

The Economist

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXV.

BEING FROM JULY TO DECEMBER, 1932, INCLUSIVE.

THE MONEY MARKET.

TWO PER CENT.

ON Thursday, June 30th, Bank rate was reduced from 2½ to 2 per cent., and simultaneously the turn of the half-year was passed without any market resort to the Bank of England. The last time a 2 per cent. Bank rate was current was 35 years ago, and no one in the market has had

previous experience of an end of the half-year when borrowing from the Bank was unnecessary. The reduction in Bank rate naturally stimulated hopes of an early conversion offer. While most members of the market agreed that the 1932-34 Treasury bonds would almost certainly be dealt with immediately, some members were looking for the announcement of a major operation, though not exactly on the lines of the Chancellor's announcement on Thursday, recorded on a later page.

Earlier in the week the clearing banks reduced their minimum rates for market loans from $1\frac{1}{2}$ to $1\frac{1}{4}$ per cent., though they still continued to lend at $1\frac{1}{4}$ per cent. into July. On Thursday, following the Bank rate reduction, their minimum rates were reduced to 1 per cent., but London deposit rates remained unchanged at $\frac{1}{2}$ per cent. Efforts to bring country deposit rates down below the general rate of $2\frac{1}{2}$ per cent. have so far met with little success owing to competition from the savings banks.

Mainly owing to demands for funds from the gilt-edged market, money was fairly usable early in the week at $\frac{1}{4}$ -1 per cent., but by Wednesday heavy Treasury bill maturities and the absence of payments for fresh bills made money easier at $\frac{1}{4}$ - $\frac{1}{2}$ per cent. On Thursday, the small amount of calling by the clearing banks that proved necessary raised rates to $1\frac{1}{2}$ per cent., but money was still very comfortable. Last week's Treasury bills went at 15s. 0.19d. per cent., two millions being cut off the original offer of £45.0 millions. "Hot" Treasury bills were quoted at $\frac{1}{2}$ per cent. early this week, but eased to $\frac{1}{4}$ - $\frac{1}{2}$ per cent. on Wednesday. The Bank rate reduction left this last rate unchanged. On Thursday three months' prime bank bills were quoted at $\frac{1}{4}$ -1 per cent., with standstills at $1\frac{1}{2}$ - $2\frac{1}{2}$ per cent.

The Bank return shows an expansion of £4.5 millions in the note circulation and a consequent contraction of £4.1 millions in the Reserve. Government Securities are increased by £5.3 millions, and Other Securities are reduced by £5.0 millions. The Bank is known to have been selling *devisen* during the past few days, in order to check appreciable weakness in sterling. There has been a big decrease of £17.6 millions in Public Deposits, with an increase of £13.0 millions in Bankers' Deposits. This represents the restoration of the *status quo* after the position last week, when discrepancies between Treasury bill payments and maturities diverted a certain quantity of money out of the market into Public Deposits in the middle of the week.

The passage of the Finance Act gave the signal for the formal establishment of the Exchange Equalisation Account, and this week's revenue returns records the issue of the full amount of £150 millions from public funds to this account. Apparently it has been thought desirable to constitute the fund in its entirety at once, so as to mask in the future the extent to which the fund is being used. To finance this issue, £148.1 millions have been added to the floating debt, £118.3 millions in the form of Treasury bills, and £29.8 millions as advances from public departments. All these operations are matters of bookkeeping, for no extra Treasury bills have been issued to the market, nor does the Bank return suggest that any appreciable quantity has been taken up by the Bank of England in exchange for its *devisen*. In

fact, the Treasury bills in question were probably taken up by the Exchange Equalisation Fund itself, and will only be disposed of by it as and when it has to acquire foreign exchange. The advance of £29.8 millions equally came from the Fund.

This week the German "standstill" negotiations are being resumed in London, and six German bankers and one German industrialist have arrived. The negotiations will be conducted under the presidency of Mr Albert H. Wiggin, of the Chase National Bank, and it is understood that the immediate object of the German representatives is to secure a reduction in the interest charged on outstanding credits. Clearly, Germany is not in a position to be able to accelerate repayment in any way. The German request for lower interest rates will undoubtedly evoke considerable sympathy in London, but it will obviously have to be correlated with the interest now charged on advances to British customers of London banks. It is obviously impossible that German standstill credits should be charged a lower rate of interest than ordinary British bank advances. Present indications are that the ruling rate on German standstill loans will be reduced from 6 to 5 per cent.

While the outflow of gold from New York has been checked, it is not entirely at an end. Shipments during the past week included \$5.0 millions to Belgium and \$6.0 millions to France. On the other hand, ear-markings upon foreign account contracted during the week by \$15.5 millions, and this suggests that the effective drain of gold is at an end, though the arrangement of one or two further shipments to Europe have just been reported. Money rates remain unchanged, with call loans at $2\frac{1}{2}$ per cent. and open-market discount rates at $1\frac{1}{2}$ per cent. for 90-day bankers' acceptances.

The Foreign Exchange market was again very quiet this week. Sterling was weak against most of the principal currencies, and especially against the franc and the dollar. The New York rate hardened from 3.62½ to 3.60½, after touching 3.59½; Montreal gained three points at 4.12. Paris, after touching 91½, went to 91½, against 92½ last week. Brussels improved by 10 points to 25.90. Milan was a little firmer at 70½, and Madrid also at 43½. Amsterdam, exceptionally, weakened to 8.92. Berlin gained 7 points at 15.16, and Switzerland 10 at 18.50. The Scandinavian currencies reacted differently, Stockholm advancing from 19.47 to 19.50, and Oslo gaining 4 points at 20.26. Copenhagen was weaker by one point at 18.36. The South American currencies were again largely nominal, Rio being quoted at 5½d. (sellers), Buenos Aires at 34½d., and Monte Video at 29½d. In the Far East the rupee was very firm at 1s. 5½d. The yen lost ½d. at 1s. 6½d. after touching 1s. 6d. Batavia was fractionally weaker at 9.00. In the forward market dollars were firmer by ½ cent for both deliveries at discounts of ½ cent and 1½ cents. Paris remained unchanged at par for both periods. Brussels was at ½ centime discount for both one and three months, and Milan weakened by ½ to ½ lira and ½ lira discount for one and three months respectively. Madrid was better by ½ at discounts of ½ and ½ peseta. Amsterdam was quoted at par for both deliveries. Switzerland was unchanged at ½ centime premium for one month, but was rather more offered at 1½ centimes premium, against 2 centimes last week. The silver market was very quiet and, indeed, featureless, but prices declined by ½d. to 16½d. for cash and by ½d. to 16½d. for forward. The China silver exchanges fell away in sympathy, Hong Kong losing ½d. at 1s. 3½d. and Shanghai ½d. at 1s. 7½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bouverie Street, London, E.C.4.

HOPES AT LAUSANNE.

THE second week of the Lausanne Conference has been a period of successive hopes and fears stirred by the breath of rumour and gossip. Lausanne has the physical disadvantage in comparison with Geneva that the delegations of the Powers have been established in hotels a mile or so apart, and have tended to live in separate little worlds composed of their own officials and their Press. This and the fact that the proceedings up till Wednesday night continued to take the form of private conversations between the chief participants have tended to make the reports from the Conference unusually full of tendentious surmises and conflicting accounts. Yet, despite hesitations and hitches, real and rumoured, the progress achieved by the time we go to press appears to warrant hopes that before these lines are read the first step may have been taken to free the world from the grip of its present financial and economic paralysis.

Our chronicle begins with the events of last Friday. On that day, following the long Franco-British conversations, which had resulted in an encouraging measure of agreement on points of principle noted in last week's *Economist*, direct contact between the French and German delegations was first established. Expositions of the respective points of view were given by the Finance Ministers of the two countries; and though the meeting did not appear to have got down very closely to "brass tacks," these preliminaries were conducted at least with personal cordiality. Indeed, on the eve of the week-end, which M. Herriot was to spend in Paris and Herr von Papen in Berlin, the atmosphere contained distinct elements of hopefulness, particularly the reported readiness of the German delegation to discuss the possibilities of "economic collaboration" as an alternative to the continued payment of "political tribute."

Monday witnessed a noticeable, though happily temporary, fall in the barometer. The German Press of the Right had criticised harshly Herr von Papen's supposed "weakness" in offering "compensation" to France; and at the resumed meeting on Monday evening—occupied chiefly by an *exposé* of the German view—M. Herriot was reported to have found Herr von Papen and his colleagues less accommodating than had been hoped, in French circles, from their earlier attitude. Nevertheless, the conception of a "pool for general European reconstruction," to which Germany might contribute, appears to have emerged somewhat more clearly from the German statement; and on Tuesday, when Mr MacDonald, whose tactful and sympathetic handling of the Conference merits full tribute, resumed the task of mediator, it was at least possible to say that negotiations were still in being. Moreover, on Tuesday night a meeting of the Radical Socialists in Paris made it clear that there was a strong feeling in M. Herriot's own party that greater boldness should be risked in securing accord on a basis approaching that of the "clean slate."

Wednesday was a day of marked vicissitudes. In the morning, which witnessed a continuation of Franco-British discussions, a disagreeable impression was caused by the German delegation's issuing a *communiqué* purporting to correct "misleading" reports of the attitude which the delegation had adopted in a previous stage of the negotiations. The *communiqué* declared that Herr von Papen had said that:—

The confidence of the world can only be restored if the victorious Powers would bring themselves to eliminate the discriminations of the Versailles Treaty. If thereby Germany's equality of status and security were established, the Chancellor would consider it possible for Germany to pay her share towards the general effort to reconstruct world economy in the form of a contribution of which the full restoration of Germany's equilibrium and that of the world was a prerequisite.

The unfortunate effect produced by this somewhat tactless and untimely *communiqué* was heightened by sensational glosses unnecessarily put upon it in Press reports from Lausanne—indeed the representatives of a section of the Paris Press appeared to be maliciously intent on sabotaging the Conference—but by the evening the per-

suasions of the British Prime Minister had again exercised a useful influence and a definite step forward had been taken. At a meeting of the six inviting Powers, Mr MacDonald, who reviewed the situation, said:—

There was general approval of the main principles of the report of the Basle experts, and there was widespread agreement that the Conference must end in something substantial and final, though it had to be adapted to a world settlement, including the United States. There was agreement, too, that the Conference must end soon; that the settlement must render possible the restoration of confidence; that artificial transfers which disturb the international balance of accounts should only take place, if at all, by the normal operation of international commerce, and should be limited to within that capacity; and, finally, that Germany could not pay at the present time. He hoped by the beginning of next week that Lausanne might reach a final decision and set up the necessary machinery for continuing the work in a wider field.

It was then decided to appoint a "Bureau" of one representative each of the Powers, under Mr MacDonald's chairmanship, to examine the position in the light of the preliminary exploration and to report to the heads of the delegations. Ministers of Commerce were also asked to meet together to consider certain questions connected with the preparations for a wider conference on the world crisis as a whole.

The "Bureau" sat until a late hour on Wednesday; and on the following day it continued the by no means easy task of translating into a detailed plan the conception of German contribution to "European restoration." By midday early optimism was somewhat chilled by reports that there was a wide gap between French and German notions of the sum which Germany could appropriately be asked to contribute, and that, whereas Germany was prepared to lodge with the B.I.S. bonds to the amount of a definite non-revisable sum, whose service would only be paid, and which could only be placed on the market if and when German credit—as measured by some simple test such as the return of the Young Loan to parity—had been restored, the creditors were demanding a "safeguarding clause" to meet the contingency of a resumption of war debt payments to America. This demand, if correctly reported, was scarcely consonant with the agreed principle that the settlement should be final; and, though we can sympathise with French reluctance to give up claims unconditionally, until the attitude of the United States is finally known, a formula which appeared to make the agreement conditional on war debt revision would be the worst way of approaching American opinion. Moreover, what would such a clause be worth? For, if a figure is now fixed which represents the maximum that Germany can be asked to contribute—if confidence is to be restored and the risk of fresh crises eliminated—it is certain that she will never pay more.

We go to press before the outcome of these final negotiations is known. If an agreed scheme, of a sort which would free Germany's commercial creditors from the fear of any fresh transfer crisis, can be worked out, a big step forward will have been taken. It will leave France with a difficult budget problem, and, from Germany's point of view, much will depend on the political agreements which accompany it. Further great efforts will be needed to solve the whole of Europe's financial and economic problems, about which very little has so far been said at Lausanne; but if our hopes of agreement on these lines are fulfilled, it will at least be possible to say in future discussions with the United States that a definite attempt has been made by Europe to meet Mr Hoover's appeal to deal first with her own problems regardless of external conditions. Alive as we are to the possibility of last-minute hitches, we trust that this week-end will see an agreement which will enable Germany and the whole world to say that the reparations chapter, with its opening clause fixing the responsibility for the war upon Germany, has finally been closed, and that the nations are writing in its stead a new charter in which they generally assume responsibility for lifting the world out of the morass.

THE HOOVER DISARMAMENT PLAN.

It is a pity that Mr Baldwin's statement on disarmament in the House of Commons on Tuesday has not received as great a publicity as was accorded to Sir John Simon's speech at the Geneva Conference last week. The two declarations did not, indeed, differ materially in substance, but the funereal, if lovely, lilies with which the Foreign Secretary wreathed President Hoover's proposals would have produced a far better impression upon his audience and the listening world if they had been replaced by the warmer blooms that fell from Mr Baldwin. He rejoiced, he said, to see those proposals because they were on a scale at which he would like disarmament to take place. It would be dangerous to rush in and say that something was possible before there had been time to examine the proposals, but the Government were anxious to see as much disarmament as possible result from them. They were going into the matter with a view to making it a real success.

That is the spirit in which the President's momentous plan must be considered. There are aspects of it, some of which we indicate below, which must be amended before it can be regarded as a thoroughly satisfactory solution of the disarmament problem, and, in particular, it is inadequate in some respects where we would be prepared to go much further; but it is the first detailed scheme put forward by any of the great military powers of the world—except Russia, whose plan of total disarmament has no chance of acceptance—which involves a substantial measure of genuine disarmament. Its practical effect on any particular national force can be quite simply discovered, since it consists of a formula of reduction to be applied to the armies, navies and air forces of all countries alike.

For Great Britain the main interest of the proposals, apart from their general purport as a measure of world disarmament, lies in their bearing on naval power. The man-strength of our forces on land would be unaffected, since the American suggestion that the 100,000 men allotted to a Germany of 65 million inhabitants forms a reasonable measure for the "police component" in each country would give this country, in view of its colonial possessions, actually a larger army than it at present maintains. The abolition of large mobile guns accords with British policy, but the proposal to do away with tanks altogether goes further than our own desire to limit their size and is a point on which compromise could probably be effected. As regards the air, acceptance of the plan would involve agreement on the abolition of bombing aeroplanes and the prohibition of bombing from the air—restrictions which in view of our exposed position would be all to our interest.

The naval proposals, which are much more complex, naturally affect us very closely. In the matter of battleships the plan is simple. The existing vessels are to be reduced by a third in both number and tonnage. The battleship fleets, therefore, of Britain, the United States and Japan, which to-day consist respectively of 15, 15 and 9 ships, would consist in future of 10, 10 and 6. To put the matter that way is simpler than to enter on calculations of tonnage, but for the sake of completeness the full effect of the Washington and London Agreements (1922 and 1930) and the Hoover proposal (1932) may be added:—

BATTLESHIP NUMBERS AND TONNAGE.

	1922.	1930.	1932.
Great Britain	20 525,000 tons.	15 474,250 tons.	10 316,167 tons.
United States	18 525,000 tons.	15 453,900 tons.	10 302,600 tons.
Japan	10 315,000 tons.	9 271,890 tons.	6 181,260 tons.

The Washington figures represent maximum tonnage, whereas the London and "Hoover" figures are actual. Britain's obligations under the Hoover plan would be met by the scrapping of the five oldest ships, the battleships "Queen Elizabeth," "Barham" and "Warspite," and the battle-cruisers "Renown" and "Repulse" while the United States would have to scrap her six oldest ships in order to reduce to the appointed tonnage limit. The most important question in this category is that of replacement, which begins for us under the Treaty provisions in 1937; and here our representatives should plainly

urge the addition to the Hoover Plan of a big reduction of future maximum size, if not the complete abolition of the battleship.

Cruisers, limited at Washington only in size, were limited in numbers and total tonnage by the London Agreement, which provides the basis of the proposed new reductions. This class of vessel was divided at London into "large" and "small" categories, the former consisting of vessels with guns of over 6.1 inches. The Hoover Plan would make no change as regards the strength of Great Britain and the United States in large cruisers; for 150,000 tons is allotted to each of them, which is rather more than the London Treaty gave them. (The United States is, however, apparently to lose her option of building 18 large cruisers instead of 15, combined with correspondingly more small ones.) Japan's London total of 108,400 tons would be reduced to 90,000. For small cruisers Great Britain is to have 104,275 tons, against the 192,200 allowed her by the London Treaty, and the same figures apply to the United States. The number of units depends, of course, on their size. If the average were about 4,300 tons, the number would be 24 for each country. At present Great Britain has 32, and the United States, which has not built up to its treaty figure, only 11. Japan gets 66,713 tons, instead of 100,450, which would give her 15 or 16 ships; she has 24 at present. The hand of the United States Navy Department is to be seen in the proposal to concentrate the cruiser cuts on the smaller class, which Great Britain regards as far the more valuable for the defence of our trade routes, leaving unchanged the total tonnage of the large cruisers, which the United States experts prefer. This provision cannot go unchallenged.

In the destroyer class a tonnage cut of 25 per cent. is proposed, the figures for 1930 and 1932, therefore, being:—

	1930.	1932.
Great Britain	150,000	122,500
United States	150,000	122,500
Japan	105,500	79,125

Our present strength is 134 destroyers, totalling 140,600 tons, including over-age ships, compared with 251 vessels owned by the United States, totalling 267,500 tons.

The limitation imposed on aircraft carriers at Washington was left unchanged at London. A tonnage cut of 25 per cent. is now proposed, which gives the following result:—

	1922.	1932.
Great Britain	135,000	101,275
United States	135,000	101,275
Japan	81,000	60,750

It is worth noting that at London the British delegation proposed a reduction of the British and American totals to 100,000 tons, to which (as to our actual strength) the new Hoover figure of 101,275 tons closely approximates.

No agreement on the numbers, size or individual tonnage of submarines was reached at Washington. At London Great Britain, the United States and Japan were each allotted 52,700 tons, and that figure is reduced by the Hoover Plan to 35,000—a cut of approximately one-third. At the same time, the maximum size of any individual vessel is to be 1,200 tons. At London it was 2,000 tons, with special licence to each country to have three vessels up to 2,800 tons. Under the Hoover proposal that licence disappears. The maximum number of submarines any country may possess in 40. The number of British submarines at present is 51 and of American (in commission) 66.

The tonnage limitation would involve the scrapping of our 18 latest submarines, together with one built in 1920, while the United States under that clause would scrap only 6 new vessels in commission and one now building. The question of submarine limitation is one on which France, with her great fleet of 65 built and 45 building, is likely to raise strong objections; while, on the other hand, Mr Hoover's intervention will presumably not deflect the British Government from advocating the total abolition of this arm.

It is thus clear that on the naval side the Hoover disarmament plan requires certain amendments and amplifications to meet the British case. As regards land armaments, it has, in the form in which it was expressed in the President's message, three main defects: it does

not deal with the crucial question of conscript armies and trained reserves; it does not allow perhaps sufficiently for the exposed strategical position of certain countries as compared with, say, the United States themselves; and by omitting to combine budgetary limitation with reduction of effectives it leaves open the danger of competition in mechanisation. But it is a plan for genuine disarmament, and whether or not its emergence at this moment is connected with American domestic politics, it must be examined by all the other great Powers with an eye rather to how it should be expanded than how whittled away. Now that it has been brought forward, no smaller measure of disarmament can be regarded as a successful issue for the Geneva Conference.

FINANCIAL EQUITY IN KENYA.

For the past quarter of a century Kenya Colony has been the theatre of an extraordinarily interesting but extraordinarily difficult experiment. Advantage has been taken of the amazingly wide range of climate in this Equatorial African country in order to introduce a European, as well as an Asiatic, element into the local population, side by side with the native Africans. Each of these three communities now aspires to be equally at home in Kenya, and the problem is to keep the peace, to hold the scales even, and to establish friendly and co-operative relations between three territorially intermingled castes who differ from one another in regional origin, in physical race, in cultural tradition and in social efficiency. The stresses and strains to which this audacious experiment has given rise have become notorious. They have arisen in every sphere of social life, and one field in which they have caused acute searchings of heart is the domain of finance.

On this account the Colonial Office in Downing Street decided, at the beginning of the current calendar year, to appoint Lord Moyne (formerly Mr Walter Guinness) as Financial Commissioner to Kenya. His terms of reference were to inquire into the contribution made to taxation, both direct and indirect, by the different racial communities; into railways freights and import duties, with a view to discovering the extent to which each community benefits or suffers by them; into the amount of money expended in the interests of each community, in particular on natives and non-natives; and into the degree and manner in which financial responsibility should be conferred on the Native Councils. The Commissioner was to consider the general financial and economic situation of Kenya as far as might be necessary for the purposes of his inquiry; and, in a supplementary instruction, he was asked to make recommendations as to the readjustment of taxation and expenditure, if examination of the existing position under his original terms of reference disclosed a case for change. The result is an able and reasonable report, which was published as a Blue Book* last week.

* Cmd. 4093. Price 2s.

The essential facts which Lord Moyne has ascertained, and on which his recommendations turn, are given in the following table, which shows the contributions of each of the three local communities to the total revenues of Kenya, the costs of the services by which they each directly benefit, and the surpluses which go towards the cost of the indivisible services. The figures work out as follows:—

Communities.	Contributions. £	Services. £	Surpluses. £
Europeans	665,781	171,247	494,534
Asiatics	395,658	46,080	339,578
Africans	791,100	331,956	459,144

These figures have to be appreciated in the first instance in the light of the population figures, which are: Europeans, 17,285; Asiatics, 56,903; Africans, 2,950,000. The Europeans, who are by far the smallest community, are thus paying the largest contribution of any of the three groups towards the cost of common services. Moreover, the European community as a whole appears to be living at no higher standard of life than would reasonably be expected in Great Britain, whereas the Asiatics domiciled in East Africa are enjoying a distinctly higher standard than they would have enjoyed if they had stayed at home. On the other hand, "the comparison of the burden of non-native taxation in Kenya with that borne by taxpayers in other countries is indeed striking. . . . The non-native population of Kenya are in the probably unparalleled position among civilised nations of bearing no direct taxation at all beyond a male poll tax of 30 shillings, a male education tax of 20 shillings or 30 shillings, and a comparatively light scale of death duties." Moreover, the lowness of the charges for European education "represents an unduly high scale of advantage to be enjoyed at the public expense." Lord Moyne finds that the native Africans are bearing a relatively greater burden; that they cannot in their present circumstances fairly be expected to make heavier contributions, and that, if further revenue has to be raised, it ought to be from the non-natives.

The Financial Commissioner also finds that further revenue does need to be raised, in as much as, from 1929 onwards, Kenya has failed to balance its budgets, and has been meeting successive deficits out of accumulated savings. Lord Moyne recommends that the necessary additional revenue should be raised by levying income tax on the Europeans and the Asiatics.

As regards the taxation of the native Africans, he not only finds that there is no case for an increase, but shows that there are serious objections to the existing hut and poll taxes. The hut tax "discourages the improvement of housing conditions and is an incitement to overcrowding," and it "should be transformed or replaced as soon as possible." Furthermore, "if the hut tax is to be modified and finally replaced by a more scientific tax according to ability to pay, it is advisable, at the same time to separate it from the poll tax, which was grafted onto it shortly after its introduction."

Lord Moyne goes on to make the constructive proposal that an annual quantity of revenue, amounting to half the annual yield of native African direct taxation on a six years' average, shall be allocated to a Native Betterment Fund to be expended primarily upon the development of the four major services of direct benefit to the natives—namely, education, medical, agriculture and Native Reserve roads and bridges. This fund should be controlled by a statutory body independent of the Select Committee on Estimates. Lord Moyne is careful to point out that this recommendation "is not one for the administrative separation of the non-native and native communities."

It will be seen that this is a valuable piece of work which has been performed for Kenya Colony by an eminent authority from the United Kingdom on instructions from His Majesty's Government at Westminster. The Moyne Report is a fresh proof—if proof be needed—that we are right in retaining control in this country over the government of Kenya Colony, instead of handing over the destinies of the two larger of the three local communities into the keeping of the seventeen thousand men, women and children in Kenya who are of European origin.

THE U.S. BANKING PICTURE.

RECENT untoward developments in Chicago have forcibly redirected attention to weaknesses in the American banking structure. During June over thirty minor institutions in that city were forced to close their doors, and the pressure culminated this week in an ominous collapse of the stock market quotation for the shares of the Central Republic Bank and Trust Company, accompanied by a "run" on its deposits, which lately totalled \$95 millions. The chairmanship of the bank was assumed last Sunday by General Dawes, who recently resigned the presidency of the Reconstruction Finance Corporation; and the situation is understood to have been "saved" by recourse to loans from the Corporation to the extent of the great bulk of the Central Republic's deposits. Nevertheless, elements of uncertainty with regard to sections, at least, of the American banking position still persist. For, unless it can be shown that the background of that position is improving, it is clearly necessary to envisage the future as likely to be characterised by the consequences, more or less serious as the event may show, of a strain whose effects are cumulative with the lapse of time.

In the following diagrams we have endeavoured to give a picture, in broad essentials, of the American banking trend during the past three years. Both from the standpoint of the banking system itself and from the broader angle of American monetary policy, it is an opportune moment to examine, firstly, the changes in the position of the Reserve banks, and, secondly, the changes in the condition of reporting member banks. The first diagram, therefore, has been prepared to show among the assets of the twelve Reserve banks their aggregate gold holdings and also their aggregate chief earning assets, namely, bills rediscounted, bills bought in the open market, and United States Government securities. Bills rediscounted represent, in effect, the borrowings by member banks, and so compare closely with the item of borrowings from the Federal Reserve system shown in the second diagram. Bills bought and United States Government securities reflect the open-market operations of the Reserve system itself. Liabilities include the note circulation and member bank balances at the Reserve banks. The second diagram, which, for reasons of space, has had to be drawn on a different scale, so that the slopes of the various curves are not equivalent, deals with reporting member banks. The assets shown are total loans, total investments, and the reserve balances at the Reserve banks. The liabilities shown are deposits (demand and time combined) and borrowings by rediscount from the Reserve system.

The picture presented by the diagrams may fitly be regarded as falling into four phases. First comes the stock market collapse of the autumn of 1929, whose immediate effect was to initiate the trade slump, and also

to saddle the banks with a mass of frozen loans and securities, which had to be liquidated as far as proved possible. The difficulties of this liquidation were accentuated by the losses suffered by many of the banks' formerly sound customers and by the continuance, for a time, of new capital issue activity, which provided fresh securities which in practice the banks had to absorb. Thus, while the first effect of the 1929 crisis was the freeing of a huge mass of bank credit previously absorbed in speculation—this is illustrated by the huge fall in discounts at the Reserve system—the later effects, in evidence during 1930 and constituting the second phase of the picture, were the fall in the note circulation as the result of contracted trade, and the steady expansion of the banks' investment portfolios.

CONDITION OF FEDERAL RESERVE BANKS.

Meanwhile the Reserve system was trying to restore confidence and to ease the situation by a policy of cheap money. During the year rediscount rates were progressively reduced, the credit basis expanded, and the bond market supported by purchases of Government securities. This policy was criticised in certain quarters on the ground that it discouraged the liquidation of weak positions, and while our second diagram shows a steady reduction of loans in 1930, the reduction was unfortunately confined to commercial loans in contradistinction to loans against securities, which remained virtually unchanged during the year. The increase in the banks' investments was also confined to securities other than those of the American Government.

Whatever views may be held as to the wisdom of Reserve bank policy in 1930—and it is easy to be wise after the event—there is no doubt that by early 1931 American banking was in a difficult, if not unsound, position; and it is small wonder that, under pressure of deepening trade depression, enormous numbers of the little country banks had to close, and that even some of the larger banks found themselves in trouble. From this situation there developed the third phase of the picture. In the summer of 1931 there came a wave of mistrust by the American public in its banking system—reflected in an outbreak of hoarding. This raised the note circulation from \$1,500 to over \$2,500 millions, helped to reduce deposits at the banks by approximately \$4,000 millions, reduced their balances at the Reserve banks by about \$350 millions, and forced them to add \$600 millions to their borrowings.

For a time the Reserve banks were able to balance the increase in the note circulation by fresh acquisitions of

gold, for, thanks to the influx of bullion during the early months of 1931 from South America and the Far East, the Reserve banks' gold stocks had risen by August to the record height of practically \$3,500 millions. In September, however, England suspended the gold standard, and at once many European central banks jettisoned the gold exchange standard and turned their dollar balances into gold. Apart from this, foreign confidence in American stability had been sapped, and withdrawals of funds and gold shipments took place for that reason.

With distrust at home and abroad it was high time to act, and in the autumn of 1931 there was launched the official policy of "reconstruction and reflation," whose development forms the final phase of the picture. The foundation of the National Credit Corporation, for the purpose of mobilising bank funds in support of necessitous banks, was the first stage in the process of attempting to restore public confidence, and this was followed in 1932 by the more ambitious Reconstruction Finance Corporation, which authorised the Reserve banks to issue notes against United States Government securities as well as against gold and "eligible" bills; and simultaneously the Reserve banks began to buy Government securities on the open market. As the first diagram shows, these purchases at the end of May amounted to nearly \$1,000 millions.

CONDITION OF REPORTING MEMBER BANKS.

While these measures have partially restored public confidence in the banks—as is shown by this year's moderate contraction in the note circulation and the check in the decline in deposits—the member banks have so far done little to expand credit or revitalise business. Instead, the effect of the Reserve banks' purchases of Government securities has been offset, on the one hand, by further gold losses, and, on the other, by member banks' repayments of their debts to the Reserve system and reconstitution of their reserve balances. Loans by the member banks to the public have continued to decline, either through lack of demand for new credit or through the absence of credit-worthiness among potential borrowers. June witnessed a marked decline in the rate of gold efflux from New York, and inspired hopes that this would give the American "reflation" experiment a fresh chance. At the moment, however, it remains to be seen whether lack of confidence may not prove to be a fatal obstacle to the achievement of any substantial results by this means or the exercise thereby of any great influence on the price-level. In short, American banking and business are to-day finding that they cannot expand or prosper while the world around them is in ruins.

IMPERIAL PREFERENCE: NEW ZEALAND.

NEW ZEALAND's position in reference to imperial preference differs very little in essentials from that of South Africa, which we examined last week. The principle of imperial preference has been very definitely in operation since 1903; in 1907 its scope was greatly extended, and in 1921, 1927 and 1930 the margin between the tariffs payable by British and foreign goods respectively was further widened. The amount of imports affected by the preferential tariff in 1929 and 1930 is indicated by the following table:—

(In millions of pounds.)

	1929.		1930.	
	British.	Foreign.	British.	Foreign.
Free, whether British or foreign	5.8	4.1	6.0	3.9
Uniform duty for British and foreign goods	2.3	3.2	1.8	3.2
Free if British, dutiable if foreign	11.1	3.1	10.0	2.6
British duty lower than foreign	13.9	5.3	11.8	3.7

In addition to the general British tariff, New Zealand has a reciprocity treaty with South Africa under which the rates of duty are lower than the rates payable by other British countries, and a treaty with Australia by which the two Dominions grant each other mutual concessions. This spring a trade treaty of one year's initial duration was signed with Canada, ending a period of sharp fiscal retaliation, but its terms were on the whole less favourable than those of the treaty abrogated in 1930.

Aided by the high degree of preference, the British share of New Zealand's overseas trade is very large. Exports to British countries have formed from 84 to 93 per cent. of total exports during recent years, and imports from British countries from 68 to 73½ per cent. of the total. The following table shows the distribution of imports and exports according to origin and destination:—

OVERSEAS TRADE: NEW ZEALAND.
(In millions of pounds.)

	Imports.			Exports.		
	1927.	1929.	1931.	1927.	1929.	1931.
United Kingdom	21.5	22.6	12.2	36.9	41.0	30.9
Canada	2.7	4.8	1.2	1.7	3.2	0.3
Australia	3.9	3.3	2.4	3.7	2.3	1.2
Other British countries	2.6	2.4	1.6	0.5	1.0	0.3
Total British countries	30.7	33.1	17.4	42.8	47.5	32.7
United States	8.1	9.3	3.9	2.7	3.7	0.9
Germany	0.8	0.9	0.6	1.1	1.2	0.3
France	0.9	0.7	0.3	1.0	1.8	0.4
Other foreign countries	4.3	4.8	2.6	0.9	1.4	0.9
Total foreign countries	14.1	15.7	7.4	5.7	8.1	2.6
Total	44.8	48.8	24.8	48.5	55.6	35.2

The proportion of New Zealand imports which came from British countries fluctuated downwards until 1929, but recovered in 1930 and moved sharply upward in 1931. A similar movement occurred in the export proportions.

New Zealand's most important imports are textiles, metal manufactures, apparel, machinery and vehicles. In most of these lines the United Kingdom is by far the most important supplier, but in the trade in agricultural machinery the United States, which are in general our most important competitor, though their share in the total declined sharply in 1931, have a big lead. British

motor cars, which enjoy a rapidly growing popularity in New Zealand, rose from third to second place on the import list in 1930, the leading position being usurped by Canada from the United States. In cotton and woollen piece-goods our priority is unchallenged, though New Zealand imports a small amount of these goods from each of a large number of other countries. The same applies to apparel, and to many classes of metal manufactures, and to electrical goods and equipment, though in this last-named class competition is very much keener. As, however, the British proportion of all these imports is so large, an increased measure of preference would not cost New Zealand a great deal, while any increase in the British export of these goods would be of considerable value to us.

What this country can offer New Zealand in return is a more doubtful question. Before the slump in wool values, New Zealand's most important export was one of the commodities for which, the Empire being a net exporter, preferential treatment could not help her to obtain a better price. As shown below, however, other products have recently increased their relative importance:—

EXPORTS FROM NEW ZEALAND.
(In millions of pounds.)

	1927.	1929.	1931.
Butter	10.9	13.2	10.6
Frozen meats	9.1	9.6	8.6
Wool	13.0	15.3	5.5
Cheese	5.6	7.0	4.5

Dairy products, on which other Dominions also are likely to ask for increased preference, will probably prove one of the more fruitful lines of negotiation at the Ottawa Conference. Of 6.8 million cwt. of butter imported into the United Kingdom in 1930, 3.1 millions came from British countries; slightly more than half the British consignment came from New Zealand. As, however, the Canadian share was negligible, though Canada is potentially a very large exporter of butter, it is doubtful whether, even if the British consumer were to accept the sacrifice involved in a higher foreign duty, New Zealand would gain in competition with other Dominions a very large share of the resultant benefit. As to meat, until technical improvements are found which will render frozen beef competitive in point of palatability with the chilled product (in 1930 we imported six times as much chilled as frozen beef), the consumer would rightly object to any attempt to penalise Argentine beef. New Zealand lamb, on the other hand, already holds a leading position in the British market, and a further strengthening of this position might be effected by means of preference, though here again our special relations with the Argentine, New Zealand's chief foreign competitor, would have to be carefully considered.

It is not, indeed, so much in the field of tariffs as in that of currency, credit and exchange that Ottawa holds out hopes of substantial advantage for New Zealand. There she differs completely from South Africa. So great a proportion of her trade is done with Great Britain that there could be no question of her following gold rather than sterling, and indeed there has been constant agitation, especially by primary producers, for an increase of the 10 per cent. premium which already exists on the London exchange. An expert committee, appointed by the Government last February to examine the economic and budgetary position of the Dominion, reported that "the main problem in New Zealand is to remove the disparity between export prices and internal prices and to adjust her economy to a lower level of overseas borrowing." The majority of the committee were in favour of a further movement of the exchange rate (which is controlled by the banks in concert) away from parity, combined with adjustments in fixed charges, rents, wages and public finance. The Government, however, decided against any alteration of the 10 per cent. rate, partly because budgetary difficulties would be increased by the decline of Customs revenue and the greater cost of transferring to London the annual charge of £12 millions sterling on the overseas debt, and partly because they hesitated to approach the Ottawa Conference with their

hands tied from imposing what in effect would have been a Customs surcharge of 20 or 30 per cent. on all imports whether from British or from foreign countries. The New Zealand delegation intend to make these financial issues a leading, if not the first, point of their brief at Ottawa. Mr Downie Stewart, who will accompany Mr Coates to the Conference, recently described it as a fortunate opportunity for the whole price level problem to be approached from the Empire standpoint. Attempts to raise the price level by international action had hitherto been unsuccessful, but concerted action on an Empire scale to raise the sterling price level for primary products might be possible, and it was the only thing that could relieve the burden of external debt. At the present price level New Zealand could either pay its London obligations or buy British manufactures, but could not do both, or, rather, the latter must be severely restricted. The example of New Zealand, indeed, reminds us plainly that the raising of commodity prices, if that can be achieved, is of far greater importance in the expansion of Empire trade than any preferential adjustments and fiscal bargaining possibly can be.

THE HALF-YEAR'S NEW CAPITAL.

SURVEYING the situation at the beginning of 1932, an observer of London's new capital market might well have been inclined to say that the two main questions which then awaited the decision of events were, firstly, whether there would be a sufficient restoration of confidence in the stability of sterling to elicit once more, at least in the case of first-class bonds, a ready response from the investing public; and, secondly, if this condition were fulfilled, whether the coming year would see the yield obtainable on "riskless" lending fall sufficiently far to divert capital, not perhaps into speculative enterprise, but at any rate into fixed interest securities of what may be termed a "secondary" character. To the first of these questions the half-year now concluded has given a fairly definite answer. Offers of high-grade securities have been eagerly absorbed at steadily declining yields. As regards the second question, however, the six months' trend has afforded much less conclusive evidence. Owing to the unwillingness of "good" borrowers to enter into commitments and the inability of less "credit-worthy" borrowers to approach the public with the scantiest hopes of success, the market has been little tested; and though such results as are available point to a considerable inelasticity in the rate for new long-term capital in the case of all but the highest grade issues, conclusions drawn from the meagre data so far accumulated can be only tentative and provisional.

We summarise below the half-year's new issues grouped under three main heads, in comparison with the corresponding figures for the previous periods:—

DESTINATION OF NEW CAPITAL.

	First Half of Year.					
	1931.	1928.	1929.	1930.	1931.	1932.
United Kingdom— Government Other	£ 20,324,400	£ 85,211,000	£ 1,600,000	£ 39,960,000	£ 10,250,000	£ 103,189,200
British Possessions— Government Other	£ 14,324,300	£ 31,423,000	£ 23,590,000	£ 27,000,800	£ 27,736,600	£ 16,041,200
Foreign countries— Government Other	£ 43,002,600	£ 40,177,700	£ 49,964,000	£ 37,155,000	£ 35,588,600	£ 17,412,500
Grand total ...	£ 77,651,300	£ 156,811,700	£ 25,154,000	£ 104,115,800	£ 74,575,200	£ 136,642,900

The British Government total comprises £107.6 millions (i.e., the whole amount of the accepted tenders) in respect of the 3 per cent. Treasury bond issue made in May, less a debit of £4.4 millions representing net encashments of National Savings Certificates. In the first half of 1931 an excess of £10.2 millions in sales over encashments of

these certificates accounted for the whole of the British Government borrowings. Apart from these operations, the half-year's total of new issues amounts to slightly over £60 millions, as compared with £70 millions a year ago and £104 millions in the first half of 1930. Issues to foreign countries were nil, and those for British Possessions were almost exclusively on Government account. The next table gives a further analysis of various classes of borrowers:—

CLASSES OF BORROWERS.
(£ million.)

	Total.	British Government.	Foreign and Colonial Govts.	British Colonial and Foreign Corps.	Foreign Railways.	Mines, Finance, and Exploitation.	Rubber and Oil.	Balance (Mainly Home Industry).

1932—2nd quarter ...	145.9	106.2	12.0	17.2	Nil	...	...	10.5

Comparing the course of the past two quarters, it will be seen that in April-June there was an appreciable expansion in borrowing on account of Colonial Governments and of corporations, though there was also a substantially greater amount subscribed under the unclassified heading "mainly for home industry":—

The next table carries our analysis further by subdividing the past half-year's issues into twenty-nine categories.

ANALYSIS OF NEW CAPITAL APPLICATIONS.

Description.	First Half-Year, 1931.	First Quarter, 1932.	Second Quarter, 1932.	Total First Half-Year, 1932.
British Government Loans	£ 10,250,000	£ Dr 3,000,000	£ 106,189,200	£ 103,189,200
Colonial Government Loans	£ 27,736,600	£ 4,077,000	£ 11,964,200	£ 16,041,200
Foreign Government Loans	£ 1,740,000	£ Nil	£ Nil	£ Nil
British Corporation, County and Public Board Loans	£ 6,205,300	£ 9,842,600	£ 17,129,200	£ 26,971,800
Colonial Corporations and Public Board Loans	£ Nil	£ Nil	£ 117,200	£ 117,200
Foreign Corporations	£ Nil	£ 3,412,500	£ Nil	£ 3,412,500
British railways	£ Nil	£ Nil	£ Nil	£ Nil
Colonial railways	£ 2,850,000	£ Nil	£ Nil	£ 2,850,000
Foreign railways	£ Nil	£ Nil	£ Nil	£ Nil
Australian mines	£ 371,900	£ Nil	£ Nil	£ 371,900
South African mines	£ 8,932,300	£ 496,600	£ 22,300	£ 518,900
Other mines	£ 2,255,000	£ 99,000	£ 237,500	£ 336,500
Exploration, financial and investment trusts	£ 112,500	£ Nil	£ Nil	£ Nil
Breweries and distilleries	£ 337,500	£ Nil	£ Nil	£ Nil
Merchants, importers, &c.	£ 9,360,000	£ Nil	£ Nil	£ Nil
Stores and trading	£ 111,700	£ 40,000	£ 9,200	£ 49,200
Estates and land	£ 143,200	£ 13,000	£ 29,200	£ 42,200
Rubber	£ Nil	£ 350,000	£ Nil	£ 350,000
Oil	£ Nil	£ Nil	£ Nil	£ Nil
Iron, coal, steel and engineering ...	£ 3,838,300	£ 155,000	£ 4,730,400	£ 4,885,400
Electric lighting, power and telegraph	£ 98,000	£ Nil	£ Nil	£ Nil
Tramways, omnibuses, &c.	£ 6,300,000	£ Nil	£ Nil	£ Nil
Motor traction and manufacturing Gas and water	£ 429,000	£ Nil	£ 289,000	£ 289,000
Hotels, theatres and entertainments	£ 82,500	£ 1,191,400	£ 498,000	£ 1,689,400
Patents and proprietary articles ...	£ 300,000	£ 55,000	£ 50,000	£ 105,000
Docks, harbours and shipping	£ 136,400	£ Nil	£ Nil	£ Nil
Banks and insurance	£ 6,733,300	£ 1,013,000	£ 4,678,600	£ 5,691,600
Manufacturing and miscellaneous ..	£ 89,273,500	£ 17,745,100	£ 145,944,000	£ 163,689,100

It will be observed that, apart from borrowing by the British Government, Colonial Governments and British corporations, the great bulk of the other issues were on account of British public utilities and railways. In the case of the manufacturing and miscellaneous group, as in that of mines, rubber companies and the hotels and entertainments class, the majority of issues were made to shareholders only.

Further light on the situation of the new capital market is thrown by the next table, which analyses the nature of the borrowing:—

NATURE OF BORROWING.

	Debentures, Bonds, &c.	Preference Shares.	Ordinary Stocks and Shares.	Total.
Year 1927	£ 228,958,000	£ 36,836,600	£ 89,371,400	£ 355,166,000
" 1928	£ 212,817,900	£ 45,062,600	£ 111,177,600	£ 369,058,100
" 1929	£ 137,670,300	£ 31,543,400	£ 116,025,700	£ 285,239,400
" 1930	£ 227,658,500	£ 15,548,800	£ 24,593,300	£ 267,800,600
" 1931	£ 74,835,599	£ 6,911,859	£ 20,296,833	£ 102,044,291
First half-year, 1930	£ 137,679,600	£ 13,775,000	£ 18,101,000	£ 169,555,600
First half-year, 1931	£ 68,916,900	£ 5,832,800	£ 14,523,800	£ 89,273,500
First half-year, 1932	£ 152,585,600	£ 8,025,700	£ 3,077,800	£ 163,689,100

Whereas there was a slight increase, as compared with a year ago, under the heading of preference stocks and shares (including, be it said, a high proportion of issues to shareholders only), issues of ordinary shares fell to less than a quarter of the total of a year ago. In fact, though our usual analysis, which will be found on page 34, of issues by Stock Exchange introduction points to a slight revival of activity, the history of the past half-year has been predominantly one of borrowing by Governments within the Empire, British corporations and public or semi-public bodies in this country. To what extent such borrowing has dominated the market can be seen from a glance at the following table, in which we show the issue and present prices of the chief flotations:—

Month of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, June 29, 1932.
1932.	Mauritius 5% Guar. Deb.	£ 600,000	98½	109
January	Uganda 5% Ins. Stk., 1951-71 ..	1,600,000	96	107-109
February	Nyasaland 4½% Guar. Stk., 1952-72..	2,000,000	97½	106
February	Central Electricity Board 5% Stk., 1955-75 ..	7,000,000	95	103-105
February	Croydon Corporation 5% Red. Stk., 1950-60 ..	750,000	Paw	106-108
March	Poole Corporation 5% Stk., 1957-72 ..	750,000	100½	108½

(a) Issued by tender. Price accepted, £97 15s. 1.97d.

Comparing the position at the beginning of January with that at the end of June, we find that the yield on long-term British Government securities has fallen gradually from about 4½ per cent. to under 4 per cent. This decline has been closely paralleled by the yields on new offers of high-grade securities. For example, the loans issued in January by Mauritius and Uganda yielded respectively £5 1s. 9d. and £5 4s. 8d. per cent., whereas in June, Tanganyika secured money on a yield basis of £4 2s. Similarly, the municipality of Croydon had to pay 5 per cent. for a loan in February, but, by April, Bristol and Hull were able to raise funds at fractionally under 4½ per cent., while the Central Electricity Board, whose January issue yielded over 5½ per cent., was able six months later to borrow at under 4½ per cent. On the other hand, where the security could not be described as definitely "riskless" the decline in the yield basis was much less pronounced. Thus, in April, India had to offer 5½ per cent., while as late as the end of June an issue by the Province of Alberta, yielding 5½ per cent., had an unfavourable reception.

Revolution in Siam.—Last Friday a successful revolution was achieved in Siam by the officers—or a clique among the officers—of the naval and military forces. The heir to the throne and the chief of the police were placed under arrest; and the King, who was not in Bangkok when the *coup* was carried out, returned to the capital and accepted the *fait accompli*. The only casualty seems to have been one high military officer, who was shot and wounded in the act of resisting arrest; and this sole victim is happily expected to recover. The revolutionaries deprecate the application of the term "revolution" to their work; but a revolution does not cease to be a revolution when it is accomplished without loss of life; and this Siamese specimen is not difficult to classify and pigeon-hole. Like the recent alarms and excursions in Chile, the present upheaval in Siam is evidently a political expression of the malaise produced by the pressure of the economic crisis. But the crisis has caught Siam in a different stage of social development from some of these other countries; and accordingly this Siamese revolution has taken rather a different form. While our Latin-American revolutionaries move in an endless cycle from one dictator or one junta to another, and while the Japanese Fascists are moving backwards from a pseudo-constitutional regime towards a one-party tyranny, the Siamese revolutionaries are moving in the opposite direction—from absolute monarchy towards self-government. This Siamese affair is a movement, engineered by military officers, for securing a parliamentary constitution; and the nearest obvious modern analogy is the Turkish revolution of 1908. In Siam, as in Turkey, the military officers are the political radicals because they are the element in the country which has been the most deeply imbued with Western ideas. The economic crisis brought the political movement in Siam to a *déroulement* by imposing the necessity for an increase in taxation—an increase which the late Government attempted to provide for by imposing a tax on salaries. The Siamese peasantry, whose minds are hardly touched yet by Westernisation, and whose taxes have actually been lightened, seem to have been passive spectators. It

remains to be seen how these peasant masses will get on with the small and rather exotic Westernised intelligentsia if the intelligentsia now comes into effective power through the curious semi-democratic constitution to which the King has now agreed.

Australia's Budget.—At the opening of the Premiers' Conference at Canberra on Tuesday, Mr Lyons, the Commonwealth Prime Minister, announced that, whereas the Premiers' Plan had provided that at the end of June the total deficits of the Commonwealth and States should amount to only £12.7 millions, the actual estimated results would be an aggregate deficit of £17.6 millions on account of the States, less a Commonwealth surplus of £1.2 millions, making £16.4 millions in all. The main factor in this realised deficitary position was the deficit of £10.7 millions on account of New South Wales. For 1932-33 the Treasury estimated that on the existing basis the aggregate deficit would be £20 millions, made up as follows:—Commonwealth, £3.5 millions; New South Wales, £9.5 millions; and the other five States, including Tasmania, £7 millions. He did not propose a further increase of Commonwealth taxation, but would rely on economies in administration to meet the Commonwealth deficit, leaving at the exclusive disposal of the States such assistance from the banks as was available. In this connection Mr Lyons read a letter from the chairman of the Commonwealth Bank pointing out that the banks had financed Governments during the year to the tune of £31 millions, and that the ability of the banks to continue the necessary financing of the Premiers' Plan was rapidly approaching a point unforeseen and capable of becoming disastrous. Though the financial credit of Australia has greatly improved and the position of the external floating debt has been considerably relieved, it is sufficiently clear that, so far as the achievement of a balanced Budget is concerned, the Commonwealth is not yet out of the wood. On Wednesday the States had their say, and while the Premier of New South Wales declared that he hoped to show later on a cut of £4 millions in that State's prospective deficit, and the Premier of Victoria also foreshadowed an improvement on the estimate, the Premier of Queensland urged on the Conference an amendment which would substitute for strict adherence to the Premiers' Plan a general undertaking to meet all interest obligations and progressively to reduce Budget deficits. Eventually, however, unanimity on a policy of reducing the deficits by retrenchment was reached.

Parliament and Economy.—The report which the Estimates Committee has presented to the House of Commons contains two suggestions of importance. Reviewing the growth of borrowing by local authorities during recent years, the Committee point out that much of this local expenditure automatically attracts Treasury grants without the specific sanction either of the Treasury or of the House of Commons. They observe that when a Department sanctions a scheme submitted by a local authority it really commits the State at that point to expenditure which will have to be made in future years. Accordingly they propose—and we agree with the recommendation—that in future the Department concerned should submit an annual programme of their proposals for Treasury endorsement before sanctioning. The other recommendation which they make concerns the Road Fund, whose commitments rose from £23 millions on March 31, 1929, to £62 millions at the end of March, 1931. By March, 1933, as a result of the curtailment of schemes, the commitments for future expenditure will have dropped to £26 millions, including debt to the Treasury; but, in the Committee's opinion, the position remains unsatisfactory in that Road Fund commitments are incurred without the prior knowledge or expressed sanction of Parliament. The Committee suggest either that the Road Fund should be abolished, as the May Committee desired, or that, alternatively, the Ministry of Transport's estimates should include an annual statement of the commitments, revenue and expenditure of the Fund. Of the two suggestions we greatly prefer the second. Financed as it is by taxes on motor transport, the Road Fund is an appropriate

mechanism for facilitating sound continuity of expenditure. The result of making provision for road schemes invariably dependent on the budgetary exigencies of any single year might be to produce a chaotic and wasteful administration of what should be productive expenditure. The inclusion of the suggested statement in the Ministry of Transport's annual estimates should enable Parliament to keep a sufficiently timely hold over the trend of policy on which future expenditure depends.

A Quarter's Revenue.—The first quarter's revenue return gives little indication of the budgetary position as it will emerge towards the end of the fiscal year. The deficit on account of ordinary revenue and ordinary expenditure is £81.3 millions, compared with £78.0 millions last year, while issues for the sinking fund have been reduced from £10.1 millions to £6.9 millions. On the revenue side, the figures of income tax and surtax, which reflect mainly the collection of arrears and of deductions at source between the two instalment dates, are of no great significance, though a big drop in surtax receipts is not reassuring. Estate duties, estimated to bring in £11 millions more this year than last, actually show a drop of over half a million on the quarter, but the death of millionaires is always one of the impalpable risks of budget making. More important, perhaps, is the decline of stamp duties from £2,580,000 in the first quarter of last year to £2,310,000 only, since in the face of criticism from financial circles the year's estimate was put at nearly £6 millions above last year's receipts. Revenue from Customs and Excise conforms satisfactorily to the estimates. As for expenditure, supply services have so far cost nearly £6 millions more than in the corresponding period of last year, in spite of cuts, but payments on this account vary considerably from quarter to quarter, and it must be remembered that unemployment fund deficits are now being included in the Ministry of Labour vote. A saving of £9 millions has been made in the interest and management of the National Debt, without which the budget outlook would have been much gloomier than it is.

Mr Baldwin and Ottawa.—As Mr. Lloyd George observed in a speech last Saturday, there are distinct signs of disillusionment among the ranks of British protectionism; "the pæan of triumph over the carrying of tariffs has gone, the music is very low, very soft." Indeed during the debate on the motion of censure in the House last week, and in the course of a speech which he delivered last week-end at Sheffield, Mr Baldwin not merely refrained from invoking louder music; he appeared deliberately to apply the soft pedal. Disclaiming any previous assertions on his part that tariffs would work speedy wonders, he submitted that the whole tariff system was on its trial, and he expressed, not without significance, the hope that Ottawa would be the first step towards greater freedom of trade. Mr Baldwin, to do him justice, has never been a "whole-hogger," though he certainly once seemed to cherish a belief, which we could not share, that tariffs could be used as an effective method for attaining the dual, incompatible aims of domestic protection and more international exchanges. We hope that his recent speeches are evidence that he recognises, and is prepared at Ottawa to insist, that the commercial policy of this country must be directed not to the pursuit of crazy dreams of economic Imperialism, but to the reciprocal, progressive lowering of tariff barriers, on the lines of the Belgian-Dutch Convention, in our trade relations both within and without the Empire.

Canada's Textile Tariff.—We have received from a Canadian correspondent particulars of the duty paid by him on a consignment of English cloth of a type apparently usable—to judge by the sample sent us—for moderately priced overcoats. Landed in Canada, the cost of the cloth at current rates of exchange was 50 cents a yard. On this was charged a specific duty of 42½ cents, an *ad valorem* duty of 14½ cents, and a so-called excise tax of 3 cents. When the dumping duty was included the pro-

tective tariff works out at 127 per cent. *ad valorem*. Commenting on the attitude of the Canadian industrialists—an attitude which has recently led to the refusal by the Federal Government of a grant to a co-operative fruit-growing settlement in British Columbia because it was proposed to instal a British cold storage plant—our correspondent remarks: "We have reached the stage in Canada when a man ought to thank God every morning if no new industry has been born during the night, because every time a new Canadian industry is born it adds to the cost of living and increases the difficulty of doing business in Canada." We have no desire to stress unduly an admittedly *ex parte* presentation of a problem which has more sides than one; but our correspondent's letter suggests forcibly that our negotiators at Ottawa will have to overcome serious obstacles to inter-Imperial expansion of trade in manufactures.

Lancashire's Labour Crisis.—At the end of last week, writes our Manchester correspondent, the Central Board of the Northern Counties Textile Trades Federation announced the result of the ballot of its members on the labour situation. It was reported that out of 161,939 votes recorded, 78,437 were for strike action, 61,742 for negotiations with the employers, and 21,760 papers represented no returns or spoiled papers. The Central Board held a long meeting at Blackburn to consider the figures, and it was officially announced at the close that the Board did not feel justified in declaring for strike action, and that the situation would be considered by the Executive Committees of the several trade unions. At a further meeting of the Board on Monday it was resolved that, in view of the figures disclosed by the ballot vote, the Board found itself unable to agree to enter into negotiations so long as the conditions laid down by the employers' association remained. It may be pointed out that the employers are determined that before a joint conference can take place the holding of such a meeting should mean that a wages reduction is necessary, and that any agreement reached must be final and not subject to ratification by any larger body of the operatives. In the circumstances there is a deadlock. The employers are quite unconcerned at the situation, as more firms are getting their operatives to accept reductions. On the other hand, the power of the trade unions is being steadily weakened. It is agreed, however, that it would be to the benefit of the industry as a whole if a county agreement could be reached, as the variety of arrangements made at individual mills are causing great irregularities in production costs and therefore in the price of cloth.

Cotton Trade Surplus Capacity.—The scheme of the Joint Committee of Cotton Trade Organisations for the elimination of surplus machinery has had to be abandoned. The report on the result of the ballot stated that the owners of 17.70 per cent. of the spindles had voted in favour of the scheme and 56.53 per cent. against, while the owners of 25.77 per cent. did not record any vote. It may be mentioned that the large percentage of non-voters was due to the withdrawal of the vote of the Lancashire Cotton Corporation. The directors of the Corporation, whilst approving the scheme, were of opinion that their big vote, representing 8,000,000 spindles, should not be allowed to influence unduly the general opinion of the spinning section. The Joint Committee, therefore, had received a request from the Corporation that if the general opinion of the trade was against the scheme their vote should not be recorded. In view of the result, the Executive Committee decided to recommend to the Joint Committee that no further action should be taken on the scheme. 'In many respects,' writes our Manchester correspondent, "the result must be considered disappointing, as this is another case of the refusal of the leaders of the cotton industry to adopt any proposals requiring united action. It is significant that the resignation of Sir Kenneth Stewart from the chairmanship of the Lancashire Cotton Corporation was announced on the same day as the result of the ballot on the scheme of the Joint Committee; and Sir Kenneth, in his letter of resignation, drew attention to his disappointment at the failure

of the industry to unite in any endeavour to relieve the industry from its depression and to prevent further decay. It is recognised, however, that the individualism which still exists in Lancashire is largely responsible for the refusal of employers to take part in any general scheme of reorganisation." It is an attitude for which Lancashire is likely to pay a ruinously heavy price.

Sterling and Gold Prices.—In spite of a fall of nearly 2 per cent. in the sterling exchange, the past fortnight has witnessed a continuance of the tendency to which we called attention two weeks ago, namely, a slight rise in gold prices, contrasting with an opposite movement of sterling prices.

1924 = 100	52.2	51.0	50.8

It is to be noted that the foreign indices, for which we are indebted to the *Financial Times*, continue to move downwards.

The Grain Markets.—At this time of the year the international grain markets are largely under the influence of crop reports which often cause wide fluctuations in prices. Although the current season's world crops cannot yet be estimated, it recently became evident that the international grain situation was growing less favourable. The break in wheat prices three weeks ago was therefore not unexpected. The following table shows the course of prices since June, 1931:—

CEREAL PRICES (nearest future).
(Cents per Bushel.)

	Chicago.				Winnipeg.
	Wheat.	Maize.	Oats.	Rye.	Barley.
1931—June 30	57½	61½	30½	37	33½
December 30.....	54½	36½	25½	41½	41½
1932—March 31	53½	35½	23½	46½	40½
April 30	54½	24½	21½	37½	39½
May 31	56½	30½	23½	35½	38½
June 29	48½	28½	19½	27½	37½

It will be seen that the quotations for maize, oats, rye and barley declined steadily during the first six months of the current year. In contrast, wheat remained remarkably steady until the beginning of June despite the growing intensity of the economic blizzard and the continuous fall in the general level of (gold) wholesale prices. The relatively favourable trend in wheat prices was due to the fact that the current season's consumption had been generally over-estimated earlier in the year. Another

Treasury, June 30, 1932.

factor contributing to the strength of the wheat market was the partial failure of the United States winter crop and its slow progress elsewhere. At the beginning of June, and however, it became known that the North American and European spring crops were progressing favourably; and this was followed by the publication of better official crop estimates in North America, and by selling pressure from Canadian holders who were anxious to secure the export bonus of five cents per bushel. The estimated yield of the North American crop, at 1,091 million bushels, shows a reduction of only 85 million bushels on last year's harvest. The failure of the United States winter crop has therefore been practically counter-balanced by an increase in the yield of the spring crop and of the Canadian crop. It is now expected that visible supplies at the end of the current season (July 31st) will show little reduction on last year's carry-over. According to Mr G. Broomhall, the world's visible supply at the beginning of June stood at 488.2 million bushels as compared with 490.0 million at 488.2 million bushels on the corresponding date a year ago. The trend of prices in the near future depends, of course, largely on autumn crop prospects and on Russian grain policy. On the other hand, the Italian Government's action in almost excluding foreign wheat from the home market—a policy which is expected to be followed by France, Germany and other European countries as soon as home-grown grain becomes available—is likely to exercise a depressing influence on world prices.

Exchange Regulations in Argentina.—Our Buenos Aires correspondent writes:—Additions to the regulations governing the remittance of funds from Argentina to places abroad threaten to complicate still further a position that already creates serious difficulties for persons who are resident abroad yet possessed of capital funds in this republic. The expressed intention of the Control Committee is to stop the drain caused by absentee land-lordism, in which respect many wealthy Argentines are inveterate offenders. Unfortunately, the Exchange Control Committee seems to be unable to discriminate. It has entirely overlooked the fact that there are large numbers of persons who have worked all their days in this republic, and, after accumulating a certain amount of wealth, have purchased Argentine bonds and mortgage "cedulas," or have otherwise left their money to aid in the further development of the republic, relying on the assurance that the interest would not only be regularly forthcoming, but would also be at their free disposition. In its latest circular the Exchange Control Committee has, to all intents and purposes, said that in view of the seasonal diminution in exports it will be forced to restrict remittance permits. Such restriction will apply not only to payments for imported merchandise, but also to interest on securities, if the holders are actually or juridically resident abroad. Already this restriction is being put into force. Permits, even when applied for through banks, are not granted within a week or ten days, while in many instances applications for relatively trifling amounts, say for sums under £100, come back with permission given for half the sum required. There is no appeal, and although, by favouritism, exceptions are sometimes made, the whole system is working in a manner directly detrimental to legitimate private interests and harmful to the best interests of Argentina herself.

Anglo-South American Bank.—The extraordinary general meeting for the purpose of approving the new scheme referred to in the *Economist* of June 11th was held on June 27th. In moving the adoption of the scheme, Sir Bertram Hornsby, the chairman of the bank, explained how it came about that the bank was involved so deeply in the nitrate industry, and how, owing to the American crisis, Cosach was unable to carry out its intentions of floating a large bond issue in New York for the purpose of repaying its bank indebtedness. This failure was followed by the British suspension of the gold standard, leading to the withdrawal of a good many foreign balances lodged at the Anglo-South American Bank; and, most unfortunately, all this happened at a time when the

bank had an exceptionally large quantity of acceptances outstanding on the London market. As a result, the directors had to submit their position to the Bank of England, and the present scheme was the final consequence. In the course of his speech, Sir Bertram also dealt with the possibility of a call on the "A" shares, and indicated that the adoption of the new scheme should put the need for a call into the background. The customers had displayed remarkable confidence in the stability of the bank, and if the shareholders would only do the same the likelihood of a call would recede still farther. In reply to question, Sir Bertram insisted that the provision that the new preference shares (which are being taken up by the assisting banks) should possess voting control was an integral part of the scheme, and that the bank's aggregate advances to Cosach were not an excessive amount to have lent to one particular industry. The resolutions adopting the scheme were carried unanimously.

LEAGUE OF NATIONS.

Hoover Disarmament Plan — Sir John Simon's Speech.

(FROM OUR CORRESPONDENT.)

GENEVA, June 28.

THE sudden and drastic American disarmament proposals gave the Conference a much-needed jolt. While the majority of delegations welcomed them wholeheartedly, there has been scarcely veiled irritation on the part of some of the leading Powers at the manner, method and moment chosen by President Hoover. This is almost entirely due to dislike of the substance of the plan, and all the excuses that it is a political Republican move, that it has disturbed the tranquil progress of the conversations in progress, or that it was brusquely thrown in at an inopportune moment, are only manifestations of that fact. From some of the criticisms it might be imagined that the reduction of armaments was the last function expected from a Disarmament Conference, but most people here are convinced that no pettifogging analysis or out-of-hand condemnation of the scheme will be able to smother the direct appeal which it makes to the great mass of people. There is no doubt that adjustments would be needed to make it as equitable as possible; it is obvious that in many respects America can afford to adopt a much simpler attitude to problems of defence than most States; she has less to fear, and is probably more secure than any other nation in the world. But it is impossible to exaggerate the worldwide relief which would ensue if such a measure were to be carried through. In general, it implies not a change in relative strengths but a parallel reduction in strengths. Broadly speaking, States are invited to have ten a side instead of fifteen a side. There are States—possibly including Great Britain—for which there may be a definite minimum in this scaling down, even when the relative strength of other States is taken into account. But it is unreasonable to suppose that such a stage in our naval strength has already been reached, regardless of reductions which may be agreed upon by other maritime Powers.

There is also the problem of different requirements, as indicated in the old controversy of American insistence on large battleships and our insistence on cruisers. These points are not beyond adjustment, and if Great Britain really desires to save money and to improve political relations, first with America and then with the rest of the world, her representatives will show more cordiality to the American plan than has so far been the case. Sir John Simon's statement was frankly disappointing, and its measure was the satisfaction of those most disinclined

to follow President Hoover's lead. Considerable comment was directed to his harsh observation that the object of the Conference was to attain agreement, and that "agreement was not to be obtained by unilateral statements." For the rest, his speech was damning with faint, vague praise. It is true that Great Britain would on some points go further than the United States, but it is not a fair claim to imply that she is ready to go beyond the measure of disarmament contained in the American plan as a whole. It will be impossible to make such a claim unless Great Britain states her readiness to reduce tonnage by something approaching one-third; so far her attitude with regard to capital ships, as implied by Sir John Simon, seems to be not that the total tonnage of this class should be reduced, but that the size of the individual units should be reduced, the total tonnage of the class being maintained. That would mean no financial saving—indeed, possibly increased cost of construction. If that is not a true interpretation of the British attitude it would be well for the Government to take an early opportunity of explaining it, for similar deductions have been generally made.

At the same time, Sir John Simon did say that the British delegation felt the Conference must aim at something big and that public opinion hoped for large results. The Conference awaits more definite suggestions from Great Britain as to how these big results should be obtained. The suspicion is that they relate more particularly to land forces of others, as assumptions continue to be made that we are the only nation which has yet disarmed. The worst contingency of all would be that we should sit on the fence, not officially liking the American plan, but also not caring to oppose it, and should leave the destructive work to others. Destructive forces will not be lacking. Japan has already made it clear that, in her view, the plan goes too far, and she will certainly be difficult in the process of reaching any general agreement whatsoever. France says that if reductions are to be so drastic they can only be accepted if they are accompanied by a system of international security; we are also informed of what France has already done to give a lead in disarmament and of the difficulty, therefore, of a further mathematical reduction on existing figures. It must be recognised that the plan requires a great deal from France, but it ought not to be too much on a long view of real French interests. The only emphatic and complete approval comes from Italy—apart from other less important military States—and after all the other big Powers had spoken with their questioning and doubting, Mr Grandi's ringing acceptance was much more loudly applauded than even the original Hoover message. The proposals would go most of the way to satisfying the Germans. The danger now is that the scheme will be frittered away in private conversations, and the only hope still lies in the exercise of the full force of public opinion.

UNITED STATES.

Politics — Budget — Finance — Prices — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 22.

CONGRESS seems likely to remain in session for some time. The delay has been occasioned by wrangling over economy measures, with a Relief Appropriation Bill in the background. As Wall Street sees it, while the outlook for a reduction of from \$250 to \$300 millions in expenditure is dimmer by about half, the likelihood that unsound monetary proposals or inflationary schemes will be passed is much smaller. Congress will probably agree on cuts of from \$150 to \$200 millions, and will need to find new sources of tax revenue at the December session; but, with the death of the ex-service men's bonus measure, the chances for similar bills having a hearing is remote. Probably the so-called Wagner Relief Bill, which would provide \$300 millions to be lent by the Federal Treasury to the States, which in turn would distribute the funds to their municipalities for poor relief, will pass.

No surprises were contained in the Republican platform on which Congressmen and the President will stand for re-election. Little attention is paid to the rather unimportant references to business and finance, but the attitude on prohibition has called for sharp comment. In the East much disappointment is felt, but the proposal to be cautious about any change fits pretty well with the sentiment of the rank and file of the party in those States where the closest fight with the Democratic candidates is to be expected. Wall Street, which is normally Republican in sentiment, feels that President Hoover is preferable to any Democratic candidate likely to secure the nomination, and, while the financial district has been a severe critic of many things in the past four years, it will, as usual, support the Republican candidate.

In financial markets the edge has worn off the passage of the Tax Bill, the defeat of the bonus, the stoppage of gold exports, and the announcement of the formation of a bond market investment company by the leading banks. Bond markets have maintained their ground fairly well, but the share market has lost three-fourths of its early June recovery. With the application this week of the higher taxes on share and bond transfers, the natural tendency of activity to subside with the wearing out of a rally, and with intensified trade slackness due to the summer season, has been enhanced. Sales in the share market have fallen to the lowest level since the summer of 1924. Government bonds have been supported by the Federal Reserve Bank, but the railroad and public-utility sections have not yet developed enough strength to support new offerings. A \$30 million bond issue of the New York Consolidated Gas Company has been authorised by the State regulatory body, but is held up pending a favourable market. New capital issues are still confined to State, municipal and Federal Treasury borrowing. Capital is wary of long-term employment, and the bulk of income now is used to liquidate debts instead of for investment.

Gold exports have ceased. Last week the country's monetary gold stock fell \$70 millions, largely as the result of the final French earmarking operation, but this week a few dribbles of metal have come in, and so far none has gone out. There has been a marked change in attitude on the part of many who until recently were inclined to "take a position" in some foreign currencies, particularly the gold currencies, as offering more safety than the American dollar. By far the bulk of the eastward movement of capital has been repatriation of foreign funds, as shown by the closeness of figures covering gold loss and the shrinkage in foreign balances held here, but some American speculation on the bull side of European currencies has taken place.

Federal Reserve Bank credit continues to rise, the net gain last week being \$72 millions, and the member banks were able to cut their borrowings \$6 millions. The Reserve statement reflects the French gold earmarking operation. The Reserve Banks added \$30 millions to their bill holdings, presumably taken over from the Bank of France, inasmuch as contingent liability on bills bought for foreign correspondents was down \$48 millions, and they bought \$47 millions in Government bonds. The tax date this time did not bring on a Treasury overdraft, and no ripple was caused on the surface of the money market.

Domestic trade offers no great encouragement for the summer. Commodity prices are still declining. The Bureau of Labour Statistics index for May fell 1½ per cent.; as usual the bulk of the decline—this time 5½ per cent.—occurring in agricultural products. The spread between agricultural and non-agricultural prices is now so wide that farmers are able to buy almost nothing beyond the necessities of life, and, even with fair crops, the low prices mean that in many cases taxes and interest on mortgages have to wait. This week the largest mail-order concern, Sears, Roebuck and Company, which sells goods largely to farming communities, had to omit its dividend payments. Farm implement manufacturing plants are virtually idle. While farm purchasing power is thus severely crippled, actual distress on the farms is rare, and it is only in the cities that there is any need for doles in any form.

The Bureau of Labour commodity price index follows:—

INDEX NUMBERS OF WHOLESALE PRICES.	(1926=100.)		
	May, 1931.	Apr., 1932.	May, 1932.
All commodities	73.2	65.5	64.4
Farm products	67.1	49.2	46.6
Foods	73.8	61.0	59.3
Hides and leather products	87.6	75.0	72.5
Textile products	67.4	57.0	55.6
Fuel and lighting materials	65.3	70.2	70.7
Metals and metal products	85.0	80.3	80.1
Building materials	80.0	72.5	71.5
Chemicals and drugs	80.5	74.4	73.6
House-furnishing goods	86.8	76.3	74.8
Miscellaneous	70.5	64.7	64.4
Raw materials	66.5	55.5	53.9
Semi-manufactured articles	69.8	59.6	58.1
Finished products	76.9	71.1	70.3
Non-agricultural commodities	74.5	68.9	68.1

The steel trade has dropped to around 16 per cent. of capacity and prices are weak. Some mills are closing down altogether. Little hope of recovery before August is held out, unless the Reconstruction Finance Corporation should begin large loans to the railroads for use in purchasing new equipment. The motor industry has been disappointing, and, while May brought an increase in building contracts, the structural steel industry is using comparatively little steel at this time. Railroad traffic is rising slightly, and it is likely that the 25 to 30 per cent. drop in traffic (compared with 1931) of the first six months of the year will be improved upon somewhat in the final six months. Electrical output is still running from 10 to 12 per cent. under last year. Employment in May for leading industrial groups fell 3.2 per cent. from April, according to the Bureau of Labour, the bureau's index standing at 59.7, compared with 75.2 for May of last year. Payrolls dropped nearly 4 per cent. Salary cutting is beginning again among the railroads, and continues for industrial and financial companies.

FRANCE.

Politics — Economies — Coal — National Debt.

(FROM OUR CORRESPONDENT.)

PARIS, June 29.

It seems fairly clear that the majority of the population, whatever conclusions may have been drawn from the result of the recent General Elections, have read with approval the French attitude at both Geneva and Lausanne, but that a proportion, both in Parliament and outside, are preparing an energetic opposition to the Government, unless M. Herriot is prepared to go much further in the direction of disarmament and of a complete suppression of German reparation payments, regardless of whether the United States can be induced to adopt a similar policy in regard to European war indebtedness towards America.

So far, positive action has been manifested only by the Socialists and—to a lesser extent—by the more advanced wing of the Radical Party. On Sunday M. Léon Blum, the leader of the French International Socialist Party, in a speech at Toulouse, formally announced that "the presence of the Socialists in the Government has in no way overcome the timidity of M. Herriot, and the Ministry formed on June 8 had been upset on June 23 by the departure of the Socialists." The suggestion, apparently, is that, in consequence of M. Herriot's attitude in regard to Mr Hoover's proposal for one-third disarmament all round, Socialist support of the new Cabinet has been withdrawn, and that, after two week's existence, the Cartelist Ministry, as such, has ceased to exist.

Yesterday the left wing of the Radical-Socialist Party, which is notoriously in favour of a purely Cartelist Ministry, in which the Socialists would hold portfolios, upset the whole political world by calling a meeting with the object of passing a vote of censure upon the Premier, who

is their own Party leader. During the morning there was a good deal of sharp criticism of M. Herriot's attitude at the two conferences, which was immediately made known by telephone to the Premier at Lausanne. M. Herriot's reply, it was asserted in political circles, was to the effect that he would not tolerate interference by any party or political group in the negotiations now in progress, and still less on the part of his own group, and that, if the Radical "Young Turks" persisted in their attitude, he and his colleagues would immediately return to Paris and resign office. This had an immediate effect. At an adjourned meeting last night, attended by over 100 of the 160 members of the Party (and consequently including a fair number of the more moderate section), the nascent proposal for the immediate sending of delegates to Lausanne, with the mission of remonstrating with the Premier, was allowed to drop; and the meeting closed with a colourless resolution, instead of what might have been a vote of censure.

The officials of the spending departments are busily engaged in working out the details of the programme of economies which is to be submitted to the Chambers on an urgency time-table that will permit of their being passed into law within a week or ten days at the outside. In a statement yesterday M. Paul-Boncour, the War Minister, announced that the interests of the Army would not be compromised by economies to be effected under the next Budget. Excluding the public debt, he pointed out, national defence charges were equivalent to nearly one-half of the total Budget expenditure, and must, therefore, inevitably suffer the consequences of that fact, but reductions would not be proportionally larger than in the case of other departments. The reduction of proposed credits to be carried out in connection with the 1933 Budget, the Minister explained, will in certain cases have an effect also on the current Budget expenditure, but these must not be confused with economies which will be possible from the application of organic reforms, which latter will require prolonged study and will bear fruit only in the future.

The Caisse d'Amortissement announces that, as from to-day, the rate of interest payable on National Defence Bonds (now entirely two-year maturities) will be reduced from 2½ per cent. to 2¼ per cent., which will continue to be payable in advance. This reduction follows closely on a previous modification on May 28th, only a month ago, when the rate was brought down from 3 per cent. to 2½ per cent. Interest on Defence Bonds is now exactly on a par with the Bank of France discount rate, which has stood at 2½ per cent. since last October, when it was increased from 2 per cent. Meanwhile, interest offered on new bond issues, which averaged 4.68 per cent. throughout 1931 and stood at exactly that level in May last year (but had moved up to an average of 5.40 per cent. on issues made in February last, only to drop to 4½ per cent. in April), is again on the upward trend, and averaged 4.90 per cent. during May. The average yield from issues of fixed return during May reached 4.93 per cent., as against 4.22 per cent. in January and 3.57 per cent. in May last year. Issues of variable yield in May had an average return of 5.47 per cent., against 4.84 per cent. in the previous month, 4.93 per cent. in January and 4.27 per cent. in May last year. New issues in May totalled 560,000,000 francs, of which 469,000,000 francs represented bond issues and 64,000,000 francs increased share capital by old companies, and only 27,000,000 francs issues of new companies.

Coal production figures for May, which are announced to-day, suggest that the various steps taken to limit imports of foreign combustibles have proved sufficiently efficacious to justify larger daily output by the French mines. Average daily output in May was at the rate of 157,102 tons, against 151,824 tons in the previous month, notwithstanding a diminution of the labour force employed from 264,082 units to 261,624. Total production during the 24 working days was 3,770,440 tons, against 3,947,439 tons in the 26 days of the previous month and 4,095,245 tons in April, 1931 (24 days). Metallurgical coke production by the colliery plants was 269,740 tons, against 267,712 tons in the previous month and 398,900 tons in May, 1931.

GERMANY.

Reich and States — Lausanne — Unemployment — Gelsenkirchen.

(FROM OUR CORRESPONDENT.)

BERLIN, June 28.

FRIEDRICH VON GAYL, the Minister for the Interior, has prevented by his intervention an open conflict between the Government of the Reich and the majority of the State Governments. The new decree, while formally removing the existing ban on public demonstrations and wearing of uniforms (the latter prohibition only applies to Baden and Bavaria), leaves it open to the State Governments to issue new prohibitions if circumstances require it, though only within definite limitations of time and scope. The State Governments, which have refused to remove the bans which were originally enforced by the Reich, will avail themselves of the new emergency decree and try to take, within its terms, the measures which circumstances demand.

In this the Governments of the Southern States are acting in close association with the Government of Prussia. The leading Ministers of the States met in Berlin at the beginning of the week at the intervention of Herr Hirtsiefer, the acting Prime Minister of Prussia, and decided upon their common attitude to the new decree. Such a conference of State Ministers without the attendance of the Reich Government is an entirely new departure in German politics, and the announcement that similar conferences will be repeated "as occasion arises" is particularly striking. It is evident that the States, with their submission to the new emergency decree, wish to give the von Papen Cabinet, and especially Herr von Gayl, an opportunity of putting an end to the unrest which at present dominates the public life of Germany. It is, however, equally clear that the States, especially those of South Germany, are completely determined to resist any Hitler regime with all the means at their disposal. The danger of anything approaching civil war in Germany is, however, not nearly as imminent as some people abroad appear to think, and this relatively amicable co-operation between the Minister for the Interior and the State Governments is a new pacific element which leaves room for hope that Government measures will soon put an end to the conflicts in the streets of large cities, and even in the open country, which are inevitable in the present mood of exasperation. This was confirmed in the sensational attack which the National Socialists carried out a few days ago upon the office of the Social Democratic organ, the *Vorwärts*.

The von Papen Cabinet has, it is true, lost much prestige during the last week. The question of what the Chancellor said in Lausanne to the representative of the *Matin* is being hotly disputed, but it seems certain that Herr von Papen announced a number of concessions to French opinion for which he cannot secure agreement at home. Herr von Papen has most unjustly been regarded as a chauvinist; actually he is one of the most determined supporters of the policy of understanding with France. His great miscalculation, in accepting the office of Chancellor, was his belief that a regrouping of political forces would enable him to carry through such a policy of understanding. There is, indeed, something to be said for the idea that a Government of the Right in Germany might have more chance of concluding an agreement than a Government of the Left, but this theory presupposes a Right of a type which does not exist in Germany. With the National Socialists, a party of the streets which has to be guided by the moods of the streets, this policy cannot possibly be carried out, and at present there is not sufficient support in Germany for a sober and responsible Government of the Right. Even the "toleration" of the von Papen Government by the National Socialists has become exceedingly doubtful, not only because of its attitude at Lausanne, but also on account of its attempts to establish tolerable relations with the Länder. The National Socialists are particularly furious at the tolera-

tion by the Reich Government of the Prussian Government's suspension of their Berlin organ, the *Angriff*. The National Socialist papers are already full of threats to the Cabinet.

The improvement in the labour market which normally sets in in spring had almost completely ceased by the middle of June. Employment had, indeed, increased in the open-air industries, but those industries which depend mainly on the general state of trade have curtailed their labour forces still further. The number unemployed at June 15th was 5,569,000, against 4 millions at the same date last year. The corresponding figures for February 15th were 6,127,000 this year and 4,991,000 in 1931.

The last week has thrown little light on the darkness of the Gelsenkirchen affair. The Ministers concerned are in Lausanne, and their only communication has been to the effect that the present Finance Minister, who held a junior financial post in the late Government, knew nothing of the transaction. The present Minister of Economics, Herr Warmbold, who was also in the Brüning Cabinet, did know of the proceedings, but both he and his Parliamentary Secretary opposed it, and he disclaims all responsibility. The Government have promised a more detailed announcement when the Ministers return to Berlin. Meanwhile, the legality of the proceeding has been examined and confirmed by the Ministry of Justice.

Herr Dietrich, the ex-Minister of Finance, has made statements, some of which are contradictory, and some of which have contributed to strengthen the great uneasiness about the affair. Originally, the danger of the business passing into foreign control was given as the principal motive. Various foreign groups were said to have enquired for the shares. This version of the matter is now universally discredited, the more so as the banking house of Mendelssohn, which had been mentioned in this connection, has published a flat and unequivocal denial. It is, in fact, not very probable that in present conditions foreign groups should be forthcoming to invest 100 million marks in Germany and, in addition, to take over the risk of further financial commitments for her largest mining concern. At all events, there is absolutely no concrete evidence to show who these foreign interests may be.

Herr Dietrich had, however, other reasons for the operation. He held the view that coal and iron had to be brought somehow under State control because they were a private monopoly. Even that is an astonishing admission from the mouth of a Liberal politician, for control of Gelsenkirchen, and through it of Vereinigte Stahlwerke, would only make the Reich a participant in a monopoly which the Reich itself originally founded by its coal regulations and prohibitive tariff policy. Thus, in order to break the monopoly, in so far as it is possible to talk of a monopoly at all, there was no need to purchase shares. Recently, however, Herr Dietrich explained that he had engaged in this transaction because the reorganisation of the banks would have been endangered by a collapse of Charlottenhütte: "The decisive reason was the simple fact that Charlottenhütte was no longer solvent, and that if it had gone bankrupt the entire elaborate structure of the big concerns which were associated with it, Oberschlesische Montanindustrie und Oesterreichische Alpine Montangesellschaft, would have been set rocking. Such a collapse would have thrown hundreds of thousands of people on the streets." Even this, however, is unconvincing; for Charlottenhütte was merely a holding company, and the bankruptcy of Herr Flick would have directly endangered neither Vereinigte Stahlwerke nor its affiliated undertakings across the frontier, for the Reich could perfectly well have made the banks grant a moratorium, as it will have to do even now. Why, in any case, it should have been necessary to buy the shares at 90, four times their official price, at the beginning of the negotiations, and to leave Herr Flick in possession of a substantial mining concern in central Germany, remains unexplained. For the rest, it is established that the banks knew nothing of the purchases of the Gelsenkirchen shares and had no desire for Reich intervention in Charlottenhütte. Public discussion of the whole matter is therefore likely to remain very keen.

AUSTRIA.

Credit Anstalt — Taxation — Transfer Suspension.

(FROM OUR CORRESPONDENT.)

VIENNA, JUNE 27.

IN the course of this week, representatives of the Austrian Government, probably Dr. Rintelen and the Governor of the National Bank, Dr. Kienböck, will go to London to resume the negotiations with the foreign creditors of the Credit Anstalt. The discussions are to be conducted on the basis that the interest of the creditors in the Credit Anstalt is to be more or less eliminated, and that they are to receive a certain annuity. This would give the State the decisive influence in the Credit Anstalt. It would then have to be decided whether the bank can still be run in the present way, or whether the sound industrial departments can be separated from the weak. At present, the loss which the maintenance of the existing enterprises of the Credit Anstalt involves is estimated at about 100,000 schillings per day.

As soon as the Federal Chancellor, Dr. Dollfuss, returns from Lausanne, the supplementary budget is to be presented. It will mean fresh heavy burdens, and it is very doubtful whether the financial success which is aimed at can be achieved. The merchandise turnover tax, which was originally to have been increased by only 50 per cent., is to be increased by 100 per cent., and the extra revenue which is expected amounts to 160 million schillings—on which is expected to bring in 30 millions more than previously. The duty on spices, tea and coffee is also to be increased by 100 per cent., and the financial administration also expects 30 millions more revenue from this source. On the other hand, the plan for an employment tax, which is a kind of punishment for still having work, is to be abandoned, as is also the contemplated tax on matches. The farmers have again succeeded in shelving an increase of the wine tax, which should have brought in several millions more. The General Post Office is doing its utmost to avoid the contemplated increase in postage and telegraph charges and telephone subscriptions. It has pointed out that since the last increase the service is being used 22 per cent. less, so that the increase of the charges is more than counterbalanced. The only effect is that the staff of the Post Office has become from 10 to 15 per cent. too great. It is an ominous fact that the July salaries of the civil servants cannot be paid in a single sum, but are to be paid in two instalments. This in itself would not be an important matter, for the National Bank has frequently pointed out that salaries in general should not be paid completely on the first of the month, but in two halves, on the 1st and on the 15th. The cash difficulties in July result from the fact that the Federal Railways are not in a position to pay the interest on the credits granted to them by the State, upon which the financial administration had been counting.

The industrial situation remains unfavourable, especially in the iron industry. Crude iron output for May had to be reduced to 8.9 per cent. of normal; crude steel output only 11.9 per cent.; and rolled goods and semi-finished goods to 15.8 per cent. Orders in hand in the iron industry have receded to 14 per cent. of normal, which is the lowest level ever recorded. In the course of June there has been a slight easing of wholesale prices, but there is a considerable increase in retail prices and in the cost of living. Prices in Austria have not followed the decline which is general on the world markets, a circumstance which is expressed in the discount at which the schilling is traded. There are constant reports that steps are to be taken to adapt the schilling to the value placed upon it abroad. The Government denies them, but an easing of the foreign exchange regulations is becoming increasingly necessary. In the first place, private clearing between importers and exporters needs to be extended. Further, there is some thought of permitting exportation against payment in schillings and in conjunction with greater liberation of a portion of the foreign credits of schilling face value. For the time being, however, the National Bank has suspended remittances of foreign exchange to foreign countries, and until the question of the new loan is cleared up the banks

are not being given permission to remit abroad the interest which falls due under the standstill agreements. Up to the present they have been doing this out of their own resources, though they have had to procure the consent of the National Bank before doing so.

HUNGARY.

Budget — Bank Rate — Foreign Creditors.

(FROM OUR CORRESPONDENT.)

BUDAPEST, June 28.

A TEMPORARY reinforcement of the Government's position has been secured by complying with most of the demands of the agrarian wing of the Government party who have recently been in revolt. The Budget has been passed without alteration by both Houses of Parliament just in time to receive the assent of the Regent on the eve of the new financial year beginning on July 1. Unhappily, the passing of the Budget does not solve the financial problems with which the Government is faced. The new Budget for the State Administration balances on paper at 806.2 million pengő, and that of the State undertakings at 401.1 million pengő, but it is already clear that current revenue in July and in August will not suffice to meet the provisions voted for these months, and the Treasury has no funds with which to cover the deficit. The Finance Minister admitted in the Upper House that, in view of the diminished national income, the country is unable to maintain the national expenditure at its present level, but the remedy suggested by Baron Korányi—the nationalisation of all branches of the administration—though very desirable, is not likely to bring much relief to the Treasury in the coming financial year. That current revenue will not yield the estimated 806.2 million pengő, and that the State undertakings will show a substantial deficit, is realised by members of all parties in both Houses of Parliament; but there was not one practical proposal to cut expenditure to a level compatible with the capacity of the taxpayer. On the other hand, there were speeches in both Houses advocating the partial or the complete suspension of the State Debt service on the assumption that the 101.6 millions earmarked for that purpose and owed mostly to foreign creditors cannot be transferred in any case as it falls due. While there is a strong case for the suspension of amortisation of the State Debts, which would lighten the Treasury by about 30 million pengő for the coming financial year, it would be a great mistake to default in collection of the interest service so long as other services are not appreciably curtailed.

Mr Tyler, the League representative resident in Budapest, has left for Geneva to attend the meeting of the Financial Committee, and in all probability Baron Korányi, the Finance Minister, will follow him. Important decisions will have to be taken now in Geneva with regard to budgetary expenditure and the proposed wholesale reduction of interest rates. The National Bank has reduced its discount rate as from July 1st from 6 per cent. to 5 per cent. in order to facilitate the financing of the harvest, and other steps to alleviate the high interest burden of the agriculturist will soon follow, according to recent declarations of the Prime Minister.

The great excitement caused here last week by rumours that the Austrian schilling will be depreciated by 25-30 per cent. has prompted the authorities—both the Government and the National Bank—to declare that Hungary will remain on the gold standard and that no devaluation is contemplated. At the same time it was emphatically reasserted that the Government will not resort to inflation. The announcement of the Government has been received with satisfaction, but maintenance of the budgetary expenditure at its present level and the reintroduction of the *Boletta* system—a wheat and rye subsidy—are likely to involve a considerable deficit, which cannot be met from foreign funds, as in the past two years, so that the task of maintaining the gold standard in view of the already inflated price level will not be easy.

The American creditors have signed at last a standstill agreement with their Hungarian debtors on the lines of the British agreement. The sums covered by the agreement are not disclosed, but they amount probably to about \$20 million, and the agreement is subject to renewal like the British on August 1st. The transfer moratorium which was promulgated on December 22, 1931, has now been in operation for six months, and as it is obvious that it will last longer than till the end of 1932, its provisions will have to be modified at an early date in order to suit them to the changed conditions. According to a statement of the National Bank, in the last six months 47.8 million pengő was paid into the Foreign Creditors' Fund, of which 10.5 million pengő was paid out for coupons redeemed in pengő, presented at the counters of the National Bank.

SWEDEN.

Kreuger Aftermath — Devisen Position.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 20.

THE first effects of the Kreuger crash are now over, and, judging by the statistical data in various economic fields which have become available, it is fairly clear that a certain *détente* has set in. This is particularly noticeable in the money market. Since the middle of May there has been a very decided reduction in the volume of credit, which has found striking expression in no less than two reductions of the discount rate within a fortnight. In the bank report for May the volume of credit for recent months appears almost stationary, a somewhat remarkable improvement, since normally in May there is an increase. Moreover, the report shows the first symptoms of the winding up of Kreuger engagements by the commercial banks. Side by side with the bankruptcy proceedings in Kreuger and Toll and some of its collaterals it has been necessary under the present regulations to remove Kreuger engagements from the usual loan accounts. The consequence has been that loans have been cut down to an enormous extent, though this is, of course, mainly of formal significance. The final result of the process thus begun should normally be that securities for credits must be taken over by the lenders, if a realisation is not possible or desirable. The transfer of engagements to a "Sundries" account, which has now taken place, should mean the final disappearance of these credits; and, in their place, other assets of the commercial banks, especially bond and share accounts, will show a corresponding increase. This process has perhaps already taken place to some extent, as some engagements have been wound up privately.

There is, however, no indication yet of a subsidence of the remarkable nervousness of the commercial banks during recent months in respect of liquidity. On the contrary, they have continued to increase the liquidity of their assets, and at the end of the month their "sight" resources were no less than Kr. 172 millions. A month earlier the corresponding figure was Kr. 145 millions, and a year ago Kr. 92 millions. Indirectly the magnitude of these enormous cash holdings helps to increase the excess of loan money. On the other hand, against the extraordinary strengthening of the liquidity position, which has characterised recent months, must be set the forcing of credits which the winding up or transformation of Kreuger engagements inevitably involves. By the side of the inevitable losses on credits against Kreuger stock this will mean in reality the weakening of the liquidity position and of the credit capacity of the commercial banks for years to come. Against this background the present credit policy of the commercial banks is entirely natural.

The commercial banks have in recent months greatly reduced their holdings of foreign exchange. After the improvement in the balance of payments, which has gone on practically since the end of November, the position in May showed a distinctly worse tendency, though it was quite normal for the time of the year. Our net bank claims abroad fell by Kr. 23 millions, though they were still about the same volume as a year ago, namely, Kr.

300 millions. Despite the recent reduction in our total exchange holdings, the Riksbank continued to increase its holdings by Kr. 8 millions, so that the commercial banks must have sold foreign exchange for Kr. 31 millions. The Riksbank has now succeeded in collecting an exchange reserve of such magnitude that the bank is once again a factor to be reckoned with in the exchange market. In the autumn, after the exchange crisis, its exchange reserves fell to the minimum of Kr. 19 millions. In June they had risen again to Kr. 127 millions.

SPAIN.

Catalonia — Trade — Budget.

(FROM OUR CORRESPONDENT.)

MADRID, June 14.

THE outstanding political feature of the past month has been the growing opposition to the Government's programme with regard to religion and to the Statute of Catalonia. It seems evident that public opinion has swung over to the Right, and that some change in this direction is due in the composition of the Cabinet. It remains to be seen whether Señor Azaña will be allowed to complete his programme, which includes a Statute of Autonomy for Catalonia, with certain limitations.

The Stock Exchange has been depressed throughout the month, but recovered somewhat in the last few days, possibly owing to the change in the political atmosphere; on the other hand, the peseta has continued to improve, accompanied not by a decline, but by a rise in the index of the cost of living, which has now reached the figure of 190.4, as against 181, the average for 1931. Owing to this improvement of the peseta, the Central Exchange Office is now able to meet all demands for foreign currency, and has a balance in hand of over 300 million French francs, part of which is destined to cover the credit opened by the Bank of France against a deposit of gold. Another result of the rise of the peseta is that Spanish capital is beginning to return to this country, especially that which was placed in South America and Cuba, although the adverse economic conditions in those countries may have been one of the determining factors of the movement.

The figures of Spanish foreign commerce for the first quarter of 1932 show a decline of imports from 350,169,610 pesetas (gold) to 243,494,022 pesetas (gold), as compared with the same period of 1931, while exports have receded from 292,122,433 pesetas (gold) to 195,150,329 pesetas (gold) in the same periods. The Treasury figures of income and expenditure for the first four months of the year show an improvement over the same period of previous years, as will be seen from the following figures:—

	(Thousands of pesetas).	
	Receipts.	Expenditure.
1930	886,750	758,652
1931	866,904	875,828
1932	932,727	746,080

Of this year's receipts, the following show decreases: Industrial tax, tax on net profits, death duties, motor-car tax, tobacco and lottery monopolies. On the other hand, there has been an increase in the Treasury's participation in the profits of the Bank of Spain, Customs, sugar tax, stamp duty and revenue from the petrol monopoly.

The net profits of the National Telephone Company amounted, in the last financial year, to 17,450,993 pesetas, of which amount 12,200,998 pesetas have been carried forward after paying a 7 per cent. dividend to the preference shares. During the first quarter of 1932 telephone services were inaugurated between Spain and Brazil, Colombia, the Bermudas and Hawaii, as well as with Poland and Roumania, so that Spain now possesses one of the finest telephone organisations in Europe.

To provide for the deficit in the carry-over to next harvest, the Minister of Agriculture has authorised the import of 100,000 tons of foreign wheat, to be delivered before June 30. It is stated that this measure might not have been necessary had the landowners been willing to co-operate with the Government in supplying reliable

statistics upon which to base an estimate of the country's store of grain.

According to figures published by the Geographical and Statistical Institute, the number of failures in the year 1931 rose to 179, as against 122 in 1930 and 94 in 1929. The figures involved in 1931 were also much larger at The figures involved in 1931 were also much larger at 307,613,528 pesetas on the asset side, and 269,316,265 pesetas as liabilities, against 78,300,183 pesetas and 56,999,838 pesetas respectively in the preceding year; the comparison gives an indication of the intensity of the economic crisis through which the country is passing.

CANADA.

The Imperial Conference — Business — Price Brothers.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 15.

THE Western grain crop is fulfilling its early promise. Crop conditions in Alberta are reported by the latest crop bulletin of the Bureau of Statistics to vary from "excellent" and to "ideal"; they are very satisfactory in Manitoba; and they are notably better in Saskatchewan than they were in 1931 at the same date. In the Central and Maritime Provinces, however, owing to the prevalence of cold, backward weather, the condition figures of all crops are below those of the parallel date in 1931, though in British Columbia they are better. The first trade forecast of the volume of the Canadian wheat crop places it at 415 million bushels. The stocks of Canadian wheat in store are given as 143,899,623 bushels, which is nearly 18 million bushels more than the figure of 126,207,000 bushels for the parallel date in 1931.

There are some scattered signs of an improvement in general business conditions. The turnover of money has been more rapid, and reports received from departmental and other retail stores indicate an increase of at least 10 per cent. in retail sales. There has also been a gain in the carloading figures. Efforts to develop an export trade in cattle to the British market are proving reasonably successful, and shipments to the end of May totalled 5,493 head, as compared with 4,969 head in the corresponding period of 1931. There has also been a fairly good export movement of cheese, but so far there have been no shipments of butter to Britain. At present, with pastures at their best, there is a glut of milk in Canada and prices are being reduced everywhere.

The various committees which are engaged in the preparatory work connected with the Imperial Conference are all working hard, and most of the members of the Bennett Ministry are remaining in Ottawa. But in a speech which Mr Rhodes, the Finance Minister, delivered at the convention of the Manufacturers' Association, he gave not the slightest hint of the Government's probable policy at the Conference; it is probably still in process of evolution, but it will be kept a closely guarded secret to avoid domestic controversy and pressure from interested parties. The United Farmers of Ontario have announced that before the Conference they will send to Ottawa a strong delegation to urge an enlargement of the British preference in the Canadian tariff with a view to lowering living costs in Canada and increasing the market in Britain for Canadian farm products. For the past week representatives of the Lancashire cotton industry have been holding conferences in cashmere cotton industry have been holding conferences in Montreal with leaders of the Canadian cotton industry with a view to arriving at some agreement which could be the basis for tariff readjustments at the Conference. It is understood that the Lancashire delegation was discouraged by the results of the earlier conferences, and had decided to sail home on July 16th, but after paying a visit to Ottawa and conferring with Premier Bennett and some of his colleagues, it has decided to stay another week and resume the negotiations in Montreal. Apparently there is a wide gulf between the viewpoint of the two sets of manufacturers.*

Commodity prices continue to fall, and the Bureau's index number for wholesale prices (1926 = 100) was 67.7 in

* Comment on the upshot will be found in a Note of the Week.—Ed., Econ.

May, as compared with 68.4 in April. There was a much sharper fall in the index number of retail prices, which was 81.8 for May as compared with 83.7 for April. The most pronounced change was in the rentals index, which dropped from 99.3 to 93.9, the heaviest fall recorded in any month for many years.

The fortunes of the ill-starred Beauharnois Corporation are still in an embarrassed state, and at a meeting of the bondholders held in Montreal on June 10th a committee of twelve members was appointed to look after their interests. It was disclosed at this meeting that the corporation owed the banks, on April 30th, \$14,686,000, which had been partially guaranteed by the Federal Government, and that its total financial requirements until the project was fully completed in 1937, after making allowance for operating income, would be in excess of \$31 millions. In view of the fact that it was virtually impossible to sell to the public the issue of first mortgage bonds which has always been contemplated, it was agreed by the meeting that the first essential for the rehabilitation of the company's fortunes was financial co-operation in some form by the Federal Government. In a speech in Parliament, Premier Bennett had indicated that, under certain conditions, such co-operation might be forthcoming; and it was decided that the bondholders' committee should wait upon the Government and ascertain what it was prepared to do.

The financial difficulties of the Price Brothers Corporation, rated a few years ago as one of the soundest newsprint concerns in Canada, had, as revealed by their last annual statement, become so acute that Lord Beaverbrook, who is an important shareholder and customer, was summoned across the Atlantic and given a doctor's mandate to prescribe for the ailing corporation. The plan which he expounded to the shareholders in general terms proposed heavy sacrifices for all classes of security-holders, and the details are to be worked out by a committee under his supervision; he has also consented, if the plan is ratified by the shareholders, to join the directorate. Moreover, after the resignation of the three chief executive officers of the company had been accepted, Mr Allan Aitken, of Montreal, a brother of Lord Beaverbrook, was appointed president of the company. It was stated by Lord Beaverbrook that the control of the company was unchanged, and would remain in the hands of the Price family and their associates; but it is reasonably plain that he will be henceforth the directing spirit of the corporation's activities. At the shareholders' meeting he announced his firm opposition to the participation of Price Brothers in the large newspaper merger for which certain Canadian banks have been working; and the prospects of any consummation of this project are accordingly less auspicious than ever.

Letters to the Editor.

IRELAND'S REAL PROBLEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Having read your leader on "The Irish Debate" while spending a brief holiday across St. George's Channel, I am moved to send you these reflections of a sojourner in County Derry, whither, after the dust and preoccupations of London, one passes with an expectation of repose in calmer airs. The expectation is disappointed. If Eausanne has scarcely stirred a ripple of interest here, that is chiefly because Lausanne, Geneva, Ottawa and the whole outside world are overshadowed by anxieties much nearer home.

Once arrived in Ulster, one discovers with something of a shock that the true centre of the Irish problem has not yet been appreciated in London. The old rule of thumb for Irish policy that "England's extremity is Ireland's opportunity" carries with it the dreary corollary that, when Irish affairs come to a crisis, England is usually too much occupied with insistent interests elsewhere to give more than half her mind to what is happening in Ireland. This year is no exception. London is concerned chiefly with Mr De Valera's pretensions as raising a delicate point of Imperial policy which may set awkward precedents for the future. The real threat of Mr De Valera, however, is not to Imperial policy or financial morality, but to the twin Governments of Ireland which have been struggling towards stability during the last ten years.

Between the Free State and the "Six Counties" of Northern Ireland, ancient antagonism and recent wounds have been too deep for real understanding to be established in a decade. But a promising beginning had been made. Each State was making encouraging progress with the business of internal administration, and, under the influence of efficiency and conciliation, animosities were beginning to be absorbed in the peaceful exertions of everyday life. At this moment an Orange drum is beating about a mile away across the fields in practice for the high feast of July 12th; but its beat has not the grim significance of ten years ago, for it is some time since blood was shed between Orangemen and Catholics, and the brawls which still occur between the two factions have moved imperceptibly from the area of fratricidal tragedy to that of rough-house comedy. But the old feelings are not dead. They are still near enough to the surface to boil up again if provocation is offered; and if those hatreds return there will return with them to haunt England that spectre of the Irish problem which seemed to have been laid by the Irish Treaty of 1922.

That Treaty, though it freed England from the thankless exercise of Irish internal government, did not transfer Irish affairs from the domain of home to that of foreign policy. In discussing Mr De Valera, London is too apt to neglect that fact. One may talk airily of bringing him to heel by a tariff on imported cattle or by discriminating duties on dairy produce. But between England and the Free State there flow the waters of St. George's Channel to cool the mutual irritations of an economic war. Between Ulster and the Free State there runs only the inflammable line of a disputed land frontier. It must not be forgotten that such weapons as England might see fit to wield against the Free State would necessarily be wielded also by the "Six Counties" comprised in the United Kingdom of Great Britain and Northern Ireland. The possibilities of events in this direction are uncomfortable to contemplate.

There is, however, another factor to be considered. Mr De Valera, who above all is a traditionalist and a sedulous student of history, has failed to absorb one lesson of Irish history: that, unless united by strong external forces, the Nationalist party has always tended to split into the moderates and the extremists. By the carefully selected planks of his platform, he has attempted to persuade the Free State that an external oppression exists; but against the patent fact that he is dividing Ireland against itself, his oratory has weighed light, and at the elections he failed to secure a clear majority. After that, blunder followed blunder. Failing to recognise that the favourable conjuncture, on which he had admittedly worked with some skill and historical knowledge, had only brought a striking advance to his minority, but had not converted it into a majority, he has launched his Government on a programme which could only hope to succeed with an enthusiastic country behind it. On the Oath question alone he might have secured a spectacular, if empty, success by a careful use of England's preoccupations and of the

Statute of Westminster. He had not, however, the wisdom to concentrate on that. By adding the annuity and "an united Ireland" to his pretensions, he has mobilised a powerful opposition to his whole programme. Even if the House of Commons could now be got to approve unsubstantial concessions on the Oath, Ulster, more vitally concerned, would be deeply uneasy at such apparent evidences of weakness. That Ulster may take independent and embarrassing action if her anxieties are stirred was proved well enough in the gun-running days of 1914.

But it is not only in external policy that De Valera has blundered. At home he is explaining to the farmers that, when he promised them relief from the annuities, what he really meant was relief from the degradation of paying them to England, but that the money, now untainted, must continue to be paid to him. With the possibility of an English tariff being imposed on Free State farm produce precisely because the annuities are being withheld, Mr De Valera's explanations have only a rather moderate force with the farmers. Nor is he finding the maintenance of two armies a very simple matter. With De Valera in office, the former voluntary and illegal organisation of the Irish Republican Army is demanding official recognition and, what is more awkward, official pay. But there is also the established army of the Free State to be provided for. To disband that and leave its members to look after themselves would be an elementary mistake which even the enthusiasms of Mr De Valera cannot obscure. And, finally, there is the Roman Catholic Church. In the past the Church has not been entirely unfriendly to the cause of Irish liberation—Mr De Valera's reading of the eighteenth and nineteenth centuries must have told him that. And yet, lightheartedly he has pronounced himself an anti-clerical, and he even sought to veto the Eucharistic Congress which is now being held in Dublin.

With such an enthusiasm for making enemies and such a blindness to the difference which should lie between policy in opposition and policy in office, it is hard to believe that De Valera can survive long. He still believes—or at any rate some of his lieutenants still believe—that an all-powerful ally to their cause exists in America. America has given powerful financial and moral support to De Valera in the past, but it is difficult to imagine that, with the Free State in existence, the Anglo-Irish question should ever again become an important influence in the high politics of the United States. As for financial support, the stricken cabins of the emigrant districts could give poignant evidence of how the remittances have declined. In looking to America, De Valera is almost certainly deceiving himself. There remains one weapon to his hand, the tragic weapon of civil violence and conspiracy which has so often before been wielded in Irish history. Whether in desperation Mr De Valera will ultimately be forced back on that, it is still too early to say.—Yours, &c.,

Books and Publications.

BOOKS OF THE WEEK.

Tracts for the Times.

In this volume* Mr Cole has collected together fifteen papers, some seven of which are printed here for the first time. The papers are divided into three groups, headed respectively "The Economic Crisis," "Economics in Theory and Practice," and "Socialisation." Under the first head the author discusses the world crisis; free trade, protection, and regulation of imports and exports; monetary policy; and, in the two last papers in this section, wage theory and causes of unemployment. The most interesting essays in this section are those entitled "The Crisis" (a reprint of a pamphlet written in conjunction with Mr Ernest Bevin), "The World Economic Outlook from the Standpoint of Labour," and "Wages and Employment." In the former of these two papers Mr Cole suggests that rationalisation of industry, while it may effect real economies of production, is bound to lead to a larger monopoly element in industrial organisation, and for this reason is likely to lead to more or less permanent unemployment, that is to say, unemployment

* "Economic Tracts for the Times." By G. D. H. Cole. (London) Macmillan. 327 pp. 12s. 6d.

that is not caused by the immobility of labour between different places and trades, nor caused by monetary disequilibrium; for, the author argues, the greater the lack of competition, the greater is the incentive for each industry to restrict output in order to maintain prices and profits. Hitherto economists have discussed the effects of an absence of competition in one industry on the assumption that there is, in the main, competition elsewhere. In envisaging and analysing a situation in which there is an element of monopoly in nearly every industry, resulting either in general long-period unemployment or else full employment at a very much lower wage rate than would have obtained in purely competitive conditions, Mr Cole has put his finger on an important consideration.

In the essay on "Wages and Employment" Mr Cole discusses the problem whether wage reductions will or will not increase employment. He suggests that it is quite illegitimate to argue that, just as one employer or one trade will employ more labour if the wage rate falls, so, if the general level of wages falls, more labour in general will be employed. In the first case one may, and in the second case one may not, ignore the reduction in money demand that may follow the reduction in wages. But

in considering this question Mr Cole uses the conception of elasticity of demand for goods in general. Now, elasticity of demand is a measure of what proportionate increase in amount bought will follow a given proportionate fall in price, on the assumption that money incomes are unaltered. Surely this, too, is a conception which one may legitimately use of one commodity, but not of goods in general. For the problem is to decide whether a fall in wage rates will be accompanied by a corresponding rise in profits, and thus, leaving money incomes unaltered, lead to an increase in the amount of goods bought because of the fall in their costs; or whether such a fall will be accompanied by an equivalent fall in the amount spent on goods and so by a fall in money incomes. When he talks of the elasticity of demand for goods in general, not Mr Cole begged this more fundamental question, which can only be answered in terms of monetary analysis?

In his second main group of papers Mr Cole discusses in effect what he considers should be the future development of economic theory. The essays in this section are extremely interesting and suggestive. In "Towards a New Economic Theory" Mr Cole pleads that economics should be something very much more than the study of the determination of prices, and argues that the ideas of the classical economists as to the "real costs" of production were on the right lines. He is undoubtedly right in demanding that the real social cost of producing a given commodity should be the study of the economist; but is he not unfair to the conception of the problem of economics to be found, for instance, in Professor Pigou's "Economics of Welfare" when he writes (page 185) of modern economics that "when it cuts the cackle and comes to the horses" it is of prices that it speaks? Of much that is written, this is a true criticism, but, whatever may be the success of their attempt, the contemporary Cambridge school has certainly attempted to analyse the real costs and the real satisfactions of an economic society. Further, Mr Cole is dissatisfied with the division of economic theory, which still exists, into discussions of production and distribution, arguing that the discussion of the effects of changes of costs upon output assumes a fixed demand, which is independent of those changes. This difficulty, which is a very real one, is non-existent in a non-monetary economy, where the demand for commodity A is the amount of commodity B which can be obtained for it, but becomes very real in a monetary economy, where, as has been discussed above, it is essential to decide, for example, on what conditions a reduction in money wages will cause a rise in profits and on what conditions it will cause simply a fall in the amount spent on commodities in general. It is, therefore, extremely important that economic theory should study "how a deficiency of demand in relation to productive power can actually arise," and Mr Cole suggests three main lines of attacking this problem. He completes this section with two interesting papers on "The Use and Abuse of Economic Terms" and "The Nature of Profit." J. E. M.

SHORTER NOTICES.

"Little Missions." By Septimus Despencer. (London) Edward Arnold. 6s.

The "little missions" with which this amusing book is concerned are not of the religious but of the diplomatic kind. The author performed them in the service of the Allied and Associated Powers; and he tells us that, in the course of 1919 and 1920, he "travelled en petite mission nearly 250,000 kilometres, concluded seven international agreements . . . and was involved in four distinct wars, not one of which was ever reported in the English or American press." His "mission-field" was the former domain of the then just defunct Hapsburg Monarchy; and he gives a vivid picture of this part of Central Europe in the interregnum between the disappearance of the old empire and the emergence of the new Successor States. The real theme of the book is the passing of the old order, and an appreciation of its merits in the light of the vacuum left by its annihilation. The writing is good; and the writer knows how to use scenes and incidents from his own personal experience in order to illustrate

the great impersonal march of public events. Hence the book should appeal both to readers who want entertainment and to those who seek light on a fascinating and poignant chapter of contemporary European history.

"New Russia." By A. de Mongie. (London) Allen and Unwin. 366 pp. 12s. 6d.

The dangers which are likely to beset an author who undertakes to write "a fragment of contemporary history" need no emphasising, particularly when the "fragment" consists of an "explanation" of revolutionary Russia. M. de Mongie is the more to be congratulated on the objective character of this work, because as a politician and former Minister of Public Works he probably holds emphatic views on the more controversial aspects of Soviet life. With the assistance of an excellent translator, he has succeeded in writing a history of the events leading up to the October revolution and of the succeeding incidents which, without deviating from plain fact, stimulates thought and fires the imagination. M. de Mongie writes tersely, but not at the expense of "atmosphere." Little more than a third of the book is devoted to the present organisation and condition of the U.S.S.R., and here again the author is careful to confine himself to undisputed facts. Only in his thoughts by way of conclusion, M. de Mongie discloses his real attitude. "It is my greatest hope," he writes, "that . . . I have written one of the rough drafts of peace which will be of service to future generations." It is a not ignoble aspiration, and, so far as in him lies, he has served well the cause of better understanding between Russia and the capitalist world. It will not be his fault if subsequent history demonstrates that there can be no mutual tolerance between two incompatible political systems.

OTHER BOOKS RECEIVED.

Capitalism, Co-operation, Communism. By Andrew J. Kress (Washington D.C.) Ransdell Incorporated. 141 pp. \$2.00.

An illustrated account of the working of the co-operative movement and its possible future development.

FURNESS WITHY.

THERE are two reasons why the forthcoming accounts of Furness Withy and Company are awaited with more than normal interest. Shareholders are anxious to know how far the earning power of the strongest group of interests in the British mercantile marine has withstood world depression, and to what extent profitable employment has been found for the additional capital obtained some months ago.

When it was announced, last autumn, that Furness Withy contemplated a £2,000,000 ordinary share issue, it was at once assumed that the company foresaw an exceptional opportunity to acquire new tonnage and connections at bargain prices. The company's entire history suggested that the new issue was a portent of decisive developments. Furness Withy had always shown exceptional judgment both in buying and refraining from buying other interests. Some of its most profitable subsidiaries were bought before the war well under par. Its holdings of £1 shares in the Neptune and the Norfolk and North American Companies, for example, were understood to have cost 4s. per share. It paid £100,000 for a holding of over £400,000, at par, in Houlder Brothers, and 10s. per £1 share for its interests in the British Empire Transport Company. Other acquisitions had been proved, by experience, equally well advised. The British Maritime Trust—control of which was obtained in 1908—had paid steadily 6 per cent. post-war dividends, without taking undue risks. The Economic Insurance Company had been a consistent profit-earner, and had succeeded in increasing its dividends in the depressed period 1930-31. The group at one time had owned collieries, ironworks and engineering properties, but had opportunely disposed of them before the post-war depression in the heavy trades became acute. It had avoided the fatal mistake, made by many of its competitors, of rushing into big building programmes at post-Armistice inflated tonnage values. Its wisdom in refusing to pay the price demanded for the shares of the Oceanic Steam Navigation Company, in 1926, had been amply vindicated by subsequent events. Although the ordinary shareholders had received a 100 per cent. capital bonus in 1919, the increase in the parent company's assets from £5,308,000 in 1910 to £10,987,000 in 1931 had been financed without obtaining a penny of new capital from outside. A 1931 valuation by the company's officials showed a margin of £6,000,000 of net assets over the company's issued ordinary share capital of £4,000,000.

In short, both under the "Furness" regime (which ended in 1919, when the representatives of the Furness family resigned from the board to devote themselves to their shipbuilding, steel and coal interests) and under the chairmanship of Sir Frederick Lewis (now Lord Essendon), the Furness Withy group had maintained a reputation for ultra-conservative finance and shrewd reluctance to take anything but the right step at the right time, which went far to explain its acknowledged position as one of the strongest shipping organisations in the world.

There was, consequently, much speculation over the company's object in making a £2,000,000 ordinary share issue last December, at a price (21s.) well below the lowest market quotation for the existing shares in previous years (as recently as 1930 the shares had touched 36s. 9d.), after the chairman had suggested that no negotiations for acquiring additional assets were in progress. The prospectus suggested that part of the money was required for general purposes, and made specific reference to the completion of the "Monarch of Bermuda," which had been specially designed for the New York-Bermuda passenger trade. The comment was immediately made in the market that the occasion was the first for many years on which new tonnage had not been financed entirely "from within." The further prospectus reference to the necessity of "taking advantage of any favourable opportunities . . . under existing conditions of still further expanding the business" was associated with possible acqui-

sitions, on a bargain basis, from the distressed Royal Mail Group, particularly in the North Atlantic trade. Although Sir Frederick Lewis, after the subsequent passing of the Royal Mail moratorium scheme, announced his consent to act as chairman of the new operating company formed to co-ordinate the Royal Mail services on South American routes, no intimation has as yet been made of any new Furness Withy acquisitions, actual or contemplated. Last December's capital issue (at 21s. per £1 share) was not an entire success, since the company's shareholders subscribed for only £468,619, leaving £1,531,381 to be taken up by the guarantors, Messrs. N. M. Rothschild and Sons. Furness Withy ordinary shares have since fallen in the market to 15s.

From 1912 to 1915 the company paid 10 per cent. annual dividends, and from 1916 to 1918, 20 per cent. (all free of tax), on £2,000,000 of ordinary capital. A doubling of the ordinary capital by a bonus share issue in 1919 was a purely book-keeping transaction, the company immediately reducing its dividend rate to 10 per cent. and maintaining this rate until 1923, when the distribution was lowered to 7½ per cent. In 1928 the rate was raised to 10 per cent., but dividends were made subject to tax, and for 1931 (year ended April 30th) it was reduced to 7½ per cent., subject to tax, which was actually the lowest effective rate paid since 1911. Profits, etc., for the last three complete years have been as follows:—

Years ended April 30th.	1929.	1930.	1931.
Profit	£ 653,393	£ 595,276	£ 292,691
Depreciation	250,000	250,000	150,000
Preference dividends	60,000	59,063	58,125
Earned for ordinary	343,393	286,213	84,566
Paid on ordinary	320,000	315,000	232,500
Earned per cent.	10.7	9.1	2.7
Paid per cent.	10	10	7½

Increase or decrease in carry-forward

* Of which £100,000 was covered by a transfer from company's taxation reserve and £11,000 from tax reserve of a subsidiary.

The sharp reduction in the earnings of 1930-31 was the result of world trade depression, accentuated by increased competition (particularly on the New York-Bermuda route) aided by uneconomic shipping subsidies and flag discrimination by foreign Governments. As Sir Frederick Lewis admitted, the year's results would have been "infinitely less satisfactory" but for the company's widespread ramifications. As earnings on the old capital for 1930-31 were under 3 per cent., and would have been nil had depreciation been maintained at the level of the two previous years, the company's investments are likely to be even more of a "sheet anchor," given the continuance of world depression, in the near future than in the past.

The identity of the company's chief subsidiaries and associates is shown on the following page. The company does not disclose separately the earnings of its own fleet and its dividends from subsidiaries. The British Maritime Trust has maintained its "standard" 6 per cent. dividend for the calendar year 1931, and the Economic Insurance Company is known to have enjoyed a satisfactory experience. Any decline in Furness Withy earnings will be attributable to the difficult conditions under which shipping interests have operated all over the world. Figures have already been published which show that Houlder Brothers maintained their dividend for 1931 (which will come into the Furness Withy 1931-32 figures) at 8 per cent., but earned only 6.4 per cent., against 10.3 per cent. The Houlder Line showed net earnings of 6.9 per cent. (against 11.2 per cent.) and distributed 8 per cent. (against 10 per cent.). The 1931 profits of the Prince Line fell from £164,615 to £47,813 and the dividend was reduced from 5 per cent. free of tax to 2½ per cent. subject to tax. The Bermuda trade was affected by

the deepening of American depression and, until the putting of the "Monarch of Bermuda" into commission, by the effect of the withdrawal of the popular "Bermuda," which has now been purchased by Workman Clark after suffering severe damage in a fire at Belfast.

No shipping group, naturally, can hope to escape the consequences of a *malaise* which has reduced the value of the world's foreign trade by 50 per cent. since 1930. Nevertheless, shareholders may regard the company's position as strong enough to carry it through an even more

prolonged depression. The company has always had a large holding of general investments, including British Government securities. At April 30, 1931, this holding was conservatively valued at £2,592,000. Last December's share issue has further increased its liquid resources, and it should be in a position to pursue a "forward" policy whenever opportunity arises. For the present, however, the directors may consider prudent conservation of profits, even at the expense of ordinary dividends, the most appropriate course for the company.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
July 5.ACCOUNT.
July 7.

Receding hopes of a satisfactory reparations settlement at Lausanne brought a subdued tone to the industrial markets early in the week and encouraged nervous holders to transfer into fixed-interest stocks. The news that the London clearing banks were reducing their minimum charge for all short market loans coincided with strong rumours that Bank rate would be reduced, a belief which later proved to be well-founded. At the same time, there was a general feeling that the week-end would see, if not a War Loan conversion announcement, at least a Treasury Bond conversion scheme. Active bull speculation entirely dominated the gilt-edged market in mid-week and caused a sharp appreciation in quotations accompanied by a large turnover, which continued after hours.

Striking gains were recorded by many of the long-dated Government securities, and new high levels were reached in several instances. Consols were in keen demand, and Conversion 3½ rose 2½ points on Wednesday, while Funding and Victory Bonds appreciated similarly. War Loan was affected by conversion considerations, and remained unchanged. India loans displayed weakness in the early sessions but were strong in sympathy with the funds in mid-week. The new Fives were quoted at 7½ premium. Colonial stocks were very firm, and numerous gains were recorded. The Cyprus scrip was heavily over-subscribed, and went to a premium at once, while the new Central Electricity scrip was quoted at 2½ premium after 3½.

The foreign market was as depressed as the gilt-edged market was buoyant. German loans declined steadily as Lausanne prospects deteriorated, although better news on Thursday caused a mild recovery. Japanese stocks were lower on the unsatisfactory financial position of the country and the consequent weakness of the yen. Siamese bonds slumped on the "revolution."

Home rails were adversely affected by dividend considerations, and a poor batch of "traffics," but were helped by the "pooling" discussions, to which reference is made on page 30. Metropolitan rose on the new agreement with the Ministry of Transport (discussed on page 30). Argentine rails were weak on bad traffic figures, and Leopoldina lost ground, while Cordobas receded further on the capital reconstruction (outlined on page 31).

Industrial shares were fairly cheerful at first, but interest fell away rapidly, and the trend was unfavourable to holders. International stocks lacked support, and New York quotations of transatlantic issues were not helpful. Shipping shares were in some demand on the success of the Cunard fuel experiment. Dorman, Long were inquired for on the report that the company had secured an important Danish bridge contract. Cables and Wireless were marked down on the May traffic receipts, but recovered subsequently. Lovell and Christmas were a firm feature following the resumption of dividends, while Henley's Telegraph advanced on the report. Patons and Baldwin's improved for the same reason. Breweries generally lost ground, and Guinness weakened on the prospect of an import duty on Irish goods. Bank shares were very strong, while Anglo-South American "A" shares reflected the reassuring tone of the meeting.

Interest in the oil share market centred on the world conference which meets this week in Paris, the news that the Soviet delegates were on their way causing a revival of optimism. A small amount of selling was experienced from Paris, but in general the changes in quotations were inconsiderable. Rubber shares were neglected, the dullness of the raw material discouraging buyers, while the volume of selling was likewise not appreciable. Tea shares were quickly marked down on the appearance of a seller.

The mining share market opened with Kaffirs in good demand, Randfontein and Sub Nigel in particular being supported. An easier tendency developed later, and the tone deteriorated. Copper shares declined with the metal, and tin shares were irregular. South Kalguri enjoyed a

sharp rise on the report, but Westralians gave way on Wednesday. One or two Rhodesian gold shares improved, but Ashanti Goldfields weakened and De Beers were out of favour.

"FINANCIAL NEWS" DAILY BARGAIN INDEX.

(Approximate number of Bargains recorded in Stock Exchange Lists.)

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock markets were extremely unsettled all the week, political and economic conditions being regarded with growing apprehension. Further dividend reductions by a large number of important companies was regarded as inevitable, and the announcement that Atchison was omitting its dividend caused no surprise. Continued anxiety was felt regarding the Chicago banking position, thirty-six Chicago banks having failed this month. Better news was forthcoming regarding the Central Republic Bank, however, which was able to secure an advance from the Reconstruction Finance Corporation to enable it to meet its obligations. Railroads were particularly weak, and though short covering helped a number of issues in mid-week, utilities, oils and mines were mostly lower. The decision of the Interstate Commerce Commission on the Four Party plan of consolidation of the Eastern railroads is expected shortly, but it is understood that the plan of the railway group will not be entirely approved in its original form. The business index of the *New York Times* for the week ended June 18th was 55.2, compared with 55.1 for the previous week. Steel mill activity made a further low record, the industry working at only 15 per cent. of capacity, while the figure is expected to go still lower. Freight car loadings were 518,419 for the week ended June 18th, against 501,760 for the previous week, the increase being due to exceptional merchandise movements in anticipation of the newly-imposed taxes.

PARIS.

Firm conditions accompanied the opening of the Paris Bourse, the announcement that the Bank of France would pay a half-yearly dividend of only Frs. 100 having very little effect. Young bonds were marked up strongly at first, but German issues receded. Most issues were of a settlement at Lausanne receded. Most issues were better in mid-week, but the volume of trading was restricted. On Thursday a general improvement occurred in most sections, German bonds recovering on fresh rumours of a possible debt agreement.

	June 23, 1932.	June 27, 1932.	June 30, 1932.	June 23, 1932.	June 27, 1932.	June 30, 1932.

BERLIN.

News from Lausanne did not inspire any optimism, and prices were lower all round. The general tendency was heavy, the sole exception to the trend being Lignite shares. Gold mortgage bonds declined further. The market on Wednesday was considerably brighter, an advance in shares taking place all round. Reichsbank rose 1½ to 122½. Dye Trusts enjoyed an appreciable recovery.

	June 23, 1932.	June 27, 1932.	June 30, 1932.	June 23, 1932.	June 27, 1932.	June 30, 1932.

Svenska Tandsticks				6½	6½	8½

AMSTERDAM.

The Bourse was quiet, with prices a shade lower. There was a sharp reaction on Tuesday following unfavourable news from Lausanne. Dutch Government bonds, which had previously been very firm, declined sharply, and the close was weak. Unilevers were strong exceptionally.

	June 23, 1932.	June 27, 1932.	June 30, 1932.	June 23, 1932.	June 27, 1932.	June 30, 1932.

Deil Batavia				96	105	100
Royal Dutch				120	122	123
Handelsbank				154	155	154

OTHER CENTRES.

Minor European Bourses were still unsettled pending some definite result from Lausanne. In the early part of the week Brussels was firm, a fair volume of business being transacted in rubber shares, but the market eased later on profit taking. A rally occurred in Frankfurt on Wednesday, but Stockholm and Copenhagen were very erratic and closed weak. Conditions elsewhere were extremely irregular.

INVESTMENT NOTES.

The Gilt-Edged Boom.—The activity in the gilt-edged market this week may fairly be described as a boom. The week opened quietly—in fact, British Government stocks appeared at first subdued by certain political speeches in which prominence had been given to the possibility of a semi-compulsory reduction in interest on the National Debt. However, the announcement on the Tuesday morning that the Stock Exchange was to be open on the following Saturday prompted the speculation that the *raison d'être* of this unexpected decision was a Government conversion offer to be made on July 1st either to holders of Treasury Bonds 4½ per cent. 1932-34 or to holders of 5 per cent. War Loan or to both. On Tuesday the buying of long-dated stocks, which had been prominent for so many weeks past, developed strongly, and on Wednesday had become almost an indiscriminating scramble, the view being universally held that a reduction in Bank rate and a conversion offer this week-end were "certainties," and that the Lausanne Conference had better prospects of success. The most sensational rises were seen in Conversion 3½ per cent. (4 points) and Local Loans (nearly 3 points).

	Lowest. 1932.	June 22.	June 30. Opening.	Close.	Yield % at close.

(Continued on page 30.)

THE UNIQUE CHARM OF SOUTHWOLD.

THIS PICTURESQUE SMALL TOWN on the Suffolk Coast is an ideal place for those who desire a few days' complete change and rest. The Town itself, with its wonderful Church and quaint "greens" and great, high Common commanding extensive views over sea and land, is different from the usual seaside resorts.

Across the river is WALBERSWICK, the haunt of nearly all artists and of many famous authors for some fifty years past, and from here are many beautiful walks or rides, either along the beach or across the silent marshes, to the lost city of DUNWICH, or over hilly gorse and heather commons flanked by woods to BLYTHBURGH, with its noble church, or WENHASTON, with the medieval picture of "The Doom."

From Southwold delightful short motor excursions may be made to FRAMLINGHAM (20 miles), with its vast castle and church, with splendid monuments of the tragic Howards, or to WINGFIELD CASTLE (21 miles), the great Manor House of the ill-fated Dukes of Suffolk, with the beautiful effigy of Elizabeth Plantagenet in the church adjoining, or to ADEBURGH THORPNESS (18 miles) and ORFORD, remote from modern life, with the great Norman keep still dominating town and coast.

Southwold provides excellent sea angling, and there is an attractive 18-hole golf course. By train from London it is about two hours to SAXMUNDHAM (14 miles) and a little more to DARSHAM (7 miles), HALESWORTH (9 miles), where motors from hotels meet visitors by appointment.

There is THE SWAN HOTEL, (h. & c. water in every bedroom) in the Market Place, a well-known and most comfortable hotel with a century's reputation (Tel. 5), and also a smaller, THE CROWN HOTEL, an old Georgian Inn recently reconstructed (Tel. 53), both well known for the excellence of their catering.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 27.)

Record high prices were seen throughout the market, several India and Colonial and the new trustee stocks participating in the general liveliness. The announcement of a 2 per cent. Bank rate was the signal for a reaction, but at the moment of writing the market is firm at levels only slightly below the best. On the reaction on Thursday it was noticeable that a good deal of money went into short-dated stocks, including even 5 per cent. War Loan, which rose from 101½ to 101¾. The new Treasury 3 per cent. bonds were ¾ higher at 2½ premium.

Metropolitan Railway and the Bill.—In the *Economist* of November 14, 1931, we discussed the objections which the Metropolitan Railway had raised to the London Passenger Transport Bill, our contention being that the Metropolitan Railway had genuine grievances which deserved to be taken into account. It was announced this week that an agreement had been reached between the directors of the Metropolitan Railway and the Minister of Transport which would meet these grievances and put an end to the opposition of the Metropolitan Railway to the Bill. A meeting of the consolidated and preference stockholders is to be held on July 14th to approve the scheme, which contains the following proposals: (1) holders of 3½ per cent., 3½ per cent. "A" and 5 per cent. preference stocks to receive an amount of London Passenger Transport "B" stock, which will produce the same income as that derived from their present holdings; (2) holders of convertible preference stock to elect either to be dealt with as in (1) or to exchange into ordinary stock at par; (3) holders of ordinary stock to receive £67 10s. London Passenger Transport "C" stock for every £100 ordinary, with the option to convert into a new guaranteed stock, of a nominal amount equal to the par value of their present holdings, bearing interest at 3½ per cent. for fifteen years and 3 per cent. for ten years. For this purpose a trust is to be established on the general lines of the trust constituting the Central London Guaranteed Assented stock. Metropolitan ordinary stock of holders who do not desire to accept Transport "C" stock is to be deposited with the trust, to which will be allotted the Transport "C" stock issuable in respect of the Metropolitan ordinary stock so deposited. The new guaranteed stock issued by the trust will be secured by a first charge on the share of the pooled receipts to which the main line railway companies are entitled in respect of their suburban traffic. The guarantee is to come to an end after fifteen years from the appointed day if at any time after twelve years 6 per cent. shall have been paid on the Transport "C" stock in two out of three consecutive years. At the expiration of twenty-five years

the trust will be dissolved, and each holder of trust stock will receive his proportionate amount of Transport "C" stock. It will be seen that a valuable option has been secured by the ordinary stockholders of Metropolitan Railway, for it would appear that the share of the pooled revenues representing the receipts of the main line railway suburban traffic will provide a very substantial cover for the guaranteed stock interest. There should be no difficulty in obtaining the consent of the Metropolitan stockholders to this scheme, for it is undoubtedly an excellent bargain for the company. It may be added that the holders of Metropolitan 4 per cent. terminal debenture stock will be repaid on the due date in 1933 and will not have their holdings converted. The holders of Metropolitan debenture stock other than the terminal debenture will be transferred into Transport "A" stock on such a basis as will produce the same income as they receive from their present holdings. The settlement is subject to Parliamentary confirmation, but the company has the right to withdraw if any amendments are made repugnant to the agreement.

London Midland and Scottish and the Pool Plan.—The directors of the London Midland and Scottish Railway announced last week the half-yearly dividends on their preference stocks. The 5 per cent. redeemable preference stock of 1955 is to receive 1½ per cent., the 4 per cent. first preference 1 per cent., and the 4 per cent., 1923, nil. The announcement came as a shock to the market, as although earnings were not expected to cover the junior preference stocks this year it was thought that the first half-yearly payments would be made. According to the directors' statement the total decline in traffic receipts this year up to date has amounted to £2,200,000, which has been offset to the extent of £1,200,000 by fresh economies in expenditure, of which £420,000 was due to reduced wages and salaries. Some interesting facts were disclosed by Sir Josiah Stamp in evidence before the Committee appointed by the Minister of Transport to hear objections to the proposed pooling of competitive traffic receipts by the London Midland and Scottish and London and North Eastern Railway Companies. Under the pooling scheme competitive traffics are to be grouped into three classes and to be of eight descriptions. The whole of the traffic receipts of the two companies under these headings for the years 1928, 1929 and 1930 are to be ascertained, and for future years the combined receipts will be divided between the two companies in the proportions found for the average of these three years, allowances being made for work done other than by rail conveyance. The scheme is not intended to affect the fixation of rates and charges, which are on a common basis, but the results should tend to improve the efficiency of the services and to reduce charges. The agreement is to run for fifty-five years from July 1st. Objections to the proposed scheme have been raised by the National Union of Railwaymen, the Railway Clerks Association, the National Federation of Iron and Steel Manufacturers, the Railway Carriage and Wagon Builders, and the Mining Association. Sir Josiah Stamp stated that facilities which were being given by both companies on unremunerative lines could be run at a profit under the pooling scheme as a single service. Without the pool it was possible that both facilities might have to be abolished. He agreed that the pooling would assist the companies in their competition with road transport and that the economies which the pool would make possible, coupled with a trade revival, might enable the companies to reach their standard revenues and more. In reply to the Chairman of the Committee, Sir Josiah added that the amount likely to be saved would be very large. He did not care to make a guess, but the order of magnitude might be six or seven figures, although the scheme would take a considerable time to develop. It was surprising to hear from Sir Josiah that the pool would affect about 50 per cent. of the company's total gross receipts, or rather more than £50 millions. The economies in sight if the scheme is approved of may be some comfort to the preference stock holders, who are now to receive only a meagre proportion of their dividends.

County Stock New Regulations.—Amendments of the County Stock Regulations, 1891-1921, which have been published in the *London Gazette*, have carried out one of the important reforms made necessary by the Hatry defalcations. Under the new regulations, when stock is issued to the public by a County Council, the funds subscribed are to be transferred to the Council's bankers and credited to a special account bearing the Council's name and the name of the stock. Moneys paid in advance of allotment are to be so transferred within three days after allotment. No payment is to be debited to a special account opened under the regulations unless authorised by order of the Council. When an issuing company paid to the bankers for credit to the special banking account all sums due from the purchaser in respect of the amount certified in the allotment letter or scrip certificate. Issuing houses are to supply the registrar as soon as possible with a record of the scrip certificate, showing in each case the number and other identification marks. When the stock is fully paid a statement of payments and dates is to be furnished. Fully-paid scrip certificates or fully-paid allotment letters must be surrendered to the registrar before the registered person can be registered as a holder. The new regulation does not apply when the Council itself issues the allotment letters and scrip certificates and an officer of the Council is the registrar. These regulations, whose effect should be entirely salutary, apply only to England and Wales, excluding the London County Council.

Mexican Debt Statement.—The decision of the International Committee of Bankers in Mexico not to make any distribution to depositors of Mexican bonds until certain matters arising out of conflicting claims have been settled postpones once again the clearing up of the Mexican debt position. The Committee had prepared definite plans for making a distribution to depositors under the agreements of July, 1922, and October, 1925, but in view of the fact that conflicting claims are now being raised by an action instituted in the New York courts, the Committee feels it is precluded from making any payment until the respective rights of all those interested are settled. Owing to adverse economic conditions, the Federal Congress of the United States of Mexico, by a law promulgated on January 27th last, declared ineffective and refused to ratify the agreement of July 25, 1930, and the supplementary agreement of January 29, 1931, which were executed subject, upon ratification, to submission to bondholders for their acceptance. The action of the Mexican Government rendered the agreement null, and the Committee therefore returned to the Government its deposit of \$5,000,000. In order to preserve the basis for a resumption of payments on the direct external debt and for the reorganisation of the railways when economic conditions improved, the Government entered into an interim agreement on December 22, 1931, which was ratified. In its turn, the Government undertook to deposit with the Committee the sum of \$5,000,000 in United States gold on or before July, 1933, the Committee agreeing that if the new deposit is made within the period named it will execute with the Government for submission to bondholders an agreement substantially identical in form and substance with the July, 1930, agreement, subject to any changes made necessary by the lapse of time involved in the postponement of the first annuity year to 1934. The details of the 1930 scheme appeared in the *Economist* of August 2, 1930, page 243.

Cordoba Central Scheme.—Details of a drastic scheme of capital reconstruction were announced this week by the Cordoba Central Railway, which has a paid-up capital of £21,028,860. It will be recalled that in March last the 4 per cent. debenture holders and 5 per cent. debenture holders approved a moratorium. It is now proposed that no interest shall be paid on the first debentures prior to October, 1934, when the rate is to be increased from 4 per cent. to 4½ per cent. per annum, subject to the reservation that for the first two succeeding years payment shall be deferred, if in the opinion of the Board, net revenue available in cash does not permit of payment in full. As compensation, holders will receive new Consolidated Income stock equivalent to 15 per cent. of their holdings. The sum of £40,000 per annum will be set aside as from July 1, 1934, and the first £200,000 may be used for capital purposes, while the balance will be for redemption. The redemption price of the stock is to be raised from 105 per cent. to 107½ per cent. The 5 per cent. debentures will receive no interest until all interest due on the first debentures has been met. Holders of this stock are to waive their rights to interest for a period of four and a half years from January 1, 1930, and to agree that interest after July 1, 1934, shall be non-cumulative. The first preference, second preference and ordinary stock is to be merged into a consolidated income stock entitling holders to the balance of net revenue of each year subsequent to the year ending June 30, 1934. Holders of 5 per cent. debentures will receive 50 per cent. of their present holdings in the new stock; holders of the first preference stock, 65 per cent.; holders of the second preference stock, 30 per cent.; and holders of the ordinary stock, 12½ per cent. As regards the six per cent. debentures, the scheme provides for the modification of sinking fund rights and the consent of the 5 per cent. debenture holders before any further stock is issued. Though the scheme is drastic, it is pointed out that by its adoption the amount at the

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

debit of the company's net revenue account, which by June 30, 1932, would total over £1,000,000, will be practically wiped out. An additional incentive to stockholders is the fact that the Inland Revenue authorities, if the scheme is sanctioned, propose to accept five per cent. debenture stock and the newly-created Consolidated Income stock in satisfaction of a substantial part of a liability of some £460,000.

Yorkshire Amalgamated Collieries.—The accounts for the year ended March 31, 1932, of this Northern holding company show a decline in total revenue of £42,106. The export of coal from the Humber ports, the natural outlet for a large proportion of the output of the collieries operated by the subsidiary companies, has been greatly restricted in volume, and the prices obtainable have been lower than those prevailing in the preceding year. A dividend of 6d. per share on the "A," "B" and "D" shares was announced last July in respect of the year 1930-31, but no distribution is recommended this year, the dividends received from subsidiaries having been declared in part out of undistributed profits earned since the incorporation of Yorkshire Amalgamated.

	Year to March 31,		
	1930.	1931.	1932.
Income	£ 80,182	£ 69,974	£ 27,868
Interest	15,944	11,092	10,488
Management	707	940	867
Directors' fees	2,000	2,000	2,000
Net profit.....	61,531	55,942	14,513
Brought forward.....	5,447	16,102	18,434
Ordinary dividend.....	70,018	52,000	Nil
Special charges.....	5,000*	5,000*	7,500*
Income tax returned.....	4,142	3,390	1,448
Carried forward.....	16,102†	18,434	26,895

* Investment reserve or depreciation.

† After crediting £20,000 from suspense account.

The poor results of the operating companies are shown below:—

	Net Profit, Net Profit,	
	1930.	1931.
Dinnington Main	£ 45,464	£ 21,407
Rossington Main.....	19,247	Dr. 12,123
Maltby Main.....	15,966	4,207
Denaby and Cadeby Main	96,586	33,197

The balance sheets of the subsidiary companies show that current items are mainly lower as a result of a smaller volume of trading. Both Maltby and Rossington—whose losses are attributed mainly to the relatively high proportion of loan capital and bank indebtedness—have slightly reduced their debt. All the collieries have been maintained in efficient working condition, and ample depreciation on plant, machinery and houses has been provided for in the accounts of all the subsidiary companies.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

Patons and Baldwins.—This important company of wool and hosiery yarn manufacturers has recorded better results for 1931 than for any year since 1924. Net profit totals £287,005, after providing, *inter alia*, for depreciation, taxation, and loss in connection with the Australasian exchanges. For 1930 net profit was only £112,186. Preference dividend absorbs £65,168, while the ordinary distribution is increased from 2½ per cent., tax free, to 7½ per cent., tax free, and requires £119,947. The directors have taken the opportunity to restore to the reserve fund the sum of £100,000 which was withdrawn in 1929-30, while the carry-forward is slightly augmented at £42,072.

	Year to April 30.		
	1930.	1931.	1932.

* Tax free.

The company has extended its operations in several directions during the year. The assets of Derwent Mills, Ltd., Matlock, have been acquired for Angora rabbit wool spinning, while a larger mill has been built at Toronto to make better provision for the company's Canadian business. The balance sheet is barely liquid, available assets at £531,392 being insufficient to meet "sundry creditors, including reserves for Government taxes, etc.," at £579,936. At their present price of 28s. 9d. the £1 ordinary shares give a yield of about £5 10s. per cent., tax free, allowing for the final dividend.

W. T. Henley's Telegraph.—Once again the profits of this old-established company have displayed considerable stability in the face of intensified depression. Trading profit is down by less than 6 per cent. at £328,664, while net earnings amount to £244,309, compared with £248,556, the allocation to depreciation being only £54,131, against £78,395. The modest preference dividend is covered twenty-seven times, while the directors are again able to recommend an ordinary dividend of 30 per cent., including bonus, the distribution being well covered by earnings:—

	Year to March 31.		
	1930.	1931.	1932.
Trading profit.....	£ 374,264	£ 349,089	£ 328,664
Fees	8,609	7,500	7,500
Debenture interest.....	6,750	6,750	6,750
Depreciation	49,767	78,395	54,131
Income tax	24,788	7,888	15,974
Net profit.....	284,350	248,556	244,309
Brought forward.....	542,280	572,630	567,186
Preference dividend	9,000	9,000	9,000
No. of times covered	31.6	27.6	27.1
Ordinary dividend:			
Amount	195,000	195,000	195,000
Earned %	45.9	38.2	36.2
Paid %	30	30	30
Reserve	50,000	50,000	50,000
Carried forward.....	572,630	567,186	557,495

The carry-forward is reduced from £567,186 to £557,495, but the reserve fund is increased by £50,000, and now stands in the balance sheet at no less than £650,000, or the equivalent of the ordinary capital. The report states that there has been a reduction in turnover during the year, the conditions of exchange having rendered foreign business difficult. The subsidiary company, Henley's Tyre and Rubber, made "a satisfactory profit." The balance sheet of the parent company reveals a strong liquid position. At £5½, the £1 ordinary shares yield about £6 2s. 6d. per cent., allowing for the final dividend and bonus.

A New Fixed Trust.—Another fixed trust has made its appearance under the title of National Fixed Investment Trust, Ltd. The chairman is Sir George Hamilton, M.P., and the directors include Sir Arthur Griffith-Boscawen. The investments forming the unit of stock embrace twenty-seven equity shares of British companies, including the Bank of England, Prudential Assurance, and four public utility companies. The aggregate unit cost at present market prices is approximately £46,000. Each unit is divided into 4,000 sub-units, and the trustees (Midland Bank Executor and Trustee Company) will issue to each purchaser of the sub-units "National Fixed Trust" certificates. The minimum purchase in the first instance is limited to twenty sub-units. The purchase and sale prices of the certificates will be published daily in the Press, the price being based on the market value of the twenty-seven securities forming the unit, plus the usual Stock Exchange charge. Our criticism of fixed trusts remains the same—that the selection of the original securities comprising the unit presumes something like omniscience. No share can be sold unless there is a fundamental change in the intrinsic security or the non-payment of a dividend. The shares comprising the units of the National Fixed Investment Trust appear to be well chosen. When buying a shop window, however, you are bound to buy some articles which you do not favour or which you do not particularly prize.

South Kalgurl.—Our mining correspondent writes:—Towards the end of April this West Australian undertaking issued an advance ore reserve estimate showing some decrease in the quantity and value of the "probable" material and accompanied by rather discouraging remarks as to the outlook in this respect. Shareholders who were thus induced to part with their interest are doubtless now regretting their timidity. The report to March 31st shows a profit of £76,400, against £82,960 in 1930-31. The difference is due to the exchange premium and the enhanced selling price of gold in terms of currency; but for these factors, the earnings would have been somewhat less than before. As the continuance of current conditions "cannot be relied upon," the directors have decided to pay a special bonus of 2s. 6d. per share in addition to the usual final dividend of 1s. 6d. per share. Moreover, it is proposed to make a return of capital to the extent of 2s. 6d. per share. Thus the members will shortly receive 6s. 6d. per share—4s. less tax, the balance tax free. Even then the company's financial position will be quite good. The ore reserves still represent several years' supply, and there is the possibility that fresh discoveries of value may be made. Altogether, a study of the position as a whole suggests that the recent advance in the price of the shares was fully warranted.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Mexican Railway, Ottoman Bank, Anglo-South American Bank, Bleachers' Association, Globe Telegraph and Trust, Electric Supply Corporation, General Electric, African and European Investment, Metal Box, Barclay Perkins, and Hovis. At the annual meeting of the Ottoman Bank, Sir Herbert Lawrence drew the attention of shareholders to the liquid character of the balance sheet, the cash item being six million sterling, against three millions the year before, and bills receivable roughly £6,000,000, instead of £4,000,000. The policy of increased liquidity had naturally had an adverse effect on working results, but it was a policy essential to the present security and future prosperity of the bank. Presiding at the annual meeting of Bleachers' Association, Sir Alan Sykes said that, taking the year as a whole, the volume of exports of bleached cotton piece-goods had declined by nearly 7½ per cent. in comparison with 1930-31, the present level being less than one-half of the quantity exported only three years ago. At the annual meeting of the Metal Box Company, the chairman said that the company's food-can business had expanded very greatly and in step with the increasing realisation of the great possibilities of the canning industry

CAPITAL ISSUES.

Following on the recent British Columbia issue, the *Province of Alberta* entered the London capital market this week with an issue of £1,000,000 5 per cent. redeemable stock at 98, giving a yield of £5 2s. 5d. per cent. on the basis of redemption in 1967. Notwithstanding the relatively high return, it seems that some 80 per cent. was left with the underwriters. A trustee issue of £615,000 4 per cent. inscribed stock, 1956-66, at 95 by the *Cyprus Government* had a much better reception, though the yield to redemption was no more than £4 5s. 7d. per cent. This is the first time that Cyprus has raised a loan in London, and the colony has no public debt apart from outstanding balances amounting to £152,504, which will be repaid out of the proceeds of the present issue. The balance is to be used to meet the cost of road and harbour works. In a different class, the *South Shields Greyhound Stadium* offered 480,000 2s. ordinary shares at par. The company has been formed

purchase and equip a greyhound racecourse and sports stadium at South Shields, the purchase price being £23,500 in cash and 80,000 fully-paid ordinary shares of 2s. each. Three of the five directors are also directors of Clapton Stadium, Ltd. No estimate of profits is given, though the satisfactory results of similar going concerns are tabulated. The present popularity of this mushroom sport is unquestionable, but the issue must nevertheless be regarded as somewhat speculative.

Public Offers.

Province of Alberta.—Issue of £1,000,000 Government of Alberta 5 per cent. redeemable stock, 1962-67, at £98 per cent. The stock will be redeemed at par on June 1, 1967, but the Government will have the option of redemption, in whole or part, at par on or after December 1, 1962, on six months' notice. The proceeds will be applied to refunding Treasury bills and meeting charges on the General Revenue Fund of the Province. The net general debt of the Province was \$88,952,745 on June 14, 1932. There is a budget deficit of about \$4,000,000 for the fiscal year ended March 31, 1932.

Cyprus Government.—Four per cent. inscribed stock, 1956-66. Issue of £615,000 stock, of which £200,000 was placed in the terms of the prospectus. Price of issue, £95 per £100 stock. The issue is a trustee security. The proceeds will be used to meet the cost of harbour works and road construction in the colony, and for the repayment of loans. The loan is secured on the general revenue and assets of the Government of Cyprus. The principal will be repaid at par on August 15, 1966, but the Government will have the option of redemption at par on or after August 15, 1956, on six months' notice. The colony has no public debt.

South Shields Greyhound Stadium.—Issue at par of 480,000 ordinary shares of 2s. each. The company has been formed to purchase the freehold property at South Shields, lately in possession of the South Shields Football Club, to be equipped as a greyhound racecourse and sports stadium. The directors anticipate that the present undertaking will be as successful as similar going concerns, and should show satisfactory returns to shareholders.

Bristol Waterworks.—Issue by tender of £250,000 5 per cent. consolidated preference stock. Minimum price £107 per £100 stock. This is an irredeemable security authorised under the Trustee Act, 1925. No portion of the stock has been underwritten. The proceeds will be used to meet capital expenditure already incurred and for the new reservoir and works at Cheddar. Full interest on the preference capital has been paid since the incorporation of the company in 1846.

