In contrast to this impracticable proposal, the Report of the Majority preserves a sense of proportion; but it suffers from certain defects, not all of which are inherent in the nature of the problem. On the administrative side the recommendations do not appear to have been thought out very clearly. The setting up of a new scheme of what virtually amounts to a new system of relief alongside the already existing system of Public Assistance—the administration of which has only recently been revised under the Local Government Act of 1929—and under a different Ministry carries with it obvious dangers of waste and overlapping. Indeed, it threatens to introduce once more that confusion of authorities which Mr Chamberlain's Local Government Act was intended to clarify. Moreover, from the point of view of the Local Authorities themselves, the assumption of a new administrative burden may prove far more difficult than the Majority of the Commission appear to imagine.

The County and County Borough Councils have already in many cases found it hard enough to find suitable members with sufficient leisure to undertake the thankless task of supervising the administration of the Poor Law, and the constitution of a new set of Public Assistance Committees is scarcely feasible. And if the Commission assumed that in practice the new Committees would, in fact, be identical with the existing bodies, then that is only one more reason for combining the two systems of relief which do not differ in any essential principle.

It is also a pity that the Commission did not see its way to introducing a difference in the rates of benefit under the two schemes. As a matter of principle, the scale of relief ought definitely to be lower than insurance benefit. The reason why the Commission found itself unable to maintain this salutary distinction is, however, clear enough. It lies ultimately in the enormous volume of unemployment. The present flat rate of benefit represents a minimum subsistence standard in those parts of the country where the cost of living is highest, and it would have been impossible to raise the level of "insurance" benefit without either bankrupting the insurance fund or

curtailing materially the period of insurance benefit. But the fact remains that in rural areas, for instance, where rents are comparatively low, the rates proposed allow a considerably wider margin, and in these days of depression industry and the taxpayer can ill afford to be generous. Indeed, the introduction of a means test would seem to be opposed in principle to a flat rate of benefit. There is, in fact, an inherent contradiction in the Commission's conception of Unemployment Assistance, which could only be resolved by frankly abandoning the notion of transitional benefit altogether, and transferring the whole of Unemployment Relief, beyond that provided for in the Insurance scheme itself, to the existing Public Assistance system. That is a course which would have required a good deal more courage than even a Royal Commission can be expected to display in view of the stigma still adhering to the poor law in the minds of the majority of the workers. But it should not be forgotten that the whole trend of recent Local Government legislation has been to remove this stigma as far as possible. The County Council is a much more respectable institution than the Board of Guardians.

From the financial point of view it must be confessed that the Report offers very little comfort. Even if the forecasts made by the Commission prove to be reliable, the gain to the Exchequer effected by the new scheme as compared with the present cost of what we have persisted all these years in calling Unemployment Insurance is negligible, and that only on paper. Moreover, the warning contained in Mr Trouncer's note cannot be disregarded. Though the Commission has evidently calculated that the 4d. rate will cover the cost of relief at present administered under the poor law which will be transferred to the Unemployment Assistance Scheme, it may very well prove to be substantially greater. If this fear is justified, it may well prove that on balance the total expenditure in payment to the unemployed will be higher than it is to-day.

That is a possibility which might at first sight appear to condemn the Report outright. Yet with a live register very near to the three million mark no other result could be expected. In spite of its defects, many of which are inherent in the circumstances under which it was composed, the Report does go as far as could reasonably be expected towards solving an insoluble problem. It has at least two outstanding merits. It provides the first essential of a sound insurance scheme, namely a solvent insurance fund; and it recognises clearly the distinction between insurance and relief, rightly basing the latter upon the need not of the individual but of the family.

Last, but not least, some of its recommendations outside the immediate question of financing the unemployed are eminently wise. In the case of juveniles, for example, the lower age of entry and the crediting of contributions in respect of voluntary continuation of full time education and approved courses of instruction will be commended by all those who appreciate the dangers and the difficulties of the present system of juvenile employment. The Report also blesses the existing schemes of training for adults and piously hopes for their extension. It could with advantage have gone very much further and more boldly in this direction; for when all is said and done, the problem of supreme importance to-day is to preserve the morale of the nation and to give to that large fraction of the nation which is now in the grip of untoward circumstances a hope and a purpose in life.

THE GERMAN ELECTIONS.

THE returns of the General Election for the Reichstag, which was held in Germany last Sunday, November 6th, have not been sensational; and, on present showing, there is no indication that the political consequences of these elections will be sensational either.

In any analysis of the returns there are five principal parties whose fortunes have to be taken into account, and these five fall into two groups. There are the Centre Party and the Social-Democrats and the Nationalists, who each represent certain important permanent elements in the

German body-politic; and there are the Nazis and the Communists, whose ebb and flow registers the fluctuation of the wayward emotional element in German political life.

To take the three more stable parties first, it is evident that normally, each of these parties can count upon a solid nucleus of supporters who will vote for their party faithfully all their lives, and will probably hand on their political creed to their children. Accordingly, anything like a *dégringolade* of any one of these three parties would imply a real upheaval in German political life, while a sensational advance on the part of any one of them would suggest a real shift in the balance of political forces. When we look at the position of these parties as it is now, by comparison with their position after the General Election of last July, we are struck at once by the smallness of the change which the new returns register. In the new Reichstag the Centre will be reduced from 75 seats to about 70, and the Social-Democrats from 133 to about 121, while the Nationalists will rise from 37 to about 50. But, in all three cases, the slowness of the change is equally significant. Evidently the Catholic and the Socialist votes have come down to bed-rock, and may be expected to maintain something like their present level even if the two parties remain out in the wilderness.

Conversely, the gains of the Nationalists in this election are surprisingly small when one considers that to vote Nationalist was the only way in which it was open to a German voter last Sunday to express his confidence in the von Papen regime. We do not know whether Herr von Papen and his colleagues, when they decided to appeal again to the country after so short an interval, had really any expectations that the consequence would be a far-reaching transfer—or, rather, re-transfer—of votes to the Nationalists from the Nazis. Anyhow, the returns show that nothing of the kind has taken place. The loss of about 35 seats is no doubt a serious matter for a movement which, like the Hitler movement, can only succeed by maintaining the spell of unbroken success. On the other hand, the dozen additional seats which are to the Nationalists' modest share of the rather meagre spoils which have fallen from the Nazis to all the other parties in the aggregate are so far from symbolising a national vote of confidence in Herr von Papen that the result must be added as almost as much of a slap in the face for the Nationalists as for the Nazis themselves.

For the Nazis, the reverse which they have suffered is unquestionably severe. For ever since their startling victory in the autumn of 1930—on the morrow of the completion of the Allies' evacuation of the Rhineland—the Nazis have gone forward from strength to strength. They have now come up against the von Papen regime; have pitted their strength against it; and have made no substantial impression upon it. Moreover, in the process they have been manoeuvred into the position of championing the cause of constitutional parliamentary government in Germany against dictatorship. As nothing more exciting than the largest of the constitutionalist parties, the Nazis would appear, at the moment, to have rather poor prospects.

It is otherwise with the Communists, whose strength in the Reichstag has been raised by these elections from 89 to about 100. The political atmosphere which has been fostering the Nazis during the last two years has also fostered the Communists, but to a less sensational degree. Every time that the Nazis have achieved a gain the Communists have succeeded in gaining likewise, though always

on a more modest scale. These smaller but steadier gains have been the fruit of a rather different kind of appeal. In essence, no doubt, the Nazi and the Communist appeals are of the same nature. They are appeals to desperate men to win a millennium by violence. But there is one important difference between the two appeals which may count for much at this moment. Herr Hitler has promised his millennium for to-morrow, whereas the Communists, in writing out their cheque, have never yet filled in the date. On the morrow of this last election Herr Hitler stands with his overdue millennium unrivaled and his strength on the ebb, while the gradual advance of the Communists towards their undated millennium has accomplished one more of its steady steps forward. At this moment, the two parties of violence must be contemplating the next general election with very different expectations. For next time the Nazis have to fear the possibility of a setback which might be as great a land-slide as some of their previous leaps forward; but the Communists can face the next election with equanimity, in the expectation of repeating their usual performance by once more gaining ten or a dozen seats on their previous figure.

No doubt these Communist prospects are as much in the minds of all the other parties as they are in the minds of the Communists themselves; and for this reason we may look forward to seeing a rather energetic concerted effort to make the present Reichstag work rather than play the Communist game by continuing to hold inconclusive general elections at the recent rate of frequency. This effort would have to take the line of a compromise between the constitutional parties and the Government. The constitutional parties would have to content themselves with something less than a complete return to constitutionalism. They would have to tolerate the continuance in office of a Government which was not representative of a parliamentary majority. On the other side, the Government itself, having found by experiment that no number of general elections can win more than about one-eighth of the seats in the Reichstag for its own supporters, might feel that it had to come to terms with the other parties to some extent.

Probably the solution will be found to lie in some change of personalities; and, in fact, Herr von Papen has hinted, in a speech delivered since polling day, that he may allow himself to be made the scapegoat for the present German political reaction, as he once served as the scapegoat for German official tactics in the United States during the war. If the present regime survived with Herr von Papen eliminated, the survivors—e.g., General von Schleicher—might find it easier to win parliamentary support. The Centre Party, for instance, might be conjured out of its present irreconcilable attitude by the fall of a Chancellor who, as a Catholic, is inevitably regarded by his co-religionists as a traitor to their cause. Already, in all sections of the Opposition press, including the Social-Democratic newspapers, there is a tendency to translate general criticisms of the present regime into personal attacks on Herr von Papen, but not on General von Schleicher. One element in a possible compromise is already visible here.

But a compromise can hardly succeed unless it includes the Nazis; and here again the personal factor may come in. Undoubtedly the wise course for the Nazis now is to realise the potential power which they have gained during these last two years by agreeing at last to participate in the Government before their gains depreciate any further. But how can this be done without loss of face when the party has as its leader a man who has committed himself, beyond possibility of personal retreat, to the "totalitarian" policy of all or nothing? Is it possible that Herr Hitler will accompany Herr von Papen into limbo? No doubt, if he has to make this melancholy journey, he will have, so to speak, to be given a Pullman seat instead of being bundled into a cattle-truck; but that will make little difference in the end if he finds himself travelling to the same destination on board the same train. For "the elimination of personalities" can be effected by different ways and means. One can be eliminated by being placed on a pedestal in a glass case as well as by being hounded into the desert as a scapegoat. Is the glass case Herr

Hitler's destiny? The very fact that the question can be asked is evidence that this transalpine *duce* is no Mussolini.

The one combination that now seems unlikely is a Nazi-Communist combine to pull the house down. The quarrel that has ended the recent Nazi-Communist transport strike in Berlin seems likely to be definitive. For this is an alliance which the Nazis could only afford so long as they were manifestly outstripping the Communists in the race for power. Thus, on the whole, the immediate future of German politics seems likely to be rather less stormy than the immediate past, though it would be idle to pretend that the obscurity of the situation has been greatly lessened.

BUILDING SOCIETIES AND SMALL HOUSING.

A DECISION which may open a new chapter in building society history has been reached by the Housing Committee of the National Association of Building Societies, which has submitted to the Ministry of Health a memorandum suggesting that, in the case of blocks of small houses, built with a view to letting at economic rentals within the reach of the working classes, the societies should advance 90 per cent. of an agreed valuation. It is suggested that responsibility for 70 per cent. should be entirely with the building society making the loan, while the remaining 20 per cent. should be guaranteed jointly by the Government, the local authorities concerned and the building society in the proportion of one-third each. This proposal appears to be contingent (a) on the withdrawal of subsidies and rate aid, save for slum clearance, (b) on the relaxation of the present legal requirement that not more than twenty "subsidy houses" may be built to the acre, and (c) on the adoption of a lower standard as regards road and footpath construction. The building societies' committee goes farther, for it suggests that the Minister of Health might use his influence to induce local authorities to negotiate for the handing over to building societies of the mortgage business locally financed, in recent years, under the Small Dwellings Acquisition Acts and the Housing Acts.

Although initiative for the inquiry came, in the first place, from the Ministry of Health, its possibilities appear to have appealed more to the Northern than the Southern societies. It may be significant that the Committee included Sir Enoch Hill of the Halifax and Mr Walter Harvey of the Burnley Society, but not Sir Harold Bellman of the Abbey Road. That the societies should desire to extend the scope of their operations is not unnatural. In reviewing the financial results of the leading societies in 1931 (see the *Economist*, April 23, 1932, page 919), we pointed out that, since the war, over a million houses had been built for sale to private owners, mainly with the help of building societies, and that it was unlikely that the demand for houses costing, say, from £700 to £2,000, mainly in occupier-ownership, could long continue at a rate sufficient even approximately to maintain building society operations on the scale of the last few years.

The suggestion for co-operation between national and local authorities and the building society movement, in a nation-wide effort to satisfy the urgent demand for better working-class housing facilities, opens up a vista of impressive social possibilities. The benefits of better housing to the nation, physically and morally, have been urged for years by enlightened members of every political party. The present scheme ostensibly offers the Government a considerable reduction in the liability undertaken, which is now put at £184 per dwelling in urban parishes, and £196 in agricultural parishes. A similar inducement is offered to local authorities, whose liability under existing arrangements is assessed at £67. The maximum liability to each, on a £400 house, under the proposed building society scheme, is computed by the Committee at £26 18s. 4d.

The low level of contemporary interest rates, further, makes the moment particularly opportune for the inauguration of a great housing "drive." This last consideration, however, suggests what may, in practice, prove a formidable difficulty. The building societies, which

would themselves be responsible for securing the funds with which to advance the full 90 per cent. of the agreed valuation of each house, have in the recent past based their large "turnover" on the offering of relatively high interest rates to investors and depositors and the charging of correspondingly high rates to mortgagors. If 3½ per cent. is to be regarded as the future basic yield figure for British Government securities, mortgage rates of over 5 per cent., which the societies at present charge to borrowers, would appear unduly high for the proposed new business. It may be argued that if the money for advances on small dwellings were raised by a specially constituted National Housing Corporation (in which the building societies might participate), with a Government guarantee, it might be obtained at very little more than 3½ per cent. The societies, however, while aware that their participation would give their obligations to investors practically gilt-edged status, would scarcely regard such a rate as attractive. They claim that their expenses and reserve and taxation requirements necessitate at least a margin of 1 per cent., or even 1½ per cent., between their borrowing and lending rates. Further, they had some £342 millions due to shareholders and £57 millions to depositors and other creditors at the end of last year, against which their largest asset consisted of £360 millions due on existing mortgages, the great majority of which had been made at over-all rates well in excess of 5 per cent. In the five years to 1931 they advanced £368 millions on new mortgages. Allowing for repayments, therefore, it is clear that the great bulk of the mortgages now outstanding are "young" mortgages.

If low interest rates continue, it may be presumed that the societies will endeavour to "let down" their own rates cautiously, step by step. They would almost certainly regard a transition to anything in the neighbourhood of 3½ per cent., in the near future, as unduly violent and dangerous to their financial structure. It would, inevitably, result in pressure for lower rates by existing mortgagors, which the societies could not indefinitely resist. If the new rates, even with a Government guarantee, proved unattractive to those investors who had been induced, in the past, to lend to the societies by virtue of the admittedly high rates offered, any widespread withdrawal movement would call attention sharply to the drawback inevitable in building society technique—that of borrowing "short" and lending "long." The "risk factor," by general admission, is significantly higher in the case of small than of larger properties.

Under any scheme, finally, in which the building societies were participants, the State would be compelled to take cognizance of the wide disparity between the size and status of individual societies. Actually, there are over a thousand societies in Great Britain to-day, ranging from the Halifax, with £78 millions of assets, and the Abbey Road with £35 millions, to many societies with less than £5,000 of assets. Altogether, whilst it is all to the good that the movement's Housing Committee, by its present decision, has brought the question of co-operative effort in small housing to the forefront, the State and local authorities, before giving their decisions, may well demand closer definition and explanation of numerous points which may involve serious difficulty in practice.

THE GRAIN SITUATION.

ATTENTION has been focussed on the prospects of cereal farmers by the renewed slump in grain prices. It is commonly agreed that the restoration of the purchasing power of agricultural communities forms an essential condition of a revival in trade. Nations that are predominantly agricultural as well as farmers within the boundaries of industrialised countries, have found that the price ratio between their products and manufactures has become increasingly disadvantageous to them during the past four years. During the same period industrial unemployment has assumed menacing proportions. As the fall in prices has applied to almost all agricultural products, the farmer has had little incentive to cultivate alternative commodities. His plight has, moreover, been seriously aggra-

vated by the growth of economic nationalism which coincided with a series of heavy crops. The attempts of the Governments of the chief importing countries to maintain the purchasing power of their farmers by a drastic restriction of foreign supplies, have played no small part in prolonging and intensifying the agricultural crisis, for the low level of international prices has failed to stimulate the demand of importing countries owing to the policy of high prices maintained by protection. In view of the resulting shift in the balance of production between importing and exporting countries, the latter are faced with the necessity of reducing acreage by a greater proportion than would otherwise have been necessary.

The extent of the fall in the price of grains since the advent of the depression is shown in the following table:

AVERAGE PRICE OF GRAINS.

Season.	Wheat(a).	Barley(a).	Rye(a).	Oats(a).	Maize(b).	Rice(c).
	Winnipeg.	Winnipeg.	Chicago.	Chicago.	Chicago.	London.
	Per bushel (60 lbs.).	Per bushel (48 lbs.).	Per bushel (56 lbs.).	Per bushel (32 lbs.).	Per bushel (56 lbs.).	Per cent.

" Nov. 9	46	28	27	15	24	7 6

(a) Season, August-July. (b) Season, November-October. (c) Calendar year.

It will be seen that current quotations are in many cases only about one-third of the average prices during the season 1928-29. No doubt costs of production have been reduced considerably. Improvements in technique have been substantial, and the price of fertilisers and agricultural machinery has been reduced. Nevertheless, current prices in a free market are unremunerative to the majority of farmers. Although wheat is the most important cereal from the point of view of international trade, the total value of the annual production of the other grains exceeds that of the chief bread grain by a substantial margin. The development of the production of grains in the principal countries of the world during recent years is shown in the next table:—

Grain Production (In Millions of Acres and Centals.)

Season.	Wheat.		Barley.		Rye.	
	Area.	Yield.	Area.	Yield.	Area.	Yield.
Average 1926-27 to 1931-32...	215	1,971	54	596	87	945
1931-32.....	218	2,005	54	524	86	862
1932-33.....	221	2,040	56	635	87	977

Season.	Oats.		Maize.		Rice.

Average 1926-27 to 1931-32 ...	46	511	155*	2,147	114*	1,658
1931-32.....	45	452	159†	1,830	118†	1,782
1932-33.....	44	554	166‡	2,059	118‡	1,724

* Average, 1925-26 to 1929-30. † 1930-31. ‡ 1931-32.
(Source: International Institute of Agriculture.)

The most striking fact revealed by these figures is the increase in the area under cultivation of all grains except oats. It has been most pronounced in the case of maize and wheat. Clearly, if the restrictive policy of various Governments, which prevents an expansion in demand, is persisted in, a reduction in acreage is inevitable before there can be an adjustment of supply to demand at a higher level of prices. The reason for the sharp fall in values which has taken place recently is evident. Last year's yield of barley, rye, oats and maize was considerably below the five-year average from 1926-27 to 1931-32. In spite of the fact that other grain such as wheat can be substituted for these products to a substantial extent, the rather smaller production means that their prices did not decline as much as some other products. Indeed, the average price of barley in Winnipeg in 1931-32 even shows a substantial rise on the preceding year; this is, however, partly due to the lower gold value of the Canadian dollar.

But the outlook for prices during the current season is not encouraging. Not only has the production of wheat been higher than last year, but the supply of the other grains is also considerably larger. Production of wheat in the chief European countries (excluding Russia) advanced from 853,386,000 centals in 1931 to 899,988,000 centals in 1932. Similarly, the yield of rye rose from 430,300,000 centals to 523,155,000 centals, the output of barley increased from 282,695,000 centals to 331,528,000 centals, and the oats harvest, at 424,561,000 centals, shows an advance of 33,812,000 centals. At the same time the yield of the maize crop in the principal countries of the northern hemisphere increased from 1,759,213,000 centals to 1,991,526,000 centals, mainly as a result of the bumper crop harvested in the United States. As far as can be judged, the Eastern rice crop, too, promises a good yield. It is true, as the appended summary shows, that only wheat, maize and rice enter into international trade in substantial quantities:—

Exports of Cereals (In Millions of Centals.)						
Season.	Wheat.	Barley.	Oats.	Rye.	Maize.	Rice.
1929-30.....	315	75	34	27	169	118
1930-31.....	424	88	26	25	242	118
1931-32.....	424	62	24	39	201½	115

* Season, August-July. † Season, November-October. ‡ Ten months ended August 31st. § Calendar year.
(Source: International Institute of Agriculture.)

Nevertheless, the abundance of other grains also reacts unfavourably on wheat prices because a smaller proportion of the latter will be needed for feeding purposes.

The position of the cereal farmer is far from enviable. He faces another season of low prices, and is individually almost powerless to improve his position. Similarly, well-meant national measures have only resulted in aggravating the situation. Clearly, the only sane remedy is for importing countries to reverse their policies in order to stimulate demand at low prices and thus increase the buying power of those primary producers whose demand can alone restore prosperity to their own industries. The only alternative—and that a very retrograde one in view of the large unsatisfied potential demand of the world—is a drastic curtailment of the area under cultivation in the chief exporting countries, mitigated by such further efforts as they may be able to make to bring down costs to an even lower level.

THE UNEMPLOYMENT INSURANCE REPORT.*

Summary of the Majority Findings.

The Commission begin by observing that the Report has had to be framed at a time of financial stringency and grave economic and industrial dislocation. The total cost of any scheme proposed is bound to be serious; and the recommendations, to be practical, must take this into account. For the same reason it is impossible to review on its abstract merits the distribution of the financial and administrative responsibility as between employers, contributors, the State, and local authorities. Changes in this must be limited to those which are necessary to secure the purposes which the Commission have in mind.

Chapter I.

EVOLUTION OF UNEMPLOYMENT INSURANCE.

The Report reviews the development of unemployment insurance in 1911-31; gives an account of the changes in the scheme since the Interim Findings of this Commission; and describes the provisions of the Poor Law as they affect the able-bodied unemployed. The chapter ends with a review of existing provisions for unemployed workers and of the Means Test.

Chapter II.

POST-WAR UNEMPLOYMENT.

The Report next analyses the facts of post-war unemployment and its permanent and industrial causes. The "standing army" of unemployed numbers about 100,000, and their unemployment accounts for only one-tenth of the whole. During the last eleven years 60 per cent. of the insured population have

* Report of Royal Commission on Unemployment Insurance—Cmd. 4165. 7s. 6d. H.M. Stationery Office.

experienced some unemployment; but the incidence is very unequal. The two main elements in the problem are (a) the widely distributed intermittent unemployment, whose causes are a persistent feature of modern industry, and (b) the hard core of chronic concentrated unemployment which has grown greatly in relative importance since the war. The second element has its root in post-war industrial conditions, and its causes are likely to persist for some years. Insurance is a suitable method of treatment for transient unemployment, but it does not meet the needs of chronic unemployment. This latter is a problem of relief, coupled with measures of assisted transfer and training.

Chapter III.

PROPOSALS OF REPRESENTATIVE ORGANISATIONS.

A summary is next given of the proposals put forward by representative organisations. Those representing the employers and local authorities were in favour of maintaining the distinction between insurance and relief. The trade unions recommended unemployment benefit for everybody capable of and available for work, without a Means Test, the cost to be borne wholly by the taxpayer.

Chapter IV.

PRINCIPLES OF INSURANCE.

A discussion follows of the principles upon which unemployment insurance should be based. The degeneration of the insurance system during the last twelve years is attributed partly to undue optimism as to the temporary character of the high level of unemployment, and partly to the fact that, as the only alternative was the Poor Law, an intolerable burden would have been placed upon local authorities in the distressed areas if they had been made responsible for the relief of all unemployed workers who had exhausted their right to benefit. It is, therefore, clear that the scope and provisions of the insurance scheme must depend largely on the arrangements that exist outside it, and these are accordingly discussed first.

ARRANGEMENTS OUTSIDE INSURANCE.

The duty of the State to provide for the needs, during unemployment, of those persons who are capable of work, and who show that they will normally seek to earn their livelihood in industrial employment, is recognised; and stress is laid on the duty of taking all possible steps to prevent their deterioration in employability. The Commission express the view that a good deal more could be done than is done at present to provide work. Cash payments are, however, indispensable, and the principles upon which these should be based are discussed. The trade union scheme of unconditional cash payments is rejected on the grounds that, if practicable at all, it could only be so under a system of State regulation of industry and that its cost would be immense. After discussing and rejecting the idea of a system of fixed payments, as of right, subject to deductions under general rules, the Commission adopt the remaining alternative of a system of discretionary payments adjusted to individual needs (judged by assessment of the resources of the household of which he is a member) of the applicant. The administration of these discretionary payments should be a function of the local authority, but the present system of administration is unsatisfactory in five respects:—

- (1) The test of need is not administered on uniform principles.
- (2) Some of the areas of administration are too small.
- (3) The central authority has insufficient responsibility and cannot exercise effective control.
- (4) The central authority concerned is not primarily an industrial authority and is not otherwise directly concerned with unemployment.
- (5) The local authorities have no financial responsibility for the administration of the test of need for transitional payments.

These objections can be overcome by reorganising the local administration, by councils of counties and county boroughs, of a system of payments based upon need, and by closer central supervision of their methods. The Ministry of Labour should be responsible for that supervision.

UNEMPLOYMENT ASSISTANCE.

The Commission therefore propose a service to be administered under the guidance of the Ministry of Labour and to provide generally for the able-bodied unemployed who are within the industrial field. They see no reason for differentiating between workers who normally work in insurable employment and those who normally work in uninsurable employment. As long as an industrial worker is unemployed involun-

tarily and is willing to accept training, instruction or occupation, he should receive assistance in the form of cash payments, determined by a new statutory committee of the local authority, to be called the "Unemployment Assistance Committee." If he ceases to qualify for assistance under the scheme, he may apply to the Public Assistance Committee, as at present. As this will tend to confine the Poor Law service to cases requiring deterrent treatment, the power which the English and Welsh local authorities already possess to set to work, or relieve in an institution, should be extended to Scotland. Discretion to grant supplementary relief in exceptional cases should remain.

Differences in local practice should be largely smoothed out by closer central supervision, and if the objects of the scheme are kept in mind, the differences which remain will be well founded.

The amount of relief should be less than the prevailing level of wages, and, where possible, insurance benefit should be higher than relief.

DISTRIBUTION OF COST.

The causes of unemployment being largely national, it is inequitable, as well as impracticable, that local authorities should bear a large part of the cost of relief; but it is desirable that each locality should retain a financial interest in its own employment situation, and it is undesirable that local authorities should administer funds in which they have no financial interest. The burden must therefore be so divided as to place the greater part of the cost upon the Exchequer, without undermining the local authority's sense of responsibility. It is suggested that, as a starting point, the cost of meeting transitional payments under the present system should be taken as a basis for the Exchequer contribution under the new scheme, and it should be allocated between the local authorities in proportion to their relative burdens of unemployment not covered by insurance. It is suggested that each area should bear its own cost up to the extent of a 4d. rate.

FUTURE OF INSURANCE.

The Report then considers the future of unemployment insurance. A scheme in which the benefits are substantially covered by the contributions raises no question of equity, but only of desirability. Such a scheme, in which payments are made as of right, has great advantages from the point of view of the worker; and, as the responsibility for employment rests with industry and not with the State, it is reasonable that the first costs of unemployment should be borne by industry and not by the State. Further, the system is easier to administer than one of relief. As to scope, the system must aim at covering occasional, but not chronic, unemployment.

Chapter V.

STATUTORY COMMISSION.

The Report proposes the appointment of a Statutory Commission to keep the scheme constantly under review and suggests changes which may be necessary to keep its finances on a sound basis. It should have the power to propose orders and regulations to be made by the Minister, and to report at any time if occasion arises. It should be required to make an annual report on the finances of the scheme, and, for the purpose of carrying out its duties, it should have power to obtain information from the Department on matters with which it is concerned. The Minister of Labour should be required to seek its advice before making any Order.

The Statutory Commission should also maintain a close watch over the development of the arrangements outside insurance for unemployed workers; and, before issuing general directions with regard to these arrangements, the Minister of Labour should seek its advice. It should consist of not more than five members, appointed in consultation with, but not as direct representatives of, the interested parties.

Chapter VI.

SCOPE OF INSURANCE.

This chapter deals with the scope and provisions of the unemployment insurance scheme. The attempt to differentiate between employments carrying different degrees of risk, whether by different rates of contribution, or by restoring the right to contract out, is not recommended. Nor is the extension of the scheme to cover certain industries, now excluded, which carry practically no risk. The continued exemption of certain publicly-controlled services is recommended, as is also the retention of the Minister's power to grant certificates of exemption in certain cases, including a limited proportion of railway workers.

The Commission recommend that the age of entry into insurance should correspond with the school-leaving age. No

change is recommended in the provisions relating to persons over sixty-five.

It is desirable on general grounds to raise the income limit to £350, but this should not be done unless and until the limit for health insurance is also raised. The additional revenue at present rates of contribution would only be about £2,000,000.

In view of the difficulties involved, the Commission do not advocate the extension of the scheme to agriculture, but they recommend that the possibility be explored of setting up a special scheme for that industry. The inclusion in the insurance system of private domestic servants is not recommended. No change is recommended in respect of existing special schemes, men employed in His Majesty's forces, agents, apprentices, seamen domiciled abroad, shore fishermen and persons not employed under contract of service.

CONTRIBUTIONS AND BENEFITS.

No change is recommended in the system of a flat rate of contributions differentiated only by age and sex, or in the requirement that a claimant shall have paid thirty contributions in the preceding two years. The Commission recommend a continuance of the concessions in respect of periods of sickness or of unemployment in excepted work, and advocate a similar concession in respect of time spent in attending recognised training courses.

The Report recommends the restoration of the principle of relating the period of benefit to the record of insurable employment over a recent period. A claimant having thirty contributions to his credit in the preceding two years should be entitled to a minimum of thirteen weeks' benefit. At the end of thirteen weeks he should be entitled to a further period of benefit in the benefit year in the proportion of one week for each ten contributions paid over the previous five insurance years, less the yearly average number of weeks' benefit (excluding transitional payments) drawn in the period of five years.

CONDITIONS FOR RECEIPT OF BENEFIT.

The present waiting period should be continued. No immediate change is recommended in the interpretation of "continuous unemployment." Customary holidays should not count for any purposes as days of unemployment, nor should idle days in weeks in which a shift worker has done a normal week's work.

