has resulted in a very considerable rise in nearly all shares. Austrian securities have gone up in about the same proportion as foreign shares traded on the Vienna Stock Exchange. Among the former the following rises were registered during the period August 19th to September 9th:—State Railway Company from 16 to 18, A.E.G. Union 7.80 to 11.15, Austrian Siemens from 86 to 106, Alpine Montangesellschaft from 9.10 to 13.80, Felten and Guilleaume from 109 to 130 schillings. Among the foreign values the following improvements took place:—Lemberg-Czernowitz-Jassy Railway (Rumanian) from 20.10 to 24.75, Trifailer Coal (Yugoslavia) from 19 to 24.75, Aussig Chemical Union (Czechoslovakia) from 103 to 122, Dymamit Nobel (Czechoslovakia) from 512 to 604 schillings. From this it will be seen that foreign currency fluctuations were not the decisive cause of the recent stock exchange tendency, for Austrian shares have risen no less than foreign shares. Nor were there marked signs of any desire to acquire substantial values, for purchases and sales kept within very limited bounds.

The recovery in share prices is chiefly the expression of better feeling. At the same time, the view is generally held in financial circles that the rate of improvement has been too rapid, for, even though an improvement may be expected in Austria's prospects, it is, nevertheless, to be feared that the next few months are not likely to witness any fundamental change. Still, individuals are already talking of clearer skies. Bicycle and motor-cycle exports have greatly increased within the last few months, a furnace belonging to the Alpine Montangesellschaft, which was recently extinguished, can now be started again; the radio and gramophone branch, as also luxury metal articles and better-class ready-made clothing, report relatively satisfactory orders in hand. The foreign-tourist traffic has been excellent, and it is assumed that during the principal travelling season, which is now drawing to a close, it has brought an asset of about 300 million schillings into the Austrian balance of payments. The internationally celebrated resorts, such as Bad Gastein, Salzburg and the Carinthian Lakes, had a record number of visitors, and some of the enterprises connected with foreign-tourist traffic (cable railways, bathing establishments, etc.) registered revenue twice as large as those of last year. It is also said that the caterers for foreign visitors are contemplating investments, which should be an incentive to Austrian industry.

The protection policy for agriculture, which has been pursued for years and reached its height this year, when nearly all imports of agrarian produce were forbidden, should be making the farmers better customers for industrial products, especially in view of the favourable harvests. Last year's harvest of winter wheat was 16 per cent. higher than that of the preceding year, rye 23 per cent. higher, winter barley 10 per cent. higher, summer

barley 30 per cent. higher, and oats 32 per cent. higher. The pulse and oil results were also better, and the fruit harvest greatly exceeded expectations, so that special treaties had to be concluded with Germany and Poland in order to prepare for exportation of the surplus apples. Whereas in the adjacent districts of Hungary a litre of wine can scarcely be sold at a price of 12 heller (less than 1d.), and the producers are obliged to form a cartel in order to prevent the price of a litre from falling below 15 heller, wine of the same quality is not to be had in Austria at six times the price. It will be seen from this that the Austrian farmers are much better off than the peasants of the neighbouring countries.

The attempt was made to create for the industrialists a similar ruling position on the Austrian markets, but as so many branches of industry must rely on exports, the attempt was not very successful. Industrialists believe that it could be done if the present disparity between the official exchange rates of the Austrian National Bank and those quoted for the schilling abroad were eliminated. In this, however, they assume that there would be no rise in the value of the schilling. As a matter of fact, the whole economic system is adjusted to this disparity of the schilling; currency relations are fairly well stabilised, and the only thing missing is the formal act of legal stabilisation. This is illustrated by the development on the investment market. There is no serious difference between the quotations of rentes and loans in foreign currency values and those made out in Austrian schillings. During the period from August 19th to September 9th the increases in foreign securities were:—Vienna Dollar Loan from 61 to 66.50, American portion of the Federal Loan of 1931 from 48.50 to 56, American portion of the League of Nations Loan from 105.50 to 108. The official quotations of the investment paper on the Vienna Exchange were also well maintained; for example, Federal Loan of 1933 rose from 59 to 61, and League of Nations Loan from 107 to 108.75. Nevertheless, there are numerous securities bearing fixed rates of interest of 8 per cent. and 10 per cent., so that it is not surprising that the plan for a rentes conversion is also contemplated in Austria, though it has very few supporters at present.

ITALY.

Cotton Agreement — Unemployment — Prices — Stock Exchange.

(FROM OUR CORRESPONDENT.)

TURIN, September 5.

GREAT prominence has been given by the daily press to the various agreements which have been reached between employers' and employees' federations, of which the most important refers to the cotton industry. The success is compared rather proudly with the Lancashire strike and references are made to the heavy losses sustained in England by the Trade Unions, the industry and the community at large. The problem in Italy was very similar to that in England. The last collective labour contract was made in 1924. Since then technical conditions have changed and there has been a shifting of labour between individual firms and localities. Employers more alert in the introduction of semi-automatic and automatic looms and of the multiple-loom system, were obliged, in order to attract hands, to increase wages above the collective minimum; while the less enterprising managed to pay reduced wages to hands tied, for one reason or another, to particular places. Workers complained that wages had not increased in proportion to the greater strain and attention necessitated by the diffusion of the multiple-loom system; employers retorted that the 1924 tariff was not flexible enough and did not take sufficient account of the quality of the fibre, the speed of the machinery and the several counts of fabrics woven. Above all the minimum wage guaranteed by the 1924 agreement no longer corresponded to the changed level of prices and the lower cost of living. The new agreement was concluded after many local discussions only through the influence of the central Corporations Department, in prolonged sittings presided over by the Under-Secretary of State, Signor Biagi, a

former employees' organiser. The agreement relates to some 250,000 workers, whose probabilities of getting work are thereby enhanced. It appears that the maximum reduction was fixed at 10 per cent. for wages higher than the contractual basis, and that reasonable terms were reached as regards the multiple-loom system and the equalisation of wages as between different districts. It is an achievement to have been able, under a legislative system which treats strikes and lockouts as penal offences and resolves industrial conflicts by means of compulsory arbitration, to avoid the economic and social loss involved in industrial disputes: in order, however, to allow an impartial appraisal of the practical working of the system, a thorough study into changes of hours, wages and other conditions of labour, with reasons thereof, and consequences on the rate of employment, would be necessary. Such a study is badly needed.

As in other years, after touching its lowest level in June, unemployment has again risen in July:—

	THOUSANDS UNEMPLOYED.			
	1929	1930	1931	1932
January	462	466	723	1,051
June	193	322	574	905
July	202	342	638	931

Another interesting, if somewhat belated index, published by the Corporations Department, taking as a basis (100) the number of hands employed in September, 1926, gives for the end of May of successive years the indices of 94.6 for 1929, 88.6 for 1930, 74.9 for 1931, 65.4 for 1932. The number of hands occupied at the same dates for a number of working hours higher than the normal was 16.4, 12.3, 12.2, 7.7 per cent. of the total, while the number of hands working on short time was 8.3, 23.1, 24.1, 29.5 per cent. Thus both the frequency and the constancy of employment are decreasing.

The State Railways are struggling very hard against the crisis and the growing competition of motor cars. By the introduction of 762 week-end "popular" trains with exceedingly low fares, 590,570 passengers have been carried from June 5th to August 22nd. How far these efforts will check the decline is uncertain. The number of passengers decreased from 112.2 millions in 1928 to 88.4 in 1931, and in the first semester of 1932 the figure was further reduced to 36.6, against 41.7 millions in the corresponding period of 1931.

The index of wholesale prices at last appears to have been checked in its downward course. After decreasing almost uninterruptedly from a yearly average of 654.4 in 1926 (1913=100) to 299.93 in July, in the fourth week of August the index closed at 299.77, after rising to 300.10 in the third week. It is, however, too slender a basis on which to build hopes of revival in industry and in the stock exchanges. Perhaps largely in a spirit of imitation of the New York boom some movements have been also engineered in the Italian bourses. It is yet too soon to gauge the intrinsic soundness and durability of the change. The daily average of future transactions in fixed interest securities effected in the Italian bourses decreased from 29.4 million lire in 1928 to 15.3 in 1929, 18.3 in 1930, 12.3 in 1931, and 3.9 in the first seven months of 1932. Similar figures for variable dividend securities were:—122.4, 72.6, 37.7, 20.0 and 9. Probably we have reached the bottom of inactivity, but it will presumably take a long time before we go back to anything like the former level; and in the meantime any improvement in quotations threatens to be merely speculative, as it lacks the sound basis of a widespread market.

NORWAY.

Bank Rate — Ottawa — Trade — Whaling.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, August 31.

THE reduction of the Norwegian Bank rate from 4½ to 4 per cent., announced to-day, and effective as from September 1st, was not expected at this juncture. True, conditions in the domestic money market have been rather easy

during the greater part of August, but during the last week or two there has been a firmer tendency, a fact which is also to some extent borne out by the Norges Bank's returns. The reduction, which was, in the first place, a response to a similar step, taken earlier in the day by the Bank of Sweden, may also be regarded as the expression of a desire on the part of the Norges Bank to join the international movement towards a lower level of interest, as well as to accentuate and encourage the brighter tone now prevailing in business and trade circles. Another consideration may also have been the possibility of imminent loan transactions on the part of the Government as well as other public bodies, although at the time of writing no definite steps have been taken in this direction. The private banks in the chief centres of Norway have decided not to reduce their deposit rates, while their rates for ordinary trade bills and loan account will be reduced by ½ per cent. (at any rate in Oslo).

The Ottawa Conference—although, of course, primarily an Imperial affair—is not without importance to this country, for the introduction of prohibitive tariffs in Great Britain will most certainly prove detrimental to existing trade relations between the two countries. As a striking instance may be mentioned the export of Norwegian cod-liver oil, of which Great Britain has been for years a large consumer. The duty at present is 10 per cent., but it is reported that after Ottawa this duty will be raised to 40 per cent. At a recent annual meeting of the Federation of Norwegian Commercial Associations the President, Mr Sigurd Astrup, very aptly expressed what is certainly a widely held view in this country as follows: "The great events which have taken place in the commercial world during the past year are in direct antagonism to our conception of free trade, to the interests of mankind and accordingly also to common sense. Progress and prosperity cannot be ensured by restrictions and isolation, but only by the unfettered development of all creative powers. This certainly also bears most emphatically on the deliberations at Ottawa, but it is to be hoped that the negotiations between England and Norway as regards commercial affairs, hitherto kept in suspense on account of the Ottawa Conference, will lead to results that will further the healthy trade relations which have so long existed between the two countries."

The figures covering the trade balance of Norway for July 31st this year reveal a surplus of imports over exports of about 8 million kroner, as compared with 38.7 million kroner for the same month last year, imports amounting to 49.34 million kroner and exports to 41.36 million kroner. The item "Ships imported" bears the chief responsibility for the reduced import figure, the value of this item being 15.79 million kroner in July, 1931, against only 11.00 kroner this year.

The sale of about 16,000 tons whale oil of next season's production at a price of £10 per ton has caused some consternation and much discussion, not only because the price in itself is very low, but chiefly because oil of the old production was recently sold at the same price. At a recent meeting of the Norwegian Whaling Association it was decided not to sell their new production at the price of £10 now offered by Unilever. Future sales of whale oil of new production will be effected through the Association.

Business on the Bourse during the month has been very active, and prices in most sections have been firm. Government securities—especially dollar and sterling bonds—continued very firm all through the month, although the tone has been somewhat less firm the last two or three days. Industry and shipping shares have been on the upward move, and whaling—although more irregular—also show a rise compared with July. Unemployment figures show a rise of about 1,300 compared with July 15th, and now aggregate 27,000, against 22,400 on July 15, 1931.

JAPAN.

Business Improvement — Exports — Relief Measures.

(FROM OUR CORRESPONDENT.)

Tokyo, August 12.

SOME signs of a change for the better, if not of revival, are in evidence in many directions. Several important commodity markets have developed distinct rising tendencies. Raw silk, in particular, has advanced rapidly to 750-60 yen a bale, as against 415 yen during June, the lowest of the year. This marked improvement in the silk market is a powerful stimulus to cocoon prices. Summer cocoons, which are now arriving at the markets, are quoted at 4.10-20 yen per kamme, as compared with a mean of 2.30 yen for spring crop. A perceptible improvement has been noticeable in the cotton trade as well as in the rayon industry. The Rayon Manufacturers' Association has decided to reduce the curtailment from 25 per cent. of capacity to 15 per cent., beginning with October. The stock market has manifested a decidedly better rallying power as general recoveries in commodities and quotations throughout have moved to higher levels. The export season has set in normally this year, and a considerable improvement is seen in the adverse balance on merchandise account. The earnings statements of industrial companies for the past half-year are less unsatisfactory, and certain branches of industry have fared much better.

Commodity prices have reversed the downward trend which they resumed during March. The Bank of Japan's wholesale index number for July registered a rise of close upon 1 per cent. on the month, raising the total slightly above the figure for November last, immediately before the suspension of the gold standard. The foodstuff group shows marked advances with the single exception of rice, which declined owing to favourable weather conditions. The textile group has also improved. The recovery is largely attributable to a hardening of gold prices of primary products, though the rise may be to some extent due to the new import duties as well as the fresh depreciation of the yen.

The trade returns for last month show that there was a favourable balance of 42,663,000 yen, an unprecedentedly large sum for the month of July, imports amounting to 68,170,000 yen and exports to 110,833,000 yen. In comparison with July, 1931, imports fell by 25,674,000 yen, while exports rose by 7,417,000 yen. Figures for July clearly show the effects of the tariff. Though the decline in imports is largely accounted for by raw wool and ammonium sulphate, substantial declines were recorded in timber, wheat, machinery, and automobile parts, on which additional duties were imposed. On the export side the increase in cotton piece-goods, cotton yarn and rayon products was largely offset by the decrease in raw silk, refined sugar and paper.

Earnings statements which have so far appeared of important industrial companies for the past half-year show distinct improvement in many cases, and the midsummer dividends were generally maintained. Several of the leading textile companies fared better, the Kanegafuchi, the Fuji, and the Dai-Nippon all enjoying higher profits. Sugar refineries and electric power companies also showed increased earnings, while a number of concerns in shipping, shipbuilding, iron and steel, and rubber groups continued to record considerable losses. Banking profits for the June half-year also show increases in the case of larger institutions. Net profits of Yasuda increased from 4,160,000 yen to 4,300,000 yen, and those of Dai-ichi rose from 8,207,000 yen to 8,680,000 yen.

The special session of the Diet convened to deliberate on the remedial measures for distressed farmers, small industrialists and retail dealers, will meet on August 22nd. The official relief schemes to be submitted to the session consist of the extension of public works and provision of low-interest loans to provincial financial institutions. Under the schemes, 237 million yen will be expended during the current fiscal year for the construction of public highways, harbour improvement, and other public works to give employment to surplus agrarian labour, while

another 264 million yen will be lent at a low rate of interest to provincial banks, co-operative societies and other bodies to enable them to liquidate frozen credits on farm mortgages. In the coming seven months 460 million yen is thus to be disbursed to ease monetary stringency in rural districts. As the Departments interested in the relief measures are asking for more money, the total cost of the schemes will be further increased.

CANADA.

Crops — Business — Prices — Trade — Railways.

(FROM OUR CORRESPONDENT.)

Ottawa, August 23.

THE western harvest is now in full swing, and in Manitoba wheat cutting is nearly finished and a good deal of threshing done. In Saskatchewan the grain crops ripened prematurely over a large area in the southern part of the province, and, though they are being harvested under ideal conditions, there has been a further decline in yield prospects. In Northern Saskatchewan and Central Alberta where the crops are good, their lateness is causing some apprehension. Some reports mention the possibility of grades and weights per bushel being lower than in 1932, but the early samples are grading high. Oats and other coarse grains promise to give less than the average yield. In British Columbia the field crops have made good progress since the heavy rainfalls of July, and the apple and other fruit crops are also good. In the central provinces of Ontario and Quebec harvesting operations have been delayed by showery weather, and the yield has been improved probably at the expense of quality. Pastures have improved, potatoes and other root crops are in good condition and the apple and other fruit crops are only slightly below the average. In the Maritime provinces the improvements which began in July for crops previously backward and poor has steadily continued, but the grain harvest is late; a high quality crop is promised for the apple-growing districts of Nova Scotia, but in New Brunswick the important potato crop is suffering from blight. Taken all round the field crops of Canada for 1932 seem likely to give an ultimate yield rather below than above the average.

There is some improvement in business conditions. Helped by rising commodity prices and heavier purchases in the rural areas there has been a considerable expansion of retail sales during the first half of August, and wholesale houses are beginning to feel the effects of the freer distribution of goods. The increased movement of merchandise is also finding reflection in the car-loading figures, and for the week ending August 13th the figure was 39,050 cars, as compared with 35,285 cars for the previous week, but it is still 5,945 cars below the figure for the parallel week of 1931. The July wholesale price index showed no change at 66.6, and there has since been an upward movement; the retail index, however, dropped from 81 to 80.8. Commitments for autumn business are greater in volume than at the same date in 1931, and travellers are sending in more encouraging reports from their territories than they have for some time. From the Western Provinces there is reported a better demand for medium priced farm implements, the sales being fully 20 per cent. ahead of those of the same period a year ago. The canning industry also has been encouraged by crop conditions and is benefiting by a new marketing organisation of which most canning establishments are members.

Throughout the summer the American tourist traffic has fluctuated in volume, but it is now very brisk, and summer hotels are making up some of the slackness in business which occurred during the earlier part of the season. Factory industry remains very uneven. The demand for industrial steel shows no change, and current business consists mainly of small orders. Motor sales are confined largely to low-priced models, and sales of commercial cars are unsatisfactory. The textile mills have in some cases been curtailing their operations and their owners have become very apprehensive of the tariff concessions which have been made at the Imperial Economic Conference for

the benefit of their British competitors; as a result they are afraid to accumulate large stocks. The boot and shoe factories, however, remain fairly busy, chiefly on footwear of medium class, and they are providing the chief market for leathers. The metal trades remain inactive, and the demand for building materials is poor; in July the aggregate value of building permits issued in 61 leading cities was only \$4,227,173, which was just slightly below the figure for June, but was nearly 7 million dollars, or 61.7 per cent. below that of July, 1931. There is now a superfluity of office accommodation in practically all the towns and cities, and rents are falling fast; the same situation prevails in regard to residential dwellings, as many families are sharing under the stress of hard times, and there has been a substantial remigration to the country of rural folk who had been attracted to the urban communities by the lure of high wages during the boom times.

The foreign trade returns continue to make depressing reading; imports in July were \$35,710,571, compared with \$48,379,235 in July, 1931, and domestic exports \$42,321,284, compared with \$49,645,120 last year. There has, therefore, been an aggregate decline of about 20 per cent. in Canada's foreign trade as compared with July, 1931, but the protectionists are once more taking comfort from the fact that there has been an improvement in the favourable balance. At present, however, grain exports from Montreal are being maintained at a higher level than a year ago; cheese exports to the United Kingdom are increasing and cattle shipments to the same destination also show a slight gain. As the result of the decisions of the Conference, farmers, fruitgrowers and other classes engaged in the great basic natural industries are hoping for a substantial improvement in their export trade with Britain, and since the Conference ended their spokesmen have been busy commending its work and explaining the basis of their hopes. The Canadian millers are greatly relieved that no duty has been imposed by Britain on Dominion flour, and the British millers are correspondingly disappointed. Most of the copper producers also think that they will benefit by the preference on copper, but some of them are dubious about this. Meanwhile, details of the tariff concessions which Canada has made Britain are being awaited with interest, but they will not be known until they are laid before the Federal Parliament. It is now expected that a special session will be called in October for the purpose of giving effect to the agreements reached at the Conference and dealing with the railway problem.

The Royal Commission on Transportation, which was set to work early in the year, has last week resumed its labours at Ottawa. It is understood to have before it the draft of its final report, which they expect to finish by the end of August. Since the railway problem needs to be tackled at once, it is, therefore, probable that Parliament will be summoned sometime in October.

Letters to the Editor.

MUNICIPAL ECONOMY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—If local authorities are to economise, may I suggest one way by which substantial savings can be made in municipal budgets?

As matters now stand, municipal housing schemes will soon be more or less a thing of the past. The Minister of Health's recently announced decision disallowing the compulsory acquisition of 1,300 acres of land at Wythenshawe by the Manchester Corporation seems to indicate pretty conclusively that the Government has decided, for the time being at any rate, to check municipal building. But the building of houses must continue? Why shouldn't local authorities encourage building societies to fill the gap.

There is an opportunity here for municipalities to co-operate far more closely than in the past with building societies. Building societies have the experience and the resources to do much of what is necessary. By utilising them local authorities should be able to secure effective economies in local expenditure out of public funds.

Where local authorities are anxious to encourage the building of houses they can obtain authority to give guarantees to prospective purchasers who have not themselves sufficient capital to go direct to building societies. Where this scheme is already in operation it has worked admirably, and an extension of it should mean both the speeding up of house building and a reduction of cost to local authorities.

Relations between local authorities and building societies are happily of the most cordial, and at a time when many of the former are the objects of a good deal of criticism, much of it ill-informed and undeserved, I must say that those of them which have come within my personal experience seem to me to be carrying out their duties under the greatest difficulties in a manner that is at once efficient and public-spirited.—I am, Sir, Yours very truly,

COTTON TEXTILE SHARES.

BRITISH textile shares have fully participated in the rise in industrial equities which followed upon the success of the War Loan conversion scheme, the recovery in Wall Street and the upturn in commodity prices. They have also shared in this week's reaction. Has the market been over-hasty in discounting an early recovery in earning power, having regard to the nature of recent company reports and the overseas trade returns for the last eight months? We propose to discuss this question in a series of articles. The position of the cotton textile and finishing companies is dealt with in the paragraphs which follow, that of the silk and artificial silk and the wool textile companies being reserved for separate analysis.

The lack of statesmanship or leadership in the cotton textile industry is not an inspiration to investors. A prolonged labour stoppage in Lancashire would quickly offset the advantages gained as a result of the departure from the gold standard and the Japanese boycott in China. The overseas trade returns and the recent reports of textile companies indicate that these advantages have been by no means inconsiderable. The complete returns for August and the first eight months of the year are analysed on page 496. Anti-Japanese feeling may be partly responsible for the fact that whereas exports of British cotton piece-goods to China declined from 35.7 million square yards in the first eight months of 1930 to 24.3 millions in the corresponding period of 1931, the total for the first eight months of 1932 was 63.0 million square yards. Exports to British India (eight months in each case) fell from 713.8 million square yards in 1930 to 308.8 millions in 1931, but have now recovered to 416.6 millions. For the remainder of the British Empire the figures are 442.4, 330.5, and 502.6 millions respectively; for Central and South America, 179.1, 126.4 and 142.5 millions; for Sweden, Norway and Denmark, 41.8, 45.6 and 51.4 millions; and for all countries, 1,853.2, 1,169.0 and 1,527.1 million square yards respectively. Whereas the value of our total piece-goods exports to countries other than those named (*i.e.*, mainly to States still on the gold standard) fell from £12.9 millions in the eight months of 1930 to £7.8 millions in 1931, and to £7.4 millions in the same period of 1932, our exports to China, the Empire and countries in the "sterling area," having dropped from £34.2 millions to £18.0 millions, have now recovered to £23.0 millions.

The reports of the leading cotton textile companies

have not yet had time fully to reflect these trade movements. Any improvement recorded in profits may be attributed mainly to economies or to increased sales in the home market. The Fine Cotton Spinners and Doublers Association relies on the home trade and European markets for the bulk of its orders. The depression in Germany has been an adverse factor in its business, and the new British tariffs, designed to restrict hosiery imports, may automatically react upon the export of fine Egyptian yarns to Germany. In certain other European countries the company has been forced practically to cease trading because of the difficulty in remitting payments. The increase in home sales is, however, a compensating factor. The chairman of the company, in his speech in May, was able to refer to larger sales and deliveries of yarn from the company's mills, both in weight and value.

The chairman of the English Sewing Cotton Company has related the improved results of the year ended March 31, 1932, to the greater stability in cotton prices and to substantial economies effected in administration and manufacture. There has been an increase in this company's sales of yarns for the weaving and hosiery trade in Great Britain, and its exports have suffered a smaller decline than was anticipated. This company has a holding in the American Thread Company, which has reduced its dividends.

As regards J. and P. Coats, the chairman, in his speech, last June, emphasised the difficulties of trading abroad, in view of unconscionable import and exchange restrictions. Nevertheless, the declaration of an interim dividend of 2½ per cent. last month, against 1½ per cent. in the previous year, indicates that the company has been experiencing somewhat improved conditions this year. No information as to the Lancashire Cotton Corporation has been divulged since the publication of the accounts for the year ended October 31, 1931. It is known, however, that the rise in cotton prices has given the corporation a considerable profit on its stocks, which were bought at very favourable prices. The interests of the Lancashire Cotton Corporation are so far-reaching that practically every market of the world is of some importance to its revenue account. Nevertheless, the advanced standardisation system which it has adopted can lead to satisfactory trading results only when large-scale trading with the East has been restored.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
September 20.

ACCOUNT.
September 22.

The markets have suffered the most extensive reaction since the beginning of the recovery in values three months ago. The movement originated in New York, where speculation, by general consent, had outrun discretion. The technical position of London, however, was much healthier, and although the rise in quotations was sharply checked, selling of domestic stocks was not extensive, and prices quickly recovered from the worst. Sentiment, on the whole, remained hopeful. It was agreed that the revival had discounted a trade recovery for at least some months ahead, but the shake-out in New York was regarded as entirely healthy.

Gilt-edged stocks held their ground in reassuring fashion, relatively firm conditions developing in mid-week after a small amount of liquidation had been absorbed. Assented War Loan continued to fluctuate slightly under par. The total War Loan assents so far are £1,885,000,000 and dissents £88,000,000. Reports of the Treasury's intentions to postpone its autumn refinancing were disbelieved. India loans returned to favour after a reactionary tendency, the market hoping that Gandhi's self-starvation threat would not prelude a renewal of political unrest. A fair business was done in Australians, at firmer prices, in anticipation of a funding issue in the near future.

The foreign bond market had an unhappy week. Though German bonds recovered, after weakness on the dissolution of the Reichstag, the market showed no enthusiasm for the interim Greek debt settlement. Brazilian bonds were particularly weak, on fears of an indefinite prolongation of civil war. Chinese lost ground on a report of default on the Salt Loans, and Japanese failed to hold their gains, after a decline in the yen.

Home rails were irregular, declining on Tuesday in anticipation of further unfavourable traffic returns and recovering on Wednesday, although the figures proved worse than expected. Market prices of "depressed" prior charges continued to discount a recovery in gross earnings. A fairly large business was done at lower prices in South American railways, Brazilians being especially depressed on the disquieting political outlook. Canadian Pacific came within the orbit of transatlantic liquidation, but partially recovered on the reported recommendation of a Royal Commission that supreme authority of management of both C.P.R. and C.N.R. should be vested in a controlling Board, without disturbing the former's capital ownership.

Industrial shares, naturally, were heavy, but no signs of a wide break in prices were in evidence. "International" and "Transatlantic" issues showed sharp

Tel.: Mansion House 7685.

The results of these four concerns for the last two trading years are shown on the preceding page. No precise estimate can be made of the increased profits which these companies are likely to obtain as a result of the rise in cotton prices from 4.10d. to 6.10d. per lb. between June and September, but in some cases it will be considerable. The chairman of Fine Cotton Spinners, for example, stated that an advance of 1d. per lb. in cotton represented over £100,000 on the company's normal stocks, which were valued last March at £2,173,000. Apart from appreciation in stock values, trading on a rising market, as everyone knows, is a much easier proposition than trading on a falling market. If the rise in cotton prices is maintained, it may not be over-optimistic to expect somewhat better trading results from these companies next year.

To the finishing trades—the leading companies of which are Bleachers, Bradford Dyers, British Cotton and Wool Dyers, and Calico Printers—the bulk export trade to the East is at least as important as in the case of the cotton textile companies. The improved results of Calico Printers for the year ended June 30th last may be attributed largely to the buying movement which developed during the first few months following this country's departure from the gold standard. Economies in manufacturing contributed largely to the increase in Bleachers' profits, but the improvement in the export trade in the last three months of the company's financial year (which ended last March) was said to be a material factor. The bleaching trade has suffered less from Japanese and other competition than the trade in dyed and printed goods, but Bleachers' Association, nevertheless, remains dependent on Lancashire's trade with China. As the volume of exports of bleached goods in the company's last financial year was less than half the quantity exported three years ago, there is obviously room for considerable improvement.