Sheppy Gas Company.—Issue by tender of £10,000 five per cent. perpetual debenture stock, minimum price par. The net revenue for the year to December 31 last, after depreciation was £6,488, covering interest on the loan capital, including the present issue, nearly five times. The proceeds will be used to repay a banker's loan.

Stock Exchange "Introductions."

York Corporation.—Particulars of an issue of £500,000 York Corporation 4 per cent. redeemable stock, 1952-1972, redeemable at par on June 30, 1972, or at the option of the Corporation on or after July 1, 1952, on three months' notice. This is a trustee security. The whole of the stock has been sold at £94 per cent. to Messrs. F. W. Bentley and Company, of Leeds.

COMPANY MEETINGS, &c.

OTTOMAN BANK.

DIVIDEND MAINTAINED.

STRONG AND LIQUID POSITION.

TRADE CONDITIONS IN THE NEAR EAST.

SIR HERBERT LAWRENCE'S IMPORTANT REVIEW.

The annual general meeting of shareholders of the Ottoman Bank was held, on June 28th, at Winchester House, Old Broad Street, London, E.C.

General the Hon. Sir Herbert A. Lawrence, G.C.B., presided. The Secretary (Mr W. P. Sheppard) having read the notice convening the meeting,

The Chairman said:—Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume that it is your pleasure that the report and balance sheet circulated among you should be taken as read. (Agreed.)

I wish first of all to report to you, with great regret, the premature decease in the month of March last of Monsieur de Sorbier de Pougnaoresses, who, during the last six years, has occupied with distinction and devotion the post of director-general of the bank at Istanbul.

During the past year the general situation was considerably aggravated, not only in the countries of the Near East but in all parts of the world, culminating in two outstanding events—the crisis in Germany and the suspension of the gold standard in England.

GERMAN CREDITS

The nature of our business naturally causes us to maintain banking relations with most European countries and the Mediterranean basin. Happily, our only so-called "frozen" assets of any importance are those in Germany. There, however, the credits constitute important provisions apart from the statutory reserve. With regard to the other outstanding event, the departure by England from the gold standard in September last, this matter of worldwide importance was not without its effects on our own balance sheet, which is, of course, in sterling, though, our activities being of an international character, part of our capital and reserves are not in sterling.

GREATLY IMPROVED CASH POSITION.

I would particularly call your attention to the liquid character of our balance sheet and to the effect of our efforts to increase that liquidity in the course of the year under review. You will notice that the item cash is six million sterling this year, against three million sterling last year. Though part of this difference is caused by appreciation of foreign currencies in terms of sterling, the major part of the increase is the result of a definite policy to increase our strength and liquidity. Other indications of this policy are the reduction in current account debtor and the increase in bills receivable from £4,000,000 to approximately £6,000,000. This figure included French and English Treasury bills, which form a considerable portion of the employments in Paris and London.

This policy of increased liquidity has naturally an adverse effect upon the working results, but we feel convinced that it is a policy essential for the present security and future prosperity of the bank.

The exploitation of our various groups remained closely bound up with the economic situation peculiar to each of the countries in which they work.

TURKEY'S TRADE POSITION.

Turkey, which mainly draws its revenues from the soil, has been deeply affected by the world fall in agricultural products and raw materials. Prices, when it has been possible to sell on foreign markets, have frequently fallen below cost of production. Although last year the harvests in tobacco, cotton, wheat, barley and fruit were satisfactory in quantity, there was again a notable contrac-

tion in export value; since 1925 the fall in gold value comes out at 50 per cent., while in tonnage it only amounts to 20 per cent.

In spite of the corresponding reduction in imports, the commercial balance showed at the end of October, 1931, a deficit of nearly £T.15,000,000. As a remedial measure imports were strictly limited by decree in November last, and this had some effect towards re-establishing the commercial balance during the last two months of the year.

This, however, must considerably affect the Customs receipts, which were estimated in the Budget of 1931-32 at £T.56,000,000 out of the total Budget of £T.186,000,000. In its anxiety to maintain a balanced Budget the Turkish Government endeavoured to secure a reduction in the charges of the external debt by an agreement with the bondholders. It also pursued a policy of strict economy, including a levy on salaries, both public and private, by a progressive tax called the "Tax of the Economic Crisis."

The Government aims at balancing both the commercial and the State Budget, so as to maintain the *de facto* stability of the national currency, which was reached in September, 1930.

THE TURKISH POUND.

In September, 1931, this stability showed its power of resistance in that it was possible to keep the then existing parity of the Turkish pound with currencies which remained on the gold standard. Throughout the year 1931 the Consortium of Banks continued to intervene on the market, and your establishment was again charged in the autumn with the task of the temporary circulation for account of the Treasury of notes necessary for the purchase of exchange arising from exports. Since January 1, 1932, the work of the Consortium and the issue of notes has been taken over by the Central Bank of the Republic, which began its activity on October 3, 1931.

In the difficulties of every kind imposed on them to-day Governments can do no better than choose between several temporary policies: the Turkish Government has preferred the restriction of foreign commerce and greater dependence on its own resources to the dangers of a depreciated currency. No impartial observer can complain of this choice. Banking activity, however, naturally suffered in consequence.

It is significant that cheques passing through the clearing house at Istanbul have fallen by 24 per cent. since 1930. Our head office in Turkey and the Turkish branches were faced with an increase in unproductive cash resources owing to a restricted business programme following the diminished purchasing power of a heavily taxed population, and the necessity for more than ordinary care in giving credit.

It is not surprising, in these conditions, that in 1931 the results of our exploitation have been bad in Turkey. Your committee have been preoccupied with this state of affairs and have taken steps to reduce the general expenses.

EGYPT.

In Egypt the effects of the world crisis were felt acutely during the year. The fall in the price of cotton had a natural effect on exports, which were only about £E.28,000,000, against about £E.32,000,000 in 1930. The difference in imports was even more considerable, the figure of £E.31,500,000 for 1931 comparing with nearly £E.47,500,000 for 1930. Our branches there conducted only a limited business, partly owing to the decrease in turnover, and partly as a matter of prudence.

PALESTINE AND IRAQ.

The results of our Palestine branches continued to be satisfactory despite a considerable depression in that country. On October 1 last year we established an office at Tel-Aviv, near Jaffa, which is making satisfactory progress.

In Iraq there was no improvement in economic conditions. The prices of exported commodities reached lower levels, the demand

was poor, and the country, being essentially agricultural, suffered severely. The Government, however, acted energetically and did all in its power to assist cultivators, while proceeding with necessary capital works, which should lead to improvement in both agriculture and communications.

The financial situation should also be improved by the oil royalties, which are a new source of income, and it is anticipated that work will shortly begin on the trans-desert pipeline to the Mediterranean.

CONDITIONS IN PERSIA.

In Persia there was an adverse trade balance, the exceptional and continued fall in the price in silver since 1929 resulting in serious depreciation in the value of the kran.

As a measure of control the Government instituted a Commission on foreign exchange, and later a monopoly of foreign trade. The first measure was not entirely successful, but the monopoly law was more effective, and resulted in a considerable reduction in imports, which were only permitted under licence.

It will be realised that our branches, both in Iraq and Persia, suffered from these difficult conditions, but the results of their working were not unsatisfactory.

Our branches in Cyprus have had their share of the reduced business available, but the turnover was again small, and low prices had, as elsewhere, an adverse effect on the general well-being of the island. The Agricultural Bank of Cyprus, Limited, suffered from the same causes.

In the Levantine countries under French Mandate the effects of the world depression were more limited than in most other countries, and the Banque de Syrie et du Grand Liban, after creating reserves, has only reduced its dividend slightly from 11 per cent. to 10 per cent.

The Banque Franco-Serbe was able to maintain its dividend at 5 per cent., in spite of the agricultural crisis from which Yugoslavia, like all the other Danubian States, is at present suffering.

BANK'S SUBSIDIARY IN ATHENS.

At the moment when our subsidiary in Athens, the British-French Discount Bank, Limited, closed its balance sheet, the drachma was maintained on the gold parity; nevertheless, as a measure of prudence, the necessity of which was confirmed by subsequent events, the drachma assets were valued at the old parity of 375 drachmas per pound sterling instead of applying to them the official rate of 270 drachmas. At the end of the year the profit and loss account shows a profit which it has been decided to retain.

Banking business in Roumania, where we are interested through the Bank of Roumania, Limited, has again been depressed, and there does not seem any immediate prospect of renewed activity.

The balance sheet has been drawn up with our customary prudence. The balance of profit and loss is, even more than last year, affected by the policy of liquidity of which I have previously spoken. It shows a balance of £77,582, which with the amount brought forward of £23,271, makes the total at our disposal £100,853.

We propose to you the distribution of a dividend of 3s. per share, the same as for last year. If you are good enough to follow our recommendations, the dividend will be payable on July 4 at Istanbul, London and Paris, free of all tax in Paris, leaving a sum to be carried forward of £25,853.

TRIBUTE TO THE MANAGEMENT AND STAFF.

Before concluding my remarks I should like to thank in your name the personnel of all ranks, and in particular our managements for their care and vigilance in such a difficult and trying period.

I now beg to move, ladies and gentlemen: "That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1931, be fixed at the rate of 3s. per share, and that this dividend be payable in Istanbul, London and Paris on July 4, 1932." I shall ask Monsieur Mallet to be good enough to second that resolution.

Monsieur Raoul Mallet: I have much pleasure in seconding the resolution.

The Chairman: Before I put the resolution to the meeting I shall be prepared to answer any questions.

No questions being asked, the resolution was put to the meeting and carried unanimously.

The Chairman: I now beg to propose: "That Monsieur Anathase Roudy and Monsieur Jacques de Neufize be and they are hereby re-elected members of the general committee."

The Viscount Goschen, P.C., G.C.S.I., G.C.I.E., C.B.E., V.D.: I have much pleasure in seconding that.

The resolution was unanimously adopted.

The Chairman: That concludes the business of the meeting.

VOTE OF THANKS.

Mr Gordon Jacobs: Before we leave the meeting, gentlemen, I think we should offer a word of thanks to the chairman for his very interesting review. He has spoken of the difficulties of the situation, and I often wonder if shareholders realise what an anxious time is experienced by the board of a bank such as this in these harassing days. I think we can congratulate ourselves on the results, and it is certainly very satisfactory that the finances of the bank are in such a liquid state. I have much pleasure in proposing a hearty vote of thanks to the chairman and the other members of the general committee, as well as to the management.

Mr A. A. J. Addiscott: I have very great pleasure in seconding the motion.

The vote was unanimously accorded.

The Chairman: Gentlemen, on behalf of my colleagues, both here and in Paris, I beg to thank you for the resolution which you have just passed. I do not propose to add anything to what I have already said in my speech, except to confirm what the mover said just now, that the anxiety of conducting a business of this kind in these times is really a very great one. I thank you.

The proceedings then terminated.

BARCLAY, PERKINS & COMPANY, LIMITED.

OVER-TAXATION OF BEER.

The thirty-seventh ordinary general meeting of Barclay, Perkins and Company, Limited, was held, on the 27th ultimo, at Southern House, Cannon Street, London.

Mr E. W. Giffard (chairman and managing director) said that the gross profit for the year was £303,394, and the net profit was £249,359, a decrease of £59,000. He was sorry to have to report a decrease in the profits, but he thought that any of them who had been following the course of events in the world would agree that they really ought to congratulate themselves on having done so well in the circumstances.

During the first six months of the year under review the profits had been practically maintained. Then, in September, Lord Snowden had put on an extra 31s. tax per barrel, on top of the 3s. imposed in the Budget of 1930, which the brewers had been unable to pass on to their customers. That made a total tax of 134s., less a rebate of 20s., making 114s. per standard barrel, whereas before the war the tax had been 7s. 9d.

They fully realised the national emergency and the difficulties which the Chancellor had to contend with, but they did feel that it was very unjust—and he personally thought that it would prove to be very unwise to single out one industry to find one-tenth of the national revenue. (Hear, hear.) Everyone had anticipated that the extra tax would be taken off last March, and, of course, there could be no question but that it could not indefinitely be maintained. The Chancellor himself in his Budget speech had said: "I never put the maintenance of the tax upon the ground that it was a tax that was desirable in itself. I have never denied my view that the beer industry is over-taxed at present. I agree that it is very hard that this tax should have gone on being increased time after time with obvious detriment to the industry itself and in the long run to the Revenue."

INJURY TO ALLIED TRADES.

While they had loyally accepted the burden, they had not retreated one inch from their conviction that beer was intolerably over-taxed, and that serious harm was being done to the brewing industry and its many allied trades. He believed that there were as many as forty or more allied trades which were directly or indirectly affected. Great distress was being experienced among the retailers and among the hop-growers and the barley-growers. The effect of that tax must be to lower income-tax returns and estate duties and to increase unemployment. To tax a falling industry too heavily only made it fall further.

There was another unfortunate result of the tax. It must necessarily check the improvement of the public-house, thus defeating the principal recommendation of the Royal Commission. The improvement of the public-house constituted probably the most practical solution of what was left of the drink question. He would point out that brewers had spent since the war upwards of £21,000,000 on improving their houses. He would suggest to the shareholders that they should press on their representatives in the House of Commons the seriousness and the injustice of the tax, and do all they could to get it removed at the earliest possible moment.

As far as business for the current year was concerned, he was not prepared to prophesy, but he was afraid that as long as the tax was maintained there would be very little chance of any increase in their sales, because the price of beer now practically put it out of the reach of the working man and his family.

The report and accounts were unanimously adopted.

MEXICAN RAILWAY COMPANY, LIMITED.

PAYMENT OF DEBENTURE INTEREST.

MR VINCENT YORKE ON HIS VISIT.

The 134th ordinary general meeting of the Mexican Railway Company, Limited, was held on the 29th ultimo, at Winchester House, Old Broad Street, London. Mr Vincent W. Yorke (the chairman) presiding.

The Secretary (Mr C. Tennant) having read the notice convening the meeting and the auditors' report.

The Chairman said: At our last meeting six months ago, I pointed out that it was impossible for us to make money for "want of business," and my story to you will be very much the same to-day. Our gross earnings for the half-year under review were only \$24,424 per diem, as compared with \$31,364 in the corresponding half-year, and with \$35,500 as recently as in the first half of 1929. Passengers and in numbers and in receipts are over 19 per cent. down, while the tonnage of goods is down by 20 per cent., and receipts by 23.5 per cent. The heaviest decline has been in foreign goods, our best paying traffic, and amounts to 40 per cent.

Against the decline in total receipts of \$1,276,000, we have been able to set a saving in expenses of no less than \$743,000, which reflects clearly the successful efforts of the management to economise in every possible direction. Even then, we have, after charging debenture interest, a net debit of £135,000, as compared with a net debit of £60,000 for the preceding half-year, which can only be described as a most deplorable result.

THE CURRENT HALF-YEAR.

As regards the current half-year, the gross receipts have continued at much the same unsatisfactory level, and down to the end of April average only \$24,000 per diem. I will say, however, that they now remain week by week very constantly at that figure, which may be an indication that they have at last touched bottom, if indeed there is a bottom to anything in the world to-day. The net receipts show an adverse balance of \$194,000 to the end of April, but after that month it may be hoped that they will show some improvement. The question of our shops has been receiving very careful attention for some time past, and a scheme is now under weigh for the concentration of all repairs to steam locomotives at Apizaco. The first steps towards this change were effected at the end of last year and resulted in the discharge of over 150 men, who became redundant under the new arrangement, and the saving of \$28,000 per month in wages. Indemnities under the Labour Law have had to be paid to those discharged, with the result that the saving effected has not yet been apparent in the accounts. In addition to this, we have induced our suppliers of electric power to make us certain concessions in rates while the bad times last, which should save us another \$14,000 per month. I do not pretend that these economies will go nearly the whole way to counteract the falling off in traffic, but in really bad times like these every little helps.

THE OUTLOOK.

As regards the future, I fear that there are no signs in recovery of business or prosperity, to which I can point. Our passenger traffic, as is happening all over the world, is suffering from road competition, the new roads in Mexico are well constructed and maintained, and offer a call to the holiday maker and his family, which the railway does not. The prices of metals show no recovery in the last six months, with the result that nearly all the smaller mines have closed down, and the larger ones can barely make profits. The cotton factories are mostly working short time, having on their hands large stocks which move very slowly. Fruit traffic from the south-east of Mexico, which three years ago was becoming of real importance to us, has entirely ceased by the land route, owing to the low prices for bananas ruling in the United States of America. The figures of oil production have sunk to a relatively very low level, owing to the new developments in the United States of America, and the bad prices obtainable. The pipe line from the oilfields to Mexico City has now been completed, and will have the effect of reducing our receipts for transport of oil. The outlook for foreign traffic through the port of Vera Cruz would seem to be a poor one, owing to the uncertain future of exchange, which is discouraging to the importer, and the development behind a high tariff wall of many new industries in the Republic. In fact, it is difficult to see how any general improvement can set in until the prices of primary products rise, and of this one can see no sign anywhere.

THE CHAIRMAN'S VISIT.

As I have just returned from a visit to our property in Mexico and a stay of five weeks in the country, I will give you a short summary of the various impressions left on my mind. In the first place, I will say that I found the general atmosphere much more cheerful

than it is here, and certainly more cheerful than that of the United States, and Cuba, which I also passed through. Political conditions appeared to be absolutely stable, and the diplomatic relations of Mexico with the United States entirely satisfactory.

The future of exchange, which affects our interests very vitally, seems to me most uncertain. While I was in the country, it fell steadily from \$2.95 pesos to the American dollar to \$3.55 pesos, and to-day, after allowing for the discount on sterling, the peso is only worth 17.7 pence. So far as I could ascertain, no effort was being made on the part of the Mexican Government to sustain the value of the peso, possibly with the idea of lowering the cost of production and increasing the country's exports. Any further fall is much to be deplored from our point of view, but it should be recognised that this may well happen.

CONDITION OF PROPERTY.

As regards our own property, its physical condition is excellent; in fact, has never been better. At the same time, I was able to satisfy myself that all reasonable economies in operation have been effected, nor could I see signs of extravagance in any direction. I am glad to say that we seem to be getting to the end of our commitments for capital expenditure, and only owe now for rolling stock bought on deferred terms the sum of some \$212,000 payable in instalments which continue until October, 1933. The only additional expenditure with which we shall be faced is in connection with the removal of the shops from Orizaba to Apizaco, of which I have already spoken. It is desirable to remove the car-repairing work also to Apizaco if finance will permit, but this work, together with the remodelling of the shops for the repair of steam locomotives, can be spread over some length of time, and suspended at any moment if funds are not available. Otherwise, unless there is a big revival of business, the property is in a condition to move on for many years with little or no expenditure of a capital nature.

On the whole, then, though I will not say I was encouraged, I was far from discouraged by my visit, and came away more hopeful than I had expected to.

If I may now review the actual position of our company—we have paid the whole of our debenture interest and the interest on the "A" and "B" stocks since 1922, and in that time have paid off £438,880 of the "A" stock outstanding, and we shall pay our debenture interest falling due on July 1st next. For a long time past we have been a Cinderella among foreign railways, but at the moment we can look our haughtiest sisters in the face and hold our head as high as almost any of theirs. You may like to ask whether we see any chance of being able to continue payment of debenture interest. I can only say that it seems hopeless to-day to look for any immediate recovery in earnings, and we have nearly reached the limit of economies. It must therefore depend on whether we can induce the Mexican Government, either by accelerating the rate at which our indemnity is being paid us, or the liquidation of their debts for services, or by some other concession, to help us to tide over the next few months, or it may be years.

ATTITUDE OF AUTHORITIES.

I lost no opportunity while in Mexico of pressing our claims on the Mexican authorities, and of pointing out that nothing would help Mexican credit more than the re-establishment of the fortunes of the Mexican Railway in London, which, even after all that has happened lately, is still the financial centre of the world. Without saying I am confident, I will say that I am hopeful that they may respond to our representations. A breathing space after our long struggle would be of great advantage to us.

I will now read you a cable just received from my general manager in Mexico:—

"Poor harvest prospects owing to frost and drought—Coffee and fruit crops good in Cordoba district—Bananas production poor, both United Fruit and Vaccaro Lines shipping only small quantities through Vera Cruz—Increased production expected with beginning of the rains—Potrero has produced some 3,000 tons more sugar than expected, but production will be reduced next season—Lumber industry doing well—Textile jute and beer industries working reduced hours Orizaba district and textile mills at Panzacola closed but expecting renew work in a few months—Textile and flour mills in Puebla working almost normally, most factories in Puebla have installed modern machinery—No immediate prospects of increase in silver price in spite of new demand for coinage purposes—Exports from Mexico low—Prices for other metals very low—Real del Monte and Santa Gertrudis mines operating at full capacity—Dollar exchange is now 3.67 causing reduced imports—High rate was partly due to expropriation laws, but these may be cancelled—Traffic running normally—General labour unrest, tramway operatives on strike, and strike threatened on Southern Pacific—Political situation unchanged—Concentration of Apizaco shops giving desired results and hope to be able to complete programme."

The report and accounts were unanimously adopted.

BLEACHERS' ASSOCIATION LIMITED.

IMPROVED POSITION DESPITE YEAR'S DIFFICULTIES.

BENEFITS OF ECONOMIES.

SIR ALAN J. SYKES ON POSITION AND PROSPECTS.

The thirty-third ordinary general meeting of Bleachers' Association, Limited, was held at Blackfriars House, Manchester, on Wednesday, June 29, 1932.

Sir Alan J. Sykes, Bart. (Chairman of the Company), in moving the adoption of the report and accounts, said:—

I concluded my speech last year with a statement that the future depended largely upon factors which were almost entirely beyond our control, that we had commenced the new financial year with a volume of trade at a slightly lower level than that at the commencement of the year 1930-31, with the accounts of which I was then dealing, and that the immediate prospect was not encouraging.

That somewhat pessimistic outlook has been amply justified by the condition of our export trade during the past year, but I am glad to say that the figures to which I shall refer in a moment will show that we have been able to effect a definite improvement in our position, despite the difficulties with which we have been confronted.

DECLINE IN EXPORTS.

I characterised 1930-31 as the worst year the bleaching trade had experienced since the days of the American Civil War in 1861-65. From the point of view of the volume of trade, the year 1931-32 was distinctly worse. The decline in the United Kingdom exports of bleached cotton piece-goods by comparison with the previous year continued, and by the end of the first quarter of our financial year, the volume of exports was nearly 30 per cent. below the already low level reached in 1930. During the summer, trade continued to decline by comparison with the previous year, but at a diminishing rate, and, at the end of the third quarter, the total exports were rather more than 15 per cent. behind the previous year's figures. From that point, the comparison improved, in the first place because the stagnation of trade last year almost obliterated the usual seasonal increase that occurs in the early months of the calendar year, and, in the second place, because of a definite improvement in the volume of trade this year. Had it not been for this improvement in the last three months of the financial year, the position would have been substantially worse.

Taking the year as a whole, the volume of exports of bleached cotton piece-goods declined by nearly 7½ per cent. in comparison with 1930-31 to a level less than one-half of the quantity exported only three years ago.

To a trade dependent upon exports for something like 80 per cent. of its normal production, such a contraction can only be described as disastrous.

Nevertheless, we have had to make the best of things as they were and I think that we can justly claim some success in meeting the exceptionally difficult conditions with which we have been faced during the past year.

Although the financial results which we are able to place before you are far from what we should like them to be, it is not without some satisfaction that we can point to an improvement both in our financial position and in the total profit which we have made by comparison with last year.

The brief review that I have given of the trend of the export trade will have shown you that the improvement occurred in the second half of our financial year. This improvement was reflected in the financial results of our trading and was augmented by the cumulative effect of the economies which we had introduced, with the result that in the last six months our profits showed a marked increase by comparison with the first half of the year.

YEAR'S PROFIT.

If you will turn to the profit and loss account, you will see that the profit for the year, before providing for depreciation or for the payment of directors' fees, amounts to £391,232, compared with £308,436 in the previous year. The latter figure, however, as I explained in presenting the accounts last year, included a transfer of £25,087 from income tax reserve, so that the actual increase in the profit earned this year amounts to £107,883.

Directors' fees amount to £2,349, which is somewhat less than last year.

The amount which we are charging for depreciation this year is £175,000, a reduction of £25,000 compared with the amount charged last year. This reduction is in conformity with the reduced value of the fixed plant and machinery, consequent upon the transfer of

the business of John McNab and Company, Limited, and the provisions which we have made for writing down the value of other assets. I shall explain these items more fully when dealing with the figures of the balance sheet.

After payment of debenture interest amounting to £101,250, the balance of profit amounts to £112,633, compared with £4,576 in 1930-31.

Last year, it was necessary to transfer £90,000 from our reserve for equalisation of dividends and to reduce the balance of profit carried forward by £42,236, to cover the payment of our preference dividend, but this year we need for that purpose only £24,179 from the balance of profit brought forward.

BENEFITS FROM ECONOMIES.

I am sure you will appreciate that such a marked improvement in the profit earned during the past year in spite of a lower volume of production could have been secured only by enforcing the strictest possible economy, and, in effecting this, the directors have received, and they wish to acknowledge, the loyal and whole-hearted co-operation of both our staff and our workpeople.

Our managing directors, staff and workpeople have had another anxious year, but each and all of them in their own spheres have loyally worked together in our interests, and on your behalf I propose to tender to them our great appreciation of their loyal co-operation and our grateful thanks.

In the interest of economy, we have been compelled to continue the policy to which I referred last year and to close four more of our works, and although we regret the hardship that this must necessarily involve, we have no option but to take such steps as will reduce our productive capacity to accord more with trade demands.

Actually, the economies which we have been able to secure are greater than would appear from the accounts which are in your hands, in that they have resulted not only in an increase in profit on a lower output, but that they have permitted us to continue our policy of reducing prices where possible with a view to meeting foreign competition. Naturally, the concessions which we have been able to make during this year, under exceptionally difficult conditions, are not extensive, nor are they as much as we should like them to have been, but they are an earnest of the determination of the bleaching trade to do all that lies within its power to cheapen the cost of our finished products in the world's markets.

I will now turn to the balance sheet, where there are one or two changes since last year which I should like to explain.

BALANCE SHEET—ASSETS.

Taking first the assets side of the balance sheet, the item, "Land, Buildings, &c.," has been reduced during the year by £722,844. In part, this reduction is due to an arrangement by which the business of John McNab and Company, Limited, one of the subsidiary companies of the association, was recently transferred to a new company, the shares of which are held by the Calico Printers' Association, Limited, and ourselves, and the value of our holding appears in the balance sheet under the heading of "Shares in Subsidiary Companies."

This transaction was a measure of rationalisation between the two associations arising from the fact that we each had a works in Scotland engaged in the same class of trade, neither of which was fully employed nor likely to be. The interests of both associations obviously would be served by securing the economies which would arise by amalgamating the two businesses, and a mutual decision was reached to effect this step. The amalgamation has been completed and we are satisfied that the arrangement will be of benefit both to the Calico Printers' Association and to ourselves.

The account has also been credited with the sum of £320,000, which has been transferred from the fire insurance fund, and to which I shall refer in dealing with the liabilities side of the balance sheet. The allocation of this sum has enabled the directors to write down the value of the works which have been closed during the past year to a figure which represents not more than the value of such works when closed, and by this means any loss in capital value sustained by this arrangement has been adequately provided for.

The account has been reduced further by the sum of £175,000, written off as depreciation. This amount, in the opinion of our

valuers, is adequate in view of the large reduction in the value of fixed plant and machinery, for which we have already provided.

The second item on the assets side of the balance sheet, "Shares in subsidiary companies," has increased by £227,810. This is accounted for by the transfer of our interest in John McNab and Company, Limited, and by other adjustments.

There are small changes in advances to subsidiary companies, stocks on hand, and sundry debtors, which are accounted for by slight variations in the amount of working capital required as a consequence of trade fluctuations.

The balance of cash with our bankers shows a substantial increase, and our investments are practically unaltered.

LIABILITIES.

On the liabilities side of the balance sheet there is no change in respect of the issued capital or debenture stock, or in the amount outstanding on mortgage account. The bank overdraft has disappeared, to be replaced by the credit balance to which I have just referred, and the loan account has been reduced by more than £50,000. In respect of these two items alone there is an improvement in the liquidity of our balance sheet to the extent of over £200,000.

There is no alteration in the amount standing to the credit of our general reserve fund, but the superannuation fund shows a slight reduction as a result of the payments made during the past year.

The fire insurance fund has been reduced by £320,000 in accordance with the transfer to which I referred in my explanation of the reduction of the value of land, buildings, &c. This amount is no longer required for the purpose for which the fund was originally established, and the balance, which now stands at £52,771, is sufficient, in the opinion of the directors, to meet any claim that may be made upon the fund.

The investments contingency fund shows no material change.

The available balance of the profit and loss account, after providing for depreciation and for the payment of directors' fees and debenture interest, is £112,633, and this, with the amount brought forward from last year, gives us a total available balance of £349,811. The directors have already paid an interim dividend for nine months on the preference shares amounting to £102,609, and they recommend that a further dividend be paid on the preference shares for the three months ended March 31, 1932, at the rate of 5½ per cent. per annum, amounting to £34,203, and that the balance of £212,999 be carried forward to the next account.

CURRENT YEAR'S PROSPECTS

Before I conclude, you will probably expect me to say something with respect to the prospects for the current year. We have closed the financial year with the volume of trade at a slightly higher level than at the close of 1930-31. To what extent the improvement will be maintained I cannot say, but already the pace shows signs of slackening.

The abandonment of the Gold Standard has done much to neutralise the handicap of high internal costs, from which this country previously suffered, but the mere severance of the link with gold does not absolve us from the necessity of exerting every effort to reduce our production costs to the lowest practicable level.

Neither does it justify the view that appears to be held in some quarters that, because high internal costs are to some extent offset by the depreciation of the external value of our currency, it does not matter what burdens are placed upon industry either by the excessive demands of those engaged in production or by the appropriation of a disproportionate part of the national income to the service of the State.

We are not unappreciative of the economies which have been effected by the present Government or by the Cabinet which was formed after the failure of the late Government, but we must not lose sight of the fact that such economies have been no more than were necessary to correct unsound finance and to restore the equilibrium of the Budget. They have afforded no relief to the taxpayer, and the intolerable burden of national and local taxation remains one of the most urgent problems with which this country is faced. The recovery of British industry is dependent upon a substantial remission of direct taxation, which is not only draining the industrial system of capital which should be devoted to reorganisation and development, but is throttling the primary force by which the whole industrial system is kept in motion—that is, the ability to earn profits.

One other warning I should like to utter. The external depreciation of our currency has appreciably lightened our burden, and we cannot afford to take up that burden again. Whatever decision may ultimately be reached with respect to the basis of our monetary system, we must at all costs avoid a repetition of the mistakes or miscalculations of 1925, and, above all, the interest of British industry must come first.

PROBLEM OF WORLD TRADE.

The cotton trade still has its own problems to solve, but of no less importance is the world problem of arresting the decline in international trade.

The continuous fall in world gold prices, the burden of reparations and war debts, the increase in tariff barriers, exchange restrictions, exchange dumping regulations and import quotas, Government defaults, and the entire lack of confidence which has brought about a cessation of foreign lending—these are the forces which are gradually but inevitably strangling world trade.

The problem is international, and the remedy can only be found and applied by international co-operation.

Given the removal of these obstacles to world trade, I have a greater confidence than I have felt for some time past in the ability of British industry to hold its own. The extent to which the cotton trade will participate in any general recovery of world trade must depend, in a large measure, upon the wisdom of its leaders, both employers and employees, and their ability to find a solution of the difficulties which lie immediately ahead of us.

The resolution approving the report and accounts was moved by the chairman, seconded by Mr A. K. Davies, and carried unanimously.

The retiring directors were re-elected on the motion of Mr James Ainsworth, seconded by Mr Ernest Cubbin.

The joint auditors, Messrs Jones, Crevdson and Youatt and Messrs P. & J. Kevan were re-elected on the motion of Mr Fisher Lyon seconded by Mr P. Bayley Brown.

The motion for the conversion of shares into stock was proposed by the chairman, seconded by Sir William Clare Lees, and carried.

The meeting terminated with a vote of thanks to the chairman, moved by Mr H. W. Arnold, who made sympathetic reference to the late Mr D. Q. Henriques, who had been a constant attendee at the shareholders' meetings. Mr G. Grimshaw seconded the vote of thanks, which was carried unanimously, and Sir Alan briefly responded.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

CONQUISTADORES!

It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

**THE ANGLO-SOUTH
AMERICAN BANK LTD**
117 OLD BROAD ST, LONDON, E.C.2

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED.

REVENUE AFFECTED BY WORLD CONDITIONS.

The twenty-seventh ordinary general meeting of the African and European Investment Company, Limited, was held, on the 24th ultimo, at Southern House, Cannon Street, London.

Mr C. F. Rowsell (chairman of the London board) said that the past year had seen the greatest financial crisis in the history of this country and a fall in the general trade of the world so great that, unless some solution was found of the problems involved, it was quite impossible to foretell what might be the final result. However, a study of financial crises in the past gave one confidence that a solution would and must be found, and, when that was put into operation, the recovery would be rapid and complete. The present price of commodities generally and base metals in particular had long gone below the cost of production, and it was inevitable that either from exhaustion of the producers or from other causes a rise in price must inevitably follow.

The effects of the crisis had been worldwide and had naturally affected South Africa, where the difficulties had been increased by Great Britain abandoning the gold standard and South Africa remaining upon it. His own view was that, in the interests of South Africa, it would be best if they were to determine to follow sterling; that appeared to be the opinion of the majority of business and financial interests in South Africa.

YEAR'S RESULTS.

Taking into consideration the facts of the situation, he did not think that they had to present the shareholders with a position which could be described as very unsatisfactory. The dividends received during the year were £28,266, as against £63,411 in the previous year. That decrease was mainly accounted for by the reduction in the dividend of the Vereeniging Estates, Limited, and of the Crown Diamond Mining and Exploration Company, Limited, which, owing to the severe fall in the value of diamonds, had had to shut down its mine. Profit on sale of shares and farms and sundry receipts were £50,680, as against £74,590. The item of rentals and farm revenue, £48,527, as against £54,325, was very satisfactory, showing that, notwithstanding the depressed conditions, the farm revenue had been well maintained. The total revenue amounted to £127,474, as against £192,358, and the profit was £28,318, against £100,382. There was a disposable balance of £147,432, and they had dealt with that by writing off the discount on the issue of first mortgage debentures and expenses of issue, amounting to £73,988, by transferring £60,000 to reserve, and by carrying forward £13,443.

PRINCIPAL INTERESTS

Referring to some of the company's leading interests, the Chairman said that the Grootvlei Proprietary Mines had now completed its arrangements with the Government, and an agreement had been made with the East Geduld Company by which that company was extending its workings into the Grootvlei property, as this was the most economical and satisfactory method of developing the latter. One could not form an opinion as to the value of the reef underlying the Farm Grootvlei except from the indications given by the developments being carried out on East Geduld, where the drives were gradually approaching the Grootvlei boundary. East Geduld promised to be one of the highest grade mines on the Rand, and the developments went to show that the long neglected Far Eastern Section might ultimately develop into the richest section of the Witwatersrand.

The Vereeniging Estates, Limited, continued to be thoroughly successful, and the output of coal controlled by it last year amounted to 2,864,260 tons. He thought that the output this year would be nearer 3,000,000 tons. Everything was going quite satisfactorily on this estate.

The Union Steel Corporation, Limited, had made a much better showing, the trading profit for the year being £56,120, and the net profit was £27,208, as compared with a loss of £16,868 for the previous year.

The most important interest which they had was their holding of land in South Africa, consisting of about 3,000,000 English acres standing in the books at £1,110,166. In that they had an asset of excellent value. Every realisation of land during the past few years had been made at a substantial profit, and, apart from the value of the land as an agricultural proposition, there were great possibilities attached to so large an area, spread in so many directions, of the discovery of valuable minerals upon it. It was upon several of their farms that the alluvial diamonds had been discovered which had resulted in substantial profits to the company. The report and accounts were adopted.

METAL BOX COMPANY, LIMITED.

CONSIDERABLE EXPANSION OF BUSINESS.

The eleventh annual ordinary general meeting of the Metal Box Company, Limited, was held on the 29th ultimo, at Winchester House, Old Broad Street, London. Mr F. N. Hepworth (chairman of the company) presiding.

The Chairman, in the course of his remarks, said: The accounts submitted for approval to-day disclose a position which I feel sure you will regard as satisfactory in view of the present situation. The balance of profit and loss account for the year, together with the balance brought forward from last year, is £91,544 13s. 6d.

There are undivided profits and reserves of the subsidiary companies, earned while they have been in association, of no less than £88,295, which, added to the reserves and carry-forward already disclosed, make a total of undivided profits of £212,754; and the shares in subsidiaries have been acquired on such a basis that, in total, after deducting depreciation and other amounts written off the whole cost is represented by assets, without including anything for goodwill.

Our general line business has been well maintained throughout the year, though owing to the drop in prices generally, and the severe competition that has been experienced, the profits have been to some extent affected. I would like members to note that we are from day to day, and all through the year, making efforts to develop improved methods of packing for our customers and fresh uses for the tin box generally.

LARGE EXPANSION IN FOOD CAN BUSINESS.

Our food can business has expanded very greatly, and in step with the increasing realisation of the great possibilities of the canning industry in this country.

The fact that the food values and flavour of properly canned vegetables and fruit are increased rather than diminished by the process is receiving wider recognition almost daily.

The full benefit of the very large capital expenditure on our food can factory and plant at Perry Wood has not yet been obtained, and, indeed, even now we are making a very considerable extension there which, together with the servicing facilities we are able to render, will make the position of our customers' supplies absolutely secure.

For the period from January 1st to date the sales of open top cans are approximately 44,000,000, as compared with 27,000,000 for the same period last year.

To stabilise further our production we are developing the flattened can business, and if we are successful, as we fully anticipate we shall be, it should mean a very large export business to those countries where seasons and products vary from our own.

Our paper printing and carton business is an important branch—important in itself and important in that it completes the chain of service we are able to offer to packers of every kind of commodity.

Tinplate Market: This has caused some anxiety. At one time a pool was formed and a minimum selling price fixed at 16s. per basis box—a price which it has not been found possible to maintain. The pool still exists, but the minimum price has been abandoned, and we have been mulcted in some loss by having to write down our stocks of tinplate—our principal raw material.

RECENT ISSUE.

Last month £700,000 debentures were created and £600,000 issued at 86 per cent., and an issue was made of 200,000 £1 preference shares at 21s.

The prior charges created by this new capital are to a large extent in replacement of prior charges of subsidiary companies, the interest on which had previously been deducted by them before arriving at their profits.

In addition, we have been able to repay money borrowed from the banks to pay for our considerable extensions and the acquisition of new businesses.

I cannot let this opportunity pass without a reference to our managing director, Mr Robert Barlow, who during the past year has been called upon for enormous sacrifices of his own personal leisure.

I cannot pretend to see into the future, but, with the loyal support of all our staffs, I make bold to say that when we meet next year we will have an even more satisfactory position to disclose than the one I have had the honour of putting before you to-day.

Mr Robert Barlow, the managing director, in seconding the resolution, said they were anxious to preserve the individuality and initiative that had made the success of each of the associated businesses. At the same time, of course, they had to direct and control these activities in the interests of the company as a whole. It was fortunate that they had been able to build up their central organisation during the period of depression. The conditions of the last two years had emphasised the necessity for economy. The report was unanimously passed.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

SCHEME APPROVED.

At the extraordinary general meeting of the Anglo-South American Bank Limited, held at Southern House, London, on the 27th ultimo, the chairman, Sir Bertram Hornsby, referred to the close association of the bank since its inception with the Chilean nitrate industry. The majority of the former Chilean companies were indebted to the bank for considerable sums, but not to an extent causing anxiety. To compete successfully with synthetic nitrate, reorganisation of the Chilean industry had become obvious, and the bank had lent support to a plan for the formation of the Campaña de Salitre de Chile ("Cosach"), which assumed the bank debts of the absorbed companies. Unfortunately the financial crisis in America had frustrated an intended large "Cosach" bond issue there, part proceeds of which would have paid the Anglo-South American Bank debt.

The knowledge of "Cosach's" difficulties and heavy debt to the bank, combined with the abandonment of the gold standard by many this country, causing withdrawal of sterling balances by many foreign depositors, also the exceptionally large amount of our acceptances outstanding in the London market, had so strained the bank's liquid resources that the directors had submitted the position to the Bank of England, who in association with a group of other banks had responded most generously, and it was entirely due to their goodwill that the arrangement outlined in the circular of June 2nd had become possible. With control passing temporarily to a group of the most important English banks, headed by the Bank of England, shareholders had little to lose and much to gain. He considered that with only a small improvement in commodity values, the Continent of South America would once again return to prosperity, and this bank had very valuable connections and a very definite goodwill value, which would enable it to take its full share in that prosperity.

Regarding the possibility of a call on the "A" shares, little could be added to the recent circular. Nobody could by a stroke of the pen transform partly-paid into fully-paid shares, but he considered that the proposed arrangement should put into the background the need for a call.

Resolutions were passed unanimously authorising the increase of the capital to £11,000,000 by creating 1,000,000 5 per cent. first cumulative preference shares.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED.

EFFECTS OF WORLD DEPRESSION.

The fifty-ninth ordinary general meeting of the Globe Telegraph and Trust Company, Limited, was held, on the 28th ultimo, at River Plate House, London, the Rt. Hon. the Earl of Middleton, K.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that their gross receipts amounted to £58,861, against £269,868 in the previous year. In order to pay the preference dividend, which was cumulative, they had transferred £25,000 from the reserve which had been formed to be available to equalise dividends. The year under review had been the worst experienced in the history of the company, which had, for the first time in 59 years, paid no dividend on the ordinary shares.

The general depression had fallen heavily on telegraph securities which the company had been formed to hold, and had had an adverse effect on their revenue. Cables and Wireless, Limited, had paid no preference dividend in the last two half-years, and the experience of great foreign companies had been the same, with the result that there had been a drop in the trust's revenue from that source of £218,731, on the basis of last year's figures. That was the effect of the world-wide paralysis of trade, the duration of which could not be at present estimated, but which, in the nature of things, could not be permanent.

CABLES AND WIRELESS, LIMITED.

The future of the trust must, of course, largely depend on their great holdings in Cables and Wireless, Limited. The trust differed in its object and its scope from any ordinary trust company, as from its inception it had been dependent on the cable companies. None the less the directors had thought it desirable that a trust company should not be entirely dependent for its revenue on one industry, and consequently three years ago they had taken wider powers of investment, and now had £600,000 invested in securities independent of cables. Therefore, before the great collapse of trade they had been alive to the possibility of change in the prosperous conditions which had so long held good. The new companies now on their list were largely electric light and power companies and similar securities, which showed less depreciation in value at the moment than almost any other class of investments.

The report and accounts were adopted.

GENERAL ELECTRIC COMPANY, LIMITED.

SATISFACTORY RESULTS.

The annual general meeting of the General Electric Company, Limited, was held, on the 30th ultimo, at Magnet House, Kingsway London, Sir Hugo Hirst, Bart. (chairman and managing director), presiding.

The chairman, in moving the adoption of the report and accounts, said that the profit and loss account showed a diminution of net results of barely 5 per cent. Considering that net result was arrived at after allowing for the decline in the company's overseas business and was big enough to enable it to make generous provision for reserve, he hoped the shareholders would be as gratified as the directors were. It was true the dividend recommended was 8 per cent. instead of their recent standard of 10 per cent., but, with the outlook as it was, he was sure shareholders would agree that the preservation of the company's internal strength was of the utmost importance, and he hoped shareholders would support the directors in their conservative policy, which was to make the company strong enough to withstand all pressure.

Referring to the effect of the depression and misfortune in all parts of the world, the chairman remarked that the steadiness and determination with which the people of this country faced the situation were reflected in the electrical industry, and whilst it was too much to hope that they could be really prosperous whilst the world was in its present state, he for one was convinced that even if they should have to face further setbacks there would be no disaster. They in the electrical industries were particularly justified in expressing those sentiments, as they were spending a great deal in research and development, and, consequently, if some of the older departments showed a falling off, they were encouraged by new possibilities.

The chairman then went on to refer at some length to the progress made in the various departments of the company's business and said that the demand for domestic appliances of every kind was progressing most satisfactorily, and the high standard of the company's products assured them of a steady market. They had equally good reason to be proud of their achievements in the wireless field, both in valves for transmission and reception, as well as their listening-in apparatus, the quality of which was so much appreciated, that every year since the beginning of broadcasting had proved a record year in their output and sales. So far as their overseas companies were concerned, they had suffered particularly in Australia owing to the drop in exports in that Dominion. During the recent months there had been signs of the beginning of a betterment; they could only hope, for the company's sake and for Australia's sake, that those signs might continue. It was also satisfactory to record that their South African and Chinese companies had shown a slight improvement over last year. He desired to point out in that connection that any losses they had incurred had been dealt with out of the profits of the year under review.

THE GENERAL OUTLOOK.

With regard to the general outlook, the chairman remarked that he for one felt happy that this country had at last committed itself to a policy of protection of its industries. The short time during which they had enjoyed protection had not been long enough to prove results. On the one hand, foreign importers had taken care that their shelves should be full from the day protection became effective. On the other hand, the Government had to act quickly, and the form of protection which they enjoyed was not yet based on scientific lines. They in the electrical industry particularly had cause for grievance on that account. They were not complaining, they were considering themselves so much better off than they were and they felt confident in due course they would get the scientific protection they needed, which was the only one serving the best interests of the country. He was satisfied that the protection established would give many industries which became impotent during a period of free imports and were driven towards extinction an opportunity to rehabilitate themselves.

He knew there were those who said that what we were doing might be useful to us but might be at the expense of others, and that such a policy was not one which would lift the economics of the world out of their slough. He agreed, but was it wrong to look after the welfare of one's own family before one looked after that of one's neighbour's?

It was his ardent hope that Lausanne might achieve something which would relieve nations from the burdens of war indemnities and reparations which pressed so heavily on them and us. It was his ardent hope that the measures that had been taken would balance the Budget, and he particularly hoped the Government would, before the next Budget approached, submit to the country schemes of economy which would considerably reduce future commitments in taxation. They could not hope to continue to exist with a permanent Budget of £800,000,000.

The reports and accounts were unanimously adopted.

ELECTRIC SUPPLY CORPORATION LIMITED.**PROGRESS OF SUBSIDIARY COMPANIES.**

The thirtieth annual general meeting of this company was held, on the 30th ultimo, at Winchester House, London.

Mr John G. B. Stone (the Chairman) said that the gross earnings during the past year amounted to £88,379, compared with £96,030. in 1930, and £53,562 was carried to net revenue account compared with £55,443. The gross earnings were reduced by the sale of the Hitchin undertaking as at July 1st last, and also by a marked reduction in their sale of electricity at Dumbarton, which would account for more than the reduction in the total units sold. They had also sold their interest in the Alton District Electricity Company, and, although these transactions had caused a temporary setback in revenue and profit, they had been able to add to general reserve fund the satisfactory sum of £56,337. The Chelmsford undertaking was entering into a new phase of its existence, the whole supply now being taken in bulk from the County of London Electric Supply Company. The rates charged to consumers had been very materially decreased and a new two-part tariff introduced. With regard to their subsidiary companies, for which they had provided practically all the capital, one group comprised one area covering roughly 300 square miles in Sussex, extending from Pulborough and Amberley in the west to Buxted and Framfield in the east, and from Handcross and Ardingly in the north to Steyning and the northern boundary of Brighton in the south. Further east they had the Newhaven and Seaford Company, and to the west of the Sussex undertakings they had in Hampshire the Petersfield Company. Then they had the Peterhead Company in the far north, which commenced supply in September, 1929.

The effect of the new tariffs at Chelmsford was reflected in the increase of 20 per cent. in the connections. In the rest of their own undertakings, apart from Dumbarton, the increases were satisfactory.

Dealing with the accounts, the Chairman said that the market value of investments apart from subsidiary companies, as at December 31st last, was £248,371, against a book value of £120,463. Of these, they had since realised £45,743, and the present value of the balance was £225,184.

The report and accounts were unanimously adopted, and a final dividend of 7 per cent., making 11 per cent. for the year, on the ordinary shares, was declared.

HOVIS, LIMITED.**RECORD PROFIT.**

The ordinary general meeting of Hovis, Limited, was held, on the 27th ultimo, at Caxton Hall, Westminster, London.

Mr A. H. Dence (the chairman), in moving the adoption of the report and accounts, said that the amount of their net profit, at £152,920, constituted a record.

Referring to matters of importance to the milling trade of Great Britain, the chairman said that in the autumn of last year the Government introduced a Wheat Bill, requiring the milling trade to absorb a quota of British wheat. The Bill had now been passed, and had come into force as the Wheat Act. The Act admittedly was passed in the interests of farmers and agriculturists of Great Britain, and did not pretend to help millers, but the chief onus of administering the Act and of collecting quota payments fell upon the millers. They had accepted in a spirit of loyalty and co-operation the responsibilities which the Act threw upon them.

In a few days' time the Ottawa Conference would be sitting, and again the milling industry and its interests would be one of the subjects of conversation and negotiation. The question of a Dominion quota had been one of the chief much-advertised and discussed measures to be dealt with by the Conference. Millers looked forward with much trepidation and some dismay to what might take place at Ottawa. They felt it was unfortunate that their industry should be the subject of such negotiations, and feared that the results to their interests, unless most carefully watched and protected, might be disastrous.

He most earnestly hoped that the Government, whatever else they might do, might see the necessity of leaving British millers a free wheat market, and also that, recognising all the new obligations imposed upon them and the need for supporting them in carrying out their obligations, they might see the absolute necessity and wisdom of providing the trade with reasonable protection against foreign and Dominion competitors, who, not having the same obligations, were placed in a favourable position to compete with and undersell them in their own markets.

In conclusion, the chairman said that they had a splendid business and their goods met a national want; also, they had laid such solid foundations in the past that there was every right to hope for a continuance of prosperity in the future.

The report was unanimously adopted.

Government Returns, &c.**NATIONAL ACCOUNTS.**

The total ordinary revenue for the twelve days ended June 30, 1932, amounted to £12,252,400 against ordinary expenditure of £17,522,400. After allocating £895,000 to Sinking Fund and having allowed for a reduction of Exchequer Balances of £57,993, the operations for the week, as shown below, increased the National Debt by £6,107,000 to £7,665,703,000:—

BULLION.

The following statistics of imports and exports of gold for week ended June 30, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
Netherlands	Belgium
France	Germany
United States of America	Netherlands
British West Africa	France
British South Africa	Switzerland
Anglo-Egyptian Sudan	Austria
British India	Czechoslovakia
Straits Settlements and Dependencies	
Australia	
Salvage from s.s. Egypt	
Other countries	
Total declared value of imports	Total declared value of exports

GOLD MOVEMENTS.

The arrivals and withdrawals of gold, as announced by the Bank of England, have been as follows:—

1932.	ARRIVALS.	1932.	WITHDRAWALS.
June 24	Nil	June 24	Nil
" 25	Nil	" 25	Nil
" 27	Nil	" 27	Nil
" 28	Nil	" 28	Nil
" 29	Bars bought 402,533	" 29	Nil
" 30	Nil	" 30	Nil
Total	402,533	Total	Nil

Net arrivals, June 24, 1932, to June 30, 1932, inclusive, £402,533. Messrs Samuel Montagu and Company write on June 29, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £135,721,215 on the 22nd instant, as compared with £134,479,710 on the previous Wednesday. To-day, the Bank of England announced the purchase of £402,533 in bar gold. The amounts of gold available in the open market have again been substantial, but Continental buyers have readily absorbed offerings.

Quotations during the week:—

" 29	114s. 8d.	14s. 9-8d.
Average	114s. 4-8d.	14s. 10-2d.

The s.s. "Cathay," which sailed from Bombay on the 25th, carries gold to the value of about £733,000.

An event of special interest was the arrival in London yesterday of the first consignment of gold saved from the s.s. "Egypt," which was lost off Ushant in May, 1922. It will be recalled that the original salvage ship "Artiglio" was also lost in December, 1930, and it remained for the new vessel of the same name to carry on the work of its predecessor. The success which has already attended the efforts to recover the treasure, which has been at the bottom of the sea for more than ten years, is therefore particularly gratifying, and it is to be hoped that the further operations will be even more successful.

SILVER.

During the week the tendency has been toward a slightly lower level of prices. On the 24th instant prices for both deliveries fell sharply, being quoted at 16½d. and 16¼d. respectively; the fall followed a decline in the Shanghai exchange, which appeared to be due to speculative exchange operation in that quarter. Although there was some resistance at this level, China and the Indian Bazaars both being inclined to give support, the market has shown little power of recovery, selling by speculators and the Continent proving sufficient to meet the demand. America has also been more disposed to sell, but offerings from this quarter have been only moderate.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 20th instant to mid-day or the 27th instant:—

Imports.	Exports.
British India	Bombay
Australia	Ceylon
New Zealand	Germany
British South Africa	Italy
Canada	Other countries
Belgium	
Other countries	
47,784	9,786

Quotations during the week:—

LONDON, LTD.—The directors have decided, in view of prevailing trading and financial conditions, especially in export markets, to defer consideration of a dividend on the ordinary shares until the accounts for the financial year ending October 31, 1932, have been completed.

CARDIFF.—An active demand for anthracite coal is the only favourable feature of the South Wales coal market. At Swansea and Port Talbot shipments are more active than they have been at any other period this year, and at Swansea on Wednesday morning eight vessels were waiting their turn for loading berths. The position in the steam coal trade is practically unchanged. A contract for the supply of 40,000 tons has been placed by the Madrid-Saragossa-Alicante Railways and another for 7,000 tons by the Palestine railways, while one or two others are in the course of negotiation. The current volume of trade, however, in steam coals is not quite as large as it was a few weeks ago, and shipments, particularly to France and Italy, are suffering from import restrictions and large stocks. The French official figures for May show a decrease in the total imports of coal from the United Kingdom of about 210,000 tons compared with April, and normally France draws over 50 per cent. of its British supplies from the South Wales coalfield. Some of the sized small grades are demanding prices above the schedule, but other qualities are in abundant supply at the minimum prices. The following are the current approximate quotations: Best Adirats, 18s. 6d.; seconds, 18s. 9d. to 19s. 4d.; best drys. 18s. 6d. to 19s.; Black Veins, 18s. 3d. to

SHEFFIELD.—Nothing has occurred this week to relieve the acute depression of all branches of iron and steel. In fact it is being aggravated by preparations at many works for the half-yearly stocktaking. In these cases deliveries of material are being suspended for the present. Inquiries coming in are disappointing. A few good special contracts are reported. The Appleby works in Lincolnshire have been allocated 3,000 tons of steel plates as their share of the big Russian contract recently secured by Stewarts and Lloyds. There is rather more activity in the high-grade tool and alloy steels; foreign competition in such material has almost disappeared. Importations of the best Swedish brands of steel have fallen off considerably since the 33½ per cent. duty was imposed on such material. Users of ferro-alloys refuse temptations to buy forward. Business continues fairly brisk in steel parts for automobiles, bed wires, precision tools and cold wrought steel in strip form. A German firm has commenced to manufacture pocket knives and scissors at a factory in Sheffield. The depression in cutlery and plate is as acute as ever, but there is a moderate demand for knives used in industry. Proprietors of steel-casting

foundries are being invited by the General Steel Castings Association to negotiate on the subject of selling their plants for dismantling in order to get rid of redundant capacity.

GLASGOW.—Business in the West of Scotland is not yet showing signs of early revival, and now the feeling seems to be pretty general that no improvement can be looked for till after the Fair holidays. There has been a quite important amount of ship repair work carried on at the Clyde yards during recent weeks, involving a fair tonnage of steel, but on the whole steelmakers are finding it difficult to dispose of output of the limited plant now in operation. Semis are also in poor demand. Home trade for both black and galvanised sheets is very good and for several export markets there seems to be some improvement, although plant is still only partially employed. At the tube plants work is irregular, some makers having a considerable amount of work on hand while others are very badly off for work. In the wrought iron trade things remain dull.

CARDIFF.—The recent improvement in the South Wales tinplate trade is maintained and shipments last week at Swansea totalled nearly 100,000 boxes, compared with 81,700 the previous week and 78,500 boxes in the corresponding period last year. Prices are firm at from 14s. 9d. to 15s. 3d. per basis box. Welsh bars, at 95s. per ton, are unchanged, and foreign bars, the imports of which are declining, are quoted at 82s. to 83s. per ton. Galvanised sheets are firmer and a substantial order is reported to have been placed with Lysaghts, Ltd., by Russia.

OTHER METALS.

TIN.—Despite the new and drastic turn in the restriction screw, demand remained generally on a small scale and prices showed a weak tendency. Quotations at the London Metal Exchange were subject to wide fluctuations during the week. Only slight selling pressure was sufficient to drive values down to about £110 on Monday. The market remained dull on Tuesday. On Wednesday prices improved on improved buying, but closed below the figure of the corresponding day a week ago. In New York the metal was quoted at 19.50 cents per lb. on Wednesday, against 19.70 cents per lb. a week ago and 20.75 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £114 15s. to £115 per ton, compares with £116 5s. to £116 10s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,435 tons, show an increase of 286 tons on the week.

COPPER.—In view of the small volume of business in New York, copper prices were largely nominal. In London, prices declined gradually from Monday to Wednesday, but there was a considerable increase in turnover at the lower level of values. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £26 2s. 6d., compares with £27 11s. 3d. to £27 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 18,255 tons, show a decrease of 349 tons, while stocks of rough copper, at 894 tons, remain unchanged.

LEAD.—The volume of sales at the London Metal Exchange was only kept steady (750 tons on Monday, 800 tons on Tuesday, and 650 tons on Wednesday) by means of concessions from holders, and the metal closed below the level of Wednesday last week. In New York the metal was quoted at 2.95 cents per lb. on Wednesday, against 3.00 cents a week ago and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £9 7s. 6d. per ton for shipment during the current month, compares with £9 13s. 9d. on the corresponding day last week.

SPELTER.—Owing to the poor demand for this metal, prices declined at the end of last week. On Monday, the metal opened a little steadier, but although sales totalled 950 tons, there was no advance in prices because of excessive supplies. On Tuesday and Wednesday business fell off, but there was no further reduction in prices. Wednesday's official closing quotation in New York, at 2.75 cents per lb., compares with 2.80 cents a week ago and 2.825 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £11 3s. 9d. per ton for shipment during the current month, against £11 10s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel have been maintained at £95 per ton and £225-£230 per ton respectively. Platinum remained unchanged at £9 15s. per ounce. Foreign antimony was reduced from £23-£23 10s. per ton to £22 10s.-£23 per ton. Quick-silver was again sold at £11 15s.-£12 5s. per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week June 23rd to 29th (inclusive) are 56,580 bales, of which 35,041 are American, 5,463 Peruvian, 8,332 Egyptian, 1,025 African, 5,124 East Indian, 889 Argentine, and 706 sundries.

Manchester.—The conditions prevailing in the market during the past week have shown very little change. Spinners and manufacturers have met with a fair amount of inquiry and some useful contracts have been secured, but buying has not been at all vigorous and most of our customers are still disposed to restrict their commitments as much as possible. Demand in cloth for India continues on a rather more encouraging scale and in light white prints and fancies a moderate turnover has taken place, chiefly for Karachi, Madras, Amritsar and Calcutta. Some advices from China have been rather better and a few transactions have been put through in white shirtings for Shanghai. Certain shippers for Egypt and the Near East have displayed rather more interest in bleaching cloths and printed and dyed goods have been in steady request for North and West Africa. Home trade goods have been purchased rather more freely and a little more activity has been mentioned for Australia. American yarns for home consumption have moved off quietly at irregular rates. It has been quite impossible to improve margins. Quotations in Egyptian qualities have been rather firmer without any particular increase in turnover.

THE WOOL TRADE.—Bradford.—The attention of the trade is again turning towards Coleman Street, where the fifth series of sales will commence next Tuesday. The indications are more favourable for selling interests, writes our correspondent, than any series previously held this year. The delay in the discharge of debts enforced upon the Continental clients of firms in the wool trade here is causing great dissatisfaction. Large sums of money are held up which should be available here for the pursuance of new business. Internally, the wool industry is fairly sound. The opinion is gaining ground that prices have touched bottom. Already there is talk of a 5 per cent. advance at the forthcoming sales. This would leave wool still quite cheap, and the probability is that topmakers and other buyers on local account will operate freely. Purchases at the last series are not by any means exhausted. Indeed if buying is to be governed by immediate requirements, there will not be sufficient competition to lift the price of any class of wool but it is expected that 64's average combed merinos will not be bought in London at less than 21d. in the top. Since last report a fair amount of new business has been done in tops, including an improved call for dry-combed merinos for export, and the result is that quotations are ¼d. to 1d. higher. For average 64's 20½d is wanted, and 21½d. for warp—in some cases ¼d. more for both types. The attitude of topmakers is definitely protective.

THE GRAIN MARKETS.

WHEAT.—There has been no improvement in the international wheat situation during the past week. Business in wheat has been quiet, and prices showed a sagging tendency. There has been no perceptible change in crop prospects. Nevertheless, it would be idle to venture a forecast of the course of prices in the near future as markets are still largely governed by crop reports. According to the fortnightly crop report of the Canadian Bureau of Statistics the standing crop continues to make good progress. The migratory grasshopper pest, particularly in parts of Manitoba, is still dangerous; but the cut-worm menace is now past. The report indicates a normal or above normal harvest for Canada this year. On Wednesday, "July" futures were quoted at 48½ cents per bushel in Chicago, against 48½ cents on the corresponding day last week, and 55½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 9d. per 496 lbs., as compared with 27s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 26s., against 26s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 25s. 6d., against 25s. 6d.; Australian, ex ship, 25s., against 25s. 6d. to 26s. 3d. a week ago.

WHEAT FLOUR.—Trading in flour has not been very active, although quotations were further reduced in North America. North American shipments, at 128,000 sacks, showed an increase of 2,000 sacks, as compared with the previous week. Of this total, 28,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 24s. per sack of 280 lbs., as compared with 24s. last week; delivered London, 23s., against 23s. Manitoba patents, ex store, 23s. 6d. to 26s., against 23s. 6d. to 26s.; and Australian, ex store, 19s. to 19s. 6d., against 19s. to 19s. 6d. a week ago.

BARLEY.—The market in barley has been dull, and prices are scarcely changed on the week. On Wednesday, "July" futures were quoted at 38½ cents per bushel in Winnipeg, against 38½ cents last week and 40½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 25s., against 24s. to 25s. a week ago.

OATS.—The demand for oats has been on a small scale, and prices tended to sag under the influence of larger arrivals from Argentina. "July" futures, which last week stood at 20½ cents per bushel in Chicago, sold at 19½ cents per bushel on Wednesday this week, against 22½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 3d. per 320 lbs., as compared with 17s. 6d. last week; "River Plate," ex ship, 16s. 3d., against 16s. 6d.; "Chilean White," landed, 24s. 6d. to 26s., against 24s. 6d. to 26s. a week ago.

MAIZE.—There has been a substantial increase in demand during the past week, and prices gained a little despite heavy arrivals. Wednesday's quotation in Chicago for "July" futures, at 28½ cents, show no change on last week, and a fall of 1½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., compared with 19s. 6d. last week; "Plate," ex ship, 18s. 9d., as against 18s. 3d.; "Plate," June-July, 18s. 9d., as against 18s. 3d. Yellow maize meal, ex wharf, was quoted at £5 10s. per ton, against £5 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

Chicago (No. 2 Winter)	130½	79½	57½	55½	48½	48½
Chicago (No. 3 Winter)	130½	79½	57½	55½	48½	48½

The visible supply of wheat in Canada, at 65,784,000 bushels, shows an increase on the week of 6,632,000 bushels. Supplies a year ago stood at 56,672,000 bushels.

OTHER FOODS.

SUGAR.—There has been a further advance in raw sugar values during the past week although profit-taking took place on a substantial scale in the United States. The volume of sales at the New York "futures" market was smaller than a week ago (16,000 tons on Monday, 24,000 tons on Tuesday, and 27,000 tons on Wednesday). "July" futures in New York were quoted at 0.78 cent per lb. on Wednesday, against 0.77 cent per lb. a week ago, and 0.63 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 8½d. to 5s. 9½d. per cwt., against 5s. 7½d. to 5s. 8½d., and "March, 1933," at 5s. 11½d. to 6s. 0½d., against 5s. 7½d. to 5s. 7½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.	Deliveries.	Stocks.
	1932. 1931.	1932. 1931.	1932. 1931.
Tons. Tons.	Tons. Tons.	Tons. Tons.	
London	2,563 2,771	1,987 4,584	14,826 33,800
Liverpool ...	11,955 3,729	15,285 14,176	93,324 64,227
Total	14,518 6,500	17,272 18,760	108,150 98,027

Last week ... 14,829 25,554 14,359 14,172 110,904 110,287

COFFEE.—In view of the poor demand the reaction in coffee prices proceeded further in New York. At Tuesday's London auctions only a small proportion was sold and prices were easier. Last week's movements of coffee in London were as follows: Brazilian, landed, 164 bags; delivered for home consumption, 73 bags; exported, nil bags; stocks, 6,199 bags, against 2,737 bags last year. Central American, landed, 931 packages; delivered for home consumption, 2,660 packages; exported, 2,201 packages; stocks, 124,641 packages, against 116,228 a year ago. Other kinds, landed, 958 packages; delivered for home consumption, 2,203 packages; exported, 931 packages; stocks, 91,002 packages, against 88,445 a year ago.

COCOA.—The demand for cocoa was not very active either in London or New York, and prices remained barely steady. "July" futures were quoted at 3.81 cents per lb. in New York on Wednesday against 3.83 cents per lb. a week ago and 3.84 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, June-July, at 24s. 6d. per cwt., f.o.b., London contract, shows no change on the week. Last week's movements of cocoa in London were as follows: Landed, 2,252 bags; delivered for home consumption, 4,108 bags; exported, 231 bags; stocks, 166,233 bags, against 229,420 last year.

TEA.—The quantities catalogued for this week's auction comprise 46,745 packages of Indian, and 27,607 packages of Ceylon tea. Monday's Indian auctions showed a better demand than last week and sales passed quickly at steady prices. The Ceylon teas on offer on Tuesday were generally of unattractive quality, but common and medium grades sold quite well. The improvement in demand was maintained at Wednesday's Indian sales, though teas of better grade were somewhat irregular. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.

Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
June 25, 1931	s. d. 0 7-79	s. d. 0 8-15	s. d. 0 11-17	s. d. 0 5-79	s. d. 0 5-80	s. d. 0 4-04	s. d. 0 8-63
June 2, 1932	0 6-73	0 9-13	0 10-71	0 5-30	0 4-60	0 5-83	0 8-09
June 9, "	0 7-23	0 8-30	0 9-79	0 5-04	0 4-67	0 5-88	0 7-68
June 16, "	0 7-19	0 7-59	0 8-83	0 4-92	0 4-75	0 5-86	0 7-36
June 23, "	0 7-04	0 7-00	0 7-55	0 4-32	0 4-29	0 5-64	0 6-79

RICE.—The market in rice was again quiet and prices remained unchanged. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 7s. 10½d., also remained unchanged. Movements in London during the past week were as follows: Landed, 1 ton; delivered, 113 tons; stocks, 3,321 tons, as against 602 tons last year.

POTATOES.—Old potatoes have been generally in excess of the dwindling demand and prices fell sharply during the week. Supplies of new potatoes are increasing steadily. At the Borough Market, "Best King Edward" sold from 5s. to 6s. per cwt., as compared with 10s. to 10s. 6d. per cwt. a week ago. New "Jerseys," at 13s. per cwt., remained unchanged.

SPICES.—The market in spices has been dull and pepper was easier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ¼d. per lb. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 11 tons; delivered, 14 tons; stocks, 357 tons, against 483 tons last year. White, landed, 20 tons; delivered, 15 tons; stocks, 585 tons, against 616 tons a year ago.

MEAT.—At the Smithfield Market English beef remained unchanged in price, but Argentine meat was again cheaper. In mutton there was no improvement in "New Zealand," and "home-grown" was easier. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 4d. to 4s. per 8 lbs., against 3s. 10d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 3s., as against 2s. 2d. to 3s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 7,864 tons, as compared with 8,237 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87.8 per cent. of the supplies, as against 87.3 per cent. a year ago, and imported mutton, mainly New Zealand, formed 82.0 per cent. of the total supply, as against 82.3 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Quiet and to a large extent seasonal conditions prevail. Demand for the oilcake product is at a low level and vegetable oils are in only moderate request by the consuming industries. Hence the trade in oilseeds tends to drag and with more than ample supplies pressing on the market there is nothing to help prices to advance. Plate linseed, afloat and June shipment, however, is steady around £7 7s. 6d., later positions rising to £7 12s. 6d., but crushers, both here and on the Continent, are tardy buyers, while the United States is unable to give much support. Shipments from Argentina are on a liberal scale, the quantity of linseed now afloat for Europe being 159,500 tons (including 5,600 tons from India), or 6,400 tons more than last week. Argentina alone has still over a million tons of this season's seed available for export. Cottonseed is steady but inactive, current value of Egyptian (black) being £5 15s. to £5 17s. 6d., according to position. New seed, November-January loading, is quoted £6 5s. Linseed oil is in poor request but steady, raw oil for June delivery quoting £12, and July-August, £12 5s. per ton, naked, ex Hull mill. Crude cotton oil is somewhat steadier at

£19 10s. and refined £21 15s., also ex Hull. Oilcakes are in low demand and mill quotations have again been reduced slightly.

HIDE, LEATHER AND ALLIED TRADES.—Very little alterations in prices of ox and heifer hides occurred at the Manchester sales this week, as, with the exception of 59 lbs. and under, second warbled, which made 1/4d. per lb. more, supplies were disposed of at the previous week's figures. Cows also were unchanged in value. At the Leeds auctions prices were inclined to be firmer, and, taken all round, there is, perhaps, a slightly better feeling in regard to the market for hides from home-slaughtered cattle. Business in the imported hide market has tended towards improvement, and for some classes of hides a trifle more money has been paid. A fair trade has been done in wetsalted South Americans, Argentine ox having changed hands at 3 1/4d., while light ox have made just over 3 1/4d., and Montevideo ox 3 3/4d. Turnover in dry hides from the same source has been small, and prices are unchanged at 4 1/4d. for B.A. Americanos, up to 5 1/4d. for M.V. Americanos, 4 1/4d. to 5 1/4d. for Sierra Cordobas, and 2 1/4d. for B.A. Inservibles. In keeping with most other sorts of dry hides, Africans have ruled quiet, apart from a little interest taken in Capes. For the latter 5d. and 4d. is being asked for first and second dries, while drysalted 20/30 lbs. are offered at 4 1/4d. and 3 1/4d. Prices for Mombasas range from 4d. to 4 1/4d., while unbathed Adis Abebas can be obtained for from 3 1/4d. to 4 1/4d. There has been no increase in the trade in Australians, which are offered at unchanged rates. A moderate turnover continues to be done in both sole and upper leather, but the bulk of the business passing is composed of small orders for immediate requirement, and it is seldom that an inquiry for a decent size parcel is met with. In bottom stuff English and wetsalted bends have accounted for a fair proportion of the trade done, in addition to which medium weight dry hide bends have been moved off in moderate quantities for the requirements of shoe manufacturers. Pinned bellies and shoulders have again received slightly more attention, but there has been no increase in the call for rough sorts, the market for which remains very quiet. The majority of orders in connection with upper leathers are concerned with glacé kid and patent leather. Box and willow calf inquiries are, perhaps, rather more frequent, but in remains to be seen whether business will result from all the "feelers" which are being put out. Other sorts of upper stock are only a limited sale, with, perhaps, the exception of reptiles, for which the call is fairly well maintained.

RUBBER.—Little interest was taken in rubber during the past week, but prices remained unchanged. In New York, Wednesday's spot price for rubber, at 2 1/2 cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 1 1/4d. per lb., against 1 1/4d. per lb. on the corresponding day last week. In forward positions, business has been done at 2 1/4d. for April-June, 1933, as against 2 1/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,191 tons; delivered, 2,202 tons; stocks at the end of last week, at 110,226 tons, show a decrease of 1,011 tons as compared with the preceding week.

rise of bill rates was the competition of War Loan, which, if "non-assented," was utilisable as a five months' Treasury bill. At a price of about 101, its net yield is over 2 per cent.; and it is thus only natural that bill rates had to move in the upward direction to attract buyers.

* * * *

The extent to which the discount market availed itself of the opportunity to secure a higher yield by buying War Loan has been greatly over-estimated in many quarters. The absorbing capacity of the market for bills maturing on any particular day is limited; and December 1st is a particularly bad day, owing to the heavy disbursements of dividends. Moreover, as uncertainty prevailed whether the clearing banks would take War Loan as collateral, none of the discount houses were anxious to commit themselves to any substantial extent. In spite of this, it was perhaps a reasonable precaution on the part of the authorities and the banks to discourage the practice; and, as a result of the "hint" given to the market on Wednesday, further purchases of War Loan for this purpose will be curtailed. In any case, however, it is most unlikely that the operations would have assumed sufficiently large dimensions to make any material difference to the result of the conversion offer.

* * * *

Owing to the comparative scarcity of Treasury bills, money was in good demand last Friday, and the rate quoted was $\frac{3}{4}$ to 1 per cent. From Saturday onward, however, an easier tendency prevailed, and this Thursday the rate was $\frac{1}{2}$ to $\frac{3}{4}$ per cent. Last week's Treasury bills went at 16s. 11.82d., against 15s. 0.19d. on the previous week. The rise was due to the announcement of the Conversion scheme. Treasury bill rates advanced from $\frac{1}{4}$ to $\frac{3}{4}$ during the week, while on Thursday fine bank bills were quoted at 1—1 $\frac{1}{4}$. The result of the standstill negotiations—recorded on another page—did not influence the rates of standstill bills.

* * * *

The main feature of the Bank return was an increase of other Government securities in the Issue Department by £32 millions and a corresponding decline of Other Securities. Many quarters were inclined to interpret this change as an indication that the Bank had sold a corresponding amount of its foreign exchange holdings. Although it has been known in the market that it has been necessary to support sterling, the amount of £32 millions was much in excess of the Bank's estimated loss of foreign exchange. In fact, the changes in the Issue Department last week bear no relation to the fluctuations of the Bank's balances abroad. They were mere bookkeeping entries connected with the definite establishment of the Exchange Equalisation Account. Before the creation of that account the foreign exchange acquired had to be carried in the Issue Department; now that the account is in operation it has become possible to transfer the *devisen* in exchange for Treasury bills. Hence the increase of Government securities and the decline of other securities.

* * * *

The turn in the trend of sterling has removed the possibility of selling in the market the Treasury bills issued for the purposes of the Exchange Equalisation Fund. Indeed, it seems probable that, should the adverse trend continue, it will tend to bring about a reduction in the

volume of outstanding Treasury bills. On the other hand, this tendency might be rather more than counteracted by an increase in anticipation of repayments on December 1. This consideration has also contributed towards the stiffening of Treasury bill rates during the past week.

* * * *

The last reduction of Bank rate has revived the controversy about the charges of clearing banks on overdrafts. While no reduction has so far been made in the standard rates, it is believed that the number and extent of exceptions from the rule of a 5 per cent. or 4 $\frac{1}{2}$ per cent. minimum rate has increased considerably. Notwithstanding this, considerable pressure is being brought to bear upon the banks to lower their standard charge.

* * * *

It now seems certain that the efflux of gold from New York has come to an end, for the time being at any rate. The shipments that are still being arranged to various European countries represent the repatriation of previously earmarked gold. As a result of the withdrawal of funds from London the dollar has improved, and is now well above gold export point. Money rates in New York have remained unchanged, with call loans at 2 $\frac{1}{2}$ per cent. and commercial paper at 2 $\frac{1}{4}$ to 2 $\frac{3}{4}$ per cent.

* * * *

The Foreign Exchange market was rather more active this week, and fluctuations were more frequent and wider than of late. Sterling was weak against the gold currencies, and especially against the dollar, the latter being due partly to covering of short positions, and partly, it would appear, to repatriation of proceeds of sales of British Government securities on foreign account. The New York rate went from 3.60 $\frac{3}{4}$ to 3.57 after 3.54. Montreal improved to 4.07, after 4.01. Paris was less variable, and went to 90 $\frac{1}{8}$ after 90 $\frac{3}{4}$. Brussels was at 25.67, some 23 points lower than last week. Milan touched 69 $\frac{1}{4}$, but reacted to 70, whilst Madrid exceptionally was weaker on balance at 43 $\frac{1}{8}$. Amsterdam gained 5 points at 8.85, and Berlin 12 at 15.04. Switzerland, after 18.19, rose to 18.33, against 18.50 last week. Of the Scandinavian currencies, Stockholm was unchanged at 19.50, Oslo weakened by 2 points to 20.28, and Copenhagen by 7 to 18.43. The last-named movement does not represent any change in the Danish policy of keeping the kroner "linked" at a chosen level to sterling; nor is there any reason to suppose that the Copenhagen authorities are not in a position to control the rate. Indeed, the kroner, in terms of gold, has fractionally appreciated. Helsingfors lost 5 points at 237. The South American currencies were again largely nominal, Rio being quoted at 5 $\frac{1}{8}$ d. (sellers), Buenos Aires at 34 $\frac{1}{4}$ d., and Montevideo at 29 $\frac{1}{4}$. In the Far East the rupee was very firm at 1s. 6 $\frac{1}{2}$ d., a gain on balance of $\frac{1}{4}$ d., and was quoted at one time at 1s. 6 $\frac{3}{4}$ d. The yen was firmer and gained $\frac{3}{4}$ d. at 1s. 6 $\frac{1}{4}$ d. Batavia improved to 8.93. In the forward market dollars were firmer at rather narrower discounts of $\frac{1}{8}$ cent for one month and 1 $\frac{1}{4}$ cents for three. Paris went from par for both deliveries to 2 and 3 centimes premium for one and three months respectively. Brussels from $\frac{1}{2}$ centime discount was at par for one month and $\frac{1}{4}$ centime discount for three. Milan was unchanged for one month at $\frac{1}{8}$ lira discount but gained $\frac{1}{8}$ at $\frac{1}{4}$ lira discount for three. Madrid one month remained at $\frac{1}{8}$ peseta discount but improved by $\frac{1}{8}$ to $\frac{3}{8}$ peseta discount for three. Amsterdam was unchanged, as was one month's Switzerland, but three months weakened by $\frac{1}{2}$ to one centime premium. The silver market was very quiet and fairly steady, prices declining by $\frac{1}{16}$ d. to 16 $\frac{3}{4}$ d. for cash and to 16 $\frac{1}{2}$ d. for forward. The China silver exchanges remained at last week's levels, Hong Kong being quoted at 1s. 3 $\frac{1}{4}$ d. and Shanghai at 1s. 7 $\frac{1}{4}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moodys-Economist Services, 8, Boulevard Street, London, E.C.4.

BATTLING WITH SHADOWS.

WRITING a week ago, with full consciousness of the risks of last-minute hitches to which international conferences on the grand scale are always exposed, we took, not without substantial reason, an optimistic view of the outcome of Lausanne. Apart from the inclusion in the Creditors' proposals of a wholly objectionable so-called "escalator" clause, providing that the figure of Germany's future payments should be subject to modification in the light of such revision as might be effected of the payments due by the Allies to the U.S.A., the broad bases for a settlement seemed to have been so firmly laid that we felt confident that no delegation dare take the responsibility of obstructing, or even unduly delaying, the completion of a satisfactory accord. *Dis aliter visum*; fulfilment of the hopes of an expectant, not to say impatient, world has once more been deferred. The stumbling-block of the "escalator" clause has, it is true, been removed, but only at the cost, apparently, of substituting for it an alternative proviso suspending ratification—a proviso equally objectionable from the American point of view, and one whose introduction represented a lamentable departure from the spirit of the original brave declarations that the settlement must contain the essential principle of finality. Worse still, the Conference—with reality within its grasp—degenerated during the past week into a battle with shadows. The path to agreement was blocked no longer by substantial questions, such as the problems of budgets and transfers, but by political figments to which reality was lent only by the forces of national rancour and stiff-necked personal pride.

We may take up the melancholy story from last Saturday morning, when M. Herriot rejoined the Lausanne Conference after a single day's visit to Paris. After much drafting and re-drafting, the Creditor Powers succeeded by Sunday in formulating a more or less definite plan which they submitted to the German delegation. No details were officially published, but it appeared from Press reports that the scheme was roughly as follows:—Reparations as such should be cancelled, but Germany should undertake to make a contribution to "economic reconstruction" in the form of bonds to the amount of Rm. 4,000 millions, which should be issued when the Bank for International Settlement was of opinion that the bonds could be marketed without danger, but not until after the expiry of three years. It was apparently contemplated that the figure stated should be inclusive of arrears under the Hoover moratorium but exclusive, not only of the service of the Dawes and Young Loans, but also of the American Mixed Claims payment and of the Belgian marks adjustment; that the interest on the bonds should be 5 per cent., with a sinking fund extinguishing the obligations in fifteen to twenty years; and that the bonds should not be issued at less than 90.

The reception of these proposals by the German representatives was not favourable. The German delegation objected to the amount, which, they argued, was twice too high; they further asked that the decision of the B.I.S. in relation to the issue of bonds should be unanimous—a proviso which would mean that the Governor of the Reichsbank would in effect have a veto; and, most of all, they objected to the incorporation in the settlement of a proviso, which the creditors now proposed, that the settlement should not be ratified unless and until there was a corresponding settlement in the matter of Europe's war debts to America. It also began to be clear that, as might have been anticipated, Herr von Papen, with an eye to his own political preoccupations at home, would make his acceptance of any future liability of the order of magnitude contemplated by the Creditors conditional on some form of "political concession" which could be represented for German consumption as a vindication, in part at least, of Germany's case.

Monday was uneventful. M. Herriot was absent in Paris; and the only development of importance was the

presentation by Signor Grandi of a memorandum—inspired apparently by feelings of uncertainty with regard to inter-European war debts other than reparations—in which the Italian delegation emphasised their conviction that the "clean slate" was the only possible solution. Italy very properly reminded the Conference that it was convened not to ensure future and uncertain payments, but "to perform the final indispensable acts for the revival of confidence and the recovery of trade."

The rest of the story can be briefly told. Tuesday was spent in a series of bilateral negotiations between Mr MacDonald, on the one side, and M. Herriot and Herr von Papen alternately, on the other. From these discussions, in which there was no direct contact between the French and German delegations, the only positive progress reported was that the Germans had raised their figure for the bond issue to Rm. 2,600 millions. On the question of the "political concessions," the German demands were now understood to comprise both a clause in the Lausanne protocol formally annulling Part 8 of the Treaty of Versailles (*i.e.*, the Reparations Section, which includes the "War Guilt" Article) and a claim to equality of status with regard to armaments. To both of these proposals French opposition was adamant and, meanwhile, the atmosphere was rendered less conciliatory by the unaccountable reluctance of the British delegation to adhere to the spirit of its original declaration and announce generously and courageously that it would act in relation to war debts on the same basis as other creditor Powers acted in relation to reparations. Such a course of action was undoubtedly implied in the arguments which were employed to induce the French to abandon the substance of their 'reparation claim. On Wednesday some sort of "gentleman's agreement" in the matter of the French and Italian war debts to Great Britain—albeit, one judges, in somewhat vague terms—was concluded, but, though the discussion was once more transferred to a full meeting of the six inviting powers, no further progress could be recorded on the central issue, in regard either to the final figures of Germany's "reconstruction" payment, or to the political clauses.

Up to midnight on Thursday the deadlock persisted. While the experts were busily polishing the details of a Convention, M. Herriot was still not prepared to yield one inch on the "War Guilt" issue, or even, it seems, to discuss "political concessions" at all. Finally, in the small hours of Friday morning, the situation was reported to be that, whereas the French were now grudgingly prepared—on a cash figure undisclosed—to consider a new "political" formula drafted by the British, the Germans were reluctantly offering to drop all "political" demands if their liabilities were reduced to well under Rm. 2,000 millions.

It may well be that, before these lines are read, a "settlement" of sorts will have been signed; but can the outcome of Lausanne now be the laying of sure foundations for tackling urgently the problems of European reconstruction? Finality was demanded and promised; instead, the slate is to be half-cleaned, and the controversy—with its train of uncertainties and animosities—transferred to the question of inter-Allied debts, on whose settlement the ratification even of the Lausanne agreement itself is to be conditional. A spirit of general reconciliation and readiness to co-operate was to be created; instead, there have been dreary bickerings over a question which only the judgment of history—not any formula devised by living statesmen—can determine. The one certain thing is that, in a week's hard bargaining, much of the spirit of co-operation has been lost; that a unique opportunity for the "grand gesture," for magnanimity and a generous-minded policy of "burying the hatchet"—the only basis on which Britain and her fellow-debtors could safely expect equally generous treatment by the United States—has been largely frittered away.

IRELAND AND ARBITRATION.

REPORTS of the British Government's intentions, on which we commented last week, have now been confirmed; they have sought for and obtained from Parliament powers to impose by Treasury Order import duties up to a maximum of 100 per cent. *ad valorem* on imports from the Irish Free State "if it appears to the Treasury that any failure of the Government of the Irish Free State to implement their obligations has resulted, or is likely to result, in a direct loss to the revenue of any public fund of the United Kingdom or in an additional charge on any such fund." In the House of Commons last Monday, Mr Thomas stated that the Government propose to exercise these powers "in their own way, at their own time, but immediately." We should have been much happier had Mr Thomas omitted that last uncompromising word. While a chance still remains to prevent the "Irish Question" once more appearing upon the stage of British politics, with all its old bitterness and with the risk of ultimate consequences not lightly to be contemplated, we would express with all the emphasis at our command the earnest hope that the powers which Parliament has delegated to the Executive may never be used.

Introducing the Government's motion last Monday, the Secretary for the Dominions made out, with commendable freedom from exaggeration or over-emphasis, a strong case in favour of the British Government's claim to the receipt of the annuity payments. Reviewing briefly the history of Irish land purchase during the past two generations, he reminded the House that there was no constitutional issue involved in this matter, and that the essence of what had been a short and simple transaction was that the British Government had helped to provide an easy means whereby the Irish peasantry should become their own landlords. This they had done not merely by guaranteeing the payment to the lenders of the money required for land purchase, but by supplying large sums themselves. The Irish Land Commission had reported only a year ago that in a period of fifty years over three hundred thousand holdings had been vested in the tenants, subject to a terminable half-yearly payment representing in practically all cases a substantial reduction of the amounts payable as rents; the average tenant purchaser was now repaying to the State as purchase instalments little more than half the rent payable prior to the Land Act of 1881. In short, Britain's treatment of Ireland in this question had not been ungenerous; and the British Government did not shrink from arbitration.

Both Mr Thomas and other Government speakers disclaimed all desire to act towards the Irish Free State in a spirit of retaliation; their wish was to seek a peaceful settlement, and the disclosure made in Mr Greenwood's speech, and subsequently confirmed by Mr Thomas after communication with the Irish High Commissioner—that the moneys received from the land annuities and other charges were being set aside by the Irish Free State Government in suspense accounts in anticipation of arbitration—obviously made a favourable impression on the Front Bench as on the whole House. None the less, though Mr de Valera in his latest letter of June 16th "accepts the principle of arbitration and agrees that a tribunal of the general character outlined in the report of the Imperial Conference of 1930 would be suitable," the Government at Westminster could not concede the Irish demand that the personnel of the tribunal should not be restricted solely to citizens of the British Commonwealth. This, they stated, was a point of principle from which there could be no departure on their side; and meantime, since default in respect of the land annuities or other Irish payments would represent a new burden on the Budget and on the British taxpayer, they must recoup themselves at their discretion by the proposed special import duties.

There are two reasons, one economic and one political, on whose account we find ourselves unable fully to approve the policy which the British Government is proposing to adopt. In the first place, we regard the tariff weapon as an entirely inappropriate mechanism for application to this case. As we pointed out last week, the raising of

anything like £5 millions on imports from the Irish Free State would mean, when regard is had to the nature of our imports from that country, that British consumers (and particularly British farmers), rather than the Irish suppliers, would in effect have to pay the bulk of the duty. Admittedly, if sufficiently prohibitive duties were imposed, all but a small percentage of Irish imports could be excluded and Ireland could in consequence be brought rapidly to the verge of economic ruin. But to suggest that such a development, with its inevitable repercussions on our important export trades to Southern Ireland, would do this country less economic injury than the loss to the Treasury of a few million pounds of "Miscellaneous receipts" is ridiculous. Quite apart from the disquieting consideration that a tariff war between Great Britain and the Free State would have a "front" on the dangerous terrain of the Ulster Border, the policy of endeavouring to recoup losses on inter-governmental obligations by the two-edged blade of tariffs would be futile if put into effect; and, as a bluff, it is singularly ill-considered.

In the second place, we are not satisfied that the British Government are well advised to take a rigid stand on what they have described as the "unanimous conclusions of the 1930 Imperial Conference." That Conference, it is true, recommended that where machinery for the settlement of disputes between members of the Commonwealth became desirable, and where the parties to the dispute agreed to submit it to arbitration, an *ad hoc* tribunal should be set up, and that its personnel should be limited solely to citizens of States of the British Commonwealth. But they deprecated "too much rigidity," and their preference for *ad hoc* proceedings instead of the constitution of a permanent court, and their insistence on the voluntary character of the arbitration, indicate that they did not intend to rule out other forms of procedure if these could be agreed upon. In a matter which involves not merely sums of money, but the whole of the future relations between this country and the Irish people, we have little patience with sticklers for constitutional procedure; nor do we think that it is much practical matter that when the British Government signed the Optional Clause they did so, as Mr Thomas stated, with the express reservation that inter-Imperial disputes were "a domestic matter for ourselves" and not justiciable before the Hague Court. In this dispute, without prejudice to the validity of any arguments which the Free State Government may have to bring forward, we may fairly say that the British Government has "its quarrel just." In that position it could well afford to waive its objections and humour Irish feelings in the matter of a neutral chairman to preside over a quartette of assessors.

We go further than this. We would suggest that even if agreement be impossible with regard to the chairmanship of the tribunal, the right course for the British Government would be to seek an award from such a tribunal as can, in such circumstances, best be constituted before proceeding to tariff retaliation. Let them even now appoint two arbitrators of their own nomination, both of whom should preferably be citizens of Dominions overseas, and let them invite Mr de Valera to appoint two arbitrators on his side from among the citizens of the Irish Free State. If Mr de Valera makes his nominations, well and good; the tribunal can take evidence and proceed to judgment, with the risk at worst that disagreement and an even vote might render recourse to further arbitration inevitable. If Mr de Valera declines on such terms to nominate members to the tribunal, then let the British Government submit its case to the Dominion arbitrators appointed by it. Plenty of names of Dominion statesmen and members of the judiciary will readily occur to mind, whose judgment in such a dispute would impress public opinion throughout the world as possessing the quality of impartiality; and, if their reasoned award was in favour of the British Government's contention, Mr de Valera's moral position would be hopelessly weakened.

As it is, the British Government appears to us to be in danger of playing into Mr de Valera's hands by giving Fianna Fail the chance to argue, however unfairly, that it is attempting to execute judgment before the jury's verdict. That is the way to enable Mr de Valera to

retrieve in Ireland support which his budget and his general policy have already done much to lose for him. On the dark forces in the background of Irish politics—the still menacing shadow of the gunman—we do not wish to dwell unduly. It is enough that, whereas the bulk of the Irish people are fully alive to the advantages of retaining membership of the British Commonwealth of nations, Mr de Valera might be able to submerge that plain and simple issue in a flood of recrudescing animosities and national hysteria. At the present juncture of our relations with the Irish Free State there is everything to be gained by patience and "masterly inactivity," and everything to be lost by hasty action.

THE MONETARY HALF-YEAR.

IN the present phase of the world crisis, with sterling a "managed" currency, free dealings in foreign exchange suspended over half the world, psychological influences exercising abnormal weight on movements of liquid funds, and with moratoria and standstill arrangements rendering the whole situation in many directions artificial, the real centre of interest in monetary affairs this year has lain in the sphere of governmental and central banking policy—aspects of the problem to whose frequent discussions in these columns we do not propose, on this occasion, to add. Yet, though the technical features of the London money market, whose trend we customarily review at the close of each half-year, may have been of relatively minor importance, a period of six months, which began with Bank rate at 6 per cent. and ended with "Two per cent." as a signal prelude to the greatest conversion operation recorded in the history of this country, merits brief comment by way of retrospect. For though the trend of the money market in London during the first half of 1932 can be summarised shortly as the story of rates falling progressively under the pressure of a glut of loanable funds, combined with shortage of commercial paper and restricted demand for Stock Exchange loans, the rapidity of the movement and the extent to which it reflected the restoration of confidence—on a short view, at all events—in Britain's financial stability; had a certain dramatic quality.

The half-year began with a supreme effort on the part of the direct taxpayer, which yielded in January alone over £140 millions of revenue, enabled the floating debt to be reduced by £91 millions, and produced a strong impression on public opinion abroad. The flow of international short money was definitely reversed in favour of London; sterling was further assisted by steady resales in this market of gold attracted from India by the depreciation of the rupee in terms of gold currencies; and, with the supply of Treasury bills sharply curtailed as a result of the great influx of tax revenue, the end of January saw the Treasury able to discount bills at 4½ per cent., as compared with nearly 5½ per cent. at the close of 1931. By the middle of February—the Bank of England having meantime repaid the balance of its New York and Paris credits—Bank rate had long been completely ineffective; and the reduction of the rate by a full point, from 6 to 5 per cent., was regarded at the time as being a step considerably overdue. From then onwards the course of events was uniformly one of successive reductions of Bank rate (4 per cent. on March 10th, 3½ per cent. a week later, 3 per cent. on April 21st, and 2½ per cent. on May 12th) following cautiously an uninterrupted decline in market rate, until the final level of 2 per cent. was reached on June 30th, when the discount on "hot" Treasury bills was barely ½ per cent.

In the following table we give our usual calculations of daily average rates during the half-year:—

DAILY AVERAGE FOR FIRST HALF-YEAR.									
	1928.		1929.		1930.		1931.		1932.
Bank rate	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Market rate (3 months) ...	4 10 0	5 5 11	3 16 9	2 17 2	2 8 0	2 8 0	2 8 0	2 16 8	
Margin	0 9 0	0 4 6	0 16 9	0 9 2	1 3 7				
Short loans	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Deposit rate	3 13 8	4 8 2	2 19 9	2 1 8	2 15 2				
Margin	2 10 0	3 5 11	1 16 9	1 0 0	0 3 3				
Margin	1 3 0	1 2 3 1	1 3 0	1 1 8	0 14 11				

The unusually wide margin between Bank rate and market rate illustrates the extent to which market rate during the half-year anticipated the successive reductions in their rediscount rate by the Bank of England authorities. The close approximation of the short loan rate to market rate reveals the lack of profit, during a great portion of the period, in financing bill portfolios (indeed, towards the end of the half-year the average cost of market borrowings was nearly ½ per cent. higher than the return on Treasury bills), but it has to be borne in mind that during nearly the whole period the market's profits on resales of bills was substantial. The considerable decrease in the margin between the deposit rate allowed by the banks and the minimum rate obtainable for their advances to the market must also have trenchanted considerably on banking profits, though this consideration is more than counterbalanced by the great capital appreciation which the banks have enjoyed on their investments in gilt-edged securities.

In the next table we summarise the half-year's changes in the quotation of sterling against typical centres:—

	Par Level.	Rate, End of 1931.	Rate, June 30, 1932.
New York.....\$ to £1	4 86½	3 38½-39½	3 60-60½
Montreal\$ to £1	4 86½	4 09-11	4 11-13
ParisFr. to £1	124 21	86½-86½	91½-91½
Copenhagen ...Kr. to £1	18 159	18 18½	18 ½-18 ½
Stockholm ...Kr. to £1	18 159	17½-18	19 45-55
OsloKr. to £1	18 159	18½-18½	20 ½-20 ½
Kobe ...Sterling to yen	2/0 58	2/0½-2/0½	1/6½-1/6½

The most sensational developments, so far as sterling is concerned, took place in March. The early days of that month had seen an improvement to \$3.48 in the rate on New York; and, following the announcement that the Treasury had repaid the bulk of its Franco-American credits, demand for sterling, prompted partly by lack of confidence in the stability of New York and other centres, became almost uncontrollable. By the end of March the New York rate had risen to \$3.80, and though a reaction followed, the Bank of England, in an endeavour to avoid embarrassing fluctuations in the exchange, was compelled to acquire *devisen* to an extent which, it was feared, might exercise an undue strain on its resources. The authorities' hands were strengthened towards the end of April by the Government's decision to establish the Exchange Equalisation Account, but up till early June the task of keeping the pound steady was rendered more difficult by a general lack of confidence in Continental centres as to the stability of the dollar. The balancing of the American Budget brought temporary reassurance, but not before there had been large-scale withdrawals of French and other balances from New York in gold, while the Bank of England and other Government holdings of dollars reached a figure not made known to the public, but generally believed to run into many millions sterling. In addition, the Bank of England had acquired £14 millions of gold. Mid-June, however, saw signs of a change of sentiment. Those who had taken short positions in dollars were inclined to cover their commitments, and even before the final reduction of Bank rate to 2 per cent. it was believed that the Bank of England was a seller of foreign exchange in pursuance of the policy of neutralising short-term fluctuations. With the relation between the course of sterling exchange and that of British wholesale prices, we deal in another article in this issue.

Turning from retrospect to prospect, it is by no means easy in all respects to "take a view" of the monetary situation this mid-summer. The end of June was negotiated by the market with almost unexampled ease, and the reduction to 1 per cent. in the clearing banks' minimum charge for short market loans has appreciably reduced the cost of financing bill portfolios. How far market rates of discount will be forced down still further by a continuance of "short" bill purchases by the clearing banks, which played a large part in accelerating the decline during recent months, remains to be seen. Since there is no general disposition to expect any further reduction of Bank rate, and since "non-assented" War Loan now possesses considerable attractions as a five months' bill, the outlook would appear to favour greater steadiness of rates in the discount market. In fact, the phase

of "depression cheapness" of short money, which was only temporarily interrupted by the sterling crisis last summer and autumn, would now seem to have reached more or less complete finality. How long the period of comparative stability, which now seems to be in prospect, will endure, or whether its even tenor will be broken, at least temporarily, by the effect of adverse developments in foreign centres or by exchange fluctuations leading to further unexpected movements of the mass of liquid international funds—these questions await answers whose nature will be dictated in the first instance by the decisions of statesmen in the field of international politics.

IMPERIAL PREFERENCE: INDIA.

THE participation of India in the Ottawa Conference is in itself remarkable. Hitherto delegates of India at Imperial Conferences have been unable to pledge their country to a policy of Imperial preference for two main reasons. The first is that a very high proportion of India's imports (over one-half in some recent years) comes from Great Britain, so that privileged entry could not be given to British goods without substantially altering the measure of domestic protection that has been held necessary; and the second reason is that political opposition to commercial favours to this country has been intense and has received the backing of very powerful commercial interests in India. It is therefore a matter for congratulation that the Indian Legislative Assembly has approved the despatch to Ottawa of a delegation, headed by Sir Atul Chatterjee and including Mr. Shanmukham Chetty, leader of the Nationalist Opposition, one of whose tasks will be to consider whether "having regard to the new tariff policy of His Majesty's Government in the United Kingdom, Great Britain and India should enter into a reciprocal preferential regime so designed as to benefit the trade of both countries."

India has been forced in the past few years to accomplish a strenuous adjustment of her external trade balance. In the year ended March 31, 1930, her exports (other than re-exports) totalled £233.8 millions, and her imports £187.3 millions, giving her a balance of £46.5 millions with which to pay debt service and other external charges. By 1931-32 her exports had been exactly halved, and, in spite of a curtailment of imports in nearly the same proportion, her outward balance had fallen to £22.1 millions. The division of her overseas trade by countries is shown below:—

BRITISH INDIA, TRADE BY SEA.

In millions of £'s.

Years ended March 31.

* Including Mauritius.

† Iraq, Egypt, Arabia, Persia.

Apart from the great reduction of trade in the past two years, the most striking fact that emerges from this table is the falling proportion of imports bought from Great Britain. In 1924-25 we supplied 55 per cent., and the whole Empire 62 per cent., of India's imports; in

1929-30 these proportions had fallen to 44 per cent. and 53 per cent., and last year to 35 per cent. and 45 per cent. This in spite of the fact that as a market for India's products the United Kingdom had meanwhile improved her relative position considerably. That is the main problem with which India and this country will jointly be faced at Ottawa.

The item of greatest importance in our exports to India is, of course, cotton manufactures. Here the Congress boycott, which reduced imports by more than one-half in a single year, affected the figures for 1929-30 abnormally, but that is not the whole tale, since between 1923-24 and 1928-29 imports of cotton goods from Great Britain had declined from £45.5 millions to £25.4 millions, while cotton imports from foreign countries rose from £6.4 millions to £11.7 millions. And apart from foreign competition. Indian mills are not only increasing their output but are moving steadily towards the production of those finer qualities upon the revived demand for which Lancashire relies for its rehabilitation in the Indian market. In the course of a communication to the Tariff Board, strongly opposing preferential duties in favour of Lancashire goods, the Indian Chamber of Commerce in Calcutta has recently pointed out that the production of piece-goods in Indian mills has increased since the quinquennium 1925-30 by about 39 per cent. Meanwhile imports of cloth have decreased from 1,919 million yards in 1929-30 to a rate of 760 million yards in 1931-32. Statistics are also produced to show "that the quality of cloth produced in the country has greatly improved. . . . The mills have produced larger quantities of fancy goods, bleached goods and also coloured piece-goods; and it is the experience of consumers that the finish of the cloth manufactured by the Indian mills has also improved. There has also been a very remarkable increase in the production of higher counts of yarn and finer goods, in accordance with the recommendations by the Tariff Board during their last inquiry." In view of such achievements the Chamber maintains that "it can no longer be doubted that with the grant of adequate protection the Indian mills will be able to provide all the requirements of the country both in respect of quality and quantity." In brief, "because India needs full protection against the imports of finer varieties of cloth, irrespective of the country of origin, she cannot give any effective Imperial preference without jeopardising her own interests considerably. The position, frankly stated, is that if the preference to the United Kingdom is to be effective, we have to injure the home industry." These views may be contrasted with the opinion of the Bombay Millowners' Association, indicated in its recent annual report, that the most serious competitor of the Indian textile industry is Japan rather than Great Britain, a view endorsed by Mr. Gandhi when he wrote in his journal a year ago that "from the economic standpoint—and that is the only standpoint for the millions—boycott of Japanese goods is much the more important."

Another important category in our trade with India is iron and steel. India is an exporter of pig iron (chiefly to foreign countries), but a considerable importer, in normal times, both of iron and steel semi-manufactures and of finished articles. Here again the figures over a period of years show a reduction of total imports since 1927 (under the influence of protection) and a falling away of the British share of the market. Now iron and steel production is regarded as a key industry for India from both the political and the economic viewpoints, so that it will be little use for Britain to ask for a mere reduction of local protection; but it is an industry where large units prevail and where concentration of production on different stages and grades can be arranged with comparative simplicity. This line of approach has recently been commended by Sir Padamji Ginwala, formerly president of the Indian Tariff Board and one of the delegates to the Ottawa Conference.

On the other side of the account, India's principal articles of export are raw cotton (£48.8 millions in 1929-30, the last fairly normal year), rice (£23.5 millions), jute and its manufactures (£59.1 millions), and tea (£19.5 millions). Jute may be ruled out at once as a subject of

preference, since India is practically the only source of supply not only for Great Britain but for the world. Tea has just been given back a preferential duty, and no doubt the Indian delegation will press for an increase of the rate; in 1930 we imported £29.6 millions worth of tea from British and £4.5 millions from foreign countries. Great Britain forms such a small portion of India's market for rice (5.4 per cent. only in 1931-32), while on the other hand so large a proportion of our imports come from foreign countries, that to penalise the British consumer in order to encourage the Indian cultivator of rice seems a very poor bargain. The same applies to raw cotton, of which we bought, in 1930, 44 per cent. of our supplies from the United States, 38 per cent. from other foreign countries, and 18 per cent. from the Empire, while India finds by far the greater part of her market for cotton in foreign countries, notably Japan. Apart from these considerations and the necessity of buying the raw material of a staple industry in the cheapest market, the growing local demand for India's cotton renders it an unfavourable subject for preferential treatment. However, there are greater possibilities of advantageous arrangements concerning India's secondary exports—for instance, groundnuts, oil cakes and oil seeds, coffee, rubber, and fruit—which will have to be carefully examined at Ottawa. Preferences exist already, of course, on sugar and tobacco.

When we turn from trade and tariffs to currency and credit we find political difficulties thickening still further. The rupee has been, since 1926, fixed in relation to sterling at the rate of 1s. 6d., and this link was preserved after the suspension of the gold standard here last September. But intense agitation both among Indian business men and in nationalist political circles has been directed against what was conceived to be an artificial overvaluation of the rupee, maintained in the interests of British traders. India, certainly, like other countries, suffered grievously for five years or more through the appreciation of gold in terms of commodities, but now that sterling, and the rupee with it, are free to pursue their own course the worst of her troubles might be removed by concerted action within the "sterling area." Even so, the grievance of the one-and-sixpenny ratio will not have been dismissed, and Mr. Chetty at least may be expected to raise that issue when currency matters are discussed at Ottawa. The final answer to this, as to the tariff problem, turns upon the question, how far and how soon under her new constitution will India be master of her own financial, fiscal and economic destiny.

PRICES: HALF-YEAR'S REVIEW.

At the end of 1931 the *Economist* index of wholesale prices showed a rise of nearly 10 per cent. on the level at which it stood immediately before our departure from the gold standard; the trend had an appearance of some stability, and it was permissible to hope that, so far as the valuation of commodities in terms of sterling was concerned, the long and disastrous decline in prices had been definitely arrested. The past six months, however, have shown that such hopes were premature and doomed to disappointment. As will be seen from the following summary of our index number, calculated with 1927 as a base year, the end of June saw our index number at a new record low level, 2.5 per cent. below that recorded in mid-September of last year and over 7 per cent. lower than the figure of a year ago:—

"ECONOMIST" INDEX.

1927 = 100.

Date	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	114.2	108.7	136.8	119.4	105.6	115.7
" 1929	96.9	85.8	92.2	95.6	90.5	92.4
" 1930	81.0	77.2	64.4	83.6	81.6	77.6
" 1931	68.7	65.3	50.0	73.1	68.4	64.3
End June, 1931	68.8	60.2	48.4	72.4	68.7	63.6
" December, 1931	69.0	64.7	52.8	76.7	66.2	65.8
" March, 1932	73.7	65.8	50.4	71.4	62.2	64.3
" June, 1932	68.9	57.6	43.7	67.4	58.4	58.8

In short, as may be seen at a glance from the first of the accompanying diagrams, in which we plot the course of British wholesale prices and the cost of living, with 1924 as a base year in each case, a brief upward turn of sterling prices during the autumn and winter of 1931 has been succeeded this year by an abrupt reversion to the precipitate downward trend of 1930. There is no sign yet of "flattening" in the recent downward curve of wholesale prices, and the gap between prices has widened.

WHOLESALE AND RETAIL PRICES.

To illustrate the position further we show below a list of cash quotations in sterling for a number of typical commodities at the end of the past half-year in comparison with previous dates:—

	1930.		1931.		1932.
	End June.	End December.	End June.	End December.	End June.
Wheat, Canadian, per qt.	39/-	24/6	26/-	30/9	26/-
Beef, English sides, per 8 lbs.	5/8	5/3	5/2	4/6	5/4
Mutton, New Zealand, per 8 lbs.	3/10	3/11	3/8	2/10	2/7
Tea, Indian auction average, per lb.	13.50d.	14.25d.	7.75d.	10.18d.	7.04d.
Sugar, granulated, per cwt.	21/9	19/6	20/9	20/8	19/2½
Cotton, American middling, per lb.	7.58d.	5.34d.	5.43d.	5.34d.	4.43d.
Cotton yarn, 32's twist, per lb.	11.50d.	9.00d.	9.00d.	9.12d.	7.87d.
Wool, Australian, per lb.	27d.	22d.	21d.	22d.	17d.
Jute, per ton	£22/5/-	£15/10/-	£16/-	£19/5/-	£14/15/-
Pig iron, Cleveland No. 3, per ton	66/6	63/6	58/6	58/6	58/6
Coal, best Welsh, per ton	20/-	20/-	20/-	19/6	19/6
Tin, standard, per ton	£136/12/6	£116/10/-	£113/2/6	£141/3/9	£114/17/6
Copper, per ton	£49/5/-	£46/10/-	£37/5/-	£38/10/7½	£26/11/10½
Linseed oil, per ton	£41	£22/10/-	£18/-	£14/12/6	£12/5/-
Rubber, plant, sheet, per lb.	6.25d.	4.25d.	3.25d.	3.31d.	1.75d.
Cement, Portland, per ton	47/-	47/-	47/-	43/-	43/-

It will be seen that, with the exception of imported wheat and English beef, every item in the foregoing list shows a more or less substantial fall as compared with the prices ruling a year ago. The great extent, however, of the divergence of movement between the prices of individual commodities can be seen more readily from the next table, in which we show the percentage variations in the prices of all the articles covered by our index number, as compared with a year ago and with mid-September, 1931. The extraordinary range of movements—from declines of over 40 per cent. to increases of over 20 per cent.—furnishes an eloquent commentary on the disturbance which the monetary events of the past year have created in the commodity markets, even when due allowance is made for special factors (e.g., in the case of tin) affecting individual prices. With certain exceptions and qualifications, comparison of current prices with those of a year ago leads to the conclusion that the major

declines have been in cases where the British market is predominantly the price determinant:—

	Inc. (+) or Dec. (-) per cent. compared with			Inc. (+) or Dec. (-) per cent. compared with

As our readers are aware, we have endeavoured since this country's departure from the gold standard to throw as much light as possible on the trend of commodity prices by supplementing our regular wholesale index number with two other indices compiled on roughly analogous bases, namely, (1) a selection of typical primary products whose prices are quoted in terms of gold currencies, mainly in the United States markets, and (2) an approximately similar list of primary commodities dealt in on a sterling basis in the London market. In the second of the accompanying diagrams we have plotted the course of our complete index and of our two supplementary indices, together with a curve showing the appreciation of the dollar in terms of the pound sterling. Each of the curves is plotted with the position as at last mid-September as a base.

STERLING AND GOLD PRICES.

The picture which is presented by the diagram may repay close study. It lends itself to interpretations of a controversial nature, but it is premature, we suggest, as yet to draw from the movements of the four curves any inferences of a more than tentative, provisional nature. Considering first the period from the middle of last September to the end of February, 1932, we are inclined to

suggest that the following features emerge. Firstly, the depreciation of sterling and, in particular, its sharp fall (which appears as an inverse movement on the chart) between mid-November and mid-December, 1931, played a large part in contributing at that time to the depression of gold prices; for, in the conditions of the crisis, "gold" producers were forced to accommodate their prices to the British market. Indeed, up to the end of February the salient conclusion which emerges from the diagram is that in the determination of prices sterling "called the tune." Between the end of February and the middle of April, however, the appreciation of sterling had a natural consequence in a fall of sterling prices, and from the middle of April to the end of the half-year, with the pound more or less pegged against the dollar, sterling and gold prices moved on almost parallel lines. In both cases, one should perhaps say, similar consequences—notably restriction of international trade—produced similar results.

We may fitly end this survey by a final table, which shows in summary form the course of our complete index number, with 1913 as a base year:—

"ECONOMIST" INDEX.

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscel- laneous.	Complete Index.
Average, 1924.....	159.9	169.9	210.6	145.2	131.5	159.3
" 1929.....	135.6	136.8	141.9	116.2	112.7	127.2
" 1930.....	113.4	122.9	99.1	101.6	101.5	106.8
End June, 1931.....	96.1	104.1	77.0	88.9	85.3	89.3
" December, 1931.....	96.3	95.9	74.5	88.0	85.6	87.5
" March, 1932.....	96.3	104.7	81.3	93.3	82.4	90.6
" June, 1932.....	103.1	104.8	77.6	86.8	77.5	88.5
" June, 1932.....	96.4	91.8	67.3	82.0	72.7	80.9

Reviewing the situation a year ago, we observed that the depression of wholesale prices to an average level of 12½ per cent. below that which existed in 1913 was putting a strain on the world's economy, whose ultimate consequences, if no recovery took place, could not lightly be contemplated. In the past twelve months much has happened to emphasise the force of that warning. The problem how a recovery of prices is to be fostered is to-day more than ever the focal point of the world's difficulties.

NON-FERROUS METALS.—I. COPPER.

THE rapid advance of electrification since the war has occasioned an ever-increasing demand for copper. This metal has the advantage of being, next to silver, the best conductor of electricity, and as silver is relatively more expensive, copper has no substitute in this field. Expressed as a percentage of the average of 1909-13, the world's smelter production of copper in 1929 showed an increase of 100 per cent. Partly as a result of technical progress in the mining and refining of copper, and partly because of the discovery and exploitation of new deposits and the increasing use of scrap metal, productive capacity had begun to exceed demand some years before the onset of the present world crisis. Statistics of production, consumption and prices indicate that since 1923 excessive productive capacity has been the bugbear of the industry.

In the following summary table we give a picture of United States and world production:—

	(Thousands of Metric Tons.)					
	Mine Production (a).	Smelter Production (a).	Refinery Production (b).	U.S.A.	World.	U.S.A.
1913.....	555.4	990.4	600.1	1,018.5	(d)	(d)
1927.....	784.4	1,505.9	837.2	1,495.7	1,140.0	1,600.0
1928.....	820.9	1,715.6	893.8	1,678.3	1,240.0	1,780.0
1929.....	905.0	1,937.8	987.9	1,885.0	1,400.0	2,005.0
1930.....	632.5	1,601.8	706.3	1,556.5	1,120.0	1,760.0
1931 (c).....	451.0	1,300.0	(d)	(d)	747.0	1,520.0

(a) Metallgesellschaft.

(b) American Bureau of Metal Statistics.

(c) Estimated by Messrs Brandeis, Goldsmid and Company.

(d) Figures not available.

It will be seen that, though the post-war years had brought about, even by 1927, a slight relative increase in

supplies from countries other than the United States, up to 1930 the U.S.A. still dominated the production position. Of the total mine production (metal content) in 1929, the United States was responsible for 48 per cent., while Chile, Canada and Africa accounted for 16 per cent., 6 per cent. and 8 per cent. respectively. The proportion of the world's smelter production of these countries was: United States, 52 per cent.; Chile, 15 per cent.; Canada, 3 per cent.; and Africa, 7 per cent. Comparative figures for the world's refinery production were: United States, 70 per cent.; Chile, 12 per cent.; Canada, 0.1 per cent.; and Africa, 1.1 per cent. In 1929 about 75 per cent. of the world's total production originated either in the United States or in mines located in Latin America under her direct control. In addition, the United States refined a very large proportion of the output of Canada and Africa. She was also the world's principal consumer of copper, her proportion of the world's consumption being 53 per cent., against 11 per cent. for Germany, 8 per cent. for Great Britain and 7 per cent. for France.

Before coming to more recent developments, it should be noted that the internal organisation of the copper industry had undergone far-reaching changes since the war. The discovery of the "flotation process" of concentrating finely milled ores of low grade led to the development of the great "Porphyry" deposits in the United States and to the formation of large horizontal combines. At the same time the great South American deposits passed under the control of Kennecott and Anaconda, the two leading United States producers. Horizontal combination was quickly followed by vertical integration, first by Anaconda and subsequently by Kennecott, the American Smelting and Refining Company, and later by Phelps Dodge. Anaconda acquired control of the American Brass Company, which is the largest copper manufacturing concern in the world. Kennecott acquired the Chase Companies, which are also very large copper manufacturers. In 1927 Anaconda and Kennecott together controlled nearly 40 per cent. of the world's total output of copper. The control of the copper industry had thus passed into the hands of a small number of very large concerns.

When the price of copper began to decline as a result of the development of excessive productive capacity, the large producers took advantage of their dominating position, and in October, 1926, an organisation was formed with the object of controlling prices and sales of copper to consumers in Europe, which meant, indirectly, to United States consumers as well. Copper Exporters, Inc., which comprised 90 per cent. of the world's capacity (including, apart from United States producers and refiners, their Latin-American subsidiaries, many Canadian mines, Katanga, and also most European concerns), began by restricting supplies in order to eliminate the price-fixing powers of the London Metal Exchange. From June, 1927, to April, 1929, the price of copper was raised from 12½ cents per lb. to 24 cents per lb. Shortly afterwards it declined to 18 cents per lb., and was held at that level for a whole year until April, 1930.

As was to be expected, this artificially high price stimulated production elsewhere, particularly in Northern Rhodesia, where the metal content of the deposits is very much higher than that of the large mines in the United States. Katanga, the Belgian-owned mine in the Congo, and Canada also increased their output steadily. As a result, the progressive shrinkage in the demand for this metal since the end of 1929 was not accompanied by a similar reduction in output. While stocks in North and South America increased to 525,000 tons at the end of 1930, prices declined rapidly to 10 cents per lb. Throughout 1931 prices continued to decline, reaching 6½ cents per lb. at the end of November. In December a slight recovery took place following a decision of the American Producers' Association to curtail their output to 26½ per cent. of capacity; and at December 30 the metal was quoted at 7½ cents per lb. Restriction had, however, come too late to be effective. Although the quantity of stocks held in North and South America has not been disclosed since September last year, a reliable estimate gives the stocks in the hands of producers at nearly 800,000 tons at the end of 1931, representing about 10 months' supply at the present rate of consumption. In

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK

LIMITED
41, LOTHBURY, LONDON, E.C.2

February this year prices again began to decline, and touched 5½ cents per lb. in New York on March 2. A further turn in the restriction screw to 20 per cent. of capacity on April 1 caused a rise in price to 6½ cents per lb., but within a fortnight the New York quotation had fallen back to 5½ cents per lb.

Until then, Copper Exporters, Inc., had preserved its existence by means of an amendment to its marketing rules permitting sellers to dispose of the metal to foreign consumers below the official price. But a new factor was introduced into the situation by the tariff clauses in this year's United States budget. In order to counteract the gradual shift of production from the high-cost producers in the United States to the low-cost concerns elsewhere, the United States Government imposed an import duty on the metal of 4 cents per lb. The effect was to throw the world's copper industry completely out of gear. On the one hand, producers outside the United States, deprived of a large potential demand, were faced with the necessity of reducing production still further. On the other hand, as was to be expected, the imposition of the duty led to the disruption of Copper Exporters, Inc. Four of the largest members, the International Nickel Company of Canada, the Chile Copper Company, the Cerro de Pasco Corporation, and Katanga, have already announced their decision to withdraw from the cartel. So far, the Producers' Association has remained intact, but it is believed that as soon as there is an attempt to throw overboard the large stocks existing in the United States, foreign producers will secede from the Association.

The immediate outlook for the industry is not hopeful. The existence of huge stocks in the United States will probably prevent a rise in prices despite the duty. The future for concerns outside the United States is even less bright owing to the increase in productive capacity relatively to demand as a result of the duty. Since the end of June prices have declined further, both in the United States and elsewhere, and unless some of the producers decide to shut down their mines, a recovery in prices appears to be very distant, although, as with other commodities, stocks in the hands of industrial consumers are at a minimum, and a fairly rapid reduction of the amounts overhanging the market might be expected if there were a definite industrial revival. Incidentally, an interesting development has been the formation in this country of a copper refining company under the title of British Copper Refiners, Ltd. Its initial output capacity will be 1,000 tons per week, but provision is being made for an enlargement of the plant as soon as circumstances permit. There is no doubt that as a result of the duty, additional refining capacity will be installed in other European countries and that the virtual monopoly of the United States will gradually pass out of her hands.

Notes of the Week.

The Prince and Ottawa.—The views of those who regard the Ottawa Conference as an opportunity for elaborating a restrictive Imperialistic system of trade barriers get no sympathy from the Prince of Wales, whose personal knowledge of the Empire as well as of the rest of the world is probably unsurpassed by that of any delegate to the Conference. The Prince, having caught a chill, was unable to deliver the speech that he had prepared for the Canadian Dominion Day dinner for Ottawa delegates last Thursday, but his brother, Prince George, read it for him. No country or group of countries, he said, could isolate itself from the fortunes of the rest. The case of the United States, the largest free trade area in the world, alone proved that. Canada and Australia needed a world market for their wheat; Australia, South Africa and New Zealand for wool; the United Kingdom for manufactures. It may be (the Prince added) that, taking a long view, the Empire will, by drawing closer together, become in time less dependent on the rest of the world, but such a change, if it is to come, must come gradually and by a natural process of evolution, guided but not forced by Government action. If the Government delegates needed reminding that the success of the Ottawa Conference (and the Prince declared that failure was unthinkable) will be measured by the extent to which it reduces tariff barriers and liberates trade, they have now had from the most experienced as well as the most exalted source a reminder which could hardly have been more clearly or more emphatically expressed.

The British Disarmament Plan.—The statement of the British Government on disarmament, made on Thursday by Mr Baldwin in the House of Commons, adds little that is new to the seemingly interminable international debate in which everyone speaks in favour of the motion but no one is prepared to vote for it. The Government, said Mr Baldwin, most cordially welcome President Hoover's declaration, between which and their own proposals there is a substantial area of common ground. They agree with Mr Hoover that the three problems of military, naval and air disarmament are essentially inter-connected; and, as regards land and air forces, the American and British proposals differ only slightly—notably in the particular of the desirability, according to the British Government, of retaining tanks weighing less than 20 tons, which "cannot be regarded as specifically offensive weapons." But as regards navies the proposals differ considerably. Instead of cutting numbers and total tonnage of battleships by one-third (i.e., by 175,000 tons) the British Government propose to limit armament to 11-inch guns and individual tonnage to 22,000 tons, which would ultimately "save" 195,000 tons. This is plausible enough, but it means no saving at all until 1937, and then possibly merely concentration of competition and expense on speed and equipment. If we cannot assent to the abolition of the battleship, we must associate reduction in numbers with the cut in size. In the cruiser class the difference is similar, for the British plan is merely to reduce the maximum size and armament to 7,000 tons and 6.1-inch guns—indeed, this is apparently to be made a condition of the reduction of the size of capital ships below 25,000 tons. Now just as it is true that our special needs demand the retention of a considerable cruiser fleet—we see no reason why there should not be a naval, as well as a military, "police component"—so it is equally true that the United States need large cruisers with high steaming range; and until we offer some compromise on the point we shall be wrecking the Geneva Conference on the same rock as that which sank the Coolidge Naval Conference in 1927. The British Government continues, rightly in our view, to press for the abolition of the submarine, upon which it would make contingent the reduction of destroyer tonnage by one-third; it proposes that if that cannot be accomplished, then the surface displacement of submarines should be fixed at 250 tons—but in that event would we, or would we not, be prepared to cut destroyer tonnage at all? At this moment the world

demands of Great Britain a clear, a bold and a generous disarmament policy; and on all three counts it has been disappointed.

Progress in Conversion.—Present indications disclose a highly favourable proportion of assents to the terms of conversion by holders of 5 per Cent. War Loan. Among large converters may be noticed the clearing banks, several large insurance companies, and many leading industrial concerns. The directors of International Tea made a fine gesture by investing £500,000 new money in 5 per Cent. War Loan with the object of converting. One important development of the week was the intimation of the authorities to the discount market that they disapproved of non-assented War Loan being used as a short bill—a question discussed more fully in our Money Market Notes. Meanwhile, several points of interest to War Loan holders have been cleared up. In the House of Commons Mr Baldwin stated that the bonus of £1 per cent. which is payable to those who give notice of conversion before July 31st will be accountable as income and not as capital. Trustees will not therefore be obliged to reinvest the proceeds of the bonus, but can pass it on to the beneficiaries. Moreover, the bonus money will be tax free. In reply to another question, Mr Baldwin stated that holders of the new 3½ per cent. War Loan will be chargeable to income tax for 1933-34 upon the amount of their dividends for that year and not by reference to the dividends for 1932-33 upon their corresponding holdings of 5 per cent. War Loan. It is obviously still too soon to attempt to assess the degree with which this impressive conversion operation, whose bearing on investment factors we examine in a leading article in our Stock Exchange section, will common the assent of holders; but an encouraging start has been made. In these times of uncertainty, he would be a rash prophet who was prepared to guarantee that the rate of interest on riskless lending can be held down in the long run to a 3½ per cent. basis; but from the standpoint of the national advantage the case for contributing to the complete success of an operation calculated to afford substantial relief to the Budget, and ultimately to facilitate the lowering of fixed charges on industry, should be convincing.

A Wet President?—By 945 votes to 190½ the Democratic Convention elected Mr Franklin Roosevelt as presidential candidate at the fourth ballot on Saturday. This result was achieved by the transference to Mr Roosevelt of the votes previously cast for Mr John Garner, Speaker of the House of Representatives, who was chosen as candidate for the vice-presidency. Whether the nomination of Mr Garner to run with Mr Roosevelt was the only concession required by the Hearst interests, who were strongly supporting the former's candidature, may never emerge. There have been, as always when a party convention in the United States is narrowly divided, unsavoury rumours of bargains and subterfuges, most of which can doubtless be dismissed as mere gossip, but which will do Mr Roosevelt no good in the country. The greatest obstacle that he has to overcome, however, outside genuine political and party issues, is the opposition of Tammany Hall, whose nominee, ex-Governor "Al" Smith, received such a humiliating defeat at Chicago. Mr Smith himself has since formally aligned himself with the Democratic campaign, without reference to the personality of the candidate, but Tammany is implacable in its resentment towards Mr Roosevelt, who is popularly associated with the Seabury investigation, which has recently exposed an appalling condition of corruption and public malfeasance in New York. As for policy, the Democratic aspirant to the White House may be counted a "low-tariff man." After his nomination he described the Smoot-Hawley tariff as a barbed-wire entanglement, adding: "We have invited and we have received the retaliation of the nations. I propose an invitation to them to forget the past, to sit at a table with us as friends, and to plan with us for the restoration of the trade of the world." So far, so good; though whether these fine principles can emerge unscathed from the factional bargaining and log-

rolling that accompany the construction of an American tariff remains to be tested by experience. It is unlikely that the election will be fought on the tariff issue, in spite of the prominence given to it in the Democratic programme; for the Democrats have "gone wet," and with that question to consider the citizens of the United States are unlikely to be distracted by matters so much further from home. Everything points to the presidential campaign turning on the repeal of the Eighteenth Amendment, and so powerful is the feeling, even among former "Drys," that prohibition has multiplied corruption and crime that, in spite of hesitations in the South and the hostility of "bootleggers" organised ecclesiastical forces, the "Wet" plank is, of all the material in the Democratic platform, the most likely perhaps to win them victory. But that victory is far from assured.

French Finance and Monsieur Herriot.—A detailed account will be found in our Paris correspondent's despatch this week of the budget problems confronting France and of the proposals on which M. Herriot's Government came to loggerheads with the Finance Committee of the Chamber. From the political point of view, the situation which our correspondent describes involves many elements of regrettable uncertainty, but there appears to be a prospect of some accommodation being reached which will avoid a fresh crisis in Paris or the reconstruction of the Government. Negotiations between M. Palmade, the Budget Minister, and the Finance Committee have been continuing this week, and though it may be that reluctance on the part of deputies of the Left to assent to unpalatable forms of retrenchment in regard to *fonctionnaires* and pensioners will result in a considerable modification of the Government's original proposals, there appear to be signs of general recognition that the budget must be balanced and the present weekly deficit of some £2 millions definitely stopped. It would be a bitter irony of Fate if France once again were to be disappointed of a desire which she has more than once vainly entertained since the war—to have an Administration which is liberal in its foreign policy yet sound in its treatment of domestic finance.

Change and No-change in Yugoslavia.—Dr. Mariukovich's Cabinet resigned at Belgrade on June 30th, and a new Ministry was formed by Dr. Serskhich two days later. The change of Government was forced by a majority in the present Chamber—a so-called parliament, which represents, not the people of Yugoslavia, but the dominant Serb minority—and the new Ministers' mandate is not to change, but to accentuate the present policy of forcible "Serbisation." Presumably they are apt instruments for the task, since most of them appear to be nonentities, while the new Prime Minister himself, being a Bosnian Serb who started his political career as an irredentist under Austro-Hungarian sovereignty, may safely be credited with the zeal of the fanatic. The policy which is thus to be prosecuted with increased vigour is to standardise Yugoslavia and the Yugoslavs on a Serb pattern. Free parliamentary institutions are in abeyance; and, under what is virtually a Serb military dictatorship, the old regional political parties are banned and the historic geographical boundaries of provinces are effaced by a redistribution of the country into artificial departments which are deliberately made to cut across the old lines. This, of course, is a leaf taken out of the log-book of the French Revolution; but the implied analogy between twentieth-century Yugoslavia and eighteenth-century France is false, and therefore dangerous. By the time when the territory of France was redistributed into the present French departments, the mind of the French people had long been ripe for closer national union. The internal unification of France at the turn of the eighteenth and nineteenth centuries had hundreds of years of preparatory history behind it. There is no such intellectual and emotional background to-day for a unified Yugoslavia. Until 1918 the present territory of this post-war successor-State of the Hapsburgs and Osmanlis had been divided—ever since the break-up of the Roman Empire—by fron-

tiers which separated not only different States and different peoples, but different civilisations. The problem of Yugoslav unification to-day is thus vastly more difficult than that of Italian unification in the nineteenth century. Moreover, Italian unification proceeded from the most civilised end of Italy, which asserted its ascendancy over the backward toe and heel, whereas the Serbs are semi-barbarians by comparison with the Croats, who are now having Yugoslav unity forced upon them by Serbian hands. These orthodox Christian Serbs may still be able to hold down the Catholic Croats and the Muslim Bosniaks by sheer force for some time to come; but the eventual effect of this policy will be just the opposite to what the Serbs themselves desire; and, if they persist in it, the price of their error, in the long run, will assuredly be the dissolution of Yugoslavia into its original component parts. If the Serbs want a safe model to follow in their relations with the Croats, they should look into the terms on which Scotland has been united with England since 1707.

Marking Time in Manchuria.—Last Friday a special meeting of the Assembly of the League of Nations was held in Geneva to consider the present state of the Sino-Japanese dispute; and it was simply decided to extend the constitutional period of six months (due to expire on August 19th) within which a report on the dispute ought to be made by the League Council. No fresh time-limit was fixed—though a hope was expressed that the Assembly's Standing Committee of Nineteen might be in a position to begin its examination of the forthcoming report from the Commission of Inquiry not later than November 1st. The Commission has already finished its field-work in Manchuria, and is now paying its final visits to Japan and China before digesting and setting forth the results of its observations. Everyone knows that a report of this scale and importance and delicacy cannot be produced in a hurry. None the less, we agree with, and endorse, the points which were made at Geneva on this occasion by the Chinese delegate, Dr. Yen, when he appealed for the greatest possible expedition in reaching some decision and taking some action. His points were that Japan is taking advantage of the long delay in order to create a *fait accompli*; and that, although little is being heard of the fighting that is now going on in the remote north-eastern parts of Manchuria, it is bringing death—and this upon civilians as well as combatants—no less surely than the fighting which took place a few months ago, in the full glare of publicity, on the outskirts of Shanghai. Mr Yen also pointed out that a region which used to be the granary of China is now fast going out of cultivation. All these points are cogent. As regards the *fait accompli*, the seizure of the China Maritime Customs office at Dairen by the officials of the puppet Manchukuo Government, with Japanese connivance and support, has now been followed up by high-handed seizures at Harbin, at Antung on the frontier between Chinese territory and Korea, and at Manchuli, where the Chinese Eastern Railway meets

the Trans-Siberian Railway on the Sino-Russian frontier. Meanwhile, in North-Eastern Manchuria the Japanese troops, with their doubtful Manchukuo auxiliaries, are confined to the railways and navigable rivers, while the open country is in the hands of their opponents. The frost-covered highlands of Kirin Province, east of Ninguta, are in the hands of local Chinese guerrillas, while, in the plains north of the Sungari, General Ma, with his mounted troops, is eluding pursuit. These are not the conditions in which Manchuria can be developed economically—either by the Japanese or by anybody else.

Turkey and the League.—At a time when the League has been weakened by loss of blood from the stab in the back which it has received from Japan—an original member who has never ceased to protest her devotion—there is some comfort in the prospect that the League's strength may be recruited by the adhesion of Turkey, another Oriental country which, unlike Japan, has hitherto kept outside the League and has never sought to conceal its suspicion of what the League stands for. (There is more than a reminiscence, here, of the Parable of the Two Sons). Turkey's motives for holding aloof from the League hitherto are not, after all, far to seek. To begin with, she regarded the League with suspicion for the same reason for which Germany once took the same view—on the ground that the League had begun life as an enlargement of the circle of Allied and Associated Powers who had been Turkey's enemies, as well as Germany's, during the war. After that, Turkey was turned against the League—perhaps not reasonably, but also, perhaps, not unnaturally—by the terms of the League Council's decision in the Mosul dispute between Turkey of the one part and Great Britain and Iraq of the other. And finally Turkey (again like Germany) finds herself placed, by an awkward accident of geography, between the Western world and Russia; and she could not afford to make friends with the West at the price of alienating her formidable Muscovite neighbours, with whom she is constrained, whatever happens, to live on reasonably good terms. It now appears that these obstacles, which have deterred Turkey so long from joining the League, have at last been overcome; and on July 1st it proved possible for the League Assembly to place the admission of Turkey upon its agenda. An invitation, emanating from twenty-eight States-members, was read by the Spanish representative, Señor Maderiaga; and a special advocacy of Turkey's claim to admission was made thereafter by the Greek Minister for Foreign Affairs, M. Michalakopoulos. The recent reconciliation between Turkey and Greece (in which M. Michalakopoulos himself has played an active personal part) is to the credit of both Greek and Turkish statesmanship, and it is also the best of reasons for letting Turkey in; for the establishment of this Græco-Turkish *entente* is a solid guarantee that Turkey's weight will be thrown on the side of peace. On this precedent, League Members might well make up their minds forthwith that, supposing Japan executes her threat to resign her membership, they will leave the question of her readmission in abeyance until the day comes when it is proposed by the representative of China.

British Industry and the Imperial Conference.—The Federation of British Industries and the General Council of the Trades Union Congress, whose joint memorandum prepared for the 1930 Imperial Conference still forms the most important statement of the case for constructing permanent machinery of economic co-operation within the Commonwealth, have sent to the Government a further manifesto designed to give the views of British industry as a whole on the problems of Ottawa. As a joint expression of opinion by the accredited representatives of capital and labour it is remarkable in itself; but still more striking is its insistence on the world-wide character of those problems. "In our view," they write, "it would be fatal to approach the Ottawa Conference in any narrow spirit, or with an objective limited to inter-Commonwealth preferences. . . . We should wish to see

the Ottawa Conference endeavour to give a lead, both by its declarations and by its actions, towards an ultimate all-round relaxation of restrictions on trade. As a first step everything possible should be done to facilitate the easy exchange of goods between the different nations of the Commonwealth. In the second place, we hope the decisions of the Ottawa Conference will be such as to facilitate international action designed to bring about a recovery in the level of wholesale prices." What is suggested is the organisation of a sterling area in which there could be greater stability of prices coupled with freer trade. "If an agreement on these lines were reached we should then be glad to invite other nations seeking a similar objective to join with us in enlarging the area over which price stability and freedom of exchange would operate." Finally, the statement urges the development of complementary production, in the belief that the unco-ordinated development of a great variety of industries in all parts of the Commonwealth has already led to the establishment of certain enterprises on an economic basis. The statement, which is signed by Sir George Beharrell, Mr Guy Locock, Mr John Bromley and Mr Walter Citrine, is necessarily couched in general terms, but its purport is unmistakable, and amid the welter of special interests with which the Government delegation will be surrounded at Ottawa they will do well to heed its warnings.

Empire Monetary Policy.—A strong warning against ill-considered manipulation of the currency and credit of the Empire as a result of the Ottawa Conference is contained in this month's *Barclay's Bank Monthly Review*. The author of the article points out that public confidence is the first essential of a monetary system, and that, with memories of post-war inflations still so vivid, "as a permanent arrangement there is no practical alternative to a currency having a metallic basis." The breakdown of the gold standard was due not so much to its inherent defects as to the influence of extraneous factors. Again, "a great Empire should have a strong and powerful financial centre," capable of lending abroad and of influencing world monetary and commercial conditions. The strengthening of the position of this country must thus first be achieved before a new monetary plan for the Empire can be launched. Just as the Ottawa Conference must avoid the erection of any additional hindrances to trade with other countries, and "set an example in the promotion of freer trade," so "until a common standard is again established, to which all the leading nations are prepared to link their own systems, trade must continue to be conducted under a serious handicap." The writer urges, therefore, that we should continue without material change our monetary system as it is now working. To this statement of "sound banking" views, we would add one comment: a premature return to the gold standard, at whatever level of exchange, would be as great a disaster as the premature construction of any permanent non-metallic system. A settlement of the reparations and war debts questions, general political appeasement, and some move towards closer world economic co-operation, are the indispensable conditions of either course of action.

German Standstill Negotiations.—The first of the quarterly conferences, which has been held this week under the chairmanship of Mr. Wiggin, in accordance with the terms of the 1932 Agreement, between delegates from the various Creditor Committees and from the German *Stillhalte* Committee appears to have been characterised by an attitude of goodwill among the majority of the creditors; but, with political settlement at Lausanne still to be achieved, it was obviously impossible to make much progress with the major problems which have one day to be faced. The official *communiqué* issued at the end of the Conference stated that "there were still due to creditors in certain countries preferential rights to moderate amounts to complete the reduction of 10 per cent. which began on March 15th. In agreement with the German delegates,

arrangements were made which will assure completion of these reductions. At least one-third of the amount is available immediately. The greater part will have been provided by October 1st and the balance by the end of the year." The difficulty which had to be resolved in this connection lay in the fact that, whereas the original Standstill Agreement precluded cash repayments and contemplated simply a reduction of "credit lines," some debtors had drawn up to the full extent on their open credits, so that the 10 per cent. reduction could not take place without cash transfers. The amount involved is believed to be about £1,000,000 gold, and we understand that the situation will be adjusted either by cash repayment or by agreement on the part of the German Committee to transfers of "non-availed" credits between debtors. As for the question of a further reduction in outstanding credits, the Conference agreed to postpone consideration until the next meeting on October 1st. In connection with the interest rates on the German credits, the German Committee is believed to have asked for a uniform level of 5 per cent. on cash advances. The *communiqué* announced that, in view of the general cheapening of money, and in order to give the benefit of this to German economy as well as to make sure that all creditors received uniform treatment, it was agreed that the delegates should recommend to their committees in the respective countries a lower schedule of interest rates. While there would probably be no strong opposition in London to the rate being reduced from the present figure of 6 per cent. to 5 per cent., it remains to be seen whether other centres will be prepared to fall into line.

More Tariffs.—Further recommendations of the Import Duties Advisory Committee have just been issued as a White Paper.* They relate chiefly to the prolongation of the additional duty of 23½ per cent. *ad valorem* (making 33½ per cent. in all) imposed in April for a period of three months on a wide range of iron and steel products. Meanwhile a national committee, with area and sectional sub-committees, has been appointed to prepare a scheme of reorganisation of the industry, to operate under the protection of the permanent tariff that has been promised. It is now proposed to renew the temporary duty, fortunately not indefinitely, but for a further period of three months, "so that the whole position may automatically come under review in the early autumn." The only amendment is the exception from additional duty of band-saw steel strip more than 4 inches wide and from 19 to 12 gauge (Birmingham wire) in thickness, which is not manufactured in this country. The Committee append recommendations for new duties on safety-razor blades and blanks and on transparent cellulose wrapping. The former class was subject to a safeguarding duty, which has now lapsed, and lately, according to the Committee, foreign competition has become very keen in the cheaper types of blades. They propose, in addition to the existing rate of 20 per cent., a specific duty of 2s. a gross, which should not, they believe, result in any increase of the retail prices of British blades, since for a blade sold wholesale at ½d. each the public has in some cases to pay 1½d. each, with equally great distributive margins on the better-class blades. Plainly, there is more to be done for the British industry by means of lowering distribution costs than by means of protective duties. It should be observed that on the cheap blades, against which the duty is explicitly directed, the total duty may work out at 70 per cent. *ad valorem*, and even more on blanks. The Committee "do not contemplate recommending any alteration in the rate of duty now proposed for a period of five years"—a wholly objectionable attitude which appears to imply a desire to "plant" permanent high protection on this country. They recommend further that transparent cellulose wrapping should be brought on the 20 per cent. list, being satisfied that home production can be rapidly extended. We have often repeated our opposition to taxing wrapping paper, which is an important raw material of commerce, and our arguments remain valid.

Cotton Trade Affairs.—During the past week, writes our Manchester correspondent, there has not been any particular development in connection with the wage crisis in the weaving branch of the Lancashire cotton industry. On Tuesday last separate meetings were held of the employers' and the trade union committees, but neither side made any move towards a joint conference. The employers have made it a condition of another joint meeting that it should begin on the understanding that a wage reduction is necessary, and the leaders of the operatives refuse to begin negotiations until this condition is withdrawn. The employers are also very determined that no discussions shall take place until the negotiating committee appointed by the workpeople shall have received full powers to negotiate a final settlement without the terms being submitted to the larger organisations. The employers are not at all concerned at the deadlock, as gradually more of their members are securing wage concessions from the operatives, and undoubtedly there is every appearance of the trade unions losing further ground if the present policy of drift is maintained. In the meantime, however, favourable trade developments are undoubtedly being held back owing to buyers withholding orders until a definite wage settlement has been reached. It has become known this week that the scheme for regulating production in the Egyptian spinning section has had to be abandoned. The proposals which were announced about a month ago provided for the limitation of output and for a fund to be created from penalties from those spinners working their mills in excess of the determined quota. Those spinners not able to run machinery equal to the amount permitted would receive payments from the fund. It was expected that this scheme would keep production down to the demand and thus prevent the acceptance of prices much below costs. It is now reported that although all the big combines in the fine spinning trade have been prepared to accept the scheme, a few firms have refused to come into line. In the circumstances, the committee has concluded that it would be unfair to create a state of affairs in which a small minority could benefit at the expense of a majority of the spinning employers affected. This is another instance of the failure of the Lancashire trade to devise any scheme to ease the depression.

Canada and the Cotton Trade.—A vivid, and none too pleasing, light has been thrown on the prospects of the Ottawa Conference by the report presented to His Majesty's Government by the delegation which recently visited Canada on behalf of the Lancashire cotton industry. After a fortnight spent in consulting with representatives of the Canadian cotton manufacturers and of the Government, and in visiting factories, the result—already briefly noted in an earlier issue of the *Economist*—was that they were no nearer than when they arrived towards deflecting the Canadian manufacturers from their view that the present tariff levels were the minimum necessary, and that the complexities of which the British cotton trade complains were an essential feature of the protective system which Canadian interests required. The British delegation presented a case for such a reduction of the Canadian tariff as would assure to Lancashire a major share of Canadian imports of cotton cloth, which they assessed at 125 million yards, against a domestic produc-

tion of 275 million yards. Having concluded that a tariff of 7½ to 8 per cent. would be adequate to meet the differences between the two industries so far as labour costs were concerned, they put forward a plan involving a list of goods to be admitted free of duty and a second list of categories to be admitted from the United Kingdom at duties ranging from 5 to 17½ per cent., with duties against foreign goods higher by 25 per cent., *ad valorem* in each case. They advocated the radical simplification of the Canadian tariff by the substitution of single *ad valorem* rates for the present combination of *ad valorem* duty, currency dumping duty, rates tax, special excise tax and a system of discretionary valuation by appraisal. They argued that a prosperous consuming market like Canada requires a varied supply of fabrics quite beyond the range of home production, and the high and complicated duties, even combined with preference, gave a great advantage to United States manufacturers, who could deliver from hand to mouth and who were responsible for most of the competition and price-cutting that the Canadian industry feared. But the Canadian representatives remained obdurate; "the only measures which they in any way contemplated as a means of securing a more satisfactory share of the trade for the United Kingdom were tariff adjustments and increases devised with a view to erecting further barriers against foreign importations." One suspects, however, that their reluctance to consent to the British group's candid *exposé*, and their objection to a simple *ad valorem* duty which would leave no doubt as to the measure of protection existing, indicate some lack of confidence in the support of public opinion. The report notes, too, that the distributive trades and the garment manufacturing industry (which collectively employs a far larger volume of labour than the cotton manufacturers) are becoming increasingly active in favour of lower cotton duties. Where does the Bennett Government stand in the matter? No doubt the delegation communicated privately with the British Government on that point. The speeches of Mr Stevens, the Minister of Commerce, and the well-known fact that the Conservative leaders are closely in touch with Eastern industrialists, especially the textile trades, do not encourage an optimistic view. Let us hope that Mr Baldwin and his colleagues will hold strongly at Ottawa to the proposition now put forward by the cotton delegation, "that nothing short of a reduction in tariff levels in the Canadian market will offer us the volume of trade which the chief industries of the United Kingdom are entitled to look for under Imperial Preference in return for the risks they will undoubtedly run in their foreign markets and the higher costs of living which may be unavoidable in more normal times." The case, thus stated, is well put; but, as further illustration of the complexities of the Canadian problem at Ottawa, we commend especially to our readers' notice the informative letter from a correspondent which we print on p. 76 of this issue.

Unemployment and Working Hours.—The contention in trade union circles that unemployment, in so far as it may be caused by industrial reorganisation and mechanisation, should be countered by a reduction of working time has long been familiar. In the past two weeks this general contention has been expressed in concrete and precise demands. The annual conference of the Engineering Union instructed the Executive to submit to the employers a claim for a 40-hour week, and the President of the National Union of Railwaymen, in his opening address at the annual conference of that body, suggested that the immediate objective of the union should be a 36-hour week. It is not surprising that in circumstances which must induce a feeling of desperation in the minds of many workers their thoughts should be concentrated on a shorter working week as a device for spreading the available employment among a larger number of workers. In virtually all the discussions on the subject, however, the condition is either implicit or openly stated that the level of former earnings must not be lowered. Now there may be cases, as experience in America has shown, where economies due to reorganisation or the installation of labour-saving plant are so great that hours may be reduced

in particular establishments without a corresponding fall in earnings, but for trade union leaders to countenance the belief that this can be done throughout an industry in existing circumstances in this country is highly dangerous from the point of view of the workers themselves. The causes of the present abnormal employment are varied and intricate. No one can estimate even approximately the extent to which labour displacement may be the consequence of reorganisation; but, whatever the proportion may be, it is certainly small compared with the unemployment arising from foreign competition, the effects of the world slump, and other causes. In a "capitalist" economy these factors could only be accentuated by the higher costs which would be unavoidable if hours were reduced without equivalent adjustments in earnings, and the outcome would be a still further extension, rather than a diminution, of unemployment.

Conditions in Germany.—The semi-annual report of the Reichskreditgesellschaft contains, as usual, a remarkable collection of statistics illustrative of industrial, financial and commercial developments in Germany and abroad during the half-year just completed. The statistics show a certain similarity as between Germany and the United States, which have experienced almost equal percentage reductions, between 1929 and 1932, in production, foreign trade and stock exchange values, whereas the corresponding curves for Sweden and England are much flatter. During the early months of 1932 the German index of production rose from 52.9 (1928=100) in January to 59.2 in May, but this compares with an average of 74.9 in the second quarter of 1931. The industrial consumption of electricity (1925-26=100), which was 105.5 in the first quarter of last year, fell to 88.1 in the first quarter of 1932. The volume of goods carried by the Reichsbahn fell in the same period from 24.1 to 18.7 million tons, and the percentage of trade unionists fully employed (1929=100) from 71.8 to 58.7. Merchandise imports were Rm. 351 millions in May, against a monthly average of 415 millions in the first quarter of 1932 and 640 millions in the first quarter of 1931; the corresponding figures for exports were Rm. 447, 535 and 807 millions. The export surplus rose to 96 millions in May, after having fallen from an average of 334 millions in the third quarter of last year to 54 millions in April, 1932. While the wholesale price index (1913=100) had fallen to 97.2 in May, the cost of living (1913-14=100) was still 121.1. Hourly tariff wages, which first fell below the 1928 average in December last, remained stationary at 89.6 per cent. of that level during the first quarter of this year. Savings bank deposits have been falling since February, new capital issues are practically at a standstill, and, in spite of reductions in the Reichsbank discount rate and in call money rates, short-term money is still three times as dear in Germany as in London, New York or Paris.

The Shipping Industry and Ottawa.—The report on shipping policy, presented by the committee appointed last January by the Chamber of Shipping of the United Kingdom, and adopted by the Council at their last meeting, will be welcomed by all who are anxious that the result of the Ottawa Conference should not be the imposition of further stifling restrictions upon an already half-strangled system of world trade. The essence of the report is its recommendations that "the British shipping industry, in the interests of this country and of the Empire, should adhere to the policy of freedom of the seas, on a footing of equality for all ships, under all flags, in all parts, in all international and in all inter-Empire trades." In particular the committee, with a small dissentient minority, declares that the need for equal treatment applies with equal force to the United Kingdom coasting trade, and expresses itself not in favour of the reservation of that trade to British ships. According to the statement prepared by the committee, British inter-Imperial trade in 1929 represented 15 per cent. of the total seaborne trade of the world and trade between the British Empire and foreign countries a further 39 per cent. In the same year, British shipping carried about 43 per cent. of the world's

total international trade, including nine-tenths of the inter-Imperial trade, three-fifths of the trade between the Empire and foreign countries, and about a quarter of the trade between foreign countries. Thus the proportion of the British shipping trade which would be subject to retaliation by foreign countries is very high, and this possibility far outweighs the possible advantage of reserving the coastal trade. Similarly, the committee is opposed to any attempt to reserve the inter-Empire carrying trade to British ships: "the benefits to be obtained by reserving that trade to British ships are small, but if such a reservation were made it would no doubt be regarded as the concession of a valuable monopoly in return for which the Governments of the Empire would seek to impose, in the interests of their import and export trades, conditions on British ships, the burden of which would far outweigh the value of the benefits actually conferred." The committee strongly emphasises the fact that the vital need is for the restoration of world trade and that the most important task before the Empire is to give a lead in that direction. In addition, it urges the importance of the adoption and enforcement by all nations of the various international conventions relating to shipping, and the formulation of schemes for the gradual elimination of redundant tonnage. If the same courage and sense of proportion which the shipping industry has shown in adopting this report could be expected from all the interests to be represented at Ottawa, the prospects of the Conference would be considerably brightened.