Slight modifications are suggested in the interpretation of the terms "capable of and available for work."

It is recommended that a claimant should be required to prove that he is "unable to obtain suitable employment," and that the disqualification under Section (4) of the Act of 1930 should be repealed.

Power should be given to adults to question the reasonableness of an order to attend courses of instruction. Unreasonable refusal by juveniles to attend when required should be punished by a period of disqualification for benefit.

The Courts of Referees should have the power to suspend benefit indefinitely, subject to an appeal to the Umpire.

Recommendations are made with a view to seeing that workers employed for less than a full week shall always be better off when in employment than when they are unemployed. Regulations applied to seasonal workers should not operate in such a way as to discourage other unemployed persons from temporarily taking up seasonal employment.

It is recommended that the regulation relating to married women shall not apply where thirty contributions have been paid in the preceding two years and since the date of marriage.

Women who have been deserted, or who are permanently separated from their husbands, should be regarded as unmarried.

The continuance is recommended of the special provision by which disabled ex-service men are allowed to qualify for benefit by ten, instead of thirty, contributions in the preceding two years; but the other conditions of benefit should apply to them. The Exchequer should make good to the Fund the expenditure incurred only by virtue of this special provision.

DEPENDANTS.

It is proposed to extend the class of dependants to include a daughter or sister acting as housekeeper, and to exclude fathers and stepfathers, younger brothers and sisters, half-brothers and half-sisters, and step-brothers and step-sisters. The increase in the rate of ordinary benefit for young persons receiving allowance in respect of a dependant should cease. Dependants' benefit should not be paid in respect of persons in receipt of old age or widows' pensions which are not less than the amount of dependants' benefit. Otherwise the claimant should be entitled to dependants' benefit if he can show that while in employment he has contributed to the maintenance of the person in respect of whom it is claimed at least the equivalent of the amount of dependants' benefit. Benefit should not be payable in respect of a female dependant who earns more than 8s. per week from one or more occupations (including taking boarders). An occupation ordinarily carried on for profit should not be a disqualification unless the amount earned exceeds, on the average, the ordinary rate of dependants' benefit.

The restoration to the insurance officer, subject to appeal, of the right to disallow benefit in certain cases is recommended. Certain minor changes are recommended in connection with appeals, and one in connection with suspension of benefit. The umpire should have power to fix the date from which a disqualification imposed by him is to run.

The importance of close attention to and review of the forms and methods of procedure is urged upon the Minister of Labour.

The Commission approves the principle of allowing trade unions to administer unemployment benefit, subject to adequate safeguards. An extension of the provision for supplementary schemes is suggested.

Whatever new scheme is adopted, it should be embodied in a consolidating Act, which would repeal the Acts now in operation.

Chapter VII.

UNEMPLOYMENT ASSISTANCE.

The Commission then proceed to give a more detailed account of the proposed scheme of "unemployment assistance" outlined above.

MEANS TEST.

In particular, detailed suggestions are made for the application of the Means Test. In deciding what constitutes a household, regard should be had to the facts of each case, and a proportion of the earnings of other members of the household, in addition to out-of-pocket expenses, should be left out of account. A smaller proportion of any occasional earnings of the applicant himself should also be ignored. Savings under £50 should be left out of account; account should be taken of the first £50 at the rate of 1s. a week, and 1s. a week for each further £25. No payment should be made where savings exceed £300. House property should be treated as savings, but, if resided in by the applicant, account should only be taken of the amount which would normally be paid in rent.

It is recommended that half the amount of a disability pension be ignored, and there should be discretion to ignore more in special cases. There should be discretion to ignore a proportion of workmen's compensation allowance. The present statutory exemption of the first 7s. 6d. of health insurance benefit and the first 5s. of friendly societies' benefit should continue, and the latter should be extended to Scotland.

Steps should be taken to narrow differences between different areas to represent real economic differences, and to preserve a proper relation between relief scales and scales of benefit.

Chapter VIII.

UNEMPLOYMENT EXCHANGES.

After a full survey of the work of the unemployment exchanges, the Commission recommend that they should be developed along the present lines. They believe that the introduction of a compulsory element in their use is undesirable. Certain suggestions for future development are, however, made.

The Report recommends that powers be given to the Minister of Labour to introduce and control schemes for the decasualisation and regulation of employment.

Chapter IX.

TRAINING.

This deals with the provision of training and occupation for unemployed workers. No change is recommended in the general

regulations for juveniles, or in the present voluntary basis of the training for women. Education authorities should, however, be induced to play a much larger part in the organisation of courses for the younger workers.

A considerable extension of the provision by local authorities for occupation and training of adults is recommended, but the greater part of the cost should fall on the Exchequer. It is, however, hoped that the activities of voluntary organisations will be continued and extended. The Commission stressed the importance of hard work and discipline at all these centres. Allotments are particularly approved of.

Chapter X.

FINANCE.

This important chapter deals with finance. The present debt of £115 millions is the total net excess of the expenditure of the Unemployment Fund over its revenue from July, 1921, to March, 1932. Most of it was incurred during the last two years. The Commission recommend its transference to a separate fund, with provision for its amortisation in 65 years by an annual payment of £4½ millions, to be borne as to two-thirds by the Exchequer and one-third by the Unemployment Fund.*

ANNUAL REVISION.

The finances of the scheme cannot be based on an estimate of average unemployment over a period of years, but must be adjusted annually in the light of experience. The Statutory Commission should recommend the necessary changes in contributions, benefit, or conditions, and the Minister should be under a statutory obligation to make such changes as will, in his opinion, maintain the finances of the scheme on a solvent and self-supporting basis.

In spite of last year's economies, the present charge on the taxpayer is at the rate of £31 millions higher than last year, and will, if continued at the rate of September, 1932, amount to £80½ millions. The cost of out-relief to able-bodied persons last year was £5.1 millions, and will be somewhat higher in the current year.

LIMITS OF FINANCIAL REFORM.

Changes in none of these directions, however, can be carried beyond a certain limit which the Commission consider to be reached in the proposals below, and if adjustment beyond this limit became necessary, recourse would have to be had either to borrowing or to a special Exchequer grant. Should the annual review at any time reveal growing financial instability, without a reasonable prospect of early recovery, it might be necessary to establish simply a system of unemployment relief with a test of needs.

Meanwhile, to secure solvency on a basis of three million unemployed the Commission recommend:—

- (1) No change in the rates of contribution.
- (2) The following weekly rates of benefit:—

Age.	Males.	Females.
Over 21	15	13
18-21	12	10
17-18	7	6
16-17	5	5
Under 16	3	3

- (3) No change in dependants' benefit except that the rate for the first child should be raised from 2s. to 2s. 6d.

COST OF ADMINISTRATION.

The cost of administering the Unemployment Insurance Acts, including transitional payments, is £7 millions, of which £4 millions may be attributed to the administration of insurance benefit proper. As an unemployment exchange service is necessary apart from the administration of benefit, it is suggested that a larger proportion of the cost should be borne by the Ministry of Labour. This would reduce the share borne by the Unemployment Fund to £3½ millions for 1933-34.

EFFECT OF RECOMMENDATIONS.

The following table shows the general financial effect of the recommendations, assuming a live register of 3 millions:—

FINANCIAL YEAR 1933-34.

Receipts† from contributions at present rates	£ 59,100,000
Estimated cost of benefit at present rates	59,000,000

* Mr Trouncer only agrees to this proposal subject to a reduction in the ordinary Exchequer contribution to the Fund.

† The recommendations which follow are subject to a reservation by Mr Trouncer.

‡ No provision is made for contribution and benefit in respect of new classes of juveniles aged 14 to 16. Assuming the extension to them to be in full operation, the estimated balance of income over expenditure would average about £700,000 per annum.

SAVINGS.

Revised rates of benefit for single persons	£1,000,000
Period of benefit (minimum 13 weeks, maximum 39 weeks)	4,000,000
Earnings test for workers employed during the week	2,250,000
Changes in classes of dependants	50,000
	7,300,000
	51,700,000
Additional 6d. for first dependent child	340,000
Cost of administration	3,500,000
Contribution from fund to amortise debt	1,500,000
	£57,040,000

This gives the fund an estimated surplus revenue of £2,060,000 over expenditure.

As to the finance of the scheme of Unemployment Assistance, the cost of transitional payments under the present system is estimated at £55½ millions, of which £3 millions is administrative costs. If the maximum rates of transitional payments are altered to the rates of insurance benefit proposed, the cost will be £55 millions. Allowing for the transfer from insurance which will follow the change in the period of benefit, and for a saving as a result of the needs test, the cost, including administration, would amount to about £58 millions. Balancing the cost of the new claimants coming into the scheme from the existing Poor Law against the proceeds of a 4d. rate in the local areas, the Commission suggest that the Exchequer contribution should be fixed at, in the first instance, £58 millions. The total Exchequer liability will then compare with the present liability as follows:—

1933-34. (Live Register 3 millions.)

Under the existing arrangements:—	£
Ordinary contribution to Unemployment Fund	19,700,000
Deficiency grant	9,400,000
Cost of transitional payments, including administration	55,500,000
	£84,600,000

With changes recommended:—

Ordinary contribution to Unemployment Fund	£ 19,700,000
Contribution in respect of Juveniles aged 14-16 years	470,000
Contribution to debt account	3,000,000
Amount transferred from Unemployment Fund to Ministry of Labour Vote for administrative costs	500,000
Exchequer contribution to cost of new service by Local Authorities	58,000,000
	£81,670,000

Thus, the Exchequer will be on the whole about £3 millions better off.

Note by Mr Clay.

In view of the safeguards against overburdening the scheme which have been introduced by the recommendations, solvency over a representative period, with temporary borrowing, is preferable to a balance in each individual year. Mr Clay proposes to arrive at this adjustment by redistributing benefit in favour of claimants with a good record in a way which would involve a great extension in the maximum period of benefit. The additional cost involved would be met by borrowing.

Reservation by Mr Trouncer.

If the Exchequer grant to the relief scheme is limited to £58 millions, the additional cost thrown on local authorities will be more than can be borne. The scheme should therefore be limited at first to persons who are now qualified for transitional payments.

A greater saving to the Exchequer is desirable and might be achieved by a reduction in the rates of benefit recommended for adults and 6d. for juveniles and by an increase in the workers' contribution to 1s. per week. A reduction in the Exchequer contribution from 10d. for each insured worker in employment to 5d. for each insured worker, whether in employment or not, is also recommended. These proposals are estimated to reduce the Exchequer liability to £66,560,000, assuming that 5 per cent. of the cost of transitional payments is found by local authorities, against £85 millions under existing legislation.

Minority Report.

The minority agree with the majority in recommendation that the Ministry of Labour should be the only central depart-

VIEWS

Imperial and Parochial

Soundness of judgement usually rests upon an ability to combine the 'close up' with the bird's-eye view. To encourage the wide angle, the Westminster Bank issues a periodical 'Review' of current trade conditions, with surveys based on local reports drawn from all over the country. Readers of *The Economist* may obtain copies monthly, without cost, on addressing a request to the Manager

WESTMINSTER BANK

LIMITED

41 LOTHBURY, LONDON, E.C. 1

ment responsible for dealing with able-bodied unemployed, but disagree fundamentally with division of unemployed into two classes.

The cost of unemployment is too heavy and unpredictable to be met by a system of mutual insurance, but could be met by a contributory scheme giving a statutory right to benefit to all who comply with the conditions. The proposed scheme would cover all manual workers and all earners of salaries below £350; the age of entry would be the school-leaving age. It would provide for the maintenance of employability, for placing and for the payment of benefit, and would be administered by the Ministry of Labour through the employment exchanges. The scheme would be partly financed by contributions from employers and workpeople, and the remainder of the cost would be borne by the Exchequer. No part of it would fall on local authorities. Benefit would be paid at a fixed rate (the rates payable before the recent Economy Act) for the duration of unemployment, as long as the claimant was free from disqualification or disallowance. The minority are opposed to a Means Test, but if one is imposed, it should be administered at the labour exchange under rules laid down by Parliament.

The education authorities should be required to provide courses for the younger unemployed workers, and the Ministry of Labour should be responsible for training workers and for occupation centres. The Government should do more to provide work, which should be paid for by wages and not treated as relief or test work. The conditions for the receipt of benefit (apart from the contributions qualifications) and the machinery for the determination of claims should, in general, remain as at present.

Notes of the Week.

Parliament and Unemployment.—Having passed the third reading of the Ottawa Agreements Bill on Thursday of last week according to plan—with the Government's "big battalions" duly marshalled to register 416 "ayes" against 68 "noes"—Parliament proceeded to a three days' debate on the state of employment. It was a dispiriting affair, whose only merit was the absence of partisan feeling and the genuine sense of the tragedy of the crisis. But, as to policy, it revealed very clearly a strange inconsistency of attitude on the part of the Government, to say nothing of a marked absence of constructive ideas. The Prime Minister, "thinking aloud," wondered wistfully what was to become of the unemployed. Neither he nor Mr Chamberlain, who wound up the debate on Tuesday, really came near to meeting the case, which was urged by various Opposition speakers, that, under existing unparalleled conditions of uninvested funds and stagnant enterprise, a stimulus to recovery must be given by the State, either by providing machinery for financial assistance for approved undertakings, or by capital expenditure on its own account, or both. Instead, they dwelt on the wasteful tendencies of relief works and the limits to what

the State can do. "Why on earth," asked Mr Chamberlain, "if a thing is a profitable enterprise is it not going on now?" Mr MacDonald gave no clear indication that he knew the answer; but whereas the Prime Minister laid emphasis on the potentialities of the World Economic Conference (whose postponement far into the New Year he strongly deprecated), and laid stress on the international aspects of the world depression, the Chancellor of the Exchequer took, as was to be expected, a somewhat different line on the question of international trade. On the evening before he spoke, the Government's new meat restriction plans had been announced; and, though he admitted that "we cannot expect to regain prosperity in this country while all the rest of the world is depressed," Mr Chamberlain was at pains to justify this experiment in curtailment of supplies. In doing so he adduced the strange argument that the failure of previous restriction schemes had been due to the fact that they addressed themselves simply to keeping supplies off the market, instead of restricting output. In the case of several commodities, e.g., rubber, this is not the case; nor do we understand how the meat scheme, which we discuss below, can be said "to go to the root and decrease production." Be that as it may, the Government speakers gave no indication of appreciating that it is only by the expansion of demand—whether it be achieved by removal of impediments which penalise trade or by the mobilisation of financial facilities stimulating enterprise—that increased prosperity can be obtained. A rise of prices brought about in any other way is merely robbing Peter to pay Paul. Though Paul may be saved from bankruptcy, Peter not only has less to spend elsewhere, but is definitely poorer than before. Until that truth is realised by the Cabinet, British policy, we fear, will continue to drift irresolutely between conceptions of internationalism, to which only lip-service is paid, and self-sufficiency, whose achievement—and no more than partial achievement—would be possible in this country even at the expense of an enormous reduction of our standard of living—would call for much more heroic measures on "autarchic" lines than this Government would have the courage to undertake.

The New Meat Scheme.—That heroism, however, is a quality which the Government themselves would claim for the contractionist side of their activities was made apparent by Major Elliott in his announcement on Monday of the new meat plans. "We have risked many things," he said, "both in regard to trade and in administration which may take us much further than we should have gone had it not been for the emergency." He informed the House that the Government was determined that agriculture shall be preserved, and that the problem of its preservation was essentially one of prices. Accordingly, they had secured from the Argentine meat importers an undertaking to put into effect immediately a cut of 20 per cent. in the supplies of imported mutton and lamb, together with a cut of 10 per cent. in chilled beef supplies, to be followed by a further cut of an additional 10 per cent. "if in the next two or three weeks prices had not responded adequately." Negotiations were also under way for an immediate voluntary restriction by Danish and other Continental shippers of supplies of bacon and hams. Major Elliott will doubtless be gratified to observe that, as we record in our market reports this week, the wholesale prices of imported meat have already risen by about sixpence per stone of eight pounds. Whether the consumer will be similarly gratified we take leave to doubt. As we see it, this experiment in raising prices by artificial contraction of supply is at once futile and, for this country, peculiarly dangerous. The blackmail which the peasant has levied on Governments throughout Europe in the past few years, in the shape of higher and higher tariffs and more and more restrictive quotas, has been a major factor in intensifying economic paralysis. For Britain—a country dependent on cheap costs of living for its ability to compete in world markets—to join in this game is to take a terrible risk. Moreover, even if we could exclude the consideration that supplies of cheap food excluded from the British market will be diverted elsewhere to the benefit of

our competitors in the manufacturing field, the fact would remain that all that the Government can achieve by its restrictionist policy is at best a transference, not an increase, of purchasing power. British agriculturalists may benefit, and so, to a less extent, may the foreign supplier who is to receive, *ex hypothesi*, a higher return on smaller shipments; but the reduction in the consumer's purchasing power will immediately react not only on other industries, but on his ability to buy milk, eggs, fruit and many other of the products of agriculture. This restriction of the living standard of the people is of menacing significance also from another point of view when it is remembered that the cash resources of one-fourth of the industrial population are derived mainly from the Exchequer in the shape of unemployment benefit.

The New Irish Import Duties.—We cannot congratulate the Government either on the matter of their new anti-Irish tariff measures or on the manner of their introduction. By Treasury Order which came into force at midnight on Tuesday, increased duties were imposed on a wide range of livestock and dairy produce, supplementing those originally enacted under the Treasury Order of July 12th. The effect of the new Order, combined with the termination after November 15th of the exemption of Irish Free State imports from general duties imposed under the Import Duties Act, is shown below:—

	Duty as from July 12th.	Duty as from Nov. 9th.	Duty as from Nov. 15th.
Live animals for food	20	40	40
Animals not for food	20	40	40
Butter	20	30	40
Eggs	20	30	40
Cream	20	30	40
Bacon	20	30	30
Pork	20	30	30
Poultry and game	20	30	40
Other meat of all kinds	20	30	30

The preamble of the Treasury Order states that the duties imposed under the Order of July 12th have been insufficient to make good the loss to the revenue occasioned by the suspension by Ireland of payments on Land Annuity and on other accounts. In defending the Order in Parliament on Tuesday night, Mr J. H. Thomas stated that between July 12th and October 29th the total amount collected had been £674,000, or, roughly, a weekly average of £44,000; but for the last four weeks the average had risen to £74,000 per week as a result of the bonus paid to exporters by the Irish Government. Not content, however, with thus obtaining "compensation" which—albeit insufficient in the aggregate to make good the annual loss of £5 millions—was nevertheless rising, Mr Thomas announced that the Government had decided to take the inconsequential course of imposing duties which, as will be seen from the above figures, are virtually prohibitive and hence destructive of Customs revenue. The inference is painfully obvious that the latest move in the tariff war, which will cause widespread ruin in Ireland and still further embitter Anglo-Irish relations, has been taken either in the desperate hope of fermenting an anti-Fianna Fail *coup d'état* in Ireland or, more probably, in order to satisfy the insistent clamour of English agriculturalists for yet more and more protection at the consumer's expense.

The Means Test.—The Government's proposals, which the House debated on Wednesday night, for the establishment of certain rules for the administration of the Means Test are to be regarded presumably as an interim reform pending wider action in the light of the recommendations of the Gregory Commission. The proposed rules are that:—

- Any wound or disability pension taken into account shall be treated as if it were reduced by one-half.
- Any weekly payment by way of compensation under the enactments relating to workmen's compensation taken into account shall be treated as if it were reduced by one-half.

(c) All money and investments treated as capital assets and taken into account shall—

- in so far as the value of all such money and investments considered in the aggregate does not exceed twenty-five pounds, be disregarded, and
 - in so far as that value exceeds twenty-five pounds but does not exceed three hundred pounds, be treated as equivalent to a weekly income of one shilling for every complete twenty-five pounds.
- (d) In taking into account the value to any person of any interest in the dwelling house in which he resides, any sum which might be obtained by him by selling, or by borrowing money upon the security of, that interest, shall be disregarded. Thus it will not be lawful for a public assistance authority to reduce the determination of a person's need for transitional payments or to determine that he is not in need of such payments, merely because money could be obtained by selling or mortgaging the house in which he resides.

The application of these rules is estimated to increase the cost of transitional payments by about £1 million per annum, or, on the present basis, somewhat less than 2 per cent. It is, however, further proposed that Poor Law authorities shall be allowed to observe the same rules in granting outdoor relief, a change whose financial effect on local expenditure cannot be precisely estimated. In so far as the rules apply to insured workers receiving transitional payments, we are glad to note that some of the worst of the present hardships will be eliminated. Rule (d) should put an end to inequitable and wasteful forced sales of house property in which claimants of transitional payments are residing as owners; and we trust that the same principle will be applied by public assistance authorities to the case of all physical property whatsoever. The provisions with regard to disability pensions and workmen's compensation go a considerable way towards meeting recent complaints; and Rule (c) at least ensures that the unemployed will not be forced to drain tiny savings to the last drop. It will be observed, however, that in this respect the proposals of the Royal Commission, which we have criticised elsewhere as being not over-generous, go beyond the present, somewhat niggardly, proposals of the Government, which assume, in effect, that savings in excess of £25 bear interest at the rate of over 10 per cent. per annum. As this rate is totally discrepant with realities, the rule means that, unless the scale of transitional benefit is to be considered as yielding a margin over and above minimum needs, claimants must actually draw upon savings to keep body and soul together. Within limits, no exception can fairly be taken to this principle which, after all, applies to uninsured workers of all classes. But we have said, and we repeat, that savings up to £100 should certainly be disregarded, and that, in calculating the deduction appropriately to be made on account of income from larger savings, the assumed rate of interest should conform much more closely to the facts. A further point of criticism of the Government's proposals is that they leave entirely out of account the present very unsatisfactory treatment of the "family income." We are still convinced that there is no case whatsoever for a system under which an employed worker, living with a parent who is out of work and claiming transitional payment, is not entitled to have any part of his earnings regarded as his own.

The Peers Again.—With the world in travail after thirteen years of uneasy peace, and with a fourth of our industrial population standing idle, and waiting for those acts of statesmanship that will permit the nations once more to resume the march of civilisation, we find it hard to believe that the public will work itself into a state of excitement about the House of Lords. But Lord Salisbury's Joint Committee of Peers and Commoners is not dismayed and has hopefully launched its plan for reforming the Upper Chamber. The hereditary principle is to be saved at the cost of dilution on a fifty-fifty basis. Of three hundred members of the New House one hundred and fifty are to be elected by members of the peerage and one hundred and fifty by members of County and County

Borough Councils. In both cases members will sit for twelve years, one-third retiring every four years. In exchange for this "modernisation" the conditions under which the House of Commons may overrule the Lords under the Parliament Act are to be modified by a stricter definition of "money bills" which the Lords may not amend and by a provision that the overruling of the Lords in case of dispute shall only take effect after a second general election. The scheme is deliberately intended to make possible a greater representation of the Liberal and Labour parties, and even suggests that where the income of an "outside" member is less than £600 a year it shall be made up to that figure. But we venture to doubt whether the country will increase the power of a Second Chamber to block or postpone legislation so long as its personnel is largely based on the hereditary principle or is dependent on a restricted "fancy" franchise. There is a case for the representation of special interests—including the landed aristocracy—in a second chamber. But reform on these lines must go very much further than is here proposed.

Disarmament.—During the past week the problem of disarmament has been actively discussed in half-a-dozen places in Europe. At Geneva, on November 4th, the Bureau of the Disarmament Conference listened to an exposition of the French Plan by the French Minister of War, M. Paul Boncour. At Toulouse, M. Herriot has been defending his disarmament policy against an attack from the Left Wing of his own supporters. In Rome, the question of a Franco-Italian naval agreement has been discussed with the Italian Government, among other matters, by the United States delegate to the Disarmament Conference, Mr Norman Davis. And in London, as we go to press, a debate on disarmament is in progress in the House of Commons. With the Toulouse Congress we deal in another note. On M. Boncour's speech there is little to say, since—as our League correspondent points out in his dispatch—it does not add much to what M. Herriot's previous speeches in Paris have told us. On the points to which we drew attention last week we must still reserve judgment until a text of the Plan is in our hands. Mr Norman Davis's conversations in Rome are good news; for a settlement of the Franco-Italian naval difficulty would clinch the naval agreement between the three Oceanic Powers which was embodied in the London Naval Treaty of April, 1930, and it would also considerably facilitate a solution of the problem of European land armaments, since the tension between France and Italy is of the essence of this problem, as well as the tension between France and Germany. At the moment it is the policy of the British Government that calls for the closest scrutiny. It is unpleasant, for instance, that when the Bureau of the Disarmament Conference was discussing the important question of supervision, last Monday, Mr Eden should have resisted the proposal that the Permanent Commission should make regular investigations as a matter of course. Is it really the British Government's policy that the Control Commission should only be allowed to act upon a formal complaint from some particular Government? And what is going to be the British Government's policy about air armaments? There is a rumour that Sir John Simon has advocated the abolition of all bombing and fighting planes and the international regulation of civil aviation, but that this proposal has encountered opposition in the Cabinet and that the Prime Minister has not been supporting his Foreign Secretary. If this rumour has any substance in it, the position is serious for the country, and will, we hope, prove serious for the Government. For no effrontery can maintain that the obstruction of disarmament was part of the mandate which "the National Government" received from the nation last year. Moreover, for this country of all countries, to oppose disarmament in the air, of all elements, is madness. For it is precisely the extension of warfare from the land and the sea to the air that has welded Great Britain on to the European Continent and has made her one of the most vulnerable countries in the world instead of one of the most secure. The fact that France is just

now as frightened of German air strength as we (if we are in our senses) ought to be frightened of Continental air strength, is a stroke of good fortune for this country. And the Government will not be forgiven if it perversely throws this opportunity for aerial disarmament away. As for civil airways, everybody, of course, wants to keep open our Imperial air routes; but this can only be done by international agreements, since every one of these routes passes over the territories of foreign countries. We hope this week's debate will have shown, by the time this issue of the *Economist* appears, that recent rumours have done the Government's policy injustice.

The Toulouse Congress.—At the end of last week the French Socialist-Radical Party held its annual Congress at Toulouse. The congress is a big affair. This time it was attended by 1,850 delegates, as well as by about 1,000 other party members, and the Senate and Chamber suspended their sittings while it was in progress. To face this assemblage of his political followers must have been rather an ordeal for M. Herriot in view of the mounting tide of dissatisfaction with his policy which has been apparent on the Left wing of the party ever since the Herriot Government took office. The temper of the Congress was presumably somewhat inclined in a critical direction by the local atmosphere; for the south is the traditional stronghold of French Radicalism. Nevertheless, M. Herriot has come through his ordeal with remarkable success. The leaders of the Left duly attacked the Government on the two tender points of finance and armaments; and M. Bergé demanded in terms the dismissal of General Weygand as well as the dismissal of the Police Commissioner, M. Chiappe. M. Herriot, however, succeeded in carrying the majority of the Congress with him when he made his reply; and the final resolutions of the Congress were in effect a vote of confidence which gives M. Herriot a free hand from his own supporters to carry on his present policy. The French Prime Minister won his victory partly by oratory; partly by virtue of the fact that the new French Plan, so far as its details are yet public, is a really substantial contribution to a solution of the disarmament problem; and partly thanks to the well-known tendency—which is particularly strong in France—for parties of the Left to line up behind Governments that stand to the right of them when the question at issue is a question of foreign policy. Much, of course, will depend on how the Plan turns out. If General Weygand does prove to have put a spoke in the wheel, and if his intervention does cause the French Plan to miscarry at Geneva, then, no doubt, the Radical attack on the General Staff will be renewed with still greater vigour and will find a wider response in the country—for the French people as a whole are manifestly bent on peace. On the other hand, if the military experts prove to have been brought to reason by M. Herriot's endeavours, and if the Plan achieves any substantial measure of success, then M. Herriot's command over his own followers would appear to be assured for some time to come.

The Amnesty in Italy.—The amnesty which is being granted in Italy in celebration of the tenth anniversary of the Fascist regime turns out happily, after all, to be as comprehensive as it appeared to be in the original announcement. When the actual terms were published last Sunday they were at first sight disappointing. Officially, the amnesty only applies to persons who have been convicted of penal offences, and not to persons who have been placed in *confino* in the islands or have been put under *ammonizione* by police action; and this latter category includes rather more than half the political prisoners in whom the world at large is chiefly interested. It is now evident that the legal limitation to convicted persons is a technicality; and that, in fact, the amnesty is being extended to persons interned as a measure of police precaution. The general terms are that persons sentenced to terms of not more than five years' imprisonment are to be released forthwith; persons serving sentences of from five to ten years are to have three years remitted; while sentences of more than ten years are to

be shortened by five, provided that a minimum term of seven years is served. Offences against the tax laws are amnestied if the guilty pay up before January 31st next. On these terms something between 15,000 and 20,000 persons imprisoned or detained for ordinary crimes will be released forthwith. Six hundred and thirty-nine out of 1,056 persons serving criminal sentences for political offences will be released forthwith. And, by an extension of the amnesty, 598 out of 1,086 persons in *confino* through police action and not through judicial condemnation will be released forthwith. Thus the amnesty secures, in effect, the immediate release of 1,287 political prisoners out of a total of 2,142 in the two categories. These figures are noteworthy. They testify, as nothing else could, to the confidence of the Fascist regime in its power to hold its own by the psychological hold upon the minds of the Italian people, and not by physical force; and the amnesty will assuredly do more than any other single act could do to give this confidence justification. During the last few years Signor Mussolini has shown us repeatedly that he stands for moderation and common sense and breadth of view in the field of international relations. He has now had the courage to apply the same policy on his home front. We are sure that he will never regret it.