British Cotton and Wool Dyers is in a rather different category. Yarn dyeing is an important section of this company's business, so that the home, Empire and "quality" markets are more important than in the case of the other finishing combines. With this exception, the "quality" side of the trade counts for comparatively little with the finishing companies. It is the bulk trade of the East which is of prime importance. A few weeks of the East which is of prime importance. A few weeks of good buying from India or China would make a very considerable difference to the annual accounts of Bradford Dyers, Calico Printers and Bleachers. The results of the finishing companies for the past two years are shown in the table at the foot of the preceding page.

Looking ahead, there may be ground for a mild recovery in the earnings of British textile companies during the next few months, but the long-term outlook is much less clear. The advantages which these companies have gained from the boycott of Japanese goods in China cannot be counted upon indefinitely. The competitive power of Japan in other Eastern markets has been increased by reason of her departure from the gold standard. Striking examples of the force of Japanese competition were given by Mr. Lennox Lee in his speech to the shareholders of Calico Printers' Association this week (upon which we comment in an "Investment Note" on page 517). The increase in Japanese imports into India, which followed upon the boycott in China, may be lessened as soon as India has applied its increased preferences to British goods. It remains true, however, that no lasting increase in the export of Lancashire goods is likely to be obtained until the restrictions upon international trade are relaxed or removed. Further, there is a danger that the new tariff policy outlined at Ottawa may dislocate the export trade of Lancashire, for, as Mr. Lennox Lee has pointed out, over the past 3½ years the value of exports of cotton piece-goods to foreign countries has been £113½ millions and to the British Empire £107 millions. As the greater part of Lancashire's wares are handled, at once stage or another, by the big finishing combines, the shareholders of these companies have much to gain from a recovery in the large-scale Eastern trade. In the meantime, they have at least the assurance that their companies' finances have been kept in a liquid condition.

movements, but were not entirely unsupported at the lower levels. Domestic iron and steel shares were slightly lower on scattered country selling, but motor shares were firmer after an initial loss of ground. Rayon shares were extensively sold on Tuesday, British Celanese showing marked weakness, but rallying next day. Textile shares were undecided, the market tending to abandon hope of an early resumption of work in Lancashire, pending a full discussion of outstanding questions under Ministry of Labour chairmanship. Electrical shares were easier, although selling was never very considerable. Tobacco shares were harder after early weakness, but brewery shares remained irregular. Shipping shares lost ground. United Dairies were dull on news of the dispute between the milk-producing and distributing interests. Insurance share values were generally maintained, but bank shares were slightly easier.

A large increase of activity in the oil market followed the news of the Roumanian ratification of the Paris Agreement and the increase of British petrol prices (discussed in a Note on page 576). The rise, however, had been well discounted and prices were not held. Rubber share quotations suffered a general decline in sympathy with the price of the commodity, which at one time reached 2½d. per pound. Some of the leading issues, however, obtained fair support after the decline. Weakness in the tea share market was unrelieved, although a part of the marking down of quotations was precautionary.

Mining shares suffered from extensive liquidation at the beginning of the week, partly owing to the reaction in metal prices and partly on Continental political fears, which discouraged French speculators. The market was also aware that the pending French conversion operations might be accompanied by a virtual embargo on share activity. The recovery in diamond shares was sharply checked, but "Kaffirs" showed a recovery, on influential buying on Thursday, Randfontein and East Rand being strongly supported. Copper shares were dull, though Rhokana improved on the debenture scheme, details of which are given on page 519. Tin shares declined sharply, the market being top-heavy. Australian buying failed to check the decline in Western Australian issues.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The state of the market was viewed with suspicion before the reaction of Thursday week, September 8th. Once the rise in prices had been checked, a further break was regarded as inevitable. Manipulative operations had increased, and speculative excitement was rising among some sections of the outside public. In particular, conservative authorities were disquieted by the extent of the rise in second-grade stocks and the weaker bonds. The technical insecurity of the markets was subsequently illustrated by the very slight resistance to lower prices once selling had started. The reaction in commodity prices was not of dangerous dimensions, in proportion to the preceding rise, but it served to accentuate speculative pessimism. Even the Maine election results might have been taken by the share market in its stride, a week or two ago, but their effect, under reactionary conditions, was considerable. Undoubtedly, the shake-out has been healthy. Opinion is divided on the question whether basic industrial prospects justify a further, if less abrupt, rise in security values in the coming weeks. Freight-car loadings continue slowly to rise. For the week to September 3rd they totalled 559,927 cars, an increase of 21,954 over the previous week's figure. Steel operations have risen by a further 1 per cent. to 15½ per cent. of capacity, and a more marked increase is expected shortly, though it may not be wholly spontaneous. The increase of 3,293 tons in Steel Corporation unfilled orders—the first since March, 1931—at the end of August is not discouraging, though it failed to satisfy the bulls. Cotton consumption continues to increase. As a result of these movements the Business Index of the *New York Times* advanced from 52.49 to 53.30 in the week ended September 3rd. Altogether, trade movements so far have been not unhelpful, but indecisive. Election considerations, inevitably, will assume increasing importance in the next few weeks.

* 2-hour session.

PARIS.

The Bourse opened undecided, became reactionary, and finally enjoyed a tentative recovery. Speculative interest in international issues proved decidedly sensitive to the New York reaction, and, after Monday's events in Germany, weakness spread to domestic securities, including bank shares. Government securities alone continued to receive support, in anticipation of the debt conversion scheme. Selling, however, was somewhat overdone, and industrials, mines and oil shares regained an appreciable part of their losses in mid-week. The market canvassed the possibility of a 4 or 4½ per cent. basis for debt conversion, the necessary Bill being expected to come before Parliament on Saturday or Sunday. The expected budgetary saving was tentatively put at two milliard francs.

BERLIN.

Although markets were firm on Monday, an undercurrent of nervousness regarding the political situation was in evidence. The Reichstag dissolution coincided with a fresh break in Wall Street. No considerable volume of selling was released, but the public showed a disposition to defer purchases, and prices fell back on Tuesday. The absence of liquidation, in due course, allowed quotations to recover, but opinion continued to regard the general technical position with a certain conservatism.

	Sept. 8, 1932.	Sept. 12, 1932.	Sept. 15, 1932.		Sept. 8, 1932.	Sept. 12, 1932.	Sept. 15, 1932.

AMSTERDAM.

Quotations sharply relapsed on unfavourable American and European developments. The Roumanian ratification of the oil agreement had been fully discounted, and failed to check selling of Royal Dutch. A general pre-failed to check selling of prices, however, served to cautionary marking down of prices, followed extensive mid-week bear closing.

	Sept. 8, 1932.	Sept. 12, 1932.	Sept. 15, 1932.		Sept. 8, 1932.	Sept. 12, 1932.	Sept. 15, 1932.

OTHER CENTRES.

Similar conditions obtained on other European bourses. Sentiment was appreciably shaken by external events, but the volume of selling was, on the whole, less than was generally expected. The ensuing recovery, common to most markets, left quotations well below last week's levels, and the tone, before week-end, became undecided.

INVESTMENT NOTES.

Reaction in Wall Street.—After the spectacular rise in Wall Street prices, a reaction was generally expected. So far, its severity has not been out of proportion to the strength of the previous boom. The break began towards the end of last week, after a reaction in cotton prices. Disappointment over the small increase in the unfilled orders of the U.S. Steel Corporation brought in further selling, which gathered momentum as a general decline in commodity prices developed. The Maine Elections, which returned a Democrat Governor, served to unsettle the whole market. A new selling movement developed on Tuesday, when the volume of transactions reached 5,100,000 shares. A slight recovery followed on Wednesday, when the business news showed evidence of improvement—an increase having been recorded in steel operations and power output—but this did not prevent a further relapse before the close of business. The following table shows the movements in the share price indices since last July:—

	July 8.	Sept. 7.	Sept. 14.
Rails	13.23*	39.06	29.71
Industrials	41.22*	79.93	65.88
Utilities	16.53*	36.11	28.80

(July 8 = 100.)

Rails	100	295.2	224.5
Industrials	100	193.9	159.8
Utilities	100	218.5	174.2

* 1932 low.

The reaction, so far, has been of normal dimensions. It is still proceeding as we write. Just as adverse news was overlooked while the boom movement lasted, so good news is now being ignored when sentiment is bearish. There is a general belief, however, that the market will recover stability on any further indication of business improvement. A seasonal increase in business is due, but it remains to be seen to what extent the lending policy of the Reconstruction Finance Corporation will accelerate the normal movement.

Turkish Debt Negotiations.—The wording of the latest announcement of the Council of Foreign Bondholders, regarding the Paris negotiations over the Turkish National Debt, is laconic but hopeful, since it speaks of a "possible settlement" of this vexed question. Whether the Treaty of Lausanne settlement was generous or the reverse to Turkey, who was allotted responsibility for £T84½ millions of the old Turkish debt of £T129 millions is an academic question, seeing that the Republic has shown little anxiety to discharge its obligations under the Treaty. After prolonged and arduous negotiations, a settlement was signed in June, 1928, which secured ratification by the Turkish Grand National Assembly, but by November, 1930, the Debt Council was compelled formally to announce a renewed Turkish default. Under normal world trade conditions, the terms of the 1928 Agreement would not have pressed hardly on the Turkish State. They provided for the payment of annuities rising from £T2 millions from 1929 to 1936, to a maximum of £T3.4 millions by 1952. Interest on the Unified Bonds was agreed at 47.22 per cent. of the nominal rate, rising to 100 per cent. by 1949, and on other loans payable in sterling at 54.43 per cent., rising to 100 per cent. by 1952. The unforeseen financial difficulties attendant on world depression have given Turkey a constructive case for at least temporary concession. As recently as last March, an agreement in principle was reported to have been reached between the bondholders and the Turkish Government, under which the annuities were to be reduced, and payment to be made in gold pounds. The Turkish Budget estimates for 1932-33, published in June, showed an increase in debt provision from £T23 millions to nearly £T50 millions. It will be hoped that the Turkish Government, which enjoys a high reputation for the punctilious discharge of its responsibilities in other directions, will make a reasonable contribution to a settlement with its bondholders, who are prepared, at some little sacrifice, to recognise the difficulties of its financial position.

Greek Debt Settlement.—Greece's default has been ended this week by an agreement under which 80 per cent. of the interest service of the debt for the current year will be paid in cash and the remainder in interest-bearing scrip. The question of further payments will be considered in November. The announcement is of special interest to holders of such loans as the 5 per cent. of 1914, the 7 per cent. "Refugee" of 1924, the 6 per cent. "Stabilisation" of 1928, the 6 per cent. "Public Works" of the same year, and the 6 per cent. "Public Works" of 1931. We comment on the settlement in a "Note of the Week" on page 502.

Chilean Nitrate Difficulties.—The affairs of the unhappy "Cosach" concern remain, like Mahomet's coffin, in a state of uncomfortable suspense. In our issue of August 13th last (page 323) we showed that five separate interests were attempting to share whatever could be salvaged from the wreck of the Chilean nitrate industry—the English bankers, the bondholders, the Guggenheim group, the pre-Cosach companies, and the Chilean Government. We suggested that the Guggenheim group had encountered more resistance from the British bankers than was expected, and was inclined to seek the support of the Chilean Government for its own solution. It is now understood that the visit to Santiago of Mr. Whelpley, on behalf of the Guggenheim interest, has been fruitless, the Chilean authorities refusing to support his proposals. Matters, therefore, remain in deadlock, to the loss of all concerned. The industry itself is in a grave position. Since the present nitrate year opened on July 1st, Chilean nitrate exports have been largely suspended, the banks being understood to have been unwilling to finance further additions to the swollen stocks in Europe. Should this situation continue, even the present attenuated production in Chile must be brought to a standstill, sooner rather than later. The unsettled political situation adds to the difficulties of those concerned. After this week's

fresh *émeute*, the possibility of carrying on firm negotiations for a settlement, with a Government likely to be in a position to implement its own decisions, appears disconcertingly remote.

Petrol Price Increase.—The market in oil shares had waited so long for the increase in British petrol prices that it was taken by surprise when the advance of 3d. per gallon was announced on Tuesday night, bringing the retail prices of No. 1 petrol from 1s. 4½d. to 1s. 7½d. per gallon and No. 3 petrol from 1s. 2½d. to 1s. 5½d. per gallon. The following table shows the fluctuations in petrol prices since the petrol tax was originally imposed:—

(Per gallon.)				
	Retail Price, No. 1 Petrol.	Tax.	Total.	Companies' Increase or Decrease.
	s. d.	d.	s. d.	d.
April 1, 1928.....	1 0½	Nil	1 0½	
April 28, 1928	1 0½	4	1 4½	+ ½
March 1, 1929	1 3	4	1 7	+2½
November, 1929.....	1 2½	4	1 6½	— ½
September 23, 1930 ...	1 0½	4	1 4½	—2
March 3, 1931	0 10½	4	1 2½	—2
April 28, 1931	0 10½	6	1 4½	Nil
May 22, 1931.....	0 9½	6	1 3½	—1
July 18, 1931	0 8½	6	1 2½	—1
September 10, 1931 ...	0 8½	8	1 4½	Nil
September 14, 1932 ...	0 11½	8	1 7½	3

It will be seen from this table that, ignoring the tax of 8d. per gallon, the present advance of 8d. still leaves the cost of petrol to the consumer at 1d. per gallon below the price ruling from September 23, 1930, to March 3, 1931. It cannot be said that a retail price of 11½d. per gallon is high. Indeed, it is well known that at the previous retail price of 8½d. per gallon for No. 1 petrol the national petrol distributors were losing money, particularly as the bulk of their business was done not in No. 1 petrol but in No. 3, which was selling at 6½d. per gallon. The advance was not made earlier in the year because of differences between the exporting interests. These differences have now been composed by the Paris agreement, under which the Royal Dutch-Shell group, the Anglo-Persian Oil Company, the Standard Oil and other American exporting companies, and the Roumanian exporters have agreed to limit their production to the requirements of their marketing outlets, based on their 1931 quotas of the trade. This agreement puts an end to the indiscriminate price-cutting of the exporting interests, and it is understood it will be accompanied by an advance in prices throughout the world. Prices have already risen in France, and it is expected that an advance in Germany and the Central European markets will be made at an early date. In America, gasoline prices are already standing at higher levels than those ruling at the beginning of the year, so it is not expected that any further increase will occur. Indeed, the present advance in British petrol prices merely brings up the British price level to that of the American Gulf export market. As the Stock Exchange has been discounting the advance in petrol prices, it is not unnatural that prices of the leading oil shares have reacted after the event. The advance brings an additional revenue in this country of approximately £13½ millions, of which 30 per cent. may accrue to the Royal Dutch-Shell group and 20 per cent. to the Anglo-Persian Oil Company. This, however, will not do much to improve the trading results of the international oil combines for the twelve months ending next December. The present market prices of the equity shares of these companies may, therefore, be said to have fully discounted a recovery in trade next year. The investor's interest in the advance in petrol prices is not confined to the oil share market. It has been construed as a bear factor for the bus companies and the Underground. Thomas Tilling ordinary shares fell from 57s. 6d. to 55s. 6d., and Underground Electric Railways ordinary shares from 18s. to 17s. 6d. before showing any recovery Lord Ashfield has stated that the extra cost will put

September 17, 1932.]

heavy burden on road transport companies which will be more than they can bear in view of the fall in traffic receipts. To what extent economies in operating expenditure will offset the increase in petrol costs remains to be seen, but having regard to the possibilities of a reduction in the petrol tax, the shareholders of the bus companies do not seem disposed to take too pessimistic a view.

Lancashire Cotton Outlook.—The speech of Mr. L. B. Lee to the shareholders of the Calico Printers' Association, last Wednesday, is an instructive commentary on our analysis of the textile share position on page 510 of this issue. Mr Lee is not unhelpful regarding some recent developments, but the quality of his optimism is certainly strained. The Calico Printers, he declared, had booked an increased volume of business since the departure from the gold standard, but only at the expense of a substantial reduction in prices. The Japanese threat in Eastern markets was more than formidable. Japanese cloths similar to those of Lancashire were being sold at prices 60-70 per cent. cheaper, and the Japanese share of prints imported into India had risen from 25 per cent. in 1929 to 46 per cent. in 1931. In other markets, particularly in Europe, exchange restrictions imposed at best delay and at worst partial or complete prohibition of payment for British goods. Mr Lee, nevertheless, strongly suggested that Lancashire's salvation must begin at home. An unrepentant Free Trader, he saw little hope for the industry as a result of the Ottawa Agreements, under which the cotton piece-goods trade (which in the last three and a-half years had shipped merchandise valued at £113 millions to foreign countries and £107 millions to the British Empire) might be confronted with additional restrictions in non-Empire markets, in return for nebulous and indefinite advantages in Empire countries. "We want," Mr Lee declared, "to trade with the whole world and make our trading as simple and as free from regulations and restrictions as possible." Lancashire's troubles were not due to import competition in the home market, which could be regulated by a domestic tariff. Imports of cotton piece-goods into Great Britain had been stationary in the last four years, while exports had declined by 55 per cent. Trade had been lost because Lancashire's costs were too high. Much had been said regarding "rationalisation," but except for the closing down of mills little had been achieved. The framework of the industry remained substantially unaltered, with the manufacturer and the distributor maintaining an aloofness which was damaging and costly. Government regulations and high taxation on the one hand, and trade union policy on the other, had further combined to retard the normal economic reaction to changing circumstances. While investors in some cotton textile and finishing shares may look for a limited improvement in published earnings during the next few months, for the reasons mentioned in our leading article, they would do well to bear in mind Mr Lee's sound contentions when estimating the long-term prospects of the industry.

Harland and Wolff.—Never in its eighty years' existence has Harland and Wolff faced so grave a crisis as has ensued upon the virtual cessation of British shipbuilding activity and the collapse of the Royal Mail group. The parent company's trading loss of £283,137 for the year to December 31, 1931, as compared with a trading profit of £117,882 for 1930, affords an inadequate indication of the year's unhappy experience. The 1930 figure was touched after allowing £250,000 for depreciation, for which no allowance was made last year. Two subsidiaries made losses, which were not brought into the parent company's accounts, and though a similar remark applies to profits made by certain other subsidiaries, it may be assumed that the group, on balance, suffered higher net trading losses than the holding company's accounts suggest. The

THE ECONOMIST.

517

auditors' reports are qualified as regards the value of the assets, or the provision for depreciation, in the case of four subsidiaries. Messrs. Price, Waterhouse, in their report on the parent concern, describe the book values of investments as being "considerably in excess" of their current worth, and the amounts owing by subsidiary and associated concerns as probably unrealisable in full. A comparison of the last three years' results (so far as comparison is possible) is given:—

	Years ended December 31.		
	1929.	1930.	1931.
	£	£	£
Trading profit (before depreciation)	674,873	367,882	<i>Dr. 280,917*</i>

Inc. or dec. in carry-forward ..	+ 24,749	+ 105,746	- 230,917
Total carried forward	132,307	238,053	7,136

* Including £2,220 dividends on investments

The company, for the present, is in the hands of its creditors (including H.M. Treasury and the Midland Bank), who, in consideration for deferring £7,687,577 of claims until December 31, 1934, have the right to nominate directors. The value of practically the whole of the company's assets, standing in the balance sheet at nearly £20,000,000, is purely conjectural, until shipbuilding comes to life again, and the financial complications arising out of the Royal Mail crisis, which have been merely postponed, are definitely straightened out. Until then holders of the 6 per cent. first cumulative preference shares can have no idea what their interest in the business will ultimately be worth. They can be certain only that no dividends can, in the meantime, be looked for by any stretch of imagination. The company has a plant equal in range and efficiency to any in the industry, but it is quite impossible to estimate its future earning-power.

Cinema Accounts.—The belated accounts for the twelve months to March 31, 1932, of the "Maxwell" group of cinema companies—British International Pictures and Associated British Cinemas—do not fulfil market expectations. In each case profits show a decline, and dividends are cut from 8 per cent. to 5 per cent. The British International Pictures, the producing and distributing organisation, attributes its difficulties to the smaller theatre returns since the financial crisis last autumn and the heavy increase in taxation. It also suffered a special loss on foreign versions of its productions, for which it could not obtain payment from abroad. These bad debts are met by an appropriation of £100,000 from general reserve. The report of the Associated British Cinemas, the exhibiting company, is silent, but hopeful regarding

† Subject to directors' fees.

The balance sheets do not disclose a very liquid position. British International Pictures is paying its dividends on a larger capital, having issued 1,000,000 ordinary shares at 5s. in August, 1931, ranking for dividend from September 15, 1931. At 9s. 9d., the 5s. shares yield £6 13s. 3d. per cent. The current quotations for Associated British Cinemas 5s. ordinary shares is 8s. The reports of two concerns controlled by the Gaumont British Picture Corporation show that profits for the twelve months to March 31st last have been maintained. The net earnings of Denman Picture Houses were £382,795, against £335,859, and the ordinary dividend is unchanged at 2½ per cent. The net profits of the General Theatre Corporation were £316,814, against £323,843. The equity capital of both companies is held by the Gaumont British company, whose profits for year to March, 1932, were £490,801, against £502,060, the dividend maintained at 6 per cent.

Kreuger and Toll Bankruptcy.—The statements formally sworn at Stockholm last week, as regards the bankruptcy estate of Kreuger and Toll, afford cold comfort to British share and participating debenture holders. The company's liabilities are put at Kr. 780 millions (approximately £39 millions), and its assets at Kr. 508 millions (£25½ millions). The real deficiency is probably greater than these figures suggest, since doubt still exists regarding the financial relations between the company, other concerns in the group, and Ivar Kreuger's personal estate. The latter's liabilities are Kr. 1,171 millions (£58½ millions), against assets of Kr. 98 millions (£5 millions)—the liabilities figure including Kreuger's direct obligations only and not amounts for which he had given a personal guarantee. The most significant feature of the report of the administrators of the bankruptcy is less their finding that "it is not as a business man but as a criminal that Kreuger was distinguished from his fellow men"—shareholders had already come independently to that melancholy conclusion—but their declaration that other

Address.....

directors of Kreuger and Toll appear frequently to have had full knowledge of the inaccuracy of the company's published statements. It would seem that British holders, who own 31.6 per cent. of the total Kreuger and Toll "B" shares, have little hope of receiving anything from the company's liquidation. The position of holders of secured gold debentures is more promising. Their security brought in \$850,000 of current interest in the four months beginning April last, and may have a substantial ultimate realisable value, apart from the debenture holders' claims as general creditors on the estate. These secured debentures, however, are chiefly American owned, British holdings representing less than 10 per cent. of the whole. As we suggested in a recent "Note" (see the *Economist*, August 27, 1932, page 403), there is more than a possibility that the Swedish Match Company may be saved, as a going concern, though British investors, who are heavily interested, have no prospects of dividends for a considerable time to come.

Modderfontein East.—In view of the erratic nature of developments in the past, writes our mining correspondent, the further improvement which occurred last year is significant. With a small increase in the footage, the quantity of payable ore opened up amounted to 757,660 tons. This was rather less than the 1930-31 total, but the value averaged 6.2 dwts., as against 5.8 dwts. A re-estimation of the payable reserves gave 1,997,000 tons, value 6 dwts., compared with 1,935,600 tons, value 5.9 dwts., at the end of June, 1931. Allowance being made for sorting, the total represents rather more than two years' supply for the mill. Our usual table is shown:

	Year ended June 30,		
	1930.	1931.	1932.
Ore crushed, tons	817,000	850,500	880,000
Revenue per ton	25/3	25/-	25/-
Costs per ton	20/2	20/6	20/7
Profit per ton	5/1	4/6	4/5
Total working profit, £...	206,540	192,360	194,690
Dividends, £	186,160	186,160	186,160
Rate per cent.	20	20	20
Carried forward, £	173,990	167,430	148,320
Ore reserve, tons	2,013,000	1,985,600	1,997,000
Value, dwts.	5.8	5.9	6.0

The increase in the tonnage milled was so far counter-balanced by a small advance in costs that the effect upon the total profit was trifling. Maintenance of the dividend at the 20 per cent. rate disbursed for the three preceding periods entailed a further draft upon the carry-forward, which now stands at £148,300, against £177,400 at June 30, 1929. Capital expenditure, which absorbed £13,900 in 1930-31, called for £22,800 last year. The consulting engineer reports, however, that requirements for the current year are estimated to be very small. The shares, at 45s., give a gross yield of 9 per cent. irrespective of exchange considerations.

Nourse.—In the year ended June 30th last the effects of the milling of a record tonnage for an improved average yield were rather more than negated by an expansion in costs—due in part to the performance of an unprecedented development footage, and in part to the inevitably greater expense of working at increased depth or distance from the mill. The operating profit of £83,950 fell slightly below that of the previous year, and as capital expenditure absorbed £33,500, in place of the nominal amount of £2,000, repetition of the 7½ per cent. dividend drew the carry-forward down by £14,800 to £66,000. With results for the current year approximating to those of 1931-32, and capital expenditure very small—as foreshadowed by the consulting engineer—the next accounts should show an improvement in the cash position. A satisfactory feature of development was the fresh increase in the payable material opened up, the available tonnage of 1,601,900 comparing with 1,418,500 in the previous year and 1,291,500 two years previously. The position, however, is still capable of improvement. During 1931-32 over 970,000 tons of ore were extracted from the mine, 180,000 tons being sorted out as waste. The £1 shares are quoted slightly under par.

Rhokana Corporation.—Following the recent scheme for reducing the prior charges of the Rhodesian Selection Trust comes another relating to the Rhokana Corporation, which belongs to a different group. The proposal is that the existing issue of £4,500,000 7 per cent. debentures shall be replaced by shares in the ratio of one £1 share for every £5 of surrender value—that is, 20 per cent. premium. Interest will be paid until the end of the year. With output restricted to 20 per cent. of capacity, the company—even with the improved price of copper—is no more than covering its debenture requirements, plus a small amount for depreciation. On the basis of 7 per cent., the annual charge would amount to £315,000. But the issue was made before Great Britain's departure from the gold standard. American holders are entitled to receive payment at the rate of 4.86 dollars and Dutch holders at 12.11 florins to the pound. In these cases the actual payment is nearer 9 per cent. than 7 per cent. Obviously, the "conversion" will relieve the company of an onerous liability, and as the proposal has received the support of fully 92 per cent. of the debentureholders, its approval will be little more than a formality. In Tuesday's shake-out Rhokanas touched 4½. The current quotation is around 5.

OIL OUTPUTS.

ANGLO-PERSIAN OIL COMPANY, LTD.—Production in Persia for the month of August amounted to 588,000 tons, making a total of 4,239,000 tons for the first eight months of 1932. Total figures for the previous years were as follows:—1929, 5,480,955 tons; 1930, 5,939,302 tons; 1931, 5,750,498 tons.

APEX (TRINIDAD) OILFIELDS.—August output, 48,230 tons; deliveries, 48,510 tons. Alcock Oil: August output, 10,799 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for week ended August 20, 1932, was 255,000 barrels. Production for the week ended September 3, 1932, was 263,000 barrels.

AUTUMN IN SOUTHWOLD.

THOSE requiring a restful change amid beautiful surroundings should visit SOUTHWOLD on the SUFFOLK COAST. The town itself, with its wonderful Church and attractive open "greens" and great high common commanding extensive views over sea and land, is different from the usual seaside resorts.

During the Autumn months the weather is generally good up to Christmas; and during the Autumn SOUTHWOLD provides specialities such as: "Longshore herrings" (as delicate as fresh caught trout, and infinitely superior to the ordinary deep sea fish); freshly cured mild bloaters; unrivalled brown shrimps (so superior in flavour to the red); delicious small soles (the sea here is called "Sole Bay" from earliest records); and sprats in the later Autumn.

SOUTHWOLD provides excellent Sea Angling (also trawling with local fishermen); and there is an attractive 18-hole Golf Course.

By road it is 105 miles from London. By train it is about a two-hour run to SAXMUNDHAM (14 miles), and a little more to HALESWORTH (9 miles), where motors from hotels meet visitors by appointment.

There is the SWAN HOTEL (Tel. No. 5) (h. and c. in all bedrooms), a well-known comfortable old coaching house, with old local prints and furniture, now under new management of Miss Baker (formerly of The University Arms Hotel, Cambridge; and The Esplanade Hotel, Seaford).

There is also the smaller CROWN HOTEL (Tel. 53), an early Georgian House, recently partly re-constructed, under the management of Miss Constantine (late of The Royal Crescent Hotel, Fife).

At both Hotels the beds are from Heals, and most comfortable; and the food is excellent, and the menus English.

COMPANY MEETINGS, &c.

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION, LIMITED.

SATISFACTORY FINANCIAL POSITION.

The seventh ordinary general meeting of the Industrial Finance and Investment Corporation, Limited, was held, on the 9th instant, at Winchester House, London.

Mr Paul Lindenberg, the chairman of the Corporation, presided. The Secretary (Mr R. F. Norland) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—You will find in the balance sheet that there are very important amounts in an entirely liquid form, and I feel confident you will agree with me that your Corporation's financial position is highly satisfactory in spite of the fact that the securities show considerable depreciation. The thirtieth of June last, the date of the balance sheet, was unfortunately a very unfavourable day for the valuation of securities, and coincides with practically the lowest price level of Stock Exchange securities for a long time. Since then there has been an appreciable improvement, and I am pleased to be able to tell you that the moderate rise in the value of Stock Exchange securities has already benefited the Corporation to a considerable extent.