The Situation in Iraq.—As the Arab State of Iraq approaches the momentous transition from British tutelage to full *de facto* as well as *de jure* independence, certain problems which have been always present in the background are coming to the front and coming into focus; and the greatest of these problems is the question of the non-Arab minorities. Apart from the inevitable elements in the chief commercial centres, and the Persian element in the Shi'i holy cities, there is one large non-Arab element—the Kurdish element—which occupies a compact, mountainous and inaccessible territory of its own; and there are also the Assyrian Nestorian Christians, who came from the Kurds' own mountains. Southern Kurdistan was deliberately incorporated in the 'Iraq, at the instance of the British Government, in the outcome of the long and stubborn controversy over the frontier between Iraq and Turkey which was the last point to be disposed of in the Middle Eastern peace settlement. At the moment, the Southern Kurds acquiesced in the League of Nations Council's decision to attach their country to Iraq; for this relieved them of the unpleasant alternative of a Turkish reoccupation; and the League award was explicitly made conditional upon the safeguarding of the Kurds' national individuality and upon a prolongation of the British mandate—or mandatory responsibility—for twenty-five years, unless this regime were to terminate at some earlier date through the admission of Iraq herself to League membership. Now that this latter contingency is on the point of being realised, the 'Iraqi Kurds are becoming more and more restive. For, although the Arab Government at Baghdad has given them assurances (doubtless in good faith) that the existing arrangements for the local official use of the Kurdish language and for the maintenance of local self-government will be respected, the Kurds have always regarded the British tutelage over Iraq as the substantial guarantee for the rights which the League Council stipulated that they should enjoy; and they are unwilling to see the British connection terminate. This incipient anti-Arab national movement in Southern Kurdistan obviously threatens to increase the 'Iraq Government's difficulties in dealing with disorderly highland chieftains of the traditional type, such as the Sheykh of Barzan. Although this latter disturber of the peace was driven across the frontier and was thereafter compelled to surrender to the Turkish authorities last month, the 'Iraqi Army does not appear to have acquitted

itself very creditably in these operations, in which the heat and burden of the day appears to have been borne by the British Air Force. Moreover, this Kurdish chieftain has no sooner been disposed of than the British authorities in Iraq have found themselves in difficulties with the Assyrian levies—a force which is in the service of the British and not in that of the 'Iraqi Government. Ever since the termination of the British tutelage over Iraq became imminent, the Assyrians have been threatening to emigrate *en masse* from that country—where they have been settled, on British initiative and under British auspices, in compensation for the loss of their former homes in the mountains, which have been left on the Turkish side of the new Turco-Iraqi frontier. The Assyrian levies in British service in Iraq have now refused to re-enlist, and a British battalion has had to be rushed to Iraq from Egypt by air in order to take their place. Presumably the Assyrians intend to emigrate to Syria and to offer their services to the French. These minority problems in Iraq are not to be taken lightly.

Shipping Freight Index.—Partly in conformity with seasonal trend and partly as a reflection of an accentuated glut of tonnage pressing on markets whose demand grows more and more restricted, whole-cargo shipping freights in June registered a further substantial decline. Our index number shows a fall on the month of 5.3 per cent., and is now 8.4 per cent. lower than a year ago:—

AVERAGE 1898-1913=100.					
	Average, 1913.	June, 1931.	April, 1932.	May, 1932.	June, 1932.
European Waters	110.0	82.4	86.1	86.3	83.3
North America	113.1	89.6	91.7	89.6	87.4
South America	123.4	89.8	86.0	81.6	77.1
India	106.3	91.8	90.8	93.5	93.1
Far East and Pacific	117.4	93.0	99.3	88.8	82.3
Australia	127.9	98.8	96.1	88.1	76.6
Total	116.3	90.9	91.7	88.0	83.3

Outward coal freights for Mediterranean discharge were still relatively steady, and poor homeward prospects led to a slight stiffening of outward freights to South America and India. In the home trade and to near Continental ports, however, quotations generally declined. In the homeward markets the weakness of grain prices was reflected in an appreciable reduction in the volume of chartering. Business from North America, so far as tramp tonnage was concerned, was very meagre; and though a fair number of vessels were absorbed for Plate loading, the quantity of available tonnage in Argentine waters was so excessive that freights to Europe fell heavily. Similar weakness characterised the Australian and Far Eastern markets. Movements of the various sections of our index number are shown in detail below:—

AVERAGE 1898-1913=100.					
	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	71.3	- 2.5	South America—outwards	67.3	+ 2.1
Bay—outwards	99.1	- 1.8	South America—homewards	86.8	- 11.7
Bay—homewards	82.3	- 9.6	India—outwards	88.4	+ 4.2
Mediterranean—outwards	89.5	+ 0.1	India—homewards	97.7	- 5.0
Mediterranean—homewards	86.6	- 1.6	Far East, &c.	82.3	- 6.5
North America	87.4	- 2.2	Australia	76.6	- 11.1

Expressed as a percentage of the average for 1913, the total figure of our index number for June works out at 71.6, compared with 75.6 in May and 78.1 a year ago.

The 1930 Census of Production.—Volume XIII. of the preliminary reports of the 1930 Census of Production, published in a recent issue of the *Board of Trade Journal*, covers the mechanical engineering trades. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other

firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
	Thous. £.	Thous. £.	Thous. £.	Thous. £.	£	£
Agricultural machinery	3,249	3,203	1,926	2,011	185	183
Locomotives, engines, boilers ..	29,505	19,484	15,340	11,111	193	211
Machine tools	2,958	6,139	1,842	3,272	186	178
Marine machinery	21,015	23,354	10,015	10,945	164	190
Printing and bookbinding machinery ..	2,383	3,627	1,726	2,858	233	281
Textile machinery	18,570	11,833	11,159	7,285	185	151
Other engineering*	74,687	90,960	42,355	50,730	213	219
Total	152,367	158,600	84,363	88,213	197	205

* Excluding motor vehicles, cycles, aircraft, railway carriages and wagons.

The returns reveal a slight but definite expansion in the industry as a whole between the two census years. The average number of persons employed rose from 427,289 to 429,790, and the net output per employee, at £205, records an advance of £8. As was to be expected, this expansion has not been uniform. The textile machinery branch of engineering shows an appreciable decrease in net output, and in the locomotives, engines, boilers, and boilerhouse plant section, the net output also reveals a heavy decline. The advance was most pronounced in the miscellaneous group, of which constructional engineering forms the chief item.

Vital Statistics 1930.—The outstanding feature of the final report of the Registrar-General for 1930 is the decline of 14 per cent. on the previous year in the number of deaths registered in England and Wales. The death-rate, at 11.4 per thousand, was the lowest on record, and compares with 13.4 in 1929. The rate of infant mortality, at 60 per thousand live births—still much too high a figure—was 14 per cent. below that of the previous year and 5 per thousand less than the previously lowest rate recorded in 1928. The birth-rate, at 16.3 per thousand of the population, was the same as in 1929. The downward trend in the birth-rate, so marked since the war, was therefore temporarily arrested. According to more recent information, it is clear that a further decline is to be anticipated in 1931. In the view of the Registrar-General, the element of personal control over reproduction accounts for the great decline in the birth-rate during recent years. The total number of live births and deaths amounted to 648,811 and 455,427 respectively. The “natural increase” in the population was therefore 193,384, against 111,181 in 1929.

Another German Reorganisation.—Recent days, writes our Berlin correspondent, have seen the conclusion of the financial reconstruction of another large mining organisation, the Ewald Mining Company. This company caused great surprise last autumn by its announcement that its short-term debts, together with those of its subsidiary, the König Ludwig Mining Company, amounted to about Rm. 90 millions, of which 70 millions were bank credits. Its principal creditors were the Deutsche Bank and the banking house of Simon Hirschland in Essen. The debts were primarily due to excessive capital expenditure, both on the exploitation of collieries and on the construction of a nitrate factory. It was intended to consolidate the debts by means of a large foreign loan, but meanwhile there supervened not only the crisis in the international capital market, but also the particular crisis in the nitrate industry, which made the new plant unprofitable. The position is now to be rectified by turning the Ewald Mining Company into a joint-stock company with a capital of 16 million marks. Of this 10 millions will be allocated to the bank creditors, 4½ millions exchanged for old Ewald shares in the proportion of one old share to Rm. 1,500 new Ewald shares, and the remaining 1½ millions exchanged for the 500 König Ludwig shares which are still held by the public. The remaining 2,500 König Ludwig shares are still held by Ewald, which holds the König Ludwig mines on a thirty years' lease. This arrangement leaves Ewald still with about 42 millions of debt and König Ludwig with more

than 33 millions, but the banks have granted both companies a five-year moratorium with a substantial reduction of interest. The burden is to be slightly reduced by the sale of the majority of the shares of the Langenbrahm Mining Company, held by König Ludwig, to a French group, but the purchase price is to be paid out of funds which are subject to the standstill agreement, and so far it has not been possible to obtain the consent of the foreign exchange clearing office.

United States New Capital Issues.—Through the courtesy of the *Journal of Commerce* of New York, we are able to supplement our statistics of British capital issues during the preceding half-year with a comparative table for the United States:—

	First half-year, 1929.	First half-year, 1930.	First half-year, 1931.	First half-year, 1932.
Foreign—				
Government	\$ 48,667,000	\$ 44,661,000	\$ 148,612,200	\$ Nil
Corporate	194,148,347	336,510,000	126,150,000	Nil
Domestic—				
Municipal	465,792,051	505,099,283	750,728,400	421,756,427
Railroad	353,670,700	793,763,070	318,636,000	3,425,000
Public utility	759,340,090	1,348,309,922	1,170,309,100	175,026,000
Industrial	1,637,813,291	747,071,164	256,015,700	413,800
Others	1,379,279,682	351,707,238	72,855,000	115,871,500
Total	4,838,711,161	4,127,121,677	2,843,306,400	716,492,727

Borrowings in the United States have been on a considerably reduced scale during the past six months, as compared with corresponding periods of the three preceding years. Municipal borrowing accounted for more than half of the total. Public utilities were the next largest borrowers. Railroad and industrial issues were practically negligible, but other issues amounted to about one-sixth of total borrowings.

Pioneer Life Assurance.—In spite of the handicap of administering in these times a small and fluctuating business, the Pioneer has produced for the year ended March 31, 1932, a very satisfactory report. The company's business is centred in Liverpool; is confined in the ordinary branch to the issue of “without-profits” policies; and includes in the industrial branch all forms of policy normally issued by industrial companies. The combined funds amount to £680,000. As a result of lower income tax assessment in the industrial branch, the combined interest earnings show an increase from £4 10s. per cent. net in 1930-31 to £4 13s. 5d. per cent. last year. The expenses have remained at virtually the same level in the industrial branch, namely, 39.4 per cent., but in the ordinary branch show an advance from 15.2 per cent. to 16.1 per cent. The company has achieved the creditable result of increased new business in each branch, the amount in the ordinary branch being £97,150, compared with £90,525, and in the industrial branch £390,289 compared with £321,393. The usual annual valuation has been made, and the basis of valuation has in no way been weakened. The results of the last three years are as follows:—

Ordinary Branch.		1929-30.	1930-31.	1931-32.
Trading surplus earned during the year	£	544	7,909	17,056
Investment profits	£	1,564	3,424	816
Brought forward from previous year	£	2,262	3,282	4,615
		3,282	14,615	22,487
Allocations:—				
Shareholders	£	...	6,000	5,000
Investment reserve fund	£	...	4,000	17,000
Carried forward to next year	£	3,282	4,615	487
		3,282	14,615	22,487
Industrial Branch.				
Trading surplus earned during the year	£	5,094	17,235	11,375
Investment profits	£	1,628	3,558	878
Brought forward from previous year	£	9,731	10,453	5,246
		16,453	31,246	17,499
Allocations:—				
Shareholders	£	6,000	...	...
Investment reserve fund	£	...	26,000	17,000
Carried forward to next year	£	10,453	5,246	499
		16,453	31,246	17,499

During the height of the crisis, in November last, the usual interim dividend was postponed, but the directors recommend in the report a dividend for the year at the same rate as formerly, namely, 9½ per cent., and announce also that interim dividends will not in future be paid. The £34,000 transferred to investment reserve fund has, together with a release of £5,000 from internal reserves, sufficed to increase this fund to £90,000. It is stated that this fund is more than sufficient to meet the depreciation on the assets.

Liberal Summer School.—The annual meeting of the Liberal Summer School will be held this year at Oxford from July 28th to August 3rd. The programme of lectures covers a wide range of topical economic and political questions, and includes, *inter alia*, such well-known speakers as Mr H. G. Wells, Viscount Cecil, Sir Arthur Salter, Viscount Astor, Sir Michael Sadler, and Sir Walter Layton. All inquiries should be forwarded to the Secretary at 42, Parliament Street, London, S.W. 1.

Overseas Correspondence.

LEAGUE OF NATIONS.

Lytton Commission — Turkey — Economic Conference — Geneva.

(FROM OUR CORRESPONDENT.)

GENEVA, July 5.

It was with considerable misgiving that a number of delegates accepted the Special Assembly's resolution to prolong the delay of six months within which the Covenant requires that the report on a given dispute should be published. The reason for this is that the Lytton Commission has informed the League that it will not be able to report before the middle of September. Meanwhile, as the Chinese delegate observed, the delay is against China's interests, and plays into the hands of the Japanese. The President's reminder of Japan's promise not to aggravate the situation is worthless; Japan has completely and consistently ignored every undertaking she has given. What is more important is the President's reminder to the Assembly of its resolution not to recognise any situation brought about by means contrary to the Covenant or the Paris Pact. Not all States can afford to follow Japan's example and show such lack of self-respect as to ignore their undertaking; if they should fail to obtain an honest settlement, the least they can do will be to remain firm in their refusal to recognise the consequences of Japan's bad faith.

By the time this appears in print Turkey will in all likelihood be in the League. Her entry is not without interest, for Turkey's influence in the Balkans in recent years has been one of moderation in many respects, and the very striking change in the relations between Turkey and Greece received much less notice than it deserved. It is an example of political wisdom which might well be kept before other States whose attitude to Turkey and the Balkan States is generally one of lofty superiority. Turkey comes in without any of the conditions for a seat on the Council which have in recent years been the obstacle.

It now seems certain that the world economic conference will, after all, be a League Conference. The excuse so often given that the Conference would have to be held outside the League because the United States of America is not a member was never valid. The United States has on no occasion in recent years objected to participate in any conference organised by the League on those grounds, and it was rather strange that such objections should have been attributed to her from Lausanne at a moment when she was not participating in the Lausanne Conference but was taking part in the League Conference at Geneva. It is unfortunate that matters should have so developed that

the United States of America has become in this case almost the champion of the League, in face of other Governments who claim to be its stalwarts. It is fair to say that in Geneva no profound importance is attached to the question whether the Conference be held within the League or outside it, provided it accomplishes useful work, but the excuses that were being put about for the proposed economic conference to be non-League have created something like a scandal. If Great Britain or any other members of the League, for reasons best known to themselves, desire to leave the League aside whenever possible, it would be better to do so frankly and not to hide behind the skirts of the United States. It is assumed in many quarters that apart from more general reasons which are attributed to some of the more nationalist Governments, the outstanding irritation is the insistence of many of the smaller powers on receiving a square deal—more particularly in the Sino-Japanese conflict—on pressing for a little more respect for the Covenant, more achievement and fewer secret conversations of which they know nothing.

The bureau of the Disarmament Conference this afternoon decided, at the request of a number of delegations, to resume next Thursday the general discussion of the Hoover plan. It is not to be a detailed discussion, but one on the lines of the speeches made when the plan was first submitted. Sir John Simon stated, with Mr Gibson's approval, that it could not be expected that on so bold a proposal States could be ready within two or three weeks to enter upon detailed debate. On Sir John's proposal, it has been decided that when this discussion is concluded a resolution will be proposed welcoming in broad terms the Hoover plan as a stimulus to the Conference, and a further resolution setting out the nine or ten points on which the Conference has more or less reached agreement. There is some difference of opinion as what point has in fact been reached, and Mr Litvinoff suggested they might also have a resolution on the points of disagreement. However, Sir John Simon, Mr Motta and others asserted that far more progress had been attained than the Conference had been given credit for. Some of the smaller powers are not content, but the prospects are that something roughly on the lines of Sir John's suggestions will be adopted, and that in about two or three weeks the Conference will adjourn.

UNITED STATES.

Industry — Railroads — Dividends — Banking.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 29.

BUSINESS conditions are slack and are likely to continue so until the autumn. Prolongation of the Congressional session, a fresh outbreak of bank failures, although of no great importance, and the general uncertainties abroad restrain such tendency towards improvement as might otherwise appear. Trade activity is probably at a lower level now than it was a month ago. The rate of decline in railroad freight traffic this month has slackened, but railroad earning statements for May show that the past month, in spite of economies in all directions, was the worst the roads have yet had. The first seventy first-class railroad companies to report reveal a decline of nearly 70 per cent. in net railway operating income as compared with the corresponding month of last year. Only a few roads are earning enough to cover their interest charges, and for the first five months net railway operating income was down by 45 per cent. The Norfolk and Western, one of the strongest roads of the country, has been obliged to cut its regular dividend from a \$10 to an \$8 basis. The Atchison, Topeka and Santa Fé omitted its dividend entirely after two reductions. This is the first time the Santa Fé common shareholders have had to forgo dividends since 1900, and the stock was a prime favourite among investment trusts and others investors of large sums. Only two active railroad stocks—the Chesapeake and Ohio and the Delaware and Hudson—have maintained dividend rates intact since the beginning of the depression.

Five active railroad common stocks listed on the New York Stock Exchange are still in the dividend class. Besides the D. and H. and the C. and O., they are: Union Pacific, Reading, and Norfolk and Western.

Some further severe reductions of industrial company dividends also has taken place, but there have been some surprises on the side of maintenance, namely, American Can and Allied Chemical and Dye. The yield basis for all common stocks, and for most preferreds as well, clearly indicates that the market is shaky about any dividend. United States Steel preferred, for instance, is selling to yield nearly 14 per cent. The steel industry is merely doing some replacement jobs, and the rate of operations is scarcely above 15 per cent. of capacity. Some industries have had orders placed to anticipate the excise taxes which came into effect last week. The oil trade is slowly improving, because of unrestricted output, and the price trend is now upward.

The wheat harvest is in full swing, having come earlier than usual in the winter crop areas. While the yield is fair in most sections, the prevailing low prices will not permit recovery in agriculture this year. Farmers are able to live, but with the average price of around 25 cents a bushel for wheat at primary markets, they have little or nothing for taxes and interest on debts. They cannot be expected to buy much beyond the necessities of life until another crop year, although higher prices for hogs are helping.

The outbreak of bank failures in the Chicago district came as an unpleasant reminder that the position is not yet entirely liquidated, and while the news of the difficulties of the bank in which Charles G. Dawes is interested came as no surprise to Wall Street, it was nevertheless somewhat unpleasant news to the country. A heavy loan from the Reconstruction Finance Corporation and private bank aid have put the Dawes bank out of danger, and no serious trouble is expected from Chicago, where there have been 36 small failures in the past fortnight. Bank failures in May rose to 77, but there have been few this month outside Chicago.

Some rise in currency circulation has come as a consequence of withdrawals of deposits from banks, and these affairs also have accounted in part for the heavy deflation in bank loans and investments last week. Reporting member banks in leading cities show a drop of \$218 millions in loans; of which only \$50 millions were on stock and bond collateral. A partial explanation also lies in the recent increase of R.F.C. loans to railroads, which have liberated bank money; and, for the remainder, the aftermath of the tax date is responsible.

The Federal Reserve system last week found it necessary to purchase only \$38 millions of bills (there was at the same time a drop of \$12 millions in bills and of \$8 millions in member bank discounts) in order to maintain member bank excess reserves at around \$250 millions. The monetary gold stock rose \$8 millions, and money in circulation gained \$38 millions. Reduction in the New York discount rate was fully expected, and was taken as a measure of confidence of the central banking authorities in the end of gold exports and the improbability of heavy U.S. Treasury long-term loans in the near future.

Open market money rates are still unusually far below the discount rate, although the New York Reserve Bank cut sharply its buying rate for bills to aid the market. The Treasury is ending the fiscal year with a deficit of virtually \$3,000 millions. Apparently all Congress will do toward the suggested \$300 millions Economy Bill will be to approve reductions of \$150 millions, of which two-thirds is in pay for Federal employees. This reduction is to come about through compulsory thirty-day vacations without pay. The plan is estimated to be equivalent to an 8 per cent. cut in salaries. The Relief Bill is still in conference of Senate and House committees, and may not be ready for a vote for several days.

The committee of twelve, recently appointed by the Governor of the New York Federal Reserve Bank, partly at the suggestion of the Secretary of the Treasury, to devise and consider plans for stimulation of industry and to help advance the anti-deflationary policy of the Federal

Reserve Banks, have approved the scheme for trade acceptances as a substitute for open-book accounts among industrial and merchandising companies. The plan has strong backing from such leading companies as General Motors, General Electric, Westinghouse, U.S. Steel and Standard Oil of New Jersey, and the committee hopes that "the grant of banking accommodation to manufacturers and merchants will be facilitated through the discount of approved trade bills in place of cash advances on one-name promissory notes of borrowers," which should result in the use of additional bank credit.

FRANCE.

Political Crisis — Finance — Iron and Steel.

(FROM OUR CORRESPONDENT.)

PARIS, July 6.

THE Bill embodying the first portion of the Government's economy proposals, which have been specially designed to balance the Budget and furnish the Treasury with the necessary funds to meet requirements, was laid before the Chamber on Friday. It was evident from the outset, however, that the Finance Commission—in which Radicals, Socialists and other normal supporters of the Government fill a clear majority of the seats—was by no means in favour of the proposals submitted to it. The only whole-hearted supporters of the Government's plan were the representatives of the Opposition groups; and the Commission rejected so large a proportion of the proposals that the net result would be to reduce the Ministry's economy plan from 4,200,000,000 francs to 2,500,000,000 francs, and at the same time render impracticable other projected measures designed to furnish a further 2,200,000,000 francs for the purpose of establishing a balanced Budget and an adequately supplied Treasury.

The effect of this extraordinary policy has been a fresh crisis. The definitely Cartellist groups in the Chamber have seized the first opportunity offered to challenge the Herriot Ministry on the question whether it will depend for a majority solely and entirely on the groups of the Left, or risk another Ministerial crisis, which may be solved either by the formation of a coalition between the whole of the Centre Parties, or by a dissolution and fresh elections.

The Government economy proposals are directly due to the twin facts that the Budgets for 1931-32, 1932 and 1933 all resulted or will result in heavy deficits, and that the Treasury—whose bank balance has for some time past been less than 100,000,000 francs (in the last two Bank of France statements it has been returned as barely 80,000,000 francs)—is impossibly restricted. The proposals tabled last Friday comprise the following items, the figures indicating estimated reductions of expenditure or increases of revenue to be effected under the current Budget (April 1 to December 31, 1932) and its successor:—

(In millions of francs.)			
I.—REDUCTIONS OF EXPENDITURE.			
	1932.	1933.	
National defence	83	1,440	
Civil Service pay	125	500	
Pensions to war widows after re-marriage	110	220	
Old-age pensions to ex-service men who pay income tax	50	100	
National insurance	45	90	
Other economies	10	240	
	423	2,590	
II.—INCREASED REVENUE.			
Suppression of certain turnover tax abatements	205	410	
Increase in tax on coffee	150	300	
Income tax on savings bank deposit interest	140	280	
Increase of income tax on real estate revenues	...	100	
Revision upwards of general income tax scale	...	380	
	495	1,470	
III. POST OFFICE BUDGET.			
Revision of rates	107	214	

A number of these proposals concern suppression of recently applied increases of expenditure. The most serious increase of the taxation burden (which received the approval of the majority of the Finance Commission) is that concerning the sliding scale of rates imposed in regard to assessments for general income tax, to which the schedule rates are supplementary. The increases proposed range from 12½ to 27½ per cent. The effect of the new modifications will be seen by the following examples:—

Taxable Income.	Amount payable under			Increase.
	Present System.	New System.		
Frs.	Frs.	Frs.		%
20,000	400	500		12
30,000	800	1,020		27½
50,000	2,000	2,500		25
100,000	7,333	8,500		16
400,000	70,933	88,000		24
1,000,000	267,333	320,000		16-30

All the proposed reductions in national defence expenditure were approved by the Finance Commission practically unanimously. They are distributed as follows:—Army, 22,000,000 francs under current Budget, 615,000,000 francs in 1933; Navy, 302,000,000 francs (in 1933 only); Air Forces, 202,000,000 francs (in 1933 only); Colonial Defence, 8,500,000 francs in 1932, 10,000,000 francs in 1933; other reductions common to all services, 52,500,000 francs in 1932, 311,000,000 francs in 1933. Total economies in military expenditure will therefore be 83,000,000 francs this year and 1,440,000,000 francs under the 1933 Budget.

The foregoing economy proposals form only the first portion, as has already been mentioned, of the Government plan.

The Government propose to raise a further 1,200,000,000 francs by applying an extensive conversion scheme to certain of the war and post-war Rente issues. This, according to plans drawn up in connection with the above economy and readjustment proposals, it was proposed to submit to the Chambers under urgency procedure immediately after the summer recess. Finally, on the assumption that the conversion plan would prove successful, it was decided to raise a further 1,000,000,000 francs from the Caisse d'Amortissement, out of reductions that would accrue in regard to annual public debt charges by the application of the conversion plans. The 2,200,000,000 francs expected from these two sources were necessary to round off the Government plans to secure sufficient funds to deal with the present deficit and to place the Treasury in an easier situation. It is now evident that, unless the Cartellist opposition to a large proportion of the Government proposals can be overcome, the entire plan for balancing the budget will have to be recast.

The rejection by the majority members of the Finance Commission of all proposals involving cuts in the scales of civilian pay, pensions and allowances has obviously been largely due to pressure brought to bear by various powerful syndical organisations into which the public servants formed themselves some years ago. This was made clear when the Commission took into consideration Clause 6 of the Bill, which provides for a reduction of 5 per cent. in the salaries paid to the President of the Republic, the Ministers, senators and deputies, and all other civil and military servants of the State. This was adopted only in so far as it applies to the President of the Republic and the members of both Houses of Parliament. All the rest of the proposals for cuts in the pay, pensions or allowances of other individuals were also rejected. Steps taken by some of the Civil Servants' unions to organise on Saturday a manifestation outside the Chamber, as a protest against the economy proposals, were nullified by the posting of large bodies of police to command all approaches to the House within a radius of about a mile. According to present plans, there seems to be a possibility that M. Herriot may endeavour, if negotiations prove fruitless, to bring the whole question directly before the Chamber, independent of any report by the Finance Commission. An unofficial suggestion is that powers should be sought permitting, in certain circumstances, matters of this kind to be referred for consideration to the Conseil d'Etat, which in France is

the supreme body of arbitration in all matters concerning interpretation of the rules of administrative procedure, and which, it is argued, would or should possess jurisdiction in the present conflict.

Iron and steel production figures for May, which were made public yesterday, show little difference of the month. Pig iron output totalled 459,000 tons, or exactly the same figures as in April (against 724,000 tons in May last year and monthly averages of 864,000 tons throughout 1929). Crude steel production was 445,000 tons, against 457,000 tons in April, 674,000 tons in May last year and a monthly average of 808,000 tons in 1929. The number of blast furnaces in activity during May was only 79 (or the same as in April), against 129 in April last year. In the home market business remains as poor as in other countries, with prices still on the downward trend, and no sign of improvement exists, with the exception of a slight animation in constructional ironwork and one or two other directions.

GERMANY.

Lausanne — Budget — Gelsenkirchen — Foreign Loans.

(FROM OUR CORRESPONDENT.)

BERLIN, July 5.

THE German public is now beginning to have a fairly clear idea of the position of the Lausanne negotiations. The greatest surprise is felt at the reported readiness of the German delegation to undertake an unconditional final payment, and in the event of success Herr von Papen will have the greatest difficulty in persuading the German public of the necessity of such a decision and of the possibility of carrying it into effect. Judging from the attitude of the respective parties, he can only count to a very limited extent on the support of the Right, while neither the National Socialist nor the Nationalist Press gives any reason to suppose that the attitude of absolute refusal of any German special payments is to be in any way modified. Nevertheless, it is, of course, conceivable that Herr von Papen may purchase, by further concessions in domestic politics, the continued toleration by the Nazis of his foreign policy. Of all the papers of the Right, however, only the *Deutsche Allgemeine Zeitung*—which, indeed, in this as in many other matters may be regarded as the mouthpiece of industry—is at present giving the Government to understand (though without approving the tactics of the German offer) that an agreement would be tolerable "in so far as it does not substantially exceed one to two milliards; in so far as all difficulties with the United States, so far as Germany is concerned, are removed; and in so far as the carrying through of the new loan can be regulated the late Government could not have procured any better terms, and if the Papen Cabinet comes home with an agreement of this character it will owe no apology to its predecessor." This is, however, written on the presupposition that it will be possible formally to cancel the reparation clauses of the Versailles Treaty, including the war guilt clause.

Up to the present the Centre, on the other hand, has remained adamant. Its leading paper, the *Germania*, writes:—"Germany can make herself useful to her creditors more effectively than by final or sham payments if she contributes to the recovery of the commodity and capital markets and makes it possible for the resources invested in Germany once more to be productively used. The Brüning thesis of complete cancellation, which, unhappily, has been fatally undermined by the German delegation at Lausanne, appears more and more clearly as the only possible—because the simplest and most reasonable—solution, and nothing would be, to our mind, more ungrateful and short-sighted than just at this moment to pass over Brüning's reparation policy with a sympathetic smile. We do not believe that the delegation have anything better and more effective to put forward, and we consider it a serious mistake on their part to have failed to prevent the creditors from spreading a

thick net of figures and demands." Although the Social-Democratic Press is showing the greatest reserve, it is highly probable that the Papen Government could secure the support of the Left for a reasonable agreement with the reparation creditors, but it can hardly accept this support without destroying its internal political foundation.

The report of the Reichskreditgesellschaft on Germany's economic development during the first half of 1932 holds the "war between creditors and debtors" primarily responsible for the appalling state of affairs which has arisen: "There is no longer any possibility, as the development of international trade clearly shows, for debtors in debtor countries to assume obligations to make payments abroad as long as there is no possibility of securing, and even increasing, markets by hard work and effort. This possibility has been reduced by the action of individual countries pursuing a *saue qui peut* policy in instituting exchange regulations, import duties and quotas, and thereby making commercial interchange the subject of State regulation. For this reason, the report continues, debtor and creditor relationships ought to be adapted to the changed conditions, for the ability of debtors to meet even their old obligations has in many instances been destroyed.

The suggestion then put forward in the report is a reduction or partial suspension, by mutual agreement, of the interest on foreign loans when the foreign exchange necessary for the transfer cannot be procured. The redemption of the loan according to programme ought, on the other hand, on no account to be interrupted, as the redemption corresponds to the depreciation of the capital goods purchased with the loan. Advantage might, however, be taken of low quotations for German loans to hasten their redemption, and this would enable a large number of long-term creditors who would like to do so to free themselves of their long-term connections in advance of the due date. No such regulation of private debts is, however, possible until reparations have been cancelled by agreement.

The Budget for 1932, which has been put into effect by emergency decree, is as follows:—

(In Millions of Marks.)

REVENUE.		EXPENDITURE.	
Income tax, including poll and crisis taxes	1,890	Tax revenue transferred to states and communes	2,113.5
Turnover tax	1,820	Pensions	1,381.5
Death duties, industry and transport taxes	1,047	Other internal expenditure arising out of the war	325.6
Customs	1,140	External expenditure arising out of the war	145.0
Tobacco duty	775	Social insurance	501.9
Beer duty	300	Unemployment insurance	929.2
Other taxes on consumption	492	Reich debt services	231.4
Total taxation	7,464	Extraordinary service of floating debt	420.0
Other revenue	755	Service of old Reich debt	286.9
		Army supplies	426.6
		Other expenditure	1,567.7
Total	8,219	Total	8,329.3

The Government intends to balance the Budget, which is lower by one milliard than that of the preceding year, by a reduction of 110 millions spread over the various items of expenditure. The Reich itself has reduced its expenditure by 129.6 millions, apart from the contemplated 110 millions; the transfers to States and provinces are 207.6 millions less, and the complete cessation of reparation payments brings the reduction in expenditure to 422 millions.

The Government have appointed a committee, consisting of the former President of the Reichsgericht, Dr. Simons, the former Finance Minister, Herr Schlieben, and the former Secretary to the Treasury, Professor Popitz, to inquire into the Gelsenkirchen affair. The duty of the committee is less to go into questions of law, for it is assumed that the transaction was legally unimpeachable, than to ascertain whether it was in the public interest, in what circumstances it took place, and, in particular, whether any private groups have derived

illegitimate advantage from it. It may be taken for granted that the result of this inquiry will be made public before the elections, as the Papen Government probably hope to find in it a weapon against their predecessors. Meanwhile it has become known that at the last moment a parcel of Rhenish lignite shares, to the nominal value of about Rm. 12 millions, which were held by Gelsenkirchen, were sold to Flick-Charlottenhütte before the Gelsenkirchen shares passed into the ownership of the Reich, and Flick-Charlottenhütte resold them, it is rumoured, at 200, which means a total of Rm. 25 millions to Dr. Silverberg, the principal shareholder of Rheinbraun. This does not improve the appearance of the Gelsenkirchen affair, since it means that the Reich was deprived of one of Gelsenkirchen's most valuable holdings to the advantage of Herr Flick. The Finance Minister certainly knew of the transaction.

While the interest service of the German foreign loan has hitherto been transferred in full, anxiety has been felt for some months as to how the Reichsbank would meet those few maturities of long-term loans which fall due in 1932. The first was that of a 5 per cent. American debt of 10 million dollars, owed by Sächsische Werke and due on July 15th. The company has informed its American creditors that it is not in a position to repay the loan at maturity, as the authorities will not provide the foreign exchange necessary for transfer. Negotiations were therefore opened with the National City Bank as trustee for the loan, and an interesting compromise has now been arrived at. Five per cent. of the loan, which was redeemable at 105, is to be paid in dollars at maturity and the rest converted into five-year 6 per cent. notes, which will thus fall due on July 15, 1937. Saxony bonds rose sharply in New York upon the news of this settlement.

U.S.S.R.

Foreign Trade — Balance of Payments.

(FROM OUR CORRESPONDENT.)

MOSCOW, June 22.

THE recent publication of full statistics covering Soviet foreign trade in 1931 indicates that in this field, at least, Russia is feeling the full blast of the world crisis. While exports increased in volume by 1.3 per cent., their value declined by 21.7 per cent., or 225,161,000 roubles. Imports increased in quantity by 24.8 per cent. and in value by 4.3 per cent. The unfavourable balance of trade amounted to almost 300,000,000 roubles, or over £30 millions at par. Inasmuch as the Soviet Union has no foreign investments and few "invisible exports," an unfavourable trade balance demands strenuous efforts to keep the balance of payments on an even keel, and the Soviet Government has been acting with considerable energy in various directions for this purpose. The first and most obvious remedy is to cut down imports, and the complaints of dull business which are to be heard from most representatives of foreign firms here indicate that this is not being neglected. For many years the Soviet Government has ruthlessly barred from its import list not only luxuries, but practically all objects which are designed for the immediate satisfaction of the consumer. The overwhelmingly largest share of Soviet imports falls under such headings as machinery and equipment, metals and raw materials. Now it seems that some cut must be made even in those foreign purchases which make possible the rapid industrialisation of the country. At the same time the "valuta specialist" is rapidly becoming a figure of the past. Contracts on a foreign currency basis are being wound up, with a very few exceptions, as fast as possible, and as a general rule only engineers and skilled workers who are willing to accept payment in roubles (which may not be exchanged into foreign currency or taken out of the country) need apply for posts in the Soviet Union.

Russia's need to realise every available unit of foreign currency has led to an extraordinary system of currency double bookkeeping, which probably has no exact precedent in any other country. The Soviet Union to-day

is covered with a network of so-called Torgsin stores, where only gold and foreign currency are accepted in payment. These shops are stocked with foodstuffs and manufactured goods, better in quality, as a rule, than one can purchase in Russian shops which deal on a rouble basis, and free from the rationing system. While the Torgsin shops were inaugurated for the benefit of tourists and foreign residents in Russia, they have expanded to an extent which indicates that they are reckoning with a considerable amount of Russian patronage. Certainly the opportunity of buying unlimited quantities of butter, sugar, conserves and manufactured goods does coax out a certain quantity of hoarded gold and foreign banknotes. Moreover, a remittance system has been introduced and widely advertised abroad whereby persons with friends or relatives in Russia may send them currency in the form of buying cheques, payable at the Torgsin shops.

Another Soviet method of restoring the balance of payments is intensified production of gold. Modern mining machinery and large dredgers are being employed in such gold districts as the Lena and Aldan River basins of Eastern Siberia. The figures of gold output are not published, but there is a visible strenuous effort to develop maximum production. Finally, a constant campaign for "economic independence" is carried on in the factories and mines. Engineers and workers are especially rewarded for inventions or suggestions which make it possible to dispense with imported machinery or equipment. Russian is substituted for foreign equipment whenever there is the least possibility that satisfactory results can be achieved after the change.

A continuation of the world depression will probably mean a slowing up of the tempo of industrial construction and development envisaged under the second Five Year Plan, which begins in 1933. Scarcely any industry is keeping up with the high production schedule set for 1932 (when an increase of 36 per cent. in industrial output, by comparison with 1931, was projected) and the shortage of steel is already having a bad effect on the work of the tractor and machine-building plants. However, a spreading out of the programme of industrialisation over a longer period would not have any particularly disastrous results; a much more important practical problem would seem to be the improvement of the country's food supply, which has suffered badly last winter and spring as a result of a combination of factors, including drought in some of the eastern and south-eastern regions of the country, and storage of food for possible military emergencies in the Far East. In the meantime, the Soviet Union has maintained its commercial solvency with a success which more than one capitalist country might envy.

AUSTRIA.

Bank Bill — Trade Treaties — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, July 4.

THE Government has brought in a new Bank Bill, based on the experience of the last few years and providing for thorough measures of control. In the first place, the evil that the banks publish far too little information is to be eliminated. A balance-sheet scheme is laid down, and balance sheets have to be made up quarterly. A special control institute is to keep track continually of current business, and every bank is obliged to resort to one of the chartered auditors, whose independence is to be assured by means of strict penal regulations. Further, records of credits are to be given to prevent clients from taking up credits from various sources without the knowledge of their bank. Business with members of the banks' boards and supervisory councils is to be forbidden, as also with the employees of the banks and with the members of their families. The according of so-called guaranteed royalties is to be stopped, and of any payment which a member of a bank receives for his activities with an associated enterprise at least half must go to the bank. The emoluments of functionaries of banks in distress are to be specially regulated, and the notice necessary for

dismissal of employees is to be considerably reduced. Members of the management and leading officials of banks which have become insolvent are obliged to repay any "excessive" emoluments which they may have received in the course of the three years immediately preceding the opening of bankruptcy or composition proceedings. If these provisions had been introduced earlier they might have prevented several deplorable affairs, which have in the meanwhile caused great losses to the banks and to the State. The Government commission which was previously responsible for the banks has proved to be totally inadequate.

The delegates of the Austrian Government have come back from Lausanne, and the Federal Chancellor has declared that the loan has been assured to Austria, though he did not state when it will be available. It is expected that this will be in the early days of September, after the necessary measures have been passed by Parliament. In the meanwhile, the National Bank must maintain the restrictions which it has been observing in regard to the remitting abroad of foreign means of payment. For travelling purposes only very small sums are being allowed. The agreement made between Austria and Czechoslovakia to promote tourist traffic between the two countries during the summer months is also meeting with difficulty.

The trade treaty conflicts which have developed between Austria and Hungary are of a serious nature. The Austrian farmers want the cattle quota reduced to half; further, Austria demands that payments for Hungarian merchandise, and particularly for grain, should be made in schillings and not in dollars as heretofore. Finally, in recent months Hungary has decreed a number of import prohibitions which seriously affect Austrian export trade, though Hungary has declared herself prepared to rescind a part of the prohibitions, provided Austria waives her claim to a reduction of the import quota of cattle. Further, the Hungarians are willing to liberate to Austria for travelling purposes only an amount representing the surplus value of the foodstuffs which Austria may take from Hungary over and above the present level.

The negotiations with Russia concerning fresh orders for Austrian industrialists have come to a dead stop. The Russians will place fresh orders, but they demand that for every fresh order a conversion shall be made into schillings of the corresponding value of old Russian obligations in dollars to Austrian firms. In economic circles it is pointed out that for the past ten months not a single Russian order has actually been executed in Austria, while the Russians have not only maintained their old exportation to Austria but have been trying to enhance it.

Unemployment is increasing in spite of the summer season. In the second half of June the increase in Vienna brought the total up to 106,990, so that the corresponding level of last year is exceeded by 21,740. But even in the provinces no marked decrease is observable. For instance, at the Krupp works at Berndorf further dismissals are in progress, especially as the efforts to get Krupp of Essen to help to put the Austrian enterprise on its feet again have been fruitless. There is no improvement yet on the Federal Railways, and, though one expert opinion follows another for the purpose of effecting internal savings and whittling down the number of offices and departments, traffic continues to decline and revenue consequently to dwindle. Statistics show that in the year 1918 there were 18 journeys *per capita* of the population and only 14 in 1931.

HUNGARY.

Politics — Lausanne — League Loan.

(FROM OUR CORRESPONDENT.)

BUDAPEST, July 5.

ON June 30th, the Budget having been passed by both Houses of Parliament, Count Károlyi tendered the resignation of the Cabinet to the head of the State, which was, however, not accepted. It is understood here that

the Regent's decision to retain the Károlyi Cabinet was due principally to the realisation that the present Government is better suited to conduct the forthcoming international negotiations on reparations, the scheme for the Danubian economic co-operation, and, above all, the parleys with the foreign creditors through the intermediary of the League with a view to the reduction of the intolerably high interest burden.

The representatives of the Government have gone to Lausanne at the invitation of the Great Powers, but the agenda of the Conference concerning Hungary is not exactly known here. It is supposed that apart from the settlement of Eastern reparations, with which the thorny problem of the Hungarian Optants is closely interconnected, there will be an opportunity to discuss economic co-operation among the Danubian countries. As to reparations, it will be remembered that in 1924, before the first League reconstruction scheme began to operate, Hungary had undertaken by the Geneva Protocol to pay 200 million gold kronen in twenty annuities commencing at 5 millions and gradually rising to 14 million gold kronen. At the second Hague Conference in January, 1930, Hungary consented to pay 23 further annuities at the rate of 13.5 million gold kronen (15.6 million pengő) from 1944 until 1966 on other than reparation account as a final settlement of all political obligations arising out of the war. At the same time, the Hague Conference settled the long-drawn-out dispute of the dispossessed Hungarian landowners by instituting the so-called "A" and "B" Funds, to which most of the Hungarian reparation payments are to be remitted apart from other contributions from the Great Powers and the interested Succession States. It is obvious that so long as Hungary cannot meet her commercial obligations she will not be able to meet her political obligations either. The estimates for 1932-33 provide only a sum of 800,000 pengő, instead of the annuity of 10 million pengő according to the schedule of the Geneva Protocol of 1924. Whatever the decision at Lausanne, two important facts will have to be borne in mind by the Great Powers whose citizens are also the chief creditors of Hungary on commercial accounts; first, that even when normal trade relations have been restored in the Danube Valley the transfer capacity of Hungary will be very limited, and it seems that the best that foreign creditors can hope is an annuity scaled down to 100 million pengő, a third of the present obligation of 300 million pengő; second, that any amount required from Hungary on reparation account will flatly diminish the commercial creditors' share; in other words, reparations, if any, will have to be borne by them.

Hungary's transfer difficulties are amply demonstrated by the recent announcement of the trustees of the State Loan of 1924 (commonly known as the League Loan) that the funds in foreign currencies already in their hands are at present insufficient to meet in full the interest due on August 1st next. Fortunately, there is a reserve fund covering a half-yearly service of the League Loan from which the August coupons will be duly met. The Hungarian Government has promised to recommence transfers as soon as possible when the situation permits. On the other hand, the trustees announced that the Government, in further breach of the terms of the General Bond and the Geneva Protocol, issued instructions that, from the proceeds of the revenues pledged for the security of the loan, only such amounts are for the future to be transferred to the trustees' account with the National Bank of Hungary, as, converted at the official rate of the Bank, would correspond to the pengő equivalent of the instalments due under the General Bond. The trustees have taken immediate steps to lodge a protest against these infractions of the General Bond and the Geneva Protocol, and have advised the Secretary-General of the League of Nations of these developments. The Hungarian Government, in response to the announcement of the trustees, has issued a *communiqué* pointing out that as the pledged revenues yield about 6½ times the service requirements, and represent about 30 per cent. of the total State revenue, their attachment for an indefinite period would make the administration of the Budget impossible. It is

difficult to see how any Government in a similar case could have acted otherwise, and there is little doubt that the Financial Committee of the League which has just dealt with the matter will have to admit that there was no other solution in view of developments which could not have been foreseen in 1924 when the General Bond and the League Protocol were signed.

Unlike the Austrian League Loan, the Hungarian State Loan, though issued under the auspices of the League, was not guaranteed by the respective Governments of the issuing countries. The total amount issued in 1924 amounted to £14,129,000 gold, of which London lent £7,903,000; the amount of the British share outstanding at present is about £6,400,000. The American portion issued amounted to \$9,000,000, of which \$7,320,000 is outstanding. France did not participate in the loan; the other participants were Switzerland, Holland, Italy and Sweden. It should suffice to demonstrate the financial plight of the country that total exports, averaging less than 25 million pengő per month in the first five months of 1932, are not enough to cover the service of the external debt, amounting to 300 million pengő per annum.

BELGIUM.

Railways — Public Finance — Industry

(FROM OUR CORRESPONDENT.)

LOUVAIN, June 14.

In common with the railways of other countries, the Belgian railways have suffered severely from the crisis. For the first four months of this year the running of the Belgian railways has left a deficit of 125 million francs. It is hoped, however, that for the whole year the loss may not exceed 250 millions, which could be met from the company's reserves. Since April 1st running costs have been lightened by the 10 per cent. diminution in salaries and wages, and the prices of coal and other supplies have also fallen. Running costs, it should be noted, include the allocation of a relatively high amount (30 million francs per month) to the renewal funds. The rolling stock renewal fund will be largely drawn upon for the building of steel coaches, which has just been put in hand.

The railways have recently been preoccupied by the question of motor competition, which had hitherto not been as acute in Belgium, where freights and fares have always been comparatively low, as in other countries. The railway administration has been endeavouring specially to develop on the Belgian railways the system of traction by automotors. For two years three German automotors, consuming heavy mineral oil, and three English steam automotors (Sentinel) have been running on local lines. An electric automotor (A.S.E.A.) has recently been purchased. The adoption of this kind of traction has reduced costs notably on certain lines, and has shown that competition with the automobile can be carried on successfully by the railways. The rural narrow-gauge railways, which constitute an extremely widespread network in Belgium (4,600 kilometres), are also going to undertake a similar reform. More than 1,000 kilometres have already been, and 500 more are to be, electrified. The rest will all be provided with oil-consuming automotors, and this is expected to enable these lines to resist motor competition.

Revenue from the new taxes has not apparently fallen far short of anticipations, but expenditure has been increasing unceasingly. Unemployment relief will involve more than 700 million francs, and old-age pensions will this year absorb 800 millions, against 500 millions as anticipated in the budget. A disablement relief fund, for which 35 millions were provided in the budget, will necessitate more than 60 millions. There is no question that there has been exaggeration and abuse in respect of social expenditure. The Government have been trying to check these undue expenses, but the political difficulties are too great. The Government, in fact, will have

to issue further loans, and though the market is not unfavourable, the public is not very likely to absorb all that will have to be offered for public subscription. This policy of balancing the budget by means of loans is likely to give rise to a financial crisis at the end of the year.

The general economic situation has not improved, but industry seems to have touched bottom. The present industrial production may be estimated in Belgium at 70 or 75 per cent. of the 1929 volume. Unemployment figures showed a seasonal fall in April and May. The foreign trade balance has become favourable, and exports have remained at a relatively satisfactory level.

NORWAY.

Money — Finance — Trade — Shipping — Whaling.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, June 20.

THE situation on the money market has continued rather easy during the month, though the amount of notes in circulation is somewhat too high for this season of the year. According to the return of the Norges Bank on June 15th, this item was 302 million kroner, against 290 millions at the same time last year. Balances abroad have been reduced from 16.4 million kroner on May 18th to 9.5 million kroner on June 15th. As on previous occasions when the krone has depreciated heavily, the Norges Bank—in full correspondence with the policy of the Government—has maintained a much higher krone rate than international quotations would indicate, thus causing a heavy toll on the balances held abroad. The Minister of Finance recently stated that it was the opinion of the Government that the krone should follow the pound as far as practicable, and that fluctuations of the rate should be counteracted as far as possible.

The revenue and expenditure figures for the first three quarters of the Budget year 1931-32 are now available. It appears that total revenue for the whole year was estimated at 373.6 million kroner, while an amount of 280.9 million kroner has been received; and that while expenditure during these first three quarters amounts to 259.4 million kroner, the amount voted for the whole year aggregates 381.5 million kroner. The Government propose to cover the prospective deficit by an increase of direct taxes and by introducing duties on tobaccos, beer, petrol and various other products. Further, the Government have submitted a proposition to the Storting to take up a new loan of up to 50 million kroner, part of which will be used for the redemption of internal loans.

Foreign trade figures for May reveal an excess of imports over exports amounting to 15 million kroner, against 11.5 million kroner in the preceding month and 47.3 million kroner in May last year. During the five first months of this year the total import surplus amounts to 52 million kroner, compared with 153 million kroner during the same period last year. The improvement of the trade balance is due to a decrease in imports of 80 million kroner and an increase of exports by 20 million kroner. The item "Ships imported" represents about seven-eighths of the decrease in imports.

Owing to the continued slump in world trade, the freight market has been highly unsatisfactory during May and June, except that the Russians have been in the market for tonnage from Archangel to British and Continental ports, and a number of Norwegian steamers have been chartered. There has consequently been a decrease in laid-up Norwegian tonnage during May of about 225,000 tons, representing 64 steamers, and of this number some 40 have been chartered for the Russian timber trade. Though the freights obtained are exceedingly low, this favourable development is encouraging, but may not be of a lasting character, as most of the steamers have only been chartered for one single trip, and it may prove very difficult to obtain remunerative employment during the remainder of the summer.

The agreement between all the foreign and Norwegian whaling companies operating in the Antarctic (with the

exception of one foreign and one Norwegian company) was recently signed in Sandefjord, after prolonged negotiations. This agreement restricts the catch during the season 1932-33 to a certain percentage of the catch during 1930-31, and fixes the production of whale oil at not exceeding 1.93 million barrels, while the capacity of the companies concerned amounts to about 4 million barrels. On account of the heavy reduction of the catch, several companies will not be able to handle remuneratively the quotas allotted to them, for which reason co-operation has been established between the various companies.

JAPAN.

New Government — Tariff — Silk — Trade.

(FROM OUR CORRESPONDENT.)

TOKYO, June 9.

AFTER an unusual delay of more than a week since the assassination of the Premier Inukai, Admiral Viscount Saito, the former Governor-General of Korea, was commissioned to form a new Government. Despite the growing impatience of the army and navy with party politicians, which was a principal cause of the protracted Cabinet crisis, Viscount Saito selected most of his colleagues from the two major parties and formed a Government which is practically a coalition and is by no means "a strong super-party Ministry." Mr Takahashi, the Minister of Finance, and Lieutenant-General Araki, the Minister for War, have retained their respective posts in the new Cabinet. As Mr Takahashi remains in the Treasury there will not be much change in the contour of financial policy. This is admittedly a disappointment to the ever-widening circle of inflationists, though the more sober section of the financial world approves of the veteran financier. As to the relief of farmers, for which a national movement is being organised, time must pass before a definite constructive programme is devised.

The Government introduced into the present special session of the Diet three important financial measures—for the reform of the Bank of Japan, prevention of the flight of capital, and tariff revision. The gist of the central bank reform is summarised in the raising of the maximum for the fiduciary note issue from the present 120 million yen to 1,000 million yen, the State's direct share in the profits of the bank and the constitution of an advisory board to the court of the bank. The proposed measure against the flight of capital empowers the Government to restrict or prohibit any transaction in foreign bills, currencies and securities, acceptance of deposits in foreign currencies, remittance of money and granting of credit abroad, except for the purpose of financing normal trading requirements and reasonable travelling or other personal expenses. There are two proposed lines of tariff revision: one projects an imposition of a 35 per cent. surtax on specific duties

CHEAP EDITION. 1s.

With a New Chapter on The Balance of Trade

TARIFFS:

THE CASE EXAMINED

By a Committee of Economists under the Chairmanship of

SIR WILLIAM BEVERIDGE, K.C.B.

New Statesman: "Is it possible that any Protectionist could arise from the reading of this book with his faith unshaken? For these informed economists have entered every nook and cranny of the tariffist creed and swept it clean of all its hoary myths and fallacies. To be sure this has been done before, though never so completely."

LONGMANS.

"in order to restore equilibrium between specific duties and *ad valorem* duties, which has been upset by the depreciation of the currency." Nearly two-thirds of the 647 items on the tariff list will be subject to the additional duty. The other proposal is for higher protective duties on wheat and other grain, iron and steel, watches, machinery, automobile parts, timber and several others. The increase is roughly 50 per cent. on the average.

The unloading of the huge surplus of raw silk held under the Raw Silk (Indemnification) Act has proved, as was feared, a depressing influence on silk prices, which last week were down to 380 yen, a new low level. In the circumstances, the buyers have been unable to take over the stock. The situation has become so serious that, particularly as the agricultural communities are in dire distress, it cannot be left to take its own course. The Government decided on Saturday night to rescind the contract and repurchase the remaining stock of 98,310 bales. Following the Government's decision, silk prices rapidly recovered to 470 yen. There also has been a marked recovery in Spring cocoons, which are now arriving at the market.

Heavy imports still continue. The trade returns for last month show that, in comparison with May, 1931, imports increased by 23.5 million yen, or 18.3 per cent. while exports rose by only 1.3 million yen, or 1½ per cent. Though the increase in imports is again largely accounted for by raw cotton, the growth in imports of wheat, pig iron, machinery, timber and several other items represents some attempt at forestalling of duties. On the export side, the expansion in cotton manufactures and rayon products was nearly offset by the heavy decline in raw silk, sugar and paper.

Commodity prices continue the downward trend with undiminished severity. The Bank of Japan's wholesale index number for May registered a further sharp drop of 2½ per cent. on the month, reducing the total to 150.3 and thus offsetting most of the gain since the abandonment of the gold standard. The fall was general, and out of fifty-six products only four advanced.

Letters to the Editor.

CANADA AND THE OTTAWA CONFERENCE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—It may interest you to have some observations on the Ottawa Conference from the Canadian viewpoint. As hosts and as members of the Conference, the Canadian Government, after a somewhat laggardly start, have been actively engaged on preparations, and a number of committees have been set up. A general economic committee is charged with the examination of a wide variety of problems such as the effect of preferences upon import trade and Canadian price levels, dumping, the currency situation as it affects Canada's foreign trade, marketing methods, the wheat quota proposals, Canada's competitive position in the British market, the status of trade treaties in relation to preferences, ocean freight rates, and other matters. The Tariff Committee has a more restricted function; its task is to compile material which will help the Ministry to determine the practical proposals for the stimulation of inter-Imperial trade which they will submit to the Conference. It has had before it communications from the British Government and the observations thereon of the Canadian Manufacturers' Association and of representatives of individual industries affected, who have been cross-examined on their views.

Moreover, the Bennett Ministry is by no means relying solely upon the advice of the manufacturing interests. It has invited Chambers of Commerce, importers' associations and agrarian organisations to submit their views and ideas about the expansion of inter-Imperial trade, and the memoranda which they submit will be given careful consideration. At the invitation of the Bennett Ministry the three Provincial Governments of the Prairie Provinces have, after a conference on the subject, taken steps to secure a co-ordinated expression of western opinion about the problems of the Conference, and the milling interests are being consulted about problems like the wheat quota and the future of their export market in Britain. So if the Bennett Ministry was somewhat slow in beginning its preparations for the Conference, it has been making up for lost time, and there is now every prospect that Canada will be

as well prepared with material as any other of the British units. But probably no one of the Governments requires such careful preparation of its case inasmuch as it is confronted with a peculiarly delicate dilemma whose solution is imperative for its own political fortunes.

The Attitude of Manufacturers.

The real difficulty is that while the Canadian Manufacturers' Association as a body professes ardent devotion to the idea of deepening the channels of inter-Imperial trade, few—if any—of its individual members see any reason why they should be called upon to sacrifice their present scale of protection. What some manufacturers are willing to suggest is that duties affecting their raw materials and supplies should be altered so as to divert to Britain business now enjoyed by American and other interests. On the other hand, there are a substantial number of industrial firms in Canada which are controlled by American capital and have close affiliations with either parent or allied organisations in the United States, from which they are in the habit of securing their raw material; such firms naturally dislike the idea of being compelled by tariff changes to buy from British instead of American sources, and are resisting tariff changes directed to this end. It is, however, an open secret that warnings have been conveyed to manufacturers by the Government that a general attitude of "non possumus" will not be tolerated, and that if they do not volunteer a reasonable number of concessions, the Government will disregard their views and objections and make the concessions "off its own bat."

It is understood that at the annual convention of the Canadian Manufacturers' Association a few weeks ago the private decision was reached not to adopt at the Conference an attitude of rigid defence of the existing tariff preserves, and Mr W. C. Coulter, the newly-elected President, declared in his address at the closing banquet that the Association ardently believed in the stimulation of inter-Imperial trade and would make whatever contribution it could to the success of the Conference. But it is also known that the policy of the Bennett Ministry in regard to dumping duties and measures taken to cope with imports from countries with depreciated currencies was endorsed. Undoubtedly the core of the resistance to any further tariff concessions to Britain is to be found in the attitude of textile manufacturers engaged in producing woollens, cotton, rayon and silk. They have been the chief beneficiaries of the tariff largesse which the Bennett Ministry has dispensed since it came to office, and their plants have been working far nearer to their full operating capacity than those of any other Canadian industry. On the other hand the price of textiles shows no decline as is visible in other commodities.

The textile manufacturers make no secret of their determination to fight to the last ditch for the retention of their preserves, and as textile factories are fairly well scattered over Eastern Canada they can command a good deal of support. Their extremist attitude, however, is not supported by the main body of the Manufacturers' Association, and it is believed that the officials of the latter body have frankly informed the textile interests that they cannot commit the Association as a whole to support such a rigidly protectionist policy. Private warnings to the same effect have also been conveyed by Ministers to the textile interests and intimation given that some concessions to British textile imports are inevitable.

The situation in regard to iron and steel also presents difficult complications. With railway and building construction at the lowest ebb for years, the Canadian iron and steel plants are now operating at a very low level and find orders hard to come by, with the result that the workers engaged in these industries are suffering severely from unemployment and none of the iron and steel corporations of the Dominion, except the Steel Company of Canada, is able to pay anything to its security-holders except bond interest. A year ago Mr Julian Piggott, the manager of the British Steel Export Association, spent some months in Canada and succeeded in negotiating an arrangement under which the Canadian steel manufacturers, in return for being allowed immunity from British competition in the lighter types of steel, agreed not to manufacture certain heavier classes of steel products, which not "being of a class or kind made in Canada" would therefore enter duty free, although the value of this agreement to British steel manufacturers has since been substantially impaired. Conferences preliminary to the Ottawa Conference are due to take place between the representatives of the British and Canadian steel interests, and an effort will be made to reach some satisfactory agreement for the allocation of equitable shares in the Canadian market, but the iron and steel interests of Canada will not willingly see any diminution of their present tariff protection.

Footwear, leather goods, electrical equipment and machinery of different kinds will be the other commodities of prime importance in the tariff discussions between the British and

Canadian delegates, and the situation which prevails in regard to them presents many of the same difficulties as exist in the case of textiles and iron and steel products. There has been some propaganda disseminated in Canada to the effect that the best policy for the Canadian Government would be to put everything that is not manufactured in Canada on a British preferential free list and that this would offer magnificent openings for British trade. A list of something like 3,000 articles which are not made in Canada has been compiled, but the unfortunate flaw in this scheme is that a large number of these articles are petty gadgets of which the annual volume of imports is inconsequential and others are only produced in the United States, not a few of them being covered by American patents. A free list of this kind for British goods would probably not bring any material stimulus to British exports to Canada, and what the British delegates will obviously insist upon is concessions upon staple articles of common domestic consumption.

The Government's Dilemma.

Herein lies the great dilemma of the Bennett Ministry. There are comparatively few articles of ordinary staple consumption which Canadian manufacturers do not try to produce, and naturally they think that they are entitled to the lion's share of the domestic market. The Bennett Ministry is fully aware that, if it countenances any serious inroads upon the protectionism enjoyed by its local manufacturers, it will incur their bitter hostility and might possibly have to face a revolt among the more extreme protectionists in its own following in Parliament. It is also aware that in the rural communities, and with consumers who are not interested in manufacturing industries, the manufacturers as a class are not popular; complaint is often made that the products which they offer are not good value for the price which their tariff protection enables them to ask. It knows that very high hopes concerning the Economic Conference have been raised and that the Canadian public has been encouraged to expect that the Canadian public will increase inter-Imperial trade valuable results which will restore Canadian prosperity. exchanges and thereby help to restore Canadian prosperity. It is conscious that, if it does not make some very substantial tariff concessions at the Conference, it will be liable to see the British Government withdraw the existing preferences for certain products and conclude new trade arrangements with some of Canada's competitors in the British market like Denmark and Argentina. It can visualise the devastating indictment which would in this event be launched by the Liberals and Progressives, who will accuse it of having acted as the subservient instrument of selfish manufacturing interests. So what the Bennett Ministry will be engaged in during the coming month is a delicate calculation as to just how far it can go in the direction of tariff concessions for the benefit of inter-Imperial trade without arousing the envenomed opposition of the local industrialists who are its staunchest supporters.

The Canadian Conservative party, led by Mr R. B. Bennett, owed its decisive victory at the general election of July, 1930, partly to the popular dissatisfaction with the Liberal Government of Mr Mackenzie King, which the advent of hard times had generated, and partly to its forthright advocacy of a policy of higher protectionism as a panacea for the depression which had then begun to afflict the Dominion. To-day, nearly two years have elapsed since the experiment in higher protectionism was initiated and an appraisal of the results does not reveal a very satisfying picture. So far from unemployment being cured, it has steadily mounted in volume. A competent economist, Professor G. E. Jackson, of Toronto University, recently placed the number of unemployed in Canada at about 725,000, or some 35 per cent. of the total workers, a figure which is much higher than the British ratio of unemployed. Naturally the protectionists rejoice in the curtailment of imports and the appearance of a favourable balance of trade, but the barriers against imports have produced tariff reprisals from foreign countries and caused a steady diminution of exports. The Bennett Ministry is, indeed, faced with evidence that its tariff policies have resulted in an erosion of a substantial amount of the popular support which brought it victory at the last general election, and it is now a subject of common speculation whether it will not utilise the coming Economic Conference as an opportunity to modify its fiscal policies in the direction of lower tariffs. But it cannot embark upon any such adventure without taking into consideration the attitude of the Canadian Manufacturers' Association, whose members ranged themselves almost solidly behind it at the last general election.

The Wheat Quota.

Finally, a word as to the wheat quota scheme, which, at the Imperial Conference of 1930, was submitted to an exhaustive examination by the grain and economic experts of Britain and the Dominions. There was considerable divergence of

opinion between the two groups about what would constitute a fair allocation by quota of Britain's wheat imports. The British were at first unwilling to concede that Canada should have a larger quota than 47 per cent. of Britain's wheat imports, but the Canadians stuck out for 55 per cent. Eventually it was decided that the scheme should be subjected to further examination and come up for discussion at Ottawa. The controversy about the allocation of quotas is complicated by the difference between Canadian and British statistics of the trade in grain between the two countries, the former describing as exports to Great Britain many cargoes diverted en route to other countries, while the latter undoubtedly include among imports from the United States grain originating in Canada but shipped from New York after storage in American lake ports.

But despite this difficulty the quota scheme will undoubtedly receive further consideration at the Conference, and the Canadian delegates (if they cannot persuade their British confreres to incur the political risks of a preferential food tax) will push it with all their powers of argument and persuasion.

So far discussions in the press and elsewhere have revealed considerable divergence of opinion about the value of a quota scheme to the grain-growers of Western Canada. One body of opinion, which has supporters among both the grain trade and the farmers, thinks that a fixed minimum quota in the British market would have definite value and in support of their belief lay great stress on the following argument. During the first half of each crop year from August 1st onwards the continental countries with their restrictive systems for the benefit of their domestic producers are in the habit of exhausting their home production of grain and drawing as little as possible upon external supplies. As a consequence there is during this period intensive competition in the British market, and it is claimed that the assurance of a definite outlet for a part of the Canadian wheat crop during this period would bring substantial benefits to the western grain grower; it would be of less value to him during the second half of the crop year when the continental countries were importing more freely. Another point made is that a quota system would offer some protection against the demoralisation of grain markets by Russian dumping.

But in other equally authoritative quarters grave doubts are entertained about the value of a fixed minimum quota in the British market or even of a preference. It is pointed out that when Western Canada has an average crop nowadays, say of 400 million bushels, the exportable surplus available will not be far short of 300 million bushels. Obviously, even if all Argentinian and Russian wheat were excluded from the British market, Canada would still have to share it with Australia, and it could not at the very best be expected to absorb for British consumption more than 150 million bushels of Canadian wheat. The balance of the exportable surplus would have to be disposed of elsewhere, and in the markets of the Continent of Europe it would have to face fierce competition from the wheat of other exporting countries who had either been completely shut out of the British market or allowed to sell only a small quantity in it. In these markets selling pressure would be intensified and an inevitable consequence would be a depression of the basic world price for wheat, and a lower aggregate return for the Canadian grain-grower. This view is strongly held by some of the most intelligent members of the grain trade in Winnipeg, while the milling interests of Canada also entertain a cordial dislike of the idea of a quota as they fear that it will give British millers an excuse for pressing their claims for a duty on all imported flour. But the Bennett Ministry is under the necessity of demonstrating its ability to get from the Conference some practical benefits for the western farmer and it will therefore use all its bargaining power to secure for him some preferential position in the British market in regard to wheat.—Yours, etc.,

Canada.

BOOKS OF THE WEEK.

Depressed Areas.

THE Board of Trade has just issued two of the Industrial Surveys of Depressed Areas which were drawn up for it by the Economic Departments of the various universities concerned.* The first two relate to South Wales and the south-west of Scotland; and the amount and variety of information provided is such as to make one look forward with lively anticipation to the remainder of the series.

The scope of the reports includes a brief description of the physical and industrial character of each region, an account of its economic history during recent years, with special reference of the period from 1924 to the present time, an evaluation of the present position of the principal industries and services which are to be found in it, and an attempt to prophesy in some degree its economic future. Naturally, perhaps, personal idiosyncrasies show themselves most clearly in the last of these four divisions, since any view formulated about the economic future of these or any other regions—or, indeed, of Great Britain as a whole—must depend so largely upon the views which its formulators hold about the nature of the present crisis itself, and whether it is destined to disappear naturally, as other crises have disappeared, or to deepen and intensify and end either in a permanent lowering of standards or in the collapse of the present system. Economists in different areas and of different schools of thought will answer this question in different ways; those who write from Cardiff seem to be prophesying in the expectation that the conditions of 1930-32 will continue with only minor modifications, while the Glasgow contributors obviously believe in the trade cycle, write casually of "the first post-crisis year (probably 1934)," and even commit themselves to a tabular statement of the probable state of employment in that year, showing in most industries a distinct improvement over 1929—a statement which seems, to the present writer at any rate, almost startlingly optimistic.

As has been said, no such optimism is prevalent in South Wales. There even the heavy loss in population (largely by migration) has not availed to prevent unemployment in the heavy industries, and particularly in the northern part of the coalfield, reaching appalling heights. It is true that South Wales, in common with the rest of the country, has seen a considerable expansion of employment in such occupations as road transport, distribution, hotel and restaurant work, and amusement trades; but this expansion is not expected to continue; and, as the report points out, any attempt to move out of the area the thousands of unemployed miners who are definitely "surplus" to the industry and whose services are extremely unlikely ever to be required again can only result in a diminution of employment in those occupations which have expanded. Nor does either the departure from the gold standard or the discovery of new uses for coal appear to afford any hope. The departure from the gold standard has, for a variety of reasons, brought little or no increase of prosperity; the sale of patent fuel has practically collapsed; low-temperature carbonisation is having little success; and hydrogenation, though it has possibilities, still gives too expensive a product. Better organisation of mining, and better co-ordination of the coal mines with the railway companies, particularly in relation to waggons, would, the report thinks, be of service; but both these are in effect forms of rationalisation whose general tendency is to the displacement of labour; and the final result, in terms of employment, might be no better. The only remedy, the report insists,

is the domiciling of new industries within the area, and the creation of greater "diversity in industrial make-up," as in Swansea, which has suffered relatively little. But of efforts in that direction it has little to chronicle, save the establishment of the semi-educational craft "settlements" in such black spots as Blaenau and the Rhondda; and, as it somewhat sadly observes, "the employment of fifty or sixty persons at Brynmawr making tweeds or furniture or boots is but a minute step along the road which has to be travelled before a surplus of 30,000 or 40,000 can be removed." Not, on the whole, a cheering document.

The report on the Clyde area is more optimistic, and that not only in its prognostications, though it has to admit a loss in population and heavy unemployment in its most important occupations, in only two of which, shipping and dock labour, was the percentage lower than that for Great Britain as a whole. The reason for this optimism, when the facts and figures given are closely studied, is rather hard to find. It appears to be due partly to a feeling that the position, particularly in regard to shipbuilding, might have been much worse; and partly to a faith in the financial stability of Scottish firms—as to which rather more detail than that given in a very short appendix would have been welcome. For this reason, the report holds, new inventions and the improvement of industrial processes (rather than the creation of new industries) will be easy to finance in Scotland when the time arrives—whether that date be 1934 or another. There is, however, a certain feeling that the progress of rationalisation tends slightly to close down Scottish rather than English works. It is disappointing that this report pays no heed to agriculture, which is the subject of a full and interesting section to the Welsh report; and both would have gained by a rather fuller description of the organisation both of industry and of labour. But they contain so great an amount of valuable matter difficult to obtain elsewhere that these are minor criticisms.

"The Co-operative Movement in India." By Eleanor M. Hough. (London) P. S. King. 340 pp. 15s.

Despite its enormous development—over 100,000 societies figured in the statistical returns of 1929-30—the co-operative movement of India has received less attention than it merits in this country. The indebtedness of the peasantry is the root of all evils in the Indian countryside; credit societies consequently overshadow all other types of co-operative activity, and consumers' and marketing societies have made slower progress. It is impossible to expect a sustained effort towards the improvement of agricultural production or marketing from small farmers who cannot hope, by the most strenuous labour, to pay off the exorbitant claims of their moneylenders. Dr. Hough, examining Indian Co-operation with detachment as an American, realises the urgency both of increased credit facilities in the rural areas, and of a careful control over their use in the hands of illiterate and unpunctual peasants. However undesirable in principle the dominant position of the official Registrars of Co-operative Societies, the collapse of the co-operative structure in Burma and its unsteadiness in Madras and elsewhere prove that a premature withdrawal of official supervision leads to disaster. Only a steady training in the virtues of thrift and wise expenditure will fit the villager for the unrestricted management of his societies. Under prudent guidance, as Dr. Hough points out, Indian co-operators have gained valuable ground. Dr. Hough endorses, however, the demand of the recent Banking Inquiry Committees in India for long-term mortgage credits, with which to carry out land improvements and to release the owners from old debt. She tends, as do impatient Indian economists, to under-rate the dangers of long-term lending to men who lack thrift and are inclined to postpone all payments to which they are not immediately compelled. The experience of the Mortgage Banks in the Punjab and Madras suggests a policy of caution. Nevertheless, this review of Indian Co-operation is the best which has yet appeared. It is balanced and full of thoughtful comment.

* "An Industrial Survey of the South-West of Scotland." "An Industrial Survey of South Wales." Made for the Board of Trade by the staff of the Political Economy Department of the University of Glasgow, and by the University College of South Wales and Monmouthshire. H.M.S.O. Papers 51-191 and 51-192 of 1932. 222 pp. and 180 pp. 4s. 6d. and 3s. 6d.

"Kemalist Turkey and the Middle East." By Dr. K. Krüger. (London) Allen and Unwin. 7s. 6d.

This book is competent and comprehensive, but it lacks freshness and originality. It would indeed be difficult, in the compass of some two hundred pages, to survey so vast a field in any but a summary fashion. The author observes, in his preface, that he could have written a much larger work, but that he has deliberately limited the size of the present volume out of regard for the present straits of the book-market, as well as from the desire to make his knowledge of Turkey accessible to the general public. This being so, he would have been better advised to make some corresponding restriction of his field. As it is, the book ranges over every aspect of contemporary Turkish social and political life; goes into the relations of Turkey with all her neighbours; and, in each chapter, attempts to give a sketch of the historical and background. There are chapters on Pan-Islamism and Nationalism; on the new economic policy and economic resources; on parliament, the press, education and justice; on the emancipation of women; on national defence; on relations with Soviet Russia; on relations with Western Europe; on the Christian minorities; on Turkish relations with the Balkan States; on the future relations of Turkey and Russia; on Turkey and her Eastern neighbours; on the geographical position of Turkey and its bearing on Russian and British policy in the Middle East; on Turkey's hopes of the United States; and on Turkey and the League of Nations. Perhaps the two best chapters are those on economics (especially the account of recent railway construction) and on future relations with Russia (including an appraisal of the future of Pan-Turkism in the U.S.S.R. and a hint of the future Russian economic pressure upon Turkey). On the other hand, in the chapters on Pan-Islamism and Nationalism, on Women and on Minorities, the writer fails to call up vividly in the reader's mind the fascinating picture of the process by which Turkey has been "made over" into the likeness of a rather common-place modern Western-model State at the cost of jettisoning all her own original institutions which provided, in their day, something so very near to a solution of the peculiar social problems of the Near East. In these chapters, we ought to be shown a picture of our fundamental Western institutions transplanted into an exotic environment where they produce incalculable and often disastrous effects. But Dr Krüger seems to lack just that touch of imagination which is wanted in order to conjure that picture up.

A. J. T.

OTHER BOOKS RECEIVED.

- Krise und Konjunktur.* By Professor Wilhelm Röpke. (Leipzig) Quelle and Meyer. Rm. 1.80. 137 pp.
An analysis of the trade cycle with a discussion of possible measures of regulating it and of mitigating the effects of failure to regulate it.
- The Alternative to Communism.* By A. G. Pape, and a Symposium. (London) Cecil Palmer. 126 pp. 2s. 6d. net.
A plea for a new political "fellowship." The symposium contains contributions by Professor Murray Butler, Mr George Lansbury, Mr Arthur Kitson and others.
- World Reorganisation or Downfall, and the Remedy.* By Peter L. Robertson. (Hamilton, Ont.) Davis-Lisson, Limited. 236 pp.
Contains, *inter alia*, plans for the redistribution and revaluation of gold, the liquidation of war debts, and an international currency.
- We have Paid Enough.* (London) Simpkin Marshall. 125 pp. 2s. net.
A collection of criticisms, by British, French and American writers, of the United States war debt policy.
- Mind and Money.* By John T. MacCurdy. (London) Faber and Faber, Limited. 319 pp. 10s. 6d.
An analysis of the present economic situation in the light of group psychology.
- Unemployment Insurance in Austria.* By Mollie Ray Carroll. (Washington) Brookings Institution. 49 pp. 50 cents.
An interesting and instructive account of the working of the present Unemployment Insurance Act in Austria.
- Essai sur le Chomage Anglais Contemporain.* By Henri Lavachery. (Brussels) Maurice Lamertin, 58-60 Rue Condrenburg. 156 pp. 16 francs.
A study, in French, of the English unemployment problem.
- The Crisis in the World's Monetary System.* By Gustav Cassel. (London) Oxford University Press. 98 pp. 4s. 6d. net.
The Rhodes Memorial lectures delivered in Trinity Term, 1932.
- Economic Conditions in the U.S.S.R.* (London) Kniga, Ltd., Bush House. 279 pp. 4s.
A descriptive handbook giving particulars of the general structure and working of the U.S.S.R.

A PRACTICAL MONETARY POLICY
FOR
THE OTTAWA CONFERENCE

By
E. BEDDINGTON BEHRENS
With a Foreword by
The Right Hon. L. S. AMERY, P.C., M.P.
(former Secretary of State for Dominion Affairs
and for the Colonies)

The St. Clements Press, Portugal Street, W.C.2.

Die Golddevisenwährung. By Dr. Hans Busse. (Berlin) Verlag von George Stilke. 130 pp.

The working of the gold exchange standard is examined in the light of the experience of various countries, and the conclusion is reached that its future as a means of economising the world supply of gold is very dubious.

Weltwirtschaft: eine Notwendigkeit der deutschen Wirtschaft. By Wilhelm Röpke. (Tübingen) Verlag von J. C. B. Mohr (Paul Siebeck). 27 pp. Rm. 1.20.

A short and effective essay in denunciation of the policy of "autarchy."

Les Finances de l'Empire Japonais et leur Évolution. By André Andradès. (Paris) Librairie Félix Alcan. 200 pp. 15 frs.

A short history of Japanese public finance from the revolution of 1868.

Empire Stock-taking, 1932. By L. St. Clare Grondona. (London) Haycock Press. 84 pp. 3s. 6d.

An abridged revision of the original volume, with the statistics brought up to date.

The Indian Peasant. By the Marquess of Linlithgow. (London) Faber and Faber. 32 pp. 1s. net.

A very readable little pamphlet, well designed to give the general reader a background to the Indian problem.

Political Aspects of the World Depression. By Sir Arthur Salter. (Oxford) Clarendon Press. 21 pp. 2s. net.

The Burge Memorial lecture.

Problems of the Ottawa Conference. By G. R. Stevens. (Cape Town and Johannesburg) Juta and Co., Ltd. 53 pp.

A collection of articles, most of which were originally published in the *Cape Argus*.

A Main Cause of Unemployment. By P. C. Loftus. (London) Sir Isaac Pitman. 88 pp. 2s. net.

The author attributes the present crisis principally to large-scale foreign investment.

The South Wales Coal Annual, 1932. Edited by A. P. Barnett and T. J. Beynon. (Cardiff) Business Statistics Company, Ltd. 302 pp. 7s. 6d.

A useful reference book containing all manner of coal statistics and particulars of dock accommodation, conveyance rates, foreign duties, etc.

Atkin's Manual, 1932. (London) Geo. D. Atkin and Co., Stock Exchange. 483 pp.

Giving particulars of over one hundred and thirty electricity companies.

Il Costo della Burocrazia dello Stato. By F. A. Repaci. (Turin) Edizione de "La Riforma Sociale." 38 pp.

An account of the cost of State administration in Italy.

Die Wirtschaftskurve, 1932. Vol. I. (Frankfurt-a-M.) Societäts-verlag. Rm. 2.70. 112 pp.

A periodical containing articles on current economic conditions.

Income Tax Up to Date. By H. J. Gully. (London) Financial News. 24 pp. 9d.

In addition to income tax rules and payments for 1932-33, the pamphlet contains a synopsis of the Land Value Tax and a table of the rates of Estate Duty.

The Stock Exchange.

THE CONVERSION SCHEME.

THE City has now had time to reflect upon the great conversion scheme. The magnitude of the task—the conversion of one-third of the National Debt, or an amount exceeding £2,000 millions—and the simplicity and boldness of the Government's proposals undoubtedly caught the imagination of the public. There has been an immediate and enthusiastic response from the City. The welcome of the Stock Exchange has been expressed in a somewhat frenzied boom in gilt-edged securities, a scramble for industrial prior charges and a somewhat indiscriminating speculation in foreign Government bonds and British industrial ordinary shares. At one moment the curious phenomenon was seen of Government stocks falling while equity shares of the most varied types were rising with the greatest abandon, but this proved to be a transient phase. The incipient equity boom has not been widely followed by the public, and, as we write, gilt-edged stocks have regained their initial strength. In any case, afterthoughts are always more important than first reactions, and in estimating the chances of success for the scheme we must attempt to analyse the forces whose future influence on the markets is likely to be decisive.

That a reaction in gilt-edged should have occurred is not unnatural. On the morning after the Government's announcement, the dealers advanced the prices of British long-dated stocks automatically to a new yield basis of about $3\frac{1}{2}$ per cent. No doubt they argued that as 5 per cent. War Loan had been the drag upon the market, preventing Government stocks from deriving the full benefit from the fall in interest rates, the market should rise immediately as soon as the drag was removed—in other words, that they were not advancing the price of British Government credit to a new and experimental basis, but were allowing the real credit basis, which had been concealed by the 5 per cent. War Loan, to be revealed. Nevertheless, it was clear that any buying which followed in the enthusiasm of the moment on top of the adjusted prices might leave the market in a top-heavy, vulnerable position. Speculation in the long-dated stocks had been rampant in the weeks and months prior to the conversion scheme. Profits were bound to be taken. Moreover, the weakness of sterling on the exchange markets probably reflected some withdrawal of foreign money from British Government funds.

There is no doubt that the markets will recover when these profit-taking sales or foreign withdrawals are completed. It will, however, be necessary if the conversion scheme is to be a complete success, to remove the present anomaly—that it pays better to sell 5 per cent. War Loan and buy $3\frac{1}{2}$ per cent. Conversion than to buy or hold War Loan and assent to the conversion. Even allowing for the £1 bonus granted to holders assenting before July 1st, War Loan at $101\frac{1}{2}$, with 5s. net accrued interest, yields only £3 10s. per cent. as a $3\frac{1}{2}$ per cent. long-dated stock, whereas $3\frac{1}{2}$ per cent. Conversion at 98½ with 14s. net accrued interest yields £3 11s. 6d. per cent. The present prices and yields of the long-dated stocks are shown in the following table, which gives for comparison the lowest prices touched early this year, the prices ruling at the close of business on June 30th—the eve of the announcement—and at the opening of July 1st—the morning after.

	Lowest. 1932.	June 30.	July 1.	July 7.	Yield %.
Consols, $2\frac{1}{2}$ %.....	54½	67	71	71½	3.52
Consols, 4%.....	81½	101½	110	105½	3.85
Conversion, $3\frac{1}{2}$ %.....	73½	93½	98	98½	3.59
Funding, 4%.....	83½	104½	107½	106½	3.75
Victory Bonds, 4%....	89½	104½	108	105½	3.79
Local Loans, 3%.....	60½	77½	85	83½	3.59

* The Government has the option to redeem at par, 1957.

We must next consider whether the present strong demand for trustee stocks outside the British Government list, for industrial debentures and for preference shares denotes the genuine embarrassment of the small holders of War Loan. There is no doubt that the great mass of small holders will be seriously distressed by the 30 per cent. reduction in income if their holdings are converted. Further, they are not accustomed to holding a long-dated stock exposed to the market fluctuations that depend on the rise or fall of money rates. It is not forgotten that the Goschen conversion scheme, which was hailed at the time as a brilliant success, was later to cause bitter disappointment through the rise in interest rates and the consequent fall in the market value of Consols. To be in the possession of a long-dated stock liable to depreciation in market value at some future date, after having suffered a reduction in interest from 5 per cent. to $3\frac{1}{2}$ per cent., is not a pleasant prospect for the small holders of War Loan. These considerations—especially the anxiety to maintain income—probably explain the rush to buy Colonial stocks, the loans of public boards and port authorities, and the debenture stocks and preference shares of trading companies which can be regarded as safe. Some remarkable rises have occurred. The next table gives the prices of representative loans and prior charges to-day and four weeks ago:—

	Price beginning of June.	Yield %.	Price July 7.	Yield %.
Victoria 5%, 1945-75.....	86½	5.84	100	5.00
New Zealand 5%, 1956-71.....	98	5.12	106	4.75
India $4\frac{1}{2}$ %, 1950-55.....	90½	5.20	100½	4.50
Port of London Authority 5%, 1950-70.....	105	4.55	113	4.03
Central Electricity Board 5%....	104½	4.68	109½	4.58
London Midland and Scottish 4% deb.....	79½	5.14	90½	4.43
London and North Eastern 4% deb.....	74½	5.48	81½	4.90
Buenos Ayres Great Southern 4% deb.....	57	7.00	69	6.75
Pref. Shares:				
Meadow Dairy $7\frac{1}{2}$ % pfce.....	25/6	6.03	28/-	5.33
Vickers 5%, tax free.....	15/7	8.60 (gross)	17/-	7.84 (gross)
Shell Transport 7%, 2nd pfce.	22/3	6.43	26/9	5.29
Lyons 7% pfce.....	28/-	5.00	30/-	4.65
Unilever 7% pfce.....	23/-	4.45	27/-	5.18
Courtaulds 5% pfce.....	20/-	5.00	23/6	4.25

Can such high prices for fixed-interest stocks be maintained? As there has been no change in the basic conditions of trade, it seems illogical that the prior charges of industrial companies, which only recently were being avoided on the grounds that the earnings cover was deteriorating, should now be bought in a stampede, because the yield basis on British Government stocks has been brought down to nearly $3\frac{1}{2}$ per cent. Allowance must, however, be made for the fact that the holders of War Loan who desire to maintain their income are being forced to sell quickly and reinvest in Colonial stocks, public board stocks and industrial prior charges, so that the advance in the latter has been artificially pressed. And it is possible that the difference in yields between British Government stocks and industrial prior charges may be narrowed to a still finer point by reason of the scarcity of suitable fixed-interest securities. Nevertheless, if the trade depression continues unabated, the natural inclination of investors must be to prefer the greater security of British Government funds, and we, therefore, incline to the view that further lowering of dividend yields will be seen inside the gilt-edged market before the end of the year unless some world catastrophe supervenes.

If, as we imagine, the Government views with mixed

feelings the Stock Exchange boom in fixed-interest securities outside the gilt-edged market, it must certainly be amazed, if not disconcerted, by the sudden demand for equity shares. But it must recognise that the same motives are behind this movement—namely, the desire to purchase dividend-paying securities which will return a reasonable income. The leading British industrial ordinary shares have already enjoyed an all-round rise, as can be seen from the following table:—

	June 30.	July 1.	July 4.	July 6.
Associated Portland Cement, £1	22/1½	23/-	26/-	25/6
British American Tobacco, £1	2½	3½	4½	4½
Carreras "A".....	3½	3½	4½	4½
Courtaulds, £1.....	1½	1½	1½	1½
Babcock and Wilcox, £1.....	36/6	32/6	45/-	43/9
Bradford Dyers, £1.....	15/-	16/-	18/6	17/-
Imperial Tobacco, £1.....	3½	4½	4½	4½
Imperial Chemical, £1.....	14/3	14/9	16/9	16/6
Pinchin Johnson, 10/-.....	31/3	31/6	27/3	26/-
Thomas Tilling, £1.....	54/-	56/-	60/-	59/4½
Turner and Newall, £1.....	22/9	23/6	27/-	25/6
Unilever, £1.....	1½	1½	1½	1½
United Glass Bottles, £1.....	23/9	24/-	26/9	26/3
Woolworth, £1.....	50/6	51/9	56/-	54/6
Great Western Rly ord. stock...	24½	27	31½	28½

Many of these rises may have been justified on individual merits, particularly as the market has been short of stock, but there is less to be said for the rise, for example, in Japanese $5\frac{1}{2}$ per cent. bonds from 63 to 75, Brazil 5 per cent. Funding, 1914, from 57 to 66, Entre Rios ordinary stock from 13 to 20, Argentine 4 per cent. from 45 to 53. These offshoots of the prevailing Stock Exchange activity are typical of the confusion of the hour. The idea that a successful conversion of 5 per cent. War Loan in Great Britain can improve world conditions is obviously far-fetched. At best it can tend to stimulate domestic trade by the normal process of cheapening the rate of borrowing for industry and reviving activity in the new issue market. If it were seriously believed that the conversion scheme, involving the payment of £1 bonus to the prompt assenters, would prove to be the turning point for domestic trade, the investor in British Government stocks would have to face the prospect of an increasing trade demand for credit and a gradual advance in interest rates, reacting adversely on the market prices of his long-dated holdings. Thus if there were any justifiable reason for the boom in equity stocks, the War Loan holder would be torn between the desire to help the Government in balancing its budget and the knowledge that by claiming repayment in cash on December 1st he might be able to reinvest in Government stocks more cheaply.

Happily, the Government is not altogether dependent for its success upon whether the private holders of War Loan take a patriotic view of their duty towards the conversion. It is believed that the Government departments control about one-third of the entire loan, and that the banks, insurance companies and financial institutions account for another third. Moral pressure can be brought to bear upon the latter, while direct orders can be given to the former to convert. Of course where War Loan has been bought by the money market as a short-dated bill, cash will be demanded for repayment on December 1st. But this cannot be very harmful, for the Government will doubtless make a new Treasury bond issue before December 1st. It is, indeed, argued in some quarters that within limits it would be to the interest of the Government to break up the loan, and that although too heavy an issue of Treasury bonds would be inadvisable, it is also unwise to have too large a proportion of a $3\frac{1}{2}$ per cent. long-dated stock outstanding. We do not, however, suggest that the Government will have any difficulty in carrying through the conversion scheme, as far as technical conditions are concerned, and to make it the complete success that is desired only a slight further advance in long-dated stocks is probably required. Such a movement now seems likely.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 19.	July 21.

FOLLOWING the sensational rise in gilt-edged stocks at the close of last week, buyers overflowed into all markets on Monday, and quotations throughout moved to higher levels, many securities scoring records for the year. Profit-taking brought a reaction on Tuesday, and irregularity continued early on Wednesday. Subsequently the bulls again took charge, and the upward trend was continued. Despite a singular lack of authoritative information from Lausanne, dealers were in the mood to take the best possible view of everything, and international loans scored some of the biggest advances.

The tempo of the gilt-edged rise was moderated as the longer-dated stocks approached a $3\frac{1}{2}$ per cent. yield basis, but after a period of profit-taking on Tuesday, buying was resumed and considerable business was transacted. Three and a half per cent. Conversion Loan was in strong demand on Thursday, while Local Loans were also in request and moved up to $83\frac{1}{2}$. India stocks were fairly quiet in mid-week, but a marked recovery occurred on Thursday. The new Five per cents. were quoted at $10\frac{1}{2}$ premium. A large amount of trading was carried on in Colonial stocks, though Australian loans became slightly irregular. New Zealand issues were firm. The new Cyprus 4 per cent. loan was quoted at $6\frac{1}{2}$ premium. Home corporation issues were strong.

Foreign stocks made a remarkable recovery under the lead of the German loans, following persistent rumours that Lausanne would prove successful. Young bonds in particular were strongly supported from the Continent. Austrian bonds were firm on renewed talk of the possibilities of an early loan. Roumanian 7 per cents. were prominent. Chinese bonds came on offer on news of a fall in the Customs receipts. Japanese issues registered big advances in the earlier session, but became a little patchy later. The Brazilian funding loans were weaker, while Chilean and Argentine stocks were relatively neglected. Home rails lacked support following the publication of a particularly bad set of traffic figures, though most stocks were up on the week. The traffic position is discussed in a note on page 86. Underground shares were quiet pending the interim dividend announcement. Business was quieter among foreign rails, the traffic figures of the Argentine lines inspiring anything but confidence, while most stocks suffered from profit-taking after the earlier gains.

Bull speculation was responsible for an all-round improvement in industrial quotations, though basic conditions failed to provide any real reason. Some profit-taking on Wednesday was followed by renewed purchasing. Trans-Atlantic issues were a shade firmer. The feature was the sharp advance in Cables and Wireless preference shares, which put on $15\frac{1}{2}$ points in a week on the announcement of an unexpected dividend. Electrical shares were less steady. Among Motor shares, Leyland dipped, but subsequently rallied. Courtaulds were a trifle uncertain. The Tobacco leaders gathered fresh strength. A revival of interest was noticeable in Greyhound shares, while an active turnover was recorded in Boots Pure Drug. Foster Clark were dull on the interim dividend reduction.

The speculative markets shared in the general advance. Oil shares were bought from Paris, and considerable business was transacted, with an active "Street" market after hours. The sharp decline in American crude oil output assisted quotations. Rubber shares became a little quieter in mid-week, but quotations were firm, the easiness of the raw material having little or no effect on prices. Rubber Trust suffered from profit-taking. Tea shares were active, Amalgamated and Consolidated Tea and Lands being especially favoured.

Mining shares were buoyant. Kaffir shares continued in spirited demand from Paris and the Cape, Randfontein, East and West Rand and Sub Nigel recording important gains. "Chartered" forged ahead, and Santa Gertrudis

(Continued on page 84.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The New York Stock Exchange was closed on Saturday, and again on Monday for the usual Independence Day holiday. The tone of markets was fairly firm when business was resumed, German and European bonds being especially favoured as news continued to arrive suggesting a satisfactory *dénouement* at Lausanne, but there was no movement corresponding to the sharp boom in London. Public utility shares were, if anything, more than ever out of favour, following the Democratic nomination of Mr Franklin Roosevelt, who is believed to advocate some measure of Federal regulation of holding companies. Oil shares were one of the best features on the fall in the last crude oil output return, while copper shares were hardly affected by the very low export prices which are being obtained. Farm equipment shares improved substantially on the rise in wheat and cotton. Elsewhere the 6 per cent. bonds of the New York, Chicago and St. Louis advanced 9 points in a day on the expectation of a partial payment, with the assistance of a loan from the Reconstruction Finance Corporation. There is little basic improve-

ment in the economic situation, steel operations being reduced to 12 per cent. of capacity, against 15 per cent. for the previous week. Electric power output for the week ended July 2 was 1,456,961 thousand kilowatts, against 1,607,238 thousand kilowatts a year ago.

PARIS.

The conflicting reports from Lausanne were not taken too seriously, and there was a general tendency to regard the position as hopeful. On the strength of this, a large volume of business was transacted, and prices moved sharply in favour of holders. Young and Dawes bonds rose quickly, while Tintos, Royal Dutch, Canadian Pacific and Central Mining were favoured. Rentes were strong. Profit-taking in mid-week, particularly in German loans, brought a sudden reaction, followed almost at once by a recovery. On Thursday all markets took on a heavy appearance.

	June 30, 1932.	July 1, 1932.	July 2, 1932.	June 30, 1932.	July 1, 1932.	July 2, 1932.

BERLIN.

The Berlin Bourse enjoyed a vigorous recovery on increasing anticipations of a satisfactory settlement at Lausanne. A swift rise occurred in practically all fixed-interest securities. Young bonds were again higher, while Reichsbank improved and mining shares were in request. Gelsenkirchen showed some weakness. Business con-

INVESTMENT NOTES.

Course of Equity Share Values.—For the first time this year our monthly chart of equity share prices shows a divergence in trend between London and New York. London turned upwards, while New York continued reactionary. The movements in British equity share prices last month were, however, small—the *Financial News* index of 30 British ordinary shares moving up from 51.3 on May 31st (the low record of the year) to 54.0 by June 30th. Since that date a much sharper upward movement has taken place—the index for July 4th being 62.0. This, of course, is the result of the enthusiasm with which the War Loan conversion scheme has been received. If the movement continues—the probabilities of which are discussed in our leading article this week—the losses suffered on equity shares last year will shortly be wiped out. It is interesting to see that whereas the standard statistics index of American equity share prices has fallen from 184.2 in 1930 to 32.8 by the end of June, 1932—a drop of 82.2 per cent.—the index of British share prices has only fallen from 86.6 to 54.0 in the same period—a decline of 37.7 per cent.—while already a large part of the decline has been recovered. The interesting question is whether the liveliness in London, coupled with a favourable *dénouement* at the Lausanne Conference, will now pull the New York Stock Exchange out of its rut. The rally which occurred on Wednesday gives some promise that at least a temporary recovery has begun. Strong British buying of American securities and European, especially German, bonds was reported. It may therefore be that London will come to the rescue of New York and that the Old World will yet point the way of recovery to the New.

tinued to be of large dimensions in mid-week, though prices were less satisfactory and trended downwards in many instances as a result of profit-taking.

AMSTERDAM.

Buoyant conditions prevailed at Amsterdam in sympathy with the strength of the London Bourse and in the expectation of a Lausanne settlement. All quotations trended upwards, the German loans being especially favoured. Royal Dutch sprang, while Unilever and Philips Lamps were in keen request. Sugar shares were lively, Amsterdam Trading advancing sharply, while rubber and shipping shares were bought. Billiton Tin was a good feature.

OTHER CENTRES.

Nearly all the minor European bourses enjoyed a strong tone in sympathy with London and Paris. Prices were up all round at Stockholm, Skandinaviska and Grangesberg being especially in request, while banks generally were supported. A more cheerful sentiment obtained in Brussels, while Milan and Frankfurt were active, though irregularity tended to develop in mid-week.

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, January 1932 to June 1932. (1928=100)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks—Daily Figures.

Half-year Railway Traffic.—For the first half of 1929, before the world slump began, the gross "traffics" of the "Big Four" railways amounted to £86,504,000. For the first half of 1932 gross receipts have fallen to £70,097,000, or by 19 per cent. The aggregate decline for the half-year is no less than £6,588,000, compared with 1931, though the period with which comparison is made itself showed a fall of £7,947,000 over the first six months of 1930. A feature of the figures is the sharp relative fall in passenger traffic, the proportion being 37.7 per cent. of the whole decline, against 30.9 per cent. Merchandise makes a relatively better showing, accounting for only 46.9 per cent. of the losses against 54.6 per cent. The London Midland and Scottish contributes 35 per cent. of the decline, the North-Eastern 33 per cent., the Great Western 18 per cent., and the Southern, whose passenger traffic has been particularly badly hit, 14 per cent. The quota of the Southern last year was only 7 per cent.

HALF-YEAR TRAFFICS.

(£'000 omitted.)

	L.M.S.	L.N.E.R.	G.W.R.	S.R.	Total.
	1931, compared with 1930.

Coal and coke	146	584	474	57	1,147
Total	2,965	2,866	1,591	525	7,947

1932, compared with 1931.

Passengers	722	619	491	652	2,484
Merchandise	1,108	1,168	564	253	3,093
Coal and coke	479	401	120	11	1,011
Total	2,309	2,188	1,175	916	6,588

The following table demonstrates the catastrophic declines in share values. By June 30th prices were already on the upward grade for reasons entirely unconnected with the railway position, and since that date the equity stocks have reached considerably higher levels following a wave of speculative buying based on anything but the intrinsic merits of the stocks.

	1931.	1932.	Price,
	High.	Low.	June 30, 1932.
L.M.S.R. 4% pref. stk., 1923.....	55½	25½	38½
" ord. stk.	34	13	20½
L.N.E.R. 4% 2nd pref. stk.	44½	16½	33½
" def. stk.	8½	2½	6½
G.W.R. 5% red. pref. stk.	100½	83½	87½
" ord. stk.	69½	38	48½
S.R. 5% pref. stk.	92½	55½	67½
" def. stk.	23½	9½	11½

It is not expected that the gross receipts for the second half of 1932 will be materially better than those for the first half, and it is doubtful whether further economies and pooling schemes (to which reference was made in last week's *Economist*, page 30) will be adequate to safeguard those stocks, which are at present perilously perched on the edge of the trustee list.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

"Cosach" Liquidation.—The Chilean junta announced on Saturday last that the Chilean national nitrate company "Cosach," would be liquidated in such a way that the Treasury would not suffer any loss. If this decision is adhered to, the grand attempt to rationalise the Chilean nitrate industry on mass-production lines—and with the use of Guggenheim process plant—will have ended in failure and disaster, and the failure will be attributable only in part to the onslaught of the world trade depression. The truth of the matter is that "Cosach" has been hampered from the beginning with an insupportable burden of debt representing the claims of the Chilean Government, the Guggenheim Brothers and their bankers, and the constituent companies. The decision to liquidate will not be accepted without a struggle. The directors of "Cosach" are of opinion that the company's debts can be written down to a point at which it will be possible to compete with independent producers and at the same time provide the Chilean Treasury with an adequate revenue. The present position is deplorable enough for the British investor holding not only Chilean Government bonds, but shares in the constituent nitrate companies and the mass of the £2 millions prior-secured 7 per cent. "Cosach" sterling bonds, which were issued in March, 1931, on the London market by Baring Brothers, Morgan Grenfell, Rothschild's and Schroeder's. It was announced on June 4th that the trustees to this loan had not received the April or subsequent monthly payments required for the service of the "Cosach" bonds. A strong committee representative of British holders of "Cosach" securities has been formed, with Mr Nigel Campbell, of Helbert Wagg, as independent chairman. But the strongest of bondholders' committees cannot oppose a whole nation or remove a whole slump from an industry. It will be interesting to see how the independent nitrate producers, unencumbered with debt, make use of their new freedom of action, and whether the change will do anything to improve the revenues of the Chilean nitrate railways, including Antofagasta, which have suffered from a closing down of the Shanks process plants.

Coal Mining Company Results.—The combined effect of coal marketing schemes, local rationalisation and a sterling bounty has not sufficed to lift the coal trade out of depression. One or two companies have shown better results, but of the seventeen whose recent profits are set out in the table below, twelve failed to pay an ordinary dividend last year. The aggregate profits of the seventeen concerns declined from £1,434,826 in 1930 to £1,049,981 in 1931—i.e., by nearly 27 per cent. A conspicuous improvement, however, was registered by the Bolsover Colliery, whose profits rose from £163,654 to £302,409, and the ordinary dividend from 2½ per cent. to 7 per cent. Manchester Collieries (which paid 2 per cent., against nothing) would appear to have benefited from internal reorganisation.

† 11 months.

‡ Before sinking fund.

Welsh Associated Collieries were particularly badly hit by the falling off in industrial demand. The imposition of severer quota restrictions abroad is unfavourably affecting the current year's trading. The new Coal Mines Act makes for stabilisation of current labour conditions, but does not provide for lower working costs.

Good Recoveries.—At a time when the vast majority of company reports tell a depressing tale of the world trade slump, it is important that we should not lose sight of the few whose recent results have shown a marked recovery. In the following table we give comparative profit figures of twelve companies about whose results the word "recovery" can fairly be used. In seven cases the ordinary dividend has been increased, while in the other five cases prudence has dictated the further conservation of resources:—

Name of Company.	Net Profit, 1930.	Ord. Div.	Net Profit, 1931.	Ord. Div.	Price, July 6, 1932.	Yield %.
Barry and Staines Linoleum (£1)	98,795	2½	142,963	10	1½	5 15 0
Bolsover Colliery (£1)	163,654	2½	302,409	7	11	7 10 0
British Cotton and Wool Dyers' (5/-)	Dr. 7,705	Nil	27,175	3½	4/0	5 5 0
British Oil and Cake Mills (£1)	155,105	Nil	666,162	10	1½	6 3 3
Dunlop Cotton Mills (Q1)	151,446	15*	189,825	32*	...	...
Home and Colonial Stores (Q1)	564,938	25	795,825	25	16/3	6 5 0
Kolster-Brandes (£1)	6,895	Nil	86,468	Nil	5/6	Nil
Lovell and Christmas £1	60,635	Nil	113,009	6	18/9	6 6 3
Patons and Baldwins (£1)	112,186	2½*	287,006	7½*	1½	4 16 0
Shipley Collieries (£1)	6,838	Nil	29,877	Nil	7/6	Nil
Spillers	272,444	10	352,077	15	38/6	7 15 0
Vauxhall Motors	Dr. 85,636	Nil	56,040	Nil	...	...

* Tax free.

The causes of the improvements are in most cases clear. The two collieries have profited by internal reorganisation and modernisation of plant. Barry and Staines Linoleum has effected important economies following the linoleum merger. British Oil and Cake Mills has derived advantage from its close association with Unilevers, while Vauxhall Motors has been revitalised by General Motors. The widening gap between wholesale and retail prices has doubtless been of assistance to Home and Colonial Stores. British Cotton and Wool Dyers has benefited directly from the sterling "bounty" following the abandonment of the gold standard. Dunlop Cotton Mills have been helped by the low prices of raw materials, while the same condition has probably been a factor in the marked recovery of Patons and Baldwins. Kolster-Brandes is recovery of the "boom" flotations which has survived the slump and now promises to take its share of the profits of a growing radio industry.

Distillers.—The annual report of the Distillers Company shows that profits have declined by over 20 per cent. After providing for payment of the full year's interest on the several debenture stocks there remains a balance of £1,758,869, which with £283,151 makes available for distribution £2,042,020. The reserve fund is increased to £2,750,000 by the allocation of £250,000. It is proposed to reduce the annual dividend to 17½ per cent., against 20 per cent. for the two preceding years. The carry-forward is £201,482, an increase of £8,330.

	1930	1931	1932
Net profit	£ 2,322,740	£ 2,272,915	£ 1,758,869

While the operating works of the company have been maintained in the fullest state of efficiency, there has been written off a sum of £158,976 for depreciation. During the year the value of the vinegar works at Hull has been taken out of property account and added to sundry investments against shares to be issued by British Vinegars Ltd., a company that has been formed to amalgamate some of the well-known vinegar manufacturers in this country. After deducting the value of these works and the depreciation referred to, and adding the costs of additional realisations, the net result is a reduction in property account by £180,637. The £1 ordinary shares are at present quoted at 50s. to yield £7 6s. per cent. after allowing for the final dividend of 10 per cent.

Associated Newspapers.—The accounts of this leading "Rothermere" company for the twelve months to March 31st last indicate that net profits have fallen by a third to £704,645. The usual dividend on the 5 per cent. preference shares and the 7 per cent. ordinary shares absorbs £67,000, while the distribution on the £2,250,000 of deferred capital is reduced from the 40 per cent. which it has received for the past eight years to 25 per cent., requiring £562,500. The sum of £250,000 is placed to reserve for contingencies and the carry forward reduced from £666,172 to £491,318.

	Year to March 31.	1930.	1931.	1932.

The balance sheet reveals liquid assets of £1,655,173, of which £354,231 consists of cash and £730,216 of British Government securities. Shares in subsidiaries at £1,404,797 are given at or below market value where quoted and at cost where unquoted. Liabilities include £568,963 owing to subsidiaries and £962,981 on account of "creditors and reserves for contingencies," an item which might well be elucidated further. At their present price of 15s. the 5s. deferred shares yield £8 6s. 8d. per cent. less tax.

Union Cold Storage.—The 1931 accounts of this holding company show that after charging differences on exchange and "certain provisions for the year" to a reserve account, there is a balance of income of £999,707, which compares with £981,703 for the previous twelve months. After placing £125,000 to depreciation reserve and meeting

SOUTH MANCHURIAN RAILWAY CO. LTD.

5% Sterling Bonds issued in 1907 and 1908 for £4,000,000 and £2,000,000 respectively.

THE YOKOHAMA SPECIE BANK, Ltd., announce that the REPAYMENT of the above Bonds maturing on the 23rd July, 1932, at par, and payment of the accrued interest up to that date at 5% per annum, will be made in London at their office on and after the said date, between the hours of 11 and 3 (Saturdays excepted).

The Bonds must be listed on the forms to be obtained at the said Bank, and be lodged three clear days for examination prior to their payment.

For

THE YOKOHAMA SPECIE BANK LTD.

The amount at which the company's properties in Russia stood in the balance sheet has now been fully provided for. The directors are of the opinion that trading investments in subsidiaries, at £7,604,280, are not over-valued "in view of the benefits which the company derives from them." The balance sheet does not disclose a liquid position, "quick" assets being only £2,743,549 to cover current liabilities of £3,870,308. The 16 per cent. cumulative preference shares are quoted at 22s., to yield about £5 10s. per cent., allowing for the accrued dividend. The ordinary shares are privately held. The absence of consolidated accounts hides the real earnings position.

Industrial Profits.—During June we received 235 company reports, aggregate profits showing a decline of 21.80 per cent., compared with 33.30 per cent. in May:—

Reports.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
Published in 1931—		%
April	217	— 10.49
May	211	— 22.3

Other Companies	148	29,475,330	27,720,580 — 7.2
Total	675	72,998,272	56,834,421 — 22.14

One of the worst declines was recorded by the Anglo-Persian Oil Company, whose profits fell from £4,468,579 to £2,318,718. India Tyre and Rubber made a loss of £558,177, against a profit of £169,066, while the earnings of Guest Keen fell from £439,222 to £233,895. Several of the textile companies fared better, Bleachers, J. and P. Coats, and Patons and Baldwins all enjoying higher profits.

Tin Company Reports.—In view of the conditions which prevail as regards output restriction and the price of the metal, little purpose would be served by any detailed comparison of tin results for the past two years, but the financial features of various reports lately issued deserve attention. Last year the Aramayo lost 2,355,850 Swiss francs, as against 754,060 francs in 1930, reducing the carry-forward to 708,600 francs. In respect of 1929 the distributions totalled 25 per cent. For details of output and other salient points the meeting must, as usual, be awaited. The depreciation of the boliviano in terms of Swiss francs has entailed the provision of an exchange account of no less than 4,425,500 francs. Stocks of metal at the date of the balance sheet stood at 3,996,600 francs and cash at 1,468,800 francs. South Crofty resumed production towards the end of October after a year's suspension. Operations resulted in a net loss of £22,300, of which £6,770 is extinguished by transfer of the general reserve. On December 31st cash and debtors totalled £13,600, against creditors of £7,500. Should tin rise above £150, the directors state, the company will begin to make a moderate profit. The outstanding feature of the Tronoh report for last year consists in a drastic writing down of the fixed assets. To this purpose are applied first, the balance of £62,800 standing to the credit of share premium account; then £10,000 from income tax reserve; and, finally, £21,900 from profit and loss. The book value of the company's two properties, five dredgers, plant, buildings, etc., thus becomes reduced to the virtually nominal amount of £10,000. The reason for this drastic measure is to be found in the financial position. There is a cash surplus of barely £10,000—irrespective, on the one hand, of suspense accounts, etc., to the tune of £12,300, and, on the other hand, of £53,700 for income tax and accruing liabilities. Investments at cost now figure at £361,000, as against £378,050 on December 31, 1930. Last year's profit on mining corresponded very closely with that of the preceding period, but in the absence of any appreciable surplus from realisation of investments, which in 1930 provided £9,400, the profit is £6,600 down to £30,800. Of this the dividends absorb £15,000, and £49,600 goes forward, as compared with £58,200 brought in. Prospects for the current year depend chiefly upon the extent to which the rise in the price of tin counteracts the further cut in quota. The latter is now only one-third the 1929 standard. Following the example of the Tronoh, the Sungei Besi indulges in a liberal writing down. By the 1931 net profit of £7,600 the credit balance was increased to £39,600. Of this £17,600 is applied to the writing down of the fixed assets. The share premium account of £15,500 is similarly utilised, the book value of the hydro-electric works being thus reduced to £80,000, and the plant and machinery to £25,000. On December 31st the cash assets exceeded the liabilities by only a narrow margin. Last year the Southern Tronoh made only a small profit, but the financial position is fairly good, the company having £26,000 in Treasury bonds. By reduction in costs, the Bisichi—a Nigerian proposition—rather more than offset the adverse factors initially referred to; even so, the earnings were not sufficient to admit of any distribution. The last was 5 per cent. in respect of 1929. The company has ample funds in hand. The accounts of the Geevor (Cornwall) show a loss of £10,700, the mine having been shut down ten months out of the twelve ended March 31st.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—P. and O. Banking Corporation, Imperial Bank of Persia, Trust Company of London and Scotland, Anglo-

Spanish Construction, George Newnes, Henderson's Transvaal Estates, Ohlsson's Cape Breweries, and Amalgamated Dental. At the annual meeting of the Imperial Bank of Persia, Sir Hugh Barnes said that there had been considerable activity in the resuscitation of local Persian industries and the development of new ones. Two sugar factories had been erected near Teheran, and tanning, cotton, spinning, weaving, hosiery and other factories had been set up in various parts of the country. Presiding at the annual meeting of the Amalgamated Dental, Mr Russell Polden said one of the most important developments during the past year had been the world-wide introduction of an entirely new product—Solarex—which made it possible to match natural teeth in form and shade much more closely. At the annual meeting of the P. and O. Banking Corporation, Mr W. E. Preston said that the new export of gold from India had been of inestimable value to that country, which was suffering, like all other raw material producing countries, from a severe contraction in the demand for her raw produce.

Public Offers.

Five per cent. War Loan, 1929-47.—Holders who so desire may have their holdings in this Loan continued after December 1, 1932. The rate of interest will be reduced to 3½ per cent.; the Treasury reserves the right to redeem at par on or after December 1, 1952, on three months' notice. The exemptions from United Kingdom taxation will continue in force. Holders giving notification of conversion on or before July 31, 1932, will receive a cash bonus of 1 per cent. nominal of the amount of their holdings. Holders who wish to have their holdings redeemed in cash on December 1, 1932, must notify the Bank of England or Bank of Ireland not later than September 30, 1932. Holders who have made no notification on or before September 30, 1932, will be deemed to have accepted the offer to continue their holdings in the Loan.

Stock Exchange "Introductions."

York Corporation.—Particulars of an issue of £500,000 4 per cent. redeemable stock, 1952-72, redeemable at par on June 30, 1972, or at the option of the Corporation at any time

after July 1, 1952, on three months' notice. This is a trustee security. The whole of the stock has been sold to Messrs F. W. Bentley at £94 per cent.

Middlesex County Council.—Issue of £2,000,000 4 per cent. redeemable stock, 1952-72, redeemable at par on November 1, 1972, or at the option of the Council on or after November 1, 1952, on three months' notice. The stock is a trustee security. The sale of the stock has been negotiated through Messrs R. Nivison and Company and Messrs J. and A. Scrimgeour at £98 per cent.

YOU CAN BE SURE OF SHELL

Summer Shell petrol is specially blended to give the best results under Summer conditions

The resolution was carried unanimously.

THE ANGLO-SPANISH CONSTRUCTION COMPANY, LIMITED.

THE FINANCIAL POSITION.

At the annual general meeting held on Tuesday, July 5th, the Chairman, Sir Evelyn Wallers, reported that the 52½ millions of pesetas nominal of Spanish State Bonds lodged in the company's name with the Bank of Spain had now been withdrawn and partially realised. During the period of deposit there had been some decline in their quoted value, and a depreciation of the peseta, which losses were directly attributable to the arbitrary action of the Government in power before the present Republic.

The chairman stated that an estimate of the liquid assets could be arrived at equivalent to 66 per cent. of the company's debentures outstanding, but this would only be realised provided that certain assumptions as regarded the disposal of the investments and the exchange value of the peseta eventually materialised. This calculation excluded sums still owing by the Government to the Spanish company amounting to some 55 millions of pesetas. Unfortunately, the railway had been affected by political factors; there was, however, no reason whatsoever why the concession should be called in question, and the board was confident that with increasing political quietude the company would receive justice at the hands of the Government in power. It should be observed that the company, which on several occasions had protested in the Supreme Courts against acts of previous Governments in conflict with the terms of the concession, had in every instance been awarded judgment in its favour.

The annual receipts of the exploitation continued to show progressive improvement, although the expenditure still exceeded the revenue.

An improvement in the peseta was to be noted as the result of the comparative prosperity of the country and the Government's strong action against extremists, and the Republic had done much good work as regards national finance.

AMALGAMATED DENTAL COMPANY, LIMITED.

GOOD RESULTS—SUCCESS OF NEW PRODUCT.

The twenty-seventh annual general meeting of the Amalgamated Dental Company, Limited (formerly Claudius Ash, Sons and Company, Limited and De Trey and Company, Limited) was held at the Holborn Restaurant, High Holborn, London.

Mr Russell Polden (the chairman), who presided, and moved the adoption of the report and accounts, said that the two preceding years had been difficult owing to economic depression, but the embarrassments of trade in 1931 had been increasingly aggravated by reason of the ever-growing lack of confidence internationally. Shareholders might be justifiably pleased with the manner in which the unprecedented situation had been handled, and the results of the year's trading might be considered satisfactory. There was a balance of £118,000 standing to the credit of the profit and loss account for appropriation, or £5,000 less than in the previous year, and the board now proposed to pay the balance dividend of 4 per cent., making 8 per cent. for the year, on the cumulative preferred ordinary shares, and a dividend of 3d. per share, free of income tax, on the deferred ordinary shares, or at the rate of 6½ per cent. gross, carrying forward £11,858, as against £11,302 brought in.

Having referred to the opening of the magnificently equipped new dental schools at Newcastle-on-Tyne and at Helsingfors, and to the completion of Glasgow's up-to-date dental hospital, the Chairman said that he had mentioned these important examples that the shareholders might better appreciate that the duty was upon their company to maintain a progressive policy in line with the great advances in dental science which were evidenced in every country in the world, and he felt he might say that the dental profession, wherever the company traded, had ample evidence in the shape of new and improved products emanating from the company of the result of their research work. One of the most important developments in that direction during the past year had been the world-wide introduction of the entirely new product—Solarex—which made it possible to match in form and shade natural teeth much closer than had ever been possible before. Solarex had been received by the dental profession with general and world-wide appreciation.

As to the immediate future, much depended upon the efforts of the conferences that were seeking to restore confidence, politically and financially, throughout the world. So far as their company was concerned, every precaution possible was being taken to protect the interests of the business pending a return to normal international trade.

The report and accounts were unanimously adopted.

GEORGE NEWNES LIMITED.

REVIEW OF COMPANY'S INTERESTS.

LORD RIDDELL'S SPEECH.

The thirty-fifth annual general meeting of George Newnes, Limited, was held, on the 7th instant, at the offices of the company, 8-11, Southampton Street, London, W.C.

The Rt. Hon. the Lord Riddell (the Chairman), in the course of his speech, said:—Ladies and gentlemen, in view of the conditions that prevailed during the period under review, the profit earned may be regarded with satisfaction. Let us hope that we may do as well during the present year.

Having complimented the staffs of the company and its subsidiaries upon their excellent work, Lord Riddell proceeded: As stated in the report, George Newnes directly or indirectly hold the whole of the ordinary shares in C. Arthur Pearson, Limited, Country Life, Limited, Newnes and Pearson Printing Company, Limited, W. H. and L. Collingridge, Limited, Leach's Publications, Limited, and the George Newnes Book Company (India), Limited.

VARIETY OF PUBLICATIONS

I again wish to direct your attention to the list of periodicals and magazines owned or controlled by George Newnes. It comprises *Tit-Bits*, *John o' London's Weekly*, *Humorist*, *Woman's Life*, the *Strand*, *Pearson's*, *Wide World*, *Grand*, *Royal Pictorial*, *Novel*, *Happy* and *Sunny Magazines*, *Hobbies*, *Home Movies*, *Pearson's Weekly*, *Home Notes*, *Woman's Friend*, *Home Gardening*, *Smallholder*, *Scout*, *Peg's Paper*, *Peg's Companion*, *Modern Woman*, *Modern Home*, *Miss Modern*, *Lady's Companion*, *Leach's Home Dressmaker*, *Leach's Children's Fashions*, *Leach's Knitting Books*, *London Opinion*, *Amateur Gardening*, the *City Press*, *Country Life* and *Homes and Gardens*.

I am fully justified in saying that no periodical house possesses such a varied, important and useful set of publications. They cater for every taste and find their way into a large proportion of the homes throughout the country. They also have a large sale overseas. Compared with other publications, periodicals have a long life. They are read and re-read and are passed on from reader to reader. For this reason they hold an important and exceptional position as advertising media, well understood by advertising experts in search of publications which make a steady sustained appeal.

In addition to our periodicals, there are other profitable branches of the business that demand constant care and attention. I refer in particular to our great printing works at Exmoor Street, now being largely extended; our block-making works and our book-selling department, which is a specialised branch of the business.

The profit earned by George Newnes does not include the whole of the profit earned by its subsidiaries. Each of these is carefully managed so as to ensure its individual stability. In other words, excessive dividends are not paid to the holding company. The permanent stability of each part of the undertaking is our main objective. I am sure this policy will meet with your approval.

FIGURES OF COMBINED UNDERTAKINGS.

A few figures concerning the combined undertakings as at March 31, 1932, will no doubt be of interest. They are necessarily only approximate.

Cash at bankers and in hand amounted to some £237,000, of which £128,630 was held by George Newnes. Freeholds, leaseholds, machinery, plant, furniture, fixtures, stock and investments amounted to £633,287 and debtors to £382,074. On the other hand, creditors amounted to £300,821, the preference share capital of the combined companies to £1,082,472, and the ordinary share capital of George Newnes to £464,944. Accumulations standing to the credit of profit and loss account, after providing £68,494 for the final dividend on the George Newnes shares and the other payments mentioned in the report, will stand at £143,830. Goodwill stands at £1,299,351. In this connection we have, however, reserves amounting to £490,275, thus reducing the effective figure to some £800,000, which is very moderate considering the earning capacity of the combined undertakings. In arriving at this figure I have not brought into account the balances on profit and loss accounts already referred to. The Newnes and Pearson Printing Company have debentures amounting to £150,000 and Collingridge debentures amounting to £90,000, but the whole of both issues is now held by George Newnes and its subsidiaries.

Next year I hope to present you with a consolidated balance sheet. This could not be done this year, as it was necessary, in order to arrive at precise figures, to readjust some of the accountancy periods.

I think you will agree that the figures with which I have supplied you show that the combined concern is in a thoroughly

sound financial condition. Owing to the state of trade, some of our departments and some of our subsidiaries have not done as well as usual, but this was only to be expected.

EXTENSION OF PRINTING WORKS.

In order to cope with increased requirements, we have recently bought more land at Exmoor Street, on which we are about to construct a much-needed extension of the works. We have also placed orders for a quantity of new machinery. These operations involve an expenditure of some £80,000, part of which has already been paid. The remainder will be provided out of existing resources of the combined undertaking. We hope and believe that the expenditure will be justified by increased profits. To keep a printing business such as ours up to date, almost continuous expenditure is necessary, but to provide for this we have from time to time written down our machinery and plant, so that the figure in the balance sheet is no real index of their value. The equipment of a printing works such as ours would demand a very much larger expenditure than the amount shown in our accounts.

I propose to make no prophecy about the future. Our various businesses chiefly depend upon the state of trade. Indeed, they may be regarded as a barometer of trade prosperity or the reverse. Let us hope that before long trade conditions will cause the barometer to rise.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Frank Newnes, Bt. (Vice-Chairman), seconded the resolution, which was carried unanimously.

The retiring directors having been re-elected, and the auditors (Messrs Yeatman, Melbourne and Company) reappointed, a cordial vote of thanks to the chairman, directors and staff terminated the proceedings.

TRUST COMPANY OF LONDON AND SCOTLAND, LIMITED.

MR ALFRED SHEPHERD ON THE OUTLOOK.

The third annual general meeting of the Trust Company of London and Scotland, Limited, was held, on the 1st instant, at the company's office, 25-31 Moorgate, London, Mr. Alfred Shepherd (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—So far as the business of our company—that of an investment trust company—is concerned, the year embraced in the report accounts now submitted to you has been one in which a total lack of confidence has existed, arising, I fear, from the inability of many, if not all, countries concerned to view the position otherwise than from their own national standpoint. Until nations realise that they must consider and treat the present conditions internationally, I fear nothing effective is likely to be accomplished.

There is one item in the balance sheet to which I think it necessary to direct your attention—namely, realisation account, being a net losses on investments sold (less reserve), £33,634 13s. 7d. This arises from the fact that during the year the directors considered it advisable to realise certain securities at sums below their cost price, the result being that, after exhausting the balance of the reserve which had hitherto been deducted from the total cost of the investments and not applied in writing down any specific securities, there was a loss amounting to the said figure. The directors sold these securities because they thought it advisable that they should be realised, and the subsequent trend of quotations of these investments has fully justified the action taken.

The general result, so far as our Trust is concerned, is that at the end of our year there has been a further serious fall in Stock Exchange quotations, which, however, must not be taken as an indication of the present intrinsic value of the investments. The valuation shows that, after giving effect to the realised loss before last year. Considering the general fall in the quotations of securities during the year, this further depreciation cannot be viewed as unexpected.

There has been a considerable reduction in the amount of revenue received by our Trust, the income from investments this year being £49,116, against £59,762 last year. After payment of year being £49,116, against £59,762 last year. After payment of income tax and interest on debenture stock and loan, the appropriation account shows £27,396, against £39,651 last year, and, as will be seen from the directors' report, after payment of the preference dividend and writing off the expenses in connection with the debenture stock, there remains a balance of £3,415 11s. 11d. This sum the directors recommend should be added to the amount of the carry-forward brought in, making £14,394 12s. 2d. to be carried forward to next year.

The directors gave very serious consideration to the question of whether it would be judicious to recommend any dividend on the

ordinary stock. After full consideration, and particularly keeping in view the great uncertainty which still exists as regards the future, they felt reluctantly compelled to recommend that no dividend should be paid on the ordinary stock, and that the balance, after payment of the preference dividend, should be carried forward.

Before formally moving the adoption of the report and accounts, I would like to say that the date of the closing of our accounts was one when Stock Exchange quotations were the lowest, or nearly the lowest, of the year as regards securities other than gilt-edged. While there has been a slight rise in certain quotations and some reports of industrial companies show better results, it cannot be assumed that there is any substantial improvement in the trade of the country, and no general rise in the value of securities can, in my opinion, occur until there is such a revival. As I have already intimated, so far as our revenue is concerned, there will, it is clear, be a further fall during the current year.

Until the results of the Lausanne and other conferences and the elections in Germany and the United States are known, it seems to me unlikely that there will be any immediate rise. The intimation this morning of the War Loan conversion terms is a matter of supreme importance, and gives ground on the other hand for feeling that we may now be approaching the dawn of better times.

The resolution was carried unanimously.

Government Returns, &c.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bills were opened on July 1, 1932, and the total amount applied for was £59,945,000. Tenders were accepted for bills at three months, dated Monday to Friday at £99 15s. 5d., about 54 per cent. and above in full, and Saturday at £99 15s. 6d. and above in full. The amount allotted was £45,000,000.

REPORTS AND NOTICES.

BANKS.

CHASE NATIONAL BANK OF THE CITY OF NEW YORK.—The statement of the Chase National Bank for June 30, 1932, shows the following changes in important items since March 31st, the last quarterly statement date. Cash in the bank's vaults and on deposit with the Federal Reserve Bank and other banks amount to \$299,944,000, as compared with \$327,674,000 on March 31st. Investments in United States Government securities are \$218,073,000 as compared with \$176,563,000. Securities maturing within two years are \$106,511,000, as compared with \$51,081,000. Other bonds and securities, including stock in the Federal Reserve Bank, amount to \$89,847,000 as compared with \$101,355,000. Loans and discounts total \$860,648,000 as compared with \$1,025,866,000. The capital of the Bank remains unchanged at \$148,000,000, while the surplus is \$100,000,000 as compared with \$124,000,000 on March 31st. Undivided profits are shown at \$17,381,000 as compared with \$20,789,000. Reserve for taxes, interest, contingencies, etc., amounts to \$12,170,000 as compared with \$28,650,000. Deposits at \$1,302,456,000 compare with \$1,328,737,000 on March 31st.

NATIONAL BANK OF AUSTRALASIA, LTD.—Net profits of the National Bank of Australasia, Ltd., for the year ended March 31st amounted to £276,838 (against £561,205 for 1930-31), to which is added £149,112 brought forward, making the amount available £425,950. From this sum appropriation has been made in respect £425,950. Of this sum dividend of 3 per cent. paid in November last—i.e., of interim dividend of 3 per cent. at the meeting that a final dividend of £150,000. It was recommended at the meeting that a final dividend of 3 per cent., leaving a carry-forward of £125,950. The total dividend for the year of 6 per cent. compares with 8½ per cent. for the preceding year. An amount of £300,000 has been transferred from the reserve fund (which previously stood at £3,300,000) to a special reserve for exchange adjustment, which is designed to provide for possible adverse movements in overseas exchange. In the event of this reserve or any portion of it not being required for the purposes of exchange adjustment, the amount available will be added by the board to the bank's inner reserves.

INSURANCE.

THE NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.—To succeed Mr Geoffrey Marks, whose retirement was announced in our issue of July 2nd, the directors have appointed Mr George Hugh Recknell, F.I.A., F.F.A., the society's present actuary and secretary, to be actuary and manager. Mr Recknell entered the society's service as assistant actuary in September, 1923, being appointed actuary in May, 1928, and actuary and secretary in October, 1929. He became a Fellow of the Institute of Actuaries in 1915, served through the war in France and in Palestine and in Syria, and obtained the Fellowship of the Institute of Actuaries in 1923. He has been a member of the Council of the Institute of Actuaries since 1927, and of the Board of Examiners for the last three years. He has also contributed frequently to the journal of the Institute. The Directors of the Society have appointed Mr F. B. Swift, F.I.A., to be Investment Secretary. Mr Swift entered the service of the Society in 1922 and became a Fellow of the Institute of Actuaries in 1930.

MISCELLANEOUS.

SANGERS, LTD.—The third annual report and accounts of Sangers, Ltd., show a trading profit for the year ended March 31, 1932, of £69,213, being a small reduction of £5,061 on last year's figure of £74,874. Deducting directors' fees and income tax, adding the amount brought forward there is a balance of £84,945, of which preference dividends to January 31, 1932, absorb £14,062 and the preference dividend on January 31, 1932, absorb £14,062, leaving an available balance of £56,820 (last year £59,133). £1,600 has been written off goodwill, making a total of £52,600 written off this item during the four financial years since the incorporation of the company. It is proposed to pay a final dividend on the ordinary shares of 10 per cent., making 17½ per cent. for the year (last year same), leaving to be carried forward, subject to two months' accrued preference dividend, £36,470 (last year £34,758). The balance sheet shows: Cash, £17,970 higher at £59,505 (last year £41,535); British Government securities, £28,018, as against £24,170 last year. Meeting, Holborn Restaurant, W.C.2, at 12 noon on July 12, 1932.

Bengali State Railway.							

The Durham "bunker only" trade is much quieter this week, with prime bunkers offering at 13s. 6d. per ton f.o.b. To-day's f.o.b. prices for export are as follows: NORTHUMBERLAND.—D.C.B. screened steam, 13s. 6d.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin screened, 13s.; smalls, 8s.; Tyne prime large, 12s. 9d.; smalls, 8s.; Hartley main, large, 12s. 6d.; smalls, 8s. DURHAM.—Lambton, South Hetton screened steam, 15s.; smalls, 11s.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s.; coking smalls, 12s. 6d.; price, unscreened bunkers, 13s. 6d.; second class unscreened bunkers, 13s.

CARDIFF.—Conditions in the South Wales steam coal trade have shown no improvement during the present week; on the contrary, owing to the scarcity of orders, the shipments of steam coals have further declined, and there have been periods when about 40 per cent. of the tipping appliances have been idle. In the anthracite trade, however, the recent improvement has been maintained, and exports at Swansea and Port Talbot have continued active. Among the contracts placed during the past week have been one for 24,000 tons of steam coal for the service of Spanish trawlers, and for 80,000 tons of locomotive coals by the Brazilian Sao Paulo Railway. There is a likelihood of some improvement in trade with France as the result of an increase in the quota from 60 per cent. to 70 per cent. of the monthly average shipments for the United Kingdom to that country in three years, 1928-30, but the current supply of coal is so much in excess of the demand that a further reduction in the output quota of the coalfield is anticipated for the September quarter. Last week's quotations are unchanged.

IRON AND STEEL.

MIDDLESBROUGH.—Little headway is being made in the pig iron markets and during the past week business has again been very quiet. In Cleveland iron the demand locally is only on a moderate scale owing to the slackness in the foundry trades, and the demand for Scotland, already small, will be further curtailed by the holidays now in force in the Falkirk district, to be followed later by the Glasgow fair holidays. The export trade is also very slack and little improvement can be looked for in that quarter. After providing for their own requirements, the outside demand is not sufficient to take up the whole of the surplus, and makers have been adding to stocks at the furnaces recently. Only a small business was reported at Tuesday's market and this was practically all for early delivery. Official prices for Cleveland were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t., but substantial concessions can be obtained on these prices for Scotland. There is little change in the hematite position. Demand is improving a little, but is almost entirely confined to early requirements, for which mixed numbers are obtainable at 62s. 6d. per ton. Makers are anxious to secure forward business, for which they ask 63s. a few months ahead, but consumers show no inclination to commit themselves at present. Shipments last month showed considerable improvement on May, the details being:—

	June, 1932.	May, 1932.
Pig iron	11,920	8,958
Manufactured iron	2,937	3,718
Manufactured steel	27,569	19,804
	42,426	32,280

The ore market is practically idle. Best rubio is nominally 15s. c.i.f., and the current freight for early loading Bilbao/Middlesbrough is 4s. 6d. Imports of all kinds of ore into Middlesbrough for June totalled 77,849 tons, against 35,027 tons for May. Coke continues in full supply and good blast-furnace qualities are offering at 15s. 6d. delivered local works. In the finished trades no new orders of importance are reported during the last week, but several small contracts have been secured and more are expected to follow. Prices for steel for home under the rebate scheme are unchanged, viz.: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other main products are: Iron crown bars, £9 15s.; heavy steel rails, £8 10s.; 24-gauge black sheets, £8 5s.; and 24-gauge galvanised corrugated sheets, £9 10s., all for home use. The number of blast furnaces in operation in the district is unchanged at 17.

SHEFFIELD.—A state of depression continues in most branches of the iron and steel industry, and is aggravated by the seasonal quietude which is customary in the months of July and August. Buyers of open-hearth steel are awaiting reductions in price, held to be long overdue. This subject is under consideration by producing firms. Makers of steel strip are benefiting by the tariff. Large quantities of this material have been imported in the past, but there is now little difference between the cost of foreign and British strip, and the quality of the latter is quite satisfactory. The large firms are again curtailing their staffs and reducing salaries, and the unemployed of Sheffield now contains a numerous sprinkling of men who have held responsible positions in the steel industry. There are many cases of severe hardship. Tools are the only active lines in the lighter branches, but orders from the automobile industry continue on a substantial scale. Conditions in the plate and outlery industry have never been so bad. Taking Sheffield as a whole, the volume of business and work continues to fall off.

GLASGOW.—In the iron and steel trades there has been more business placed during the present week, in the main for small lots required before the holiday stoppage, but plant is not fully employed. Continental semis have been offered here at exceedingly low prices, but very little business is being done. There is an increased demand for home semis by those manufacturers who are mainly engaged on manufactures for the home market. Bookings of both black and galvanised sheets for export are better this week, and the volume of home trade orders is fairly satisfactory. Conditions in the tube trade are unchanged. It was announced at the

end of last week that Messrs Lithgows, Ltd., of Port Glasgow, had received an order for a large cargo boat from Messrs J. and C. Harrison, Ltd., London, this being similar to several others which Messrs Lithgows are building for the same firm.

CARDIFF.—Conditions in the South Wales iron and steel trade have deteriorated during the past week, and in the tinplate industry mills are now operating at only from 55 per cent. to 57 per cent. of capacity. Prices, however, are unaltered at from 14s. 9d. to 15s. 3d. per basis box. Welsh steel bars are quoted at 95s. per ton, delivered, and foreign bars at from 80s. to 82s. per ton. Galvanised sheets continue a very quiet market at £9 15s. per ton f.o.b.

OTHER METALS.

TIN.—This metal advanced in price towards the end of last week, following the publication of the world's visible supplies, which, at 59,200 metric tons, shows a decrease of 1,100 metric tons on the month. On Monday the market in London opened dull. Sales amounted to 350 tons only, and prices reacted. There was a slight improvement on Tuesday, although demand showed no increase. On Wednesday, demand increased, sales totalled 450 tons, and prices advanced further. In New York the metal was quoted at 20.75 cents per lb. on Wednesday, against 19.50 cents per lb. a week ago and 19.60 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £124 to £124 5s. per ton, compares with £114 15s. to £115 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,435 tons, show a decrease of 261 tons on the week.

COPPER.—As was to be expected, the imposition of an import duty of 4 cents per lb. on June 21st, has occasioned the withdrawal of four important members of Copper Exporters, Inc. They are: Katanga, Chile Copper, International Nickel and Cerro de Pasco. The market opened slightly firmer on Monday, owing to the depreciation in sterling. Sales totalled 900 tons. A better demand on Tuesday, when sales amounted to 1,000 tons, brought about a slight increase in prices which was maintained on Wednesday, although business had fallen back to the level of Monday. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £27 5s. to £27 7s. 6d., compares with £26 1s. 3d. to £26 2s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 17,930 tons, show a decrease of 325 tons, while stocks of rough copper, at 869 tons, were 25 tons smaller.

LEAD.—In view of the reserve of sellers, the price of lead advanced on Monday, although sales at 700 tons, show a reduction of 50 tons on the corresponding day a week ago. Despite the smaller demand on Tuesday (650 tons), prices hardened further, but there was a slight reaction on Wednesday, when sales dropped to 400 tons. In New York the metal was quoted at 2.80 cents per lb. on Wednesday, against 2.95 cents a week ago and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £10 per ton for shipment during the current month, compares with £9 7s. 6d. on the corresponding day last week.

SPELTER.—More interest was taken in spelter this week, and sales rose from 600 tons on Monday to 650 tons on Tuesday, and 1,000 tons on Wednesday. Under the influence of this improvement in demand, coupled by reserve on the part of sellers, the price of this metal advanced steadily. Wednesday's quotation in New York, at 2.625 cents per lb., compares with 2.75 cents a week ago and 2.825 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £11 13s. 9d. for shipment during the current month, against £11 13s. 9d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and platinum have been maintained at £95 per ton and £9 15s. per ounce respectively. Nickel tained at £25 per ton and £9 15s. per ounce respectively. Foreign antimony rose from £225-£230 per ton to £230-£235 per ton. Foreign antimony was reduced from £22 10s.-£23 per ton to £21 10s.-£22 10s. per ton. Quicksilver was sold at £11 10s.-£11 12s. 6d., against £11 15s.-£12 5s. a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week June 30th to July 6th (inclusive) are 38,290 bales, of which 16,483 American; 236 Peruvian; 3,494 Argentine; 1,578 African; 1,417 East Indian; 13,928 Egyptian; and 1,154 Sundries.

Manchester.—The tone of the market has continued firmer in sympathy with the further rise in raw material rates. Inquiry has tended to broaden and here and there rather more business has been done, but the turnover in most sections remains disappointing. There is less expectation of cheaper prices, but export trade is being very seriously curtailed by the restrictions upon dealings with many countries abroad. Cloth inquiry for India has continued rather more encouraging, and a fair miscellaneous business has been done in light bleaching descriptions, prints and fancies, chiefly from Karachi, Madras and the up-country markets. There has not been much fresh demand for China, but there are indications of a little more activity before very long in fancies. A few more sorting up lots have been booked for Egypt and the Near East, and the recent improvement in the demand for West Africa has been maintained. Some makers have met with useful support from the markets of the Dominions, and necessary buying has taken place in home trade goods. Quotations in American and Egyptian yarns have stiffened, and most spinners have displayed more resistance against low offers from buyers. There has been a slight improvement in the turnover in home counts, but only a limited trade has been done in export numbers.

THE WOOL TRADE.—Bradford.—Since last report, writes our correspondent, events have moved favourably in the wool trade, and to-day the outlook is better than at any time since last October. The influences then at work were exceptional. The recovery in prices in that period may be attributed very largely to an increase of consumption, though no doubt there has been also a good deal of intelligent anticipation. Importers and topmakers realised that prices were about at the bottom, and that in any case it was high time for a new move to be made. It has long been recognised that wool was below an economic level, and calls have frequently been made for something to be done to adjust the relationship between primary cost and the prices for partly and fully manufactured goods. Between these two extremes spinners have been struggling against unremunerative prices for yarn, and speculating on cheap tops by selling yarn at prices which obviously meant a loss. Topmakers had also been more squeezable than was justified by the original cost of the raw material, the result being that average 64's were sold at 19½d. and warp at approximately 20½d. A buying

move on the part of spinners, and the approach of the London sales contributed to the creation of a new atmosphere, and now greasy combed merino and medium and coarse crossbreds are selling at 7½ to 10 per cent. advance, compared with the previous series. This is equivalent in the former to ½d. to ¾d. per lb., and in the latter to ½d. So far, the supply of fine crossbreds has been rather sparse, but the improvement in these is also ½d., and whilst there have been large supplies of slipes, these have advanced ½d. to ¾d. for fine, and ¾d. for medium and coarse. Thus, the raw material is again establishing itself, and spinners who have sold yarn at little prices in anticipation of still being able to get cheap tops, seem likely to be the losers. The selling price of average 64's tops is now 21½d. to 22d., and warp 22½d., ½d. more being occasionally wanted for the latter.

THE JUTE TRADE.—Dundee.—The first forecast of the jute crop, giving the area under cultivation of raw jute, was issued yesterday. The figures were only slightly increased, compared with last year at this time, being 1,903,000 acres against 1,899,600 acres. The latter figures were revised in September last year, when the final forecast was issued, and the area was reduced to 1,858,100 acres. It was expected that the acreage of the new crop would be larger than that given out, but the prospects under growing conditions have been so very favourable this season that a good yield is anticipated, and a crop of 6,660,000 bales can be expected, compared with last year's forecast of output at 5,560,000 bales. The consumption of the Indian Jute Mills during the past season from July 1, 1931, to June 30, 1932, was about two million bales more than their purchases of the past crop, which meant that their stocks of over 5 million bales were reduced to that extent. Under present working conditions the consumption of the Indian Mills is round about five million bales per season, compared with the normal seven million bales. Trade generally has improved during the past week, and spinners and manufacturers have sold on larger lines. Prices are steadier, but not dearer for yarns and cloth, while the raw material has gained 5s. to 10s. per ton. Sellers of the new crop have not been offering very freely this week. Grade First Marks are quoted at £16 5s., and grade Lightnings at £15 15s., while good First and Lightnings are more or less nominal at £18 and £16 10s. respectively, August-September. Daisie assortment rules at £15 10s. and Tessa assortment at £16 10s., for the full group, September-October shipment. Spinners have displayed considerably more interest in the spot position, and a number of sales have been carried through at from £14 10s. to £14 15s. for Daisie assortment, and £13 to £13 10s. for Daisie-4, ex-warehouse. Jute yarns are firm, and altogether a fair business has been done in most qualities recently. Common 8 lb. cops are lowest at 9s. 9d., and 8-lb. spools at 1s. 10d., twist at 3½d. for 3 ply 8 lb., and sacking yarns at 2½d. for 24-lb. weft, and 3½d. for 8-lb. chains. Rove is quiet but steady, at from £18 for 46 lb., and £15 10s. for 200 lb., and the finer yarns have come in for a little attention at 2s. 5½d. for second quality 8 lb. Rio warp, 2s. 2d. for third, and 2s. for fourth. Carpet qualities are quiet, at from 3d. to 3½d. for 14 lb. warp. Inquiries for jute cloth have been decidedly more numerous, and buyers have been more ready to purchase on broader lines. Prices are very steady at from 2½d. for 10½ oz. 40 in. and from 1½d. for 8 oz. Lir-oleum hessians and heavy goods are quiet. Calcutta goods have firmed up in sympathy with the general tone of improvement prevailing throughout the market.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation is scarcely changed on the week. The volume of business at the principal markets has again been small, and prices fluctuated within narrow limits round the lower level established recently. The following table shows a recent estimate of North American crops in 1932, which exceeds substantially an earlier estimate made a few weeks ago:—

North American Wheat Crops.

	(Million bushels). 1931.	1932 (estimate)
U.S. Spring wheat	787	428
U.S. Winter wheat	105	274
Total	892	702
Canada: Prairie Provinces	284	478
Total	1,176	1,180

It will be seen that the 1932 crop of North America is expected to exceed the harvest of 1931. As home consumption is at the rate of about 750,000,000 bushels per annum, Canada and the United States together will have an exportable surplus of about 430,000,000 bushels. Recent crop reports suggest that most European crops will show a higher yield than last year. On Wednesday, "July" futures were quoted at 49 cents per bushel in Chicago, against 48½ cents on the corresponding day last week and 50½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 9d. per 496 lbs., as compared with 27s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 26s., against 26s.; No. 3 Northern Manitoba, Vancouver, ex ship, 25s. 9d., against 25s. 6d.; Australian, ex ship, 25s., against 25s. a week ago.

WHEAT FLOUR.—Trading in flour has been a little more active, but prices remained generally unchanged. North American shipments, at 166,000 sacks, showed an increase of 38,000 sacks, as compared with the previous week. Of this total, 67,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Strait run, delivered country, 24s. per sack of 280 lbs., as compared with 24s. last week; delivered London, 23s., against 23s. Manitoba

patents, ex store, 23s. 9d. to 26s., against 23s. 6d. to 26s.; and Australian, ex store, 18s. 6d. to 18s. 9d., against 18s. to 19s. 6d. a week ago.

BARLEY.—The demand for barley has shown some improvement on the Continent. The Danubian countries and Russia were the chief sources of supply. On Wednesday, "July" futures were quoted at 36½ cents per bushel in Winnipeg, against 38½ cents last week and 36½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. to 25s., against 24s. to 25s. a week ago.

OATS.—Little interest was taken in oats during the past week. Shipments have been on a small scale. "July" futures, which last week stood at 19½ cents per bushel in Chicago, sold at 19½ cents per bushel on Wednesday this week, against 20½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. per 320 lbs., as compared with 17s. 3d. last week; "River Plate," ex ship, 16s. 1½d., against 16s. 3d.; "Chilean White," landed, 24s. 6d. to 26s., against 24s. 6d. to 26s. a week ago.

MAIZE.—A large volume of business has again been done in maize, and, despite heavy shipments from Argentina, prices hardened a little. Wednesday's quotation in Chicago for "July" futures, at 29½ cents, shows a rise of ½ cent per lb. on last week, and one of ½ cent as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 19s. 9d. last week; "Plate," ex ship, 18s. 9d., as against 18s. 3d.; "Plate," June-July, 18s. 9d., as against 18s. 3d. Yellow maize meal, ex wharf, was quoted at £4 10s. per ton, against £5 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to July 2	45,374	48,173	50,579	51,734
44 weeks to July 2	3,643,531	4,765,917	9,214,073	9,508,319
Average price of English wheat per cwt.	s. d. 6 5	s. d. 6 2	s. d. 8 5	s. d. 9 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
June 25, 1932	Owts. 67,779	Owts. 3,625	Owts. 9,433	s. d. 6 5	s. d. 7 1	s. d. 8 1
July 2, 1932	45,374	3,522	6,784	6 5	6 10	7 10
June 30, 1928	103,875	7,111	5,504	10 9	10 8	12 5
June 29, 1929	48,213	7,080	12,784	9 8	9 11	9 3
July 1, 1930	50,579	7,537	6,272	8 5	6 11	6 5
July 4, 1931	46,173	6,720	9,992	6 2	5 11	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	July 8, 1931.	Jan. 4, 1932.	June 29, 1932.	July 6, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	66½	60½	62½	53½	54½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	54½	55½	48½	49

The visible supply of wheat in Canada, at 71,090,000 bushels, shows an increase on the week of 6,006,000 bushels. Supplies a year ago stood at 57,037,000 bushels.

OTHER FOODS.

SUGAR.—There was a further substantial improvement in raw sugar values during the past week, and sales took place at 3-00 cents per lb. c. and f. New York. "July" futures in New York were quoted at 0-88 cent per lb. on Wednesday, against 0-78 cent per lb. a week ago, and 0-61 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 5s. 11½d. to 6s. 1½d. per cwt., against 5s. 8½d. to 5s. 9½d., and "March, 1933," at 6s. 2½d. to 6s. 4½d., against 5s. 11½d. to 6s. 0½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	174	131	749	5,051	14,251	28,890
Liverpool	7,826	13,320	16,576	11,336	84,574	66,211
Total	8,000	13,451	17,325	16,387	98,825	95,091
Last week	14,518	6,500	17,272	18,760	108,150	98,037

COFFEE.—The market in coffee has again been dull. New York quotations receded further. At Tuesday's London sales only 1,580 bags were on offer, but only a proportion found buyers at easier rates. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 704 bags; exported, 10 bags; stocks, 5,470 bags, against 2,769 bags last year. Central American, landed, 1,063 packages; delivered for home consumption, 1,922 packages; exported, 2,397 packages; stocks, 121,165 packages, against 113,880 a year ago. Other kinds, landed, 9,700 packages; delivered for home consumption, 2,910 packages; exported, 1,141 packages; stocks, 96,733 packages, against 86,649 a year ago.

COCOA.—After a period of slow demand, both in London and in New York, a slight improvement became noticeable during the week and quotations showed a slight rise. "July" futures were quoted at 3-91 cents per lb. in New York on Wednesday, against 3-81 cents per lb. a week ago and 3-83 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 27s. 3d. per cwt., f.o.b., London contract, shows an advance of 9d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 2,504 bags; delivered for home consumption, 11,497 bags; exported, 83 bags; stocks, 157,608 bags, against 227,361 last year.

TEA.—The quantities catalogued for this week's auction comprise 47,505 packages of Indian, and 28,375 packages of Ceylon tea. At Monday's "Indian" sales common and low medium varieties were in good demand and prices were firmer. The improvement was sustained at Tuesday's "Ceylon" auctions. On Wednesday there was a further improvement in the demand for low-grade Indian tea at higher prices. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	
July 2, 1931	0	7-73	0	7-45	0	10-75	0	6-10	0	6-96	0	5-88	0 8-57
June 9, 1932	0	7-25	0	6-30	0	9-79	0	5-04	0	4-67	0	5-88	0 7-68
June 16, 1932	0	7-19	0	6-59	0	8-83	0	4-92	0	4-75	0	5-86	0 7-36
June 23, 1932	0	7-04	0	7-00	0	7-55	0	4-32	0	4-29	0	5-64	0 6-79
June 30, 1932	0	6-82	0	6-80	0	7-35	0	4-56	0	4-27	0	5-62	0 6-61

RICE.—The market in rice was steady and "forward" positions showed a hardening tendency. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 8s. per cwt., show a rise of 1½d. per cwt. Movements in London during the past week were as follows: Landed, 423 tons; delivered, 724 tons; stocks, 3,020 tons, as against 599 tons last year.