"The Economist" and Yugoslavia.—Through the good offices of the Adriatic Overseas Corporation, Limited, we have received a memorandum from Dr. Juraj Tomicic, the Director of the Office for Foreign Trade at Belgrade, on an article about the situation in Yugoslavia which we published in our issue of October 15th. The memorandum is, we regret, far too long for us to print in *extenso*; but as the writer takes us to task, we are anxious, as far as limits of space allow, to put his criticisms before our readers. We may say to begin with that Dr. Tomicic is mistaken on one point. He assumes that our article was based on current anti-Yugoslav propaganda. As a matter of fact, no literature of this kind had come into the hands of the writer of the article; and the picture which he sketched of the historical antecedents of Yugoslavia was based on his reading of certain works by a Slavophil British historian which were published before the war and therefore before any such State as Yugoslavia existed to be made the butt of hostile propaganda. We may also say, with all respect, that Dr. Tomicic, in his admirable zeal to defend his Yugoslav cause, has misconceived our thesis. "The whole article," he says, "wishes to suggest to the English public that the national unity of the Croats and Serbs has been built on a wrong foundation of identity of language, while in fact the cultural, social and economic interests of those two peoples are quite different; that their national and State unity has been accomplished only through the force of Serbian arms." This *résumé* exaggerates our thesis to the point of travesty. What we did maintain in the article was that community of language is not *a priori* a sufficient basis for a national State; that community of language is only one element, and not the most important element, in those cultural affinities which are the natural basis of political nationhood; and that if two peoples have had different affinities since the Dark Ages, a community of language is no guarantee that they will be able to live together as one nation in the political sense. We also suggested that the problem is made more difficult when, in the artificial creation of a national State, the initiative comes from the more backward of the parties concerned (as in the case of Yugoslavia in the twentieth century) and not from the more progressive (as was the case with Italy in the nineteenth century). Our point is well expressed by Dr. Tomicic himself in a later passage in which he believes himself to be controverting our thesis. "It was natural," he says, "that the creating of a new State out of the parts of the old Austrian Empire could not go very smoothly. Different traditions, different structures of economic development and different administrative and legal units could not easily disappear, especially in the critical years which followed the end of the war." To our mind, the most interesting point that Dr. Tomicic

makes (and, as a Croat himself, he speaks here with authority) is that the Croat politicians have carried on against the Serbs since the war the habitual tactics of political opposition which they used to employ against the Magyars. This, we believe, is true; and we are inclined to agree with Dr. Tomicic that it is unfortunate. But what is it that has driven the Croats to feel and act towards their brother Serbs as they used to feel and act towards their Magyar masters? Dr. Tomicic describes from personal experience the enthusiasm in Croatia for union with Serbia that prevailed at the end of the war. We do not question his picture; but it leaves us wondering what has happened since to change the Croatian attitude towards the Serbs so profoundly. Surely—and here we spy a gap in Dr. Tomicic's reasoning—the post-war behaviour of the Serbs to the Croats must be primarily to blame for this extraordinary alienation of Croatian sentiment?

The Canadian Exchange.—Early this week the Canadian dollar depreciated against sterling from \$3.67 to \$3.79½, and against the American dollar from 90 to 87 cents. This sudden decline gave rise to a considerable amount of speculation, accompanied by rumours that the Canadian internal loan had proved a failure, and that borrowing of an inflationary character would be necessary. As is usually the case with exchange rumours, these suggestions appear, in part at least, to have exaggerated the true facts of the case. The Canadian internal loan consists of two portions, one a three-year 4 per cent. issue of \$25.0 millions at 99.20, and the other a 15-20 year 4 per cent. issue at 93.45. The first portion was rapidly over-subscribed, but the lists for the second portion remained open; and the contrast between the immediate over-subscription of the new British conversion loan and the failure of the medium-term Canadian loan to be quickly subscribed accentuated unfavourable comment. In addition to this, it had become known that on Thursday of last week the Canadian Government had placed \$35 millions in circulation under the rediscount machinery provided by the Canadian Finance Act. That is to say, they had sold \$35 millions 4 per cent. two-year Treasury notes to the banks, who rediscounted them at 3 per cent. Thus, though later reports suggest that by the time the lists for the medium-term loan are closed most, if not all, of the total will have been subscribed, the impression created abroad was that the Canadian Government had either decided to indulge in a little mild "reflation," or that its grain and other commitments demanded imperatively the raising of cash more quickly than could be accomplished by the medium-term loan. It is true that there are other factors which explain to some extent the recent weakness of the Canadian dollar, namely, the recent fall of grain prices and the fact that seasonal demand, which had recently led to a marked appreciation of the Canadian dollar against sterling, must decline with the forthcoming closing of the St. Lawrence. Nevertheless, despite Mr. Bennett's of the St. Lawrence. Nevertheless, despite Mr. Bennett's public reassurances that no change in Canada's financial policy is contemplated, the idea that the "reflationists" in Canada may recently have been getting the upper hand has undoubtedly played a part in the recent movement of the exchange market.

Hungarian Standstill Agreement.—A new standstill agreement was reached last week between representatives of the National Bank of Hungary and other Hungarian interests and representatives of British and American banks. The first agreement, it will be recalled, came into force on February 1st and nominally expired on August 1st, but owing to the holidays it was continued by an exchange of letters pending the negotiation of the new agreement. This new agreement, in its turn, is to remain in force until February 1, 1933, but the foreign creditors have the power to terminate it after December 1st next. French, Dutch and Swiss banking interests are not parties to the new agreement, but Hungary has engaged not to grant them better terms; thus they may possibly join in the new agreement at a later date. Compared with the

original agreement, the new scheme possesses few point of difference, though in certain respects the creditors have obtained additional safeguards. The standstill bills representing the principal of the debts due to British and American bankers will continue to be replaced by fresh bills as they fall due. So far, Hungary's creditors have not accepted their interest in pengös, but instead have required their debtors to pay the interest in pengös into special "blocked" accounts which serve as security against the interest due in foreign currency. The creditors however, have power to draw against their security accounts if they desire to invest part of the interest due to them in Hungarian property; but, even if they do this the sum so invested remains blocked in Hungary—though not in any specific Hungarian investment—for three years. This power was already in existence under the old agreement, but a new interest transfer agreement has now been signed. This provides that, if a foreign banking creditor so desires, he can authorise the National Bank to release pengös from his "blocked" account to be paid over to Hungarian exporters; and the foreign banking creditor receives the foreign currency proceeds of the export in question, which he credits against the interest due to him. This transfer, however, is not to be made at the official rate of exchange, but at such higher rate (in pengös) as is necessary to ensure the marketability abroad of the goods so exported. As a "black bourse" in Hungarian pengö already exists, and as it is hardly to be expected that the agreed transfer rate will be as high as the "black bourse" rate, the extent to which the scheme will operate depends on how much the creditors are prepared to lose in thus stimulating Hungarian exports (*anglicè* "dumping"). The question whether Hungary can be enabled to get on her feet again depends, for answer, on much wider considerations of Europe's commercial policy. All that can be said of the present proposal is that, in so far as Hungary's banking creditors are enabled to "unfreeze" some of their present loans, without excessive loss, they may be readier, given more favourable circumstances, to consider the grant of fresh commercial credits.

Cotton Spinning Agreement.—Our Manchester correspondent writes:—The spinning employers and operative in the cotton industry have at last signed an agreement regarding hours and wages. The ceremony took place in Manchester on Tuesday, and was made possible by the termination of the strike in the spinning section, which ended on Saturday last after having lasted a week. On that day the results of the ballots of the operative spinners and cardroom workers were made known; and, as the number of votes cast in favour of continuing the stoppage was not sufficient, work was resumed in the mills on Monday. The new agreement is similar to that reached in the manufacturing section, and peace is now assured to the industry for a period of at least three and a-half years. The main points are as follows:—

Conciliation Procedure.—For the purpose of the more effective avoidance of stoppages of work the two sides agree to set up a Conciliation Committee consisting of not less than four or more than six from each side. A standing chairman will be appointed for a definite period and there will also be appointed two independent members, one from each side. The Conciliation Committee will first endeavour to settle the matter by agreement, but failing settlement the standing chairman, after consultation with the independent members,

will make a recommendation, and he will also have the authority to make an award if invited to do so in writing by both sides. This provision will remain in operation for a period of three years from the date of signing (November 8th) and thereafter will be terminable on six months' notice being given on either side.

Bad Spinning Complaints.—Both sides agree that any complaints regarding bad spinning shall be considered by the existing machinery, but any extension to that machinery may be provided to avoid stoppage of work.

Hours.—The 48-hour normal week in the cotton spinning industry will be restored, and later discussions will take place on the means by which working hours may be made as fully effective as possible.

Wages.—These will be reduced by 14 per cent. on standard piece price lists, i.e., from 82½ to 68½ per cent., which is equal to a reduction of 1s. 6½d. in the £. The two sides will discuss the question of the wages of low-paid operatives without delay.

Reinstatement.—The employers have strongly recommended all their local associations to offer employment as speedily as possible to operatives who have been displaced; and should any difficulties exist at the end of two months the situation will again be reviewed generally by the Central Organisations.

The two sides have yet to discuss the wage rates for low-paid operatives. This affects about 28,000 workers in the industry whose wages are below 30s. per week. In some instances the mills have already announced that the reduction of 1s. 6½d. in the £ will not be enforced on these low-paid operatives.

The American Cotton Crop.—On Wednesday last the U.S. Department of Commerce published further important statistics relating to the cotton crop for this season. The estimate of the yield was given as 11,947,000 bales, against 11,425,000 bales a month earlier. In market circles, writes our Manchester correspondent, there was an expectation of only a slight increase in the forecast, and the report, when published, was considered "bearish." It is significant that, just before the official statistics were announced, there was heavy selling in New York and Liverpool, with rumours that the estimate of the yield had "leaked." A month ago the Government figures were also above expectations, and there was appreciable selling pressure just before the figures became known, though it is understood that special precautions are taken by the Department of Commerce to preserve secrecy. A month ago the production per acre was given at 149.3 lbs., but the figure has now been raised to 156.2 lbs. The amount ginned up to the end of October is stated to be 9,246,000 bales, against 7,311,000 bales a fortnight ago, and 12,130,000 bales at the same time last year, when the crop of 17,095,000 bales was the second largest on record. This latest information with regard to American cotton supplies is not likely to be favourable to trade in Lancashire, as buyers of yarn and piece-goods are not likely to be afraid of higher prices just at present, and it seems probable that customers will continue to purchase from hand to mouth. Superabundant supplies of raw material are assured for the next twelve months, and higher values are dependent upon definite signs of an increasing world consumption.

Employment in October.—According to the latest statement issued by the Ministry of Labour, it is estimated that approximately 9,397,000 insured persons were in employment on October 24th. This was 246,000 more than a month earlier, but 51,000 less than a year ago. The total number of registered unemployed on October 24th was 2,747,006, or 111,005 less than in September. The number of persons wholly unemployed rose by 20,230 during the month, but this was more than offset by a reduction of 130,237 in the numbers of those temporarily without work. The unemployed among persons usually in casual employment fell by 998. About 50 per cent. of the improvement recorded since September 26th is due to the resumption of work following the termination of the dispute in the cotton industry. Other industries that have benefited are coal mining, the woollen and worsted,

jute, pottery, engineering and metal industries, and certain sections of the clothing trades. On the other hand, many seasonal trades were adversely affected, including building and contracting, the distributive trades, and hotel, shipping and road services.

British Agriculture in 1931.—In its annual report for 1931 the Ministry of Agriculture has published an estimate of the value of agricultural and horticultural produce sold off farms in England and Wales. The development and relative importance of the various branches of agriculture during recent years is shown in the following table:—

BRITISH AGRICULTURAL OUTPUT. (Million £.)					
	1925-26.	1927-28.	1928-29.	1929-30.	1930-31.
LIVESTOCK AND LIVESTOCK PRODUCTS.					
Live stock	77.2	74.2	78.6	75.3	64.8
Milk and dairy produce	58.2	55.0	56.1	57.3	55.0
Poultry and eggs	15.3	15.9	16.9	18.7	17.8
Wool	2.7	3.9	2.8	1.8	1.1
Total	153.4	149.0	154.4	153.1	138.7
FARM CROPS.					
Corn	24.1	22.3	20.9	18.4	12.9
Potatoes	11.8	13.1	10.6	7.0	11.6
Sugar beet	1.2	4.0	3.6	5.3	7.6
Hops	3.4	2.9	2.6	1.5	1.0
Hay, straw and miscellaneous products	5.6	5.2	5.5	5.4	4.3
Total	46.1	47.5	43.1	37.6	36.5
FRUIT, VEGETABLES, FLOWERS, &c.					
Fruit	9.7	9.4	6.9	8.4	8.9
Vegetables	8.4	7.7	10.6	10.5	8.9
Flowers and honey and glass-house produce	6.5	6.6	6.6	6.6	6.6
Total	24.6	23.9	23.9	25.5	21.7
All Products	224.1	220.4	221.4	216.2	196.9

It will be seen that after a period of relative stability from 1926 to 1930, the total value of agricultural produce sold by farmers in England and Wales in 1930-31 shows a decline of about £19,000,000, or 9 per cent. on the preceding year. This shrinkage in the farmers' gross receipts was of course due to the fall in prices. In the absence of information showing changes in the wages bill, rent, feeding stuffs and fertilisers, it is impossible to estimate the net receipts of the industry. The fall in the gross value of the output of British agriculture was most pronounced in the livestock group. On the other hand, the decline was relatively small in the value of poultry and eggs, and milk and dairy produce. The total receipts for farm crops were scarcely changed on the year. The figure for corn alone declined from £18,400,000 to £12,000,000, but this was offset by an increase in the value of sugar beet and potatoes. The substantial advance in the receipts for potatoes was due, not to a larger crop, but to an increase of over 100 per cent. in the average selling price. The reason for the decline in the third group is to be found chiefly in the fall in prices, to which flowers and glasshouse produce offered the greatest resistance.

Shipping Freight Index.—Whole-cargo shipping freights, as measured by our index number, rose, on balance, by slightly less than 1 per cent. during October. The current figure, 87.3, was, however, over 8 per cent. below that recorded for the corresponding month of last year. Particulars of the index number are as under:—

AVERAGE 1898-1913=100.					
	Average, 1913.	Oct., 1931.	Aug., 1932.	Sept., 1932.	Oct., 1932.
European Waters	110.0	90.8	81.0	83.1	84.9
North America	113.1	91.5	82.0	85.8	84.4
South America	123.4	89.6	74.8	79.4	76.6
India	106.3	97.6	90.7	92.6	94.5
Far East and Pacific	117.4	94.0	81.8	86.1	87.4
Australia	127.9	106.8	80.1	92.6	96.1
Total	116.3	95.0	81.7	86.6	87.3

Chartering for outward coal was again on a very moderate scale; and while some improvement took place in Home

Trade rates, those obtained for Mediterranean destinations were barely steady. Apart from fairly active business in grain from the Danube, homeward requirements in European waters were small. Further afield, the unsettled state of the commodity markets and restricted purchases on European account had severe repercussions on North and South American grain chartering, and resulted in a heavy break in rates. In the Far East, where tonnage was less plentiful, freights were nominally better maintained and a fair volume of cargo space was also absorbed by Australian grain exporters for both Europe and China. Movements of the various sections of our index number are shown in detail below:—

AVERAGE 1898-1913=100.					
	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	78.1	+ 4.7	South America—outwards	65.2	...
Bay—outwards	100.9	+ 1.8	South America—homewards	87.9	— 5.7
Bay—homewards	82.3	...	India—outwards	86.3	+ 3.7
Mediterranean—outwards	80.9	— 1.3	India—homewards	102.7	+ 1.3
Mediterranean—homewards	89.2	+ 0.9	Far East, &c.	87.4	+ 3.5
North America	84.4	— 1.4	Australia	96.1	...

Expressed as a percentage of the average for 1913, the total figure of our index number for October works out at 75.1, compared with 74.4 in September and 87.7 a year ago.

LEAGUE OF NATIONS.

Disarmament — French Plan — Economic Conference.

(FROM OUR CORRESPONDENT.)

GENEVA, November 9.

M. PAUL BONCOUR's statement to the Bureau of the Disarmament Conference added no details to those already known about the French Plan, but the emphasis laid on the one or two of the guiding features was important. The uncertainties that remain cannot be cleared up until M. Herriot has finished the draft of his memorandum and submitted it to the Conference, and it therefore serves little purpose to discuss those parts of the scheme which are now a little obscure. What M. Boncour did make clear was that not only is it the French Government's intention to reach uniformity of system and status with Germany, but also, "with the necessary stages, . . . the progressive unification of material in the various armies of countries bound by the Pact"—that is to say by the European Pact of Mutual Assistance. Further, he also made it clear, in several references, that the plan should make possible important reductions in armaments. While taking into account differences in population, and Colonial responsibilities, M. Boncour's indication was that France is prepared to accept equality of status in men and arms, and that, subject to the acceptance of a European Pact of Mutual Assistance, she is prepared to accept important reductions in material. The Colonial condition is difficult both in relation to Germany and to Italy, but ought not to be insurmountable.

The Mutual Assistance Pact is a more difficult condition, not only because of its inherent complexity, but still more because of the fact that it contains the provision for restricted national contingents, powerfully armed, to be kept at the disposal of the League—a dangerous element, as was pointed out last week. M. Boncour's defence of the proposal was not convincing. He asked the obvious question: Why not destroy the arms to be forbidden to the national forces? His answer that it was too simple and illogical was unimpressive. There is no need to fear the simple solution, and it is mistaken logic to suggest that proscribed arms cannot be destroyed because they must be kept available for collective action in defence of a victim of aggression. It is better to forbid them to the

special contingents as well as to the normal national forces. All States would then be without them, just as all States would possess them if they were allowed. It would make no relative difference. If the earmarking of contingents for collective action is possible and desirable, it can be done without the "powerful arming"; and it is strange that the French do not themselves see the grave risk of what they propose. It is, or may be, the difference between a real disarmament agreement and the beginning of the re-armament by Germany. The opportunity given to the militarist elements of Germany would be too tempting, and unless the bolder and wiser course of destruction of heavy arms is followed, the French Plan may undo, on the military side, all that it promises of hope on the political side.

The best way for French and European security is that of the largest possible destruction of offensive weapons. In fact, there is no other way, and the French, having gone so far as they appear to have done on "equality," ought not to be beyond persuasion upon the most effectual means of arriving at a safe and lasting basis for it. Their contingent plan, as it is now conceived, shows a trust in Germany which is not shared by many outside France, for no system of control, however severe, would prevent the aggressive possibilities which would accompany a powerful armed nucleus of troops, and, as between Germany and France, the contingents would not, of course, be available except for national use. It is impossible not to be somewhat sceptical about the working of the idea of collective contingents; they would not be very dependable until political and armaments circumstances made them no longer necessary. It is this particular feature of the French Plan to which attention should be directed if something is to be made of the genuine French effort to meet the situation.

The Preparatory Committee for the Monetary and Economic Conference has finished its first session, which has been shorter than expected. It has contented itself with a full and frank exchange of views, and has adjourned until after Christmas to give its members the opportunity to enter into discussion with their respective Governments in the hope that concrete proposals may be presented. So far as can be gathered, the meeting has not been much beyond a statement of the difficulties and desiderata as viewed from various angles, but there appears to be a determination to work for positive proposals, and circumstances, including the American elections, may ease this effort during the coming few weeks. Some kind of arrangement on debts would obviously facilitate many things that are necessary. There has been surprise here at Mr Ramsay MacDonald's reported statement in the House of Commons that he hoped the Conference might meet before Christmas. It is curious that he had not been better informed, for it is clear that the Conference could not meet so soon with any chance of success; and, after all, the date has to be fixed by the Organising Committee of the League Council. It would probably be better for it not to meet at all than to meet and fail through inadequate preparation, though there is something to be said, on this subject as also on the subject of disarmament, in favour of not leaving the matter too long to the experts, who are mostly in the hands of their Governments and unable to take the responsibilities which belong to the Governments.

UNITED STATES.

Business — Banking — Profits — Treasury.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 2.

THE top of the seasonal rise in business activity seems to have been passed, and poor third-quarter earning statements have depressed prices in most markets. The decline in wheat to new low record prices has been an additional load on the shoulders of the share and bond markets, emphasising, as it does, along with recession in other grains and in livestock prices, the certainty of slack

purchasing power in rural communities for some time to come.

The daily trading volume in stocks is the smallest since 1924. Most observers expect some improvement to follow the election, regardless of the outcome, but the background of a strong market is not yet a convincing one. When greater interest is taken it will have the aid of the cheapest money on call and time that the market has seen in a great many years. A great supply of call money is seeking employment, on any sort of Stock Exchange collateral, at a half of 1 per cent., a rate until now confined to loans secured by United States Government bonds.

The month-end has brought a reduction of perhaps \$50 millions in member bank excess reserves, but the old peak of close to \$500 millions will, it is expected, be regained or passed shortly. There is little sign yet of greater demand for credit, and the continued shrinkage in circulating currency, increase in monetary gold stock and the output of national bank note currency are adding to the credit reserves. The New York Federal Reserve Bank estimates that from July 27th to October 26th the banks belonging to the Federal Reserve System added \$244 millions to their excess reserves. They gained a total of \$537 millions, of which \$297 millions was from gold imports and releases from earmark. Net receipt of currency from circulation was \$106 millions. Of this increase in funds the banks used \$203 millions to repay borrowings at the Reserve banks, and employed \$90 millions as reserve against increased deposits.

Investments and deposits have been rising slightly in banks outside New York, but here the increase since the middle of the year has been rapid. Net demand and time deposits in New York banks are about \$1,000 millions above the low point of March, most of the gain having taken place in July. Some of the increase has been the result of credit expansion, mainly investments, a rise of \$200 millions in the past month having taken place in net loans and investments among member banks here, in addition to the \$500 millions' growth from late July to October 1st. As the banks point out, it is usual for expansion in New York to precede that of the interior, since funds from other centres are deposited here awaiting business improvement. The accumulation at this centre of record-breaking excess reserves, the expansion in deposits and of investments and the rise in price of high-grade bonds foreshadow, it is held, further steps out of the business slough.

New financing in October was small, although there was a slight rise in public utility issues. Government financing was less than in September, consisting mainly of a \$500 million issue of 8 per cent. 4½-year Treasury notes. September issues were around \$161 millions, of which \$86 millions was refunding. Company issues amounted to \$6 millions, foreign issues \$2 millions and State and city borrowing \$67 millions.

The October net gold increase was \$70 millions, bringing the total from the low point in June to \$355 millions, or two-thirds of the loss since the beginning of the year. Little gold is now believed to be held under earmark for foreign central banks.

While the business pace is now slackening, it increased until about the middle of October. Department-store sales in the New York district were 14 per cent. under a year ago, against an average monthly decline of 21 per cent. in recent months. Business failures declined, and company dividend reductions also were less numerous. The share market in the month lost about 14 per cent. in price. Freight loadings on the railroads turned down a little in the third week of October, and doubtless will continue to show seasonal recession, but they have held up longer than usual. The steel industry has declined a trifle from its recent rise to nearly 20 per cent. of capacity, and price reductions announced by the Chrysler Motor Company, following publication of a third-quarter statement showing a loss of \$5 millions, indicates the slackness of new automobile buying. The General Motors third-quarter deficit was around \$7 millions. Motor out-

put in October is estimated at 60,000 units. It will be somewhat higher in November.

A compilation made by the National City Bank of profits for 205 companies in merchandising and industry shows a combined deficit of \$14 millions, compared with net profit of \$6 millions in second quarter and profit of \$25 millions in first quarter. In the third quarter of last year these companies reported profit of \$90 millions. For the nine months the profit was \$18 millions, a drop of 95 per cent. from the same period of 1931. Earnings on net worth were only two-tenths of 1 per cent., against 4.4 per cent. shown for last year. The petroleum industry is almost alone in showing any improvement over a year ago. This showing does not mean, of course, that no business is showing a profit, as a large number of small profitable enterprises are buried in a tabulation including results from the large companies.

The Treasury's deficit continues to pile up, amounting in the first four months of the fiscal year to \$680 millions, excluding about three or four hundred millions for R.F.C. account. However, the rise is occasioning no great anxiety. Some people think that an additional tax law will be imperative when the next Congress meets in December, but an opposing view is that much of the new taxation has not yet had time to work, and that the law passed last autumn ought to stand for the remainder of the year. Meanwhile, it is hoped, with the election out of the way, much more can and will be done toward cutting expenditures of the Federal Government. Obviously, it is in the best interests of the Budget to concentrate attention on reducing expenditures rather than finding fresh revenues.

FRANCE.

Politics — Budget — Public Accounts.

(FROM OUR CORRESPONDENT.)

PARIS, October 9.

THE annual National Congress of the Radical Party, for which the country's parliamentary work was suspended for a week, came to a close on Saturday in vastly more satisfactory conditions than had been expected. Not only was the latent revolt of the advanced wing of the Party against the fairly evident refusal of the Herriot Ministry to continue the Cartellist alliance with the Socialists, which worked so well during the recent elections, quietly suppressed under the rapidly growing personal authority of M. Herriot; but the Premier succeeded at the same time in very favourably impressing practically all the parliamentary groups on the Ministry's right with the conviction that, whatever may be the inclination of Radical policy towards Socialism in domestic matters, the Ministry is determined to speak in no uncertain voice for the country as a whole in all that concerns the relations of France with the world outside. "The word 'security' is not a mere abstract word," M. Herriot insisted, while claiming to be fundamentally pacifist; "it is the very life of your children."

While the Toulouse Radical Congress has greatly strengthened the situation of the Ministry and the probability of greater parliamentary stability than has existed for many years, it cannot be said that similar satisfaction is felt in regard to the Budget situation. The Government Bill to secure sanction for a great programme of public works, to be financed by a large loan, was formally deposited late last night. This loan, which is admittedly designed much more for the relief of the Budget than for its ostensible purpose, is not regarded favourably by the country's experts, and particularly because it is merely one of several similar projects which, it is insisted, can only be regarded as efforts to balance the Budget by unsound financial methods. The only solid basis to any real effort to balance the Budget, it is insisted in many quarters, would be a sweeping reduction of public expenditure.

The Ministry for the Budget announced to-day that the problem of balancing revenue and expenditure for the coming twelve months will have been solved before the week is out, and that the Budget total will be around 52,000,000,000 francs, or a fraction less than that for 1930-31, which was 52,601,000,000 francs. The current nine months' Budget would work out at the rate of 55,185,000,000 francs for a full twelve months. It is semi-officially stated that the drafts of the whole of the departmental budgets have been completed, and that the credits to be asked for War Office, naval and air force expenditure have been reduced by over 1,500,000,000 francs (as compared with those of last year), which exceeds the total reductions voted last July. It is asserted that the amount of the proposed public works loan will be 7,000,000,000 francs, this expenditure being divided into two equal halves during the 1933 and 1934 financial years. It is expected that the complete Budget Bill will be in the hands of the deputies early next week. In that case it is hardly to be expected that the Chamber Finance Commission will be able to complete its work on the measure before the end of the month, which will leave barely four weeks for the Bill to receive attention by the Chamber and the Senate. In the circumstances, little short of a miracle will enable a further recurrence of *douzièmes provisoires* to be avoided (at a cost to the taxpayer of around 700,000,000 francs a month).

Figures published this week, on the authority of the Paris Chamber of Commerce, suggest that the country's expenditure at present is at the rate of 87,000,000,000 francs a year, made up as follows:—State Budget, 53,000,000,000 francs; Caisse d'Amortissement, 7,000,000,000 francs; Postal Department (posts, telegraphs and telephones), 7,000,000,000 francs (independent Budget); local government, 20,000,000,000 francs (department, 6,000,000,000 francs; communes, 14,000,000,000 francs). Direct State expenditure has increased 42 per cent. in the period 1926 to 1932, while local government expenditure by the departments has more than doubled in the same period. Communal expenditure (which rose from 1,039,000,000 francs in 1913 to 14,000,000,000 francs in 1929) alone appears to have remained stationary during the last three years.

At their periodical general assembly in Paris yesterday, the presidents of the French and Algerian Chambers of Commerce expressed deep dissatisfaction with the Government's financial proposals, mainly on the ground of its failure to reduce public expenditure to a level commensurate with the country's reduced resources. The preamble to the resolution called attention to "the imperative necessity for massive Budget deflation" in the form of reduction of administrative pay; reduction of expenditure by a general reorganisation of the public services; a drastic diminution of pensions and annuities, by discrimination between real rights and abuses; and fundamental reform of the national insurance law.

One important outcome of recent criticism of governmental methods has been to focus attention on the need for systematic reform of the public accounts. In Great Britain promptly published monthly accounts of revenue and expenditure have been the rule for generations. In France it is impossible to obtain even rough estimates of the Budget situation until long after the close of the financial year, while it is generally several years before anything like exact detailed figures are available. For similar reasons, payments of amounts due under Government contracts are frequently made only several years after they have become due. A parliamentary report, issued a few months ago, dealt with payments due to commercial concerns which had been awaiting payment for four or five years or more. The result is that contractors are compelled to charge the Government extraordinarily exaggerated prices as compared with those ruling in the open market for similar goods. It is now hoped that a new and simplified system of up-to-date accounts will be adopted by the end of 1933.

GERMANY.

Election — Transport Strike — Swiss Agreement — Grain Policy.

(FROM OUR CORRESPONDENT.)

BERLIN, November 8.

THE Reichstag election of November 26th has shown that the National Socialist movement is not irresistible. It has lost 35 of the 230 seats which it won in July. Under the German electoral system, which, until the rise of the National Socialists, only allowed small fluctuations between the chief parties, such a loss of more than ten per cent. within three months is in itself remarkable, but its great importance is that it explodes the myth that this party, under a specially favoured leader, was bound to continue to grow until it had the majority of the German people behind it.

The National Socialist party is still by far the largest in the Reichstag, and the electors' demand of a party to which they have given so many votes that it shall exercise a practical influence upon the decisions of the Government and thereby prove its quality. They will be disappointed if Hitler renounces such influence, as he did by his decision of August 13th, in order to retain the advantages of being in Opposition.

Coming developments depend largely on the inferences which the Nazis draw from this experience. Even in the quarters closest to the Government doubts are beginning to arise as to the wisdom of its hostile attitude to Parliament. The parties which support von Papen, the Nationalists and the German People's Party, have indeed made gains, but even so the Government has only one-tenth of the Reichstag behind it. The Chancellor will therefore certainly negotiate with the parties in order to form a coalition which will be able to carry out the plans of the Government, especially the reform of the constitution. Such a coalition would have to consist mainly of National Socialists, Nationalists and the Centre, but Hugenberg, the leader of the Nationalists, is so hated by both Nazis and the Centre that the possibility of co-operation seems almost out of the question. Moreover, the Centre has discovered that a section of its earlier supporters have resented its leaders' negotiations with the National Socialists—that is the only explanation of the Party's loss of votes in the western districts. Finally, there is little sign that the National Socialists are any more ready than before to co-operate with the Government, even if, as seems probable on other grounds, there is a change in the office of Chancellor. Indeed, such statements as Hitler has so far made suggest that the opposite is the case.