INCOME FROM INVESTMENTS.

As regards the income from interest, dividends, commissions, etc., for the past year, the difference as compared with the year ended June, 1931, is only about £8,000. On the largest part of our investments and loans interest and amortisation payments have been regularly received, and our income has been increased by the difference in exchange resulting from outstanding loans in gold currencies. However, as far as future earnings of finance companies such as our own Corporation are concerned, a certain reduction in the income from dividends, interest, etc., must be expected as foreign Governments and industrial companies are not in all cases in a position to meet their obligations, either because their earnings have fallen off or exchange restrictions make it impossible for them to remit the full amount of their contractual obligations for interest and amortisation. In addition to this the employment of money at remunerative rates is getting increasingly difficult, and the liquid funds have to be lent out or invested at rather low interest rates.

DIFFICULTIES OF THE PAST YEAR.

During the past year we had many anxious moments, and events have occurred which have made business of a financial nature extremely difficult. As the most important event I should like to recall to you the decision of the Government to go off the gold standard, which step in consequence of the withdrawal of capital from England by foreign countries was forced upon us. This, of course, resulted in a great depreciation of all sterling investments and a reduction of income on practically all investments abroad, which had helped for many years to pay, as one of our invisible exports, for the imports of goods. On the other hand, the depreciation of the sterling exchange helped in a certain measure the export industries of this country. The benefit which might have resulted has, however, not been fully realised in consequence of the restricted buying powers of our Colonies and foreign countries. As a consequence of the fluctuating sterling exchange, the international trade which has been carried on for many years in sterling, and which was always financed through London acceptances, changed over to dollar or other gold exchanges, and England lost a large part of the advantage of being intermediary for such international trade, causing also a loss to finance, insurance and shipping, etc.

SATISFACTORY SIGNS OF IMPROVEMENT.

I think—I must add this is my personal view and is not shared by some of my colleagues—it would be of great advantage to this country if a stabilised exchange based on gold—not necessarily at the old parity—could be re-established at the earliest possible moment, as this would be welcomed by the whole world as an important milestone on the way to recovery from the world crisis. No doubt when this step can be taken the ground which has been lost will speedily be recovered by our enterprising commercial and industrial business circles.

During the last few weeks we have seen a certain recovery in the prices of commodities which is one of the most satisfactory signs of improvement.

The records of many industrial centres in England and Scotland contain a more hopeful note lately, and I think the improvement which may be expected in our industries will give plenty of scope for a finance company such as our Corporation to resume activity in helping sound companies by financial assistance and advice.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 10, 1932, amounted to £8,399,500 against ordinary expenditure of £8,099,000. After allocating £425,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £252,256 the operations for the week, as shown below, increased the National Debt by £377,000 to £7,672,976,000:—

(000's omitted.)

Treasury Bills	£ 30,906	Bank of England Advances	£ 4,750
Public Department Advances	+ 2,550	Issues under Finance Act, 1931	50
		Brit. Govt. Loans abroad repaid	- 28,139
		Road Fund	- 140
	+ 33,456		- 33,079

A complete analysis of the National Debt at June 30, 1932, was printed in the *Economist* of July 2, 1932.

Total	128,376		Total	Nil	

Messrs Samuel Montagu and Company write as follows on September 14, 1932:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,031,386 on the 7th inst., as compared with £138,906,143 on the previous Wednesday. The purchase of £260,797 bar gold was announced by the Bank on the 8th inst. Substantial amounts of gold were available in the open market and were taken for the United States, the Continent, and for destinations not disclosed, although in one of the latter instances the buyer was the Bank of England, their purchase being indicated above.

Average	118s. 1-2d.	14s. 4-6d.

Last week-end afforded a striking instance of the rapidity with which gold can be handled in the London market. A large shipment of unrefined gold from India was received by the refiners in London mid-day on Friday last; the operation of refining was completed early on the Saturday morning and gold to the value of £350,000 was packed and despatched to Southampton in time for shipment by s.s. "Aquitania," which sailed at half-past two in the afternoon of that day for New York.

Nearly £1,400,000 of gold was shipped from Bombay last week. The s.s. "Kaisar-i-Hind" carries about £520,000 consigned to London and £43,000 to Amsterdam; the s.s. "Clan MacIver" has about £165,000 consigned to London, whilst the s.s. "President Pierce" carries £642,000 consigned to New York.

SILVER.

The market has been poorly supported during the past week and offerings from India, China and America met with little resistance; the tendency was decidedly weaker in consequence, and although the reaction from the high prices recorded last week was not unforeseen, the actual fall to the level of 17 1/2 d. and 17 1/4 d. reached yesterday for cash and two months' delivery respectively was rather more than expected. Just as the recent rise proved too rapid, the decline seen during the period under review also proved overdone, the low prices attracting buyers, with the result that a recovery to 17 1/2 d. and 18 d. for the respective deliveries ensued to-day. Whilst it is possible that prices may continue to fluctuate the market should be steady at about to-day's level.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 5th inst. to mid-day on the 12th inst.:—

IMPORTS.	£	EXPORTS.	£
Belgium	31,871	British India	35,133
Germany	24,920	Germany	1,757
Mexico	29,000	France	2,579
Canada	15,456	French Possessions in India	1,500
British India	7,568	Straits Settlements	1,700
France	10,899	Other countries	4,011
Australia	6,475		
Other countries	7,466		
	133,655		46,680

Quotations during the week:—

REPORTS AND NOTICES.

MISCELLANEOUS.

CALICO PRINTERS' ASSOCIATION, LIMITED.—The accounts for year ended June 30, 1932, show net profit, after charging £359,970 for depreciation, &c., and £128,000 for debenture interest, amounted to £157,457. This compares with a loss of £175,289 for year ended June 30, 1931. The full preference dividend is to be paid, but ordinary shareholders receive no dividend. Fixed assets have increased from £4,993,734 to £5,047,429. Advances to, and debts due from, subsidiaries are at £919,435, compared with £711,085, while investments are £161,072 higher, at £1,323,579. Stocks are at £743,108, against £661,785, but cash at £514,721, against £731,384 a year ago. Debtors are up from £1,246,801 to £1,311,005. Creditors have risen to £430,029, from £355,647, and deposits are down from £336,160 to £309,226.

GAUMONT-BRITISH PICTURE CORPORATION, LIMITED.—The profit for year ended March 31, 1932, fell by £11,759 to £490,301. The ordinary dividend is maintained at 6 per cent., less income tax. The carry-forward is increased from £84,461 to £87,229. The sum of £29,832 has been transferred from Reserve in order to write down certain items, but by an appropriation of profits the Reserve has been increased to £2,550,000, a figure in excess of the amount of ordinary share capital. Bank Loans have fallen from £270,000 to £164,955. Meeting at 142-150, Wardour Street, W.1, September 28th, at noon.

INCORPORATED ACCOUNTANTS' EXAMINATIONS.—The next examination of candidates for admission to the Society of Incorporated Accountants and Auditors will be held on October 31st, November 1st, 2nd and 3rd, in London, Manchester, Cardiff, Leeds, Glasgow, Dublin, Belfast, Cape Town, Johannesburg and Durban. Women are eligible under the Society's regulations to qualify as incorporated accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the Office of the Society, Incorporated Accountants' Hall, Victoria Embankment, London, W.C.2.

OVERSEAS TRADE RETURNS.

IMPORTS (Value C.I.F.).

	Month ended August 31.		Eight Months ended August 31.	
	1931.	1932.	1931.	1932.
I.—Food, Drink, and Tobacco—				
A. Grain and flour	4,854,563	4,880,032	33,225,483	38,091,349
B. Feeding stuffs for animals	404,506	544,357	3,136,648	4,252,471
C. Meat	7,597,258	6,947,010	62,809,419	54,655,477
D. Animals, living, for food	1,420,043	304,349	9,046,439	7,022,395
E. & F. Other food and drink	16,939,328	14,991,892	149,818,331	134,090,762
G. Tobacco	660,474	539,447	6,364,275	4,573,973
Total, Class I.	31,865,972	28,207,087	264,400,655	242,686,426
II.—Raw Materials and Articles Mainly Unmanufactured—				
A. Coal	2,497	1,894	21,640	18,869
B. Other non-metallic mining and quarry products and the like	302,853	282,051	2,661,413	2,331,822
C. Iron ore and scrap	179,487	123,395	1,674,672	1,337,541
D. Non-ferrous metalliferous ores and scrap	575,654	496,747	5,057,178	4,295,188
E. Wood and timber	3,765,335	2,923,800	17,954,246	16,411,028
F. Raw cotton and cotton waste	1,578,986	2,211,838	16,408,597	19,506,566
G. Wool, raw and waste, and woollen rags	808,053	1,065,014	26,815,042	25,010,223
H. Silk, raw, knaps and nolls	87,018	86,934	800,533	951,306
I. Other textile materials	285,938	263,205	4,275,146	4,783,571
J. Oil seeds, nuts, oils, fats, resins, and gums	1,962,273	1,564,232	17,797,113	15,515,114
K. Hides and skins, undressed	989,421	944,038	7,665,193	8,907,353
L. Paper-making materials	761,730	749,282	6,052,756	6,252,099
M. Rubber	253,169	189,645	3,479,712	1,763,236
N. Miscellaneous raw materials and articles mainly unmanufactured	931,630	781,101	5,765,023	4,923,666
Total, Class II.	12,483,504	11,703,176	116,428,264	112,007,382
III.—Articles Wholly or Mainly Manufactured—				
A. Coke and manufactured fuel	662	1,830	11,000	13,538
B. Earthenware, glass, abrasives, &c.	756,449	452,447	5,969,131	3,202,719
C. Iron and steel and manufactures thereof	1,357,894	498,318	12,008,084	6,552,076
D. Non-ferrous metals and manufactures thereof	1,474,803	1,241,860	13,899,285	9,435,301
E. Outfery, hardware, implements, and instruments	458,713	422,704	4,377,079	2,757,345
F. Electrical goods and apparatus	447,657	243,042	3,289,715	1,582,437
G. Machinery	1,051,329	701,185	9,575,483	7,242,296

Total	65,281,043	53,312,814	553,094,289	465,943,418

RICE.—The market has been quietly steady, and Wednesday's spot price of 10s. per cwt. is again unchanged on the week, and most forward positions are unchanged at 8s. 4d. Movements in London during the past week were as follows: Landed, 53 tons; delivered, 386 tons; stock, 1,944 tons, against 890 tons a year ago.

POTATOES.—Supplies were ample, and prices in consequence barely steady. "King Edward," light soil, were unchanged at 5s. to 10s.

SPICES.—Peppers have been steady but quiet, and "Black Singapore" was quoted 6d. per lb. on Wednesday, a fall of 1d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 43 tons; stock, 273 tons, against 600 a year ago. White, landed, 39 tons; delivered, 40 tons; stock, 402 tons, against 492 a year ago.

MEAT.—Some of last week's advance in Argentine beef was lost, and the quotation for chilled hindquarters was 3s. 8d. to 4s. 4d. on Wednesday, against 3s. 10d. to 4s. 6d. last week; New Zealand frozen mutton was 2s. 4d. to 2s. 10d., against 2s. 2d. to 2s. 10d. on Wednesday of last week. According to the Smithfield Market official report, supplies during last week amounted to 8,954 tons, against 9,417 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.6 per cent. of the beef supplies, against 83.9 per cent. a year ago. Imported mutton, mainly New Zealand, formed 73.6 per cent. of the total supply of mutton and lamb, against 74.7 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets are still influenced by the possibility that effect will be given to the Ottawa agreements probably in November, these including an import duty on Plate linseed. The effect has been seen in the renewed activity in the linseed market, demand for near positions being strong. Plate linseed on spot at Hull advanced to 110, but an easier feeling has developed for seed on passage, up to 10s. 6d. has been conceded, and for October and November loadings 10s. 15s. has been paid. Current value for Plate afloat is 10s. 15s., and for shipment to the end of the year 12s. 8d. to 13s. 6d. Calcutta to London, September-October, has been done at 11s. 10s., and October-November at 11s. 12s. 6d. The quantity of linseed afloat for Europe has advanced to 197,000 tons, or 31,200 tons more than last week, and compares with 126,800 tons a year ago. Cottonseed is in better demand, and old crop Egyptian is now held for 27 10s., with new crop, October loading, quoted at the same figure. A considerable trade has been done in linseed oil in practically all positions, up to 17 10s. being paid for raw oil on spot at Hull. For September delivery 17 10s. is now quoted, and for October-December 17 15s. Forward positions have lost some of the premium they have enjoyed. Cotton oil is firm, and crude Egyptian ex Hull is quoted at 23 5s., and refined 25s. 10s. prompt. Other vegetable oils are also slightly dearer. Oilcakes are in moderate demand, and late quotations are maintained.

HIDE, LEATHER AND ALLIED TRADES.—Most descriptions of hides and skins have further advanced in price, in face of a good inquiry. At the Manchester sales of domestic supplies, all weights and classes of ox and heifers, together with cows and bulls, made 1d. per lb. more, while calfskins were from 1d. to 1d. per lb.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

DEATH DUTIES

Seventy Million Pounds are taken out of capital each year to meet Estate Duties alone.

The only satisfactory method of meeting the capital loss is by LIFE ASSURANCE.

Write for special booklet "Provision for Death Duties at Minimum Rates."

EQUITY & LAW
LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2.
Established 1844 Funds Exceed £10,000,000

£1,300 instead of £1,000?

Under the Institution's *Distinctive System* of Whole Life Assurance the Premiums are on so moderate a scale that at early and middle ages the yearly sum charged elsewhere for £1,000 (with profits) will here secure from the first as much as £1,300 or thereby, with right to Bonuses. The additional £300 is equivalent to an Immediate and Certain Bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

Full particulars of the *Distinctive System* will be sent on receipt of a postcard addressed to:

THE
SCOTTISH PROVIDENT INSTITUTION,
6 ST. ANDREW SQUARE, EDINBURGH.

Founded in 1837 Funds exceed £22,000,000

THE MONEY MARKET.

MONEY has once more been very easy, with $\frac{1}{4}$ per cent. the ruling rate for both old and new money. Over the week-end, the usual conditions of extreme ease prevailed, while towards the middle of this week revenue and Treasury bill payments made money a shade more usable. Apart from the fact that the clearing banks were buyers of all maturities, the discount market has been very inactive. On September 16th Treasury bill offerings amounted originally to £50.0 millions, but in the end it

was found that the full amount was not required, and so the allotment was reduced to £46.0 millions. As a result of heavy applications, the average tender rate fell from 12s. 11.7d. to 9s. 7.39d. per cent., or to a new low record, the previous low record having been 9s. 11.05d. per cent. on August 5th last.

With business practically limited to occasional clearing bank buying, discount rates have become very weak. October Treasury bills were quoted in the market at $\frac{3}{8}$ per cent., Novembers at $\frac{1}{2}$ per cent., and Decembers at $\frac{1}{4}$ per cent., but the clearing banks have as a rule succeeded in buying Octobers at $\frac{3}{8}$ per cent. and other maturities at $\frac{1}{4}$ per cent., and on Thursday, when the rate on "hot" bills was showing a tendency to harden, it was forced back again by a bank purchase to the old rate of $\frac{1}{4}$ per cent. A certain number of "hot" Treasuries were thrown on the market by their original holders at $\frac{3}{8}$ per cent., or cost price. Three months' Bank bills are quoted at $\frac{1}{2}$ per cent., but most business has actually been done at a slightly lower rate. Standstill bills are quoted at 1.2 per cent., and some houses are less ready to take them up than they were earlier in the year.

	Sept. 1, 1932.	Sept. 8, 1932.	Sept. 15, 1932.	Sept. 22, 1932.	Previous Rate and Date Changed.
Bank Rate	2	2	2	2	2 (June 30, '32)
Banks' Deposit Rate..	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Discount / Call	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Houses / Notice ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Market rate ("hot")	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Treasury bills).....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Market rate (3 months' bank bills)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Market rate (standstill bills)	1-2	1-2	1-2	1-2	...

The low rates and inactive conditions prevailing in the discount market are becoming a problem to the smaller firms, for the bills bought at the higher rates current earlier in the year ran off some time ago. It must be remembered, however, that brokers were able to earn substantial profits during the period of falling money rates early in the year, and also out of the appreciation in the gilt-edged market, and so they ought not to achieve too bad results on the year as a whole. On the other hand, it is a matter of considerable importance for them to know how long the present regime of low and unremunerative rates is likely to last, and a point of more special importance this week is whether or not to apply specially for end-of-December maturities.

To judge from Government statements, and also from the Ottawa Conference Monetary Report, the present intention is to keep money very cheap for an indefinite period, in order to leave the way clear for a revival in trade. It is needless to add that recovery depends upon a large number of factors besides cheap and plentiful credit, but it is obviously essential that the commercial world should be able to count upon cheap money for a considerable time to come, even though supplies of credit are, under the present adverse conditions, in excess of requirements. It therefore seems safe to assume that the December 31st half-year will pass just as easily as did that of June 30th, and this implies that there is no need for the market to compete for end-of-December maturities to the extent of driving down the rate.

The Bank return records a return of £3.0 millions of notes from circulation, and with gold movements negligible the reserve is increased by the same amount. Though this contraction is explained in part by the return of holiday notes, it is rather more pronounced than is usual at this time of year. The only other movements of note are an increase of £11.0 millions in Public Deposits to £29.9 millions, and a decrease of £7.2 millions in Bankers' Deposits to £82.6 millions. The former movement is due to an excess of Treasury bill payments over maturities, and also possibly to certain revenue payments which are concentrated in the middle of the month. The decline on Bankers' Deposits is the resultant of the contraction in

the note circulation and the increase in Public Deposits. It explains the very slight hardening of money towards the middle of the week.

The Foreign Exchange market was again very quiet this week. The reaction in sterling which set in a short time ago continued and became more pronounced, but was less marked at the close. The New York rate fell from 3.47 $\frac{1}{2}$ to 3.45 $\frac{1}{2}$. Montreal was unchanged at 3.85 $\frac{1}{2}$. Paris hardened to 88 $\frac{1}{2}$ and Brussel to 24.90, against 88 $\frac{1}{2}$ and 25.10 last week. Milan improved fractionally to 67 $\frac{1}{2}$, as did Madrid to 42 $\frac{1}{2}$. Amsterdam was five points better at 8.61, and Berlin eleven points better at 14.51. Switzerland went from 18.02 to 17.92. The Scandinavian currencies were not much changed, Stockholm moving only two points against us at 19.49, whilst Oslo and Copenhagen remained at last week's levels of 19.87 and 19.28. The South American currencies are still largely nominal, and remained at last week's levels. In the Far East the rupee, after some hesitation, was unchanged at 1s. 6 $\frac{1}{2}$ d. The yen improved by $\frac{1}{2}$ d. to 1s. 4 $\frac{1}{2}$ d. Batavia was unchanged at 8.67. In the forward market dollars were less offered at narrower discounts of $\frac{1}{2}$ cent for one month and $\frac{1}{2}$ cent for three months. Paris was quoted at 2 and 7 centimes discount. Belgas were better at 8 and 23 centimes discount, against 10 and 30 centimes discount last week. One month's Milan was weaker at $\frac{1}{2}$ lira discount, three months being unchanged at $\frac{1}{2}$ lira discount. Madrid was at $\frac{1}{2}$ peseta discount for one month and $\frac{1}{2}$ peseta discount for three. Amsterdam improved to $\frac{1}{2}$ cent premium for both deliveries, whilst Switzerland was unchanged at $\frac{1}{2}$ and 1 centime premium for one and three months respectively. Silver was $\frac{1}{2}$ d. lower for both quotations at 17 $\frac{1}{2}$ d. for cash and 17 $\frac{1}{2}$ d. for forward, India being a seller as a result of political uncertainty. The China silver exchanges reacted in sympathy, both Hong Kong and Shanghai being $\frac{1}{2}$ d. cheaper at 1s. 4d. and 1s. 9 $\frac{1}{2}$ d. respectively.

The main feature of the foreign exchange market has thus been the weaker tendency of sterling, and it is understood that when the New York rate fell below \$3.46 on Thursday, some official intervention was thought desirable. The causes of this weakness are seasonal purchases of dollars to finance crop movements and possibly a return of foreign capital to Wall Street as a result of the revival in the New York stock market. Francs have also showed some strength, and here it is suggested that there has been some foreign buying of rentes in order to take advantage of the conversion offer. The fact that the New York rate has lately been held at just under \$4.50 does not mean that sterling is going to be stabilised at that point. To disprove suggestions to that effect, it is only necessary to point out that many questions require to be settled before stabilisation can be considered.

New York money rates remain unchanged, with call money at 2 per cent. and 90-days bankers' acceptances at $\frac{1}{2}$ per cent. in the open market. According to the American Acceptance Council, bankers' acceptances at the end of August amounted to \$681.5 millions. This represents a decrease on the month of \$23.2 millions and on the year of \$408.9 millions. Member bank demand deposits increased by \$221.0 millions during the week ended September 14th. This reflects Government financing in the middle of the month, and, incidentally, the impression is growing that the Tax Bill passed last session will be inadequate to provide for the deficit. Gold arrivals during the week ended September 21st amount to \$3.4 millions, while withdrawals from earmark are returned at \$29.6 millions. There were no gold exports of note, so that the net gain on the week is about \$33 millions.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

BRITAIN'S NOTE TO GERMANY.

We cannot congratulate either the German or the British Government on the developments, for which they are severally responsible, in the course of the armaments negotiations during the past week. Last Saturday two acts of the German Government were announced which have seriously added to the difficulties of an already difficult diplomatic situation. It was announced that the von Papen Government had informed the President of the Disarmament Conference, Mr Arthur Henderson, of their decision not to be represented at the current meetings of the Bureau of the Disarmament Conference. Simultaneously it was announced that the German Government had given orders for the laying down of the third of the six "pocket-battleships"—those expensive miracles of perverse ingenuity—that are allowed to Germany by the Versailles Treaty. Both acts were, of course, strictly within Germany's legal rights; but at the same time both were gravely prejudicial to Germany's own true interests—not to speak of the interests of the international common weal with which all national interests, German and other, are manifestly bound up in this post-war world.

Yet, if Germany's attitude has been sadly lacking in diplomatic finesse, and has, indeed, been such as to lend weight to the suspicion that her present rulers desire not so much universal disarmament as re-armament for Germany, it is difficult to feel greater satisfaction with the Note embodying the British Government's contentions in this controversy. It falls, in effect, into two chapters, the first critical, the second expounding British views. The critical chapter concludes with a declaration of opinion that "the correct position under the Treaty of Versailles is that Part V is still binding, and can only cease to be binding by agreement." This conclusion, which is clearly not open to challenge, is led up to by an impeccable legal argument; and it is supplemented by some blunt expressions of opinion on Germany's tactics. "His Majesty's Government . . . think it unfortunate that a political controversy of this magnitude should arise at this moment, when it is so necessary that attention and energy should not be diverted from efforts which are being undertaken, and are so urgently needed, to restore the productive and commercial prosperity of the world." It is submitted, further, that, "in view of Germany's economic difficulties, the initiation of acute controversy in the political field at this moment must be accounted unwise," and that, "in view of the concessions so recently granted to Germany by her creditors, it must be accounted particularly untimely."

So runs the critical part of the Note. Two comments upon it suggest themselves. The first is that apparently Germany does not directly challenge the British reading of the Treaty—indeed, later on the Note itself assumes as much. The strong element in her case is that, in view of the statements made both in the Treaty and in the Clemenceau letter, the Allies are morally bound to disarm. Whether Germany was in a position in 1919 to refuse any terms the victors might have dictated is not now relevant; the fact is that the picture of the future world then placed before Germany was not one in which she remained with a minimum of armaments while the other Powers retained an overwhelming superiority of military force. The picture was rather one of a world secured by international agreements in which the maintenance of peace required, in the words of the Covenant, "the reduction of national armaments to the lowest point consistent with national safety and the enforcement by common action of international obligations." Germany has a right to say that her signature of the Treaty imposed a moral obligation on the nations which they have not fulfilled.

As to the untimeliness of Germany's intervention, there is no doubt that her action has forced an issue which will hold up world recovery until it is settled. But the curse of the world for a decade has been procrastination. If the Powers had shown greater keenness during the Disarmament Conference itself—to say nothing of the past twelve

years—to reduce their forces substantially, the internal situation in Germany would have been very different and she would not have been goaded to put forward so "untimely" a demand.

The statement, however, recognises that Germany's case is not based "on legalistic deductions from the language of the Treaty of Versailles," but is an appeal for adjustment on the moral ground that the disarmament clauses of 1919 were intended to be the precursor of general limitation by other nations. "His Majesty's Government do not deny the fact and do not seek to minimise the force of the contention." They therefore seek a way in which Germany's claim may be met, and in this connection they define the purposes of the Conference in somewhat ambiguous terms by asserting that "the objects to be aimed at are, in the case of the more heavily armed Powers, the largest possible reduction, and in the case of lightly armed States, at any rate no material increase" (*sic*). From this they proceed to set out their own position, which is that hereafter all arms limitation will be controlled by the same process, and limitation "already prescribed by existing treaties—such as the Peace Treaties or the Naval Treaties of Washington and London—will, save so far as they are modified by mutual consent, reappear in the voluntary and comprehensive compact about to be negotiated at Geneva." This means that there will be no distinction of status, and so far as the juridical side is concerned, is a frank acceptance of the point of view of Germany, whose demand (as set out in the famous *aide-memoire*) is that "the Disarmament Convention takes the place of Part V of the Versailles Treaty for Germany." It is true that there is a touch of diplomatic adroitness in the grouping together of the clauses of the Peace Treaty, which was imposed upon Germany, and of the Washington and London Naval Treaties entered into voluntarily. But the Note is perfectly right; the whole system should be brought within a single code.

This, however, still leaves uncovered two important considerations. The first is that if Germany's armaments, without having attained *de facto* equality (and she has expressly stated her willingness to concur, as a transitional solution, in some measure of inequality), are to be limited by a General Convention, the clauses of the Convention applying to Germany must not last for ever. This point is emphasised in the German Note. If German's legal status is placed on the same footing as that of the other countries, the point might be met by the Covenant which provided for the revision of a general arms Convention every ten years. It is possible that under the conditions anticipated the agreement might even be for a shorter period in the first instance.

The second consideration is still more vital. It is that other countries must come down to a level much nearer to that of Germany, the alternative being a demand which may prove irresistible that Germany should be permitted to rearm. There are sections of opinion in some of the former Allied Powers which would rather see Germany permitted to rearm than have to make drastic cuts in their own armaments. That solution—the "tragic paradox" of the British Note—leads to disaster. But that or drastic cuts by other countries is the choice before us. We do not believe that the voluntary reductions hitherto made by the United Kingdom, or by any other Power, have been at all commensurate with the reductions that are urgently called for by the present critical state of international affairs. And we look in vain for any clear indication in the British Note that the Government is determined to press at Geneva for such measures of armaments reduction in the victors' case as would provide an answer to Germany's charge of breach of faith on the ex-Allies' part, and make it possible for her to renew as an entirely voluntary act an engagement to limit her armaments to something like their present scale.

Here, in fact, is the crux of the whole matter. The British Government may admonish Germany for General Schleicher's tactlessness; it may feel disappointment that

its Note has been denounced by the German press as a piece of insincere hypocrisy. It may protest that its intentions are both sincere and laudable. But unless the British Note is followed by a positive proposal on Britain's part that reduction by the "heavily armed" towards Germany's level should at least be begun here and now (and reduction by means of budgetary limitation suggests itself as a promising method for yielding quick results), our moral lecture to Germany will prove, we fear, exceedingly unfruitful.

LIBERALS AND THE GOVERNMENT.

GROUNDLESS expectations, to which currency had been given by a section of the Conservative Press, that Wednesday's meeting of the Executive of the National Liberal Federation would serve as an occasion for the announcement of the resignation of the Liberal Ministers, have not unnaturally been disappointed. According to the official account of the proceedings, Sir Herbert Samuel informed the meeting that the Ottawa proposals were discussed (on very brief reports, we imagine) in the Cabinet on August 27th, immediately after the return of the delegates. Since then the Cabinet has been scattered; but on August 29th Sir Herbert Samuel sent his colleagues in the Government a memorandum reviewing the situation and suggesting a course of action. At a meeting of the Liberal Ministers on September 8th provisional conclusions were unanimously reached and confirmed at a further meeting held on September 14th. The Prime Minister had announced that the final consideration of the legislation called for by the Ottawa agreements would be begun at a meeting of the Cabinet to be held on September 28th. Pending that meeting, Sir Herbert was not able to make any statement as to the course which the Liberal Ministers would take in the Cabinet discussions. Indeed, having regard to the obscurity of the Ottawa documents so far published, and to the fact that no definite decision as to legislation can yet have been taken by the Cabinet, it would obviously be proper that the Liberal Ministers should deem it necessary to satisfy themselves as to the considered attitude of the Prime Minister and the Conservative section of the Coalition before finally deciding whether or not to remain within the Government.