POTATOES.—There are now very few old potatoes on offer, and new potatoes are available at prices scarcely exceeding those ruling for last year's varieties only a few weeks ago. English kidney could be obtained at from 10s. to 12s. per cwt. at the London Borough Market.

SPICES.—The market in pepper was steady and quotations hardened a little. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a rise of ½d. per lb. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 12 tons; delivered, 8 tons; stocks, 361 tons, against 619 tons last year. White, landed, 18 tons; delivered, 28 tons; stocks, 570 tons, against 597 tons a year ago.

MEAT.—Prices of English beef and mutton at Smithfield are scarcely changed on the week. On the other hand, both Argentine beef and New Zealand mutton have been slightly dearer. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 8d. to 4s. 2d. per 8 lbs., against 3s. 4d. to 4s. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 4d. to 3s. 2d., as against 2s. 2d. to 3s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,063 tons, as compared with 7,594 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86-4 per cent. of the supplies, as against 85-9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 83-0 per cent. of the total supply, as against 82-4 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Active and generally steadier conditions prevail in the markets for oilseeds. Linseed is in better demand, both here and on the Continent, and prices have advanced, Plate afloat and for July shipment now quoting £7 17s. 6d. and forward to September, £7 17s. 6d. to £8. Shipments continue good and the quantity afloat for Europe has increased to 179,800 tons, or 20,300 tons more than last week, but this is likely to undergo reduction in the near future. Cotton seed is also in better demand and dearer in sympathy with Alexandria, the market being influenced by reports of lessened production in Egypt in the coming season and an improved domestic consumption in India. Old seed for July and August shipment is quoted around £6 5s. and new crop, November-January, £6 10s. Vegetable oils have a somewhat better tone, though consumptive demand is not excessive. Linseed oil has advanced, with seed raw oil for July delivery, ex Hull mill, now quoting £12 12s. 6d., and for August, £12 16s. Cotton oil is steadier, and crude Egyptian ex Hull has advanced to £20 and refined to £22 10s. Oilseeds and meals are in poor request and mill quotations are unaltered.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides and skins from home-slaughtered cattle are steady to a rather firmer tendency, as at the auctions held in Manchester this week all ox and heifers, with the exception of the two bottom weights in first clears, were unchanged in value from the previous week. The latter weights, together with all cows, made 1d. per lb. more money. Slightly more interest is being taken in the calfskin market, and although values still remain very low, a slight upward tendency is apparent for some weights. Prices for sheepskins also are inclined to improve in view of the fact that fellmongers have been able to obtain a little more money for wool. A moderate amount of business has been done in some descriptions of imported hides, and while prices for many sorts show very little variation, fractional advances have been obtained in some directions. In the South American wet-salted market Argentine ox have been disposed of on the basis of 3½d., while light ox have realised up to 3½d., and Montevideo ox 3½d. Dry South American hides are unchanged in value, with only a small business passing, quotations for B.A. Americanos being in the region of 4½d., while Sierra Cordobas are offered at 4½d., and M.V. Americanos at 6d. Fair sales have been made of African hides, with Capes changing hands at 4½d. and 3½d. for dry salted 20-30 lbs., and 30-40 lbs. at 4½d. and 3½d. Unbathed Adis Abebas are obtainable at up to 4½d., as is also the case with Mombasas. Business in Australians continues quiet. Although there has been no appreciable increase in the turnover of sole leather, fair sales of light-weight dry hide bends have been made of late, and in this direction business has shown an improvement on the past week or two. Medium weights also continue to command a moderate amount of attention, but so far the call for heavy weights has not increased. Pinned bellies and shoulders have accounted for a moderate amount of attention, in addition to which a little extra business has been done in rough bellies. Trade in connection with upper stock continues on fairly satisfactory lines for glaci and kid willow calf, but there has been no improvement in the call for either box calf or patent leather. Reptile skins continue to be moved off in fair quantities, in addition to which a dropping sale is experienced all the time for certain lines of suede leather.

RUBBER.—The market in rubber has been a little more active, and, in the absence of selling pressure, quotations in London show a

slight advance. In New York, Wednesday's spot price for rubber, at 2½ cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 1½d. per lb., against 1½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. for April-June, 1932, as against 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,467 tons; delivered, 2,590 tons; stocks at the end of last week, at 109,225 tons, show a decrease of 1,001 tons as compared with the preceding week.

COMMODITY PRICES IN THE UNITED STATES.

(New York quotations, unless otherwise stated.)

	June 8. Cents.	June 29. Cents.	July 6. Cents.

Tin, "Straita," spot, per lb.	19-80	19-50	20-75

this was the cause of the cheapening of discount rates. Possibly it may have had some psychological effect upon the market, but the immediate cause was the notification of the embargo on lending on War Loan as "shorts." As it was the competition of War Loan that had been responsible for the firmer tendency during the week that followed the conversion announcement, it is only natural that, once this factor was eliminated, bill rates should relapse once more to their old level.

The Lausanne Agreement may have contributed to the downward movement of bill rates, as it reduced the likelihood of a German moratorium, in the near future at any rate. Although the bills directly concerned are the Standstill bills, indirectly the improvement of the outlook has strengthened confidence. Moreover, the likelihood of a reduction of Bank rate is now more in the realms of practical politics than would have been the case had Lausanne resulted in failure.

Money was in good supply throughout the week, and the rate was at $\frac{1}{2}$ to $\frac{3}{4}$ per cent. for day-to-day loans, and $\frac{1}{2}$ to 1 per cent. for weekly loans. Treasury bill rates were persistently weak, in part owing to buying by those who missed the Treasury bills sold on tender on Friday last. The average rate of allotment was 17s. 2.38d., which, though higher than during the last three Fridays, was considerably under market anticipation. Fine bank bills moved with the general tendency, declining once more below 1 per cent., while better-class Standstill bills were also more popular and commanded lower rates.

	June 23, 1932.	June 30, 1932.	July 7, 1932.	July 14, 1932.	Previous Rate and Date Changed.

still bills)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...

The controversy about the use of War Loan as collateral for market loans has come to an end completely, as the clearing banks have definitely enforced the rule not to regard them as short bills. One of the discount houses has announced the conversion of its whole holding, and it is to be assumed that others will follow the example. The suggestion has been put forward that banks should go a step farther and, in order to encourage the conversion of War Loan held in the market, they should agree to grant loans on assented stock on the terms of market loans, i.e., with a 5 per cent. margin, and at a rate of interest of 1 per cent. If this is arranged for a definite period—say twelve months—it would certainly contribute towards the success of the scheme.

The Bank return was comparatively unexciting after last week's spectacular changes. As the foreign exchange holding has been transferred from the Issue Department to the Exchange Equalisation Fund, the items of the Issue Department no longer indicate the Bank's operations in the foreign exchange market; in fact, changes in Other Government Securities and in Other Securities were in this return negligible. The most interesting feature of the Bank return was the slight decline of the note circulation, which is decidedly favourable considering the advance of the holiday season. It is believed that this year the holiday demand will be of greater importance than usual, as many people who went abroad in previous years and financed their holiday by buying foreign notes or by taking letters of credit will stay in Great Britain this year and so require more notes.

On Tuesday the Bank bought gold to an amount of £250,000 in the market. While during the last two months it has been buying considerably larger amounts, this purchase has attracted attention because it is the first time that the Bank has bought gold in the London market. Thus, while its previous purchases, which were made abroad, resulted in a reduction of the Bank's foreign exchange holding, the present purchase left that holding unaffected. One of the theories put forward in explanation of the transaction is that it is a way to bring about a credit expansion on a modest scale. Another interesting feature of the bullion market has been the revival of retail selling, as a result of the depreciation of sterling, which has enabled dealers to quote more attractive prices for sovereigns and other forms of gold.

Dollars have been decidedly firm, not only in relation to sterling, but also in relation to gold currencies. There has been so far very little sign of transferring funds from New York to London to take advantage of the high yield of War Loan as a short bill. The bear position in dollars may be regarded as having been completely liquidated. Open-market discount rates in New York remained unchanged at 1 per cent. to $\frac{1}{2}$ per cent. for 90-day bank bills and $\frac{1}{2}$ per cent. to $\frac{1}{2}$ per cent. for six months' bills. The ruling rate for call money was 2 per cent.

The Foreign Exchange market was quieter this week, and fluctuations were fewer. The general tendency was against sterling, especially in regard to the dollar and the franc, for both of which there was a considerable demand. New York went to 8.55 and 8.57, and at one time declined as low as 8.54. Montreal was a point weaker at 4.08. Paris improved by $\frac{1}{8}$ to 90, and Brussels moved rather sharply against us to 25.58. Milan gained $\frac{1}{8}$ at 69. Madrid, exceptionally, again moved in our favour to 44. Amsterdam was four points better at 8.81, and Berlin eight points at 14.98. Switzerland moved rather sharply against sterling to 16.20. Of the Scandinavian currencies Stockholm gained two points at 19.48, and Oslo eleven at 20.17, but Copenhagen again weakened, by four points, to 18.47. The South American currencies are still at practically nominal quotations, Rio being unchanged at 5.3d. (sellers), as were Buenos Aires and Montevideo at 34d. and 29d. respectively. In the Far East the rupee was very firm, and improved by $\frac{1}{8}$ d. to 1s. 6. $\frac{1}{8}$ d., whilst the yen, after early weakness, improved on balance by $\frac{1}{8}$ d. to 1s. 6. $\frac{1}{8}$ d. Batavia gained three points at 8.90. In the forward market New York was firmer at narrower discounts of $\frac{1}{2}$ cent and 1 cent for one and three months. Paris weakened to 1 and 2 centimes premium. Brussels was quoted at $\frac{1}{2}$ centime discount for both deliveries. Milan improved by $\frac{1}{8}$ to $\frac{1}{2}$ lira discount for one month and $\frac{1}{2}$ lira discount for three. Madrid weakened, and stood at wider discounts of $\frac{1}{2}$ centimo for one month and $\frac{1}{2}$ centimo for three. Amsterdam was unchanged at par for both deliveries, as was Switzerland at $\frac{1}{2}$ centime and 1 centime for one and three months respectively. The silver market was quiet, but the bazaars were inclined to take a little more interest, and some speculative buying by India and China sufficed to raise prices in spite of sales by the U.S.A. Cash advanced by $\frac{1}{8}$ d. to 16. $\frac{1}{8}$ d. and forward by $\frac{1}{8}$ d. to 16. $\frac{1}{8}$ d. The China silver exchanges rose in sympathy, Hongkong gaining $\frac{1}{8}$ d. at 1s. 3. $\frac{1}{8}$ d. and Shanghai $\frac{1}{8}$ d. at 1s. 8d.

INSURANCE SUPPLEMENT.

Our Annual Insurance Supplement is published with this week's issue of "The Economist."

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bonville Street, London, E.C.4.

A GREAT ACHIEVEMENT.

Writing a week ago, when the fate of the Lausanne Conference hung in the balance and when reports reaching London of many comings and goings suggested that unsuspected difficulties had arisen in clinching an agreement, it almost seemed as though the will to peace was faltering in the presence of old prejudices and traditional suspicions. But the darkest hour is just before the dawn. Before last week's *Economist* was in the hands of our readers the good news had flashed round the world that Germany and her creditors had come to terms and that for all practical purposes the unhappy story of reparations was at an end. Well might the whole world heave a sigh of relief at the passing of this penal regime, with its constant reminder of sad and bitter memories, and at the promise of a fresh start on the basis of co-operation and understanding. It is true, there may yet be some awkward corners to turn, the most difficult of these being the complementary problem of the decision of the creditors to postpone ratification of the Lausanne Agreement until a satisfactory arrangement about the debts has been reached. The European creditors would, in our view, have been on much stronger ground if they had taken their courage in both hands; for the mere fact that final ratification is suspended is only "a talking point," which may easily do more harm than good by having an appearance of a threat to the United States. But so far as the vital task of rebuilding German credit is concerned there need be no misgivings if the world will hold fast to the certainty that, whether the Lausanne Agreement be ratified soon or late, there can be no going back on the decision reached last Friday. Whatever the course of future negotiations may be, that day was a turning point in Europe's history. A generous meed of praise is due to the statesmen responsible for this momentous achievement.

The agreement with Germany is in our opinion a very good one—indeed, the best that in the circumstances could have been obtained. The details, which we give on a later page, show that while the advocates of complete cancellation have been disappointed, a relatively small final payment by Germany has been designed on lines which will ensure that hereafter the world need fear no serious disturbance of international trade and finance as a result of Germany's obligations. Indeed, the only payments to be made in future by Germany will be not to Governments but to private investors, and the charges will be absorbed into her ordinary public debt.

As to the two points on which there was still a difference of opinion when we wrote last week, namely, the amount of the bonds to be issued, and the form in which the creditors of Germany were prepared to say that the Reparations Chapter of the Treaty of Versailles, with its War Guilt clause, was closed—the first was settled by splitting the difference between two and four milliards and fixing three milliards as the nominal value of the bonds. This means that as they are to be issued at 90 the cash proceeds when issued will be 2.7 milliards. As to the second point, it was never contemplated that the clause regarding Germany's responsibility for the war would be dealt with in any way which suggested that the former Allies had changed their views on the origins of the war. What is very much to be desired is that the world should put this question behind them and treat Germany hereafter on an equal footing. In the event, this question of future relations with Germany was dealt with in the Preamble, the key phrases of which are that the Act accomplished at Lausanne "will completely put an end to reparations"; that the purpose of the signatories in doing so is to "create a new order, permitting the establishment and development of confidence between the nations in a mutual spirit of reconciliation, collaboration and justice"; and that they will make every effort to deal with present and future problems "in the spirit which has inspired the present agreement." M. Herriot spoke even more warmly in his final speech when he said that "we have tried to understand one another," and, to

quote only one example, "we French, gravely concerned with the affairs of our own country, have listened with emotion to the story of the sufferings of the German people with whom we wish to have cordial relations."

That the accredited representatives of France, frankly recognising the economic necessities of the world and surrendering their claim that the last penny of war damage must be made good at Germany's expense, should have spoken of future collaboration with Germany in such terms is a great event. Moreover, that French opinion was genuinely anxious to come to terms with Germany was forcibly illustrated by the uneasiness displayed by the Radical Party while the Conference was in progress lest the prospects of settling reparations and establishing better relations might be prejudiced by trying to drive too hard a bargain. If the spirit of M. Herriot and the forces which he represented at Lausanne continue to guide the policy of France, it will awaken a warm response in the public mind of Great Britain and will ensure that Britain will work cordially with her nearest neighbour in trying to solve the problems of the world.

How far these good intentions will carry us depends, however, also to some extent upon Germany. French opinion has not been unduly disturbed by recent pronouncements of the Hitlerites, and it was not altogether unexpected that Herr Hitler would refuse to endorse the arrangements arrived at by the Conference. But the tone of German politicians may be rather different after the election to that which is now adopted, and we have no doubt that, whatever may be said on party platforms, every thinking German must realise that the arrangement made at Lausanne is a very favourable one for Germany. At the cost of a very modest contingent payment, Germany gets a final quittance of her reparations obligation, and the opportunity of rebuilding her damaged credit. We cannot believe that when German opinion frankly faces the situation it will prefer to reject this very favourable arrangement, and with it the prospects of a peaceful understanding, and prefer to follow the road of repudiating her obligations with all the risk of damage to her credit and the revival of suspicion and bitterness which that course would involve.

But, promising though the results of the Lausanne Conference unquestionably are, the way in which its results have been presented to the world undoubtedly leaves something to be desired. It is clear from the Agreement that the underlying motive is the desire to be quit of the disturbing effect of political payments, for until this is done no headway can be made in evolving a common policy for grappling with the economic crisis. The Lausanne agreement, largely because of hurry in its final stages, has been rather given the appearance of a patched-up bargain; whereas in truth it is the practical recognition of an economic reality. It is therefore essential that the major premise of the whole discussion should be forcibly and clearly brought to the fore, particularly since it is the consideration which must underlie not merely the question of reparations, but the question also of war debts. Whereas the making of commercial loans or the movement of credit between one country and another increases economic activity and provides the means by which repayments can be made, the payments arising out of the war are in no way related to the rendering of any service that has added to the wealth or to the trade of nations. On the contrary, they are the result of events which have impoverished the debtors. Moreover, even if the debtor countries are able to shoulder the burden involved, the payments cannot be made unless the creditor is able and willing to accept payment in the goods or services which the debtor is able to supply. This has not happened; with the result with which all the world is familiar. Unfortunately, the damage is not limited to the amount of the debts involved; but, as we have often pointed out, the crisis once started has gathered such momentum that the shrinkage of economic activity has reached colossal dimensions, compared with which the total of these war

payments is comparatively small. The game is not worth the candle for anybody concerned.

It is on such grounds as these that the European countries must present the case to the United States. This is the more important in view of the misunderstandings that have been allowed to arise regarding the so-called "gentlemen's agreement." About this much-discussed document there was never any real mystery—except perhaps its name, the usual meaning of which is an understanding between two or more persons which is not committed to paper! The explanation of Mr Chamberlain in the House, followed on Thursday by its publication, has removed all doubts as to its meaning and purport. It was not a case of secret diplomacy, for Mr MacDonald announced one of its most essential provisions at the public meeting of the Conference and each Prime Minister was specifically left free by the terms of the note itself to explain its provisions to his Parliament; it was not concealed from the Germans, for a copy was sent to Chancellor von Papen, who knew the intention of the creditors at an early stage of the Conference. Nor does it lay down any basis on which the European countries would be prepared to come to terms with America. It merely declares the intention of the Powers not to ratify the present agreement until satisfactory arrangements are made regarding the debts, and provides that, if this is not done, the parties will meet again to consider the situation. There is nothing sinister about all this; and if we question its wisdom, we must recognise that politicians are more often the interpreters rather than the creators of public opinion, and that Parliaments, who have the last word, have to be persuaded or cajoled. The simple fact is that certain of the European creditor countries were not willing finally to sign, seal and deliver an agreement affecting one side of their budgets until they knew where they stood in regard to the tangled skein of the international debts—of which the debts to America are a very important part. As a matter of pounds, shillings and pence this is very small comfort, for not one of the Governments concerned imagines that, whatever the juridical position may be, the deal with Germany, with all that it implies in both the political and economic fields, can possibly be reopened. We can only hope that America will not be too much perturbed by these very human hesitations on Europe's part.

The moral is that the emphasis hereafter must be laid on what is after all the central point for us all, namely, that every obstruction that stands in the way of economic recovery and of collaboration to that end must be removed. Paradoxical though it may seem to the taxpayer of the Middle West, that can only be achieved if the same criterion is applied to the debts as the European countries have applied to the case of reparation payments. The British Conversion scheme and the Lausanne Agreement are two great efforts to break the onslaught of the trade crisis. But the offensive must not slacken, and these blows must be followed up in an even wider field. If our courage and perseverance do not falter, there is every reason to believe that the future historian will note the month of June as the turning point of the great depression.

BRITAIN AND DISARMAMENT.

THE more closely we consider the British Government's disarmament proposals which were announced in the House of Commons by Mr Baldwin on July 7th, the more strongly do we feel the force of the criticisms which we outlined in the *Economist* last week. It is not too much to say that, in allowing these proposals to go forward as this country's official policy, the British Government is making itself a party to a move which threatens to stultify the Hoover Disarmament Plan. It was inevitable, but none the less unfortunate, that in last Wednesday's debate the question of disarmament should have been crowded out by the Prime Minister's report on Lausanne; for Parliament's pre-occupation is the experts' opportunity; and at this moment it is a god-send for the experts of the Admiralty to be able to carry on their business in "ships and sealing wax" without public criticism.

We do not blame the Admirals. They are simply acting

after their kind; and it would be as futile to blame greyhounds for chasing hares. But an efficient democracy ought to know how to keep its experts under control; and, in the world as it is, it is the naval and military experts who need the strictest supervision. There are certain spheres in which the expert is apt to be wiser than the man in the street. In the sphere of international economic and financial relations, for instance, it would manifestly have been better for this country and for the world if, during the last fourteen years, the experts had been able to have the last word instead of being flouted, again and again, by politicians who were partly reflecting and partly inflaming an ill-informed public opinion. On the question of disarmament, on the other hand, the intuitive good sense and good feeling of the peoples has manifestly proved itself better able to save the world than the expertise of distinguished professionals whose very occupation and outlook debar them from offering the peoples what the peoples are rightly asking for and what the peoples are entitled to receive. The Government will be gravely failing in their duty towards their constituents if, in speaking their final word at Geneva, they speak, not with the voice of the people, but with the voice of our naval and military public servants.

This means that there must be a radical revision of the programme announced by Mr Baldwin last week. The more narrowly we scrutinise it, the clearer it becomes that these are not so much proposals for disarmament as ingenious devices for enabling the British Navy and Army and Air Force to retain the arms by which they set the greatest store and to keep a free hand for employing these arms for the professional purposes which they consider most important. For instance, why do our experts reject President Hoover's admirable proposal for an immediate scrapping (without any suggestion of replacing) one-third of the capital ships that are allowed to the three principal naval Powers under the London Naval Treaty of 1930? Why do they propose, instead, that the London Treaty strengths in capital ships should be left as they are for the original treaty period and should then be replaced by equal numbers of capital ships of a smaller and cheaper type? Surely because they reckon that, given the limitations of British taxable capacity, this is a promising basis on which they will be able to persuade the British taxpayer, in the long run, to keep up our British establishment of capital ships to a parity with American maximum strength.

And why do they propose that cruisers, again, instead of being reduced in numbers, shall be reduced in size? Because, as we all know, a larger number of smaller cruisers happens to suit the British Empire, with its excessive length of sea-routes to be protected and its convenient multitude of coaling stations, whereas the American Navy, with a shorter length of sea-routes and a dearth of outlying stations, prefers a smaller number of larger ships. In fairness we ought to add, in passing, that President Hoover, when he was drafting the corresponding clause of his Disarmament Plan, seems to have permitted the Navy Department at Washington to dip its professional trident into the ink instead of here using his own presidential fountain-pen. In this matter of cruisers—though in this matter only—the Hoover and the Baldwin proposals seem to us to be "much of a muchness," and both inadequate. But here there was a clear case for mutual concessions, not alternative irreconcilable schemes.

Next, why does the British Army want to keep light tanks and the British Air Force want to retain the right to carry out aerial bombardments within specified areas? In pleading the experts' case in the House of Commons, Mr Baldwin let the cat—or the bomb—out of the bag. "More than any Power," Great Britain "relies upon aircraft to discharge her mandatory duties and to police and control undeveloped regions (sic)." And the Army's use for light tanks turns out to be the same. "They constitute an essential compensation for lack of numbers which it would be impossible to surrender. As far as this country is concerned, in view of its world-wide responsibilities, any general prohibition would require an increase in our present land forces in terms of man-power." In plain language, we want bombing planes to terrorise Pathans on the N.W. frontier of India and Kurds on the N.W. frontier of Iraq, and light tanks to overawe certain large

populations under the British Raj or British ascendancy—perhaps in India, perhaps in Egypt, or perhaps in Cyprus or in Palestine—who might be inclined to kick against the pricks of British bayonets but who are expected to think twice about it if they are confronted with a nineteen and three-quarter ton tank.

Limits within which air-bombing is to be allowed by international convention? In that case, is London to be outside or inside? And if it is to be outside, is the safety line to run east or west of Twickenham and north or south of Hendon? We do not share, nor do we believe that the British public shares the Government's enthusiasm for "selective" bombing. And why do we want a battle-fleet at all? The Admiralty's desire for a relatively large number of relatively small cruisers is a desideratum which we appreciate, though there is an uneasy suspicion always in the United States that what we are really after is maintenance of numbers of personnel. We believe that this desideratum can be satisfied by applying to naval forces, as well as to land forces, President Hoover's valuable conception of a "police component." Incidentally, this would help to solve Franco-Italian as well as Anglo-American naval disagreements. But why a battle-fleet? For the very insistence of our Admiralty upon large quantities of small cruisers on the score of our far-flung Imperial responsibilities cuts the ground from under their feet in this matter of capital ships. One of the essential distinctive features of capital ships is the restrictedness of their range of operation; and even if we kept Scapa Flow stuffed full of super-dreadnoughts, that would not help us one jot in policing Hongkong.

In short, we have regretfully to conclude that the British counter-proposals on disarmament, instead of helping or improving the Hoover Plan, go far to wreck it. At the time of their publication we criticised Mr. Hoover's proposals on the grounds that they failed to take into account Britain's real need for a "police force" of light cruisers; that they did not go far enough towards the abolition of the submarine; and that on land, while failing to allow sufficiently for the exposed strategical position of some countries, they had the serious omission of not combining budgetary limitation with reduction of effectives. These, however, were relatively minor points capable of adjustment. The essential value of the Hoover Plan was that it represented a genuine measure of disarmament—here and now. This, unhappily, cannot be said of the British proposals, and we fear their reception in the United States will be most unfavourable.

INDUSTRIAL PROFITS.

THE aggregate results disclosed by the profit and loss accounts of 675 British industrial joint-stock undertakings, whose reports have been analysed in our columns during the past quarter, make a considerably less favourable showing than those recorded in the first quarter of this year. As will be seen from the following table, net earn-

ings declined by 24.2 per cent., following a recession of 19.4 per cent. registered in the corresponding quarter of 1931 in comparison with the results for 1930:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Companies.	Reports Published in		Increase (+) or Decrease (—).	
		1930.	1931.		
Third quarter	320	£ 24,793,702	£ 15,996,685	— 8,797,017	—35.5
Fourth quarter	474	26,460,390	12,292,859	—14,167,531	—53.9
1931.					
First quarter	548	63,403,727	54,314,815	— 9,088,912	—14.3
Second quarter	675	74,997,272	56,832,591	—18,164,681	—24.2
Total	2,017	189,655,091	139,436,950	—50,218,141	—26.5

During the past quarter (aggregate provisional figures were given on page 88 of last week's issue of the *Economist*) the heaviest decline of profits occurred in the shipping group, while the financial, land and investment, motor and cycle, oil, tea, and iron, coal and steel groups also show a severe contraction of profits. Exceptionally, slight improvements as compared with a year ago were recorded in the case of electric lighting and power, shops and stores, textiles and tramways. The average rate of ordinary dividend for the quarter works out at 4.6 per cent., as compared with 8.7 per cent. in the previous quarter and 8.3 per cent. a year ago.

In accordance with our practice each summer, we give in the next table a summary of the results ascertained during the past twelve months as a whole:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

Group.	No. of Companies.	Reports Published in Year ended June 30.		Increase.		Decrease.	
		1931.	1932.				
Breweries	108	£ 18,097,377	£ 16,353,621	...	...	£ 1,743,756	9.6
Canals and docks	9	528,008	248,288	...	...	279,720	53.0
Electric lighting and power	44	7,913,136	7,998,711	85,575	1.1	...	...
Financial, land and investment	107	5,486,115	2,283,383	...	...	3,202,732	58.4
Gas	49	4,408,353	4,254,260	...	...	154,093	3.5
Hotels, restaurants, &c.	34	2,163,110	1,654,671	...	...	508,439	23.5
Iron, coal and steel	137	8,987,413	4,566,798	...	...	4,420,615	49.2
Motor and cycle	31	3,296,800	892,688	...	...	2,404,112	72.9
Nitrates	1	287,337	Dr. 656,511	...	...	943,848	328.5
Oil	12	14,315,754	8,076,906	...	...	6,238,848	43.9
Rubber	328	1,087,349	Dr. 1,046,594	...	...	2,133,943	196.3
Shipping	41	4,410,357	Dr. 346,609	...	...	4,756,966	107.9
Shops and stores	66	10,333,842	3,146,094	...	...	1,787,748	16.4
Tea	104	4,528,794	1,248,617	...	...	3,280,177	72.4
Telegraphs, &c.	10	2,590,805	2,402,230	...	...	188,575	7.3
Textiles	66	5,378,310	3,757,952	...	...	1,620,358	30.1
Tramways	29	2,478,949	2,186,645	...	...	292,304	11.8
Trust	190	14,941,557	12,075,308	...	...	2,866,249	19.2
Waterworks	29	1,176,646	1,123,053	...	...	53,593	4.6
Miscellaneous	617	76,045,069	63,217,439	...	...	12,827,630	16.9
Total	2,017	189,655,091	139,436,950	...	...	50,218,141	26.5

The foregoing figures speak largely for themselves and require little amplification by way of comment. As was to be expected, public utilities of an essential nature, such

as electric lighting, waterworks, gas, telegraphs and tramways make a relatively good showing, while the fall in the profits of breweries, shops and the large miscellaneous group was appreciably less than the average for the whole, in which the adverse fortunes of rubber, shipping, nitrate, iron, coal and steel, textiles and the motor and cycle group figure prominently. The fall of 26.5 per cent. in net profits over the twelve months follows upon a fall of 14.7 per cent. a year ago.

In the next table we set out the distribution of profits in the past four quarters, together with the total for the year ended June 30th:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1931.	£	£	£	£
Third quarter ..	15,996,685	11,479,274	71.8	5,937,287
Fourth quarter ..	12,292,859	9,462,779	76.9	5,315,499
1932.	£	£	£	£
First quarter ..	54,314,815	37,438,571	68.9	11,647,128
Second quarter ..	56,832,591	31,983,074	56.3	18,545,687
Total	139,436,950	90,363,698	64.8	41,445,601

In the past two quarters there has been a welcome improvement in the proportion "put back into the business." On the average for the past twelve months, however, the reserve ratio at 5.6 per cent. compares very unfavourably with 15.7 per cent. ascertained this time last year. The apportionment of earnings of the individual groups is shown below:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries	16,353,621	10,724,005	65.6	2,311,628
Canals and docks ..	248,288	90,995	36.6	178,963
Electric lighting and power	7,998,711	3,455,415	43.2	1,469,248
Financial, land and investment	2,283,383	2,461,058	107.8	1,361,197
Gas	4,254,260	3,598,743	84.6	404,447
Hotels, restaurants, &c.	1,654,671	776,115	46.9	676,507
Iron, coal and steel ..	4,566,798	3,386,731	74.2	1,586,138
Motor and cycle	892,688	574,010	64.3	426,406
Nitrate	Dr. 656,511	Nil	Nil	Dr. 656,511
Oil	8,076,906	4,672,351	57.8	2,192,590
Rubber	Dr. 1,046,594	65,675	13.491	Dr. 1,125,760
Shipping	Dr. 346,609	1,348,904	74.5	Dr. 2,441,223
Shops and stores	9,146,094	5,112,051	55.9	1,182,607
Tea	1,248,517	1,092,672	87.5	136,796
Textiles, &c.	2,402,230	870,641	36.2	1,486,298
Tramways	3,757,952	3,979,318	105.9	1,986,499
Trust	2,186,645	874,529	40.0	585,743
Waterworks	12,075,308	6,507,153	53.9	4,105,565
Miscellaneous	1,123,053	658,151	58.6	275,306
Total	63,217,439	40,115,181	63.5	18,475,688

It will be observed from the very irregular showing disclosed by the foregoing figures that conservative principles in the matter of distribution of earnings were still displayed by breweries, electric lighting and power companies, hotels, the oil group, shops and stores, tramways, trust companies and waterworks, but heavy drafts were made in the aggregate on reserves in the case of the financial, land and investment companies and by the textile group, while tea, motor and cycle and iron, coal and steel companies also show a debit entry on reserve account. It should, of course, be appreciated, as we have pointed out before, that these aggregate figures must be read with the qualification that they do not mean that companies which made losses actually declared dividends. That is to say, they are true of groups, not of individual concerns.

We now come to the ratio of net profits and reserve allocation to total ordinary and preference capital:—

	Total Ordinary and Preference Capital.	Net Profits.	Carried to Reserve, &c.
1931.	£	£	£
Third quarter ..	343,500,531	15,996,685	4.6
Fourth quarter ..	383,451,625	12,292,859	3.2
1932.	£	£	£
First quarter ..	665,704,181	54,314,815	8.2
Second quarter ..	1,042,514,627	56,832,591	5.5
Total	2,435,170,964	139,436,950	5.7

A year ago the ratio of net profits to capital was 8.7 per cent., as compared with 10.6 per cent. in the year ended

June 30, 1930. The ratio reserved has fallen from 2.1 per cent. in 1930 to 1.4 per cent. in the twelve months ended last June and 0.3 per cent. in the year now concluded. Thus progressively the decline in the earning of capital has been tempered from the shareholders' point of view by a decrease in the proportion of net profits withheld from them.

In the final table we show the average rate of interest paid on debenture, preference and ordinary share capital during the past twelve months:—

	Debt Capital.	Rate of Int.	Preference Capital.	Rate of Int.	Ordinary Capital.	Rate of Div.	Rate of Div. a Year Ago.
Breweries	53,977,806	4.7	45,044,375	5.1	72,376,185	14.8	16.6

Miscellaneous	7,006,107	4.7	5,396,580	5.1	11,182,290	5.9	6.9
Total	91,215,482	5.4	306,995,118	6.0	488,335,759	8.2	10.5

At 5.7 per cent. the average rate of ordinary dividend shows an appreciable fall as compared with a year ago and still more in contrast with 10.8 per cent. in the twelve months ended June 30, 1930. In view of the contraction of the reserve ratio noted above, investors will probably decide that the scaling down of dividends represents no more than common prudence.

NON-FERROUS METALS: ZINC.

The outstanding feature of the zinc-producing industry is that the United States, at once the principal single producer and consumer, has been rendered immune from foreign competition by an import duty imposed as long ago as 1846. At present the duty on crude zinc is 1½ cents per lb. On the other hand, the United States does not normally export zinc owing to the relatively high costs of her producers. The industry is therefore strictly compartmented on a geographical basis between the United States and the rest of the world.

The principal products of zinc ore are spelter, zinc dust, oxide and sulphide. Of these, spelter, which usually contains a small proportion of lead, is by far the most important in quantity. Spelter is used chiefly in the process of galvanising as a protective coating for iron and steel, and, in conjunction with copper, in the manufacture of brass. Of the total consumption of spelter in the United States in 1931, 43 per cent. was absorbed by the galvanising trades and 26 per cent. in brass manufacture.

The development of production and consumption of spelter in the United States and elsewhere during recent years is shown in the following table:—

(In thousands of metric tons.)

	Smelter Production.*			Consumption.†		
	United States.			United States.		
	Production.	Proportion of World Production.		Consumption.	Proportion of World Consumption.	
1913.....	1,001	31.4	1,001	280	28.0	
1925.....	1,133	45.8	1,200	488	40.6	
1926.....	1,235	45.4	1,245	530	42.5

1931†	1,009	27.2	1,060	285	26.9	

* Metallgesellschaft. † American Bureau of Metal Statistics. ‡ Provisional.

It will be seen that, up to the present crisis, there had been a substantial rise in world production and consumption during the post-war period. At the same time the figures reveal a progressive decline since 1925 in the relative importance of the United States as a producer and a consumer. Of a total smelter production of 1,404,000 metric tons in 1930, the United States contributed 32 per cent.; Canada, 8 per cent.; Belgium, 13 per cent.; Poland 12 per cent.; France, 6 per cent.; and Australia, 4 per cent. Apart from the United States, which in 1930 was responsible for 81 per cent. of the world's total consumption, the principal consumers were:—Germany, 14 per cent.; Great Britain, 13 per cent.; France, 10 per cent.; and Belgium, 10 per cent.

The present position of the zinc-producing industry can best be considered in the light of recent developments. The method of production of spelter was revolutionised after the war by the discovery of the process of "selective flotation." The new process, which began to come into extensive use in 1925, increased the proportion of zinc recoverable from the ore. Further, and most important, it made possible the exploitation of many great low-grade ore deposits hitherto undeveloped in many parts of the world. The effects of this revolution in the metallurgy of zinc is illustrated in the next table, showing the average price of spelter during recent years:—

	London.	St. Louis (U.S.A.)
	"Ordinary Brands." "Per Long Ton."	"Prime Western." "Cents. per lb."
Average, 1913	22 14 3	5.504
" 1925	36 3 6	7.622
" 1926	34 2 8	7.337
" 1927	28 9 11	6.242
" 1928	25 5 5	6.027
" 1929	24 17 8	6.512
" 1930	16 14 4	4.556
" 1931	12 8 7	3.640
" 1932, July 13th ..	11 12 6	2.550

After a relapse from war-time scarcity prices during the 1921 slump, prices of spelter rose steadily from 1922 until 1925. That year, however, marked a turning point in the industry, and producers have suffered ever since from excessive output capacity. Even the United States from 1928 and 1929, which added to rising world consumption, did not arrest the downward trend in world prices. The pressure of surplus capacity, already strong during a period of rapidly advancing demand, became overwhelming when industrial activity began to decline at the end of 1929. The situation was, of course, aggravated by the tariff protection of the high-cost producers in the United States, which limited the market for foreign low-cost producers; but serious over-production, years before the onslaught of the economic blizzard, was prevented only by the gradual decline in prices.

Under the circumstances it is scarcely surprising that attempts should have been made to control production and prices in order to counteract the downward movement in the value of the metal. In 1927 Belgian producers entered into negotiation with the principal interests outside the United States, and in 1928 a cartel was tentatively established. Owing to the non-adherence of Australian, Canadian and Mexican producers, the scheme proved a failure, and the cartel was dissolved at the end of 1929. In 1930 fresh efforts were made to reconstitute the cartel, but a definite agreement was not reached until the July, 1931, when the situation had become desperate. The International Zinc Cartel, which was formed in July, 1931, represents about 90 per cent. of world capacity outside the United States. Its first action was to curtail production to 55 per cent. of capacity as from August 1st. As this cut proved insufficient for the adjustment of supply to demand, a further turn in the restriction screw was found necessary, and since October last the industry has been working at 50 per cent. of capacity. The cartel agreement is to continue for five years, but it may be denounced on September 30, 1932. In the event of a denunciation on that date the agreement will expire on December 1, 1932.

The course of prices since August last year shows that the cartel has been unable to stem the downward tendency of prices. The imposition by Great Britain of an import duty on spelter as from March 1st has had an adverse effect on quotations without providing any imme-

for all Scandinavian
currency transactions.

SKANDINAVISKA KREDITAKTIEBOLAGET

diate benefit for Empire producers. Empire production has been increasing rapidly during recent years, and the Empire is now a potential net exporter of zinc. Nevertheless, the outlook for spelter appears less dark than that of copper. Recent figures show that production has recently been kept below demand. Stocks of the associated producers declined from about 206,000 metric tons at the end of July last year to 189,000 metric tons at the end of December, and 176,000 metric tons at the end of March, 1932; and though stocks in the United States, at 120,000 metric tons at the end of May, show little change on the corresponding date of last year, the cartel is so confident as to the outlook for the industry that at a meeting held in Brussels on May 12th it considered a further reduction in output unnecessary. This view appears, however, somewhat optimistic. The new British tariff has not so far led to the disruption of the cartel, but serious difficulties may arise in the event of the imposition of a duty by Germany.

THE HALF-YEAR'S OVERSEAS TRADE.

The June trade returns do not compare favourably with those of May; for, while imports are nearly £2 millions more, total exports are £750,000 less. Comparison with the preceding month, however, is never satisfactory, owing to the confusing influence of seasonal causes, and when the returns are compared with those of June last year they show certain encouraging elements, as may be seen from the first of the subjoined tables:—

MONTH OF JUNE.
(000's omitted.)

	1932.	Increase or Decrease as compared with			
		June, 1931.	June, 1930.		
Imports	£ 57,518	— 11,078	— 16.1	— 25,835	— 31.0
British exports	29,724	+ 292	+ 1.0	— 13,122	— 30.6
Re-exports	4,175	— 1,869	— 30.9	— 3,704	— 47.0
Total exports	33,898	— 1,577	— 4.4	— 16,826	— 33.2
Excess of imports over total exports	23,620	— 9,500	— 28.1	— 9,009	— 27.6

FIRST HALF-YEAR.
(000's omitted.)

	1932.	Increase or Decrease as compared with			
		January-June, 1931.	January-June, 1930.		
Imports	£ 359,972	— 57,850	— 13.8	— 181,717	— 33.5
British exports	187,033	— 12,123	— 6.1	— 117,818	— 38.6
Re-exports	29,330	— 6,378	— 17.8	— 19,949	— 40.4
Total exports	216,363	— 18,501	— 7.9	— 137,767	— 38.9
Excess of imports over total exports	143,609	— 39,349	— 21.5	— 43,950	— 23.4

The figures for the half year, in the second table above, are more significant than those for a single month. Though exports are still lower than during the corresponding period of last year, their decline seems to have been at least temporarily checked, and while the three-months moving average of imports tends rapidly downwards, that of exports is fairly well maintained. It appears that, so far, the reaction of our tariff policy upon the purchasing power of our customers abroad has not checked exports in

the same degree as the tariffs themselves have reduced imports. How long this benefit accruing from the depreciation of sterling will last is another matter.

The next table shows in which classes the decreases of imports and exports have been most marked:—

RETAINED IMPORTS AND BRITISH EXPORTS BY CLASSES.
(£'s million.)

	Retained Imports.			British Exports.		
	First Half-Year.			First Half-Year.		
	1930.	1931.	1932.	1930.	1931.	1932.
Food, drink and tobacco	221.8	187.2	176.1	23.0	17.2	16.0
Raw materials and articles mainly unmanufactured.....	118.5	74.5	75.3	34.5	23.7	21.8
Articles wholly or mainly manu- factured	146.6	115.2	75.0	238.6	150.4	143.0

As was to be expected, the reduction in imports has taken place mainly in the manufactured class. A satisfactory symptom is the slight increase in the retained imports of raw materials, which should betoken an anticipated expansion in industrial activity. This increase was due mainly, as the following table shows, to increased imports of timber, raw cotton, wool, silk, flax, hemp and jute, hides, and wood pulp:—

RETAINED IMPORTS.

	First Half-Year.		
	1930.	1931.	1932.
Wheat..... cwt.	41,338,767	45,691,105	50,698,927
Beef..... cwt.	6,343,616	6,363,202	5,669,777
Sugar..... cwt.	16,669,595	17,388,602	23,824,194
Iron ore and scrap..... tons	2,776,790	1,221,427	1,049,249
Wool..... loads	1,446,392	992,769	1,292,901
Wood and timber, sawn, soft.....	5,834,950	4,814,438	6,147,622
Raw cotton..... centals	3,406,053	4,155,327	4,252,479
Sheep and lambs' wool..... lbs.	2,354,812	1,687,574	2,313,860
Raw silk..... lbs.	158,275	130,978	145,805
Flax, hemp and jute..... tons	228,073	212,242	174,145
Crude petroleum..... thousand galls.	546,966	526,713	617,400
Hides, wet and dry..... cwt.	729,071	591,149	866,133
Wood pulp..... tons	1,669,297	1,322,381	490,702
Rubber..... centals			

The following statistics of exports bear out, so far as manufactures are concerned, the suggestion of these raw material import figures:—

EXPORTS.

	First Half-Year.		
	1930.	1931.	1932.
Coal..... tons	28,548,670	21,284,988	19,823,231
Pig iron and ferro alloys..... tons	191,045	111,454	76,262
Railway material..... tons	234,113	113,564	48,408
Total iron and steel..... tons	1,797,540	999,214	954,539
Textile machinery..... tons	50,182	170,585	167,390
Total machinery..... tons	72,691,600	62,490,300	80,448,400
Cotton yarns..... lbs.	1,487,875	847,913	1,147,949
Cotton piece-goods..... thous. sq. yds.	136,528	139,491	199,325
Wool tops..... lbs.	15,152,800	12,233,800	15,102,800
Worsted yarns..... sq. yds.	40,682,800	27,391,100	26,294,000
Woolen tissues..... sq. yds.	17,855,300	14,734,700	14,528,600
Worsted tissues..... sq. yds.	38,438,700	32,358,600	37,494,600
Linen piece-goods..... sq. yds.	459,078	324,996	331,246
Leather boots and shoes..... dozen pairs	145,231	79,724	78,609
Leather..... cwt.	2,268,330	1,551,782	1,960,041
Paper and cardboard..... cwt.	25,785	12,782	2,119
Locomotives..... number	16,260	12,035	18,298
Motor cars and chassis..... number			

Exports of all textiles, except pure silk and woollen and worsted piece goods, were greater in the first half of this year than in the corresponding period of 1931, and exports of boots and shoes, paper and cardboard, textile machinery and motor cars all showed an improvement. Coal, iron and steel and most of the principal iron and steel products, however, still compare unfavourably with last year.

We remarked three months ago that the effect of the departure from the gold standard in changing the orientation of our trade appeared to have shown itself less in a stimulus to purchases from us by gold-standard countries than in a diversion from those countries to our market of the purchases of "non-gold" countries. This tendency has continued. Our exports of coal are down, largely owing to the quota system so widely prevalent in Europe, but our coal exports to the Scandinavian countries and to Canada have increased. The increase in exports of cotton yarn was most marked in the cases of the Scandi-

navian countries, China, India, Australia, Canada, Argentina, Roumania and Bulgaria, a development which suggests not only a temporary increase in the relative importance of non-gold-standard countries as markets for our manufactures, but also a revival of the Far East as a market for British textiles. China took nearly 57 million square yards of cotton piece-goods in the last half-year, as compared with 20 millions a year ago, and India took 292 millions, against 212 millions. Most European countries, except Norway, Denmark, the Netherlands and Roumania, took less, but exports to nearly all Empire markets, except South Africa, increased substantially.

THE LAUSANNE ACT.

For the convenience of our readers we summarise below in a form readily available for future reference the Final Act of the Lausanne Conference, signed on July 9, 1932, and published as a White Paper (Cmd. 4126). The Act comprises a Preamble and five instruments, namely:—

- I.—Agreement with Germany.
- II.—Transitional measures relating to Germany.
- III.—Resolution relating to non-German Reparations.
- IV.—Resolution relating to Central and Eastern Europe.
- V.—Resolution relating to a World Economic and Financial Conference.

The Act was signed on behalf of the Governments of Belgium, Great Britain, Canada, Australia, New Zealand, South Africa, India, France, Italy, Japan, Poland and Germany. The signatures of Greece, Portugal, Roumania, Czechoslovakia and Yugoslavia were withheld.

The Preamble.

The Preamble recalls that in accordance with the announcement made at Geneva on February 13, 1932, the object of the Lausanne Conference was:—

"... to agree on a lasting settlement of the questions raised in the Report of the Basle Experts and on the measures necessary to solve the other economic and financial difficulties which are responsible for, and may prolong, the present world crisis."

On the 16th June, 1932, the representatives of the Governments of the United Kingdom and Northern Ireland, France, Italy, Belgium and Japan signed the following Declaration:—

"Deeply impressed with the increasing gravity of the economic and financial perils which overhang the world and with the urgency of the problems which the Lausanne Conference has met to consider;

"Firmly convinced that these problems require a final and definite solution directed to the improvement of European conditions and that this solution must be pursued henceforward without delay or interruption, with a view to its realisation in the framework of a general settlement;

"Noting that certain payments of reparations and war debts will fall due as from the 1st July next;

"[We] Are of opinion, in order to permit the work of the Conference to proceed undisturbed, that, without prejudice to the solution which may ultimately be reached, the execution of the payments due to the Powers participating in the Conference in respect of reparations and war debts should be reserved during the period of the Conference, which the undersigned Governments intend should complete its work in the shortest possible time.

"It is understood that the service of market loans will not be affected by these decisions.

[On July 10th the following statement was made to the Conference on behalf of the British Government:—

"The effect of the Declaration of the Conference signed on June 16, 1932, is extended to cover the suspension of the payments due in respect of War debts until the Lausanne Agreement with Germany which we are signing to-day has come into force, or until the decision has been reached that it will not be possible to ratify that agreement."

The French and Italian Governments associated themselves with this arrangement.]

I.—Agreement with Germany.

The signatories, recognising that the validity of the Agreements signed at The Hague on the 20th January, 1930, is not in question, but concerned by the economic difficulties resulting from the present crisis, and being desirous to make, so far as they are concerned, the necessary efforts to ensure the confidence which is indispensable to the development of normal

economic and financial relations between the nations make the following declaration:—

"The Powers signatory of the present Agreement have assembled at Lausanne to deal with one of the problems resulting from the war, with the firm intention of helping to create a new order, permitting the establishment and development of confidence between the nations in a mutual spirit of reconciliation, collaboration and justice.

"They do not claim that the task accomplished at Lausanne, which will completely put an end to Reparations, can alone assure that peace which all the nations desire. But they hope that an achievement of such significance and so ardently attained will be understood and appreciated by all the pacific elements in Europe and the world, and that it will be followed by fresh achievements.

"These further successes will be more readily won if the nations will rally to this new effort in the cause of real peace, which can only be complete if it is applied both in the economic and in the political sphere and rejects all possibility of resort to arms or to violence.

"The signatory Powers will make every effort to resolve the problems which exist at the present moment or may arise subsequently in the spirit which has inspired the present Agreement."

ARTICLE 1.

The German Government shall deliver to the Bank for International Settlements German Government 5 per cent. redeemable bonds, to the amount of three milliard reichsmarks gold of the present standard of weight and fineness, to be negotiated under the following arrangements:—

(1) The Bank for International Settlements shall hold the bonds as trustee.

(2) The Bonds shall not be negotiated by the Bank for International Settlements before the expiry of three years from the signature of the present Agreement. Fifteen years after the date of the said signature the Bonds which the Bank for International Settlements has not been able to negotiate shall be cancelled.

(3) After the above period of three years the Bank for International Settlements shall negotiate the Bonds by means of public issues on the markets as and when possible, in such amounts as it thinks fit, provided that no issue shall be made at a rate below 90 per cent.

The German Government shall have the right at any time to redeem at par, in whole or in part, the Bonds not yet issued by the Bank for International Settlements. In determining the terms of issue of the Bonds, the Bank for International Settlements shall take into account the desirability of giving to the German Government the right to redeem the Bonds after a reasonable period.

(4) The Bonds shall carry interest at 5 per cent. and sinking fund at 1 per cent. as from the date on which they are negotiated. They shall be free of all German taxes, present and future.

(5) The proceeds of the Bonds, as and when issued, shall be placed to a special account, the allocation of which shall be settled by a further agreement in due course between the Governments, other than Germany, signatory to the present Agreement.

(6) If any foreign loan is issued by the German Government, or with its guarantee, at any time after the coming into force of the present Agreement, the German Government shall offer to apply up to the equivalent of one-third of the net cash proceeds of the loan raised to the purchase of Bonds held by the Bank for International Settlements. The purchase price shall be such that the net yield on the Bonds so purchased would be the same as the net yield of the loan so raised. This paragraph does not refer to loans for a period of not more than twelve months.

(7) If, after five years from the signature of the present Agreement, the Bank for International Settlements considers that the credit of the German Government is restored, but the quotations of its loans remain none the less below the minimum price of issue fixed under paragraph (3) above, the minimum price may be varied by a decision of the Board of the Bank for International Settlements, which decision shall require a two-thirds majority.

Further, at the request of the German Government, the rate of interest may be reduced below 5 per cent. if issues can be made at par.

(8) The Bank for International Settlements shall have power to settle all questions as to the currency and denomination of bonds issued, and also all questions as to charges and costs of issue, which it shall have the right to deduct from the proceeds of the issue. In considering any questions relating to the issue of Bonds, the Board of the Bank for International Settlements shall take the advice of the President of the Reichsbank, but decisions may be made by a majority vote.

ARTICLE 2.

On its coming into force the present Agreement will put to an end and be substituted for the reparation régime provided for in the agreement with Germany, signed at The Hague on the 20th January, 1930, and the agreements signed at London on the 11th August, 1931, and at Berlin on the 6th June, 1932; the obligations resulting from the present Agreement will completely replace the former obligations of Germany comprised in the annuities of the "New Plan."

ARTICLE 3.

Consequently, Articles 1, 2, 4, 5, 7, 8, 9 and 12 and Annexes I, III, IV, V, Va, VI, VII, IX, X and Xa of the said agreement with Germany are definitely abrogated.

[The effect of this Article is mainly to abrogate Germany's Debt Certificate under the Young Plan and the Certificate of the German Railway Company; to release Germany from her obligations with regard to the Reichsbank and German railway laws; and to abrogate the Young Plan provisions with regard to payments in kind.]

ARTICLE 4.

The Protocol signed at London on the 11th August, 1931, and the Protocol supplementary thereto signed at Berlin on the 6th June, 1932, are abrogated. Consequently, the provisional receipts handed to the Bank for International Settlements by the German Railway Company under the said Protocol of the 11th August, 1931, will be returned to it.

ARTICLE 5.

The debt certificate of the German Government and the certificate of the German Railway Company referred to in Article 7 and in Annexes III and IV of The Hague Agreement shall, with the coupons attached, be returned to the German Government and to the German Railway Company respectively.

ARTICLE 6.

Nothing in the present Agreement alters or affects Article 3 (Liquidation of the past), Article 6 (so far as concerns the corporate existence of the Bank for International Settlements), or Article 10 (Immunities of the Bank for International Settlements) of The Hague Agreement.

ARTICLE 7.

The Signatory Governments declare that nothing in the present Agreement diminishes or varies or shall be deemed to diminish or vary the rights of the bondholders of the German External Loan, 1924, or of the German Government International 5½ per cent. Loan, 1930.

Any necessary adaptation of the machinery relating to the manner in which the obligations of the German Government with respect to the German External Loan, 1924, and with respect to the German Government International 5½ per cent. Loan, 1930, will be discharged will be subject to mutual arrangement between the German Government, on the one hand, and the Bank for International Settlements, Fiscal Agent of the Trustees of the German External Loan, 1924, and Trustee of the German Government International 5½ per cent. Loan, 1930, on the other hand.

ARTICLE 8.

The present Agreement will, on its coming into force, be notified by the Government of the French Republic to the Bank for International Settlements with a view to the application by the Bank of the provisions which affect it; the said Government will also inform the Bank, for the purposes of its Statutes, that the "New Plan" is no longer in effect.

ARTICLE 9.

Any disputes, whether between the Governments signatory of the present Agreement, or between one or more of those Governments and the Bank for International Settlements, as to the interpretation or application of this Agreement shall be referred to the Arbitration Tribunal set up under Article 15 of The Hague Agreement with Germany. The relevant provisions of that Article and of Annex XII of the said Agreement will for this purpose be applicable.

ARTICLE 10.

As soon as the present Agreement has been ratified by the Governments of Germany, Belgium, France, Great Britain and Northern Ireland, Italy and Japan, it shall come into force between those Governments whose ratifications have been deposited or notified at that date. It shall come into force in respect of every other signatory Government on the date of notification or deposit of ratification.

II.—Transitional Measures relating to Germany.

The signatories declare:—

ARTICLE 1.

The effects of the Declaration of 16th June, 1932, [see above] will be prolonged until the coming into force of the Lausanne Act or, failing this, the notification by any one of the following countries: Germany, Belgium, Britain, France or Japan that it has decided not to ratify.

ARTICLE 3.

As regards the execution, by means of deliveries in kind, of contracts and works in course of execution, a Committee, consisting of representatives of the German Government and the Governments concerned, shall be appointed to draw up such proposals as may be desirable in regard to such contracts and works.

III.—Resolution relating to Non-German Reparations.

The Creditor Powers and other Governments concerned [the signature of Greece was withheld] recommend to the Conference that a Committee consisting of one representative of each of the Governments concerned shall be set up to consider the group of questions known as "non-German Reparations" and cognate questions viewing them within the framework of a general settlement; are of opinion that, in order to permit the work of the said Committee to proceed undisturbed, without prejudice to any question of principle or to the solutions which may ultimately be reached, the execution of the payments due in respect of the above-mentioned questions should be reserved until 15th December, 1932, failing a settlement before that date.

IV.—Resolution relating to Central and Eastern Europe.

In order to achieve the financial and economic reconstruction of Central and Eastern Europe, the Conference decides to appoint a Committee which will be entrusted with the duty of submitting to the Commission of Enquiry for European Union at its next session proposals as to measures required for the restoration of the countries of Central and Eastern Europe, and, in particular—

- (a) Measures to overcome the present transfer difficulties of those countries and to make possible the progressive suppression, subject to the necessary safeguards, of the existing systems of exchange control;
- (b) Measures to revive the activity of trade, both among those countries themselves and between them and other States, and to overcome the difficulties caused to the agricultural countries of Central and Eastern Europe by the low price of cereals, it being understood that the rights of "third countries" remain reserved.

Accordingly, the Conference invites the Governments of Germany, Austria, Belgium, Bulgaria, France, the United Kingdom, Greece, Hungary, Italy, Holland, Poland, Roumania, Switzerland, Czechoslovakia and Yugoslavia, each to appoint not more than two representatives on the Committee referred to above.

V.—World Conference.

With a view to deciding upon "the measures necessary to solve the other economic and financial difficulties which are responsible for, and may prolong, the world crisis," the Conference decides to invite the League of Nations to convoke at a convenient date and at a place to be fixed (not necessarily Geneva) a Conference on Monetary and Economic Questions.

The Conference decides to entrust the preliminary examination of these complex questions, which are closely interdependent, to an authoritative committee of experts.

The Conference therefore invites the Governments of Germany, Belgium, France, the United Kingdom, Italy and Japan each to appoint as members of the Committee two experts, one qualified to deal with economic questions, the other qualified to deal with financial questions.

The Conference further resolves to invite the Government of the United States of America to be represented on the committee on the same basis as the Governments of the States mentioned above.

Finally, the Conference invites the Council of the League of Nations to nominate three persons qualified by their financial competence, and three persons qualified by their economic competence.

Notes of the Week.

All at Sea.—The argosy has sailed into the sunset. On Wednesday the "Empress of Britain" put forth from Southampton carrying the British Olympic team, bound for Los Angeles, and a still more olympian cohort—seven Cabinet Ministers and God and the ship's purser alone know how many advisers, secretaries and journalists—*en route* for Ottawa. We wish them well; and, of the two teams, the parliamentarians probably stand in greater need of the nation's good wishes, for the political hurdles at the Imperial Conference have an even more formidable look than those in California which will confront the athletes. In recent issues of the *Economist* we have examined the relevant data relating to the trading situation of each of the principal overseas participants in the Conference, and have endeavoured thereby to present the background of economic fact against which possibilities of fruitful agreement have to be measured. The evidence affords little encouragement to those who have reposed on the Ottawa Conference fanatical hopes of realising the conception of free trade within an impenetrably ring-fenced Empire; the scope for diversion of existing trade by preferential tariff mechanism would obviously be very limited, even if considerations of the need to sell outside the Empire were not important for all its members and, particularly, for Great Britain. The experience of the Lancashire cotton delegation in Canada is scarcely encouraging; and there is a real danger that in a desperate effort to escape from overt failure, the Conference may be tempted to take the fatal course of pursuing Imperial preferences at the price of still further crippling world trade by adding to tariff barriers against foreign goods. From recent declarations of Ministers we gather, to our great satisfaction, that the Cabinet has awoken to this danger and is prepared to insist that the test of the Conference's success will be its ability on balance to add to, and not subtract from, the world's freedom of trade. If they can achieve even a little progress in this direction, and if they avoid at the same time any commitments which would prejudice our freedom to join with non-Empire countries in reciprocal "freer trade" arrangements, the British delegation—even though they disillusion those who cherish dreams of the Empire lifting itself into prosperity by its own bootstraps at express speed—will do well.

The Franco-British Declaration.—On Wednesday afternoon Sir John Simon announced in the House of Commons "an outcome of the Lausanne Conference" in the shape of a joint Franco-British declaration under four heads:—

- (1) France and Britain intend to exchange views with complete candour concerning "any questions coming to their notice similar in origin to that now so happily settled at Lausanne, which may affect the European régime." They hope that other nations will join them in adopting this procedure.
- (2) They intend to work together and with other delegations to find a solution of the disarmament question.
- (3) They will co-operate with each other and with other Governments in preparing for the World Economic Conference.
- (4) Pending a new commercial treaty they will avoid discrimination against each other's trade.

The House was somewhat mystified by this statement; and, if the proof of the pudding lies in its effect on international digestions, it must be added that the reception of Sir John's words abroad makes one ask what good purpose was served by their utterance. The agreement to renounce tariff discrimination is welcome; but Clauses 1-3 are, on the face of it, so amiably vague and colourless that they invite every manner of gloss. In Geneva, the declaration is suspect as a supposed attempt to substitute a new Concert of the Powers for the authority of the League. In Paris and Berlin, Clause 1 is approved or denounced according to the hopes, or fears, of its press interpreters that (a) there is now a revived *entente cordiale* directed against Germany, or (b) that France is

now pledged to entertain discussions of Treaty revision. Worst of all, M. Herriot's announcement that the pact means that Britain cannot undertake to make debt payments to the United States without consulting France has been received very ill in America. The implication that this is a move towards a "united front of debtors" has evidently strengthened in the U.S.A. the regrettable impression created by the "gentlemen's agreement," namely, that the European auto-piano will play the tune of harmonious agreement only if America puts in the penny. Of this attitude on the part of the United States we shall have occasion to write again; we are only sorry that, thanks partly to the hesitations and partly to the maladroitness of Europe, the debts issue should now be in danger of becoming a controversial item in the inopportune circumstances of the Presidential Election.

M. Herriot and the Chamber.—The course of the proceedings in the Chamber of Deputies on the Government's financial proposals suggests that the ultimate effect on the alignment of parties in France and on the position of M. Herriot's administration may be far-reaching. During a session which lasted from 2 p.m. on Monday to 11 a.m. on Tuesday the Chamber radically modified the Finance Bill, which is now estimated to yield an "improvement" of only 883 million francs in the Budget of 1932 and 2,570 million francs in that of 1933, whereas the Budget Minister had originally asked for over 4,000 million francs in respect of the latter year, whose aggregate prospective deficit is put at between 6 and 7 milliards. Thus, watered down by deputies reluctant to assume responsibility for unpalatable economies, the Bill has now gone before the Finance Committee of the Senate, which may possibly reinstate a number of the rejected items of new taxation and retrenchment—unless desire to avoid further trouble on the eve of the Recess prove uppermost. Politically, however, the significant feature of the debate in the Lower House was the defeat of the proposal which the Finance Committee of the Chamber had inserted in the Bill, at the instance of the Socialists, providing for the suspension of army manoeuvres and periodical training of military reserves. This proposal was opposed by the Right and—with great vehemence—by M. Herriot himself, who made its suppression a matter of confidence. By 360 votes to 172 M. Herriot secured his vote of confidence, but thanks only to the support of the Centre and part of the Right. The Socialists and some Left-Wing Radicals voted against M. Herriot, and still more of the latter party abstained from voting. Thus M. Herriot's *point d'appui* has shifted definitely Rightwards; the conception of co-operation between Socialists and Socialist-Radicals has broken down on an important question of principle, and, unless M. Herriot succeeds in cementing together a Centre coalition which embraces some Right elements—and, though our Paris correspondent points to this as a probability, it remains to be seen whether he is prepared to pay the price of such support—his position may ultimately become precarious.

The Broker's Man in Ireland.—Our hopes that the British Government might yet see fit to exercise a little more patience in dealing with the Government of the Irish Free State have been disappointed. On Tuesday night the Special Duties Bill received the Royal Assent, and almost immediately—while Mr De Valera was speaking in the Dail of the possibility of agreement on an arbitration tribunal—a Treasury Order was issued imposing a duty of 20 per cent. *ad valorem* on a wide range of imports from the Irish Free State. Whiskey and stout escape; but the hand of the new-model international debt-collector falls on animals, alive or dead, and on dairy produce—in other words, on the great bulk of what we buy from Southern Ireland. The decision is regrettable. In so far as 20 per cent. does not exclude—and, if it does, the Government will not get their revenue—the duties will both hit the British stock farmer and raise the cost of living. If he had wanted to recoup the loss on the Land Annuities without penalising the British consumer, Mr Thomas would have done better to put an export tax on exports

to Southern Ireland. The new proposals, which Mr Norton is said to be bringing over from Dublin, may turn out to afford the basis for a belated agreement, before Mr De Valera carries out his plan of tariff retaliation in turn. Let us hope so; for it is no use for Mr Thomas to plead that the Irish leader has throughout been difficult and inclined to "trail his coat." Our duty to practise a little masterly inactivity was the greater. As it is, the Government have risked the embitterment of Anglo-Irish relations by using as a means of debt-collecting a weapon only one degree less futile than a bayonet.

The Indian Moderates.—It seems that the work of building a new constitution for India must go forward without the co-operation even of the Moderates. Sir Tej Bahadur Sapru, Mr Jayakar, and their colleagues at the Round Table Conference, have now decided to take no further part in the work of the Consultative Committee. As a reason for this decision they have explained that in their view the procedure recently outlined by the British Government is symptomatic of a new policy and cannot produce a constitution as satisfactory as that which the conference method was calculated to bring about. How far this is the real explanation, or how far the opinion of the Moderates in India has been alienated by the Ordinances, we do not profess to know. All that can be said is that the cessation of the Moderates' co-operation leaves the British Government still more alone in its task, but with no less responsibility to press forward with it as rapidly as possible. The best hope for the future in India that we can see is that the Provincial Legislatures should be rapidly brought into being, with statutory provision for the future formation of a Central Federal Authority. Then, though the only Central constitution which this Parliament at Westminster is likely to approve will probably not fully satisfy the aspirations of any section of politically-minded India, nevertheless the opportunity thus afforded to Indian politicians of exercising real and definite self-government over provincial areas surpassing in size the territories of most of the world's Great Powers—with a substantial step towards Central autonomy in prospect—may yet succeed in attracting to the work of constructive statesmanship the forces now spent on purely obstructive opposition.

Convulsions in Latin America.—If any practical demonstration is really needed to convince the Government and people of the United States that a European reparations agreement at Lausanne is not enough in itself to restore the financial and economic health of the world, they have only to look across the border at the plight of Latin America. For here are twenty American republics which, according to American ideology, possess the same regional right as the United States herself to immunity from the hereditary ills of the Old World. These Latin American countries, moreover, are now a great and growing market for United States exports and United States investments. Yet Latin America is palpably hit as hard as any part of the world by the world depression; and the Latin American reaction is one of the most prominent danger signals indicating that reconstruction and recovery have their definite, and now fast approaching, time limit. Since the summer of 1930 Latin American economic and financial distress has been finding vent in political upheavals; and the serious feature is that, as the world depression persists, one Latin American revolution follows hard at the heels of another until the cumulative damage to the social fabric threatens—in some of these countries at least—to reach a point at which it may become irreparable. During the last few days there has been more disturbance in Chile, and fresh trouble in Peru and in Brazil. In Chile, where Señor Davila has been in the saddle since the overthrow of Colonel Marmaduke Grove on June 17th, the momentary dictator's power has been challenged by the return home of ex-President Ibañez on July 6th. Señor Davila received him with ostensible friendliness, but countered his arrival by himself assuming the Presidency on the 8th. At the end of last week it looked as though there would be fighting in Santiago de Chile between the two men's armed supporters; but this bloodshed has been averted for

the moment by the voluntary withdrawal of General Ibañez from the city into the country. Meanwhile, in Peru, there has been a violent Communist outbreak at Trujillo, and although the Peruvian Government has been able to send reinforcements with comparative rapidity by sea, and has been bombing the insurgents from the air, it has taken several days to drive them out of the town, and they are still holding their own on the outskirts. The most serious news of all—in view of the size of the area involved—comes from Brazil, where the present Government, which fought its way to office in October, 1930, and which represents the interests of the outlying States of the Brazilian Union in the extreme north and south, has been challenged this week by a military revolt in São Paulo: the leading central State which had formerly dominated the Brazilian Federal Government at Rio de Janeiro. If this sort of thing were to go on for another year or two, large parts of Latin America might forfeit the fruits of a century's painful progress and might relapse into the anarchy and poverty in which they found themselves on the morrow of their original liberation. If this were to happen to a region of this magnitude, the untoward effects would be felt severely by the world in general and by the United States in particular.

The Cortes and Catalonia.—The Spanish Cortes, which has done duty as a Constituent Assembly as well as an ordinary Parliament, completed a year's solid labour this week. Unhappily, in spite of three all-night sittings during the last fortnight, the debate on the statute of autonomy for Catalonia is not nearly finished. Tempers are clearly becoming ragged in the July heat, while the same old issues are fought out in connection with each successive Article of the draft which is the basis of discussion. But, as Señor Marcelino Domingo, the Minister of Agriculture, pointed out the other day, the differences of opinion within the Republican ranks are only concerned with the degree of autonomy that is to be sanctioned. It is merely a question of expediency, of ways and means, whereas formerly, in the time of the monarchy, the issue was patently one of principle. There is no doubt that the establishment, *de facto*, of the *Generalitat*, actually before Spain itself became a Republic, has made possible a solution of the Catalan problem which no amount of negotiation could have achieved. Nevertheless, Colonel Macia and his colleagues are displaying a readiness to compromise on non-essentials, with which they had certainly not been credited. Even when in Madrid the luckless poet-politician, Señor Ventura Gassols, was the victim of a practical joke, being shorn of his flowing locks, there was no unfortunate sequel. Exquisite expressions of condolence in the Cortes by a Madrid fellow-poet and by the Prime Minister closed the incident. One still hears from Barcelona of threatened Sinn Féin violence and from Madrid of a commercial boycott. But they are, in the main, the fruits of a heated imagination. The reality is the steady preparation in Catalonia for an autonomous regional life, and now finally comes an announcement that the Government is losing patience and proposes to issue a statement of the further modifications in the *dictamen* which it will allow (Catalan acquiescence having already been secured) and to stand or fall by it. Since there is certainly no alternative Government at present, the Cabinet can afford to challenge Parliament in this way. It looks as if the final touches, however, to the Statute and the Land Reform Bill will await the re-assembly at the beginning of October.

The Free List.—On the recommendation of the Import Duties Advisory Committee, the Free List has been this week enriched by a curiously assorted, though none the less welcome, medley of exemptions—to wit, *objets d'art* consigned to galleries or museums; paintings and drawings; roundwood logs of pine, spruce and aspen; *phragmites communis*; glycol ethers, bromine and boron minerals and concentrates; rags, partly of wool, not pulled; and natural essential oils. None of these classes of articles can strictly be regarded as forming a trade of great economic importance; and we may, perhaps, be forgiven a smile when the Committee describes the free

importation of *bois de rose* and bergamot as possessing "special urgency," while steel "semi's" are left to carry 33½ per cent. Nevertheless, we are glad to note that the Committee is alive to this side of its functions, and we are particularly pleased that the senseless and illiberal duty on works of art has now gone by the board.

The B.I.S. and Gold.—At the monthly meeting held last Monday, the board of the B.I.S., having taken note of the provisions of the Final Act of the Lausanne Conference, decided to renew for three months the credits extended to the national Banks of Austria, Hungary and Yugoslavia expiring during July. It then proceeded to pass a resolution substantially to the following effect:—

"The board, recognising the necessity of the re-establishment between nations of a monetary system with a common basis in order to facilitate international settlements under more stable and secure conditions, is unanimously of opinion that the gold standard remains the best available monetary mechanism . . . it is desirable, therefore, to prepare all the necessary measures for the re-establishment of the functioning of the gold standard."

"In order to render possible a general return to the gold standard, the board thinks it first necessary that those measures should be taken by international collaboration and national efforts which will restore equilibrium in the economic and financial structure of the various countries. The realisation of these measures depends in the first instance on Government action and, without that, is beyond the power of Central Banks. To enable the mechanism of the international balance of payments to work again in a satisfactory manner, it will be necessary to restore a reasonable degree of freedom in the movement of goods, services and capital; to complete the solution of reparations reached at Lausanne by a satisfactory solution of war debts; and to take the necessary steps in each individual country to restore and maintain equilibrium in its internal economy, not only as regards public revenue and expenditure, but also as regards the cost of production and organisation of the internal money and capital market."

The fact that the votes in favour of this resolution included those of Mr Montagu Norman and Sir Otto Niemeyer, representing the Bank of England, gave rise to some concern in British circles opposed—and rightly—to our returning either prematurely or unconditionally to the gold standard. Mr Chamberlain, however, lost no time in explaining to the House on Tuesday that the resolution represented, as he understood it, simply the view of the B.I.S. on what the ultimate solution of the currency problem ought to be. He did not read it as having any bearing upon any immediate action that might be taken by this or any other Government; the British Government were in no sense committed by the resolution, and there was no intention on their part to return to the gold standard in the immediate future. There the matter may well be allowed to rest. The charge that the Governor of the Bank of England was endeavouring to commit the Government was, in fact, a little absurd. When all is said, the B.I.S., in passing this resolution, was doing little more than signifying its endorsement of the majority findings of the Gold Delegation of the Financial Committee of the League. Pending the World Economic Conference, no decision is likely to be taken by this, or any other "off-gold" country, on the very vital question whether, and on what conditions, it shall resume gold payments. In the meantime, there is no constitutional impropriety in central bankers expressing opinions which, as a matter of common knowledge, they have consistently held.

The Shipbuilding Returns.—The returns issued for the end of June by *Lloyds Register of Shipping* show, as was to be anticipated from the known state of demand, a further downward movement:—

	(Thousand tons.)			
	Work in Hand.	Work Commenced.	United Kingdom.	Abroad.
1931—First quarter.....	693	1,306	33	209
Second quarter....	556	1,271	23	211
Third quarter ...	417	1,114	39	134
Fourth quarter....	400	1,003	105	120
1932—First quarter.....	373	925	26	55
Second quarter....	280	829	28	42

British tonnage under construction at the end of June is scarcely more than half that at the end of June, 1931, and constitutes the lowest figure recorded for over fifty

years. Even at that, it includes 159,000 tons on which work has been suspended. Work in hand abroad has diminished less, so that the British percentage is reduced to 25.3, and the foreign total includes only 17,000 tons on which work has been suspended. The chief countries whose figures compose this total are: Italy, 180,565 tons; United States, 162,203 tons; France, 128,128 tons; Germany, 103,500 tons; and Sweden, 89,201 tons. This increasing stagnation in the shipyards is an inevitable *sequela* of the paralysis which has been steadily creeping upon international commerce during the past two years. Until there are signs of trade expansion, reflected in some recovery of freights, it would be optimistic to look for any revival.

Sterling and Gold Prices.—The past fortnight has seen a slight, but none the less welcome, rise in gold prices as measured by our index based on a short list of primary products. A parallel rise occurred in sterling primary prices; but, though there has been a fall of 5 cents in the dollar quotation for the pound, our complete index has risen only fractionally:—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistisches Reichsamt, Germany.

July 13th ...	97.5	101.3	82.6	...	...	...	...

Sectional movements of the complete *Economist* index are shown below:—

"ECONOMIST" INDEX.
(1927 = 100).

	Sept. 18, 1931.	June 29, 1932.	July 13, 1932.
Cereals and meat	64.5	68.9	66.1
Other foods	62.2	57.6	56.9
Textiles	43.7	43.7	45.7
Minerals	67.4	67.4	68.3
Miscellaneous	65.8	58.4	58.7
Complete index	60.4	58.8	58.9
1913 = 100	83.1	80.9	81.1
1924 = 100	52.2	50.8	50.9

Movements in the cereals and meat and "other foods" groups during the fortnight have been irregular, the chief factor in the decline on balance being falls in the prices of imported wheat, bacon, potatoes, beef and cheese. There was an appreciable recovery in textile prices, and in the other groups tin and rubber were firmer.

Currency at Ottawa.—Our Ottawa correspondent writes:—There is a substantial body of Canadian opinion which takes the view that it would be conducive to a revival of Canadian prosperity if the Canadian dollar could be linked to sterling, and the disturbing fluctuations of monetary exchanges between at least the different parts of the Commonwealth eliminated. Of this school of thought Mr Stevens, the Minister of Trade and Commerce, has been an assiduous protagonist, without, however, receiving any endorsement of his views from Mr Bennett or any other of his Ministerial colleagues. It was largely his advocacy that induced the Canadian House of Commons, by formal resolution, to instruct the Government to raise the currency question at the Ottawa Conference and "to initiate and support measures for the stabilisation of the currencies of all British countries in such a manner as to facilitate trade between the component parts of the Empire, and to promote economic unity therein." Mr

Stevens takes the view that unless commodity prices are raised by some new monetary policy the debt burdens, public and private, of Canada as well as of other countries are beyond hope of liquidation. He has also supported the remonetisation of silver. In some quarters the view is held that the best means of achieving an equilibrium in inter-Imperial monetary exchanges would be for all countries of the Commonwealth to adopt the British pound as the basic currency unit, and that Canada should not abandon her dollar, but should undertake to maintain it on a constant level with the pound regardless of its fluctuations in terms of foreign currencies. But another school of thought holds that nothing short of the creation of a common Imperial currency will be effective for the purposes aimed at. General A. D. McRae of Vancouver, a multi-millionaire, a senator, and formerly Conservative campaign manager, has lately constituted himself the active protagonist of this idea. He proposes the resurrection of the British guinea, which would be treated as the equivalent of five dollars, as the basis for a common Imperial currency on the decimal system, which would be placed under the management of either an Imperial super-bank or some sort of Imperial governing board recruited from representatives of all the units of the British Commonwealth. He would have this currency backed by the joint gold reserves of the British Commonwealth and the future output of its gold mines, and to each unit there would be allocated an amount of currency in proportion to its gold reserves in a ratio of 4 to 1. Senator McRae also argues that the creation of such an Empire currency as he outlines would immediately attract large sums from other countries which are uneasy about the present position of their deposits, and that it would soon be adopted as the basic unit of exchange throughout the world. The objection is that at the present time the financial and commercial relations of Canada with the United States far surpass both in volume and importance similar relations with the countries of the British Commonwealth taken together. For two countries which have a common frontier of three thousand miles the convenience of possessing a common monetary unit, even though it is rarely at the same level on both sides of the frontier, is indispensable. Furthermore, account must be taken of the enormous debt obligations which Canada has incurred in the United States. The aggregate investment of American capital in Canada is placed at three and a half billion dollars, and this year Canada has to find roughly a million dollars per day to meet her obligations for principal and interest in the United States. In any scheme for achieving parity between the pound sterling and the Canadian dollar it is unlikely that the British Government would agree to raising the pound to the level of the Canadian dollar, and therefore the Canadian dollar would have to be brought down to the level of the pound. Such a process would undoubtedly entail a heavy augmentation of the burden of Canada's indebtedness to American interests, and for this reason alone it could not be lightly contemplated, though inflation finds support from the agrarian leaders of the Western provinces.

The Austrian Budget.—The Government has presented the supplementary Budget to Parliament, writes our Vienna correspondent. Some of the measures designed to bring in increased revenue were dropped in deference to vigorous protests both in Parliament and in all the economic associations. Indeed, a plenary session of the Chamber of Commerce made a severe attack upon the Government, and declared that, in the opinion of the Chamber, the policy which the Government has so far observed has served agrarian interests exclusively. The supplementary Budget provides for extra expenditure amounting to 181 million schillings, against increased revenue amounting to only 85 million schillings. The deterioration in the balance of revenue and expenditure is to be covered by savings of 81 millions in expenditure on materials, by withdrawal of the 100 million reserve for short-term liabilities and by increased revenue from taxes, Customs duties and imposts, making a further 85 millions. There is no precise limit to the increase of the merchandise turnover tax. It is merely stated that the

crisis supplement to the general merchandise turnover tax is to be fixed in consultation with the principal committee of the National Assembly in accordance with the proposal of the advisory committee on unemployment benefit. This is designed to keep the Social Democrats from forcing an increase of Government liabilities under the National Insurance, for if they insisted upon greater liberality in this direction a further increase of the merchandise turnover tax would be necessary to cover the extra demands of the National Insurance Department. For the time being, however, the merchandise turnover tax will no doubt be doubled. The question of covering the deficit on the Federal Railways has not yet been solved. The Government declares that it is impossible to take the whole of the deficits of 1930 and 1931 into the Budget for the year 1932. In addition to the deficit for 1930, amounting to 54 millions, and interest thereon of 2.5 millions, half the deficit of the Federal Railways for 1931, amounting to 40 millions, is to be covered. The remainder is to be left for liquidation in the Budget of the year 1933. At the same time, both the Government and the Minister of Finance admit that the continued decline in traffic will inevitably lead to a deficit on the year 1932. From the loan which is hoped for, 54 millions is to be allocated to investment renewals which have already been executed or ordered by the railways. The position of national insurance is desperate. In the first Budget for the year 1932 it was calculated that the average of unemployment would figure at 250,000 schillings, whereas, in consequence of the increased severity of the economic crisis, the figure will be 323,500. The result is that an additional expenditure of 71.6 million schillings and a further expenditure of 9 millions, due to the altered distribution of the burden between the State and the Federal countries, will have to be reckoned with. All this extra expenditure on social services is to be covered by an increase in the merchandise turnover tax. In view of the storm of protest from economic circles the further increase of taxation which was contemplated has been abandoned. The duty on colonial goods and spices is the only one to be seriously augmented, and from this a supplementary revenue of 12.5 million schillings is expected. For the agreement which is to be made with the creditors of the Credit Anstalt a sum of 5 million schillings is provided in the Budget. Postal fees are to be greatly increased.

Hungary's Agricultural Moratorium.—Our Budapest correspondent writes:—Parliament has been adjourned until October 26th, but the Emergency Committee, composed of 33 members of both Houses, called into life a year ago to act as an advisory body in financial matters to discuss the proposed ordinances of the Government, will meet during the summer recess, whenever circumstances demand it. Since Parliament rose the Committee has voted a decree providing for a partial moratorium on all agricultural debts until November 1st. The agricultural *stillhalte* agreement, as it is called here, was the price the Government had to pay for a political truce from the rank and file of their own party. While there is a strong case for the temporary suspension of forced sales of agricultural estates, especially for smallholders, until a general debt settlement can be worked out with the foreign creditors, it cannot be denied that the partial moratorium for agriculturists—without complementary provision for commerce and industry primarily affected by it—is likely to force the country towards a general moratorium with all its attendant evils, unless the Government can present a businesslike scheme after the four months of grace have elapsed. With regard to the much-talked-of unilateral action for scaling down the intolerably high interest rates of both foreign and internal obligations, it is understood that the Government does not propose to do anything in July, but it will endeavour to get the assistance of one or more experts with international reputation to advise on the situation. In view of the complete cessation of transfer of foreign exchanges for the service of the external debt and the above-referred partial moratorium for internal debts, it is obvious that urgent action is necessary to avoid a general moratorium.

Iron and Steel Production in June.—According to the figures issued this week by the National Federation of Iron and Steel Manufacturers the number of blast furnaces in operation remains at 69, and production of pig iron, at 311,400 tons, continued in June on a fairly even keel. Steel production amounted to 459,800 tons, compared with 416,900 tons in May and 428,900 tons in June last year; the apparent increase is, however, discounted by the fact that Whitsun holidays occurred in June last year and in May this year, while it is understood that production would not have been maintained at this level but for Russian orders for plates and sections taken by some of the firms. The June output brings the pig iron production for the half-year to 1,932,800 tons and steel production to 2,683,100 tons. Pig iron production is at 38 per cent. of the 1913 rate and steel production at 70 per cent. The following table compares the production of pig iron and steel in the chief producing countries in the first half of 1932 and 1931; where the output figures for June are not yet available they have been assumed to be the same as in May:—

	Pig Iron.		Steel.	
	First Half of		First Half of	
	1931.	1932.	1931.	1932.
	(In thousands of tons.)			
United Kingdom	2,006.0	1,932.8	2,650.1	2,683.1
U.S.A.	11,105.3	5,326.0	15,258.6	7,779.5
Germany	3,291.6	2,068.0	4,545.2	3,007.5
France	4,391.5	2,765.5	4,094.3	2,702.0
Belgium	1,555.7	1,454.5	1,486.7	1,435.0
Luxemburg	1,026.2	920.0	998.7	924.5
Total	23,376.3	14,466.8	29,031.6	14,551.6

Imports of iron and steel in June amounted to 126,100 tons, the lowest figure reached since 1923, when the Ruhr occupation interfered with exports from the Continent. Imports for the first half-year amounted to 967,500 tons, compared with 1,276,900 tons last year, but part of this decline was due to the "forestalling" which took place in the later months of last year. Exports of iron and steel fell by 4,000 tons to 147,300 in June and the total exports for the first half-year amounted to 952,500 tons, compared with 999,200 tons in the corresponding period of 1931. Prices of Continental material, on a gold basis f.o.b. Antwerp, registered small declines during June. British prices were firm, but, in order to narrow the margin between British and Continental prices, concessions were granted on soft billets when ordered in quantity.

U.S.A. Wheat.—The Crop Reporting Board of the Bureau of Statistics of the United States Department of Commerce has issued its July estimates of the wheat crop. The figures are shown below, with comparable statistics for past years:—

Season	(Million bushels.)		
	Winter	Spring	Total.
(June-July).	Wheat.	Wheat.	
1927-28	578	336	914
1928-29	577	228	805
1929-30	601	246	857
1930-31	787	105	892
1931-32	432	305	737

It will be seen that the partial failure of the winter wheat crop has been largely made good by the high yield of the spring crop. The yield of the Canadian crop (Prairie Provinces) has been estimated at 478 million bushels, against 284 million bushels a year ago. The total North American crop is, therefore, expected to exceed last year's harvest by 89 million bushels. The United States oats crop has been estimated at 1,217 million bushels, against 1,112 million bushels a year ago. The maize harvest is expected to yield 2,996 million bushels an increase of 439 million bushels on last year. The estimate for barley, at 812 million bushels, shows an increase of 113 million bushels as compared with the actual yield in 1931.

American Cotton Crop.—At the end of last week the Department of Agriculture of the United States Government announced that the area under cotton cultivation on July 1st was 37,290,000 acres, a decrease of 9½ per cent. compared with a year ago, when the amount was 41,189,000 acres. The decrease in the acreage, writes our Manchester correspondent, was slightly larger than expected. It is impossible at this period of the year to form any idea as to the probable extent of the yield; for the crop will depend upon the weather in the belt during the next couple of months. Up to the end of last week there had been a period of excessive rains in the growing area, and some anxiety was felt as to damage to the plants from the boll weevil later on; but during the last few days better weather reports have been received, and the growth is now making more favourable progress. Since the crop for the season which is now ended was the second largest on record, namely, 17,000,000 bales, it is believed that the carryover will be 13,000,000 bales. Even should the new crop be of only moderate dimensions, heavy supplies are assured during the next twelve months.

LEAGUE OF NATIONS.

Disarmament — After Lausanne.

(FROM OUR CORRESPONDENT.)

GENEVA, July 13.

AFTER the first impression caused by the Hoover proposals there was something of a slump in the Conference proceedings. The only important sequel had been Italy's comprehensive acceptance. Then came the British Government's programme which, despite its effusive preamble, is a definite alternative so far as naval matters are concerned. It has not produced a deadlock, but the situation is not far short of that. The British effort has had a discouraging influence. For hopes of substantial reductions in number now, the British hold out hopes of reductions, not in numbers, but in size and gun calibre, five, eight or ten years hence.

It is difficult to see a bridge between the two plans. For that bridge to be found, two things must happen. The British Government must show a readiness to reduce numbers now, and the American Government a readiness to consider subsequent reductions in size. But that is not all. The Americans allowed it to be implied that in reducing capital ships by one-third, they may be ready not to replace the remaining units and thus allow the capital ship to die a natural death. The British Government wants the same number of capital ships at 25,000 tons instead of 35,000 tons, and so to perpetuate the big ship. Incidentally, they ignore completely one of the central political problems of the Conference by thus taking no account of Germany's demand for equality of rights. The British plan, as a supplement to substantial reduction in numbers somewhere near the proposed American levels, would be admirable, and would justify the otherwise unjustifiable claim that it goes further than America suggests.

On top of this discouraging position comes the Japanese refusal of the American plan, and an expression of preference for the British. It will be politically most unfortunate if we work in that partnership and in that direction. It is possible that Japan may wreck the American scheme anyhow, but if there were whole-hearted British determination to make something out of the American plan, it would be quite feasible, if Japan declined to come in, to go ahead and have a safeguarding clause if necessary to provide against possible contingencies. The controversy, however, will not be engaged yet, and present efforts are devoted to finding a resolution containing sufficient points of achievement to make an adjournment of the Conference respectable. This will probably take place in about a week or ten days.

Meanwhile, Turkey has accepted the invitation to join the League, and a resolution declaring her to be a member will be adopted by the Special Assembly next Monday. The Council meets in a day or two to consider the agreement regarding help to be given to Austria, and the invitation from the Lausanne Conference to summon a financial and economic conference at a convenient time and place. The Lausanne invitation is conceived in rather unusual terms; it reports that the Lausanne Conference decided to entrust the preliminary work to a committee of experts to which it asks the League to add other experts; it suggests that the Committee should "seek assistance from the Directors of the Economic and Financial sections of the Secretariat" of the League; and it adds that the British Government are prepared to enter into correspondence with the various Governments concerned in the appointment of members of the preliminary committee. This is a novel method to suggest to the League. It is customary for the League, when it organises a conference, to appoint its own committees, naturally to use its own officials, and to consult Governments through its own channels. If States members have any suggestions on the way this should be done, the Council is the proper place for them to make them; it is quite abnormal for one particular Government itself to offer its services to "enter into correspondence" with other Governments.

This is not purely a matter of courtesy or procedure, but one also of some political importance. The success of the Lausanne Conference has been hailed with enthusiasm everywhere, but there were some political tendencies, of which the invitation to the League is a manifestation, that will require watching. The apparent efforts—real or rumoured—to set up a consultative pact between the inviting Powers were conceived in a somewhat dangerous form of resemblance to a pre-war concert of Powers in Europe, and this tendency is reflected in the information transmitted to the League as to what the Powers have already done about a League Conference, and what the British Government itself further suggests it should undertake. It is curious also to note all omission of any idea that the International Labour Organisation—representative of employers, and workers, as well as Governments—should be asked to help in the preparatory work. That, also, is apparently not accidental, and on this, as on the other points, there may be some comment in the Council. It is well for the great and powerful States to give a lead, but it is late in the day to ignore the interests and views of others, which include the British Dominions. The Conference to be summoned by the League is not a European but a world conference, and the inviting Powers at Lausanne were not representative of world interests. The principle, however, is wider than in its relation to the projected conference, and if it is not checked in time it will create disorder and ill-feeling that will increase the difficulties of developing fruitful international co-operation.

One other result of Lausanne is that the delicate political questions there left aside will be transferred to Geneva both in the Disarmament Conference and in other respects. That is as it should be. But the Governments should understand that to deal with them successfully will require an even greater effort of concentration than was needed at Lausanne where, after all, the problem was to find a form in which a known fact could be recorded in agreement instead of in disagreement. The political problems left over are much more complicated and fundamental.

UNITED STATES.

Politics — Lausanne — Relief — Industry — Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 5.

ALTHOUGH Governor Roosevelt obviously was the strongest candidate before the Democratic convention, Wall Street was taken somewhat by surprise by his nomination. In the financial district the prevailing opinion is that, while Roosevelt has started well and has made a politically

clever speech of acceptance, his position will weaken as the campaign progresses. Roosevelt's candidacy is recognised, nevertheless, as dangerous to Republican success, and that recognition adds to the gloom in Wall Street, where sentiment is predominantly Republican.

Along with the anxieties of the election, the uncertainties at Lausanne are helping to keep markets stagnant; in fact, there is a large and apparently growing body of opinion in this country to the effect that important reductions in foreign debts must be faced by this country, and there is much sentiment in favour of an offer from here. At the same time, politicians fear that it will cost them votes to take such a stand, and the Democratic platform is made up with a "no cancellation" plank. That by no means closes the door to large concessions, but it may make the matter more difficult if Congressional candidates stress the point in their campaigning. On the other hand, there is some expectation that President Hoover may take a strong stand in favour of help for Europe before election day.

In Wall Street, at least, the point is stressed that Europe is making a mistake to appeal for reduction or cancellation in this country on the basis that sacrifices here should equal those on the other side. It is felt that the chance of a genuine sacrifice on the part of the American taxpayer would be much more likely if nothing more were said on that score. Such proposals are immediately countered with the purposely rigid attitude that a debt is a debt, and that reparations are Europe's business. Some such sentiment has been voiced by ex-President Coolidge in a recent magazine article, and the effect is felt to be unfortunate. Yet, more than most observers far removed from the scene suspect, the American public is coming to realise that its best interests lie in the direction of debt reduction or cancellation. After all, the added tax burden will not be particularly heavy, so long as attention is not called to it by politicians; and few would mind the taxes if only they could again do business on a profitable basis and draw wages. American aid in removal of the debt burdens is to be sought through the door of reviving American trade. For that reason Wall Street leaders feel that a great deal would be accomplished by the drawing up of some plan at Lausanne independent of what America might do.

Congress has joined issue with the Administration over a Relief Bill. No great difference in viewpoint exists, and the measure to provide two or three hundred millions for direct State relief, about as much more for "unproductive" public works, and some \$1,500 millions for lending to private enterprise through the Reconstruction Finance Corporation will probably be adopted. The chief difficulty lies in minor points of administration, but it is fairly certain that the Federal Treasury will have to find \$2,000 millions or so for loans and gifts.

Meanwhile the statistics of trade show the effects of seasonal slackening superimposed on continued deepening of the depression. The steel industry is now down to 10 or 12 per cent. of capacity, due in part to closings over the July 4th holiday, and railroad traffic has declined further. Industrial company reports for the first six months or second quarter have not yet appeared, but are bound to be poor. Oil companies have been doing better, but mining concerns, steel mills, motor factories, companies engaged in building construction, farm implements, railroad supplies and most manufacturing enterprise will be able to show little net profit. Pig iron operations are probably the lowest in history, and steel output is the smallest since 1896.

The mid-year report of the Federal Treasury shows a deficit for the fiscal year ended June 30th of \$2,885,000,000, against \$903,000,000 for 1931. Gross debt increased by \$2,686 millions. Total receipts were \$2,121 millions, a drop of \$1,196 for the year, and expenditures chargeable against ordinary receipts were \$5,006 millions, or \$786 millions larger than in 1931. The 1932 deficit proves to have been \$762 millions larger than the Treasury's estimate in its annual report. The discrepancy came about largely in the Federal Government's loans to the Reconstruction Finance Corporation

and the Federal Land Banks. Other expenditures were \$100 millions under estimates, and the ordinary receipts were only \$238 millions less than the estimates.

While the actual balance for the 1933 budget will depend on receipts which are not likely to materialise in full, including payment of the inter-Allied debts, and a volume of trade at least equal to that of the past year, a sales tax remains a possible means of increasing revenues and one which the Congress, which meets in December, may have to consider. R.F.C. loans continue on a somewhat larger scale, and obviously the policy of allowing such loans to increase can be justified only on the belief that the depression will subside before long, and that it is only necessary to maintain buoyancy among the banks and railroads until that time.

Federal Reserve cheap money policy is unshaken, and the week's expansion in Reserve Bank credit was \$58 millions, accomplished by the purchase of \$71 millions in Government bonds. The effect was largely lost through an expansion of \$144 millions in currency, which is now \$808 millions greater than a year ago, the week's rise being due to the Chicago banking troubles. Monetary gold stock rose \$3 millions, and the week's shipment of \$17 millions came from earmarked stocks, going to France, Switzerland and Belgium, and imports coming from Canada to the extent of \$2.6 millions. Member bank loans and investments continue to drop, but less rapidly. Deflation for the last week of June in loans and investments for reporting member banks in leading cities (40 per cent. of the banking resources of the country) was \$65 millions, entirely in the Chicago district.

FRANCE.

Politics — Budget — Lausanne — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, July 13.

THE sharp divergences of opinion between Radicals and Socialists, in regard to the Herriot Government's proposals for bringing about a balanced budget, may have interesting consequences. The Socialist Parliamentary Party yesterday morning voted solidly against the Herriot Ministry. The vote is regarded by all shades of opinion as marking a definite break between Radicals and Socialists, and as a rupture of the Cartel; and this, as M. Léon Blum mournfully remarked, "within a bare two months of our electoral victories."

The crucial issue during the debate was one concerning national defence—the suppression of the annual training of reservists and the customary large-scale army manoeuvres—which reduced the whole problem of the inherent incompatibility of the respective basic doctrines of the Socialist and Radical Parties to a remarkably clear-cut and simple test, of which the result was a foregone conclusion. For a few minutes, however, the fate of the Government trembled in the balance. Unless aid were forthcoming from the Opposition ranks on its right, the Ministry was doomed. M. Paul Reynaud, a former Finance Minister, declared that no help must be expected from his group, as the Government had abandoned most of their proposals for economy, for which reason they proposed to abstain from voting, in the hope that the Senate would right the situation in this respect. M. Flandin (Finance Minister in the Tardieu Cabinets), however, in a speech which made a marked impression on the House, took the whole question into a higher level. The time had passed for party warfare, he said, and the moment had come from the union of all good wills. In view of the serious general situation, he and his friends had decided to give the Government their support in regard to the finance proposals. After a rather confusing speech from the leader of the more socialisant section of the Radical Party, M. Herriot promptly put the question of confidence, and the Government proposals were adopted by 360 votes to 172, with 125 abstentions. The latter included the whole 42 votes of M. Tardieu's new "Central Republican" group, and 41 of the Marin Nationalists.

Exactly what the immediate outcome of this unexpectedly speedy collapse of the Cartel will be is not yet clear. The Chambers will rise for the summer recess as soon as the Emergency Finance Bill has been approved by both Houses, which it is practically certain to be by Monday next at the latest. This will give nearly three months for calm reflection. The general feeling seems to be that the end of October or early in November, when the 1933 budget will have to be taken in hand, will see a coalition of most of the Centre groups, which will assure the future of a strong Ministry of Concentration, led by the present Premier.

The Emergency Finance Bill, nevertheless, has emerged from the battle with sadly diminished value. The Finance and Budget Ministers based their original proposals on the necessity for securing, by a combination of economies and fresh revenue, some 6,000,000,000 francs, urgently needed to cancel out the existing deficit, to help towards extinguishing further expected shortages, and to place the Treasury on an easier footing. The revolt of the Socialists and advanced Radicals against the original proposals, as soon as they were made public, resulted in a hasty recasting of the whole plan before it was presented to the Chambers. The Socialist and advanced Radical members of the Finance Commission insisted on still further far-reaching modifications, many of which the Government accepted. Other important changes were effected during the "urgency" debate on the measure. The result of all this is shown by the following figures (in millions of francs):—

	1932.	1933.
Initial proposals of the Government	918	4,060
Estimated totals as reported after Finance Commission's First Reading	299	2,357
Estimated totals as reported after Commission's Second Reading	663	2,880
Text voted by the Chamber	333	2,570

The thorny question of a 5 per cent. cut in Civil Service pay was avoided by the rejection of the proposal, except as regards the salaries of the President of the Republic and of Ministers. The proposed reduction in the pay of senators and deputies has been replaced by a cut of 5 per cent. in the credits to meet the administrative expenses of the two Houses. During the Chamber debate M. de Lasteyrie, M. Poincaré's Finance Minister, urged, amid general approval, that the whole question of administrative reform should be taken in hand in earnest, and that, instead of reductions in Civil Service pay, there should be a substantial cutting down of the number of public servants, in view of the heavy over-staffing of certain departments. This is also the view of many experts who are themselves in public employ, and who suggest the setting up of a permanent commission to take the work in hand, with a view to increased yield and greater efficiency.

The urgent question of the moment is as to how the remainder of the money required to balance the Budget is to be found. It is now considered probable that an early issue of 1,000,000,000 francs Treasury Bonds will be necessary. The situation in this respect may be gauged from the fact that, according to the Finance Minister, M. Germain-Martin, when the Government came into office in

May the Treasury's available funds totalled 70,000,000 francs, and it had need of 2,000,000,000 francs to meet requirements for June. The Rente conversion plan is now likely to be applied as soon as the holidays are over, but it is already evident that this will not materially improve the general situation, and it appears probable that, in the end, a solution will be found in the time-honoured form of a large internal loan issue. A huge lottery for the benefit of the Budget is again being suggested in various unofficial quarters.

The decisions arrived at by the Lausanne Conference have been received by French opinion with satisfaction. This is due to some extent to the fact that, in the view of Paris, M. Herriot—although the French delegates were completely isolated when the Conference began—was eventually able to win both Mr MacDonald and Signor Grandi round to his thesis, and to bring about what is regarded here as an effective revival of the *entente cordiale*. What is looked upon as immensely more important, however, is that French hopes that Lausanne could be transformed into a prelude to eventual negotiations with Washington, for the wiping out of European debts to America, have become an accomplished fact. The French leaders long ago, for all practical purposes, renounced all hope of recovering any further substantial sum from Germany, and focussed their attention primarily on the problem of how Germany's default could best be utilised as a factor for securing them relief from their American creditor. This aspect of the matter, much more than any serious expectation of ultimately benefiting from such deferred payments as Germany might be induced to agree to, was the real motive for adopting the policy of Lausanne of urging that, in form at least, reparation payments should not be completely wiped out. The reason is simple. Now that the Young Plan has followed its predecessors into oblivion, the doctrine which it embodied, and which inseparably bound up German reparation payments with American claims against Europe, has also disappeared; so that any complete cancelling of the German debt prior to an arrangement between Washington and its European debtors would place the latter in a defenceless position. The Lausanne decisions have furnished Europe with a weapon—in the form of a united front and the "gentlemen's agreement"—that will enable her delegates to meet their creditor on much better terms than would otherwise have been the case. Lausanne, in short, from the French point of view, will enable Europe to argue without fear of retort that, if America is not prepared to sacrifice something to restore world prosperity, she need not expect Europe foolishly to make a one-sided sacrifice that would leave both the Old World and the New in the same hopeless situation as at present.

The unweighted index of wholesale prices at the end of June is announced by the Statistique Générale to-day as 408 (1914 = 100), against 421 in May, 477 in June last year and a mean of 543 in 1929. The index for French products is 475, a drop of 17 on the month and of 64 since June last year. The figure for imported products is 287, against 294 in the previous month and 365 in June, 1931.

GERMANY.

Lausanne — Trade Policy — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, July 12.

THE German public has not received the results of the Lausanne Conference with satisfaction. The Social-Democrats and the relics of the bourgeois Left do, however, recognise that Lausanne represents a great advance on the Young Plan, as witness the following passage from *Vorwärts*:—

"Herr von Papen, who went to Lausanne to secure a victory for the policy of 'national concentration' has returned with a fine result of the policy of fulfillment. Lausanne was to be a parting of the ways. It has, however, become a milestone on the long and difficult road which led from Versailles through London to Locarno and The Hague and which is marked by the monuments of Erzberger and Rathenau. . . . On the whole, the policy of reason has been victorious at Lausanne over unreason. The defeat

of unreason is signalled by the tremendous uproar it is raising in the press of the Right, against the German delegation."

The most severe attacks on the Government come from the National Socialists. Their leader in Berlin, Dr. Goebbels, declared at a large public meeting:—

"And now for the most terrible thing of all: a representative of this Cabinet has negotiated at Lausanne in our name, the name of national Germany. This representative did not consider it necessary to announce openly to the world before the conference: 'We will pay no more because we cannot pay any more, and because we do not wish to pay any more. We have paid enough. We wish to see Germany cleared of the slur of War guilt: and if the world resists this demand we will declare the Versailles Treaty null and void.'"

On the same day Hitler stated:—"The agreement which has to-day laid a burden of three milliards on Germany will in six months not be worth three marks."

The Nationalists are rather milder in their utterances, but they are keeping the way open for an alliance with the National Socialists. As to the Centre, Dr. Brüning, in his election speech at Breslau on Sunday, severely criticised the new Government and spoke with great disappointment of their foreign policy. There is, however, little doubt that the Centre will ultimately support the Lausanne agreement if it is laid before the new Reichstag. That it will not be easy to secure ratification is clear from the simple fact that in all human probability the National Socialists and the Communists together will not be far from having a majority in the new Reichstag. But ratification is no urgent necessity for the time being; it will certainly not become pressing before the beginning of next year, and by then many changes in domestic politics may have occurred.

German trade policy has recently taken further steps in the direction of intensified protectionism. When the tariff was drawn up in 1925, autonomous duties of Rm. 6 per 700 kilos on lard and Rm. 14 per 200 kilos on bacon was introduced. In order to keep a free hand for future increases rates of 14 and 20 marks were specified in the trade treaties. The modified "intermediate duties" have now suddenly been raised by decree, which means a heavy burden on the consumer and a blow to the export industries of several countries. Not only this, but the treaty with Sweden has been denounced. True, the bacon and lard duties were only of secondary consideration, though it is admittedly intended to raise them still higher; the primary consideration was the duty on sawn timber. When Germany wished to raise the duties on round softwood logs in June, it appeared that this was only possible to a very limited extent, because otherwise the German sawmill industry would have been injured by a corresponding increase in the import of sawn timber. In order to avoid this result without forgoing the increase in the duties on rough timber, it is now intended to abolish the restrictions on the duties on sawn logs contained in the Swedish-German trade treaty, and to that end the treaty has been denounced, although Germany's trade balance with Sweden is very favourable. In addition, the potato duties have been raised from Rm. 2 to Rm. 4 per 200 kilos, and the import of early potatoes is limited to 70 per cent. of last year's amount. The Reichslandbund, the largest farmers' organisation, is demanding a tax on margarine, on the ground that it is made principally of foreign raw materials and with the intention of aiming a blow at the most formidable competitor of German butter.

While the reduction in the number of unemployed during the first half of June was only 13,915, against 53,000 last year, it was unusually great in the second half of the month and amounted to 93,000 and 46,000 last year. The total number of unemployed at June 30th was 5,457,000, against 8,958,000 a year ago. The improvement in the second half of June was due to a belated seasonal movement in agriculture and to an improvement in certain sections of the textile industry.

The Stock Exchange and a section of the financial press expect a reduction in discount rate as one of the first consequences of the Lausanne agreement. The Reichsbank law requiring a gold and exchange cover of over 40 per cent. as a condition of the reduction of bank rate below 5 per cent. is part of the Young Plan and therefore cannot be set aside by a German law or by emergency

decree. Not until the Lausanne agreement is ratified will the German legislative recover a free hand. It is, however, believed in influential quarters that Germany could now, after the Lausanne agreement, secure the consent of the presidents of the foreign banks of issue, which is provided for in the Young Plan, for a change in the Reichsbank law. Dr. Luther raised this question at the last meeting of the B.I.S., but it is not yet known with what result. Even if no opposition is forthcoming from abroad, however, it is doubtful whether Germany would do wisely to alter the law and reduce the discount rate at present. In spite of the very strict exchange regulations, the interest rates obtaining in Germany are not wholly without influence on the movements of funds to and from Germany, so that it is possible that the already very scanty gold reserve might be further reduced by a large fall in the discount rate. Also, the demands on the Reichsbank by domestic borrowers are still very great, and constitute another argument against reduction. On June 30, 1932, the Reichsbank had Rm. 3,100 million rediscounted bills, against 2,579 million a year before, in spite of the contraction in economic activity which took place in the meantime. Further, the average yield on most German rentes is still nearly 10 per cent. A further artificial reduction in short-term money rates would make the spread between money market and capital market rates excessive. In spite of these considerations, the Reichsbank brought about a reduction in the private discount rate from 4½ to 4¼ per cent. on July 11th, and the Stock Exchange is counting on an early reduction in discount rate to 4 per cent. Ex-Finance Minister Dietrich, in a recent political speech, even demanded a reduction to 3 per cent.

ITALY.

Growth of Corporate System — Railways and Roads — Gas — SIP.

(FROM OUR CORRESPONDENT.)

TURIN, July 4.

At a Ferrara corporate congress recently a few voices were heard advocating the vesting of all capital ownership in a body on which savers, capitalists, employers, technicians and workers should be represented. These prophets were howled down as Bolsheviks, and the overwhelming majority reiterated a profession of faith in the Labour Charter, which recognises individual initiative under State control. Intervention by the State is increasing daily, and is signalled by a systematic recourse to intermediate agencies between State and individuals. Workmen's insurance against accidents will be administered through a unified body, acting through existing or new organisations or syndicates. A new silk corporation is to be created, according to Signor Bottai. Its character is not very clear; separate syndicates for employers and employees will continue to exist, and the corporation will be a body representative of both, with functions of education and control which are now exercised by Government departments. Syndicates will pay the recently instituted premium of 1 lira per kg. of cocoons produced, a premium which will cost the Treasury some 30 million lire. The crisis is acute in the silk industry, and at the present cocoons price of 4 lire per kg. many spinners dare not buy.

There is some resistance to this gradual dispossession of public departments from their time-honoured functions, especially as frequently there is the risk that the control of expenditure of public money will be weakened by such a procedure. Anxiety is sometimes visible in parliamentary reports about the consequences of the growth of numerous intermediate bodies, such as syndicates, semi-public institutions, joint-stock companies whose sole shareholder is the State, and whose accounts are not subject to the same degree of revision as the usual State accounts. In a recent report (Senate, 1176-A), Senator Mayer said that the probable losses of the Liquidations Institute could be estimated at 5,429 million lire, to be paid by taxpayers before 1940.

The crisis and the competition of motor cars are playing havoc with the revenue of the State railways, and a sum of 200 million lire is to be paid from the Treasury to the railways, in order to balance the 1931-32 accounts. The State railways appear to be active in devising remedies. As motor-car competition extends from short to long distances, drastic reductions for goods are granted, up to 70 per cent. for shorter hauls. To single firms reductions are granted provided that at least 400 tons per semester are loaded. Terminal charges are also being drastically reduced.

Senator Frassati convened on June 30th the shareholders of the Italgas Company, the biggest gas-holding company of Italy, whose lamentable story is already known, to hear the results of this liquidation. The gist of the matter is that 883.2 million lire must be deemed lost in consequence of the speculative adventures of past administrations. After charging 149.2 millions of it to the various reserve funds, the remaining 234 millions loss must be debited to capital, which is thus reduced from 260 to 26 millions (i.e., from 100 to 10 lire per share, a remarkable fall from the 800 lire quotations of halcyon days). The capital will again be increased to 260 millions, by a share issue already guaranteed, to be offered at par to old shareholders. At the meeting of SIP, a big electric and telephone company, it was stated that the company owns plants with a yearly output capacity of 1,850 million kwh. of continuous energy and of 339 million kwh. of seasonal energy. During 1931, the production was limited to 1,245 and 47 million kwh. respectively, with a probable loss of some 100 million lire net revenue. The telephone plants were similarly used up to only 70 per cent. of their capacity, against a normal 90 per cent., thus entailing another loss of 50 million lire net revenue. The broadcasting monopoly, which is also vested in SIP, is as yet far from giving good results; subscribers represent only 0.5 per hundred population, against 2 in Switzerland, 4.50 in Germany, and 6.70 in England. The accounts close with a net profit, but with practically no provision for depreciation, only 8.2 million lire being set aside on a 847 million lire capital and 138 millions reserves, and with heavily overdrawn banking accounts of about 400 million lire. Directors state that a settlement is sought to fund this enormous floating debt, thus paving the way to resume the payment of dividends to shareholders as soon as the worst of the crisis is over.

HOLLAND.

Belgian Treaty — Money — Capital Issues.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, July 5.

THE convention recently initialled between the Netherlands and Belgium at Ouchy, aiming at the gradual and reciprocal reduction of import duties, has been greeted with all-round approval. The operation of the convention, however, seems likely to involve some difficulties. In the Netherlands we have an *ad valorem* tariff, whereas the Belgian duties are specific. In addition, Holland has always striven for the inclusion of general and unconditional most-favoured-nation terms in all negotiations for commercial treaties. If, now, certain privileges are accorded to Belgium with regard to the levying of import duties, other countries with which we have most-favoured-nation treaties can lay claim to the same privileges on the strength of that clause without the slightest reciprocal concession. This, of course, is not the object of the treaty proposed between the Netherlands and Belgium, which is based essentially on the principles of reciprocity. When, therefore, the treaty of Ouchy becomes operative it will be necessary for the Netherlands and Belgium to approach all countries enjoying most-favoured-nation terms with them, and to inquire whether they are prepared to regard the Ouchy convention as an exception to the most-favoured-nation arrangements.

The Amsterdam money and capital market continues to display a remarkable trend. The money market is exceedingly liquid, so that private discount rates range from

$\frac{1}{2}$ to $\frac{3}{4}$ per cent. In view of the Netherlands Bank's official discount rate of $2\frac{1}{4}$ per cent., it appears likely that Dr. Trip, the President, will shortly follow the example set by New York and London, and decide upon a further reduction in Bank rate here, especially as the position of the guilder is exceptionally strong. The circulation of banknotes is now covered by gold to the extent of over 100 per cent.; in addition, private banks in the Netherlands are in possession of large stocks of gold.

The great liquidity of the money market is also expressed in the rates for prolongations. During June prolongation rates averaged 1 per cent., as compared with 1.06 per cent. in June, 1931. For the second quarter of the year the average was 1.02 per cent., as compared with 1.89 per cent. for the corresponding quarter of 1931. Balances with the Netherlands Bank bearing no interest have risen to 247 million guilders. The remarkable thing is that, despite such abundant supplies on the money market, the rates on the capital market still show a rising tendency. The 5 per cent. class has apparently been pretty well abolished for municipal loans; the last flotations at $5\frac{1}{2}$ per cent. were in vain, and the municipality of Groningen is evidently considering the possibility that 6 per cent. will be demanded for a new loan. The fact that the two 1932 State loans were issued at par at 5 per cent. interest has not made it easy for borrowers of smaller standing.

The issues floated during the first half-year on the Amsterdam market, totalling 245 million guilders, are not far behind the total for the corresponding period of 1931, when issues aggregated 264 million guilders. Of this year's figure, however, no less than 200 millions were absorbed by Netherlands State loans. The remaining borrowers accounted for only 45 million guilders, which is less than half of the amount taken in the same period last year. In the course of last month issues to a total of 102 million guilders were offered for subscription, but 100 million guilders of this were for account of the State.

FINLAND.

Short-term Debt — Money — Trade — Unemployment.
(FROM OUR CORRESPONDENT.)

HELSINGFORS, June 30.

THE money market was quiet in May and June, with a slight tendency to become more stringent. This is partly a consequence of customary seasonal fluctuations, but is principally due to the international confidence crisis, for owing to the continued nervousness of the lending countries, Finland has been obliged to reduce her short-term foreign credits at a rapid pace. While these usually grow appreciably during the spring, their amount, calculated at par, has been reduced this year by over 300 million marks. Finland's net short-term foreign indebtedness, which was estimated to amount to 3,100 million marks at the end of 1929, has thus dropped to below 900 millions. At the same time the annuities on the country's foreign bond loans have been paid in the usual way. This reduction in the foreign indebtedness of the country has only been possible thanks to the satisfactory balance of trade, which would have caused a considerable relaxation of the money market under normal conditions.

Deposits of the joint stock banks were reduced in May by 104.1 million marks, in comparison with only 17.8 millions in May, 1931, while credits fell by 110.5 as compared with 10.6 millions in the previous year. At the end of May the total credits of the joint stock banks amounted to 8,463.1 million marks, compared with 9,120.8 millions one year and 9,535.8 millions two years before. In other respects the changes in the balance sheets of the joint stock banks were very slight during May. Their borrowing from the Bank of Finland was practically unchanged at 147.1 million marks in comparison with 492.8 millions at the end of 1931, while their net foreign balances dropped 5.2 million marks to 20.4 millions compared with a net indebtedness of 151.1 millions a year ago. All the private financial institutions lowered their

rates on deposits and credits by $\frac{1}{4}$ per cent. on May 1st and again on July 1st.

The position of the Bank of Finland has changed little. In May the reserve of foreign currency was reduced by 48.1 million marks, and during the first three weeks in June by a further 53.9 millions. On June 22nd, therefore, the reserve of foreign currency, excluding the foreign credit, amounted to 400.5 million marks, as against 554.8 millions at the end of March, before the last decrease started. In spite of this the note reserve has remained more or less unchanged at a little over 600 million marks, compared with only about 300 millions at the end of last year. The ordinary cover for the notes amounted at the end of May to 61.6 per cent. of all liabilities payable on demand.

The brightest point in the economic position of Finland is the continued favourable balance of trade. Imports for the whole period January-May was in volume about 21 per cent. less than last year, while the volume of exports increased about 12 per cent. In May imports were fairly large; their value amounted to 811 million marks, compared with only 223 millions in April, but 329 millions in May, 1931. Exports amounted to 826 million marks, against 291 millions in April and 359 millions in May, 1931. While the surplus of exports for January-May last year was no larger than 27 million marks, the corresponding figure this year was 376 millions.

Unemployment, though greater than it has been in Finland for a long time, is fairly moderate in comparison with the large industrial countries. The number of unemployed reached its highest point during the winter at about 90,000 but has now dropped to about 53,000. It is to be expected, however, that this is chiefly a temporary seasonal improvement and that, with the approach of winter, the number will rise again to its former level, unless general economic conditions take a turn for the better before that. To cope with the unemployment problem next autumn and during 1933 a Government Commission has just worked out a plan for special public works of various kinds to be carried out for account of the Government or with State aid. The cost is estimated at about 500 million marks. This amount is to be covered partly out of the new spirit taxes and partly by means of economies effected in current Government expenditure, but chiefly by means of internal loans.

CANADA.

**Crops — Business — Trade — Ottawa Conference —
The Meeting of Cotton Interests.**
(FROM OUR CORRESPONDENT.)

OTTAWA, June 27.

THE trend of all the crop reports available is that there is a great improvement in conditions as compared with the same date a year ago. Export demand for wheat showed some improvement in the month of June, but prices still remain deplorably low. Moreover, there are rumours abroad at Winnipeg that the Government, though its representative, Mr John MacFarland, who is charged with the disposal of the stocks held by the Wheat Pools, has been supporting the market to a very substantial extent.

There is little change to record in the general business situation. The car-loading figure for the week ending June 18th, at 44,787 cars, shows a gain of 1,051 cars over the figure for the previous week, but is 7,618 cars below the figure for the corresponding week of 1931. Retail trade has been stimulated by the advent of warm weather, but wholesale trade is below the volume of a year ago and merchants are only buying in small lots. There is not available this spring the usual impetus to business from new construction work, owing to the fact that the index for building materials had fallen in May to 79.09, compared with the peak figure of 144.7 in 1920. Building permits in May, issued in sixty-one Canadian cities, had a value of \$5,289,500, as compared with a value of \$12,155,800 in May, 1931. The only factories which are

really busy are the textile mills and the boot and shoe establishments. There has been a slight increase in the production of motor cars, but the furniture and agricultural implement plants are very dull, and the metal trades are short of orders.

In the worst plight of all are the iron and steel plants, and the production of pig iron in Canada during May only amounted to 13,339 tons, as compared with the April total of 16,898 tons; the production of steel ingots and steel castings in May was 29,239 tons, as compared with 36,030 tons in April and 75,235 tons in May, 1931. The Algoma Steel Company, which has its plant at Sault Ste. Marie, and is a subsidiary of the Lake Superior Corporation, has just gone into voluntary liquidation following its default on its first mortgage bonds.

The difficulties of the lumber industry have been increased by the new American duties, which are almost prohibitive in their effects; the markets of the Antipodes and the Orient are not extensive at the present time, and the lumbermen of British Columbia feel that their best hope is in getting a larger share of the British market. A delegation of the British Columbia lumbermen, headed by Dr. Tolmie, the Provincial Premier, has descended upon Ottawa to urge the Bennett Government to insist that the British Government put in force preferences, and embargoes on Russian lumber, which will open the British market for Canadian timber. No daylight is visible for the newsprint industry; the shipments from Canadian mills in May amounted to 172,954 tons, which was 29,326 tons less than the figure for May, 1931.

One of the few bright spots in the Canadian economic situation is the steady increase of the output of gold, and it is now reasonably certain that the total production for the year will have a value in excess of sixty million dollars, as compared with a value of 55½ millions for 1931. The production of the base metals is being held down by low prices and lack of demand.

The foreign trade figures for May were an improvement upon those of April, but were again disappointing, and read as follows, comparative figures for May, 1931, being appended:—

	May, 1931.	May, 1932.
	\$	\$
Imports	73,457,404	44,361,312
Exports (domestic)	59,833,245	40,594,404
Exports (foreign)	1,011,742	807,895
Total	134,302,391	85,763,611

The aggregate decline is about 35 per cent., but as imports have declined by 29 millions as against a shrinkage of 19 millions in exports, the adverse trade balance for the month was reduced to less than three million dollars as compared with an adverse balance of more than twelve millions for May, 1931. Wheat was responsible for nearly half the decrease in export values, but the exports of flour were well maintained; the exports of meat were more than double, and there was a substantial increase in copper exports. Other commodities which showed a decrease were newsprint, lumber and nickel.

Preparations for the Imperial Conference are still going busily ahead at Ottawa, and this week the Cabinet, some of whose members have been on holiday, have practically all reassembled in the capital and will hold daily meetings for the next week to examine the data which have been collected by different committees, and to discuss plans and policies in connection with the Conference. Unfortunately, a preliminary conference at Montreal between the representatives of the British and Canadian cotton industries, which was designed as a sort of curtain-raiser for the main conferences, has had very disappointing results. The Lancashire delegates proposals aimed at an increase of 120 million yards of cotton cloth in their Canadian sales by tariff readjustments, but the Canadians could not contemplate concessions which would have given

War!

(1914—1918)

Pestilence!

(Influenza 1919)

Depression!

(1930—1931)

*All within twenty years.
Could there be a more
gruelling test?*

YET in the midst of such world conditions Policyholders and Beneficiaries received from the Sun Life Assurance Company of Canada, in cash, during these three periods alone:—

over £46,400,000

SINCE FORMATION Policyholders and Beneficiaries have received from the Company over £123,000,000.

The inherent strength and popularity of the Sun Life of Canada is strikingly demonstrated by the fact that in 1931—a year of unprecedented depression—the number of its policyholders increased to over One Million, whose deposits during that year totalled Twenty-Six Million Pounds.

**The total income in 1931 exceeded disbursements by
TWELVE MILLION POUNDS**

No member of the public has ever lost a penny through the failure of a Canadian Life Assurance Company.

In prosperity Life Assurance is valuable; in adversity it is indispensable. Depression or no depression, the future must be protected by the only means which is "depression proof"—adequate Life Assurance.

The Sun Life Assurance Co. of Canada (Incorporated in Canada in 1865 as a Limited Company) offers the finest Life Assurance Service in the World. It also specialises in annuities.

Write for details:

Trafalgar Square, LONDON, S.W.1.

them more than 16 per cent. of this amount, and practically all of this was to be accomplished by diverting business which is now enjoyed by other countries. At the close of the conference each of the parties issued a separate press statement giving its account of the proceedings and explaining its situation. However, Mr J. H. Grey, the head of the Lancashire delegation, supplemented this with a personal statement in which certain observations caused great offence to the Canadians, and as a result the Canadian delegation sent to the press a rejoinder couched in severely critical terms. So the cotton conference has left rather an aroma of discord behind, and it is quite plain that if British cotton goods are to get any worthwhile concessions at the Conference, the Bennett Government will have to make them of its own accord, and in the face of opposition from the manufacturers.

ARGENTINA.

Budget — Loans — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 21.

THE 1932 budget is now practically sanctioned by both Chambers with a total expenditure of something like \$886,000,000 paper, of which some \$300,000,000 corresponds to the service of the public debt, including provision for the additional charge brought about by depreciated exchange. Exact statistics are not at the moment obtainable, and there are still a few points upon which the Senate and the Chamber of Deputies do not see eye to eye. The main body of taxation is, however, fully authorised, including income tax, death duties on an increased scale, the tax on transactions, and the additional import dues as imposed by the Provisional Government.

By dint of hard work and widespread propaganda the Junta responsible for raising the Patriotic Loan has obtained in one form or in another an amount of approximately \$135,000,000 paper; of this sum \$90,000,000 paper appears to have been actually paid up, while the balance will presumably be met in due course by subscribers. It is impossible to write with greater exactitude, as the published statements do not make it very clear how much cash has been received, and allowance has also to be made for the various offers by firms and individuals who are creditors of the State and willing to accept bonds of the new loan in settlement of their accounts. It is announced that very shortly the whole of the first \$100,000,000 paper in bonds of the first series lodged or discounted with the Conversion Office will be withdrawn, and the second series is about to be put out for subscription, though presumably this too will be treated in the same way as the first series and discounted with the Conversion Office. Whether the second \$100,000,000 will be covered by public subscription is hard to say. Possibly the bulk of it can be placed with creditors of the State, but it is more than likely that

institutions known to have important credit balances at their disposal will be directly approached, and that in a manner that will make refusal difficult.

Beyond this second \$100,000,000 there seems little reasonable possibility of local funds being forthcoming. Moreover, there is the grave danger that when bonds of the first and second series are offered for sale in the open market the price registered will be much below the issue price of 90 per cent. Argentina must nevertheless be given credit for a whole-hearted attempt to supply her urgent financial needs from her own resources, and if in the long run the balance of the \$500,000,000 is found by rediscounting the bonds with the Conversion Office it is reasonable to assume that the credit of the nation will be strong enough to stand the strain on the currency without seriously depreciating the purchasing value of the Argentine paper dollar.

Strict control of all foreign remittances, though detrimental in many ways to import trade, is unquestionably helping to build up a favourable balance, notwithstanding the severe handicap caused by the steady fall in value of all Argentina's exportable commodities. For the first five months of 1932 the total in tons exported was 8,171,650, as against 7,254,012 tons for the first five months of 1931, while the value was \$285,101,565 gold, as against \$274,613,031 gold. Prices unfortunately are most depressing. Wheat in Buenos Aires for prompt shipment is to-day \$6.30 paper per 100 kilos, as against \$7.10 at the beginning of the month. Maize at \$4.55 is some 30 cents down, while linseed has for over a month pasts stood at what is considered the bedrock quotation of \$8.70. Meat, wool and hides are also at the lowest quotations known for very many years, and this position naturally reacts upon local financial conditions. Nevertheless, the financial position is not on the whole top-heavy. Producers are making next to no profit, but in the majority of cases they are still able to pay their way if given reasonable financial consideration; and that the local money market is strong enough to be able to do without incurring excessive danger.

Books and Publications.

BOOKS OF THE WEEK.

Labour in America.

MANY books, says Professor Cummins, have been written about various aspects of labour problems in America; but he has set out to view and to analyse the labour problem as a whole. The result is an impressive volume of over 850 pages,* within which is brought together a very large mass of material, old and new. Professor Cummins not only describes the history and working of the American trade union movement, from the "moderate" American Federation of Labour to the revolutionary Industrial Workers of the World and their successors, but also sets out to analyse the attitude of the employers and of the State to trade union organisation and trade union grievances, to discuss the working of "open" and "closed" shops and of schemes of employee representation, and to evaluate the movement as a whole in the light of its relation to the present economic system. His tone and attitude are usually judicial, and, while he is in general sympathetic to trade unionism, he has many hard things to say of its actual operation under American conditions—of trade union "graft," for example, in the building trades of Chicago and New York. But, unlike many American publicists, he rejects entirely the view that there is in reality no need for trade unionism, on the ground that the underlying interests of employers and workers are identical. On the contrary, he affirms with the Socialists that opposition of interests is bound to exist as

long as the present economic system endures, because the dominance of the money motive in industry makes it indispensable for the employer to aim at making labour cheap and plentiful, whereas it is to the interest of the worker to do all he can to make it scarce and dear.

The labour problem, in Professor Cummins's view, exists precisely because of this conflict of interests, and trade union policies are, in his opinion, mainly variants on the attempts to maintain a scarcity of labour. For it is on scarcity that bargaining strength depends. The American trade unions are, however, not numerous enough to have much influence on the general conditions of supply, save to the extent of their political influence on immigration policy. They have been able to affect supply only in the relatively small number of occupations in which they have been strongly organised, and hardly at all outside the highly skilled grades of labour. Though there are a few industrial unions—notably the miners and the brewery workers—inside the American Federation of Labour, that body has, on the whole, set its face against the common organisation of skilled and less skilled workers, and clung to the attempt to preserve its sectional monopolies of labour in the skilled crafts. In doing this, Professor Cummins holds, it has been allowing the stream of economic development to flow round it, and its power to be increasingly undermined. The greatest recent successes in collective bargaining have come to industrial unions, such as the Amalgamated Clothing Workers, which are outside and at variance with the American Federation of Labour.

Recent developments, especially the contraction in the demand for labour owing to mechanisation and the severe

unemployment brought on by the slump, have been driving the trade unions slowly and reluctantly from their "non-partisan" policy of voting for men rather than parties to some more organised political action. But Professor Cummins does not expect this tendency to work swiftly. He points out conclusively the very formidable obstacles which the American constitution and American political practice put in the way of the growth of any effective third party; for the American political system gives a new party little chance of gradually building up its power as a minority group. Third-party votes are usually votes thrown away; and though the Socialists have been able to poll up to a million votes on occasion, this has given them no such say in American policy as a minority party might have in Europe. Nor, in his view, have Socialism and Radicalism in America used aright such opportunities as have come their way. They have been too much under European influence to make a genuine American appeal on a broad enough basis. Professor Cummins's book, taken as a whole, is neither very original nor very constructive. But it brings together usefully a large mass of scattered materials, and his comments are usually sensible, though not inspired.

SHORTER NOTICES.

"Economic Progress and Economic Crises." By Johan Åkerman. Macmillan. 8s. 6d.

Up to a few years ago economists used to write glibly—as some of them still do—about a mysterious phenomenon known as "the trade cycle." This alleged "cycle" was supposed to repeat itself in modern communities over periods of from seven to a dozen years, and much ingenuity was expended upon attempts to find a formula which would explain the varying duration and intensity of the different recorded "cycles." There were a dozen theories of the "trade cycle," and in most of them the chief stress was laid upon some single cause, supposed to be universally at the back of the cyclical movement. There were monetary explanations, psychological explanations, even explanations based on the alleged influence of "sun-spots" on the world's harvests. But nowadays these simple explanations have gone out of fashion, and economists who still cling to the idea of the "trade cycle" in some form usually advance more complicated and less comprehensive theories. Dr. Åkerman belongs to the newer generation. Criticising the methods of all those schools of economists which based their reasoning on an abstract assumption of equilibrium in economic affairs, and setting out to stress above all else the vital importance in them of the element of time, Dr. Åkerman comes to the conclusion that economic life at any moment embodies the current phases of a number of cycles of varying length and character—not peculiar to different industries or groups within the economic system, but all operating in their several ways upon the system as a whole. This conception will be recognised as one that has become fairly popular in America in recent years, and Dr. Åkerman, though a Swede, learnt his economics in the United States. Undeterred by the doubts cast upon the "trade cycle" theory in its older, simpler form, he sets out with a fixed determination to find "cycles" everywhere and in everything; and where the data are admittedly too scanty, or cover too short a period, to afford a satisfactory demonstration, faith is unhesitatingly called upon to fill the gap. In stressing the importance of time-factors in the processes of economic causation—or causal association, as he would prefer to say—Dr. Åkerman supplies a useful corrective of equilibrium theories; but a recognition of the importance of the time-factor in all the various aspects of economic life does not, by itself, form an adequate basis for a belief in any cyclical rhythm in the economic system as a whole; nor does Dr. Åkerman really demonstrate that such a rhythm in fact exists. In particular, his attempts to establish the existence of long "cycles" extending over fifty-year periods, and even of longer cycles still, lasting for centuries, seems to rest on very slender foundations, and to depend far too much on the inconclusive evidence supplied by movements of general prices. By the way, he says many good things, and his book is well worth reading for them. But his method of seeking for general cycles of varying duration in time, in preference to studying the varying causes of fluctuation in different parts of the economic system, leads too readily to facile generalisations with an insufficient basis of clearly established fact. G. D. H. C.

Money Power and Human Life. By Fred Henderson. Allen & Unwin. 6s.

MR. HENDERSON published last year a little book, *The Economic Consequences of Power-Production*, which was among the most penetrating studies of the modern industrial era. He now follows this up with another small volume on the power of finance. The money power is, in Mr. Henderson's view, merely a reflection of the power generated by the private ownership of real things—the means of production—in a form appropriate to the exchange economy of the modern world. He is intent always to get back to the real things and forces which lie behind the monetary expressions characteristic of a price-economy; and his object, in this volume as in his last, is to lay bare the artificial character of the scarcity under which the world is now compelled to exist. Mr. Henderson is not a monetary crank, hoping to cure all our ills by a better management of the monetary machine, but a Socialist who sees in modern finance the latest form assumed by that class-exploitation which Socialists associate with the private ownership of the instruments of production. He is somewhat inclined to be repetitive, and to think that an argument gains force by being restated in different language. But his book is important, and deserves to rank high among modern Socialist critiques of the working of the present economic system.

OTHER BOOKS RECEIVED.

Banking Policy and the Price Level. By Dennis H. Robertson. (London) P. S. King. 103 pp. 5s.

A critical examination of the theory that the trade cycle is due to purely monetary causes.

Are Sanctions Necessary to International Organisation? (New York) Foreign Policy Association, 18 E. 41st Street.

An affirmative answer is given by Mr. Raymond Leslie Buell and Mr. John Dewey answers in the negative.

Annuaire Statistique de la Société des Nations, 1931-32. (London) Allen and Unwin. 342 pp.

The tables, which are given both in English and in French, include statistics of population, employment, production, commerce, transport prices and public finance.

The Measure of Value. By J. Taylor Peddie. (London) P. S. King. 45 pp. 2s. net.

The author sets out to evolve a scheme for a measure of value, maintaining that gold and silver have not in the past functioned as such.

Balance of Payments, 1930. (London) George Allen and Unwin. 183 pp. 6s.

This valuable League publication gives the latest available estimates of the balance of international payments of thirty-two countries.

Keane's Manual of Investment Trusts, 1932. (New York) Keane's Financial Publications, Inc. 1,836 pp. \$25.

A comprehensive record of all the available information of some 592 investment trusts.

Le Banque Nationale Suisse, 1907-1932. Compiled by Hermann Schneebeli (Zurich) Banque Nationale Suisse. 501 pp.

A history of the bank since its establishment a quarter of a century ago.

The Calendar and its Reform. By F. A. Black. (London) Gall and Inglis. 73 pp. 2s. 6d. net.

Contains a history of the evolution of the present Calendar and a scheme for its revision.

A Mathematical Reformation of the General Theory of International Trade. By Theodore Otto Yntema. (London) Cambridge University Press. 113 pp. 12s. 6d. net.

A re-examination by mathematical methods of the conclusions drawn from the classical theory of international trade.

L'Argent-Metal. By Maurice Desonbry. (Paris) Les Presses Universitaires. 281 pp.

An account in French of the recent production, consumption and marketing of silver.

AMERICAN INVESTMENT TRUSTS.

FUTURE American investors may not altogether regret that the investment trust principle in America was required to face a severe market crisis in the first decade of its existence. The British movement in the 'nineties had a similar experience, and learned more of the sound technique of its trade in a decade of adversity than it could have picked up in fifty of humdrum existence. In America the investment trust was "discovered" and taken up, with possibly more zeal than discretion, in the years before the great boom of 1928-29. At a time when immense profits were to be made, by way of investment for speedy capital appreciation, it was inevitable that the cautionary voices of some of the pioneers, who had studied the investment trust movement in Great Britain, should be unheeded—the more so as the Federal authorities, unlike the Inland Revenue of Great Britain, placed profits on sales of securities on a par with investment income by taxing both indiscriminately. It was no less inevitable that some promoting groups should abuse the "blank cheque" facilities which all subscribers to investment trust shares must needs give to the management. Honest but costly mistakes by well-meaning boards were no less unavoidable, for shrewd management houses of the Scottish and English type are not built up in a day or a decade. Finally, when the slump reduced average bond prices by 40 per cent. and equity values by 80 per cent. from their "peak" levels, many American trusts had scarcely begun to build up strong reserves, which alone afford effective defence against adversity.

A year ago, when we reviewed the prospects of leading American investments trusts (see the *Economist*, June 20, 1931), we pointed out that the shares of many companies were already selling below the break-up value of the portfolios, and that the American public had signalled its dissatisfaction with the managements by the avidity with which it had taken up the wares of the "fixed trusts"—whose chief *raison d'être* was the elimination of managerial discretion. It has now been made clear that

the lessons of depression have not been lost on the directors of American trusts. The conclusion reached by a sound critic of American practice, Mr Henry E. Hanson,* is that the adoption of conservative management methods, in keeping with the practice of the British system, was the "outstanding feature" of investment trust operations in 1931. The consensus of expert opinion has now accepted the principle that diversified investment for income, and not speculation for capital profits, is the true investment trust function. A definite beginning has been made with the setting up of reserves against depreciation in portfolio values.

Mr Hanson's survey, which is based on the published figures of a large number of companies, is eloquent of the difficulties under which all American investment trusts, without exception, are labouring. In the first place, investment income has fallen off much more sharply than in Great Britain. The net profits of 78 "general management" trusts in 1931 declined by 25.9 per cent. as compared with 1930. The average return on the whole invested capital of these companies was no more than 2.56 per cent., against 8.06 per cent. in 1930. Capital losses, through security depreciation, very greatly exceeded investment income. In the case of the 78 companies referred to, realised losses on securities were about four times as great as total receipts by way of dividend and interest, and were responsible for the second feature of investment trust practice last year, namely, the reduction of capital resources. The 78 companies reduced their issued capital and surplus from \$814.5 millions to \$722.0 millions, or by 11½ per cent. over the course of the year. Such reductions, heavy as they were, represented only a part of the total decline in asset values, which, for 67 companies, reached a figure of 41 per cent., net assets declining from \$680.5 millions to \$400.0 millions.

The fall in portfolio values of ten large American trusts last year is compared below with that of ten large British trusts of pre-war formation:—

Company.	When Formed.	Balance Sheet Date.	Value of Invested Resources† (Millions).			Net Value All Assets‡ (Millions).			
			End 1930.\$	End 1931.\$	Per cent. Change During Year.	End 1930.\$	End 1931.\$	Per cent. Change During Year.	Per cent. of Invested Resources (1931).

(a) Including subsidiaries. (b) Founded 1854; organised as investment trust, 1929. (c) Deducting reserve fund.

Although British valuations are taken, on the average, at rather later dates than the American, they reveal much less extensive depreciation during the last twelve months. This may be attributed in the main to their much wider "spread." American investment trusts hold a far higher proportion of ordinary shares than the British companies, and a survey made by a well-known American firm showed that although they did a good deal of switching from one issue to another last year, there was an unexpectedly small decrease in their holdings of common shares.

The ratio of investment income was much lower in the case of the American than of the British companies, as the next table shows:—

Company.	Net Investment Income.				Common (or Ord.) Stock.

* Invested resources = Debt Issued, Capital and Surplus (including debentures, mortgages, etc.).
† Dividends payable semi-annually, but amounts vary. Last dividend paid, 55 cents per share.

The American companies, indeed, are now paying the penalty for their original concentration on stocks likely to give high capital profits rather than a stable investment income.

The lesson enforced by the difficulties of recent months has been sharp but salutary. A certain number of American investment trusts will be fortunate if they survive, and the equity stocks of many others may have a scarcely measurable value for years to come. The unfortunate common stockholders, in the meantime, have not the consolation of many ordinary stockholders in British trusts, who, though the capital value of their securities would not be fully covered on a break-up at present prices, can, nevertheless, look forward to receiving respectable annual dividends, unless the depression is unconscionably prolonged. Nevertheless, it may be contended that the best managed American trusts have now made a determined beginning with the task of setting their house in order. They have been compelled to take heavy losses on the liquidation of unsound securities, which, in many cases, should never have been included in their portfolios. The close scrutiny made of their investments, however, will serve them well in the future. Above all, the principle that only investment income should be brought into profit and loss may now be regarded as firmly established in America. Uniformity in this respect is not yet complete, but the New York Stock Exchange has given an invaluable lead by a recent recommendation—which has the dual merit of being unambiguous and coming at a most opportune moment. The recommendation is as follows:—

The Committee favours the elimination from the income account of all profits and losses on security operations and crediting and debiting them, preferably to a properly designated reserve, or else to a special surplus account, which should be a segregated part of earned surplus. Should a reserve be established and a debit balance occur therein, it should be shown as a deduction from earned surplus. This reserve or special account should not be regarded as available for current dividends, and when utilised as

a source of dividend such dividends should carry with them a clear indication of their character.

Even when more normal times have returned, however, American investment trust practice will probably still reveal important divergences from British traditions. Common shares will always represent a larger proportion of the total portfolio, for the reason that the capitalisation of American industry as a whole is much less by way of fixed interest and much more by way of equity stocks than that of British industry. The American investment trust manager has a narrower field, proportionately, from which to choose eligible bonds and preference stocks to give "ballast" to his portfolio, than his Scottish or English colleague. American trusts, again, will doubtless, for many years to come, invest their resources much more in domestic securities than their British counterparts. The investment trust movement in Great Britain was born at a time of active foreign lending, and to-day many companies hold anything from a half to three-quarters, or even more, of their investments outside the United Kingdom. American trust company managements have as yet neither the inclination nor the experience to render such a high degree of concentration on foreign investment either possible or desirable. They have learned in the fires of affliction that "wide spreading" of holdings is indispensable. For the present, however, they will seek to spread their portfolios over many domestic industries and groups rather than over numerous foreign countries.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.
July 19.

Account.
July 21.

MARKETS had a less effervescent appearance and the decreased volume of transactions reflected the slowing up of speculative activity. Profit-taking, particularly among industrials, was persistent in the earlier sessions, but gilt-edged stocks continued to approach a 3½ per cent. yield basis. Second thoughts were less favourable towards the Lausanne "settlement," the prospects of general ratification being considered dubious. The better tone evinced in Anglo-French relations, however, was welcomed as a possible (if negative) step towards the crystallisation of international problems.

Gilt-edged stocks improved steadily throughout the week, the rise being general. Funding were in keen request, while Victory Bonds and the Conversion Loans enjoyed modest gains. War Loan rose ½ on Thursday, on "short-term" buying supposed to emanate from insurance houses not affected by the "ban." India stocks were firm, particularly the long-dated issues, and Colonial stocks were maintained. New South Wales issues were especially favoured. British Columbia scrip advanced to a higher premium, and the Cyprus Loan was strong. Home corporation stocks were firm in sympathy with the Funds.

In the Foreign market, European stocks were still subject to profit-taking, the German, Austrian and Greek loans weakening appreciably. French rentes were firm. Brazilians suffered from scattered sellings owing to the "revolt," but later news suggesting that the outbreak had been localised brought a sharp recovery, San Paulo rising several points. Argentine loans were dull and Chileans featureless. Japanese and Chinese issues had a firm appearance.

Home rail stocks declined steadily following the recent speculative rise, the return to realism being dictated in part by an exceedingly poor batch of "traffics" and in part by the grave tone of Sir H. Walker's circular to members of the Southern Railway staff. Weakness was general throughout the list, affecting senior and junior stocks impartially. Little business was transacted in foreign rails, further falls being recorded among Argentines. Costa Rica jumped exceptionally on further consideration of the dividend.

(Continued from page 129.)

There was no recrudescence of last week's indiscriminate activity among Industrials, markets developing a "patchy" appearance more in accordance with basic conditions. Transatlantic issues were steadier after initial irregularity, but Cables and Wireless fluctuated sharply pending the publication of the report (discussed on page 136). Iron and Steel shares were inclined to dullness, but among Textiles English Sewing Cotton revived following the appearance of an excellent preliminary statement (summarised on page 187). Guinness were heavily sold on the prospect of serious dislocation in Anglo-Irish trade. Imperial Chemical were without support, while Furness Withy, whose accounts are considered on page 136, remained under the influence of a reduced dividend. Among Bank shares, Hongkong and Shanghai responded to the maintenance of the interim dividend, but some irregularity was apparent elsewhere.

Oil shares suffered from an early lack of support. Conflicting news from the Oil Conference at Paris and an increase last week in the U.S. crude oil output were adverse factors. Subsequently, however, Paris entered the market as a buyer, and the leading issues advanced. Rubber shares were less buoyant than of late, and quotations showed signs of shaking down again to "depression" levels. Tea shares relapsed into comparative idleness, though the Indian issues were a little firmer in mid-week.

After a very quiet week, Kaffir shares were again in request from Paris on Thursday, and prices were mostly higher. Previously the feature had been the strong demand for Lake View and Star and Wiluna, while Nundydroog were also active. Tin shares were firm on the rally in the metal, but the weakness of copper had an adverse influence on Tinto and Tharsis. "Johnnies" declined, despite the maintenance of the dividend, but "Chartered" among Rhodesians, were a better market in mid-week.

NEW YORK.

The most serious feature at the beginning of the week was the decline in the volume of business to the lowest proportions for years past. On Monday only 600,000 shares were dealt in. On Tuesday the total was no more than 200,000. Firmer conditions began, however, on Wednesday, when 1,000,000 shares were traded and prices regained the whole of the ground lost in the previous seven days. The chief factors in a technical recovery were psychological, the markets regarding the early adjournment of Congress as increasingly probable, without the passage of the more extreme measures desired by some members. President Hoover's veto on the Garner Relief Bill was widely welcomed. The ultimate agreement between the President and Congress on "relief" measures was marked by the passage of a Bill, on Wednesday, appropriating \$300 millions for loans by the Reconstruction Finance Corporation to States and municipalities for the relief of distress, providing \$322 millions for public works, and enlarging the Corporation's total resources by \$1,500 millions. A clause authorising loans to private individuals was deleted. The bond market again showed strength, but suggestions for a renewal of new issue activity were frowned upon. The strength of commodity prices was also a favourable factor in the latter part of the week. Steel operations last week showed a rise from 12 per cent. to 16 per cent. of capacity. The improvement, however, was attributable to resumption of work after the holiday period rather than to betterment of basic conditions.

PARIS.

A less favourable tone was in evidence at the opening. The Lausanne Agreement failed to bring about the anticipated revival of confidence, and stocks continued to fall in profit-taking, particularly the German issues. Uneasiness was still felt regarding the condition of the domestic finances and the probability of new taxation. A marked recovery, however, followed M. Herriot's pronouncement regarding Anglo-French relations, rentes being a strong feature. Tintos and Royal Dutch, in the speculative sections, had a downward trend. The Bourse was closed on Thursday.

BERLIN.

During most of last month the tendency was weak. Before and during the first part of the Lausanne Conference both the political and the economic outlook was considered unpromising. At the beginning of July the marked rises which German bonds had undergone on foreign markets began at last to be reflected in Berlin. On July 5th and 6th, especially, when there was at last a prospect of agreement in Lausanne, there were substantial rises in quotations. Shares and loans rose about 10 per cent., but even so, they only reached the very low level which had obtained at the end of May. The conclusion of the Lausanne Conference had, surprisingly, no effect on the German stock exchanges. Its unfavourable reception by the political parties, especially the National Socialists, and even by serious newspapers, frightened small and medium capitalists and discouraged them from investing their liquid funds. Bankers and speculators, on the other hand, were rendered uneasy by the fact that the ratification by Germany of the Lausanne agreement seemed by no means assured. Thus for the first few days after the conclusion of the conference the German bourses were weak and the turnover was small. Nevertheless, most prices are higher to-day than a month ago. German loans, which fell considerably in June, have recovered on hopes of a reduction in discount rates and of the inauguration by the Government of a cheap money policy. The 6 per cent. mortgage bonds of the mortgage banks, the most important German fixed interest security, which stood at 76 at the end of May and 62 at the end of June, are now again over 70. The Reichsbahn 7 per cent. preference shares were higher than at the end of May. The section of the German war loan which was not valorised in 1924 has risen from 3 to 5½, as the valorisation law made the payment of interest in these loans conditional upon a "final settlement of the reparations question."

AMSTERDAM.

A sharp reaction occurred on Monday in sympathy with conditions on other bourses. Mixed reports from the oil conference at Paris served to depress Royal Dutch, and prices tended to crumble in all sections. Sugar shares were heavily on offer. Jurgens and Van den Bergh's preference were exceptions to the general decline. German bonds fell sharply, while Unilever, Philips Lamps and Aku came on offer and lost several points each on Wednesday. Rubber shares were dull.

OTHER CENTRES.

The trend of the minor European bourses was mostly downward, and business showed a marked falling off. Inactivity prevailed at Brussels, where prices were adversely affected by the serious strike movement. Frankfurt was again overshadowed by domestic political considerations, but the demand for good fixed-interest stocks continued. Stockholm had a lively appearance in the earlier sessions, but business tailed off, and prices in mid-week were mostly lower.

INVESTMENT NOTES.

Progress of Conversion.—By Wednesday of this week the Bank of England and the Post Office Savings Bank had received applications from over 870,000 holders of War Loan in response to the conversion scheme. Approximately 95 per cent. were in favour of conversion. The amount converted is not stated, but according to General Seeley, who is in charge of the publicity, there is now no chance of failure. Of the larger conversions this week may be mentioned those of the Yorkshire Penny Bank of £6,475,000, the Co-operative Wholesale Society of £2,000,000, and Spillers of £1,900,000. Major Elliot, Financial Secretary to the Treasury, made an important announcement in the House of Commons on Wednesday to the effect that the total amount of War Loan held by all the Government Departments was about £36,500,000. Of this less than £1 million was under the control of the Departments, and had already been converted, while the balance was held by such bodies as the Charity Commissioners, the Public Trustee and the Accountant-General of the Supreme Court acting in a fiduciary character. Before conversions of these holdings could be effected, Major Elliot added, it was necessary to consult the persons or bodies interested. Reports had been current in the City (to which we alluded last week) regarding the amount of the holdings of Government Departments, the popular idea being that the Government controlled about one-third of the loan, directly and indirectly. It is now believed that the holdings of the banks, the insurance companies and other financial institutions of the City, together with those of Government Departments, will together not exceed one-third of the loan, leaving two-thirds in the hands of the British public, at home and overseas, and foreigners. The amount of foreign holdings has been officially given at about £100 millions. On the eve of his departure for the Ottawa Conference Mr Neville Chamberlain stated that he had every confidence that before the end of July the vast majority of holders would have converted (thus securing the £1 bonus). As the option to demand cash extends up to September 30th, it may yet be some time before the Government can announce the complete success of the conversion scheme. It is obvious that the Government must rely on the patriotism of holders and on the boom in long-dated Government stocks to ensure success. The behaviour of the gilt-edged market (described in the next note) has been a trump card for the Government.