The detailed results of the election are as follows:—

	Votes.		Seats.		Percentage of Seats.	
	July.	November.	July.	Nov.	July.	Nov.
National Socialists	13,745,780	11,705,256	230	195	37.1	33.1
Social Democrats	7,959,712	7,231,404	133	121	21.5	20.7
Communists	5,282,625	5,970,833	89	100	14.3	17.0
Centre	4,458,051	4,228,633	75	69	12.4	11.9
Nationalists	2,177,414	3,061,626	37	52	5.9	8.0
German People's Party	436,014	659,703	7	11	1.2	1.8
German State Party	371,799	337,871	4	2	1.0	0.9
Christian Socialists	364,542	412,523	4	5	1.0	1.1
Hanoverians	...	63,999	...	1	...	...
Bavarian People's Party	1,323,969	1,081,595	22	19	3.2	3.1
Agriculturalists	90,554	46,468	1	1	0.2	...
Economic Party	146,875	110,117	1	2	0.4	...
Bavarian Peasants	...	149,000	2	2	...	...
Württemberg Peasants	96,851	105,188	2	2	...	...
Others	671,307	215,106	...	...	...	...
	37,162,084	35,402,306	607	582	...	...

The substantial gains of the Communists at the expense of the Socialists are partly a result of the economic crisis, but are mainly due to the radical tendency which the present regime, especially by its interference in Prussia, has engendered among the socially-minded workers. Before the election even greater losses by the Socialists were anticipated, and the party organisation has once more displayed its well-known power of resistance.

The radical feeling among the workers gave rise to an important transport strike in Berlin immediately before the election. The Berlin Transport Company, which runs all the trams, underground railways and motor buses in Berlin except the Stadt- und Ringbahn, which is controlled by the State Railways, has hitherto paid wages which are on the whole relatively favourable. The management recently, in view of the state of the company, asked for a very severe wage reduction. Agreement was finally reached on a reduction of only 2 pfennigs an hour—about 2½ per cent.—but this arrangement was to be terminable at a month's notice, so that it would have been possible for the company to initiate another reduction in a very short time. Under the influence of Communist and National Socialist agitators, the workers, only about one-third of whom are members of trade unions, refused to accept the agreement concluded by the union leaders with the management, and when the unions thereupon wished to renew negotiations, by far the greater part of the employees struck. The State arbitration tribunal gave the rejected agreement the status of a compulsory arbitral award, and the unions officially discountenanced the strike. The Government had the strike leaders arrested on the ground that the strike was alleged to be part of a treasonable Communist plot, but nevertheless the Berlin transport system was for five days almost completely at a standstill, and numerous acts of sabotage took place, although the entire Berlin police was made available for the protection of those men who remained at work. It was particularly remarkable that the strike aroused great sympathy among the wage-earners and salaried workers in other occupations, in spite of the fact that they were the people who suffered the greatest inconvenience from the cessation of the transport services. Communists and National Socialists worked together with complete solidarity in spite of the fact that they were at the same time fighting each other in the election campaign, and the strike took on an increasingly political character. Politically it was directed against the Social Democrats, as well as against the Papen Government. Finally, however, the fear of dismissal and complete destitution—for no strike benefit was paid by the unions—drove such large numbers back to work that the leaders were obliged to call off the strike on the day after the election without even securing a promise of immunity from penalties.

Since February 1st there has been no commercial treaty in force between Germany and Switzerland, as the Swiss had denounced the agreement previously in existence. Though actual tariff war has been avoided, this state of affairs was against the interests of both countries. Switzerland had limited her imports from Germany by quotas; Germany had injured the Swiss tourist traffic by her exchange regulations. An agreement has now been reached, which, though it does not amount to a full trade treaty, effects some improvement in the position. Switzerland is increasing her quotas for German goods, especially furniture, knitted goods, iron sheets, copper goods, lace, sewing machines and pencils. Germany is reducing her duties on goods in whose export Switzerland is interested, especially chocolate, embroidery and clocks. In respect of tourist traffic, Switzerland is to receive approximately the same exchange treatment as Austria. Though this agreement affects very few goods and in no way replaces the old treaty, it is noteworthy as a first step towards a more liberal commercial policy. Switzerland has presumably been induced to make these concessions by her unsatisfactory experience of quotas, which have not improved her trade balance. The German Government is not disposed to conclude a commercial treaty with Switzerland on a broader basis as long as the Swiss quota system continues.

The question of German import quotas was postponed just before the elections, in spite of the fact that the Government had held out prospects of an early decision. The delegation which negotiated the matter with other countries is to submit its material to the permanent Government departments, and after they have worked on it the Cabinet will consider it again. The difference of opinion between the Food Minister and a section of the Cabinet, consisting of the Minister of Economics, the

Foreign Minister and the Finance Minister, supported by the President of the Reichsbank, will therefore have to be settled first.

The Government have decided to support grain prices by purchasing and storing grain through the Getreide-handelsgesellschaft. So far, only rye has been purchased, and sold cheaply as fodder to pig breeders, the Government purchases being regulated according to market possibilities. Owing to the good harvest this policy was not able to prevent a fall in wheat prices below Rm. 200 per ton, against 215 last year, while rye prices fell almost to Rm. 150, against over 185 last year. The holding of stores which is now proposed will make the Government grain policy independent of the present demand for fodder rye and will permit its extension to wheat, but it throws upon the Reich a heavy risk, and also the burden of financing the stocks. The Government intend to finance it through the Reichsbank, and it will need some hundred million Reichsmarks. The success of this policy depends on whether the Government is able to unload the stocks towards the end of the crop year. If they are obliged to carry them over into a new season there is a great danger that the valorisation experience of many other countries may be repeated in Germany, and that it will prove impossible to get rid of the stocks because of the pressure of interests which are opposed to their appearance in the market. The danger is particularly great, because owing to technical improvements, grain production is already on the increase in Germany, and this tendency will, of course, be strengthened by the maintenance of prices.

HOLLAND.

Money — Capital — Trade — Industry.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 8.

THE further depreciation of sterling has not occasioned any particular alarm in the Netherlands, although the development is viewed with regret, if only because it proves that the much-desired stability has not yet been achieved. The direct losses for this country, arising from the new decline of sterling, are not likely to be of any great magnitude. Most companies which do not need sterling assets for their business have disposed of their holdings long ago, and presumably the others will mostly have safeguarded themselves against the depreciation by means of the foreign exchange futures market. Fears that the decline in sterling would enable English goods to compete intensively on our home markets are unnecessary, for the trade returns clearly show that cheap English products are not being imported to any abnormal extent.

Despite the greater activity in the new issue market during October, the liquidity of the Amsterdam money market continues to be very great. Call money can hardly be placed at all, and is quoted at only ¼ per cent. Private discount rates have already dropped to ½ per cent., while the demand for prolongation funds is nil, and the rate has been 1 per cent. for months. The very abundant supplies of money on the market are naturally of great significance to the State, as the authorities are thereby enabled to make provisions for the floating debt conveniently and on advantageous terms.

The influence of the crisis on State revenue is clearly shown by the Ministry of Finance statement for September. Revenue amounted to 29.9 million guilders, against 34.7 millions in September, 1931; for the first nine months of the year revenue totalled 295.8 millions, against 334.1 millions in the corresponding period of 1931. Demands are becoming more and more insistent that the burden of interest payments should be relieved by conversion of the National Debt. As the 4 per cent. State loan is quoted at around par, conversion operations in the near future do not seem beyond the range of possibility, although no intimation of such intention has yet been given by the Minister of Finance. All State loans above 4 per cent. would in such event become liable to conversion. The floating debt has been considerably reduced

since the Dutch East Indies negotiated a loan of 106.5 million guilders, which enabled them to pay off the debt to the State. On November 1st Exchequer bonds to the amount of 60.4 million guilders were accordingly redeemed. The great interest taken in Exchequer bonds is evident from the fact that for the last issue, which was for 25 million guilders, the subscriptions aggregated 105 millions.

New issues in October totalled 126.9 million guilders, against 3.6 millions in October, 1931, and 24.7 millions in September, 1932. Conversions accounted for 16.7 millions last month. Two foreign loans were launched, the Paris Loan and the Belgian Telephone and Telegraph Monopoly, for an aggregate of 21,966,000 guilders. These issues indicate that, for the first time since July of last year, there is now a resumption of interest on the part of foreign countries in the Amsterdam new issues market.

Our trade returns display a somewhat more favourable aspect for the month of September, corresponding with the usual seasonal trend:—

	(Millions of Guilders.)			
	August,	September	Jan.-Sept.,	
	1932.	1931.	1932.	1931.
Imports	95	153	102	1,452
Exports	67	120	77	1,019
				625

In September, 1932, the balance of imports over exports was accordingly 25 million guilders, as compared with 28 millions in August, 1932, and 33 millions in September, 1931.

Our trade with Great Britain, however, shows an unsatisfactory trend. On the one hand, there is a decline in the importation of English goods, showing that despite the depreciation of sterling there is no sign of the Dutch market being flooded with English merchandise. In fact, the importations from Great Britain during the first nine months of this year actually show a decline from 1,564,900 tons, with a value of 120 million guilders, to 1,285,700 tons, with a value of 87.9 million guilders. On the other hand, we are losing England also as a market for Dutch merchandise. The value of our exports to England dropped by half, compared with the corresponding nine months of 1931, from 250 to 124.5 million guilders.

The third quarterly review issued by the official Central Statistical Bureau provides but little encouragement as to the state of affairs in commerce and industry in the Netherlands. The improvement during the third quarter has not been more than seasonal. It is only in the stock market and capital market that the Central Statistical Bureau records some progress; an increase in confidence expressed itself in a vigorous recovery in quotations. Agriculture in particular is passing through hard times, and the Government has introduced a Bill into the Second Chamber for the provision of State aid to market gardeners. The legislation is to guarantee the market gardeners a fixed price for their produce, the State making good any deficiency in the market price, up to a maximum of 5 million guilders. The Second Chamber of Parliament has recently also passed a Bill for the institution of industrial councils. This measure is of particular importance from a standpoint of social economics, as it aims, *inter alia*, at providing the means for disposing of disputes and questions between employers and employees by mutual agreement, thereby promoting industrial peace.

AUSTRIA.

Industry — Housing — Vienna Finance — Trade Treaties.

(FROM OUR CORRESPONDENT.)

VIENNA, November 7.

THE most recent figures concerning unemployment in Austria indicate that the seasonal decline was not so great as it was last year, though one cannot draw optimistic conclusions from this fact, as the number of those unemployed receiving no benefit has expanded in consequence

of the strict practices in paying benefit and of the increase in the number of old-age pensioners. The fact is that, for instance, the aggregate of wages and salaries paid in Vienna, which was 104 million schillings last August, was 25 millions less than last year and the lowest recorded. It is also a fact that industrial employment in August (and it is certain that no improvement has taken place since) was only 50 per cent. of employment of August, 1929. The index of commercial turnovers is the lowest recorded since inflation was overcome in 1922. This level of low figures has obtained for several months.

The end of the building season will not have any special effect, as, on account of the exhaustion of the State housing scheme and of the limitation of State and municipal building contracts, building activity had become very slight. It is desired, however, to continue on a small scale the promotion of house building, which consists of granting very cheap second mortgages on houses to be erected, but the financing is meeting with difficulties. At present there are many buildings in danger of remaining unfinished in view of the delay in remitting the Federal contributions, and the Government is finding it hard to get the savings banks and insurance companies to help with 20 million schillings for the purpose of completing these buildings. This is not surprising when one considers that the institutes in question, which have to keep as much ready money in hand as possible, have already been obliged to take up several hundred million schillings' worth of housing loan, and that the housing scheme obligations, for which they paid at least 90 are nominally quoted at about 72 and in reality can only be disposed of at 15 per cent. discount on the nominal quotation.

For a time it was hoped that the building market might be animated by a colonisation movement now in progress. It appears, however, that the new colonisation plan chiefly represents farming interests, while the suburban building quite rightly promoted by certain countries is neglected. The Municipality of Vienna, which was for a number of years the biggest asset to the building trade in Austria, is also obliged to curtail its activities.

The City of Vienna, which used to have an expenditure of 491 million schillings, which corresponds to about a quarter of the State Budget, has for the first time begun to feel the crisis. Its returns show an uncovered deficit of 38 millions, in spite of the fact that expenditure has already been cut down by more than 10 per cent. Whereas actual revenues were always larger than the estimates, on this occasion several items are falling seriously short. The hardest hit which the Municipality of Vienna had to suffer was not from its own budget but from the reduction of its share in the State taxes, which dropped to 94 millions, as against an estimate of 144 million schillings. The municipal enterprises, the gas and electricity works, the tramways and the brewery also suffered. As soon as the returns were submitted, the city administrator of finance, Hugo Breitner, who was known throughout Europe for his socialistic methods of municipal administration, gave notice of his resignation. His successor also belonged to the Social-Democratic Party and he declared

PLANNED MONEY

SIR BASIL P. BLACKETT

A Director of the Bank of England

Planned Money presents with refreshing vigour and admirable lucidity the case for a thorough-going reconsideration of prevailing opinions regarding currency and the gold standard.

Sir Basil puts forward a British Monetary Programme for the International Monetary Conference as an alternative to the restoration of the gold standard.

5s. net.

CONSTABLE

his intention of continuing the methods of his predecessor, which were strongly opposed in bourgeois circles.

There is renewed activity in the negotiation of commercial treaties. Negotiations have been carried on with Germany in regard to a preference treaty, though they have not yet beyond the preliminary stage. Apart from the fact that the attitude of other States to a preference treaty is still most uncertain (obstruction is feared from Czechoslovakia in any case) imminent danger threatens Austrian exports of timber, butter, cheese and fruit in view of the expected allotment of quotas in Germany. Preference negotiations are also in hand with Poland and are progressing in a very friendly spirit. In the course of these negotiations thorough discussion is taking place not only of the plan to create a monopoly of the Austrian coal trade, whose prospects have become less rosy, but also of the so-called Ruhr Coal Treaty, which binds the Federal Railways (as the presumptive holder of such a monopoly and in any case as the chief coal consumer in Austria) to the almost exclusive use of Ruhr coal to the detriment of Czechoslovakia and Poland. In the meantime, the Government is confronted by 400 petitions to issue fresh import prohibitions.

BELGIUM.

Budget — Industrial Activity — Agriculture.

(FROM OUR CORRESPONDENT.)

LOUVAIN, October 25.

ON the initiative of the Liberal members the Renkin Cabinet resigned on October 18th; four days later Count de Broqueville formed a new Cabinet with the sole object of dissolving Parliament and calling a General Election immediately. Several explanations have been given of the departure of the Liberal Ministers. Their resignation was undoubtedly caused by the financial situation, which has become more and more serious. Since July, it has become evident that measures of financial reform must be faced immediately. The late Renkin Government did not draw up an immediate plan and was of opinion that the matter could be delayed till the 1933 Budget—a view which was probably intensified by the Government's desire to avoid unpalatable measures before the elections due next year. Meanwhile, Belgian State expenditure was being financed by the proceeds of foreign loans raised under very onerous terms. In these circumstances the dissolution of Parliament was unavoidable and it is to be regretted that this step was not taken earlier, for the balancing of the Budget has only been rendered more difficult by delay. Nevertheless, one must not forget that the monetary situation of Belgium appears to be strong. Her economic situation is better than that of most countries; the National Bank of Belgium has enormous gold holdings amounting to 13 milliard francs; and as will be seen below, signs of economic improvement have been more apparent here than in many other countries. If the position of the public finances has become serious, it is largely from lack of foresight.

Some signs of economic improvement have been registered recently. For example, in the Antwerp diamond industry some recovery has taken place since August. Nine thousand craftsmen are at present at work; the highest employment figure (totalling 30,000 hands) was reached in 1929, and the lowest (say 2,000) in May and July of this year. Recovery is much more perceptible in Antwerp than in Amsterdam. The coal industry has been a little better than was anticipated not long ago. It is availing itself of the strong rise in the prices of house coals (anthracite), which seem very scarce in Europe. The Belgium output of these coals was diminished in July and August by the coal strike. For the finest qualities a 40 francs rise is recorded, but industrial coals are far from enjoying such a demand. Prices are stationary or at the most only experience a rise of 5 francs. In the metallurgical industry the situation has been slowly but regularly improving. Stocks of iron and steel have been exhausted, and several inactive blast furnaces are, it is

reported, to be blown in. Prices of the most important metallurgical products have been rising. The Belgian textile industry has also felt the effects of the general recovery in that trade.

These signs of improvement should, however, not be exaggerated, for the general effect on the unemployment registers is at present insignificant. No improvement in the labour market is anticipated before next spring. Moreover, agriculture has not done well in 1932, though this year has been better than last. The wheat yield has not reached the anticipated level, and registers only 2,600 kilos per hectare. The quality, however, appears to be very good. The price of inland wheat fell recently to 65 francs per 100 kilos, but Governmental regulation fixed the price at 85 francs per 100 kilos to the flour mills. American wheat is sold at about 78 francs in Antwerp. The Government's action has only had a trifling effect on the price of bread, which is still sold at 1.40 francs per kilo, for the ratio of inland wheat used by bakers is only 10 per cent. of the total. On the other hand, restrictions put on the importation of butter caused a very serious increase in its price. Public opinion protested vehemently, and the import quotas have now been enlarged.

The Renkin Cabinet's resignation will probably be marked by a return to freer trade. At any rate, it has been announced that the quota system will not be extended to other merchandise. On the whole, the Belgian customs regime has remained relatively liberal, but during the past year concessions to protection have become more frequent.

SOUTH AFRICA.

Silver — Money Market — Foreign Trade — Railways.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 12.

THE Government continues to have to deal with various minor troubles arising out of the currency position. According to the Union Currency Act, British silver is legal tender within the Union, subject to the prescribed limits. Efforts to prevent its introduction by private persons, at a profit on the ruling rate of exchange, have been unsuccessful, while Rhodesia is experiencing difficulty owing to heavy removals, in spite of prosecutions of train employees and other regular travellers. Mr Havenga recently referred to the experience he had acquired on his journey back to the Union, and it is considered likely that British silver will be withdrawn after adequate notice, which could presumably be given under the Emergency Act passed in November last. The amount in circulation is believed to be roughly £1,500,000.

On October 7th the South African Reserve Bank reduced its rate from 6 per cent to 5 per cent. The reduction was welcome, but the most frequent comment was that it was long overdue. Critics of prominence in various branches of business have failed to note any circumstances to-day which render the reduction more reasonable on the part of the Bank than would have been the case, say, six months ago. Perhaps the delay may have had some connection with the possible effect of a reduction on the transfer of money to Britain—a proceeding now much less likely in view of the Government's reiterated determination to maintain the gold standard. Treasury bill and fixed deposit rates quoted by the trading banks have been reduced in proportion, and other rates (overdrafts, etc.) will follow, "subject to arrangement in the light of individual circumstances." There are still many rumours—with little enough foundation—to the effect that the Minister of Finance is maturing a scheme of currency devaluation.

Another rumour—which comes rather into the category of a reliable forecast—is that the Government are considering an important loan conversion scheme. The success of similar ventures overseas, the cheaper rates for money, and the necessity for an attempt at some rearrangement of our financial burdens, are all pre-disposing

arguments. The total debt of the Union at March 31, 1931 (according to the last report of the Public Debt Commissioners), was £243½ millions (in stock, excluding Union Loan Certificates and Treasury Bills). Of this, £54 millions is at 3 per cent., and £26½ millions at 3½ per cent., the balance being at higher rates up to 5 per cent. The last-named rate is carried by no less than £103 millions. According to the same report, the Public Debt Commissioners hold £70.8 millions—£31 millions in South Africa and £39.8 millions in England. The sum of £121.5 millions is held by investors overseas and £51.3 millions by investors in the Union. A general rate of 3½ per cent. is spoken of, but in any case it is thought that the Government could save between £1 million and £2 millions. The average rate of interest paid at present is 4.193 per cent.

The Congress of the Associated Chambers of Commerce of South Africa has just opened in Pretoria. There is naturally strong feeling in regard to the enormous fall in imports and the causes responsible for it. Mr R. Islip, the president, pointed out that in 1929 imports were valued at £79 millions, in 1930 at £60 millions, in 1931 at £50 millions, and for the first eight months of this year at £21½ millions—or a rate of £33 millions for the year. This level of trade is such that merchants cannot pay overhead charges. Quoting from a report of the Cost of Living Commission of 1931, Mr Islip said that the rate of profit on many classes of business was less than that on

fixed securities. It is noteworthy that in regard to imports the gold exports alone, for the first eight months of this year, exceed these in value by more than 50 per cent.

Mr Islip also referred to the position of the railways, faced with the necessity of paying interest on a capital of £163 millions. An ordinary corporation, in the same position, would recognise and act on the necessity for reconstruction. The Railway Department will some day have to face the fact that transport conditions have changed, and that parts of their undertaking and some of their traffic can never again be remunerative. The local remedy of the moment is the hampering of road traffic by legislation. The railway authorities also incur a great deal of criticism on account of their staffing policy generally, and on account of the policy of employing white unskilled labour. It is alleged that efficiency in the performance of the duties of the railway service is subordinated to proficiency in Afrikaans, even in cases where the language is rarely required and is adequately provided for. As regards the European labourers, it happens that the overwhelming majority of these support the present Government. The whole economy of the country is based on native unskilled labour, the displacement of which merely shifts the problem of indigency from voters to non-voters. If, as a purely sociological decision, it is decided to employ European labourers, their extra wages should be charged to public funds and not to railway accounts.

Books and Publications.

BOOK OF THE WEEK.

THE NATIONAL PROBLEM OF RETAILING.

FOR a nation of shopkeepers we have always been singularly indifferent to retail distribution; and our neglect and ignorance cost us dear. The distributive trades employ about 1,600,000 insured workers—many more than are engaged in any other single industry; a further half or three-quarters of a million persons are engaged as owners of retail shops, or at incomes above the insurance level; the capital employed—including stocks as well as fittings and buildings—cannot amount to much under £500,000,000; and some £1,750-£2,000 millions pass across the retail counter every year. Some of the most important and most profitable of post-war economic developments have taken place in the field of retail distribution; a host of new enterprises and new forms of enterprise have come into being, and far-reaching vertical combinations have been formed. Yet hitherto there has been no serious, well-informed survey of retailing in Great Britain, no description of the different types of shops and the varying needs they serve. Ill-informed and often captious criticism of "middlemen" has been plentiful, but sober study and enlightened discussion have been marked by their absence.

Mr. Lawrence Neal's book,* the direct product of discussion among a small group drawn from younger members of the Incorporated Association of Retail Distributors themselves actively and responsibly engaged in retailing, therefore fills a serious gap in contemporary economic literature. Starting with an examination of retailing institutions, Mr. Neal examines the small independent shop, the specialty shop, the department store, multiple shops, fixed price chains, the co-operative movement, club trading and mail order business. Any exact statement of the numbers and turnover of these different institutions is impossible owing to the deplorably backward condition of British statistics; but Mr. Neal hazards the guess that small independent shops account in numbers for some 90 per cent. of the total of roughly 500,000 retail outlets, but in turnover for only 50-60 per cent. of the aggregate

trade. The remaining 10 per cent. of the number and 40-50 per cent. of the turnover are covered by large-scale institutions. Department stores handle perhaps 7½ per cent. of the retail turnover; multiple shops other than co-operatives and fixed price chains incorporate some 40,000-50,000 outlets and handle 15-20 per cent. of the turnover; co-operatives handle some 12-15 per cent.; while large fixed price chains, such as Woolworths and Marks and Spencer, make up the remainder.

No less novel and more important than Mr. Neal's quantitative survey of types of retail institutions and his short descriptions of their function and the public they serve is the account of department store operations which fills the second section of his book. It is quite common for people to imagine that the margin between wholesale cost and retail price represents a toll which exacting store owners levy on a helpless public. Mr. Neal makes quite clear the processes by which that margin is for the most part swallowed up by expenses essential if goods are to be provided where and when the public wants them, in the right styles, at the right seasons, in small quantities, accompanied, as it were invisibly, by delivery and credit services and the expensive upkeep of attractive premises without which a modern department store could not trade. Middle figures for expenses, according to Mr. Neal, show that on the average, and allowing for mistakes in purchasing, shortages and the like, salaries and wages in a large department store account for some 12½ per cent. of the selling price; occupancy expenses—rent, rates, lighting, heating, etc.—for some 4½ per cent.; publicity for some 3 per cent.; and miscellaneous expenses some 4 per cent.; the total amounting to nearly a quarter of the purchase price, to which, of course, must be added a small further margin for net profit.

A modern department store's ratio of costs is probably higher than that of most other retail institutions. The paradox that, in an age of increasing machine production, costs of distribution remain so high, results in the main, as Mr. Neal points out, from the facts that "distribution is and must remain largely dependent on man power," that the demands and buying habits of consumers are capricious, disorganised, wasteful and often unreasonable; and that at the present time we lack completely the exact knowledge which is essential even for the initiation of reform. The common complaint about retail distribution in recent years is that retail prices have not closely

followed so-called wholesale prices in their downward trend. Mr Neal easily makes mincemeat of this allegation, for he shows, and rightly, that "wholesale" price index numbers really refer in the main to bulk commodities which have undergone little processing and embody little of the costly and inelastic element of labour; while, on the other hand, the "retail" index number notoriously relates to the out-of-date living conditions of working class budgets thirty years ago. Nevertheless, the problem of high distributive costs remains, as Mr Neal recognises; modern distributive methods stultify the advances of machine technique and mass production; and the prosperity which science and invention have laid at our feet cannot be realised without distributive reform. Mr Neal's remedy is, first, a development of fact-finding; secondly, a planned co-ordination of buying along the lines now pursued by multiple shops, and, thirdly, the limitation of retail outlets to the real needs of specific areas.

The obvious objections to such proposals are many. At bottom, however, they point to the right road. The first stage of that road is an increase in knowledge about the detailed facts of retailing and consumer demand. Mr Neal's book, clear, informed, incisive in analysis and forceful in argument, contributes to that knowledge and should be read not merely by retailers and economists but also by politicians, by publicists, by social reformers, by consumers and all others who desire to contribute to the new economic world which is in the making.

SHORTER NOTICES.

"Persia." By Sir Arnold Wilson. "The Modern World" Series. London. 1932. Benn. 21s. net.

This is a book which will interest the general reader who is not already interested in Persia for her own sake. For it is an account, by a writer with a wide first-hand experience, of one of those countries that, in our generation, are passing

through the process of Westernisation—a process which, in retrospect, may stand out as the most important single historic movement of this age. This aspect of Persian life is continually present to the author's mind, and he is always writing in the light of it as he passes through the successive chapters of his comprehensive cross-section review of Persia as she is to-day. About half the chapters deal with economic subjects: agricultural and pastoral industries; commerce and industry; communications (e.g., motor roads and air routes); irrigation projects and mineral wealth; currency and finance; national accounts. On all these matters, Sir Arnold Wilson not only writes in an interesting way but also speaks with authority by reason of his administrative and business experience in the Middle East. The account of the development of the South Persian oilfields by Western enterprise and the effect on the social life of the local population—particularly the nomadic Bakhtiari mountaineers—is perhaps one of the most valuable passages in the book. But there are also chapters on literature and education in which the author grapples with the difficult task of combining a survey of present tendencies with a sketch of a great tradition. Sir Arnold Wilson evidently expects to see Persia keep her feet in the present turmoil of world affairs. To us in the West, who have stirred the turmoil up by the propagation of our mechanical inventions, it seems, just now, as if there had never been quite such a grand disturbance as this since the world began. But to the older peoples who are having the bother of adjusting themselves to the situation which the West has created, we must look rather like small boys who have been up to mischief and who now stand open-mouthed—half horrified and half delighted—at the spectacle of their own handiwork. This, we take it, is how the West appears to Persia to-day. And we may also take it that she is not unduly perturbed or profoundly impressed. For, after all, the Persians have seen many tiresome people—Greeks and Romans, Arabs and Mongols—make their tempestuous passage across the world-stage. Full of sound and fury, the barbarians come and go; but Persia, like China, remains.

"British Monetary Policy." By Frederic Benham. P. S. King. 5s.

Dr. Benham belongs very definitely to the group of economists who would give a new lease of life to *laissez-faire* doctrines. In Dr. Benham's view, the root cause of our difficulties in Great Britain is the failure to reduce incomes (above all wage-incomes) to a satisfactory competitive level. He does not agree that the necessity for this has disappeared with the depreciation of sterling since Great Britain's departure from the gold standard; and he is disposed to argue that we ought to be prepared to follow other countries to any length in the policy of cutting costs at the expense of wages. The cutting of interest rates also figures in his programme; but he regards it as far less important. Dr. Benham not only wants this country to go back to the gold standard, but believes its restoration to be possible at the old parity, provided his drastic policy of income reduction and monetary deflation is followed through to the bitter end. Consequently, he is strongly opposed, not only to national, but also to any international, measures designed to raise the level of prices. On its assumptions his book is clear and logical; but the assumptions themselves give to his conclusions a certain sense of unreality. Nevertheless, he has given us the best short exposition of a view which is not without friends, and is at least theoretically arguable. Whatever may be thought of this view, it is well to have it plainly and skilfully stated.

GRAMOPHONE AND WIRELESS SHARES.

THE gramophone trade to-day gives the lie complete to the extravagant and specious promises held out to the public in the prospectuses of many new gramophone companies a few years ago. In the days of the 1928-29 boom it was almost common form for directors to declare that they would sell ten to twenty million records a year and make enormous profits. Actually the entire national production of records in 1924 was only 22 millions, and though in 1930 it had risen to 72 millions the country, even in the absence of economic depression, could never have absorbed anything like the output budgeted for in the "boom" prospectuses. No later figures are available of home production, but the value of exports in the first nine months of this year, as compared with the corresponding periods of 1931 and 1930, has declined by 25 per cent. and 62 per cent. in the case of gramophones and by 31 per cent. and 60 per cent. in the case of records. The domestic trade has fared better than the foreign, but at the present level of consumption and selling prices a considerable part of the industry is necessarily working at a loss.

The trade is now dominated by a "combine," brought about by the merger of the Gramophone Company and the Columbia Graphophone Company, in 1931, under the name of Electric and Musical Industries. This merger, conceived on rationalist principles, has proved difficult to rationalise in practice. The two constituent companies have found it necessary to maintain their respective trademarks—i.e., their individual goodwill—and even to retain in part their separate selling organisations. Manufacture has certainly been concentrated at one plant in Great Britain, but tariffs and taxation put a limit on similar possibilities as regards many foreign factories. In time, undoubtedly, the elimination of competition for artists, the consequent reduction in royalties, and the more complete rationalisation of manufacture and distribution should enable the "combine" to reduce its costs of production to an exceptionally low level, especially when output can be increased to a volume commensurate with normal prosperity. As yet, however, it is questioned whether the company is actually producing as cheaply as some of its competitors, in spite of its comparatively large turnover.