Nevertheless, unless the Conservative Ministers are prepared to modify the Protectionist trend of tariff policy which they have instituted to the detriment of every real national interest, the resignation of the Liberal Ministers can hardly be withheld. It is difficult to suppose that Mr Isaac Foot would have been so outspoken at Cardigan on Tuesday in denouncing the Ottawa agreements had he not known that when the agreements were debated in the House he would be repeating his criticisms from a position other than the Government front bench; and it is understood that at the Liberal Executive meeting both Sir Herbert Samuel and Lord Lothian significantly endorsed all that Mr Foot had said. In so far as the feeling of the Liberal Party with regard to the Ottawa agreements is concerned, the resolution passed at Wednesday's meeting should leave Sir Herbert Samuel and his colleagues in little doubt as to the opinion of the party. The resolution declares that the Ottawa agreements increase instead of reducing the impediments to world trade, involve an unprecedented surrender of the rights of the British Parliament, limit the power of this country to negotiate freer conditions of trade with other countries, impose fresh burdens upon the mass of the people by taxing or otherwise raising the price of essential foodstuffs, and nullify the value of Dominion "concessions" by accepting the vicious principle of compensatory tariffs. It ends by calling for uncompromising opposition to the agreements. If, as we believe, Sir Herbert Samuel and his colleagues share this view on an issue fraught with consequences so vital to our future evolution for years to come, the Liberal Ministers cannot retain their places in the Government unless their colleagues are able not only to express the intention but to produce an effective plan for securing the increase of international trade of which Mr Baldwin spoke so wisely at Ottawa.

The withdrawal of the Liberal Ministers will doubtless be proclaimed in many quarters as an "unpatriotic" step. It will be argued—it is indeed already being argued in advance—that the situation in India and in Ireland is grave; that the League of Nations is facing a critical problem in Manchuria; that the Disarmament Conference has reached a crucial stage in its proceedings; that the World Economic Conference is imminent; and that it is undesirable that the influence of Britain should be weakened by the disintegration of the "National" Government. It may be argued too, though this is not an aspect of the situation on which the leaders of the Conservative Party may care to dwell, that domestically the state of our foreign trade and our unemployment is as critical to-day as when the "National" Government came into being. For the Liberal Ministers to disassociate themselves from the Administration at this juncture because of doubts as to the wisdom of certain "tariff experiments" is bound to be assailed as "desertion in the face of the enemy."

We are not disposed to minimise the force of the argument that there is still undiminished need for unity of national purpose in this country, and we are prepared to agree that it would be worth while to pay a considerable price for the maintenance of a Government which gave convincing evidence of its determination and ability to deal with every facet of the great economic and political problems confronting us in such a way as to serve unmistakably the national interest. Indeed, if the record of the present Government were in other respects impeccable, it would undoubtedly make the decision of the Liberal Ministers in weighing the balance of advantage and disadvantage much more difficult. As it is, we are convinced that, unless the Government has a far more constructive policy than has yet been disclosed, the balance of advantage swings quite clearly in the direction of resignation. For though the Ottawa agreements may fairly be regarded as the last straw, the real case for resignation rests on wider grounds, namely, that since it came into office the general policy of the Government has not been nearly as vigorous in grappling with the world crisis as the situation requires and that liberal opinion can play its part most usefully in external but constructive criticism of the Government's actions.

A year ago, when a real crisis of panic threatened the stability of this country, we gave unqualified support to Mr MacDonald's decision to form an all-party administration to deal with the emergency. The decision was justified by its fruits: the Budget was balanced, and though the suspension of the gold standard could not be averted, confidence in sterling was rapidly restored. Had the Emergency Administration remained in being, imbued with the sense that its function was to give single-minded attention to the critical situation of this country and of Europe, without considerations of party alignment, until the foundations of recovery were surely laid, the history of 1932 might have been happier. As it was, a needless, unjustifiable and delusive general election produced a new Parliament quite unrepresentative of the real distribution of opinion in the country, and a new Government, indistinguishable from a Coalition, in which a Liberal minority has done little more than tinge the hues of an otherwise Conservative policy.

The result has been far from satisfactory. The Government has a few excellent achievements to its credit, including in particular the success of the conversion scheme, but in general it has to an increasing extent suffered from the weakness of all Coalitions whose life is prolonged beyond a specific *ad hoc* emergency, such as a war, or a single piece of legislation for whose enactment clear-cut accord is concluded. Above all, Parliament has suffered from the lack of the honest and open criticism, which is the breath of life to democratic government. In the withdrawal of the Liberal Ministers from an Administration whose main positive activity has been to pile tariff on tariff, and whose supposed expression of the "general will" involves increasingly an element of political insincerity, we should find, for our part, not a weakening of British influence abroad, but the re-establishment of healthy reality in British politics.

A YEAR OFF GOLD.

ON Monday this week sterling celebrated the first birthday of its departure, for good or for evil, from gold. The year has been extremely chequered, but on the whole sterling has thrived better than might have been expected—certainly much better than might have been inferred from the lugubrious prophecies heard immediately before the suspension of the gold standard. In order to review its varying fortunes, we have prepared the chart published at the foot of this page. The keyline in this chart is the course of the sterling-dollar exchange, the rate being plotted for every Thursday during the year. We have also added to the appropriate dates the principal events of the year which had a distinct bearing upon the exchange value of the pound and also of the dollar.

The year began not only with the suspension of the gold standard, but also with the institution of a 6 per cent. Bank rate and the imposition of certain moderate restrictions upon the sale of sterling. The pound had to begin by finding its new level, which it did for a few weeks at \$3.90. During October the dollar was subjected to considerable pressure, mainly because Continental central banks were abandoning the gold exchange standard and turning their dollar *devises* into gold. This involved the United States in gold losses of \$750 millions and necessitated a double increase in the New York rediscount rate from 1½ to 3½ per cent.

November witnessed the second big decline in sterling, which was due to a variety of causes, all operating in a very restricted market. These included purchases of foreign exchange to finance seasonal and "abnormal" imports in forestalment of the tariff, and the liquidation of the Netherlands Bank's sterling balances. It is also possible that preparations for the repayment of the last part of the Bank's credits and of the Treasury credits were in hand. At this juncture, however, began the outflow of gold from India which was to be of such assistance both to India herself and to the pound. The result was that by December the decline in sterling had been checked, with summary punishment inflicted upon the "bears," while in January, when it became clear that revenue was coming in well, the foundations were laid for a recovery.

Meanwhile the American authorities were embarking upon their policy of credit expansion. In the middle of January the Reconstruction Finance Corporation was formed, and the same week witnessed the beginning of the

big gold efflux from the United States. The following month the Glass-Steagall Act was passed, permitting a further expansion of Federal Reserve credit, and the Reserve Banks began their big purchases of Government securities. This credit expansion had one good effect in that it checked bank failures and enabled member banks to reduce their indebtedness to the Reserve system; but it did not inspire world confidence in the dollar, especially as it was by then clear that the American budget was unbalanced. A final disturbing influence was the decision of France to withdraw her balances from New York.

Thus, to the recovery of sterling during the first quarter of 1932 several influences contributed. It represented in part a natural reaction from our abnormal depreciation of December, helped by the improved budgetary position and the repayment of our foreign credits. On the more tangible side, the sales of Indian gold, estimated at £32 millions up to the end of February, had had a cumulative effect, while the introduction of the tariff and the conclusion of forestalling brought a sudden drop in imports into Great Britain. But a further contributory factor was the temporary loss of foreign confidence in the dollar for reasons stated above.

The rise in sterling lasted until April, and was accompanied by further repayments of Britain's Paris and New York credits, by reductions in Bank rate from 6 to 3 per cent., and by the removal of the restrictions upon foreign exchange dealings. In April came the Budget and the announcement of the impending establishment of the Exchange Equalisation Account, which actually came into being on July 1st. This gave a definite check to speculation in sterling for the rise, and the pound fell back to just under \$3.70, where it was pegged during May and early June. In May, too, the Bank of England was able to begin the replenishment of its gold stocks.

From that date onwards the course of the New York-London exchange ceased to be sensational. The balancing of the United States budget and the gradual realisation abroad that the American authorities had no intention of carrying schemes of credit expansion to any dangerous point removed one factor, namely, mistrust in the dollar, from which sterling had previously benefited indirectly. Moreover, not only did seasonal purchases of dollars for normal import financing exercise a gradually depressing influence on sterling, but the mid-summer revival in Wall Street attracted a certain volume of European funds. On the other hand, the successful conversion of the 5 per

cent. War Loan was a strong factor making for long-term confidence in sterling; there was little trace of bear speculation in the pound, and the general impression in foreign centres was that the resources in the hands of the British authorities were adequate to prevent any violent fluctuations. Thus, twelve months after the suspension of the gold standard, we see no reason short of an improbable boom of great dimensions in Wall Street to forebode in the next six months a recurrence of the violent movements which characterised last winter.

EUROPEAN WAGE TRENDS.

(BY A CORRESPONDENT.)

PRECISE comparison of the course of wage movements in different countries is impossible, partly because of the inadequacy of statistical material, and partly because of the complexities of wage-fixing methods and adjustments, especially in Great Britain. A study of the available official information, however, indicates that in the crisis conditions of the past twelve months wage rates in Great Britain have on the whole yielded less to the economic pressure than in several other important industrial countries. The figures published by the Ministry of Labour give a broadly accurate impression of what has happened in this country, but they may be regarded as to some extent an under-statement, seeing that agricultural workers, Government employees, shop assistants, and some other classes of workers are not included. All the basic and most of the general miscellaneous industries and trades are covered, however, and it is shown that in these there were net decreases in the wage rates of approximately 1,259,000 persons during the six months ending June 30th this year, and a reduction of £159,000 in the total weekly wages of those persons, estimated on the basis of full-time working. In the corresponding period of 1931, before the financial crisis was added to the world trade depression, the comparative figures were 2,008,000 workpeople and £226,500. For the whole of 1931 wage reductions affected just under three million persons, and the total weekly amount was round about £400,000, compared with 1,100,000 and £57,000 in 1930. A large part of all these reductions is attributable not to claims by employers on account of trade depression but to the operation of cost of living sliding scales. Other sliding scale reductions based on the selling price of the product of the industry, notably in iron and steel, are more directly the result of trade depression.

The minimum rates of coal mine workers, who have been on an extremely low scale since 1926, remained unchanged in the period under review. Other groups important numerically whose wage rates were maintained during 1931 were cotton operatives, printers, seamen, dock and flour mill workers, but, as will be seen below, the impetus given by the deepening depression to what on the Continent are described as claims for "crisis reductions" has now extended the movement to nearly all these workers—concerted action being taken at the time of writing to enforce a heavy reduction throughout the cotton industry, and claims by printing trade employers and the L.G.O.C. being still under discussion.

Taking a rapid survey of the wage changes in the principal industries during the past twelve months, it may be noted that it is not possible to estimate the general effect of the successive adjustments in the rates of iron and steel workers in percentage terms, because they are not uniform throughout the producing districts, and in some cases the employers have not pressed for the full reductions they could have claimed under the sliding scale provisions, while in others it has been agreed that wages should not fall below a specified level. In some of the specialised sections of the steel industry in Sheffield, in which the sliding scale does not operate, there were reductions in bonus payments amounting to several shillings a week, again with modifications for low-paid men.

The most drastic change covering a large number of workers in 1931 was the enforcement by most of the employers in the woollen textile industry of Yorkshire, acting individually after the termination of the agreement with the unions, of cuts of 11.7 per cent. on time and 11.2 per

cent. on piece rates. This was definitely a cost-lowering movement. In the engineering industry there was an agreement to reduce costs by a less drastic adjustment in overtime and night shift rates, and a modification of piece rates so as to enable a workman of average ability to earn only 25 per cent. instead of 33 per cent. above time rates—a method of readjustment which was also followed by the boot and shoe trade employers. In the shipyards there were changes, in so far as they were applicable, similar to those accepted by the engineering workers, and in addition some rather drastic reductions in, or complete elimination of, abnormal bonus payments which had persisted since the war were enforced. Railway workers in nearly all grades accepted a reduction of 2½ per cent. on gross earnings, with a further reduction of 2½ per cent. on earnings above 40s., and a similar cut was later accepted by most of the tube and underground workers employed by the London Combine. Early in 1932, after prolonged negotiations, dock workers agreed to a reduction of 10d. per shift on time rates and 7 per cent. on piece rates, and marine workers accepted one of 9s. to 12s. per month for ordinary seamen and 18s. for other classes. The wages of tramway workers throughout the country, and later of the London tramwaymen, were reduced by about 1s. per week.

The reductions in miscellaneous trades varied widely, ranging mainly from 1s. to 3s. a week, with the majority round about 2s., or 5 per cent. In these groups are included manual workers employed by local authorities. There were small adjustments, apart from cost of living reductions, in the building trades, and cuts varying between 6d. and 3s. per week were accepted by agricultural workers in a number of counties.

A survey of all these figures, covering two or three million workers, shows that, apart from the woollen textile operatives and the Lancashire cotton operatives affected by the present dispute, the majority of the more serious reductions do not represent more than about 5 per cent. on the total earnings of those concerned. This contrasts sharply with the heavier cuts which many Continental workers have been called upon to accept, especially in Germany under the emergency decree of December last. It is not possible to bring the United States into a comparison, owing to the lack of reliable records and the disorganisation of masses of workers, but there is good reason to believe that in the past few months drastic reductions have been widely enforced.

The avowed purpose of the German decree, which took effect on January 1st this year, was to justify the enforcement of lower prices by a reduction of all wage rates covered by agreements to the level fixed by the corresponding agreements on January 10, 1927. In the second half of 1931 wages had already been reduced in many industries, outstanding instances being iron and steel 1s. per shift; coal 4 per cent.; textiles in Saxony 5 per cent.; and metal and engineering 6 per cent. The extent to which the decree increased these and other reductions is shown by a comparison of the rates prevailing on January 1st this year and a month earlier. For skilled workers there was a decline of 9 per cent. in the building and paper trades; round about 10 per cent. in coal mining, pottery, baking and confectionery, and the Federal railway and postal services; 11.4 per cent. in brewing; 11.6 per cent. in metal and engineering; 12.8 per cent. in printing; 13 per cent. in lignite mining; and over 14 per cent. in chemicals and paper goods. These reductions, virtually all of which still continue, although negotiations for revision were possible after April 30th, indicate the heavy fall over the whole of industry in Germany, as compared with Great Britain.

In Belgium there have been reductions in coal mining, transport, iron and steel, engineering and other industries averaging about 5 per cent. In the Saar iron and steel wages were cut by 6 per cent. in November. In the North of France a reduction of 4 per cent. in the textile industries last year was followed by one of 10 per cent. in January this year, and a recent award in the northern coalfields provides for a cut of 7½ per cent. in two instalments. In Sweden a general movement for "crisis reductions" has been carried through, not without strong opposition from the workers, through the State conciliation machinery, the principal reductions being:—Iron and steel and engineer-

ing, 6 per cent. piece workers and 4 per cent. time; saw milling, 9 per cent. piece and 6 per cent. time; paper workers, 4 per cent.; and dock workers, varying amounts. In several industries also hours have been extended from 48 hours weekly to 52. In Holland typical reductions in recent months are textile workers, 10 per cent.; dock workers, 7 per cent.; miners (including State mines), 10 per cent.; and metal workers, 11 per cent. In Norway, where resistance was carried to the point of strikes or lock-outs in several industries, there have been general reductions ranging from 5 to 9 per cent. In Denmark the employers demanded a general reduction of 20 per cent., but the State Conciliator persuaded them to postpone the claim for a year. In the co-operative bacon factories, however, a strike was settled on the basis of a 3 per cent. reduction. Fewer details are available relating to wage movements in Italy, but in March 25,000 employees of the Fiat concern accepted a cut of 10 per cent. In the Silesian coalfield of Poland a cut of 8 per cent. was accepted, and in the Dombrova field one of 10 per cent. was enforced after a strike. An interesting point about the settlement in both these coalfields was a provision that the total amount of the reductions should constitute a fund from which compensation may be available for export losses.

INDUSTRY ON THE NORTH-EAST COAST.

THE Industrial Survey of the North-East Coast Area,* recently conducted for the Board of Trade by Armstrong College, leaves a more depressing impression upon the reader than the survey of Lancashire, which we discussed two weeks ago. Lancashire, the survey showed, is less dependent upon her principal industries than one had always imagined, is equipped for almost every kind of industrial and commercial enterprise, and has a surprising number of new strings to her bow. The North-East Coast, on the other hand, appears from the Armstrong College survey to be completely dependent on the heavy industries and to be little adapted to the establishment of others on any important scale.

The results of the survey are embodied in a series of monographs, which cover more ground than can be even indicated in the space at our disposal, each dealing with a single industry or industrial group, and their principal conclusions are summarised in a short report. The year 1924 is taken as a starting point, and in that year nearly two-thirds of the insured population of the area covered by the survey, which is bounded on its inland sides by the Cheviots, the Pennines and the North Yorkshire moors, was attached to the group of heavy industries comprising coal, iron and steel, engineering, shipbuilding, chemicals, and shipping and waterside services. Coal-mining employed about one-third of the occupied population, and was responsible for 44.5 per cent. of the net output of all

the trades of the area. By July, 1931, only 54 per cent. of the number at work in 1924 were still employed, and although the number attached to the industry was reduced by 41,000, the unemployment percentage had risen from 3.9 in 1924 to 37.8 in 1931. This enormous decline is attributed partly to the loss of export markets, for the North-East Coast area exports a much larger proportion of its coal output than does the country as a whole; partly to the reduced consumption of coal by the other industries of the area; and partly to a reduction in the number of labour units required to produce a given output of coal. The report finds that there has been surprisingly little movement towards amalgamation and grouping in these coalfields, but production has been gradually concentrated in fewer pits, and advance in the application of new technical methods has been faster than in the country as a whole. As to the future, the conclusion reached is that the average annual production of coal in the area for the next five years will not differ greatly from that in the last quinquennium, which means that the maximum number of persons to whom the industry will be able to offer employment will be in the neighbourhood of 200,000. The number of persons insured in the industry has already fallen to that level, but if the persons who have left the industry since 1924 have not found work elsewhere, there must be a surplus of 40,000 workpeople available to the industry.

The iron and steel industry plays a smaller part in the industrial activity of the area, but is relatively very much more important there than in the country as a whole. The heavy branches of the industry employed 4.9 per cent. of the insured population of this area in 1930, against 1.7 per cent. of the insured population of Great Britain. Between 1923 and 1930 there was a continuous decline in employment in these branches, and in spite of a decline of 12,000 in the numbers insured between 1924 and 1931 the unemployment percentage has been higher in most years than in all the industries of the area taken together, but this decline is attributed not to decline in output, which up to 1929 was fairly well maintained, but to an increase in *per capita* production. The output of pig iron from the area was 2.25 million tons in 1924 and 2.35 millions in 1929; output per person employed for the same years was 216 tons and 331 tons respectively. The steel figures for the same years were: output, 1.72 and 2.21 million tons, and 76.2 and 98.4 tons per head. As these figures suggest, the area has more than maintained its technical efficiency in these industries, relatively to that of the rest of the country, and improvements in organisation have also been extensive. Nevertheless, in spite of this comparative steadiness of output, the industry has not been prosperous. This is ascribed partly to excess capacity, partly to the decline in selling prices, which has not been accompanied by a corresponding reduction of costs, and partly to the heavy fixed interest payments required by the financial structure of the industry.

The report prophesies little change in the activity of the industry during the next few years, and on that basis

* "An Industrial Survey of the North East Coast Area." (London). H. M. Stationery Office. 7s. 6d. net.

forecasts a maximum employment of 37,500. Unless the persons who were attached to the industry in 1923, the year of maximum employment, have found other employment, the surplus of workers must be about 17,000 persons; but if they are no longer available to the industry, it will only be some 2,000.

The monograph on the engineering industry is mainly concentrated on general engineering, electrical engineering, marine engineering, constructional engineering, and stove, grate, pipe and general ironfounding, as these five industries covered, between them, in 1923, 88 per cent. of the total insured workers in the engineering and minor metal trades. Unfortunately for the survey area, it contains a relatively small proportion of the country's insured workers in the minor metal working trades, whose history during the past few years has been less unfavourable than that of the five main groups. Still more unfortunately, the unemployment percentages in the various metal trades, though their movements have been similar to those of the corresponding percentages for the country as a whole, have been on a consistently higher level. The outlook for the five main trades is very complex and differs from trade to trade, but on a careful estimate the author of this monograph reaches the conclusion that there must be a surplus of about 6,000 workers even in a good year.

The shipbuilding position seems to be more unfavourable in the North-East Coast area than in the country as a whole. The district has lost ground in the building of cargo boats, probably owing to the severe effects of the depression upon local shipowners, and the unemployment percentage in the area for June, 1931, was 70, compared with 56 for Great Britain and Ireland. In addition to the peculiar local difficulties, the shipbuilding industry in the area is suffering, in common with that of the rest of the country, from foreign competition and from redundant capacity. As a very tentative guess, for which he does not claim any accuracy, the author of the report suggests that even in good years there will in the immediate future be a labour surplus of about 13,000 workers.

The chemical industry has expanded so rapidly on Tees-side lately that no estimate of its future demand for labour is practicable. Even assuming that it has no surplus, however, the estimated surpluses of the other heavy industries make a sufficiently disquieting total. Unhappily, the report is anything but optimistic as to the degree to which this is likely to be offset by the expansion of other industries. The printing and building trades have unemployment problems of their own; the food industries in the area are capable of considerable expansion in output without any great increase in their numbers employed; the shipping industry is largely dependent upon the heavy industries and the road transport industry has already attracted almost as much labour as it is likely to need in the near future. Public utilities and the distributive trades are likely to expand, but there will probably not be any rapid increase in the numbers employed. In short, the authors of the survey take the view that "it is highly improbable that any expansion of these industries and services can take place on such a scale as to make up for a continued loss in the heavy or basic industries for which the area is so favourably situated." While they consider that the area "would gain from the existence of a greater variety of industrial activity and the increased production of consumption goods and extension of these services less subject to periodic fluctuations," they are evidently of opinion that the fortunes of the area are inevitably bound up with those basic industries on which its activity has been concentrated in the past, so that, as the demand for the products of these industries is likely to be permanently lower than in the past, the part played by the area in the national economy is likely to be of less importance in future. The prospect of attracting new industries is not bright, partly owing to the disadvantages of the area as a distributing centre, so that the best hope of new development lies in the adaptation of existing works to meet new needs and new conditions. This means that the need for ever-increasing watchfulness and enterprise in industry will in future be even more acute in the North-East Coast area than it is in industrial Britain as a whole.

AFTERTHOUGHTS ON THE CONFERENCE.

(BY OUR CANADIAN CORRESPONDENT.)

SINCE the Imperial Economic Conference ended, a process of stocktaking in respect to the results has been in progress throughout Canada. Press comment is strongly coloured by partisan feelings, but while most of the Conservative press is representing the achievements of the Conference as a triumph for the shrewd and aggressive leadership of Premier Bennett, the *Montreal Gazette*, the leading Conservative paper, studiously refrains from any exuberant paeans about the results. The Liberal papers have been giving publicity to the seamier side of the Conference and lay stress upon the bickerings and squabbles which characterised its later stages. For instance, the well-informed Ottawa correspondent of the *Winnipeg Free Press* gives an outline of its proceedings which, he says, "will explain why it is not on the cards to expect a second Economic Conference and why the rosy forecasts of achievement were not realised." He declares that:

"From the moment the microphones were turned off and the opening session was closed, the Conference descended from the clouds of Imperial sentiment to the rock of hard selfish bargaining. . . . One of the unfortunate legacies of the Conference is the bitterness and ill-will created between the British and Canadian delegates."

The full value of the concessions in the Canadian tariff for the benefit of British imports cannot be appraised here until the revised schedules are submitted to Parliament for its approbation. Undoubtedly if the new Tariff Board which the Canadian Government will establish under authority already given by Parliament is manned by people of integrity and independence, the results of an inquiry whose object is to determine the relative costs of production in Canada and Great Britain and fix the tariff rates on a basis just sufficient to equalise them, and no more, should result in a very substantial enlargement of the British preference, but much depends upon the composition of the Board, and the history of the earlier Tariff Board, which was established by the King Government and abolished by the Conservatives, is not exactly encouraging. Admittedly its first investigations were conducted in an impartial atmosphere and were responsible for turning a revealing searchlight upon the attitude of the manufacturing interests, but in the later stages of its career there were grave suspicions that it had been, for all practical purposes, captured by the industrialists, and the fruits of its labours in the direction of lower tariffs were negligible. Inevitably the manufacturing interests of Canada will exert all their influence to ensure that the Board will have a personnel reasonably sympathetic to their views, and, if they succeed in this, British manufacturers need not cherish exalted hopes about being allowed much freer entry for their products to the Canadian market. There is also no guarantee that the proceedings of the Tariff Board will be conducted expeditiously, and it might be possible to stave off decisions for at least a year.

In regard to wheat, the Western grain trade and the leaders of the agrarian organisations are still very dubious of the value of the preference of six cents a bushel in the British market. They are afraid that it will mean tremendous selling pressure from Argentina and other wheat-exporting countries in the markets of Continental Europe, and that there will be a resulting depression in the world price, which will mean lower aggregate returns for the Canadian grain grower and smaller profits for the grain trade. As for timber, there is considerable dissatisfaction in Canada. Premier Taschereau, who is interested in the disposal of Quebec timber, immediately after the Conference issued a statement to the effect that the pledges of the British Government in regard to Russian timber were much too vague to be effective, and that the Bennett Government should have stood out for a much more specific declaration. In British Columbia, too, similar doubts are entertained about the value of the arrangement. It is felt that the only real advantage gained by the lumbermen of British Columbia is that the continuance of the preference will make competition in the British market from Oregon and Washington out of the question. They wanted the establishment of a quota

system, or an absolute embargo on Russian lumber, and were not particularly anxious for an increase in the preference because they felt that, even if it were granted, Russia could undersell them and force prices down so low that the whole industry would be demoralised. The fear of the British Columbia interests is that the present situation will lead to continued British purchases of cheaper grades of timber from Russia, and that the British market will only be available for British Columbia timber of the higher grades, which will represent about 40 per cent. of the average sawmill output; and the difficulty is that the lumber industry as at present constituted in British Columbia must operate on a higher percentage than 40 per cent. to make a profit. Sooner or later, however, it is probable that the Bennett Ministry will present to the British Government a demand for action against Russian timber, and back it up with evidence that Canadian lumber interests are being penalised by the incidence of Russian competition.

The spokesmen of the dairy interests, the fruit-growers and the salmon packers all aver that they can discern substantial benefits from the preferences now permanently available in the British market; the apple-growers of Nova Scotia and British Columbia are particularly pleased and predict a steady expansion of their exports at the expense of their American competitors. Less confident are the pork-packing interests, who realise the difficulties of taking immediate advantage of the opportunities offered by the quota of 2½ million cwt. of bacon to be accorded free entry to the British market. In recent years they have been exporting to Britain only a fraction of this amount of bacon, and, if full advantage is to be taken of the quota there will have to be a great improvement in the average quality of Canadian bacon and in marketing efficiency.

To sum up: intelligent Canadian opinion realises that the Conference results cannot assure any special sort of prosperity for the Commonwealth unless they are accompanied by an expansion of trade between its units and the other nations of the world. Canada cannot hope for much trade gains from the preferences in Britain until British purchasing power is restored by an expansion of trade far beyond the limits of the Commonwealth; and, *per contra*, the Canadian market will not offer much larger scope for the sales of British manufactured goods until Canada is able to sell profitably in foreign markets the balance of her exportable surplus of natural products which the British Commonwealth cannot absorb.

Notes of the Week.