Conversion Reactions.—Since the middle of last week the long-dated British Government funds have been a strong and rising market. Already some stocks, such as Local Loans, are yielding under 3½ per cent., and the market is freely speculating upon a rise in assented War Loan before September 30th to over 102 and a lowering of the yield basis on long-dated British Government funds to nearly 3 per cent. by the end of the year. The demand for fixed-interest stocks, outside the Government market, continues. The successful progress of the conversion scheme has created a shortage of supply of such securities. The Chancellor's appeal to borrowers not to make public issues of capital has led virtually to an embargo on the new issue market, and has dried up the supply of new fixed-interest securities of a high-grade investment standing. This shortage is responsible for the not altogether healthy boom in semi-gilt-edged stocks. It is now argued that if British Government funds are to stand on a yield basis of 3½ per cent. or better, Home Corporation stocks and the loans of public authorities such as the Central Electricity Board, Port of London Authority, etc., must stand on a yield basis of 4 per cent., while Dominion Government loans should command a credit basis of 4½ per cent. or better. This revolution in credit-worthiness has no doubt been a godsend to a large number of public borrowers, particularly Australia, which has a heavy New South Wales maturity to meet this year, and to the home railway companies. The progress which has been made so far in the credit advance is shown in the following table:—

	June 30.	Yield.*	July 13.	Yield.*
Conversion 3½%	93½	3 14 10	99	3 10 10
Local loans 3½%	77½	3 17 2	86½	3 9 3
India 3½%	74½	4 14 0	81½	4 6 2
Australia 5% 1945/75	94½	5 6 1	104½	4 15 11
New Zealand 4½% 1945	90	5 0 0	102½	4 7 10
British Columbia 5%	98½	5 1 6	108½	4 12 6
South Shields 4½%	103½	4 7 0	110	4 1 10
Central Electricity Board 5%	106	4 14 4	111	4 10 0
Great Western Railway 4% deb.	88½	4 10 5	98	4 1 6
Buenos Aires Great Southern 4% deb.	57	7 0 4	68	5 17 8

* Without allowing for accrued interest.

It will be deduced from this table that India and New Zealand can now see their way to raising money in London at well under 4½ per cent. and Australia at about 4½ per cent. Perhaps no industry has been more astonished at the credit revolution than the home railways, whose debenture stocks are now reaching a 4 per cent. yield basis. When the embargo on new issues has been lifted, the effect of thus cheapening the cost of borrowing so sharply and over so wide a field of enterprise may have a considerable effect on domestic trade.

Building Society Interest—Drastic Decision.—The boards of management of the Abbey Road, Co-operative, National, and Woolwich Equitable Building Societies announce that interest on new deposit accounts will in future be limited to 3½ per cent. net and free of liability to tax. Individual investors in these societies may not increase their present holdings by more than £250, and, until further notice, these societies will not receive upon new investment accounts sums in excess of £50. These steps are declared to have been taken to prevent societies being made the depository of substantial funds realised from the sale of War Loan. Their significance, if they are prolonged, will be very considerable. Lower interest to investors will, doubtless, check the future flow of new money to the societies, in normal times, less than might be imagined, since the rates obtainable on "competitive" or semi-competitive investments—e.g., gilt-edged securities, and National Savings Certificates in particular—will also be lowered under the new regime. The gap between effective building society rates and interest on deposits in the Post Office and Trustee Savings Banks will, however, be appreciably narrowed if the latter, as is generally expected, is maintained at 2½ per cent. Of more immediate importance, however, is the joint decision of the four largest metropolitan societies stringently to limit the amounts they are willing to receive from investors, new and old. These four societies alone had, at the end of their last financial years, received some £84,529,204, from 396,922 shareholders and 40,389 depositors. Their outstanding advances on mortgage were £81,617,886,

these having increased during the last financial year by £15,608,447. The severity of the present measures of limitation may be inferred from the fact that the largest of the London societies—the Abbey Road, which has consistently governed its policy as regards new investments by reference to contemporary conditions—was lately advertising its readiness to receive any sum on investment from 1s. to £4,975. It may be presumed that the current measure represents, in part, honourable observance of the Chancellor's request that the new capital market be kept clear while War Loan Conversion is proceeding, and that more latitude will be allowed to building society investors after the conclusion of that operation. Such a development would be highly desirable. New "residential" building activity in this country, for good or ill, is now governed so intimately by the dimensions of the financial accommodation forthcoming from the societies that any sudden and prolonged interruption of the stream would be calculated to have a dangerous effect on the volume of building and on property values. The pace of the last few years may have been too hot to last, but a gradual rather than a violent retardation is called for at the present time.

Lausanne and German Bonds.—The Lausanne Settlement has, naturally, had an invigorating effect upon German Government bonds, although prices have reacted from the highest touched. From a level of 68 on June 30th, the 7 per cent. (Dawes) Loan advanced to 89½ before reacting to 85½, and the 5½ Young Loan from 54 to 74 before reacting to 67½. The following table gives the extreme fluctuations over the past year and a half:—

	1931 Prices.		1932 Prices.		Present Price.	Yield Per cent.
	High.	Low.	Low.	High.		
German 7% (Dawes) Loan	106	52	52½	89½	85½	8 3 9
German 5½% (Young) Loan	81½	37½	39½	74	67½	11 3 3*

* Allowing for gold premium, interest being payable in gold pounds.

Whether the market in German Government bonds will enter upon a new phase will probably not be decided until after the German elections on July 31st. Hitherto the market has been primarily one for the speculator. At one time this year it was thought that Germany would be forced to declare a moratorium and that default would occur on both the Young and Dawes Loans. Later a distinction was made in favour of the Dawes Loan because its proceeds had been spent in Germany, whereas two-thirds of the Young Loan had been handed over to the Creditor Powers. That the Hitler Party had looked with disfavour on the Young Loan made it the more speculative, although the German Government had been paying interest thereon in gold pounds, whereas the interest on the Dawes Loan was payable in sterling. The Lausanne Settlement has for the moment left the security of the Young Loan somewhat uncertain. There is no doubt that the 7 per cent. Dawes Loan is the first charge on the German State as it received a first charge by way of collateral security on the gross revenues from the customs and from the taxes on tobacco, beer and sugar and from the net revenues of the spirits monopoly. The 5½ per cent. Young Loan was secured, subject to the Dawes Loan, on the annuities and on the special taxes and revenues assigned to the Dawes Loan and directly on the tax of Rm. 680 millions payable by the German Railways. As the German railways are now freed from this annual tax, the Young Loan presumably ranks as a second charge on the customs and taxes especially allocated to the Dawes Loan. If the German elections result in a Reichstag which will ratify the Lausanne Treaty, a further improvement in German credit may no doubt be expected. Under the Lausanne Pact, £150 millions of German bonds may be issued after three years at a minimum price of 90, carrying interest at 5 per cent. If this issue of bonds is ever to become possible, the 7 per cent. Dawes Loan must be standing at about 125 and the 5½ per cent. at 90 to return the same yield basis of 5.56 per cent.

Bank Interim Dividends.—The maintenance of the interim dividend rates of all the largest banking institutions at the levels established last year was reassuring to the market and to shareholders. In view of the conservative tradition of the British banks, which does not permit the distribution of earnings "up to the hilt," it was argued that the maintenance of interim dividends suggested that the banks had had a rather better half-year than might have been anticipated. The recent payments made by the chief institutions are set out below, together with comparative share prices and current yields:—

Name.	1931.		1932.		Share Price, July 7, 1932.	Price, July 13, 1932.	Present Yield.*
	Interim.	Final.	Interim.	Final.

* Based on dividend for 1931.

Recent months have undoubtedly brought to the banks their own problems and difficulties. The rapid decline in money rates, which kept steadily below Bank rate, has not had a wholly favourable effect on "short" operations, while the universal contraction in industrial and commercial activity meant a curtailed demand for advances at remunerative rates. Gilt-edged securities, on the other hand, have a much higher market value now than six months ago, but it is not the practice of the banks to write up their holdings. In the circumstances, it is not surprising to find that in general the half-yearly statements show a sharp fall in the total of "advances" and a considerable rise in "investments" and cash.

Underground Interim Statements.—The decision of the Underground "group" to reduce interim dividends came as no surprise to the market. Though considerable economies have been effected in the past, it is generally recognised that these have been insufficient to meet the decline of £268,700 in the gross receipts of the Common Fund Companies, which has occurred since the beginning of the year. The payments of the four operating lines of the group—the Metropolitan District, the London Electric, the City and South London and the Central London—are all reduced by 1 per cent. to 1½ per cent. The L.G.O.C. ordinary shares are to receive 2½ per cent., tax free, against 3½ per cent., while the Associated Equipment is able to maintain its payment at 5 per cent., tax free. Underground Electric, which is the holding company, is able to pay the 3 per cent. on its 6 per cent. income debenture stock, and 2 per cent., instead of 3 per cent., on its ordinary stock:—

Company.	Stock or Shares.	Date Payable.	Dividends.

The receipts of the Underground companies have suffered less severely from the slump than those of the main lines, but the shares, where quoted, have registered severe de-

10-15% PER ANNUM with SECURITY!

Look around you. Half your friends are worrying themselves ill over "depressions." A haunting fear of the future is dragging them down into an abyss of despair. In the turmoil of financial fluctuations they are letting their savings slip through their fingers. Why? Because they have missed the straightest road to financial security—a CANADA LIFE GUARANTEED ANNUITY.

Safeguard yourself before your future is threatened. By investing your money with the Canada Life you will secure a guaranteed income of 10-15 per cent. per annum according to your age. And your money will be absolutely safe, for the assets of this British company are over £42,000,000. An Annuity is the ideal scheme for those over middle age. For younger men and women, the Company has other equally sound and attractive investment schemes.

Thousands of people have realised the outstanding advantages of a Canada Life investment. It is safe. It is free from complications. It gives you a larger income from capital. Full details can be had for the asking.

CANADA LIFE
ASSURANCE COMPANY

Incorporated in Canada as a Limited Liability Company.

Established 1847.

J. R. Wandless, F.I.A., Manager, 2 St. James's Square, London, S.W.1

clines. Metropolitan District ordinary stock has fallen from a high level of 77½ in 1931 to 51½, while the £1 ordinary shares of the holding company are only 18s. 6d., against a high point of 24s. 10½d. last year.

Armstrong Whitworth Securities.—In its third year following drastic reorganisation this holding company has suffered another setback. Interest and dividends for the year amounted to £81,090, against £100,730, the difference being due partly to lower interest rates and partly to re-investment in concerns which have not yet reached the dividend-paying stage. Profit totals £67,753, compared with £109,801, while after deduction of directors' fees and debenture and note interest, net earnings stand at £11,477, against £56,959. Provision for trading losses of subsidiaries has absorbed no less than £173,583, so that there is a debit balance of £93,431 to go forward to next year.

	Year to December 31.	1929.	1930.	1931.

* Provision against trading losses of subsidiaries.

† Before deducting £173,582 provision for trading losses of subsidiaries.

The report indicates that during 1931 the demand for steam locomotives and marine engines, which constituted the staple products of the Engineers' company, practically fell away altogether, while no orders for new ships have been received by the Shipbuilders' company since July, 1930, and the shipyards have been idle since April, 1931. Craven Brothers (Manchester) was reconstructed during

this year, and the resulting capital loss is reflected in the balance sheet. The company is now working at full capacity on contracts which should offer favourable results. A new company, Armstrong-Saurer Commercial Vehicles, was formed in 1931 for the manufacture of heavy oil road vehicles. Funds were provided also for the completion of the Diesel Electric Department at Scotswood. The expenditure on these items has resulted in a fall in the cash item from £365,859 to £28,107. The balance sheet position remains liquid, sundry creditors being no more than £244,654, while British and other Government securities alone stand at £554,852 and debtors at £524,494. It is significant that the value of works in progress in the consolidated statement of assets and liabilities is only £290,646, against £556,392 in 1930 and £941,949 in 1929.

Furness Withy.—In a leading article in the *Economist* of July 2, 1932, in which we considered the position of the Furness Withy shipping group in the light of such information as was then available, we suggested that the forthcoming accounts were eagerly awaited for two reasons—first, because they would indicate how far the strongest of the British mercantile marine group had withstood the effects of world depression, and, secondly, because they would throw light on the uses to which the recent issue of 2,000,000 £1 ordinary shares had been put. The accounts have now been made public, but unfortunately withhold almost as much information as they disclose. Profit for the year is given at £388,421, after crediting "transfer from reserves." Last year the profit was £402,690, and it was announced at the annual meeting that £111,000 of the total was drawn from reserves. Pending further information, it is impossible to compare net earnings with those for 1931. After setting aside £150,000 for depreciation and meeting the usual preference dividend, the directors feel justified in recommending an ordinary dividend of 6 per cent., against 7½ per cent. The £2,000,000 of new ordinary capital receives £18,750 by way of interest at 5 per cent., while £25,823 is used towards writing off new issue expenses of £125,823, the balance of £100,000 being transferred from share premium account:—

† After crediting transfer of £111,000 from tax reserves.
‡ Unascertainable, pending further information regarding transfer from reserves.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

The balance sheet indicates that the greater part of the new capital has gone to the company's subsidiaries. Amounts due from subsidiaries have risen from £70,833 to £255,718, and amounts due to subsidiaries have declined from £887,568 to £911,877. General creditors have fallen from £2,400,868 to £2,192,406. Shipping property has risen from £1,297,347 to £2,430,822. The company's financial position continues to be very strong. General investments, including British Government securities, total £2,523,996, though the value of the latter is not separately stated. Possibly the meeting will disclose much which might well have been included with the accounts. The £1 ordinary shares are at present quoted at 17s. 6d. to yield about 47 per cent., allowing for the final dividend of 2½ per cent.

Cables and Wireless Results.—Following the unexpected announcement by the directors of the Cables and Wireless Company that the full results for the year 1931 would permit of a distribution of 2½ per cent., less tax, on the preference capital, the annual report of the parent company, together with that of its operating subsidiary—Imperial and International Communications, Ltd.—are of special interest. The latter showed only a 0.4 per cent. reduction in message receipts, a 16.6 per cent. reduction in total income, a 7.7 per cent. reduction in working expenses, and a 63 per cent. reduction in net income, which is equivalent to a return of only 0.4 per cent. on the ordinary capital of £30 millions. A dividend of 5s. per cent. is paid, absorbing £70,000, and £45,000 is written off part of the cost of the Indo-European Telegraph Company shares, leaving £20,665 to be carried forward, as against £20,131.

† Includes £45,000 written off Indo-European Telegraph shares.

Cables and Wireless has had to meet a drop of 48.3 per cent. in dividends received from the cable and Marconi companies (including a drop of 81.6 per cent. in the dividend of the Marconi Company). Administrative and general expenses and taxes were only 16.8 per cent. less, leaving net income no less than 50.8 per cent. down at £642,083, which is equivalent to only 2.74 per cent. on the preference capital, to cover dividends of 2.75 per cent. The carry-forward is £2,200 lower at £64,689.

CABLES AND WIRELESS.

‡ Less £15,108 written off formation expenses.

The balance sheet shows the shareholdings in subsidiary companies at cost, viz., £52,728,471. It is more evident than ever before that a reconstruction of the capital is urgently required. Since the dividend announcement the 5½ per cent. preference stock has risen to 67½.

English Sewing Cotton.—The preliminary profit figures of this £3,000,000 Northern textile manufacturing company show that net earnings for the financial year to March 31 last increased from £221,522 to £249,663, a result which in the circumstances must be considered highly satisfactory. After payment of the usual preference dividend, the directors have decided to repeat last year's ordinary distribution of 10 per cent., although the amount is not quite earned:—

Year to March 31.	1930.	1931.	1932.
Profit	435,405	311,312	£

Carried forward	109,908	81,430	81,093

§ Not available.

The decision is less surprising when considered in the light of the company's last published balance sheet. Reserve funds aggregated no less than £1,150,000, of which £400,000 was earmarked for "equalisation of dividends," while to set against a "creditors" item of £509,345 there was £1,146,495 of gilt-edged securities and £764,430 of "debtors." In the circumstances shareholders will probably pardon the decision not to aim at a further conservation of resources. The £1 ordinary shares are quoted at 80s. to yield 48 19s. 8d. per cent., allowing for the final dividend of 7½ per cent.

Associated Newspapers' Position.—The speech of the Hon. Esmond C. Harmsworth, at last Tuesday's annual meeting, was not particularly informative as regards the financial position of Associated Newspapers, whose profit, as we pointed out last week, declined in the year ended March 31st last from £1,067,917 to £710,645. On the whole, however, Mr Harmsworth's speech was reassuring. Shareholders are accustomed to hearing a panegyric on the holders of the company's newspapers in the realm of dominance of the company's newspapers in the realm of circulation and advertising. It is clear, however, that in both these respects the company, broadly, is retaining its relative position. In view of the severity of economic depression, a drop of only about 10 per cent. in advertising space, coupled with the maintenance of the number of individual advertisers, must be accounted an encouraging result. As regards prospects for the immediate future, however, Mr Harmsworth had nothing to offer shareholders beyond the vaguest generalities. Notice has been given to redeem the whole of the outstanding first debenture stock of the Anglo-Newfoundland Development Company. The provincial evening papers controlled by Northcliffe Newspapers have increased their advertising revenue, but there appears, to judge by Mr Harmsworth's carefully guarded pronouncement, to be small prospect of an early augmentation of earning-power sufficient to put this somewhat costly venture soundly on its feet.

Anglo-Dutch Plantations.—The unsatisfactory level of plantation commodity prices has again gravely affected the earnings of this £2,850,000 holding company. Instead of receiving £102,708, the 1930 figure, from its operating company, it has had to provide £77,877 to provide for the subsidiary's loss. After meeting the usual charges, there remains a net loss of £142,779, compared with a net profit last year of £28,948. For the second year in succession the share capital receives no payment. The sum of £100,000 is taken from reserve account, leaving the carry-forward at £131,251, compared with £174,030 brought in:—

	1929.	1930.	1931.

The local accounts have been charged with £29,019 to meet losses resulting from the fall in the value of sterling, while £201,059 was absorbed by depreciations on the usual basis. Excellent crops were obtained in 1931. The rubber plantations yielded 15,893,600 lbs., against 13,211,630 lbs., but whereas the cost price fell from 5½d. per lb. to 3.44d. per lb., the selling price declined from 5½d. per lb. to 2.70d. The tea crop was 15,519,263 lbs., against 12,902,277 lbs., the cost price falling from 8.60d. to 6.09d., and the selling price from 11.83d. to 8.56d. Half of the tea production was, however, sold forward under contract at 1s. 1½d. per lb. London. The company still possesses fair reserves, and its balance sheet is liquid. The £1 ordinary shares are quoted at 7s., against a high level for the current year of 18s. 6d. and for 1931 of 19s. 1½d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of New Zealand, W. T. Henley's Telegraph Works, Associated Newspapers, Union Cold Storage, Estates Control, Anglo-Dutch Plantations of Java, and International Tea Company's Stores. At the annual meeting of the Union Cold Storage, Mr Roger Sing spoke at length on the subject of the forthcoming Ottawa Conference, and adduced figures demonstrating the unreciprocal nature of our Imperial trade. He emphasised the view that the very life of Britain depended upon the development and extension of her trade, not only with the nineteen million white people of the Dominions but with the four hundred million white people in the rest of the world. Presiding at the annual meeting of W. T. Henley's Telegraph Works, Mr Arthur Salmon said that the Judge lead press, which they had designed at their works, had been very well received abroad, a leading maker of lead presses in America having taken a licence from them for the manufacture and sale of the press in the U.S.A. and Canada. The annual meeting of Associated Newspapers is dealt with on this page.

force of undiminished strength. This evidence has been provided by advertisers themselves in perhaps the most remarkable series of congratulatory letters of this nature ever received by any newspaper, which we have recently published.

"THE EVENING NEWS."

The Evening News maintains its leadership in evening journalism to the same unprecedented degree. No competitive evening newspaper has a net sale within 200,000 copies a day of that of *The Evening News*. I would point out, too, that *The Evening News* enjoys the confident support of leading advertisers in similar ratio. Last year the excess of trade advertising carried by *The Evening News* over and above its nearest rival amounted to 68,389 single column inches.

This ascendancy, maintained week after week, year after year, is most marked in the instances of national advertising and the announcements of the big retail stores. Figures show that *The Evening News* carries more than double the amount of store advertising than that which appears in any other competitive evening newspaper. This is exceptionally significant, as the results of such advertising, being carefully keyed, show at a glance the relative merits of media used.

Another feature is the larger proportion of displayed advertising allocated to *The Evening News* by the leading motor-car manufacturers, which reveals a wider appreciation of the unique pulling power of *The Evening News* in the better-class homes of London and the Home Counties, the area least affected by the trade depression.

THE "SUNDAY DISPATCH."

The position of the *Sunday Dispatch* is no less satisfactory. In spite of intense competition in this field of journalism, it is quite evident that its sale is consolidated in a million of the best type of middle-class homes. Advertisers continue to report most excellent results from the *Sunday Dispatch*.

Some indication of the increasing confidence of advertisers in the pulling power of the paper is provided by the record 28-page issue published the other week. In this issue we carried more advertising revenue than in any other single issue of the *Sunday Dispatch* over its 131 years of publication.

The *Over-Seas Daily Mail*, with its world-wide readership among Britain's abroad, becomes of increasing importance as a powerful organ of British trade. Regularly, the *Over-Seas Daily Mail* carries more than double the amount of advertising carried by any other newspaper produced in this country for similar circulation.

NEWSPAPERS' UNASSAILABLE POSITION.

To generalise once more, it can be said with the firmest assurance that the position of your publications in the advertising world is unique in this country to-day. They stand in an unassailable position in the confidence of the business world as well as the public, which can only mean that the gradual turn of the tide of trade must react, first of all, upon the advertisement revenue of Associated Newspapers, Limited.

There are signs of movement in this direction, but for the moment it must be admitted that they are not as appreciable as one might hope and work for. However, with the full benefit of the new tariff policy and with eyes turned towards Ottawa, the time for a general revival of British industry is not, we must hope, far distant.

THE FUTURE.

You will, no doubt, expect a few words from me as to the future. The full force of the economies which have already been effected will be mainly felt in the new financial year. The new spirit of hope and optimism which has been engendered by the success of the Lausanne Conference, the magnificent spirit of co-operation of the people in the biggest Conversion Loan ever effected encourage us in the belief that the foundations are being laid for the big trade revival which is, unfortunately, so long overdue.

In any case, so far as this company is concerned, the strong liquid resources reflected in the balance sheet place this company in a very sound position and enable us to meet any competition and to take full advantage of any favourable developments whenever they may occur. In view of these hopeful signs, I look forward to the coming year with confidence.

STAFF.

You would not like me to close without a word of thanks to the members of our staff for their loyal and hearty co-operation during the past year.

The Chairman having replied to questions, the resolution for the adoption of the report and accounts was put to the meeting and carried unanimously.

The retiring directors were re-elected, and the auditors (Messrs. Lever, Honeyman and Company) having been reappointed, the proceedings then terminated.

NATIONAL BANK OF NEW ZEALAND, LIMITED.

SIR AUSTIN HARRIS REVIEWS A DIFFICULT YEAR.

The sixtieth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 12th instant, at 17, Moor-gate, London, Sir Austin E. Harris, K.B.E. (chairman of the company), presiding.

The Chairman, after expressing regret at the death of the late chairman, the Hon. William Pember Reeves, said that the year under review had been one of unrelieved depression and great difficulty. The depression had been world-wide and its full force had been felt by those countries depending principally for their welfare on primary production. Commodity prices had continued on the down-grade, without any definite signs of improvement and neither the abandonment by Great Britain of the gold standard nor the adjustment of Colonial exchanges had, as yet, produced any alleviation in that respect, which, from all their preconceived ideas, must have been expected to show itself.

It was the low level of prices of commodities which was perhaps the chief of the many troubles affecting the world, and was certainly the principal trouble affecting the welfare of New Zealand. It was to be hoped that some alleviation might emerge from the proceedings of the World Economic Congress, which was to be set up in the autumn. Economic laws of supply and demand would doubtless in time work their own cure, but they had been tampered with by so many extraneous devices of man that it would not seem impossible to expedite recovery by rectifying mistakes which had been made.

He had no hesitation in saying that a great step forward towards the restoration of confidence had been achieved by the successful conclusion of the Lausanne Conference. The ground had been cleared for the examination of further problems of currency, exchange and tariffs, which were blocking the road to stabilisation and renewed prosperity.

Those questions would be among the principal subjects to be explored and examined at Ottawa. The expressed confidence of our statesmen, apart from the urgency of discovering some remedy for our present ills—if possible, within the Empire itself—inspired the hope that that Conference, fraught with mighty possibilities, might lay the foundation of a great new Imperial trade brotherhood which might in time render Great Britain less dependent for her welfare on the rest of the world and less vulnerable to attack by tariffs or dumping.

NEW ZEALAND'S TRADE AND FINANCES.

The staple products of New Zealand—dairy produce, meat, and wool—had shown a progressive fall in values for the last four years. The dairying industry was the mainstay of the Dominion, and it was satisfactory to observe that production had been more than maintained in spite of the fall in prices. Great Britain was New Zealand's principal customer, and the figures of the Dominion's trade with this country and the rest of the world over the last five years indicated that the economic existence of New Zealand depended on her trade with Great Britain, and that the balance of trade which she carried on with foreign countries and other Dominions was unfavourable.

Summing up the financial position of the Dominion, he said that, at the beginning of May, the Government, by the firm decision to maintain the credit of the Dominion, had been able to borrow five millions of money in London. They had also realised £2,000,000 of revenue securities, and those two operations had correspondingly reduced the demand on the New Zealand banks to provide the Government with London money.

The Government had recently announced that, their requirements having been found in London up to March 31, 1933, and with an estimated trade balance of £12,000,000, there was no financial reason for retaining the licensing regulations, and there seemed to be less reason than ever for raising the exchange, especially as provision was assured for payment of the present level of imports. The banks had been accused in some quarters of exploiting the public or the Government for their own ends, but in the long run and in times of financial stress it was on the strength and guidance of those institutions that the country must rely. He could not too strongly emphasise that the banks were only concerned with the financial stability and trading affairs of the Dominion. Political pressure in any direction was outside their province, and they could do not more than give the Government their considered opinion and advice from time to time as to ways and means of finance.

The balance sheet represented a strong and liquid position. The ratio of liquid assets to demand liabilities was 31s. 2d. in the £, or, including fixed deposits, 11s. in the £, or 55 per cent. The gross profit of £600,300 showed a decrease of 7.1 per cent., and the net profits, at £30,500, a decrease of 14.4 per cent. The board had not felt justified in recommending a higher dividend than that proposed, and he felt sure that, in the circumstances, the proprietors would not look upon the return of 7 per cent., free of tax, as being other than satisfactory.

The report and accounts were unanimously adopted.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED.

MR ARTHUR E. SALMON ON THE POSITION AND PROSPECTS.

The fifty-third ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 8th instant, at the Abercorn Rooms, Great Eastern Hotel, London, Mr Arthur Edward Salmon (chairman) presiding.

Mr A. H. M. Jacob (the secretary) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, after paying a tribute to Sir George Sutton, who has retired from the chairmanship of the company, said:—The net profit is £260,283, which is £16,000 less than in the previous year. Considering the difficult conditions through which we have been passing, the directors consider that this result is satisfactory. There has been a reduction in the turnover of the business. There has consequently been a proportionate reduction in the profit made, but this has to some extent been compensated in the profit made, but this has to some extent been compensated by a dividend having been paid by the tyre company, and by the profit that has been made on investments being somewhat greater than was the case in the previous year. Trading conditions during the year have been very difficult. In common with all others engaged in the electric cable trade, there has been a reduction in turnover, but we have obtained a good share of the business that has been offering. The reduction in our turnover is partly due to a fall in the prices of commodities used in the company's manufacture, and partly to the quantity of work. The reduction in our overseas business has been much greater in proportion than in our home business. Owing to the restrictions in exchange and other adverse conditions, it has been very difficult to transact business abroad, but we have kept the flag flying, and we are quite ready to undertake any business abroad which our overseas branches may be able to secure. So far as our home trade is concerned, there has been a falling off in our general business, but we have received a larger number of orders than in the previous year, which indicates that we are not losing our customers, but that they placed orders for lower amounts; there has consequently been no saving in the staff work involved.

In addressing you at the last annual meeting the chairman referred to the Judge lead press, which was designed at our works, and to which we attach great value. We have received sundry inquiries for the press, both at home and abroad, and orders are beginning to be placed. The largest cable manufacturer in America sent a representative to our works to examine the press, and the result is that they have ordered a press for use in their own factory. Further, a leading maker of lead presses in America has taken a licence from us for the manufacture and sale of the press in the United States and Canada. The chairman informed you at the last meeting that the great firm of Krupp's also hold a licence for the manufacture and sale of the press.

As to the future prospects of the business, this is always a difficult matter to deal with, and with the conditions now prevailing it is more difficult than ever. Taking the long view I am optimistic, for I believe that with the progress which is being made in the use of electricity, there will be a large and increasing demand for the company's products, but so far as the immediate future is concerned it would be unsafe to prophesy. We have brought into the present financial year a substantial amount of business, although not so large an amount as was brought into the previous year. Next, the orders we have received up to date are equal in value to those received last year—I might say or slightly more—which is encouraging. So far as the overhead expenses are concerned, considerable economies have been made, but care has been exercised to ensure that such economies are consistent with the efficient carrying on of the business. We have an excellent sales organisation, and you may rest assured we shall secure a fair share of any business that is offering. On the other hand, the fall in the value of money may have some adverse effect upon the income from our investments. Taking all these circumstances into consideration, I have no hesitation in saying we can face the future with full confidence. The company is in a very strong financial position. Every item of its assets is taken at its lowest value, and, furthermore, there is a large amount of undistributed profit available, the carry-forward amounting to £557,000.

The resolution was unanimously adopted. Mr H. B. Shersby, in moving a cordial vote of thanks to the directors and the staff, congratulated Mr Salmon on his appointment to the chair, expressing the hope that he would for a long time occupy that important position.

Mr J. Lamont seconded the resolution, which was carried with acclamation, and the Chairman having briefly responded, the proceedings terminated.

ESTATES CONTROL, LIMITED.

LORD LUKE ON TRADE RECIPROCITY.

The twenty-eighth annual general meeting of Estates Control, Ltd., was held, on the 12th instant, at the company's offices, 152-166 Old Street, London.

Lord Luke, the chairman of the company, who presided and moved the adoption of the report and accounts, said:—The accounts are very similar to those of the previous year, the only really important change being that "Investments at cost and stock of raw material," which stood at £805,509 in March, 1931, are now represented by the following items:— "Investments at cost (being estate cattle and associated companies) £501,970, and "Sundry investments at cost and stock of raw material" £287,757. These two items taken together show a reduction of £15,782. The cash at bank, at £14,291, shows an increase of £2,801. The trading profits, at £24,476, are practically the same as in the previous year, but the "Dividends, interest rent, etc.," at £28,695, is £786 up.

CANADA AND ARGENTINA.

Estates Control has interests in Australia, Canada and the Argentine, and knowing something of the products of those countries it rather surprises me to find that there is such a general assumption that the Argentine is the great competitor of all the Dominions. It is a misconception, and, in the case of Canada, there is little similarity in the products exported.

Canada is an importer of maize and linseed. Argentina is the largest exporter of those products.

As regards any competition between Canada and the Argentine in exports to England, the only competitive article I can think of is wheat, and Canada exports a hard type of wheat, while the Argentine wheat is of a softer type, and is not in direct competition.

I have spent a fifth of my life in those two countries, and know something of their conditions and possibilities as regards products, and I feel that they are complementary to one another, and if there was an earnest to find further means of trade, new possibilities could be discovered.

While in Buenos Aires I pointed out that it would be helpful if reciprocal trade took place between the Argentine and Canada. Already Argentina takes about half its newsprint from Canada, and she is also taking a good deal of Canadian harvesting machinery.

Canada being north of the Equator and Argentina south, they have their summers at opposite times. I should not be surprised some day to find Canada importing Argentine chilled beef at the time of the year when it least suits her farmers to send their own cattle into the market. To-day Argentine Estates of Boyril ships Canada wholesome ready cooked corned beef.

OTTAWA POSSIBILITIES.

When leaving Buenos Aires I suggested to the journalists who interviewed me that Argentina should be thinking out what she could import from England, so that she could at the earliest possible date after Ottawa enter into negotiations for trade reciprocity. As regards reciprocity in another direction, I mentioned that delay was unnecessary, owing to the fact that our purchases of Argentine products were usually partially balanced by the dividends and interest received on our investments from over there, and by facilitating and assisting every British company working in the Argentine they would go some way towards equalising the trade balance.

The exchange provided by our chilled beef purchases should be available per contra to adjust the requirements for remittances to this country, and I was able to say this without any feeling that I was pleading my personal case because my companies' remittances on the whole are towards the Argentine. I mention chilled beef because whatever other Argentine product, be it mutton or frozen beef, exported to England may be curtailed, I do not anticipate much further reduction in chilled beef.

Chilled beef is a type of baby beef that it has taken forty years of pedigree stock farming to produce. This type of steer matures on alfalfa—that is, lucerne—in under two years, and the type could only be duplicated with similar soil and climate after many years of importing British pedigree stock, and to get numbers of the new type would mean many generations of three years each.

Each year our dividend causes a certain amount of comment. I would just say, in the first place, that it is paid on 102,500 ordinary shares of 4s. each, and therefore only requires £18,450 to pay 90 per cent. If you glance at the balance sheet you will see that we have put aside out of profits during the last 28 years over £350,000, part in reserve and part in carry-forward, and having thus increased our capital, we have this extra sum to trade with and earn additional profits.

The report and accounts were unanimously adopted.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

ANOTHER RECORD YEAR.

The annual general meeting of the International Tea Company's Stores, Limited, was held, on the 12th instant, at Winchester House, London.

Mr Guy Collier (the chairman) presided, and in moving the adoption of the report, said that it was with great pride that he was able to announce another record year, the trading profit for this year being £885,088, which was £64,925 more than that earned last year. It was proposed to pay a final dividend of 18 per cent., making 30 per cent. for the year, to place £60,000 to income tax reserve, and to carry forward £134,547 to the next account. They had placed to general reserve account £100,000, and £100,000 to a reserve for equalisation of dividends.

Their extraordinarily good profits had been brought about by an enormous expansion of trade—by that and by that alone.

In spite of the lower spending power of the people, in spite of the competition which grew keener and keener each day, the weekly returns from their individual shops kept wonderfully steady, and even showed an increase in money turnover against previous years. When they considered the drop in food values this was little short of marvellous. It showed they had a solid following throughout the country, and that the International were becoming "The Fashion"—were becoming, in fact, the leading family stores in scores and scores of towns throughout the country.

The directors recommended that the sum of £124,943, being part of the reserve account, be capitalised, and distributed by way of bonus, in the form of ordinary shares of 5s. each, fully paid, to the ordinary shareholders, in the proportion of one new ordinary share for every ten ordinary shares held on June 27, 1932. He did not propose to speak on this question of policy very fully, but he would just caution shareholders not to expect this bonus distribution as an annual affair. They must, on this occasion, be guided entirely by results achieved and the prospects for the future.

Mr Colin Cooper (vice-chairman) in seconding the motion, said that their factory at Southall had now been improved and enlarged, and was now one of the finest, if not the finest, composite food factories in the world. Since the end of the financial year it had broken all records, the output in certain departments having been more than double that of last year.

The report was unanimously adopted and the bonus recommendation agreed to.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED.

FURTHER REDUCTIONS IN COSTS.

The twenty-second ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 14th instant, at Southern House, London.

Col. Sir Robert Williams, Bart. (the chairman), said that the available funds of the company were liquid and amounted to over £300,000. The local Java accounts, after providing £201,059 at par for the various depreciation reserves, showed a loss of £88,271. This loss, after the various items of London expenditure and debenture interest had been added, was increased to £142,779.

In 1931 they had 25,659 acres of tea in bearing and the crop amounted to 15,071,551 lbs. Notwithstanding the rigid economy which had had to be practised over the whole of the company's operations, both as regarded equipment and the condition of the gardens, their tea estates had never been in better fettle. The f.o.b. cost price in 1930 was 8.60d. Last year this was reduced to just over 6d., whilst the cash cost—excluding depreciations—was only a little over 5½d. Thanks to their forward contract the selling price, though comparing unfavourably with that of the last few years, could not, in view of the generally poor market, be considered an unsatisfactory one. At 8.56d. per lb. f.o.b. the result showed a net profit, after all deductions including depreciations, of 2½d. per lb.

With regard to the prospects for the coming year, their estimated crop was 16,500,000 lbs. As up to the end of June the crop had already amounted to 8,793,790 lbs., given normal weather the estimate should be about secured. Again this year they had the benefit of the contract under which one-half of their output had been sold at 1s. 1½d. per lb. London. The price on the market for the free portion of their teas was unfortunately likely to be a very low one.

The company's rubber area was now 32,248 acres, of which 28,307 acres were in production. The output for the year amounted to 15,893,600 lbs., or the equivalent of 582 lbs. per acre. The production cost was 3.44d. f.o.b. at par of exchange, a reduction of 2d. per lb. compared with the cost price of 1930. Of this, 3.44d., nearly seven-eighths of a penny, was accounted for by depreciation reserves, so that, notwithstanding the very low net selling price of 2.70d. per lb., the year showed a small cash profit.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the nine days ended July 9, 1932, amounted to £20,810,000 against ordinary expenditure of £22,406,000. After allocating £517,100 to Sinking Fund and having allowed for an increase of Exchequer Balances of £176,626 the operations for the week, as shown below, increased the National Debt by £2,290,000 to £7,667,993,000:—

(000's omitted.)

Treasury Bills	30,847	Bank of England Advances	19,500
By 1% Treasury Bonds	13,200	Public Department Advances	20,500
Repayments under Land Settlement Act	7	National Savings Certificates	350
		Road Fund	299
		Issues under Irish Land Act	1,115
	44,054		41,764

A complete analysis of the National Debt at June 30, 1932, was printed in the *Economist* of July 2, 1932.

SIDNEY TURNER,
Accountant-General.

BULLION.

The following statistics of imports and exports of gold for week ended July 14, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
Germany 400	Germany 7,560
Netherlands 76,074	Netherlands 416,947
France 29,244	Belgium 16,000
Egypt 80,465	France 892,300
India 16,197	Switzerland 2,000
British West Africa 51,487	Czechoslovakia 6,850
British South Africa 1,207,510	Other Countries 950
Kanva 16,788	
British India 764,529	
Straits Settlements and Dependencies 388,499	
Other countries 2,421	
Total declared value of imports 2,633,614	Total declared value of exports 1,342,609

GOLD MOVEMENTS.

The arrivals and withdrawals of gold, as announced by the Bank of England, have been as follows:—

1932.	ARRIVALS.	1932.	WITHDRAWALS.
July 8	Bars bought 1,599	July 8	NI
9	NI	9	NI
11	NI	11	NI
12	Bars bought 249,811	12	NI
13	NI	13	NI
14	NI	14	NI
Total	251,410	Total	NI

Net arrivals, July 8, 1932, to July 14, 1932, inclusive, £251,410.

Messrs. Samuel Montagu and Company write on July 13, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £136,144,152 on the 6th instant, as compared with £136,142,754 on the previous Wednesday. Offerings of gold in the open market have been mostly secured for the Continent, but of the £325,000 available yesterday the main proportion was taken by an undisclosed buyer. Yesterday, also, the Bank of England announced the purchase of £249,811 in bar gold.

Average	115s. 7.7d.	14s. 8.3d.

SILVER.

The market has shown a firmer tendency during the past week, and prices advanced steadily until the 11th instant, when 17½d. and 17½d. were reached for cash and two months' delivery, respectively. The Indian Basars were the principal source of support, but a contributory factor to the rise in prices was hesitation on the part of sellers. At the higher level, however, China was inclined to sell, besides which speculators seemed disposed to take profits; prices eased in consequence, but the undertone remains steady, although it is possible there might be further slight reaction. The Continent has sold moderately, but American reaction have not been active. The imminence of the Ottawa Conference, and the hope in some quarters that proposals made there might have a beneficial effect on silver, possibly influenced in part the bullish feeling apparent during most of the week.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 4th instant to mid-day on the 11th instant:—

IMPORTS.	£	EXPORTS.	£
British India	24,545	Hongkong	15,236
Germany	16,656	France	2,185
Soviet Union (Russia)	14,855	Australia	1,500
Japan	6,301	Other countries	2,605
British South Africa	2,774		
Other countries	5,945		
	71,076		21,526

Quotations during the week:—

REPORTS AND NOTICES

The directors of the Royal Insurance Company and the Liverpool and London and Globe Insurance Company announce with regret that Mr Walter Carter, after forty-one years' service, retired on May 31st from the position of London manager of the two companies, and they desire to place on record their appreciation of the valuable work he has done on behalf of the companies during this long period. To succeed Mr Carter the directors have appointed Mr F. R. Bellamy, hitherto assistant secretary of the Royal in London. Mr A. E. Marsden, assistant London manager of the Liverpool and London and Globe, has been appointed deputy of the Liverpool and London and Globe, and Mr F. J. Cheminais and London manager of both companies, and Mr C. F. Trustam, assistant secretary of the companies, together with Mr T. G. Brown, hitherto agency manager of the Liverpool and London and Globe.

BANKS.

GUARANTY TRUST COMPANY OF NEW YORK.—Deposits on June 30, 1932, including outstanding cheques, amounted to \$928,343,300, which figure compares with total deposits of \$892,931,647 at the time of the last published statement of March 28, 1932. The company's capital account totals \$270,495,732, comprising capital \$90,000,000, surplus funds \$170,000,000, and undivided profits \$10,495,732. The last figure shows a decrease of \$14,487,651 from the last published statement of March, in accordance with the announcement of the board of directors on June 1st that a sum had been appropriated from undivided profits to strengthen the reserves of the company for possible doubtful items. The company's total resources are \$1,240,705,948. Its assets on hand, in Federal Reserve Bank and due from banks and bankers and its United States Government obligations total \$537,258,847, as compared with \$457,505,782 on March 28, 1932.

THE NATIONAL CITY BANK OF NEW YORK.—The condensed statement of condition of The National City Bank of New York, dated June 30, 1932, including domestic and foreign offices, shows total assets amounting to \$1,567,673,668-38, comprising cash in vault and in Federal Reserve Bank, \$180,581,711-67; due from banks and bankers, \$121,737,827-46; loans, discounts and bankers' acceptances, \$696,620,610-13; United States Government bonds and certificates, \$253,201,185-70; State and municipal bonds, \$21,701,593-02; stock in Federal Reserve Bank, \$6,600,000-00; other bonds and securities, \$105,340,840-38; ownership of Inter-national Banking Corporation, \$8,000,000-00; bank buildings, \$61,122,307-90; items in transit with branches, \$6,473,867-45; customers' liability account of acceptances, \$99,186,454-02; and other assets, \$7,107,270-65. On the liabilities side there appears the following items: Capital, \$124,000,000-00; surplus, \$76,000,000-00; undivided profits, \$5,444,512-77; reserves for contingencies, \$31,253,258-98; unearned discount and other unearned income, \$2,455,115-61; interest, taxes, other accrued expenses, &c., \$6,913,168-47; dividend payable July 1, 1932, \$3,100,000-00; liability as acceptor, endorser or maker on acceptances and bills, \$104,241,020-25; Deposits, \$1,214,266,592-30; total, \$1,567,673,668-38.

RAILWAYS.

CORDOBA CENTRAL RAILWAY COMPANY, LTD.—The result of the voting at the stockholders' meetings held on Friday, July 8, 1932, to consider the scheme of arrangement, has been certified by the company's auditors to be as follows:—

	For the Scheme.	Against.	Majority for the Scheme.
4% first debenture stock...	3,029,875	15,170	3,014,705
5% debenture stock	2,390,991	15,462	2,375,529
First preference income stock	478,646	1,876	476,770
Second preference income stock	542,012	322	541,690
Ordinary income stock ...	716,288	1,257	715,031

MISCELLANEOUS.

A/B SEPARATOR, STOCKHOLM.—The net profit for 1931 was Kr. 3,019,362-64; brought over on profit and loss account from 1930, Kr. 3,790,638-32; total amount at the disposal of the general shareholders' meeting, Kr. 6,810,000-96. The board of directors will recommend to the general meeting that 2 crowns per share be distributed on the ordinary shares, 1,634,000; reserve for payment of 1932 dividend on preferred shares, Kr. 1,050,000; reserve for taxes, Kr. 300,000; to be carried forward on profit and loss account, Kr. 3,826,000-96; total, Kr. 6,810,000-96.

Commercial Reports.

MARKET SUMMARY.

The movement of prices at the principal international commodity markets has been somewhat irregular during the past week. Among cereals, there was a slight decline in the quotation of wheat and rye in Chicago (U.S.A.), but maize and oats were a shade steadier. Cocoa and coffee were a little firmer, and raw sugar continued to

advance. Rubber was dearer, following a slight improvement in demand. Last week's advance in raw cotton was followed by a reaction. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices. According to reports from various industrial centres, business in the coal trade appears to be shrinking. Transactions in iron and steel are on a small scale. Inquiries for cotton goods are increasing, but so far there has been little expansion in actual business. The rayon trade experiences a good demand for light-weight fabrics. An outstanding feature has been the advance in wool prices at the auctions in London.

THE COAL TRADE.

SHEFFIELD.—Business in all classes of coal continues to shrink and this month will probably be the worst experienced for some considerable time. The chief demand is for best steam hards, which are fairly steady, but nuts and smalls and household fuel are greatly in excess of demand. Production has been curtailed further and unemployment in the industry is increasing. Stocks are going up. Excessive production of furnace coke is an outstanding feature of the trade. The anticipated expansion of pig iron production has not taken place and surpluses at the ovens can be bought on exceedingly favourable terms. Prices accepted at as low as 9s. per ton are mentioned. Best hards are quoted at 16s. f.o.b., and best house coal at 20s. and 21s. at pits are being quoted. These figures, however, are nominal.

GLASGOW.—The Lothian collieries have been on holiday this week, and those in Lanarkshire and Fife close down at the end of the period for a ten days' suspension. There has been no special pre-holiday rush of business on this occasion. Apart from first Fife steam round coal is plentiful despite the reduction in output, but the latter circumstance, of course, affects the supply of washed nuts, available quantities of the larger sizes of which are readily taken up. Pearls are, however, weak. Shipment prices (f.o.b. district ports): LANARKSHIRE: Ell best, 14s. 3d.; splint best, 14s. 9d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 9d.; steam, 13s.; trebles, 12s. 6d.; doubles, 10s.; singles, 9s. 3d.; pearls, 8s. 6d.; dross, 8s. 9d. FIFE: Screened navigation, 16s. 6d.; first-class steam, 13s.; third-class steam, 10s. 6d.; tre

COFFEE.—There was a slight improvement in the demand for coffee in New York. On Tuesday, 4,500 packages were offered at auction in London. The results were, however, disappointing, as only a small proportion was sold. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered for home consumption, 122 bags; exported, 27 bags; stocks, 6,817 bags, against 2,582 bags last year. Central American, landed, 2,602 packages; delivered for home consumption, 1,910 packages; exported, 2,256 packages; stocks, 119,601 packages, against 111,185 a year ago. Other kinds, landed, 1,405 packages; delivered for home consumption, 2,037 packages; exported, 1,180 packages; stocks, 83,430 packages, against 86,715 a year ago.

COCOA.—The market in cocoa has been firm, both in London and New York, and there was a further advance in prices. "July" futures were quoted at 4.14 cents per lb. in New York on Wednesday, against 3.91 cents per lb. a week ago and 3.98 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 27s. 6d. per cwt., f.o.b., London contract, shows an advance of 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 6,014 bags; delivered for home consumption, 4,186 bags; exported, 25 bags; stocks, 159,411 bags, as against 227,044 last year.

TEA.—The quantities catalogued for this week's auction comprise 42,966 packages of Indian, and 29,729 packages of Ceylon tea. At Monday's "Indian" sales, there was a good demand for all descriptions. Common and medium had advanced ½d. to ¾d. per lb. The "Ceylon" teas on offer on Tuesday found ready buyers at higher prices. On Wednesday the Indian varieties on offer passed quickly into buyers' hands at prices slightly higher than those of Monday. The following table shows the average prices (compiled

RICE.—The market in rice has been steady, and there was a further advance in forward quotations. Wednesday's "spot" price, at 8s. 3d. per cwt., shows no change on last week, while forward positions, at 8s. 3d. per cwt., show a rise of 3d. per cwt. Movements in London during the past week were as follows: Landed, 146 tons; delivered, 106 tons; stocks, 3,004 tons, as against 530 tons last year.

POTATOES.—The principal markets were well supplied with new potatoes, and prices declined further. English kidney could be obtained at from 8s. to 9s. per cwt. at the London Borough Market, against 10s. to 12s. per cwt. a week ago.

SPICES.—The market in spices has been quiet. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 2 tons; stocks, 359 tons, against 631 tons last year. White, landed, nil delivered, 13 tons; stocks, 547 tons, against 575 tons a year ago.

WAR LOAN CONVERSION

—an essential and
decisive step towards
Better Times

MAKE SURE OF SUCCESS
—from the very start

SWIFT and unanimous action on the part of all the holders of 5% War Loan is the country's urgent need to-day. Your countrymen are watching, the world is watching, confident that once again British courage and patriotism—British determination to deal thoroughly with the problem of the day—will triumph. Do your part in making sure of success by applying *NOW* for conversion of your War Loan.

What the Conversion
means to Britain

Already the announcement of the scheme has electrified markets, stimulated business, brought new hope of better times for the whole community. Upon the success of this Conversion depends one of the greatest economies ever attempted by any Government—a net saving of £23,000,000 every year. It means immediate relief to the Exchequer, permanent benefit to British industry, and definite progress towards the provision of increased Employment.

What it means to you
as a holder of War Loan

Some sacrifice? Of course. Every British Citizen from the poorest upwards has been proud to make sacrifices for the common good in time of need.

But remember this—as an investor, as a taxpayer, as a citizen, you have everything to gain by the success of this great enterprise. In the new 3½% Loan you will have a British Government Security, on which the full interest is guaranteed you for 20 years without interruption. And if you apply now you will, in addition, secure a

CASH BONUS OF £1 PER CENT.
payable within 14 days.

FILL IN YOUR FORM AND POST IT TO-DAY

You can get an application form from
a Bank, Stockbroker or Post Office.

MEAT.—There was a substantial decline in the price of both foreign and English beef at the Smithfield Market during the past week. English mutton was also cheaper, but New Zealand mutton was maintained. On Wednesday, Argentine beef (chilled hind-quarters) was sold at 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. 8d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 4d. to 3s. 2d., as against 2s. 2d. to 3s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,824 tons, as compared with 8,782 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.7 per cent. of the supplies, as against 85.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 83.7 per cent. of the total supply, as against 87.1 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—After a period of activity and advancing prices, markets have again turned quieter, and an easier tendency has developed. Owing to an improved demand for the oilcake product arising out of the scorched pastures principally in Central Europe, there was more activity in linseed, but requirements having been satisfied for the time being prices are now 6s. below the highest, Plate afloat and for July shipment quoting around £7 15s., and forward to October £7 17s. 6d. to £8. The quantity of linseed on passage to Europe has again increased and is now 186,400 tons, or 6,600 tons more than last week. Of this, only 4,900 tons is from India. In sympathy with Alexandria, cottonseed is firm and dearer, current value of old crop Egyptian, afloat to August, being £8 10s. to £8 12s. 6d.; while for new seed, October loading, £8 17s. 6d. is asked. Vegetable oils are steady. A good consumptive demand for linseed oil has been experienced with a marked advance in value. Raw oil is steady at rather lower figures, and for July and August delivery £12 15s. is quoted, and for September-December £13. Cotton oil is firm, and crude Egyptian, ex Hull, is held for £21, and technical refined for £23 6s. prompt. Oilcakes and meals are in better demand, and prices are fully steady.

RUBBER.—The market in rubber has again been a little more active, and, as a consequence, prices advanced a few points. In

New York, Wednesday's spot price for rubber, at 2½ cents per lb., shows a rise of ½ cent on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 1½d. per lb., against 1½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. for April-June, 1932, as against 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,242 tons; delivered, 1,944 tons; stocks at the end of last week, at 108,523 tons, show a decrease of 702 tons as compared with the preceding week.

THE MONEY MARKET.

QUIET conditions prevailed throughout the week, and until Wednesday the market retained its easy tone. On Thursday the trend was inclined to be a shade firmer, but there was hardly any quotable difference in the rates. The outstanding event of the week was the new low

record in Treasury bill rates. The average rate at which the bills were allotted on Friday last was 10s. 6.84d., as compared with 17s. 2.88d. a week ago. This easily beats the low record of the 'nineties, which was 13s. 8d. for twelve months' Treasury bills. The big drop from last week did not take the market by surprise, and only few houses missed their Treasury bills. There was thus no particular inducement for the market to buy during the next day or two.

While before the tenders Treasury bills changed hands at a shadow above $\frac{1}{2}$ per cent., during the following days they declined below that figure. On various occasions the banks were buyers of August and September bills at $\frac{1}{2}$; and, even though such deals were exceptional, the current rates were only a shade higher. Fine bank bills were quoted at the beginning of the period under review at $\frac{1}{2}$ to $\frac{1}{8}$, but later they declined to $\frac{1}{8}$ to $\frac{1}{4}$. There were no noteworthy changes in the rates for standstill bills, which were unaffected by the disturbing political events in Germany. Money remained easy, and the rate for day-to-day loans moved between $\frac{1}{2}$ and $\frac{3}{4}$ per cent.; on Saturday it declined to $\frac{1}{2}$ per cent. towards closing.

There was no apparent reason for the slightly firmer tone on Thursday. In some quarters it was explained as a result of the absence of a reduction in the Bank rate, though few people, if any, expected a change this week. Opinions are not quite as unanimous as to the prospects next Thursday, though most people think it unlikely that, from the point of view of the conversion scheme, the authorities would reduce the Bank rate at a time when, owing to holiday influences the effects of a reduction would be negligible.

The Bank return on Thursday was uninteresting, and changes in the Banking Department were on a moderate scale. The only noteworthy point is that, notwithstanding the approach of the holiday season, the active note circulation showed a further decline. It is possible that, after all, the August demand for currency will not be as pronounced as was anticipated.

The Bank of England has bought on Wednesday another £188,084 of gold in the market. Since it began to buy gold at a premium on May 14 its total purchases have amounted to £15,591,082, but apart from £438,000, which was bought in the market, all of this was acquired abroad. The market remains in ignorance as to the object of the policy of buying in London; while purchases abroad may be explained by a desire to reduce the risk on foreign balances, in local purchases, the increase of the gold reserve is not a means to an end, but the end itself.

The June averages of the clearing banks show an accentuation of the tendency, noticeable already in May, towards the decline of advances. Deposits registered a further considerable rise, while acceptances were somewhat lower. Taking the banks as a whole, advances have been replaced by discounts and investments. As com-

pared with the figures for June, 1931, investments increased by £50.4 millions, while the rise of the bill portfolio was £11.9 millions. Loans and advances were down nearly £70 millions for the year.

The firm tendency of the dollar continued during the past week, and some special gold shipments reached New York from Canada and other countries. The dollar rose to a slight premium in relation to the French franc. Call money ruled at 2 per cent., while open market rates of discount were unchanged at $\frac{1}{2}$ to $\frac{3}{4}$ per cent. for 90 day bills and to $\frac{1}{2}$ to $\frac{1}{4}$ per cent. for six months' bills.

The foreign exchange market was not very active this week, and fluctuations were infrequent. Sterling appreciated against nearly all the principal Continental currencies, whilst the dollar was weaker against both sterling and the franc. The New York rate rose from 8.55 to 8.56 $\frac{1}{2}$, and Montreal from 4.08 to 4.10 $\frac{1}{2}$. Paris, after holding its own in the early stages, fell away from 90 $\frac{1}{2}$ to 91 $\frac{1}{2}$. Brussels lost 17 points at 25.75 and Milan $\frac{1}{2}$ at 70 $\frac{1}{2}$. Madrid was only fractionally weaker at 44 $\frac{1}{2}$. Lisbon was unchanged at 109 $\frac{1}{2}$. Amsterdam was 5 points higher at 8.86, and Berlin 9 at 15.05. Switzerland fell away from 18.20 to 18.33. The Scandinavian currencies were variable; Stockholm being unchanged on balance at 19.48, whilst Oslo improved by 9 points at 20.08, and Copenhagen weakened by 9 at 18.56. The South American currencies are still nominal, and remained at last week's levels, Rio at 5 $\frac{1}{2}$ d. (sellers), Buenos Aires at 34 $\frac{1}{2}$ d., and Monte Video at 29 $\frac{1}{2}$ d. In the Far East the rupee was very firm, and gained $\frac{1}{4}$ d. to 1s. 6 $\frac{1}{2}$ d. The yen, after touching 1s. 7d., weakened to 1s. 6 $\frac{1}{2}$ d., a loss on balance of $\frac{1}{4}$ d. Batavia was 5 points higher at 8.95. In the forward market one month's dollars were more offered at $\frac{1}{2}$ cent discount, but three months' delivery firmed up to $\frac{1}{2}$ cent discount, against 1 cent discount last week. Paris was unchanged at 1 and 2 centimes premium. Brussels fell away sharply from $\frac{1}{2}$ centime discount for both deliveries to $\frac{1}{2}$ centimes discount for one month, and 4 centimes discount for three. One month's Madrid was weaker at $\frac{1}{2}$ peseta discount, three months' delivery being unchanged at $\frac{1}{2}$ peseta discount. Amsterdam was quoted at $\frac{1}{2}$ cent discount for both one and three months' delivery, as against par for both periods last week. Switzerland was unchanged at $\frac{1}{2}$ centime and 1 centime premium. The silver market was quiet, and prices moved up to 17 $\frac{1}{2}$ d. for both cash and forward at one time as a result of Indian and Chinese buying, but they fell away later, as a result of realisation, to 16 $\frac{1}{2}$ d. for cash and 16 $\frac{1}{2}$ d. for forward, a loss in each case of $\frac{1}{2}$ d. on balance. The China silver exchanges were, however, unaffected, and remained at last week's quotations, Hong Kong at 1s. 8 $\frac{1}{2}$ d. and Shanghai at 1s. 8d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

GENERAL SCHLEICHER'S RUBICON.

PLAYING augur to the political omens in Germany to-day is somewhat like attempting to interpret a Sphinx whose inscrutable exterior is known to mask a whole series of psychological complexes, in which nervous hysteria is perhaps the dominant element. Given the present compound of apathetic defeatism, frayed tempers and political emotionalism, almost any development in German politics might lead to consequences quite unpredictable. But in attempting to assess the bearing of the past week's events there is the further complication that we cannot say with any degree of certainty what is the real objective of those to whom the initiative has passed. So far as the visible evidence is concerned, all we know is that General von Schleicher—if we may so designate for short the real forces actuating the Government of which Herr von Papen is the titular head—has abrogated Parliamentary Government in Prussia by the appointment of a Reich Commissioner, and has backed up this step, in the face of the Social-Democratic Prussian Government's refusal to relinquish office, by the proclamation of a "state of emergency," virtually tantamount to martial law, in Berlin and the Province of Brandenburg. Defended by the Government's apologists as a measure necessary to cope with the menace of Communism, hailed by the Nazis as a surrender to their demands, denounced by the Southern Länder, by the Social-Democrats and even by the Centre as a breach of the Constitution of Weimar, and viewed suspiciously in France as a move towards the re-establishment of a dangerously aggressive military regime in Germany—this dramatic step bears many interpretations.

In which direction does truth lie? It is clear that General von Schleicher's act, for all Herr von Papen's pious reference to Article 48 of the Constitution, was in effect a *coup d'état*; and the plea that the Communist menace was compelling hardly carries conviction. Yet we are by no means satisfied that the superficially easy interpretation, which would represent Schleicherism and Hitlerism as more or less synonymous and would point to these events as foreshadowing a permanent fascist dictatorship in Germany, adequately fits the probabilities. We cannot quite picture such a hysterical smash "the system" of to-day, co-opting into its leadership elements who are of the very type of the "system" of the day before yesterday; nor do we readily see General von Schleicher (this "soldier of ideas" who has become the protégé of President von Hindenburg) comfortably bedded with a demagogue alien to himself as much in temperament as in race. General von Schleicher has beyond doubt crossed the constitutional rubicon; but we are far from being sure what he expects to find or intends to do on the other side.

On the supposition that there is logic in the policy of the small Junker group into whose hands the Government of the Reich has so surprisingly passed, let us go back for a moment to the causes which led to Dr. Brüning's fall at the end of May. If there is one thing of which we are reasonably sure it is that President von Hindenburg did not dismiss Dr. Brüning with the idea of facilitating Hitler's rise to power. Between the President and Herr Hitler enmity is known to be personal and bitter. In so far as Dr. Brüning, as a statesman of the Centre with unrivalled courage and conviction, had succeeded in upholding law and order in Germany during the economic crisis, his achievement had doubtless seemed satisfactory in the eyes of the landed interests with which the President and General von Schleicher are identified. They dismissed Dr. Brüning only when they came to feel that the late Chancellor's reliance on the passive support of the Social-Democrats was leading him, perhaps insensibly, too far towards the Left. Anger at the Brüning Government's proposal to acquire, by compulsory State purchase, estates hopelessly over-borrowed under *Osthilfe* credits, may have been the last straw; but there is little doubt that, long before May,

the circle surrounding the President had become increasingly uneasy at Dr. Brüning's general Leftward orientation of policy—not perhaps because they cared greatly how far the Government interfered with financial or industrial "capitalism," but because they foresaw the danger of a situation arising in which there would be a clean cleavage in Germany between (1) a Government relying mainly on a Left whose forces were weakened by intransigent Communism on its extreme flank, and (2) a rising tide of National Socialism. If they decided to forestall this situation—with all its risks, either way, to establish order—the decision does not necessarily mean that it was Dr. Brüning whom they feared; there is every indication that they saw in Hitlerism their greatest enemy.

Accordingly, we suggest, General von Schleicher and his associates proceeded to an attempt which was certainly at first and, we are inclined to think, may still be, an attempt to capitalise in their favour the desire of the great bulk of Germany to hold on to such solidity as is left; and in support of this policy they sought to mobilise the traditional national respect for law and order. Initially the attempt was made on constitutional lines. Herr von Papen, a Catholic and politically moderate-minded nonentity, was put at the head of the Ministry in the hope that his presence would attract the support—or at least the benevolent neutrality—of the Centre, led by Dr. Brüning. The hope was disappointed: the Centre declined to co-operate; the von Papen administration was revealed as a Government with no party to support it in the Reichstag; and meanwhile the Nazis had temporarily been bought off by the repeal of the ban upon the wearing of uniforms. There followed, as a result, the growing sequence of armed party strife and disorder which reached its culmination in the bloodshed at Altona last week-end. It matters little to what degree Nazis or Communists were the principal aggressors; the salient fact for General von Schleicher was that the "law and order" which had been the chief asset in his prospectus was rapidly depreciating; and though he held the Reichswehr in his hand, he may not have felt himself adequately armed to deal with the possibility of a *putsch*, whether from extreme Left or extreme Right, until he also had control of the Prussian police. This control he could not acquire so long as the Prussian Administration was in the hands of a Social-Democrat Government which was now left, as a result of the Spring election, without a working majority in the Landtag, and was, moreover, a standing provocation to Hitlerite violence. Accordingly, the stumbling block of the Prussian Government must be removed, even at the cost of some violence to the Constitution.

If we have read aright the meaning of General von Schleicher's strategy, it follows that he will presumably be anxious to limit as far as possible the provocative aspects of his tactics. It may not be without significance that Herr Bracht, the Deputy Commissioner under Herr von Papen in Prussia, is a man of the Centre, and that Centre officials in the Prussian administration have been left at their posts. Although the military jacket may replace more openly the civilian frac as official wear in the seats of Government, it would be illogical to suppose that a Government, which is seeking at any price to preserve in its own interests something of the "system of old Germany"—a system menaced more dangerously by Hitler than by any other visible force—will proceed to "trail its coat" by appointing Reich Commissioners for the Southern Länder, a step which would invite civil war. Nor should we expect to find the Government suppressing the Reichsbanner formations in Prussia so long as Herr Hitler's Storm Detachments are in being under their present leaders. General von Schleicher, with Prussia's army and police now in his hand, must still be conscious of the numerical limits of his forces. Even if he is satisfied that there has been no Nazi "permeation" of the Reichswehr, he can hardly afford to dispense with the

neutrality, at least, of the Moderate Left. He will continue, we suspect, to act on the assumption that a vast stratum of the German population is prepared to pay a long price in technical breaches of the Constitution for the assurance that the streets will be policed, the morning milk delivered, and the payment of wages and relief, however meagre, be maintained.

Nevertheless, we cannot but feel, on this interpretation of events, that General von Schleicher is running an enormous risk. It is true that, so far, the *coup d'état* has been accepted quietly. Guns have not gone off; the Social-Democrats have decided to concentrate on constitutional efforts at the election; and the trade unions have decided, at least until July 31st, to hold their hands and not declare a general strike. Yet, though the Left—with the exception of the Communist fringe, whose fighting capacity we do not rate very high—is clearly in no mood to embark on an armed counter-revolution, there can be little doubt that General von Schleicher's *coup* has irrevocably alienated both the Social-Democrats and the Centre, who see in it the destruction of the Republic. The prestige of the President, impaired by his somewhat indecent dismissal of Dr. Brüning, has now utterly collapsed; the legend of Hindenburg as the defender of the Constitution has been exploded for good and all. Whether from Brüning or Breitscheid, the Directorate can count on nothing but uncompromising opposition.

This being so, even if General von Schleicher is not faced with the danger of such a mass "down tools" movement as greeted the Kapp *putsch*, he is still faced with the problem of dealing alone, unsupported save by the Reichswehr and (more doubtfully) the police, with the forces surrounding Hitler. How will these forces behave? They are unlikely to secure a clear majority in the Reich elections on Sunday week, but that they will return as the largest single party in the Reichstag there can be little doubt; and there can be equally little doubt that, vague though the political programme of Hitlerism may be, its leaders, in order to maintain the drive of the movement, will have to force the pace. If General von Schleicher is dragged in the wake of Hitlerism towards not merely wild schemes of economic autarchy but the active suppression of anti-Hitler elements in Prussia and Bavaria, the end can only be a violent explosion. If he refuses Hitler's demands and challenges a "show-down," the prospects are less disquieting. For even though nearly all the long-service troops of the Reichswehr would probably stand fast for the Government, it must not be forgotten that the Hitler forces are by no means homogeneous. A part consists of political nondescripts, attracted to the movement mainly by the free board and lodging provided; a part comprises young men of the middle classes, little distinguishable from Nationalists except in age and lack of monarchist ideals; but a large part, led by the best brains of the movement, has a definite Bolshevik tinge. If it came to an open struggle with State forces, now openly revealed as defending a "system" against "systems" sworn destroyers, it would not be wholly surprising to find Herr Strasser's wing of the Nazi forces making common cause with the Communists on one and the same side of the barricades. Such a development might be a severe test for General von Schleicher, lacking, as he now does, the support of the still considerable moderate forces of Republicanism.

Here, as we see it, is the picture of Germany in the throes of making history, a process which invariably throws up clouds of dust bewildering to the observer, especially from a distance. With the obscurity of the future hardly less than that of the present, those of us who have cherished the hope of seeing a politically stable Germany once more co-operating on equal terms within the comity of nations can do no more than look on with anxiety and concern while she works out her destiny through this phase of *sturm und drang*. General von Schleicher has thrown the dice with a gambler's hand. He may win or lose. In any case, it is too late now to lament the fact that, had a clean settlement of reparations been reached a year ago, when Dr. Brüning's hands were still firmly on the helm, many things ill-done and many fears for the future might have been spared.

THE PROBLEM OF THE DEBTS.

AFTER reparations, war debts. Whatever may be said of the tactics of the European Powers in making their ratification of the Lausanne Agreement with Germany dependent upon a satisfactory settlement of their own debts, the fact remains that these two great problems were linked together by the President of the United States with the consent of the leaders of Congress in June, 1931, under the shadow of impending financial catastrophe. Apart, however, from this consideration, the Hoover Moratorium has now expired and the European debtors are under obligation to pay to the United States in the current twelve months a sum of about \$280 millions, of which the first instalment falls due on December 15th. With international trade reduced to a fraction of its normal amount and—in Britain's case—with the pound sterling divorced from gold, the resumption of payments on this scale would not only be extremely difficult in itself, but would make it impossible to lay satisfactory plans for the revival of normal economic activity. True, it is a bad time for opening discussions of this kind with the United States, for the wise direction of the world's affairs is fated to be blocked in this year of crisis by yet one more election. But no country can afford to prolong the present state of affairs for one day more than is absolutely necessary, and as the possibility of having to make these war debt payments is patently an obstacle to constructive measures for the revival of trade, it is inevitable that the European Powers should shortly invite the United States to consider a revision of the war debts.

With this great question we shall have future occasion to deal in some detail, from various angles. To-day we are concerned primarily with the broad lines of approach; but before we examine the possible grounds of appeal to the United States, let us set down a few plain figures. The lion's share of the \$280 millions is due from Great Britain, whose scheduled payment for the year is \$184 millions; \$60 millions are due from France, \$15 millions from Italy, \$8 millions from Belgium, \$7 millions from Poland and \$6 millions from other countries. Britain, however, is due to receive considerable contributions towards her payments from her former Allies. The amount due this year under the various debt agreements with Great Britain is about £18½ millions. Unfortunately this sum is payable in sterling and not in gold, and at present exchange rates it represents barely \$65 millions. If this sum were received in full it would reduce Britain's net payment to \$120 millions, while France would have to find about \$105 millions, Italy some \$80 millions, and the other European debtors some \$25 millions in all. As it is certain that in the current year nothing will be contributed by Germany towards these payments, the figures represent the amount each country must find from its own resources in order to meet its obligations.

It should, however, be noted in passing that the great predominance of the payment due from Great Britain will not persist indefinitely under the existing agreements. For whereas the British payment is this year practically at its maximum, the sums due to the United States from France will within ten years from now be more than double their present figure, while those due from Italy will increase by 50 per cent. in the same period, and will, in fact, increase on paper by more than five-fold before the payments come to an end. We are, in fact, considering a schedule of payments which—apart from sums due in 1933-48 to make good the Hoover postponement—is due to increase from its present figure of \$280 millions to a maximum of more than \$420 millions—a figure which is approximately equal to the whole of the current year's annuity due from Germany under the Young Plan.

We have said that it is inevitable that discussions should take place with the United States regarding the revision of these payments. Indeed, an approach to the United States on this subject would be justified not only by the terms of President Hoover's declaration of June of last year, in which he stated that suspension was necessary in order to enable the debtor Governments to

recover national prosperity—a condition which has most certainly not yet been fulfilled—but more specifically by the terms of the *communiqué* issued after the Hoover-Laval conversations in which it was recognised that some further prolongation of the Moratorium would be necessary, but that the European Powers should first take steps to straighten out the European situation by reaching a suitable agreement on reparations. This preliminary step has now been taken—albeit conditionally and at the last possible hour. But, when all is said, it is the pressure of circumstances which most compels early debt negotiations; for everything that has happened during the last twelve months has made it clear that if the world is to emerge from its parlous situation it must be prepared for much more drastic remedies than it was ready to consider twelve months ago.

But while discussions must inevitably be resumed within a comparatively short space of time, it is highly important that they should take place as far as possible on ground where there is the greatest likelihood of agreement, and should eschew arguments which are likely to emphasise differences in point of view or arouse resentment. It may therefore be worth while, before attempting to consider on what ground the problem can most usefully be discussed, to note and set aside the sort of considerations which, though bulking large in the minds of one party or another, are unlikely to lead to agreement.

In the first place there is little to be gained, in our opinion, by discussing the question which nation can best afford to carry the burden. As between the United States and the European debtors a strong case can be made, on the basis of standard budgetary and economic tests, to show that America's burden of taxation and debt per head is much the lighter. But this sort of argument will not carry us very far. The American taxpayer in the Middle West, faced with an economic crisis at his own door and the prospect of having to pay heavier taxation from greatly diminished resources, is not likely to be very much moved by statistical comparisons of the burden that is being carried by European nations. The Great War meant much less to the people of the United States than to the people of Europe. Before it was over they made an invaluable contribution in men, money and material. For that contribution only gratitude is appropriate; it would be both futile and churlish to attempt to reopen that page of history and to suggest that because of her great wealth the United States might reconsider her decision and make a greater contribution to the cost of the war. Nor, in our view, shall we make any greater headway if we attempt to base the discussions on capacity to pay. This, as experience has proved, is a most illusory conception, and conclusions reached on what seems the very best possible basis have, by a turn of the wheel, been utterly confounded.

The truth of the matter is that events have forced us all to consider the questions of reparations and war debts in the light of the whole economic situation. As we pointed out last week, these payments do not correspond with any investment which has increased the productive capacity of the debtor or enlarged the trade of the world. On the contrary, they have emerged from conditions which have reduced the ability to pay—and in ability to pay we most emphatically include the economic effect on the payer as well as on the receiver. It is only by viewing this problem as part of the task of re-establishing on normal lines the financial relations between the nations that we can hope to find common ground.

The world, after the war, confronted with great industrial changes and shifts in the balance of economic power, was faced with a problem of readjustment of international trade which, in the most favourable circumstances, would have involved internal difficulties for many nations and a strain on any international financial system. The superimposing of political payments on the normal payments between nations produced a situation with which the world was utterly unable to cope. No one would suggest that the reparation or debt payments are entirely responsible for our difficulties, but that they have played a considerable rôle no one can doubt. And, as we pointed out last week, the effect of the breakdown of the world's

financial system has produced results which are so far out of proportion to the actual amount of these debts that, if their radical revision can play even a small rôle in promoting recovery, revision will be highly profitable for all concerned.

Not long ago we gave some figures of the decline in international trade, which amounts for four nations alone to something like ten times the annual total of the whole reparation payments. Still more striking results emerge when we consider the shrinkage in the national income of the great nations. In the case of Great Britain, for example, the diminution of our national income in 1931, compared with our income of 1929, must be something in the neighbourhood of £800 millions, a figure which is larger than all the payments made by Germany since the Dawes Plan came into operation eight years ago. The case of the United States is even more illuminating. On any estimate the national income of that country must have shrunk in two years by considerably more than 20 billion dollars—a figure which is equal to twice the full capital value of all the war debts added together. If American opinion can be persuaded to recognise that the attempt to transfer payments of political debts has played some part in throwing the financial machinery of the world out of gear, is it too much to hope for agreement that the game is not worth the candle? A modest revival in the level of prices and in the volume of trade would so increase the taxable capacity of the United States that that would be far more helpful to its budget situation than an attempt to revive these debt payments. If the case for revision is presented in this way, even the Western farmer, we are confident, will come to appreciate that the long-delayed recovery for which he is looking will come more quickly if European nations buy something from him in exchange for the goods which they send than if they have to send those goods for nothing in payment of their debt.

AMERICA'S BALANCE OF PAYMENTS.

THE annual reports prepared by the U.S. Department of Commerce giving the estimated balance of international payments of the United States are always of considerable interest, since the methods of compilation and analysis, inaugurated originally by Dr. Ray Hall, furnish a much greater wealth of detail in relation to this important aspect of America's economic activities than is the case with any other country. The tenth annual report now published merits particularly close study; for it illustrates, to an extent much more dramatic than did its predecessor a year ago, the reactions not only of protracted economic depression, but of the world financial crisis.

In the following table we summarise the chief debit and credit items in America's account with foreign countries last year, in comparison with the data for 1929 and the (revised) figures for 1930:—

	Million \$.				Million \$.		
	1929.	1930.	1931.		1929.	1930.	1931.
Debits.				Credits.			
Freight payments (net)...	66	96	72	Surplus of merchandise exports	648	801	369
Tourist expenditure (net)...	638	605	458	Interest on private investments (net)	565	616	548
Immigrants' remittances	223	166	163	War debt receipts	207	241	113
Net imports of gold*	120	256	...	Net exports of gold*	...	...	166
Other items	674	...	...	Other items	...	...	244
Balance, representing net export of capital	306	780	547				
	1,420	1,903	1,240		1,420	1,903	1,240

* Adjusted for "earnings" and export of paper \$.

† Allowing for net discrepancy on account of inaccuracies a figure of \$49 millions, which affects equally the item "Balance."

‡ Allowing for net discrepancy on account of inaccuracies a figure of \$323 millions, which affects equally the contra-item "Balance."

• Allowing for net discrepancy on account of inaccuracies a figure of \$124 millions, which affects equally the contra-item "Balance."

With regard to 1931, the first feature which emerges from the foregoing table is the marked contraction in the surplus of merchandise exports, the figure being arrived at after various adjustments for bunkers, shipping repairs, parcel post, and a margin by way of "adjustments for difference in year-end lags." Gross merchandise exports, at \$2,424 millions, were 37 per cent. less in value than in 1930, while total imports, at \$2,090 millions,

showed a fall in value of nearly 32 per cent. The earnings of long-term American investments abroad fell heavily from \$838 millions to \$563 millions, while payments to foreign investors on account of long-term investments in the United States declined from \$227 millions to \$100 millions. The net credit on account of short-term interest and commissions rose from \$5 millions to \$85 millions, as a result of the high short money rates in Europe during the second half of the year. The fall in war debt receipts reflects the consequences of the Hoover Moratorium. On the other side of the account, tourist expenditure by Americans showed, as was to be expected, a considerable decline, but the most remarkable feature is the disappearance of the entry "Net imports of gold" and its replacement by a substantial credit item of net gold exports. With regard to "other items," it will be seen that the revised figures for 1930 still include a very large margin of error which affects the balance representing "net export of capital"—a balance which requires further examination in the light of the estimated transactions on capital account, since at first sight it might appear anomalous that a country whose visible and invisible credits exceeded her debits on account of freights, tourist expenditure and immigrants' remittances, should be losing gold.

In the next table we show details of the long-term capital operations of the United States during the past three years:—

	\$ Mn.				\$ Mn.		
	1929.	1930.	1931.		1929.	1930.	1931.
New American investments abroad—				New foreign investments in U.S.A.—	1,616	960	599
Public issues*	635	839	213	Bond - redemption and resale to foreigners of foreign securities	783	1,107	921
Other purchases	913	613	543	Net long-term foreign investment by America	319	295	...
Reduction, through redemption and repurchases, of foreign holdings in U.S.A.	1,170	910	546				
Net inflow of long-term capital	...	...	218		2,718	2,362	1,520
	2,718	2,362	1,520				

* After deduction of refunding operations, underwriting commissions, &c.

It will be observed that on the one side of the account, though new foreign investments in the United States showed a progressive decline, repurchases by foreigners of foreign securities previously held in America were maintained at a level considerably above that for 1929. The opportunity to repay obligations at, in many cases, a heavy discount, was evidently still attractive. On the other side of the account the most prominent feature is the fall of 75 per cent. in new American investments abroad through the medium of public issues. As a result of this radical diminution in America's long-term foreign lending, and also the lessened rate of repurchases from foreigners of American securities, the year resulted in a net inflow of long-term capital amounting to \$218 millions, as compared with a net outflow of \$295 millions in 1930, \$319 millions in 1929 and no less than \$708 millions in 1928.

In the light of this figure of \$218 millions net inflow of long-term capital, the explanation of the figure of \$547 millions "net export of capital"—and therewith the associated net export of gold—must obviously be sought in the movement of short-term funds. We give below in summary form the figures relating to the end-year position:—

SHORT TERM CAPITAL ACCOUNT.

	(Million \$.)		
	End 1929.	End 1930.	End 1931.
Due to foreigners	3,037	2,737	1,462
Due from foreigners	1,617	1,802	1,292
Net indebtedness	1,420	935	170
Net change on year...	...	— 485	— 765

During 1931 demand liabilities of United States banks to foreigners and short-term investments carried by foreigners in the American markets fell by \$1,275 millions, or more than double the amount of the reduction of obligations of foreign banks and markets to America. During the second half of 1931 America was repaying at an unprecedented rate her net short-term indebtedness abroad, and her short-term creditors were satisfying their

claims in part by withdrawals of gold. In 1930 the net export of capital from the United States was made up as to \$295 millions by net long-term lending abroad and as to \$485 millions by reduction of short-term balances held by foreigners. In 1931 the course of the stream of long-term capital was completely reversed, and resulted in a net inflow of \$218 millions, which enabled the United States, partly by exports of gold, but mainly by her surplus on account of current items, visible and invisible, to reduce practically to zero her net indebtedness to foreigners on short-term account. In studying these figures, Americans, it is hoped, will not lose sight of the marked correlation between the decline in United States foreign lending and the downward course of merchandise exports.

MERCHANT FLEETS IN THE DEPRESSION.

THE present phase of ruinously low freights and acute depression in the shipping industry may be said to have begun at least a year in advance of the collapse of world trade whose first symptoms were discernible in the autumn of 1929. After four years of comparative stability in 1924-27, during which time the *Economist* freight index number yielded, with relatively narrow fluctuations, a mean figure some 25 per cent. above the level of the average for 1898-1913, there occurred in 1928 a sharp fall in the freight market, which brought the annual mean of our index number down to 14.9 per cent. above the pre-war base. In 1929 a further decline of some 2 per cent. was recorded; and in the thirty months which have elapsed since January, 1930, the average figure is more than 8 per cent. below the pre-war level.

Against this background of falling gross revenue from cargo traffic, accompanied during the last two years by a severe contraction in passenger business, it is interesting to examine the changes in the size and position of the world's merchant fleet as recorded in *Lloyd's Register*, whose 1932 volume has been published this week. Looking first at the gross figure of tonnage of all classes, other than the internationally unimportant fraction representing sailing vessels and barges, we find that by the summer of 1923 the great post-war reconstruction of merchant fleets was complete, leaving the world's total ownership at 62.3 million tons, as compared with 45.4 million tons in 1914. Between 1923 and 1926—a period, it will be observed, which coincides with the phase of freight stability noted above—no appreciable change took place in the volume of world tonnage; but between 1926 and 1929 nearly 4 million tons were added to the world's fleet. In fact, it is clear that even before the onset of the world financial crisis, shipping had been somewhat "overbuilt," though up to 1928 the surplus was not perhaps of very serious dimensions.

The influences—partly optimistic forecasts of expanding world trade, partly policies of economic nationalism expressed in subsidies for new construction—which had led, from 1926 onwards, to a striking increase in the volume of shipbuilding contracts placed, made themselves felt in the shape of large launching figures up to and including 1930, when the volume of new shipping placed in commission, at 2.9 million tons, reached the highest level since 1921. Last midsummer the aggregate steam and motor tonnage in the world had risen to the record height of 68.7 million tons; and though in 1931 launchings fell to 1.6 million tons, the present total of the world's steam and motor tonnage at 68.4 million tons is still 2 million tons greater than it was in the summer of 1929, immediately before the crisis.

This apparent evidence, however, of continued growth in the world's marine carrying capacity requires certain qualifications, since, in particular, the gross figures take no account of the development of tanker tonnage not available for general cargo purposes. A clearer impression of the position of the world's merchant fleet on the eve of the crisis and at the present time may be gathered perhaps from the following figures, which we have compiled from the statistical tables accompanying *Lloyd's*

Register Book. The figures are approximations, since the form in which the material is published does not enable deductions on account of different categories of tonnage to be made with precision. With this reservation, however, the following table gives a broadly correct picture of the world's sea-going fleet available for all purposes, other than the carriage of bulk oil, in 1929 and 1932:—

	(Million Gross Tons.)		1932.	
	United Kingdom.	World.	United Kingdom.	World.
Total steel vessels*	19.9	61.9	19.5	64.1
Deduct—				
Tankers	2.2	7.0	2.3	8.8
Coasting vessels†	2.3	10.6	2.2	10.5
International trading fleet	15.4	44.3	15.0	44.8

* Excluding lake tonnage, all sailing vessels and all iron and wood and composite steamers and motor-ships.
† Vessels other than tankers of less than 2,000 tons.

The category of coasting vessels defined above is obviously not precise, since many vessels of less than 2,000 tons participate in international commerce; but, broadly, the foregoing figures show with reasonable accuracy the comparative amounts of internationally competitive tonnage. Thus analysed, the changes between 1929 and 1932 are relatively slight. The British sea-going fleet available for general purposes other than the carriage of bulk oil has diminished slightly, and the world total has slightly increased; but the expansion in the latter figure is not important, and the British percentage of the total remains round about the satisfactory ratio of 33 per cent.

In last week's issue of the *Economist* we noted the present condition of almost complete paralysis in the world's shipbuilding yards. So long as the present terribly high percentage of unemployed tonnage persists, and so long as there is no recovery in the freight market, even to the degree of activity represented by its average launchings of 1.9 million gross tons annually in the four years 1923-26, i.e., before the artificial and, as events have proved, unwarrantable pre-crisis boom. Indeed, until it is possible to detect sure signs that the present trend towards annihilation of international commerce is arrested and reversed, no attempt can safely be made to forecast the future of shipbuilding production; for, even though, as we have seen, the world's available carrying capacity for passengers and general cargo has not, in fact, increased appreciably since the beginning of the slump, it does not therefore follow that the carrying capacity of 1929 will not be in excess of the world's requirements for an indefinite time to come. If the world is destined to work out conceptions of autarchy to their bitter conclusion, there may have to be a great contraction of the world's internationally competitive merchant fleet below its present figure of 45 million gross tons.

Should, however, the next few years bring some revival of international trade, so that the volume of cargoes again approaches the dimensions of 1929, then there is one factor which of recent years has become, on a long view, increasingly favourable to shipbuilders. The volume of tonnage in the world aged twenty-five years and over has been steadily increasing: from 8.8 million tons in 1926 it had reached 10.3 million tons in 1929, and now amounts to the abnormal figure of 12.3 millions. The process of attrition on these more or less obsolete vessels is slow, and their continuance afloat is being rendered possible during the depression by reason of (a) cheap labour costs in some countries, and (b) the readiness of charterers to accept slower delivery of cargoes in return for "cut" freights. Nevertheless, the year 1931 saw the volume of tonnage broken up rise to over 1 million tons, as compared with an average of less than 850,000 tons in the three preceding years, while losses accounted for another 300,000 tons. If, as seems probable, total wastage by losses and scrapping is now well on the way towards 2 million tons a year, while launchings in 1932 are unlikely to exceed greatly some 500,000 tons, equilibrium between supply of and demand for carrying space at sea may be regained, unless world conditions further deteriorate, well within the limits of the next quinquennium.

NON-FERROUS METALS: LEAD.

THE structure and recent history of the lead-producing industry is in many respects similar to that of zinc production, which we surveyed in our issue of last week. Sulphide of lead ("galena"), which is the principal lead-bearing ore, usually contains a varying quantity of silver, so that the value of a "galena" deposit depends on its relative richness in lead and silver, as well as on the market price of the two metals. Although lead, zinc and silver are generally associated and mined together in the exploitation of sulphide ores, one of them usually predominates, the others being recovered as by-products. As in the case of zinc, the United States is at once the principal single producer and consumer of lead. Similarly, the United States lead-producing industry has long been isolated from the rest of the world by a tariff, which is now at the rate of 2½ cents per lb. on pig-lead, with correspondingly higher rates on manufactures.

The demand for lead, like that for other non-ferrous metals, increased rapidly during post-war years. Expressed as a percentage of the average of 1909-13, the world's smelter production of this metal in 1929 showed an increase of 51 per cent., while the output of copper, zinc and tin recorded advances of 100 per cent., 63 per cent. and 61 per cent. respectively. Between 1929 and 1931 the world's smelter production of lead declined by 20 per cent., and copper, zinc and tin showed reductions of 29 per cent., 31 per cent. and 19 per cent. respectively. The following table shows the trend of world production and consumption of lead since 1913, together with similar figures for the United States:—

(In thousands of metric tons.)

	Smelter Production.			Consumption.		
	World.	United States.	Proportion of World Production.	World.	United States.	Proportion of World Consumption.
1913.....	1,186	408	34.4	1,182	401	34.0
1925.....	1,515	601	39.7	1,480	624	42.1
1926.....	1,606	631	39.4	1,551	685	44.1
1927.....	1,685	611	36.3	1,585	630	39.8
1928.....	1,669	589	35.3	1,621	637	39.3
1929.....	1,753	624	35.6	1,688	660	39.1
1930.....	1,616	538	32.1	1,540	522	33.9
1931.....	1,401	373	26.6	1,271	362	28.5

1925-1931, American Bureau of Metal Statistics.

It will be seen that while world production and consumption increased steadily between 1925 and 1929, the output and demand for "virgin" metal remained almost stationary in the United States. Both production and absorption in the United States in 1931 were substantially below the level of 1913. The relative importance of lead-producing countries outside the United States has undergone considerable changes between 1921 and 1931. Thus, Canada increased its output from 31,190 metric tons to 129,371 metric tons; Australia from 57,213 metric tons to 158,128 metric tons; Burma from 34,235 metric tons to 75,937 metric tons; and Mexico from 60,647 metric tons to 211,396 metric tons. On the other hand, the output of Spain decreased from 135,861 metric tons to 109,719 metric tons. The development of the deposits in Australia, Canada and Burma has been more rapid than Empire consumption, with the result that the British Empire is now a net exporter of lead. Of the world's mine production in 1930, the United States accounted for 32 per cent., Mexico for 16 per cent., Australia for 12 per cent., Canada for 10 per cent. and Spain for 7 per cent. Of the total smelter production in 1930, the United States contributed 32 per cent., Mexico 14 per cent., Australia 10 per cent., Canada 9 per cent., Spain 7 per cent. and Germany 7 per cent. While the ore is generally smelted in the country in which it is mined, the United States acts in the capacity of refiner for a considerable proportion of Canadian and Mexican lead. Recently, however, Canada and Mexico have installed additional refining capacity, which will render these countries independent of United

States refiners. A point of importance is the large return of secondary metal, particularly in the United States. The proportion of secondary lead production to primary production in that country rose from 12 per cent. in 1914 to 46 per cent. in 1930. In contrast, secondary production of zinc is negligible.

The present difficulties of the lead-producing industry are due in a large measure to the rapid progress in metallurgy since the war. By 1925 the potential output of the metal began to outpace the steady increase in demand at the current price. Equilibrium between supply and demand was only maintained through a rapid downward movement in prices, which, with a brief interruption in 1920, has proceeded almost continuously ever since. The movement of lead prices in London and New York and of silver prices during recent years is illustrated by the subjoined table:—

	Pig Lead.		Silver.
	London. "Soft Foreign." £ s. per long ton.	New York. "Desilverised" Cents per lb.	New York. Cents per fine ounce.
Average, 1913	£ s. d. 18 6 2	4.370	59.8
" 1925	35 17 4	9.020	69.1
" 1926	31 2 3	8.417	62.1
" 1927	21 3 4	6.755	56.4
" 1928	21 3 4	6.305	58.2
" 1929	23 4 11	6.833	53.0
" 1930	18 1 5	5.517	38.1
" 1931	13 0 4	4.240	28.7
July 19, 1932.	9 11 3	2.650	26.9

Until 1929 the fall in prices tended to follow closely the decline in costs of production. As the reduction in output since 1930 did not keep pace with the shrinkage in demand, stocks began to accumulate, and the decline in prices overtook the reduction in the production costs of most producers. In April, 1931, the London quotation for foreign pig lead stood at about £12 per ton, a fall of nearly 50 per cent. as compared with the average of 1929.

In 1930, negotiation took place between the members of the Lead Producers' Reporting Association in order to counteract the downward movement in prices by the restriction of supplies. Opposition to an all-round curtailment of output was, however, not overcome until the spring of 1931, when the situation had become acute. In April it was announced that the cartel (whose membership excludes the U.S.A.) had decided to curtail production by 15 per cent. for six months beginning on May 1st, and to hold existing stocks off the market until the price reached a figure which was not disclosed. As this programme did not bring about an improvement, production was reduced by a further 5 per cent. from July 1, 1931. Even so, the scheme failed to achieve its aim, and prices continued to sag, reaching £10 10s. per ton in September. The suspension of the gold standard by Great Britain tended to accelerate the decline in prices, as this country is the largest single consumer of the metal outside the United States. The imposition of a tariff on lead in Great Britain on March 1st led to the disruption of the lead pool, just as the new duty on copper in the United States resulted in the withdrawal of the principal foreign producers from Copper Exporters, Inc. At the end of May attempts were made to reconstitute the lead pool and to bring about a further curtailment of output. So far, however, no agreement has been reached between the members of the cartel, and, in the absence of a revival in demand, the immediate prospects for recovery in the price of this metal are not favourable.

THE MACMILLAN REPORT: RETROSPECT.

(BY A CORRESPONDENT.)

SINCE the report of the Macmillan Committee on Finance and Industry was published, just a year has passed, during which a great deal has happened to encourage us to forget its recommendations. Its general conclusions, indeed, were based on the assumption that this country would continue to subscribe to the international gold standard, an assumption which was falsified within a very short space, partly because the Macmillan Report itself

helped to expose the difficulties of the international financial position of London. Yet, while those general conclusions would necessarily have to be reviewed in the light of what has happened since, they were not, perhaps, the most important part of the report from the point of view of practical and immediate action; most of the Committee's recommendations, including all those relating to the internal banking system and to the improvement of statistics, could be carried out, whatever be the international system with which sterling is linked. Moreover, one general conclusion remains as valuable to-day as when it was written, namely, the warning that the first measure towards the restoration of the international price level must necessarily be taken on the initiative of the creditor countries, and that it must consist partly in a greater willingness to buy and partly in a greater willingness to lend. Last year that statement was justly regarded as implying a reflection on the financial and economic policy of the United States, and so indeed it remains; but in these times we tend to forget that we are as great a creditor country as she, and that without recovering our ability or willingness to lend we have forsaken our former readiness to buy. If we had the money available there would be little prospect of our lending it abroad, since sound borrowers are so hard to come by, but we could certainly buy more freely and there would be no surer method of improving the economic soundness of potential borrowers. "It is the simultaneous reluctance of creditor countries," wrote the Committee, "either to lend or to buy which is the cause of the crisis." These wise words are worth recalling.

The first of the Committee's recommendations relating to domestic monetary policy was to the effect that the Issue and Banking Departments of the Bank of England should be amalgamated and that the Treasury share of the profits on the note issue should vary with the excess of the Bank's notes and deposits over its stock of gold and of silver coin. This proposal was designed to relieve the Bank of some of the restrictions, psychological as well as practical, upon its freedom to vary the volume of the note issue, an aim which is perhaps even more desirable to-day than when the maintenance of the gold standard demanded greater conservatism. The Committee further recommended that the Bank should keep reserves of notes at key centres about the country in order to enable the joint-stock banks to reduce their reserves of actual cash. This suggestion is now possibly of less importance than before; but in any case neither the one proposal nor the other has been carried out since the Committee reported, nor, as far as the public is aware, even been considered by the authorities. On the other hand, the recommendation that the Bank of England's liquid assets ought to be increased to a substantially higher figure may be regarded as having been met by the establishment of the Gold Exchange Reserve—though it is not difficult to surmise what the Macmillan Committee, with their sound insistence on the need for publicity, would have thought of the mystery and obscurantism with which the operation of that Reserve has been wrapped.

Next came a series of recommendations dealing with the relations between the Bank of England and the great clearing banks, which the Committee thought might with advantage be much closer. They urged that the banks should publish their monthly statements in a much fuller form, showing among other things the proportions between current and deposit accounts; that in these monthly statements the returns made of cash in hand and of balances with the Bank of England should be true daily averages, which the banks should aim at maintaining at a level of not less than 10 per cent. of their deposits, while accepting the advice of the Bank of England from time to time as to the advisability of making a change in the ratio. The Committee considered that the rates allowed by the clearing banks on fixed deposits should not always be determined as at present, but sometimes with a view to influencing the public to be more or less willing, as the varying circumstances might require, to employ their savings in less liquid forms. Above all, they thought, it was desirable that the clearing banks should be made aware in the plainest possible manner whether the general tendency of the Bank of England at any time was towards a relaxa-

tion or towards a contraction of the conditions of domestic credit. These were vital proposals, the implementing of which would greatly improve our internal banking system from the point of view of its adjustment to the needs of industry and trade.

The recommendations concerning the capital market for home investment may be passed over on the score that the new capital market is still comatose and cannot be revived by artificial respiration. But the mere fact of depression and of the suspension of the gold standard has no bearing on the proposals for the publication of more ample information and statistics. "As completely and as promptly as circumstances permit," wrote the Committee, the following sets of statistics should be collected: the monthly returns of the clearing banks in a much more ample form than at present; a classification of their loans and overdrafts according to their purpose (for industry, commerce, finance, agriculture, house-building, etc.); similar returns from the other joint-stock banks to be collected by the Bank of England and published as aggregates; statistics of foreign balances and of foreign liquid assets held in sterling, of the volume of acceptances outstanding on home and foreign account, and of the total volume of internal cheque transactions; more complete estimates of the balance of payments, "on a more secure basis of ascertained fact"; a biennial census of production; statistics of the volume of wages paid, of retail sales, of profits, of the value of capital construction. It is early to say that these recommendations have been ignored—indeed in some respects they have already been carried out—but there is absolutely no sign that the authorities attach, as did the Macmillan Committee, "very great importance" to this part of their recommendations being carried into effect. "For the complete information," they wrote, "which would thus be put at the disposal of those responsible for deciding policy, may prove to be an indispensable preliminary to their being able to work out practical methods of management for attaining the objectives of the monetary system." Let us hope that in the Chancellor's baggage as he voyaged to Ottawa was a copy of the Macmillan Report.

Notes of the Week.

The Disarmament Conference.—We go to press before the curtain finally falls on Act I. of the Disarmament Conference; until next week, when the closing speeches will have been delivered and the final text of the "record of progress" adopted, we must defer full appreciation of the accomplishment and its shortcomings. Though the progress made is not so completely negative as at one time seemed likely, the meagreness of the harvest so far gathered is evident from the terms of the resolution framed by Sir John Simon and presented by M. Benes, in the rôle of *rapporteur*, to the Conference on Wednesday. The specific points of agreement reached, with many reservations, may be briefly summarised:—

- (1) The Geneva Convention of 1925 denouncing chemical and bacteriological warfare is reaffirmed.
- (2) The size of tanks is to be limited, though the maximum figure is not yet agreed.
- (3) There is to be a limit imposed on the quantity of heavy artillery above a calibre to be agreed. Coastal land guns are not to be larger than the largest naval gun, and fixed frontier guns are to have a maximum limit (not defined) of calibre, if an effective method can be discovered of preventing their transformation into mobile guns.
- (4) Bombardment from the air is to be abolished, if agreement can be reached how to (a) limit numbers and "characteristics" of military aircraft, (b) regulate civil aircraft construction, and (c) prevent by international regulation (except in "permitted areas") misuse of civil aircraft not conforming to rule laid down under (b). In any case all forms of air attack upon civilian population are prohibited.

- (5) A Permanent Disarmament Commission is to be constituted to supervise the carrying out of agreed measures of disarmament.

So far as items 1-4 of the "recorded agreement" are concerned, the natural comment is that the Permanent Commission is unlikely to be overworked. The resolution, however—and herein lies its only potential importance—proceeds to lay down principles which are to govern Act II. of the Conference. While the General Committee adjourns—until a date not later than January 20, 1933—the Bureau will tackle the following programme:—

- (1) It is to draft texts covering items 1-4 above.
- (2) It is to examine the Hoover proposals relating to military "effectives"; the resolution declares that "strict limitation and real reduction" are to be achieved, having regard to the circumstances and forces of each State.
- (3) It is to draw up a scheme of budgetary limitation, again having regard to the special conditions of the various States.
- (4) It is to submit proposals for regulating private trade in and manufacture of armaments.

For the rest, the Conference invites the Powers parties to the Washington and London naval treaties to confer on naval disarmament and report in due course to the General Committee. Hopeful lines of future progress? Undoubtedly. Sir John Simon and M. Benes have drawn up an excellent agenda for the Bureau and the Naval Powers. Can we still hope—with the meagre mouse born of six months' painful gestation before our eyes—that the will to act on that agenda will be forthcoming? The answer depends on the pressure of public opinion. There is at least ground for satisfaction that the Conference is still in being; the statesmen members of it will have another chance before next January to transform this bare and uncertain outline into a treaty of disarmament worthy of a community of civilised nations.

Opening Day at Ottawa.—The Ottawa Conference opened on Thursday in a scene of great enthusiasm and cordiality—based on an optimistic belief that definite results may be achieved. Naturally, the introductory speeches did not give any clue as to the specific form which any proposals are likely to take, but they did seem to crystallise the attitude from which the chief delegations approach the problem. Mr Baldwin, for example, once more made it clear that, though it is possible to increase preferences merely by raising duties against the rest of the world, Great Britain would put before the Conference as its general objective the alternative policy of expanding Empire trade by reducing the barriers between its members. This, in his view, was the only way in which the Conference might contribute to the recovery of the world at large. Sir Atul Chatterji, speaking for India, made it clear that India's fiscal policy must be dictated by her revenue needs, and that in view of the coming of a new Constitution the present system of carefully-controlled protection must be preserved intact, while Mr Havenga, speaking for South Africa, emphasised that both in regard to trade and the monetary problem the Empire could only act within the limits of a world policy. But Mr Bennett announced Canada's intention to offer to Great Britain an extension of the free list and larger preferences on goods of special interest to Great Britain in cases where Canadian enterprises would not be injured—asking in return that the existing preferences should be made permanent and extended to "those other natural products of which Great Britain is an importer." This is, of course, the crux of the situation, for it means that our present duties cannot be lowered to other countries and that some new duties must be imposed. Whether the reductions proposed will be of substantial value to Britain cannot be estimated until all the cards are on the table. But it is already clear that the problem for Mr Baldwin will be to reconcile Mr Bennett's proposals with his declared intention of using our present tariffs as a bargaining weapon to lower tariffs generally and to restore the volume of the world's trade.

Cabinet Changes in Italy.—The sudden announcement of sweeping changes in the Italian Cabinet—including the retirement of the Ministers of Foreign Affairs, Finance, Education, Justice and Corporations—has been received very quietly in Rome, where it seems to have been not unexpected. But it came as an undoubted surprise abroad. It is natural that all who are interested in European affairs should ask themselves what is the political significance of this step on the part of Mussolini; for Signor Grandi's name has come to be associated abroad with the liberal policy in foreign affairs which Italy has adopted. Only a few years ago the foreign policy of Fascism was a source of anxiety and uneasiness; but to-day the policy of Mussolini, expounded with very great ability and charm by his youthful Foreign Minister, has immensely strengthened the prestige of Italy and made her a steady influence in this bedlam-like world of 1932. Why, then, Signor Grandi's *congé*? We may recall that the stand of Italy for drastic disarmament at Geneva, for the "clean slate" in the matter of reparations and war debts, and for radical action in regard to the trade obstacles that are strangling trade, has encountered all kinds of delays and opposition; that the protocol regarding the Austrian loan is not to Italy's liking and that the gloss put by the French upon the political declaration of England and France after the Lausanne Conference seemed to give the impression that England and France were getting together and elbowing Italy out in the cold. Fascism is a hard taskmaster, and *il duce* does not lightly permit the interests and desires of Italy to be brushed aside, or condone lack of success in his lieutenants. There is also the more pressing consideration that, though Italy has stood up to the depression remarkably well, she cannot afford to wait indefinitely for the economic situation to improve. The change may, therefore, indicate Mussolini's intention to pursue the policies on which his mind is set with renewed vigour. If this happens, Great Britain will have every reason for satisfaction, for the policies which Italy is pursuing are very closely in accordance with the interests of this country. At the same time, the resignation of Signor Grandi, whose personal qualities have greatly facilitated many difficult negotiations, will be received with regret. London will welcome Signor Grandi as Italy's Ambassador. We do not doubt that he has yet an important rôle to play in the public affairs of Europe.

The Irish Impasse.—We cannot congratulate Mr MacDonald on the results of his attempt to repair the damage wrought in Anglo-Irish relations by the irresistibly compelling personality of Mr Thomas. On Thursday of last week the Prime Minister authorised Mr Norton, Ireland's Labour leader, to convey to Mr de Valera a message expressing willingness to continue discussions on the question of the land annuities, regarding which Mr Norton was understood to have brought to London a compromise formula providing for arbitration on lines acceptable to the Irish Free State. Mr de Valera duly arrived in London on Friday, but his conversations with Mr MacDonald led nowhere. Next day an official *communiqué* was issued from Whitehall explaining the reasons for the breakdown. "At the last minute," it stated, "a proposal was put to the British Government that the facts should be inquired into by a body of four, two appointed by the Irish Free State Government and two by the British Government. . . . It was proposed that the decision of this body should have no binding effect. When the four had drafted their report or reports, then the Governments were to negotiate. . . . The proposal therefore involved weeks, if not months, of talk with no certainty of agreement at the end. In the meantime the relations between the Governments would have been deteriorating." The British Government accordingly rejected this proposal; and, though they adhered to their offer of arbitration by an Imperial tribunal and also expressed their readiness for "further discussion," they proposed that the annuity payments should be continued pending a settlement of the issue. It is incomprehensible to us why the British Government should be willing to continue negotiations, but unwilling that these negotiations should be carried out in the first instance through the medium of a tribunal

of four assessors, or investigators, two appointed by each side. To contend that this procedure would involve no certainty of eventual agreement, and the deterioration meanwhile of Anglo-Irish relations, is the height of disingenuousness. With a tariff war being waged across the Irish Channel, we can see no "certainty" as matters stand, except the certain "deterioration" which Mr MacDonald professes to desire to avoid. If, however, we misread the situation, and the real stumbling block was simply the inability of the parties to agree whether the land annuities should be held in a suspense account in Dublin or in a suspense account in London, all we can say is that it is deplorable that the chance of economic peace with Ireland should be wrecked on such an unsubstantial puntilio. We are far from exculpating Mr de Valera in this sorry business; he has been throughout stiff-necked, rigid and intransigent. Yet, even if it were possible to ignore the compelling need in the common interests of both countries not to play into the hands of the dark forces in the background awaiting their opportunity to turn Southern Ireland once more into a gunman's hell, there was the greater need for Mr MacDonald, in these negotiations with a difficult adversary, to rise to a fuller height of statesmanship.

Deadlock in Manchuria.—The Japanese Government has not yet taken the formal step of giving its official recognition to its own puppet-government of Manchukuo; but such consequences as this act will have, when it is eventually taken, have been virtually anticipated at the final interview between the Foreign Minister, Count Uchida, and the Lytton Commission. This interview took place on July 14th, just before the Commission left Japan; and Count Uchida seems to have taken occasion to make it clear that Japan would take the step in question at her own good time. Hitherto, there had seemed to be some significance in the Japanese Government's persistent policy of keeping up the hollow pretence that Manchukuo was a free and independent agent. The natural inference was that Japan still hesitated to close the door upon some solution of the Manchurian question which would secure Japan's essential rights in Manchuria without trampling upon China's. Now we know that this hesitation, if it ever existed, is over, and that the die will infallibly be cast—even though it is not yet quite out of the dice-box. The settled policy of Japan is to sever all links between Manchuria and China and to turn Manchuria (including, one suspects from this week's fighting, Jehol) into a second Korea, without regard to China's juridical rights or to the formidable fact that Manchuria has some thirty million Chinese inhabitants who will not reconcile themselves to Japanese rule in any form. This indefensible—and ultimately, we believe, unworkable—policy has been decided upon by the Japanese Government at a moment when Japan could be more certain than ever of seeing her just rights in Manchuria secured. For the Lytton Commission, in its studies and consultations on the Chinese side, seems to have ascertained that the Chinese would accept a settlement in which "the Young Marshal," Chang Hsueh-liang, would be eliminated and Japanese treaty rights would be safeguarded by effective guarantees on condition that Manchuria continued to be governed as a Chinese country under the Chinese flag. We fear that, as a price for their vacillations last autumn, the Western Powers are going to be faced with an ugly dilemma. For the Powers cannot possibly give their assent to a Japanese act which will be a formal repudiation of all Japan's obligations under the Covenant of the League and the Kellogg Pact. This is what Japanese recognition of Manchukuo implies. What is the Assembly going to do about it?

The Rumanian Elections.—The result of the elections to the Rumanian Chamber has been that the National Peasant Party, led by Dr. Vaida Voevod, has secured 45 per cent. of the poll. Since the Election Act of 1926 gives the Party which heads the poll, provided it obtains a minimum of 40 per cent. of the votes, a premium of

half the seats in the House, the National Peasants, with the racial minorities who make common cause with them, will have an assured control of the new Chamber, in which the Opposition consist of 28 Old Liberals, 13 Young Liberals (Professor Bratianu's Party) and a medley of small groups, including various brands of Fascists and the Peasant Party of Dr. Lupu, who stands for a policy of inflation plus forcible debt conversion. It is reported that Dr. Vaida Voevod will resign as soon as the Chamber meets in order to facilitate the formation of a reconstituted and stronger National Peasant Government. Whoever assumes control of the Rumanian administration at this juncture is undertaking an unenviable task.

The Austrian Loan.—On present indications, the League's plan for extending, on terms, financial assistance to Austria is still-born. A Bill to ratify the Loan Protocol was introduced in the Austrian Chamber on Wednesday, but the debate had to be adjourned until next week in view of patent signs that a majority for ratification could not be secured. Since the Social Democrats and the Pan-German Party have announced uncompromising opposition to the Bill, the Government can carry it—by a majority, on paper, of one vote—only if all the groups aligned normally behind Dr. Dollfuss vote in its favour; but since the Government bloc includes the fascist Heimata Party, who are most unlikely to swallow the political conditions in the Protocol, it is difficult to see how ratification by the Chamber is to be achieved, even if the Government's Christian Socialist supporters, whose attitude is doubtful, do not vote against it. We should not greatly regret Austria's refusal to ratify; very much more would still have been "lost on Mohač field." For the plan, whose main points are described by our League correspondent on a later page, had the great weakness that, while Austria's enforced renunciation of her sovereign rights in respect to the *Anschluss* question augured ill for future German (or even Italian) co-operation in dealing with the whole Danubian problem, the loan itself was calculated to do no more than give Austria another brief breathing-space. The appointment of two League representatives—one as adviser to the National Bank, the other charged with the duty of supervising the budget—was sound enough; and the 200 million schillings new money available after repaying the Bank of England credit would perhaps suffice to maintain for the better part of a year Austria's foreign debt service; but the promise in the Protocol that this temporary gain of liquidity would enable Austria, by "eliminating" the differential between the official and the "black" exchange rates for the schilling, to proceed to the removal of exchange restrictions, was surely over-optimistic. That desirable objective can hardly be regarded as practically attainable until the root problems of Austria's burden of foreign indebtedness and, still more, her economically hopeless position in the Danubian system, as that system now stands, have been solved. It was tempting, doubtless, for the Powers on the League Council to decide that it was worth while paying a moderate price to keep the Austrian problem in cold storage for a few months; but, if this stop-gap falls to the ground, it may well be a gain that the Powers will thereby be forced to face realities on the Danube the more quickly.

Lord Irwin Joins the Cabinet.—We welcome the appointment of Lord Irwin to fill the post of Minister of Education. Partisans who think more of party than of the public concern may complain that the careful balance in the Cabinet between the heterogeneous parties and sections of parties that support the National Government has been disturbed by the replacement of a Liberal Minister by a Conservative. But Lord Irwin, whose previous tenure of the Ministry of Education showed him to be a keen educationalist, really stands above party. He is precisely the type of public servant to add strength to the Government in dealing with the many great questions of the day which are far outside the sphere of ordinary party politics. In particular, his appointment,

The
MERCANTILE
BANK of INDIA
LIMITED.
Head Office: 15, Gracechurch St., London, E.C.3
CAPITAL AUTHORISED £3,000,000
CAPITAL PAID UP £1,050,000
RESERVE FUND & UNDIVIDED PROFITS... £1,217,926
Branches and Agencies throughout the East.

we hope, is an assurance to India that, in spite of all setbacks and difficulties, there will be no faltering in carrying out the policy approved by all three British parties at the Round Table Conference. Whatever the other services which Lord Irwin may yet render to the country as a member of the Government—and they should be notable—the giving of this assurance would alone fully justify this very interesting appointment.

International Lending.—The League of Nations volume on Balances of Payments in 1930 contains an analysis of capital movements, so far as figures are available, in 1931. For long-term capital movements, only the figures of new issues are available, and these are summarised, for four of the principal lending countries, in the following table:—

	(In millions of dollars.)				
	1927.	1928.	1929.	1930.	1931.
United States—					
For domestic account (including U.S. Possessions)	6,230	6,795	9,425	6,014	2,855
For foreign account	1,561	1,320	759	1,009	254
Foreign as per cent. of total ...	20.0	16.3	7.4	14.4	8.2
United Kingdom—					
For domestic account	857	1,066	776	620	207
For foreign account	675	698	459	534	224
Foreign as per cent. of total ...	44.1	39.5	37.2	46.1	52.0
Netherlands—					
For domestic and colonial account	61	131	96	123	77
For foreign account	145	107	45	103	16
Foreign as per cent. of total ...	70.4	45.0	32.1	45.6	16.9
Switzerland—					
For domestic account	79	57	131	61	125.3
For foreign account	38	18	21	60	18.5
Foreign as per cent. of total ...	32.7	23.5	13.9	49.6	12.9

The effect of the boom of 1928 and 1929 was to concentrate new issues, which were at a very high level, to a greater degree than usual on domestic investment, while issues for foreign account declined. In 1930 total issues were lower, except in the Netherlands, but issues for foreign account rose. In 1931 there was a sharp all-round reduction, which, except in the United Kingdom, affected issues on foreign account very much more than domestic issues. Now, the creditor countries cannot hope to find markets for their exports unless they either buy goods from or lend money to their potential customers. We draw attention in a leading article to the clear parallel between the decline in the foreign lending of the United States and the decline in her exports, a lesson which is all the more important to us in this country now that we have definitely rejected the alternative means of increasing our customers' purchasing power by buying from them. Sir Josiah Stamp recently warned holders of War Loan that if, after conversion, they sold their holdings and invested abroad, they might give rise to a dangerous strain upon sterling. If, however, this warning is taken too much to heart, another danger will arise. While too sudden and extensive a revival of foreign lending might endanger the foreign exchanges, a gradual resumption of lending abroad is an indispensable condition of the restoration of our export trade.

Banking Half-Year.—With the publication of the accounts of the Midland Bank last Friday, it is possible to construct a composite statement of the position of the Big Five banks at the end of June, as compared with that at the corresponding date of the last two years. The aggregate figures, it should be appreciated, obscure considerable differences in the experience of the various members of the quintet, but the picture presented by the composite balance sheet is not without interest:—

COMPOSITE BALANCE SHEET OF "BIG FIVE" BANKS.
(Million £'s.)

	June 30, 1932.	June 30, 1931.	June 30, 1930.
Paid-up capital	63.7	— 1.0	— 0.9
Reserves	44.7	— 8.6	— 8.4
Acceptances	77.9	— 31.4	— 35.9
Deposits (including undivided profits)	1,594.8	— 22.3	— 51.3
Coins, notes, balances at Bank of England and with other banks and cheques in course of collection	228.6	— 9.8	— 15.8
Ratio to deposits	14.3	— 0.5	— 0.5
Money at call and short notice	99.8	— 12.2	— 23.7
Investments	286.2	+ 23.8	+ 62.0
Discounts	255.3	+ 4.1	+ 4.5
Loans and advances	761.5	— 67.0	— 113.3

On the liabilities side, deposits have regained much of the heavy fall which took place in the second half of 1931, but they still stand at a level considerably below that of a year ago. The employment of the banks' resources shows marked changes: loans and advances, reflecting the stagnation of industry, are heavily down, while investments, which fell substantially between June 30th and December 31st last year, as a result of realisations to meet withdrawals of foreign deposits, have recovered to a level now considerably above that of June 30, 1931. The slight increase in discounts presumably reflects a large expansion in the holding of Treasury bills, offsetting a contraction in the volume of commercial paper in portfolios.

Coal Mining Results.—The statistical summary, issued by the Mines Department, shows that the October-December seasonal improvement in the situation of the British coal-mining industry was, on the whole, maintained during the first quarter of the current year:—

Period.	Tonnage Disposable (Mill.).	Costs per Ton.		Proceeds per Ton.	Profit per Ton.	Output per Man-shift.	Earnings per Man-shift.
		Wages.	Total net.				
1930.		s. d.	s. d.	s. d.	s. d.	cwts.	s. d.
1st quarter	60.0	9 2	13 4	14 5	1 1	21.94	9 3
2nd "	51.6	9 5	14 1	13 11	— 0 2	21.32	9 3
3rd "	50.1	9 5	13 11½	13 9	— 0 2½	21.34	9 4
4th "	52.6	9 3	13 7½	14 1½	0 6	21.84	9 4
1931.		s. d.	s. d.	s. d.	s. d.	cwts.	s. d.
1st quarter	52.2	9 2	13 6	14 3	0 9	21.78	9 2
2nd "	47.5	9 3½	13 11	13 10	— 0 1	21.44	9 2
3rd "	45.3	9 4½	13 11	13 10	— 0 2	21.35	9 2½
4th "	50.9	9 1½	13 6	14 1	0 7	21.86	9 2
1932.		s. d.	s. d.	s. d.	s. d.	cwts.	s. d.
1st quarter	49.6	9 1	13 6½	14 0½	0 6½	21.98	9 2

As compared with the last quarter of 1931, there was only a slight decline in the tonnage disposable commercially. The output per man-shift was higher than in any quarter since 1930. Wages, at 9s. 1d. per ton, show a slight reduction, but there was a fractional increase in other costs. The average selling price declined from 14s. 1d. per ton to 14s. 0½d. per ton, thus leaving profits at 6½d. per ton, as compared with 7d. in the last quarter of 1931. The only districts which recorded a loss are Scotland and Durham. Both districts showed a small profit in the preceding period. The situation in the coal trade has deteriorated considerably since March, and it is improbable that the relatively favourable results of the first quarter have been repeated in the April-June period.

Cotton Trade Wages.—Further developments, writes our Manchester correspondent, have taken place regarding the wage reduction movement in the cotton industry. The Central Board of the Northern Counties Textile Trades Federation, which represents the nine trade unions

involved in the weaving section, requested a joint meeting with the employers to discuss wages and conditions. A communication to this effect was sent to the Cotton Spinners' and Manufacturers' Association, who in turn replied that they would not arrange a meeting unless the operatives receded from their position taken up in April last, when they said they would not enter a joint conference committed to a further reduction in wages. The operatives' leaders considered the position afresh; a further letter was despatched to the employers on Wednesday; and the matter is again being discussed, as we go to press, by the Cotton Spinners' and Manufacturers' Association at a meeting in Manchester. These continued parleys indicate that a joint meeting will be arranged probably next week.

Unemployment and the Cost of Living in June.—Employment during June showed a further slight deterioration as compared with May. According to the current number of the *Ministry of Labour Gazette*, among the insured workpeople in Great Britain and Northern Ireland the percentage unemployed at June 27th was 22.8, as compared with 22.1 per cent. at May 23rd, and 21.2 per cent. a year ago. It is estimated that the approximate number of insured persons in employment on June 27th was 9,394,000, or 8,000 less than at May 23rd, and 92,000 less than in June, 1931. The total number of persons registered as wholly unemployed on June 27th was 1,961,769, as compared with 2,001,127 a month ago, and 1,851,421 a year ago. Those temporarily without work numbered 688,378 on June 27th, as compared with 680,664 on May 23rd and 662,141 a year ago, while the unemployed among those normally in casual employment amounted to 63,087 on June 27th, and was 12,319 less than a month earlier. As regards the cost of living in June, the index number of the Ministry of Labour on July 1st stood at approximately 43 per cent. above the level of July, 1914, as compared with 42 per cent. on June 1st, and 47 per cent. a year ago. For food alone the corresponding percentages were 25, 23 and 30 respectively.

France and Women's Suffrage.—On July 7th the Senate in Paris postponed the question of women's suffrage in France until after the recess—if not for an indefinite time to come—by referring back to Committee a Suffrage Bill which had been under debate, off and on, for about a fortnight. This is not the first time since the war that votes have been refused to women in France by the Senate's action; and to-day France is one of a curiously composed minority of five European States in which women are not yet enfranchised. Two of the other States in question are France's Latin neighbour, Italy, and semi-Latin neighbour Switzerland (Belgium, who so long kept them company, has now joined the majority). The remaining two are Yugoslavia and Bulgaria. In these last two cases the hesitation to enfranchise women for the present is not only comprehensible but manifestly prudent. In Balkan countries where parliamentary government itself is an exotic, and a very tender plant, any sweeping extension of the franchise at this stage might prove altogether too great a strain upon the whole institution's vitality. In the three West-European countries the persistence of the conservative attitude on this subject is less easy to understand, and in France least easy of all. France is in general one of the most progressive countries in the world. French women have already been admitted, with great liberality, into the professions, and have justified this liberality by the distinction which some of them have attained as doctors and lawyers and artists and scientists. And if this is true of the *élite*, it is equally true—and at least as widely recognised—that the rank and file of the womanhood of France did yeoman service during the war in field and factory; and that, without this hard work and endurance and efficiency on the women's part, the heroism of French manhood at the front would not have been enough, in itself, to carry the country through its ordeal. Why, then, this repeated refusal, by the Senate, of a political power and responsibility which, outside France, has become, in our generation, one of the

ordinary rights and duties of adult women and has long ceased to be a freakish privilege? It is obvious that sheer political conservatism here counts for much, and that in France, as elsewhere, the Upper Chamber of the Legislature is a conservative citadel. Yet in other matters the French Senate sometimes shows itself more liberal than the Chamber; and the significant point about the Senate's dislike of votes for women is that it is as strong among the Radical Senators as it is among the groups of the Right. The French Radicals dread the enfranchisement of women because they fear that, like the enfranchisement of the peasantry a century ago, it might so strengthen the Catholic vote as to put France back once again under clerical domination. Thus the female suffrage movement in France is in the unfortunate position of being in disfavour with Left and Right alike for different reasons.

Italian Trade Policy.—Our Turin correspondent writes: "The critical foreign trade situation is the most discussed economic topic of the day. Almost at the same moment that Great Britain and France agreed to abstain from every action detrimental to their reciprocal commercial interests, the French *Official Gazette* published a Decree fixing Italian exports of fresh fruits, which in July, 1931, amounted to upwards of 2,500 tons, at little more than 1,000 tons per month. Fresh vegetables, of which we exported 500 tons in July, 1931, are reduced to a maximum of 315 tons a month. When the maximum is reached, a *communiqué* at the doors of the Custom house will suspend imports. The Decree has provoked an outburst of indignation in the Press and in the economic representative bodies. The programme of the Italian Government, states the General Confederation of Industry, has been freedom of trade and abolition of obstacles to commercial intercourse; but as the foreign practice has been very different, drastic retaliations are becoming more and more imperative. The presidents of the seven em-ployees' confederations echo this statement, adding that in the next economic conference Italy should keep her hands free, unless Governments see their way to agree on immediate reductions and progressive abolition of all hindrances to foreign trade. After the outspoken free-trade speech of Signor Mussolini, at the Centenary of the Trieste and Venice Insurance Company, Free Trade is a popular slogan, but there is reason to fear that the representatives of protected industries are paying only lip-service to it, while aiming, under the cloak of retaliation, at higher and higher protection. Facts, however, point unmistakably to the urgent necessity of international agreements towards restoring the commercial comity of nations. Italy's foreign trade was at a low ebb in 1931; but the level reached in 1932 is lower still. In the first five months of the year imports totalled 3,747.1 million lire, against 5,284.9 million lire in 1931; exports, 2,763.9 million lire, against 4,020.2 million lire. The excess of imports over exports has decreased from 1,214.7 million lire to 983.2 million lire, but at a great cost." As a post-script to this despatch, we have to chronicle the fact that, last Tuesday, Italy proceeded to enact the "imperative restrictions," of which our correspondent writes. Quotas have been imposed on a long list of French and Algerian products, including wool, machinery, glass, paper, furniture, laces, pianos, artificial flowers and toys. Thus one more tariff war, aimed at the achievement of "compensated" trade, which balances most easily at zero, has been opened.

The Co-operative Outlook.—The delegate meetings of the Co-operative Wholesale Society (writes a correspondent) are being held this month. For the three months ended April 9th the sales of the C.W.S. were £20,008,917, of which £6,018,822 represented productions in its own works. While the turnover increased by £631,948, the output of the factories increased by only £186,640. Sir Henry Wilkins and his twenty-seven colleagues on the directorate see no signs of any change for the better in the general trade of the country. This is emphasised in the deposits and withdrawals from the C.W.S. Bank, which amounted to £167,579,913 in the first three months of the year—a drop of over ten millions. The bank has decided

to convert its holding of £2,000,000 in 5 per cent. War Loan to the new 3½ per cent., and is advising the distributive societies, which took up over one and a half millions of the first issue, to do the same. Export business has slowed down to £289,778—a decrease of 17 per cent. In the societies' own productive enterprises the flour mills lead with an output of £1,797,480—an increase of £253,833. But the production of margarine, influenced by the lower prices of butter, dropped by 25 per cent. to £301,947. The preserve works' output increased by 10 per cent. to £324,522, and the output of soap rose to £670,344, representing 14,759 tons. Although the boot and shoe production represented 1,042,892 pairs, of a value of £418,922, the decreases were 26,238 pairs and £67,890 in value respectively. Despite this, however, the increase of the turnover for the first three months of the year by over £600,000 justifies the optimism of the directors as to the strong position of the society in the ebbs and flows of commerce. The C.W.S. is helping the development of the co-operative milk business, which now amounts to 100,000,000 gallons a year in England and Wales. Last year thirty-two distributive societies opened new dairies; the C.W.S. will open centres for the collection and distribution of milk in Cumberland and South Wales this year. Permission is sought to open another in Berkshire, and a privately-owned glassworks at Worktop is being acquired to supply the millions of glass bottles now required for the trade.

The 1930 Census of Production.—Volume XIV of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, deals with musical instruments, sports requisites, games and toys, hats, gloves, elastic webbing and bacon curing. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
	Thous. £.	Thous. £.	Thous. £.	Thous. £.	£	£
Musical instruments ...	7,930	11,253	4,236	6,704	225	297
Sports requisites	3,054	3,019	1,592	1,620	243	197
Games and toys	1,468	1,928	705	1,104	141	175
Hats and caps	13,294	11,242	5,174	4,641	173	163
Gloves	2,219	2,934	1,008	1,243	182	172
Elastic webbing	1,923	1,659	858	842	156	153
Bacon curing	20,662	24,571	3,921	3,369	342	272

The results of the Census of 1930 in this group of miscellaneous industries compare favourably with 1924, with the exception of the bacon curing and the hat and cap trades. The substantial advance in the value of the output of musical instruments in 1930 is due almost entirely to the expansion in the output of gramophones and parts. The production of gramophones increased from 276,092 in 1924 to 774,681 in 1930, and the output of gramophone records was more than three times the number made in the earlier year. The increase in the demand for gramophones may perhaps be associated with the decline in the output of non-automatic pianos from 92,810 to 50,120. The value of requisites for sports and athletics other than rubber goods was appreciably greater in 1930 than in the previous census year, while the output of golf, tennis and other rubber balls showed a substantial decline. The output of leather gloves increased from 6,276,000 pairs to 10,320,000 pairs, and the number of fabric gloves, at 2,472,000 pairs, showed an increase of 840,000 pairs on the earlier census year. Again, the total number of hats and caps made in 1930, at 5,026,000 dozen pairs, showed an advance of 476,000 dozen pairs. The advance of 17 per cent. recorded in the gross value of the bacon curing and sausage trades is due mainly to the increase from 656,000 cwt. to 1,595,000 cwt. in the production of smoked bacon and hams. The decline in the total net selling value is a result of foreign competition at lower prices with no corresponding reduction in the price of the raw materials of the bacon curing trade.

The Zinc Cartel.—In view of the gradual decline in stocks, the executive committee of the International Zinc Cartel decided, at a meeting at Brussels on May 12th, that production should be continued at 50 per cent. of capacity. Despite the improvement in the statistical position of the metal, prices continued to sag in the absence of a revival in demand. Stocks of the associated producers, which stood at 189,300 metric tons at the beginning of the year, had been reduced to 173,840 metric tons at the end of May, and to 167,780 metric tons at the end of the past month. In the United States, on the other hand, production once more has been tending to exceed consumption. Representatives of the Cartel, therefore, met again at Ostend on July 14th. In order to arrest the downward movement in prices it was decided to curtail output from 50 per cent. of capacity to 40 per cent. of capacity, beginning on August 1st. Past experience suggests that this limitation scheme will go the way of others.

Transvaal Output in June.—The Transvaal gold output during June showed a slight falling off as compared with May. The output in June amounted to 959,011 ounces of fine gold, as compared with 965,644 ounces in May. Compared with June a year ago, there is a large increase in output, as in that month it amounted to 897,750 ounces of fine gold. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	796,270	839,782	843,857	875,452	882,801	914,576	956,784
February	785,924	779,339	816,133	815,284	818,188	839,937	914,012
March	834,340	860,511	877,380	866,523	889,370	910,998	960,035
April	803,303	824,014	825,907	872,123	868,606	882,337	949,796
May	849,214	859,479	886,186	897,598	916,213	910,279	965,644
June	852,146	855,154	862,363	856,029	867,867	897,750	959,011
July	862,134	851,861	867,211	889,480	912,652	916,843	...
August	843,854	863,345	891,863	889,601	921,081	916,425	...
September	839,939	842,118	857,731	849,553	903,176	816,024	...
October	853,296	855,743	897,720	888,690	926,561	945,113	...
November	840,276	848,059	872,464	861,593	884,753	900,510	...
December	836,187	851,235	858,761	851,134	908,492	923,353	...
Total.	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	10,874,146	...

A notable feature of the above table is the expansion of output each month since last September. The following table shows the number of natives employed at the mines during the past nine months:—

	Oct., 1931.	Nov., 1931.	Dec., 1931.	Jan., 1932.	Feb., 1932.	March, 1932.	April, 1932.	May, 1932.	June, 1932.
Gold mines	208,987	209,270	211,582	215,752	216,171	214,024	214,334	215,926	217,077
Coal mines	13,061	12,882	12,260	12,394	12,177	12,009	11,943	11,972	11,633
Diamond mines	1,517	1,429	1,402	1,598	1,363	NU	NU	NU	NU
	223,565	223,581	225,244	229,744	229,711	226,033	226,277	227,898	228,910

The number of natives employed at the gold mines shows a further expansion on the month.

North British and Mercantile Insurance—A Correction.—We regret that owing to a typographical error on page 17 of our Insurance Supplement, published last week, the trading result of the above company for 1930 was given as a loss of £262,436. The figure should have been a profit of that amount.

Overseas Correspondence.

LEAGUE OF NATIONS.

Franco-British Agreement — Austrian Loan — Economic Conference.

(FROM OUR CORRESPONDENT.)

GENEVA, July 19.

WITH one general but important reservation, the feeling here about the post-Lausanne announcements in London and Paris, especially the Franco-British agreement, has considerably modified after the first reaction of suspicion and irritation amongst various delegations. At

first the astonishment was great. With the variety of subsequent *dementis* and explanations, and with Sir John Simon's statement to the Council that it was merely an affirmation of the preamble of the Covenant, and that it is open to the adhesion of any European States besides those specially invited, misunderstandings have been diminished, but it is idle to pretend that the agreement is yet accepted frankly at its face value, or that the States excluded from the specific invitation are contented. What was not understood was why an agreement to fulfil the simple obligations of the Covenant (which has been in force for twelve years) and to co-operate in disarmament and economic questions, should have been deemed a matter for separate Franco-British agreement, and why a few other selected Powers only should have been subsequently invited to adhere. The French interpretations added to the suspicions, which were developed to a wild degree, and one authoritative Frenchman's comment was that in a few weeks' time the result would be a serious deterioration in Franco-British relations on account of the different interpretations put upon it. That, fortunately, seems less likely now. The agreement is apparently of as little significance as its text indicates. No one understands, therefore, what M. Herriot has obtained or what he has conceded, or, in fact, where the triumph lies.

The one general reservation referred to at the beginning of this letter is in regard to the tendency, noted both in this agreement and again in the resolution submitted by Sir John Simon to the Council on the monetary and economic conference, for the Great Powers to direct the League in their own way. Mr MacDonald and Sir John Simon are credited with having unduly developed what might be called the Great Power complex, in a manner not calculated to promote general good feeling. The original form of the British Council resolution was slightly improved to underline more satisfactorily what the Spanish representative called "the sovereignty" of the League. Nevertheless, both Señor Madariaga and the Irish Free State representative remarked upon the unusual procedure which Sir John Simon has adopted. The League is to summon the Conference, and is to pay for it. If the British Government continues in its desire to hold the Conference in London, presumably under Mr MacDonald's presidency, the Assembly will doubtless remind it of the standing rule that, in such circumstances, the Power making the request is expected to pay the very considerable difference in the cost to the League. It would be much more convenient to hold the Conference in Geneva, which is properly and centrally equipped.

The resolution sets up a committee of the Great Powers on the Council, plus the Norwegian *rapporteur* on financial questions, which is to sit under the presidency of Sir John Simon and to decide the place and date of the Conference, after the preparatory work has been concluded. This committee also will itself decide if and what other States are to be invited to sit with it, and it will select the three financial and three economic experts which the Lausanne Conference asked the League to add to the expert commission already established at Lausanne to prepare the programme. It was only after some insistence that a vague undertaking was given by Sir John Simon that the International Labour Organisation should be given a share in the preparatory work. Possibly one advantage of holding the Conference in London would be to give a proper sense of responsibility to the British Government as a League member whose prestige would obviously be involved. It frequently seems to act and speak as though that were not always the case. What States put into effect the recommendations of the League's Economic Conference of 1927, which gave clear warning of the consequences of failure to act upon them—consequences too painfully come true? Great Britain certainly did not. Where lies the responsibility for the failure of the League's effort in 1930 to organise a Customs truce while new trade and economic arrangements were negotiated? The Conservative Opposition in England angrily criticised the Labour Government at that time for its efforts to obtain success, and was elated at the failure, to which their criticism largely contributed. The work of

the League's Economic and Financial Organisation, which has been going on persistently for years, must be the basis of the forthcoming Conference; the ground has been largely prepared. What is needed is that the States should at last take action. It will be a vast and difficult undertaking, but should take place in more favourable conditions than hitherto.

A strange "first fruit" of Lausanne in the realm of political appeasement is the acceptance of French political conditions in order to secure her share of aid to Austria. The result is that there is considerable doubt whether the Austrian Parliament, which considers this matter to-morrow, will accept the plan, and that Germany has dissociated herself from it. The Government experts, appointed on the insistence of the Great Powers to collaborate with the delegation of the Financial Committee on the subject, have, after months of delay, agreed to the action in the form of a loan of 300 million schillings, the participating Governments either guaranteeing the loan or putting the money in some other way at the disposal of the Austrian Government. The loan will be concluded for twenty years, and, for the most part, will be devoted to consolidating the existing short-term obligations. The Austrian Government agrees to take the necessary measures to re-establish and maintain budget equilibrium and to carry out a programme of budget and financial reforms. The proceeds of the loan will be utilised in agreement with a League Commissioner and an adviser to the National Bank. The British Government is guaranteeing 100 million schillings, which is not new money, but represents the transfer of short-term to long-term credit, covering the advance of the Bank of England a year ago. France is contributing 100 millions, Italy 30 millions, Belgium 5 millions and the rest is being covered by several countries, including Holland, Czechoslovakia and Switzerland.

The protocol, which is based on that of 1922, provides, through the Commissioner, for a return to League control, prematurely suppressed in 1926, and involves a new engagement on the part of Austria not to alienate her independence—in other words, no talk of *Anschluss* for twenty years. This is the political condition which disturbs Austrian and German opinion, and the German Government has abstained from participation in the plan on that account. It promises to make its own individual contribution, which is reported to be in the form of a 7 million schilling credit. Germany's representative on the Council declared that assistance to Austria should not be bound up with political conditions. In the report to the Council, the hope was expressed that this collective effort might facilitate the first step towards the abolition of existing hindrances to trade in Central Europe, and that, as the previous effort to stabilise Austrian currency ten years ago was followed by a general stabilisation of currency elsewhere, this action to-day might be followed by a recovery of trade throughout Europe. It is clear, in all reports and discussions on the difficulties of particular States, that everything depends upon the larger measures for dealing with the European situation as a whole; no tinkering will save it, and the doubt in most people's minds is whether the particular assistance to Austria has come soon enough, and whether the political conditions attached will contribute to improved relations. There is even some questioning in Austria about the financial advisability of accepting.

FRANCE.

Finance — Foreign Trade — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, July 19.

THE Senate on Friday voted the Emergency Finance Bill without a division, and on Saturday, after hastily disposing of a number of fairly important measures, both Houses adjourned for the summer recess, which would normally last until the middle of October. M. Caillaux, who is now Chairman of the Senate Finance Commission,

and several other experts belonging to the Upper House, made no secret of their dissatisfaction with many aspects of the Bill, but made it clear that the only thing to do was to make the best of a bad job, in the hope that more adequate steps will be taken at the earliest opportunity. As a matter of fact, nobody regards the emasculated Finance Act as satisfactory. It has ensured neither real reduction of immediate or future expenditure, nor increased revenue. An appreciable amount of fresh taxation has been imposed, but will not come into operation to any appreciable extent until next year. Internecine party political warfare has dominated urgent national financial needs, with the result that so far the new Chamber (as one non-party writer puts it) has "done nothing to meet the unsatisfactory Budget situation, except to impose additional taxes which will yield nothing for immediate needs."

In view of the dangerous shortage of available money at the Treasury, the Chambers on Saturday passed a short Bill authorising the issue of 2,000,000,000 francs of additional Treasury Bonds, which will ease the situation until the current year's inflow of direct taxation begins to make itself felt in the middle of July. The Chamber Budget *rapporteur*, M. Lamoureux, stated that the Treasury's available funds were reduced to 700,000,000 francs. There were still 600,000,000 francs of Treasury Bonds unissued under the law of 1926, which gave the Treasury power to issue up to a maximum of 5,000,000,000 francs to meet its necessities during periods of low water, and the Government had in sight a further 350,000,000 francs coming from economies effected in respect of the present financial year. This made a total of 1,650,000,000 francs to meet uncovered requirements of 3,400,000,000 francs between now and January 1st. In view of the fact that any large-scale conversion scheme would disturb the market, if applied at present, the only practicable source of the money required was an issue of a further 2,000,000,000 francs of Treasury Bonds. The Finance Minister, M. Germain-Martin, warned the House that when the moment came to put the Rente conversion plan into operation it would be necessary to raise again the maximum limit of issue of Treasury Bonds. He added that it was necessary only to read Bourse quotations of Rentes, and especially of the 6 per cent. issues (which closed last night at 100½ and 104½ respectively) to realise that, in public opinion, conversion was already an accomplished fact. The Bill was approved by 381 votes against 30, the Cartel groups furnishing 322 votes of the majority, while 181 deputies (who last week formed a large section of M. Herriot's "reserve majority," on the occasion of the Socialist revolt against the Ministry) abstained.

The belief that a large Rente conversion plan will be applied within the next three months has had a remarkably stimulating effect on the quotations of the ten issues dealt with in the official market. It was stated before the Chamber Commission last Saturday that the Government will in all probability convoke an extraordinary session of the Chambers towards the end of September or early in October, before the elections for the renewal of one-third of the membership of the Senate, for "the purpose of obtaining authority for 'very large conversions of Rentes.'" The project, it was asserted, will include a proposal to authorise a further issue of 3,000,000,000 francs of Treasury Bonds for the purpose of facilitating the operation. It may be recalled that under a recent Finance Act it is assured that, in the event of any conversion plan being applied, small holders of issues affected shall be given some kind of compensation for any hardship they may be called on to suffer through a lowering of yield. It is expected that the French Rente issues made in London during the war will be included in the plan, in which case it is possible that holders of these will also benefit from the relief just mentioned. The total amount of Rentes involved is expected to be in the neighbourhood of 80,000,000,000 francs.

The foreign trade returns for June indicate a slight improvement in the value of both exports and imports on the month, but resulted in the largest adverse balance since July last year, with the exception of that recorded last April. Imports totalled 2,602,000,000 francs, against

2,482,000,000 francs in the previous month and 3,917,000,000 francs in June, 1931. Exports were 1,576,000,000 francs, against 1,471,000,000 francs in the previous month and 2,520,000,000 francs a year ago. This brought the total adverse balance for the first half of the year to 5,195,000,000 francs, as compared with 6,976,000,000 francs in the corresponding period of 1931. Exports for the six months show a drop of 6,140,000,000 francs, or 38 per cent., as compared with the corresponding period of last year, while imports fell off 7,920,000,000 francs, or 34 per cent. Import tonnage was rather more than 20 per cent. smaller and export tonnage 23 per cent. down. The detailed six months' figures are:—

	First Six Months of		Differences in
	1931.	1932.	1932.
IMPORTS.	Frs.	Frs.	Frs.
Foodstuffs	7,065,933,000	5,359,903,000	- 1,706,030,000
Raw materials ...	11,239,107,000	6,839,694,000	- 4,399,413,000
Manufactured goods	4,893,716,000	3,078,938,000	- 1,814,778,000
Totals	23,198,756,000	15,278,535,000	- 7,920,221,000
EXPORTS.	Frs.	Frs.	Frs.
Foodstuffs	2,171,126,000	1,474,960,000	- 696,166,000
Raw materials ...	3,895,388,000	2,404,920,000	- 1,490,468,000
Manufactured goods	10,156,793,000	6,204,069,000	- 3,952,724,000
Totals	16,223,307,000	10,083,949,000	- 6,139,358,000

A great deal of emphasis is being laid on an alleged falling off in yield from taxation, which it is claimed is one of the great causes for the present shortage of funds at the Treasury. The revenue returns for June, however, suggest that this has been greatly exaggerated. Total yield last month from "normal and permanent" resources was 3,076,000,000 francs, or only 2.6 per cent. below that in June, 1931, and about one-fifth per cent. less than in June, 1930. On the other hand, the month's recoveries were, so far as indirect taxation was concerned, 219,700,000 francs (or 6.6 per cent.) below Budget estimates; but this would seem to be due to some departure from the normal rule of basing forward estimates on the actual results of the penultimate year, seeing that the yield for the month was within a fraction of that registered in June, 1930, and that there was certainly no ground last Christmas for assuming any appreciable improvement in the country's economic situation during the current twelve months. The worst decline was in yield from taxes on securities, which revealed a drop of over 32 per cent. on the year. The month's return from income tax and other direct imposts, on the other hand, was nearly 40 per cent. more than in June, 1931. This was due to various minor and apparently unimportant "readjustments" of assessments scales authorised by the 1932 Finance Act. Recoveries from indirect taxation for the first three months of the current financial year show a drop of 615,627,000 francs, or 6.6 per cent., as compared with the corresponding period of 1931, and were 670,441,000 francs below Budget estimates.

GERMANY.

Political Crisis — Labour Service — Commercial Policy.

(FROM OUR CORRESPONDENT.)

BERLIN, July 19.

RUMOURS are current that the Government has yielded* to the demands of the parties of the Right for the appointment of a Reichskommissar for Prussia, or for the transference of the executive into military hands. The Government's resistance to these demands hitherto has been strengthened by the knowledge that such an act of violence against the acting Government of Prussia, which is composed of the Social Democrats and of the Centre, might have unpredictable consequences, since the Prussian Government in such an event would command

* The coup d'état which took place the day after this letter was written is dealt with in our first leading article.—*Ed. Economist.*

the unconditional support of the whole of Southern Germany.

The Government's desire to avoid such an attack was subjected to a severe test early in the week. In Altona, the Prussian sister-city of Hamburg, a National Socialist procession which passed through the working class districts with provocative intent, was attacked by Communists with firearms. The Prussian police took energetic measures against the Communists, but were themselves fired upon and had to force barricades. Twelve persons were killed and a very large number injured. Sunday was a day of great unrest in other places also, as for example in Greifswald, and in many instances the National Socialists were the aggressors. The National Socialists immediately demanded, in imperative terms, comprehensive measures against Prussia, and threatened armed resistance. The Government, however, decided upon a measure which must have been far from pleasing to the National Socialists. They issued a prohibition throughout the Reich of all open-air demonstrations and assemblies, a prohibition which had already existed in Prussia before the interference of the von Papen Government. This prohibition was not altogether welcome even to the organisations of the Left, as the "Iron Front" had also prepared large open-air meetings, but it hits the National Socialists much harder, as their uniformed troops are only effective if they can hold demonstration marches. This Government decree did, however, cut off one of the principal sources of danger, as it removed the possibility of mutual organised attacks by the National Socialists and the Communists.

Nor was this the only matter in which the von Papen Government acted last week in opposition to the wishes of the National Socialists. The Government did indeed issue a new decree on "labour service," which extended the scope of this emergency work for the unemployed, but they did not do as the National Socialists wished, and introduce compulsory service; participation was still left to the free choice of the unemployed. They appointed a Reichskommissar for voluntary labour service and commissioned him to prepare a report on the necessary conditions and the appropriate form of a compulsory labour service, but they appointed to the post Dr. Syrup, the President of the Unemployment Insurance Institute, who is an energetic opponent of compulsory labour service. The so-called voluntary labour service, as it exists at present in Germany, is intended primarily to give the young unemployed a chance of using their powers in work of public usefulness which could not otherwise be undertaken, owing to lack of means.

The participants can, therefore, not be paid ordinary wages, and have to be content with their unemployment benefit and a small supplementary allowance, but the companionship and the occupation after an often prolonged period of enforced idleness are so attractive to the young unemployed that far more volunteer than can be accepted. The numbers that can be accepted are very strictly limited by the fact that the equipment and materials cost on the average four times as much per head as the relief allowance. The extension of this labour service, and especially the making of it compulsory, is a plank in their programme upon which the National Socialists lay great stress, for they see in it a solution of the unemployment problem, and, what is still more important from their point of view, a possibility of influencing with their ideas, as soon as they come into power, even those young people who are least sympathetic to them. So far they have not gone very far into the financial aspects of the problem. At first the unions and the Socialists looked upon labour service with mistrust, but they have gradually become convinced of its psychological advantages, and only ask, very emphatically, that the work carried out under this scheme shall, whatever happens, be "supplementary," that is to say, shall not be allowed to come into competition with work done for ordinary wages.

The opposition to the systematic exclusion of German imports has greatly increased, especially in business circles. The movement is due to the clear recognition of the fact that exclusion of imports necessarily leads to a

complete cessation of exports. The managing committee of the Deutsche Industrie- und Handelstag has presented a memorial to the Government in which this great organisation declares, "Germany needs a substantial import of food and raw materials, and therefore is not free to choose whether she will maintain her connections with world economy or not. On the other hand, she exports mainly finished goods upon which most of the exporting countries are by no means dependent." The Industrie- und Handelstag gives a warning against the introduction of a policy of general exclusion before it is known whether the World Economic Conference and the other international negotiations will not open the way to co-operation. The Dusseldorf Chamber of Commerce has passed a similar resolution. The Kiel Institute for Ocean Transport and World Economy has concluded its work in connection with the Commission of Enquiry into German Economy by the publication of a comprehensive volume, in which it declares that Germany cannot live without exports, and, therefore, must not on any account adopt a policy of autarchy.

AUSTRIA.

League Loan — Credit Anstalt — Tariff War.

(FROM OUR CORRESPONDENT.)

VIENNA, July 18.

WITHIN the next few days the currency and budget problems of Austria will have to be handled decisively. The Council of the League of Nations in Geneva has approved the agreement concerning an international loan of 300 million schillings, but it seems unlikely that the loan agreement will meet with the approval of the Austrian Parliament. There is very strong opposition, particularly from the national parties, on account of the fact that the inhibition of union between Austria and Germany, as laid down in the Geneva Protocol of the year 1922, is prolonged for a further twenty years. Other foreign rights of control are also criticised. Even from the purely economic point of view the loan has certain defects, though the Austrian crisis is so acute that most of the objections might have to be waived.

It has been impossible to avoid a prohibition of remittances abroad, but this is only the legal confirmation of the state of things created by a decree of the National Bank on June 23rd. The prohibition of remittances to cover foreign debts applies to all loan debts contracted either by public bodies or by private enterprises, but it does not extend to debts for merchandise, estimated at at least 300 million schillings; these obligations are affected by the foreign exchange regulations, which in practice restrict payment to the channels of the clearing and compensation agreements. The interest service of the loan debts is also estimated at about 300 million schillings, of which about 200 millions come under the heading of public debts. The decree prohibiting remittances abroad provides that Austrian debtors must pay their current commitments, converted at the official rate of exchange, into a special fund at the Austrian National Bank. The Bank keeps the amounts thus paid in a blocked account, but will use them for the benefit of the creditors, who, however, have no right to take any proceedings against the debtor.

These regulations are much better than the regulations governing the transfer moratorium now prevailing, for instance, in Hungary and Bulgaria. In those countries the creditor has practically no possibility of disposing of his blocked credits, while in Austria he will in general be free to purchase merchandise, and the blocked money can also be used for purposes of travelling in Austria. For the League of Nations Loan and the Federal Loan, 1930, the requisite amounts in foreign exchange are in hand, otherwise only schillings can be remitted. The short-term commitments of the banks, which now amount to 18 million dollars, do not come under the exchange prohibition; the standstill agreement, which was concluded in this respect, lapses within a few days.

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL
FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

In the course of this week negotiations are to take place between the Austrian Government and Sir Robert Kindersley, the representative of the English creditors of the Credit-Anstalt. The negotiations are, however, impeded by the uncertainty of the position in Austrian domestic politics. It is worthy of note that the Minister of Education, Dr. Rintelen, is to have charge of the negotiations. Dr. Rintelen is regarded as the coming great man in Austria, and he is known to be a strong opponent of State liability for the Credit-Anstalt, basing his opposition both on juridical and on economic arguments. The Government has recently offered to pay off the debt to the foreign creditors within thirty years at the rate of five million schillings per year for the next ten years and 20 millions per year in the following twenty years. At the same time, it demands a very considerable reduction of the interest.

Within the last week a tariff war with Hungary has broken out. The Austrian Government felt obliged to take energetic action, because Hungary delivers to Austria such articles as flour, fruit and vegetables, in which the bulk of the business is done in the summer months, so that a decision is imperative at the present time. The balance of trade between Austria and Hungary involves payment to Hungary of a difference of about 100 million schillings per year, in spite of the fact that the exchange of goods between the two countries has been greatly curtailed, and this state of affairs has become intolerable. Also, Austrian farmers wish to have the Hungarian importation of foodstuffs into Austria further limited. The Austrian Government has therefore issued a fresh importation prohibition upon flour, fresh vegetables, most kinds of fruit, preserves, etc., so that these articles can now be imported only under permit. It is hoped that, in view of the very old relations between the two countries, the conflict will shortly be settled, but in any case higher duties and further limitation of importation on the part of Austria must be reckoned with.

HUNGARY.

Customs War — Exchange Control.

(FROM OUR CORRESPONDENT.)

BUDAPEST, July 19.