In the matter of selling prices, at least, the boggy of the cheap record can no longer hold any terror. If the 2s. 6d. dance records of H.M.V. and Columbia can still be under-sold, the combine itself has its "cheap lines," like Parlophone, which are sold at 1s. 6d. by subsidiary companies. In the field of gramophones, the combine is concentrating mainly on cheap portable machines and on expensive radio-gramophone sets. The fact that it holds the Marconi patents has possibly added to its considerable success in developing the sales of radio-gramophones in Great Britain. Trading conditions abroad, however, have been deplorable, and, even if profits could have been made, exchange restrictions would have prevented their transfer to Great Britain. On the whole it is not surprising that for the period from the date of the combine's incorporation (April 20, 1931) to September 30, 1932, its subsidiaries should have made a loss of £741,084. In addition to this trading loss the subsidiaries wrote-off no less than £2,094,155 to provide for "exceptional losses on factories closed, depreciation in their investments and the writing-down of plant," while over £600,000 of the 1931 reserves of the pre-merger companies has disappeared from the combine's balance sheet.

Outside the combine there remain two companies of importance—the Decca Record Company, which holds the British recording rights of the Polyphon Company of Germany and the Brunswick Record Corporation of America, and the Crystalate Gramophone Record Manufacturing Company, which acquired this year the Vocalion Gramophone Company. The Decca had a disastrous start in 1929-30, but succeeded in reorganising itself and its management, and eventually took the lead in the autumn of 1931 in cutting the prices of dance records. Having acquired the services of a popular dance-band conductor, it was able to expand its sales considerably in this country and in France. As a result of its initial losses the company is now writing 17s. 6d. off its £1 ordinary shares and cancelling arrears of dividends on the preference shares, whose capital remains intact, holders being compensated by an additional 1 per cent. on their cumulative dividend rights. Neither class of share is to rank for dividend before March, 1933.

The company is trading this year on a profit-earning basis. Its financial position is healthy and it shows no intention of expanding unwisely.

The Crystalate Company is interesting for its specialised character. It does a large business in the cheaper records sold by multiple stores like Woolworth and Marks and Spencer, and alone in the gramophone trade it has consistently made profits. It has American, German and French subsidiaries. After acquiring the Vocalion Company in April this year, it increased its capital from £250,000 to £365,000.

Both Decca and Crystalate were amalgamations of the 1928-29 boom in company promoting. Other survivors of that chapter of genesis have been less fortunate. Dulcet-Polyphon, for example, is still reporting losses. A summary of the trading accounts of all these gramophones is contained in the table at the foot of page 887.

By contrast with the gramophone companies the radio manufacturing companies would seem to have been less vulnerable to trade depression and the decline in "luxury" spending. No separate figures can be given for the radio manufacturing activities of the big electrical combines, but the smaller independent radio companies are still maintaining a high level of prosperity. Thus, Pye Radio, a company formed in the same company promoting boom to develop the business of a Cambridge firm of radio manufacturers, has been steadily prosperous and progressive. The company's output of receiving sets in the year ended March, 1932, was 2½ times greater than in the preceding year. The wireless business of E. K. Cole, which was formed in 1925 and turned into a public company in 1930, has also been successful. Kolster-Brandes, which made a bad start, was able to report a good recovery in the year to February, 1932. The comparatively high profit ratios of these radio companies (set out in the table), are in striking contrast with the losses of the gramophone companies covering similar periods.

The market, however, values conservatively the shares both of the prosperous wireless and the less happy gramophone concerns.

There is no uniformity between the prospects of the gramophone and wireless markets. The latter is not near "saturation point," although the five-millionth receiving licence was recently sold. As costs of production and selling prices are further reduced, the range of the market should be extended. Whether the "all-mains" set, and not the "battery-operated" set, will be the dominant model of the future, and whether the wireless receiving sets will develop into television sets is immaterial, for the existing companies will all be interested in the marketing end, and cannot fail to derive benefit from the popularisation of any new development. As regards the gramophone trade, it would seem more likely that a temporary saturation point was reached in 1929. The market for new machines would seem to be developing in the radio-gramophone line, a less extensive field than in the past. The wireless will no doubt continue to act as an advertising medium for the popular dance records, but it remains to be seen whether demand has been permanently limited by the recent development of wireless in the home.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
November 22.	November 24.

MARKET optimism was sharply checked by the results of two false diagnoses. In the first place, the "stags" of last week's 3 per cent. Conversion Loan, having become accustomed after recent War Loan operations to think in thousands of millions, forgot that £300,000,000 was a sufficiently heavy offering to test the digestion of the strongest market. Having greatly over-applied, they were dismayed to receive a 70 per cent. allotment on applications over £5,000. On Thursday the scrip touched 2½ discount, while the expected sales of the longer dated stocks depressed prices throughout the gilt-edged list. The market's second faulty diagnosis was made in respect of the American elections, many speculators correctly forecasting a sweeping Roosevelt victory, but misinterpreting its immediate effect on the American market. Considerable anticipatory deals in international stocks were hastily undone on Wednesday evening and Thursday morning, dullness in the more speculative counters being accentuated by the downward tendency of cotton and metal prices. It was generally hoped, however, that the reaction would not go far, in view of Wall Street's subsequent recovery. The weakness of gilt-edged stocks was particularly well marked as regards the "longs," including Assented War Loan and Old Consols. India Loans declined in sympathy, and Dominion stocks were easier, the new South Africa scrip being extensively offered.

The foreign bond market was inactive, an unsatisfactory feature being the sharp marking down of Japanese bonds, for reasons discussed in an Investment Note on page 893. Chinese bonds were dull and South American stocks idle. A moderate demand for German bonds, on the absence of sensational developments in the elections, found the market somewhat depleted of stock.

For the second week in succession the home railway traffic figures made an improved showing, and prices were further helped by the decline in national unemployment in October. Special attention was given to Southern issues, the possibilities of a large increase in South Coast residential traffic, after the opening of electrified services, being widely canvassed. A fresh batch of unfavourable earnings' figures checked an incipient recovery in Argentine rails, but San Paulo were firm, in sharp contrast to other Brazilian stocks. Canadian Pacific (whose earnings' prospects are discussed on page 893) were heavy on the American reaction.

Industrials were firm at the beginning of the new account, many investors seeking shares with stable dividend prospects to offset the low yields obtainable on gilt-edged stocks. Textile shares were supported on the resumption of work in Lancashire spinning factories. Breweries showed strength on exaggerated expectations of a repeal of the Volstead Act, and international issues were purchased in hopes of a burst of American activity after the election. Disappointment subsequently caused a sharp reversal of the trend, and the whole market became more subdued. Iron and steel shares, however, which had been in fair demand from the provinces, largely held their ground, and electrical shares remained in favour. Shipping shares were more active than for some weeks past, Cunard rising and reacting, respectively, on the revival and official denial of rumours of a resumption of work on Ship Number 534. P. & O. were sold on dividend fears. Bank shares became irregular as gilt-edged values declined, but insurance shares were scarcely changed, after many had gone ex dividend.

The Continent was an active buyer of oil shares at the outset, but quickly changed its tone in mid-week, when leading issues were freely offered. A conservative estimate of trade prospects is given on page 896. Dealings in rubber shares tended to expand, the firmer tendency of the commodity encouraging a moderate demand for a small floating supply of shares. Business in the tea share market remained restricted, but a statement that restric-

tion negotiations were proceeding without undue delay was sufficient to maintain values.

The Mining share market opened cheerfully, with a steady flow of buying orders from Paris. Sentiment, however, subsequently made the same *volte face* here as elsewhere, and prices reacted. The undertone in gold-mining shares, however, remained firm, Kleinfontein holding the greater part of an early advance, while Brakpan were bought from Johannesburg on a cabled announcement of a rich "strike." Rhodesian shares advanced on hopes of an early application of the Ottawa copper duties, but reacted later. Tinto, similarly, were sold when the price of copper fell in mid-week. Tin shares remained quiet. Turnover in West Australians was greatly reduced, although Wiluna remained firmer.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets were firm up to the eve of Tuesday's election, but turned dull after the results were known. Mr Roosevelt's victory had been hopefully discounted, but his unexpectedly large majority in the Electoral College revived a certain disquietude over the possibility of radical changes by the prospective administration. On Thursday the market turned active again with two to four point rises. Wednesday's selling, in any case, was largely technical, profit-taking being general after a wholesale speculative rise. Business prospects remain doubtful. Steel operations rose last week to 21 per cent. of capacity, and Steel Corporation unfilled orders were 11,950 tons higher in October. Some of the automobile producers are expediting orders in connection with the production of new models, but demand is not encouraging. Last month's sales of General Motors were only 5,800 units, this being the lowest figure in the Corporation's history. Car loadings in the last week of October showed a full seasonal decrease of 24,531, the week's total being 617,500 cars. The current earnings statements of the larger companies, though no worse than had been widely expected, are inevitably acting as a damper on sentiment. The New York Central suffered a third quarter's loss of \$4,401,000 against a surplus of \$225,000 in the corresponding quarter of last year, the Radio Corporation a loss of \$812,000 against a profit of \$1,319,000, and the Lehigh Valley a loss, after charges, of \$2,036,000 against a loss of \$1,239,000 last year. The market is now realising the extent to which national income and taxable capacity have been reduced, and is keenly aware that institutions

like the weaker railroads cannot live indefinitely on official assistance. Mr Roosevelt is credited with a determination to close up the Budget deficit, but has obviously a heavy task before him. Meanwhile, the market may remain sensitive to near factors like the weakness of cotton and wheat prices.

September, when it was sharply checked. Though the improvement has not been fully maintained, it is believed that Canadian farmers, whose financial position leaves much to be desired, will press forward their crops to the utmost extent. The table given below shows estimated earnings for the C.P.R. system for the whole year, by comparison with the actual figures for 1931. It is based on the assumption that higher traffic during the remainder of this year will reduce the total fall in gross earnings to the neighbourhood of \$15,000,000, and the decline in the net figures (which was \$2,260,000 for the nine months ended September) to approximately \$1,000,000. These assumptions err, probably, on the side of optimism:—

	1931. (Actual).	1932. (Estimated).
Gross earnings	142,337,648	127,000,000
Working expenses	116,654,776	102,500,000
Net earnings	25,682,872	24,500,000
Special income	10,951,964	5,000,000
Deduct fixed charges	36,634,836	29,500,000
Surplus	14,584,472	6,500,000
Contribution to pension fund	750,000	750,000
Earned for dividends	13,834,472	5,750,000
Preference dividends	5,410,697	5,500,000
Earned for ordinary	8,423,775	250,000
Paid on ordinary	16,750,000 (5%)	?
Balance chargeable to surplus	8,326,225	?

We have allowed for a fall of approximately \$6,000,000 in special income. This item was obtained last year, as to \$488,000 from steamers, \$1,624,000 from telegraphs, hotels and rentals, and \$8,840,000 from investments, securities, interest, etc. Receipts under the first head, this year, may be negligible, if not negative. Under the second, they can scarcely amount to much more than \$1,000,000. Under the third, a reduction to around \$4,000,000 would not appear excessive. We have allowed for an increase of less than \$1,000,000 in fixed charges, although the increase in 1930 was \$3,011,000, and in 1931 \$2,890,000, while in March last the company issued \$12,500,000 of 6 per cent. ten-year collateral trust convertible bonds. On this showing, the preference dividends should be covered (chiefly by "special income"), but earnings for the common stock will be negligible. If this forecast proves near the mark, the board may not deem it advisable to draw upon the company's large reserves to pay a dividend, unless some unexpected windfall comes as an appropriation-in-aid of special income, as it did two years ago, or a considerable recovery in Canadian prosperity can be reasonably anticipated in the next few months. The present market quotation for the shares seems heavily to discount hopes of directorial generosity.

United Africa.—A remarkable recovery has been shown by the United Africa Company, the merger of African and Eastern Trading Corporation and the Niger Company. Excluding depreciation, tax and directors' fees, a trading loss for the year ending April, 1931, of £949,940 has been converted into a trading profit of £397,045. The directors give no explanation of the recovery, but shareholders may

attribute it generally to the improvement in commodity values, which has allowed the writing up of stocks. The shareholders of African and Eastern Trade Corporation (whose capital reconstruction scheme is described on p. 892) may be painfully surprised by this recovery. In December, 1931, the capital of the United Africa, in which they held a half-interest, was written down from £15,731,600 to £7,500,000. Subsequently a further 3,500,000 shares of £1 were issued, of which the African and Eastern could only subscribe for 500,000, leaving the Lever group to subscribe 3,000,000. This had the effect of reducing the interest of African and Eastern to 20 per cent. and raising the Lever interest to 80 per cent. Further, the African and Eastern lost their equal vote in the affairs of the company. The trading results for the past two years are shown in the following table:—

	Years to April 30. 1931.	1932.
Trading results	Dr. 949,940	397,045
Depreciation	272,899	269,213
Directors' fees	2,983	2,883

Subsidiary company's income tax	13,171	17,152
Written off	16,529	Nil

Earned for dividends

Dividends

Carry forward

The balance sheet of the company is not informative. The effect of the writing-down of capital is shown by the reduction of fixed assets from £12,825,901 to £6,477,516. Stocks are practically unchanged at £5,177,719. Cash and bills receivable have risen from £268,112 to £503,488. The improvement in the United Africa results has the effect of improving the cover for the African and Eastern "A" preference share dividends. Under the arrangement with Lever Brothers, African and Eastern have a prior claim on profits (if available) up to £18,000 to pay the dividend on their "A" preference shares of £1. In June the directors deferred payment of the half-year dividend on the "A" preference shares until the accounts of United Africa had been received. Now that the United Africa is paying a dividend of $\frac{1}{2}$ per cent., it is hoped that the African and Eastern will be able to pay their arrears of dividend on the "A" preference shares, which are quoted in the market at $\frac{1}{2}$ - $\frac{1}{4}$.

Birmingham Small Arms.—The report and balance sheet of the Birmingham Small Arms Company reveals a sorry state of affairs. After crediting rents, interest, and making full allowance for depreciation, trading losses were £331,675. In addition £356,971 has been written off stocks to cover depreciation due to abnormal trading conditions, bringing the total deficit up to £688,647, as against £112,944 last year. The transfer of £500,000 from general reserve, with £77,319 brought in, reduces the deficit to £111,328, but when debenture interest and sinking fund are added, a debit balance of £220,609 remains to be carried forward.

The directors attribute the losses of the company to the decline in the home and overseas demand for high-priced touring cars and motor cycles. At the close of the year the company embarked on a new programme of smaller cars, and have obtained sufficiently substantial orders to keep the factories at Small Heath and Coventry fully engaged. As the iron and steel using trades, as a whole, however, are still in the throes of depression, it seems fair to presume that the results for the current year will not show any phenomenal improvement.

Australasian Land Companies.—The report of Dalgety and Company for the year to June 30th last, leaves a satisfactory impression. "The net result was an almost complete disposal of a clip of record proportions," with prices in Australian currency a shade better than the previous year. Australia on the whole enjoyed a satisfactory season, and New South Wales an exceptional one, but conditions in New Zealand were affected by drought. Profit is down from £801,895 to £676,376, and if the cost of exchange depreciation is deducted, there remains a considerable net loss after all charges have been met. The ordinary dividend is reduced from 7 per cent. to 5 per cent., tax free. The exchange losses are again met by a transfer from contingency reserve, but other reserves, totalling £1,500,000, are still equal to the issued ordinary capital, and the list of investments is impressive. The company should have little difficulty in riding out the depression.

§ After crediting £175,177 from contingency reserve.

Australian Mercantile, Land and Finance reports that on the whole it has had a satisfactory season. Net profit has increased from £61,725 to £92,438 and the directors have ventured to declare a dividend of 2 per cent., tax free, absorbing £28,000. Last year £25,000 was allocated to reserve. The New Zealand and Australian Land Company shows somewhat improved results, but is unable to pay an ordinary dividend, which last year amounted to 2 per cent. The loss from working properties has been reduced from £90,101 to £57,439 as a result of lower costs and a reduction in drought expenditure, but income from investments is down from £36,324 to £24,338. The net loss for the year is £10,357, compared with £74,183. The sum of £46,000 has been transferred from contingency reserve to enable the preference dividend to be met. Results, in every case, are decidedly better than could have been anticipated twelve months ago.

Rhodesia Railways Moratorium.—The moratorium proposals of these railways, though unwelcome, should scarcely have come as a surprise to the market. Although for the financial year to September 30th last Rhodesia Railways succeeded in meeting its debenture charges with something to spare, the Mashonaland Railway showed a net loss of £244,339. In January last the boards of the two companies notified debenture holders that, drastic economies notwithstanding, the stage had been reached when net revenues were inadequate to meet debenture interest without drawing on accumulated reserves. In April Lord Plender began an investigation of the finances of the group, and a scheme of management is now submitted, based on his report. No less than £20,589,903 of stock is involved. The interest falling due after November 1, 1932, and before November 2, 1935, is to be met only out of net income. Interest on £252,870 3 per cent. debentures and £3,996,333 4 per cent. debentures of Rhodesia Railways and £2,560,000 5 per cent. guaranteed debentures of the Mashonaland Railway is to

be met under guarantee by the British South Africa Company, the advances carrying interest at 6 per cent., and being refunded as net revenue permits. Debenture interest in arrear is to carry interest at 6 per cent. During the moratorium no part of the loan of £276,679 made to the Mashonaland Railway by the Rhodesia Railways Trust is to be repaid, current interest being added to principal. Two nominees of the debenture stock trustees are to be appointed additional directors of the two companies. The British South Africa Company and the Rhodesia Railways Trust have both approved the scheme. The Trust holds virtually the whole of the share capital of Rhodesia Railways (£8,000) and of the Mashonaland Railway (£450,000), and in addition an unstated proportion of their combined debenture stocks. In 1930-31 the Trust received £165,813 from Rhodesia Railways and £91,661 from the Mashonaland Railway, including £69,265 accrued interest. The British South Africa Company, besides being a guarantor for both lines in respect of certain stock, holds 1,740,151 £1 ordinary shares out of 2,005,767 shares issued, of the Rhodesia Railways Trust, which paid a dividend of 5 per cent. tax free for the eighteen months to September 30, 1932. The income of the British South Africa Company will be proportionately reduced if the Trust is compelled to pass future dividends. In addition, its liabilities under guarantee will involve a moratorium sum of £295,000 a year. Whether any appreciable portion of these payments will come back to the company, via dividends of the Trust, depends on the extent of the latter's holdings of the railways' debentures.

Trinidad Leaseholds.—An increase of no less than 45 per cent. has been shown by Trinidad Leaseholds in trading profits, before depreciation, for the year ended June, 1932. This is to be attributed partly to a reduction in working costs but mainly to the increased revenue in sterling obtained on sales effected in United States currency. The following table gives a comparison of the results for the past two years:—

	Year ending June 30. 1931.	1932.
Net profits	£ 349,727	£ 499,079
Overhead expenditure	18,786	29,230
Depreciation	208,236	208,307
Income tax	95,000	42,000
Net balance	27,705	219,542
Earned %	2-11	16-74
Paid %	5	7‡
Reserve and write-offs	112,705	21,750
Carry forward	30,151	63,999

The products sold in the last financial year amounted to 855,826 tons, as against 858,984 tons in the previous year. The current year's trading should begin to reflect the results of the distribution of petrol in Great Britain, which was undertaken in July, 1930. The sales of the company's motor spirit have greatly increased, particularly as the bulk of the company's sales are in its "Regent" brand, which sells at 1s. 5½d. as against 1s. 7½d. for the No. 1 petrols of the combines. The balance sheet shows a liquid financial position, cash and Government securities having increased from £275,500 to £511,500.

OFFER TO NEW READERS.

American Oil Company Reports.—The reports of American oil companies for the nine months this year show a considerable improvement on those of the corresponding period of 1931. The earnings of some of the leading oil companies are given in the following table:—

	1931 Earnings.	Per Com- mon	1932 Earnings.	Per Com- mon
	9 Months.	Share.	9 Months.	Share.
Standard Oil of California	11,941,787	0.91	12,012,544	0.92
Phillips Petroleum	2,410,253	...	374,508	0.09
Union Oil of California	3,200,000	0.73	2,728,000*	0.63
Atlantic Refining	2,771,400	...	4,248,000	1.58
Continental Oil	9,484,163	...	75,200*	0.02
Shell Union Oil	23,709,991	...	Dr. 3,098,020	...

* Estimated figures.

In the case of Shell Union earnings, the figures are exclusive of a profit of \$6,051,668 obtained from the purchase below par of the company's own debentures. The improved trading results are attributable to the fact that oil prices have been at a higher level this year both as regards crude oil and refined oil products, as the following figures will show:—

	Present Price.	Average Price. 1931.
Crude oil—		
Mid-Continent crude, 36 gr. per barrel	0.92*	0.67
California crude, 25 gr.	1.97	1.81
Gasoline—		
Mid-Continent refinery, cents per gallon	4.625c.	3.45c.

* This price was recently increased to \$1.04 per barrel by certain companies. The increase has not yet been made by two of the large Standard Oil companies.

It should be appreciated that still better results would have been shown if gasoline consumption had not declined somewhat sharply in the third quarter of this year. It is estimated that the total decline of gasoline consumption in America this year will be from 10 to 15 per cent. Unless, therefore, crude oil production is restricted to keep pace with the decline in consumption, a reaction in oil prices is not impossible. It is disappointing to find that the Federal Court in Texas has held that the restriction orders are invalid in the East Texas field because they are designed to prevent economic as against physical waste. A special session of the Texas Legislature is therefore being called to pass legislation designed to restrict crude oil production to market demands. Restriction is not likely to be abolished in America, but much more drastic curtailment of output will have to be enforced if supply is to be balanced with a falling consumption.

South African Colliery Results.—Our mining correspondent writes:—Depression in South Africa finds eloquent testimony in the account of two colliery enterprises published this week. The Wankie (Rhodesia) has suffered especially by reason of its reliance upon the railways and the Northern Rhodesian-Congo copper industry—which are to a considerable extent inter-dependent. Last year's coal sales amounted to 433,600 tons, as against 576,400 tons in 1930-31 and 855,100 tons in the twelve months ended August 31, 1930. Of the decrease shown for the latest session the Belgian Congo was chiefly responsible, the railways coming next. At 15,539,000 tons, the proved coal reserves are up by 4,241,000 tons. The difference is accounted for by the inclusion in the estimate of No. 2 colliery, which provided about one-third the tonnage extracted in 1931-32. In view of the year's profit of £79,500, in place of £139,800, and an increased taxation figure of £34,600, the payment even of 5 per cent. (as against 12½ per cent.) entailed a small draft upon the carry-forward. Incidentally the terms in which this distribution is referred to in the directors' report are liable to give an erroneous impression. Wankie 10s. shares are quoted on the Stock Exchange at about 12s. 6d. The Witbank Colliery, of course, is chiefly concerned with the requirements of the gold industry of the Transvaal. These, doubtless, have been fairly well maintained, but last year a reduction occurred in the demands for the South African

railways and for export purposes. Thus the net profit declined by £13,100 to £40,900, necessitating a cut of 8½ per cent. to 6½ per cent. in the dividend rate. By the redemption of a further £15,000 the debentures outstanding have been reduced to £105,000. The consulting engineer reports that coal of standard quality and thickness continues to be opened up in both sections of the mine. Witbank shares are held by leading Kafir groups.

De Beers' Results.—The last De Beers' figures inevitably reflect the year's unfavourable developments in the diamond industry. Operations previously restricted were discontinued altogether on the productive side at the end of March. Diamond sales over the year fell off by more than half, while "other income," which in 1930-31 had shown a noteworthy expansion, fell below the level of 1929-30. Expenditure on mining was substantially lower, but owing to the increase of the De Beers' commitments in connection with leased companies, interest on shares and debentures absorbed £194,830, against £140,660. Thus, the previous year's modest profit was replaced by a loss. Naturally, no dividend could be paid on either class of capital. The last distribution on the deferred was 5s. in respect of the first half of 1929-30, and the interest on the preference shares is in arrears since December, 1930. Our usual comparison is appended:—

	1929.	Year ended June 1930.	1931.	1932.
Diamond sales	3,255,790	3,262,670	679,550	307,820
Other income	554,000	535,810	750,240	445,520
Expenditure, depreciation, &c.	1,761,780	1,671,570	1,296,050	895,820
Net profit	2,047,010	2,126,910	133,740	142,480*
To taxation	303,250	302,590	...	...
Dividend on deferred shares	817,890	...	...	...
Rate per share	15/-	...	...	...
To reserves	250,000	...	...	...
Carried forward	377,400	1,401,720	1,535,460	992,980

* Loss.

No particular change is shown in the balance sheet as regards the company's holdings in associated concerns, but the other investments have risen from £875,800 to £993,100. Advances to allied undertakings have apparently increased to a substantial extent, though the form in which the accounts are drawn up precludes exact comparison. The diamond industry of South Africa is now well consolidated, and will derive immediate benefit from any improvement in trade. In the past few months some recovery has occurred both in the demand for and in the price of the stones, more especially those used for commercial purposes. A real change for the better, however, must await more settled conditions in the United States, the chief market for the company's products. The £2 10s. preferred shares are quoted around £7 10s., the deferred at £4 7s. 6d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—London Maritime Investment, Consolidated African Selection Trust, North British Rayon, and Electric and Musical Industries. At the annual meeting of North British Rayon, Mr Ernest Walls discussed the encouraging results in the company's first year of full-scale working, during which the first six months had been characterised by heavy non-recurring expenditure. New plant during the past two years had cost over £24,000. Ample sums had been placed to depreciation and the company was prepared to take advantage of the first sign of revival. At the annual meeting of London Maritime Investment, Sir Vernon Thomson stated that a valuation of the investments as at September 30, 1932, showed an aggregate depreciation of about £50,000, against which the company had a reserve fund of £250,000.

CAPITAL ISSUES.

The partial embargo on new issues remains, although the Chancellor of the Exchequer informed the House of Commons, on Tuesday, that the question of its further relaxation was under consideration. The unfavourable trend of gilt-edged prices and the undigested condition of the "staggered" portion of the Three per Cent. Conversion Loan would in any case have explained the absence of any new trustee issue this week. The list of offerings includes two "straight" issues and two important Stock Exchange "placings." Hambros Bank and Erlangers offered debenture stock of *Olympia, Limited*, redeemable by drawings within thirty-one years, and yielding £4 4s. 3d. per cent. flat and £4 9s. per cent. to middle redemption date. The stock is secured by a first specific charge on freehold properties valued at nearly 2½ times its nominal amount and a floating charge on other assets, in a company which has been ably managed from the outset. The debenture is a sound "property" stock, offering a reasonable yield in its class. The secured debentures of the *Carlton Main Colliery Company, Limited*, which offer a flat yield of £6 2s. 5d. per cent. and a yield to middle redemption date of £6 4s. 1d. per cent., are less well secured, being part of a maximum total of £1,000,000 entitled to a first floating charge over net assets valued last March at £4,054,000. Of the latter figure, however, £2,085,000 was represented by collieries and other properties (mainly leasehold), and £1,674,000 by investments in subsidiary and associated companies at cost. The company, however, has been a steady profit-earner, even during the depression, and the present issue is mainly of a conversion character. *Amalgamated Anthracite Collieries, Limited*, whose ordinary shares have recently been active in the market, have placed a large line of 5 per cent. first mortgage debenture stock, at 98, less 1½ per cent. commission, mainly to fund bank loans. *Marston, Thompson and Evershed, Limited*, the Burton brewers, have placed a smaller line of 4½ per cent. redeemable debenture stock at 95 per cent., less 1 per cent. commission and ½ per cent. brokerage. The stock is adequately but not generously covered. The method of "placing," though convenient to borrowers in some respects, appears to be somewhat costly, judging by the margin between the "placed" price and the level at which market dealings take place. The *Amalgamated Anthracite* debenture, for example, for which the company received, net, only 96½ per cent., was dealt in this week at 99 to 100.

Public Offers.

Olympia.—Offer for sale of £1,000,000 4 per cent. first mortgage debenture stock at £95 per cent. by Hambros Bank and Erlangers. The company was incorporated in April, 1929, to acquire the freehold land and buildings known as Olympia and other properties. Notice of repayment of an existing mortgage amounting to £500,000 has been given, while £200,000 will be applied to making advances to the company's wholly-owned subsidiary, Kensington Property Company. Profits of the company after charging working expenses and depreciation, but before deducting interest on the above-mentioned mortgage and income tax, were:—April 18, 1932, to December 31, 1929, £69,437; 1930, £137,447; 1931, £142,867. The annual service of the present debenture issue will be £57,831.

Carlton Main Colliery Company.—Offer of £450,000 6 per cent. secured debentures at £98 per cent. The purpose of the issue is to provide part of the sum required to repay the 6½ per cent. notes. Holders of the notes were given the right up to November 9, 1932, to exchange up to 90 per cent. of their holdings for a similar amount of the present debentures, plus a cash payment to adjust capital and interest differences. A sinking fund will provide for the redemption of the debentures by March 31, 1957. Messrs. Higginson are authorised to receive applications. For the past three years profits after depreciation have been £155,511, £147,172, £130,873. Average profits, covered debenture interest 2½ times.

Romford Gas.—Issue by tender of £60,000 4 per cent. redeemable preference stock, minimum price £102½ per £100 stock, redeemable at par on January 1, 1958. The flat yield at the minimum price is £3 18s. per cent.

Stock Exchange "Introductions."

Marston, Thompson and Evershed.—Particulars of an issue of £225,000 4½ per cent. redeemable debenture stock, redeemable by sinking fund not later than March, 1972. The company has the option to redeem at any time after December 31, 1942, at 102½ per cent. Net profits for the past four years have been: 1928-29, £121,161; 1929-30, £131,747; 1930-31, £114,211; 1931-32, £107,578. The stock has been placed with the Law Debenture Corporation at 95 per cent., less 1 per cent. commission and ½ per cent. brokerage.

Amalgamated Anthracite Collieries.—Particulars of an issue of £1,500,000 5 per cent. first mortgage debenture stock, redeemable by sinking fund by January 15, 1965, at 102½ per cent. The company has the right to repay on or after January 15, 1938, at 103½ on six months' notice. The stock has been acquired by Messrs. Laing and Cruickshank and Messrs. Cohen, Laing, Hoare at 98 per cent., less commission of 1½ per cent. Profits were: 1929, £512,950; 1930, £621,488; 1931, £471,022.

Forthcoming Issues.

Cork Manufacturing.—An extraordinary general meeting is to be held on November 23rd to consider resolutions that:—(1) the capital be increased to £100,000 by the creation of 100,000 preference 5s. shares; and (2) the articles of association be amended.

North Eastern Electric Supply.—A meeting of the North Eastern Electric Supply Company, Limited (formerly the Newcastle-upon-Tyne Electric Supply Company, Limited), is to be held at the company's office in Newcastle on November 15th, at 11 a.m., to approve an increase in the capital by the creation of 660,000 new £1 ordinary shares. A circular to shareholders states that an issue is necessary in order to provide funds to meet expenditure on the company's business.