Conversion in France.—France's Conversion scheme, full details of which are set out in our Paris letter, has been launched this week. Had it not been over-shadowed by the larger, more unexpected, and more drastic scheme which is just being completed in this country, it would have easily ranked as the greatest and most dramatic event of the year in the realm of public finance. Some 85 milliard francs of debt, which are now costing the Government from 5 to 7 per cent., are to be reduced to a 4½ per cent. interest basis. The issues involved are as follows:—

	Capital Value, October 31, 1931. France.
5% 1915-1916	16,737,000,000
5% Amortissable, 1928	18,500,000,000
6% 1920	25,655,000,000
6% Amortissable, 1927	17,662,000,000
6% Obligations, 1927	4,570,000,000
7% Treasury Bonds, 1927	2,750,000,000
	85,874,000,000

At the present price of the £ this total amounts to very nearly one thousand millions sterling. The operation, therefore, is about one-half as large in scope as the British precedent. As the reduction is only to a 4½ per cent. basis, however, the saving in interest is not so large, the estimated reduction in the Budget for 1933 being

COLLECTION

of Bills, etc., on all

**SKANDINAVISKA
KREDITAKTIEBOLAGET**

Göteborg — Stockholm — Malmö

about 1,320 million francs. In some important respects the scheme differs from that in this country owing to differences of habit and practice. For example, the investor is only given a week in which to make up his mind whether he will ask for cash or take the new 4½ per cent. Conversion stock (foreign holders must make up their mind within a week but are given until the end of November to complete the transaction). Previous French conversions have, however, hitherto been made at a very few days' notice, and in effect everyone has known in France that this move was imminent. Again, the French Government is not apparently worried at the possibility of having to make large reimbursements in cash. All the experience of previous occasions indicates that the French investor, who has not the habit of looking far afield for his investments, has neither the inclination nor the facility for finding alternative uses for his savings, and accepts the reduction of interest as philosophically as he can. The results in the first few days suggest that this experience will be repeated. The overwhelming proportion of these issues is, of course, held in France, and contrary to statements which have been made, it would appear that only the smaller part of them is held by banks and institutions, leaving the greater part in the hands of the French public. It is not thought likely, therefore, that a large bond issue will be required to provide cash. An interesting feature of the scheme is that small holders whose income is below the French income tax limit, and are over sixty years of age, may—if they have held the first of the above stocks since 1920—convert their holding into an "annuity rente" with an income which increases until the age of 90. In this connection it is explained that the concession represents some relief to small holders who suffered through the devaluation of the franc seven years ago. It is apparently intended that this concession which includes stocks, part of which were floated in England during the war, shall be made available to British investors; but as the conditions mentioned are not entirely applicable in this country, discussions are to take place with the authorities here as to the terms on which comparable cases in this country may be dealt with in a similar way. It is very improbable that many of the investors in this country who lost the greater part of their investments in these French war issues will qualify for this special treatment, but it is a friendly gesture that the French Government should put British nationals on the same footing as their own in this matter. The scheme, as we have said, is on a very great scale. For though the amount is less than in this country, it represents very nearly the same proportion of France's internal debt—which totals about 280 milliard francs—as in our own case. If France's external debt is included at its nominal value the fraction of the total national debt involved is smaller than in England, but, of course, the nominal value of France's external debt is really only a paper one, as the annual payment she is making in respect of it is on a very low interest basis. From the point of view of the effect upon the world situation, we regret that the French Government could not see its way to bringing the interest figure down to 4 per cent., for by so doing France's contribution towards the important task of reducing the general rate of interest would have been the more effective, and this, as we have repeatedly pointed out, is one of the important things to be achieved at the present

moment. But these investments fill so important a place in the savings of the French people that the Government evidently hesitated to make too sharp a reduction at one stroke in the investment income of the French elector. In any case this move is a great step in the right direction, and we heartily wish it every success.

The Results of Stresa.—Until the full texts of the draft Convention and the other recommendations are available it is difficult to evaluate the results of the Stresa Conference, which ended on Tuesday. So far as can be judged from cabled summaries of the documents, the Conference adopted unanimously a series of admirable resolutions in favour of the balancing of budgets, the gradual "un-freezing" of credits, greater international co-operation, and the progressive abolition of restrictions on foreign exchange dealings and trade. That so much common ground should have been revealed is something; but experience has shown how difficult it may prove to translate pious declarations into practice. As for the Conference's one concrete proposal, our first impression, in the absence of fuller details, is that it demands very critical scrutiny. The suggestion is apparently that the agrarian countries of Central and South-Eastern Europe should receive an annual subsidy of 75 million gold francs to enable them to market certain grain exports (it has not been made clear whether the subvention is to apply to cereals other than wheat) at prices which represent at least a small margin of profit to the producers. In return, the countries in receipt of the subsidy would undertake gradually to free their import trade from existing restrictions. Several delegations, notably the British and Dutch, dissented from this scheme—not, in our view, without good reason. Apart from the consideration that we should be embarking on uncharted waters if we made it our policy to purchase by doles the reduction of tariffs all and sundry, we await the full text of the Convention with grave doubts whether it will prove to contain a convincing case for the artificial subsidising of grain production in Eastern Europe. And this, nothing more nor less, is what the proposal appears to contemplate.

The League Council and Assembly.—The Council of the League of Nations has assembled for its sixty-sixth session under the chairmanship of Mr de Valera; and the Assembly meets for its thirteenth session (a pin-prick for the superstitious!) on Monday. The chief definite piece of business on the formal agenda will be the admission of Iraq to League membership; but the most crucial affair with which the two organs of the League will have to deal will be the reception of the Lytton Report. Is the Report to be discussed in this ordinary session of the Assembly, which has already been postponed from the beginning to the end of the month in order to give time for the Report to reach it? Or is the Japanese Government to be accorded the delay for which it asks in order to submit its observations? In that event, an extraordinary session of the Assembly will have to be held in October or November. But, over and above any specific questions, the Council and Assembly will have to grapple with the general state of the world, of which the Far Eastern crisis and the armaments crisis are symptoms. There is a close concentration now between all international affairs; and this makes it virtually impossible to deal with them effectively any longer in isolated compartments. As for the admission of Iraq, it will be constitutionally important as the first case of the winding up of a mandate. It also has a political importance, and this in two connections. In general, it will contribute—following, as it does, upon the admission of Turkey—towards giving an adequate representation on the League to the Islamic world, which has hitherto been conspicuously under-represented there. In particular, the establishment of Iraq as a sovereign independent State-member of the League will facilitate the solution of the Arab problem which was left unsolved in the peace settlement. For the status which Iraq acquires to-day can hardly fail to be acquired by the more progressive Arab States of Syria and the Lebanon to-morrow; and a federation of these three countries with Transjordan, and possibly also with Ibn Sa'ud's double kingdom of the Najd-Hijaz, might bring a much-needed stability to Arab Asia. This, however, is to look rather far ahead. In the first instance, Iraq will have her work cut out in showing that her Arab majority is capable not only of governing itself but also of giving fair treatment to the numerous and uneasy non-Arab minorities.

The Japanese Challenge.—The solemn farce of the relations between Japan and her puppet "independent" Government in Manchuria was carried one step further on September 15th by the signature, at Hsingching, of a protocol which embodies the long-pending recognition of Manchukuo by Japan and, at the same time, lays down what the future relations of the two Governments are to be. The document is succinct, but it gives Japan everything in Manchuria that she desires. Manchukuo is to "confirm and respect . . . all rights and interests possessed by Japan or her subjects within the territory of Manchukuo by virtue of Sino-Japanese treaties, agreements or other arrangements or Sino-Japanese contracts, private as well as public." On paper, Manchukuo here undertakes no obligations towards Japan that have not been binding hitherto upon China; but the point of this article lies, of course, in the unwritten but manifest understanding that the Japanese claims in Manchuria, which Manchukuo accepts, are to be Japan's own version of her own contractual or prescriptive rights, without any bilateral discussion or judicial examination of their validity. Moreover, in the second article of the new protocol, Manchukuo grants Japan something which Baron Tanaka himself never ventured to claim as an acquired Japanese treaty right. Japanese forces are to be stationed in Manchukuo without any limitation of area being stipulated; and thus, at one stroke, Japan extends the range of her military occupation in Manchuria from a narrow railway zone to a vast territory approximating in area to the combined areas of Germany and France. The meaning of the protocol is further brought out in certain subsidiary documents. For instance, in an explanatory statement which was issued on the date of signature by the Japanese Government, the domain of Manchukuo is described in terms that include not only "the three eastern provinces" of China in Manchuria, but also the province of Jehol in Inner Mongolia—on the north side of the Great Wall, within easy striking distance of Peking. The same statement declares that Manchukuo will maintain "the open door" for the trade of all foreign nations alike, and will refrain from all anti-foreign action and agitation; and the Japanese Government, for its own part, expresses the pious hope that all peoples of the world will pursue their economic activities in Manchuria on a footing of equal opportunity. How lucky for China, who was declared "an alien nation" by the Manchukuo Foreign Minister on the day on which the protocol was signed! A Customs wall is to be established by Manchukuo between Manchuria and the remaining territories of the Chinese Republic; but with "the open door" and a ban upon foreigner-baiting, the non-Manchurian Chinese will be just as well off in Manchuria as the rest of us! Unfortunately, however, "the open door and equal opportunity" in Manchuria has one little condition attached to it. For on Saturday last the Vice Foreign Minister of Manchukuo (who happens to be a Japanese) made the further announcement that Manchukuo would not be an open country for personal residence or for the investment of capital for nationals of any country other than those which recognise the establishment of Manchukuo as an independent State! This is the most direct challenge that Japan has yet delivered to the United States and to the League of Nations. She announces that—unless we take back our declared resolution not to recognise a new situation brought about by force in violation of treaties—she is going to exclude us by force from a territory which, in our view, is still juridically part of the Chinese Republic. This challenge cannot be evaded. What are we going to do about it?

Mr Gandhi's Fast.—We suggested last week that Mr Gandhi's threat of self-martyrdom might conceivably lead to hopeful developments in the direction of agreement between the Indian leaders. These possibilities appear to be growing brighter. Conferences and discussions among Hindu leaders are proceeding feverishly. Mr Gandhi began his fast on Tuesday, and the actual beginning, with its grim reminder of a time limit, has lent a spur to these activities. On Sunday last, two days before the fast began, a deputation which included Sir Purshotamdas Thakurdas, visited the Mahatma in his jail and announced on leaving: "We broke ground." On the following day, Monday, a conference opened at Bombay between the leaders of the caste Hindus and the Depressed Classes with the object of finding an agreement which would enable Mr Gandhi to discontinue his fast. The first day proceedings made little progress, a dispute developing between Dr. Ambedkar and other leaders of the Untouchables, but at a further meeting the next day, under the presidency of Pandit Malaviya, it was reported by the deputation which had seen Mr Gandhi that the latter left it to the conference to draw up a formula or pact, and said that he would abide by it. The conference thereupon appointed a sub-committee, whose personnel included Sir Tej Bahadur Sapru, Mr Jayakar and Dr. Ambedkar, to consider the question and draft a scheme for the adequate representation of the Depressed Classes as an alternative to separate electorates. On Wednesday, Sir Tej Bahadur Sapru again visited Mr Gandhi and submitted terms drafted by the conference's sub-committee. On these Mr Gandhi reserved judgment until he had consulted with Dr. Ambedkar. In spite of reports that Dr. Ambedkar's demands on behalf of the Depressed Classes include the provision of nearly three times the number of reserved seats given under the communal award, as a price for agreeing to joint electorates, hopes are raised high in Bombay that a Hindu agreement is near at hand. So it may turn out that the first pangs of Mr Gandhi's hunger will coincide with a voluntary settlement of one of the two most far-reaching of Indian questions which have so far baffled all the efforts of men of good will both in England and India.

The Axe and the Schools.—We have found occasion in the past to comment on the growth of public expenditure on education; and at a juncture when there is a real need for some relief from the burden of taxes we should support any well-considered proposals for scrutinising strictly educational expenditure and eliminating every vestige of waste. At the same time retrenchment on education which is calculated to lead to a contraction in the volume of effective education obtainable by the people of this country is retrenchment run mad; and the new draft regulations for secondary schools, issued by the Board of Education last Friday, are extremely disquieting. They provide, firstly, that at all grant-aided secondary schools fees shall be charged. Secondly, they state that the Board of Education will "hesitate in future to approve a fee of less than nine guineas," and that there should be some increase in all schools where the present fee is less than fifteen guineas. Thirdly, they sweep away at one stroke the present principle whereby any child can obtain a free place by success at open competitions. Competition for "special places" is to be maintained, but all parents of successful candidates are to be subject to a means test. The exemption limit is to be an income of £3 to £4 a week in the case of a family of one child with an extra 10s. for each additional child. While we do not oppose the principle that parents well able to contribute towards the cost of secondary education for their children should be required to do so, we consider that the suggested exemption limits are much too low and that the fees charged for children in excess of one should at least be progressively reduced. As these regulations stand they involve the risk that whereas the children of the very poorest parents receiving free secondary education might not be greatly affected, there would be a serious and most undesirable contraction in the number of children of parents with incomes ranging from £200 to £800 per annum attending secondary schools. From

reports that the Government is preparing to reduce provision for the training of teachers, we fear that they are aiming deliberately by means of these regulations at a contraction in the aggregate volume of education. To pursue such a policy is, in our opinion, a counsel of despair.

Milk War Again.—A regrettably regular feature of the September news is the report each year of the failure of farmers and milk distributors to reach an agreement over the coming year's milk prices. The public, uninstructed in the technicalities of dairy farming and its costs, can only form its judgment on the basis of the statements issued to the Press by the respective parties, and that judgment, influenced largely, no doubt, by the wide disparity between the profits of the big distributing firms and those of the milk producers, is this year more than ever on the side of the farmers. The producers received in the year almost concluded just under 1s. 1½d. per gallon. The dairy companies, after prolonged negotiations, increased this offer by 4d. per dozen gallons for 1932-33, which would mean a price to producers of 1s. 1½d. per gallon, but the farmers are holding out for a further 7d. per dozen gallons. In a statement issued early this week the National Farmers' Union pointed out that the farmer has actually been receiving less this year for producing the milk than the producer has charged for delivering it, and would still be receiving less under the new offer. Further, the N.F.U. states that this price has not been paid for nearly all the milk delivered. The United Dairies, according to the N.F.U. statement, have paid a "manufacturing price" of 4½d. to 5½d. per gallon for 25 per cent. of the milk they have purchased. Some distributors make an additional profit by compelling the farmers to pay the cost of transporting the milk by rail to the firm's depots. The distributors have not published any answer to these charges; their principal countercharge is that distributors who remain outside the agreement have been able to purchase milk from farmers at prices very much below those named in the agreement. The N.F.U. appears to be commanding very strong support from farmers all over the country in its determination to withhold supplies from the distributors if an agreement is not reached by October 1st, and it is to be hoped that, if this disastrous state of affairs is not averted, the farmers' confidence in their ability to organise a temporary system of distribution which will prevent a shortage may prove justified. These recurrent disturbances, however, suggest that all is not well with our present system of milk distribution, and if the Milk Reorganisation Commission succeeds without too much delay in providing a satisfactory marketing scheme, it will have deserved well both of the trade and of the public.

The Cotton Deadlock.—For over a week, writes our Manchester correspondent, conferences have been held at the Midland Hotel, Manchester, between representatives of the weaving employers and operatives in the cotton industry in an attempt to settle the strike which on Monday last entered its fourth week. Following three days' discussions it was announced on Thursday last that the two sides had agreed upon the following agenda:—(1) Re-establishment of collective bargaining and the restoration of agreements; (2) machinery to ensure the honouring of agreements; (3) wages; (4) reinstatement. The next day, items (1) and (2) were discussed and it was officially announced by Mr F. W. Leggett, who has been acting on behalf of the Ministry of Labour, that both sides had agreed to certain additions to the joint rules for dealing with future disputes. The main decision was the formation of a Conciliation Committee with an independent chairman and two consultants which would be formed provided that the two sides reached agreement on all the questions before the present conference. On Monday of this week the two sides commenced to discuss the wages question. For three days the talks were continued without any definite progress being made, and on Wednesday the official announcement made by the Ministry of Labour indicated a grave position. The statement pointed out

that there was a very definite reluctance on both sides to move from the position which had been reached in August, and the notes which had that day been passed between the employers and the operatives revealed considerable divergence between the two sides. It was evident that a critical stage had been reached. The conference, however, was continued on Thursday, when somewhat better progress was apparently made. The official announcement issued in the evening stated that, so far as the wages question is concerned, the Negotiating Committee would consult the larger bodies on both sides the following day. It was understood that the difference on wages had now been narrowed to one of sixpence in the pound, but the delicate question of reinstatement had still to be tackled. This news of some approach to a settlement is welcome, but, as we go to press, it seems doubtful whether complete agreement can be reached in time to prevent the stoppage dragging into yet another week. Regarding the spinning employers' demand for a wage reduction, joint meetings were held in Manchester last week, and on Friday it was announced that the conference had been adjourned to a date to be decided later. This step was taken to enable the employers to hold a ballot of their members on the position. At this stage in the proceedings the employers were demanding a wage reduction of 2s. 2½d. in the £ and the counter offer of the operatives was a fraction below 10d. in the £. In the meantime the strike in the manufacturing section continues, and the employers are expecting the breakaway movement to spread. The operatives, however, are being encouraged in their resistance by financial help and gifts of food vouchers from the T.U.C.

The Bank's By-laws.—At the half-yearly Court of the Governor and Company of the Bank of England on Thursday, September 22nd, four resolutions were passed, the purport of which is to remove anachronisms and certain restrictions on the efficient working of the institution. The first resolution does two things. It requires ordinary proprietors to give the same length of notice of proposals of candidature for the Court as members of the Court themselves have to give—a provision which remedies a hitherto absurd situation—and it also regularises a form of voting which is the only convenient form to-day, but which was not contemplated in the pre-printing days when the by-laws were framed. The second puts an end to the system under which the proprietors are required to re-elect the entire staff of the Bank every year, and its effect will be to place these appointments in the hands of the Court. The third resolution deals with By-law 4, "Keeping the Cash." Under this ancient by-law three directors of the Bank were entrusted with three keys, and all three were required to attend when certain movements of assets took place. The new by-law leaves it to the Court of Directors "to take such measures as it may from time to time think proper for the safe custody of the cash and securities of the Bank." This minor internal reform was surely long overdue, for in these busy days it is hardly an economic use of the directors' time to be constantly running up and down to the vaults to superintend minor transactions. The fourth resolution is the most interesting of the by-laws now amended. The Court was only empowered to pay £2,000 a year to the Governor, £1,500 a year to the Deputy-Governor, and £500 a year to each director. In the days when it was framed it may have been possible for the Governor and the Deputy-Governor to superintend the whole daily business of the Bank. To-day that is absolutely impossible, and the full-time services of other directors are a necessity. Yet, until Thursday of this week, the Court had no power to pay more than the small director's fee even to a director who was giving his whole time to the service of the Bank. The change now made will not only enable future Governors to be drawn from those who cannot afford to work without adequate pay, but it will also enable the Court to employ and remunerate suitably the services of full-time directors and to strengthen its calibre by the election from time to time of some of the most experienced servants of the Bank. Everyone will welcome such signs of the "Old Lady" bringing herself up to date, and the only wonder is that resolutions such as these have not been passed long ago.

Sterling and International Prices.—During the past fortnight there has occurred on balance an appreciable setback in the price level. The complete *Economist* index has fallen by only a fraction more than 1 per cent., but our index of the sterling price of primary products has fallen by nearly 2½ per cent. and our index of international gold prices has lost practically all the ground gained during the preceding fortnight:—

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistische Reichsanstalt, Germany.
	British Complete Index (sterling).	British Primary Products (sterling).	International Gold Prices.				
1932							
Jan. 24th ...	108.3	115.7	93.8	93.6	93.6	95.8	91.6
Feb. 24th ...	110.9	120.9	89.6	92.4	95.1	97.2	92.0
Mar. 22nd ...	108.1	111.9	86.5	91.5	96.3	97.0	91.4
Apr. 20th ...	103.8	105.4	83.6	89.6	97.0	95.3	90.3
June 1st ...	100.2	101.0	79.8	87.3	94.0	91.7	88.5
June 29th ...	97.4	99.3	80.5	86.4	91.5	89.2	88.1
July 13th ...	97.5	101.3	82.6	87.3	91.3	89.2	88.0

Aug. 10th ...	101.0	108.6	88.5	89.8	88.4	88.5	88.0
Aug. 24th ...	102.6	111.8	89.5	89.8	89.0	89.3	87.1
Sept. 7th ...	107.1	120.2	94.7	91.7	89.0	91.5	87.9
Sept. 21st ...	106.0	117.4	89.6	91.2*	...	91.5*	87.6*

* These figures relate to September 14th.

So far as British sterling prices are concerned, the movements during the past two weeks show considerable irregularity. Among leading raw materials, wool, flax, hides and petrol are dearer, while cotton, hemp, jute, non-ferrous metals and rubber all declined. Details of movements in the complete *Economist* index are given below:—

	"ECONOMIST" INDEX.		
	Sept. 18, 1931.	Sept. 7, 1932.	Sept. 21, 1932.
Cereals and meat	64.5	66.7	66.6
Other foods	62.2	64.4	64.4
Textiles	43.7	55.0	52.4
Minerals	67.4	78.0	76.1
Miscellaneous	65.8	62.0	62.5
Complete index	60.4	64.7	64.0
1913 = 100	83.1	89.0	88.1
1924 = 100	52.2	55.9	55.3

While the recovery from the low point reached at the end of June still remains substantial, the past fortnight's setback will strengthen doubts whether, in the absence of real improvement in consumption, the recent upward fluctuations of prices can be sustained.

League Loans Memorials.—The recently constituted League Loans Committee of which Sir Austen Chamberlain is Chairman, has this week issued two memorials, the one addressed to H.M. Government and the other to the Council of the League of Nations. The purpose of these documents is to draw attention to the facts that of the nine loans issued for reconstruction purposes, under the auspices of the League of Nations, a considerable proportion are now in default, and that both the British Government and the League Council owe special consideration to the bondholders of these issues. The case put forward is a very strong one and rests on several grounds. In the first place it is true, as the Memorial to the League asserts, that, had it not been for the reconstruction schemes in connection with which the League loans were issued, the services of previous loans could, in many cases, not have been resumed, nor would the countries concerned have been able, as they did, to raise further credits abroad. Moreover, in every League loan prospectus it was definitely stated that the loan was being issued under the League's auspices, and in every case reference was made to the resolution of the Council which authorised the issue. It is not, of course, suggested that any legal responsibility to safeguard the bondholders rests upon the League Council; but the moral responsibility is clearly a heavy one. It is one, moreover, that the League has every reason to honour if it can find means of doing so, for it is obviously detrimental to League prestige that loans subscribed under its guidance and inspiration

should remain in default. Indeed, as the Memorial suggests, if default continues "the flow of international investment, which is an essential element in promoting the development and prosperity of the world, may be seriously hampered." What precise measures it is open to the League Council to take to restore the investors' confidence and to observe its moral responsibility is not clear, but the matter is one that calls for the Council's most urgent consideration. To the British Government also attaches similar responsibility; not merely because our Government was in all cases represented on the League Council when the resolutions approving these issues were passed, but also because in several instances at any rate the Government used its influence with representative leaders in the City of London to obtain the successful issue which might otherwise not have been possible. Sir Austen Chamberlain points out "The British investing public, which subscribed about half the total of the League loans, did so in the faith that a special security attached to them, and that, having regard to the circumstances of the issue, both the Council of the League of Nations and His Majesty's Government would exercise a special watchfulness in regard to them." This is perfectly true, and it is incumbent upon Sir John Simon to take a leading part at the present Council meeting in facing the problems to which these Memorials call attention. Details of the various loans involved will be found in a Note under the Stock Exchange section of this issue.

Bleachers' Reduced Charges.—Our Manchester correspondent writes:—During the last few years there has been much criticism in cotton trade circles with regard to the charges ruling for the bleaching, printing and finishing of cotton goods. Considerable satisfaction, therefore, has been expressed this week at the decision of the Bleaching Trades Advisory Board to revise their lists in a downward direction. The changes announced are somewhat irregular, but it has been decided to abolish the surcharge of 5 per cent. and the total reduction amounts to about 15 per cent. on the previous existing charges. With regard to standard shirtings the revision means a reduction of 3d. to 3½d. per piece of 40 yards, and in the case of light mulls the cost will now be 7d. a piece as compared with 8d. It is anticipated that the concessions granted will be of considerable benefit to shippers and merchants when they are competing for business in foreign outlets. It is anticipated that immediately the strike is over buyers abroad will display much more interest in this class of goods.

Cost of Living in August.—The cost of living was unchanged during August, the index number of the Ministry of Labour on September 1st registering 41 per cent. above the level of July, 1914, as compared with a similar figure for the beginning of August, and 45 per cent. a year ago. For food alone the index also remained unchanged at 23 per cent., as compared with 28 per cent. a year ago, increases in the prices of eggs and bacon being offset by reductions in those of potatoes and mutton.

Canadian Railway Reorganisation.—Last November the Canadian Government appointed a strong Royal Commission, including Mr Justice Duff, as chairman, and also Lord Ashfield, to review the difficulties of the two big Canadian railway systems, and a summary of their report, which is unanimous, has now been issued. The Commission finds that the principal causes of the railways' difficulties were over-development of lines beyond the country's needs; excessive competition between the two systems; the growth of road transport competition; inelasticity of freight rates, wages and labour conditions generally; and, finally, the world depression. It further finds that the Canadian National Railway has suffered from the assumption through the Government's action of insolvent railway systems; from large capital expenditure on the improvement of these systems; and from political and community pressure on the management. The Committee considered the amalgamation of the two big systems, the Canadian National and Canadian Pacific, but

rejected the idea on the ground that it would create too formidable a monopoly. Instead it recommends the maintenance of the identity of the two systems; the freeing of the Canadian National management from political interference of community pressure; the promotion of co-operation between the two systems and the elimination of duplicate services; the adoption of economies on a scale sufficient to reduce the burdens of the Canadian National and check extravagant operation; and protection to the Canadian Pacific against arbitrary and prejudicial action by the Canadian National. The Commission further propose that the powers of the present Canadian directorate be vested in three trustees, to be appointed by the Governor-General-in-Council, and to be men of proved skill and capacity, paid adequately, and eligible for re-appointment at the end of their term of office. One trustee will be appointed chairman, and will devote his whole time to his duties. The trustees are to control all expenditure, and Parliament is to limit itself to voting the sums required to cover annual deficits. The chief operating officer of the line is to be appointed by and to be responsible to the trustees and not to Parliament. Finally, the Commission recommend that a statutory duty be laid upon the trustees of the Canadian National and the directors of the Canadian Pacific to adopt as soon as possible co-operative measures for the elimination of unnecessary duplication and waste and for the joint use and operation of properties. The full text of the report will be laid before Parliament when it meets on October 6th, and the summary ends by intimating that the Government intends to introduce legislation to give effect to those recommendations of the Commission which it is in the national interest to adopt. So it remains to be seen what portions of the report will be carried into operation.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Britain's Attitude — Manchuria.

(FROM OUR CORRESPONDENT.)

GENEVA, September 20.

DELEGATES are assembling in Geneva now for the most critical series of meetings that have taken place since the Armistice. The Ministers and delegates attending the Bureau of the Disarmament Conference, the Council, the ordinary Assembly and the special Assembly will have before them the German armaments claim for equality of rights, the report of the Lytton Commission on Manchuria, the preparations for the World Economic Conference, as well as a variety of other matters of less fundamental importance. The decisions taken on the German claim and on Manchuria will definitely mark an epoch in the development of world relations everywhere. What is done on these two problems will decide along which road the world is to travel—whether a crucial fight is to be waged successfully on the side of international co-operation and good faith, or whether the world is to be split on the old pre-war lines of groups, scrambles and intrigue. It is simple folly to discuss these questions in terms of hostility towards or support of the League. They are world-wide problems on whose handling the prosperity and security of all States will depend. It is the time for decision, courage and leadership, and no time for subtle and short-sighted calculations about the material advantages of being for or against Germany, for or against Japan, for or against America.

If Germany's request is not wisely handled, there is no hope of peace or disarmament, and Europe will be flung back into the old tragedies. If there is failure at least to stand by the principles of the League, the Kellogg Pact and the Nine-Power Treaty on Manchuria, the new and difficult effort towards a different way of ordering international relations will have received an almost mortal blow. It is impossible to exaggerate the gravity of the

decisions to be taken within the next few months, and on none of them has there been a clear indication of what British policy is. Great Britain has contributed no constructive leadership towards disarmament, she has all along been a drag on the League's wheel in the handling of the Far Eastern situation, and Ottawa is her contribution to removing the shackles on her own and on international trade.

There is considerable criticism of the way in which Germany has put her case. That the *aide-memoire* to France should have been accompanied by menacing declarations by members of the Government is a fact which has merely served to embarrass France in taking a reasonable attitude, and, as the President of the Disarmament Conference has pointed out in his note to the German Foreign Minister, the Disarmament Conference, before its July adjournment, specifically reserved, without prejudice, some of the important political problems, including that of equality of status. The obviously proper thing would have been for Germany to come to the Bureau and challenge it upon this issue. It is unreasonable to decline to attend the Bureau or the Conference until the issue has been decided outside the Conference. On the other hand, so far as the substance of the matter is concerned, there was no point whatever in Germany's participation in the Disarmament Conference at any time if it were to be accepted that her conditions must in any event remain governed by the Treaty of Versailles.