SINCE July 15th there has been virtually a Customs war between Austria and Hungary owing to the failure to prolong the most-favoured-nation treaty, which has been in operation for six years. As there has been no commercial treaty with Czechoslovakia since December 15, 1930, Hungary is at present in a state of Customs war with the two industrial Succession States of the Hapsburg monarchy, which are the natural markets for her agricultural surplus. The result of the tariff war with Czechoslovakia

was that Hungarian exports to that country declined from 153.2 million pengő in 1930 to 24.2 million pengő in 1931, and imports have fallen from 172.9 million pengő to 50.1 million pengő. Whereas in 1930 exports to Czechoslovakia amounted to 16.8 per cent. of the total exports, in 1931 the ratio fell to 4.2 per cent. Negotiations for a new commercial treaty for the past eighteen months have been unsuccessful in spite of almost continuous parleys held simultaneously in Prague and Budapest. By 1932 the trade was reduced to a barter of Hungarian pigs against Czechoslovak timber. Great indignation is felt in Hungary that for some years past Austria has always denounced the commercial treaty at harvest time and thus made the marketing of Hungarian products exceedingly difficult. The Austrian delegation insisted this year that, in view of the precarious foreign exchange situation of their country, Hungary's merchandise exports should be entirely counterbalanced by merchandise imports from Austria. Considering that the value of the merchandise exports of Hungary to Austria have been for years more than double her imports from that country, the Hungarian delegation could not comply with the Austrian proposals. Merchandise trade figures with Austria for the past three years were as follows, in million pengő:—

	Exports to Austria.	Imports from Austria.
1929	315.6	140.1
1930	256	94.8
1931	170.9	69.5

It must be added, however, that there are several items in the balance of payments between the two countries which are largely in favour of Austria, such as tourist traffic, transit freight, investments, banking and insurance commissions, which make good a considerable part of the deficit of the merchandise trade. Therefore the Hungarian delegation offered a compensation treaty on the most-favoured-nation basis, suggesting that the ratio of merchandise trade in the future should be 100 to 150 in favour of Hungary, pointing out that the invisible items would compensate Austria for the deficit in the merchandise trade. Unfortunately the Austrians have rejected the Hungarian proposals, and it is feared that the conclusion of a new treaty will not be easy. In the absence of Parliament, the Press and various organisations are loudly demanding that Hungarians should boycott Austrian summer resorts, and the Government is urged to turn to the Council of the League of Nations, which has just reprimanded Hungary for her default on the service of the League Loan and expressed the hope that there will be a seasonal improvement in trade after the harvest which may enable Hungary to increase her transfer capacity. In view of the trade difficulties with Austria and the disappointing crop reports—wheat was greatly damaged by rust—the prospects for an improvement of Hungary's transfer capacity are very gloomy.

The National Bank has issued a detailed statement regarding the surrendered and allotted foreign exchanges for the eleven months August 1, 1931, to June 30, 1932, during which exchange operations have been subject to the control of the Bank. The surrendered export bills totalled 148.1 million pengő, and another 51 million pengő was notified to the National Bank and was allotted directly to the exporters for the import of foreign raw material. The total exports recorded by the Statistical Department in the same period amounted to 420 million pengő, or more than double the sum controlled by the National Bank. The discrepancy is due to the facts that a great deal of export is done against pengő balances of foreign creditors, that merchandise credits are accorded, and that some exporters evade the compulsory surrender of exchange and sell it in the black market. It should be borne in mind also that the Statistical Department has somewhat overstated the value of exports. The total amount allotted for merchandise imports aggregated 165 million pengő, about half of the 850 million pengő imports value as recorded by the Statistical Department. The discrepancy is due to the fact that certain foreign importers continue to trade against long-term credits and against pengő deposits, and some importation is financed by foreign exchange acquired in the black market.

SWITZERLAND.

Foreign Trade — Prices — Banking.

(FROM OUR CORRESPONDENT.)

GENEVA, July 8.

THE economic situation has further deteriorated: exports have continued to dwindle, unemployment has increased, and business is generally very slack. Imports, which aggregated 157,000,000 francs a month during the first quarter, were reduced by import restrictions and import quotas to 145,746,000 francs in April and 144,061,000 francs in May. An agreement was recently concluded with France governing the application of the quota system in the two countries. Switzerland will not reduce industrial imports from France listed in the annexe of the Franco-Swiss Convention of July 8, 1929, below the amount imported in 1931. On the other hand, France undertakes not to apply the quota to imports from Switzerland on the condition that their amount does not exceed 10 per cent. of total imports, and provided that the quantity imported in 1931 is not exceeded. At the same time, the two countries have agreed to remove certain products from the consolidated list.

German imports, especially coal, coke and malt, having reached in May the level of 1931, Switzerland prohibited further entries. The consequence was that Germany at once opened negotiations and made a concession regarding foreign exchange control. Anybody may now send or take from Germany to Switzerland up to Rm. 700 a month. This will probably encourage German tourists to come and spend their holidays in Switzerland and help to some extent the Swiss hotel industry, which is very seriously hit by the crisis.

Exports, which aggregated 73,000,000 francs a month during the first quarter, dropped to 66,482,000 francs in April and to 60,714,000 francs in May, as against 120,000,000 francs and 116,000,000 francs respectively in the corresponding months of 1931. The Government is trying to help the exporting industries, but the methods so far employed have not in the least improved the situation. State subsidies and the raising of Customs duties may for some time ease the position of the exporting industries, but by themselves they are not remedies. These industries will only be able to sell again when the tariff barriers set up in all countries have been lowered, and when Swiss production costs reach a level that will permit Swiss industrialists to compete with some advantage on foreign markets. That is why some people here are strongly advocating the adoption of an inflation policy, which might greatly help home industries by reducing the exchange value of the Swiss franc. But the Government, the National Bank and bankers as a whole are opposed to inflation, and are resolved to maintain the gold standard. Prices have already fallen, but the drop is not sufficient to lower the cost of living. It is felt that a general effort should be made with a view to bringing down production costs as well as sale prices, but the difficulty is that in Switzerland many products and articles are in the hands of big combines, which dictate their prices to retail dealers. The cost of living, which has already dropped to 140 (1914 = 100) might be several points lower, but it seems almost impossible to bring about a substantial reduction so long as Customs duties and salaries are so high.

The other day the Swiss Parliament approved a Government proposal to create a special Federal Loan Fund, the capital of which is to be, at first, 275 million francs. The object of that fund is to provide the Swiss banks with the necessary money in case there should be a run on them or foreign investors withdraw suddenly the sums they deposited in Switzerland. That decision had an immediate effect on the Bourses, where, during the past week, the value of bank shares and securities rose by several points. There is more activity on the Bourses than there has been for the past eight months. The situation of the Swiss banks remains good on the whole, though many of them suffered losses through the Kreuger and Toll failure.

POLAND.

Port Rivalry — Budget — Bank of Poland — Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, July 6.

RELATIONS between the Free City and Poland are growing from bad to worse. The Polish Government not only give their importers every encouragement to use Gdynia in preference to Danzig or any of the German ports, but Gdynia is being increasingly used for overseas transit traffic to Central and Southern Europe. Its full development only awaits the completion of the new railway from Upper Silesia direct to Gdynia, the building of which is being financed by France. The following table shows the volume of goods traffic through the ports of Danzig and Gdynia during the past three years:—

Year.	DANZIG.		GDYNIA.	
	Incoming.	Outgoing.	Incoming.	Outgoing.
	(Metric tons.)			
1929	1,792,950	6,766,699	324,298	2,497,893
1930	1,090,631	7,122,461	506,037	3,122,294
1931	754,300	7,576,205	558,348	4,741,563

Despite the most rigid economy (save as to military expenditure) the Government have not yet succeeded in contracting expenditure to the level of revenue. Budget income during the financial year ended March 31, 1932, averaged close to 190 million zlotys per month. Revenue collected in the first two months of the present year amounted to 370 million zlotys. The monthly average of budget expenditure last year was over 200 million zlotys (there was an apparent deficit for the year of 204 million zlotys, but the books are not yet closed), while for April zlotys, but the books are not yet closed), it was 388 million zlotys, and May this year, combined, it was 388 million zlotys. No the Ministry of War spending 125 million zlotys. No specific provision has been made in the present year's budget for war and war relief debt charges, but there is not expected to be any serious difficulty in meeting external commercial debt services, whether for the State or subordinate authorities. These are quite small on a *per capita* basis, but onerous enough considering the very low prices which Poland is now getting for her exports. Purely in their own interest, creditor countries are short-sighted in not forthwith revising debt contracts which are working out with such extreme disadvantage to the debtors.

Poland still has a certain mark of distinction in being one of the few debtor countries which has not yet found it necessary to impose restrictions on the transfer of foreign exchange. The position, however, is steadily growing more uncomfortable, and, despite the commendable determination of the authorities to withhold the imposition of artificial restrictions as long as they can possibly do so, they cannot much longer defer more drastic action for checking the loss of gold.

The Bank of Poland at the end of May reported a gold bullion holding of 555 million zlotys, foreign *devisen* serving as cover 38 million zlotys, and foreign *devisen* not serving as cover 117 million zlotys—a total of 710 million zlotys. The comparative figures at the close of 1931 were 600, 88, 125 and 813 million zlotys; and, one year previously, 562, 288, 124 and 974 million zlotys. The loss of more than 100 million zlotys during the first five months of 1932 has occurred notwithstanding the very severe import restrictions which were imposed in January last. Concurrently with the loss, the Bank of Poland has further contracted currency circulation by 115 million zlotys (to 1,103 million zlotys on May 31st), and decreased its bill portfolio by 83 million zlotys (to 637 million zlotys on May 31st). On the other hand, its non-interest bearing advance to the Ministry of Finance has been increased from 20 million zlotys to 50 million zlotys—no doubt to cover a portion of the Budget deficit. Despite the continuous gold drain which has been going on for close on three years, there is still a legal "cover" of 46.94 per cent., so that no immediate concern is felt over the Government's ability to continue to maintain the present gold parity of the zloty.

During the first five months of 1932 Poland had an excess of exports over imports valued at 99 million zlotys (exports 461 million zlotys, imports 362 million zlotys), as against an "active" foreign trade balance of 113 million zlotys for the same months of 1931, when exports amounted to 789 million zlotys and imports to 676 million zlotys. With the monthly import figure now down to a value of 73 million zlotys (for May), it is realised that further reduction is almost impossible. Imports have now been restricted to absolute necessities for the economic survival of the State, but the present surplus of exports over imports is inadequate to meet capital withdrawals, merchandise credits previously contracted and now maturing, and foreign debt services. It is abundantly clear, therefore, that Poland must secure a new external loan, or compel the countries with which she has an adverse trade balance to take more exports from Poland, or impose restrictions on the transfer of balances abroad. A vigorous rise in grain and raw material prices would, of course, be of great help, but such relief is far from imminent. It is the general belief that Poland has asked France for a loan of 600 million francs, and there are rumours that the Herriot Government have given assurances that every possible aid will be given to Poland in this connection.

JUGOSLAVIA.

Budget — Foreign Loans — Industry — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BELGRADE, July 15.

Two important statements have been issued by the Ministry of Finance: one on the preliminary accounts for the budgetary year 1931-32, and the other on Yugoslav State debts. According to the first, 10,925,549,000 dinars (£40,000,000 at par), or 82.5 per cent. of the budgetary estimate of 13,288,102,000 dinars was realised. Against this sum is to be placed expenditure of 10,801,235,000 dinars, which gave by March 31st a temporary surplus in favour of the State of 624,000,000 dinars. This surplus has already been earmarked for the payment of arrears and of the floating debt accumulated during the budgetary year which, together, amount to 757,500,000 dinars. The actual deficit, therefore, is 133,500,000 dinars, but part of this may still be made up, as the financial year ends on August 31st, and by that date some arrears of revenue may be collected. Of the individual items, customs have yielded the poorest receipts; monopolies have given a profit of 1,609,000,000 instead of 1,839,000,000 dinars; railways had a deficit of 135,000,000 dinars; while direct taxation yielded 1,771,000,000, against the 2,006,000,000 expected in the budget.

The statement on debts, which is the first complete public statement issued since the war, gives the amount owed by the State on July 1, 1932, as 38,783,557,636 dinars (£141,000,000 at par). Of this sum 9,195,718,852 dinars, or 25 per cent., is due on pre-war debts; 3,586,966,230 dinars on the debts of the former Kingdoms of Serbia and Montenegro as well as on the debt taken over from the Austro-Hungarian Monarchy; 3,016,871,651 dinars on various provincial debts; 2,450,119,557 dinars

PITMAN'S THEORY & PRINCIPLES OF CENTRAL BANKING

"A critical and stimulating study."—THE ECONOMIST.

Order from a bookseller or

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

for the purchase of the Southern railways, and 99,656,115 dinars for the purchase of the Oriental railways. Post-war debts abroad amount to 8,684,679,602 dinars (£81,590,000 at par) and come under five heads: the 8 per cent. and 7 per cent. gold dollar loans concluded with the U.S.A. house of Blair and Company for the building of the Adriatic railway, 2,507,363,000 dinars; the 5 per cent. loan from France for armaments, 593,998,634 dinars; the 6½ per cent. monopoly loan given by Kreuger's concern, 1,236,400,000 dinars; and the 7 per cent. stabilisation loan of 1931 of 2,248,577,185 dinars. Under this head should be reckoned also a surplus received from Germany over and above the Dawes plan of 2,098,350,000 dinars. The third group, that of post-war internal loans, is the smallest, and amounts to only 6,020,315,000 dinars. Most of this is due to nationals as compensation for damage sustained during the war, viz., 4,516,900,000 dinars. The 7 per cent. railway construction loan of 489,860,000 dinars and the two debts on 4 per cent. and 6 per cent. bonds issued to large landowners for the expropriation of feudal estates, make up the remaining sum. The largest share of debts comes under the heading of war debts, and amounts to 12,882,834,181 dinars, or 35.5 per cent. of the grand total. Most of this sum is owed to Great Britain, whose claim amounts to 7,191,455,040 dinars; 3,463,325,000 dinars are owed to the United States, and 2,228,954,141 dinars to France. The total debt of 38,783,500,000 dinars, if reckoned on a population of 14 millions, gives a burden of 2,770 dinars per head, with an annual debt service of 112 dinars, a sum which would be very light in normal circumstances. Subtracting the sum due on war debts of 12,880,000,000 dinars, the remainder of the debt would be only 26,000,000,000 dinars, or 1,850 dinars per head, with a service of about 80 to 85 dinars.

Economic conditions have changed little in the past two months; business and trade are still poor; bankruptcies are more numerous than in 1931; the tourist season is slack, and whatever improvement there may be is more or less of a seasonal character. A clearing agreement with Czechoslovakia, following the recent arrangements with Switzerland and Italy, has helped to ease the "black bourse," and foreign currencies, although still tight, are not so unobtainable as two or three months ago. Unemployment, too, is on the down grade, partly because many peasants who came to the towns in search of seasonal work have returned or are returning home for the harvest season. Much labour is also being absorbed by the building trade, where quite a boom has developed. This, although not due to flourishing conditions, but rather to a feeling of general uncertainty, has brought considerable work to subsidiary industries, and the number of buildings to be erected this year already exceeds that of last year. Money is also slowly returning to banks, and cautiously finding its way into Government securities. No large movement has developed, it is true, in either of these two directions, but the trend on the whole is favourable, although the Lausanne agreement has failed to make any marked impression on the popular mind. The harvest is still uncertain, as blight has affected some of the northern districts, reducing the yield by 40 to 50 per cent. On the other hand, copious rains have had a good influence on maize. The gloomiest picture is naturally that of foreign trade. The total volume, which for the first five months of 1931 was 4,162,000,000 dinars, has shrunk to 2,812,000,000. Of this sum 1,187,400,000 dinars were spent on exports, and 1,125,400,000 received from imports, the deficit in the trade balance being 62 million dinars, as against a deficit of 231 million dinars in 1931.

TURKEY.

Budget — Shipping Monopoly.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, July 4.

THE ratification of the Turkish Budget for the financial year beginning in June has now been completed. The usual habit of basing the estimates on the average of the past three or five years was abandoned, and the very low

revenue returns of last year were taken as the normal, though this meant a compression of expenditure in every department. The year 1932-33 has opened with a deficit from the previous year of £T.10 millions, and this would have been much greater but for special taxation pushed through in the later months. As the total revenue collected last year only amounted to £T.161 millions, and the last seven months showed a progressive diminution of returns, the estimates for the present Budget have been kept down to £T.169 millions. These estimates take into account the probable returns of the new taxes, called the crisis and budget-balancing taxes, which are put down at £T.24 millions. It is evident that the Government expects a still further diminution in the normal earnings and taxable capacity of the population. Certain calculations state that the agricultural class has undergone a loss of £T.100 millions in the past year owing to the low price of wheat. This has induced the Government to bring in a law obliging the Agricultural Bank to purchase a million and a half bushels from the peasantry this year and undertaking the general task of controlling the wheat market, with the object of assuring the cultivator due returns, and thus keeping up his taxable capacity.

The most important item on the expenditure side of the new Budget is the public debt service. This amounts to 49 millions, as compared with 30½ millions last year. The increase is caused by the falling due of engagements previously contracted by the Defence and Public Works Ministries. Though negotiations for prolonging some of these debts have been entered into, they have not yet been carried through successfully. It is noteworthy that of the State's debts to individuals all those dating from the old regime have now been paid off, except a million Turkish pounds. The next largest item of expenditure will be the defence forces, which will absorb just over £T.40 millions, a diminution of £T.19 millions in comparison with previous years. The Angora administration has always maintained its defence expenditure at about one-third of the Budget, and the fact that this year it has brought it down to a quarter is a notable change. Apart from the economic pressure which has forced it to do this, it is probable that the intention of the Government to accept the invitation to Turkey to join the League of Nations has had some influence. Nothing, however, has been admitted which in any way diminishes the efficiency of the defence forces. The number of army conscripts is now, for instance, 175,000, as compared with 140,000 five years ago, but the rationing system has been cheapened and now costs only about fourpence per soldier.

Despite the representations of Turkish shipowners, the Government has decided to constitute a State shipping monopoly. The new merchant fleet thus constituted will consist of 141 units, of which 45 belong to the Government-owned company the "Seiri Sefain" and the rest to private shipowners. The tonnage of the former amounts to 46,000 out of the total of 94,408 tons. The Bill brought in by the Government arranges for the purchase of the privately-owned ships and their amalgamation under a State administration. A commission of experts will carry out the valuation, two for the State and two for the private shipowners, assisted by an expert from Lloyd's. When the monopoly is created it will cover all transport of passengers, cattle and goods between Turkish ports. The Government took this decision on account of the considerable disorganisation in the carrying trade which now occurs owing to the competition of many small private owners—a disorganisation which extends to times of sailing, fares, comfort, and so on. The new administration will unify shipping in these directions. Some of the private shipowners at present only possess one or two units of small tonnage. It is thought that it may be necessary later to create a Ministry of Transport to deal jointly with shipping, railways, and posts and telegraphs, or, at any rate, to form an under-secretariat for the new State merchant marine.

Letters to the Editor.

AMERICA AND WAR DEBTS.

TO THE EDITOR OF THE ECONOMIST

SIR,—In your leading article of June 11th, under the title of "Lausanne," you take cognisance of what is apparently a growing view in Europe, that the easiest way out of the *impasse* of reparations and war debts is for Germany and the ex-Allies to declare unilaterally their defaults *en série*. You regard such a policy as neither "helpful nor hopeful," without disputing the economic logic. Your objection is contained in the following sentence: "From such a situation the confidence of transatlantic investors, to say nothing of good international relationships, could scarcely be expected to revive."

So far as "good international relationships" are concerned, it is fair to suggest that in dealing even with a people of primitive political instincts your expectation is too simple. When the American taxpayers acquire a burden from European taxpayers, the tactics of the operation are likely to be felt to be quite immaterial. The hocus-pocus is too transparent; realising that America in effect had been compelled to forgive the debts, Americans might feel a more lasting resentment than if the debts had been repudiated. With respect to the "confidence of transatlantic investors," the view that intergovernmental debt must be determinative therein implied is that Europeans could not borrow subsequently from Americans if European Governments repudiated their debts to the American Government. If Germany repudiates reparations payments, she does so in order to conserve a minimum standard of living and ensure the validity of Government debt to foreign nationals and of debts of

German nationals to foreign nationals. If, failing to receive reparations payments from Germany, Germany's war creditors repudiate their debts to the United States, this will be done for the same reasons. These are the valid reasons for repudiation of the intergovernmental debts, and the validity depends upon strict concordance of the economic facts. To urge that the "confidence of transatlantic investors" (meaning nationals contemplating commercial investments abroad) must be more injured by frank repudiation than by cancellations secured through a transparent political manoeuvre, is to cast reflection on intelligence on both sides of the Atlantic. As Sir A. Salter has put it without evasion, the war debt due the United States must be paid by European taxpayers who owe it or by American taxpayers who do not owe it. The resistance in the United States is due to the failure of Europeans to convince Americans, cognisant of the ways in which the gross income of Europe is disbursed, that incapacity to pay is factual. The Americans who visit Europe and those who follow European periodicals find it difficult to escape the inference that Europe finds it hard to pay for the last war because it costs so much to prepare for the next. When Americans are convinced that reparations and war debts cannot be paid in equity to the masses in the debtor countries, unilateral repudiation will give less offence than a staged cancellation.

The *impasse* is essentially due to distance and differences of experience and outlook. If Europeans will recall how little has been accomplished in the solution of the political differences between the various European countries since the war, the failure to reach an accord with America in respect of war debts is hardly surprising. Also, it need not occasion surprise if Americans reach the view that were war debts once formally repudiated, war loans would not be granted in the future.—

I remain, yours very truly,

Stanford University, California.

BOOKS OF THE WEEK.

Business and Science.

"TRADE must not be entered into as a thing of light concern, it is called business very properly, for it is a business for life, and ought to be followed as one of the great businesses of life; I do not say the chief, but one of the great businesses of life it certainly is: trade must, I say, be work'd at, not play'd with; he that trades in jest, will certainly break in earnest; and this is one reason indeed why so many tradesmen come to so hasty a conclusion of their affairs."

So wrote Daniel Defoe in "The Compleat English Tradesman," more than two hundred years ago; and, surveying the present condition of the world, one is bound to reflect that it shows little signs of having digested Defoe's advice. All around, in every country, one sees tradesmen "coming to a hasty conclusion of their affairs"; tariffs, quotas and protections of one kind and another suggest a very promiscuous "playing with trade"; while across the Atlantic, at least, many who "entered into trade as a thing of light concern" now certainly "breaking in earnest." And why? Can it, perhaps, be connected with simple lack of study? Or, to put it more correctly, with that absence of realisation that there is anything in business, in trade and production, which can possibly be the subject of study, which has for so long been the cardinal belief of the bulk of British business men? Many have observed that the subject of economics, which deals with "one of the great businesses of life," is a subject so entirely undiscussed in school curricula that the average child commonly proceeds to university or factory without having any idea of how, or through what channels or organisation, his daily wants are in fact supplied. Others, more cynically, have remarked that if it were thought desirable that such information should be given in schools it would in practice prove impossible, since the authorities on economics would never agree upon the contents, scope or method of presentation of their subject. Others, again, like Mr. H. G. Wells, have complained that whereas the writer

on science or history can find in libraries and museums tabulated and catalogued information on many, if not all, of the points he desires to cover, the sort of information required by a would-be encyclopaedist of economics is for the most part non-existent, at any rate uncollected; and where collected, collected in so many different ways and upon such differing principles as to make it of far less use than it might be. Perhaps it may serve as a summing-up of all these reflections if we note that, in the words of the most interesting contributor to the first of these volumes,* to-day, *for the first time* (italics his), the British Association includes in its programme of sectional meetings, concerned with progress in this or that specialised branch of scientific work, a more general section devoted to industrial co-operation."

One would not expect the first venture of the British Association to cover the field in at all a complete, or even a very scientific, way; none the less, there is material of value, and much that is interesting in this collected report of papers and discussion. It is divided into five sections, dealing respectively with the study of management, with training for management, with "body and mind at work," including incentives and physiological factors, with "some higher management problems," meaning rationalisation of distribution and utility of trade barometers,

and with development of invention. Of these, the last section, being devoted mainly to the technical problems of patent law and practice, is the least interesting to the general public. In the others, the criticisms already mentioned find full play. Even those who are disposed to attach most weight to trade barometers complain bitterly of the inadequacy of the statistical material on which they are based, and the advocates of rationalisation seem to feel strongly the lack of proper information about the costings and results of advertisement, for example; while in discussing methods of university training for managerial posts the Birmingham Professor of Commerce sardonically quotes the report of a Cambridge University Syndicate, actually issued in 1931, to the effect that "Any degree course necessarily has one of two primary objects: it is designed either to train the candidate to think, or to impart useful knowledge. The Honours Tripos is designed to meet the former alternative; it is the aim of the Syndicate to urge the latter as the object of the Pass Degree" (italics ours). The utterly destructive view of the older universities that useful knowledge is a hindrance to higher thought, and, conversely, that those lower beings who have to learn facts will learn them better if they are discouraged from thinking about them, could not be more aptly expressed. Nevertheless, this book describes interesting experiments at home and abroad in the training both of candidates for management and of the higher class of managerial workers, such as drivers of buses.

Both the section on rationalisation and that on incentive may strike the student as somewhat lacking in profundity. The rationalisers, in their anxiety to show that by rationalised expenditure on advertising and salesmanship more goods can be sold at a less cost, appear to be ignoring the question of competition on the wide scale, in fact, where and by what means firms are to dispose of the goods whose distribution has been thus rationalised; though Major Urwick (whose two contributions to the book are admirably stimulating) has contributed an acute analysis of the underlying causes of the present-day "consumption deficiencies." Similarly, the discussions upon incentives hover between the immediate stimulus which may make a group of small girls thread more needles, and the very wide and almost philosophic question of what induces, or can induce, the wage-earning part of industry, under present conditions, to work—obviously too large a question to be briefly answered. As a sign of changing opinion, and as much almost for what it does not say as for what it does, the book is a valuable five shillings' worth.

Mr Crowden's three reprinted lectures are valuable chiefly for the very full bibliographies appended to each chapter. Otherwise they are, though interesting, rather slight for reprinting at this price.

SHORTER NOTICES.

"Red Russia." By Theodor Seibert. Translated by Eden and Cedar Paul. (London) George Allen and Unwin. 425 pp. 7/15s.

This latest addition to the now formidable array of books and reports on Soviet Russia is the work of a German journalist who was resident in Russia from 1925 to 1929 and travelled widely in various parts of the country. It was first published, in German, in February of last year, and the third edition, from which the English version is translated, appeared in October; so that the book must have enjoyed a wide circulation in Germany. It possesses most of the characteristics usually attributed to journalists, including a vivid picturesque style and an impressionistic mind, as well as a distinct inability to keep that mind clear and to sort its impressions into an intelligible whole. This is especially clear in his general conclusions. He is, on the whole, definitely anti-communist; but he is so convinced (and rightly convinced) that many opponents of Russian Communism oppose it on false and impossible grounds that it is not always easy to understand on what grounds he is basing his own opposition, whether on the admission of Russian Communists to ideals with which he does not agree or to failure to live up to their own. The latter seems to be the most prominent ground of indictment; but if so, it is idle to attack the Soviet authorities for their repudia-

tion of Western theories of jurisprudence, which is part of their own basic theory. Certain inconsistencies are also visible in his book; e.g., his account of the absence of any real discussion in the Communist Party (as well as in the Central Soviet system) seems hardly to square with the even longer account of the fierce controversy at the Fifteenth Congress which resulted in the downfall of Trotsky and his friends. Nevertheless, such discrepancies are as much a tribute to the honesty of Herr Seibert's observation as a criticism of his powers of synthesis; and he has certainly made a real attempt to give what credit he thinks is due to a regime which he dislikes. The main theme of his book is political; the economic section is short and scrappy, which is unfortunate; and he omits altogether, except for a few references to maternity care, the very important aspect of public health and child welfare. Taken as a whole, the book is less comprehensive and less informative than Mr Calvin Hoover's work; but it is more up to date, and contains interesting and suggestive passages. The translation is, as usual with these translators, of high quality.

"Austria of To-day." By V. W. Germain. 294 pp. (London) Macmillan. 12s. 6d.

The author is well qualified for writing this book, for he has been in intimate personal contact with his subject. He was a prisoner in Austria during the war; he has revisited the country since, and is apparently living there to-day; and he has Austrian family connections. At the same time, Mr. Germain does not fall into the error—not uncommon among experts—of seeing nothing but the limited field of his expertise. He is interested in Austria as "an economic sore toe" of Europe—a European country which is often the first to feel the rubs and aches which afterwards come to afflict the whole continent more or less. The book is comprehensive. It begins with a sketch of the old Hapsburg Monarchy, gives a good account of the débâcle of 1918, and carries the story down to the world crisis, with one or two interesting "cross-section" chapters (e.g., a chapter on the Austrian Police), interspersed in the narrative, and with some useful financial and economic appendices. Many of Mr Germain's chapters, of course, re-traverse ground which has already been covered in more elaborate and more authoritative works; but Mr Germain has given us something valuable of his own in putting the whole story together; and he draws really interesting character-sketches of leading personalities in Austrian post-war politics: the Social-Democrats at the moment of the débâcle; and the Social-Democrats' more effective successors, the police-official Schober and the Roman Catholic ecclesiastic Seipel. The author also gives an interesting glimpse of the attitude of the younger generation in Austria. The furnace of affliction appears to be producing a new Austrian temper in the young which is something very different from the easy-going fecklessness of the Viennese bourgeoisie in the days when the Dynasty did everything for them. According to Mr Germain, Austria is not likely to resign herself to her post-war fate, or to allow the rest of Europe to take her plight for granted. No doubt, there will be more chapters to be added in the second edition—and these may prove not the least interesting part of the post-war record.

GREATER LONDON AND COUNTIES TRUST.

A good deal of attention was aroused a few years ago, when the Greater London and Counties Trust began to acquire properties of electricity supply companies in Great Britain. The reason was that the Trust was controlled by Utilities Power and Light Corporation (Canada), which in turn was controlled by Utilities Power and Light Corporation of America. Thus, each new development of the Trust was represented as an invasion by American interests of a British public utility industry. The acquisitions went on from 1927 to 1931, the most important being the control of Edmundson's Electricity Corporation in February, 1928, which was purchased for 70s. in cash per £1 ordinary share. Edmundson's has now become the organisation through which the Trust holds or directs control of its many operating companies. In May this year the Greater London and Counties Trust sold the remainder of its directly owned British interests to Edmundson's for the purpose of improving its own finances and those of its parent organisation. The price paid by Edmundson's was £3,355,000 and the financing consisted of the sale of £1,000,000 5 per cent. debentures at 95½ and sale of £1,250,000 6 per cent. cumulative preference shares at 21s. of Edmundson's. The Greater London and Counties Trust also received, as part purchase consideration, 980,000 £1 ordinary shares of Edmundson's. The proceeds of the Edmundson's issues were used to pay off bank loans and an indebtedness of £2,000,000 to the Greater London and Counties Trust. It must not, therefore, be assumed that, in asking the British public, through Edmundson's, to pay cash for their British acquisitions, the American interests have in any shape or form parted with control, for they still hold the ordinary shares of Edmundson's.

Territorially, the area covered by the Greater London and Counties Trust and Edmundson's Electricity is probably the largest of any electrical undertaking in Great Britain, but with an output in 1930 of approximately 295 million units it ranks in importance after the London Supply Company (819 million units), Newcastle Electric Power Company (819 million units), County of London Supply Company (779 million units), the Manchester Electric Supply Company (447 million units), the Manchester Corporation (378 million units) and Birmingham Corporation (358 million units). The area of supply of the Greater London and Counties Trust runs, roughly, east and west through East Anglia, Cambridgeshire, Huntingdonshire and a small part of Bedfordshire. There is a gap of about 30 miles representing the area served by other distributors, and then come the counties of Worcester, Hereford, Radnorshire, Brecknockshire, Glamorgan and part of Monmouth, Oxfordshire, part of Hampshire, including the Isle of Wight, and the northern half of Dorset. It has distributing rights over the whole of Cornwall, with isolated undertakings, principally, in North Devon. Its most valuable properties are undoubtedly the Shropshire, Worcestershire and Staffordshire Company and the South Wales Power Distribution Company.

The areas covered fall, roughly, into three sections—a small section in the east, another small section in the west, and a very large section in the centre. This does not suggest that the Greater London and Counties Trust cannot carry out an effective system of rationalisation, for rationalisation of distribution depends upon good management and co-ordination in each definitive area. It will be appreciated, however, that, with the exception of the Shropshire, Worcestershire and Staffordshire Company with its subsidiaries, the group does not supply important industrial areas. The density of population in its territory is low and it has been compelled to expend a large amount of capital on distribution systems in rural areas. None of its subsidiaries, for example, in East Anglia, Bedfordshire and Cambridgeshire, with the excep-

tion of the company operating in Cambridge, has made very substantial profits. In the west section, the lack of hinterland for the Cornish tin mining industry naturally affects the earning capacity of the Cornwall group of companies. Thus, the most profitable parts of the whole group are to be found in Shropshire, West Stafford, and Cambridge, and the small isolated undertakings under the control of the Urban Electricity Supply Company. The names and capital of controlled companies are given in the table on the next page, accompanied by a map and chart which, we hope, will enable our readers the better to understand the lay-out of the group.

A close examination of the Greater London and Counties Trust may be made from two points of view—operating efficiency and finance. As regards the former, it has developed normally—not counting an abnormal year such as 1931—in the matter of output, which has increased as follows:—

1929	240 million units
1930	295 million units
1931	308 million units

In the matter of operating efficiency it is unfair to compare one group which is predominantly rural with another which is predominantly industrial, but a comparison may be made with electricity supply undertakings as a whole. The following table shows the units sold in 1929-30, the average price per unit, and the percentages of gross revenue and net profits to capital expenditure for Edmundson's and for all undertakings in Great Britain:—

Year 1929-30.	Edmundson's (excluding Inter- Company Sales).	Public Authorities (including Sales between Undertakings).	All Companies (including Sales between Undertakings).	All Undertakings (excluding Sales between Undertakings).
Units sold	294,613,000	6,169,300,000	4,897,000,000	8,666,000,000
Average price (pence per unit)	1.645	1.395	1.174	1.495
Gross revenue from sale of current	£1,991,226	£35,856,261	£23,854,969	£53,934,922
Per cent. of capital ex- penditure	15.7	17.4	18.8	16.5
Surplus from working ... Per cent. of capital ex- penditure	£950,631	£15,538,862	£12,158,128	£27,696,990
.....	7.5	7.8	8.6	8.5
Capital expenditure	£12,654,030	£200,291,250	£126,778,903	£327,070,153
Do., per 1,000 units sold	£42.95	£32.47	£25.89	£37.74

It will be seen that, in the case of Edmundson's, the percentages of gross revenue and net profits to capital expenditure are below the normal for the country as a whole.

As regards capitalisation, the gross capitalisation of the group in 1929, excluding the Greater London and Counties Trust, was about £14 millions, at the end of 1930 about £16 millions, and in 1932 over £22 millions. Eliminating duplications, the net capitalisation is now about £14 millions. The surplus available for the payment of interest, depreciation, reserves and dividends amounted in 1929, as far as can be ascertained, to little more than 8 per cent. on the net capitalisation. For all companies operating in Great Britain, the surplus in 1929, the last year for which figures are available, amounted to over 11 per cent. on all capital raised. Measured by another test, the capitalisation per unit sold of the Greater London and Counties Trust group in 1929 amounted to 0.91 shillings, as compared with an average for all companies of 0.69 shillings in the same year. Finally, as regards capitalisation per kilowatt of maximum load, the Trust again compares unfavourably with other companies, the figure being £117 as compared with £87 for all companies in Great Britain.

The British investor is, however, concerned not so much with the capitalisation of the group as a whole as with the position of Edmundson's Electricity Corporation.

In its last three complete financial years, the company has earned 8 per cent. or over, and paid 7 per cent. on its ordinary shares. The capital of Edmundson's is now £4,990,000, divided into £400,000 7 per cent. cumulative preferred shares of £1 each, 1,250,000 6 per cent. cumulative preferred shares of £1 each, and 3,340,000 ordinary shares of £1 each. In addition, the company has a loan capital of £2,365,000. The balance sheet at March 31, 1932, showed a satisfactory liquid position, with investments in subsidiaries valued at £3,931,000. The new 6 per cent. preference shares of the company are quoted at 24s., to yield 5 per cent.

We have already indicated that a flat comparison between the capitalisation of the Greater London and Counties Trust and other groups of similar size is unfair to the former, as the Trust's area is predominantly rural, with the exception of the area supplied by the Shropshire, Worcestershire and Staffordshire company, while other groups are predominantly industrial. There is no reason to suppose that the Trust will not be able to develop the sale of electricity in its area to earn an adequate return on the whole of the capital employed. At present, however, Edmundson's has £4,015,000 of debentures and preferred capital (plus subsidiary prior charges), ranking ahead of £3,840,000 ordinary capital, the latter carrying complete control. The American interests who own the ordinary shares would enhance the cover of public holders of prior stocks in a somewhat "high-gear" capitalisation if, when the group's natural expansion called for fresh capital requirements, they were to take the opportunity to issue further ordinary rather than preferred shares.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. August 9. ACCOUNT. August 11.

The tone of all markets was subdued at the opening of the three weeks' account. Business was more restricted and prices tended to sag. The news of the appointment of a Reich Commissioner in Prussia on Wednesday was received with a certain apprehension, though German bonds rallied after being initially marked down. Political developments in Italy created some concern, but their effect on prices was negligible.

After a firm opening, sellers began to predominate in gilt-edged stocks, "second-line" issues, in particular,

losing ground on the diminution of buying by non-converting War Loan holders seeking maintenance of income. Old and New "Consols" came on offer and small recessions occurred in Three-and-a-Half per Cent. Conversion Loan, though Four-and-a-Half per Cent. Conversion Loan, exceptionally, was better on Wednesday? India "long-dated" stocks were less firm and Dominion issues out of favour. Commonwealth Fives receded below par.

Among foreign stocks, a feature was a sharp relapse in German bonds, by no means wholly recovered on Thursday. German provincial and municipal issues were also adversely affected. Austrian stocks declined, on the lukewarm reception accorded to the new loan proposals. Roumanian stocks weakened on the internal political crisis. Italian twenty-year bonds were lower on the resignation of several of the Duce's Ministers. Japanese stocks were unaffected by the news of further fighting in Manchuria.

A slightly oversold position in the Home Rail market brought a moderate improvement in prices, unconnected with the week's traffic returns, which were the worst this year. Doubts regarding the payment of the Southern preference dividend were allayed by Thursday's announcement. There was very little new business among foreign rails, Argentine traffic returns being as unsatisfactory as ever.

Industrial shares were dull. The announcement of an agreement between British and Canadian iron and steel interests, on the eve of Ottawa, caused a rise of a few pence in some "heavy" shares. Cables and Wireless were easier before the meeting. Tobacco shares were reactionary and breweries lost further ground. Textile shares, however, were mainly firm. Electricity issues were steady on the County of London interim dividend. Home bank shares were easier.

Firm conditions prevailed in the Oil share market at the beginning of the week, but quotations fell away when it was found that Paris was inclined to sell. America gave little support, and Shell and Royal Dutch declined, with a fair recovery on Thursday. The shares of the Eagle companies, whose accounts are dealt with on page 187, were little changed. A slight increase occurred in rubber share activity, but Anglo-Dutch and Allied suffered moderate setbacks. Dealing in tea shares continued difficult, the amount of floating stock being negligible. In the mining share market Western Australian issues were unable to hold the whole of their recent gains, but Kafirs returned to prominence. Johannesburg was in bullish mood, and Randfontein, Durban Deep and Union Corporation were in demand. De Beers reacted, and among Rhodesians "Chartered" fell away. Copper and tin both declined, and the weakness of the former was reflected in the quotations of Tinto and Tharsis.

It is fortunate that British holdings of Kreuger and Toll "B," though representing nearly one-third of the total "B" shares outstanding, are only one-tenth of the total British interest (at par) in the Kreuger companies, since the Committee's investigations have made it clear that the prospect of holders receiving anything out of the estate of Kreuger and Toll is remote. Holders of secured gold debentures are in little better case, since a sale of the "deposited property" (consisting largely of bonds of acutely depressed European countries) would not at present produce anything like sufficient to satisfy debenture holders' claims. Whether any "nursing" of these securities would produce an enhancement of their value in a reasonable time is doubtful, and, in any case, as British holders are a small minority, they will have little say in the decision. The International Match Company is in liquidation in America, and the Protective Committee offers no remark on the probable value of its assets. The most hopeful feature of the Committee's statement is its insistence that the protection of the business and goodwill of the Swedish Match Company, in which 64 per cent. of British "Kreuger" holdings are invested, is "worth a struggle." Shareholders will support the Committee's intention to send out a representative to Stockholm to assist a local committee (which also includes three Swedish gentlemen and representatives of British Match, the liquidator of International Match and certain banking creditors) in working out a plan for continuing the company's operations. Much depends upon the disclosures of a "fact-finding report," in which Messrs. Price, Waterhouse and Company are now engaged. The British Committee is clearly right in its decision to support any reasonable policy which will maintain the company in being and prevent the dissipation of its energies and resources in complex litigation between interested parties. Seeing that British holdings are chiefly in "B" shares, it might be to the advantage of the investors concerned to agree to any arrangements between prior creditors which ensured provisional continuation of trading under sound management, even if this involved deferment of consideration of the ultimate position of the equity shareholders. It is a break-up of the business which British holders have most to fear.

Furness Withy Holdings and Earnings.—It is Lord Essendon's custom to supplement uninformative annual reports of Furness Withy by lucid reviews from the chair, and his speech, at last Wednesday's meeting, answered most questions which have lately perplexed shareholders. The "transfer from reserve," included in last year's profit figure, was £100,000 (from taxation reserve) plus non-recurring items (about £10,000) which, in a diversified business tend, in fact, to recur. Thus it would appear that earnings, on the old capital, were about 2 per cent., against a 6 per cent. dividend. More of the recent issue of ordinary capital has gone into new tonnage construction, apparently, than the board originally intended, owing to the necessity of building the "Queen of Bermuda" to replace the lost "Bermuda." The company last year made an offer to acquire an important business, but its terms were refused. More recent "very tentative discussions in another direction" may yet materialise. The issue, meanwhile, has lubricated the company's financial position; but, from the revenue point of view, as Lord Essendon frankly admitted, it has not yet been of considerable benefit. The auditors' qualifications to the balance sheets of the British and Argentine S.N. Company and Furness-Houlder Argentine Line are not regarded as significant by the parent company, in whose books the shares already stand below par. The losses made by two other subsidiaries were sufficiently small to be dealt with out of those companies' undistributed profits. Shareholders will greatly appreciate Lord Essendon's disclosure of the position as regards Furness Withy's main subsidiaries. Our readers may care to supplement the analysis of the company's interests, which we gave on page 25 of our issue of July 2nd last, by the following facts based on Lord Essendon's survey:—

Company.	Capital.	Remarks.
Economic Insurance Co.	1,000,000 £1 shares 5s. paid.	Total assets worth \$2,150,000, including over £1,000,000 British Government securities. Furness Withy owns 750,000 shares carried at par. Last profit (including carry forward), £101,825. Dividend 15 per cent. tax free.
British Maritime Trust.	£1,000,000 in £5 shares £200,000 5% debentures.	Gross assets nearly £2,000,000, "fully worth" par. F.W. owns 178,337 £5 shares carried at approximately £4. Last profits £105,446, dividend 6 per cent.
Houlder Bros.	£100,000 5% pref. £800,000 ord.	F.W. owns 50 per cent. ordinary capital, carried at half nominal value. Last dividend 8 per cent. tax free.
Bellamy's Wharf & Dock.	•	Owns freehold premises on Thames. F.W. holds whole ordinary, practically whole preference. Last dividend 12½ per cent.
British & Argentine Steam.	£375,001 ord. shares, £85,050 4½% debentures.	Last dividend 5 per cent. F.W. holds whole ordinary shares, carried at approximately 50 per cent. of par.
Furness-Houlder Argentine Lines.	£800,000 ord. shares.	Last dividend 8 per cent. F.W. holds 66 per cent. and Houlder Bros. 34 per cent. Carried in F.W. books at 12½ per £1 share.
Johnston Line	•	No present dividends. Profits retained in business. F.W. holds 25,000 5 per cent. £10 preference carried at £7 and £75,000 £10 ordinary carried at £6 13s. 4d.
Neptune Steam Navigation.	•	Last dividend 5 per cent., tax free. F.W. holds 60,018 5 per cent. £1 preference carried at 5s. 6d. and 189,764 £1 ordinary carried at 10s.
Norfolk and North American S.S.	•	Loss 1931, £7,213. F.W. holds 492,600 £1 ordinary carried at 5s. Balance held by subsidiaries. Trade Facilities loan £480,000.
Warren Line (Liverpool).	£434,260 in £10 ord.	Loss 1931, £12,282. F.W. holds £17,130 carried at £2 per £10 share. T.F.A. 5 per cent. loan of £122,430 outstanding, repayable over 4 years.
Prince Line	£1,202,990 ord.	Trade depression will probably entail further drain on general and taxation reserves for year ended June 30, 1932. F.W. holding £935,356, carried at value unaltered, but probably higher than its value to-day, excluding goodwill. T.F.A. loan £793,500.
Manchester Lines ..	•	F.W. holding (carried below par) does not give control.

* For capital see our previous table, mentioned in text above.

Lord Essendon's speech included further details of the company's far-flung interests, a realistic but cautiously hopeful estimate of the shipping outlook, and a plea for a "gentleman's agreement" for voluntary laying up of world tonnage. Altogether, as a frank exposition of the interests and viewpoint of a great organisation, the address has had no parallel in the annals of the shipping trade.

Cables and Wireless Outlook.—Mr J. C. Denison-Pender's speech secured a deservedly favourable reception from shareholders at last Thursday's Cables and Wireless meeting. He was able to show that although the group's most formidable overseas competitors had fared better in the early stages of world depression, their business had shown a much more severe decline than that of Cables and Wireless in 1931. The decision to pay a small preference dividend had been based, not on any optimism on the directors' part regarding an early and significant increase of business, but in order to cheer the stockholders, the majority of whom were small holders. The affairs of the organisation were being progressively rationalised. The recommendations of the Greene Committee of Inquiry were far-reaching, but (so far as could be gathered from Mr Denison-Pender's summary) did not question the company's basic position. The Committee had found that the fall in the company's revenue had been due primarily to commercial influences, in which trade depression and competition were material factors. They had formulated recommendations covering, *inter alia*, (1) Government approval of directors; (2) adoption of a single category of reduced rate message; (3) cost of maintenance of strategic cables; (4) rationalisation of external services in the United Kingdom, both telegraphic and telephonic; and (5) transfer to the Post Office of the whole business of collection and delivery of messages. It is clear that some of these recommendations involve delicate matters for negotiation with more than one Government. Any action taken will obviously have an important potential effect on future earnings, but as the whole matter remains *sub judice*, no statement can be made as yet. It is all to the good, however, that better relations have already been established between the company, the Advisory Committee and the Governments concerned, and

that many members of the staffs who were protected by agreement, taken over at the company's formation, have recently agreed to concessions, in the company's favour, in wages and hours. Shareholders, obviously, will be called to exercise the virtue of patience a little longer, with the assurance that the possibility of helpful action in semi-political matters, outside the board's direct control, has been brought much nearer during the last twelve months. The company, meanwhile, is free from financial embarrassment, and the question of an eventual capital reconstruction scheme may be postponed until the dimensions of "normal" earning power can be ascertained.

Distillers and the Spirit Duty.—At the annual meeting of the Distillers Company, in Edinburgh last week, Mr W. H. Ross reviewed at length the development of the industry from its effects on the industry. From taxation on spirits and its effects on the industry. From the year 1860 the duty was 10s. per proof gallon, with minor alterations, until 1909, when Mr Lloyd George increased the rate to 14s. 9d. In 1918 it was advanced to 20s. per proof gallon, in the following year to 50s., and 90s. per proof gallon, at which it had since been maintained. The rate applied to whisky, which was compulsorily bonded for a period of three years. Spirits cleared under that age paid a duty of 74s. per proof gallon. Such spirits, costing the rectifier 2s. 6d. per proof gallon, paid a duty equal to about thirty times the value of the basic material. Of the retail price of a bottle of whisky selling at 12s. 6d., duty accounted for 8s. 5½d., leaving 4s. 0½d. to cover manufacture, etc., all intermediary operations, and profits. The effect on consumption had been extremely remarkable. The quantity of spirits cleared for consumption during the year immediately preceding the war was 26,794,000 proof gallons. For the year to March 31, 1920, consumption had fallen to 17,825,000 proof gallons, while for the year to March 31, 1932, the figure was under 9,000,000 proof gallons. These figures throw into clearer relief the strength of the tactical position and policy of the Distillers Company, which has earned net profits aggregating £16,800,000 in the last eight years, and paid ordinary dividends averaging nearly 20 per cent. per annum. The development of new activities, especially as regards industrial alcohol, has been shown to be well advised.

Mexican Eagle.—The 1931 report of the Mexican Eagle Oil Company makes disappointing reading for shareholders, but there is something to be read between the lines. Net profits before depreciation amounted to \$10,057,224, a decline of about 33½ per cent., due almost entirely to the low prices of the company's products, and after allowing for depreciation of \$11,858,845 the net result was a trading loss of \$1,801,121. Until the result of a lawsuit concerning the company's titles to oil land at Amatlan is settled, payment of the first preference dividends has been postponed. However, thanks to the large balance brought forward from last year of \$8,802,651, appropriation has been made for the preference share dividend accrued, without encroaching on reserve, leaving a balance to be carried forward of \$912,313. The trading results for the past three years compare as follows:—

	(Mexican pesos.)		
	1929.	1930.	1931.
Oil sales (in barrels)	14,854,739	18,883,361	16,325,134

* Includes \$1,000,000 transferred from exploration reserve.

† Including \$728,328 accrued but unpaid.

The balance sheet shows a highly satisfactory cash position, British Treasury securities, cash and debtors amounting to over \$28 millions, against creditors of about \$13 millions. The directors in their report refer to confiscatory tendencies in some Mexican States in the matter of local expropriation laws, but add that the Federal Government has announced its intention to revise such laws in conformity with the Constitution. The directors have therefore every confidence that the Mexican courts will deliver a satisfactory judgment in the lawsuit regarding the company's titles in Amatlan, of which they have been in peaceful possession for over thirty years. The most satisfactory feature of the report is the statement that south of the Tuxpam River a new well has demonstrated the existence of an oil-bearing limestone at the depth of 7,000 feet, with every probability of a broad structure, most of which is controlled by the company. Since the exhaustion of the old, prolific fields in Mexico, the oil companies have made ceaseless endeavour to find a new oil-bearing territory, so that this discovery may be of the highest importance to Mexican Eagle shareholders. Mexican Eagle 7 per cent. cumulative preference shares (8s. 4d.) are now quoted at 7s., with dividends accrued from April 30, 1931. The ordinary shares (8s. 4d.) were dealt in at 5s. 1½d. on the report.

Canadian Eagle.—As the Canadian and Mexican Eagle companies mutually guarantee each other's preference and participating preference share dividends, the postponement of payment by the Mexican Eagle of its first preference dividends has compelled the directors of Canadian Eagle to do likewise until the matter in dispute in Mexico has been determined. The profit of the Canadian Eagle for 1931, after providing for losses on oil trading, amounted to \$1,228,594 (Canadian dollars), as compared with \$6,929,906 in the previous year. After making provision for the preference share dividend account and for a transfer to general reserve of \$3,000,000, the carry-forward was reduced from \$2,884,128 to \$180,787. The results for the past three years are compared in the following statement:—

The directors explain that the greater amount of the company's assets are sterling assets, and that practically all its revenue is obtained in sterling. The decline of over 80 per cent. in net profits is attributable to the loss on oil trading and to the fact that no dividend has been declared by the Eagle Oil and Shipping Company on its preferred and deferred ordinary shares, the whole of which the company holds. Moreover, the company has had difficulties in collecting exchange from certain South American companies in which it operates through various subsidiary companies. The balance sheet, like that of Mexican Eagle, shows a highly liquid position, British Treasury securities and cash amounting to \$6,184,440, against creditors of \$984,661. The 7 per cent. preference shares (12s. 7d.) are quoted at 10s. 4½d. and the ordinary shares at 5s.

Rhodesian Selection Trust.—Our mining correspondent writes:—Rather unexpectedly a scheme has been put forward for modifying the finances of this enterprise. At present there are in issue \$6,612,000 out of \$12,500,000 authorised 6 per cent. tax-free debentures. It is proposed to reduce the authorised amount to \$5,000,000, and to replace \$3,207,000 of the issued debentures by shares; to modify the rights of \$3,375,000, and to cancel the balance (\$30,000). From March 1st last to March, 1937, interest on the outstanding bonds is to be paid only out of profits, and is to be non-cumulative until September, 1934. The conversion rights are to be modified and extended. The debenture holders undertake to subscribe forthwith for 154,000 (5s.) shares at par and for a further 250,000 shares within three months of the ratification of the agreement. These proposals are largely the outcome of the output restriction plan which came into force at the beginning of the current year. By their adoption the company will be provided with additional funds, and will secure a marked lightening of its first-charge burdens. The Trust is chiefly interested in Mufulira Copper, whose quota is to be produced by the Roan Antelope and Rhokana undertakings jointly.

New Zealand Mining.—The effects of the exchange-plus-gold premium, writes our mining correspondent, are strikingly illustrated in the report on the Blackwater Mines for 1931. A slightly increased tonnage of ore was crushed for a substantially higher average yield at a somewhat reduced cost ratio. This, together with the "external" factors mentioned above, was duly reflected in a rise in profit to £37,300, against £10,400. After providing for income tax, and a dividend of 1s. 6d. per share tax free, the enhanced balance of £10,000 goes forward. The last preceding distribution was 6d. in respect of 1925. It is announced that the estimated working profit for the first half of the current year exceeds £25,000. No material change is shown in the ore reserve position, the tonnage representing approximately two years' supply for the mill, but the manager reports encouraging discoveries at depth on the main property. In view of these developments—funds being available—an extensive programme of work is to be carried out. Thanks to the return of prosperity to the Blackwater, the parent company, the Crusa Gold Fields of New Zealand, is making a distribution of 9d., tax free, upon its written-down shares.

Company Meetings of the Week.—On later pages of this issue will be found reports of the following companies:—Armstrong Whitworth Securities, Furness Withy and Company, Distillers Company, United Dominions Trust, Cables and Wireless, Victoria Falls and Transvaal Power, South African Breweries, Associated Tin Smelters, and Covent Garden Properties. At the annual meeting of Armstrong Whitworth Securities, Major-General Dawnay referred to the company's interest in the manufacture of road vehicles using heavy oil instead of petrol. A half interest had been acquired in a company known as Armstrong-Saurer Commercial Vehicles, which was already in production. The Armstrong-Saurer heavy-oil lorry had been successfully launched on the market, and the volume of sales was encouraging. At the annual meeting of United Dominions Trust, Mr J. Gibson Jarvie said the mortality of businesses selling on an instalment system and of banks financing them, in America, had been negligible as compared with mortality in other directions. One large company, whose volume of business for 1929 had totalled \$500 millions by September of that year, had liquidated 95 per cent. of the transactions on its books by the following September. The annual meetings of Cables and Wireless, Furness Withy and Distillers are referred to on earlier pages.

Great Marlow Water Co.—Offer for sale by tender of £8,050 5 per cent. Debenture Bonds to be redeemed at par on January 1, 1932, minimum price £106 per £100 stock, yielding at that price £4 11s. 11d. per cent. Net profit for the year to December 31, 1931, totalled £4,036, covering interest on loan capital, including the present issue, over four times.

Crowborough District Water.—Sale by tender of 1,450 new ordinary shares of £10 each, ranking for a maximum dividend of 7 per cent. Minimum price £7 per share.

COMPANY MEETINGS, &c.

ARMSTRONG WHITWORTH SECURITIES COMPANY, LIMITED.

ACTIVITIES OF THE GROUP.

CONDITIONS IN SHIPBUILDING AND ENGINEERING INDUSTRIES.

DIESEL ENGINE PROGRESS.

MAJOR-GENERAL DAWNAY'S REVIEW OF THE SITUATION.

The annual general meeting of Armstrong Whitworth Securities Company, Limited, was held on the 20th instant, at Winchester House, Old Broad Street, London, E.C., Major-General Guy P. Dawnay, the Chairman of the company, presiding. The secretary (Mr. W. T. C. Cochrane) having read the notice convening the meeting and the report of the auditors, the chairman said:—

Ladies and gentlemen: The report and accounts of your company for the year 1931 are in your hands, and I assume that, as is customary, you will allow me to take them as read.

In addressing you last year, I opened my remarks by saying that the acute depression in trade from which we were already suffering at that time was bound to cause the operations for the year 1931 to be contrast most unfavourably with those for the year 1930. I also told you that in my view the prospects for the immediate future were far from encouraging, and that I found myself unable to detect indications of an early revival. It is evident that I was not unduly pessimistic at that time. The event shows me to have erred rather in under-statement than in over-statement. The year 1931 proved to be one of the most difficult years through which industry in general has ever passed; and our own particular branch of industry is among those upon which the difficulties have pressed most severely. I shall have something to say presently about the industrial activities of our operating and subsidiary companies in amplification of that remark.

BALANCE SHEET CHANGES

First, however, I would invite you to turn to the Securities Company's balance sheet so that I may explain the principal changes which have taken place since December, 1930. On the assets side of the balance sheet, the figure under "shares in and amounts owing from other subsidiary companies" represents an increase of about £130,000, as compared with the preceding balance sheet. This is accounted for to some extent by advances in connection with the Armstrong-Saurer Commercial Vehicles Company, but mainly by our additional investment in Craven Brothers (Manchester) in connection with, and consequent upon, the reconstruction of that company, reference to which you will have noticed in the directors' report.

Trade and other investments show a reduction of £65,000, partly owing to the fact that a holding of our own debenture stock, purchased for redemption in accordance with the trust deed, which was previously included under this heading, now appears under the heading of redeemed and cancelled debentures on the other side of the balance sheet; and partly owing to the redemption of a debenture which previously formed one of our trade investments.

Work in progress and stocks remain at practically the same figure as in the previous balance sheet. Sundry debtors are lower by £160,000, for which reduction payments received in respect of shipbuilding debts are almost entirely responsible. Investments in British and other Government securities and cash are lower by £317,000. We have explained the reason for this reduction in our directors' report. The development of the Diesel-Electric department at Scotswood, the reorganisation of Craven Brothers and our interest in Armstrong-Saurer Commercial Vehicles, Limited, account for more than the whole of this reduction.

REDEMPTION OF NOTES.

As regards the liabilities side of the balance sheet, the only change of importance to which I need draw your attention is that under the heading of "5½ per Cent. Secured Notes." In the balance sheet at December 31, 1930, £140,000 of these notes, due on July 1, 1931, were included. These notes were redeemed on the due date. I may add that the £105,500 of 5½ per Cent. Notes, due on July 1, 1932, which are included in the balance sheet before you, have also been redeemed on the due date. The payments

due under the ship mortgages upon which these notes were secured have been punctually made, so that the notes have been self-liquidating.

With regard to the notes on the balance sheet, you will see that all the main subsidiary operating companies incurred trading losses during the year 1931, which have been fully provided for in the accounts. The question of the value of the deferred debts under shipbuilding contracts having been raised by our auditors, we considered it proper to add note No. 2. I would ask you to observe, however, that we have made reserves to cover losses if such should arise in the collection of these debts.

Turning to the profit and loss account, you will see that the net income for the year stands at £67,752. We have drawn your attention in our report to the fact that interest and dividends received on investments during the year 1931 amounted to just over £81,000, as against £100,700 for the year 1930. The final result is a profit for the year of £11,477, as against a profit for the year 1930 of £56,959.

THE CONSOLIDATED STATEMENT.

We have, as usual, appended a consolidated statement so that you may see the situation of our group of companies as a whole. Will you turn to the assets side of that consolidated statement.

Properties: The net expenditure during the year on new plant and machinery was £65,000, principally on account of the Diesel traction development and new furnaces at Close Works. Provision for depreciation has been provided in all operating companies' accounts.

Expenditure on reorganisation of works, plant and machinery: The amount of £23,700 under this heading represents the cost to December 31, 1931, of reorganising Scotswood Works to allow of the manufacture of the Armstrong-Saurer commercial vehicles.

Shares in and amounts owing from other subsidiary companies: The increase in shares held represents principally the Securities Company's further investment in Craven Brothers.

Shares in and amounts owing by associated companies—£185,000. Practically the whole of this sum represents our investment in the Armstrong-Saurer Company.

Floating assets: The figure standing against work in progress and stocks shows a reduction since the previous account of £265,700, which is due, of course, to the stagnation of trade. The reduction in the aggregate of investments and cash, under this heading, is entirely accounted for by the reasons which I have already given you in dealing with the corresponding reduction in the Securities Company's balance sheet.

Turning to the liabilities side of the consolidated statement, in November last the provisions of the sinking fund on our debentures became operative, and at that date debenture stock of the nominal value of £55,145 was delivered to the trustees and cancelled. Owing to the price at which this stock was acquired, this transaction showed a large saving which has been allocated to reserves.

I have already dealt with the 5½ per Cent. Secured Notes in my remarks on the Securities Company's balance sheet; and I think that there are no further items in the consolidated statement to which I need draw your attention.

THE OPERATING COMPANIES: DEVELOPING NEW LINES

As regards the operating companies, as I told you last year, the profit made by the Engineers company in the year 1930 was mainly attributable to the marine engine department. As we have said in our report, business in marine engines practically ceased to exist during the year 1931, so that this source of profit was no longer available. The locomotive and locomotive boiler business which had, in any case, been barely profitable in recent years, fell into a similar condition of stagnation. During the year under review, the total orders placed among all the British locomotive

to move in the matter. My reply is that no Chancellor has a right to consider a question of this sort from any other viewpoint than that of his own finances and the maintenance of the trade affected. It is unfortunately too true that the distilling industry has very few advocates in the House of Commons to plead its cause, but as I wish to show, there are various interests in the country which are vitally affected by the maintenance of such an industry as ours. I wish to deal with the more important of these. In the first place the whole of the distilling trade with its various ramifications for distribution and sale is vitally affected. When I speak of the distilling trade I refer not only to the corporate bodies but to the individual shareholders of all companies connected with the trade. In our company alone we have an army of about 22,000 shareholders, who, if they would exercise the influence they possess, might do much to bring pressure to bear upon their Members of Parliament, who would give voice to their opinions in the House of Commons.

HEAVY LOSS TO FARMERS.

Secondly, the farming interests are probably more concerned than any other in the prosperity of our industry, as we are one of their largest customers. It is gratifying to see that some of the farming associations are becoming alive to the position and are suggesting various remedies for dealing with the question. It may be interesting for the farmers to know that during the season 1930-31 this company carried over no less than 80,000 qrs. of Scotch barley to be converted into whisky in the distilling year just closed. It was found after going into the figures of production and consumption that the quantity of barley referred to was amply sufficient to cover our whole requirements, thus rendering it unnecessary to make further purchases during the past season. Unless some relief can be obtained shortly, by whatever means it comes about, I see no prospect of more than a mere handful of distilleries being in operation during the forthcoming season, and in that case the quantity of barley required to be bought from the farmers will be negligible. If we take it that the average production of malt whisky, after the heavy duties were imposed but before the heavy slump in production took place, required a total of at least 400,000 qrs. of barley, one gets an idea of the loss which will accrue to the farmer if this production has to cease, even for a year or two, in order to rectify the heavy stocks of whisky already in existence.

My other appeal for support in urging a reduction of the duty is to the auxiliary trades which derive their custom largely from the distillers, namely, maltsters, coopers, case and bottle manufacturers, &c., while railway and other carriers are affected in a slightly smaller degree.

I next come to a different class, namely, the consumer, who, since the high duties have been imposed, has been largely deprived of a beverage which satisfied his wants without injury but rather benefit to his health. In this connection I of course exclude those consumers who, no matter in what article of food or drink, partake to excess. I particularly appeal on behalf of a large section of our population, including the aged, sick, and infirm, who have been deprived in these later years of the nourishment and stimulation to be derived from good Scotch whisky. I can speak from personal experience during the last year and a half, when my health has been under normal. What I would like to see is a more open acknowledgment from the medical faculty itself of the benefits to be derived from such stimulants as we provide.

APPEAL TO TEMPERANCE PARTY.

My last appeal is to the Temperance Party to stop their persecution of a trade which is both honourable and legal in this country. I understand that this year is the centenary of the birth of the Temperance Movement. One can visualise what was the condition and views of many of the people of this country a hundred years ago, when even the educated classes considered there was no shame in imbibing the various alcoholic liquors more freely than was desirable. The Temperance Movement had a fruitful field in front of them to correct the views which then obtained, while education has helped them greatly to bring about an improved state of feeling. Unfortunately, the Temperance Party has not adhered to the terms of their original charter, namely, to aim at temperance, but has overstepped the bounds and attempted to force on the public what is known as total abstinence. Since that policy was adopted I think the party's influence has been on the decline. One has only to look round the world to judge of the views on prohibition at the present day. The United States, Canada (excluding Quebec Province), Norway, Sweden and Finland, all essayed to introduce prohibition into these countries during the aftermath of the war, but with the exception of America, every one of the countries has now, in greater or smaller measure, retraced its steps. It is well known that America is at present trembling in the balance. It is a proud nation, and doubtless will not like to acknowledge failure in

this matter, but the change is bound to come, even if it is retarded by the shackles with which the original legislation bound the future policy of the country.

SCOTTISH TEMPERANCE ACT.

What of our own country, Scotland? In the year 1913 a Bill was introduced, and finally passed under the title of the Temperance (Scotland) Act. As a sop to the Trade to get over certain opposition, it was provided that the Act should not come into force for seven years after it was passed, so that the Trade might have time to make the necessary provisions for the change which the Temperance Party seemed to think would be brought about. This concession had been thrown at the Trade more than once by the Temperance Party as a reason why further compensation should not be allowed to dispossessed licence holders. They apparently give no consideration to the fact that during the seven years' interval the country was engaged in the Great War with the resultant upheaval in Trade conditions, and that, therefore, the opportunity which was given to the Trade to provide in advance for any change was really lost to them. Be that as it may, the first election which took place in 1920 under the Scottish Temperance Act, instead of effecting, as the Temperance Party predicted, a sweeping of licences from the country, only produced a reduction of about 5 per cent. in the number of licences. The elections which have taken place at regular intervals since have only emphasised the objection of the people of this country to be coerced in their manner of living, and the results have receded to a reduction of less than 4 per cent. of the licences which formerly existed. It is worthy of note that if the Temperance Party had supported the Bill introduced into the House of Commons in 1922 by the late Mr. James Kidd, M.P., and thereby have made it a non-contentious measure, it would have effected a reduction of licences up to the present date of 10 per cent. in districts where such cancellation of licences was not desired, and with provision for compensation to the licence holders at the expense of the Trade itself. I sometimes think that if the Temperance Party would cease employing the telescope with its limited vision and singleness of purpose, and were to use their naked eyes with their wider, although nearer range, they might discern other evils far greater than now attach to houses provided for public refreshment.

TRADE'S UNDULY LARGE SACRIFICE.

I would again refer to my appeal to the Chancellor of the Exchequer for an early remission of the high duty on spirits, and would support this appeal on the ground that the distilling industry has been asked to bear a larger share of the increased taxation than was reasonable; that this was imposed largely as a war measure, and that owing to the peculiar conditions under which the Trade is carried on, it has involved a larger sacrifice on the part of this trade than other trades were asked to bear by reason of the fact that their product has to be produced many years in advance of the time when it goes into consumption.

Before closing, I would like to express the appreciation of the directors and shareholders of the faithful services during the past year of the various staffs of the companies both at home and abroad. Without their loyalty and co-operation, it would be impossible for the directors to present year by year such satisfactory results.

And now I have much pleasure in moving the adoption of the report which recommends the payment of the usual dividend on the preference shares and of a final dividend on the ordinary shares of 10 per cent. less tax, which with the interim already paid, makes a total dividend for the year of 17½ per cent., less tax, and leaves a sum of £291,481 19s. 9d. to carry forward to the current year.

Mr Thomas Herd seconded, and the report was unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

FURNESS, WITHY AND COMPANY, LIMITED.

SHIPPING POSITION AND PROSPECTS.

VOLUNTARY LAYING-UP SCHEME SUGGESTED.

The forty-first annual general meeting of Furness, Withy and Company, Limited, was held, on the 20th instant, at Furness House, London.

The Right Hon. Lord Essendon, who presided, in the course of his speech said:—Naturally it is a matter of regret to your directors that the results of the past year's working are not more satisfactory, but, on the other hand, having regard to the conditions which have prevailed, particularly in the past few months, there is, I think, ground for satisfaction that we are not only able to present to you a strong balance sheet, but also to distribute a total dividend of 6 per cent. on the ordinary shares. We have again included in the profit and loss account an amount transferred from reserve account, namely, £100,000, and there are also included some items which, strictly speaking, are non-recurring profits, but none the less it is a fact that in a diversified business such as ours these do repeatedly occur.

The purpose of the new issue of ordinary shares was to strengthen the liquid resources of the company, which had been absorbed by the numerous acquisitions which the company has made during the past 20 years without any increase of capital. The balance sheet reflects the manner in which the new capital has been utilised. In particular, our shipping property has increased by approximately £1,200,000, and in parenthesis I might remark that at the time we were preparing for the new issue we did not anticipate having to build the "Queen of Bermuda" to replace the M.V. "Bermuda," which was lost. In addition, our liabilities have been reduced, and, as already mentioned, our holding of Government securities is considerably greater than it was a year ago, on which, incidentally, there is a substantial appreciation. While on the subject of Government securities I feel sure the shareholders will endorse the decision of the board to accept the Government's offer to convert the 5 per cent. War Loan into the new 3½ per cent. stock.

BERMUDA INTERESTS.

Having dealt with the position of the company's various subsidiaries, the Chairman referred to the Bermuda interests, and proceeded:—The new quadruple turbo-electric vessel "Monarch of Bermuda" has proved an unqualified success, as, notwithstanding the depression, she has been well patronised in the New York-Bermuda service. Her modern equipment, including bath in every cabin, and every possible comfort and convenience, have made her a delight to the travelling public. The unfortunate mishap to the "Bermuda" while undergoing repairs at this side necessitated the building, at Messrs Vickers Yard, Barrow-in-Furness, of the "Queen of Bermuda." This vessel should take her place in the Bermuda trade in January next, and we trust that these two magnificent vessels will modify the unwelcome competitive attentions to which we have been subjected since we undertook to provide the steamship service required by this old and important colony at a time when no one else would undertake the duty. Our hotel interests in the island have not done badly considering the times.

OUTLOOK FOR SHIPPING.

Dealing with the outlook for shipping, the Chairman said:—This is a problem which is very much in the minds of all those who are associated with an industry upon which the country's trade has been so much dependent in the past and will no doubt be equally dependent in the future. Quite frankly, the improvement which was hoped for when I addressed you at our extraordinary general meeting in December last has been delayed.

Memory is remarkably short in some respects, but I think you will recall that at that time there were definite indications of an improvement. The abandonment of the gold standard had reflected itself in an increase of exports; unemployment figures were improving, and further benefits were expected from the bargaining power of tariffs. There was, in fact, a well-defined movement in favour of equity stocks as distinct from fixed interest stocks which were temporarily under a cloud. From January onwards, however, the shipping trade has steadily deteriorated, and the psychological effect of the continual depression is aggravating a position that was already bad. However, I still prefer to think that the improvement is only delayed.

NEED FOR INTERNATIONAL CO-OPERATION.

In the meantime, this continued depression which has lain for so long upon the weary heart of the world emphasises, as nothing else can do, the need for international co-operation in business

affairs. To borrow a phrase recently coined by Dr. Nicholas Murray Butler, what is wanted by the whole world is a declaration of interdependence. We are enjoying a very large measure of co-operation in political affairs in this country (in fact, I believe this is the only country in the world at the present time where a National Government is in being), and the result of the Lausanne Conference has revealed a very considerable measure of international co-operation in political and financial affairs.

As regards business, however, instead of co-operation, many nations seem to be indulging in measures which are the reverse of international co-operation. British shipowners have to compete with the subsidised ships of a great number of foreign countries, and trade barriers—which I agree are in some cases more in the nature of self-defence than anything else—are increasing rather than decreasing. There are no doubt a variety of reasons for these trade barriers, exchange regulations, quotas, subsidies, prohibitions and restrictions, but in any case their effect is most harmful to shipping, which is essentially international in character.

The principle seems to be to save himself who can, irrespective of the fact that this so-called salvation is apt to degenerate into a policy of mutual destruction. However, the inspiring influence of the Lausanne agreement, to be followed, we hope, by a successful outcome of the Ottawa Conference, will go a long way towards restoring confidence, and towards setting the wheels of commerce into motion, and it may be that these important developments will mark the turning point in our trade situation.

Shipowners, however, cannot afford to sit by and wait for things to improve without doing everything they possibly can to improve their own situation. Various methods have been proposed, the most pernicious of which, viz., the scrapping of old vessels and replacement by new, was referred to at our last annual meeting. Since then some foreign owners have suggested an international scrapping scheme, based upon financial contributions from the Governments of the world. I am afraid Governments cannot be expected to favour a scheme for the shipping industry alone, and which, if applied generally to necessitous industries, would mean the inevitable bankruptcy of all national exchequers. Any contributory scheme on the part of shipowners themselves would, in my opinion, be equally doomed to failure, and, in fact, any scrapping scheme is prejudiced by the limited market for scrap.

AN INTERNATIONAL LAYING-UP SCHEME.

My own view is that the only solution having any prospect of success would be a voluntary international laying-up scheme under which the shipowners of the world would enter into a gentleman's agreement to lay up a certain percentage of their vessels for an agreed period. Difficulties there would be, such as would exist in any scheme that could be imagined. But I think these difficulties could be surmounted provided there is the will to do so. Obviously, specialised types of tonnage such as passenger, mail and refrigerated ships, and tankers, would have to be left to make their own arrangements. So long as there is a large surplus of tonnage it is obvious that, as soon as a freight can be obtained that will cover expenses, vessels will come out, if only to save the expense of laying-up, the difficulty of the problem being enhanced by the fact that operating expenses vary widely under different flags, i.e., cheaply-operated foreign vessels come out first.

Furthermore, it would be very undesirable that anything should be done to encourage the building of more ships whilst a surplus of tonnage still exists. As the demand for tonnage increased a proportion of the laid-up tonnage could be released from time to time until the arrival of the happy day when the scheme could be abandoned because its usefulness had been fulfilled. Provision would also have to be made by which the scheme did not discourage scrapping as and when opportunities occur.

Plenty of old vessels are awaiting the opportunity of being scrapped, and an improvement in the iron and steel industry would cause a demand for scrap.

This whole problem is being considered by the Chamber of Shipping in conjunction with representatives of the International Shipping Conference.

The present position in regard to surplus tonnage, according to the latest statistics available, is that there is about 13,500,000 gross tons of merchant shipping laid up, of which the British proportion is about 3,500,000 tons. In other words, about 19 per cent. of the world's tonnage is idle, the laid-up percentages of the tonnage owned by the various countries ranging from about 8 per cent. in the case of Japan up to about 30 per cent. in the case of Germany.

The report was unanimously adopted.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bills were opened on July 15, 1932, and the total amount applied for was £65,475,000. Tenders were accepted for bills at three months, dated Monday to Friday at £99 17s. 2d., about 12 per cent. and above in full, and Saturday at £99 17s. 3d. and above in full. The amount allotted was £45,000,000.

NOTICES.

The directors of the Chartered Bank of India, Australia and China have appointed Mr Arthur d'Anyers Willis, of Messrs. Ogilvy, Gillanders and Company, at present a director of the bank, to be deputy-chairman.

Company News.

REPORTS AND NOTICES.

Lord Cullen of Ashbourne has been elected a director of the Rio de Janeiro City Improvements Company, Ltd.
Southern Railway is paying full interest on its preference stocks, but nothing on the junior issues. Expenses have been reduced by over £500,000.

A. W. Gamage reports a net trading profit of £5,570, against a loss of £9,304.

Ebbw Vale Steel directors hope to submit reorganisation scheme in September.

Prices Tailors announces profit of £145,000, against £135,289.

BANKS.

STANDARD BANK OF SOUTH AFRICA, LTD.—Net profits of the Standard Bank of South Africa for the year to March 31, 1932, amounted to £457,442, compared with £567,620 for preceding year. With the £142,622 brought in, the total was £600,064, or £92,558 less than for year ended March 31, 1931. The dividend has been reduced to 11 per cent. from 15 per cent., the latter including a bonus of 1 per cent. The amount absorbed is £275,000. Officers' pension fund again receives £100,000, and £75,000 as before goes to premises account. The balance forward is increased by £7,442 to £150,064. Investments appear as usual at less than market values, and show an expansion of £1,723,424 to £7,142,674. A sum of £664,170 has been transferred from the reserve fund to an exchange reserve account to provide for any contingencies. The meeting will be held at Southern House, Cannon Street, E.C., on July 27, at 12.30 p.m.

MINES.

ASSOCIATED TIN MINES OF NIGERIA, LTD.—Profits for 1931 amounted to £28,082, against £29,426. After adding £93,845 brought in, £27,337 is set aside for depreciation and £11,671 for development expenses, leaving £82,920 to go forward. The output of tin concentrates was 2,643 tons, compared with 1,990 tons, and was produced at an average cost of £56 13s. 2d. per ton, f.o.r. Bukuru. This represents a further reduction of £4 6s. 5d. per ton. The average price realised per ton of concentrates was £88 10s., against £99 8s. 2d. After allowing for the year's output, the ore reserves at the end of 1931 stood at 35,048 tons, a net increase of 1,467 tons. Property account stands at £642,803, which, in relation to the ore reserves, is considered a very conservative figure. The reserve of £150,000 has been used to write off investments, debtors, loans to subsidiary and other companies.

MISCELLANEOUS.

MANCHESTER SHIP CANAL COMPANY.—The traffic receipts for the month of June, 1932, amounted to £101,085, against £100,485 in June last year, an increase of £610. The traffic receipts for the half-year ended June 30, 1932, amounted to £596,079, as compared with £592,886 for the corresponding period of last year, an increase of £3,193. The net revenue of the whole of the undertaking for the half-year (after providing for interest and fixed charges) was £20,388 more than the corresponding half-year in 1931.

SMITHFIELD MARKETS ELECTRIC SUPPLY COMPANY, LTD.—The Corporation of London have decided to exercise their option to terminate the company's contract for lighting the Central Markets on December 25th next. Shareholders will be further advised when certain matters under negotiation are completed.

SUMMARY OF BALANCE SHEETS.

SALISBURY (SOUTHERN RHODERIA) FOUR-AND-A-HALF PER CENT. MUNICIPAL LOAN, £100,000.—Numbers are announced of certain bonds drawn for redemption at par on June 30th next.

WILLIAMS DEACON'S BANK, LTD.—The directors have declared an interim dividend for the half-year ended June 30th at the rate of 12½ per cent. per annum, less income tax, upon the "A" shares and upon the "B" shares.

Commercial Reports.

MARKET SUMMARY.

The fairly general advance in the price of primary products at the principal commodity markets noticeable a fortnight ago, has given way to a reaction. In the United States many commodities suffered a setback this week. Among non-ferrous metals, tin has been maintained, while lead, spelter and copper have been easier. Rubber shows a slight rise in price, but cotton was cheaper. Among cereals, wheat, maize, oats and rye were all easier. Coffee has been a little steadier, and sugar has gained a few points, but cocoa did not maintain last week's advance. Sterling prices of commodities, which lend themselves to grading, and therefore to international arbitrage, moved in sympathy with gold prices. According to reports from various industrial centres, the coal trade is inactive. The volume of business in iron and steel is small, and tends to fall off, owing to the holiday period. There has been more inquiry for Manchester goods, but actual business shows little improvement.

THE COAL TRADE.

SHEFFIELD.—There has been a further shrinkage of business in South Yorkshire coal, the volume of which is the lowest recorded for many years. Best hard are steady, but prices of other qualities tend to weaken. Stocks have become heavy at collieries and tempting price offers fail to relieve the situation. Industrial consumption fails to expand. There is a comparative slump in slacks and furnace coke. Domestic demand is at the usual summer level, and users appear to be economising their fuel consumption. Best steams for export are quoted at 16s. f.o.b., best house at 20s. at pits, and furnace coke up to 10s. at ovens.

GLASGOW.—Apart from Ayrshire, all the Scottish coal-producing areas are now in the middle of the annual summer holidays, which, owing to the heavy accumulations of large coal, are likely to extend into August. Indications are not lacking that some relaxations in import restrictions now operating in the chief European consuming countries may be expected towards the autumn. The Irish situation naturally creates some concern in Ayrshire, which hitherto maintained a steady export trade with

the Free State. Washed nuts remain the strong feature of the market, particularly Fishfire trebles. Shipment prices (f.o.b. district ports):—**LANARKSHIRE**.—Ell best, 14s. 3d.; spint best 14s. 9d.; spint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 9d.; steam, 13s.; trebles, 12s. 6d.; doubles, 10s.; singles, 9s. 3d.; pearls, 8s. 6d.; dross, 8s. 9d. **FIFE**.—Screened navigation, 16s. 6d.; first-class steam, 13s.; third-class steam, 10s. 6d.; trebles, 13s. 6d. to 15s. 6d.; doubles, 10s. 6d. to 11s. 6d.; singles, 9s. 3d.; pearls, 8s. 6d. **LOTHIANS**.—Prime steam, 11s. to 11s. 6d.; secondary steam, 10s. 6d.; trebles, 13s. 6d.; doubles, 10s. 3d. to 10s. 9d.; singles, 8s. 9d. to 9s.; pearls, 8s. 6d. **AYRSHIRE**.—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 9d.; trebles, 12s. 6d.; doubles, 10s. 6d.; singles, 9s. 9d.; pearls, 9s.; dross, 9s.

CARDIFF.—There has been no apparent expansion in the demand for steam coals during the past week on the Cardiff coal market, which for the most part continues to present a dull and lifeless appearance. The quantity of coal shipped at the South Wales ports as cargo and bunkers in the foreign and coastwise trades last week was the largest since that ended January 23rd last, totalling was 466,955 tons compared with 404,780 tons the previous week, and 333,241 tons in the corresponding week last year. The improvement, however, was due mainly to a more favourable tonnage position. The demand for washed coals and for anthracite grades continues fairly active. The Western ports of Swansea and Port Talbot monopolise the benefits of the activity in anthracite coal shipments, and the eastern ports are not working at more than two-thirds of their capacity. There is a slightly better inquiry for Monmouthshire large, but prices, except in the case of dry sized grades, are ruling generally on the basis of the minimum price of small coals, when cession has been made in the minimum price of small coals, when supplied for the purposes of briquette manufacture. The reason for this concession is the high cost of pitch, which to day is quoted at nearly double the price ruling at the corresponding period last year. Only two patent fuel works are working, but that at Cardiff is engaged up to the maximum of its productive capacity. Coke is easy with gas grades ruling between 20s. and 20s. 3d. per ton, ordinary foundry brands down to 19s., and furnace grades at 15s. 6d. The demand for pitwood is quiet, but prices are steady. Approximate current quotations are as follows: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 15s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 30s. to 38s. 6d.; Red Vein large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 45s.; French nuts, 40s. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 18s. 9d. to 21s.

NEWCASTLE-ON-TYNE.—Export trade in both counties remains at a low ebb, and the small amount of tonnage loading at the Staiths will make another quiet week. Coal exporters contend that fixed minimum prices, which are so well known to foreign competitors, are losing us trade, but on the other hand certain of the collieries are of the opinion that any elasticity in prices will not increase trade owing to the import restrictions abroad. The only bright feature on the North-East Coast is the bunker trade, which is being maintained notwithstanding the lesser tonnage trading, and is undoubted doubly due to the devalued pound. For the six months ending June 30th, bunker shipments in the River Tyne totalled 921,283 tons compared with 921,783 tons for the same period last year. To-day's f.o.b. prices for export are as follows:—*Northumberland*: D.C.B.: screened steam, 13s. 6d.; smalls, 8s. 6d. Howards, Bontinck, Newbigin, screened, 13s.; smalls, 8s.; Tyne Prime: large, 12s. 6d.; smalls, 9s. Hartley Main: large, 12s. 6d.; smalls, 9s. *Durham*: Lambton, South Hetton: screened steam, 15s.; smalls, 11s. Wear Special: unscreened gas, 15s. Holmside, Ryhope, Boldon: unscreened gas, 14s. 6d.; second-class gas, 13s.; cooking smalls, 12s. 6d. Prime, unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.

IRON AND STEEL.

MIDDLESBROUGH.—The Cleveland pig iron market continues extremely dull with little prospect of early improvement. The local demand is still curtailed through slackness in the foundries, and requirements for Scotland will be very light for some time, as and the Glasgow fair holidays have now commenced, and all consuming works in that area will be closed down until the beginning of August. The demand for shipment is also at a very low ebb, so that altogether there was a thin attendance at the weekly market on Tuesday, and only a moderate business was reported for early delivery, forward purchases being almost entirely neglected. Official prices for Cleveland iron were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. These apply for all business except Scotland, where substantial concessions are offered direct by makers. There is still little change in regard to hematite. A fair number of orders are coming along on home account, but they are mostly for early delivery. The export demand has fallen off considerably, which is rather a serious matter, with the prospect of two extra furnaces being in blast at Ayresome Works by the beginning of August. This has had rather a weakening effect on the market, and ordinary mixed numbers can now be had for early delivery at 61s. 6d., and at 3d. to 6d. more over a few months. Shipments of pig iron are very disappointing this month, the total clearances to 19th inst. being only 3,927 tons, compared with 8,318 tons to same date in 1896. In the finished trades there are no new contracts of importance to report this week, and home prices for steel materials are unchanged, viz.:—Plates, £8 15s.; under the rebate scheme are unchanged, viz.:—Angles, £8 15s.; and 7b. 6d.; joists, £8 15s.; other products are iron crown

bars, £9 15s.; heavy steel rails, £8 10s.; 24-gauge galvanised corrugated sheets, £7 7s. 6d.; 24-gauge black sheets, £8; also for home use. Further quantities of steel plates are on order in this district against the Russian contract. 1,800 tons have been shipped this week, and another steamer is due next week to load 3,750 tons. The ore market is almost idle. Best rubio is purely nominal at 15s. c.i.f., and the freight Bilbao/Middlesbrough for early tonnage is 4s. 6d. Coke is slow of sale, and with a surplus on the market the price is weak at 15s. delivered works. This figure could be shaded for some brands. The number of furnaces in blast in the district is unchanged at seventeen.

SHEFFIELD.—Local industry is feeling the effects of preparations for the August stoppage, although demand and inquiries in the quality steel section show some signs of expansion. Output of the best alloy steels, particularly stainless steels, is larger to-day than for some time past. Foreign competition in this expensive material has been nearly wiped out by differences of exchanges and tariffs, as the cost of the imported steels now approximates that of Sheffield material. The advantage arising from these two factors will be more marked, however, when general trade emerges from the depression. Slackness is acute in partly-manufactured, open-hearth steel and heavy steel forgings and castings. There is little doing in supplies for railways and shipyards, and overseas trade drags. Some of the tool makers are fairly well booked, but bad weather has spoiled the season for garden tools. Trade in safety razors is booming. Other classes of cutlery and silver and electro-plate are extremely quiet.

GLASGOW.—All works in this district are now closed for the holidays, and while a re-start will be made at a number of plants on Tuesday of next week, in many cases operations will not be resumed until a week later. In several trades the works have been closed down for a considerably longer period than is customary, owing to the continued scarcity of orders.

CARDIFF.—The South Wales timplate industry continues quiet, but prices are steady at from 14s. 9d. to 15s. 3d. per basis box. Welsh steel bars are also stationary at 95s. per ton net, but foreign bars are easier at from 78s. to 80s. per ton delivered, and Belgian consignments have latterly again been on the increase. All imports of foreign iron and steel goods at the South Wales ports last week totalled 12,552 tons, compared with 11,017 tons the previous week, and 27,306 tons in the corresponding week last year. The question of the reorganisation of the South Wales iron and steel industry is under the consideration of a regional sub-committee of the National Committee appointed a few weeks ago, and a questionnaire has been addressed to the local manufacturers.

OTHER METALS.

TIN.—The price of tin has been subject to violent fluctuations recently. There has been no improvement in demand. The metal changed hands at about £127 per ton on Monday, but owing to lack of support, its quotation declined on Tuesday and Wednesday. Sales on the London Metal Exchange totalled 525 tons on Monday, against 600 tons last week, 375 tons on Tuesday, against 300 tons, and 275 tons on Wednesday, against 500 tons. In New York the metal was quoted at 21·00 cents per lb. on Wednesday, against 21·00 cents per lb. a week ago and 19·70 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £123 10s. to £123 15s. per ton, compares with £126 12s. 6d. to £126 17s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,189 tons, show a decrease of 93 tons on the week.

COPPER.—The international copper situation has deteriorated further. The United States unofficial export price has been lowered again, but foreign buyers show little response. The market in copper in London opened dull on Monday and quotations declined. Sales totalled 600 tons. There was no improvement on Tuesday, when sales amounted to 300 tons. On Wednesday there was a slight increase in turnover (900 tons) at the lower price. On Wednesday, "Domestic" spot was quoted at 5½ cents per lb. in New York, against 5½ cents a week ago, and 5¼ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £25 7s. 6d. to £25 8s. 9d., compares with £26 7s. 6d. to £26 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 15,946 tons, show a decrease of 1,014 tons, while stocks of rough copper, at 969 tons, were unchanged.

LEAD.—In contrast to last week, the London market in lead opened dull on Monday, but there was an increase in business at the lower level of prices. Sales totalled 700 tons. On Tuesday and Wednesday the quotation of this metal declined further without stimulating buying. Sales amounted to 450 tons on Tuesday and to 400 tons on Wednesday. In New York the metal was quoted at 2.65 cents per lb. on Wednesday, against 2.70 cents a week ago, and 3.00 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £9 5s. per ton for shipment during the current month, compares with £9 16s. 3d. on the corresponding day last week.

SPELTER.—At a meeting at Ostend on July 14th, the executive committee of the International Zinc Cartel decided to reduce production further, from 50 per cent. of capacity to 40 per cent. of capacity, beginning on August 1st. The demand for spelter in London was quiet, but in view of the reserve of sellers prices were maintained. Sales totalled 450 tons on Monday, 300 tons on Tuesday, and 350 tons on Wednesday. Wednesday's quotation in New York, at 2.50 cents per lb., compares with 2.55 cents a week ago and 2.80 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £11 8s. 9d. for shipment during the current month, against £11 7s. 6d. a week ago.

POTATOES.—There was a good demand for new potatoes, but supplies at the principal markets were sufficient to bring about a further decline in prices. English kidney could be obtained at from 6s. 6d. to 7s. 6d. per cwt. at the London Borough Market, against 8s. to 9s. per cwt. a week ago, and 10s. to 12s. per cwt. a fortnight ago.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

completion of the War Loan Conversion scheme, and that a different state of affairs may obtain in the autumn. The prevalent ease, however, is readily explained by general and well-known causes, and there is no reason to suppose that there has been any change in policy since a few months ago. If, as is not impossible, money becomes firmer in the autumn, it will again be in all probability due to natural causes.

In the meantime discount rates also remain very low. Somewhat to the disappointment of the market, which had hoped for a more remunerative rate, last week's Treasury bill issue went at 10s. 10.92d. per cent., or only 4.08d. per cent. above the record low rate of the previous week. Since then hot Treasury bills have changed hands at $\frac{1}{2}$ per cent. and at $\frac{3}{4}$ under. Prime three months' bank bills are generally quoted at $\frac{1}{2}$ per cent., but as a rule business would be missed at this rate, and some parcels have changed hands as low as $\frac{1}{8}$ per cent. Even standstill bills can be dealt in at $\frac{1}{2}$ per cent. if they carry a London clearing bank name. Rates on other standstill bills range up to 2 per cent.

Inquiries show that very little "dissented" War Loan is coming into the discount market. Some of the banks are prepared to accept it to a limited amount as a 4-5 months' bill as security against short loans, but there is practically no demand for this facility. Even in cases where War Loan was lately acquired as a "short," its new owners are now applying for its conversion, and the impression in the money market is that large quantities are being turned in for conversion during the last few days of the month by holders who waited deliberately until the last moment in order to see how matters developed. For various reasons it is not expected that much "dissented" War Loan will ever come into the money market.

	July 7, 1932.	July 14, 1932.	July 21, 1932.	July 28, 1932.	Previous Rate and Date Changed

Market rate (standstill bills)	1½-2½	1½-2½	1-2½	1-2	...

One view taken by bill brokers is that as the unconverted War Loan is due to be repaid on the same day as the payment of the dividend, it will be a particularly useless maturity; for it will put its holder in funds just when there is a temporary glut of money. This view rather tends to overlook the fact that the Government will probably issue in the autumn a short-dated bond in order to cover the repayment of unconverted War Loan; and it is not impossible that December 1st will be chosen as the day for one of the calls on such an issue. As matters stand, the Government could readily place a five-year 3 per cent. bond, perhaps at a shade over par, or a two-year bond issue at an even lower rate.

Considerable interest is taken in the recent improvement in the dollar. It is reported from Paris that this week the Banque de France has been selling francs for sterling, and without this support it is thought that the New York-London rate might have fallen below \$3.50. To some extent the appreciation of the dollar is a seasonal movement, which this year is occurring earlier than usual. Large transactions have been put through in London to cover impending movements of tobacco, while cotton bills drawn in Liverpool are also beginning to come forward. Now that the gold standard is suspended, wide seasonal movements in the exchange must be expected.

There is, however, another factor at work, namely a steady flow of investment money from Europe to the

United States. In part it is being attracted by the low prices to which even many relatively sound American securities have fallen, but the reduction in British long-term interest rates set in motion by War Loan Conversion is an obvious factor, and it is possible that a certain number of Continental holders of War Loan have been selling in London and re-investing in America. This, again, is a perfectly natural movement, and one that need cause no anxiety.

The only change of importance in the Bank return is a pre-holiday increase of £3.5 millions in the note circulation. The Bank added a further £1.1 millions to its gold stocks, which now stand at £137.7 millions, an increase of about £17 millions since the spring. As compared with the situation a year ago, allowing for the day's difference in the date of the return, there is an increase of £10-£15 millions in the circulation. This, however, has to be discounted in part by the consideration that gold ornaments sold during the "gold rush" may have been sometimes replaced by small-scale hoarding of notes.

On Monday the American Government announced their new financing arrangements. These include an issue of \$325.0 millions in two-year 2½ per cent. bonds, and one of \$325.0 millions of four-year 3½ per cent. stock. These amounts will cover the \$227.0 millions of Treasury certificates, maturing on August 1st, and will provide the new funds needed by the Reconstruction Finance Corporation. The news created a good impression upon Wall Street, especially the intimation that part of the proceeds would be allocated to the Reconstruction Finance Corporation. Call money was quoted this week at 2 per cent. and open market discount rates at $\frac{3}{4}$ -1 per cent. for 90-day bankers' acceptances.

Quietness characterised the foreign exchange market throughout the week, but the general tendency was adverse to sterling. New York went from 8.56½ to 8.52, and Montreal from 4.10½ to 4.04. Paris also improved, but less sharply, from 91½ to 90. Brussels gained 32 points at 25.48, Milan 7 at 69½, and Madrid 1 at 44. Amsterdam was 10 points better at 8.76, and Berlin appreciated rather sharply to 14.84, as did Switzerland to 18.11. The Scandinavian currencies again reacted differently, Stockholm being unchanged at 19.48, whilst Oslo improved by 13 points to 19.95, and Copenhagen by 1 point to 18.55. The South American currencies are still largely nominal, and remained unchanged; Rio at 5½d. (sellers), Buenos Aires at 34½d. (nominal), and Montevideo at 29½. In the Far East there was a weakening tendency in the yen, which fell away by ½d. to 1s. 8½d., whilst the rupee was unchanged at 1s. 6½d. Batavia improved by 10 points at 8.85. In the forward market fluctuations were fewer and not so wide, dollars being quoted at ½ cent discount for one month and at 1 cent discount for three. Paris one month was unchanged at 1 centime premium, but three months' delivery was dearer than last week at a premium of 3 centimes. Brussels weakened rather sharply to 5 and 12 centimes discount. Milan was firmer at narrower discounts of 1 lira and 1 lira. One month's Madrid at 1½ peseta discount was 1½ better than last week, but three months' delivery was weaker by 1 at 1 peseta discount. Amsterdam was unchanged at 1 cent discount for both deliveries. Switzerland was rather weaker at 1 centime and 1 centime premium. The silver market was quiet, and prices improved on a little China and speculative buying, by 1½d. for cash at 17½d., forward being unchanged at the same level. The China silver exchanges advanced with the cash quotations, Hongkong being dearer by ½d. at 1s. 3½d. and Shanghai by ½d. at 1s. 8½d.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

THE REAL ARMAMENTS PROBLEM.

THE closing days of debate in the General Committee of the Disarmament Conference, described by our League correspondent in his letter on a later page, added little which is material to the text of the resolution, whose terms we summarised in our last week's issue, recording the progress made towards agreement and laying down the lines of procedure for the next stage of the Conference. Mr Hugh Gibson, for the United States, tactfully acquiesced in the inevitable, and, in announcing that he would vote for the resolution, admitted that it was the maximum of agreement that could now be achieved. Sir John Simon gave the offspring of his draftsmanship a doubtful benison by observing that it "contained no commitment that was contrary to the essential convictions of anyone." M. Herriot intimated France's wholehearted adherence, though he made in advance some awkward reservations in respect of future treatment of effectives. The Italian and Russian representatives both roundly declared that to pretend that any substantial measure of agreement had been reached was farcical. Herr Nadolny, for Germany, announced bluntly that his Government was not satisfied with the Conference's progress so far, and could not undertake to continue its collaboration failing a clear and definite recognition of the equality of rights between nations. Spokesmen of the minor Powers were mostly critical; and in the end, though the resolution was passed by 41 votes in favour, against the two adverse votes of Germany and the U.S.S.R., eight nations, including Italy, Austria, Hungary, Bulgaria and Turkey, significantly abstained from voting.

We have no wish to scoff at the efforts of the statesmen assembled at Geneva during these five unfruitful months, nor to belittle their difficulties; yet we should have been happier had the spokesmen of the leading Powers who voted for this resolution refrained from claiming quite so unctuously that they had achieved progress in any way commensurate with the fine phrases with which the Conference began. There is little need to rehearse in detail the points of agreement conditionally reached. So far as agreed steps towards reduction of armaments are concerned, the Conference has adjourned with no single firm decision taken; and as for its programme for the future, it did not need the concerted efforts of the world's leading statesmen to draw up a promising agenda. Though we welcome the fact that the Conference is still in being, that the Armaments Truce is prolonged for a further four months, and that next January will afford one more chance of realising better results, there is substance in the Italian criticism that if the statesmen endeavour to persuade their countries that worth-while steps have now been taken towards solving the armaments problem, so that public opinion may rest content with what is being done, they will be enacting a dangerous farce. There is more need than ever that, in the light of the limitations which the Disarmament Conference has hitherto displayed, pressure of public opinion should be more than ever intensive.

But if the general will of the peoples of the world to be rid of fear of imminent war and to be relieved of the staggering burden of armaments is to become effective, then there is need for clear thinking as to the various possible objectives which the second stage of the Disarmament Conference can pursue. Already it is being suggested in some quarters that the first stage of the Conference ended in something barely distinguishable from failure, for the simple reason that it endeavoured, under the pressure of peace enthusiasts, to do too much. Clearly it is idle for peace-lovers to cry for the moon; and, short of complete universal disarmament, the maximum success conceivably attainable must partake to some extent of the nature of a compromise. If we hold, as we do, that any agreement which falls appreciably short of the sort of reduction of armaments contemplated in the Hoover proposals must be regarded as a failure, we must be prepared to show cause why lesser alternatives would be an inadequate solution.

As we see it, there are five possible objectives which, after the adjournment and following next autumn's preparatory work by the Bureau, the Conference in its second stage might pursue. Firstly, it might abandon as hopeless under existing conditions any attempt to achieve an actual reduction of present forces. It might concentrate, as some advocates of a "realist view" are now suggesting, on an endeavour to secure an effective, scientific limitation of armed forces at their present level. Such a result, it is argued, would remove the dangers which have arisen in the past from competitive arming and would lessen the risk of an explosion occurring from accumulation of inflammable material. The argument is plausible; but it breaks down hopelessly on one fatal obstacle. An agreement on these lines would mean, in fact, the stereotyping of the existing balance of military power in Europe, and that is a situation in which the Central Powers defeated in the Great War will ultimately—perhaps inconveniently soon—refuse to acquiesce.

Secondly, the Conference might confine itself to attempting to make further progress with agreements to "humanise" war by eliminating armaments which have been criticised as peculiarly repugnant in their effects to the civilised conscience, such as bombing aircraft, submarines, or long-range chemical or explosive shells. Given the exigencies of war, it would be difficult to feel much confidence that any agreement on these lines would be worth the paper on which it was written; for, in the last resort, a nation which resorts to hostilities will always—and with logic—apply unrestricted force against its adversary. Nor would it be easy to derive much satisfaction from the attainment by the Conference of a third possible objective, namely, the elimination of weapons, e.g., large mobile guns and tanks, which are considered to facilitate the offensive. If the desideratum be so limited, the corollary is that we should approve the strengthening of "defensive" armaments. But is a solution of the problem really to be sought in dotting every frontier in Europe with a chain of impregnable fortifications?

We come then to the fourth possibility, which is that the Conference should take refuge in an endeavour to lighten the cost of armaments. In so far as this represented quantitative reduction, it would be a step in the right direction; and any relief from the financial burden of fighting forces would naturally be popular with the taxpayer in all countries. Though, as between the naval Powers, it should not be unduly optimistic to hope for agreement to reduce all round the numbers of existing capital ships as well as the future size of unit tonnage, the difficulties of securing all-round reduction of land armaments on these lines are much greater. Moreover, even were it possible to reach universal agreement on methods for cheapening the cost of preparing for war, could we be satisfied that we should thereby have rendered the chance of war much more unlikely?

Thus we arrive at the conclusion that there is no satisfactory course for the Conference to pursue but to endeavour to attain the only remaining possible objective, which is the progressive reduction of armaments towards the conception of "police" components offering no threat to the security of neighbouring countries. But to hope for much better progress in this direction next winter than has been achieved in the Conference's first stage is clearly idle, unless by their declarations and their policies the statesmen of the leading Powers can satisfy each other that they do not in fact intend war upon each other. If there is really no danger of war between civilised peoples in this generation, the maintenance of the present level of armaments in an economically impoverished world is lunacy. If there is a real danger of war, then not only the Disarmament Conference, but the civilisation of the world is under sentence of death. We cannot hope to resume the forward march of material prosperity; we cannot exploit the progress of scientific knowledge or take the necessary steps to revitalise the international trade which is the condition of our mutual advancement; our conferences for

the purpose of re-establishing the economic and financial system of the world can only lead to disappointment; in short, we can have no confidence between the nations so long as we are preparing to smash the foundations of international life by reverting to the use of force.

The proceedings at Geneva during the past five months have shown that no substantial progress towards disarmament can be made on lines of technical *expertise*. The problem is now revealed nakedly as one of re-establishing simply the sense of political security. Is it too much to hope that between now and next January the statesmen of Europe and, not least, those of Germany, will weigh the awful responsibility that will rest upon them if, in defiance of the will of the great masses of the peoples, they so fail to satisfy their *confrères* of their sincerity in abjuring aggression that no single nation is willing to abate what it conceives to be its essential present preparations for hostilities?

OTTAWA.

It is much too soon to attempt to estimate the progress of the Ottawa Conference. The issues involved are of such magnitude that it would indeed be foolish to expect that the basis for any far-reaching agreement could be hammered out in a week. Since the opening day committees have been busily at work; and though none of the Dominions would wish to give such an impression, the fact that the Dominion delegates have been discussing informally among themselves what advantages in the British market they would like to have accorded to them, has resulted in the Conference tending to take on the appearance of an argument between Britain, on one side of the table, and Canada, South Africa, Australia and New Zealand on the other, with India and the Irish Free State looking on. Mr Bennett's famous offer of concessions to Great Britain, mentioned on the first day, has not yet seen the light, so that it is impossible to tell yet whether any serious advantages are to be offered to British trade; but it is at least clear that, on the other side of the account, Great Britain is to be invited to put a tax on meat and dairy produce, in order to be in a position to give preferences to the Dominions, and is being asked to prohibit or, if that is impossible, to control and restrict imports from Russia—a move which would have very far-reaching political effects, would prejudice the results of our export credits policy, and would create fresh difficulties in world markets by forcing Russia's exports into new channels.

Until more authoritative news is forthcoming, it is useless to discuss the details of schemes which may prove to be no more than idle rumour. Meanwhile, it is evident that at the end of this first week there is creeping into the reports from Canada and into the comments of the Press a note of disillusion, represented by the Canadian newspaper which regretfully observed that the change of Government in Britain has produced less change in the fiscal outlook of the country than the Dominions had expected. Perhaps it would be truer to say that the experience of the last ten months has had the effect of considerably modifying the outlook of the Protectionist section of the Cabinet, and has brought home the paramount necessity of doing something to restore international trade. But, whatever the correct diagnosis in this respect may be, it may be convenient, while waiting for more specific news from Ottawa, to consider wherein lies this divergence of outlook between the Dominions and Great Britain.

In the first place, there stands out the contrast in viewpoint revealed in the speeches at the opening meeting. On the one hand, there is the opinion voiced by Mr Baldwin which regards existing tariffs as one of the chief obstacles to trade and looks to a reduction of tariffs as an essential step towards restoring both Empire and world prosperity. Many of the Dominion speakers followed Mr Baldwin in paying lip-service to this view, but in fact what they are all demanding of Great Britain is that we should increase our tariff against other countries in order

to give the Dominions preferential advantages. Meanwhile, none of them have so far shown any considerable willingness to make reductions in their own duties. It is true that Mr Bennett has suggested in very general terms that he is ready to make some reductions in favour of British goods; but in the same breath he makes his concession valueless by trotting out the old Protectionist folly that the duty must continue to balance the higher cost of production in Canada. This "compensatory principle," which was laughed out of court at the World Conference of 1927 when brought forward as a possible "scientific" basis for settling the world's tariffs, is of course the doctrine enshrined in American tariff legislation, and, if systematically applied, inevitably leads to higher and higher tariffs. It is really amazing that, in this year of grace, a doctrine which deliberately proposes to cancel out the whole economic advantage of international exchange should be seriously put forward at a conference whose main business is to get trade going again. If this is all Canada has to offer, her proposition is worthless.

So long as the Dominions can hope to improve their own position by capturing some of the trade which at present is done in Great Britain by foreign countries without at the same time having to face the odium of reducing the tariffs which protect their own interested industries, they will naturally follow the line of least resistance. Yet it cannot be too clearly stated that fresh taxes imposed to give preference to the Dominions cannot possibly result in an improvement in the world's position. On the contrary, it is bound to make things worse. Take, for example, the vexed question of meat. If the preferential duty is to be of any good whatever to the Dominions, it must raise prices in Great Britain; but, if it raises prices, there will be less meat consumed. It is true that more may be obtained from one or other of the Dominions, but the total volume of trade must suffer. There is no possible escape from this dilemma; the process of diverting trade out of its natural channels must inevitably be costly and reduce the total amount of business. Mr Baldwin is perfectly right in suggesting that the only way in which the Conference can help matters is by bringing about a reduction of duties, which will have the effect of increasing trade. We sincerely trust that he will have the courage to stick to his guns.

Another aspect of the difference in attitude between Britain and the Dominions is the extraordinary idea which seems to prevail in certain circles that the Dominions have behaved much better to the Mother Country than the Mother Country has behaved to them. Fanciful figures are quoted of the benefits which the Dominions have conferred on the Mother Country by their preferences, while the unfortunate Dominions have had to compete on equal terms with foreign countries in the British market. This is a travesty of the case, for the facts prove that the boot is entirely on the other leg. It is true that the Dominions have given preferences to the Mother Country, but it is notorious that most of them have put high duties against British goods. If our own products have been kept out, it is little comfort to know that the duties against foreigners are higher still. Some six or seven years ago the Balfour Committee reported that British trade was being impeded at least as much by Imperial tariffs as by foreign tariffs. Since that time the Dominions have taken the lead in pushing their tariff walls higher still. The Dominions, on the other hand, have had free entry into the greatest market in the world; their agricultural and industrial enterprises have been fed in abundance—possibly even in too great abundance—by British capital on very favourable terms; and under this regime they have waxed prosperous and been able for many decades to maintain an exceptionally high standard of living. Dominion statesmen who complain of the treatment which they have received in the British market should reflect upon the fact that in the case of every single one of the self-governing Dominions the proportion of their exports which they sell to the Mother Country is much higher than the proportion of their imports which they buy from her. It is the parent, not the offspring, who has cause for complaint.

The disillusion, however, which is now spreading at Ottawa springs not merely from differences in point of view, but from practical considerations. The discussion of the wheat problem, for example, has provided a very illuminating lesson in elementary economics. In recent articles we have pointed out how little the Empire has to gain by a preference arrangement or a quota system for wheat in view of the fact that the Empire is a net exporter to other countries, and that it would be cutting off its nose to spite its face if it did anything which would tend to lower the general world price. The competent authorities in Western Canada came to this conclusion some time ago after careful consideration. But apparently Mr Bennett was not advised of this, and, having endeavoured to make the wheat question one of the issues of the Conference, he invited these wheat authorities last week-end to meet and reconsider the situation. On reflection they reaffirmed their previous view, and Mr Bennett is now in the position of putting forward proposals regarding wheat without the moral support of his own wheat provinces. His programme, indeed, offers little attraction to the Western farmers, who obstinately stick to the view that their interests can only be served by lower industrial tariffs.

Nor are the exponents of the doctrine of diverting trade into the Empire faring very much better in regard to other products. In the case of meat, for example, the truth of the matter seems to be that nothing short of an almost prohibitive duty would, in fact, divert the Argentine meat trade to the Dominions. They, indeed, have not the means of taking over this trade, and could not do so for many years to come. In the circumstances the only effect of a duty would be that our consumers would pay more.

Clearly, this bargaining business must be very carefully handled if we are to escape the heartburnings and suspicions which are so liable to arise the moment an attempt is made to substitute a commercial bond for the sentiment which has hitherto held the Empire together. If the former were really the better way, we should at least have expected some grateful recognition of the fact that Great Britain, which has recently imposed duties varying from 10 to 38½ per cent. on trade amounting in 1930 to some £500 millions, has left entirely free that portion of it—amounting to over £100 millions—which comes from the Empire. But we have seen no reference to this very substantial advantage in any of the speeches of Dominion statesmen—except the request that in certain cases, e.g., butter, the margin should be increased by the imposition of a heavier foreign duty. The Dominions also seek to ensure that these privileges should be maintained for a period of years. But this no Government can guarantee; for it is a matter on which the last word rests with the electorate.

The blunt truth is that at Ottawa Great Britain is meeting countries in which protectionist sentiment and protectionist modes of thought are as deeply entrenched

as in any part of the world; in which the level of protection—following the lead of the United States—has steadily risen; and whose exporting industries have not been able to overcome the influence of the protected trades. In the circumstances it will be an uphill fight to obtain results from the Conference which will really contribute to the expansion of international trade.

COAL IRRATIONALISATION.

HAVING been assured of the continuance of the statutory output quota and price-fixing machinery for five more years, British colliery owners are now understood to be considering how the defects which have been revealed in the working of the scheme can be remedied. There is substance in the claim that in the chaotic situation into which the industry has been allowed to drift some system of regulation was necessary, and that the quota and minimum prices have arrested a fall in prices which was threatening disaster to the producers; but experience has justified the criticism of those who in 1930 insisted that to apply the quota and price-fixing system to hundreds of separately-owned small or medium-size mines, without any guarantee of other reorganisation measures, was a cumbersome and ineffective method of attacking the whole problem.

There has been little advance during recent years towards greater aggregate efficiency in the industry as distinct from the efficiency of individual progressively administered mines. In the still deeply depressed state of the industry the closing of collieries, whether intermittent or permanent, has been dictated as before by financial pressure and not by the technical considerations which would contribute to the well-being of the industry as a whole. The unification movement, called for by all technical and scientific advance in the sphere of fuel and power, has not been accelerated, despite the efforts of the Commission set up to promote amalgamations; there is some evidence, indeed, that it has been retarded, as witness the recent statement of the chairman of Manchester Collieries, Limited, Mr Joseph Ramsden, that negotiations initiated by that company for the complete unification of the Lancashire coalfield had broken down, mainly on the question of finance. The implication of a carefully guarded statement seemed to be that some concerns, assured at least of a precarious existence by the quota, were holding out, as the price of absorption, for better financial terms than their true value as part of a larger organisation would warrant.

Price-fixing within the rigid limits prescribed by the Act of 1930, which permits only one price for each class of coal without regard to the market for which it may be intended, has not abolished price cutting by one district at the expense of another. It has simply induced a district which intended to invade another district's territory to adopt a lower schedule of prices. This has evoked many protests.

Methods and costs of distribution have, so far, been virtually untouched by the operation of the scheme, and there is no evidence that progress has been made towards the establishment of central selling organisations. Nor is there any indication that the position is now being surveyed from the wide viewpoint necessary if all these matters are to be considered with the care which their importance warrants. In the speech to which reference has been made above, Mr Ramsden suggested that complete unification would go a long way towards solving the difficulties of the industry in the Lancashire coalfield, especially on the selling side. It would, of course, bring about centralised selling automatically, and the same thing would happen wherever a coalfield is suitable for the constitution of one ownership group, as in Northumberland and the smaller districts. In South Wales, Durham and the Midland areas, where considerations of the "economic unit" would probably lead to the formation of several amalgamated groups in each area, the spirit of co-operation necessary for central selling organisation has still to be fostered, and a national lead would clearly be helpful. There is no evidence that such a lead is being given, either by the Mining Association or by the Central Council which administers the national side of the quota and price-fixing scheme. Lord Aberconway has stated that in certain districts there is a "strong feeling" in favour of organised selling, and that this matter is being thoroughly investigated, but there is also much opposition to the idea. Mr Ramsden considers that "drastic reform" in distribution is necessary to reduce a margin between producer's and consumer's prices which is much too wide, but little has been heard lately of a movement inaugurated a year or two ago with the object of achieving a thorough-going rationalisation of distribution.

Under present circumstances, it is perhaps significant that the only suggestions that can be described as official, and as being put forward by a fully representative body in the industry, seem to be limited to a further attempt to adapt the quota and price-fixing scheme to the existing organisation of the industry. The suggestions are contained in a memorandum recently issued to the colliery owners by the Central Council, and it is said that they are the fruit of some months of consideration of the working of the scheme. The Council appears to be concerned almost entirely with the failure of the present arrangements to prevent district price competition; and if its proposals were accepted the remedy would be the institution of five area quotas in place of the existing two. There would still be the national quota, but instead of the allocation of this in the form of one district quota in each area there would be a separate quota for the inland market and the export market. Then in each district there would be a separation of the inland quota into deliveries within the production district and deliveries in other parts of Great Britain. How this could be extended to the individual colliery quota is not explained.

The counterpart of this tangle of complications in relation to prices would be the amendment of the 1930 Act to give power to fix different minimum prices for a particular class of coal according to the market in which it would be sold; and conferment of authority on the Central Council to co-ordinate minimum prices when districts failed to agree, and to impose penalties on district executive boards for default in fixing or enforcing minimum price schedules. Finally, as a recompense to the exporting districts for acquiescence in this limitation of their freedom to dump into adjoining districts the coal they cannot now sell abroad, the inland districts are urged to agree to a general levy for the support of the export trade.

The Westphalian system of regulated production and sale, which has been evolved by the contrary process of adapting the organisation of the industry to the system, is simplicity itself compared with the intricate machinery now recommended for Great Britain. With about ten groups controlling production in an industry highly organised for the scientific utilisation of coal, selling in Westphalia is directed by a single co-operative body which can allocate orders to secure the minimum cost of transport. While single pithead prices are fixed for each class of coal for accounting purposes, the Syndicate's selling price policy outside the "uncontested" or non-competitive in-

land areas is extremely flexible, and the aggregate difference between prices realised and the pithead prices is made up by a general levy on all coal produced, with a modification for the tonnage used by the "mixed" concerns in their own works. The large groups find no difficulty in balancing their total production within the quota, and if a surplus of any particular kind of coal accumulates (one is writing of normal trade conditions, not of the present abnormal depression) it can be disposed of at special prices instead of remaining unsaleable at rigid minimum prices. The position in Great Britain, with its separate coalfields, must be much more difficult in any case, even if a large measure of unification were attained, and central selling established in each district; but it would not be impossible, given good will and an "industry outlook," to work up from this to full co-ordination of selling policy through a national committee on relatively simple lines similar to those just described. There is scarcely room for doubt that, if compulsory control of output and prices is to be permanently imposed on the industry by law, efforts will have to be concentrated on radical reorganisation to simplify the control, instead of on measures to complicate it. Above all, there must be sustained effort to make production more remunerative by eliminating waste and unnecessary costs, rather than by the facile expedient of raising prices to consumers. From all these points of view the proposals of the Central Council—if they constitute the sole contribution of that body to the solution of the problem—can only be regarded as ineffective, lacking in courage, and barren of promise for a better era for the industry.

THE POSITION OF LANCASHIRE.—I.

(BY A CORRESPONDENT.)

EVEN to-day, with all the experience accumulated since the war, a clear view of the present position of the British cotton industry can only be obtained against a background given by the position of the industry as it used to be. In 1913, when the productive capacity of the industry was fully employed, production comprised about 1,950 million lbs. of yarn, and about 8,000 million linear yards of cloth. At that time exports absorbed, directly, about 11.18 per cent. of the annual production of yarn, and about 85.87 per cent. of the annual production of cloth was sold abroad; the exports from the United Kingdom represented between 60 and 70 per cent. of the total of international trade in cotton goods. Thus the activity of the industry was supremely dependent upon the maintenance of its export trade. During the war, and in the years immediately succeeding, international trade in cotton goods was at a lower level than before, but, in 1924, when world cotton trade had recovered to within measurable distance of the pre-war amount, the estimated production of cotton yarn in the United Kingdom had declined to about 1,350 million lbs., and that of cloth to about 5,590 million linear yards, the estimated proportions exported being 13 per cent. and 83 per cent. respectively. This meant that in 1924, as compared with 1913, yarn exports from the United Kingdom were less by about 22 per cent., and piece-goods exports by about 35 per cent. The relative position of the United Kingdom between 1924 and 1931 in yarn production and in the export of piece-goods is indicated in the following table*—

Year.	Production of Yarn.†		Export of Piece-Goods.**	
	World.	U.K.	World.	U.K.
1925	117	113	106	100
1926	120	96	98	87
1927	126	106	106	93
1928	122	96	103	89
1929	124	94	105	84
1930	107	68	79	56
1931	108	69	63	42

Among the striking features of this table are the large increase in world yarn production between 1924 and 1929

* For a large proportion of the figures given in this article, the writer is indebted to the Cotton Trade Statistical Bureau. The Bureau has, of course, no responsibility for the views expressed.

† Estimated from returns of mill cotton consumption, excluding waste yarn.

** Value of exports re-valued at 1924 prices.

and the failure of the United Kingdom to share in the increase. Britain also failed to retain her 1924 proportion of the volume of international trade in piece-goods, which in the meantime had not greatly increased. The effect of the world slump is revealed in the figures for 1930-31. In 1930 the estimated production of cotton yarn in the United Kingdom declined to 920 million lbs., and the production of cloth to 3,100 million linear yards, the yarn exports amounting to 65 per cent. and the piece-goods exports to 35 per cent. of the 1913 quantities. Between 1924 and 1929 there is no good reason to think that the home market declined, or that it was smaller in 1924 than before the war. In 1930, however, there was a considerable shrinkage in this market estimated at some 20 per cent.

Thus, when the present position of the cotton industry of the United Kingdom is seen against a background given by the pre-war position, the central feature is that the industry has lost a large proportion of its export trade in piece-goods. Exports of yarn, as yarn, have been fairly well maintained, but these exports were but a comparatively small proportion of the industry's production of yarn. The second feature is that this loss continued during a period when there is every reason to believe that the world's consumption of cotton goods was largely increasing, and when international trade in these goods was not declining. On the one hand, the trade has been lost to national industries which have come to provide a larger proportion of the supply in their home markets and, on the other, there has been loss to outside foreign competitors.

The markets in which loss has been experienced and the position as regards foreign competitors are shown in the next two tables:—

EXPORTS OF COTTON PIECE-GOODS FROM THE UNITED KINGDOM.

	Average 1909-13 Million Yards.	INDICES. 1909-13 = 100.				
		1924.	1928.	1929.	1930.	1931.
India (including Burmah)	2,508	62	58	51	29	16
China and Hong Kong...	587	55	35	36	12	14
Rest of Far East	574	58	62	56	28	17
Central & South America	798	63	59	58	40	27
Europe	362	122	92	83	76	70
Near East	824	74	48	42	32	30
Africa	316	88	114	94	101	57
Australia and New Zealand	214	86	81	92	75	70
United States & Canada	146	145	57	49	35	27
Total (all countries)	6,482	71	61	58	38	28

PERCENTAGE SHARES OF WORLD EXPORTS OF COTTON PIECE-GOODS. (Based on Value.)

Countries.	1924.	1928.	1929.	1930.	1931.
United Kingdom	54.6	46.9	44.2	40.0	35.3
Japan	10.8	14.7	17.5	18.0	23.4
France	7.4	7.2	7.2	8.6	7.7
United States	6.3	6.9	7.0	6.8	6.9
Italy	5.9	6.2	6.2	6.2	7.0
Czechoslovakia	4.0	5.0	4.7	5.3	4.4
Belgium	1.3	2.7	2.8	3.8	3.5

These tables require little comment. The first shows that the larger percentage loss of piece-goods trade has been in the large markets of the Far East, Near East and Central and South America, and the smaller percentage loss in the comparatively small markets of Europe, Africa, Australia and New Zealand. Up to the end of the post-war slump the loss was mainly due to reduced consumption in these markets and to competition from home industries; between 1924 and 1929 it was mainly due to external foreign competition on which the second of the above tables throws some light. Evidently all the countries mentioned except the United Kingdom have made some headway in recent years; but the outstanding competitor has been Japan. Before the war Japanese competition in the world markets had not become serious, but, when the war concluded, a secure footing had been gained in the markets of the Far East, where Japanese trade has continued to expand, and, at the same time, to extend to the markets of the Middle and Near East, Africa, and to America. The change in the pre-war position of the cotton industry of the

United Kingdom is, therefore, that while the industry is still, with some qualifications, equipped to carry on its pre-war amount of international trade, there are now many competitors in the field, each striving for a share of the trade which, in the meantime, owing to the growth of cotton industries supplying their home markets, has but little, if at all, increased.

The obvious reaction of the change is seen in the internal problems of the cotton industry of the United Kingdom, which, as the years have passed and trade has declined, have become increasingly difficult. The desirable solution, of course, would be such an expansion of the industry's trade as would again fully employ the existing equipment, but probably no one now expects that this will be realised in the near future. Its realisation would require either that trade should be regained from national industries in their home markets, and in face of external foreign competition, or that there should be a large general expansion in which all might share. Failing this expansion, which at present seems far remote, the first possibility would probably be countered by the use of protective tariffs; and, in view of the trend in recent years, and of the fact that during this period the large majority of the concerns of the cotton industry of the United Kingdom have been working on an unprofitable basis, it is impossible to feel optimistic concerning our competitive capacity internationally. The tremendous immediate problem is how to reverse this trend and restore the industry to a stable profitable basis.

HOOVER v. ROOSEVELT.

(BY A CORRESPONDENT.)

THE four-yearly bout for the Presidential belt has opened. The seconds are out of the ring, and Herbert Hoover, the Republican holder, faces Franklin D. Roosevelt, the Democratic challenger. The referee is the electorate of the United States. The verdict will not be given until November; and it is largely because of the long-drawn-out nature of the contest that few Americans, outside the ranks of blind partisans, venture with any confidence to forecast the result. In Wall Street, where the desire for a Roosevelt defeat is stronger than the enthusiasm for a Hoover victory, the betting odds a week or two ago were "evens." For the next three months the fortunes of the contestants will sway this way and that; and fundamental forces may be lost sight of in the frenzy of combat. But to-day the atmosphere is not yet too misty to discern some of the main factors upon which the issue will depend. Let us glance, then, at the prospect as the respective party "fans" see it to-day.

The Democratic partisans of Mr Roosevelt base their confidence in his triumph on two main arguments. They argue, firstly, that Mr Hoover, elected on the prosperity cry, has been in power during three years of deepening and unprecedented depression, for which much of the blame will be imputed to him personally by the electorate; secondly, that, although it may be true that normally there are more Republicans than Democrats in the United States, there are certainly more "wets" than "drys," and the "wet" plank in the Democratic platform will sweep many luke-warm Republicans, for this once anyhow, into the Roosevelt camp. There are other argu-

ments, of course, in vogue—but these two transcend others in importance. What is their substance? Of the two, the argument based on the drink question is undoubtedly the stronger. No one can visit America in these days without realising the tremendous sweep of opinion that has taken place, especially in the East, in favour of the repeal of the Eighteenth Amendment. It is held, therefore, by some to be inevitable that with the South presumably solidly Democratic in the circumstances of the present campaign, and with anti-Prohibition feeling the predominant influence in the East, Mr Roosevelt's challenge constitutes one that all the Republican forces cannot resist. It would be rash, however, to accept that conclusion offhand. It is open to Mr Hoover between now and election day to make any number of cautious advances on the question of Prohibition, and it is thought by some shrewd observers not to be impossible for him to make such advances in a way that an adequate body of "wet" Republicans will be sufficiently placated to prevent them from actively supporting the Democratic platform. If that happens, liquor may lose its present place as the dominating factor in the campaign.

If that is so, then the election would appear to turn mainly on the question how far the country will blame the President for the depression which has occurred during his term of office. Americans are no less prone than other nations to impute against their rulers the misfortunes brought about by natural causes; and if the Presidential elections had taken place a few months ago there can be little doubt that the electorate would have decided by a large majority to change the colour of their Administration. But the American people, like other nations, have now had time to learn that the depression is common to all countries and that no Government in the world has been able to resist it. Therefore the insistent effort designed to prove that the depression is in no way Mr Hoover's fault is rapidly gaining ground, and has now reached a point at which the Republican campaigners hope successfully to follow it up by maintaining that, so far from being guilty of inaction in the face of the crisis, Mr Hoover and his colleagues have taken bold, adequate and successful steps at every fresh turn of the emergency. Three months of intensive campaigning is a long time, and though no great upturn in the economic situation is expected before November, it is not impossible that Mr Hoover will gain as much as he would have gained from economic improvement by the broadcast argument that it is dangerous to change horses in the middle of a flood. Again, the Republicans point hopefully to the fact that, although depression breeds discontent, after depression has lasted for a certain period there tends in many countries to be a definite swing not to the Left, but to the Right. If the election were held to-morrow a gambler would probably be justified in risking all he could afford upon backing the chances of Mr Roosevelt; but to make that wager with polling on November 8th is a very different matter. And, indeed, as so often in American elections, it may be that minor issues will tilt the balance one way or the other.

At the outset of his candidacy Mr Roosevelt is faced with an extremely awkward decision, which may react substantially on his Presidential chances. To him as Governor of New York falls the duty of studying the charges made against Mayor Walker and of deciding whether to dismiss him from office or not. It is held by some that, by dismissing Mayor Walker, Mr Roosevelt would give an exhibition of strength that would win him greatly increased prestige, and do much to counter the charges of "political flabbiness" which are so freely levelled at him in the East. Equally, it is held by others that the taking of this decision would mean that the powerful forces of Tammany would no longer give him really active support, and that he would therefore lose the vital key State of the East.

Controversy over the Reconstruction Finance Corporation is another factor which may exert substantial influence on the course of the campaign. In well-informed American financial circles the salvage work achieved already in a few months by the R.F.C. is acclaimed as vital and successful. In such circles the feeling is that,

had it not been for this organisation, the worst fears entertained earlier in the year might have been realised. If there is now a growing confidence that the banking situation has been held up and hoarding checked, this is attributable mainly to the work of the R.F.C. But to the man in the street the operations of this corporation are suspect. By mass opinion it tends to be looked upon as an organisation whose function is to salvage "big business" with the taxpayers' money—and "big business" since the coming of depression is badly out of favour. It is likely, therefore, that the Democrats might successfully play upon the alleged shortcomings of the R.F.C. to discredit the Hoover administration. This danger has been fully realised at the White House, and the President, after a diligent search, has secured a well-known Democrat to succeed Eugene Meyer as the corporation's chief. By this means some at least of the popular odium attaching to the R.F.C. may be shifted off Mr Hoover's shoulders.

More important still, perhaps, is the personal equation. Were the battle to be decided, as in olden time, upon the hustings, then the commanding personality and platform qualities of Mr Roosevelt might have decided the day in his favour. But to-day the radio is the chief instrument of the personal appeal of the two men; and Mr Roosevelt's forensic abilities will be matched by Mr Hoover's colder but forceful logic. Again, if Mr Roosevelt has an asset in his name—albeit his blood relationship to the beloved "Teddy" is somewhat distant—Mr Hoover can still rely upon the great legend of magical organising power which grew up around him during the war, and which is not yet dead. Finally, incredible though it may seem to Englishmen, it is freely avowed that Mr Roosevelt's physical infirmity—or so much of it as remains after his plucky and successful victory over an attack of paralysis—may stand seriously in his way. Much will be heard in the Republican campaign of Mr Roosevelt's "crippledness," of the fear that the burden of work and responsibility attached to the office of President would break him down, and, most of all, that such an event would land the United States with the distrusted and unpopular Mr Garner (now Democratic candidate for the Vice-Presidency) as the Chief Executive. The Democrats, on the other hand, will acclaim (and truthfully) Mr Roosevelt's physical fitness and unbounded energy, to say nothing of the magnificent courage and determination—comparable with that of Lord Snowden—with which he has triumphed over physical disability.

Perhaps we must not quite forget that there will be a third candidate, who, though his chances of entering the White House are entirely non-existent, might conceivably spring a surprise in the volume of votes which he is able to detach from the two main parties. Up to date, however, this factor, though imponderable, does not look important.

To sum up: Mr Roosevelt is to-day in a stronger position than any recent Democratic candidate, and to-day his chances are bright. But it is almost generally assumed—whether rightly or not—that the present Democratic advantage will decline to some extent. Whether that decline will be steep enough to send Mr Hoover back to the White House is the great enigma. Does it really matter very greatly to the world in general, to Europe, or to Britain which man is selected? Both understand world problems. Both realise fully that unless the United States is prepared to adopt the "ring-fence" isolation policy, both equally will be compelled, in the interests of the United States, to study American interests in the light of world economic problems. And neither—in the absence of fresh European cataclysms—is ready to try the "ring-fence" isolation policy. So let us Europeans stand aside, keep our would-be "seconds" well away from the ring, try to understand the points of the fight, but leave the referee's job strictly to the American people, in the firm belief that they know best about their own affairs, and that, whatever leader they may choose, he will be the best man to take that big position and to assume those great world-wide responsibilities which inevitably await the victor of next November.

DIARY OF THE CRISIS.

- April 1st. League Financial Committee issues report on South-Eastern Europe, emphasising crisis and recommending, *inter alia*, a loan for Austria and temporary relief in respect of foreign debt service for Bulgaria and Greece.
- April 6th. Four-Power Danubian Conference meets in London.
- April 7th. Powers fail to reach agreement on methods for dealing with the problem of the Danubian States.
- April 10th. President von Hindenburg re-elected by majority of 5,942,182.
- April 12th. League Council meets in Geneva to consider Financial Committee's report on South-Eastern Europe.
- April 13th. Dissolution of Nazi "Storm Troops" enacted by Presidential Decree.
- April 15th. M. Venizelos informs League Council that, failing a loan, Greece must default on foreign debt.
- April 18th. Deutscher Credit-verein A.G. and First Croatian Savings Bank at Agram suspend payments.
- April 19th. British Budget introduced; tax revenue £723 millions; Exchange Equalisation Account established.
- April 21st. Bank of England rate reduced from 3½ to 3 per cent. Treasury Order issued imposing, as from midnight on April 25th, additional duties varying between 5 and 23½ per cent. on a wide range of imports.
- April 23rd. Reported fighting between Japanese and Manchurian irregulars between Harbin and Vladivostok.
- April 24th. Prussian Diet election results in party distribution: Nazis, 162; Social Democrats, 93; Centre, 67; Nationalists, 31; Communists, 57. Similar Nazi gains in other Länder.
- April 25th. Bill introduced into Greek Chamber providing for abandonment of the gold standard and control of the exchange by the Bank of Greece. Sterling weak: —\$3.68.
- April 27th. Banque Française Algérienne of Algiers suspends payment.
- April 29th. Second reading of Irish Free State Government's Bill to abolish Oath carried in Dail by majority of six.
- May 1st. French election polling day. Preliminary returns show swing to the Left.
- May 4th. German Presidential Decrees issued providing for State control of all semi-military party organisations.
- May 5th. Sino-Japanese Armistice Agreement signed at Shanghai.
- May 6th. French President assassinated by Russian lunatic. Austrian Cabinet resigns.
- May 8th. Second ballot of French election gives Left parties 356 seats out of 615.
- May 9th. Reichstag reassembles. Austrian Government appeals to League for immediate financial assistance. Tardieu Government resigns.
- May 10th. M. Lebrun elected President of the French Republic. British Chancellor of the Exchequer announces immediate imposition of additional duties on silk and rayon imports.
- May 11th. Announced from Tokyo that all Japanese troops (with the exception of a small naval force) now in Shanghai will be withdrawn.
- May 12th. Reichstag rejects by 287 votes to 257 a motion of no confidence in the Brüning Cabinet. Bank of England rate reduced from 3 to 2½ per cent.
- May 15th. Japanese Premier assassinated in Tokyo.
- May 18th. Greek debt scheme announced whereby portion of amount required for service of foreign loans is to be utilised for public works, the balance being deposited in a special blocked account. The question of transfer to be examined at the end of 1932.
- May 19th. Irish Free State Oath Bill passed by Dail by 77 votes to 69. Anglo-South American Bank announces scheme under which a group of banks, headed by the Bank of England, will take over certain of its assets connected with the nitrate industry.
- May 20th. Austrian Coalition Cabinet formed under Dr. Dollfuss.
- May 21st. Greek Cabinet resigns. Prussian Cabinet formally resigns but continues to act in absence of clear majority for any party. League Council considers financial position of South-Eastern European States and decides that it shall be studied further by a mixed expert committee.
- May 22nd. Admiral Saito asked to form a new Japanese Cabinet.

FOR BETTER OR WORSE?

It's a gamble, but your widow must invest the capital you leave her to secure an income. Why not invest it for her now?

The new "Safeguard" Policy guarantees your dependants £3 per week free of Income Tax for every £1,000 Assured—over 15%—in the event of your death.

- May 23rd. Announced that Austrian Cabinet will proclaim a transfer moratorium on May 28th.
- May 24th. Prussian Diet assembles; Nazi member elected as President.
- May 25th. Prussian Diet adjourns following disturbances between Nazis and Communists. M. Papanastasiou forms new Greek Cabinet.
- May 29th. President von Hindenburg and Dr. Brüning confer on political situation.
- May 30th. Brüning Cabinet resigns after failure by the Chancellor to secure an assurance of the President's support.
- May 31st. Herr von Papen appointed Chancellor of the Reich. President Hoover appeals for passage of adequate Tax Bill without further delay. Roumanian Cabinet resigns.
- June 1st. French Chamber meets. Socialists' proposals for participation in a Government under M. Herriot rejected by the Social-Radicals.
- June 3rd. Greek Cabinet resigns.
- June 4th. M. Herriot forms Cabinet without Socialist participation. German Reichstag dissolved. Chilean Government overthrown and a Junta installed. Tax Bill passed by U.S. House of Representatives.
- June 5th. M. Venizelos forms new Greek Cabinet.
- June 6th. Large London metal market firm fails. Chilean banks closed. U.S. Tax Bill passed by the U.S. Senate. Reich elections fixed for July 31st. New Roumanian Government formed by Dr. Voevod.
- June 7th. Mr Thomas and Lord Hailsham in Dublin discuss the Land Annuity payments. French Government receive vote of confidence by a majority of 269 votes.
- June 8th. Free State Senate rejects Section 2 of the Oath Bill.
- June 9th. Chilean Junta takes possession of the Central Bank.
- June 10th. Mr de Valera confers with members of the British Government in London, but fails to reach agreement. Foreign creditors of the Credit Anstalt reject proposals from Austrian Government for partial settlement of their claims. British import duties on pig iron increased to 33½ per cent.
- June 13th. Committee set up by the Bank of England to protect the interests of British bondholders of League loans.
- June 14th. German Presidential decree imposes cuts in unemployment pay and pensions, and a new levy on salaries. Liquidation of Lee, Higginson and Company, of New York, and their Paris branch, announced.
- June 15th. German Presidential decree raises ban on Nazi "troops."
- June 16th. Lausanne Conference opens; Mr MacDonald chairman. U.S. Republican Convention nominates President Hoover as Presidential candidate.
- June 17th. Declaration signed at Lausanne by Great Britain, France, Italy, Belgium and Japan suspending during the period of the Conference the payment of reparations and interest on European war debts. Bavaria, Baden and Württemberg ban all party uniforms. Chilean Junta deposed by counter-revolution and new Junta set up under Señor Davila. Manchukuo Government proposes to China that all customs collected in Manchuria shall be placed under its control, China receiving a quota for service of foreign loans.
- June 19th. Manchukuo prohibits banks receiving customs revenue (except those at Dairen) from transmitting such revenue to Shanghai.
- June 20th. Conclusion of agreement between Holland, Belgium and Luxembourg for progressive annual reduction of tariffs by 10 per cent. announced at Lausanne.
- June 21st. Officially announced that Reich has purchased a controlling interest in the German Steel Trust. Rioting and street fighting reported from Santiago and Valparaíso. Manchukuo seizes customs revenue at Dairen. Sterling: \$3.61½.

June 22nd American disarmament proposals, involving the reduction of world armaments by one-third, announced.
Austrian partial moratorium on foreign transfers operates.

June 23rd Dr. Dollfuss discusses Austria's financial position with League and Experts' Committee at Lausanne. Reported that Great Britain, Italy and Switzerland are willing to participate in a 300 million schilling loan to Austria; French participation dependent on political stipulations.
Renewed political violence reported from Germany.
China appeals to League Committee of Nineteen to call upon Japan to refrain from actions likely to aggravate position in the Far East.
New York Bank rate reduced from 3 to 2½ per cent.

June 24th Japanese Customs Commissioner at Dairen dismissed by the Inspector-General for Chinese Maritime Customs, following the former's refusal to transmit revenue to Shanghai.
Heavy withdrawals reported from Chicago Continental Illinois Bank and First National Bank. Many small banks in Chicago fail.

June 25th Bavaria and Württemberg refuse Reich's request to raise ban on political uniforms. Nazis attack Vorwärts.
Japanese customs staff at Dairen resign. Harbin customs seized by Manchurian police.

June 29th German presidential decree issued restoring freedom of political demonstration and the right to wear political uniforms throughout the country, but allowing the States to forbid the first in "specifically limited areas and in individual cases" and the second when "public security is immediately endangered."

June 30th Irish Land Annuities in default.
Bank of England rate reduced from 2½ to 2 per cent.
Jugoslav Cabinet resigns.
Sterling: \$3.59½.

July 1st British War Loan Conversion scheme announced.
U.S. Federal budget deficit for 1931-32 of \$2,885 millions.

July 2nd U.S. Democratic Convention nominates Mr Franklin Roosevelt as presidential candidate.

July 3rd Dr. Serskhitch forms new Jugoslav Cabinet.

July 4th Mr Thomas introduces into the House of Commons a resolution authorising the levying of special duties on Irish Free State imports in the event of the non-payment of Land Annuities or other Irish obligations. Announced that annuities will be paid into a suspense account by I.F.S. pending arbitration.
Sterling: \$3.55½.

July 7th British counter-proposals to American disarmament scheme announced.

July 8th Agreement reached at Lausanne whereby reparations are cancelled apart from a final issue by Germany of 3,000 million marks of bonds. "Gentlemen's Agreement" makes scheme conditional on satisfactory debt settlements with America.

July 11th Lausanne Agreement endorsed by German Cabinet; unfavourably received by Nazis and Centre.
Sterling: \$3.55½.

July 12th French Chamber passes Budget by 385 votes to 201. Announced by British Government that duties of 20 per cent. *ad valorem* will be imposed on certain Irish Free State imports as from July 15th.

July 13th Announced that a declaration has been drawn up between Great Britain and France on the means for facilitating political appeasement in Europe; text communicated to Germany, Italy and Belgium inviting their co-operation.
Announced that a Bill will be introduced into Dail providing for the imposition of retaliatory duties on certain British imports.

July 14th Italy adheres to Franco-British declaration.
Mr Norton, leader of Irish Labour Party, and leaders of British labour discuss Irish dispute with Mr MacDonald in London.

July 15th Mr de Valera confers with British Prime Minister in London; no agreement reached.
Continued political violence reported from Germany.
League Council adopts protocol providing for issue of 300 million schilling loan to Austria.

July 16th French Chamber authorises Treasury borrowing of 2,000 million francs for urgent needs.

July 18th Reich Government reimposes ban on open-air demonstrations and processions.
Roumanian National Peasants' Party successful in general election.

July 19th Fighting between Chinese and Japanese in Jehol.

July 20th Prussia placed by presidential decree under Reich Commissioner (Herr von Papen); Prime Minister and Minister of the Interior deposed; "state of emergency" declared in Berlin and the Province of Brandenburg.
Five Italian Cabinet Ministers resign; Signor Mussolini assumes Ministries of Foreign Affairs and Corporations.

July 21st Ottawa Conference opens.

July 23rd General Committee of Disarmament Conference adopts resolution recording progress, Germany and Russia recording adverse votes and eight other States abstaining.

July 25th Germany adheres to Franco-British declaration.
Russo-Polish pact of military and economic non-aggression signed.

July 26th Irish Free State retaliatory duties operate.
"State of emergency" in Berlin and Brandenburg terminated.

Notes of the Week.

The Irish Dispute.—Mr de Valera has made his counter-move in the economic war between Britain and the Irish Free State more cautiously than was generally expected. His first schedule of retaliatory import duties, which became effective last Tuesday, includes a tax of 5s. a ton on coal and coke and a duty of 20 per cent. *ad valorem* on iron and steel, cement, and electrical apparatus, while duties ranging from 42s. to 84s. a hundred-weight are imposed on various sorts of pig's meat. In the latter case an Imperial preference is given and imports from Northern Ireland are to be duty free. It would appear that the Free State Government are disinclined to risk complete exclusion of imports from Britain until they are sure that Ireland can finance adequately alternative imports from the Continent without a serious rise in prices. The fact that the duties paid on coal imports from Britain this week have provisionally been remitted lends colour to this view; and, seeing that, however ready the Free State may be to pursue a policy of greater self-sufficiency, the electorate would certainly not welcome any serious increase in the cost of living in what is already a fairly "dear" country, Mr de Valera is probably wise to move circumspectly. In any case, unhappily, sufficient damage is being done both by his duties and those imposed on this side of the St. George's Channel. In a situation in which, as matters now stand, everything is to be lost and nothing gained—for continuance of tariff war would mean the end of any hope of recovery of payments due from Ireland—we once more appeal to Mr MacDonald to reconsider his attitude. It would be deplorable if considerations of "saving face" were to stand in the way of a resumption of negotiations. *Ricchezse oblige*; Britain is not yet so little or so poor a country that she cannot afford to take a wise and magnanimous line in this deplorable dispute. If Mr MacDonald can arrange a Customs armistice on both sides, while the question at issue is referred either to a tribunal with a chairman appointed by the Hague Court, or, alternatively, to a fact-finding commission of two assessors from each side, we are confident that his initiative would be welcomed in all responsible circles both in England and the Irish Free State.

Senator Borah's Broadcast.—Senator Borah's speeches are usually a significant index of the trend of opinion of the American "man in the street"; and his advocacy, in a broadcast address last week-end, of debt revision as between Europe and the United States has naturally been welcomed on this side of the Atlantic as an encouraging development. For our part we would observe that in stating that he was now prepared to recommend a revision of the debts, not because they were themselves "unjust," but because revision, especially if accompanied by disarmament, would redound to the interest of the American people themselves, Senator Borah was emphasising the same considerations as we put forward in these columns last week. His speech confirms our view that the only basis on which debt negotiations can be initiated with any assurance of success is if the case for revision is put forward, not on the ground of equity nor of the debtors' capacity to pay, but with the argument that the final reduction of these payments to a manageable scale, incapable of again disturbing economically international relations, is an essential condition for the re-establishment of the prosperity which America has lost and which she can only regain as a member of a rehabilitated world. As for Senator Borah's suggestion that war debts should form part of the agenda for the World Economic Conference, we are here disposed to differ from him. The objection is that, as events at Lausanne showed, if a contentious major issue forms the first item on the agenda of a conference, the conference's capacities are apt to be exhausted by the achievement of agreement on this single point. It would be much better if the debt question could be dealt with separately during the coming autumn, while the necessary preparatory work for the Economic Con-

ference is in hand, so that the Conference itself—and we can suggest no better venue for it than Washington—might meet, with all the financial legacies of the war finally settled, to approach the vital task of laying down in the fields of tariffs, currencies and normal international finance, the foundations of a new and better era.

Prospects in Germany.—The course of events, so far, in Germany tends to confirm the opinion, which we expressed last week, that General von Schleicher, in the sphere of domestic politics, means to tread as circumspectly as he can, keeping a firm grasp on the key position of his "*l'état c'est moi*" regime and preparing to resist any movements, from whatever quarter, subversive of "law and order." Herr von Papen has spoken the Länder fair at the Stuttgart Conference: there are to be no further experiments at present in the way of Reich Commissioners. Martial law has been lifted from Berlin and Brandenburg, and most of the arrested Prussian officials have been released. No move has been made to suppress the Republican organisations. Thus the new ruler of Germany seems inclined, astutely enough, to wait and see what result will emerge from Sunday's elections. Here the prospects point to a stale-mate; the Nazis will doubtless be the leading party in the new Reichstag, but even a Nazi-Nationalist coalition seems unlikely to command a majority, and the Centre may thus become the balancing factor. This, however, presupposes the continuance of constitutional parliamentary government. Will this suit the book of the Hitlerites? We are not disposed to attach too much credence to the rumours of a *putsch* to be led by Hitler on Sunday night. Herr Hitler had little stomach for rifle fire years ago at Munich, even with General Ludendorff, complete in frock coat and top hat, to hold his hand. In a "march on Berlin" he would be up against a stiffer proposition, and we do not see the Austrian demagogue carrying his swastika-emblazoned flag to victory over the Reichswehr. Whether or not General von Schleicher is prepared to take a few of the "safer" Nazis into the Administration, the omens point to a situation in which, if Hitler reluctantly tries a *putsch*, his forces will be destroyed, and, if he does not, they will disintegrate; for the Strasser wing—absorbing possibly what is left of the Communists—would almost certainly hive off from a movement which admitted that it had abandoned its revolutionary conception. Unless he commits the folly of driving the moderate Left into a counter-revolution, General von Schleicher seems to have a fair chance of maintaining the fruits of his *coup d'état*. His real difficulties lie less in the political opposition against him than in the formidable financial and economic problems which any administration in Germany has got to face.

German "Security."—If the future Government of the Reich is to continue in the hands of the group who have now seized it, the foreign policy of Germany, as well as her domestic problems, must of necessity be a matter of international concern; for, making due allowance for electoral considerations and the fact that speeches designed primarily for domestic consumption should not be taken at their full face value abroad, it remains true that Germany's neighbours are now confronted with a regime representing to a great extent the elements who effectively controlled the policies of Germany before the war. Under these circumstances General von Schleicher cannot be surprised if his broadcast address on Tuesday had a somewhat unwelcome sound when picked up by receivers on the other side of Germany's western frontier. Speaking as a soldier who disavowed love of military dictatorship, he stated roundly that Germany's armed forces, as dictated by the Versailles Treaty, were inadequate to guarantee German "security." The present situation could be rectified in one of two ways. Either the other Powers could disarm to Germany's level, as they were legally and morally bound to do; or, failing that, Germany must so "re-organise" ("*umbauen, nicht ausbauen*") her armed forces that they would give at least some measure of

security. General von Schleicher did not expand his definition of desirable "reorganisation," but it has since been suggested from German sources that what he has in mind is the substitution of a two-year service system for the Reichswehr, in place of the more expensive twelve-year system imposed by the Peace Treaty, thus enabling Germany to maintain a larger of effectives without additional cost. If this is what is meant, the proposal need not perhaps be taken too tragically abroad; for the real crux of the problem of modern armies lies in equipment, and here General von Schleicher did not put forward any specific demands.

U.S.S.R. and Poland.—Last January, when a Russo-Polish pact of military and economic non-aggression was initiated at Moscow, but negotiations on similar lines between the U.S.S.R. and Rumania broke down over the vexed question of the status of Bessarabia, the question naturally arose whether Poland would finally sign the agreement with her eastern neighbour in the absence of a *rapprochement* between Moscow and Bucarest. The news now comes that the pact between Poland and the Soviet Union was formally signed in Moscow last Monday. Since the agreement has still to be ratified by the Sejm, it would probably be premature to conclude that Poland has now decided on firm friendship with the U.S.S.R. without regard to her fellow-member of the Little Entente; and, in any case, it is provided in the pact that all Poland's engagements with Rumania shall hold good. It may, however, perhaps be significant of a change in the influence of French policy if Poland has been encouraged by Paris to sign the pact without waiting further for an adjustment of Russo-Rumanian relations. In any case, any step such as this which diminishes tension on any of Europe's vexed frontiers is very welcome.