London County Freehold and Leasehold Properties.—The directors propose to increase the capital to £3,000,000 by the creation of an additional 1,000,000 shares of £1 each. The amount and terms of the new issue have not yet been decided on, but it is contemplated that not more than 500,000 shares will be offered in the first instance.

Price's Tailors.—Subscription list opens on Tuesday next for issue at par of 500,000 7 per cent. cumulative preference shares of £1 each.

COMPANY MEETINGS, &c.

As to the outlook for the undertaking, the two companies had been organised to trade internationally, and it was the accumulated earnings from all countries which had given them in the past a handsome total of profits. It was not sufficient for them to make profits in a few countries only, from the profits of which must be deducted the losses made in others. That meant that, until the

principal countries returned to more normal conditions the two companies would be handicapped with regard to substantial earnings. When that time came, as they believed it surely would come, he had no doubt that they would prosper as in the past, endowed as they were with their great experience and man power derived from the merging of the two largest concerns in the industry. The report and accounts were adopted.

CONSOLIDATED AFRICAN SELECTION TRUST, LIMITED.

IMPROVED DIAMOND OUTLOOK.

The eighth annual general meeting of Consolidated African Selection Trust, Limited, was held, on the 8th instant, at Mason's Avenue, London, Mr A. Chester Beatty (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The profit and loss account shows a balance of £86,562, representing our net profit for the year, and out of these earnings we have been able to continue the payment of half-yearly dividends. After making the various deductions, we have a credit balance of £51,123 to carry forward for the current year. On August 4, 1931, we paid a dividend of 1s. per share, and on February 4th of this year a dividend of 6d. per share. Since the close of the financial year we paid a dividend of 6d. per share on August 4th.

Speaking with a considerable experience of the diamond market, I am glad to say that I see certain signs of improvement in that industry, and unless the progress now being made is interrupted by untoward events, I feel that good grounds exist for believing that the diamond trade has turned the corner. A very satisfactory indication, and one which directly affects our company, is the increased demand for small diamonds, such as we supply.

The diamond reserve position on our Gold Coast properties has been more than maintained during the year, and is ample for many years.

I am pleased to inform you that our prospecting work in a new region has met with promising results. The testing work has not been carried sufficiently far to enable me to give you to-day any definite indications as to the extent and value of the new area, but from available data it appears likely to prove an asset of appreciable value.

Our share interest in Cape Coast Exploration, Limited, representing nearly one-third of the issued capital, remains unaltered. The accounts of that company for the year ended June 30th last are not yet available, but I understand that the year's operations were satisfactory, having regard to the difficult conditions of the period.

In concluding my remarks, I am sure everyone realises that, consequent on the difficult times we are passing through, many businesses are unable to earn profits. It is, therefore, the more gratifying that your company has been able to maintain payment of dividends, although on a reduced scale, out of current earnings. All that is needed is a recovery in business to enable us to pay dividends at a rate commensurate with the value of your properties and other interests.

The report and accounts were unanimously approved.

NORTH BRITISH RAYON, LIMITED.

DEVELOPMENT OF THE INDUSTRY.

The fourth ordinary general meeting of North British Rayon, Limited, was held, on the 3rd instant, at Kingsway Hall, London, W.C., Mr Ernest Walls (the chairman) presiding.

The Chairman, in the course of his speech, said: The report and balance sheet now before you show the results of the first complete year of full-scale working. Even during the year under review, we have been through a development phase, and the first six months had to bear heavy expenses of this character, all charged against revenue. The results of this expenditure on development will be seen in the next balance sheet, and if the results for the four months of the present financial year, that is, since July 1st, are a true criterion, they will be results that will fully justify the expenditure.

Our total expenditure on new plant during the last two years amounts to over £24,000. This is no small achievement for a company that has had to face the storms of the world crisis from its very first day of starting from zero.

The outstanding feature of the British rayon industry during the year has been the extraordinary increase in output. It is a remarkable thing that the rayon industry, which has been the subject of so much pessimism in some quarters, should be the only large-scale British industry showing important expansion during a year of disastrous industrial depression and difficulty.

In view of the heavy writing down of capital during the year, additional depreciation such as we are now proposing might be

thought to have been unnecessary in the current accounts. We decided, however, that, as the profits must be retained in the business on the present occasion, it would be the best plan to carry a further £10,000 to depreciation, where it is definitely earmarked, rather than to leave it as a free reserve. This depreciation is in addition to a still larger annual amount for maintaining our plant in perfect condition which is charged through trading account. Every defect in our machinery is immediately put right as a part of our routine, so that the plant is as far as humanly possible as perfect at the end of the year as when it started.

As for the future, equipped as we are with up-to-date plant, working as we have done and expect to do continuously and without interruption, on a much larger scale than originally planned, yet with reserve capacity, and with our balance sheet free from loading of any kind, we should be able to get every ounce out of every favourable wind that blows. We shareholders have all been very patient during the building-up period—a period also of unprecedented difficulty in industry—and our patience has at least had the reward which is expressed in the balance sheet before you.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 5, 1932, amounted to £13,218,300 against ordinary expenditure of £29,475,200. After allocating £135,000 to Sinking Fund, and having allowed for a decrease in Exchequer Balances of £85,572, the operations for the week, as shown below, increased the National Debt by £17,176,000 to approximately £7,901 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

pursuant to its rights under the terms of the above bonds, to repay the above bonds at 103 per cent., plus accrued interest, on February 10, 1933, and that on that date interest will cease to accrue.

MISCELLANEOUS.

ANGLO-FOREIGN NEWSPAPERS, LTD.—The scheme of capital reconstruction, which was unanimously approved by the shareholders at the extraordinary general meeting on July 14th last, has now been confirmed by the High Court and became effective from November 1, 1932.

ELDER, DEMPSTER AND COMPANY, LTD.—The following are the figures of the voting at the annual general meeting held October 26th:—On the passing of the directors' report: Votes for resolution, 4,175,620; votes against resolution, 12,065. On the appointment of auditors: Votes for resolution, 4,173,550; votes against resolution, 5,040.

ERINOID, LIMITED.—The seventeenth annual report and accounts of Erinoid, Limited, show a trading profit for the twelve months ended July 31, 1932, of £42,624, against £18,320 for the previous twelve months. After allowing for company charges and depreciation, the net profit is £37,214, which, together with the amount brought forward, leaves an available balance of £40,917, against £22,606. Out of the sum available, the directors have transferred £8,968 to income tax reserve, leaving a balance of £33,949, which they recommend be applied as follows:—In payment of a dividend of 10 per cent., less tax, at 5s. (against 5 per cent. last year), £18,750, last year £9,375; transfer to general reserve, £7,500, last year £5,000; staff fund, £1,000, last year £250; leaving £6,699 to be carried forward, against £3,704 brought in.

GAUMONT-BRITISH PICTURE CORPORATION, LTD.—We are requested by Gaumont-British Picture Corporation, Ltd., to state that a report which appeared in an evening paper that Mr. Mark Ostrer and Mr. George Black had joined the board of Moss Empires, Ltd., is not accurate. They also ask us to state that the correct facts are that Mr. Mark Ostrer and Mr. C. M. Woolf have been nominated by Gaumont-British to fill the vacancies on the board of Moss Empires, Ltd.

GOODSON'S MANTLE AND COSTUME COMPANY.—The scheme of arrangement was duly approved and passed at an extraordinary meeting of all classes of the shareholders held at Nottingham on November 7th.

HERBERT MORRIS, LIMITED.—The year shows a considerable rise in profits and, though trading has been difficult, substantial orders and internal economies have offset any loss. Profit for the year's trading to July 31, 1932, after deducting the usual charges, was £66,638, against £27,075. To this must be added the sum of £7,158 from investments and transfer fees, &c.; a balance of £37,011 is brought forward from last year. After deducting directors' fees and payments on the preference dividend, a balance for disposal remains of £74,273. Out of this, the directors propose to pay a dividend on the ordinary shares of 10 per cent., less tax, against nothing a year ago, and to place to reserve £10,000, leaving £41,773 to be carried forward.

HUDSON'S BAY COMPANY'S LAND SALES.—Quarter ended October 31, 1932:

	Quarter ended October 31, 1931.	Quarter ended October 31, 1932.	9 Months ended October 31, 1931.	9 Months ended October 31, 1932.
Farm lands:				
Acres.....	3,295	2,962	9,762	12,111
Sold for.....	£5,300	£3,140	£15,700	£16,230
Town lots:				
Sold for.....	£740	£770	£2,470	£1,490
Total receipts (gross).....	£35,600	£36,700	£109,000	£110,530

JOSHUA HOYLE AND SONS.—Trading profit for the year after providing for bad debts, income tax, &c., and taking credit for a dividend declared by a subsidiary company which was not wholly earned during the year, amounted to £83,452, against £9,955 for the previous year. Bank loan and debenture interest for the year amounts to £76,432, leaving a balance of £7,020 and, with £1,133 brought forward, leaves £8,152 to be carried forward. Capital expenditure incurred during the year has been written off and the board has appropriated £30,000 from the renewals and reserve fund to write down investments in subsidiary companies. The meeting will be held at Bacup, Lancashire, on November 17th, at 11.30 a.m.

LAMBERT BROTHERS LIMITED.—Profit for year ended June 30, 1932, after making all provisions, is £23,792, against £70,040. After adding the amount brought forward from last year, and deducting the preference dividend for the year, there remains a balance of £104,939 to the credit of profit and loss account. In view of the fluctuations in existing conditions of the value of shares in and advances to subsidiary companies the directors have placed a sum of £100,000 from reserve account in suspense for this purpose. The directors propose in lieu of a dividend to make a distribution of 1s. per share on the 562,500 ordinary shares from realized proceeds of capital accretions.

MONTAGUE BURTON SCHEME.—This scheme was dealt with in *Economist*, November 5th, page 857. At a separate meeting of the holders of the preference shares which was held on November 7th at Leeds, resolutions authorising the directors to sell to a company about to be formed all, or any, of the freehold and leasehold properties of the company were passed unanimously. The chairman stated that proxies had been received from over 3,000 preference shareholders, representing over 1,000,000 shares, in favour of the scheme.

PANAMA CORPORATION (CANADA), LTD.—The directors announce that all the assets of Panama Corporation, Ltd. (in voluntary liquidation), have now been transferred to them, and their title to the properties has been approved by the Government of the Republic of Panama. Debenture stock certificates are ready and are now being issued. Share certificates are in the course of preparation.

PRE-WAR SECURED DEBTS OF THE FORMER AUSTRO-HUNGARIAN EMPIRE.—The Council of Foreign Bondholders communicate the following: On May 3, 1932, the Austrian Government passed an ordinance giving effect to a law of December 23, 1931, which provided for the conversion of the Austrian share of liability, under the repatriation of the above debts secured on railways, into bonds of a new issue bearing interest at 4 per cent., payable half-yearly, as from January 1, 1932, and amortisable over a period of forty years from 1934. New bonds will not be issued for a smaller amount than 50 schillings, and deficiencies must be made up with coupons already due on July 1, 1932, or by payments in cash. In the event of this not being done, the unexchangeable balance will be forfeited to the Austrian Treasury. The various bondholders' organisations have not felt justified in recommending a refusal to accept the unilateral proposals of the Austrian Government, but, in view of the extreme disproportion between the value of the new bonds and that of the old hypothecations, they have formally reserved the right to press for subsequent and further compensation should occasion offer.

THE RENOLD AND COVENTRY CHAIN COMPANY, LTD.—Profit for year ended July 3, 1932, subject to depreciation, directors' fees and taxation, £81,804. Directors have transferred £15,000 to a special investment reserve in respect of a subsidiary company, Brampton Bros., which has incurred a loss. Dividend of 2½ per cent. on directors' report for the year is recommended. An addendum to the directors' report states that it is considered not to be in the interests of the company to reply to certain allegations in advance of the meeting on November 17th at registered office, Renold Works Manchester.

THE SHAREHOLDERS PROTECTION ASSOCIATION LIMITED (BY GUARANTEE).—Readers are asked to note that the address of the Association is 78 New Oxford Street, London, W.C.1.

THE LONDON COUNTY FRESHFODD AND LEASEHOLD PROPERTIES, LTD.—The directors have issued an interim report for the half-year ended September 30, 1932, and have declared a second interim dividend of 2 per cent. Rents upon renewals and re-lettings since April 1st last have increased by approximately £4,000 per annum. The company's unoccupied premises to-day represent 5.8 per cent. of the rent roll. The prospects of letting are encouraging, as is evidenced by them having re-let 50 flats since September 30th. Expenses are less than estimated at this period of the year. This indicates that the company provides the class of flats required at a moderate rent. The auditors have vouched the accounts for the half-year ended September 30, 1932, which show the net revenue was £110,675, compared with £107,767 for the corresponding period of last year. The company and its subsidiary companies during the half-year have made additional purchases from which the full income will be received during the ensuing half-year. There will, in addition, also be the income from properties acquired since September 30th. At the request of the vendors 39,135 shares were allotted at a premium as part of the purchase money.

NATIONAL FIXED INVESTMENT TRUST, LTD.—Midland Bank Executor and Trustee Company, Ltd., announce that the first half-yearly income distribution upon National Fixed Trust Certificates for the period from June 1, 1932, to October 31, 1932, will be paid to registered certificate holders, at the rate of 4.95d. per sub-unit on the due date, November 15, 1932.

NORTHERN ASSURANCE (5 per cent. Debenture Stock—£349,940 outstanding).—Proposals are to be submitted to debenture holders at a meeting called for November 22nd as follows: (1) To alter the rate of interest as from July 1, 1933, from 5 per cent. to 4 per cent.; (2) to postpone the company's right of redemption for ten years (the existing redemption date of 1970 being retained); and (3) to make it optional on the part of the company to purchase any of its outstanding stock in the future in lieu of the present requirement to acquire each year £10,000 of the stock if practicable to do so, at or below par. At the present time the stock can be redeemed on three months' notice, and it is felt that, in view of the fall in the interest yield of high-class investments, the modifications proposed should be generally acceptable to the holders.

UNION CORPORATION, LTD.—The directors have decided to follow the same course as was adopted last year, and to postpone consideration of a dividend until after the end of the Corporation's financial year.

Commercial Reports.

MARKET SUMMARY.

During the past week the downward tendency of the gold price of the principal primary products has been temporarily arrested. A survey of the course of prices in the United States shows that among non-ferrous metals, copper, lead and tin have gained a few points. Similarly, cotton was slightly higher, despite the larger official crop report, and ubbe was also firmer. Among cereals, wheat is as low as ever, but maize, oats and rye have been a little steadier. Cocoa prices, too, show an advance on the week, while raw-sugar values have been maintained. Coffee, however, continued to decline in value. Sterling quotations of commodities, which lend themselves to international arbitrage, followed the course of gold prices. The feature of the week in this country has been the sharp advance in the price of foreign beef, and mutton and lamb, following the application of the Government's policy of restricting imports. Reports from various industrial centres point to a slight seasonal improvement in the heavy industries and in the textile trades.

THE COAL TRADE.

SHEFFIELD.—There has been continued scarcity of best steams for export and firm prices. Demand remains stable, but the regulation of outputs under the quota system is responsible for periodical shortage of supplies. New business is none too plentiful. Prices are 17s. 6d. and 18s. f.o.b. In the industrial section there is rather more activity in boiler slacks, but generally the low levels of consumption of recent months continue. The house-coal trade is unsatisfactory and transactions are reported at summer prices. There is a slump in blast-furnace coke.

GLASGOW.—Scarcity of prompt shipping supplies remains the outstanding feature of the market, this having become more pronounced recently, with a seasonal expansion in the home demand. Prices all round are firm, and in the East of Scotland some qualities are unobtainable for shipment this year. No relief of the quota restriction on outputs has yet been obtained. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s.; splint best, 16s.; splint second, 14s. 6d.-15s.; navigation, 14s. 3d.; navigation second, 13s. 3d.-13s. 6d.; Hartley, 16s.; steam, 13s.; trebles, 14s. 6d.-15s.; doubles, 12s. 6d.; singles, 11s.; pearls, 10s. 9d.; dross, 9s. FIRE.—Screened navigation, 16s.-16s. 6d.; first-class steam, 14s.; third-class steam, 12s. 6d.; trebles, 17s.-18s. 6d.; doubles, 13s.-14s. 6d.; singles, 11s.; pearls, 10s. 6d.-11s. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 16s.; doubles, 12s. 6d.-13s.; singles, 11s.; pearls, 10s. 6d. Ayrshire.—Unscreened navigation, 15s.; jewel, 16s. 6d.; steam, 12s. 6d.; trebles, 15s. 6d.-16s.; doubles, 12s. 6d.-13s.; singles, 11s.; pearls, 10s.-10s. 6d.; dross, 9s.

NEWCASTLE-ON-TYNE.—The firm position of Northumberland steam coal and the increased demand for all classes of graded coal is the feature of the North-East. The Blyth collieries have a full turn for some weeks ahead, and in the Tyne the Hartley Main group are well sold up to April of next year. From Blyth 64 per cent. of this trade is for English coast, but foreign trade has increased this year, particularly from Scandinavia. Durham classes, on the other hand, are quiet, with little inquiry for coking, but prime bunkers are steady, with a fair demand from coaling staiths. Foundry coke is steady at 16s. 6d. for the prime brands. To-day's f.o.b. prices for export are as follows: NORTHUMBERLAND.—D.C.B. screened steam, 14s.; smalls, 8s. 6d.; Howards, Bontinck, Newbiggin, screened, 13s.; smalls, 8s.; Tyne Prime large, 13s. 3d.; smalls, 9s.; Hartley Main, large, 12s. 6d.; smalls, 8s. DURHAM.—Lambton South Hetton, screened steam, 15s.; smalls, 11s.; Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened, 14s. 6d.; second-class gas, 13s.; coking, unscreened or smalls, 12s. 6d.; Prime unscreened bunkers, 14s.; second-class unscreened bunkers, 13s.; Prime foundry coke, 16s. 6d.; Newcastle and district gas coke, 19s.

CARDIFF.—With the approaching close of the St. Lawrence season the shipment of coal from Swansea to Canada has eased down considerably, and there is now no congestion either at that port or at Port Talbot. In the steam coal market the position shows little or no improvement, and many collieries are urgently in need of orders for large grades, the supply of which continues in excess of the current demand. For sized coals, however, and particularly those of the low volatile classes, a steady inquiry is maintained, and the prices are still ruling above the scheduled figures. The executive board of the South Wales marketing scheme on Monday raised the prices of house coals by 1s. per ton, and also issued an instruction that the minimum price at pit of steam coals, when sold for household purposes, should also be advanced by 1s. per ton. These increases are seasonal and became operative as from November 8th. Exports from the South Wales ports last week totalled 412,525 tons, compared with 420,435 tons the previous week, and 361,709 tons in the corresponding week last year. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7 1/2d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 9s. to 10s.; special foundry coke, 32s. 6d. to 34s.; patent fuel, 20s.; pitwood, ex ship, 20s. 6d. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—Although business in the pig iron trades so far is not of an extensive nature the position is considered encouraging and a steady expansion of trade is looked for. There are indications of schemes that have been held up on the grounds of economy being now proceeded with, and if this becomes general the position of markets will be changed. Locally the Skinninggrove months for reorganisation and extensions, and this includes four blast furnaces, three Cleveland and one hematite. Against this two hematite have gone in at Pease and Partners' Normanby works, which means a net reduction of two, leaving in blast in the district three Cleveland, seven hematite, and five other kinds. This will prevent any further stocking of Cleveland iron, in fact it will probably be found necessary to increase the make at other works, as although the foundry trades generally are at present very depressed, three furnaces will not be found sufficient to meet requirements if any improvement comes along. A steadily improving business has been transacted during the past week in foundry iron, and inquiries generally are more numerous. On Tuesday official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t., but there are still the usual concessions for Scotch consumers. The business done recently has been mostly for early periods, there

being little disposition shown to enter into forward contracts. In the hematite market also the inclination is to confine purchases to early requirements and forward purchases are seldom heard of. Makers offer ordinary mixed numbers at 59s. per ton for early delivery and are inclined to make a stand at this, although the price has been shaded under special circumstances. In the finished departments there is more doing and further orders are anticipated. Home mills producing semis are benefiting by the extension of the import tariff and are turning out increased quantities. Finished steel prices for home under the rebate scheme are unchanged, viz.: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s.; for home iron crown bars are £9 15s.; and heavy steel rails £8 10s. For export, 24-gauge galvanised corrugated sheets are £10, and 24-gauge black sheets £8 5s. The ore market is unchanged, there being practically no fresh buying just now. Best rubio is, however, nominally firmer at 14s. 9d. to 15s., freight Bilbao/Middlesbrough having advanced to 4s. 7 1/2d. with tonnage scarce. Coke continues in full supply and good blast furnace qualities are offered at 14s. 6d. delivered consumer's works. The total number of blast furnaces now in operation in the district is fifteen, four having ceased work at Skinninggrove last week-end and two having restarted at Normanby.

SHEFFIELD.—Business is more active in several of the lighter branches than it has been for twelve months or so, and there is distinct evidence of seasonal trade. Unemployment, too, has dropped slightly. Business, however, still lags in crude steel and heavy engineering, and the volume of work on hand shows little improvement. Orders being booked and inquiries still lack tonnage conditions. There is little forward buying in any section. Certain special steel products are selling freely. Speaking generally, output continues below the margin necessary to yield profit. Further progress is reported in the effort to get down costs. Dismissals of managers and members of staffs have been heavy of late. Confidence in a New Year revival is spreading, hopes now being centred upon benefits to local trade from the Ottawa agreements and from the negotiations now proceeding for increased imports of British goods into Scandinavian markets. The Government of these countries are prepared to enforce a definite and greater share for Great Britain of their import trade, providing a workable and satisfactory plan can be formulated. They will, however, require some concessions from our Government which will benefit Scandinavia. British Government officials and leaders of industry who are dealing with the matter recognise that the task before them bristles with difficulties. Business in cutlery, plate and tools is extremely uneven and prices are being cut so severely that profitable operation is rarely possible.

CARDIFF.—The feature of the South Wales iron and steel market this week has been a sharp advance in the prices of Belgian and French steel bars. The import duties, and the recent further depreciation in the franc value of sterling are at last definitely restricting Continental competition. Imports of foreign iron and steel products last week totalled only 2,108 tons, compared with 17,378 tons in the previous week, and 32,835 tons in the corresponding week last year, while imports of steel bars were nearly 217 tons as against 5,147 tons the previous week, and this year's weekly peak quantity of 22,141 tons. Moreover, the quotations for Continental bars on the Swansea Metal Exchange on Tuesday were 93s. per ton delivered, which represents an increase of 10s. per ton and compares with 96s. quoted for Welsh bars. Trade in tinplates continues rather quiet, and prices are nominally unchanged at from 15s. 9d. to 16s. 3d. per basis box. Galvanised sheets are also stationary at from £10 to £10 10s. per ton. Shipments of tinplates last week were 91,819 boxes, as against 107,936 boxes the previous week, and 157,193 boxes in the corresponding week last year.

OTHER METALS.

TIN.—The market in non-ferrous metals was more active than a week ago. Tin quotations rose sharply in London on Monday and Tuesday, under the influence of a keen demand for the metal. Business was quieter on Wednesday, but prices were maintained at the higher level. Sales on the London Metal Exchange were 525 tons on Monday, against 100 last week; 775 tons on Tuesday, against 125 tons last week; and 250 tons on Wednesday, against 375 tons last week. The New York quotation on Tuesday was 23.70 cents per lb., against 23.50 cents a week ago and 24.05 cents a month ago. Wednesday's official closing quotation in London for standard cash was £155 12s. 6d. to £155 15s., compared with £152 2s. 6d. to £152 5s. last week. Stocks in London and Liverpool at the end of last week were 31,063 tons, a decrease of 66 tons on the week.

COPPER.—Copper, too, rose sharply in value on Monday and Tuesday, but part of the ground gained was lost on Wednesday, owing to realisation. The improvement in the price of this metal is due to the more confident tone in Wall Street, and to the expectation that copper producers at the forthcoming conference in New York will agree to the continuation of output at 20 per cent. of capacity. Sales at the London Metal Exchange were 1,000 tons on Monday, against 1,000 tons last week; 1,250 tons on Tuesday, against 500 tons last week; and 1,100 tons on Wednesday, against 850 tons last week. Domestic spot was quoted 5 1/2 cents per lb. New York on Tuesday, against 6 1/2 cents a week ago and 6 1/2 cents a month ago. Wednesday's official closing price for standard cash in London was £29 18s. 9d. to £30, compared with £30 12s. 6d. to £30 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 30,220 tons, show an increase of 685 tons, and stocks of rough copper, at 5,155 tons, an increase of 174 tons.

LEAD.—The price of this metal in London hardened early this week, under the influence of an active demand. On Wednesday, turnover was smaller, but there was a further rise in prices, owing to

the scarcity of sellers. Sales at the London Metal Exchange were 800 tons on Monday, against 300 tons last week; 700 tons on Tuesday, against 300 tons last week; and 300 tons on Wednesday, against 600 tons last week. The New York quotation on Tuesday was 3.15 cents per lb., against 3.00 cents a week ago, and 3.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £12 11s. 3d. for September shipment, compared with £11 13s. 9d. last week.

SPELTER.—In common with that of other metals, the market in spelter was more active than a week ago, and prices showed a hardening tendency. Sales were 2,100 tons on Monday, against 400 tons a week before; 850 tons on Tuesday, against 400 tons the week before; and 500 tons on Wednesday, against 650 tons. The New York quotation on Wednesday was 3.00 cents per lb., against 3.00 cents the week before, and 3.05 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 8s. 9d. for September shipment, against £15 2s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was again quoted at £100 per ton. Nickel was unchanged at £250-£255 per ton. Quicksilver was slightly higher at £10 10s.-£11 per flask, against £10 5s.-£10 15s. a week ago. Platinum was again quoted at £9 10s. per ounce. Foreign antimony advanced from £24 10s.-£25 per ton to £27 10s.-£28 per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week November 3rd to 9th (inclusive) are 37,240 bales, of which 21,126 are American, 4,506 Argentine, 8,440 Egyptian, and 3,168 East Indian.

Manchester.—Owing to the settlement of the spinners' strike the tone of the market has been rather more cheerful, and the opinion is gaining ground that now the difficulty relating to deliveries has been removed trade will broaden. So far, however, there has not been any particular expansion in the turnover. In piece-goods for India there has been a persistent demand and numerous sales have been arranged, chiefly in light whites, prints and fancies. Bids in dhooties for Calcutta remain unworkable. Latest advices from China are not encouraging and trade has been at a low ebb. Retail quantities of bleaching cloths have been sold for Egypt and the Near East. Some makers of printing and finishing styles have done fairly well for the countries of Northern Europe, and a little more activity has shown itself for the markets of the Dominions, especially Australia. Home trade buyers have been rather cautious. Quotations in American and Egyptian yarns have continued firmer, but in some quarters the opinion is held that prices may ease owing to the fuller supplies now coming on the market. Fresh buying, therefore, has been limited.

THE WOOL TRADE.—Bradford.—According to our correspondent, big quantities of the raw material have been sold in Australia and South Africa since the commencement of the season. The movement of the Cape clip has been exceptionally rapid, in spite of the fact that prices realisable by growers have been exceptionally low. There is evidently a disposition to accept market prices, and bigger quantities of wool have been purchased for this side than it has been found possible to ship from the ports. In Australia there has been a slight sagging tendency in prices, home-trade buyers not having been able to support the same level as was current (say) a month ago. This has, however, been accompanied by some very big clearances in the various selling centres,

and whilst there is nothing to indicate a recovery in the near future, there is quite as much probability of a steady level being maintained. Some misgiving has been felt respecting Japanese buying in Australia, for it has not been clear whether these operations have been induced by the cheapness of wool or are an effort to safeguard capital. If all the raw material bought for Japan this season goes directly into consumption, the future of prices is fairly well assured. There have been large operations on Continental account, and the home trade has been by no means slow to step in as opportunity arose. Considering how much wool has been shifted in Australia, prices are keeping up very well indeed. Crossbred wool is coming more into its own, and there is every probability of a healthy demand for medium and low, as well as finer wools when the New Zealand selling season commences. Quotations for merino tops in Bradford are steady, without much new business developing. Crossbreds are firm in sympathy with the aforesaid demand for wool.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has not improved during the past week. Prices fluctuated within narrow limits, but are scarcely changed on the week. As we show on an earlier page, the outlook for wheat is little better, if not worse, than a year ago. The International Institute of Agriculture in Rome forecasts an increase of no less than 100,000,000 bushels in the "carry-over" at the end of the current season. Not only has the wheat crop been larger than a year ago, but the harvest of other grains are substantially greater than those of the past season. This means, of course, that less wheat will be used for feeding purposes. On Wednesday, "December" futures were quoted in Chicago at 43½ cents per bushel, against 43¼ cents the week before, and 49½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 6d. per 496 lbs., against 27s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 3d., against 27s.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s., against 27s.; Australia, ex ship, 27s. 6d., against 28s. 3d. a week ago.

WHEAT FLOUR.—International trade in flour continues on a limited scale. North American shipments were 125,000 sacks, compared with 147,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 24s. per 280 lbs., against 25s. last week; delivered London, 23s., as compared with 24s. a week ago. Manitoba patents, ex store, 24s. to 25s., against 24s. to 25s. Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. last week.

BARLEY.—The demand for feeding barley remained quiet. "December" futures were quoted in Winnipeg on Wednesday at 30½ cents per bushel, against 28½ cents last week and 25½ cents a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s. to 23s., against 22s. to 24s. a week before.

OATS.—The import demand for oats by Continental countries has been small. In Chicago, "December" futures were quoted at 16 cents per bushel on Wednesday, against 15½ cents per bushel a week before and 14½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 6d. per 320 lbs., against 17s. 9d. a week ago; "River Plate," ex ship, 16s. 9d., against 16s. 9d.; "Chilean White," landed, 22s.-24s., against 22s.-24s. a week earlier.