The present attitude of Germany is not likely to attract what the French call concessions, but this is now beside the point. It is equally beside the point to argue whether or not Germany is legally right. The position is similar to that at the Lausanne Conference on reparations. That Conference met when Germany had said that she could not and would not pay further reparations, and the Lausanne Conference had either to reach the best decision it could on that basis, or to leave Germany to break loose on her own account. Lausanne took the wiser course. On this other and much more serious political issue, the situation is roughly the same. Germany has given notice that if her demand is not met she will go ahead independently. What the other Powers, therefore, have to decide is whether again they will adopt the better way of dealing with realities instead of legal technicalities, and will endeavour to make it difficult for a reactionary Germany to disturb the political relations of Europe.

The absence of any regulation of armament conditions will open up an extraordinarily grave prospect. The suggestion from France that M. Herriot may produce at last the famous *dossier* disclosing German infractions of the Versailles Treaty, with a request for an international inquiry, would be fatal. Such procedure would be legal, but it would infuriate Germany and would probably lead to a complete cessation of any conversations at all. The French argument that if satisfaction is given to Germany now she will merely use it to extort further political and territorial concessions, is not considered sound, as Germany would be much more likely to take such action if she arrogated to herself complete independence from legal Treaty terms. It is a false argument to say that the early withdrawal from the Rhine and the concessions or reparations have led merely to further demands. The truth is that neither the withdrawal from the Rhine nor the settlement of reparations was achieved until the Allied Powers were virtually compelled to take action. It was too late to have any beneficial effect on political relations, and unhappily it is more or less certain that a reasonable result on the armaments controversy will also be too late to produce the benefits which would have accrued if the question had been generously approached even twelve months ago.

The report of the Lytton Commission on Manchuria is expected in Geneva this week. It will be printed, circulated to all members of the League and published during the early days of October. The Council will then decide whether it accepts the Japanese request to postpone examination for six weeks, and will at some moment or other refer the report to the Committee of the Special Assembly. The Chinese will no doubt protest against the adjournment of the examination, and Japan may press

her reservation about the right of the Assembly to consider the report at all. On the first point, it is a little difficult to see how the Council can avoid consenting to the adjournment and it does not seem a matter of grave importance in view of all the circumstances. It is nevertheless a somewhat frivolous request; Japan has been sufficiently explicit in informing the world that she intends to pay no attention whatever to the League or to any of her treaty obligations, and it ought not to be necessary to take another six weeks to find adequate words in which to repeat this once more to the Council of the League. The Japanese are frankly counting on British complaisance, and if this proves to be justified it will be a grave responsibility for a British Government to take, not only so far as it concerns Britain's own position in the East, but also her future relations with the United States of America, and her prestige in the world as a whole. The messages from Washington indicate that the United States have given up hope of fruitful collaboration with the British Government and rely only on what the smaller Powers may be able to do to persuade Great Britain and France to observe their treaty obligations. Indications from Paris, however, seem to show that the French Government's views on Manchuria are more liberal than they were in the previous Government, and Great Britain may thus find herself in uncomfortably exclusive companionship with Japan.

UNITED STATES.

Maine Election — Banking — Industry — Revenue.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 14.

THE election of a Governor and of Congressmen in the State of Maine this week directed attention afresh to the political factor, and that was an unsettling influence on markets. Maine holds its elections for all but national electors for President two months before the other States. For that reason the trend of the voting in Maine is studied as a clue to the drift in other States. Maine ordinarily has a large Republican majority. The State had not chosen a Democratic Governor in a Presidential year since 1880, but even in that year it voted for the Republican Presidential candidate. Naturally, the change of a large Republican majority into a small Democratic majority in this Presidential year has thrown a scare into Republican ranks and increased the nervousness of markets. Republicans, doubtless, will point to the sharp setback in stock prices which immediately preceded and followed the Maine results as a warning; but any shifting of votes was due rather to the fact of poor business than to a threat of it under a new national administration.

Interpretation of the Maine results must consider the wet and dry issue, for the Democratic candidates are anti-prohibition to a man, in contrast to their opponents. Also, the vote was held at a time when Republican sentiment in a depression year is usually at a low ebb, and it was not on the direct question of Presidential candidates. With all excuses made, the election definitely reduces the odds favouring Republican success in November, and already Wall Street is trying to explore its chances under a change in Government.

A disturbing influence of the week, quite independent of politics in general, has been the strength of the sentiment developed at an American Legion meeting for prompt cash payment on ex-soldiers' pensions. The ex-service men, at their National Convention, are clearly determined to push through the next Congress a Bill granting the bonus which met with President Hoover's veto early this summer. Mr. Roosevelt has not stated his views on the matter, but in any event it is possible that the next Congress will be more favourably disposed toward a bonus and might muster enough votes to override a veto. So long as demands for this payment are insisted upon by so well-organised a body of voters, it will remain a menace to Budget stability.

Banks took kindly to the Treasury's one-year and five-year notes offered in \$1,120 millions for the tax date, and

over-subscription six times was announced. Naturally most subscribers put in for much more than they desired in order to make sure of obtaining enough, and the further inducement for payment by means of granting the Treasury a deposit credit helped to swell subscriptions. It is clear that under present conditions the Treasury can continue for some time finding low-interest rates on short-term and medium financing. In the next two years it must do a good deal of refunding of its Liberty Loan bonds.

Most of the large banks have voted their regular dividends, and earnings for the third quarter were more satisfactory. At the moment deposits are rising on accumulation of funds for approaching dividend and bond interest payments, but no change is expected in interest rates. Federal Reserve policy continues benevolent toward the money market. Last week, following a month of unchanged holdings of Government bonds, the system reported a drop of a million, but the slight decline will not necessarily continue. Certainly the central system will not press down the Government bond market.

While much of the improvement in sentiment and, perhaps, also some of the rally in security markets dates from the feeling held by many people that inflationary tendencies in credit will continue, some signs of real improvement in business are beginning to appear. Cotton consumed by domestic mills in August was nearly as large as for the same month of last year, and it was 45 per cent. greater than in July. Exports rose above the July level and were double those of a year ago. Freight car loadings have continued to rise, and the steel industry is slowly recovering. It is now back above 15 per cent. of capacity, an operating rate much lower than had been hoped for at this time, but one which is, nevertheless, accompanied by sustained hope of further improvement.

The United States Steel Corporation reported a gain of 3,000 tons in unfilled orders as of the end of August, the first month in the past sixteen to show an increase in unfinished business. The showing had no great significance, and it had to compete with the fact of low record pig iron and steel ingot output for the month. Steel companies have apparently earned less in the third quarter than in the second quarter, and they are fairly certain to find it difficult to avoid deficits in the fourth quarter. The motor industry also is recovering slowly, if at all; but it faces a public owning vehicles that have been in use on the average a good many years, and second-hand stocks have been considerably reduced. Employment in New York recently has risen, and the opening of the schools for the autumn term has helped retail trade.

Large investors in railroad securities, including the insurance companies and savings banks, are considering the question of a small commission to make a survey of the railroad position, with the idea of submitting a report after the election. The examination by competent and unbiased men of high calibre of such questions as taxation, county, State and national, waterway, airway and highway competition, capitalisation and consolidations, along with their recommendations for remedies, would, it is felt, do much good. Both Calvin Coolidge and Alfred Smith have been mentioned as members of such a commission. The railroads are about to file jointly formal notice of a 20 per cent. cut in base pay, beginning on February 1st, with expiration of the present agreement for a year's 10 per cent. reduction.

The setback in cotton, particularly on the levelling down of a speculative rise based on hope that the September crop report of the Department of Agriculture would show a further large drop, has taken some of the bloom off enthusiasm for rapid trade recovery in the South. However, it is likely that cotton planters will be less disposed than the wheat farmers have been to hold for higher prices the crop coming to market. Wheat prices have shrunk to nearly their former low levels, and the rise served mainly to benefit Canadian producers and to encourage Western grain growers to hold for still higher prices. Commodity prices still are rising, notwithstanding the blow to wheat and cotton.

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

Miscellaneous revenues collected by the Treasury under the new law are helping its position, but are insufficient to provide funds needed by the Reconstruction Finance Corporation, which still has to rely on bank credit. For the fiscal year to September 6th, miscellaneous receipts increased 16 per cent. over last year and general expenditure dropped slightly. Income tax revenue fell 35 per cent. and Customs receipts dropped about 45 per cent. The deficit to date is \$409 millions, or about \$14 millions less than for the same period of last year. This does not take into account the R.F.C. loans, which have brought up the Government debt as much again as the ordinary deficit, if the new money now being raised is included.

FRANCE.

Conversion Scheme Details.

(FROM OUR CORRESPONDENT.)

PARIS, September 21.

AFTER one of the shortest special sessions on record, which lasted barely twenty-four hours, the Chambers on Saturday voted the Rentes Conversion Bill, and an hour later the session was closed. By decree promulgated on Sunday morning, the largest conversion operation ever known in France was launched on Monday morning, and by the end of the week the conversion of some 85,000 million francs of 5 per cent., 6 per cent. and 7 per cent. State public debt issues into a new 4½ per cent. stock will for all practical purposes have been completed.

The Act provides for "the reimbursement or conversion" of the 1915-1916 and 1928 5 per cent. and the 1920 and 1927 6 per cent. Rentes, the 1927 6 per cent. Obligations, and the 1927 7 per cent. Treasury Bonds, as from November 1st. Redemption and conversion will be at par (plus the accrued portions of the redemption premiums attached to the 1927 6 per cent. Rentes, which has been fixed at 2.33 per cent., and to the 1927 7 per cent. Treasury Bonds at 3.14 per cent.). The new 4½ per cent. Conversion stock will be reimbursable within 75 years at the maximum, either at par, by periodical drawings, or by buying in on the Bourse. The exercise of the right of redemption of the new stock by the State is suspended until January 1, 1939. This period of inconvertibility, the preamble to the Bill pointed out, is in conformity with French traditions, and is designed to assure subscribers that their yield will not be lessened for a certain time (which, in connection with the issue of the 1927 Sixes and Obligations and the 1928 Fives involved in the operation, was fixed at four years). The new 4½ per cent. stock will enjoy the same rights and immunities as the old 3 per cent. Irredeemable, the yield from which is free of all taxation (except general income tax, in so far as the yield is comprised in the income proper, the coupons being exempt from all taxes on securities). In

order to give greater ease to the Treasury, the total of the new stock will be divided in two separate halves, known respectively as "A" and "B," and payments of the four half-yearly coupons will be so arranged that one will fall due every three months, in order to spread the burden of the annual interest charge more evenly over the whole year. The first coupon payable of the "A" portion of the issue, therefore, will be for a period of less than six months.

Holders of parcels of the convertible stocks will have six days in which to make known their intentions, this period expiring at 8 p.m. on the last day of the current week. In the absence of any demand for reimbursement (accompanied by the deposit of the stock at one of the Treasury sub-offices) holders will be regarded as consenting to conversion. Foreign holders are subject to the same obligation, but in their case, provided they have had their demand for reimbursement and their scrip *visé* (free of charge) at a French consular office by next Saturday, they are given until November 30th to complete the transaction. In reply to criticism that holders were given three months to come to a decision in the recent British conversion operation, it is explained that three months was obligatory in Great Britain under the conditions of issue of the convertible stock, whereas six days has always been found sufficient on previous occasions in France. M. Lamoureux, the Rapporteur of the Bill in the Chamber, moreover, asserted that in practice the delay would certainly be at least nine days.

A remarkable feature of the conversion scheme is that it provides for application of the stipulation comprised in the Finance Act of 1928, which enacted that any future conversion plan should furnish compensation for small holders (*petits rentiers*) who have suffered loss in regard to their investments through the depreciation of the franc. The Conversion Act states (Article 5) that "holders of Irredeemable Threes, 1917 and 1918 Fours, 1915-1916 Fives, and 1920 Sixes" (which include the two French war issues made partly in London) "who demand it shall be able to exchange their stock against Annuity Rentes, under conditions fixed by an agreement passed on September 16, 1932, between the Ministers of Finance and the Budget and the Caisse d'Amortissement." These conditions, which are set forth in an appendix to the Conversion Act, provide that holders of the stocks in question must have acquired their holdings prior to November 30, 1920, and still possess them; that they must have already attained sixty years of age (or must reach sixty before they can avail themselves of the new annuities); and that they must not have been assessed for general income tax during the twelve months prior to their sixtieth birthday. (The latter clause implies that their total income must not have exceeded 10,000 francs, which is the present French abatement level, during the twelve months in question.)

The older Rentes involved will be exchanged against the new Annuity Rentes at 110 per cent. of their nominal capital value, representing a redemption premium of 10 per cent. The old scrip will be annulled and the augmented value theoretically invested in an annuity, the yield of which to the annuitant will increase in amount every year. Supposing, for example, the holder of 2,500 francs 4 per cent. Rente (nominal capital), bought before November, 1920, for the equivalent of £100, which subsequently depreciated to around £20 through the fall in the franc, with a corresponding decline in the yield from £4 to 16s. The Government is now prepared to buy back the original 2,500 francs (gold) of scrip for 2,750 francs (paper), and to compensate the holder for his loss by replacing the scrip with an annuity which will guarantee him at the age of sixty an income of 282 francs paper (say, £3 4s.), to replace the equivalent of around 19s. which his investment is at present yielding (present-day sterling value). This annuity will increase progressively to 400 francs at 70, 552 francs at 80, 680 francs at 90, so that he will get his original capital back in about twenty-five years. A special provision makes these annuities bequeathable to the annuitant's widow or direct heirs—presumably up to the age limit of ninety—in the

event of the original holder's death before that age. Although more or less based on similar data to those adopted in fixing the national scales of Civil Service and other pensions, the scheme is intentionally more liberal than actuarial exactitude demands. It is fully expected to involve the State in a substantial deficit, but is regarded as an act of social justice towards a class which has suffered severely through no fault of its own.

Although no public statement has been made on the point, I have been informed by a high French Treasury authority that the scheme will apply to British holders exactly as it will to their French fellow sufferers, and that negotiations between the two Governments are to begin forthwith, in order to adjust the French conditions to meet disparities in regard to the income tax qualification and certain obvious currency difficulties. The losses sustained by British investors in French issues made in London have on several occasions been the subject of diplomatic representations to the French Government, and it has now been found possible to give a measure of satisfaction to these, as well as to British investors in other categories of Rentes, without discrimination against France's own nationals. The relief scheme will be carried out through the Caisse d'Amortissement, the difference between the total value of the Rentes thus extinguished and the cost of the annuities being met by an annual charge on the Budget.

The immediate reduction of expenditure resulting from the conversion operation, M. Lamoureux, the Rapporteur for the Budget, informed the Chamber, will work out at 1,820 million francs during the 1933 financial year. Of this, 828 million francs will represent economies of expenditure under the Budget, and 492 million francs saving by the Caisse d'Amortissement. The total saving, he explained, will vary from year to year. The cost of the operation to the Budget is estimated at around 20 million francs, which will be met from special credits opened at the Treasury, under the Finance Act of 1932, and covering 18,600,000 francs for printing and other material supplies and 6,400,000 francs for extra labour. The financing of the possible demands for reimbursement, instead of conversion, has been provided for by giving authority, in the Conversion Act, to the Minister of Finance to provide the necessary funds either by means of the issue of the new 4½ per cent. 1932 Rentes and/or Treasury bonds or other securities, or "by means of resources placed at the disposal of the Treasury by the Caisse d'Amortissement." Under its agreement with the Treasury the Caisse will take charge of reimbursements up to the limit of its resources, and will thus be continuing its normal duty of debt extinction. All question of the issue of the 5,000 million francs of Treasury bonds, by which it was officially stated a few weeks ago the operation would be financed, now appears to have been abandoned. In this connection, however, everything depends on the proportion of the holders who will refuse to convert and demand repayment of their capital instead. Provision for a Treasury bond issue has therefore been made for use in case of need. The Caisse d'Amortissement balance at the Bank of France on September 9th was over 8,000 million francs, which it is expected will be ample to meet reimbursement demands. French conversion operations have always been remarkable for the extremely small proportion of reimbursements demanded. In the 1888 operation only 88 holders out of a total of 228,000 asked to be paid off, and in 1894 only 438 out of 1,765,000. Reimbursements in the 1902 conversion were less than one-quarter of 1 per cent. of the whole. The present operation is by far the most important of the kind ever attempted in this country, but there is already evidence that the percentage of reimbursements will be extraordinarily small. It is unofficially asserted that the total return of capital asked for in Paris on Monday, when the effort began, was less than 60,000 francs.

Various reports have been in circulation in financial circles as to the proportion of the convertible issues which are in the hands of the banks and insurance companies and other important organisations, but so far verifiable estimates are difficult to obtain. It was stated a few days ago that only about 85 per cent. of the 85,000 million

francs of convertible scrip remains in the hands of the public, the rest being held by the banks, etc. Considering that practically every French family possesses a holding of Rentes, and particularly since the war, this estimate is undoubtedly very wide of the mark. During the debate in the Chamber on Saturday, the Budget Rapporteur, M. Lamoureux, expressed the opinion that the banks and insurance companies, the Compagnie des Agents de Change and other "collectivités" probably held from 20,000 million francs to 25,000 million francs of the convertible issues, and this appears to be a much more probable estimate. The necessity for the conversion operation may be gauged from the fact that the City of Paris, which is anxious to convert its 1927 7 per cent. loan stock into a 5 per cent. issue, has found it impossible to carry out the operation in Paris, and has been negotiating for some time with a Dutch-Swiss group for issue in Amsterdam and Zurich, while one of the great Paris electrical concerns is discussing with another Swiss group with a view to borrowing 100 million francs in that country on a 4½ per cent. basis.

GERMANY.

Disarmament — Bank Reorganisation — Quotas.

(FROM OUR CORRESPONDENT.)

BERLIN, September 20.

THE English memorandum on the German disarmament Note has caused general dismay here. The German public is not so much disappointed at the legal points raised in the British Note, which adopt in essentials the French point of view, as at the tone of the Note, which shows little sympathy even for Germany's moral right to disarmament. The disappointment in official circles is mainly based on the fact that conversations in Geneva had given grounds for the assumption that the German step would at least not meet with a rebuff in England. That the German Note was accompanied by interviews which were not calculated to promote its favourable reception, and that various other things happened which would have been better omitted or postponed, is widely recognised in Germany, and it is not considered altogether incomprehensible that this should have given rise in France to a state of mind unfavourable to the success of the German move. But from England Germany did expect that her attitude would be determined by the essential point, the content of the Note; and in this Note the German Government only asked for what the entire public opinion of Germany regards as the only fair solution, namely the principle of equality of rights. As the Note left open the question of negotiations for a temporary regulation of the position, and as Germany declared herself in agreement beforehand with all *de facto* limitation of armaments, it is impossible for her to see what practical considerations can possibly have called for such a vote of censure on Germany. The Government, and especially General von Schleicher, had, of course, by their intention not to increase Germany's armaments when her right to equality was recognised, but to spend no more on armaments next year than before, placed themselves in opposition to a large part of the Right. This raises the question whether it never occurred to Great Britain that her answer was bringing grist to the mills of those who would like to see Germany leave not only the Disarmament Conference, but the League of Nations as soon as possible. Not only those who are opposed in principle to a foreign policy of conciliation, but also the advocates of an "Eastern policy," will turn to their own advantage the situation which has now arisen.

Within the next few days two new institutions will be created with the object of carrying a decided step further the consolidation of the German banks which began last February. These will be an industrial finance company, known familiarly as "Ifi," and an Amortisation Institute. Through the Ifi the banks will be able to dispose of the security holdings which they can at present only sell to the public on very unfavourable terms, if at all. The chief use of the Amortisation Institute will be to take over

the frozen "debtors" of the banks and in this way to provide lasting relief to their balance sheet position. The plan is strongly reminiscent, though on a much more modest scale, of the method by which the Banca Commerciale Italiana was "rectified" last year. The details of the scheme are not yet settled, but the outlines are somewhat as follows: Ifi is to be provided with a share capital of Rm. 30 millions, of which 10 millions will be preference shares to be paid up in full by the Golddiskontbank, the Acceptance Bank and the Bank für Industrieobligation, which have no direct interest with the scheme. The 20 million ordinary shares are to be taken over by the banks and at first only 25 per cent. is to be paid up. Not only the large banks but the medium-sized and small banks are to participate. Ifi is to take over securities up to ten times the value of the paid-up capital, which means only 50 millions in the first place. It is to pay for the securities with bills which the banks can discount at the Reichsbank or in the open market after they have been endorsed by the acceptance bank.

This relief is particularly needed by the banks, because at the moment they are heavily burdened with securities which they have taken over from their industrial debtors, and this burden is preventing them from adopting a liberal credit policy.

The Amortisation Institute is to serve a similar purpose. Frozen "debtors" of the banks are to be transferred to it under bank guarantee, and gradually redeemed—the probable period is at present estimated at 20-25 years—out of the profits of the banks. It is intended in this way to relieve the banks of a mass of debt amounting to about 300 millions. In the banks' balance sheets there will appear, instead of the "debtors" which, as they are frozen, cannot be included at their full value, a claim on the Amortisation Institute at its face value, so that the banks will be relieved of the necessity of writing off further heavy losses in their 1932 balance sheets. The two new institutions are, of course, only to take over sound shares and debts.

The immediate execution of this plan is bound up with the Government economic programme, for it is impossible for business to revive if the banks cannot readily grant credit. The tax vouchers, which are the kernel of the von Papen economic programme, are intended primarily to serve as a basis for credit, but the best foundation is useless if no lenders are available. The Reichsbank will probably have to render very little direct assistance, as the transaction is primarily only a rearrangement of banking assets. It is, however, supporting the anti-deflation campaign by the reduction of its discount rate to 4 per cent., the necessary formalities of this having been completed in Basel.

The demand of agriculture for import quotas continues. At present the demand for vegetable quotas is to the fore, as tomatoes, cabbages and other vegetables are being sent in very cheaply, especially from Italy. The Government, however, has so far held firmly to the attitude that limitation of imports can only be undertaken after new agreements with the other parties to her commercial treaties. This standpoint, which is in itself unassailable, is rendered difficult to defend at home by the fact that other States, as, for example, France last year, have abandoned it, to Germany's disadvantage.

PUBLISHED BY PITMAN'S

A MAIN CAUSE OF UNEMPLOYMENT

By P. C. LOFTUS.

An indictment of foreign investment, in which a skilful attempt is made to show that the large scale exportation of British capital which has taken place in recent years is the chief cause of the existing crisis. It is based on a thorough investigation of international financial methods, and merits the closest study of all who are concerned with finance and industry. Second Edition, revised and enlarged. 92 pp. 5/- net. (By post 5/4.)

Order from a bookseller or

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

AUSTRIA.

Agriculture — Stresa — Company Dividends.

(FROM OUR CORRESPONDENT.)

VIENNA, September 19.

THE Vienna Stock Exchange could not escape the impression made by the decline on the international share market, but it showed considerable power of resistance, so that the weakening of the market was kept within narrow bounds. Undoubtedly the resistance was due in part to favourable opinion in regard to the prospects of certain branches of economy. The iron and steel industries, which have lost most of their export trade, have to contend with great difficulty in making sales. Nevertheless, there are, on the other hand, branches enjoying a boom as the result of the further check upon free trade and particularly because of throttling of importation into Austria. Agriculture is in a position to dispose of its products at prices which have risen greatly for most articles. As a consequence of the tariff protection of farm produce, there is a marked disparity between prices on the two sides of the Austro-Hungarian frontier; an egg costs five groschen in Hungary and nine in Austria, a litre of milk 20 groschen in Hungary and 50 groschen in Austria. In Vienna itself the prices are much higher. While in Budapest a kilogram of butter costs only three schillings, including the middleman's profit, in Austria one has to pay 6.50 schillings. Fruit and vegetables cost in Austria three or four times as much as they do in Hungary and Yugoslavia.

The real income of employees suffers in three ways: from the cuts in wages, from the rise in prices due to duties and taxes, and from the effects of the depreciation of the schilling. Certain industries, whose raw materials are agricultural products, are also profiting from the protective system. This is true, for example, of the sugar industry, which before the revolution used to cover only about 15 per cent. of national requirements, whereas for the 1932-33 season it is probable that hardly any imports at all will be necessary, and a propaganda campaign for sugar consumption is necessary in order that the domestic output may be sold. The sugar factories, whose plant was enlarged several years ago, and which have nearly all been brought up to date, are working at full capacity. The spirit distilleries are also working almost up to their maximum output, though the existing spirit monopoly favours the agricultural distilleries at the cost of the trade distilleries by according the former a much higher delivery price. The breweries are suffering because 41 per cent. of the price of beer goes to pay taxes, which have greatly increased the sales price of the product; in the brewing year which came to a close at the end of August, output fell from 4.4 to 3.3 million hectolitres. Big profits are being made in cattle dealing. The importation of cattle, calves, pigs, etc., is categorically forbidden; as, however, the domestic producers cannot cope with the requirement, supplies must be augmented from abroad at high prices due to the very high duties.

There is also a great boom in Austrian coal, owing to the recent legislation enforcing an admixture of brown coal and prohibiting importation of hard coal. As a consequence of these measures, the Austrian lignite mines are working at full capacity. The development will become all the more significant during the next few months, because, on the one hand, the approach of winter will bring a strong demand for household coal, and, on the other hand, many consumers quickly bought foreign hard coal before the compulsory admixture came into force and these stocks will be exhausted within a few months.

In certain circles great hopes were set upon the conference at Stresa. At the moment, however, it is not yet clear whether the results of this conference will mean a favourable impulse for Austria. Should preferential treatment for South-East European grain be decided upon,

Austria, the grain importing country, will be at a disadvantage. Austria, it is true, will accord such preferential tariffs if it is given the opportunity of carrying on industrial exportation, at least to the South-East European States, also under preferential conditions. Up to the present, however, there has been no mention of such an arrangement at Stresa, so that, like Germany and Czechoslovakia, Austria would be only a giver and not a receiver. Within the next few days trade-treaty negotiations are to begin with Hungary and Poland, and from these it will appear whether or not it will be possible to create preferential conditions for Austrian industrial exportation without intrusion from third countries. For the present, there exists a six-week provisional agreement between Austria and Hungary, which afforded quotas for Austrian industrial products, which in several articles could be exploited to no more than 20 per cent. The situation on the labour market continues to be unfavourable. In the first half of September the number of unemployed in Vienna in receipt of benefit sank by 750 to 106,000, which is 24,000 higher than the figure for the corresponding period of 1931. For the immediate future the outlook in this respect must remain pessimistic, for in October a seasonal increase in unemployment is to be expected. From the balance sheets, most of which have now appeared, it is to be seen that the Austrian stock companies are not making profits. Of the 145 companies, whose shares are quoted on the Stock Exchange, only 45 have distributed dividends, as against 78 last year. The amount paid to the shareholders is 23.9 million schillings, as compared with 51 millions last year. Conditions are best in the brewing industry, in which all six companies were able to distribute dividends (5.1 million schillings against 6.1 millions last year), and worst in the metal industry, in which of the 39 companies whose shares are quoted on the Stock Exchange only six could pay dividends. The greatest decline, however, took place in banking: in this group only two out of twelve companies declared dividends, as against seven last year. In the timber, leather, paper, petroleum and hotel industries none of the stock companies represented in the official quotations distributed any dividend at all.

HUNGARY.

Stresa — Currency and Prices — Devaluation.

(FROM OUR CORRESPONDENT.)

BUDAPEST, September 12.

THE news from Stresa that the discussion of the financial problems of the Danubian countries will be postponed to another conference did not come as a surprise, because the French proposals for a common fund to be set up by the Great Powers for the distressed Central European nations have, ever since they were launched in April by M. Tardieu at the London Conference, been regarded here as rather vague and insufficient. The British are not blamed for their lack of enthusiasm for throwing good money after bad, but their views that by abandoning the gold standard and removing all currency restrictions trade would revive are not generally shared. It is recognised, of course, that Hungarian exports suffer a great deal from the discrepancy existing between the internal and external value of the pengő, but it must be pointed out that tariff barriers, quota restrictions and prohibitions of all kinds are even more formidable hindrances to trade, and unless they are previously removed a premature restoration of the freedom of monetary transactions would do little good in itself either to international commerce or to the foreign creditors.

The quotation of fine gold per kilogramme on the produce market has recently decreased to 4,800 pengő, as against 5,200 pengő paid a month ago. The official buying price of the National Bank is 3,800 pengő. Thus there is a premium of about 28 per cent. as compared with 85 per cent. a month ago. Similar decreases are noticeable

HOLLAND.

Shipping Strike — Coal — Stock Exchange — Money — Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 10.

UNFORTUNATELY the strike in the mercantile marine of the Netherlands which had been threatening has, in fact, been declared. The strike has arisen from a wage dispute. The Dutch shipowners, attributing their inability to meet the competition of foreign shipping to the prevailing high level of wages, decided that a drastic wage reduction was imperative. Negotiations between the owners and the organisations of the seamen broke down, and after receipt of the wholly unsatisfactory reply from the shipowners, the Association of Mercantile Marine Officers and the Central Transport Workers' Union decided to put an embargo on signing on for fresh voyages. This decision was communicated to officers and crews, and the orders not to sign on are being adhered to faithfully. The result has been that the various lines have had to suspend their regular sailings, with the exception of the lines to the Indies.