The By-Elections.—The results of the North Cornwall and Wednesbury by-elections suggest that the electors are on the whole returning to the old party allegiances that existed before the formation of the National Government and the General Election of last year. In North Cornwall, where the vacancy arose from the death of Sir Donald Maclean, Sir Francis Acland, who stood as a Liberal, prepared to give general but not unconditional support to the Government, polled 16,933 votes, while the Conservative polled 15,387 votes. The corresponding figures in 1931, when the Conservatives opposed Sir Donald Maclean, were: Liberal 16,867, Conservative 15,526, and Labour 1,907. Allowing for the disappearance of the Labour vote, the figures show very little change, but North Cornwall is certainly not prepared to abandon its old free-trade Liberal allegiance. At Wednesbury, a typical "Black Country" industrial constituency, where unemployment is very heavy, the seat was recovered by Labour, who polled 21,977 votes against the Conservative's 18,198 votes. Last year the figures were: Conservative 25,000 and Labour 20,842, but the seat is traditionally Labour, and the result need cause little surprise. The campaign largely centred round the means test, which affects directly a substantial proportion of the electorate, but there is no doubt that the huge special accession of strength which the Government candidates benefited from last year is now disappearing.

The Potato Growers' "Victory."—Not content, apparently, with the Government's fiscal achievement in rendering supplies of fresh summer fruit somewhat scanty and prices dear, the Import Duties Advisory Committee have now announced that they propose in the near future to recommend the imposition of additional duties on certain forms of horticultural produce. In anticipation, however, of their general findings they have come to the conclusion that imports of potatoes, which amounted in June to 2,851,294 cwt., as compared with 2,835,043 cwt. a year ago, are becoming "abnormal" and are seriously affecting the British grower, whose supplies are available and sufficient to meet requirements. Accordingly they recommend that potatoes should bear

an import duty of £1 per ton throughout the year on "old" potatoes, and of £4 8s. per ton on "new" potatoes between November 1st and June 30th. This recommendation has been adopted by the Government, and an Order under the Additional Import Duties Act takes effect accordingly from July 28th. The decision has been hailed in the Protectionist Press as a victory for log-rolling efforts on the part of British potato growers. Potatoes are a crop whose yield and consequent price are subject to extreme variations, and it remains to be seen how far the British grower will benefit at the expense of the consumer. Since the duties are high (Dutch potatoes were previously selling round £5 a ton in the London market) it is clear that at any rate the Advisory Committee has succeeded in dealing one more blow at our trade with Continental customers.

Colour Users and the Tariff.—Sir Henry Sutcliffe Smith made a vigorous appeal, at the annual meeting of the Colour Users' Association last Tuesday, for the removal of the 10 per cent. tariff on imported dyestuffs. He adduced two main grounds for this request: the existence of the Dyestuffs (Import Regulation) Act, and the formation, a few months ago, of a cartel, including the principal Swiss, German, French and British dyestuffs manufacturers. Protection to the dyestuffs industry is afforded by the Import Regulation Act, and the revenue duty of 10 per cent. is an additional burden, which, in Sir Henry Sutcliffe Smith's view, is both intolerable, in view of the depressed state of the textile industries, and unfair, considering that British colour users have patiently endured the handicap imposed upon them since 1920 in the hope of seeing an efficient British industry built up. Already, said the President of the Association, the effect of the international cartel, the precise terms of which were not known, has been an increase in prices of 20-40 per cent., and the increase during recent months in the import of intermediate products suggests that it is also cramping the development of the industry. Whether the cartel is or is not having the mischievous effects ascribed to it by Sir Henry Sutcliffe Smith, it is patently absurd that, when the trade in dyestuffs is controlled as it has been since 1920, and only those foreign products which are admittedly indispensable to British users are allowed in at all, their users should be penalised for availing themselves of them. It is difficult to imagine a more unsuitable object of revenue taxation than an industrial material which has passed the most severe test of indispensability, and British colour users have, perhaps, as Sir Henry Sutcliffe Smith claims, a special right to consideration in that they have submitted for twelve years to hardships imposed in the interests of the dyestuffs industry, without, so far, reaping much of the promised reward.

Sterling and Gold Prices.—The faint signs noted a fortnight ago that the downward course of prices in terms both of sterling and gold currencies was temporarily reversed have become stronger during the past fortnight. As will be seen from the following table, although the foreign index numbers, with the exception of the Irving Fisher index for the United States, continued to fall up to July 13th, between that date and July 27th the three *Economist* indices all moved appreciably upwards:—

SEPTEMBER 18TH, 1931 = 100.

Date.	<i>Economist</i> Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistische Reichsanstalt, Germany.

July 27th ...	99.6	103.5	84.1	...	...	...	...

Sectional movements of the complete *Economist* index are shown below. In the cereals and meat group the rise was due partly to an upward fluctuation in meat and bacon prices, possibly not of great significance, but partly also to a firmer tendency in the cereal markets. Among "other foods" butter was prominent with a substantial rise in the price per hundredweight, textile and metal prices were irregular, but in the miscellaneous group rubber, linseed oil and hides recovered a little:—

"ECONOMIST" INDEX.

(1927 = 100).

	Sept. 18, 1931.	July 13, 1932.	July 27, 1932.
Cereals and meat	64.5	66.1	69.3
Other foods	62.2	58.9	59.2
Textiles	43.7	45.7	45.8
Minerals	67.4	68.3	67.9
Miscellaneous	65.8	58.7	59.7
Complete index	60.4	58.9	60.1
1913 = 100	83.1	81.1	82.7
1924 = 100	52.2	50.9	51.9

It would be premature as yet to conclude that a definite upward trend of wholesale prices has set in. Nevertheless, the movement since the end of June affords a little encouragement.

Cotton Trade Wages.—At the end of last week, writes our Manchester correspondent, arrangements were made for a resumption of negotiations on wages between the cotton weaving employers and the representatives of the operatives; and a joint conference took place in Manchester on Monday morning. The position was somewhat complicated by the strike at Burnley; but the joint conference, nevertheless, began its work. It is understood that at the outset the employers made a claim for a reduction in wages of all operatives in the weaving branch of the industry amounting to 30 per cent. off list rates, which meant a reduction off current earnings of nearly 18½ per cent. The trade union officials opposed such a reduction very strongly, and after further discussions the employers agreed to modify their claim; it is believed that the demand was brought down to 22½ per cent. off list rates, which means a reduction of about 12½ per cent. off current earnings. The joint conference was resumed on Tuesday afternoon when the operatives made a counter proposal, which, it is reported, was for a reduction off current wages of 5 per cent. The employers announced that they could not accept this offer and the conference was then adjourned until Friday in order that the representatives of the workpeople might consult their organisations. Although no official announcement has been made, it is understood that in addition to a general reduction in wages the employers have applied for a revision of the rates of pay in certain districts which, if accepted, would mean still greater concessions from the trade unions. The strike at Burnley has been more successful from the operatives' point of view than was generally expected, as the weavers' union has not only brought about a strike at the mills where a wages reduction was threatened, but has also brought out the workpeople at sheds where no notices had been given of a reduction. The union has also been able to close the mills that have been working on a six-loom basis for several months. At the time of writing the outlook for an early settlement of this labour trouble is certainly not bright. The employers are determined to secure a reduction off list rates of 22½ per cent., as a decrease of this kind has already been obtained at many mills, but in view of the solidarity of the workers in Burnley it is doubtful whether the trade union leaders can go back to their members for ratification of an agreement which means such a big reduction.

Idle Shipping.—The latest quarterly return published by the Chamber of Shipping shows that tonnage laid up out of commission in United Kingdom ports on July 1st amounted to no less than 2,196,140 tons net, an increase of 22 per cent. as compared with April 1st and of over 7 per cent. in comparison with the position a year ago.

We show in the following table the figures of unemployed tonnage in this country at quarterly intervals from the beginning of 1931:—

	Thousand Net Tons.	
	1931.	1932.
January 1st	1,593	1,965
April 1st	1,890	1,800
July 1st	2,044	2,196
October 1st	2,089	...

During the first half of 1932 the deterioration in the state of the shipping industry, as recorded by these figures of tonnage unemployed, has been relatively much less marked than in the corresponding period of 1931. A year ago the position underwent a serious change for the worse between the beginning of January and the beginning of April. This year, the first quarter witnessed a slight improvement, but the addition made to the volume of tonnage out of commission during the second quarter was greater even than was the case between April and July a year ago. Of the total tonnage now unemployed in United Kingdom ports—a figure which represents nearly 3¼ million gross tons, or about 5½ million tons deadweight, carrying capacity—all but 27,508 net tons consists of British-owned vessels. Included in the aggregate are 307 vessels of 855,739 net tons which have been laid up for a year or longer. The eventual re-employment of such tonnage is becoming in many cases a matter of considerable uncertainty; and there is little doubt that the majority of them would be consigned to the scrap heap were it not for the fact that they are mortgaged to banking creditors.

The Volume of Overseas Trade.—Last week's *Board of Trade Journal* contained the usual quarterly article, revealing the trend in the volume of our overseas trade by the elimination of changes in prices. The table below shows the volume and value figures for retained imports and domestic exports in 1924 and since 1930:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS.

Period.	Retained Imports.				Exports of Domestic Produce.			
	Declared Values.	Index of Average Values.	Value in terms of 1930.	Index of Volume.	Declared Values.	Index of Average Values.	Value in terms of 1930.	Index of Volume.
	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.	1930 = 100.
	Million £.	Million £.	Million £.	Million £.	Million £.	Million £.	Million £.	Million £.
1924	1,137	135.0	842	88.0	801	120.8	663	116.2
1930	957	100.0	957	100.0	571	100.0	571	100.0
1931.								
1st quarter ..	192.5	84.5	227.7	95.2	103.3	93.2	110.9	77.7
2nd " ..	189.7	82.0	231.2	96.6	95.8	90.8	105.6	74.0
3rd " ..	191.0	79.1	241.5	100.9	95.2	87.8	106.2	74.4
4th " ..	225.0	79.0	284.8	119.0	96.8	86.0	112.5	78.8
1932.								
1st quarter ..	177.3	78.4	226.1	94.5	92.3	84.4	109.4	75.7
2nd " ..	153.3	75.3	203.7	85.1	94.7	84.3	112.3	78.7

As compared with the first quarter of the current year, the volume of retained imports during the April-June period shows a decline of 10 per cent. This shrinkage is the result of a reaction after previous "forestalling," and of the influence of the new tariff and the depreciation in the gold value of sterling. Retained imports of food, drink and tobacco declined by 4.7 per cent., and the figures for raw materials and manufactures show a decrease of 15.8 per cent. and 15.6 per cent. respectively. There was a further decline of 4 per cent. in the average value of imports. As was to be expected, the fall was most pronounced in the case of manufactures, whose average value was nearly 10 per cent lower than in the previous quarter. On the other hand, the volume of domestic exports was higher than in any quarter since the beginning of 1931, with the exception of the October-December period of last year. The rise on the previous quarter amounted to 2.6 per cent. There was an advance of 5 per cent. in the volume of exports of raw materials and partly manufactured articles, and one of 3.8 per cent. in foreign purchases of manufactures. In contrast to the downward tendency in the average value of imports, the value of exports in terms of sterling did not decline further during the second quarter.

Austria's Default.—A fortnight ago, when a formal transfer moratorium was declared in Austria, the Austrian Government gave it to be understood—as our Vienna correspondent reported at the time—that requisite funds to maintain the service of the 1923 League Loan were in hand for some time ahead. It now appears that this is not the case. The trustees of the loan have officially announced that the monthly instalment due on July 1st has not been received, "nor have the trustees received any information which would lead them to suppose that the monthly instalment due on August 1st will be met." The trustees have in hand the necessary funds to provide on December 1st for the redemption of the bonds due to be made in respect of the year ended May 31, 1932; but the funds received for the payment of interest are insufficient to meet in full the interest due next December. Moreover, the Austrian Government has failed since the middle of June to pay into the trustees' account at the National Bank of Austria the whole of the pledged revenue collected by it. In these circumstances the trustees will make good the default by recourse to the guarantor Governments. The position of the 1930 loan, in respect of whose service the requisite amounts of foreign exchange were also stated by the Austrian Government to be in hand, has not yet been made clear. Doubtless the B.I.S., who are trustees for that loan, will shortly issue a statement. The position, however, now disclosed is that one more default has definitely to be faced in respect of the series of League loans, to whose unfortunate history those issued on behalf of Danzig and Estonia alone are signal exceptions.

Another Reorganisation in Germany.—The Hirsch Kupfer und Messingwerke, which holds a leading place in the German metal trade and is one of the most important copper rolling mills, has now had to be reorganised after very heavy losses, writes our Berlin correspondent. Among its large shareholders, who will bear the chief burden of the losses, have been numbered, since the end of 1929, Imperial Chemicals, Limited, with Rm. 3 millions shares out of a capital of 12 millions, and since the beginning of 1930 the Belgian copper company, Haut Katanga, with 2½ million shares. Both these foreign groups acquired their holdings at well over 100, but are now agreeing to a reduction of their capital in the ratio of 12 : 1. If, as is anticipated, the other shareholders agree to this severe writing down, the continued existence of the company is assured. The Hirsch copper works have lost about Rm. 16 millions, in spite of the fact that no loss arose out of the fall in copper prices, as their stocks were always protected by long-term contracts. Moreover, the large copper rolling mill near Berlin, the largest in Europe, worked at a profit until the last few months and is even now working to two-thirds of capacity, so that the loss is due entirely to unsuccessful commitments in ancillary lines, such as copper manufacturing and subsidiaries engaged in metal trading. The bank debts of the company at one time reached Rm. 40 millions and are still 28 millions. With some small exceptions they are all foreign debts which come under the standstill agreement, and the creditors have undertaken, if the reorganisation is carried out, to prolong their credits at very low rates of interest. Part of their claims will, however, be repaid in cash in the course of this year, as the principal asset of the company, the large copper rolling mill, is being separately organised as a new company. It has already been possible to sell 6½ million shares of the new company, representing half its future capital, at par for cash, for it is a sound company with not much debt. When the standstill creditors will be paid, and what they will receive over and above the selling price of the shares is not yet settled, but the management hopes that it will be possible after a few years to repay all the bank debts in full, without loss. In this event, the shareholders would, in the main, be the only persons to suffer loss in connection with the vast and many-sided activities of this firm, which once ranked among the most famous German firms of international reputation.

Standard Bank of South Africa.—Lord Balfour of Burleigh, the chairman of the Standard Bank, had a difficult year to review in his annual address to the shareholders last Wednesday, but the general impression left by his speech is that while the profits and resources of the bank have been inevitably affected by the past year's vicissitudes, its strength remains unimpaired. In discussing the balance sheet he was careful to explain that, as it is expressed in sterling, both sides of the accounts are inflated this year by one-fourth owing to the depreciation of sterling against the South African pound. After allowing for this, there has been in reality a contraction of £7,000,000 in deposits, offset mainly by a reduction in the item bills of exchange, this last decline being directly due to the contraction in South Africa's external trade. The depreciation of sterling and the South African exchange position have involved the bank in a further difficulty, for the bank felt bound to accept the invitation of the Union Government to co-operate in the formation of the South African exchange pool. Its participation amounts to £2,750,000, which represents an uncovered position, and to insure against any risk of loss the bank has felt bound to create a special reserve fund of £664,170 by means of an allocation from general reserves. Even so, the main reserve fund still stands at £2,500,000, an amount equivalent to the paid-up capital. On the other hand, the recent big appreciation in the bank's investments has brought their market value well in excess of their book value, and last year's need for provision for depreciation has been replaced by a substantial increase in inner reserves. Lord Balfour concluded his address with the usual review of South African conditions. This is naturally a somewhat discouraging account, but the position does not compare unfavourably with that of other countries, and South Africa is very fortunate in that her principal export—gold—commands a certain market at a remunerative price.

Bank of New Zealand.—This year's profit and loss account of the Bank of New Zealand illustrates well the difficulties with which banks are faced at the present time, for while interest rates have fallen to abnormally low levels, the bank's expenses remain largely unchanged. This is shown by the following table, giving the bank's gross earnings and expenses during the past three years:—

	1929-30.	1930-31.	1931-32.
	£'000.	£'000.	£'000.
Gross profits	2,014	2,009	1,771
Salaries	492	509	505
General expenses	180	175	142
Rates and taxes	359	446	503
Directors' fees	10	10	10
Audit expenses	3	3	3
Interest on guaranteed stock	21	21	21
Total expenditure	1,065	1,164	1,184
Net profits	949	845	581

While gross earnings have fallen since 1929-30 by £243,000, expenses have risen by £119,000, and it is noticeable that this increase is solely due to the item rates and taxes, which is entirely beyond the bank's control. The result is a contraction of £362,000, or 38 per cent., in net profits. So far the directors have maintained dividends at their previous rates, and have offset the decline in profits by reductions in the annual allocation to published reserves. The reserve fund, however, only stands at just over half the issued capital, and obviously dividends will have to suffer if the contraction in the bank's earnings continues. Compared with two years ago, deposits at £31.6 millions show a contraction of £2.3 millions only, but bad trade and falling prices have brought with them heavy contractions in the bank's bill holdings, while advances have fallen from £27.4 to £24.9 millions. There have been the customary increases in cash and in Government securities, this being the common experience of banks in times of bad trade. The general impression left by the accounts is that the decline in earnings is due not so much to a shrinkage in resources as to the fall in interest rates and to the need for increased provision for doubtful debts and other contingencies. It is to be noted that the dividends now declared are to be paid in New Zealand currency, so that the stockholder has to stand any loss on exchange.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament Conference — Progress and Prospects.

(FROM OUR CORRESPONDENT.)

GENEVA, July 23.

THE most appropriate words uttered about the resolution with which the Disarmament Conference adjourned the first phase of its work and laid down the lines of the second phase were those of the President, Mr Arthur Henderson. Within the limitations necessarily attached to the chair, Mr Henderson said and insinuated a good deal. Speaking of the thousands of telegrams and letters he had received from all parts of the world, he analysed their three particular tendencies as being in favour of (1) complete abolition of aggressive weapons; (2) President Hoover's proposals ("nothing short of a flood of communications" in their favour); and (3) the equal rights of States. He confessed that, bearing these facts in mind, he found the resolution very far short of what he would have liked it to be, but he would find it impossible to vote against a resolution which in several places decided in principle on a "substantial reduction" of world armaments on land, sea and in the air. His main deduction was that he was entitled to conclude that all who participated in the resolution—and especially the Great Powers—were so determined, and that if he thought the "great gathering-in" would not come in the second phase of the Conference, he would ask to be excused from spending another six months as President.

That is the point: how far the decision to negotiate substantial reductions will be honoured? For of actual steps towards this end the resolution contains but little, and there is no shadow of doubt that it is a great disappointment to the majority of delegations, who were left quite unconvinced by Sir John Simon's special pleading. Yet it is not altogether reasonable to assume that realised results are the only criteria of a conference not yet ended. During these six months there has been an accumulation of pressure, and it has become more and more difficult for delegations to escape finally from the Conference without reasonable results, if discredit or disaster is to be avoided. This has become increasingly manifest, and it is this which should prevent the decision recorded in the resolution to "proceed to substantial reductions" from being an expression of meaningless piety.

But rocks are ahead. Germany has become stiffer. She has threatened not to collaborate further if, by the time the Conference resumes, her claim to equal rights has not been accepted. Italy, irritated by the methods of Lausanne and by the way the Franco-British Agreement was negotiated, has become more aggressive, has turned rather sharply away from co-operation with Britain and France, and is again aligning herself more definitely with Germany and the other Powers with claims. Both Germany and Italy represent a "forward" disarmament policy, which strengthens them in what might otherwise be not the wisest or most helpful political attitude if real results are to be obtained. It is as well not to be blind to the rather complicated political play behind all this, or to assume that virtue is all on one side. There is not a great deal to choose between the principal Powers in this Conference when real politics are understood.

To what, in effect, does the resolution amount? As its summary in last week's *Economist* showed, it is not a negligible, though also not a very substantial, document, advocated by Sir John Simon as containing no provisions contrary to the essential convictions of anyone, and accepted by many delegations under protest only with an interpretation that it means at least what it implies. It would otherwise dangerously resemble Hague amiabilities. Nothing is completed on reduction of naval armaments; nothing on the figures for guns or tanks; there

is no abolition of military aircraft, and a conditional abolition only of bombardment, but not of bombing machines; little of substance is decided on effectives; there are no quantitative indications, and all political questions are postponed. But, at any rate, the ground has been prepared for the Conference at last to begin. That is something, for this stage of the past six months had to be gone through, and, whatever the disappointments or expectations, it must be realised that the Conference is a colossal undertaking dealing with fundamental matters of international life and outlook. The road will be a very rough one, as the discussion on the resolution showed.

There is nothing new to be said on the naval side; nothing was, in fact, said. Budgetary limitation shows progress, and M. Herriot wanted more in this direction, but Sir Herbert Samuel said we had cut our expenditure by 20 per cent. in the last seven years, and such factors must be considered. That is all right if it does not mean a derogation from the principle. There were also certain reservations from Mr Gibson. On effectives M. Herriot criticised the American plan, and on this, as well as on Germany's equal rights claim, he advanced once more France's security views; indeed, he said France would have to satisfy herself that security had been obtained before she could fully and unconditionally adhere to a general convention. But he was ready to uphold a reduction in the unit tonnage of capital ships, and reductions of heavy land artillery to the lowest level permitted for heavy naval artillery. France and Great Britain remain sticky on air bombardment, mainly because of their overseas needs; hence the compromise in the resolution. It is difficult to understand Sir John Simon's repeated assurances, therefore, that Great Britain is prepared to go to the most drastic limits, and to any lengths. The only straight attempt to get precise support for the Hoover principle of reduction was the Russian amendment to reduce armaments by one-third, but this was defeated with the help of the American delegation itself—on grounds of tactics, of course. But the American delegation accepted only the inevitable, and left it to Germany and Italy to express emphatic dissatisfaction. The next few months will be extremely critical, and will require the concentrated efforts of all the leading statesmen, especially those of the Great Powers. It is immeasurably the greatest political task before them, and whether the Conference re-assembles this autumn or early next year, time is relatively short for the settlement of the problems and principles in the minds of all who will have to accept the responsibilities of decision when they meet again at Geneva.

IRISH FREE STATE.

Tariff War — Emergency Powers — Shannon Scheme — Banks — Census.

(FROM OUR CORRESPONDENT.)

DUBLIN, July 27.

THE "economic war" between Great Britain and the Free State is in full swing. Nothing is to be gained by attempting to allocate responsibility or apportion blame for the rupture of negotiations between the two Governments. It is only fair, however, to suggest that the British Government has mishandled the situation and has made settlement more difficult by its hostile tariffs and its insistence on the payment of the current instalment of the annuities pending further negotiation. Nor is there any gain to be derived from a discussion of the probable outcome of the hostilities. Whether the tax on Irish cattle will be shifted to the British consumer, whether the Free State can find alternative outlets for its exports, whether it is possible to replace English by German coal—these and similar problems will, it is devoutly to be hoped, not be settled by experience, but will remain among the unsettled questions of political economy. All men of goodwill in both countries must strive to bring this unnatural conflict to an end, and to

substitute in its place some more civilised method of settling matters of international dispute.

Meanwhile the Government has been invested with complete powers of control over the economic life of the country. The imposition of direct and indirect taxes, the granting of licences, and the regulation of all commercial activity are in the hands of the Executive Council until the end of October. Doubtless these extensive powers will be exercised primarily with the object of injuring English trade as part of the "economic war," but it is not unlikely that they will also be utilised to advance the Government's internal economic policy. The details of this policy have not been made clear, but it certainly involves a considerable measure of State interference with the individual citizen. A number of measures of public control of industry and trade have already been passed, and the new emergency powers enable further measures of the same kind to be put in operation without the delay and inconvenience of parliamentary criticism. Obviously, such an extreme degree of discretion by the Executive can be justified only in an exceptional situation, and must be brought to an end at the earliest moment that the public safety permits.

Additional capital expenditure has been incurred on the Shannon Scheme, the total cost of which now exceeds ten million pounds. The generating plant on the river is to be extended, but the provision of further storage accumulation for water in the Shannon lakes has been postponed. This change of plan suggests that reliance will be placed in an increasing degree on the coal generating station at Dublin, on which additional expenditure is also about to be incurred. The Government will not be criticised for concentrating production on the most efficient plant, but regard must be had to the possible effect of the "economic war" on the cost of coal in the immediate future. The financial position of the Electricity Supply Board has been described by the responsible Minister as "by no means satisfactory," and it is estimated that the accounts for 1931-2 will show a deficit of nearly £200,000. It is expected, however, that the present year's working will result in a small surplus. Meanwhile, the consumer need not expect any reduction in the price of current.

The preliminary results of the Census of Production taken in 1929 have now been published and show the following results for all the non-agricultural industries and services in the Free State:—

Year.	Net Output.	Numbers Engaged.		Salaries. £'000.	Wages. £'000.	Net Output per Person.
		Administrative and Clerical.	Wage-earners.			
1929	£24,932,043	13,422	93,486	2,835	11,412	£233
1926	£23,062,361	12,772	89,408	2,659	10,992	£226

The half-yearly statements of the banks show decreased profits, and, except in the case of one bank, the interim dividends have been reduced. Needless to say, the conditions of the early part of the year were not favourable to banking prosperity, as agricultural prices continued to fall and profitable opportunities for employing money in farming advances tended to be restricted. Moreover, the banks were adversely affected by the Budget. The corporation profits tax, which has never been abandoned in the Free State, was for the first time extended to the profits of all the joint-stock banks, while it was raised from 5 to 10 per cent., and the limit of exemption reduced from £10,000 to £5,000. This new impost, on top of an increased rate of income tax, presses with great harshness on the banks. The tax on the consolidated bank-note issue was doubled at the same time, and now stands at 3 per cent. of the amount authorised to be issued, whether in actual circulation or not. This tax practically transfers the profit of the consolidated bank-note issue from the banks to the State, and increases the cost of keeping supplies of till money.

UNITED STATES.

Congress — Finance — Trade — Prices — Debts.
(FROM OUR CORRESPONDENT.)

NEW YORK, July 19.

ADJOURNMENT of Congress until December (a month after the autumn elections) relieves Wall Street of some anxiety, but at best the effect is negative. The presence of the legislators in Washington has all along been a potential threat to sound finance, but actually the recent Congress passed only constructive measures, excepting certain sections of the Relief Bill calling for a possible outlay of \$2,100,000,000, most of which, if made, will be in the form of repayable loans for self-liquidating schemes. With a democratic complexion to the House of Representatives and a Republican majority in the Senate, the country is fortunate in having at least the form of a balanced budget and in avoiding currency inflationary measures.

The Home Loan Bill passed at the final session of Congress is expected to receive the Presidential signature. It carries with it the so-called Glass currency inflation amendment, but in reality no inflation will result. The Glass amendment provides for currency circulation privileges for national banks, with additional Government bonds as security. At present the privilege is confined largely to old Panama Canal issues of limited amounts outstanding; and, if the national banks should take advantage of the new provisions to the full extent of their capital, an expansion of \$1,000 millions in currency might result. Nevertheless, an inflation is improbable. A greater volume of national bank notes would merely replace Federal Reserve currency now in use. To provide real expansion there would have to be an increased demand for currency; no such increase is in sight, and, should it come, it would be met in any case by the Federal Reserve Banks. It is believed unlikely that many banks will make much use of the new privilege, though on its face it offers profit-making opportunities for them.

Another section of the relief measure which is generally disliked, but which is not destined to do much harm, is the provision widening the powers now held, but never exercised, by the Federal Reserve Banks to make loans directly to individuals and corporations. Member banks would not relish competition from the Federal Reserve, but the new law has the safeguard that all such loans must have the approval of the Federal Reserve Board and that the field of member banks must first be exhausted. In practice it is likely that the services of Federal Reserve Banks will be asked occasionally to find a bank willing to make a loan which some prospective borrower is unable himself to secure.

Now that Congress has adjourned and the threat of inflationary legislation is removed, some suggestion is heard that the Federal Reserve system may prosecute less vigorously its cheap-money policy. Those who hold this view have maintained that the heavy buying of Government bonds, at the rate of \$100 millions a week, began at the time when pressure at Washington for a measure to require the Reserve Banks to use their resources to lift commodity prices was heaviest. Anyhow, no expansion in member bank credit has yet followed the sharp increase in Federal Reserve Bank credit.

After a week of inactivity in the Government bond market, the Reserve last week bought \$20 millions, which it has explained was all that was required to maintain member bank excess reserves at \$200 millions. Incidentally, the excess reserves have apparently been allowed to run down by more than one-third since the "peak" total of several weeks ago. Excess reserves were increased somewhat last week by a drop of \$61 millions in currency circulation and an increase of \$10 millions in the monetary gold stock. Member banks this week show sales of Government bonds, but their other investments are unchanged, and they have reinstated commercial loans paid off at mid-year. Bank failures are no longer attracting attention.

While the financial position has strengthened, business in general is still dragging. No great hope for increased employment is entertained as a result of the new relief appropriations, since such public works as may be started

will necessarily be slow in getting under way and at best cannot make much impression on the total of unemployment. The considerable rise in livestock prices and the firmer tone in cotton and wheat are doing much to improve sentiment. Hope is springing up that the autumn may at least bring a seasonal upturn, and if conditions improve on the farms, this may well prove to be the low point of the depression. At the same time, trade statistics are not encouraging. Foreign trade figures for June were poor. Exports fell to \$115 millions, the smallest since 1914, and the smallest for June since 1904. While exports declined, imports were increased slightly by shipments to anticipate the new tariffs, principally oil imports, and the total dollar value rose to \$210 millions.

Domestic trade is rather stagnant. The steel industry has recovered to about 16 per cent. of capacity, following the holiday shutdown, but new orders are scarce. Railroad traffic men predict some improvement in freight movement for the last half-year. Their estimates are for a drop of 21 per cent. for the last six months compared with 1931. In the first six months traffic was about 27 per cent. lower than in the same period of 1931. Railroad executives are planning co-operative action in several directions. The western lines are considering the appointment of a general commissioner to represent them all in efforts to secure favourable legislation, rates and regulations designed to meet motor and water-borne competition, to abandon useless mileage, discontinue unnecessary and duplicated train service and in many ways to reduce operating expenses. Something of the same thing is being undertaken in the East, and already the railroad share market has turned firmer.

Most people in responsible Wall Street circles now think that this country will be willing to go a long way toward European debt reduction. Sentiment throughout the country in favour of it is considerable, and it is highly unlikely that politicians will find much sympathy among their constituents if they persist in their apparent design to force default abroad in order to excuse them from seeming to increase the home taxpayer's burden. At the same time, against the argument that the country will be the gainer in the long run through reviving trade if foreign debts be reduced, there is the contention that any sacrifice on the part of this country should be accompanied by something more on Europe's part than German reparations reduction. Pressure for disarmament may be expected to be considerable.

FRANCE.

Conversion — Postal Results.

(FROM OUR CORRESPONDENT.)

PARIS, July 27.

PREPARATIONS for the application of the Government's plan for large-scale conversion of Rentes are understood to be proceeding steadily, and the market is now speculating with deep interest as to the probable details of the scheme. It was informally notified to the Chamber Finance Commission recently that the total amount of stock involved would probably be in the neighbourhood of 80,000,000,000 francs, but exactly what issues will be dealt with remains undecided. M. Abel Gardey, Senate Budget Rapporteur in March last (now Minister for Agriculture), set forth in his report on the current Budget proposals that the issues convertible are as follows:—

(1) Convertible during 1931.				
Issue.	Capital Value, Mar. 31, 1931.	Present Charge on Budget.	Date of Convertibility.	
5% 1915-1916	16,737,000,000	836,000,000	Jan. 1, 1931.	
6% 1920	26,193,000,000	1,571,000,000	Jan. 1, 1931.	
4% 1925	5,926,000,000	308,000,000	"	
6% 1927	17,850,000,000	1,070,000,000	May 1, 1931†	
6% 1927 obligations	4,593,000,000	275,000,000	July 10, 1931†	
(2) Convertible during 1932.				
7% 1927 15-yr. bonds	3,966,000,000	430,000,000	Feb. 1, 1932.	
5% 1928	21,499,000,000	1,109,000,000	May 10, 1932.	
5% 1928 P.T.T. obligations.....	2,100,000,000	145,000,000	June 25, 1932.	

(3) Convertible in 1933.			
1923 6% Credit National.....	2,965,000,000	192,000,000	Feb. 1, 1933.
1929 4½% P.T.T. Obligations	558,000,000	37,000,000	May 11, 1933.
(4) Convertible in 1934.			
1924 6% Credit National	1,542,000,000	112,000,000	Jan. 1, 1934.
1929 4½% Caisse Autonome	7,747,000,000	407,000,000	April 1, 1934.
1926 6% Credit National	920,000,000	55,000,000	July 1, 1934.

* "Caillaux Rentes" (with guarantee against exchange) reimbursable at any date at 130 frs. per 100 frs. nominal.
† Redeemable at 150 frs. per 100 frs. nominal.
‡ Redeemable in 1942 at 550 frs. per 500 frs. nominal.

The issues which became convertible during 1931, and the 1928 5 per cent. P.T.T. Obligations, all require the passing of a special law authorising their conversion. The situation of the rest of the issues is quite different; they constitute, under the law of August 6, 1926, part of the "dette intérieure du Trésor et du Crédit National," and as such may be converted by decree, subject to observance of the contract terms of the issues concerned.

It has been generally recognised here for the past two years that it is impossible to expect to carry out the operation on as low a basis as the 3½ per cent. applied in Great Britain. In his Budget report of March 31, 1931, when the situation, speaking generally, was more favourable for such an operation than it now is, M. Abel Gardey set forth the amount of saving that would result by conversion respectively on the bases of 5 per cent., 4½ per cent. and 4 per cent. only. In his report dated March 18th last, the Budget Rapporteur, it is to be noted, limits his estimates to conversion at either 4½ per cent. or 5 per cent. He bases his calculations on a presumed operation during the current year, involving the list of issues (as set forth above) which matured for conversion in 1931, plus the 1927 7 per cent. Treasury bond issue, making together (in March last) a potential total of 72,869,000,000 francs. (Since then the 21,499,000,000 francs of 1928 Fives and the 145,000,000 francs of 5 per cent. 1928 P.T.T. bonds have also become convertible.) From this it may be assumed that it is contemplated to "regularise" the "Caillaux Rentes" quite special 4 per cent. issue, one 5 per cent. issue (or possibly three), three at 6 per cent. and the 1927 7 per cent. Treasury bond issue; and that either 5 per cent. or 4½ per cent. (and more probably the latter) is the contemplated conversion rate. Meanwhile, the rate of interest paid on Defence bonds has been twice brought down since the beginning of the year (from 3 per cent. to 2½ per cent.); the issue has just begun of a 567,573,000 franc 4½ per cent. colonial loan for Indo-China (in 1,000-franc bonds, issued at 915); five other colonial loans at 4½ per cent. (issue price not yet made known) are imminent, to a total of 536,660,000 francs; a Belgian 5½ per cent. loan of 800,000,000 francs (French) has just been subscribed here in twenty-four hours; and there have been recently two 2,000,000,000 franc issues of 4½ per cent. Treasury bonds. To-day's *Journal Officiel* publishes a decree authorising the issue on August 1st of a Credit National loan of 150,000,000 francs at 4½ per cent. in 1,000-franc bonds, issued at 990 and redeemable at 1,050 francs in twelve years.

The operations for the French Postal Department for the year ending March 31, 1931, resulted in a net loss on working of 23,786,000 francs. Total working expenditure (posts, telegraphs and telephones) was 3,594,809,000 francs, and total revenue was 3,571,023,000 francs. For some years the Department, it will be recalled, has been endowed with its own autonomous Budget, and none of its figures are included in the General Budget, except some of those concerning loans on capital account. From 1923 to 1928 inclusive the "P.T.T." Budgets resulted in surpluses on working (ranging from 10,000,000 to 25,000,000 francs in the first three years, 355,000,000 francs in 1926, 232,000,000 francs in 1927, and 65,000,000 francs in 1928). These surpluses, totalling 647,000,000 francs, were utilised as to 469,000,000 francs in paying off capital invested down to the end of 1922, the balance being devoted to meeting existing capital

charges. The 15-months year ending March 31, 1929, resulted in a deficit, and a further shortage of 230,000,000 francs was foreshadowed for 1930. To meet this the Government proposed to obtain 180,000,000 francs by increasing tariff rates. This was cut down to 80,000,000 francs by Parliament, and the end of the year registered a further deficit, and forecast (in view of increases of pay to the personnel) shortages during the following four years ranging from 190,000,000 francs to 262,000,000 francs. Further increases of tariffs, under the Finance Bill for 1930-31, proved insufficient to balance revenue and working expenditure, but reduced the expected deficit to 23½ millions, as shown above. Increased expenditure during the year was 242,000,000 francs, as compared with 1929, of which 165,000,000 francs represented increased pay to the staff, and 25,000,000 francs additional personnel. Large 5 per cent. and 4½ per cent. loans were issued in 1928 and 1929 respectively to finance important P.T.T. developments, including the installation in Paris of the automatic telephone system, now well on the way towards completion. The total permanent staff of the Department numbers 165,000, plus a large number of auxiliary or non-covenanted workers. Wages represent 62 per cent. of the total expenditure on working.

GERMANY.

Coup d'Etat — Unemployment — Linden Failure.

(FROM OUR CORRESPONDENT.)

BERLIN, July 26.

IN spite of every deterrent consideration, the Government carried out last week the sequestration of the Prussian State. They removed the Ministers, discharged those of the principal officials who were not known to be conservative and entrusted the conduct of the respective Prussian Ministries to Commissars. Martial law was proclaimed at the same time in Berlin and its environs, and a number of arrests, intended as examples, though most of the arrested persons had to be released soon afterwards, were aimed at showing the populace that Herren Schleicher and von Papen and their agents were in earnest about the fulfilment of their tasks.

The public has given little outward sign of unrest. At first, indeed, there were a few demonstrations from the Prussian police, in protest against the deposition of the President of Police, Herr Grzesinski, the vice-president, Dr. Weiss, and the commander, Herr Heimannsberg, but on the whole the Prussian police submitted quietly to its subordination to the Reichswehr. The Social-Democrats and the Free Trade unions immediately decided not to reply to the attack of the Reich upon the Prussian Government with a general strike or other measures of open resistance, but to make use of this act of violence as election propaganda and afford no pretext for any postponement of the elections on the ground of general unrest. An attempt by the Communists at a general strike came to nothing. The Chancellor attempted, not altogether without success, to calm the extraordinarily lively uneasiness in South Germany by calling all the State Prime Ministers together in Stuttgart and pledging his honour that the Reich Government would abide by federal principles and that the present Government would not in any circumstances set up a Reich Commissar in any other State besides Prussia. The stock exchange and economic conditions generally showed practically no sign of unrest.

To these practical consequences was added an important legal outcome. Proceedings were taken against the Reich Government before the Leipzig Court by the deposed Prussian Government and by the Social-Democratic and Centre Parties. The function of this Court is to decide disputed constitutional questions. It consists of members of the German Supreme Court and high judicial officials of the larger German States. The Prussian Government and the other opponents of the Reich Cabinet had, in addition to the main charge, upon which judgment will not be given until long after the elections, also laid before the Court an application for an injunction "of temporary application" to restrain the Reich Government from removing the Prussian Ministers and dismissing Prussian

officials. The Court refused this request, giving as the reason that a division of functions within the Prussian Government between the Reichscommissar and the Prussian Ministers—such as was proposed by the Prussian application—would lead to greater confusion than the present system of Government by the Reichscommissar alone. The applicants must therefore wait for the main decision, which alone could provide a clear solution.

This decision of the Court has compromised, and perhaps reduced to an absurdity, the real object of German constitutional law, the removal of the most difficult political decisions from the sphere of might to that of law. If the law is to exercise an ultimate supervision over political forces, it must also be in a position to act quickly, since every delay strengthens the *de facto* situation, possibly brought about in defiance of the law, and makes it impossible to wipe out the consequences. If the Court really does reach a decision in a few weeks, its significance will probably be overshadowed by the political decisions which must take place in the meantime. That is why the interim decision constitutes such a great success for the Papen-Schleicher Cabinet, which gains a free hand during an interval of unprecedented political importance, and the unrestrained disposal of the Governmental apparatus of the largest member of the German Federation of States.

Is Herr von Papen entitled, then, to consider himself victorious? He has fought successfully, but he has not fought any decisive battle. However the elections turn out, the Cabinet will not be able to secure a majority for its economic emergency decrees, and it cannot govern without such a majority. It may even find it impossible to obtain a majority to approve its attack on Prussia, which must be submitted to the Reichstag for approval, because it took the form of an emergency decree. There is no doubt that President von Hindenburg only signed that decree because he believed it to be constitutional. If the Government tries, when the Reichstag refuses to ratify the decree to get rid of the Reichstag and carry on government by "extraparlimentary" methods, it is almost bound to come into conflict with the President. The National Socialists at first showed decided approval of the Government's action against Prussia, but since then there have begun to arise here and there suggestions that this is not enough, and demands for the appointment of Reichscommissars in other States. The vigorous campaign which is being conducted by the Nationalists, especially in Bavaria, against the State Governments is almost certain to intensify these demands. The Chancellor's assurances at Stuttgart, as a recent speech of Herr Held, the Prime Minister of Bavaria, shows, have not allayed mistrust in South Germany, but have merely forced it to express itself more politely. The Cabinet, which has destroyed its links with the Centre and the Left by that act of violence, will have to be prepared for a severe struggle with the National Socialists after the elections, and will at the same time have to solve economic problems of extraordinary difficulty.

Some time ago the Reich made provision for a sum of 135 millions to be used for road and canal construction as a means of providing work for the unemployed. This sum will be raised in the first place by discounting bills at the Reichsbank, with a promise of prolongation. A further 40 million marks are to be contributed by the unemployment insurance fund. In addition, the idea has recently occurred to the Government of procuring a further 200-250 millions through the Reichsbank. Several ministers are known to be in favour of this scheme, but the consent of the Reichsbank has not yet been obtained, nor is it likely to be. In this connection it is of interest that there has been further discussion recently of the "Wagemann Plan" for reform of the bank law.

The Mechanische Weberei at Linden, a concern some decades old and known throughout the world as the only producer of "Linden velvet," stopped payments on July 28th. An effort will be made to reach a composition with the creditors and secure the continued operation of the business. Fashion developments have been unfavourable to velvet, but this would not by itself have brought

about the firm's failure. To it was added the effect of an extensive expansion policy begun in the good years: the acquisition of competitors and of associated concerns was financed, as, unfortunately, is the case with so many other German companies, with the aid of short-term credits. By the end of 1931 the company was already in a difficult position with Rm. 16 millions of short-term debt. It took measures to meet the situation by reducing its capital from 13½ to 1.35 millions and inducing its creditors to accept new shares of the company in place of 40 per cent. of their demands, but this rectification has now proved a complete failure. The entire capital has since been lost, and with a debt of Rm. 13 millions it was impossible to secure funds to continue operations. Concealed insolvency has therefore given place to open insolvency. The heaviest losses in respect of the cessation of payments will fall on German banking houses, but the Swiss Credit-Anstalt is also affected.

AUSTRIA.

Trade — Finance — Industry — Stock Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, July 25.

FOREIGN trade is again declining. In the first half of 1932 imports sank by 358.5 million schillings and exports by 280.5 million schillings, as compared with the corresponding period of last year. The unfavourable balance, at 868.6 millions, has therefore not altered much, and there is no prospect of improvement, if success is not shortly achieved in removing the check upon trade with Hungary imposed by the commercial treaty difficulties. The invisible export, consisting of purchases by foreign tourists, is also poor. The political situation in Germany has prevented many people from coming into Austria on holiday, and the hotels and the summer catering industries, in which considerable capital is sunk, are confronted with increased difficulty.

The recession in savings deposits is having unfavourable effects. Since May, 1931, when the crisis at the Credit Anstalt became known, they have dropped by one-third. Money is again being hoarded, though savings are also being entrenched upon owing to the reductions in salaries and wages. The savings banks are therefore not disposed to accommodate mortgage seekers. Until a little while ago the Vienna savings banks freely accorded mortgages up to 10,000 schillings. Then followed a period in which they would not exceed an aggregate of 150,000 schillings per week. Now they are refusing applications for mortgage credits and proposing that application be made again in the autumn. A similar course is also being taken by the mortgage institutes, who do not want to put any more bonds on the market for fear of depressing their value. The banks are also exercising marked reserve. They are trying hard to collect money from their debtors, and strong debtors, who were previously treated with special respect, are now often obliged to make repayments because the banks can get nothing out of their weaker debtors. Some private lenders, however, are taking advantage of the situation and placing money favourably both in mortgage business and elsewhere.

Discussion of the loan in Parliament still continues. As regards the negotiations at the Credit Anstalt, an understanding has already been reached between the Financial Administration and the National Bank in relation to the bills of exchange held by the Bank. A portion of these bills of the Credit Anstalt is to be added to the National Debt, which now amounts to 91.5 million schillings. Another portion is to be redeemed in the course of a term, which is not to be too long, and another portion is to be repaid out of the proceeds of the proposed foreign loan. The banks, after that loan, are to receive back the credits they have accorded to the Federal State or to the Federal Railways, and are to use the money to reduce their bill obligations to the National Bank. The National Bank will, however, be unable to pursue a policy of deflation without running the risk of weakening a

number of firms, who are already finding great difficulty in getting credits.

The industrial situation remains unfavourable. The stocks of iron and steel are still very large, in spite of the complete stoppage of production. The timber market is very depressed, and the sawmills are working at a mere fraction of capacity. The position in the textile industry has become considerably worse, as the important purchases in winter are now gradually effecting a serious diminution of demand. Spinning mills in particular show a big falling-off in orders on hand. The index of wholesale prices shows a slight rise, and is now at 115.5, against 109.5 at this time last year. The retail price index has gone up from 142.6 last month to 143.6. Unemployment is still causing great anxiety. The extra revenue to be derived from the doubling of the merchandise turnover tax is to be used for this and other social purposes. But, as the number of unemployed is increasing, while consumption is decreasing, no improvement in the State finances need be looked for from the increase in the merchandise turnover tax. The fact that automatic tariff increases constitute a serious danger has led to differences of opinion between the General Post Office and the Administration of Finance. The latter insists upon such increases, while the General Post Office objects in view of the diminution in the use made of its services on account of the last increases.

HUNGARY.

Mr Tyler's Report — Finances — Crops — Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, July 26.

The third quarterly report of Mr Royall Tyler, the League representative in Budapest, covering the period April-June, contains very valuable and hitherto unpublished data regarding the financial situation of the country. It states that the deficit of the State Budget of the Administration for 1931-32 (ending June 30th) amounted to 81.9 million pengő. According to provisional returns, administrative expenditure was 862.7 million pengő. Actual budgetary receipts amounted to 780.8 million pengő, as against 800 million pengő estimated by the Government. In addition to the deficit of the State Budget, advances made necessary by losses incurred chiefly by the State railways and ironworks and by the Boletta Fund (grain bounty) amount to a further sum of 59.2 million pengő, making a real total deficit of 141.1 million pengő. The current deficit of the financial year 1931-32 thus entirely exhausted the proceeds of the Treasury bonds issued last August, amounting to 131.6 million pengő, and additional cash was provided by the issue of further internal Treasury bonds of 42.8 million pengő, making a total of non-revenue receipts of 174.4 million pengő. The deficit would have been about 20 million pengő more if the amortisation of certain State debts had not been suspended on account of the depleted cash reserves. This is demonstrated by the fact that though 95.3 million pengő were earmarked for the service of the State debts, only 73.5 million pengő was actually spent. Another deficit which does not directly decrease the Treasury balance is the deficit of the Social Insurance Fund, amounting to approximately 10 million pengő. In such circumstances Mr Tyler arrives at the conclusion that Hungary cannot hope to achieve financial stability unless the State undertakings cease to be a drain on the Treasury and there is a definite break with the practice of setting up funds, losses on which have to be met out of public moneys, for the relief of this or that section of the community.

Mr Tyler is greatly concerned about the continuance of the wheat and rye bounty (Boletta Fund) and points out that the effect of it on the general financial situation is bound to be detrimental, as it aggravates price disparities and obscures the budgetary and fiscal position. The League representative, pointing out that the price level, instead of falling in sympathy with gold prices in the last two years, has actually slightly risen, reminds the Gov-

ernment that there is a danger of inflation, and that the disparity of prices between Hungary and other countries causes great difficulties in the operation of the clearing agreements.

The total wheat harvest is estimated by the Ministry of Agriculture at 1,580,000 tons, instead of 1,970,000 tons harvested last year. Accordingly, the exportable wheat surplus will be reduced to about 200,000 tons, less than half of that of 1931, which was a bad year, too. The rye and barley crops promise better than last year, and maize and beet sugar are developing fairly well. The export prices for cereals are very unsatisfactory, and markets are difficult to find. Negotiations with Austria for the conclusion of a new treaty, or, at least, a *modus vivendi*, are in progress, but the existing Customs war has already inflicted heavy losses on farmers who cannot export their perishable fruits and vegetables to Vienna. The commercial treaties with Germany and Italy did not come up to expectation, and there is no likelihood of resumption of normal trade relations with Czechoslovakia either for some time.

Foreign trade returns reflect Mr Tyler's observations "that no decided and lasting turn for the better in Hungary and in other countries in this part of the world can be expected as long as import prohibitions, exchange restrictions and price disparities continue to multiply and to make war on such international trade as had survived the building of the post-war Customs barriers." Comparative figures for the first six months of the last three years, in million pengő, are as follows:—

First half of	Imports.	Exports.	Balance.
1930	404.2	452.3	+ 48.1
1931	305.9	256.9	+ 49.0
1932	169.0	151.4	— 17.6

In view of the bad harvest and the Customs war with Austria and Czechoslovakia, it is certain that total exports in 1932 will not amount to more than 350-400 million pengő, as against 911 million pengő in 1930 and 1,038 million pengő in 1929. In such circumstances it is idle to hope that Hungary will be able to resume any transfer on her foreign debt, even the service of the League Loan, since the position of the National Bank has deteriorated so much that the stock of exchange utilisable for foreign debt payments has seldom been above 2 million pengő (£100,000), and has at times been lower.

CANADA.

Crops — Ottawa Business — St. Lawrence Waterway.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 12.

CROP prospects are excellent throughout Alberta, except in the Peace River country, which has been suffering from drought. In Saskatchewan they are less favourable; while in Manitoba conditions are midway between those of Alberta and Saskatchewan, and the general prediction of the crop experts is that, unless serious drought intervenes, a better than average crop is now assured. Grain prices remain low as the result of poor export demand; during June only 15,857,427 bushels of wheat were exported from Canada, as compared with 20,783,219 bushels in June, 1931, and the total wheat exports for the first eleven months of the crop year have been 163 millions, as compared with 216½ million bushels. Consequently the stocks of wheat remain high; on July 1 the Bureau placed them at 139,663,534 bushels, which is 26 million bushels above the figure for the corresponding date of 1931. It is plain, therefore, that the carry-over at the end of the crop year on July 31st will be at least 120 million bushels, a figure ominously high for any early

improvement in prices. The Canadian flour mills, which are still working far below their capacity, have been cutting prices to keep their export markets, and in June exports of flour, at 570,861 barrels, showed a gain of 79,433 barrels over June, 1931.

There is virtually no change to record in business conditions, and all hopes of an early improvement are pinned on the results of the Economic Conference and a good crop in the prairie provinces. The latest business survey of the Bureau of Statistics, giving weighted indices of the physical volume of business in Canada during May, corrected where necessary for seasonal variation, shows a small gain:—

(1919-24 = 100.)

	May, 1931.	April, 1932.	May, 1932.
Forestry	165.8	134.8	130.6
Mining	149.7	153.0	141.5
Construction	120.1	42.3	47.8
Manufacturing	163.6	118.0	144.2
Employment in trade ..	136.7	128.3	128.3
Imports	143.5	75.9	89.8
Exports	124.5	85.6	82.0
Car loadings	103.5	91.2	84.0
Shares traded	336.1	74.0	80.8
Bank debits	145.0	109.8	102.1
General physical volume of business	149.1	124.5	128.7

The gain under the head of manufacturing was largely seasonal, and the textile mills alone can claim to be reasonably busy. The American tourist traffic is producing a brisk demand for supplies of all kinds from the summer resorts, but the purchasing power of the rural community and of the public in general remains low, and merchants continue to cut prices and put on special sales to get rid of their stocks. The index of wholesale prices fell to 66.6 in June from 67.7 in May. The most serious fall was in "Vegetable Products," which declined from 56.7 to 54.3 owing to lower prices for grain, flour and vegetable oils. Retail prices did not show a parallel fall, and the index number for June was 81.5, as compared with 81.8 for May.

Public opinion in Canada has been keyed up to high expectations about the Ottawa Conference as an instrument for the revival of prosperity, and obviously the Bennett Ministry, filling as they do the dual rôle of originators of the Conference and its hosts, cannot afford to take the political risks involved in a complete failure. There is some nervousness in manufacturing circles about the Government's attitude, and a note of anxious vigilance is discernible in the columns of the more extreme protectionist Press. Though not much encouragement was to be derived from the conference of the British and Canadian cotton interests, a similar conference between the two sets of leather interests had a very satisfactory result, and after a prolonged conference between steel interests it is now announced in a joint

statement that "a measure of agreement on common policy for submission to the Imperial Economic Conference has been reached," and that it promises "a fuller measure of co-operation than has ever existed between the two industries." Undoubtedly the Bennett Ministry has exerted its influence to induce the local manufacturers to take a conciliatory attitude, and, if it is decided to make a serious departure from the high protectionist programme of the "Canada First" policy, it can rely upon the support of practically all the elements engaged in the basic primary industries. This week, for example, a massed delegation of farmers is descending upon Ottawa to urge that no stone be left unturned to promote trade exchanges between the countries of the Commonwealth by lowering tariffs, and the flour millers are also throwing their weight on the same side. The latter are strongly opposed to the wheat quota project, and the more closely its possibilities are examined the less favour does it find with the grain trade and Western agrarian leaders.

The Canadian Government intends to raise sharply at the Conference the question of Russian competition. It is being subjected to persistent pressure by the lumber interests of British Columbia, who, having lost most of their valuable American market as the result of the recent increase of the American duties on lumber, insist that their industry can only be saved from ruin by being guaranteed an assured and substantial share of the British market for timber; and the lumbermen of Quebec are backing their demand. The Canadian Government has at present in force an embargo upon all imports from Russia, and it is expected that it will urge that the whole Commonwealth adopt the same policy, or that, failing that, the British Government should grant substantial preferences to Dominion timber. The monetary system is also looming large in the pre-Conference discussion, and support seems to be accumulating for the idea of some sort of Imperial "superbank" which would confine itself to handling commercial paper and keep exchanges between the different units of the Commonwealth at a stable level.

Mr Bennett has formally announced that the terms of a treaty about the St. Lawrence waterway project have been finally settled with the United States, that a formal pact is now in process of being drafted, and that it will be made public in the near future. It is understood that the bargain is peculiarly favourable to Canada from a financial viewpoint, that the United States has made very generous allowances for Canada's past expenditures in constructing the new Welland Canal and other improvements in the St. Lawrence system, and that it will bear practically all the cost of building what is known as the international section of the waterway. But public opinion in Montreal and the Province of Quebec generally remains unconvinced about the merits of the project, and Premier Taschereau of Quebec has issued a statement complaining that his Government has been completely ignored in the negotiations.

Books and Publications.

BOOKS OF THE WEEK.

The Economics of the Man in the Street.

It is a symptom of the present crisis that the amateurs as well as the professionals are very busy writing books about it. The world is now used to the production of two or three new infallible currency schemes a week; and the flow of volumes designed to make the causes of the world slump plain to the man in the street is unending. Business men and politicians add their voices to the general clamour, and do not hesitate to write of the inmost mysteries of banking and credit. The result is, doubtless, a gradual diffusion of knowledge, though it is

* *Banking, Credit and the Crisis.* By J. W. Kempster. London. General Press. 12s. 6d. *The G.H.Q. of £. s. d.* By Sir John Wardlaw-Milne, M.P. Cassell. 3s. 6d.

apt to seem to bankers and economists that, in this realm above all, a little knowledge has its dangers.

Mr Kempster, fortunately, is not a crank. He is a leading figure in the world of shipbuilding; and his book* is interesting especially as a representative expression of a body of opinions widely held among reasonable business men. About tariffs he is highly sceptical, but not wholly opposed. A Free Trader by conviction, he is prepared, with many misgivings, to believe that a tariff may have been forced on this country by the crisis, and may conceivably be justifiable provided it is used to get other countries to lower their tariffs, and we are always ready to remit duties on goods from any country that will admit our goods on easy terms. As an employer, he stresses the "inelasticity" of wage costs, and thinks wages ought to come down; but he recognises that deliberately lowering the standard of life would be an odd way of meeting a

crisis in which goods seems to be too plentiful. He would like wages to fluctuate in each industry on the basis of some sort of prosperity index, not unlike the old-fashioned "sliding scale." He discusses currency and credit problems at considerable length, without coming to any very definite conclusions. Indeed, the entire tone of his book is hesitant and tentative, and it is most valuable for its description of the present working of the credit and industrial system, and as the mirror of a very common condition of mental puzzlement. In his views on the crisis Mr Kempster largely follows Mr Keynes; and it is interesting to see that Mr Keynes's fundamental "equation" and his distinction between saving and investment seem to be passing so rapidly into popular economic thought.

Sir John Wardlaw-Milne has few of Mr Kempster's hesitations. He is a thoroughgoing tariffist, a believer in close Empire economic unity, and an apostle of economic nationalism. A reduction in our imports fills him with joy, unqualified by misgivings about the effects on our export trade. He wants an Empire currency group, open to other countries, which can be drawn within the "sterling area"; he disbelieves in the gold standard as a basis for our internal note issue, and dabbles with the re-monetisation of silver; but he also insists on the importance of exchange stability. He wants internal prices to rise, and then to be held stable by banking policy, and hopes for international agreement of a sort that will reconcile this policy with stability in the external value of sterling. In short, his book represents a very common amalgam of opinions fashionable on the back benches in the present Parliament. It is, at any rate, encouraging that, apart from the question of tariffs, opinion of this sort appears to be growing better informed and more sensible. There is at least something like agreement to-day about the desirability of international action to raise prices; and the distinction between uncontrolled inflation and reflation is coming to be better understood.

SHORTER NOTICES.

"An Industrial Survey of Merseyside." Made for the Board of Trade by the University of Liverpool. H.M.S.O. 51-193 (1932). 174 pp. 2s. 6d.

The third of the economic surveys of depressed areas which the Board of Trade is issuing presents some features which differentiate it considerably from its two predecessors (reviewed in these columns on July 9th). This is due principally to the small area and specialised character of the region covered. The report, in effect, deals only with the "conurbation" of Liverpool and Birkenhead and the urban areas adjacent to them; for though a few pages are devoted to Ormskirk, Ellesmere Port and (rather surprisingly) Barrow-in-Furness, the hinterland of Liverpool is, in effect, not mentioned. We have thus a study, not of a region or even an area, but of a single great port in depression, and the depression is thus even more marked than in the case of South Wales. Furthermore, more marked than in the case of South Wales. Furthermore, the fact that so many factories are placed in or near Liverpool for reasons purely of transport convenience and not with any view of supplying a local market (some of the largest drapery stores in Liverpool were actually ignorant of the existence of any clothing factories in the city) makes it even less typical of the country as a whole.

The picture given is gloomy enough. A district in which two out of every seven insured persons are unemployed, in which 50 per cent. in its chief industry (shipping and shipbuilding) are out of work, and 30 per cent. in the building trades, in which no real recovery can be expected until export trade has not merely improved, but been improving for some time, and in which uneven and unwise stimulation in trade during the good years is exemplified by such facts as the increase by 50 per cent. in six years of the numbers engaged in distribution, wholesale and retail, cannot be said to be in a good way. It is depressing to realise that, with all the talk about rationalising dock labour, the quantity of surplus workers allied to the industry has practically diminished not at all since pre-war days; and even more depressing to learn that the authors of the report expect the total surplus of workers in the area to have reached 90,000 by 1936. In this, however, they seem over-pessimistic; for they arrive at their figure by adding to the present surplus the estimated number of new entrants into industry and deducting therefrom those who will reach pensionable age during the period, thus assuming, which is surely unwarranted, that all insured persons

in the Liverpool district reach unscathed the age of 65, and that no insured women leave industry upon marriage! The only hope this very interesting report holds out is that export trade may improve, and that the working population of Liverpool is remarkably adaptable for learning new trades which do not require a high degree of skill.

"Changes in Family Life." By Sir William Beveridge and Others. (London) George Allen and Unwin. 155 pp. 3s. 6d.

This little book, which arises out of the investigation into the family recently undertaken by the B.B.C., contains an introduction by Sir William Beveridge, followed by reprints of the same author's wireless talks on the subject and some dialogues on various aspects on it which were also given originally over the wireless. There is then a chapter on "First Impressions of the Returns" and a reprint in full of the form of inquiry, from which we gather that, though it is no longer being sent out broadcast, those who wish to take part in the inquiry may still do so by applying for a form at the London School of Economics. Most readers, naturally, will turn first to the last chapter; but they will not learn much at the present stage. There are about 8,000 forms returned, and more are expected. They are fairly evenly distributed over the country as a whole; the great bulk of them come from families whose income ranges between £300 and £800 a year; and in general they indicate "no revolutionary changes" in family life. For fuller conclusions we must wait until the reports have been completed and analysed.

OTHER BOOKS RECEIVED.

The Victims of Fraud. By Eustace J. Harvey. (London) Oxford University Press. 301 pp. 24s. net.

A plea for a new law based on an examination of the principal frauds committed with goods and negotiable securities.

The Problem of Incentives in Industry. By G. H. Miles. (London) Pitman and Sons. 56 pp. 3s. 6d. net.

Three lectures, delivered under the auspices of the National Institute of Industrial Psychology, dealing, respectively, with fear and financial, non-financial and managerial incentives.

Les Efforts de Restauration Financière de la Bulgarie. (1922-1931.) (Paris) Librairie Félix Alcan. 462 pp. 80 fr.

An exhaustive account, with statistical appendices, of Bulgaria's financial position during the last decade.

The Cost of the War to Russia. By Stanislas Kohn and Baron Meyendorff. (London) Oxford University Press. 215 pp. 19s. net.

The book falls into two parts, the first dealing with the vital statistics of European Russia during the war, and the second with the social cost of the war.

Albert Thomas, 1878-1932. (Annemasse) Albert Granchamp.

A collection of appreciations of his life and work.

National Reform Union Year Book, 1931-1932. (Manchester) National Reform Union. 52 pp. 1s.

A handy volume containing detailed statistics of national revenue and expenditure and overseas trade in Great Britain.

Pension, Provident and Benevolent Funds. (Birmingham) Publication Department, Bournville Works. 48 pp. 6d.

An account of the schemes operating at Messrs Cadbury Bros., Limited.

The Stock Exchange.

INDUSTRIAL "CONVERSION" OPPORTUNITIES.

THERE is general agreement in the City of London that, whenever the Treasury raises its ban, a boom in new issues is possible, and a rush of "re-financing" operations probable. The first violin having dropped its pitch a tone-and-a-half, a period of energetic (if not harmonious) retuning may be expected in the rest of the orchestra. It has generally been assumed that the amount of funded obligations of British industry, which, given lower long-term interest rates, could be converted to a cheaper basis within the next few years, is considerable, and that the results would exercise a sensible effect on future profits available for junior shareholders.

How far are these assumptions true? Until the trade outlook becomes much more settled, it is obviously impracticable to estimate the extent to which industry may raise new fixed-interest capital in the near future. It is possible, however, by a scrutiny of the Stock Exchange Official List, to discover which companies have outstanding prior stocks eligible for conversion, if the three following criteria of "eligibility" be applied:—

First, such stocks must carry a rate of interest, per £100 nominal, higher than that at which sound concerns in the same industry could borrow to-day, on long-term account, supposing that 3½ per cent., or better, is the true interest basis for British Government stocks. This "minimum basic level" may vary with different industries, being, on a generous assumption, at least, 4 per cent. for the best concerns in a popular utility group like electric supply, and certainly not less than 4½ per cent. in groups with a sizeable industrial risk, such as steel, brewing and shipping.

Secondly, within these limits only those stocks are convertible over which there is an option of repayment in the near future, say, in the next ten years.

Thirdly, stocks quoted below redemption price may be excluded. This may shut out a few border-line cases which may conceivably come within the charmed circle in the next few years, but it will admit, on the other hand, many stocks whose conversion is unlikely for some time to yield a sufficient saving to make the operation worth while.

On a superficial glance, the scope for "industrial conversions" may appear wide. The following accounts

have been raised by way of industrial, bonds, debentures, etc., in London during the last eleven years, at average interest rates well above 6 per cent.:—

Year.	Total Issues of Industrial and Commercial Bonds, Debentures, &c. (£'000).	Average Rate of Interest.	Year.	Total Issues of Industrial and Commercial Bonds, Debentures, &c. (£'000).	Average Rate of Interest.
1921 ...	39,896	8.09	1927...	37,988	6.18
1922 ...	43,846	6.72	1928...	43,163	6.08
1923 ...	40,504	6.40	1929...	25,849	6.05
1924 ...	25,053	6.61	1930...	24,400	5.97
1925 ...	24,992	6.43	1931...	21,007	6.33
1926 ...	28,037	6.48			

Unfortunately, the greater part of this post-war financing falls outside the "conversion zone." Most companies have now funded the high-yielding short-term notes they issued just after the war. Industrial difficulties have marred the credit of some companies, and prevented their debentures from rising above redemption price. Other companies, whose standing is better, must continue, nevertheless, to carry a heavy interest burden, like an Old Man of the Sea, because their earlier issues were by way of stock with a moderate interest rate, offered at a discount, or of relatively high yielding stock uncalled for thirty to fifty years or for ever.

The following table summarises the results of our analysis of the "Stock Exchange Official List":—

Group (S.E. List Classification).	Minimum Interest Rate taken as falling within "Conversion Zone."	Debentures, Bonds, etc., not eligible for repayment or conversion in ten years.	Debentures, Bonds, etc., eligible for conversion in next ten years.	Ratio of convertible to non-convertible.
British railways	4½	342.8	1.5	0.4
Breweries and distilleries ..	4½	53.5	14.0	26.3
Commercial, industrial, etc.	4½	121.0	51.3	41.9

war as well as post-war origin), the amount which cannot be converted in the next ten years, because it fails to satisfy the tests laid down above, is many times greater than the convertible total. A widespread effort to convert some of the stocks shown in the penultimate column would doubtless involve substantial "refunding" activity in the issue market, but it would not materially lighten the burden of existing funded indebtedness. Of the £946 millions of debentures shown in the table, for every £100 convertible there would remain £800 inconvertible, under present conditions. Railway debenture stocks, for example, are either irredeemable or represent (after "grouping") investment trusts, both before and after the war, have issued irredeemable or long-term debentures almost exclusively, probably because these alone were readily marketable. How far, indeed, British industry's limited opportunity to take advantage of lower long-term rates is due to the fact that part of its funded indebtedness is a survival of easier pre-war conditions, how far to a somewhat pessimistic post-war diagnosis of interest probabilities, and how far to the refusal of many investors to subscribe for stocks without being assured of their interest in war borrowers, naturally, covered their requirements at low nominal interest rates, and the majority of such borrowings as have not already been redeemed are long-dated or perpetual.

For the convenience of readers who may be affected, we show in a table at the foot of the preceding page individual stocks which come within the "Conversion Zone." It will be appreciated that, although many of these fall within the arbitrary limits we have chosen, their actual conversion may not be practical politics unless interest rates decline further.

The conclusion suggested by our analysis is, broadly, that British industrial concerns who have issued fixed-interest obligations since the war, have, in many cases, lacked the British Government's wisdom (or good fortune) in retaining an early call option on a considerable part of their indebtedness, or have been less happy than the Government as regards the maintenance of their credit status. Their ability to exploit the economic consequences of a successful War Loan conversion, therefore, is much less than has commonly been imagined. If interest rates remain low, their beneficial effects will reach industry rather by way of cheaper short-term accommodation or of entirely new borrowing in the market. In a subsequent article, we propose to review the position as regards the obligations of public borrowers, including the British and Indian Governments, Home Corporations, Public Boards, and Government-guaranteed issues under the Trade Facilities Acts.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TRICKET. August 9. ACCOUNT. August 11.

Markets remained generally firm, with price changes mainly in favour of holders. Government stocks were helped by the particularly good results achieved in the last bonus week of the War Loan Scheme. Senator Borah's speech was regarded as a milestone on the road to recovery by way of debt revision. The Ottawa Conference was a neutral factor, but the strong tone of Wall Street had a favourable effect on sentiment on most of the Continental bourses.

An outstanding feature in the gilt-edged market was the rise of Conversion 8½'s above par to a high point of 100½. The 4½ per cent. Loan was also in good demand. The market became a little quieter in mid-week, but the undertone remained firm. Unassented War Loan, becoming scarcer, rose above the redemption level.

Continental support was forthcoming for India loans, particularly the 8½ per cent., the gap between India and British Government issues being regarded as unduly

wide. Dominion stocks made an easy start. Commonwealth Fives, however, rallied subsequently and several State loans recovered.

Foreign bonds were mainly firm in the earlier part of the week, German issues being helped by the decision of the Leipzig Supreme Court. Later, the "Young" and "Dawes" loans were sold on uncertainty regarding the outcome of Sunday's elections. Austrian Sixes declined, the prospects of ratification of the international loan plan being not regarded as promising. Hungarian 7½'s were marked down, but some support was found for Greek 7's. Siamese stocks showed fresh recovery. South American issues were flat, dealings being practically suspended on Thursday, on rumours of adverse political developments in several countries.

Home rail stocks were dull, the week's traffic figures showing no appreciable improvement. The Metropolitan interim dividend of ½ per cent., against 1 per cent., was deemed disappointing, and the North-Eastern and Great Western statements were awaited without enthusiasm. Southern stocks, however, continued to derive help from the satisfactory dividend payment. Underground shares also found buyers, Metropolitan District being particularly strong. Little business was done in foreign rails, though moderate gains were recorded by several of the Argentine issues. Antofagastas improved, but San Paulos came on offer.

In the Industrial share market business was not of large proportions, though the trend was satisfactory. Transatlantic issues enjoyed a sudden popularity. Imperial Tobacco and B.A.T. were in some demand on second thoughts regarding the former's dividend announcement. Breweries found support, Guinness rising sharply on the dividend, which exceeded expectations. Textile shares were depressed by the labour dispute at Burnley, but English Sewing Cotton improved on Tuesday. Imperial Airways, Spillers, Turner and Newall, and United Dairies also showed improvement. Bank shares had a better tendency and Insurance shares gained ground.

The Oil share market enjoyed a spell of professional activity at the beginning of the week, despite a further increase in the American crude oil output. The market anticipated an early rise in prices following the oil agreement. Paris absorbed such floating stock as appeared, but prices became easier on balance. The rubber share market was more cheerful, though the rise in the commodity proved temporary. Bargain hunters endeavoured to pick up cheap lines of shares, but little was found to be on offer. The tea share market was idle, with few changes. Jokai were in demand.

Less interest than usual was taken in the mining share market, and prices were irregular. Paris sold Kafirs on Wednesday, but Randfontein found support. Rhodesian shares enjoyed some attention, for reasons discussed on page 237. West Australian issues were dull, Australian operators failing to support the market. De Beers reacted, but Ashanti Goldfield advanced and Burma Corporation were stronger.

NEW YORK.

PARIS.

A cheerful tone obtained at the opening, news of the oil agreement having a stimulating effect. "Young" bonds were not appreciably affected by the decision of the Leipzig Supreme Court. International issues were strong on Tuesday, Tinto improving on the reported arrangements arrived at between Anaconda and Union Minière. In mid-week, though few price changes were recorded, the tone became heavy. The "Young" and "Dawes" loans were particularly weak, and activity in Rentes subsided.

BERLIN.

Increased confidence in the domestic political situation was reflected in the stronger tendency of the Berlin bourse. Senator Borah's pronouncement on war debts had a favourable effect. Industrial issues were in demand, and mining shares firm. Fixed-interest stocks, however, were less favoured. The restitution of civil rights in Berlin was welcomed, but later in the week the proximity of the forthcoming elections restrained activity.

AMSTERDAM.

The oil agreement and Senator Borah's speech on war debts combined to bring about a buoyant tone at Amsterdam. Royal Dutch rose, and rubber shares were better, Amsterdam Trading being popular. Philip's continued firm, and Unilever advanced. The general upward trend, however, was arrested in mid-week, when industrials took on a listless appearance, though plantation shares continued to find buyers.

By courtesy of the Standard Statistics Company, Inc., of New York, and 18, Copthall Avenue, London, we print the following index figures of American values calculated on closing prices (1926 = 100):—

The Canadian stock markets were virtually dead at the beginning of this month, but the announcement of the definite conclusion of a Waterway treaty between the United States and Canada on July 13th brought the market to life. There was a sharp upward movement in the stocks of companies thought likely to derive benefit from the construction work on the waterway, among those profiting being Canada Cement (whose preferred issue jumped from 20 to 36 on July 14th), Dominion Bridge, Steel of Canada, Canadian Dredge and Dock and Building Products. On June 14th the volume of trading on the Montreal Exchange was double that of the previous day and the highest recorded for some months. In the mining market a brisk demand for the better copper was created by a belief that some new tariff arrangements which would benefit Canadian copper mines would be forthcoming from the Ottawa Conference. Apart from these classes of stocks, however, there is no sign of real life in the market, and most brokers feel justified in taking prolonged holidays this summer. The Bureau of Statistics' " Investors " Index for all common stocks, after falling to 40.3 on June 30th, had recovered to 41.6 by July 7th.

OTHER CENTRES.

Irregular conditions prevailed at most of the minor European centres. Frankfurt opened firm, but fell away in mid-week. Milan was steady at first, but later suffered from profit-taking. Brussels was undecided, a feature, however, being activity in rubber shares. Stockholm became reactionary after a firm opening.

INVESTMENT NOTES.

Progress of Conversion.—Applications for War Loan conversion, as expected, have been heavy during the last week of the bonus period, the Bank of England alone having been called upon to deal with a total of over 70,000 documents each day. By Wednesday evening some 1,869,480 applications had been received, recording the decision of approximately 72 per cent. of the 2,600,000 holders of War Loan. Some 1,085,900 applications had been made through the Bank of England, 666,500 through the Post Office, 86,000 through the Trustee Savings Bank, and 31,080 through the Bank of Ireland. Early in the week it was revealed by Major Elliott, Financial Secretary to the Treasury, that out of 1,702,000 applications received to July 25th redemption applications accounted for only 2 per cent. of the total War Loan stock outstanding, i.e., for approximately £41,500,000. In the middle of this week, Unassented War Loan was selling in the market at 102½ and Assented stock at 100½, so that holders requiring redemption had the prospect of receiving less in cash on December 1st than they could obtain by selling their War Loan in the market. Some confusion was caused by a statement in an influential quarter on Wednesday that applicants for redemption, having intimated their decision before September 30th, might change their minds and convert at any time up to December 1st. It was at once pointed out that this, in effect, gave waverers an extra two months' gratuitous option. Those responsible for the statement, however, in reading the relevant passage in the Finance (No. 2) Act, 1931, Section 11, subsection 2, failed to allow for the discretionary powers conferred

upon the Treasury, which the latter, by a Parliamentary answer on July 12th, had already declared its intention to exercise. It has now been made clear that unless good reason can be shown for the delay, a continuance application from a holder who has previously lodged a repayment application will be refused after September 30th. It will however, be granted at any time up to that date. It is impossible as yet closely to estimate the final results of the operation, though its emphatic success is assured. It is believed in well-informed quarters, however, that by July 31st well over 2,000,000 holders will have lodged their applications. Repayment claims will not, it is thought, account at the outside for more than 4 per cent. of the total of the stock. It is probable that the proportion of the total stock covered by applications will be slightly larger than that of the number of applicants, and may, in fact, leave only about 15 per cent. of the whole amount unaccounted for. At least one-third of this may be "converted by default," past experience suggesting that in every operation the number of holders taking no action is appreciable. If the amount of stock held in quarters desirous of retaining their option until September 30th is thus of the order of only about 10 per cent., the Treasury's task will be comparatively light. If three-fourths of these holders eventually decided to convert, the amount of cash to be found on December 1st (allowing for earlier repayment claims uncanceled before September 30th) would not be more than £135 millions at the outside. If only one-fourth of the outstanding minority were to convert, about £240 millions of cash would be required.

New National Savings Certificates.—As from August 2nd next the Treasury will put on offer a new (Fourth) Series of National Savings Certificates, on the following terms:—

(Cost 16s.)					
End of year	Value.	Interest per cent. per annum.	End of year.	Value.	Interest per cent. per annum.
	s. d.	£ s. d.		s. d.	£ s. d.
1	16 4	2 1 8	6	19 4	3 4 1
2	16 8	2 1 2	7	20 0	3 4 9
3	17 4	2 14 1	8	20 8	3 5 0
4	18 0	2 19 9	9	21 4	3 4 11
5	18 8	3 2 7	10	22 0	3 4 8
			11	23 0	3 7 1

The latest Certificate is slightly more complicated than its forbears, and, of course, earns lower interest, the Treasury having rightly insisted on a maximum overall rate appreciably below $3\frac{1}{2}$ per cent. The Treasury has not seen its way to meet those who asked for a longer-life Certificate, the extension of one year, over the ten of all earlier series, being without significance. The authorities, who are undesirous of attracting "in-and-out" business, pay no interest on a Certificate until the end of the first year, when 4d. is added. The same amount accrues during the second year, but in instalments of 1d. at the end of every three months. During these two years the average interest rate is well below the $2\frac{1}{2}$ per cent. obtainable on Savings Bank deposits. Thereafter, interest accrues at the normal rate of 2d. at the end of every three months until, on the maturity of the Certificate, the holder receives a modest bonus of 4d. The new Certificate will probably be popular once the public has accustomed itself to thinking in terms of lower interest rates. The Treasury, however, must regret that an unlucky time sequence compelled it to effect conversion of £250 millions of First Series Savings Certificates last March on much more costly terms than it would have been impelled to offer three or four months

THE
FIVE YEAR PLAN
of the
NATIONAL PROVIDENT INSTITUTION

will be of interest to all Business Men. It is specially designed to assist them in the present period of Economic Reconstruction.

48 GRACECHURCH ST., LONDON, E.C.3

later. The manner in which interest rates on Savings Certificates have reflected major improvements in the price of Government credit is shown by the following table:—

	Series I.	Series II.	Series III.	Series IV.
When first issued.....	1916	April 1, 1922	Oct. 1, 1923	Aug. 2, 1932.

Maturity price.....	26s.	26s.	24s.	23s.
Overall rate of interest				
(% p.a. compound, tax free)	£5 6s. 2d.	£4 19s. 6d.	£4 2s. 9d.	£3 7s. 1d.
Yield on 2½% Consols at date of original issue (%)	£4 4s. 0d.	£4 8s. 0d.	£4 5s. 6d.	£3 8s. 0d.

* Originally five.

The limitation of the maximum individual holding to 500 Certificates is maintained unchanged, the total including Certificates of all series.

B.B.C. and the Stock Exchange.—The decision of the British Broadcasting Corporation to resume, in a modified form, its nightly reports on the course of Stock Exchange markets and prices will doubtless give satisfaction to many country listeners. The original decision to suspend these bulletins was interpreted as a sign of the Corporation's dissatisfaction with their quality, which was shared in City quarters. Disappointment was expressed, however, over the subsequent intimation that the service was to be withdrawn indefinitely, those responsible for radio programmes holding the view that the reports interested an extremely small proportion of listeners, and that, in general, Stock Exchange news was not adapted to radio dissemination. It has been suggested that the decision, which came most unfortunately on the eve of the Government's conversion announcement, was due less to inherent unsuitability of medium than to lack of appreciation, on the part of the controllers of programme policy, of the possibilities of a complex but important branch of national activity. The B.B.C. appears to have sounded a number of people, in a period of Stock Exchange depression, on their attitude towards a series of dull and uninspiring bulletins, and, receiving the inevitable answer, to have relinquished responsibility for a subject in which it had never been seriously interested. The number of investors, in fact, is legion, and each has a strong motive for maintaining interest in investment matters. A mere recital of prices of the most active stocks may offer an investor in remote places the opportunity of learning of changes, affecting his own position, within a couple of hours of the closing of the "House," and of posting or wiring instructions to his broker in time for the following morning's opening of business. Such an investor may wait twelve to eighteen hours for the arrival of a morning paper containing the same news. On a broader view, it is undesirable that the B.B.C., which is one of the most powerful educative forces in the State, should regard investment as a narrowly specialised technical "mystery," unsuitable for broadcasting. The Corporation's past programmes have included admirable talks by well-known economists on the many aspects of their subject, and there is a vast virgin field awaiting similar development in the domain of general investment. It may be hoped that, if the permanent staff of the B.B.C. includes no expert qualified to deal with this branch of life and thought, steps will be taken to remedy the deficiency.

Railway Dividends.—After the disappointing interim statement of the London Midland and Scottish Railway (which omitted any dividend on its 1923 preference stock and declared only 1 per cent. on its first preference), the half-yearly announcement of the Southern Railway came as a pleasing surprise to the market. No payment was recommended on the preferred ordinary stock, but a full half-year's dividend was declared on the preference stock—whose dividend prospects had been dubiously regarded. During the first six months of this year, as compared

with last, the company's receipts fell by £800,000 (gross) from passengers and goods trains, by £150,000 (net) from steamers, and by £40,000 (net) from docks, hotels, etc. Railway expenditure, however, was reduced by over £500,000, so that the decline in net revenue for the half-year was of the order of £500,000. The market was impressed less by the disclosed expenditure economies (which were of much the same proportions as those already announced by the L.M.S.) than by the board's "gesture." Part of the last half-year's saving will be non-recurrent, since it represents wage differences in the first three months, the "cuts" under the National Board's award having come into force only at the end of March, 1931. The fall in gross receipts, on the other hand, was heaviest in the latter part of the period, though this was partly due to seasonal causes. The dividend announcements of the London and North-Eastern and Great Western companies, whose gross railway receipts declined by £2,188,000 and £1,175,000 respectively in the last half-year, will have been announced by the time this issue is in the hands of readers. If economies are of the approximate proportions of those of the other two lines, earnings should be sufficient to cover all L.N.E.R. guaranteed stocks, with a small margin for first preference, and nearly to cover all Great Western preference requirements.

Crosse and Blackwell.—The latest accounts of these preserved provision manufacturers are disappointing. Profits are 40 per cent. below those of 1930 (which, in turn, were 30 per cent. below those of 1929), and net earnings after debenture interest are negligible. No dividend is paid on the £2,250,000 of preference capital. Non-recurrent charges are of onerous dimensions:—

Year to December 31st.	1929.	1930.	1931.
	£	£	£

* Of which £37,151 is guaranteed preference dividend and interest to Crosse and Blackwell, Inc., U.S.A.; £83,327 losses of overseas companies; and £2,303 exchange amount.

Difficulties in connection with overseas connections have been intensified, but efforts are being made to eliminate them. Since the date of the balance sheet an arrangement has been negotiated with the preference shareholders of the American company by which Crosse and Blackwell is released from its preference guarantee in consideration of the payment of £54,388. The assets of the Canadian company have been bought from the American company and disposed of on terms which provide both companies with fresh working capital. The board has disposed of the South African and South American companies subject to a royalty on sales and an option to re-purchase. Negotiations are in progress for the reorganisation of the French business. The company's position in the home trade has apparently been "satisfactorily maintained," and the directors look for a "substantial improvement" in trading results during the current year. The consolidated balance-sheet position is not impressive. Investments at £247,549 "cannot now be regarded as worth their full book value." The £1 7½ per cent. preference shares, 15s. paid, are quoted at 8s. 3d.; the 1s. ordinary shares at 6d.

Mitchells and Butlers.—The directors of this Birmingham brewery company attribute the drop of some 18 per cent. in earnings for the year ended June 30, 1932, to the addition of 31s. per standard barrel to the beer duty last September, which aggravated the decline in consumption. The ordinary dividend is reduced from 15 per cent. to 11 per cent., both tax free.

Year to June 30.	1930.	1931.	1932.
	£	£	£

* Free of tax.

The reserve fund is now £1,325,000, in addition to a reserve for contingencies of £800,000. The balance sheet shows cash and debtors at £670,346, against creditors and loans of £670,329. The £1 ordinary shares are quoted at 44s., which, allowing for the final dividend of 6 per cent., gives a yield of about £5 3s. 6d. per cent. tax free.

Independent Investment Company.—The report for the year to March 31, 1932, of the Independent Investment Company, of which Messrs J. M. Keynes, O. T. Falk and Ian MacPherson are directors, was interesting for several reasons. In the first place, the depreciation shown on the company's investments at March 31, 1932, was approximately 50 per cent., which, though not unique for a post-war investment trust—the Ailsa Investment Trust also had a depreciation of 50 per cent.—is large enough to demand exceptional action. This appears to have been taken, for no dividend is recommended on the ordinary stock, and two new directors have joined the board, the Hon. W. B. L. Barrington, of Messrs Helbert Wagg, and Mr C. R. V. Coutts, of the Provident Mutual Assurance. Their appointment was confirmed at the general meeting on Wednesday last, at which the chair-man stated that, in future, Messrs Helbert Wagg would act as managers and secretaries of the company. In the second place, the directors have been involved in a dispute with their auditors regarding the treatment of an exchange loss arising out of the fact that when Great Britain went off the gold standard last September the company was carrying a dollar loan against dollar securities. The accounts, as drawn up, were adopted at the meeting. The gross revenue of the Trust amounted to £31,199 against £87,917 in the previous year and the net revenue to £15,461 against £21,855. The preference dividend absorbed £9,450, leaving a balance to be carried forward of £81,059. The directors have evidently good cause for withholding payment of an ordinary dividend. The 5 per cent. preference stock is quoted at 60 and the ordinary stock at 86½. On the market valuation of the securities at £249,620 the preference capital, after allowing for loans, is covered only as to 50 per cent. Some 63½ per cent. of the total holdings are in American securities. Since there have recently been important differences of opinion between certain directors on matters of policy, the new arrangement should make for progress in the rehabilitation of the company's position—presumably on "orthodox" investment trust lines.

Copper Shares and Tariff Prospects.—The quotations of Rhodesian copper mining shares have recently moved against the trend of the market for copper, which has been sagging, the metal having sold down to 4.60 cents c.i.f. European ports, while sterling quotations in London have set up new low records. Costs of production in Northern Rhodesia are possibly lower (writes a trade correspondent) than in any copper-producing area in the

world. That shareholders, nevertheless, can hope for any return while copper sells below 5 cents is more than doubtful. Recent buying, however, has been based on the assumption that the Ottawa Conference will agree upon a tax on foreign copper with free entry for Empire brands. This is, of course, a possibility, and would no doubt benefit Canada as well as the other Empire copper-producing centres. The 4 cent duty imposed by the United States has closed an important market for the sale of Canada's refined copper. The Canadian producers are, however, outside the copper cartel. At present they are obtaining a share of the business in electrolytic grades, which suggests that when demand really improves they may carry off the greater part of whatever is going. On the other hand, both Chile and Katanga are low-cost producers, capable of putting up a stout fight on the English market unless they are shut out by a duty. Rhodesia's main trouble at present is lack of refining capacity and dependence upon American assistance. Within a few months, however, the projected plant at Prescott will be in operation. It may be taken as certain that further provision will be made in due course for converting Bessemer into refined, either in this country or at the mine.

Oil Developments.—The International Oil Conference, which met in Paris this month after adjourning at New York, has reached an agreement which will come up for ratification, it is understood, at a final conference in New York. The Russian delegates, being absent from the Conference, were not a party to its findings. Details of the agreement have been jealously guarded, but it is known that the arrangements, which are designed to "improve the situation in import markets," include an

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

undertaking between the Roumanian groups and the "international" producers to respect each other's relative position in particular markets. All intention is disclaimed of attempting to raise crude oil prices to levels which will tempt independent producers to break away. The weak point, of course, is the non-inclusion of the Russians, but the spokesmen of the Conference profess to discount this factor on the ground that Russia is now producing and exporting practically to capacity, and has no reserve for a further increase. Whether this is so remains to be seen. The oil share market was firm on the announcement, speculative buying of the leading shares being recorded from London, New York and the Continent. The movement, however, tended to lose impetus by mid-week, the market desiring fuller details as to the crucial figures contained in the agreement, and reassurance as to the willingness of the Roumanian Government to ratify in the absence of a Russian *modus vivendi*.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: The Standard Bank of South Africa, Union Bank of Australia, Provincial Bank of Ireland, Bank of Roumania, British Steamship Investment Trust, Threlfall's Brewery, Millars' Timber and Trading, and Tanganyika Concessions. Presiding at the annual meeting of Threlfall's Brewery, Major C. M. Threlfall said that one of their difficulties had been the unfair competition suffered from clubs of a certain class. In many instances they were being opened in direct opposition to licensed hotels, and were neither subject to the strict supervision of the authorities, nor required to pay the high taxation of the trade. At the annual meeting of the Union Bank of Australia the Hon. Edmund W. Parker said that their liquid assets amounted to about 8s. 6d. in the £ of the total liabilities of the bank to the public, which represented a strong position.

COMPANY MEETINGS, &c.

THE STANDARD BANK OF SOUTH AFRICA LIMITED.

CONTINUED DIFFICULT CONDITIONS.

POSITION AND PROSPECTS IN THE UNION.

INTERESTING REVIEW BY LORD BALFOUR OF BURLEIGH.

The one hundred and nineteenth ordinary meeting of shareholders of the Standard Bank of South Africa Limited was held at Southern House (formerly Cannon Street Hotel), London, E.C., on July 27, 1932. The Right Hon. Lord Balfour of Burleigh in the chair.

The Secretary (Mr T. D. Williams) having read the notice convening the meeting, the Chairman authenticated the correctness of the register of transfers by impressing thereupon the seal of the company.

The directors' report and accounts were taken as read, and the Secretary read the report of the auditors.

The Chairman then addressed the meeting as follows:—Ladies and Gentlemen, you would notice that the certificate which has just been read by the Secretary has been signed by two auditors only, and you would, I feel sure, share the regret of the directors at the recent death of Sir Gilbert Garnsey, who had been one of our auditors since 1921.

In terms of the bank's Articles of Association the directors propose to fill the vacancy thus created by appointing Sir Nicholas Waterhouse, and this appointment you will be asked to confirm at the next meeting.

The year which has passed since our last meeting has been one of great economic difficulty. In addition to the continued fall in the price of primary products we have had to encounter the abandonment of the gold standard on September 21st last. It has been a year of world-wide crisis, and the shareholders will be awaiting with special interest an account of the manner in which the events of so difficult a period have been reflected in the affairs of our bank. I venture to say that the account of their stewardship which the board have to render on this occasion is one with which you will have no cause to feel disappointed.

You have in your hands a copy of the report and Balance Sheet of the balance sheet as at March 31st last, and I would like in the first place to offer you some detailed comment on the figures.

Let me begin by explaining that as our balance sheet is expressed in sterling it has been necessary to convert the items of South African currency into sterling at the rate of exchange ruling on March 31st last; the effect is, of course, to increase the relative figures on both sides of the balance sheet by about one-fourth. The only South African item not so treated is that of bank property and premises; as these are in the nature of a fixed asset, property and premises figure remains, therefore, on the same basis as last year.

It will be observed that the total of assets and of liabilities is a little over £69,000,000, as compared with £70,400,000 last year. That the figure should actually show a net reduction of more than £1,000,000, in spite of the increase by one-fourth of some of the largest individual items, is an indication of the extent to which business has contracted during the year under review.

Taking one or two of the more important items—deposits and current accounts stand at slightly over £52,000,000, whereas last year they were just under that figure. The apparent small increase of £217,000 represents in reality a drop of over £7,000,000. The actual decrease in deposits in the Union alone is over £8,000,000.

Bills discounted and advances to customers stand at approximately £38,000,000 compared with £37,500,000 last year. Making the necessary allowance for exchange and other factors, the actual decrease of advances to the general public within the Union is £923,000 only. This figure must be borne in mind in comparison with the decrease in our deposits within the Union of £8,000,000, to which I have just referred.

As invariably happens in times of difficulty, the bank has been subject to some criticism in South Africa on the ground that we have not been more liberal in making advances. I can only say that we have done our utmost to meet the legitimate requirements of our customers, and if our critics will examine these figures, I think they must admit that it has been no mean achievement to meet the heavy withdrawal of deposits within the Union without any comparable reduction in advance facilities.

Bills of exchange are £2,870,000, against £5,240,000, an actual reduction of £2,370,000. This follows a decline last year of £1,500,000 in the same item, and is directly due to the contraction in the external trade of South Africa, which is further reflected in drafts outstanding and acceptances under credits wherein a decrease of more than £600,000 is shown.

Our investments stand at just over £7,000,000, an increase of £1,723,000 over last year's figure. You may recollect that on the occasion of our last meeting the chairman informed you that we were at that time adding to our investments, and the purchases we have made are reflected in the accounts before you. In our half-yearly statement as at September 30th we mentioned that it had been necessary to transfer a certain amount from contingencies account to provide for depreciation in investments. I am glad to be able to say that the market value of our investments is now much in excess of the book value. I take the opportunity to mention that we have converted the whole of our substantial holding of 5 per cent. War Loan.

Our cash in hand and at call is £9,400,000; allowing for the exchange variation on the South African Rand at Call, this represents a figure higher than last year by £91,000.

to obtain the release of the amount of sterling which we have placed at the disposal of the exchange pool.

As far as the general public are concerned, there are no restrictions on exchange transactions with South Africa, and it will be very gratifying to us if we can be permitted to adjust our own uncovered exchange position.

May I point out that, even after the sum of £664,170 has been set aside, we have still in the reserve fund £2,500,000, an amount equivalent to our paid-up capital?

One other matter in connection with the balance sheet requires a reference. You will perhaps remember that in our statement of September 30th last the liabilities and assets in South Africa were included at par of exchange, and it was stated that provision for the difference in exchange had been met out of contingencies account. It is satisfactory to be able to report that the position having been dealt with in the present accounts in the manner which I have explained, the amount set aside in September last has been re-transferred to contingencies account.

Turning to the profit and loss account, the balance of profits for the year is £457,442, a decrease on last year's figures of some 19 per cent.

Loss Account. Having regard to the difficulties of the period in which this profit has been earned, I need not refer to the matter in any spirit of apology. You will observe that provision for bad and doubtful debts has been made out of the profits for the year.

With the amount of £142,622 brought forward, the balance for disposal is £300,064. The interim dividend paid in January absorbed £150,000; after placing £75,000 to bank premises account, there is available £375,064, out of which the board recommend appropriating £100,000 to the pension fund, the same amount as last year, and the payment of a final dividend at the rate of 10 per cent. per annum, making a total distribution of 11 per cent. for the year.

Dividend and Carry Forward. This will leave an increased amount of £150,064 to be carried forward to the next account.

Your chairman last year, Mr E. Clifton-Brown, said:—"It is never wise to indulge in prophecy, and it is unusually dangerous to do so at this time, but it must be clear to every one of us that the problems of the current year are not less serious—they may be even more serious—than those of last year. I am speaking in general terms and not with special reference to our own business, but unless there is some material improvement in the prices of primary products and other raw materials which South Africa produces the earning capacity of most businesses must be adversely affected."

That forecast has been fulfilled to the letter, and the uncertainty of conditions prevailing during the past year, in addition to the continued fall in prices, has created the greatest possible difficulties for those engaged in trade, industry and finance in South Africa.

The value of the overseas trade of the Union for 1931 showed a decrease of £22,616,000 as compared with the figures for 1930, exports falling by £11,053,000 and imports by £11,563,000. The chief shrinkage in exports occurred in wool, maize and maize products, and diamonds, which dropped by £2,943,000, £2,232,000 and £1,907,000 respectively.

The principal decreases in imports were in the items of metal manufactures and machinery, £2,526,000; textiles, £1,984,000; and Government stores, £1,719,000.

Turning to individual industries, fortunately the gold-mining industry again showed a record output and proved a bulwark of the country's economic structure. An increased supply of native labour was obtained, and it is to be hoped that everything possible will be done to encourage the industry with a view to extending operations further in the future. There are untouched areas that could be opened up provided the necessary capital is made available.

The diamond industry has felt the full effects of the world depression, and the two principal producers in the Union closed down their mines on March 31st last. Every one of us must regret the temporary eclipse of this great South African industry. In the main a luxury trade, the diamond industry cannot hope for any early revival, but no one can doubt that when normal times return diamonds will once again make their wonted contribution to the prosperity of South Africa.

As regards agriculture, costs of production in the Union have steadily increased for some years past and, with a fall in agricultural prices during the last two years which has been out of all proportion to the decline in wholesale and retail prices generally, the farming community are experiencing the greatest difficulty in adjusting costs to the lower level of external prices.

Climatic conditions were not on the whole unfavourable, although a severe drought was experienced in Northern Natal and Zululand and a considerable amount of damage was caused by heavy rains and floods in the Eastern and Midland Cape districts at the close of the year.

While business generally in the Union has shown steady contraction during the past two years it can safely be said that conditions do not compare unfavourably with those in most countries of the world. South Africa is extremely fortunate in that her principal export—gold—commands a certain market at a remunerative price, and her export trade—great as has been its decrease—has consequently not fallen to such an extent as in countries whose exports consist more largely of agricultural produce.

In Southern Rhodesia there was a decrease of 23 per cent. in the total volume of foreign trade, but the balance of trade was favourable for the first time for some years.

Cattle raising suffered a severe setback owing to the outbreak of "foot-and-mouth" disease. Maize growers were severely affected by the continued fall in world prices, and a Maize Control Act was passed to stabilise internal prices and equalise the burden of export. This season's tobacco crop is expected to exceed that of last year. There is no doubt that tobacco of the best quality can be produced in the Territory and, provided the position is handled with care, the future of the industry appears to be assured.

Southern Rhodesia abandoned the gold standard and linked up with sterling on October 12, 1931, simultaneously with Northern Rhodesia and Nyasaland.

In Northern Rhodesia imports at £5,102,000 exceeded exports by nearly £4,000,000. The large adverse balance of trade, which has been a feature in recent years, is largely attributable to the development of the copper mining industry, necessitating the importation of large quantities of railway material, plant and machinery.

In Nyasaland trading conditions were very unfavourable. The continued fall in prices of produce curtailed purchasing power considerably, but the potential resources of the Protectorate remain unimpaired and a healthy condition would be quickly restored with an increase in the market prices of produce to an economic level.

Exports of tobacco—which is the most important crop—decreased in quantity by about 17 per cent., but this season's crop is likely to show a larger yield and an improvement in quality.

In South-West Africa the year 1931 proved to be another difficult one in every direction. The country's purchasing power has diminished rapidly during the past two years owing largely to the curtailment of diamond and copper mining operations and to the continued fall in prices of farming produce.

The East African Territories have been severely affected by the depression; their wealth being derived chiefly from agricultural industries they have felt the full force of the abnormal drop in prices of all primary products.

Further detailed statistics of commerce and industry in South and East Africa, with which I will not weary you, will be included, as is our usual practice, in the printed report of the meeting.

My colleague, Sir Roy Wilson, accompanied by our Secretary, Mr Williams, recently carried out a comprehensive tour of the Union of South Africa, visiting all the principal centres and many of the country districts.

Sir Roy's visit has been of great value to the Bank and we are glad he has returned in time to be with us to-day.

Ladies and gentlemen, such is a brief review of the conditions under which we have laboured during the past year. It is in the light of these that our results must be considered. Monetary conditions have been unusually difficult. The heavy decrease in our South African resources had to be met, while at the same time we had to do our utmost to continue advance facilities to those who are accustomed to rely upon us.

Such conditions have thrown a heavy strain upon our senior officials both in South Africa and London, and indeed have provided a very real test of the efficiency and strength of our whole banking machine.

The soundness and liquidity of the financial position revealed by the accounts in your hands entitle us, I think, to feel proud of the way in which our bank has emerged from a year of quite exceptional difficulty.

As to the future, I shall be no less cautious than your chairman last year in indulging in prophecy. Nevertheless, I think we have now more solid grounds on which to base our hopes of ultimate world recovery than have been visible for some time past. First and foremost there is the great improvement in British credit which has been

steadily taking place ever since the General Election and the formation of the National Government last autumn; the final seal has been set on this recovery by the now assured success of the great War Loan Conversion Scheme, which, moreover, by an all-round cheapening of borrowing will materially facilitate an industrial revival. Then there is the Lausanne agreement. Provisional indeed it is, but in the nature of things it could hardly have been otherwise. We may fairly hope that it will prove to be the first step towards an international settlement which will at last be based on reality and not on fantasy, and which will rid us by degrees of those barbed wire entanglements in which the trade of the world is being strangled to death, i.e., exchange restrictions and tariff barriers. Finally, there is to-day proceeding at Ottawa a Conference of which we are justified in cherishing the brightest hopes, more especially if it is being carried on, as we may feel sure it is, with the object, in the striking phrase of Mr Havenga, the Union Finance Minister, not merely of putting a ring fence round the Empire, but of revivifying the trade of the whole world.

A few months, and even weeks ago, the prospect before the world, owing to the apparent irreconcilability of the views and claims of the different nations, was that of drifting ever more swiftly into a collapse of credit which would mean nothing less than the relapse to barbarism and starvation of large and important areas. To-day we may at all events feel that under the very shadow of impending catastrophe steps are at last being taken to avert disaster, and in difficult as the future is sure to be—as well in South Africa as in the rest of the world—nevertheless a way does seem to be opening up to the ultimate restoration of confidence and a return to more normal business conditions.

I will now conclude by moving the first resolution, viz.:—"That the report and balance sheet to March 31, 1932, now presented, be adopted," and I will ask my colleague, Sir Roy Wilson, to second it. (Applause.)

Sir Roderick Roy Wilson: Ladies and Gentlemen,—Before formally seconding the adoption of the report and balance sheet, I should like for a very few moments to refer to the visit to South Africa which I have just concluded. I shall not attempt in the short time at my disposal to tell you of the impressions which I formed during this my first visit to the Union, but I do want to refer very briefly to one object of my visit which engaged my constant and close attention during the eight weeks which I spent in visiting fifty-four of our branches, namely, the all-important question of our staff. I was anxious to ascertain whether the Standard Bank, which, during its long and honourable history in South Africa, has done so much for the development of the country, had among the rank and file of its staff men capable some day of carrying on, in the higher posts of our service, the responsible duties so ably performed by our managers and general managers, past and present.

Ladies and Gentlemen, I can at once and without hesitation assure you upon that question. It was, of course, impossible for me to examine closely the qualifications of every man in the service at all the branches I visited. But I did interview and examine nearly 300 of our officers in all grades, and I am satisfied beyond doubt that we have an unusually high percentage of men who are possessed of more than average ability, and who some day will worthily succeed those who are now in retirement or who are approaching the retiring age, and who have done so much in the past to bring this bank to its present high state of strength and efficiency.

I know I am speaking for all my colleagues when I say that we intend to make the best use of this promising material, and to give every man in our service, whether he be British, South African or Dutch, the opportunity to rise to the higher posts if he has the indispensable prerequisites—character, capability and confidence.

This bank has a loyal, capable and devoted staff in South Africa, and, as a member of the board, it is to me a very pleasant duty to be able to assure the shareholders that they are well served by the staff in our main field of operations 6,000 miles from these shores, and that on this score they need have no anxiety at all for the future.

In conclusion, may I add that I had the privilege of meeting during my stay in Cape Town the Prime Minister, several members of the Government, and the Governor of the Reserve Bank. I was received by them all with the greatest kindness and courtesy, and am happy to say that the bank's relations with the South African Government and the Reserve Bank are both cordial and friendly. I beg to second the adoption of the report and balance sheet. (Applause.)

The Chairman: Before I put the resolution to the meeting I have to ask whether any shareholder has any remarks to make on

the report or accounts. (A pause.) If no one wishes to ask any questions I will put the resolution to the meeting.

The resolution was carried unanimously.

The Chairman: I have now to make a formal declaration of dividend by reading the following to the meeting:—

Declaration of Dividend. "As empowered by the Articles of Association, on behalf of the board, I now declare a dividend for the six months ended 31st March, 1932, of 5s. per share payable in British currency on 500,000 shares, as a final dividend for the 12 months ended on that date (making, with the interim dividend, a total distribution at the rate of 11 per cent. per annum), subject to income tax, to be paid to those shareholders whose names appeared on the register on the 6th day of July, and to become payable on the 30th instant."

I now have to ask Mr Arbuthnot to propose the second resolution.

Mr W. Reiersen Arbuthnot: Ladies and Gentlemen, I have much pleasure in proposing:—"That Robert Edmund Dickinson, Esq., Horace Peel, Esq., and William Smart, Esq., be re-elected directors of the company."

The Rt. Hon. Lord Sydenham, G.C.S.I., F.R.S.: I have great pleasure in seconding that resolution.

The resolution was unanimously adopted.

I now have to ask Mr Nissim to move the third resolution.

Mr Joseph Nissim: Mr Chairman, I have the honour to move the following resolution:—

Re-election of Auditors. "That A. T. Turquand-Young, Esq., F.C.A., and Roderick M. Peat, Esq., F.C.A., be re-appointed auditors of the company for the ensuing year at a remuneration of 400 guineas each."

Mr Chairman, we shareholders desire to associate ourselves with the board in our sense of the great loss to the bank by the premature death of our friend, Sir Gilbert Garnsey. (Hear, hear.) He was an auditor of the very highest standing in the City of London, with a high sense of duty, whose advice was sought for the solution of questions of the greatest complexity, and he never spared himself. The shareholders will remember that he came to us about eleven or twelve years ago, having been the auditor of the African Banking Corporation—a bank which has since been amalgamated with this bank. Now, considering how vast is the territory covered by this bank, how many its branches, how complicated the questions of accountancy that arise from the eight or nine currencies, we do think it essential to retain the services of three auditors representing three of the best firms in the City, and so we were glad to hear that a successor to Sir Gilbert Garnsey from his own firm has been nominated by you.

Speaking to the resolution, I would only remind shareholders that Mr Turquand-Young has been our auditor for a quarter of a century. (Hear, hear.) Mr Roderick Peat became our auditor more than twelve years ago in succession to his distinguished father—whom I am glad to see here to-day—who was our auditor for more than a quarter of a century, so I think that we shall have no hesitation whatever in passing the resolution. (Hear, hear.)

The Chairman: I will ask Mr Seyd to second the resolution.

Mr R. E. N. J. Seyd: I have much pleasure in seconding the resolution, and should like to associate myself with the remarks made by Mr Nissim in respect to Sir Gilbert Garnsey.

The resolution was unanimously agreed to.

The Chairman: Ladies and gentlemen,—I have now the agreeable duty to perform of moving a vote of thanks to our staff. I have already referred to the special circumstances of the past year which have rendered the work of the staff more than usually arduous. We are thereby placed under an obligation to them which is even greater than usual. During the past year Mr le Sueur, one of our joint general managers in South Africa, has reached the retiring age after forty-three years spent in the bank's service. I am using the words in their most literal sense when I speak of forty-three years spent in the service of the bank by Mr le Sueur. The bank's interests have ever been the prime object of his life, and the bank has had no more faithful servant. We shall all join in wishing him many years of enjoyment of the leisure he has so well earned. (Hear, hear.)

To fill the vacancy created by the retirement of Mr le Sueur we have appointed Mr King, formerly deputy general manager at Pretoria, to be joint general manager with Mr Shiel and Mr Robertson. To these gentlemen and to all those serving under them and to Mr Lowndes and the staff—senior and junior alike—in London and elsewhere, we owe our warmest thanks for the services they have rendered to the bank during the past year. (Applause.)

I have now pleasure in moving: "That the thanks of the meeting be given to the general managers, the London manager and other officers for their valuable services," and I will call upon Mr John Rae to second the resolution.

Mr John Rae: I have much pleasure in seconding the resolution. The vote was unanimously accorded.
The Chairman: That concludes the business of our meeting.

Mr T. L. Gilmour: Mr Chairman, ladies and gentlemen, in the long and honourable history of the Standard Bank we have gone through many vicissitudes. We have at all our annual meetings passed a resolution similar to that which I now have the honour to submit to you, but I think I shall carry all

those present with me when I say there has never been an occasion when we ought with greater heartiness to pass a resolution thanking the board of directors for their conduct of the business of this great company during the past year and thanking the chairman for his conduct in the chair. It has been said that this year has proved a testing time for the staff of this bank. It has proved also, ladies and gentlemen, a testing time for those who are in supreme control of our affairs, and I venture to say, without fear of contradiction, that they have come out of that test with the same credit which has been attributed to the bank's staff.

Ladies and gentlemen, it is unnecessary for me to detain you in proposing this resolution, but I should like to say this: we all of us on both sides of the table have been going through, during the past twelve months, a period of the most intense anxiety. We have gone through that period of anxiety as a nation; we have gone through it as a bank. I am glad to say that, by the universal testimony of other nations, we have borne ourselves under the stress and strain of this great anxiety with a calmness and a dignity which I think it is difficult to surpass. I venture to say that the bank has equally displayed the same qualities. To-day there has not been a question raised on this side of the table, and that in itself is probably the most striking testimony which could be given to the view which we shareholders take of those who are in control. I therefore have the greatest pleasure in moving:—"That the cordial thanks of the meeting be accorded to the directors for their attention to the affairs of the bank, and to the chairman for his conduct in the chair." (Applause.)

Sir William B. Peat, C.V.O.: Mr Chairman, my Lords, ladies and gentlemen, it falls to my pleasure to second what I consider to be one of the most important resolutions that could be placed before a body of shareholders—that is, an expression of thanks to the mainspring of the whole enterprise of this bank, namely, the board of directors. It is they who initiate, it is they who control, all that happens in this bank, with the aid of the excellent officers they have to advise them. We have to thank our board, and particularly our chairman, not only because we have been in the habit of doing so—a very good habit, I admit—but because we feel, one and all of us, that they have performed their duties in our interests absolutely to perfection.

The chairman has referred to the balance sheet of the bank. I am sure of this, that anyone who understands a balance sheet—and I assume that all the shareholders in this bank understand a balance sheet—will look upon the one before us to-day with pride and pleasure. Its liquidity is remarkable, and you must judge of a bank not alone by the amount of profits it shows; that is a very important thing, but it is still more important to recognise that the liquidity of a bank means safety, and the safety of our bank means safety for us as well as for those who deposit their moneys with the bank. I am speaking from some little knowledge. I was for many years one of the auditors of this bank, and I saw during my experience in that time the consistent energy, the consistent attention, which the directors of those days—and I am happy to see some of them here now—gave to the affairs of the bank, and I feel certain, from the experience they possessed, the energy they showed, and the attention they gave to the affairs of the bank, that we have every reason to thank our board most sincerely. I second the proposition. (Applause.)

The resolution was cordially approved.

The Chairman: Mr Gilmour, Sir William Peat, ladies and gentlemen, on behalf of my colleagues and myself I should like to offer you our warmest thanks for the resolution you have just passed, which is very much appreciated by all of us. Thank you very much indeed.

The proceedings then terminated.

PARTICULARS IN REGARD TO THE CHIEF INDUSTRIES OF SOUTH AND EAST AFRICA FOR THE PERIOD UNDER REVIEW.

The total mineral output of the Union for 1931 was valued at £54,729,763, as compared with £59,036,255 for 1930. Diamonds were mainly responsible for the reduction in the figures.

In Southern Rhodesia the value of the mineral output declined from £4,518,197 to £3,218,022, but in Northern Rhodesia the figures increased from £806,415 to £1,258,673.

Gold. Further steady progress was made in the Transvaal gold mining industry, and, for the ninth successive year, record figures were established. The value of the output for 1931 was £46,205,860, an increase of £685,697 on the total for the previous year. This outstanding result was largely due to the ample supply of native labour available, to improved efficiency underground resulting from the more complete mechanisation of the mines, and to the continued international demand for gold.

In Southern Rhodesia the output was valued at £2,273,875, as against £2,316,649 in 1930.

Diamonds. Production in the Union showed a decline in value from £8,340,719 to £4,182,523. Exports fell from £5,481,212 to £3,573,484. A revival in the industry can only come with improvement in general conditions throughout the world.

Coal. The Union output dropped from 15,721,592 to 11,994,578 tons. The fall in export and bunker sales was accentuated during the latter part of the year owing to the high cost of exchange, while consumption by the railways and most industries has also declined considerably.

Copper. The export of copper from the Union was the highest for many years, but as a result of the continued fall in price the value showed a decrease of £77,145 on the previous year's figures.

Further progress has been made in the development of the various mines in Northern Rhodesia, and it is estimated that about £20,000,000 has been expended on development and construction during the past three years.

The value of copper ore and concentrates exported from South-West Africa declined from £425,086 to £169,957.

Platinum. The platinum industry in the Union was unable to maintain the record output of 1930. Exports dropped in value from £311,816 to £222,656. In common with most industries, platinum mining has been seriously affected by the depression, the average price per ounce realised having fallen from £10 5s. 2d. in 1929 to £5 19s. 2d. in 1931.

Asbestos. As a result of the considerable falling off in demand, asbestos mining operations in Rhodesia and the Union have been substantially curtailed. In Southern Rhodesia production fell from 37,766 to 24,042 tons, and the value from £1,070,847 to £386,494.

In the Union the value of the output declined from £340,795 to £246,583.

Chrome Ore. Production in Southern Rhodesia dropped in value from £519,581 to £224,186, and in the Union from £44,129 to £35,710.

Farming Industries. As in the case of other products, prices have fallen steadily. A preliminary official estimate of the Union crop is 16,726,000 bags.

Maize. As a result of the control exercised under the Mealie Control Act of 1931 internal prices have been maintained at a level considerably above world prices and export business has been difficult. Efforts are being continued to induce farmers to utilise maize more freely for stock-feeding purposes, and the Department of Agriculture has been carrying out investigations with a view to ascertaining whether maize can profitably be manufactured into other products in the Union.

The export of maize and maize products from the Union declined by £2,232,000.

Exports from Southern Rhodesia were valued at £170,140, as against £253,542 in the previous year.

Exports from Kenya fell from £565,645 to £419,684.

Wheat. Wheat farmers are at present relatively the most prosperous in the Union. As a result of excellent winter rains and the protection afforded to growers by the Government a record area was sown. The crop generally was of good quality, and outstanding yields were obtained in some areas.

Livestock. The condition of livestock remained fairly good throughout the greater part of the Union. The tendency to overstock farms is confirmed by the census figures for August, 1930. The total number of sheep at that date was 48,358,000, as compared with 45,010,000 in the previous year, and it is probable that there has since been a further marked increase.

The census reveals little change in the number of cattle in the Union. The market for good quality slaughter cattle kept fairly steady at a low level.

Exports of fresh and frozen meat from the Union were valued at £234,249, as against £330,336 in 1930.

Dairy Produce. The continued fall in prices of wool and agricultural produce resulted in an increase in dairying in districts suitable for this class of farming. Internal prices of butter and cheese were fairly

well maintained with the assistance of the Government and under the control of the Dairy Industry Control Board. Production and export figures showed a further increase for the year.

Exports of eggs did not reach the record of the previous year, but were well above those of preceding seasons.

Wool. Wool growers were faced with a difficult situation owing to the fall in prices and the uncertainty created by the exchange position. For a time business was practically at a standstill, South African producers being placed in an unfavourable position in comparison with Australian growers, and stocks accumulated rapidly. A fair amount of business took place upon the announcement of a subsidy of 10 per cent. on exports, but owing to poor competition—particularly for superior long wools—prices remained unremunerative. At the end of 1931 there were 211,421 bales of unsold wool at the coast.

After the subsidy had been increased to 25 per cent. in January holders were more ready to meet the market, and there was a danger that the increased quantities of offerings would have depressing effect on values. Fortunately demand became more general, and by means of careful rationing of supplies and judicious offering of suitable wools large quantities were disposed of in February and March of this year and stocks were reduced considerably. Trade statistics just to hand reveal that the unsold stocks at the end of last month amounted to about 50,000 bales, which is little above normal and should not detrimentally affect the marketing of the next clip.

Shipments during 1931 totalled 236,648,924 lbs., a decrease of 38,375,497 lbs. and of £2,943,817 in value on the 1930 figures.

Mohair. Exports from the Union were valued at £229,061, as compared with £295,300 in 1930. Stocks on hand are very large, and with no apparent sign of early improvement in demand the position is unfavourable for growers.

Hides and Skins. The value of exports of hides from the Union declined from £759,226 to £393,436, and sheep and goat skins from £1,354,989 to £736,955. There has been a fairly good demand for all classes at the ruling low level of values, and stocks on hand are not considered to be above normal.

Cotton. The rapid expansion of this industry in Uganda has been checked by the fall in price. Exports were valued at £1,503,307, and it is expected that the output for 1932 will approximate to that for 1931.

The value of the export from Nyasaland was £38,986, as compared with £72,881 in 1930.

Sugar. Production of sugar in the Union totalled 325,899 tons, as against 393,205 tons for the 1930-31 season, the decrease being largely due to adverse weather conditions.

In addition to supplying their own markets Kenya and Uganda exported sugar to the value of £71,223, principally to Tanganyika.

Fruit. Exports of deciduous fruit from the Union for the 1930-31 season were below those of the previous year, the value falling from £431,994 to £297,555.

The present season has been a favourable one from the point of view of production, and exports are likely to approximate the record figures of the 1929-30 season.

Exports of citrus fruit were valued at £851,613, as compared with £937,200 in 1930. Prospects for this season are regarded as promising.

The value of grapes exported rose from £165,309 to £200,485, while that of dried and preserved fruits fell from £309,286 to £225,682.

Wine. The prosperity enjoyed by the wine industry during recent years has led to a steady extension of the planting of vines and this has resulted in over-production.

Exports from the Union were valued at £110,010, as against £83,667 in 1930.

Tobacco. The estimated production in the Union for 1930-31 of Virginia tobacco was 12,100,000 lbs., an increase of 1,204,000 lbs. on the figures for 1929-30.

The Turkish tobacco industry of the Western Province is experiencing difficulties on account of over-production and growers are reported to have planted considerably less this season.

Southern Rhodesia produced 8,268,926 lbs. of Virginia leaf and 375,464 lbs. Turkish leaf, as against 5,494,063 lbs. and 350,140 lbs. respectively in the previous year. Exports were valued at £374,544, as against £305,781 in 1930.

Nyasaland exported 10,690,581 lbs., as compared with 12,939,914 lbs. in 1930. The decrease was due principally to unfavourable weather conditions and a big fall in the tonnage of up-country native grown leaf.

REDUCED RATES for LIFE ASSURANCE for the NEXT FIVE YEARS

for those who want to obtain immediate and adequate life assurance protection, but whose present incomes are either temporarily restricted or small in relation to future prospects.

Write to-day for full particulars (state age for quotation purposes) to THE

LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY, LTD.

LIVERPOOL (Head Office)
1, Dale Street.

LONDON (Chief Office)
1, Cornhill, E.C.3.

Exports of wattle bark from the Union were valued at £399,887, as against £554,095 in the previous year, and the relative figures for wattle extract were £264,132 and £307,799. While it has not been possible to maintain prices overseas the market has expanded and exports have been continued at the 1930 level.

Tea. There was little change in the Natal tea industry and the quality was maintained at a high standard. In Nyasaland production is receiving increasing attention, but while exports for 1931 were slightly higher the value showed a small decrease. With more favourable market conditions the tea industry would become of considerable importance in Nyasaland.

Coffee. Coffee growing is an important industry in the East Africa Protectorates. The value of the exports from Kenya and Uganda in 1931 was £1,147,818 and from Tanganyika £247,037.

Prices have been better maintained than in the cases of other primary products and crop prospects are favourable.

Sisal. In 1931 Tanganyika exported 55,939 tons of sisal, valued at £707,177, and Kenya 15,482 tons, valued £226,144. As indicating the decline in value it may be noted that the export figures for 1930 were:—

Tanganyika ... 49,962 tons, valued at £1,172,315.
Kenya ... 14,939 tons, valued at £418,894.

Owing to the fall in prices production has almost entirely ceased in Nyasaland.

Cloves. It is estimated that 90 per cent. of the world's supply of cloves is produced in the Islands of Zanzibar and Pemba. The value of the export is about £750,000 per annum.

The last census returns reveal that on the whole the improvement previously recorded in manufacturing industries has continued.

A noteworthy feature is the erection now in progress of iron and steel works at Pretoria. The plant will be of the most modern type and prospects of working on a profitable basis are stated to be of an encouraging nature.

Secondary industries have on the whole borne the depression better than commerce and agriculture. While most manufacturers were fairly well employed during the first six months of the year they had later to face a steadily decreasing turnover.

Whaling and Fishing Industry. As a result of the large accumulation of whale oil on the world's markets and the fall in price, whaling operations were largely curtailed and the value of the export of whale oil fell from £385,360 to £32,240.

Exports of tinned crayfish were fairly well maintained and the figures relating to dried and cured fish showed a satisfactory increase, but exports of fresh and frozen fish again declined.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

BANK OF ROUMANIA, LIMITED.**HIGH LEVEL OF LIQUIDITY.**

The ordinary annual general meeting of the Bank of Roumania, Limited, was held, on the 27th instant, at 26, Throgmorton Street, London.

General the Hon. Sir H. A. Lawrence, G.C.B., who presided, said that the world economic and financial crisis had its influence particularly on primary producers, and Roumania suffered accordingly. This was reflected in the results shown by the bank for last year. The balance of £1,792 was arrived at after payment of general expenses, income tax, directors' fees, etc., and after providing for depreciation of investments and doubtful debts in London. Due to a subsequent recovery in market prices, the depreciation of investments had been largely reduced.

Further provision was necessary not only for doubtful accounts in the books of their branch, but also to augment reserves held in sterling for lei accounts, owing to the Roumanian currency continuing on a gold basis, and a transfer of £20,000 had therefore been made from reserve account. The high level of liquidity revealed by the balance sheet had been maintained, and they were in a position to meet, without delay, their deposits and other trading liabilities.

Since the banking troubles in Roumania became acute during the latter part of 1931, culminating in the closing of three important banks, their deposits had increased, being 60,000,000 lei higher at December 31st as compared with the previous year. Earning power, however, had been greatly limited, due to stagnation of business.

He had to report that they were not involved under any of the European standstill agreements.

Owing to the restrictive laws in Roumania bearing upon exchange transactions, payment of debts, realisation of security, etc., it was impossible while this state of affairs continued to know precisely the value of certain of their assets.

As was obvious, the future of their institution was bound up in the future of the country in which they operated. Until the present obstacles to international trade were removed and concrete measures taken to assist the Danubian countries, which would enable Roumania to resume the development of its indigenous resources, it was not possible to expect an improvement in the existing conditions.

The report was unanimously adopted.

THRELFALL'S BREWERY COMPANY, LIMITED.**INEQUITABLE TAXATION.**

The forty-fifth annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 27th instant, at the Cannon Street Hotel, London, E.C.

Major Charles Morris Threlfall, J.P. (the chairman), said: You will appreciate that the year under review has been a particularly anxious and exceptional one, and I regret to say that your board to-day have to report a considerable decrease in profits.

At this time last year your company was bearing the additional taxation of 3s. per barrel levied in the Budget of 1930, and we then had every reason to hope that the limit of taxation upon our trade had been reached. These expectations, however, were quickly dispelled on the introduction of the Supplementary Budget in September last, when the beer duty was increased by no less a sum than 31s. per standard barrel. The result of such increase is that beer is now subject to a duty exceeding fourteen times its pre-war figure of 7s. 9d. per barrel. Whilst the seriousness and gravity of the national situation which arose last autumn are fully appreciated, it cannot be questioned but that this trade was singled out to bear an undue and inequitable proportion of the new taxation which was then imposed. It was anticipated that the consequent increase in price would have results far-reaching and injurious, and unfortunately these fears have been amply fulfilled.

The difficult conditions against which your board have had to contend in recent years have been intensified, and the imposition of this excessive taxation, in conjunction with other factors which had been steadily exercising their influence upon the sales of the company, has accelerated the decrease in our profits very considerably.

Another great difficulty I should like to mention is the unfair competition we are obliged to suffer from clubs of a certain class. In many instances they have been and are being opened in direct opposition to licensed hotels, and are not subject to the strict supervision of the authorities, nor do they require to pay the high taxation of the trade.

Your directors have continued their policy of maintaining and modernising the company's licensed premises, and I am glad to say that during the past year we have been successful in obtaining the approval of the licensing justices to erect three new hotels.

The report and accounts were unanimously adopted, and a dividend at the rate of 17 per cent. for the year on the ordinary shares was approved.

PROVINCIAL BANK OF IRELAND, LIMITED.**SERIOUS BURDENS OF TAXATION.**

The half-yearly general meeting of the Provincial Bank of Ireland, Limited, was held, on the 27th instant, at the Bank Offices, College Street, Dublin.

Mr R. D. Trotter (the Chairman) presided.

The Chairman, in moving the adoption of the directors' report, said:—In regard to the reduction of the half-yearly dividend from 14½ to 12½ per cent., you will recollect that when I had the pleasure of addressing you in January last I indicated that with the increasing charges falling on the bank, it might not be possible to continue to distribute the larger amount. We have done so since 1924, and it is a matter of regret, and only after due consideration, that your board decided to ask your confirmation of the lower figure.

In reaching this decision the directors had to bear in mind that the Free State Budget introduced in May last placed serious burdens on the banks by way of additional taxation. The duty on consolidated notes has been increased 100 per cent.—from £1 10s. per cent. to £3 per cent. Corporation profits tax is now rated at £7 10s. per cent., increased from £5 per cent., with the allowance reduced to £5,000, and made retrospective from January 1, 1931. In addition to these a further heavy charge must be met in future by the banks in the increase of the Free State income tax to 5s. in the £, and payable in respect of the salaries of all the officials located in the Free State, who, of course, form the major portion of the staff.

With all this in mind, your directors had really no option but to reduce the distribution, and as I have said, they did so with regret, realising that it involves a loss of income not only to private holders of our shares, but also to the religious and charitable institutions whom we number amongst our shareholders. One feature of the half-year we deal with has been the exceptionally low rate for short-term money ruling in the money market, thus considerably restricting our profit-earning capacity. We can only hope that better times will soon come, so that a remission of at least portion, if not the whole, of this additional taxation may be practicable.

BANK'S STRONG POSITION.

Meanwhile, I feel confident that you will regard, with us, the bank's position as a strong one. We believe all bad and doubtful debts have been fully provided for, and the proportion of liquid assets to our liability to the public stands at the high level of over 62 per cent. In regard to our investments, their value stands to-day at a much higher figure than the book cost as written down at December last.

In regard to home affairs, we are led to believe that the crops, generally speaking, are the best and most plentiful for many years, and that, given good harvesting weather, there should be an abundant supply. Unfortunately, the prices available for pigs, sheep and lambs have fallen considerably on those ruling last year.

From the North we learn that the feeling in the linen trade is one of confidence, for although orders have fallen off during the last three months, it is generally believed that there will be a revival of demand from abroad during the early part of the coming autumn and we hope this may prove to be the case.

During the last few months we have commenced building new premises at Stormont, at the entrance to the new Parliament building, which, we hope, will be completed before the end of the year. We have also opened branches in Shaftesbury Square and Mountpottinger. These three offices should strengthen and consolidate our business in Belfast.

The great and outstanding success of the 31st Eucharistic Congress held last month in Dublin has been a matter of world-wide favourable comment, and the organisers of the huge undertaking deserve the highest meed of congratulation in carrying it through to such a successful and happy conclusion.

I again wish to record the board's appreciation of the debt which we owe to our staff. Their loyalty and devotion to the bank are, in no small degree, responsible for the protection of its interests, in face of the present difficult times. We are grateful to them, and they are deserving of your best thanks.

Capt. Poe seconded, and the report was adopted.

Alderman Hubbard Clark, proposing a vote of thanks to the directors and staff, said that in certain quarters the banks were charged with every disaster, financial and otherwise, during the past twelve months. One of the principal complaints was that the banks did not advance loans as freely as they ought to.

Yet during 1931 they advanced £80,000,000, and when it was remembered that this was other people's money one realised the anxiety and responsibility of bank directors.

The banks had proved to be the sheet-anchor of the traders and local authorities.

Mr Thomas A. McCullagh seconded the vote, which was carried with acclamation.

UNION BANK OF AUSTRALIA, LIMITED.**CONDITIONS GENERALLY IMPROVING.**

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 25th instant, at 71, Cornhill, London.

The Hon. Edmund W. Parker (the chairman) said that the year covered by the accounts was a period of exceptional difficulty and anxiety, in which it was impossible to carry on banking operations in a normal manner, or, in view of the political situation, to form any sound appreciation of the course of events. Moreover, the alteration in exchange rates, coming about the middle of the exporting season, and the enforced reduction of interest charges without an immediate corresponding reduction of interest allowances, also affected unfavourably the profits of the bank. After making provision for all bad and doubtful debts, the profit amounted to £160,953, and with £90,010 brought forward there was a total of £250,963, or £119,046 less than last year. The directors were declaring a dividend of 4 per cent. per annum for the half-year, making 4 per cent. for the year, free of United Kingdom income tax, and £90,963 was being carried forward.

The liquid assets amounted to about 8s. 6d. in the £ of the total liabilities of the bank to the public. The position as regarded liquid assets was therefore a strong one, which was a matter for satisfaction in these uncertain times; but the movements of deposits and advances had, of course, been adverse from the profit-earning standpoint.

With regard to seasonal conditions at the present time, the acting general manager cabled as follows:—"Season generally satisfactory throughout Commonwealth, except as to portion of pastoral area West Australia, where rains generally later and less than usual. Wheat crop promising well, while favourable pastoral conditions should produce large and well-grown wool clip. In New Zealand the season is favourable, stock generally good condition." During the last few months there had been an appreciable improvement in the political situation in the Commonwealth, which had reacted favourably upon the economic and financial position in Australia and upon her general credit, and they had all observed with satisfaction the slightly better tendency which had recently manifested itself in international affairs. It was too early yet to make any confident prediction as to the effect which these recent developments might have upon banking operations in the current year, but there was reason to hope that, in the absence of any disturbing events, local or international, the effect should be beneficial.

The report was unanimously adopted.

BRITISH STEAMSHIP INVESTMENT TRUST, LIMITED.**VALUATION OF THE INVESTMENTS.**

The forty-fifth annual general meeting of the British Steamship Investment Trust, Limited, was held, on the 28th instant, at Southern House, London.

Sir Austin E. Harris, K.B.E. (the Chairman), said that there had been little change in the denomination of the investments, bonds and debentures being 37.96 per cent. against 37½ per cent. last year; preference shares and stocks 22.75 per cent. against 24 per cent.; and ordinary shares and stocks 39.29 per cent. against 38½ per cent.

The year under review had been the most difficult and the most depressing in the memory of man. In all spheres of investment income and revenue had been largely reduced. The low price of commodities, heavy taxation, diminished railway traffics, exchange difficulties and defaults, had all combined in this direction, while such episodes as the Kreuger and Toll débâcle and the Chilean upheaval struck a further severe blow to the confidence of investors, with the further result that the quoted prices of investments were to-day on a level which in many instances must be out of all proportion to intrinsic value, and could be largely disregarded. The valuation of the Trust's investments on June 30th showed a depreciation of about 37 per cent. as compared with the figure in the balance sheet. After allowing for the reserve fund and carry-forward, this was reduced to less than 26 per cent., and it might be reassuring to the stockholders to hear that, within seven days of that date, there was a recovery of approximately £200,000 in this valuation.

He felt that they had seen the worst, and that, although the recovery might be slow and an occasional setback experienced, they could look forward to a greater stability and to a gradual return of confidence. It was to be hoped that some constructive policy, leading to this end might evolve from the Conference at Ottawa, and that the wheels of commerce and industry might once again be set in motion. The country had been through crises before, and had emerged to greater strength than ever, and he fervently believed that in this respect history would repeat itself. It must be a source of gratification to all of us to see how England had held up her head and to observe the strength of our credit and the soundness of our great institutions.

In the opinion of the directors, the generally unsettled outlook at the end of the financial year did not justify them in drawing upon the carry-forward to increase the dividend which was now recommended.

The report and accounts were unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED.**A DIFFICULT YEAR.**

The ordinary general meeting of Tanganyika Concessions, Limited, was held on July 28 at River Plate House, London, General Sir Reginald Wingate, Bt., G.C.B. (the Chairman), presiding.

Sir Robert Williams, Bt. (managing director), said that the profit for the year amounted to £294,102, as against £232,865 for the previous year. It was proposed to recommend the payment of the usual preference dividend, but it was quite impossible to recommend a dividend on the ordinary shares. The company was passing through very difficult and anxious times, and, although the outlook appeared more promising, recovery might well be a slow and arduous process.

Union Minière copper output was restricted to a fifth of its actual capacity, and they had paid no dividend for 1931. General trade had dwindled to an alarming extent, and the Benguela Railway, which was designed to deal with a large export and import traffic, was transporting only a fraction of the tonnage which it should eventually obtain. Such conditions, while they lasted, must of necessity put a severe strain on the liquid resources of the business.

The board, therefore, had had to make arrangements for current finance, and, in view of the present financial conditions, had pursued the policy of providing for temporary requirements only, in the expectation that the arrival of the long-delayed improvement in trade would bring about less stringent conditions. Accordingly, an agreement had been made with the Zambesia Exploring Company to advance the company for a period of two years, up to £150,000, against the deposit of Union Minière dividend shares, which, unless the loan was paid off meantime, would be sold or taken over by the Zambesia Exploring Company at the end of the period in settlement of the loan. In the latter event, however, the company had an option for a period to repurchase any shares taken over, of course at a somewhat higher price.

The operations of the Union Minière were, naturally, affected severely by the disastrous fall in world prices. Under the exceptional difficulties prevailing, it would be well understood that the profits of that company for last year showed a considerable decrease from those of previous years. The gross profits fell from the equivalent of £2,027,000 in 1930 to £1,398,000 in 1931, and this was the first time for many years that the company had received no dividend from their Union Minière shares. With regard to the prospects, he could only say that the Union Minière, with their low cost production, were in the best possible position to take the earliest advantage of any revival in prices.

With regard to the Benguela Railway, the working receipts and expenditure for 1931 amounted respectively to the equivalent of £246,000 and £225,000, both representing decreases compared with the previous year. Railway earnings showed an improvement for the current year, but were very much less than estimated, owing to the further restriction of the copper output and the lack of imported goods generally. But although the earnings of the line could not reach the estimated figures on which their calculations were based until the price and output of copper had become normal and general trade prosperity had returned, the Benguela Railway had made its influence felt and brought about substantial reductions in the rates paid by the Union Minière for the carriage of copper, fuel and general goods, thereby considerably lowering the costs of production.

As to the future, there were encouraging signs that the worst was over. He hoped that the Ottawa Conference, apart from inter-Imperial benefits, would give a practical lead to the international co-operation which was necessary to restore the markets of the world. Union Minière, being one of the lowest cost producers and also possessing the advantage of having ores containing other valuable metals, could confidently expect to be one of the world's largest producers, and, to enable their copper to be produced at the lowest possible cost, the bulk of the traffic would no doubt have to be sent over the Benguela Railway. That Railway enjoyed advantages which must in due course make it one of the most important railways in Africa, and he looked on the company's holding in it as their most valuable asset. In Kansanshi and Kilemba the company possessed an interest in two promising properties, which contained valuable metals besides copper, and would one day become important producers and help to continue the great work which had already been done in the development of Africa and its railways and the assistance of British trade.

The report and accounts were adopted.

MILLARS' TIMBER AND TRADING COMPANY, LIMITED.

THE OUTLOOK FOR 1932.

The annual general meeting of Millars' Timber and Trading Company, Limited, was held, on the 28th instant, at Winchester House, London.

Dr. James White (the chairman) said that although the company was in what might be called a difficult position it was not, as many companies were at the present time, in any difficulty whatever with regard to creditors or outside liabilities. Its difficulties were simply that, at the moment, it was carrying on business at a loss—a loss which fell to be met out of the company's capital. The company's creditors were fully secured, and, on a computation which had been made by officers of the company, they had at the present moment in the parent company and in the subsidiaries a surplus of working capital over current liabilities of some £591,000. (Hear, hear.) If any reconstruction scheme in the company were needed it would not be needed because they had got to make an arrangement with creditors, but because they might have to re-value their assets in order to avoid setting aside very large sums for depreciation, which would retard their return to the dividend-paying stage.

At the present time their preference capital was valued on the Stock Exchange at about one-fifth of its nominal value, and their ordinary share capital was valued on the Stock Exchange at about one-tenth of their ordinary capital. He was going to be bold enough to express his own opinion that if and when the time came for reconstruction no writing down to those figures would be necessary.

Their main business has always been in production of Jarra timber in Western Australia. The great bulk of their fixed assets were in Western Australia, and also the great bulk of their circulating capital, if they regarded stock as circulating capital—which it was in normal times, but which in these days might perhaps be a misnomer. Their overseas business was mainly concerned with the sale of Jarra, and that was done through the London office, which also controlled the finance of the company.

So far as the future was concerned, in Australia there seemed a reasonable prospect of a trade revival upon which their trade depended, and that view was corroborated by the advices they had received from their own local board. Speaking of facts as they knew them to-day, they had reason to hope that at any rate they would show a better result than they had shown for 1931.

The report was unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended July 23, 1932, amounted to £15,272,000 against ordinary expenditure of £9,677,900. After allocating £290,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £441,123 the operations for the week, as shown below, reduced the National Debt by £4,863,000 to £7,661,322,000:—

(000's omitted.)

Treasury Bills	+ 774	Public Department Advances	— 650
By 3% Treasury Bonds	+ 200	National Savings Certificate	— 650
		Issues to National Debt Commission	— 205
		Issues under Finance Act, 1931	— 4,332
	+ 974		— 5,837

A complete analysis of the National Debt at June 30, 1932, was printed in the *Economist* of July 2, 1932.

BULLION.

The following statistics of imports and exports of gold for week ended July 28, 1932, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Germany	20,904	Poland	1,500
Netherlands	28,802	Germany	8,279
Egypt	175,120	Netherlands	786,660
Iraq	32,215	Belgium	153,700
British West Africa	65,881	France	706,368
British South Africa	1,320,236	Switzerland	8,000
Kenya	2,219	U.S.A.	53,600
Anglo-Egyptian Sudan	26,185		
British India	1,194,565		
Straits Settlements	27,428		
Australia	1,173,561		
New Zealand	66,284		
Other countries	2,689		
Total declared value of imports	4,136,089	Total declared value of exports	1,718,107

GOLD MOVEMENTS.

The arrivals and withdrawals of gold, as announced by the Bank of England, have been as follows:—

1932. ARRIVALS.	£	1932. WITHDRAWALS.	£
July 21 Bars bought 1,521		July 21 Nil	
" 22 " Nil		" 22 " Nil	
" 23 " Nil		" 23 " Nil	
" 25 Bars bought 958,330		" 25 " Nil	
" 26 Bars bought 179,763		" 26 " Nil	
" 27 Bars bought 2,622		" 27 " Nil	
" 28 " Nil		" 28 " Nil	
Total 1,142,236		Total Nil	

Net arrivals, July 21, 1932, to July 28, 1932, inclusive, £1,142,236.

Messrs. Samuel Montagu and Company write on July 27, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £136,583,653 on the 20th instant as compared with £136,395,565 on the previous Wednesday. Further purchases of gold have been announced by the Bank of England, the chief items being £958,330 bought on the 25th instant, and £179,763 yesterday. The total amount acquired during the week was £1,142,236. In the open market, amounts of gold offered during the week have been very large; on the 25th instant about £3,000,000 was disposed of, £750,000 of this being for delivery next week. There has been some demand from the Continent, but most of the supplies have again been taken for a destination not disclosed.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
July 21 115s. 5d.	14s. 8-6d.	
" 22 115s. 11d.	14s. 7-9d.	
" 23 115s. 11d.	14s. 7-9d.	
" 25 115s. 9d.	14s. 8-1d.	
" 26 115s. 10d.	14s. 8-0d.	
" 27 115s. 4d.	14s. 7-3d.	
Average 115s. 10-3d.	14s. 8-0d.	

The a.s. "Mooltan," which sailed from Bombay on the 23rd instant, carries gold to the value of £539,000, of which £502,000 is consigned to London and £37,000 to Holland.

SILVER.

Price movements during the week have been small and the market continued quietly steady. Support has been given by China, but buying orders in many cases were limited to prices which were not attractive to sellers; the upward movements in prices were therefore due more to the absence of supplies than the pressure to buy. America has been disposed to buy in the afternoon, but the Continent has been less active, sales from this quarter during the week having been unimportant.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th instant to mid-day on the 25th instant:—

IMPORTS.	£	EXPORTS.	£
Canada 14,390		Roumania 90,388	
Australia 7,749		Czechoslovakia 49,900	
Germany 16,100		Yugoslavia 66,124	
Belgium 5,795		Poland 55,415	
		Southern Rhodesia 30,000	
		France 4,865	
		Other countries 7,658	
	44,034		304,350

Quotations during the week:—

REPORTS AND NOTICES.

Sir William McIntock has found it necessary, owing to pressure of other duties, to resign his directorship of the National Mutual Life Assurance Society. His resignation has been accepted by his colleagues with great regret.

BANKS.

Messrs. B. W. Blydenstein and Company.—As from September 30th next, Messrs B. W. Blydenstein and Company intend to restrict their activities in the London discount and bill markets. This will render superfluous a considerable portion of their partnership capital which will in due course be placed at the disposal of their predominant partners, the Twentache Bank (London), Ltd., for transfer to De Twentache Bank N. V., Amsterdam, who hold its share capital. Notwithstanding this arrangement, however, the nominal, fully subscribed capital of the Twentache Bank (London), Ltd., will remain £1,000,000 as heretofore, always available to be called up for the requirements of Messrs B. W. Blydenstein and Company, the other departments of whose banking business will continue to be carried on in the usual way.

MISCELLANEOUS.

COMBINED PULP AND PAPER APPEAL.—In the Court of Appeal on Wednesday, Lords Justices Scrutton, Lawrence and Greer gave a considered judgment in the Combined Pulp and Paper case. The defendants appealed against the judgment for £92,000 entered against them at the suit of the company. The appeal was dismissed, but the judgment against Mr Thomas Froude, the auditor, was reduced by £738.

O-CEDAR COMPANIES' SCHEMES.—Capital reduction schemes are announced by O-Cedar Consolidated Trust, Ltd., and its subsidiary O-Cedar, Ltd. The capital of the Trust is to be cut from £801,000 to £53,100, by cancelling 18s. on each issued £1 preference share, 10s. 6d. on each issued £1 ordinary share, and by extinguishing the 66,000 unissued £1 ordinary shares. All special rights attaching to the present preference shares are to be cancelled, and the 450,000 preference shares of 2s. each in the reduced capital are to become "A" ordinary shares, while the reduced ordinary shares of 6d. each are to be known as "B" ordinary shares. On Court sanction, the capital is to be increased to its former amount of £801,000, by the creation of 747,900 new shares of £1 each. The plan submitted by the subsidiary, O-Cedar, Ltd., is that the capital be reduced from £200,000 to £15,000, by cancelling the 100,000 preference shares, £200,000 to £15,000, by cancelling the 100,000 preference shares, and reducing the £1 ordinary shares to 3s. each. Each of the 100,000 ordinary shares of 3s. each will be sub-divided into one share of 2s. 6d., and one share of 6d., the former to be known as "A" ordinary and the latter as "B" ordinary. The capital is then to be increased to its present amount of £200,000 by the creation of 185,000 new shares of £1 each. The "A" ordinary shares will be re-issued by the directors as fully-paid "A" ordinary shares to present preference shareholders.

Commercial Reports.

MARKET SUMMARY.

Last week's reaction in the price of primary products at the principal international commodity markets was followed by a fairly general advance this week. This upward movement can best be illustrated by the course of quotations in the United States. Among non-ferrous metals, lead and tin were slightly firmer, but copper weakened further. Rubber advanced on American buying, and raw cotton was slightly firmer. Among cereals, the sharp rise in wheat prices is noteworthy, but maize and rye were also dearer. In the office continued to advance, and sugar was maintained at the higher level. Sterling prices of commodities which lead them-

selves to grading and therefore to international arbitrage, showed an upward tendency. According to reports from various industrial centres, the volume of activity in the iron and steel industries is experiencing a seasonal decline. Transactions are generally small and few in number. Activity in the coal trade has been declining, and the West Coast has been adversely affected by the new import duty of 5s. per ton imposed by the Irish Free State. The situation in the cotton trade has deteriorated because of labour difficulties, which causes buyers to hold aloof until the outlook is clearer. The demand for woollen and rayon fabrics has tended to decline.

THE COAL TRADE.

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
 INSURANCE COMPANY.
ASSETS EXCEED - £15,600,000
FIRE. LIFE. ACCIDENT. MARINE.
 Edinburgh: 35, St. Andrew Square.
 London: 5, Walbrook, E.C.4. and 4, St. James's Street, S.W.1

is negligible. Prices of steams, however, keep steady at 16s. f.o.b. Supplies of industrial fuel exceed demand, consumption being interfered with by holidays. The demand for house coal is at the low summer level and the trade is lifeless. In some cases prices are being eased to induce stocking by the public. Best South Yorkshire house is quoted at 20s. at pits. The acute depression of furnace coke is unrelieved.

WORKINGTON.—The Free State duties hit hard the coal trade. Three of the largest producing collieries sold a not inconsiderable part of their coal to the South of Ireland. This export trade was brought to an end on Tuesday, and the North of Ireland market is also seriously affected, since a fair proportion of the coal shipped to Ulster ports was sent to Free State communities on the Border. Industrial fuel is in limited demand, and local landsale is easy. Prices are purely nominal, with best round 22s. 6d., washed doubles 21s., washed singles 19s., all f.o.b. Small 16s. 6d. per ton. Best house coal 31s. 9d.; and house nuts 30s. at station. Gas coal 28s. per ton. West Coast coke is from 16s. 6d. to 17s. 6d. per ton.

NEWCASTLE-ON-TYNE.—The market in all sections is inactive with little tonnage at the coaling stations, so another quiet week for shipments is inevitable. Almost every day reports of further closing of mines in the county of Durham come to hand, and until the additional winter demand comes along there is little hope of any improvement. The executive of the Durham owners met this week to consider the question of minimum prices, but they decided not to make any change, their contention being that as the demand does not exist lower prices will not bring trade. The coal exports from the North-East Coast for the six months ending June were 6,635,581 tons, compared with 7,364,727 tons for the same period last year. To-day's f.o.b. prices for export are as follows: **NORTHUMBERLAND:** D.C.B. screened steam, 13s. 6d.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin screened, 13s.; smalls, 8s.; Tyne prime large, 12s. 9d.; smalls, 9s.; Hartley Main large, 12s. 6d.; smalls, 8s. **DURHAM:** Lambton, South Hetton screened steam, 16s.; smalls, 11s.; Wear special unscreened gas, 16s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s.; coking smalls, 12s. 6d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s.

GLASGOW.—The crisis which has arisen between this country and the Irish Free State continues to cause concern in Ayrshire, and, in a lesser degree, Lanarkshire, both of which counties hitherto enjoyed a steady business in that area. The outlook remains very obscure, and Irish importers are acting with extreme caution, only a few cargoes being arranged. Several cargoes of German coal are believed to have already been purchased for shipment to the Free State. Meantime, washed nuts, particularly trebles and doubles, remain the strong feature of the Scottish coal trade. This is due not to any unusual weight of demand, but rather to the scarcity of available supplies, which, of course, arises directly from the restricted output of large coal. Current prices for shipment are as follows: **LANARKSHIRE**—Ell best, 14s. 3d.; splint best, 14s. 9d.; splint second, 13s. 9d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 14s. 9d., all per ton f.o.b. Glasgow; steam, 13s.; trebles, 12s. 6d.; doubles, 10s. to 10s. 6d.; singles, 9s. 3d.; pearls, 8s. 6d.; dross, 8s. 9d., all per ton f.o.b. Grange-mouth. **FIFE**—Screened navigation, 16s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 3d.; trebles, 14s. to 16s. 6d.; doubles, 11s. 6d.; singles, 9s. 6d.; pearls, 8s. 6d., all per ton f.o.b. Burntisland or Methil. **LOTHIANS**—Prime steam, 11s. to 11s. 6d.; secondary steam, 10s. 6d.; trebles, 13s. 9d.; doubles, 11s. to 11s. 6d.; singles, 9s. to 9s. 6d.; pearls, 8s. 6d., all per ton f.o.b. **LEITH.** **AYRSHIRE**—Unscreened navigation, 16s.; jewel, 16s. 6d.; steam, 11s. 9d.; trebles, 13s.; doubles, 11s.; singles, 9s. 9d.; pearls, 9s.; dross, 9s., all per ton f.o.b. Ayr or Troon.

CARDIFF.—On the Cardiff coal market this week business has continued very quiet, and there has been little, if any, expansion in the volume of shipments notwithstanding the approach of the holidays. A new disturbing factor has been introduced by the imposition by the Irish Free State Government of a Customs duty of 6s. per ton on British coals, but only within narrow limits, as the annual quantity of coal exported from South Wales to the Irish Free State is only about 450,000 tons, or less than 3 per cent. of the aggregate volume of local shipments to overseas countries. At Swansea the demand for anthracite and bunker coals continues active, and it has been agreed to limit the August holidays at that port to Monday next. Nearly all classes of washed dry and bituminous coals are also firm, and in many cases are quoted at prices slightly above the minimum scheduled figures, but all grades of large coal are weak and stocks exceptionally heavy. It is hoped, however, that these will be materially reduced next week when the collieries will be idle till Thursday morning. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 4d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 26s. to 28s. 6d.; Red Vein large, 22s. to 23s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 40s. to 42s. 6d.; stove nuts, 36s. 6d. to 45s.; rubby culm, 11s. to 11s. 6d.; special foundry coals, 32s. 6d. to 35s.; patent fuel, 20s.; pitwood, ex ship, 20s. 9d. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron does not show any improvement, and prospects for the immediate future are distinctly discouraging. The Glasgow fair holidays do not terminate until the end of the month, and at some establishments the stoppage of operations may be continued still further. This will mean that Scotland cannot be looked to as a customer for much Cleveland iron for some time, and our own local consumption is on a reduced scale at present. With export demand now at a minimum it cannot be seen where any immediate relief is to come from, and stocks are likely to increase for some weeks ahead, particularly as the Tees-side holidays take place next month. The weekly market on Tuesday was only thinly attended, and the only business reported was a few small lots for early delivery. Official prices were unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Substantial concessions are still offered to Scotch consumers, and our local consumers argue that similar reductions should be made to them, but this has had no effect so far, and makers do not hold out any prospects of lower prices being possible. The hematite market is weak. Sales recently have been so small that weakness has developed, and it is now possible to buy mixed numbers from makers for early delivery at 61s., and a parcel of 2,000 tons for export over August and September is reported to have been sold last week, and at considerably below this figure. As a result of the loss entailed in producing hematite at prices now ruling, Messrs Pease and Partners have decided to blow out their two furnaces at Normanby Iron Works, and this is now being done, but the number will be made up by the two that are to go in at the Ayresome Iron Works of Gjeris Mills and Company next month. In the steel trade no new business of importance is reported this week, but several orders of moderate size have been booked, and others are expected. Prices are generally unchanged. A further cargo of 3,800 tons steel plates for Russia has been shipped from Middlesbrough this week, and there are more to follow immediately. The ore market shows no improvement. Best rubio is now nominally 14s. 9d. c.i.f. for odd prompt cargoes, and the freight Bilbao/Middlesbrough for early loading is 4s. 6d. Coke is weak, and good blast-furnace qualities can now be obtained at 15s. 3d. delivered works, but there is a poor demand. With the change at Normanby Works the number of furnaces in blast in the district is temporarily reduced to fifteen.