MAIZE.—The demand for maize has been active, but prices have given way, partly as a result of increased shipments from the United States. "December" futures in Chicago were quoted on Wednesday at 25½ cents per bushel, against 24½ cents on Wednesday of last week and 27½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., compared with 20s. 3d. last week; "Plate," ex ship, 18s. 6d., as against 19s. 3d.; "Plate," December-January, 19s. 3d., as against 19s. 10½d. Yellow Maize, ex wharf, was quoted at £5 12s. 6d. per ton, against £5 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to November 5	Cwts. 334,481	Cwts. 79,191	Cwts. 124,248	Cwts. 216,554
10 weeks to November 5	2,530,215	734,490	1,449,432	2,940,972
Average price of English wheat per cwt.	s. d. 5 6	s. d. 6 7	s. d. 6 10	s. d. 9 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Week ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Oct. 29, 1932	Cwts. 324,418	Cwts. 378,011	Cwts. 56,462	s. d. 5 7	s. d. 7 10	s. d. 6 2
Sept. 5, 1932	334,481	408,323	56,941	5 6	7 7	6 0
Nov. 3, 1928	274,710	678,378	78,432	9 9	10 10	8 10
Nov. 2, 1929	231,539	610,771	62,533	9 7	9 11	7 9
Nov. 8, 1930	124,248	526,468	55,204	6 10	9 8	5 11
Nov. 7, 1931	79,191	469,893	46,513	6 7	9 2	6 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Nov. 10, 1931.	Jan. 4, 1932.	Nov. 2, 1932.	Nov. 9, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	67½	62½	46½	46½
Chicago (No. 2 Winter)	130½	79½	63½	55½	43½	43½

The visible supply of wheat in Canada, at 91,956,000 bushels, shows an increase on the week of 1,219,000 bushels. Supplies a year ago stood at 56,524,000 bushels.

OTHER FOODS.

SUGAR.—The market in raw sugar has been firmer under increased buying and a more hopeful international outlook for this commodity. December futures were quoted in New York at 1-05 cents per lb. on Tuesday, against 1-01 cents a week before and 1-09 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 10½d. to 5s. 10½d. per cwt., against 5s. 8½d. a week before, and "March, 1933," at 6s. 2½d. to 6s. 2½d., against 6s. 0½d. to 6s. 0½d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.			Tons.		Tons.	
London	3,151	50	1,033	1,053	12,267	6,658
Liverpool	21,402	31,985	14,208	12,659	72,044	40,431
Total tons	24,553	32,035	15,241	13,712	84,311	47,089
Last week	21,708	11,608	14,769	14,047	74,999	28,766

COFFEE.—The tendency of coffee prices in New York continued downwards during the past week. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb., against 8 cents per lb. on the corresponding day a week ago. Tuesday's London sales encountered a steady demand at lower prices. Last week's movements of coffee in London were as follows: Brazilian, landed, 493 bags; delivered, for home consumption, 1,046 bags; exported, nil; stocks, 6,106 bags, against 2,474 bags a year ago. Central American, landed, 2,309 packages; delivered for home consumption, 2,317 packages; exported, 1,263 packages; stocks, 69,626 packages, against 66,935 last year. Other kinds: Landed, 4,347 packages; delivered for home consumption, 2,032 packages; exported, 1,284 packages; stocks, 60,317 packages, against 53,906 last year.

COCOA.—Cocoa has been in better demand and prices show a slight rise on the week. December futures were quoted at 3.96 cents in New York on Tuesday, against 3.92 cents a week ago and 4.18 a month ago; Accra, November-January, at 26s. 3d. c.i.f. Continent, shows a rise of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 12,104 bags; delivered for home consumption, 8,950 bags; exported, 286 bags; stocks, 122,201 bags, against 148,015 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 59,283 packages of Indian and 31,825 packages of Ceylon tea. Monday's "Indian" offerings encountered a keen demand at steady prices. Competition for Ceylon teas on Tuesday was less keen, and with the exception of fine qualities, the prices for the "Indian" varieties offered on Wednesday tended in buyers' favour. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.

Nov. 3, "	10-75	7-72	12-75	6-40	5-12	5-99
" 10, "	10-22	7-47	12-34	6-32	5-37	5-87

RICE.—The market in rice was quiet at the lower level reached last week. The spot price was 9s. 9d. per cwt., against 9s. 9d. per cwt. a week ago, while the forward quotations at 7s. 6d. per cwt. show no change on the week. Movements in London during the past week were as follows: Landed, 151 tons; delivered, 143 tons; stock, 2,426 tons, against 1,584 tons a year ago.

POTATOES.—The market in potatoes has been steady at unchanged prices. At the London Borough Market, "King Edward," light soil, were quoted at 6s. 6d. per cwt., against 6s. 6d. a week ago.

SPICES.—Peppers have been a quiet market at the lower level of prices established last week. Spot pepper, "Black Singapore," was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 4 tons; stock, 318 tons, against 366 a year ago. White, landed, nil; delivered, 35 tons; stock, 618 tons, against 420 a year ago.

MEAT.—Following the application of the Government's scheme to restrict imports of foreign meat, prices of foreign beef and mutton and lamb have risen sharply on the week. Wednesday's

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

quotation for Argentine beef, chilled hindquarters, was 3s. 8d. to 4s. 6d. per 8 lbs., as compared with 3s. 1d. to 4s. last week. New Zealand frozen mutton was 2s. 6d. to 3s. per 8 lbs., against 2s. 2d. to 2s. 6d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,667 tons, against 9,391 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.2 per cent. of the beef supplies, against 83.2 a year ago. Imported mutton, mainly New Zealand, formed 67.1 per cent. of the total supply of mutton and lamb, against 75 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—A rather better tone has developed, but business is confined to immediate requirements of consumers. The outlook forward being regarded as uncertain, in view of the drastic changes that are taking place in our trade relations abroad and the unresponsive condition of industry at home. The prospective duty on foreign linseed approved by the House of Commons has been discounted. Crushers have bought remain low in the absence of buying interest, but have no disposition to Plate on spot and in near positions, but have surplus still pressing on anticipate future requirements, with large surplus owing to large the market. Linseed on passage to Europe has, owing to large arrivals and smaller shipments, been reduced to 153,000 tons, or 49,000 tons less than last week. In addition, however, there is available for export to the end of the year 383,000 tons (including 70,000 tons from India), as against 196,000 tons actually shipped in the remainder of 1931. Little or no interest is being taken in the new Argentine crop, which is estimated to yield 1,750,000 tons, or about 500,000 tons less than the previous season. Current value of Plate oil and shipment is around £8 12s. 6d. Vegetable oils are quiet, though low prices appear to have brought in consumers of linseed oil, which is now somewhat steadier, and for November delivery ex Hull mill is quoted £16 10s., and December £16 15s. Cotton oil is neglected and easy, crude Egyptian ex Hull offering at £21 10s., and refined at £23 10s. The unusually poor demand for oilcakes is adversely affecting crushing operations.

RUBBER.—The ground lost a week ago has been recovered as a result of a slight improvement in demand. In New York, Wed-

The Special Supplement

published with "The Economist" of October 22nd is now available separately.

PRICE 6d.

Obtainable from *The Publisher*, 8 Bouverie Street, London, E.C.4.

A BINDING CASE for The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are now able to offer our readers a new binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen. It holds three months' issues and index, its special cork spine does away with tags, laces, and metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

Price 5/- each, post free (Lettered Back & Front), from **THE ECONOMIST, 8, Bouverie St., London, E.C.4**

"COMMERCE"**Bombay and Calcutta**

A weekly journal devoted to the practical side of finance, textile trades, the coal trade, insurance, engineering, shipping trades, Company results, market reports.

Read throughout India by people with money to spend.

Specimen copies, advert. rates can be obtained from

THE MONEY MARKET.

MONEY displayed its usual ease over the week-end and was quite comfortable on Monday despite the absence of Treasury bill maturities, and $\frac{1}{2}$ per cent. was the ruling rate both for new money and renewals. By Wednesday, however, credit was inclined to be a little tighter, and once or twice $\frac{3}{4}$ per cent. had to be paid, though $\frac{1}{2}$ per cent. remained the general rate. No calling by the clearing banks was in evidence. Last week's Treasury bills went

as expected at the higher rate of 14s. 11.17d. per cent., compared with 10s. 11.16d. per cent. the week before. This week the banks have held out for $\frac{1}{2}$ per cent., and as a result business was very limited. One bank, however, is reported to have secured some "hot" Treasury bills on Wednesday at $\frac{1}{2}$ per cent., and by Thursday afternoon "hot" Treasuries were generally quoted at $\frac{1}{2}$ and even $\frac{1}{4}$ per cent. This week the amount on offer is being increased from £50 to £60 millions, and the general expectation on Thursday was that the average tender rate would be as high as $\frac{1}{2}$ per cent. November and December Treasuries were quoted on Thursday at $\frac{1}{2}$ - $\frac{3}{4}$ per cent., and bank bills were quoted at $\frac{1}{2}$ - $\frac{3}{4}$ per cent., and Standstills at 1-2 per cent.

This week's Bank return shows practically no change. There has been a very slight increase of £1.8 millions in the note circulation, and, with gold holdings unchanged, the Reserve in the Banking Department is increased by £1.8 millions. The biggest change in the Issue Department is the decrease in Other Securities from £12.0 to £6.1 millions, but this may be regarded as representing a transfer of securities from one Department to the other, such as has frequently occurred from week to week during past years. In the Banking Department Public Deposits are unchanged, and there is practically no alteration in Securities or Other Deposits. Bankers' Deposits are risen by £2.7 millions, mainly as a result of the contraction in the note circulation and increase in the Reserve.

In connection with the reported growth in the use of inland bills, one or two accepting houses are believed to be trying to strengthen their provincial connections. The following figures have been suggested as the minimum cost of financing home business by means of bills. The bill stamp will cost 1s. per cent. and the accepting commission 10s. per cent. on a three months' bill. This is equivalent to 11s. per cent. per three months, or 2.2 per cent. per annum. If the bill is discounted at the finest rate obtainable, say $\frac{1}{2}$ per cent., the total cost is 2.95 per cent. This is undoubtedly cheaper than the current cost of bank advances, but it must be remembered that so low an acceptance commission and discount rate is only obtainable against the highest security, and that firms able to give that security could obtain a bank loan at considerably less than 5 or even 4½ per cent. Furthermore, it would in practice be probably easier to renew a bank loan than to renew a bill.

The October averages of the nine clearing banks afford some slight confirmation of the recent autumn improvement in trade. Acceptances have risen by just over four millions, this being the first improvement since a very moderate one which occurred between April and May. The decrease in advances is also less than it has been for several months.

	Oct., 1931.	July, 1932.	Aug., 1932.	Sept., 1932.	Oct., 1932.

Deposits continue to grow, and with them the difficulties the banks are experiencing in finding employment for their resources. Bills are practically unchanged, but the banks have added a further £28 millions to their investments, which, including those in subsidiary and affiliated banks, now amount to the very high proportion of 22.6 per cent. of deposits. The ratio of advances to deposits has now fallen to 42.1 per cent.

The Foreign Exchange market was fairly active, and sterling recovered considerably in the early part of this week, but there was a contraction in business as well as a decline in sterling towards the close. New York, after touching 3.84½, reacted to 3.29½, against 3.28½ last week. Montreal weakened from 3.76 to 3.77½. Paris went from 83½ to 84½, after touching 85½. Brussels lost 12 points at 23.77, and Milan ½ at 64½, as did Madrid at 40½. Lisbon gained ½ at 109. Amsterdam fell away rather sharply to 8.21. Berlin lost 4 points at 13.86, and Switzerland 8 points at 17.13, after having been considerably higher. The Scandinavian currencies reacted differently, Stockholm gaining 2 points at 18.86, whilst Oslo weakened by 7 to 19.67, and Copenhagen by 2 to 19.22. Buenos Aires improved by ½d. to 35½d. In the Far East the rupee was firm, and improved by ½d. to 5½d., but the yen was weak and hesitant throughout, and closed ½d. lower on the week at 1s. 2½d. Batavia lost 4 points at 8.25. In the forward market, one month's dollars were unchanged at ½ cent discount, but three months weakened by ½ to ½ cent discount. Paris was at one centimes and two centimes premium, and Brussels at 6 and 22 centimes discount. Milan was unchanged at ½ lira and ½ lira discount. Madrid weakened by ½ for both deliveries to ½ peseta discount for one month and ½ peseta for three. Amsterdam went from par to ½ cent premium for one month, and remained at ½ cent premium for three. Switzerland was cheaper by ½ and ½ centime premium for one month and 1½ centimes premium for three. Silver prices declined by ½d. for both deliveries, cash being quoted at 18d. and forward at 18½d. China and India were both sellers, and business was small. The China silver exchanges fell away in sympathy, Hongkong by ½d. to 1s. 4½d. and Shanghai by ½d. to 1s. 9½d.

Thus the main feature was the strength of sterling early in the week, followed by its renewed weakness. At one time sterling rose over \$3.34, but the control then intervened. This suggests that it was thought desirable to check too rapid an improvement, which, as subsequent events have shown, would probably have proved ephemeral. Three months' dollars have gone to a discount equivalent to ½ per cent. per annum, and if this week's Treasury bills go at ½ per cent. the total return of 1½ per cent. on American purchases may prove attractive, for it compares very favourably with the returns upon short money in New York, quoted in the following paragraph. Hence American interests may either take part in this week's tender or buy "hot" bills next week in the market.

Following last week's slight increase in gold under foreign earmark in New York, fairly large decreases have taken place this week, totalling \$6.8 millions. Imports amount to \$1.7 millions, of which \$264,000 came from China via San Francisco and \$987,000 from Newfoundland. There were no exports, and the total gold gain was therefore \$8.5 millions. This is by no means a large amount, but suffices to show that, notwithstanding last week's increase in foreign earmarkings, the United States continue to gain gold. The foreign exchanges, too, have again moved in favour of New York, French francs from 3.92½ to 3.92 cents, belgas from 13.88 to 13.87 cents, Swiss francs from 19.26½ to 19.24½ cents, and Dutch florins from 40.17 to 40.15½ cents. Money rates are unchanged, with call money at 1 per cent. and 90-day bankers' acceptances at ½-¾ per cent. Bank failures during October only amounted to 67, against a monthly average of 127 for the first nine months of the year. New banks are also being opened up, and this is regarded as encouraging.

EUROPE LOOKS TO AMERICA.

ALMOST at the moment when our last issue went to press the British Ambassador in Washington was presenting to the American Government a Note regarding the War Debts—a step which was quickly followed by the delivery of Notes on the same subject from France and Belgium. This action, within 48 hours of the American elections, and before the dust of the arena had had time to clear away and excited feelings to cool, has inevitably given the impression of being a little precipitate; indeed, in normal circumstances, ordinary human feeling would have prompted a little longer delay to give the protagonists in the Presidential contest at all events a few days in which to rest from their labours. The excuse must be that the date of the election allows only five short weeks before the debt payments become due on December 15th; and since discussion has been deliberately damped down in the last three months, as long a time as possible is in the last three months, as long a time as possible is necessary to permit the public in the different countries to grasp the issues involved, and to enable wise decisions to be reached on a matter which is fraught with grave import for the whole world. The action taken in the next three weeks may unquestionably afford a much needed fresh stimulus to the world's economic system. But if a deadlock is reached it is almost inevitable that, whether the debtors pay or not, there will be a serious setback to recovery.

The terms of the Notes—all of which are quite short—do not call for extended comment. The British document reminds the President that the object of the Hoover Moratorium was to assist in the re-establishment of confidence which had been shaken by falling prices and economic instability. Indeed, the crisis which made this step necessary in 1931 has not ended; and in October a year ago the Hoover-Laval conversations recognised that some further arrangement on all inter-governmental obligations might be necessary before the Hoover Year expired. It was the President's suggestion that the first step in this was the agreement at Lausanne. That Agreement has taken it in the agreement at Lausanne. That Agreement aims at the ultimate termination of all reparation payments, and represents the utmost contribution which the Governments concerned could make towards "that the restoration of world prosperity in which the people of the United States, no less than those of the British Commonwealth of nations, have so deep an interest." The Note does not argue the point of view of the British Government, which has been repeated again and again, from the Balfour Note onwards. It merely urges that negotiations should be undertaken, and that, in order to allow the work of negotiation to proceed undisturbed, the precedent set in similar circumstances during the reparations discussions should be followed, and the payment due in December suspended for the period of the new discussions or "for any other period that may be agreed upon."

The French Government has naturally added in its Note that the agreement which it accepted at Lausanne involved a very heavy budgetary sacrifice which was only accepted "in the hope of allaying the feeling of resentment prevailing among the nations, and in order to contribute both to the restoration of economic conditions and the strengthening of peace," while Belgium also calls attention to the loss of reparation receipts that she has agreed to in the interests of world recovery.

It is unfortunate that this matter should call for action at a moment when the defeated President is still in office, while the victor at the poll, with whom the future power must rest, has not yet assumed responsibility. Yet, given good will, this very fact may make it possible for this and other world questions of an importance far transcending national considerations, to say nothing of purely party interests, to be dealt with on non-party lines. Indeed, this possibility was actually foreshadowed last week in Mr Hoover's telegram of congratulation to the new President, in which the former offered his collaboration "in

the common purpose of all of us." On receipt of the Notes, therefore, Mr Hoover sent copies to the President-Elect, and invited him to discuss the situation at Washington. Mr Roosevelt has accepted—though only after making it clear that responsibility must still, for the time being, rest with Mr Hoover—and these critical discussions between the rival leaders will take place next week. So far so good.

It is idle to deny, however, that with this issue raised so soon after the election, with the United States faced with a still growing deficit in its Budget, and with the old Congress—which committed itself a year ago to a resolution against cancellation or further revision of the war debts—still in being, there are grave political difficulties ahead. Indeed, it is generally believed that they can only be surmounted if Mr Hoover, who is credited with the desire to recommend to Congress a further suspension of the debts, is backed by the prestige of Mr Roosevelt's swinging majority. There is little doubt that the full influence of financial opinion will be thrown into the scale in favour of a course which is generally recognised to be necessary for world recovery; and the American Press generally accepts the view that, sooner or later, revision by agreement or default is inevitable. At the same time the fact must be faced that European countries are not at the moment very much in favour in America. The hesitations at the Disarmament Conference, and in particular, the equivocal acceptance of Mr Hoover's sweeping proposals in the summer, caused misgivings which have not yet been entirely removed by the somewhat brighter prospects of disarmament which have emerged in the past month; while Britain's popularity has waned considerably on account of the Ottawa Agreements, which will have the effect of transferring some of America's trade with Canada and Australia to Great Britain.

The only means of overcoming these hostile forces is a full understanding of the world situation as it exists to-day, of the part which these debt payments have already played in the past in upsetting the international system of the world's commerce and finance, and the still more disastrous results which they would have in this direction as a result of the crisis and the departure of sterling from the gold standard. The reaction of American opinion to these Notes is not unlike that of France in June, 1931, when Mr Hoover suddenly launched his proposal for a moratorium only a few days after members of his Cabinet had been explaining in their speeches that the system of debt payments was working perfectly. France, on that occasion, with rather an ill grace, finally bowed to the inevitable. By her delay she robbed what was a very great piece of realistic statesmanship of half its merit. It would be a thousand pities if the readjustment of the war debts in accordance with the world's imperative needs should be made in such a way as to rob this action of any healing grace and render it an occasion of fresh international friction.

It is being suggested in some quarters in America that it would save Congress from embarrassment if the European debtors were quietly to default, and it is being put forward in this connection that the non-payment of the annuities in July, 1931, was itself a technical default, seeing that Mr Hoover had no authority to suspend payment. But to leave the debtor to act on his own responsibility in such a matter has obvious disadvantages and would set an example which, if followed in quite other circumstances by debtors generally, might lead to chaos. This is not a case where America can escape responsibility, and her decision is a grave one. We can recall no instance in the depressing history of these inter-governmental war payments in which a formal request for a moratorium has been bluntly refused. The concessions made as a result of such applications have in some cases been inadequate, but no Government has yet entirely ignored the considered opinion of the responsible statesmen of a debtor country

when they have indicated that insistence on the strict letter of the bond would have serious national and international consequences.

Mr Roosevelt has had a magnificent victory and wields at this moment a greater power for good or ill than any man in the world. But such power carries with it such a colossal burden of responsibility that one cynic was moved to send congratulations to all the candidates except the winner! His first test has come without a moment's respite. On the way in which he rises to the occasion will depend very largely his prospects of being able to grapple successfully with the other problems which will thrust themselves in quick succession upon him.

THE FRENCH PLAN.

SINCE we went to press last week, events in the field of disarmament have continued to move rapidly. There was a debate in the House of Commons, on the eve of Armistice day; an official *résumé* of the French Plan was published on Monday; and on Thursday Sir John Simon gave, at Geneva, an *exposé*—which is discussed on a later page—of the British attitude and the British proposals.

The Explanatory Note on the French Plan has confirmed what we already knew from the speeches of M. Herriot and M. Paul-Boncour, without adding much to our knowledge of detail. For our part, we do not regard this vagueness as ominous. On the contrary, we take it as an indication that the Herriot Plan, unlike the Tardieu Plan, is not a cut-and-dried document which is being laid before the world with a brusque "take-it-or-leave-it." We believe the Herriot Plan to be a sincere attempt to grapple with the crucial difficulties of the disarmament problem, to break new ground in dealing with them, and to place these new French ideas before the Disarmament Conference as a basis for a free discussion. No doubt the French Plan is calculated to fit in with French ideas and to make the world specially safe for French national interests. But that almost goes without saying in a world which is still dominated by nationalism; and if the present Plan had happened to originate in Great Britain or in Germany, does anybody suppose that its authors would not have given the first draft of it a specifically British or specifically German colour? That a French Plan should start by being "pro-French" is not a matter for criticism; it is inevitable. What is much more noteworthy—and indeed decidedly impressive and encouraging—is the evidence which appears in the Plan that French minds are at last on the move. To observers who have followed events since the Peace Settlement, it does look as though the rigid French temper, which has been the supreme difficulty during these weary years, were beginning to unbend at last.

Notably, in putting forward this Plan, France is recognising that the four European Peace treaties are not inviolable, and that Germany and the other three European defeated countries have a right to recover their equality of status with the ex-victors and the ex-neutrals. (We may recall, in passing, that in the case of Turkey these principles were recognised long ago in the Lausanne Conference of 1922-24.) These two concessions, on points of principle, by France and her allies—for we must assume their concurrence—to Germany and her former allies are surely of inestimable value to the ex-vanquished peoples. In the first reaction of German opinion to the French Plan as outlined by M. Herriot in the French Chamber, the significance of these two concessions was recognised. The German reaction to the French memorandum of this week is less favourable. Yet, in expressing their dissent from the French desiderata on matters of concrete detail which are obviously debatable, we hope that the Germans will not lose sight of these two very great advances.

One interesting aspect of the Plan is its drastic dealing with the idol of national sovereignty. If the Plan goes through, this ancient idol will emerge with its nose chipped off, and perhaps with the loss of its hands and legs. The cult of nationalism is at present so deeply

ingrained in human minds that this mutilation may seem sacrilegious. Yet, although opinions will differ as to the extent to which it is desirable and expedient to limit the traditional exercise of national sovereignty, it is evident that some considerable measure of restraint is an essential corollary to the many inventions that have changed the nature of international intercourse within living memory.

Let us briefly enumerate the ways in which national sovereignty is to be restricted under the French Plan. To begin with, the national forces that are to be at each national Government's sovereign disposal are to be forces that are only capable of defending the national territory and not capable of attacking other countries. The only national forces armed and equipped for offence are to be national contingents of an international force under the control of the League of Nations. The conformity of all national armaments with these stipulations is to be ensured by a system of international inspection. There is to be compulsory arbitration or conciliation of all international disputes whatsoever. There is to be a summary procedure for identifying the aggressor in the case of armed conflict. Both in the task of conciliation and in the task of identifying an aggressor, the Council of the League is to act by a majority vote. For coercing a declared aggressor, the Council is to have at its disposal an offensive air force recruited from volunteers whose personal allegiance will presumably be given to the League and not to their countries of origin. And, in a war that breaks out under these conditions, every Continental European country will be required to place its offensive contingent at the disposal of the League, while no country in the world will be permitted to maintain neutrality, or at any rate to claim the enjoyment of neutral rights.

In the aggregate, these restrictions upon national sovereignty are so far-reaching that our first impulse is to wonder how so nationalistically-minded a nation as the French can have reconciled itself to them. But further inspection of the Plan seems to show that what is taken away from the sovereign national State with one hand is partially restored to it with the other—at any rate in the case of the State whose name happens to be France. This brings us to the stumbling-blocks in the Plan as it stands at present.

The first stumbling-block is the proposed system of national offensive contingents at the disposal of the League. For as long as these contingents are manned and equipped by, and stationed in, the countries that provide them, it is difficult to see how any method of international inspection, however searching, can really ensure that these offensively-armed national forces shall be used, when they are used, as instruments of international police and not as instruments of national policy. The other proposed League of Nations force—the international air force recruited from individual volunteers and presumably stationed in the Canton of Geneva under the command of an international general staff—seems at least conceivably practicable, apart from the question whether we like the idea or not. But the national contingents stationed in their own countries seem, to our mind, either thoroughly impracticable or else calculated in effect to restore to each national army that capacity for offensive warfare which is to be taken away from it *ex hypothesi*.

The second serious stumbling-block in the French Plan is that the existing national stocks of offensive weapons are not to be scrapped but are to be placed "under seal" for eventual use against an aggressor with the League's approval. In our belief, these two points in the French Plan, taken together, might have the effect of maintaining the existing national armies of aggression intact under new labels. In that event, we should have made no progress towards disarmament whatsoever. We submit that these are the two points on which French opinion must expect the representatives of other countries to suggest a rather sweeping revision of the Plan as it stands at present in its first draft.

There are also certain vital questions raised by the Plan which still remain obscure. For instance, does the French conception of "all-in" compulsory arbitration allow for the revision of existing treaties by judicial or conciliatory procedure in accordance with Article 19 of the League

Covenant? This question is pertinent, because one surrender of national sovereignty requires another. If national States are to place unreservedly in the hands of some international authority the redress of their national grievances, they cannot logically refuse to give the same authority the same degree of discretion to modify their acquired national rights. This is simply the old question of the safety-valve. If the traditional method of letting off steam by blowing up the boiler is to be abandoned, then an effective safety-valve must be installed. If nations are to be induced to renounce the use of "private war" for the redress of their national grievances, they must be assured that these grievances will be open to judicial or equitable redress, even if this may involve the revision, by proper process of law or equity, of other nations' acquired treaty rights. If the French plan is to be made to work, Article 19 of the League Covenant must be made effective. But in this respect, as in others, we see no reason why discussion of the French draft scheme should not lead to fruitful results.

BRITAIN AND GOLD.

IN contra-distinction to the somewhat sanguine hopes voiced recently in the House of Commons by the Prime Minister that it might be possible to arrange for a plenary session of the World Economic Conference before Christmas, it is now admitted in official circles in London that there is little prospect of the Conference assembling until the Spring, possibly April, of next year. However regrettable may be the delay, which is now being attributed in some sections of the British Press—not without signs, one fancies, of official inspiration—to "misconceptions" on the part of the Preparatory Committee of Experts as to the functions which they were required to perform, there is force in the contention that until the ground for the Conference has been carefully prepared, its assembly would be worse than a waste of time. The disappointment and despair which would be created, were the Conference to turn out a fiasco, would be exceedingly dangerous; and to suggest that the Preparatory Committee had nothing else to do but to draw up a list of useful topics for discussion implies an unduly narrow interpretation of its terms of reference, which are "to make a preliminary examination of these complex questions." It was not to be expected that the experts could present the politicians with a series of propositions containing a cut-and-dried solution of the economic difficulties of the world; but the Conference itself can make but little headway unless the Preparatory Committee can indicate where there is common ground and, in cases where there is a difference of view, what are the points to be decided before common action can be taken. Unless the points at issue are narrowed down and crystallised in concise and simple

terms, the chances of a vast assembly of the world's political leaders being able to reach constructive accord on a whole series of complex economic and monetary problems are remote.

Though few details of the proceedings of the Preparatory Committee at Geneva have been published in this country, sufficient indications have been given in French and other Continental newspapers to suggest that, so far from having made any appreciable headway with the task of drawing up bases for discussion looking towards action by the statesmen, the experts, who in any case have now dispersed until January, did little more during their brief session than reveal differences of opinion. In the words of our distinguished and well-informed contemporary, *Le Temps*, "Ils n'ont pu, en réalité, qu'effleurer certaines questions, sans pouvoir se prononcer sur aucune." This may have been inevitable, but so slow a rate of progress is disappointing to an impatient world.

As was anticipated, one of the gravest difficulties that emerged is the conflict of opposing views regarding the question of the gold standard. According to an obviously inspired account published in *Le Temps* of November 10th, the representatives of the "gold" countries, and of France in particular, supported even by some of the representatives of countries which are "off gold," insisted that on the road to economic reconstruction the first step, without which possibilities of further collaborative action could hardly be discussed, must be the re-establishment of the gold standard in countries where it had been suspended, and, notably, of course, in Britain. The reply of the British representatives—that reversion to the gold standard on Britain's part would be subject to the realisation of certain conditions—aroused considerable criticism, and was met with the retort that all ideas of deflation or stabilisation of prices are "Utopian." Such considerations as the need for better distribution of gold reserves, the establishment of a system of clearing through the Bank of International Settlements, or the economising of gold through a reduction of statutory "cover," were apparently brushed aside as representing a retrograde move away from the principles to which the Majority Report of the League's Gold Delegation had given solemn blessing. Reversion to the gold standard pure and undefiled by the "résultats néfastes" of the gold exchange standard was roundly demanded.

This being so, we feel bound to restate once more in terms the case—overwhelming in our opinion—against an unconditional restoration of the gold standard by Great Britain. For, even if the obvious "condition precedent"—a settlement of war debts—were realised, there are, in our view, compelling objections against our again undertaking the responsibility of attempting to maintain any parity with gold unless and until certain conditions are realised—some of which involve very definite assurances on the part of the rest of the world.

These conditions, we suggest, are somewhat on the following lines:—

(1) That there must first be some recovery from the present depressed level of wholesale prices; to this end the policy of central banks—aided by complementary policy on the part of Governments—should be to put no obstacle in the way of such a movement, but rather to assist it.

(2) That the excessive concentration of gold in a few countries of the world must first be corrected. If the trade balance of the countries concerned does not become sufficiently adverse to produce this result, it must be achieved either by loans from the gold-accumulating countries or by utilising some part of the accumulations as an international reserve.

(3) That there must be sufficient common action in the monetary policy of the chief countries of the world to ensure that future gold movements are allowed to influence price levels and so correct the balance of payments, *i.e.*, that gold-receiving countries will not sterilise gold in order to obviate a rise in their internal costs.

There must also be adequate information regarding short-term capital movements from one country to another, so that there may be adequate warning when the situation in any country is becoming unduly vulnerable.