The latest quota order, given by Royal Decree dated August 24th, provides for restrictions on the importation of socks and stockings, carpets, sewing cotton and table linen, for the seven months ending March 1, 1933.

Dutch commerce and industry is still being handicapped by the obstacles which foreign countries, particularly Germany and Belgium, have raised against our exports. The negotiations with regard to our butter exports to Germany have now made such progress that a satisfactory solution is considered probable. The discussions with Belgium, on the other hand, on the subject of the restrictions on our exports of coal to that country have, so far, failed to yield a satisfactory result. The following figures closely illustrate how seriously our Limburg collieries have declined:—

Production. (Thousand tons.)		Numbers Employed.		Exports. (Thousand tons.)	
July, 1931.	July, 1932.	August 1, 1931.	July, 1931.	July, 1931.	July, 1932.
1,167	1,035	38,584	36,001	422	197
				Coal.	Coke.
				300	174

This distressed state of affairs in trade and commerce in the Netherlands forms a striking contrast with the developments on the Stock Exchange. The firm tendency on Wall Street did not fail to exert its influence on the Amsterdam market. An advance, such as has not been witnessed for a long time, set in, and once more the increasing participation of the public in Stock Exchange transactions was a gratifying feature. The bond market showed a very firm tendency too, indicating that the gradual return of confidence is becoming more and more pronounced. The recovery of some degree of activity in the issues market forms another indication in the same direction, but although the total of the issues offered for subscription in August do show an advance as compared with July, last month's aggregate is nevertheless still of modest proportions. Fears that the capacity of the new issues market was insufficient was apparently a contributory factor in this respect. From the character of the issues marketed, it can be concluded that the resurrection of our issues market is only in an initial stage, however, for the new borrowers are still Governmental and municipal bodies only. During August loans to a total of 12.4 million guilders were offered for subscription, almost entirely by various Dutch municipalities. In the previous month the issues totalled nearly 5½ millions, and in August last year over 17 millions. In the first seven months of this year issues aggregated 263.2 million guilders, as compared with 307.3 million guilders in the corresponding period of last year.

Great liquidity continues to characterise the Amsterdam money and capital market. The buying movements in the stock market were apparently financed chiefly with surplus funds available, as the demand for prolongation money was still very slight. The average rate for prolongations in August was 1 per cent., the same as in the preceding month, as compared with 1.270 per cent. in August, 1931.

in the prices paid for dollar and other bank notes in the "black" market. In contrast to Austria, the Hungarian authorities have firmly refused to allow a free exchange market between exporters and importers at higher prices than those quoted by the National Bank. Thus there has developed a "black" market where clandestine trade is transacted. The sharp fall in the "black" market and gold prices is due to the fact that the hoarding of foreign bank notes and gold has ceased, partly because the fears of a rapid currency depreciation have subsided, and partly because the speculative money engaged in gold and foreign exchanges is being gradually liquidated, as it finds more profitable use in the hitherto neglected share market. It is interesting to note that the premium paid on foreign exchanges is now less than it was on July 15, 1931, when the free transactions were suppressed at the Stock Exchange.

The price level is practically the same as it was a year or 18 months ago. In other words, although Hungary remained officially on the gold standard, prices failed to move in sympathy with gold prices. Export difficulties caused certain agricultural prices to fall greatly below the world prices. On the other hand, the prices of the staple industrial articles such as coal, iron, chemicals and textiles, etc., are 50-100 per cent. higher than abroad, as a result of monopoly secured by high tariffs and import prohibitions on the home market. An attempt by the coal combination to raise prices, which are about twice as high as the pre-war and foreign levels, was frustrated by the Cartel Court, which ruled it out as being against the public interest.

The Government has repeatedly declared that it is anxious to maintain the gold standard, but its policy—notably its inability to reduce public expenditure and industrial prices—tends rather to compromise than to maintain it in the long run. The advantages and disadvantages of devaluation are keenly discussed in economic and political circles. Agricultural interests favour a devaluation of 25-30 per cent. It certainly speaks for a devaluation of 25-30 per cent. that (a) it would correspondingly raise the depressed agricultural prices; (b) it would lighten the fixed debt charges and thereby improve the solvency of banks, commerce and agriculture alike; and (c) a much-needed depression of the unduly high portion of the national income devoted to the maintenance of public administration would automatically right the restoration of budgetary equilibrium. The main reasons against devaluation are (a) the fear of uncertainty that once devalued by 25-30 per cent., the pengő will further deteriorate, a fear which is fully justified so long as the budget is unbalanced and the temptation exists to meet the deficit through the printing press; (b) the fears that industrial prices would rise too, so that the discrepancy between agricultural and industrial prices would not be lessened; and (c) that the nominal value of the foreign debt of the country contracted in foreign currencies would correspondingly grow as expressed in the devalued pengő currency.

Hungary's representative declared at Stresa that the currency restrictions cannot be removed until the scaling down of the foreign debt service enables the country's international payments to balance. Currency reform can take place only as a part of a concerted action of the readjustment of all Danubian exchanges under the leadership of the B.I.S., when ample safeguards are accorded by the Creditor Powers. The fact that the representatives of the Great Powers refused to discuss the debt "problem"—declaring that the creditors alone are competent to negotiate directly with the debtors for the scaling down of the interest service—makes the prospects of the Danubian recovery very remote. There is little evidence that the various groups of foreign creditors fully realise the collective insolvency of Hungary, in spite of the consecutive defaults and moratoria which have been the order of the day for more than a year and will certainly continue to be for a long time to come.

The Stock Exchange.

BRITISH FILM FINANCES.

WHILE the earnings of the cinema theatre companies in this country have all declined, as was inevitable since the Government increased the amusement tax and the public has had less to spend on its pleasures, the British film industry is to be congratulated on having avoided the financial disaster suffered by its big American brother. Paradoxically, the established British film companies owe their relative good fortune partly to a present defect in their organisation—namely, the weakness of their production units. It is well known that in Hollywood huge losses have superseded huge profits on film production. The most strenuous efforts of New York bankers to force economy into the Hollywood studios and common sense into the salaries of film stars have not sufficed to make American film production profitable on the basis of present attenuated box-office receipts. The British producers, however, have never plunged heavily on their studio programmes, in some cases through lack of technical skill and equipment, in others through financial prudence. Thus, big production losses have been avoided by the established companies. It is also to their credit that their theatre circuits have not been over-expanded, although in some cases dearly purchased, but have been kept within manageable limits. In the United States the purchase of huge theatre circuits at inflated prices contributed largely to the financial downfall of the large film companies. We may therefore take heart from the fact that the leading British film companies in this year of intense depression have never approached falling into the hands of their bankers. In this particular they have set a lead to Hollywood.

Measured in bulk, or rather in footage, the progress of British film production in the last few years has not been very impressive. This may be explained by the high mortality among the new producing companies promoted during the 1927-29 boom. The table in the next column gives the footage of British-produced and foreign imported films in the years since 1927, when the Films Act was passed, which imposed a quota of British films on renters and distributors.

The final misfortune of the new film-producing companies promoted under the stimulus of the Films Act was that a year or two after their birth the "talkie" came along and revolutionised the entire technique of

film production. Of the few companies which survived, British and Dominions and British Lion Film Corporation (the latter promoted by the late Edgar Wallace) have contributed to the advancing prestige of British film production, although their shareholders have so far been presented with deficits instead of dividends. It cannot be said, however, that the Films Act, by the measure of protection it has conferred upon British producers, has enabled any distinctive school of screen art to be developed in British studios. If the British film producers are to take full advantage of the opportunities presented to them by the financial upset of Hollywood, which has undoubtedly affected the quality of American films, they must show themselves as adaptable as the Continental producers to the new technique of the talking screen.

We may now consider the position of the two established groups in the British film industry, Gaumont-British Picture Corporation and British International Pictures, which are engaged in every phase of the trade from production to distribution (renting) and exhibition. Briefly, the Gaumont-British group has had the advantage of possessing strong cash resources and the oldest established theatre circuit in the country—that of Provincial Cinematograph Theatres—but has become over-capitalised by the purchase at high prices of other theatre circuits—in particular those of General Theatres and Denman Picture Houses. We do not suggest that these two theatre subsidiaries have been a financial burden to Gaumont-British, except in so far as they have added to its heavy capitalisation, for both of them are earning

and paying their prior charges. Indeed, Gaumont-British is drawing management fees from both companies and is receiving from Denman Picture Houses a dividend of 2½ per cent. on its holding of ordinary shares. But it must not be forgotten that Gaumont-British has guaranteed £2½ million 7 per cent. first debentures and £500,000 7 per cent. second debentures of Denman Picture Houses and has made itself responsible for the financing of both theatre circuits which, after all, have got to keep themselves up to date in a rapidly changing industry. It is fortunate for Gaumont-British that its old-established subsidiary, Provincial Cinematograph Theatres, has the best theatre circuit for earning power in the country and is thus able to pay 15 per cent. steadily on its ordinary shares.

The uncertain factors in the Gaumont-British position are its production activities and its relations with the Fox Film Company of America. As regards the first, it is significant that it has recently completed new and expensive studios at Shepherd's Bush and has embarked on a film production programme requiring an expenditure, according to its own publicity, of about £1,000,000 per annum. Much depends upon the outcome of this venture, for a great deal of capital can be lost in unsuccessful film productions. As regards the second question, the Fox Film Company recently brought a suit against Mr Isidore Ostrer in regard to a contract for the purchase of a 49 per cent. interest in the Metropolitan and Bradford Syndicate which holds control of Gaumont-British. This action has been settled on terms which have not been disclosed, but it is reported that Fox films will in future be shown in Gaumont theatres and that certain Fox directors will be given seats on the Gaumont-British board. The consequences of this reorganisation cannot be foreseen, for hitherto Gaumont-British has been dominated by the Ostrer family.

As regards British International Pictures, this company has had a more varied and extensive experience of film production than Gaumont-British, its Elstree studios having seen the beginnings of British film technique. It may be assumed that it has settled down to commercialised production. Its policy to-day is to spend little more on its productions than it can recover from the box-office receipts of its own theatre subsidiary, Associated British Cinemas. The last-named has been handicapped by limited financial resources and is still carrying a load of bank debt, arising out of the purchase of its theatres, which must sooner or later be funded.

An analysis of the earnings and distribution of profits of the Gaumont-British group and British International Pictures and its subsidiary will be found in the table at the foot of the previous page. The net profit figures are shown after tax (the amount of tax not being given in all cases), so that it is impossible to compare the actual declines in theatre earnings. In all cases, however, the decline appears moderate. As regards the balance sheets, it is difficult to ascertain the exact financial position of Gaumont-British. Eliminating inter-company credits and debits, it will be found that cash and debtors amount to only £159,655 against creditors and bank overdraft of £481,097. In addition there is a secured bank loan of £180,000. The net profits, after tax, represented only 6.1 per cent. net on the loan and share capital plus share premiums. In the British International balance sheet, eliminating inter-company items, there is a surplus of cash and debtors over creditors of £12,727, which is not impressive having regard to the secured loan of £350,000 and a share capital of £1,250,000. The Associated British Cinemas' balance sheet disclosed a deficiency of current assets against current liabilities of £329,890, but this company is, in effect, financed by its parent, British International Pictures.

The table in the next column gives the market valuations of, and interest or dividends yields on, the different securities of these two film groups.

It will be seen that the market is valuing the prior charges of these film companies very conservatively, except in the case of the Provincial Cinematograph Theatres 6 per cent. debenture stock. Some appreciation has followed upon the decline in interest rates, but relatively high yields are still obtainable. The equity shares present

a paradox—those of Provincial Cinematograph being undervalued in relation to the others, although its debentures are the highest priced in the film company list. This may be accounted for by the narrowness of the market, the public holding only 3 per cent. of the Provincial Cinematograph Theatres equity. On the whole the valuation of the equity shares of the parent Gaumont-British is over-optimistic.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 4.	October 6.

THE new account opened in subdued fashion, with sentiment depressed by industrial conditions at home and the sorry appearance of international relations. A marked improvement in tone occurred as the week advanced, however, quotations being helped by the renewed strength of Wall Street, the sharp rally in a number of commodities, and the prospect of an early settlement of the cotton dispute. On Thursday the advance was general.

Gilt-edged stocks, after initial dullness, resumed their upward trend. Sentiment was assisted by the prospect of

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics. In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

cheap money for some time to come, and by the probability that Treasury Bond and War Loan repayments falling due on December 1st will be effected without any further issue. Assented War Loan was a strong feature, while advances were recorded by Funding Loan, Victory Bonds and the various conversion loans. India stocks opened quietly, but further buying occurred in mid-week, the Fives of 1942-47 being in especial request. The demand for Australians was maintained pending the refunding scheme. Home corporations were firm in sympathy with the Funds.

Foreign stocks had a quiet appearance, though Argentine issues were helped by a reassuring financial statement. Buenos Aires 3 1/2 per cent. were in keen request. Brazilian loans were dull, but San Paulo Coffee Eighties found support. Chilean issues were fairly steady, but Peruvian Corporation sagged. Japanese bonds were assisted by the better tendency of the yen, and Chinese also improved. Among Europeans, French 5 per cents. were sold fairly heavily, but German loans gained 1/4 to 1/2 on Thursday, and Austrian Sixes hardened.

The home rail market was depressed by a further batch of unsatisfactory traffic figures, but there was a marked absence of selling pressure. "Brums" lost 1/4 on Wednesday, and North-Eastern preferred weakened. Underground stocks strengthened with the passing of the bus strike danger. Among foreign rails, the Argentine "Big Four" and Entre Rios displayed considerable powers of resistance, the announcement regarding the non-payment of dividends having been already largely discounted. Leopoldina gained a fraction.

The industrial share market rallied on Thursday on the strength of the overnight news from New York, and trans-Atlantic issues were particularly strong. Throughout the list changes in favour of holders predominated. Austin Motors became a difficult market in mid-week and subsequently fell sharply on the halving of the dividend. Iron and steel shares were irregular, the volume of business being small. Electricals continued in steady demand, Henley's finding support. British American Tobacco were a good feature, while breweries were mainly firm, though Meux came on offer on the interim dividend reduction. Textile shares were marked up on expectation of an early strike settlement, and Courtaulds were firm. In the miscellaneous group, National Canning scored a sharp gain.

Oil shares continued to enjoy a large turnover, despite

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

the fresh increase in American crude oil output. Leading issues were very active, with Paris a buyer of Mexican and Canadian Eagle. Apex also found considerable support. Rubber shares had a more cheerful appearance, assisted by the sharp advance in the commodity, though the volume of business continued small. Rubber Trust and Anglo-Dutch were among those to record a rise in price. Trading in tea shares remained at a very low ebb, but sellers were discouraged by the better tendency of the Mincing Lane auctions.

The mining share market had a buoyant appearance, Kaffirs enjoying renewed support from Paris and the Cape, while other sections were helped by stronger metal prices. Modderfontein weakened on the report. Indian gold shares were particularly active, though a slight reaction occurred in Mysore and Champion Reef on the dividend statements. Copper shares were firm with the metal, though tin shares remained quiet. Northern Rhodesian issues were again in demand, and advances were numerous.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The sizeable reaction throughout the markets at the beginning of the week strengthened the technical position and prepared the way for a fresh bull movement. Railroad stocks were firm on Governor Roosevelt's speech promising continuation of the Reconstruction Finance Corporation's assistance to carriers, but the volume of general business was small. In mid-week there was a pronounced upward swing, and on Wednesday many stocks rose as much as 8-10 points. The movement was assisted by bullish pool operations, and sales reached 4,800,000 shares. The bond market enjoyed renewed strength. The recovery was not accompanied by any convincing improvement in fundamental business conditions, although an advance occurred in a number of commodity prices. Wheat rose over 2 1/2 cents and cotton was 55 points higher. Steel operations were reported at 16 per cent. of capacity, against 15 1/2 per cent. last week. Freight car loadings, compared with the previous year, were down 25 per cent. for the week ended September 10th, though this is the smallest decline since March. Electric power production for the week was better at 11.2 per cent. below the output for the corresponding week of last year, but reports from the basic industries gave small promise of underlying recovery. Less importance was attached to political considerations, the tone of Mr Roosevelt's recent pronouncement suggesting that a Democratic victory would not in any case be accompanied by unduly radical measures.

* 2-hour session.

CANADA.

During the past month the Canadian stock markets for the first time for many a long day have shown a vigorously buoyant tendency and given evidence of ability to recover from the malaise which has oppressed them for nearly three years. The upward move which began about mid-August in New York at once generated a sympathetic movement in Canada, and the steady advance in most of the pivotal stocks which followed was only interrupted by the temporary lulls until within the last few days, when there has been a definite setback. At the time of writing the markets remain in an erratic condition, but so far only part of the gains which have been recorded since mid-August have been lost. A good deal of the trading has been of a professional character, but the general public has manifested a certain recovery of the speculative spirit; at any rate, there has been a remarkable increment in the volume of trading, and on September 8th, when more than 80,000 shares changed hands, it reached on Montreal market dimensions which had not been reached since the panic days in the autumn of 1929. The leader since the C.P.R., which at the time when speculative enthusiasm for stocks was at its height in New York reached 22 1/2, or more than double its lowest for the year. Its

rise was helped by two factors: news of increased earnings as the result of the larger western grain crop and a belief that the forthcoming report of the Royal Commission on Transportation would be beneficial to its fortunes. But stocks like Brazilian Traction, International Nickel, Montreal Light, Heat and Power, Shawinigan, and Consolidated Smelters all shared in the advance. For some stocks like Smelters and Canadian Cannery the results of the Imperial Conference were counted a bull point, and the stocks of corporations which are heavily interested in the West benefited by the improvement in the economic outlook for that area. However, the wiser heads in the financial world fear that the bull movement may be pushed too far, and do not think that the underlying economic conditions justify some of the advances which have taken place. The bond market has also strengthened greatly, and there has been a brisk demand for high-class bonds, while the mining market has also profited by the changed atmosphere. The Bureau of Statistics "Investors' Index" of all common stocks had on September 8th risen to 62.2 (base 1926=100), as compared with 58.6, 56.9 and 53.4 on September 1st, August 25th and 18th respectively.

PARIS.

Business on Tuesday was chiefly confined to French Rentes. Rio Tintos were down on heavy selling, but later in the week were stimulated by the advance in copper. German bonds were well sustained, with Young Loan at 564 and Dawes at 7,250. The tone of the market became more cheerful as the week progressed, but the main interest remained in Rentes, owing to Conversion operations. The Bourse continued to suffer from public apathy, business being largely confined to professional operators.

BERLIN.

The upward movement from August 29th to September 6th was the strongest there has been for years. Upon the publication of the Government's economic programme, renouncing all dubious economic experiments, the rise spread from foreign security and commodity markets into Germany. The programme was well received and gave rise to the conviction that the turning point had been reached. The upward movement was due mainly to purchases by the public, who had been refraining out of nervousness from all investment activity for so long that they now had abundant liquid resources available. During the rise there was a great shortage of securities, for even the German banks, which have been acquiring large quantities of shares and rentes during the last few years in order to support the market, hesitated to liquidate their holdings. In consequence of this shortage the purchases of the public were only possible at greatly enhanced prices. Some shares, especially the smaller and cheaper issues, doubled their quotations in ten days, but even some of the leading German shares rose 50 to 70 per cent. As these gains were not justified by present economic conditions, an early decline was inevitable, and this set in on September 7th when profit-taking by both speculators and public began. Business declined on the succeeding days and the heavy turnovers of the beginning of September already seem to be a thing of the past. This reserve seems to be mainly due to the uncertainty of

domestic politics. In spite of the latest decline quotations are still substantially above those of early August. The general index is about 25 per cent. higher. The most marked rises are those of some electricity shares (AEG, RWE, etc.), some coals (Harpener, Mannesmann, etc.), and shipping shares. Bank shares have risen least. The price rises on the rente market were much less. Even after the last rises Reichsbank preference shares, whose 7 per cent. dividend is guaranteed by the Reich, were only 81½, and the average yield on first-class German rentes is still 9 per cent.

AMSTERDAM.

Dull conditions prevailed on the Bourse this week and there was a marked reaction in almost all stocks. Among industrial shares Philips Lamps dropped sharply. Royal Dutch were lower at 162½. Towards the end of the week the market displayed a slight firmness, but business remained restricted. Royal Dutch advanced to 166 on Wednesday. Rubbers were strong, Amsterdam rubbers jumping 6 to 126½.

OTHER CENTRES.

Dull conditions prevailed on the minor European Bourses. Budapest, which has been closed since July last year, was reopened, but actual business was only of a moderate character. Early in the week the tone in Brussels was adversely affected by the sudden fall in Tubize from 317.50 to 272.50. Elsewhere conditions were quiet and transactions few and far between.

INVESTMENT NOTES.

The Stock Exchange and the Banks.—The thorny question of split commissions has been re-opened by a circular of the Committee for General Purposes to the effect that they had come to the conclusion that any reduction of commission allowances going beyond the Committee's original proposals would be likely to restrict or divert business and prove detrimental to the interests of all concerned. We may recall that in March last the Committee had approved in principle the reduction in the proportion of commissions returnable to outside agents from 50 per cent. to 38½ per cent. except in the case of banks. This did not apply to the clerks and half-commission men in the exclusive employ of brokers, as to which the Committee had come to no decision. A mass meeting of brokers, attended by 800 members, was then called to consider these proposals, and passed resolutions to the effect that not more than 38½ per cent. commission should be allowed to banks and not more than 25 per cent. to other registered agents, and that no commission of 20s. or less should be divisible at all. These resolutions were carried with remarkable unanimity. Subsequently meetings took place between members of the Committee for General Purposes, certain members of the unofficial "Reform Committee" and representatives of the banks. The views of the bankers were then canvassed, and on June 14th a meeting was held between their representa-

tives and the Committee for General Purposes. The bankers stated that they could not agree to the proposal for the reduction of their share of the commission or to the proposal that the minimum commission should be indivisible, as the bulk of their customers' orders carried this minimum. As the banks were, through their network of branches, collectors of business, a considerable proportion of which would not otherwise reach the Stock Exchange, they did not think that they were over-remunerated for the trouble and responsibility they took. If there should be what the banks considered an inadequate return of commission, they would have to protect themselves, indicating that a certain class of business could be carried through without the Stock Exchange acting as intermediaries. The Committee for General Purposes, in view of the strong attitude taken up by the banks, have therefore returned to their original proposals. In their opinion: "Any reduction in volume or diversion of business to other centres or arrangements for putting buyer and seller together outside the Stock Exchange would not only reduce the business of both brokers and jobbers, but also materially curtail the freedom of markets; prices would then become wider, and the public suffer accordingly." The Committee's decision has been received with something like indignation by the majority of Stock Exchange members. The view has been expressed that the threat of the banks to organise a "Black Bourse" of their own was mere bluff, and that such a scheme would prove unworkable. We do not suppose that the banks have any intention of setting up a market for the exchange of all classes of securities, but there is no doubt in our mind that a great volume of business in the gilt-edged market could be done outside the Stock Exchange if the banks chose to set up a market in conjunction with the insurance companies, building societies and other savings institutions. The resentment which has been caused among many members of the House is natural, seeing that the orders of the joint stock banks generally go to a select number of the large firms of brokers. The smaller firms do little or no business with the joint stock banks, and depend much more upon outside half-commission men. It is to be hoped that in this heated discussion the interests of the investor will not be overlooked. Dealing on the Stock Exchange has become too expensive and charges ought to be reduced, but unless there is some reduction in half-commission allowances there is little chance of lower charges being secured by the investing public. We therefore trust that the banks and the Stock Exchange Committee will get together again and agree upon some compromise which will be satisfactory to the investing public.

The Gilt-edged Market and Conversion.—According to a statement issued to the Press at the end of last week, the total conversion applications from holders of 5 per cent. War Loan have risen to £1,885 millions and applications for cash to £88 millions. These figures compare with £1,850 millions and £48 millions a month previously. It will thus be seen that there has been a lull in conversion since the close of the bonus period. From now until September 30th, when the final decision of holders must be given, there should be rather more activity. There remains only some £112 millions, the destination of which is uncertain. It is understood that by far the greater part will apply for conversion or will be automatically converted. According to the statement of General Seely, who is in charge of the conversion scheme publicity, many holders of unassented War Loan refrained from converting during the bonus period for patriotic reasons and decided to allow their stock to be converted automatically. As General Seely remarked, the overwhelming success of the operation is now patent to everyone, and the confidence which the Government feels in the position is shown by its action in giving notice to repay other loans amounting to £150 millions on December 1st. No doubt, for the prestige of the Government, a great effort will be made to secure the conversion of the remaining portion of War Loan so that cash repayments will be well below £100 millions. The remarkable success of the conversion scheme has given further

stimulus to the gilt-edged market. Assented War Loan has again risen above 100, and other long-dated stocks have appreciated in like manner. There is a general confidence that the market will rise to new high levels on the conclusion of the conversion operation. General Seely points out that after the Goschen conversion scheme of 1888 the price of Consols, which stood around par when the scheme was announced, fell as low as 94 in November, 1894, but then afterwards recovered till in June, 1896, it reached 113½, remaining well above par until the outbreak of the South African War in October, 1899. It is not clear whether General Seely intended to mean that the new 3½ per cent. War Loan is likely to remain at a considerable premium until war breaks out in eleven years' time.

The Status of League Loans.—The various loans issued from time to time under the auspices of the League of Nations have had, for the most part, a chequered history. Defaults and rumours of defaults have largely undermined the confidence of investors, and the lowest quotations of 1932 were often only a small fraction of the issued prices. The following table of recent movements suggests that, while appreciable rises have occurred from the lowest of the year, the market still prefers to take a conservative view of the position.

Loan.	Issue Price.	High, 1932.	Low, 1932.	Price, Sept. 16, 1932.	Price, Sept. 21, 1932.

The publication by a special committee of memorials to the British Government and the League, the nature and the implications of which are discussed in a Note of the Week on page 544, has not so far resulted in any marked improvement in prices.

The Gaumont-British Group.—The position of the Gaumont-British Picture Corporation and those of its cinema theatre subsidiaries, Denman Picture Houses and General Theatres, is discussed at length in our leading article this week, which contains a statement showing the earnings and distribution of profits for the past two years. It will be seen that in the last financial year the net profits of Denman Picture Houses showed a fall of 8½ per cent. and those of General Theatres 10.8 per cent., which compares with a decline of 12.8 per cent. in the net profits of Provincial Cinematograph Theatres, which is the oldest established of the cinema-theatre circuits of the Gaumont-British group. This comparison may not be exact, seeing that the net profit figures are arrived at after making widely different allowances for taxation. Thus, if the special allowance of £53,000 for taxation in the income account of Provincial Cinematograph Theatres (against nothing in the previous year) is eliminated, the fall in net profits for this company would be under 4 per cent. In spite of the decline in earnings which have followed upon the increased taxation and the smaller attendances at picture houses, Denman Picture Houses is still covering its interest charges and paying in addition a dividend of 2½ per cent. on its ordinary capital. General Theatres, after meeting its debenture interest, is only able to earn its preference share dividends, so that its ordinary shares are virtually earning nothing. The Gaumont-British Company showed earnings of 10.4 per cent. on its nominal capital, but if allowance is made for the cash premiums subscribed by the shareholders to various issues of the ordinary shares and for the loan capital and secured bank loan, it will be found that the net profits represent only 6.1 per cent. return on the capital employed. The

balance sheets of the Gaumont companies disclose the following cash position:—

	Gaumont-British.	General Theatres.	Denman Picture Houses.
Quick Assets.	£	£	£
Cash in hand	36,155	101,804	129,935
Debtors	123,501	30,443	5,138
Total	159,656	132,247	135,073
Current Liabilities.

Creditors	410,986	120,003	53,811
Prof. divs. accrued ...	35,156	35,156	...
Deb. int. accrued ...	11,306	50,687	22,469
Total	492,403	205,846	76,280
Deficit (d) or Surplus (s)	332,747*d	73,599d	58,793s

* In addition, there is a secured bank loan of 130,000.

It will be seen that the financial position of these companies is not impressive. As regards the future prospects of the cinema theatres in this country, Mr John Maxwell, the chairman of the British International Pictures, at the shareholders' general meeting on Wednesday, spoke hopefully, but dwelt on the heavy increase on the entertainments tax which was imposed in November last year. Until this increase was made, cinema seats at prices up to and including 6d. were not subject to entertainment tax. There could be no question, he said, that the tax upon these cheaper seats has been a grievously heavy burden upon the poorer classes, whose spending power has already been greatly reduced. In the large industrial areas the effect of this tax upon attendances had been most marked. He urged the Government to consider the removal of the tax upon the cheaper seats.