SHEFFIELD.—There is little to report this week regarding local industry, as deliveries of materials and buying are largely suspended in view of the holiday stoppage, which will be of longer duration than usual. Most of the large works intend to cease operations for a week. Bookings lately have tended to dwindle, except in a few special lines, and there is no improvement in inquiries. The substantial reduction of the prices of tungsten announced last week have not tempted users to abandon their hand-to-mouth buying policy. One of the worst handicaps to foreign trade at the moment is the policy of controlling the export of money in payment of goods received [which is being carried out by more than twenty countries abroad, including British Dominions. British traders are taking steps jointly to obtain some mitigation of this handicap and have made representations to the British Government on the subject. Unemployment in most branches continues to increase. Favourable reports are to hand regarding such lines as safety razors, scissors, certain classes of tools and steel strip.

WORKINGTON.—No headway has been made in the North-West Coast hematite pig-iron trade during the month, and as the steel-works at Workington and at Barrow are to close for repairs during the holiday season the local demand ceases temporarily, and two furnaces are to go out of active blast. What the position of affairs is may be judged by the fact that the make of three furnaces, one of these, however, with an output of 3,500 tons per week, is sufficient to satisfy the needs of Midland, Continental, South Wales and Scottish consumers. Prospects are, nevertheless, viewed hopefully, makers being confident that the autumn will yield such an expansion of demand as will justify an increase in production. In token of this, they continue to resist the pressure exerted on them for lower prices, and Bessemer mixed numbers are quoted firmly at £3 12s. 6d. per ton at Glasgow; £4 1s. 0d. at Manchester; £4 3s. 6d. at Sheffield; and £4 4s. 6d. at Birmingham, with an additional 2s. 6d. to 5s. per ton for special and semi-special grades of iron. Malleable iron is a fair Midland trade at £5 17s. 6d. per ton delivered at Birmingham, but the market for manganese alloys is quiet, and the sales of ferro, at from £10 15s. to £11 5s. per ton, are wholly from stock. The steel market is dull, but overseas orders are expected in the course of a month or two, and the rolling mills will certainly be employed two if not three weeks in four. Native ore, at from 16s. to 18s. per ton, is in quieter local request, and in hardly any at all by East Coast and Scottish smelters.

GLASGOW.—A fair start has been made at many of the works in the West of Scotland, but there has not been a complete resumption, especially in the Lanarkshire area, where many plants are still inoperative. During the holiday period there has been a quite considerable amount of ship repair work carried through at Clyde yards, and it is reported that Clyde shipbuilders have a very large number of inquiries on hand and tenders out at the moment, and the impression seems to be general that work will become more plentiful during the autumn. At the steel making plants the restart has been only partial, and there has been no important accumulation of orders during the past week or two. Sheet makers have a somewhat better export demand, but the tonnage booked is not large. Tube makers are still quiet, and there is no improvement in the wrought iron trade. It is announced this week that the Albion Motors, Ltd., of Scotstoun, Glasgow, have secured an order for twenty platform vehicles for the L.N.E. Railway, fourteen being 1½-ton and six 2-ton. Steel prices are unchanged.

CARDIFF.—In the South Wales iron and steel trade conditions are inactive, and on the Swansea Metal Exchange on Tuesday it was reported that the tinplate mills were operating at only about 55 per cent. of their normal capacity. Tinplate prices are unchanged, at from 14s. 9d. to 15s. 3d. per basis box. Welsh steel bars are also stationary at 95s., but foreign bars are easier, and their supply is increasing, the total imports in the week ended July 17th last being 4,656 tons. Galvanised sheets are a featureless market, with quotations ruling at £9 5s. per ton f.o.b. Shipments of tinplates at Swansea last week totalled 86,789 boxes, compared with 81,334 boxes the previous week, and 79,719 boxes in the corresponding week last year, and stocks are returned at 150,734 boxes, compared with 225,651 boxes a year ago.

OTHER METALS.

TIN.—The market in tin opened dull on Monday. The metal closed a little higher on Tuesday, and advanced sharply on Wednesday on American buying. Sales on the London Metal Exchange totalled 275 tons on Tuesday, against 525 tons last week, 230 tons on Tuesday, against 375 tons, and 250 tons on Wednesday, against 275 tons. In New York the metal was quoted at 21.05 cents per lb. on Wednesday, against 21.00 cents per lb. a week ago and 19.50 a month ago. Wednesday's official closing quotations in London, in terms of sterling for "standard" cash at £127 to £127 5s. per ton, compares with £123 10s. to £123 15s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 33,022 tons, show a decrease of 167 tons on the week.

COPPER.—In view of the large supplies of copper available, prices at the London Metal Exchange fell sharply last week. There was no improvement on Monday and Tuesday, but on Wednesday the metal closed a little firmer in the absence of selling pressure. Sales at the London Metal Exchange totalled 800 tons on Monday, against 600 tons last week; 700 tons on Tuesday, against 300 tons; and 500 tons on Wednesday, against 900 tons. On Wednesday, against 5½ cents a week ago, and 5½ cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £25 2s. 6d. to £25 3s. 9d., compares with £25 7s. 6d. to £25 8s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 15,754 tons, show a decrease of 192 tons, while stocks of rough copper, at 969 tons, were unchanged.

LEAD.—On Monday and Tuesday the demand for lead was quiet at the London Metal Exchange and elsewhere, but prices remained unchanged owing to the reserve of holders. Sales totalled 350 tons on Monday and 300 tons on Tuesday. A more active demand on Wednesday, when the turnover amounted to 500 tons, caused a slight rise in quotations. In New York the metal was quoted at 2.80 cents per lb. on Wednesday, against 2.65 cents a week ago and 2.95 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London, in terms of sterling, at £9 13s. 9d. per ton for shipment during the current month, compares with £9 5s. on the corresponding day last week.

SPELTER.—The market in spelter was firm and prices advanced steadily from Monday to Wednesday, as holders were increasingly disinclined to sell in view of the improved outlook of the spelter situation. The steady decline in stocks and the recent decision of the International Zinc Cartel to make a further cut in output are chiefly responsible for the firmer tendency. Sales totalled 250 tons on Monday (against 450 tons last week), 200 tons on Tuesday (against 300 tons), and 350 tons on Wednesday (against 350 tons). Wednesday's quotation in New York, at 2.50 cents per lb., compares with 2.50 cents a week ago and 2.75 cents a month earlier. Wednesday's official closing quotation in London, in terms of sterling, for "good ordinary brands," was £11 17s. 6d. for shipment during the current month, against £11 8s. 9d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and platinum have been maintained at £95 per ton and £9 15s. per ounce respectively. Nickel was again sold at £230-£235 per ton. Foreign antimony remained unchanged at £22-£22 10s. per ton. Quicksilver declined from £10 10s. to £10 15s. per flask to £9 15s. to £10 per flask.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week July 21st to 27th (inclusive) are 34,137 bales, of which 9,009 are American, 6,485 Peruvian, 12,869 Argentine, 4,725 Egyptian, 416 African, 597 East Indian, and 36 sundries.

Manchester.—Quiet conditions have prevailed in the market throughout the week. There has been an absence of enterprise on the part of buyers and spinners and manufacturers have experienced difficulty in preventing loss of ground. The wages negotiations and the strike at Burnley have resulted in most of our customers holding aloof until the outlook is clearer. A very fair inquiry has again come through in piece-goods for India, but practically all the contracts have been for retail lots, most of the buying being in light bleaching materials for Karachi and Calcutta. Operations for China have again been restricted. The competition from Japan in India and China tends to become more acute. Very few practicable offers have been received from Egypt and the Near East, but some producers for South America and West Africa, with rather more demand for home trade circles. A rather slower feeling has prevailed in home trade circles. Numerous buyers are afraid of lower prices in the near future and are therefore acting with caution. Only a limited business has been done in American yarns for home use and the stoppage at

Burnley is having an adverse effect upon consumption. Moderate sales have taken place in the coarser numbers of Egyptian yarns. Export trade continues restricted.

THE WOOL TRADE.—Bradford.—Last week-end Dalgety and Company, Ltd., cabled from Melbourne some most instructive figures showing the exports of wool from Australia and New Zealand. Detailed information would have been very welcome, but this will come by mail. The figures cover the period July 1, 1931, to June 30, 1932, and are as follow:—

	Bales.	+ Increase
Australia	2,743,000	+ 69,000
New Zealand	634,000	+ 9,000
	3,397,000	+ 78,000

The above figures, writes our correspondent, show that last year both countries exported more wool than for many years, the Australian returns being a record, while if the New Zealand figures for 1926-27 and 1927-28 are eliminated, those for 1931-32 rank as the largest for many years. The point to stress is that both countries are producing and exporting the maximum quantity of wool. Australia is expected to produce more wool during the current season than ever before in her history. The reader must not conclude that exports represent the whole production of Australia and New Zealand. Dalgety's final figures will be very interesting. The production of Australia will easily be a record, and the figures for New Zealand will not be far from being the best ever known. It would be very interesting to know what is the actual quantity of wool still remaining in the hands of growers as well as in the various warehouses in New Zealand. A bigger weight of N.Z. crossbreds is being sold in Coleman Street this year than for a long time, and stocks are fairly heavy in London to-day awaiting the September series. The market has turned quiet, as can only be expected. London finishing on the easy side has directly affected top prices, and we should say that every quality can be bought a good ¼d. cheaper than a fortnight ago. Holidays are just beginning, the mills in the Keighley, Bingley and Skipton areas are standing this week, and on Saturday many important districts will follow. The majority believe that we are going to have a quiet August.

THE GRAIN MARKETS.

WHEAT.—The recent downward tendency in wheat prices was followed by a steady rise. On Wednesday, "July" futures were quoted at 50 cents per bushel in New York. The principal factors which brought about this advance in prices are the deterioration of the North American spring crops owing to lack of rain, the expectation of short crops in Danubian countries, and the absence of substantial exports from Russia. The course of wheat prices in the United States and elsewhere has also been influenced by the advance of security prices at the New York Stock Exchange. Although the harvests of France and Germany are expected to show a high yield, the International Institute of Agriculture in Rome has estimated the probable crop of Europe (exclusive of Russia) at 5 to 6 million quarters below the harvest of last year. The British crop appears to have suffered some damage in certain districts owing to heavy rain. On Wednesday, "July" futures were quoted at 50 cents per bushel in Chicago, against 45½ cents on the corresponding day last week and 48½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 29s. 6d. per 496 lbs., as compared with 27s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s., against 26s.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 25s. 9d.; Australian, ex ship, 27s. 6d., against 25s. 3d. a week ago.

WHEAT FLOUR.—The market in flour has been a little more active and quotations advanced in sympathy with the rise in wheat prices. North American shipments, at 135,000 sacks, showed an increase of 12,000 sacks, as compared with the previous week. Of this total, 44,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 24s. per sack of 280 lbs., as compared with 24s. last week; delivered London, 23s., against 23s. Manitoba patents, ex store, 25s. to 27s., against 23s. to 26s.; and Australian, ex store, 19s. to 19s. 6d., against 18s. 6d. a week ago.

BARLEY.—There has been an increase in the turnover of feeding barley, particularly on the Continent where Danubian varieties have been offered freely. On Wednesday, "October" futures were quoted at 35½ cents per bushel in Winnipeg, against 32½ cents last week and 33½ cents a month ago. Quotations in London,

Wednesday: "English feeding," f.o.r., per 448 lbs., 27s. to 28s., as compared with 27s. to 28s.; River Plate, landed, 24s. 3d. to 25s., against 24s. to 25s. a week ago.

OATS.—Trading in oats has again been on a small scale, but in the absence of selling pressure, quotations recorded a slight advance. "July" futures, which last week stood at 17½ cents per bushel in Chicago, sold at 17½ cents per bushel on Wednesday this week, against 19½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., as compared with 17s. last week; "River Plate," ex ship, 16s. 9d., against 15s. 10½d.; "Chilean White," landed, 24s. to 25s. 6d., against 24s. to 25s. a week ago.

MAIZE.—The demand for maize in European countries continues strong, and the heavy shipments from Argentina are being absorbed at rising prices. Wednesday's quotation in Chicago for "July" futures, at 32½ cents, shows a rise of 1½ cents per lb. on last week, and one of 3½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 21s. 3d. per 480 lbs., compared with 20s. 3d. last week; "Plate," ex ship, 20s. 3d., as against 19s. 3d.; "Plate," July-August, 20s. 3d., as against 19s. 3d. Yellow maize meal, ex wharf, was quoted at £5 15s. per ton, against £5 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat:				
1 week to July 23	Owts. 28,451	Owts. 31,618	Owts. 64,620	Owts. 33,950
47 weeks to July 23	3,726,810	4,856,258	9,420,082	9,657,299
Average price of English wheat per cwt.	s. d. 6 6	s. d. 6 5	s. d. 8 3	s. d. 11 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
July 16, 1932	Owts. 27,452	1,344	4,312	s. d. 6 5	s. d. 6 11	s. d. 7 11
July 23, 1932	28,451	2,031	4,487	6 6	8 8	7 10
July 21, 1928	82,311	4,703	3,630	11 0	10 5	12 1
July 20, 1929	45,947	5,778	6,342	10 6	9 10	9 6
July 26, 1930	84,620	3,524	10,055	8 3	8 5	6 0
July 25, 1931	31,618	2,333	8,438	6 5	6 4	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	July 29, 1931.	Jan. 4, 1932.	July 20, 1932.	July 27, 1932.
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	148½	56½	54½	62½	54½	59½
Chicago (No. 2 Winter) Cents per 60 lb.	130½	79½	51½	55½	45½	50

The visible supply of wheat in Canada, at 71,171,000 bushels, shows a decrease on the week of 426,000 bushels. Supplies a year ago stood at 60,814,000 bushels.

OTHER FOODS.

SUGAR.—The improvement in the international sugar situation was maintained during the past week. Both raw and refined sugar changed hands in large quantities in the United States. Demand in this country was quite active. "September" futures in New York were quoted at 1.01 cents per lb. on Wednesday, against 1.05 cents per lb. a week ago, and 0.04 cent per lb. a month earlier. Wednesday's sales of "raws" include "December delivery" at 6s. 3½d. to 6s. 3½d. per cwt., against 6s. 3d. to 6s. 3½d., and "March, 1933," at 6s. 6d. to 6s. 6½d., against 6s. 6d. to 6s. 6½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1932. 1931.	1932. 1931.	1932. 1931.	1932. 1931.	1932. 1931.	1932. 1931.
London	Tons. 1,559	Tons. 282	Tons. 1,380	Tons. 948	Tons. 13,049	Tons. 26,233
Liverpool	3,602	4,660	14,933	13,205	75,591	64,161
Total	5,161	4,932	16,313	14,153	88,640	90,394
Last week ...	15,274	12,651	13,247	15,215	99,792	99,525

COFFEE.—The New York coffee market was again firm and quotations advanced further. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 7½-8 cents a week ago. Tuesday's London closing sale, prior to the August holiday, was characterised by a poor demand. Although the quantity on offer was small, a large proportion remained unsold. Last week's movements of coffee in London were as follows: Brazilian, landed, 3,127 bags; delivered for home consumption, 1,064 bags; exported, 2,063 bags; stocks, 17,687 bags, against 2,523 bags last year. Central American, landed, 293 packages; delivered for home consumption,

3,371 packages; exported, 1,735 packages; stocks, 110,490 packages, against 103,910 a year ago. Other kinds, landed, 110 packages; delivered for home consumption, 1,501 packages; exported, 703 packages; stocks, 70,674 packages against 83,390 a year ago.

COCOA.—Following an improvement in the demand for cocoa, a slight hardening of prices became noticeable in New York and in London. "September" futures were quoted at 4-23 cents per lb. in New York on Wednesday, against 4-10 cents per lb. a week ago and 3-97 cents a month ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, November-January, at 26s. 6d. per cwt., f.o.b., London contract, shows a rise of 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 2,499 bags; delivered for home consumption, 3,440 bags; exported, 77 bags; stocks, 150,539 bags, against 222,260 last year.

TEA.—The quantities catalogued for this week's auction comprise 23,995 packages of Indian, and 40,073 packages of Ceylon tea. Monday's Indian auctions experienced a good demand at firm prices. At Tuesday's Ceylon sales there was keen competition between buyers, which had a hardening influence on prices. This was followed by a slight reaction on Wednesday when Ceylon teas were again on offer. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mining Lane on Garden Account:—

AVERAGE PRICE PER LB.							
Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	Total.
July 23, 1931	s. d. 0 8-34	s. d. 0 7-81	s. d. 0 11-99	s. d. 0 6-68	s. d. 0 6-57	s. d. 0 5-03	s. d. 0 9-79
June 30, ..	0 6-82	0 6-80	0 7-35	0 4-56	0 4-27	0 5-62	0 6-61
July 7, ..	0 7-16	0 6-48	0 7-50	0 4-65	0 4-38	0 6-86	0 6-85
July 14, ..	0 7-39	0 6-77	0 7-98	0 4-95	0 4-71	0 5-93	0 7-22
July 21, ..	0 7-53	0 6-72	0 8-32	0 5-05	0 4-72	0 6-06	0 7-51

RICE.—The market in rice has again been quiet. Spot prices remained unchanged while forward quotations were easier. Wednesday's "spot" price, at 9s. 3d. per cwt., shows no change on last week, while forward positions, at 7s. 10½d. per cwt., show a fall of 3d. per cwt. Movements in London during the past week were as follows: Landed, 151 tons; delivered, 66 tons; stocks, 3,082 tons, as against 579 tons last year.

POTATOES.—The supply of new potatoes was ample for a good demand and prices recorded a further decline. English kidney could be obtained at from 6s. to 7s. per cwt. at the London Borough Market, against 6s. 6d. to 7s. 6d. per cwt. a week ago, and 8s. to 9s. per cwt. a fortnight ago.

SPICES.—Business in pepper was quiet but prices remained steady. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 4 tons; delivered, 3 tons; stocks, 347 tons, against 607 tons last year. White, landed, nil; delivered, 26 tons; stocks, 510 tons, against 520 tons a year ago.

MEAT.—There was a further rise in beef prices at the Smithfield market, but mutton and lamb was cheaper. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 2d. to 4s. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 2d. to 2s. 10d., as against 2s. 4d. to 3s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,488 tons, as compared with 8,491 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87-8 per cent. of the supplies, as against 87-1 per cent. a year ago; and imported mutton, mainly New Zealand, formed 82-4 per cent. of the total supply, as against 83-7 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Conditions are about unchanged and the outlook is still uncertain and depends almost entirely on a revival of demand. In view of the generally poor sale of oilcakes and oils, crushers both here and on the Continent are carrying small stocks and are making new purchases on a very restricted scale. Moreover, the market for linseed is affected by the unusually large quantities on passage to Europe, near positions continuing at a discount. Shipments from the River Plate continue to be substantial and the quantity afloat to the United Kingdom and Continent has increased to 238,400 tons, or 5,200 tons more than last week, and comparing with 166,900 tons a year ago. Plate afloat and July shipment to Hull is now quoted £7 17s. 6d., forward positions rising to £8. Calcutta to London September has been done at £9 12s. 6d. Cottonseed is steadier but trade is slow. Old crop Egyptian is worth £6 12s. 6d., and now crop £6 15s. November-January loading. Trade in vegetable oils is on modest lines. Indications point to a better demand for linseed oil, for which £12 10s. is asked for August delivery ex Hull mill and £13 September-December. Cotton oil is in meagre supply and steady, crude Egyptian being held for £21 10s. and refined (technical and edible) for £23 10s. ex Hull. Demand for oilcakes and meals is not so good and values are inclined to ease.

HIDE, LEATHER AND ALLIED TRADES.—Although there has been a slight falling-off in trade in imported hides demand for those from home-slaughtered cattle remains very good and the tendency of values continues upward. At the auctions at Manchester this week advances of from ½d. to ½d. per lb. were realised for all weights and classes of ox and heifers with the

Bank of New Zealand

BANKERS TO THE GOVERNMENT OF NEW ZEALAND.

REPORT OF THE DIRECTORS

Presented at the Ordinary General Meeting of the Proprietors, held at the Head Office of the Bank, Lambton Quay, Wellington, on FRIDAY, 17th June, 1932, at 11 o'clock a.m.

The Directors submit herewith the Balance-sheet and Profit and Loss Statement of the Bank for the year ended March 31st last.

The profits, after providing for expenses of management, and for all bad and doubtful debts, and after making provision for the annual donation to the Provident Fund, are—

From this has to be deducted:—	
Interest on Guaranteed Stock	21,199 8 11
Leaving Balance of Profit for the year	587,023 7 8
To which has to be added:—	
Balance brought forward from last year	626,001 13 1
	1,213,025 0 9

From which has been paid:—	
Dividend on Preference A Shares	£50,000 0 0
Interim Dividend on C Long-Term Mortgage Shares	7,031 5 0
Interim Dividend on D Long-Term Mortgage Shares	17,578 2 6
Interim Dividend on Preference B Shares	41,666 13 4
Interim Dividend on Ordinary Shares	250,000 0 0
	366,276 0 10
Leaving available for distribution	846,748 19 11

Since then "hot" Treasury bills have changed hands at $\frac{1}{2}$ per cent. August and September Treasuries have been quoted at $\frac{1}{8}$ and $\frac{1}{2}$ per cent., while this week one of the banks was a heavy buyer of Octobers at $\frac{1}{2}$ per cent. Three months' bank bills were nominally $\frac{1}{2}$ per cent., but the effective rate was nearer to $\frac{1}{8}$ per cent. Standstill bills are quoted at $\frac{1}{2}$ up to 2 per cent.

	July 14, 1932.	July 21, 1932.	July 28, 1932.	AUG. 4 1932.	Previous Rate and Date Changed

Market rate (standstill bills)	1-2	1-2	1-2	1-2	...

The reduction in Bank rate to 2 per cent., followed by the fall in the yield on Government stocks to $\frac{3}{4}$ per cent., has given rise to certain apparent anomalies and misconceptions regarding interest rates generally. In particular, the banks have lately been criticised for the wide margin alleged to exist between their advance and deposit rates. Without entering deeply into the merits of this controversy, it may be as well to set out some of the salient facts. As regards advance rates, the clearing banks' traditional minimum of 5 per cent. has for the moment been abandoned, and in approved cases even loans of moderate size are obtainable at lower rates such as $\frac{1}{2}$ per cent. Again, if the banks' gross earnings on all their assets, including their cash which earns nothing and Treasury bills which now earn only $\frac{1}{2}$ per cent., be averaged, the mean rate is more of the order of 3 to $\frac{3}{4}$ per cent.

The position as regards deposit rates also needs clarifying. In London the banks only pay $\frac{1}{2}$ per cent., for this rate varies with Bank rate. On deposits outside London the banks have until quite recently paid a constant rate of $\frac{1}{2}$ per cent., which was not dependent upon Bank rate. Thus in times of a high Bank rate, a better deposit rate was obtainable in London, but to-day the contrary is the case. In practice, however, the clearing banks are to-day making tentative efforts to reduce their country deposit rates, and while existing deposits still earn $\frac{1}{2}$ and 2 per cent., the rate on new country deposits is subject to arrangement in each particular case when the new account is opened. On their savings banks accounts the clearing banks still pay $\frac{1}{2}$ per cent., or the same rate as the Post Office, and the banks no longer enforce their former limit of £500 to each savings account. On the other hand, the clearing banks still let it be known that they will not accept large sums for savings accounts, while the Post Office does not permit a net annual increase of more than £500 in any individual account.

The fact is that such anomalies as exist are more apparent than real. On an overdraft of £10,000 the difference between $\frac{3}{4}$ and $\frac{1}{2}$ per cent. is only £100 per annum, whereas the customer in question may have an annual turnover of a million. Looked at in this way, bank interest would be a negligible item in his total costs. Again, while inquiries show that there is now in process a steady trickle of money into the Post Office Savings Bank, the limit imposed upon the annual increment in each account means that it can never be anything more than a trickle. Finally, if the country customers of the clearing banks can now earn more on their deposits than Londoners, it is only fair to recall that on many occasions since the war it is the London deposits that have earned more. There may be a case for equating London and country deposit rates, and for making both move with Bank rate, but in the long run no substantial injustice arises out of the present system, and before any alteration is made the banks must take account both of the misunderstanding that any change might create in the minds of their

country customers and also of the limited competition that they meet with from the Post Office, and, until recently, from building societies.

The London Chamber of Commerce has recently suggested to the Board of Trade that power be taken to create exchange clearing houses, to apply to Austria and Hungary, and subsequently to other countries. The Board of Trade in reply states that experience has shown that the clearing-house system is of doubtful value to creditor countries, mainly because the clearing houses tend to become filled with the weaker currencies, while supplies of the stronger currency are dissipated through irregular channels. The net result of such a system is that, while its institution may result in an immediate flow of orders from the weaker countries, there is in practice no guarantee of payment within any reasonable time, and if part of the money paid into the clearing houses has to be devoted to the settlement of outstanding debts on past transactions, the date of payment on current transactions becomes even more remote. The plain truth of the matter is that the clearing system is only a palliative, and the revival of business depends upon the restoration of the normal channels of trade and means of payment.

Reports from New York confirm the view expressed in last week's *Economist* that foreign buying of stocks for investment is taking place. It is thought, however, that foreigners are so far only replacing their holdings of American securities sold earlier in the year when confidence was lacking and the dollar was declining. Even so, reductions of \$7,500,000 in gold earmarked on foreign account were reported early this week. The Government deficit for July amounted to \$263 millions. This was \$62 millions worse than the deficit of July last year, and created an unfavourable impression on Wall Street. Call money remains at 2 per cent., and open-market discount rates at $\frac{1}{2}$ to $\frac{3}{4}$ per cent. on 90-day bank bills.

The foreign exchange market was very quiet this week, and fluctuations were narrower and less frequent. Sterling, after holding its own fairly well, declined rather sharply at the close against most of the principal currencies. The New York rate, after touching 3.49 $\frac{1}{2}$ and 3.52, went to 3.50 $\frac{1}{2}$. Montreal gained a point at 4.08. Paris was half a point better at 89 $\frac{1}{2}$. Brussels appreciated sharply to 25.27. Milan again went against sterling, and fell to 68 $\frac{1}{2}$. Madrid was firmer by $\frac{1}{2}$ at 43 $\frac{1}{2}$. Amsterdam moved from 8.76 to 8.70 $\frac{1}{2}$, and Berlin from 14.84 to 14.73. Switzerland gained ten points at 18.01. The Scandinavian currencies again proved the exception to the general rule, and declined, Stockholm from 19.48 to 19.50, Oslo from 19.95 to 20.00, and Copenhagen from 18.55 to 18.61. Helsingfors, however, gained three points at 233. The South American currencies are still largely nominal, Rio being unchanged at 5 $\frac{1}{2}$ d. (sellers), as was Buenos Aires at 34 $\frac{1}{2}$ d. (nominal), but Montevideo lost $\frac{1}{2}$ d. at 29d. In the Far East the rupee was very firm, and gained $\frac{1}{2}$ d. at 1s. 6 $\frac{1}{2}$ d., but the yen was weaker, and fell away by $\frac{1}{2}$ d. to 1s. 6 $\frac{1}{2}$ d. Batavia was better by seven points at 8.78. In the forward market dollars were in rather more request at narrower discounts of $\frac{1}{8}$ cent and $\frac{1}{16}$ cent for one and three months respectively; as were francs also at higher premiums of 2 and 4 centimes, against 1 and 3 centimes last week. Belgas were in poor demand and fell away from 5 centimes to 7 centimes discount for one month, and from 12 centimes to 27 centimes discount for three months. Milan was unchanged at $\frac{1}{2}$ lire and $\frac{1}{4}$ lira discount, but Madrid was firmer at narrower discounts of $\frac{1}{2}$ peseta for one month and $\frac{1}{4}$ peseta for three. Amsterdam was more wanted at $\frac{1}{2}$ cent discount for both deliveries, just half of last week's quotation. Switzerland fell away by $\frac{1}{2}$ centime for both quotations to par for one month and $\frac{1}{2}$ centime premium for three. The silver market was quiet, and sellers were inclined to hold off, with the result that prices rose by $\frac{1}{8}$ d. for both deliveries to 17 $\frac{1}{2}$ d. for cash and 17 $\frac{1}{2}$ d. for forward. The China silver currencies reacted differently, Hong Kong being unchanged at 1s. 3 $\frac{1}{2}$ d., while Shanghai improved by $\frac{1}{2}$ d. to 1s. 8 $\frac{1}{2}$ d.

THE LONG LANE.

To tens of millions of the world's inhabitants the word holiday is no more than a mockery, for they have, alas! no employment from which to seek respite. But to many more millions still the daily task in these stern times is so absorbing and stressful that the leisure for quiet thought which holidays bring, and the opportunities they afford for reasoned retrospect, are even more salutary than in ordinary days. We are all trudging together down a long, long lane; we are getting used to trudging, though we barely look to right or to left; hardly dare to glance at the road behind, and distrust the tricks that oft-deluded vision might play us when we attempt to scan the horizon. But let those, who can, take their opportunity to rest awhile upon the holiday milestone, and, freed for the moment from the weariness of trudging, look forward to see if the turning is in sight, and backwards to judge whether the last mile is such as to make it more likely that the turning is close at hand.

Surely those who paused awhile on the last milestone a year ago may feel to-day that their halting place is more restful and secure. For it was just at this holiday season a year ago when the clouds of the world storm gathered over Britain and burst with a fury that shook the national life to its foundations. Early in the summer a cloud had formed over Austria and had spread over Eastern and Central Europe—a gathering cloud that roused the President of the United States to make his dramatic intervention to save Germany from insolvency; but few foresaw that the storm-power latent in those clouds would so quickly concentrate over the United Kingdom. The Labour Government, dilatory in taking steps to establish confidence and readjust its policy to a growing emergency, was swept from power, and, in spite of the efforts to recreate confidence made by an inter-party Junta of elder statesmen, and by the co-operation of the bankers of New York and Paris, fears of England's ability to maintain the value of the £ grew around the world and swept sterling from its gold moorings, carrying with it the currencies of more than half the world. The mile of road which we have covered since then may have been painful, but it has brought Britain at least out of the slough of insecurity and into the region of hope. Our Budget has been balanced; our balance of payments is no longer a danger; our exports have maintained, and even increased, their proportion of the volume of world trade, albeit that volume has steadily dwindled. We carry still a vast army of unemployed, and have no certainty that their ranks will not be further swollen during the coming winter; but at least we may claim to have checked the downward swing of economic activity in this country.

A year ago observers of the growing paralysis creeping over Europe were inclined to prophesy the wholesale break-up of institutions, a reversion to social disorder, and the end of the economic and financial system under which the countries of the world, save Russia, are conducted. These panic prophecies have not come true. Even in South-Eastern Europe and in Germany political institutions have not collapsed, and the financial crisis, not yet solved, has not been allowed to reach the bounds of extremity. Indeed, as the year ended, the Lausanne Conference, by setting, once and for all, finality to the reparations question, and thereby giving to Germany a chance of restoring her credit-worthiness, of which only political quarrels can rob her, marks one of the notable advances in international co-operation of the past few years. In another way also Lausanne permits us to look out hopefully along the next stage of the road. Europe has finally composed that part of the problem of international obligations left by the war which affects her alone. She has done it in a way and in an atmosphere which leave hopes that a way will be found to compose with equal success that part of the problem which affects the United States of America as chief creditor; for, since the Lausanne Agreement was known, signs have not been wanting that, though political circles in America are sensi-

tive as regards the method of approach and concerned as to the mode of presenting a case which leaves an added burden on the shoulders of the American taxpayer, opinion in the United States is becoming reconciled to a radical revision of the debt agreements as an essential part of the world problem of reconstruction, and believes that such a policy will serve America's interests at least as well as those of Europe.

And this brings us to America, where the past year has brought her statesmen and her people to face the deepest depression and the biggest economic ordeal of her history. It would be rash to predict that America is yet within sight of general economic recovery, for it has seemed that the forces that are bearing her down in depression are almost as ineluctable as those which three or four years ago forced her up to the peak of an insecure prosperity. Nevertheless, there is reason to think that the Giant of the West has passed the crisis of his sickness. In the spring and summer grave symptoms such as the growth of unemployment, the widespread failure of banks, the drain of gold to Europe and a big growth of hoarding by a distrustful public were justifiably regarded with serious apprehension. But the period of panic seems to have passed, the process of hoarding to have been checked, the banking position to have been salvaged, the psychology of the people to have been steadied. Elsewhere, the economic strength of France has declined, but not to the point of acute depression; political instability, seriously reduced trade and financial default mark the passage of the crisis through South America, while, on the other hand, stern internal measures have pulled Australia on to firmer ground.

Many, of course, have been the disappointments of this difficult year; worst of them all, the meagre results achieved by the Disarmament Conference—a failure which may yet be retrieved. Failure, too, has attended all efforts to restore the real foundations of peace in Europe for the relations between France and Germany, and between France and Italy, are still an obstacle to any smooth passage towards European pacification. Almost equally deplorable is the shrewd blow delivered to the authority of the League of Nations by Japan's defiance of international opinion and international engagements in Manchuria and China. Disappointing, if petty and temporary, is the revival of a deadlock in Anglo-Irish relations. But fortunately the quarrel between Mr de Valera and the British Government has failed to revive the intensity of the age-old controversy, and the world at large regards it merely as a domestic affair between two members of the Commonwealth, handled with clumsiness on both sides.

Can we, then, claim that on balance a year's trudging has carried us a real stage forward? It is, of course, true that as time passes without economic recuperation and without the solution of major problems, capital is progressively destroyed, readjustments of international and commercial debts made more difficult and illiquidity intensified. On the other hand, the past year has seen grave dangers averted, strong and successful efforts by individual countries to adjust their affairs to the necessities of the crisis, and at least a real beginning in removing the incubus of international indebtedness which has been so powerful a factor in distorting the face of the economic world. In the world generally the evidence of stock and produce markets confirms the impression of statistics of production and activity generally that the steepest phases of the depression are past. Persistence in the policy of expanding credit in America, and still more the boldly conceived plan of conversion in this country, go far to assure the world of the cheap money conditions that are necessary to foster recovery. In Britain we have perhaps passed to a later stage in fighting the crisis than have some other countries, and for the return of our own prosperity we must await their progress. And, above all, as we look upon the next mile of road there loom up three remaining obstructions which separate us from the approach of better times. The supreme task of the next

twelve months is for the nations in co-operation to remove the overhanging menace of armaments, to achieve some measure of monetary stability, to cut away the thicket of tariffs and trade restrictions, and to allow the commerce of the world to flow once again into more natural channels. As we leave our milestone and step out again upon the road we may take good heart from the news, not only of a check to the fall in commodity prices, which may or may not be temporary, but also of an early summoning of a conference of world statesmen to discuss what contributions each nation can make towards making progress easier for all.

GERMANY'S ORDEAL.

THE German general elections for which the Hitlerites have been clamouring so long and so stridently, and conceded by the present Government when they were called to office by the President in May last, have come and gone. The verdict of the polls, as was expected, has resulted in producing a parliamentary deadlock, for it has given no party, or natural group of parties, a working majority. It is a strange commentary on the state of confusion into which politics have fallen in Germany, that, while the Government in power arouses little sympathy anywhere and in some quarters provokes active distrust, this result should be generally hailed—except of course by the Hitlerites themselves—with something like relief. Indeed, the stock markets, thankful that the result has not been worse, have marked up German securities; and there is a general feeling that at least for the time being Germany has been spared the danger of a major disturbance. It is true that serious political outbreaks took place on Monday night at Königsberg, but, generally speaking, the Government's decree of a political holiday has been quietly accepted, and the country has welcomed the opportunity of a breathing space to recover from the excitements of Sunday.

The final figures show that an enormous poll of nearly 97 million votes was cast. Out of this total the National Socialists secured approximately a third; their votes amounting to 13,782,779, which is approximately the same as the total polled by Herr Hitler himself in the second ballot of the Presidential election. This immense poll makes the Hitler party considerably the largest party in the Reichstag. But the movement, which has hitherto leapt from strength to strength, has evidently reached the top of the tide, and this is by general consent reckoned to be by far the most important conclusion of the poll. It is significant that wherever the Hitlerites have been entrusted with administration the Hitler poll has dwindled, and as there is little hope of further gain in Germany as a whole it means that the Hitler movement has definitely failed in its attempt to capture the control of the Reich through the ballot box. It has failed, moreover, even if it were counting on the Nationalist Party as its ally, for that section of the Right has suffered a marked and definite setback, its total poll having fallen by nearly half a million. Even if the minor parties of the Right are included it is definitely impossible for a Right coalition to secure control of the Reichstag. It is, moreover, significant that the most definitely monarchist section of the Right is the one which has lost most. It certainly cannot be said after last Sunday's ballot that the German people have shown any enthusiasm for the return of a monarchist regime.

At the other end of the scale the Communists have gained some six or seven hundred thousand votes, almost entirely at the expense of the Socialists, and though they are still very much the smaller party of the two, they come out with the very considerable record of 5½ million votes. The Socialists and Communists together have a poll which is only a little less than that of the Nationalist Socialists. Socialist commentators attribute the growth of the Communist poll to revolt against the repressive action taken against the Communists by the present Government. But the apologists for the latter reply that the increase in the Communist vote is proof of their claim that there is a real Communist

menace, and that, if stern measures had not been taken, the increase would have been much greater and would have constituted a much more serious danger to German political life. An outside observer would be more disposed to comment that the increase in the Communist poll is, after all, not at a very much greater rate than the increase of the total poll, and that, considering the enormous volume of unemployment and the prolonged anxiety regarding their economic future of large masses of the population, the swing to the Left is, if anything, less marked than might have been expected. The remaining third of the votes polled are distributed chiefly among parties belonging neither to the Left nor to the Right. Nearly all of them have suffered a very great reduction in their poll, and some of them have almost been obliterated. But the exception to this rule is, significantly enough, the Centre Party itself, whose poll has increased by more than half a million. Indeed, the net result of the election is that Dr. Brüning holds the balance of power in the Reichstag, though he can no longer make an effective coalition with his former allies.

In the absence, therefore, of an effective alternative, the election leaves the present Government in power, but presents it with the problem of governing with a divided incoherent Parliament. Until the Reichstag meets at the end of the month the present lull in political activity is likely to continue and to give Freiherr von Papen and General von Schleicher a breathing space in which to prepare their plans. The task, however, is a very difficult one. The composition of the Reichstag, elected by so huge a popular vote, is a fundamental fact which cannot be brushed aside, for it at least shows beyond any doubt the present grouping of the German nation. It should not be overlooked, moreover, that every Government in Germany in the last ten years has derived its authority from a coalition of parties, and, unless there is to be a violent disturbance of the constitution, this must be done again. But the pieces of the jig-saw puzzle will be more difficult than ever before to fit together. The Government as well as the parties of the Centre and Left are agreed that since the National Socialists are the largest party of the State they must assume some of the responsibility of government and that some of the posts in the Ministry should be assigned to them. The Nazis are, however, not very willing to accept any responsibility without complete control, and, in any case, the vagueness of their programme, the demagogic character of their agitation, and their internal differences have made them a very unsuitable instrument of government. If an understanding is not reached in the meantime, the clash between the parties must come as soon as the Reichstag assembles and is asked by the Government—as it must be asked—to approve the ordinances which it has issued since it came into office. The superseding of the Prussian Government by a Reichscommissar will be bitterly opposed by the Socialists, and it is not yet known what view the Centre will take on this question. On the other hand, it will be very hard for the National Socialists to swallow the decrees which have been reducing the social services in view of their blunt repudiation of any responsibility for them during the election. How this problem will be resolved it is impossible to foresee; but there seems little doubt that Germany as a whole is reconciled to the Government carrying on provided it can assure the safety of the ordinary German citizen in his comings and goings.

But even a Government which conceives its main task to be the maintenance of law and order cannot carry on very long without a policy. So far as concerns international affairs, which so vitally affect Germany's future, the present rulers of Germany have in their dealings with foreign countries put forward, though sometimes perhaps in less tactful terms, the policy pursued by Dr. Brüning. With Reparations out of the way, Germany's great pre-occupation is that of equality of status in armaments, a demand which has been the underlying issue of the various conversations which have taken place in the last six months at Geneva. As Lord Cecil reminded us in his speech at Oxford on Tuesday, this is a conception to which the chief countries who signed the Treaty of Versailles are committed. But we equally agree with Lord Cecil's further comment that if impatience at the

long delay of the Disarmament Conference leads Germany to respond to what she considers a breach of faith on the part of the Allies by herself re-arming, the result could be nothing but disastrous. It is well that the statesmen of the world should realise that, while the form may vary, in substance this is a matter on which the German nation is at one.

But internal policy is a different matter. What the internal economic policy of the Government is, has not been disclosed. Almost at once Germany will be brought up once again against the Budget problem. Economies which the nation accepted from a Centre and Socialist coalition may not be endured so readily from a Government of the Right, especially if further cuts are believed to be the price paid for the support of the industrialists. There is, however, no reason to suppose that the Government will lend any countenance to the foolish aspiration for "autarchy"; on the contrary, it has declared its intention of seeking to mitigate the stranglehold of tariffs and trade restrictions. The world believes that Germany contains the seeds of recovery—indeed, many fear that when the tide really turns she will rapidly outstrip her competitors. But she can only realise such possibilities if her Government can mobilise behind it the overwhelming masses of the national will in dealing firmly and boldly with the critical problems of the immediate present and can stir public opinion from its prevailing mood of despondency. This is the task which confronts not merely the Government, but the leaders of all parties in Germany to-day. Will they succeed in achieving it? For this is perhaps the greatest of the unanswered questions on which world recovery depends.

THE MONETARY PROBLEM AT OTTAWA.

(BY A CORRESPONDENT.)

THE Imperial Economic Conference has shown that protection has its inhibitions as well as free trade. Under the system which Great Britain found it advisable to maintain for so many years, an extensive plan of mutual preferences within the Empire was out of the question. Now it certainly seems as though the experiment with protection were going to handicap any general plan of monetary co-operation within the Empire. Australia and New Zealand at least have come to the Conference determined that a rise in commodity prices, to be brought about primarily by the action of Great Britain, should be in the forefront of achievement at Ottawa, whereas Mr. Baldwin's opening speech, as well as the absence from the British delegation of any monetary expert of the first rank in the public eye (however competent their actual monetary assistants may be) indicates that the United Kingdom Government hoped and expected that something fairly non-committal would suffice. One of the strongest reasons for this want of decision has been the fear of the political consequences of a rise in prices in Great Britain, a concern for the interests of the consumer which is undoubtedly prompted by the realisation that a rise in the cost of living, even though actually brought about by quite general forces, would be laid at the door of protection, and especially of imperial preference if the rise of prices were Empire rather than world-wide.

There are, of course, more substantial and more specifically monetary reasons for the British Government's hesitation. Mr. Havenga's reasoned and moderate defence of the gold standard in his introductory speech contained much that was as applicable to Great Britain as to South Africa. Indeed more so; for Great Britain, with her large proportion of trade with foreign countries and her great financial interests outside what has come to be known, rather inaccurately, as the "sterling area," can of all countries least afford to insert a new element of instability into the already shaking world economic structure. On the other hand, the Dominions, as great primary producers, know even better than ourselves that the present deflationary drift of the world cannot continue without bringing still further disasters.

But there is another difficulty. The price of stability in our monetary relations with gold standard countries might well prove to be new forms of instability and trade

restraint among countries off gold, a point which can be illustrated by the attitudes of New Zealand and India at the Ottawa Conference. The motive of Mr. Coates' demand for an expression of "reflationary" policy by the British Government and the Bank of England emerged from that other part of his speech in which he pressed for the adoption of quotas on foreign imports of certain commodities. New Zealand justifiably fears that her foreign competitors—who after all have also to find markets for their products—would cut their losses on a British preferential duty and undersell her anyway. She wants a larger market, but she wants still more urgently a higher price for her products, many of which she is now selling under artificial conditions at a loss on every unit. Under present circumstances, New Zealand paradoxically cannot afford to sell more butter to Great Britain, and her Government hopes that a foreign quota might give her a sufficient grip of the market to enable her to ask a higher price. Now, apart from the general disadvantages of the quota method and of this rather extortionate means of securing a better return to a limited section of the world's producers, in this particular instance Denmark, New Zealand's chief foreign competitor in the British butter market, is in such a desperate economic condition that any such violent limitation of her trade might drive her over the brink into individual and public destitution, which could bring nothing but harm to Great Britain and through her to the whole Commonwealth. But there is a more significant objection even than that. Since the great slump began Australia has enormously increased her exports of butter, and is as much responsible as any foreign country for breaking the price. Now Australia has a 25 per cent. premium on her exchange with sterling, compared with New Zealand's 10 per cent., to which the latter has adhered in spite of strong expert recommendations that she should depreciate further. If New Zealand cannot obtain a better price, in her own currency, for her products by any other means (and Australian and Canadian competition would be sufficient to hold the price down despite a quota on foreign butter) she may well be forced to raise the premium on sterling, which would handicap British as well as other sellers in her market. But then perhaps Australia would feel the pinch and would have to follow a similar course. The prospect of competitive depreciation among the several countries of the sterling area is not pleasant to contemplate.

India's position is in many respects similar, though her first preoccupation is public finance. A poor country relying on agriculture for the greater part of her national income, she has an inelastic public revenue, which her cultivators find it extremely hard to provide when prices are low. There is one of the chief clues to the success of the Congress agitation (which in more than one district takes agrarian forms) in the past few years. The height of the ratio between the rupee and the pound has been the subject of bitter political controversy ever since its stabilisation. India's experts (and at Ottawa she is outstandingly well provided with them in the persons of Sir Henry Strakosch and Sir George Schuster) have made it plain that unless a substantial rise of commodity prices is somehow induced in the outside world she cannot continue to maintain that ratio at 1s. 6d. The handicap of a depreciated rupee upon our trade with one of our greatest oversea markets, in which we sell much more than we buy, would be almost as disastrous to Great Britain as the example that it would provide for other British countries.

For them depreciation against sterling may bring at least a temporary alleviation of their difficulties, though an aggravation of ours; but a similar process by itself cannot prove a solution of the price problem for Great Britain. Our recent experience has shown that the anticipated rise in British prices resulting from a fall of the exchange against gold has been counterbalanced by a fall in gold prices—largely in order to meet the new conditions in the greatest of international markets. But the reverse process, a fall in the exchange level of the pound following a rise of British prices which was brought about through local conditions, need not have this effect. That a rise of prices, within the sterling area if not over the whole world, must be brought about is certain; it is the

means that are obscure. For short-term money, interest rates are already abnormally low, and the War Loan conversion is doing a great deal to bring down bond interest generally. Something might be done to ease credit conditions by the commercial banks, who are not exactly lenient regarding overdrafts and advances. But it is the demand for as well as the supply of credit that is deficient. Reduce Bank rate to 1 per cent., convert the whole of the national debt, raise the fiduciary circulation by another £20 millions, and in the absence of public confidence the volume of purchasing power through credit may not expand at all. Political settlement and economic liberation are both essential for that revival of confidence, and in their absence even the best intentions cannot achieve the monetary success of the Ottawa Conference.

Monetary policy itself, however, can do something to restore the kind of confidence that is needed. Confidence, after all, is only a relation between expectation and known facts—between, in this case, the assumed prospects of making a profit with borrowed money and the terms on which it can be borrowed. If traders, and still more if governments and public institutions, could feel assured that for some period ahead money would remain cheap and plentiful they might forget some of their political and even their economic apprehensions. In any case, whatever specific measures may follow, the first step towards reflation must be a declaration of policy, to the effect that the authorities will do all in their power, subject to necessary safeguards of a general kind, to secure a rise of commodity prices through an expansion of purchasing power. This is what Mr Coates, at the opening meeting, explicitly challenged the Chancellor to declare, and unless Mr Chamberlain does so the Ottawa Conference will be counted by two at least of the Dominions a definite failure on the monetary side.

THE POSITION OF LANCASHIRE.—II.

(BY A CORRESPONDENT.)

THE previous article in last week's *Economist* examined the contraction of Lancashire's output and exports which has occurred since the war, and whose reversal cannot safely be relied on, at least in the early future. Under these circumstances, the familiar remedy advocated for Lancashire's difficulties is to reduce the equipment of the industry so as more nearly to correspond with the demand that can be reasonably anticipated. For years it has been contended that a large proportion of the existing demand is distributed among competing concerns, trade being accepted at any price in the neighbourhood of prime costs; and yet few of these concerns are working to full capacity. If the number of concerns were reduced, and the existing demand left to the remainder, it is argued that fuller capacity working would be achieved, costs per unit of output would fall, and, even at present prices, a more stable basis would be attained, and opportunity given for a reconstruction of the industry tending to greater efficiency and still lower costs. Again, as is well known, scheme after scheme has failed to secure the required amount of approval from those engaged in the industry, the latest failure being that of the scheme for a reduction of spindles in the American spinning section, followed by the abandonment of the proposed production quota scheme for the Egyptian spinning section.

The causes of these failures cannot be summarised in a brief statement; but, even if they were stated at length, unreasoning perversity, which is apt to appeal to outsiders as the prime cause, would not figure prominently among them. Merely to mention that in the American spinning section alone there are more than 600 concerns, usually controlled by men long noted and, until recent years, widely commended for their practical belief in the virtues of individual enterprise, is sufficient to indicate the difficulty of inducing a requisite majority of them to approve of any scheme which would limit their freedom to act, even in present circumstances, as individuals, or as small groups of individuals. They are men who have always looked with suspicion on large-scale enterprise, in the forms of amalgamations and combinations, as means

to greater efficiency in the cotton industry. Rather, they have been inclined to contend that, in a specialised spinning mill of, say, 100,000 spindles, set in the organisation of the cotton industry as a whole, all the real economies available can be attained. In the past, when bad times have appeared, they have been accustomed to hold out until times have improved, or until they have adapted themselves, or succumbed, to the situation; and it is still widely held that any required reduction of the equipment of the industry will be best achieved by the same process. Indeed, there are many who believe that had not outside financial interests become involved in the industry—interests now reluctant to abandon their venture as a loss—equipment would by now have been permanently reduced by quite as much as has been contemplated in the most ambitious scheme for reduction. To these Lancashire critics the "contraction" schemes, at best, appear only to seek the same end as the well-tried process of attrition, and to have the demerit of limiting the freedom, and imposing a burden on the backs, of those who remain in the industry.

Such views are naturally regarded by the advocates of the regulation schemes as absurdly narrow; for, to them, the schemes are but a first step towards a reconstructed industry better suited to meet the altered conditions of the post-war world. Nevertheless, if the internal problems of the cotton industry are to be understood, the persistence of the traditionally individualist view must be recognised and given due respect. Admittedly, it belongs to a conception of industry and trade in a world different from that which has existed since 1914; but there are still many who are not too sure of the long-run vitality of war, and post-war, conceptions. At the moment, the one thing which is certain is that, apart from some extraordinary development, the existing equipment of the cotton industry will ultimately be reduced. In the absence of some organised method, the process, presumably, will be that of an uncontrolled working of economic forces. Whether this will mean a slow process of attrition or something more chaotic and spectacular remains to be seen.

Space does not permit of more than a brief mention of the extent to which, in order to attain stability, with full-time working, the equipment of the industry might have to be reduced. In the first place, it will be remembered that the pre-war equipment was, in effect, reduced in 1919, when the working week was shortened from fifty-five-and-a-half to forty-eight hours. Allowing for this and other reductions, there is, then, the difficult question of the extent of the demand which the industry can anticipate for its products. Is it, for example, as large as the demand in 1924, or as small as the demand in 1930? If the demand were as large as in 1924, tentative estimates would suggest a reduction of the present number of spindles by about 10 millions, and of looms by about 50,000. If the demand were as small as in 1930, the required reduction might be about 25 million spindles and about 280,000 looms. If a demand is assumed somewhere between that of 1924 and that of 1930, as seems reasonable, tentative estimates might be a reduction of spindles by about 15 millions and of looms by about 180,000. No precision is claimed for these estimates; they are only intended to give some idea of the order of magnitude of the problem of reduction with which the cotton industry is faced in its spinning and weaving branches.

A very slight consideration of the data summarised in this brief review is sufficient to suggest that even the suspension of the gold standard in this country could have no large effect in improving the position of the cotton industry. After last September there was, of course, a spurt, due partly to the depreciation of sterling, partly to the anti-Japanese boycott in China, and partly to seasonal influences; but each factor was temporary in character, and any advantages which British exporters gained from the depreciation of the pound was quickly diminished as other countries largely producing or consuming cotton goods also left gold. At the time of writing, indeed, complaints are frequent that, owing to the present depreciation of the yen, the possibility of successful competition with Japan is more remote than ever. Probably few people, in a cool hour, ever expected that, added to other

obstacles, a dislocation of the currency systems of the world could have a beneficial effect in enlarging the volume of world-trade. Rather, what was expected was a shrinkage consequent upon tariff increases, restrictions on imports and exchanges, and such similar devices as have been imposed. Not until some of these obstacles are removed, and the tide of world-trade turns, does there appear to be any substantial hope of the cotton industry of the United Kingdom reverting towards even its 1929 amount of trade.

THE SALE OF RAILWAY SERVICE

(BY A CORRESPONDENT.)

THE publication of a little book entitled "Modern Developments on the L.M.S.R."* has all but coincided with the news of an internal reorganisation of considerable importance in the country's largest railway. The booklet consists of three contributions by the vice-presidents of the company, Sir Harold Hartley, Mr E. J. H. Lemon and Mr W. V. Wood, who deal respectively with the aspects of "Scientific Research," "Rationalisation, Principles of Management and Control" and the "Development of Costing Methods"; the first two consist of papers delivered at the recent annual Congress of the Institute of Transport held at Buxton, while the last is a reprint of an article which appeared in "Modern Transport" at the time of the above-mentioned meeting. To those who believe that the railways lag behind other British industries in adapting their organisation, methods and policy to present-day conditions, the three articles in this booklet may be recommended as a corrective to undue pessimism. The articles are really best studied as complementary to the speech made by Sir Josiah Stamp at the last annual meeting of the company, but their importance lies not so much in the information they set forth as in the evidence of a new spirit in railway management.

Similarly, the new internal reorganisation of the L.M.S., providing for a commercial manager who shall be responsible for all dealings with the public, both in regard to passenger and goods transport, is evidence that the L.M.S. is not afraid to launch out into new channels to meet a situation which in the last twelve months has grown increasingly critical. During the early months of the year there was considerable criticism, both outside and, more especially, inside railway circles, of the combination of the control of operation and commercial working under one vice-president whose railway experience had been gained primarily on the engineering side. Such critics had apparently forgotten that the Southern Railway a year before had adopted a closely similar type of organisation, albeit with a variation in title. Titles by themselves, however, make but little difference in the scope of functions, and it is unwise to judge an organisation critically in its evolutionary stages; now that the scheme is more fully developed, it is a more appropriate moment to assess its power to add to the strength of the organism.

The problems of railway organisation are excessively complex, and no two railway systems in the world are exactly similar, because due allowances have to be made for varying personalities available to the system and for the differing size of the territorial scope of the undertakings. Even those well versed in British railway working have failed in many cases as yet to realise that in the present L.M.S. organisation the three vice-presidents correspond to three general managers, whose sphere of authority is roughly departmental in scope. Equally, the latest development, consisting of the complete division of the commercial and operating sides of the undertaking, has been hailed as something unique in British railway history, implying the subordination of the operating department to the commercial. In turn, this has been characterised as being one of the successful features of

modern American management. This, however, is an erroneous view, and such misrepresentations are doubly unfortunate in that, if there is one feature of American railway organisation principles which is outstanding, it lies certainly in the general subordination of traffic-getting to the efficiency, measured by low cost, of operation. Just as American railways have been criticised for placing too much stress on low-operating costs—as witness the campaigns to increase carloads and trainloads even at the expense of quick transit for freight consignments—so British railways, until a few years ago, undoubtedly had stressed throughout their longer history the major importance of the commercial or receipts side, with comparatively little regard for the adequate control of operating costs. One has only to examine the careers of the pre-war lists of railway general managers to realise how by far the greater number reached the top of the ladder after mounting steps on the commercial side. In these more enlightened days the balance is held much more evenly, and under the new L.M.S. organisation the chief operating manager and the chief commercial manager are allocated equal power, and each reports to the same vice-president.

Perhaps the most noteworthy feature of the scheme is the separation of the commercial side of the passenger service from the operating department, and its grouping with the commercial side of the goods service. The traditional British form of organisation is exemplified by the Great Western Railway with a superintendent of the line, controlling both the passenger traffic and the operation of goods and passenger trains, and a chief goods manager, controlling the commercial side of the goods service. The Southern Railway recently appointed a traffic manager, under whose control lie all questions affecting the operating and commercial departments, and he is assisted by a superintendent of operation and a commercial assistant. There is a certain resemblance between the new L.M.S. organisation and the Southern Railway's organisation in this respect, though the former, doubtless having regard to the much larger area it covers, has decentralised to a far greater extent. It is, however, the L.N.E.R. which has, from its formation in 1923, adopted decentralisation as a principle, and its Southern, North-Eastern and Scottish areas, each controlled by an area general manager, have their respective passenger managers, goods managers and superintendents of operation.

Each of these types of organisation has its advantages and its disadvantages, and those who advocate complete amalgamation or nationalisation may well ponder whether such a policy would not prevent the evolution of new types of organisation which can only be regarded as healthy signs. The L.M.S. has admittedly been longer than the others in evolving what appears to be finality in organisation, but it is likely to reap the benefit in the immediate years to come through the fact that those now appointed are comparatively young, and there should be fewer changes than elsewhere in the next decade.

FINANCES OF THE MIDDLE EAST.

(BY A CORRESPONDENT.)

THE Palestine Economic Society has published a very informative brochure on the Government finances of the mandated territories in the Middle East. After twelve years of the mandatory regime, and at the moment when one of the three territories is about to be emancipated, it is interesting to survey the different economic and fiscal developments of Iraq, Palestine and Syria. The common feature of their economic structure at the time of their detachment from Turkey was a peasant agriculture together with a simple grade of early capitalism. They were all poor countries, little developed by the Ottoman sovereign. Their progress since they were placed under the Mandate has been extraordinarily diverse.

Iraq, surprisingly, has been the least affected, although Great Britain has spent many millions upon her railways and waterways. Her agriculture remains primitive; and she has not yet attracted the capital required to inaugurate any large scheme of irrigation which might make

* Copies may be obtained from the Secretary, L.M.S.R., Euston Station, or the Publisher, "Modern Transport," Norman House, 105-109 Strand, W.C.2.

the plain between the rivers again one of the greatest granaries and gardens in the world, and provide for many times her present sparse population of three millions. The immediate progress of the young kingdom seems bound up with the exploitation of its oil-wealth, which is soon to begin in earnest. The Anglo-Iraq Petroleum Company is already paying £400,000 annually to the Government on account of royalties, and has started with the work of laying the pipe-line from the Mosul oil-field to Haifa in Palestine and to Tripoli in the French mandated area. It will spend altogether many millions on that enterprise.

In Syria the agricultural progress has been more marked. The cultivable area has more than doubled, rising from 700,000 to 1,600,000 hectares, and the yield is multiplied manifold. The development of silk and cotton spinning and of the cigarette industry has broadened the basis of the economic life; and the emigration to America which was a constant feature before the war has been greatly diminished. Beirut has become a modern commercial and industrial city, like a small Marseilles, with over 200,000 inhabitants and two flourishing universities; and if Damascus has not yet recovered from the events of 1925 and 1926, she is about to become the capital of the Republic of Syria and her economic life is bound to expand.

The most remarkable progress, however, is to be seen in Palestine, west of the Jordan, for the country east of the Jordan, which is also under the British mandate, has retained its simple life in marked contrast to its neighbour. To western Palestine there has come an immigration of about 100,000 Jews and a capital estimated at £40 millions, provided mostly by Jewish bodies and individuals. The effects of the new population and the new resources are seen in every aspect of life. The cultivation of orange and citrus fruits has been quadrupled, and the export of oranges, which amounted to 300,000 cases in 1920, has risen this year to more than ten times that quantity, and will be doubled again by 1936. On the industrial side there are over four thousand undertakings with an annual production of about £5,000,000. Relatively cheap electricity is now derived from the hydro-electric works of the corporation that has harnessed the waters of the Jordan and the Yarmuk; and the extraction of the mineral salts from the inexhaustible reservoir of the Dead Sea has reached a commercial stage. The Haifa Harbour, constructed by the Government at a cost of £1½ millions, is rapidly nearing completion, and will not only revolutionise the conditions for import and export trade of the country, but will make Palestine one of the outlets of a vast hinterland stretching from Persia and Central Asia, and one of the meeting-places of East and West. Palestine alone of the three mandated territories has raised a public loan, amounting to £4½ millions. The cost of the Harbour is included in the loan. The rest of the money was required for railway and telegraphic and telephone development, and the reimbursement to Great Britain of the value of the railway and public works of the Military Administration.

The comparison of the fiscal systems of the three countries is also illuminating. The tithe and the "Werko," or capital land-tax, which were the basis of the Ottoman revenue, have remained, though they have been reformed in the rate and method of collection; and the latter tax has been replaced in Palestine towns by an urban property rate levied on the income of the land. The Customs duties, which in the Ottoman regime were based on "the sweet simplicity" of an eleven per cent. charge *ad valorem*, have been more or less scientifically amended, in Palestine and Iraq by the introduction of a number of specific duties and the exemption of certain raw materials, and in Syria by a graded system of *ad valorem* charges. The Customs and Excise duties in Palestine produce over one million pounds a year, which is over 40 per cent. of the total revenue. Their proportion of the revenue in Iraq is about the same; and in that country the basis of taxation has been broadened by the introduction of an income tax. The Palestine Government is about to examine the introduction of that modern engine of state-finance, with a view to relieving the agri-

cultural population of part of its burden of direct taxation. The increase in the revenue of the countries between 1924 and 1931 was in Palestine 75 per cent., in Syria 44 per cent., and in Iraq 11 per cent.

A similar indication is given by the comparative Government income per head of the people. In Palestine it is nearly £2½; in Syria and Iraq about £1½. That does not mean that the Arab of Palestine is much more severely taxed than his fellows in the neighbouring countries. For it is calculated that the Jewish population, which is about 20 per cent. of the whole, contributes not less than 40 per cent. of the revenue, mainly because of its far higher employment of imported goods; and it is also the principal contributor to the revenues of Government railways and postal services.

While Palestine has the highest standard of Government expenditure, she has received a much smaller direct contribution from the mandatory power. From 1923, when the considerable military forces which had been kept in the three countries were reduced, down to 1931, the grant-in-aid amounted to about £3,500,000, of which a considerable proportion was for the autonomous, but not self-supporting territory of Transjordan. On the other hand, in Syria the French expenditure for the same period has averaged about 800 million francs (roughly £2,500,000 gold) annually, largely for military expenditure. And in Iraq during that period Great Britain spent three hundred lakhs of rupees, or over £22 millions, also largely for defence. In addition, the Mandatory gave the emancipated kingdom a railway and port system on which during the war she spent millions without return. The idea therefore, which is still widespread, that Palestine is a burden on the British taxpayer is a myth. In relation to the Holy Land Great Britain has been far less generous than she has been to Iraq; and the capital for the development of the country has come in the main from other than Government sources.

The three countries have adopted new currencies under the Mandate Administration. Palestine used the Egyptian pound till 1927, but has now its own pound, equivalent to the pound sterling and issued by a Currency Board in London. The currency in circulation has risen steadily from £1,762,664 in 1928 to £2,344,664 in 1931; and the Government now enjoys a substantial contribution to revenue from the profits of the currency. In Syria the Banque de Syrie received as far back as 1919 the right of issuing notes; the amount in circulation averages 10,000,000 Syrian pounds, which, at the present rate of exchange for sterling, is equal to over £2,000,000. Iraq has used the rupee as a unit since the first occupation by the Indian Army. A law for the introduction of a currency on the basis of sterling was passed in 1931; but owing to the fluctuations of the English pound has not yet been brought into force. The unit of currency will be a gold dinar; and till the establishment of an Iraqi national bank the currency will be supervised by a Currency Board of five members, on which there will be representatives of the Ottoman, Eastern, and Imperial Persian Banks.

The three territories have moved steadily towards financial autonomy; although the burden of defence is still borne largely by the Mandatories—or, as Great Britain will now be in Iraq—by the Ally. Palestine, however, while the smallest of the three, and therefore most affected by the expenditure of an elaborate central administration, has shown a power of economic expansion greater than her neighbours, and has been able to support almost unaided a progressive policy of public services that continually adds to the constructive expenditure of Government. She has weathered the present world-crisis with surprising buoyancy, and has been spared the cutting down of services which elsewhere has been necessary. The three mandated territories are to be economically linked by the oil pipe-line from the Mosul oilfields to Haifa and to Tripoli; and a further economic link may be forged between Palestine, Transjordan and Iraq by the railway from Haifa to Bagdad, of which the line has been surveyed by the British Government, though its construction may have to wait for more prosperous days.

Notes of the Week.

The Week at Ottawa.—Following the publication at the end of last week of the British delegation's statement, to which we refer below, the Ottawa Conference has this week reached the stage of definite offers and bargaining. The official Canadian offer has been delayed, but Australia has opened the ball by laying proposals on Wednesday before Mr Baldwin and his colleagues. Although the text of these proposals is not yet available, it appears that Australia's offer, conditional upon a British tax on foreign meat, was no more than a promise to revert to the 1928 level of tariffs with the British preference widened by an increase in rates on foreign competing imports. Such an offer falls very far indeed below the minimum which could be considered even as a basis of discussion, and it is not surprising that Mr Bruce appears to have been told bluntly and immediately that his offer must involve a far greater reduction of tariffs if Britain on her side is to concede Australian requests for raising her own tariffs against certain foreign imports. Wednesday's straight talk has cleared the air to some extent, and not only is Mr Bruce reported to have become more amenable to the British argument, but Mr Bennett is said also to be realising that the only road to any tangible agreement lies in substantial tariff reduction. It is not without significance that the *Manitoba Free Press* denounces the protectionist demands of the textile industry as the obstacle in the way of obtaining benefits for Canadian farmers. The past week, therefore, may be regarded as having brought the Ottawa discussions at least one stage nearer to fiscal realism. So far, tariffs and preferences have so completely absorbed attention that negotiations on other subjects have received little attention. It is, nevertheless, believed that satisfactory progress is being made in the technical discussions on such subjects as standardisation and industrial co-operation. It does not, however, appear that the plan for the establishment of a permanent economic secretariat has advanced beyond the embryonic stage. If well-informed Ottawa reports may be credited, the British delegation will shortly make a declaration on the question of credit and exchange policy, but there is as yet no evidence that such a statement will travel beyond the Chancellor's declarations already made in the House of Commons.

British Trade and the Dominions.—We warmly welcome the statement issued at the end of last week by the British delegation at Ottawa containing facts and figures which illustrate a point made in our article last week on the Ottawa Conference, namely, that the Dominions have benefited economically much more from association with the Mother Country than *vice versa*. The statement did not attempt to estimate the incidence of Dominion tariffs upon British trade, but gave conclusive evidence for this point of view by comparing the modest proportion of British exports which enter free into the Dominions with the very large proportion of Dominion exports which enter into Britain free of tax. The statement went on to show what an immense advantage has been conferred on the Dominions by the preferences granted under the Import Act of this year. The statement made by us last week in this connection was based, as our readers will recall, on an estimate made in the *Economist* in April last as to the amount of trade covered by the new British tariff. When we made that estimate we urged the importance of publishing an official computation of the scope of our new duties. The British statement supplies this official estimate, which substantially confirms our own. The document does not give an analysis under different rates of duty, but the following shows a comparison of the totals arrived at in the two estimates of the amount of our imports in 1930 coming under categories that are now subject to duty under our present tariff:—

Official Estimate. *Economist* Estimate.
(Retained Imports.) (Total Imports.)
British Foreign British Foreign
Countries. Countries. Countries. Countries.

	(In million £.)		
Dutiable before Dec., 1931	48*	117*	56½
Dutiable under Import Duties Act and Horticultural Imports Act.....	101	371	107½
Free	110	210	137
			409
			198

* These figures include some categories subject to duty under the Abnormal Importations Act of November, 1931.

The chief reason for the difference between the two estimates is, of course, the fact that our figures are based on total imports, whereas the official figures are net imports only after deducting re-exports. The complete exemption of imports from British countries falling in the second category gives at least a 10 per cent. preference to more than half the imports coming from Canada and New Zealand, to 40 per cent. of the imports from India and South Africa, and to one-third of the imports from Australia and one-quarter of the imports from the Irish Free State. The statement also contains the following useful table showing the balance of trade between Britain and various Dominions:—

(Millions of £.).

Countries.	Imports into United Kingdom (inclusive of bullion and coin).	Exports from United Kingdom (inclusive of bullion and coin).	Visible Balance favourable to Dominions (plus); Unfavourable to Dominions (minus).
Canada	38.7	31.3	+ 7.4
Australia	70.5	33.0	+37.5
New Zealand	44.9	18.7	+26.2
Union of South Africa	62.1	27.7	+34.4
Irish Free State	43.1	44.3	- 1.2
Newfoundland	2.2	0.9	+ 1.3
British India	52.0	61.6	- 9.6
Southern Rhodesia	2.3	2.6	- 0.3
Total	315.8	220.1	+95.7

In view of interest payments due, however, and other charges which enter into the balance of international payments, the imports of a creditor country will normally exceed its exports. The case for asserting that the Dominions get better treatment in the home market than the Mother Country obtains in the Dominions may therefore be more strongly emphasised by the following figures which show the proportion of imports which the Dominions buy from Great Britain as compared with the proportion of their exports which they sell to the Mother Country:—

Country.	Ratio of Exports to Total Exports.	Ratio of Imports from Great Britain to Total Imports.
Canada	37*	18.9
Australia	49.8	39.4
New Zealand	87.7	49.4
India	27.9	35.4
South Africa	43.4	43.3
Irish Free State	92.2	80.0

* This figure would be larger if Canadian exports via the United States could be included.

The South African figures would show a much larger percentage under the heading of exports if coin and bullion had been included. Of the larger British countries, India alone shows a ratio of British imports to total imports which is greater than the ratio which her exports to Britain bear to her total export trade; and paradoxically enough India is a British country which has not a general system of preference for British goods. Such figures give no ground for Dominion complaints that we have dealt harshly with their products.

The World Conference.—It is good news that the United States has accepted the invitation of the League of Nations to participate in the World Economic Conference. It is also important that she has agreed to appoint representatives to serve not only on the committee concerned with general arrangements, but also on the two committees on economic and monetary questions respectively. Some misgiving has been caused by the fact that in the

correspondence it has been revealed that while the Conference will deal with the question of silver, which is of special interest to the United States, the questions of reparations, war debts and tariff rates will be excluded. This, as Senator Borah has properly observed, certainly seems like Hamlet without the Prince of Denmark, for there are very few who imagine that the sinking commerce of the world can be rescued in a silver-bottomed lifeboat, or, indeed, that anything important can be done unless trade barriers are reduced and international payments relieved from the burden of the debts. But on closer inspection the limitations are not as serious as they appear on the surface. The solution of the reparations problem has already been found; the debt question is one to be settled between the parties concerned and not at a public gathering of fifty States, while as regards tariffs there is a clear distinction to be drawn between tariff policy and actual detailed rates of duty. The former is specifically included in the agenda of the Conference as drawn up at Lausanne. The present correspondence implies that while it will be possible to discuss the general trend of future policy and the basis on which reciprocal or general agreements regarding tariff policy may reasonably be concluded, the question of specific rates will not, and indeed cannot, be handled at a conference of this kind. There is almost no general convention regarding tariff rates on which the whole world could agree, but it is essential that the way should be cleared to permit those countries which are ready and willing to do so to start making agreements with one another for reduction. The fitting of such understandings as the recent Dutch-Belgian agreement, or the relation of the decisions, if any, which may be reached at Ottawa, into the general tariff arrangements of the world are matters which clearly must be promptly discussed and settled if any headway in removing trade barriers is to be made. The date on which the Conference is to assemble has not yet been disclosed, for the meeting requires careful preparation; but the world is anxious that the curtain should rise on this act of the drama as soon as possible.

Mr de Valera's Troubles.—While, at Ottawa, British and Irish Free State delegates are sitting together round the family council table, the Dail and the Senate are busy with questions arising out of the deplorable "war" between Dublin and Downing Street. Some indication of the damage done to Irish exporters by Britain's latest tariff step is given by the summoning of the Dail from holiday, for a special session, in which the chief business is to discuss a Government Bill which proposes to provide £2 millions for the purpose of "finding new markets" for agricultural exports and for establishing new industries in the Free State. How and where a substitute for the British market can be provided or bought is not clear, nor have any plans been published for the fruitful expenditure of £2 millions. Meanwhile, the Senate, reflecting without doubt the feelings of men of goodwill in both countries, is sick and tired of the futile impasse, and on Wednesday, by a vote of 17 to 12 called upon Mr de Valera to reopen negotiations on the question of the annuities. In the Senate debate the farmers' leader, Mr Counihan, predicted that "if the present policy of the Government is continued, the whole social and economic structure of this State will be shaken to its foundations, and it may lead to revolution." A strong Ministerial reply, defending Mr de Valera's policy, failed to avert the Senate's vote of reproof. How long will it be before common-sense opinion in both countries insists upon an end being put to the present intolerable situation? Is it not possible that the delegations of the two countries at Ottawa, separated from the hurly-burly of home politics, may find it possible to pave the way to peace?

The I.L.P. Secedes.—For a long time past the Independent Labour Party has been threatening to part company from the Parliamentary Labour Party, and it has now taken this definite step. The decision was made on Sunday last at the I.L.P.'s Conference at Bradford, a disaffiliation resolution being supported by 241 delegates and opposed by 142. The news will probably be received by

official Labour leaders with mixed feelings. The Labour Party will suffer some, though not a very great, loss in numerical strength. But it will also be rid of the serious embarrassment of nurturing within its own fold the disciples of an advanced Socialism to which the official platform does not subscribe. Remembering the saying that "He who is not with us is against us," the Labour leaders may easily prefer the open hostility of the I.L.P. to its dubious support. As for the future of the I.L.P., Mr Maxton has more courage than discretion when he promises to win for it a parliamentary majority in the near future. The size of the minority in the Bradford voting suggests that Mr Maxton will carry by no means all the members of his party into the new battle which he is to wage. This impression is confirmed by the news from Glasgow, from which stronghold of revolutionary Socialism the Bradford disaffiliation decision is being vigorously questioned. Apparently before Mr Maxton can make war on the Labour Party, he must first engage in a war between two sections of the I.L.P., and it is by no means certain that his triumph will be complete in this first engagement.

Mr Roosevelt on War Debts.—The war debt question is very much "in the air" in America. For, following Senator Borah's radio talk (which we discussed last week and to which our New York correspondent makes reference on a later page of this issue) Mr. Franklin D. Roosevelt, the Democratic candidate for the Presidency, broadcast a speech upon the same subject on Monday. Mr Roosevelt's main points, so far as they have been cabled over, were as follows:—(a) the debt problem was complex, but has been brought measurably nearer to solution by the Lausanne agreement; (b) that the Republicans, at the same time as demanding payment, had, by their high tariff policy, made payment impossible and rendered the moratorium inevitable; (c) that the Democratic programme stood for lowered tariffs which would make some payment possible. In these American election debates it is not for us to take any part. But as interested, if detached, listeners we cannot fail to follow with growing satisfaction the steady approach towards realism, which marks the successive contributions of America's leading statesmen; and the fact that they are all of necessity constrained to think at the moment in terms of American votes, and the assumption that they are pretty shrewd judges of American public opinion, leave us still more inclined to draw hopeful conclusions as to the reasonably near possibility of a settlement, which will accord with the present emergency requirements of the world in general and America in particular.

War Loan Conversion Result.—We understand that official figures of the amount of 5 per cent. War Loan actually converted up to July 31st will not be published until next week. The delay is a reminder of the vast volume of work which has been so successfully handled by the staff of the Bank of England and their emergency assistants. Meanwhile, we do not propose to enter for the guessing competition which has been so popular a pastime in the City this week; but are content to await the official announcement with full confidence that the result is a resounding success, and that the amount left to be redeemed will prove to be of definitely manageable proportions. A warning is perhaps needed by those who attempt to base their guesses of the result upon the latest revenue and expenditure returns which are made up to Saturday, July 31st. For this return it may be deduced that War Loan conversion expenses had totalled about £12½ millions. It might appear that, since the cash bonus to converters was £1 per cent., a simple calculation would give £1,250,000,000 as the amount converted up to Saturday. This, however, is fallacious. On the one hand, the figure of £12½ millions presumably includes brokerage and other expenses; while on the other hand, it has to be remembered that the £1 per cent. bonus was not payable until two weeks after assent to conversion had been handed in. In any case it is probable that actual conversions have been far in excess of any surmise based upon this Treasury return.

Mr Wells on Democracy.—Mr Wells' paper to the Liberal Summer School, in common with several of the other brilliant addresses given at Oxford last week-end, dealt with the new issues raised by the stupendous increase in the scale of political and economic problems—a change which has been slowly developing for a long while, but has suddenly been thrust on an unprepared world by the Great War. Mr Wells' imaginative mind conceives that, if the new World State is to be permeated with liberal ideas and to be the setting of a great era of human liberation, there must be progressive and scientific world planning and the inauguration of a gigantic movement in the general mind leading to irresistible political action. This calls for the reorientation of the objectives, and indeed of the whole lives, of those calling themselves Liberals to a world plan and to the discipline and education needed to carry it out. Whether this ideal is helped by saying that it requires the formation of a Liberal Fascist or a greater Communist Party—a Western reply to Russia—is of no great importance. But Mr Wells is getting down to a real problem of the modern world when he suggests that democracy in the sense of mere political freedom is not enough, and that "there must be a systematic organisation of the will and ideas of public-minded masterful people to handle the problems of the modern State"—a view that is even greater in relation to world problems than to those of a single country. The idea has emerged in many forms in recent years—one of them is the conception that has attracted a good deal of attention in recent years of an economic general staff, but watered down in practice under the influence of our Cabinet and Parliamentary traditions to the present Economic Advisory Council. The bureaucratic character of the present German Government is an example of a different way of trying to make good the shortcomings of the democratic machine as an instrument of governing the modern State and other examples could be given. Mr Wells' paper is interesting not for his solution—for he did not propound one—but for the way in which he propounded a vital problem.

The Gran Chaco.—After a pause of two years, the dispute between Bolivia and Paraguay as to the ownership of the Gran Chaco has broken out again, and already the sporadic frontier hostilities have begun. The origin of the dispute runs back to the days before much of the interior of South America had been properly mapped and surveyed, and before the delimitation of the frontier between the two countries, for this is the reason why the ownership of this territory has never been definitely determined. In itself, the Gran Chaco is hardly worth claiming, for it is a swampy plain, flooded in winter, and infested with all the minor insect pests. The real cause of the trouble lies in Bolivia's lack of access to the sea, for at present she is dependent either on the Chilean port of Arica or upon the Paraguay River. On this river Bolivia already possesses a small port, but this is not accessible to large boats, whereas if she established her claim to ownership of the Gran Chaco, she would be able to acquire a port of a reasonable size. The threat of war has already evoked a joint appeal for peace from the United States, Mexico, Cuba, Colombia and Uruguay, and also a telegram from Señor Matos, President in Office of the Council of the League of Nations. Señor Matos recalls the terms of the 1928 settlement, in which both nations promised to have recourse to pacific means in future, and also urges the two Governments to lend themselves to the moderating action of friendly nations. Paraguay has invoked Articles 10 and 11 of the Covenant, but Bolivia claims that the facts have already placed Paraguay outside the law and she has obliged Bolivia to defend herself energetically. It seems a thousand pities that matters should be proceeding to this extremity, and we are glad to note that the British Government has joined in the appeal for peace. It should surely not be impossible to satisfy Bolivia's natural claims to access to the sea, whether by the system of "free zones" or otherwise, and thereby avert a conflict, which, in the present unstable state of South American politics, might lead to serious developments.

The Hungarian Reconstruction Loan.—Two statements were issued yesterday in relation to the Kingdom of Hungary 7½ per cent. Reconstruction Loan, which was, of course, issued under the auspices of the League of Nations. The first takes the form of a *communiqué* by the Hungarian Government to the recently constituted League Loans Committee, of which Sir Austen Chamberlain is chairman. The main points in the statement are that it is now necessary to suspend the monthly transfer of foreign exchange for the service of this loan; but that the interest service can be maintained if the trustees exercise their powers to apply the reserve fund to meeting the coupons before providing for redemption. In this connection it is mentioned that the amortisation already effected is ahead of schedule. The Government, therefore, hopes that the loan interest may be assured up to August, 1933, and promises to resume monthly transfers as soon as circumstances permit. The second statement comes from the League Loans Committee, and recommends the proposal of the Government for the acceptance of the bondholders. In doing so the Committee emphasises that Hungary recognises its obligations in connection with this loan in their entirety, and has shown its goodwill. Bondholders can hardly do otherwise than acquiesce.

Cotton Trade Wages.—Our Manchester correspondent writes:—The net result of the happenings regarding the wages situation in the Lancashire cotton industry during the past week is that the representatives of the employers and the operatives are still at grips attempting to reach a settlement to be applied to the whole of the county. Joint negotiations between the Cotton Spinners' and Manufacturers' Association and the Northern Counties Textile Trades' Federation were held on Friday last and resumed on Tuesday, when they were again adjourned until August 5th. During the week it was officially announced that both sides had made definite proposals. The employers had suggested a wage cut of 25 per cent. off the list rates, equal to approximately 2s. 9d. in the £, and the operatives had tabled a counter proposal of 12½ per cent. off the lists, or roughly 1s. 4d. in the £. The employers, however, had made it known that they would amend their suggestion in favour of the operatives if the trade union leaders would give a guarantee that there was a possibility of a definite settlement being reached. This they could not do, and at that stage the discussions were adjourned. In the meantime six district associations of the Operative Weavers' Amalgamation, which is the largest trade union affected by any wage change, requisitioned a meeting of the Operatives' General Council to consider a resolution calling a strike of all operatives throughout the county against the termination of agreements and the imposition of wage reductions. This meeting was held on Wednesday, when the resolution was discussed, and also a recommendation by the Central Committee that the rank and file should leave the whole matter in its hands. It was eventually decided that the Council meeting should stand adjourned and that the whole question should be left in the hands of the Central Committee. If the strike resolution had been carried it would have jeopardised the continuation of the joint negotiations.

French Cost of Living.—A sharp controversy, writes our Paris correspondent, is in progress in the Paris Press as the result of an official declaration by M. Henri Roy, the *rapporteur* of the Senate Finance Commission, questioning the accuracy of the French official index figures representing wholesale and retail prices. The official returns issued by the Government statistical department suggest that the cost of living has fallen in this country during the last eighteen months by 14 per cent. (non-weighted), and that wholesale prices (weighted figures) have dropped

10.8 per cent. and retail prices 10½ per cent. M. Roy insists, on the contrary, that not only have French prices not come down, but that they are actually higher than they were in 1929, and particularly meat prices. The *rapporteur* asserts that since 1929 the wholesale prices of rice, cheese, mutton and veal have declined respectively by 42 per cent., 15 per cent., 22 per cent. and 7 per cent., while the retail prices have simultaneously increased 5 per cent., 3 per cent., 5 per cent. and 27 per cent. Tradesmen who have been questioned by the newspapers assert that the confusion is largely due to the fact that the working classes now refuse to buy the poorer qualities of foodstuffs they consumed before the war, and that this has falsified certain statistics at the base. Non-commercial critics suggest that another explanation may be that poorer qualities of provisions are now, for profiteering reasons, being sold at the same rates as the better ones, and urge that the Frauds Department of the Prefecture should investigate the facts.

The Deep Sea Fisheries.—The second quarter of the year was anything but a satisfactory period for the deep sea fishing industry, for despite smaller landings there was a marked falling off in the average values when ordinarily, with demand normal, the opposite is the case. Nevertheless the wet fish (British and foreign-caught and imports) had a first-hand value exceeding four millions sterling. The following summary is abstracted from the official returns of the Ministry of Agriculture and Fisheries, and relates to wet fish only:—

April-June	Weight (in cwt.).		Value.	
	1931	1932	1931	1932
British caught:—				
England and Wales...	3,381,251	3,358,784	2,777,522	2,419,540
Scotland	1,289,417	1,211,216	841,222	722,293
Shell fish	...	...	103,674	89,933
Total	4,670,668	4,570,000	3,722,418	3,231,766
Foreign landings	511,840	378,553	263,445	179,198
Imports	357,018	479,080	834,325	687,415

Although the quantity of British-caught wet fish landed in Great Britain during the quarter was only slightly less as compared with 1931, the aggregate value (including shellfish) was nearly £500,000 down, equal to 13.1 per cent. Consequently, the average values realised were much less. In the case of England and Wales the average was 14s. 1d. per cwt. and in that of Scotland 11s. 11d. per cwt., as against 16s. 5d. and 13s. per cwt. respectively in the April-June period last year. The landings by foreign-owned fishing vessels also showed substantial declines both in weight and value. On the other hand, the quantity of wet fish imported from abroad was much larger than a year ago and the aggregate realised considerably smaller. This latter feature may in some measure be due to the fact that where fish is liable to the 10 per cent. import duty landing charges, commission, etc., are deducted to ascertain the value on which the duty is to be paid. Our exports of British-caught wet fish during the quarter were heavier and the value slightly less than a year ago, the quantity being 150,681 cwt. and the f.o.b. value £195,670, as against 118,511 cwt. and £200,794. We also exported fish, cured or salted, chiefly herrings, to the value of £342,862, as against £493,047 in the second quarter of last year. At the same time, imports of cured or salted had a value of £39,624, as compared with £285,333, and canned fish £621,027, against £992,635—in each case a decline of more than one-third. The re-exports of all kinds were valued at £131,256, against £261,702, a decrease of just upon 50 per cent. The effectiveness or otherwise of the new import duty may be gathered from a study of the foregoing. The British Trawler Owners' Federation, however, regard it as inadequate and are pressing for a substantial increase.

The 1930 Census of Production.—Volume XV. of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the woollen and worsted, fellmongery, leather and

saddlery trades. The following summary shows the gross value, the net value (gross value, less cost of materials and work given out to other firms), and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee	
	1924.	1930.	1924.	1930.	1924.	1930.
Woollen and worsted	Thous. £ 193,924	Thous. £ 111,572	Thous. £ 55,064	Thous. £ 36,473	£ 194	£ 164
Fellmongery	4,718	3,186	873	516	363	219
Leather	32,215	27,295	8,444	7,215	278	258
Saddlery, travelling bags and other leather goods	5,112	4,795	2,302	2,201	149	151

The returns for the woollen and worsted industries reveal a substantial decline in the volume of production between the two census years. The output of tops decreased from 285,529,000 lbs. in 1924 to 244,457,000 lbs. in 1930; and the weight of yarn, at 371,546,000 lbs., show a reduction of 181,033,000 lbs. Similarly, the quantity of woollen and worsted tissues made declined from 249,400,000 square yards to 178,781,000 square yards and from 149,004,000 square yards to 105,990,000 square yards, respectively. Taking the square yardage of tissues of all kinds manufactured for sale and on commission, there was a fall of 29 per cent. In a quantitative comparison between the output in the two census years, allowance should be made for the stoppage of work of two months in 1930. The heavy fall in the gross value of the total output is due chiefly to the reduction in the cost of materials used from £134,220,000 to £71,548,000. The leather industry, too, has experienced a considerable setback. The total weight of hides for sole leather returned for 1930 was nearly 10 per cent. less than the total for 1924.

Shipping Freight Index.—The general level of whole-cargo shipping freights, as measured by our index number, fell by 3.8 per cent. in July, following a decline of 5.3 per cent. in the previous month. The current figure, 80.1, is 8.2 per cent. lower than that recorded for July of last year. Details of the index number are given below:—

AVERAGE 1898-1913=100.					
	Average, 1913.	July, 1931.	May, 1932.	June, 1932.	July, 1932.

South America	123.4	86.3	81.6	77.1	75.7
India	106.3	87.6	93.5	93.1	90.8
Far East and Pacific	117.4	87.8	88.8	82.3	79.5
Australia	127.9	95.2	88.1	76.6	71.2
Total	116.3	87.3	88.0	83.3	80.1

The freight market generally remained in a depressed state, business being restricted and tonnage in over-supply, notwithstanding heavy layings up. Rates for coal to Bay and Mediterranean ports suffered a setback, ore chartering homewards was negligible, and a comparatively small amount of grain business from the Black Sea was put through at exceptionally low figures. The North American market was again extremely disappointing, while chartering from the Plate was less active, with rates showing a weaker tendency. Enquiry from the Far East was slightly better, but the grain trade from Australia to Europe was virtually a dead letter. Movements of the various sections of our index number are shown in detail below:—

AVERAGE 1898-1913=100					
	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	74.7	+ 3.4	South America—		
Ray—outwards	93.6	— 5.5	outwards	66.1	— 1.2
Ray—homewards	82.3	...	South America—		
Mediterranean—			homewards	85.2	— 1.6
outwards	85.7	— 3.8	India—outwards	86.3	— 2.1
Mediterranean—			India—homewards	95.2	— 2.8
homewards	84.9	— 1.7	Far East, &c.	79.5	— 2.8
North America	80.9	— 6.5	Australia	71.2	— 5.4

Expressed as a percentage of the average for 1913, the total figure of our index number for July works out at 68.9, compared with 71.6 in June and 75.0 a year ago.

UNITED STATES.

Chicago Board of Trade — Prices — Railways — R.F.C.
— Banking Position.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 27.

HOPEFULNESS over trade improvement for the autumn finds reflection in rising bond, share and commodity markets, but it is virtually without support in the current business news. Bond prices are at their best for the year, and the rise in shares has lifted them above the peaks reached on the short-lived June recovery. The percentage gain from the lowest levels of early July amounts to about 23 per cent. for the leading shares. In commodities the principal strength has been in livestock, chiefly hogs and cattle, sugar, oil and foods. The rise in wheat and cotton has been of recent origin.

Wall Street much regrets that at this stage anything should be done to hamper the markets, and the Government is held to have made a *faux pas* in allowing the Federal Trade Commission to order the closing for sixty days of the Chicago Board of Trade. However, the order merely means that the case will go into the courts, where it is likely to remain for two or three years. No one, including Government officials, expects actual closing of the great wheat trading exchange. The root of the trouble largely in personal animosities, growing out of reliance on the part of Federal Farm Board officials at sentiment on the part of Chicago and other grain exchanges at the whole idea of Governmental interference with free marketing of grain. Certainly the Administration has no wish to stop hedging operations in the Chicago market in the midst of the wheat marketing season.

As will be seen from the following table, the weekly index of wholesale prices compiled by the Bureau of Labour Statistics continues to rise:—

	Week ending				
	June 18	June 25	July 2	July 9	July 16
All commodities	63.7	64.0	64.4	64.8	65.0
Farm products	45.4	46.4	46.9	48.1	48.7
Foods	58.5	59.5	60.1	60.7	61.2
Hides and leather products	71.2	70.1	70.0	69.2	68.5
Textile products	53.6	53.5	53.3	52.9	52.4
Fuel and lighting	71.6	71.8	72.6	73.3	72.8
Metals and metal products	79.9	79.8	79.8	80.1	80.3
Building materials	70.9	70.7	70.3	70.7	69.7
Chemicals and drugs	73.0	72.9	72.7	73.0	73.0
Housefurnishing goods	75.7	75.7	75.7	75.6	75.6
Miscellaneous	64.0	64.2	64.5	64.2	64.3

Some fillip to interest in the share market has been given by the decision of the Interstate Commerce Commission to permit the merger of Eastern railway lineage (outside New England States) into four systems. The permission was granted on applications from the four systems—the New York Central, the Pennsylvania, the Baltimore and Ohio and the Chesapeake and Ohio-Nickel Plate-Erie (Van Sweringen Lines)—but with regard to the Pennsylvania an order has been given to dispose of holdings in the New Haven and the Boston and Maine, the two principal roads serving New England territory.

While the Pennsylvania Railroad officials have not yet accepted the terms, Wall Street expects them to do so. In any event, consummation of the mergers will take a great deal of time, as security holders of the smaller lines will have to consent to sell or exchange their stock for an interest in the enlarged systems, and opposition among some classes of shippers and ocean port rivalries will have to be contended with. Moreover, the trainmen's unions are showing signs of hostility, on the fear that consolidation will mean fewer jobs. Doubtless personnel will be reduced in the event of mergers, for the necessity for elimination of duplications in facilities and personnel is one reason for the merger movement.

Railroad-earning statements published for June show no improvement over the May reports. The first fifty

roads to report reveal a drop in net railway operating income of around 70 per cent., as compared with a year ago, which means that only a few roads are earning enough to cover interest charges. The July showing will be no better, in spite of the wheat harvest, since further appropriations for farm relief by Congress and the rise in prices of some farm products is stiffening farmers in their desire to hold wheat on the farms, much to the loss of the railroads. Industrial company reports for the second quarter are also, on the whole, discouraging, but some are furnishing pleasant surprises.

Both General Motors and United States Steel Corporation have published their statements. The former was able to earn a few cents a share on its common stock, but the Steel Corporation in the second quarter had the largest loss in its history. The deficit before preferred dividends was over \$20,000,000. Excluding depreciation charges and special charges to ore properties, the out-of-pocket loss was a little more than \$3,000,000, to which must be added over \$1,000,000 for subsidiary company bond interest and the \$6,304,000 for the quarterly preferred stock dividend.

Although the Steel Corporation voted the regular quarterly dividend of \$1.75 a share on the preferred shares, the Chairman, Myron C. Taylor, called attention to the fact that nothing had been earned for the preferred shares since the third quarter of 1931, and that total deduction from surplus for preferred and common dividends and operating losses had amounted to \$73,063,000. He concluded with the observation that "it is apparent that improvement in the business and earnings must in future determine dividend action on the preferred stock."

Weekly reviews of the steel industry indicate no change from an operating rate of 16 per cent. of capacity, but sentiment seems to have improved on the greater stability of prices. Railroad traffic fails to rise, and following a meeting in New York this week of the association of railway executives a public statement was made. It called the public's attention to the seriousness of the situation, pledged utmost efforts to secure operating efficiency, and asked for consideration in the way of legislation to abate the encroachments of competition from motors, airplanes and waterways.

With the selection of Atlee Pomerene to head the Reconstruction Finance Corporation, it is expected that loans will increase. Mr Pomerene's appointment brings the representation of the Democratic Party equal to that of the Republicans. He is known as an able man, but Wall Street, nevertheless, regrets the withdrawal of Eugene Meyer as chairman *ex officio* of the R.F.C. States and municipalities have been particularly clamorous for aid from the R.F.C., and this week the Treasury announced its first financing to supply funds to the Corporation, following the new appropriations. Two-thirds of a two- and four-year note issue for a total of \$650 millions was devoted to that purpose. The issue was largely over-subscribed.

The Press is full of rumours of Communist threats to wreck banks through the spreading of tales of their instability, but no serious heed is given to them in the financial district. Bank failures in June mounted to 144, but there have been few this month, and rising agricultural prices are encouraging for the maintenance of solvency. Member banks of the Federal Reserve system continue to

deflate their loans and investments, but not at a rapid pace, and the stiffer tone in commodities may be attributed to the first effects of the long-conducted drive of the central banking system for credit expansion.

National banks are applying in large numbers for the privilege of issuing their currency under the new law granting the currency circulation privilege to national banks on the security of United States Government 3½ per cent. bonds, a privilege heretofore confined to Consols and Panama Canal bonds. National banknote currency is bound to expand somewhat, but with the present state of demand for currency it will merely mean corresponding reduction of Federal Reserve notes. The credit position will improve slightly on the fact that National banknotes require less reserves than the Federal Reserve banknotes used by the banks.

In well-informed quarters the declarations of Senator Borah on an international conference looking to reduction in debts are well liked. Senator Borah is often a half-year or so ahead of public opinion, and his stand is regarded by some observers to forecast the public's attitude.

FRANCE.

Budget — Caisse d'Amortissement — Trade and Production.

(FROM OUR CORRESPONDENT.)

PARIS, August 3.

It is understood that at the Cabinet and Ministerial Council to be held to-day and to-morrow (before Ministers are released for a brief holiday) decisions will be taken for further large reductions of expenditure to be imposed on the various Government Departments for the period covered by the pending 1933 Budget. According to the demands for credits already received by the Ministry of Finance, the initial deficit to be faced will be in excess of 7,000 million francs so far as the Budget estimates for the coming financial year are concerned. A substantial part of this will be got rid of during the usual preliminary cutting down of departmental estimates before the actual drafting of the Finance Bill for the year. It is anticipated that this will still leave something like 5,000 million francs to be found to meet existing requirements. Judging from the fiasco which attended the new Government's first attempt to tackle the financial problem, and in view of the fact that the new Chamber, like its predecessors, possesses nothing in the way of a stable majority, the task will not be an easy one.

France, like every other European country, is not only living beyond her means, but her income—at least for the time being—is diminishing instead of increasing, so that any serious amount of additional taxation is recognised as unthinkable. Drastic retrenchment of public expenditure is therefore imperative. In theory, this is admitted freely by all shades of opinion; but no political party or group reveals the least intention of translating the idea into practical accomplishment. The world economic crisis, it is evident, has been only partially responsible for the curious deadlock which the French national finances seem to have reached. The dominating cause is to be found in the fact that every one of the series of post-war Ministries has been compelled, in order to continue its existence, to subordinate its financial conceptions to the need for securing Socialist and (which is much more important) semi-Socialist support. Owing to the time and energy wasted in compromising or other placating an ever-active Opposition, the real business of statesmanship has been neglected and replaced by a haphazard policy of "muddling through." The result is now obvious.

The Caisse d'Amortissement, in its fifth annual report, covering its operations in 1931, sharply reproaches the country's responsible leaders for having neglected to carry out, during the past year, at least part of their Renten conversion programme. "The directors," the report says, "cannot omit remarking that the excellent standing of the State issues, particularly during the first months of 1931, coinciding with the abundance of available funds

in the hands of the Caisse, capable of meeting all demands for reimbursement, and even anticipating them, would have ensured from that period the success of the conversion of the 5 per cent. and 6 per cent. issues. The Board keenly regrets that the pressing efforts made *vis-à-vis* the Government, in opportune time, by the directors of the Caisse, proved fruitless, and that the conversions, to which the Caisse had constantly directed its action, were adjourned. It desires to declare that the conversions in question should be carried out without delay as soon as the indispensable technical conditions shall again exist."

The report states that the total debt extinction since the Caisse has been in existence, down to December 31st last, amounted to "nearly 20,000 million francs, taking into account stock which matured and was not effectively reimbursed on December 31st last, but of which the Caisse has undertaken reimbursement." Renten bought in on the Bourse during 1931 totalled only 734 million francs, "owing to quotations during the year having almost continually exceeded normal limits of buying in by the Caisse." (Total extinctions during 1929 and 1930 represented a nominal capital of 9,564 million francs, and resulted in an annual economy to the Budget of 490 million francs.) Total reduction of debt carried out by the Caisse during the year, however, was 4,907 million francs, the bulk of this representing Treasury Bonds, Six-Year Defence Bonds, certain Crédit National Bonds and other descriptions formerly covered by the Budget but handed over to the Caisse d'Amortissement some time ago in connection with steps which it will be recalled were taken with a view to balancing a recent Budget. During the year the Caisse also redeemed 1,201 million francs of its own funded debt.

Iron and steel production figures for June, which were issued on Monday by the Comité des Forges de France, show practically the same totals as for the previous four months. Total output of pig iron is returned as 452,000 tons, against 459,000 tons in May, 691,000 tons in June last year, and monthly averages of 864,000 tons in 1929 and 832,000 tons in 1928. Crude steel output was 468,000 tons, against 445,000 tons in May, 650,000 tons in June last year, and monthly averages of 898,000 tons in 1929 and 792,000 tons in 1928. Blast furnaces in activity numbered 79 (unchanged), against 121 in June last year.

Coal output in June is returned as 3,838,000 tons from the French mines during the 26 working days, as against 3,770,000 tons in May (24 days), 4,191,000 tons in June last year, and monthly averages of 4,586,000 tons in 1930 and 4,577,000 tons in 1929. Average daily output, which was 157,102 tons in May, dropped to 147,619 tons in June, against 161,210 tons in June last year. Total labour engaged was 259,493 units, against 261,624 in the previous month and 284,060 in June last year. June output of the French mines was supplemented by 881,000 tons from the Saar district, against 846,000 tons in the previous month, and monthly averages of 1,103,000 tons in 1930 and 1,182,000 tons in 1929. Output of metallurgical coke by the colliery plants was 258,849 tons, against 269,740 tons in the previous month and 368,711 tons in June, 1931.

The foreign trade returns for the first half of the year indicate that, in comparison with the corresponding period of 1931, French imports from Great Britain dropped from 2,098 million francs to 1,254 million francs, while exports to the United Kingdom declined from 2,630 million francs to 1,108 million francs. Imports from Germany were 2,001 million francs, against 3,321 million francs, and exports to that country 858 million francs, against 1,568 million francs. Exceptionally, French exports to the United States showed a marked improvement, and are returned as 486,238,000 francs, against 288,619,000 francs. During recent years an appreciable percentage of the French adverse balance on foreign trade has been cancelled out, as a rule, by a surplus of exports on exchanges with the colonies and protectorates. During the first six months of last year these resulted in a surplus of 824 million francs. During the corresponding period of this year exports to the

colonies were 2,989 million francs (against 3,772 million francs), and imports into France 2,703 million francs (against 2,948 million francs), thus bringing the favourable balance down to 286 million francs, to offset an adverse balance of 5,482 million francs on French trade with the rest of the world.

Imports from Soviet Russia during the six months were 264,098,000 francs, against 249,697,000 francs during the first half of 1931, exports of French goods totalling only 28,044,000 francs, against 11,047,000 francs. This shrinkage has been due entirely to the lack of obtaining cheap credit facilities in France. The Soviets demand from 18 to 24 months' credit. This, French exporters insist, forces them, owing to the high money rates demanded here, to increase their prices by from 30 to 40 per cent., and thus makes it impossible for them to compete with British, German and Italian manufacturers. Russian orders to a total of \$2,000,000, which were destined to this country during the first three months of the current year, had to be refused for this reason, and went to Germany and other countries instead. The Soviets have shown their desire to increase commercial relations with France by offering to place orders here on 16 to 18 months' credit. Some sixty French firms have accepted this condition, and during the past three months have secured Soviet orders for 30 million francs. It is understood that, if credit conditions improve, the Soviets will place largely increased orders in France, including 150,000 to 200,000 tons of steam hammers, lifting tackle, presses, locomotives, shipping, etc., and 150 million francs of aluminium, copper and lead.

GERMANY.

Political Situation — Foreign Indebtedness — Karstadt A.G.

(FROM OUR CORRESPONDENT.)

THE Reichstag elections have demonstrated that Herr Hitler has reached the apex of his parliamentary power. As will be seen from the following table his gains over the figures of the Prussian Diet elections are so small that they may be described as a "standstill":—

	DISTRIBUTION OF VOTE BY PERCENTAGES.		
	Reichstag election of Sept. 14, '30.	Prussian Diet election of April 24, '32.	Reichstag election of July 31, '32.
National Socialists	18.3	36.29	37.3
Social Democrats	24.5	21.18	21.6
Communists	13.1	12.78	14.3
Catholic parties*	14.9	15.3	15.6
German Nationals	7.0	6.9	5.0
German People's Party ...	4.5	1.51	1.0
State Party	3.8	0.87	0.4
Economic Party	3.9	1.84	1.4
Moderate Conservatives†	5.7		

* Centre and Bavarian People's Party.

† Christian-Social, Landvolk and Landbund.

The National Socialists thus scored in the Reichstag election only a slightly higher percentage than they obtained in the election for the Prussian Diet. The slight increase which they secured over the Prussian Diet vote reflects the further disintegration of the middle parties, but they are unlikely to gain further support from this quarter in the future. The National Socialists polled 13.7 million votes, the Social Democrats 7.9 millions and the Communists 5.3 millions. Hence the Communists and Social Democrats together received almost as many votes as the National Socialists, whose attempt to make inroads on the "Marxist front," that is, on the electoral following of the two Socialist parties, again completely failed. Those Communists who strayed to the National Socialists at the elections for the National President and for the Prussian Diet have obviously returned to the Communist fold. Herr von Papen gave the Communist Party an excellent election slogan when he designated the battle against Communism as his most important aim, and when he also appeared at times inclined to inject this fight into foreign politics. This alone seems to explain why the very active battle of the Social Democrats against the Government and against the National

Socialists brought them only a modest increase as compared with the Prussian elections, in their share of the total votes. Herr Hitler's political position has grown much worse, since a party such as his constantly requires new successes in order to maintain its influence on the masses. A further disadvantage for him lies in the fact that the election campaign disclosed the essential antagonism between National Socialists and German Nationals, so that the gulf between Herr Hugenberg and Herr Hitler is steadily widening.

The question of the day is what form the political situation will assume as a result of the election. The Government announced that the composition of the Reichstag must conform to the shift in public opinion which has taken place since 1930. The Government did not commit itself in favour of any particular party, and hence could not be defeated in the election, and it still regards its position as unaffected. But in the four weeks within which the Constitution prescribes that the Reichstag must be convoked after an election, the von Papen Cabinet will have to do some very intensive political work. For if events take their own course, an untenable situation will emerge very soon after the convening of the Reichstag. When that body comes together the Emergency Decrees issued on the basis of exceptional constitutional provisions will have to be submitted to it, and if the Reichstag demands that they be rescinded, they become ineffective. It will thus rest with the Reichstag to make a decision regarding the continuance of the Emergency Decrees directed against Prussia, which sequestered the independence of the largest German State, and also on the continuance of the economy Emergency Decrees which sharply reduced all expenditures for pensions, poor relief, etc. The Socialists will certainly put forward resolutions aimed against these decrees, and the Communists will vote for their rescission. The question is whether the Centre also will not vote at least against the political Emergency Decrees. And, on the other hand, will the National Socialists consent to leave the economy decrees in existence, after having defended themselves during the election campaign against the accusation that they had been in favour of them?

It is obvious that the Government will have to try to bring about an understanding between the Centre and the National Socialists. But that understanding will be very difficult. It is true that the Centre insists that the National Socialists shall accept their share of responsibility, but it is not willing to leave to them the Ministries controlling the Police and the Army. But the National Socialists demand on principle the sole domination of the country, and above all of the armed forces. All negotiations aiming at a compromise between the Centre and the National Socialists have so far been wrecked on this opposing standpoint, and there is little indication that the situation has altered.

But even if all negotiations regarding a joint participation of these two parties in the Government of the Reich or of Prussia should fail, it is still possible that they would be willing at first to tolerate the existing Government and to help it avoid the first parliamentary reefs. This would be equally hard for each party, but it might result from the fact that the Centre desires to avoid the employment of unconstitutional methods, and that the National Socialists are perhaps less eager to assume power in the face of the coming winter than they pretend to be. If all these efforts should fail, the von Papen Government would have no other recourse than to dissolve the Reichstag again and thus gain at least another breathing space.

According to the most recent calculations, the amount of German short-term obligations to foreign countries prolonged by the standstill agreement appears to be smaller than was supposed a short time ago. All former estimates of Germany's indebtedness abroad were based on reports from German debtors, who believed for various reasons that it was to their interest to show heavy debts. Under the standstill agreement of last January, however, the foreign creditors were obliged to file with the Gold Discount Bank a list of their claims. As *Der Deutsche*

Volkswirt is able to report in its latest issue, these claims amount to somewhat less than four milliard marks. In this estimate the foreign currencies have been calculated at the quotations of February 29, 1932. If the English pound and the Swedish crown had not abandoned the gold standard Germany's short-term obligations to foreign countries would be almost 500 million marks higher. Naturally, however, this sum will be saved by Germany only if the pound and crown remain at their present levels when the debts are paid. The total sums repaid by Germany since July, 1931, probably reach 1½ milliard marks, so that the rate at which these repayments have been made in the first year of the standstill period must be described as very fast. The outlook for the near future, however, is unfavourable. Creditors and debtors agree that the greatly reduced reserves of gold and foreign currencies in the Reichsbank do not at present permit any further repayments. The contemplated conversion of debts covered by the standstill agreement into long-term investments in Germany has heretofore been carried out only to a very small extent—less than 100 million marks, exclusive of Swiss and English creditors. In these circumstances it will again be necessary to enter into negotiations during the coming winter in order to arrange a new agreement for the period following the present agreement (*i.e.*, after February 28, 1933). The co-operation of all creditors and debtors on magnanimous lines will doubtless be required for the final abandoning of the decrees restricting dealings in *devisen*, of which the standstill agreement forms a part.

The Rudolf Karstadt A.G., the largest German department store, has only just issued its report for January 31, 1932. It shows a total loss of no less than 34 million marks as a result of liquidating unfortunate old investments and of losses on stock. There are no reserves in hand to offset these losses. In the opinion of the company's directors a reorganisation cannot be effected only by a drastic reduction of the capital stock of 60 million marks since, in addition to meeting the present losses, the plant must be estimated at a lower figure in order to place the concern on a profit-earning basis. To this end the holders of the 15 million dollars of bonds must also make sacrifices to the company, and negotiations will be opened in the near future. This will be the first time that a German loan listed on the New York Stock Exchange has become unhealthy. There is no fear of a complete loss to the holders of the loan, but the Karstadt directors will probably endeavour to secure their consent to reducing the present interest rate of 6 per cent. to 3 per cent. for a number of years.

HOLLAND.

Public Finance — Trade — Stock Exchange — Gold.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, July 19.

An important occurrence in the Netherlands last week was the publication of the report of the Welter retrenchment commission. This commission was set up to investigate the possibilities of effecting drastic economies in the expenditure of the Government and public authorities. In consequence of the distressed situation of industry and commerce in the Netherlands, incomes all round have dropped enormously, and the yield of local and State taxes has undergone a severe setback. A great decline in State revenue is feared for the coming year, whereas State expenditure has increased enormously in consequence of unemployment pay and other expenditure incidental to the crisis. A grave deficit is accordingly inevitable unless drastic economies are effected all round. The Welter commission has come to the conclusion that 102 million guilders can be economised on a budget totalling over 600 million guilders. The report, however, has provoked indignation in certain quarters, as its recommendations include a further reduction in the salaries of employees of the Government and public authorities, as well as a decrease of 15 per cent. in unemployment pay and a reduction of Government staffs. The commission

foresees, however, that additional economies to the extent of 100 million guilders must be effected.

The extent to which State revenue is declining is already evident from the figures for the month of June. During that month, State revenue totalled 30.8 million guilders, against 34.8 millions in June, 1931. In view of the situation of the exchequer, the Minister of Finance has once more opened subscriptions for an issue of exchequer bonds to a value of 85 million guilders. In consequence of the very great liquidity of the Amsterdam money market it was possible on this occasion to issue 3 per cent. one-year exchequer bonds, whereas, since the middle of last April, the rate had been 3½ per cent. The new 5 per cent. conversion loan has proved a success, and is already quoted well above par.

The trade returns of the Netherlands for the first half year 1932 continue to reflect the depression:—

	Imports.		Exports.		Import Balance.
	Mill.	Mill.	Mill.	Mill.	Mill.
	kg.	gld.	kg.	gld.	gld.
First quarter, 1931	6,842	494	4,038	344	150
Second q., 1931	7,423	492	4,235	334	158
Third q., 1931	8,120	466	4,527	342	124
Fourth q., 1931	7,514	441	4,019	293	148
Total	29,899	1,893	16,819	1,313	580
First q., 1932	5,840	356	3,428	218	138
Second q., 1932	5,897	321	3,430	200	121

In our trade with England, there has been a decline in imports in the past half-year from 83 million to 65 million guilders. The principal declines were in imports of coal, yarns, tools, tin-plates, and tea. A steep drop is also recorded in our exports to England, *viz.*, from 159 million guilders in the first half of 1931 to 80 million guilders in the first half of 1932. Examples of the decline are:—Bacon (18.5 and 6.5 million guilders respectively), margarine (10.8 and 1.0 millions), butter (8.1 and 0.8 millions), eggs (8.9 and 2.5 millions), bulbs, etc. (6.9 and 2.1 millions), and paper (10.4 and 5.6 million guilders). In the first half of 1931 our trade with England showed a balance of exports over imports of 76 million guilders. This has shrunk to 15 million guilders in the first half of this year.

The bond market here, both for State and municipal loans, has had a very firm tendency lately. A slight reaction manifested itself on the Stock Exchange, but the leading securities are still quoted considerably above their lowest levels. Plantation securities, and sugar shares in particular, continue firm, under the influence of the improvement in the prices of the produce. Such a drop in the prices of our colonial produce as has been witnessed during the last two years has never been recorded before in the annals of our colonial trade. The following are striking figures in this connection. The yield of the sugar crop dropped from 419 million guilders to 175 million guilders between 1928 and 1931, that of coffee from 79 to 19 millions, and tobacco from 82 to 36 millions. The export of rubber from our colonies, which in 1925 still represented a value of 586 million guilders, hardly attained a total of 52 million guilders in 1931.

The stock of gold at the Netherlands Bank is still on the increase, and now amounts to 1,009 million guilders, or 10 millions more than the entire circulation of bank notes. It is not improbable that the continual flow of gold to the Netherlands Bank is largely due to the gradual transference of gold from the private banks to the Netherlands Bank.

SWEDEN.

Trade — Banking — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 19.

ALTHOUGH exports of pulp have shrunk to next to nothing owing to the continuance of the strike in this major industry, the balance of trade has developed in a favourable direction during the last two months, the reduction of imports is both absolutely and relatively consider-

SPAIN.

Catalonia — Banking — Finance — Trade.

(FROM OUR CORRESPONDENT.)

MADRID, July 16.

THE Statute of Catalonia continues to be the main subject of discussion within and without the Congress. Many violent debates have taken place, but the different clauses of the Statute are slowly but surely being voted, in opposition to public opinion in the greater part of Spain, but with a considerable majority within Congress. Meanwhile the parliamentary vacation has been indefinitely postponed, and sessions are to continue until both the Catalonian Statute and the Agrarian Reform Bill have been voted.

In the discussion of the Catalonian Statute, the Finance Minister, Señor Alba, put a question to the Government as to the future status of the potash mines of Cardona, which would come under the jurisdiction of Catalonia should the Statute be voted in its present form. The mines in question, which are exploited by the Union Española de Explosivos, are extremely rich, and may prove a stumbling block in the way of an amicable settlement of regional differences. In the meantime, the company is preparing to split itself up into two separate entities, one of which will be domiciled in Barcelona and will look after the Catalonian interests, including the Cardona Potash Mines, while the other, with its headquarters in Madrid, will take charge of interests in the rest of Spain. It is probable that after the Statute has been voted there will be a considerable displacement of industry to meet the new conditions, and a number of cloth manufacturers in Barcelona and district are preparing to put up factories in other parts of Spain to counteract any boycotting movement that may be started against Catalan piece-goods. It is also possible that Valencia, as a port, may benefit by the feeling which runs high against Barcelona, although vested interests have so far prevented the realisation of the direct railway from the capital to Valencia.

The increase of railway tariffs has been voted by Congress, and for a short time the shares of the principal companies improved, but when it was realised that the proceeds of the increase will be pooled to provide for wage increases for all railway employees, quotations declined again. The Stock Exchange considers that this arrangement benefits the smaller companies at the expense of the larger ones.

The Bank of Spain declared a dividend for the last financial year five pesetas higher than in the previous year, in spite of which the shares of this institution declined. The market expected a more generous distribution in view of the fact that profits reached 78 million pesetas for the last half-year, as against 52 millions for the corresponding period of the previous year.

The figures of the gross Treasury receipts for the first quarter of this year are given at 1,859,949,874 pesetas, as against 1,806,848,480 pesetas in the same period of 1931, an increase of 53,101,394 pesetas over last year. These figures do not, however, reflect the true state of the country's financial condition, as the receipts from the tax on profits, the industrial taxes and transmission duties continue to decline, and these are a truer barometer of economic activity than, for instance, the Customs duties collected, which have increased by 8,000,000 pesetas. An explanation of this latter fact is that social troubles have caused many manufacturers to close down their factories, and increased imports have been necessary to supply the deficiency of production. The gross receipts for the half-year are 165,174,220 pesetas below the budget estimates, but the Minister of Finance expresses the hope that this difference will be wiped out in the second half of this year, when the new taxation will have had time to take full effect.

The Customs returns for the month of May indicate that the balance of trade was, for the first time for a number of years, favourable to this country, the imports having been reduced to 75,700,000 pesetas gold, while exports were higher at 89,800,000 pesetas gold. While this result is influenced by seasonal factors and may not be main-

ably greater than that of exports. The check in imports created by the depreciation of our currency is becoming more marked since forced imports have been prevented by the new duties. On the other hand, the stimulus to exports which should arise from the depreciation has been completely neutralised by the barriers to imports which most countries have created in the form of tariffs and quotas. Fortunately, Sweden's principal exports consist of raw materials and semi-manufactured goods derived from natural resources which are lacking in the importing countries, and are therefore less affected by such measures. On the other hand, Russian dumping hits our export industries hard. Imports in May were Kr. 90.8 millions, which is a reduction compared with a year ago of Kr. 34.3 millions, whilst exports fell in the same period from Kr. 99.5 millions to Kr. 80.6 millions.

Now that May has passed, and with it the most stringent period as regards the balance of payment and the reserves of foreign exchanges, the holdings of the latter by the banks have slightly increased to Kr. 301.3 millions, after having been as low as Kr. 298.9 millions. A year earlier they amounted to Kr. 337.2 millions. As against foreign deposits in the commercial banks of Kr. 33 millions at the turn of the half-year the short-dated foreign claims are Kr. 70 millions. Thus the most serious period for the exchanges has been satisfactorily passed.

The anxiety of the commercial banks to maintain their liquidity, visible in their greatly increased current accounts without interest at the Riksbank, still continues. The last published report shows the highest figures of this kind which have ever been shown, at Kr. 122 millions. Instead of, as usual, diminishing their rediscounts after the pressure at the turn of the half-year had been overcome, the commercial banks prefer to increase still further their current account holdings. Owing to the reduction of the market demand for credit which has arisen from the general depression there resulted in the month of June a reduction in the volume of credit by Kr. 4 millions, whereas for example in 1930 (a more normal year than last year) there was an increase in the volume of credit by Kr. 60 millions. The fear of a rush of depositors, which was the fundamental reason for the liquidity measures of the banks during the past month, seems now to have been overcome. Deposits in the commercial banks during the past month have only sunk by Kr. 17 millions. It is therefore probable that the next step of the banks will be the reduction of their current account holdings with the Riksbank and a simultaneous reduction of rediscounting. At the turn of the half-year the latter was increased by only Kr. 7 millions and the current account means were employed instead. Since the turn of the half-year the Riksbank has also continued cautiously to buy foreign exchanges, and in the two weeks immediately succeeding the exchange reserve was increased by Kr. 8 millions. These purchases were made at the same time as the Swedish crown was falling, and this movement in the exchange was thus intensified by the Riksbank's action. Since at the same time our wholesale price-level shows a tendency to fall (*Svensk Finanstidning's* index number, which had been steady for five months, fell in June to 100), it seems probable that the Riksbank, in accordance with its interpretation of the Riksdag's instructions, will seek to counteract this falling tendency of the price-level.

The general optimism which the Lausanne Conference and the plans for a War Loan conversion in England created in the larger financial centres could not fail to have an influence on the Stockholm Stock Exchange. More particularly the rise in German bonds had the effect that bank shares rose sharply, since a relatively large number of Swedish banks held frozen credits with securities in such bonds. Broadly speaking, almost all shares improved. More marked was the rise in the shares of the engineering industry and the Grängesberg Company. Timber shares did not quite keep pace with the general tendency, owing to the fact that the recent attempted solution of the labour conflict had broken down. A certain relative, though weak, improvement was also to be seen in domestic bonds in consequence of the same general optimism.

tained in subsequent months, it remains patent that the adverse balance of trade in Spain is gradually being reduced. Invisible exports in the form of emigrants' remittances from South and Central America have, however, also diminished considerably in the last few years, owing, principally, to economic crises overseas.

In view of the fact that the Constitution of the Spanish Republic calls for budget figures to be submitted to Parliament during the first fortnight of October of each year, the Minister of Finance has circularised the different Government departments requesting them to prepare their estimates for 1933 not later than the end of this month, and pointing out the necessity for drastic reductions of expenses.

AUSTRIA.

Parliamentary Bills — National Bank — Brewing Industry — Economic Activity.

(FROM OUR CORRESPONDENT.)

VIENNA, August 1.

THE parliamentary struggle over the Lausanne Loan agreements is still in progress, but may be concluded by the end of the week and may leave the Government with a small majority. Among other matters awaiting attention are the Supplementary Budget; the Bill to permit the banks, and especially the Wiener Bankverein, to reduce their capital; and the Bill to enforce greater responsibility on the part of the heads of enterprises and to reduce their emoluments. The amount of excitement caused by banking events and by the difficulties of numerous industrial enterprises is illustrated by the fact that in the National Council the passage of Bills to reduce the emoluments of leading personalities will meet with little opposition. The explanation is that the income of the man-in-the-street is declining day by day, so that endeavours to reduce high salaries are meeting with a great deal of support.

One of the most important agreements made in the past week was that between the Government and the National Bank. It provides for the withdrawal of the greater part of the bills of exchange taken by the National Bank from the Credit Anstalt. The bill debt of the Credit Anstalt to the National Bank amounts to 683 million schillings, of which 571 million schillings is covered by the State guarantee. This sum of 571 million schillings is to be removed from the portfolio, which at present aggregates 844 million schillings, so that the total will be reduced to 273 million schillings. The bills, which the Federal State has guaranteed for the National Bank to an extent of 571 million schillings, are to be divided into three lots—into Federal Debts A, B and C. The first lot will be added to the old loan debt of the Federal State to the National Bank, so that this debt will be increased from 92 million schillings to about 268 million schillings. Federal Debt B and Federal Debt C will each consist of 200 million schillings. The former is to be liquidated as soon as possible, in the sense of the Lausanne agreements, out of the proceeds of one or more domestic loans. Federal Debt C is to be liquidated out of the share of the State in the 6 per cent. dividend distributed by the National Bank, which share is to be considerably increased for the purpose. Further, as from the year 1936, the Federal State will undertake the repayment out of its own resources, and in the third year these are to increase to 6 million schillings per year. Finally, a fresh basis of cover for bank notes is to be introduced. This is to amount to 20 per cent. and must be increased to 25 per cent. within fifteen years. In consequence of the new calculation, according to which the bill portfolio is reduced by the amount of Credit Anstalt acceptances converted into Federal State debt, the cover would amount to about 28 per cent., so that the National Bank would at once be relieved of the obligation to pay the impost on the excess of bank notes issued. Under these circumstances, and particularly if it receives funds through the new loan, the National Bank might be more accommodating in regard to discount bills and also ease matters in respect to allotments of foreign exchange.

The unemployment question seems likely to lead to serious disturbances in the autumn if no alleviation is forthcoming. For some time past one of the most prosperous industries was that of brewing, but it has lately fallen off on account of over-taxation. Since August, 1926, the taxes have been increased by 200 per cent., while the consumption of beer has declined by 50 per cent. The Federal countries, which participate in the beer tax, are getting less money, in spite of the increased rate of the tax. Their share has sunk from 52 million schillings to 30 million schillings, and that of the State itself from 90 million schillings to 50 million schillings. Of the 200,000 persons formerly engaged directly or indirectly in the production and sale of beer in Austria, a quarter are now in receipt of the dole. As all other possibilities of export business have vanished, attempts are again being made to increase business with Russia. The founding of a company which should take over a portion of the guarantee given by the State is contemplated, but the plan is meeting with difficulties from scruples which the National Bank entertains in regard to it.

The July report of the Federal Department for Statistics showed a decline in the economic position in practically all directions. Savings deposits at the Vienna savings banks sank in June from 791 million schillings to 788 million schillings, and at the savings banks in the capital towns of the Federal countries from 212 million schillings to 210 million schillings. Foreign tourist traffic is weak. During the first half of this year there were 177,753 hotel guests, against 237,904 during the corresponding period of last year. The price index of wholesale trade shows a drop from 115 to 112, and that of retail trade from 144 to 143.

HUNGARY.

Standstill Agreement — Moratorium Extension — Foreign Creditors' Fund.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 2.

PENDING the negotiations for a new Standstill Agreement with the British and American short-term creditors, the British consented that the stipulations of the old Standstill Agreement, which expired on August 1st, remain in force *sine die*. It is expected that the new Agreement, which is to run for six or twelve months, will be concluded with the British creditors next week. There are difficulties with the Americans, who object to the priority of the League Loan service and demand that transfers for the League Loan service be made in the future only *pari passu* with transfers on acceptance credit interest due. It should be remembered that the Americans did not sign the old Standstill Agreement (which was in *de facto* running from February to August) until the end of June, when Hungary defaulted on the League Loan service. Considering that there is very little chance of the resumption of the transfer on the League Loan service—though its priority is admitted and will be maintained by the Hungarian Government—there is good reason to believe that after the British signatures the Americans will also sign the Agreement. In view of the complete moratorium on foreign debts, the new Standstill Agreement will not be more than the *de jure* recognition of the existing situation, as neither capital nor interest payment can be collected or freely disposed of by the foreign creditors.

In order to comply with the principle of equal treatment for all foreign creditors, the Government issued last week a Decree supplementing the provisions of the Transfer Moratorium Decree issued last December, which prohibits Hungarians or foreigners residing in Hungary acquiring the claims of foreign creditors against their Hungarian debtors without the permission of the National Bank. Considering that there are more than 1,500 million pengő short-term and merchandise debts, etc., owed to foreign creditors, the mobilisation of which would drive the country into wholesale bankruptcy, the extension of the transfer moratorium was inevitable, and in spite of its obvious disadvantages in carrying the country a step further towards a general moratorium, its effects on the

whole might be beneficial to creditors and debtors alike, provided that a general debt settlement with the foreign creditors shortly follows. The scaling down of the high interest rate both on long- and short-term loans cannot be long postponed without risking wholesale defaults, not only in foreign exchange, but also in pengő. Mr Tyler, the League representative, in his last report, stated that the arrears of the Foreign Creditors' Fund on June 30th amounted to 8.26 million pengő, as against 58.3 million pengő actually paid into the National Bank on account of the untransferred service of the bonded long-term foreign debt for a period of six months. The fact that arrears in debt for a quarter of the year amounted to 3 million pengő only, and then increased by more than 5 million pengő in the second quarter, shows that defaults in pengő are steadily growing. As some banks have met their obligations towards the Foreign Creditors' Fund even if their clients did not meet their maturities, it is by no means an exaggeration to say that more than a third of the original debtors are actually in default.

Mr Tyler's report stated that the Foreign Creditors' Fund has not been invested, and that the National Bank, in agreement with its adviser, had decided to regard the fund as a deposit and to pay interest on it, which is at present 4 per cent.—1 per cent. less than the official discount rate of the bank. On June 30th the amount actually held by the Foreign Creditors' Fund was 47.6 million pengő, 10.7 million pengő having been paid out for matured coupons and drawn bonds redeemed in pengő, out of the total of 58.3 million pengő paid into the fund. The wisdom of redeeming coupons and drawn bonds at their full value in pengő is very questionable, when it is taken into consideration that a great many of the original debtors fail to meet their obligations, and, apart from the increasing arrears, it is known that the bond-issuing banks are compelled to borrow from the National Bank in order to satisfy their duties towards the Foreign Creditors' Fund, which is thus made up to a great extent of moneys created by bills having no real value behind them. In such circumstances it need not occasion any surprise that the transfer moratorium did not cause any deflationary effect, although that would have been the case had the service of the foreign debts—amounting to nearly 300 million pengő per annum—been actually met in the national currency, without a slight disguised inflation in the form of discounting bills at the National Bank for making up the deficit of the State and the defaulting debtors. Mr Tyler has rightly pointed to the danger of inflation, which is manifest in the end-of-July return of the National Bank and is due to the new borrowing of the State up to the amount of 20 million pengő in the form of internal Treasury Bonds, a considerable part of which is rediscounted with the bank.

ARGENTINA.

Trade — Exchange Control — Finance.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 15.

REGRETTABLE as is the severance of diplomatic relations between Argentina and Uruguay, its bearing upon commercial and financial affairs is not unduly important, as the whole matter is merely a somewhat exaggerated instance of the lengths to which party politics too readily go in this part of the world. The fact that diplomatic representatives were mutually withdrawn, and the prominence given to the whole affair by foreign correspondents, whose sensational headlines were in this instance justified by the manner in which the subject was treated in the Argentine Press, may have affected the opinion of those who do not know the two countries concerned; but this is the only serious result of what may be politely described as a diplomatic "indiscretion."

Argentina's general situation now shows small but distinct signs of improvement. Export figures for the first six months of the current year amounted to 9,656,221 tons, valued at \$333,010,269 gold. Compared with the corresponding period of 1931, these figures mean an increase of 471,000 tons in quantity and \$1,611,000 gold in

value. The depreciation in the sterling quotation of the Argentine peso must not, however, be regarded as being due exclusively to this improved trade position. For, pegged as the local rate is to the United States dollar quotation, sterling has fluctuated with the fall of the pound in New York, and a truer indication of the international value of the peso is given by the quotation of French francs or German marks. The latter has not varied for close upon a fortnight.

There is a better all-round inquiry to-day for most articles of general produce, though demand is entirely confined to Europe, the United States buying little or nothing, despite the enormous advantage that exchange conditions would seem to give them. Even linseed, which in normal conditions would be assured of a market there at its current quotations at \$8.70 paper per 100 kilos, is entirely neglected by American buyers, who are also out of the hide market, notwithstanding that there is firm inquiry from Germany and that local prices have risen by fully 25 per cent. during the past fortnight. Prices for wheat are maintained, while maize shows a pronounced upward tendency, so that, all things considered, Argentina may be considered to be marketing her produce fairly well for this time of year.

The excessive precautions taken by the Exchange Control Committee are the subject of protest in a memorial laid before the Minister of Finance and signed by a large number of trade associations. Emphasis is laid upon the fact that trade interests in general suffer considerably owing to the manner in which existing restrictions are enforced. In a recently published circular the Committee give figures covering the amount of exchange dealt in during the first half of 1932. Drafts and transfers have been sold to the equivalent of \$784,514,000 paper. Of this sum payment for imported merchandise absorbed \$397,527,000. Financial services took \$108,850,000; private remittances and travellers' charges \$109,413,000; and remittances on behalf of public utility companies \$111,554,000. It is felt that undue insistence by the Government on the absorption of the lion's share of exchange in order to meet commitments abroad does not agree with the best interests of the country as a whole.

Closely related to the possibility of Cabinet changes and a modified financial policy is the matter of the Customs import dues. Here, it is generally recognised, a mistake has been made. Even local industrialists cannot justify the existing tariff, except on the grounds that in the course of time it might bring about increased local production. The possibility that Ottawa may result in measures directly affecting the sales of Argentine produce is not for the moment in question. For, whether preference is or is not given to British goods, the fact remains that Argentina must be able to buy cheaply if she is to lower her cost of production in order that she may go on selling freely at the prices now ruling for her principal wares. Cattle breeders and the meat trade are, it is true, seriously alarmed at the possibility of a quota, or a duty, being imposed upon chilled beef, but there does not yet appear to be any disposition to enter into preferential agreements with Great Britain on the matter of imports.

The monetary situation here is comparatively satisfactory, though much will depend upon the maintenance of a conservative policy by the Ministry of Finance. It is generally known that at least \$350,000,000 paper is necessary to bring the Treasury payments up to date; hence the general feeling that rediscount of the balance of the Patriotic Loan ought by this time to have been carried out, even if payment of debts were spread over the next three months. For, as the bonds that have not been taken up by the public must eventually go into the Conversion Office, it is somewhat childish to retain a cover percentage of 44.15 on the books, well knowing that it must perforce be brought down in the near future. Meanwhile, the situation is complicated by the fact that there is actually a plethora of loanable capital available to meet a greatly diminished commercial demand for facilities; a position which results in falling rates for time deposits and keen competition among the banks for all first-class private and commercial loan business.

INDIA.

Trade — Budget — Gold and Silver Exports.

(FROM OUR CORRESPONDENT.)

CALCUTTA, July 6.

THE Report of the Controller of Currency in India for the year 1931-32, which has been published with commendable promptitude, supplements the facts and figures, and reinforces the conclusions, embodied in the Budget statement of the Finance Member, submitted to the Indian Legislature early in March. Indian produce, as the Controller reiterates, shared in the fall in world commodity prices, and this was reflected in a fall in the balance of trade. The figures for the months April to October, 1931, are particularly striking. Exports for this period, with the exception of gold bullion, fell from 140 crores in the corresponding period of the previous year to 88 crores, a fall of 37 per cent., and imports from 99 to 76 crores, thus reducing the balance of trade in merchandise for the period from 41 to 12 crores. In October, however, the stimulus to exports due to the fall in the gold value of the rupee began to take effect. Fortunately, the monsoon was good, though a little late, and the consequent cheapness of foodstuffs materially mitigated the loss caused to the poorer classes by the slackness of trade and fall in commodity prices.

The visible balance for the fiscal year 1931-32 was 90,50 lakhs, as compared with 37,60 in 1930-31. This large increase was entirely due to the heavy exports of the precious metals, principally gold, the balance of transactions in treasure amounting to a net export of 55,64, as against a net import of 24,43 lakhs in the previous year. The trade balance itself fell heavily, exports of Indian merchandise on private account falling from 220 crores in 1930-31 to 156 crores—that is, to less than half of the average of the ten post-war years. Imports also fell heavily, but not to so large an extent, the total imports being 126 crores, as against 164 in 1930-31. The amount remitted by Government increased from 7,26 to 53,04 lakhs. Against this, sterling transfers on London were sold at the statutory rate to the amount of 18,98 lakhs in the first half of the year. The net balance of remittance of funds thus came to 34,32 lakhs. Taking into account also certain other items, the total visible balance of accounts was 54,73 lakhs, an increase of nearly 50 per cent. over the visible balance in 1930-31.

The reasons for the abnormal shipments of gold, net export of which the Controller places at the record figure of 57,97 lakhs, were twofold. In the preceding year gold was already returning to the Mint at the Government of India's purchase price on account of the falling off in local consumption. This movement continued to grow in strength throughout the summer. When the gold standard was abandoned in September there was an immediate appreciation in the price of gold. This not only stimulated the movement for the return of gold which was already in existence, but induced many who had stored the metal to take advantage of the high price to sell. The movement reached its maximum in December, when the price of gold was highest. In that month nearly 17½ crores were exported. In the following months the improvement in the London-New York exchange led to a rapid lowering of the gold price, which made such exports less attractive.

Apart from arbitrage operations, the silver market was dull throughout the year, and real activity began only when the gold standard was abandoned in September. The rupee price then rose rapidly by Rs. 11 to Rs. 54 owing to a rush by bears to cover their position. A further

rise in November, when the highest level of the year was attained, "was partly due to the hopes of speculators that, following the abandonment of the gold standard by Great Britain, international steps might be taken to rehabilitate silver as a currency metal as a support to gold." Following the dissipation of this hope, prices reacted. It may be noted, in view of the contention that official sales are largely responsible for the present low prices of silver, that the total amount of silver sold by the Government of India from the commencement of their operations in 1927 up to the end of 1931-32 amounted to 127,581,564 ounces. Last year there was a net export of silver from India of 42 lakhs, or excluding Government shipments, there was a net import of 2,60 lakhs, as compared with 11,65 lakhs in 1931-32. As in the case of gold, the export of silver was stimulated by the abandonment of the gold standard and the consequent increase in the rupee and sterling price of the metal. The increase in the import duty made it profitable to melt scrap silver into bars for local re-sale in preference to importation.

Letters to the Editor.

TARIFFS IN CENTRAL EUROPE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There have appeared recently in your journal certain articles concerning the situation in Austria, and latterly in connection with the Austrian Loan, which tend to give the impression that your correspondent is labouring under a misconception of fundamental economic principles.

In our issue of July 23rd, on page 173, the so-called "tariff war" between Austria and Hungary is commented upon at some length, and the statement is made that "Austria felt obliged to take energetic action." The secret of the prohibition of the articles in question—flour, fruit, vegetables, etc.—is not hard to find. As in the case of most restrictive measures, the reason is a political one, and this prohibition of imports has been introduced in order further to protect the sectional interests of the Agrarian party.

The ever-rising tariffs and reciprocal measures are responsible for the paralysis of industry and commerce in Central Europe, as elsewhere. The article continues on the subject of the "balance of trade" between Austria and Hungary. One would have thought that the "Balance of Trade" argument had by this time been exploded. Every economist knows, though apparently your correspondent has still yet to learn, that the interchange of goods between two countries never strikes a perfect balance, though what may appear to be an adverse balance often proves eventually to be the opposite. For instance, if (A) restricts imports from (B), the latter will be able to buy so much less from (C), and such a state of things may continue until (Z). This latter country, however, may turn out to be the country which previously used to buy from (A). With its purchasing power diminished, such purchases will no longer be possible.

One thing is certain—import prohibitions, quotas, etc., are not going to improve the situation. What is necessary is exactly the opposite—namely, the free interchange of goods and the breaking down of all restrictive measures which only result in reciprocal tariffs and further aggravation. This will undoubtedly be the case with regard to Austria and Hungary. The tourist traffic, for instance, which results in a great influx of Hungarian visitors to Styria and Carinthia, will be one of the first to suffer. Hungary is already contemplating a boycott of Austrian summer resorts, and so the chain is forged, link by link.

What is badly needed in Central Europe at the present time is a truce between the various countries with regard to tariff barriers. The main objects of such a truce should be, firstly, a decision that on no account should tariffs be raised further; secondly, the fixation of a maximum tariff—say, 25 per cent. of the value of all articles. In the latter case, it should be clearly understood that countries would be left free to fix tariffs as low as possible under this maximum figure, and where necessary to eliminate them altogether, but never to exceed the fixed rate.—Yours, etc.,

Postamt 107,
Vienna.
July 27, 1932.

JULIUS MEINL.

The Stock Exchange.

PUBLIC BORROWERS' "CONVERSION" OPPORTUNITIES.

LAST week we discussed the possibility of a substantial lightening of the burden of funded indebtedness of British industry by way of conversion of existing charges to lower interest rates. We showed, by an analysis of the Stock Exchange Official List, that the number of companies with securities within the "Conversion Zone" was smaller than had been assumed in some quarters. Our figures revealed that, out of £946 millions of debentures, notes, etc., in the leading groups in the Stock Exchange classification (including railways, "capitalist" public utilities and investment trusts), some £841 millions was unlikely, by present indications, to rank for conversion within the next ten years. Of this total a substantial part represented pre-war capital issues at relatively low interest rates, while the remainder was composed of post-war stocks having no early option of redemption or issued by companies whose credit was not sufficiently well regarded to raise the market price of their debentures, even under present conditions, above the redemption price.

We propose to complete our survey by examining the "conversion" position of the chief public borrowers domiciled in the United Kingdom, including the British Government, Home Corporations and Public Boards, together with the securities of certain British companies guaranteed by the State under the Trade Facilities Acts. Our criteria of eligibility for inclusion within the "conversion zone" are, as before: (1) an existing rate of interest, £100 nominal, higher than that at which sound borrowers in each group could raise long-term resources to-day, presuming that 3½ per cent., or better, is the basic rate for British Government stock; (2) an option for repayment within the next ten years; and (3) a current price above the minimum redemption level.

The beneficial results of a successful War Loan conversion operation, from the British Government's point of view, are clearly not exhausted by the prospective net saving of £23,000,000 per annum in interest payments on the new stock. An appreciable slice of the remainder of the National Debt is represented by securities maturing, or callable, within a few years, and costing the State 4 per cent. or more, as shown in the next column.

* This figure, given in "Financial Statement" accompanying last Budget, does not include conversions out of first series National Savings Certificates into 4½ per cent. Conversion Loan, completed since March 31, 1932.

On this showing, the Government may convert an additional £1,193,769,000 of high-yielding internal funded indebtedness over the next twelve years, of which £502,248,000 (mainly Treasury Bonds) can be tackled, if need be, within the next two years, while a further £688,473,000 of 4½ per cent. Conversion Loan (plus conversions from Savings Certificates) is untouchable before 1940, and £323,048,000 of 5 per cent. Conversion Loan before 1944. In addition, National Savings Certificates (all bearing interest over 4 per cent., if held to a ten-year maturity) were outstanding to a total of £371,679,000, exclusive of accrued interest, at the end of last March, and will all be eligible for "conversion" to cheaper levels before 1942. Altogether, omitting Floating Debt (£782,250,000 on July 31st), the British Government, at the beginning of the current financial year, had £1,560,000,000, in round figures, of additional debt within a twelve-year "conversion zone." Outside this zone were:—(1) £983,400,000, net, of Victory Bonds, Funding Loan and "New Consols," all on a 4 per cent. interest basis and subject to drawings or sinking fund operations, but not finally callable until various dates between 1957

and 1976; (2) £1,063,700,000 of 3½ per cent. Conversion Loan, "Old Consols," and Annuities, already on a 3½ per cent. basis, or better; (3) £2,085,000,000 of 5 per cent. War Loan embraced in the present conversion to 3½ per cent.; and (4) capital sums of £1,038,586,000 owed externally (including \$4,398 millions of American War Debt, at par of exchange), but not maturing in the next few years.

The Government, however, has a contingent liability in respect of numerous other stocks whose service it has guaranteed. Of those appearing in the Stock Exchange List under "British Funds, etc.," Palestine Five per Cents. have an option for repayment from 1942, but nearly £525,000,000 of Local Loans Stock, carrying 3 per cent. interest, is outside the conversion area. Incidentally, the Indian Government (whose sterling issues are included by the Stock Exchange, somewhat illogically, under "British Funds") has £35,000,000 of 6 per cent. bonds and £17,000,000 of 5½ per cent. stock callable within the next four years.

An element of uncertainty surrounds the position of industrial borrowers who have raised money in recent years on a 4½ per cent. or 5 per cent. nominal basis under the shelter of a Government guarantee. Some £38,000,000 of "Trade Facilities" stocks are quoted in the Official List, and all, naturally, stand at a premium to-day. Only £14,300,000, however, completely satisfy the tests of eligibility for conversion, suggested earlier in this article. The names of the individual securities are given in the table on the previous page, but in every case Treasury sanction would appear to be a condition precedent to any change of terms or status. Presumably, the Treasury would not object to a reduction of interest, as such; but it might well take exception to a postponement of final repayment dates, without which conversion operations might be impracticable. An early ruling on this point would appear advisable.

We summarise the position as regards Home Corporation and County and Public Board stocks in the following table:—

CORPORATION, COUNTY, AND PUBLIC BOARD STOCKS.

Group (S.E. List Classification)	Minimum Interest Rate taken as falling within "Conversion Zone."	Not eligible for repay- ment or conversion in ten years.	Eligible for con- version in next ten years.	Ratio of convertible to non- convertible.
Corporation & county stocks (Gt. Britain & N. Ireland)	%	Million £	Million £	%
Public boards.....	4	284.3	81.4	28.7
		128.0	6.7	5.2

The ratio of convertible to non-convertible stocks is more than twice as high among home corporation and county authorities as among British industrial concerns as a whole, for which we gave an average figure of 12.5 per cent. last week. This advantage, however, is partially offset by the fact that an appreciable amount of pre-war stock, costing 2½ to 3½ per cent., will mature in the next few years. Public boards, with few exceptions, have borrowed since the war without taking powers to repay, except at long dates. The Agricultural Mortgage Corporation, for example, has raised £10,500,000 at 4½ and 5 per cent., none of which is callable before 1959. The Central Electricity Board, similarly, has £26,000,000 of 4, 4½ and 5 per cent. stocks outstanding, all of long-term character.

The impression left by our survey is that public and private borrowers alike have a smaller proportion of their funded debt in a "callable" state than the British Government. So far as post-war operations were concerned, the probability that the Treasury would succeed in converting its great mass of War Loan by the nineteen-forties, at the latest, and that interest rates would thereupon tend to decline, should have suggested the advisability of an optional repayment clause in many prospectuses. Borrowers, in practice, may have had little choice in the matter, for the requirements of investors, as regards certainty of income over considerable periods of years, have been, in the last resort, the deciding factor.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. ACCOUNT.
August 9. August 11.

Though the end of the "bonus period" of War Loan conversion and the incidence of holidays combined to reduce the volume of Stock Exchange business, the tone remained firm, outside the gilt-edged market. The two leading influences were the considerable profits made in American securities by British speculators since the beginning of the New York upward movement, and the rise in commodity prices. The latter induced a considerable Continental inquiry for oil, mining and to a less extent, rubber shares, London being content, for the most part, to follow rather than to lead. The heaviness of gilt-edged stocks, which on occasion necessitated inside intervention, was attributed in part to the weakness of the sterling exchange, which, in turn, was influenced by a considerable transfer of speculative funds to New York, as well as a seasonal commercial strain.

The passing of the "bonus period" left the price of unassented War Loan unchanged, the stock continuing to offer a satisfactory return as a "short bill." The assented stock, however, came on offer, and at one time fell below par, though a recovery followed the giving of support. India loans failed to hold their ground. Home corporation stocks suffered from profit-taking.

Though German bonds improved on bear covering after the election, the rest of the foreign market remained comatose. Austrian Sevens were weak on the pessimistic statement of the Bank for International Settlements. South American prices remained nominal, the threat of a Bolivian-Paraguayan war and a prolonged period of unsettlement in Brazil and the failure of official disclaimers to allay fears of partial suspension of interest payments from Argentina all combining to make dealers ultra-conservative.

Home railway stocks were under the influence, at the outset, of the unexpectedly good Great Western results, but further consideration of the uncertainties of the railway outlook (discussed in a Note on page 283), caused scattered selling later, especially of prior charges whose earnings' position, on the half-year's figures, was insecure. There was a slight increase of business, and a disposition to search for "bargains," in the foreign rail market, but a lack of confidence continued to be displayed as regards the general outlook.

For a holiday week, business in industrials was not unsatisfactory, and prices generally were well maintained. Speculative interest, however, was entirely concentrated on international and particularly Transatlantic issues, the market showing every desire to share in the benefits of the New York revival. Among domestic shares, breweries remained out of favour, the Guinness and Watney results (set out on page 284) suggesting that brewery directors generally were not over-sanguine regarding an early check to the downward tendency of consumption. "Heavy" steel and engineering shares attracted little interest, and electrical issues remained irregular. Motor shares were subject to scattered provincial selling, apart from Ford, which hardened with New York, where the shares are almost entirely held. Investors continued to take a hopeful view of the outcome of the Lancashire weaving negotiations, but rayon shares remained dull. Bank shares showed little change, apart from a rise in Canadian Bank of Commerce. Insurance shares were slightly easier on a fairly large turnover.

Last week's stirrings in the rubber share market developed into a sizable upward movement this week, but the market was decidedly sensitive to daily fluctuations in the commodity. A more hopeful feeling was reflected in numerous rises in tea shares, Indian rather than Ceylon companies attracting chief attention. The "world agreement" was a waning factor in the oil market, but Continental operators were buyers through the greater part of the week.

Continental influence was similarly noticeable in the mining share market. London interests, generally, were not eager to undertake substantial commitments in the

holiday period, but the effect of firm commodity prices was perceptible before the end of the week. The appetite of Paris for Kaffirs, though intermittent, was strong, in view of the "record" profits reported in July by a number of companies, like Randfontein, Springs, Geduld and East Geduld. The tin statistics for last month were disappointing, but the price of the metal continued to trend upwards, without causing more than a moderate increase of activity in the shares. Tinto reflected the vicissitudes of French opinion and a fair business was done in Rhodesians following the firm tendency of copper in the metal market.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The recovery in sentiment and prices, which by last week-end had outstripped the expectations of seasoned observers, made further spectacular progress this week. Despite the openly-expressed view that the pace had been too hot to last, severe bouts of profit-taking failed to upset the main movement. On Wednesday, in particular, after the most dangerous-looking reaction since the movement began, strong buying sent up the price of leading stocks by several points. The tendency of speculators, professional and private, was to concentrate partly on the regular market leaders, like General Motors, and partly on stocks regarded as undervalued on even a modest trade recovery, like Drug Incorporated, Steel Preferred and American Telephone. The firmness of commodity prices helped to provide a favourable background for sentiment, but was not regarded as a major causative factor. The bond market continued strong, with occasional spells of irregularity. Whether the recovery will eventually be brought to a

Address.....

standstill by the absence of any signs of general trade recovery, remains to be seen. Steel operations last week were no more than 14 per cent. of capacity, as compared with 15 per cent. in the previous week. Freight car loadings for the week to July 28rd were 501,130, compared with 504,094 in the preceding seven days. The railroad executives are not enamoured of the official plans for advances for maintenance and equipment work, but may yield to pressure based on a desire to stimulate business, if possible, over the next three months.

PARIS.

The Paris Bourse opened with considerable strength following the failure of the Nazis to secure a majority in the German Reichstag. Dealings, however, were mainly confined to professional operators. Profit-taking sales brought irregularity on Tuesday, but floating supplies of stock were quickly absorbed. Oil shares continued to rise. On Wednesday the general tone was easier, but on Thursday the continued strength of commodity prices caused a further revival in demand for favourite speculative counters, particularly in the oil and mining share markets.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption: where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.