The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Bylands' Revised Scheme.—In the *Economist* of June 25th last we ventured to criticise the scheme of arrangement recommended by the directors of this old-established warehouse business on the ground that it would lower the income of preference shareholders at a time when ordinary shareholders had not ceased to receive dividends. Consultations with representative shareholders have since taken place, and have resulted in a revised scheme. According to the latest proposals, a participating dividend of 2 per cent. above the suggested fixed cumulative dividend of 6 per cent. is given to the preference shareholder, commencing when the dividend to the ordinary shareholder exceeds 5 per cent. in any one year. The reduction of dividend from 8 per cent. to 6 per cent. is postponed until September 30, 1932. The premium of 2s. to be paid as compensation for the loss of dividend has been increased to 2s. 8d. less tax, which represents the loss of dividend (2 per cent.) on the remaining capital in the company for a period of ten years. Additional voting rights are also granted to preference shareholders as long as the amount distributed to them is less than 8 per cent. It is proposed to return to preference shareholders the same amount of capital as under the former scheme—viz., £500,000, or 6s. 8d. per £1 share. In short, therefore, for every three preference shares at present held, holders will receive two new 6 per cent. cumulative participating preference shares of £1 and £1 6s. in cash. The scheme has clearly been placed on a much more equitable basis, and it is significant that the mover and seconder of the resolution for adjournment on July 12th have both approved it in its new form.

The Eastwoods Group.—In a somewhat subdued progress report published early in February, the board of Eastwoods, Limited, brick manufacturers and dealers in building materials, announced that, while there had been some reduction in turnover and profits, the company had obtained its share of the available trade. The accounts for the financial year to March 31st last show that gross profit declined from £78,431 to £66,178, a fall of 15½ per cent. After deduction of expenses and other charges, including £1,286 on account of loss through sale of War Loan, net profit at £46,000 compares with £58,825. The 7 per cent. preference capital again absorbs £10,500, while the distribution on the 300,000 £1 ordinary shares is reduced from 10 per cent. to 7½ per cent. Allocations to reserves include £10,000 to general reserve (which stands at £107,500), £1,638 to investment reserve and £1,287 to taxation reserve. The balance sheet reveals a thoroughly liquid position:—

	Year to March 31,		
	1930.	1931.	1932.
Profit	88,101	78,431	66,178
Expenses	9,691	7,732	7,696
Directors' fees	2,300	1,126	1,260
Depreciation, &c.	8,700	10,748	11,222
Net profit	67,240	58,825	46,000
Brought forward	11,011	10,251	11,076
Preference dividend	10,500	10,500	10,500
Ordinary dividend:—			
Amount	37,500	30,000	22,500
Earned %	20.8	17.9	11.9
Paid %	12½	10	7½
Reserve	20,000	17,500	12,926
Carried forward	10,251	11,076	11,150

Trading profits of the subsidiary, Eastwoods Cement, are down from £32,664 to £28,742, but the report states that the cement industry has seen a considerable recovery since the recent absorption of the Red Triangle group, and that the latest accounts do not reflect the real extent of the improvement. Dividend is maintained at 6 per cent., less tax. Current trading operations are expected to show better results. The production and sale of Fletton bricks manufactured by Eastwood Flettons at their new works in Bedfordshire have been substantially increased, and development continues. Trading profit shows a small advance from £23,659 to £25,117. Preferred ordinary dividend is increased from 7 per cent. to 8½ per cent. and

the £9,300 deferred capital participates in surplus to the extent of £660. There seems no reason to doubt that the group is in an excellent position to take advantage of any resumption in constructional activity which may occur. The ordinary £1 shares of Eastwoods Limited are quoted at par.

Harrisons and Crosfield.—The profits of this well-known company of Eastern traders have again been adversely affected by the continued fall in commodity prices. Net income for the year to June 30th last is £182,032, compared with £236,845 for the previous twelve months. The preference and preferred ordinary dividends are still comfortably covered by earnings, but for the fourth year in succession the deferred dividend is reduced, the distribution being 5 per cent. against 12½ per cent. The carry-forward is slightly increased at £108,978:—

	Year to June 30,		
	1930.	1931.	1932.
Net profit	352,004	236,845	182,032
Brought forward	104,472	106,587	100,329
Preference dividend	37,800	37,800	37,800
Preferred ordinary dividend ...	100,000	100,000	100,000
Management dividend*	39,030	17,500	16,250
Deferred ordinary dividend:—			
Amount	73,059	47,803	19,333
Paid %	20	12½	5
Written off investments	100,000	...	...
Reserve	...	40,000	...
Carried forward	106,587	100,329	108,978

* Including directors' remuneration.

According to the report, investments in tea, rubber, and other produce companies have continued to depreciate to largely nominal levels. Although the directors do not regard the fall as permanent, they have nevertheless decided to transfer a further sum of £150,000 from general reserve to investment reserve, bringing that item to £550,000. The financial position, as disclosed by the balance sheet, remains very strong. A resolution to convert the £1 shares into £1 stock units will be submitted at the general meeting. The £1 deferred shares were quoted on Wednesday at £2½, to yield about £2 6s. 6d. per cent., allowing for the final dividend.

Selfridge Provincial Stores.—The businesses controlled by this company showed an aggregate profit of £215,712 for the year to August 31st last, including a profit of £18,605 on the sale of a property, compared with £248,508 for the previous twelve months. Dividends received were only £138,832, against £151,028, but net profit was slightly higher at £98,426, compared with £96,719. The £3,000,000 of ordinary capital again receives 2½ per cent. The sum of £50,000 is allocated to writing off the balance of preliminary expenses, and the carry forward is reduced from £9,887 to £1,563.

	Year to August 31,		
	1930.	1931.	1932.
Net profit	162,974	96,719	98,426
Brought forward	569	793	9,387
Ordinary dividend:—			
Amount	162,750	58,125	56,250
Earned %	7.0	4.2	4.4
Paid %	7	2½	2½
Preliminary expenses written off	10,000	30,000	50,000
Carried forward	793*	9,387	1,563

* After crediting £10,000 contributed by Selfridge and Co.

The consolidated balance sheet of the subsidiary companies reveals few changes, and the position of the group remains liquid. Stock in trade is somewhat reduced at £599,863. The £1 ordinary shares are quoted around 7s., yielding about £7 14s. per cent., allowing for the dividend.

Anglo-Siam Corporation.—The report of this old-established forestry company indicates that the demand for teak, in common with all other commodities, has shown no alteration for the better during the past year. The saw-mill was closed for a considerable period, while stocks of cut timber accumulated and sales of rough timber ceased. The effects of declining trade have been minimised by a substantial reduction in management expenses, while as a further measure of economy business has been more or less centralised at Singapore and Shanghai. Including the amount brought forward from the previous year and transfer of £10,000 from the equalisation of dividends fund, the sum available for distribution, after providing for bad and doubtful debts, etc., is £91,220. Interim dividends have already absorbed £12,275, so that the balance is £78,945. The directors recommend a final dividend on the ordinary shares of 12½ per cent. and 3½ per cent. on the preference shares, leaving £50,170 to be carried forward.

	1930.	1931.	1932.
Net profit	62,137	35,504	29,536
Brought forward	55,643	53,229	51,684
Equalisation of dividend fund	...	10,000	10,000
Preference dividend	4,550	4,550	4,550
Ordinary—			
Amount	55,000	40,000	35,000
Earned %	26.3%	14.2%	11.7%

Provident Fund	5,000	2,500	1,500
Carried forward	53,229	51,684	50,170

The liquid position of the company is very strong—nearly one-half of the assets (£475,818) are represented by British Government and other securities, although the report does not show what proportion the "other securities" bear to British Government bonds. The £1 ordinary shares are quoted at £2½ to yield £8 4s. 6d., less tax, allowing for the final dividend of 12½ per cent.

The "Johnnies" Report.—The general body of shareholders in this well-known Kaffir house will doubtless be agreeably surprised to observe a recovery in the profits. This is obviously attributable chiefly, if not entirely, to the increase in dividends received from the company's gold-mining subsidiaries. Most of these have held or more than held their ground. As pointed out in our columns a few weeks ago, the Transvaal diamond undertakings have been under a cloud for some time past. The "Johnnies" Northern Rhodesian copper interests have so far provided no return. Fortunately the outlook for both has lately become better. Transvaal undertakings have felt the effects of the prevailing depression. It may be recalled that in respect of 1930-31 the policy was followed of meeting part of the depreciation on investments by the appropriation of £300,000 from reserve. The present report states that the depreciation, which has again been "exceptionally heavy," has been "provided for"—presumably out of revenue. In view of currency complications, £150,000 has been transferred from profit and loss to special currency reserve, together with £350,000 from reserve. Thus the former fund stands at £500,000 and the latter at £300,000. A four-year contrast is appended:—

* Tax free.

† Including dividend.

The reduction in the amount required to provide the same rate of dividend as before arises, of course, from the fact

that it is payable in sterling. A satisfactory feature is the improvement which has taken place in the financial position. Twelve months ago there was a deficiency of approximately a quarter of a million. A surplus of £62,000 is indicated at June 30th last. "Johnnies" are quoted around 32s., as against 20s. a year ago.

New Modderfontein.—In the note on last year's report of this veteran Witwatersrand gold undertaking emphasis was laid upon the point that a progressive decrease in profits would have to be faced. During the financial session lately ended the crushing of a record tonnage at a substantially reduced cost ratio was more than counterbalanced by decline in average yield, the operating profit falling off by not very far short of £200,000. This necessitated a cut in each of the half-yearly distributions, the rate for the December six months being 55 per cent. and for the June period 52½ per cent. The total falls 17½ per cent. short of that for the preceding period, which in turn was 12½ per cent. down. We contrast the results of the three past years.

	1929-30.	1930-31.	1931-32.
Ore crushed	1,811,000 tons	1,934,000	2,000,000
Revenue	41/-	36/11	33/7
Costs	16/10	16/-	15/4
Profit	24/2	20/11	18/3
Total working profit	£ 2,188,180	£ 2,017,770	£ 1,822,050
Dividends	£ 1,925,000	£ 1,750,000	£ 1,505,000
Rate	137½	125	107½
Carried forward	£ 251,980	£ 242,080	£ 220,250
Ore reserves available	7,431,900 tons	6,789,000	6,009,500
Value per ton	8.6 dwt.	8.0	7.7

In 1931-32 a record development footage was performed, and about one quarter of the material milled came from reclamation. Despite this the ore reserves show a fresh reduction of more than three quarters of a million tons, with a shrinkage of 0.3 dwts. in value, the proportion of payable ore opened up being less than before in both quantity and value. Owing to the number of different reefs now being exploited, the development details are rather complicated. A study thereof leads to discouraging conclusions regarding the outlook. Allowance being made for sorting and for the continuance of substantial contributions from reclamation, the reserves as per latest estimate would last for nearly 4½ years, but "there is a considerable tonnage of low-grade ore not included in the reserve which can be mined at a profit while costs remain at their present low figure." Little work remains to be done on the principal ore body, the Main Reef leader. In the case of the subsidiary deposits, a considerable amount of ground remains to be tested. Altogether the estimates of ten to twelve years' remaining "life" appear to have been optimistic.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Rhokana Corporation, British International Pictures, and Initial Services (1928). At the meeting of Rhokana Corporation, Sir Auckland Geddes said it had always been known that cobalt was present in N'Kana ores, but until recently it had not been certain that this metal could be economically extracted. Recent investigations had proved that they would soon be able to produce cobalt in the form of a high-grade iron-cobalt alloy which should find a ready and profitable market. Presiding at the annual meeting of Initial Services, Mr A. P. Bigelow said that the very favourable results for the year under review had been made possible by the

solid foundation on which the business had been built during nearly thirty years. The nature of the business was such that a very large alteration in turnover was required to make much difference to the net results, but the directors had taken all necessary steps to profit by improved conditions. Reference is made to the meeting of British International Pictures in a Note on page 561.

COMPANY MEETINGS, &c.

RHOKANA CORPORATION, LIMITED.

DEBENTURE CONVERSION SCHEME APPROVED.

An extraordinary general meeting of the Rhokana Corporation, Limited, was held, on the 21st instant, at Southern House, London, for the purpose of submitting resolutions designed to enable the directors to carry out a debenture conversion scheme.

The Right Hon. Sir Auckland C. Geddes, P.C., G.C.M.G., K.C.B. (the chairman), presided, and, in the course of his speech, said:—Debentures amounting to £4,500,000 in 7 per cent. twenty-year convertible debentures were issued in May, 1931, at par. The principal and interest on the debentures, and any premium that may be payable by the corporation in exercising its rights to redeem the debentures, are payable not only in sterling, but at the option of the holders in dollars at \$4.86 to the pound, or in florins at Fl. 12.11 to the pound. In 1931 England went off the gold standard. This has cast a burden upon the corporation in regard to the payments of interest, principal, or premium not fully envisaged at the time the debentures were issued.

The present conversion is designed to afford some immediate relief to the corporation by ridding it of a great part of its heavy obligation in respect of the annual interest charge, and further relief by extinguishing the liability for heavy redemption payments. The yearly amount payable in sterling by way of interest, instead of being £315,000, is, at the ruling rates, over £400,000.

A very large majority of debentures are held by Rhodesian Anglo-American and by Rio Tinto Company, Limited, or its associates. These debenture holders have agreed, if the resolutions are passed to-day, to convert their debentures into ordinary shares of the corporation, and it is hoped that some of the other debenture holders will follow the lead.

TERMS OF THE OFFER.

In determining the rate of conversion the object was to fix terms which should be fair both to debenture and to shareholders. What is proposed is that an offer should be made to debenture holders to purchase as at December 31, 1932, their holdings of debentures at a price of £120 sterling per cent., and that this price should be satisfied by the allotment of fully-paid ordinary shares of £1 each of the corporation at the rate of one ordinary share for every £5 of such surrender price.

The only way in which the corporation can compulsorily redeem its debentures prior to October 1, 1940, is by paying off the whole of the principal moneys owing in respect of the debentures, together with a premium at the rate of £20 per cent. As the principal moneys are payable in dollars at \$4.86 to the pound, or in florins at Fl. 12.11 to the pound, the amount that would have to be paid in any compulsory redemption per £100 face value would be something in the neighbourhood of £168 sterling at the present rates of exchange. The conversion price of £120 sterling per cent. would seem to be a fair price in the circumstances. I should perhaps add that it seems the most improbable, if this scheme goes through, and if some of the debentures remain unconverted, that the corporation will take any steps towards redeeming the outstanding debentures at a premium.

In cases where the debenture holders accept the offer which is made to them the transaction will be completed in January next. The corporation will pay interest on debentures for the six months ending December 31, 1932, and immediately thereafter the debentures will be surrendered for ordinary shares. These ordinary shares will rank *pari passu* with the existing ordinary shares of the corporation. If the resolutions are passed to-day it is intended that the offer to debenture-holders should be made immediately, and the offer will allow a period of one month for its acceptance.

CURRENT YEAR'S RESULTS.

The report to shareholders giving the results for the first six months of this year showed costs for the second quarter of £25.92 per long ton of copper contained in blister copper, delivered London or European ports, including every cost except debenture interest and depreciation. During July and August, with copper productions of 3,911 and 4,152 long tons respectively, the costs calculated as above came out at £23.17 and £22.52 per long ton, corresponding to 3.59 cents and 3.5 cents American currency per pound, with an exchange ratio of \$3.48 to the £1. A further reduction of costs is confidently anticipated by our technical staff.

It has always been known that cobalt was present in N'Kana ores, but until recently it has not been certain that this metal could be economically extracted. Recent investigations have proved that we will soon be able to produce cobalt in the form of a high-grade iron-cobalt alloy, which should find a ready and profitable market.

The resolutions authorising the redemption of the debentures and increasing the capital of the corporation having been proposed by the chairman, and seconded by Mr Francis L. Gibbs, were passed unanimously.

INITIAL SERVICES (1928), LIMITED.

TRADING PROFITS MAINTAINED.

The fourth ordinary general meeting of the Initial Services (1928), Limited, was held, on the 21st instant, at Winchester House, London, Mr A. P. Bigelow (chairman and managing director) presiding.

The Chairman, in the course of his speech, said the trading profit for the year under review amounted to £210,603, and the total profit carried to the balance sheet was £210,951, compared with £210,542 for the previous year. The liquid assets amounted approximately to £294,000, as against £264,000 at June 30, 1931, and the market value of their British Government securities, which stood at £179,146, was in excess of the balance-sheet figure. The balance of the profit and loss account brought forward from the previous year was £17,309, and the available balance was £118,937. The directors recommended the transfer of £45,000 to general reserve, increasing that account to £145,000, and the payment of a final dividend on the ordinary shares of 4d. per share, less tax, leaving £17,687 to be carried forward. The directors hoped the shareholders would think it satisfactory the trading profits

BRITISH INTERNATIONAL PICTURES, LIMITED.

SATISFACTORY RESULTS.

The fifth ordinary general meeting of British International Pictures, Limited, was held, on the 21st instant, in London.

Mr John Maxwell (the chairman), after dealing with the changes in the balance sheet, said that when they last met he had been able to tell them that so much of the financial year as had then passed had shown them an increase in the company's returns from the hire and sale of its films, and that he felt encouraged to look forward to a reasonably prosperous year, but the effects of the financial crisis and the drastic remedies which the Government had found it necessary to apply had been felt throughout the country, and had affected the film industry in common with others, and in the circumstances he felt that the results, showing a trading profit of £112,283, after making the necessary provision for income tax, must be regarded as satisfactory.

Their studios had reached a stage of technical skill of which they might feel justly proud. As to the outlook, they were largely dependent on the general improvement in industrial conditions which many authorities would have them believe was on the way. If they were right he felt confident that the company's fortunes would show steady improvement. Their pictures were being shown more widely than at any stage of their history.

The report was unanimously adopted.

Presiding at the fourth ordinary general meeting of Associated British Cinemas, Limited, which followed, Mr. Maxwell, after dealing with the accounts, said that the trading profit was £373,131, and the results shown were satisfactory. They had felt the effect of the additional burden of taxation which the Government had found it necessary to apply in the increase in income tax, and also in the further turnover tax, which particularly affected cinema-owning companies. The effect of the increase in the entertainment tax had been immediately felt in all entertainment companies, and efforts had been made so to rearrange admission prices as to mitigate as far as possible the natural effect of the tax in reducing attendances.

In the great industrial areas the effect of that tax upon attendances had been most marked, and he felt that the Government would be taking a step which would be welcomed wholeheartedly by all classes if it could see fit as early as possible to remove the tax on all seats up to 6d., thereby removing a legitimate grievance of the lower wage-earning classes.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 17, 1932, amounted to £10,265,700 against ordinary expenditure of £12,944,400. After allocating £290,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £468,631 the operations for the week, as shown below, increased the National Debt by £2,500,000 to £7,675,476,000:—

Messrs. Samuel Montagu and Company write on September 21, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,292,183 on the 14th instant, as compared with £139,031,386 on the previous Wednesday. On the 15th instant, the Bank announced the purchase of £128,376 in bar gold. In the open market, substantial amounts of gold were available, and were bought for the United States of America and the Continent.

Quotations during the week:—

Average.....	118s. 7-2d.	14s. 3-9d.

SILVER.

Demand has continued poor, and the market could offer very little resistance to re-selling by the Indian Bazaars; consequently, prices were inclined to sag, 17½d. for cash and 17½d. for two months' delivery being quoted on the 17th instant. Selling from America had been evident on most afternoons, but offers were not forthcoming at the lower prices, and with China disposed to give support the market showed more steadiness, with a slight recovery in quotations. Although the tone of the market is steady at the decline, buyers do not yet seem attracted to a sufficient extent to indicate any rapid improvement.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 12th instant to mid-day on the 19th instant:—

IMPORTS.	£	EXPORTS.	£
Germany.....	14,950	British India.....	20,695
Belgium.....	15,730	Sweden.....	10,300
Japan.....	16,581	France.....	2,477
France.....	5,447	Germany.....	2,381
Other countries.....	3,467	Other countries.....	4,688
	56,175		40,541

Quotations during the week:—

AUSTIN MOTOR COMPANY, LTD.—At a meeting of the board, held at Longbridge Works on September 20th, the directors decided to recommend the payment of the following dividends and bonus: Dividend of 20 per cent. on the preferred ordinary shares for the year to July 31, 1932 (less income tax at 5s. in the £), £150,000; dividend of 25 per cent. on the ordinary shares for the year to July 31, 1932 (less income tax at 5s. in the £), £37,500; bonus of 25 per cent. on the ordinary shares for the year to July 31, 1932 (less income tax at 5s. in the £), £37,500—£225,000. The payment of these dividends is subject to the passing of the resolutions which will be submitted at the annual general meeting of shareholders to be held on Monday, October 3rd, and if approved the dividend warrants will be posted on October 31, 1932. The trading profit was £1,078,145 against £1,375,244.

BUENOS AYRES GREAT SOUTHERN RAILWAY.—The board of directors of the Buenos Ayres Great Southern Railway regret to announce that they are unable to recommend the payment of a dividend on the ordinary stock for the year ended June 30, 1932. The directors' report and accounts will be issued on October 17th, and the annual ordinary general meeting of the company has been fixed for October 26th, on which date warrants for the payment of dividends on the 5 per cent. and 6 per cent. preference stocks will be posted.

BUENOS AYRES WESTERN RAILWAY, LTD.—The board much regret to announce that they are unable to recommend a dividend on the ordinary stock of the company for the year ended June 30, 1932. The annual general meeting of the company will be held on Tuesday, October 25th next, at mid-day. The warrants for the dividends on the preference shares will be posted on the evening of that day.

REPORTS AND NOTICES.

MISCELLANEOUS.

UNION-CASTLE MAIL STEAMSHIP COMPANY, LTD.—Sir Francis Vernon Thomson, K.B.E., has been appointed a director of the Union-Castle Mail Steamship Company, Ltd. At the recent annual general meeting the chairman (Mr Robertson F. Gibb) intimated that the board contemplated the appointment of an additional director having large experience of shipping and finance, who he felt sure would be acceptable to the preference shareholders. Sir Francis Thomson is chairman of the King Line, Ltd., and is of the London Maritime Investment Company, Ltd., and is chairman of the Baltic Shipping Exchange, a member of the Committee of Lloyd's Register, the Council of the Chamber of Shipping, &c.

WARING AND GILLOW, LTD.—On September 14th the court in the action by the first debenture holders of the company sanctioned a contract for the sale of the company's business and practically the whole of the assets to Mr. Ivan Couper Sanderson, who has been chairman of the company since 1930. Mr Sanderson is taking steps to complete the purchase at the earliest possible date and for this purpose is forming a new company with substantial working capital. It is intended that the new company should continue the business under the present management and staff. The purchase price will be satisfied by the issue of debentures and shares in the new company. These will consist of £600,000 5½ per cent. mortgage debenture stock, £355,000 7 per cent. A income stock, £38,000 B income stock, and £380,000 7 per cent. second non-cumulative preference shares. An issue of 150,000 10 per cent. non-cumulative first preference shares of £1 each will be offered for subscription in cash. Mr Sanderson will take up firm 100,000 of these, but the whole 150,000 will be offered to the shareholders of the present company for subscription at par. A total of 390,000 £1 ordinary shares will be created and two of these will be issued as a bonus with each one of the first preference shares subscribed.

Commercial Reports.

MARKET SUMMARY.

After last week's reaction, the tendency of prices of primary products at the principal markets has once more been upwards. Wednesday's quotations in the United States of the chief commodities

ties nearly all show a rise on the week. Among non-ferrous metals copper was firmer, but lead, spelter and tin were easier. On the other hand, the last three metals all rose in London. Among textile raw materials, cotton was firmer. Rubber, too, recovered a little. Cereals were all dearer, sugar and coffee were also firmer, but cocoa suffered a slight setback. Reports from various industrial centres reveal a slight improvement in the coal trade on the East Coast. Activity in the iron and steel industry, though still on a low level, is expected to improve soon, as a result of an increase in orders. The cotton and rayon trades are severely hampered by the strike, and business in wool manufactures remains quiet.

THE COAL TRADE.

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
 INSURANCE COMPANY.
ASSETS EXCEED - £15,600,000
FIRE. LIFE. ACCIDENT. MARINE.
 Edinburgh: 35, St. Andrew Square,
 London: 5, Walbrook, E.C.4 and 4, St. James's Street, S.W.1

under the pressure of Spanish colliery owners and miners, is contemplating the prohibition of the importation of foreign coals for the service of the Spanish railways. A decree to this effect has not yet been promulgated, but an assurance has been received that, when it is issued, it will exclude current contracts. For all large grades of coal, prices are at the minimum schedule figures, but quotations for dry nuts are 2s. 6d. per ton higher than they were a week ago, while those for washed smalls for bunker consumption have also been raised by at least 6d. per ton. The opinion of the market is that these increases are the first fruits of the policy of the new Welsh Associated Mines which was recently formed to eliminate inter-competition and secure a greater measure of co-ordination in the marketing of South Wales coals. It is also reported on the market that definite quotas have been allotted to the members of the new combination in the Italian market. There was a slight increase last week in the quantity of coal shipped from the South Wales ports, but on Wednesday morning 28 tips were idle and 56 in operation. The agitation of local Labour leaders against the policy of the Great Western Railway Company in the administration of the docks under their control has collapsed, and it is not likely that any further representations will be made to the company with a view of increasing the number of appliances at the Cardiff Docks. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; second, 18s. 9d. to 19s. 4d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; best anthracite large, 38s. to 39s. 6d.; Red Vein large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rully culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 19s. to 19s. 6d.

NEWCASTLE-ON-TYNE.—This week there has been a better supply of tonnage at most of the loading points on the North-East Coast. The Northumberland steam market remains steady with a confident undertone. At present there are a number of Scandinavian inquiries, the principal being 100,000 tons of steam coal for the Danish Railways, 15,000 tons for the Finnish Railways, and 40,000 tons for the Riga Municipality. With the reported financial difficulties of the Polish coal industry, it is expected that all this trade will come to this country, and Northumberland will receive its share. In Durham the position remains fairly quiet for all the various classes of coking coal, and until there is a much improved demand for iron and steel there cannot be much activity in this section of the market. There are no changes in the f.o.b. prices for export, which are as follows:—*Northumberland.*—D.C.B. screened steam, 13s. 6d., smalls, 8s. 6d.; Howards, Bentinek, Newbiggin screened, 13s., smalls, 8s.; Tyne Prime large, 12s. 9d., smalls, 9s.; Hartley Main large, 12s. 6d., smalls, 8s. *Durham.*—Lambton, South Hetton screened steam, 15s., smalls, 11s.; Wear Special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d., second-class gas, 13s., coking unscreened or smalls, 12s. 6d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.; Prime Foundry coke, 16s.; Newcastle and District gas coke, 18s.

IRON AND STEEL.

MIDDLEBROUGH.—The optimism that was aroused in the iron and steel market about a fortnight ago has not been maintained and business has recently been quieter. Although there was a somewhat increased volume of business put through when the move first started, very few consumers had the courage to purchase pig iron for delivery ahead and most of the Cleveland foundry iron sold up to now has been for early delivery. The fact is that prices are considered too dear. There was only a small attendance at Tuesday's weekly market and trade was quiet. Official prices for Cleveland iron were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t., with important concessions to Scotch consumers. In hematite not much forward buying has taken place so far, but a move in this direction is looked for now that the prospects in the steel trade are better. Prices were inclined to harden a little about a fortnight ago, but as the enthusiasm on the market was not maintained they fell back again to 60s. for ordinary mixed numbers for early delivery, with slight premiums for periods ahead. There are still fair inquiries on the market for hematite and the position is being closely watched by consumers who have requirements to cover. Following the two furnaces just blown in on hematite at Ayresome Works, one has been changed over from Cleveland to hematite at Skinningrove Works, which makes a total of six now producing this class of iron in the district. In the finished trades there is more business moving and prospects are considered much brighter. Steel prices for home under the rebate scheme are unchanged, viz.: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Among other products are heavy steel rails, £8 10s.; iron crown bars, £8 15s.; galvanised corrugated steel sheets, 24-gauge, £9 10s.; black sheets, 24-gauge, £8, all for home use. Shipments of pig iron this month are about level with last month, the clearance of all kinds to 20th inst. being 5,213 tons, compared with 5,799 tons to August 20th. In the ore market one or two spot cargoes of best

rubio have been recently sold for special purposes, but consumers' requirements were speedily supplied and there are no further orders on the market. The nominal price for best rubio for prompt is 14s. 6d. c.i.f., but it is stated that this price was shaded slightly for one of the cargoes sold. The rate of freight Bilbao/Middlesbrough is 4s. 3d. Coke continues in plentiful supply and good furnace qualities are offering at 14s. 6d. per ton delivered consumers' works. Most large users have ample supplies for their own ovens, and seldom need to buy outside supplies. The number of blast-furnaces in operation in the district remains at seventeen.