(4) That a general agreement be reached for the removal of trade impediments and the inauguration of a more liberal commercial policy, including in particular an undertaking by creditor countries that they will refrain from placing, in the supposed interests of their domestic employment, obstacles in the way of their acceptance of a logical import surplus.

We are convinced that it would be an unwarrantable risk for this country to go back to gold if it involved the possibility of having to hold to that standard at the cost of indefinite deflation. We go further: we would say that unless there is a recovery of commodity prices the world is faced with the task of making readjustments of debts, fixed charges and rents on a scale that could only be carried out with the utmost difficulty and probably at the cost of grave social disturbance, but which would have to be carried out if civilisation is to survive.

With equal emphasis we would reject the contention, which is being voiced by critics of British policy in the "gold" countries, that if only the gold standard is universally re-established, all that is necessary is that countries with an adverse balance of payments or with a shortage of gold "cover" for their circulation should "restore" their balance of trade and re-establish their credit-worthiness. Theoretically, no doubt, if the peoples of the world had the foresight and the patience to undergo an infinitely painful process of downward readjustments of incomes and wages and a very real, if temporary, degradation of the standard of living, it would be eventually possible for equilibrium to be thus restored—provided always that external obligations were sufficiently scaled down and that there were adequate freedom of trade. But how long would the process take, and what guarantee is there that the last-named condition would be fulfilled?

We are far from denying that the continued suspension of the gold standard in the world's greatest market and the uncertainty of the value of the pound are serious handicaps to the world and are undoubtedly a cause of lack of confidence in gold and in non-gold countries alike. We share to the full the view that termination of the present phase of instability of currencies, which may well become worse before it is mended, would be desirable in the interests of all concerned. None the less, Britain is entitled to put to the "gold" countries, and particularly those with a credit balance of payments, a direct question: "Are you prepared to accept shipments of goods, etc., from Britain on a scale which will give us a reasonable assurance of being able to maintain sterling at the parity with gold which we may select?" Unless an affirmative answer, backed by definite action in the shape of a downward revision of tariffs, is given, then it is legitimate for Britain to say: "Failing such assurance we cannot risk a repetition of the breakdown in 1931, and we are not prepared to make the level of prices and wages in this country the sport of your proclivities for economic nationalism."

The experience of the past year suggests that if it is to be a contest of endurance, whose result is to determine whether saner commercial and monetary policies shall prevail, Britain need have little fear that she will prove the weaker. The deterioration of trade, employment and budgets has been more serious during the past twelve months in the "gold" countries than in Britain or other countries in which the gold standard has been suspended. If it be the case, as we fear it is, that the world as a whole has not yet learned the lesson that the successful working of an international monetary standard based on gold is dependent on a reasonable freedom of movement of goods and the renunciation of policies which have the effect of sterilising large quantities of the metal which is the base of the international system, then there is no option but to allow further time for bitter experience.

EDUCATION AND THE MEANS TEST.

THE House of Commons this week endorsed the economy proposals of the Government with regard to secondary education by a majority of 300. This result was, of course, a foregone conclusion; but the debate showed clearly enough that many of the Government's supporters are more than doubtful of the wisdom of a policy whose aim is to raise school fees and to apply a means test to secondary education. There were signs of a strong feeling among the more progressive Conservatives, no less than among Liberal and Labour members, that in spite of the financial exigencies of the moment this is not the time to "slow down the educational gears," to quote the phrase used by Mr Morgan, the Unionist member for Stourbridge. Yet this is precisely what, in fact, the Government's proposals are calculated to do.

In fairness to the Government, we may at once acquit Lord Irwin from the charge of deliberately sinister intentions. The avowed aim of his policy is to reduce the cost of secondary education to the taxpayer and the ratepayer without in any way curtailing the facilities offered to the children of the country by exacting some payment for a service hitherto given gratis from those who can afford to pay for it. That is, no doubt, sound enough in principle, but the real question is whether the actual proposals of the Government will in fact attain this desirable object. Unfortunately it seems to us only too clear that in their zeal for small economies Lord Irwin and his colleagues are running a very serious risk of reducing substantially the level of education in this country.

The policy of the Government, originally announced in the now notorious Circular No. 1421, might at first sight appear reasonable enough. At a time like the present when everybody recognises the crying need for a reduction in national taxation, local as well as imperial, the idea of introducing a means test for free secondary education cannot fail to have a certain superficial attraction. According to the figures produced in the House of Lords last month by Lord Irwin, there are at present 78 secondary schools containing 31,000 pupils where no fees at all are charged, and over 13,000 grant-aided schools containing more than 400,000 pupils. The average cost of secondary education in these schools is £35 per head per annum, and about 47 per cent. of the places in them are free. The intention of the Government is, in the first place, to abolish these free places altogether and to substitute for them (without necessarily diminishing their number) "special" places, *i.e.*, places awarded as before by open competition, which shall be "free" only if the parent of the successful candidate can prove lack of means. Secondly, the Government evidently intends to raise to some extent at least the scale of the present fees, which varies enormously—from £3 to £30—in different parts of the country. In future the Board of Education will "hesitate . . . to approve a fee of less than nine guineas," and it recommends that there should be some increase in all schools where the present fees are less than 15 guineas.

The application of the means test to the present free places may be quite unimpeachable in the abstract, but

when we come to consider the method of its application we can at once see where the shoe is likely to pinch. In the original Circular the limit of exemption laid down was an income of £3 to £4 a week in the case of a family of one child, with an allowance of 10s. for each additional child. Considering the cost of living in the larger centres of population this limit seems absurdly low. A family living in South or East London, for example, with an income of £150-£200 a year—to take an extreme case—would certainly find it difficult to afford any fee—to say nothing of 15 guineas per annum—and the only result of a means test in such instances must be to reduce enormously the number of children whose parents can afford to permit them to benefit by the "special" place which they have won. In the debate in the House of Lords on October 27th the Archbishop of Canterbury rightly protested against such an ungenerous policy. He suggested an exemption limit of £5 a week with an allowance of £1 for each additional child, which would, at any rate, be a great improvement on the Government's original proposals. Lord Irwin, in his reply, promised to consider this amendment, which was also strongly advocated in the House of Commons by Sir A. Baillie, the Conservative Member for Linlithgow.

The real difficulty of an educational means test is that it is impossible to apply it in practice. If the exemption limit is fixed high, the test defeats itself by producing no economies; if it is fixed too low it creates serious injustice. While it may be possible to make out a fairly plausible case for a reduction in the number of free places brought about by a stiffening up of the standard required, there is nothing whatever to be said for a means test which will merely deprive the parent of the successful child of the opportunity of using the award won by ability. Such a policy can only make the whole notion of a "special" place in secondary schools an absurd sham, which will be strongly resented by all liberal-minded persons. It may be true that we are wasting a great deal of money in attempting to give secondary education to those who are not in fact able to profit by it, through a disregard of the "law of diminishing returns"; but that is not an argument for abolishing free places, though it may be a perfectly sound one for restricting their number by raising the standard of competitive tests. The danger of excluding suitable candidates by a means test is so great that it would in practice certainly be far better to refrain from applying it altogether and to seek for the desired economies in some other direction. But if the Government is after all bent on applying this test in some form or other, a much more logical case could be made out for applying it to primary rather than to secondary education. For primary education is compulsory, and its application, though it might be resented as an odious form of taxation, would at any rate do nothing to diminish the number of persons receiving education.

Similarly, the raising of school fees, however desirable it may appear in view of the immediate needs of the exchequer, cannot fail to be a reactionary and short-sighted policy. That it will restrict the volume of secondary education in this country—already small enough when compared with that of the more progressive and far poorer nations on the Continent of Europe—can scarcely be doubted for an instant. For, however much the Government may desire to avoid this result through the most liberal and flexible application of new policy, the result in practice must be to eliminate the marginal pupils.

So long as secondary education is neither free nor compulsory, the raising of its cost to the parents must inevitably induce some of them to decide that they can no longer—especially in these hard times—afford it for their children. How many parents will be reduced to take such a decision no one can foresee; but by that test alone the policy of the Government stands self-condemned. Incidentally it is perhaps worth while pointing out it is also entirely contrary to the wise and liberal recommendations of the Royal Commission on Unemployment Insurance which were designed to encourage parents, in these days of reduced employment, to keep their children at school as long as possible and so to mitigate the very real dangers of "blind-alley" occupations for juveniles.

Göteborg — Stockholm — Malmö

Finally, we may well ask for what financial gains the Government is willing to risk such heavy sacrifices. The total savings which the Government expects from its new policy amount only to some £400,000—about a third of the cost of a small cruiser, and £80,000 less than the estimated increase in the annual cost of the Customs and Excise Department entailed by the new tariff.

THE DIRECTION OF OVERSEAS TRADE.

The analysis of our trade with other countries for the first three quarters of the present year shows the increasing effect of our protective and preferential tariff policy. In previous quarterly returns a reduction in imports from European countries out of all proportion to the reduction in total imports had already been apparent, but the decrease in exports was more evenly distributed. Now, however, a corresponding rearrangement of our exports is emerging: our imports for the first nine months of this year, at £520,215,000, were 16.3 per cent. lower than in the first three quarters of last year; but there were reductions of 31½ per cent. in our European imports and 10½ per cent. in our imports from other foreign countries, as compared with an increase of 1½ per cent. in our Empire imports. Total exports of British goods, at £271,107,000, were 7.5 per cent. down; the percentage reduction in the case of Europe, other foreign countries and the Empire being 10½, 7½ and 4½ per cent. respectively. The attempt to increase or maintain Empire trade at the expense of foreign, and especially European trade, is thus making its effects felt with increasing force.

Our trade with the principal European countries and their Possessions is shown below:—

* Including dependencies.

Though imports from European countries in general have been reduced by almost one-third, there were increases in our imports from some of the smaller countries, including Finland, Norway, Greece and Roumania. There is, however, a distressingly long list of countries, including some of the most important, from which our imports were less than half their value in the first three quarters of 1931. These include France, Germany, Switzerland, Austria and Czechoslovakia, while our imports from Russia, Belgium and the Netherlands were also very heavily reduced. On the export side there were a number of increases: Russia, Finland, Estonia, Denmark, Spain and Roumania all bought more from us than in the corresponding period of 1931, but these increases, few of which were very large, were outweighed to the extent of more than £10 millions by decreases in our exports to the remaining countries of Europe. Germany, for example, took £8 millions and France nearly £4 millions less.

Our trade with foreign countries outside Europe, though considerably reduced, has not suffered to quite the same extent, as the following table shows:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE.
JANUARY TO SEPTEMBER.
(000's omitted.)

	Imports from				Exports to			
	1913.	1930.	1931.	1932.	1913.	1930.	1931.	1932.

Total	180,820	232,406	166,288	148,916	106,954	92,288	55,179	50,932

* Including dependencies.

Our imports from Asiatic Turkey, Persia, Cuba, Mexico, Peru and Argentina were slightly higher; but these increases were more than balanced by declines in imports from the other countries in this group, even without the fall of nearly £15 millions in our purchases from the United States. The drop of over £4 millions in our exports to this group was largely accounted for by our reduced sales to Argentina and, to a lesser degree, by a fall in the United States' figure; other small decreases were approximately balanced by small increases in the purchases of Iraq, China, Peru and Brazil.

The next table shows our trade with Empire countries:

TRADE WITH BRITISH COUNTRIES.
JANUARY TO SEPTEMBER.
(000's omitted.)

	Imports from				Exports to			
	1913.	1930.	1931.	1932.	1913.	1930.	1931.	1932.
Irish Free State ..	£ 3,871	£ 31,219	£ 26,029	£ 19,880	£ 26,186	£ 22,650	£ 20,894	£ 20,894
West Africa	9,026	14,729	9,804	10,828	16,506	20,170	16,358	12,869
South Africa	39,614	47,501	33,790	30,245	54,984	46,415	26,766	27,832
India and Ceylon ..	12,332	7,570	4,104	3,120	4,356	5,022	3,579	3,637

Malay States	27,239	35,098	32,265	34,851	25,730	26,385	11,038	14,284
Australia	18,928	38,363	31,464	31,535	8,155	14,038	8,528	7,638
New Zealand	21,879	28,047	22,093	28,763	18,110	21,700	16,275	12,011
Canada	1,766	3,962	3,386	4,287	1,556	3,427	2,772	3,324
West Indies	5,485	17,212	13,239	15,032	9,798	19,425	15,358	14,747
Other possessions ..								
Total	143,031	232,586	180,866	183,412	144,774	194,419	129,262	123,486

The increase of about £2½ millions in imports from this group is due to increases of £6½, £2½ and £1 millions, respectively, in our imports from Canada, Australia and South Africa, which the substantial decreases in imports

from the Irish Free State, India and the Straits Settlements did not completely offset. Exports were down by nearly £6 millions, the principal reductions being in exports to Canada, South Africa and the Irish Free State. Exports to Australia increased by £3½ millions, and there was a rise of £1 million in our exports to India.

The decline in re-exports, as the table below shows, has continued progressively, but has been more unevenly distributed in 1932 than during the last year or two:—

RE-EXPORTS.
JANUARY TO SEPTEMBER.
(000's omitted.)

	1913.	1930.	1931.	1932.
Russia	£ 7,231	£ 1,871	£ 1,335	£ 1,008

Canada	2,699	1,456	1,194	672
Other Countries	7,605	7,863	6,257	4,879
Total	82,364	67,679	48,255	39,028

* Including dependencies.

There were small increases in our re-exports to Norway, Belgium, Italy and China, but for most of the other countries the decline was still very marked.

In view of the effect which our departure from the gold standard would normally be expected to produce in redistributing our trade as between those countries which have and those which have not adhered to the gold standard, it may be of interest to examine our trade with those two groups. The table below shows our imports and exports during the first three quarters of 1930, 1931 and 1932 respectively, from and to groups representing the most important countries in each of these categories. The "gold standard" group includes the United States, Germany, France, Holland, Belgium, Italy, Switzerland and South Africa. The other group includes Norway, Sweden, Denmark, Argentina, Japan, China and the whole British Empire, excluding South Africa:—

(In Millions of Pounds.)

	Imports.			Exports.		
	First Three Quarters.	1930.	1931.	First Three Quarters.	1930.	1931.
Gold standard countries	292.2	226.7	147.0	126.3	87.1	71.9
Other countries	341.1	273.5	259.8	231.3	153.0	145.8

As far as imports are concerned, the results are what might have been expected. Whereas imports from countries which are still on the gold standard have fallen by almost a half since 1930, those from other countries have declined just under a quarter. Exports, however, have behaved somewhat unexpectedly. So far from having stimulated our exports to gold-standard countries in general, our departure from the gold standard has failed to prevent a fall of about 43 per cent. in our exports to these countries, as against a decline of some 87 per cent. in our exports to the other group. A glance at the composition of the two groups reveals one important reason for this. The gold-standard group includes the United States and many of the principal industrial countries of Europe—countries where continued deflation has resulted in an immense decline in purchasing power since 1930, whereas many of the "non-gold-standard" countries have succeeded in escaping to some little extent from the latest and most extreme phases of the world depression. A further cause of the relatively large decline in our exports to gold-standard countries is the fact that many of them have taken special measures to protect their markets against an incursion of goods from countries whose currencies are depreciated.

ART AND ECONOMY.

THE old adage that tailors must cut their coats according to their cloth leaves unanswered a question which in times of severe economic depression becomes particularly pertinent. To what extent should cloth be skimmed, if skimping there must be, in order to afford a trimming which, if not essential, is demanded for very real satisfaction of the æsthetic sense? The famous prelate who professed readiness to deny "back and side" their normal claims to protective warmth, provided he were vouchsafed an adequacy of liquid comfort for the inner man, cannot be said to have resolved the dilemma. We are here concerned with the conflicting, delicate claims of art and utility, and not with the cruder human problem, which each individual will settle according to his taste, arising out of the nice distribution of expenditure between wine merchant and tailor.

In short, how far is an individual or the community as a whole acting rightly, when times are bad and purchasing power limited, in refraining from expenditure on articles which may be regarded as detachable from utility and still more from necessity? Confronted with straitened days, immediate and in prospect, should we individually or collectively decide to forgo the product of the artist and the master-craftsman as something necessarily expensive and falling within the category of "a luxury," properly subject to the voluntary application of a sumptuary law? An answer, which makes a strong appeal to common sense, was framed by the Chairman of the British Institute of Industrial Art in a lecture which he delivered a few days ago. It was essential, he suggested, to recognise that the world had become a much starker and poorer place to live in, whereas many fresh impulses generated during and since the war had caused men and women to make new and increased demands on life. The solution was that the artist, if he were to continue to make his essential contribution to civilisation, must concentrate on a progressive simplification of form; he must realise that the limitations imposed on his freedom by the necessity of paying regard to costs had become a necessary condition of healthy art production—a condition no less essential than the limitations imposed in all forms of art by the nature of the materials, tools or function. Otherwise the economic blizzard would overwhelm the artist-craftsman; nothing would survive but an output of mean, mass-produced "necessities"; and the resulting victory of formlessness over form would ultimately mean the degradation of civilisation itself.

We are far from denying that, in so far as the applied arts are concerned, Sir H. Llewellyn Smith's advice is sound and well-considered. Beauty and simplicity can be joined in much more than a companionate marriage for the duration of the depression. Pace admirers of the leisurely baroque, to say nothing of the over-elaborate monstrosities which oppressed the fire-places of spacious Victorian days, we would suggest that in the history of mankind the artist has most richly endowed civilisation with added beauty when he has wedded form with "economy" in the true sense of the elimination of all but really significant essentials. Nevertheless, a doubt still lingers in our minds whether the lecturer really disposed of half of the problems which arise. For though it is easy enough to say that if the artist-craftsman is not to be reduced to the tender mercies of a public assistance committee, he must, in times of depression, produce, so far as he can, articles within reach of the tightened purses of the public, there are some unanswered questions. It is still debatable whether society should prevent the artist altogether from producing things which cannot but be expensive and may prove fatal enticements to extravagance; or whether, *per contra*, the community should extend its blessing, if not its collective financial support, to the production in an economic depression of things which can lay no claim to utility but only to rarity and beauty.

One emphatic reply to these nice questions has come before our notice in the shape of an advertisement, in which a firm concerned with the manufacture of a distinctly evanescent decoration of life throws down the gauntlet boldly in defence of "luxury" articles. Messrs.

De Coverley and Coquelin, if we may slightly paraphrase their name, take the stand that the maintenance of the "luxury standard"—by which they mean the production by the artist-craftsman of an article which is as perfect, humanly speaking, as possible, regardless of cost—is essential to the continuance of real civilisation. For them "the best or nothing," in conformity with the true aristocratic tradition, should be the ideal of all who do not wish to see the fine flower of culture perish from the world.

Here, one fears, the cold admonitions of the economist may have to enter a caveat. "Ivory, apes and peacocks," the blue smoke ascending from the perfect Havana, the shimmer of pearls matched at the cost of ransacking three Continents—all these are lovely things; but before expenditure on them can be regarded as socially desirable, reason must sombrely admit that there should be "a margin"; and that the supply of capital needed for the production of the world's utilities should have prior claim on resources and savings. Yet, for all that one must recognise that a civilisation in which millions are underfed may have to forgo to some extent the production of things which must be from their very nature as costly as they are exquisite, it would none the less be agreeable to think that, even in the direst straits, the world will somehow contrive to keep alive its artists who are not content to follow the injunction of the Chairman of the British Institute of Industrial Art and seek a working compromise between beauty and inexpensiveness.

Though there are, doubtless, few economists who would make bold to prove on purely economic grounds justification for the existence of poetry, still less for the maintenance of indigent lyricists or epic writers at the ratepayer's expense, we should most of us deplore the day when every poet was harnessed to the task of writing (with no matter how masterly a pen) rhymed aids towards the expansion of commercial turnover, when every painter was recruited for the posters, and when the inexorable laws of supply and demand forbade any artist to make anything that was not of practical utility to the consumer. Let us all now and then, when we can afford it, do our souls a little good by defying common sense and buying something which pleases our eye for its own sake alone. And let the artist-craftsman who is not prepared to compromise in his standards take heart: an age weary of statesmen who have not even the courage of other people's convictions may yet reward him if he has the courage of his own.

Notes of the Week.

Britain and Disarmament.—The submission of promised British proposals to the Disarmament Conference on Thursday had a prelude in the debate which took place in the House of Commons a week before and which was notable for two features—a dramatic warning by Mr Baldwin of the dangers which threaten civilisation from war in the air, and a carefully worded adumbration by Sir John Simon of the lines on which the British Government hope to induce Germany to re-enter the Disarmament Conference. Mr Baldwin has since been criticised, logically enough, for his apparent attitude of hopeless defeatism. Having depicted the horrors of aerial bombardment, he appeared to argue that no prohibition of bombing and no sort of qualitative limitation would have any effect; and he seemed to imply that, since the young men of the world insist on having aeroplanes, it is no use their laying on the old the blame for an inevitable war in the future. Now, since the young men have delegated to Mr Baldwin and his contemporaries the responsibility of laying the foundations of peace, this argument will not hold water; but, capable of misconstruction as Mr Baldwin's words were, we are inclined to think that it was not his intention to accept fatalistically the view that "nothing can be done," but that he was addressing himself particularly to those of his colleagues and supporters who have been inclined to put obstacles in the way of real quantitative reduction to British armaments. Certainly in the light of the Geneva proposals this reading of his speech seems

justified. As for Sir John Simon's part in the debate, the Foreign Secretary went a long way in his endeavour to meet the German claims. He suggested that, provided Germany joined with other European States in a solemn affirmation that they would not in any circumstances attempt to resolve any present or future differences by resorting to force, the limitation of Germany's armaments should be contained in the same disarmament convention as that which defined the armament limitations of others. That is to say, the relevant Article of the Treaty of Versailles would be superseded. On the other hand, while the object of the Disarmament Conference is "to bring about the maximum of positive disarmament that can be generally agreed upon and not to authorise, in the name of equality, increases in armed strength," the full realisation in practice of the principle of "equality" could not be achieved all at once; it would be necessary to envisage its realisation by stages. He reminded Germany that she had declared that she had no intention of re-arming, but that she desired merely the recognition of the fact that the kind of arms permissible to other countries ought not to be prohibited to her. Thus stated, the British thesis held several points of ambiguity. It did not really answer the question whether Germany was to be allowed to re-arm in any degree, or, if so, in what degree; nor was it made plain whether the British Government would make sufficiently tangible proposals for the "first stage" of "levelling down" to satisfy Germany that the Reich Government ought to exercise further patience and refrain from beginning to "level up." Again, little or no indication was given how the British Government proposed to fit the French plan into their own proposals. Thus it was in an atmosphere of keen expectation of fuller details that the curtain went up on Thursday on Act II—Sir John Simon's statement to the Bureau of the Disarmament Conference.

The British Declaration.—The first impression which we derive from the British declaration of disarmament policy is that it represents a substantial step forward, but that in certain particulars a still bolder lead towards quantitative reduction ought to be given. The declaration does not mention the French plan, and has clearly been framed primarily with a view to satisfying Germany that this country at least "means business." Following closely the lines of the Foreign Secretary's speech in the House, the declaration repeats the terms on which, as already indicated, the British Government considers that the principle of equality of status should be conceded to Germany, and similarly to Austria, Hungary and Bulgaria. In endeavouring to secure the realisation of the British aim of "equality" without an increase of Germany's armed strength, the suggestion is made that if Germany wishes to have conscription "the numbers of men annually compulsorily given a militia training in Germany must be deducted, at a ratio to be agreed on, from the numbers of her long-service troops." Again, a reduction of from twelve to, say, six years in the period of Reichswehr service should be conditional on the number of long-service reserves not being augmented, i.e., the strength of the Reichswehr with the colours should be proportionately reduced. Both these proposals form a useful complement to the Herriot plan. And what of the non-German Powers? In general terms the declaration contends that regard must be had to the geographical situation of different countries and the responsibilities in respect of which their armed forces are required—e.g., colonial commitments, etc. Furthermore, in the case of a lower quantitative standard being agreed on, time must be allowed to spread the cost of replacement of material. With a view, however, to settling a programme for the first stage of disarmament, the British Government announces that it is prepared "to go to any length in agreement with other Powers" to achieve disarmament in the air. To this end the following proposals are made:—

- (1) The immediate reduction of the air forces of the leading Powers to the level of those of the United Kingdom.

- (2) A cut of 33½ per cent. all round on the air forces of the world thus reduced, the United Kingdom included.
- (3) A limitation of the unladen weight of military aircraft to the lowest figure on which general agreement can be obtained.

Given agreement on these three points, the British Government considers that Germany should refrain from making any claim to the possession of military or naval aircraft. But, in addition, it is suggested that the chief air Powers should co-operate in a thorough examination of the practicability of a scheme for the entire abolition of military and naval machines and all bombing (apart from police purposes in outlying places), combined with an effective international control of civil aviation. Apart from the air, the proposals are less striking. It is suggested that the maximum calibre of large mobile guns should be reduced to 105 millimetres, or the limit allowed to Germany, but nothing is said of the destruction of existing guns above that size. Tanks should be limited to small lightly-armoured units "unsuitable for the assault of highly organised defences"; submarines should be wholly abolished; cruisers should be limited to vessels of 7,000 tons carrying 6-inch guns. As for capital ships, Germany should be permitted to build ships of a type comparable with that finally agreed on for the Great Naval Powers, provided always that, subject to minor adjustments, there is no increase in the total tonnage in any category to which the German Navy is at present restricted. On the other hand, a limitation of battle-ships to a figure of 10,000 tons "would fail to command general acceptance." For the rest, the Hoover proposals in regard to military effectives are viewed favourably by the British Government as a basis for discussion, and unqualified acceptance is announced of the principle of effective supervision of armaments by a permanent Disarmament Commission.

What Next?—We have said that the British proposals require, in our opinion, amplification. In particular, we should have liked to have seen in them the strong advocacy of an immediate budgetary cut; we can find little reason for the retention of tanks of any sort as a defensive weapon, although, admittedly, the present proposal is an advance on the original British desire to suppress only the mammoth unit; and we are sceptical of the practical utility of pressing for the abolition of the submarine unless we are prepared—and there is no reason why we should not be prepared—to go boldly for an immediate 50 per cent. cut at least in the existing strength of capital ships. The present proposals give no assurance that the Admiralty is not still toying with the idea of building a new fleet of 25,000-ton vessels. With these qualifications, we hope that the Government will be given full credit for a declaration which, if not perfect, should nevertheless go a long way towards reassuring opinion both in Germany and in the United States. The proposals for progressive disarmament in the air are excellent; and, so far as personnel on land is concerned, there was little scope for Britain to make proposals so far as her own small force is concerned. The immediate question is, will France and Italy agree to follow the British lead by a wholesale scrapping of military and naval aircraft? If agreement can be reached on that point, and if a quantitative reduction of capital ships, *pari passu* with submarines, can be agreed, it should not prove impossible to frame a convention which embodies most of the "security" principles for which France is asking, but at the same time eliminates from the French plan the grave weakness of having Europe studded with dumps of "earmarked," but still practically accessible, offensive material.

The Means Test.—The debates in the House of Commons on Tuesday and Wednesday of this week confirm our view that revision of the Means Test regulations on the lines proposed is wholly inadequate if the growth of bitter, and far from unjustifiable, resentment in the country is to be stayed. The Labour Opposition were ill-advised in confusing the issue by attempting to argue, in

principle, for the total abolition of a test of need. This, we feel, is neither financially practicable nor even called for on grounds of social justice. The gravamen of the charge against the Transitional Payments (Determination of Needs) Bill is that it represents very little modification of a policy of making the working poor pay, to a greater extent than hitherto, for the involuntarily idle poor. Admittedly, statutory protection is now to be given to 50 per cent. of disability pensions and workmen's compensation, while there are to be no forced sales of houses over the heads of claimants to transitional payments, and the title of unemployed workers to retain in reserve at least a fraction of small savings is recognised. But, though some check is thus placed upon extreme harshness in the application of the law by Public Assistance Committees, it is still not clear whether the Bill will not result in practice in the departmental screw being applied still more tightly to areas in which Public Assistance Committees have acted in a more liberal way. The answers given by the Government to questions whether the proposed minimum standard of generosity was not intended to become, in effect, a maximum standard were equivocal. Moreover, the discussions in the House brought to the forefront the very real hardships, which the Bill does not touch, now involved in the assessment of needs on the basis of the "family income." After all, the real crux of the situation is this: except in so far as the past twelve months' administrative economies in respect of unemployment insurance benefit have combed out persons well able to support themselves—and these can be but a fraction of the whole—the fact that money has been saved by the State means one of two things. Either the unemployed have eaten less—for no one would argue that, save perhaps in a few "cheap" agricultural districts, scales of unemployment benefit yield a margin for anything but necessities—or the charge for their maintenance has been shifted from the shoulders of the taxpayer to those of relatives, comparatively few of whom are in a position to assume the burden without forgoing themselves satisfactions which might fairly be defined as essential minima.

Ottawa and India.—The Ottawa Agreements Bill having received the Royal Assent on Tuesday, Treasury Orders were promptly issued to carry into effect the provisions of the Act. But whereas the general preferences for the British Empire in respect of duties imposed under the Import Duties Act were continued without exception, the new British duties provided for by the Ottawa agreements were imposed only in so far as required by the undertakings given to Canada, Australia, New Zealand, South Africa and Southern Rhodesia. Since India and Newfoundland had not yet taken steps to carry out their side of the bargain, the Treasury Orders make no provision for bringing into operation measures required solely by the terms of the agreements with those countries. In the case of India, however, the variations in import duties which are proposed by the Government at Delhi for the purpose of giving a 10 per cent. preference in respect of a wide range of British goods have now been revealed. The great majority of the articles affected were previously subject to a duty of 15 per cent. *ad valorem*, raised to 25 per cent. by two revenue surcharges imposed in 1931. The proposal now is, apparently, that these surcharges should be consolidated in the new tariff, which is to be 20 per cent. on British and 30 per cent. on non-British goods. In view of the dependence of the Indian Budget on indirect taxation for revenue, the proposals are much as we expected. One more proof has been afforded of the failure of Ottawa to lead to any general lowering of trade barriers.

The Irish Tariff War.—The successive phases of the Anglo-Irish tariff war move drearily from fatuity to fatuity. On Thursday of last week a new schedule of twenty-six duties was announced by the Free State Government and duly approved by the Dail. The duties affect a considerable variety of manufactured articles, and are at the rate of 50 per cent., with a preferential duty of 33½ per cent. applicable to Great Britain and the Dominions. In other words, Mr de Valera is not only

hitting back at Great Britain, but is using the situation as an excuse for further experiments in high protection for Southern Ireland. In the course of the debates in the Dail this week he announced that it was not intended to suspend the collection of land annuity payments from the farmers, but that those who could not pay would be allowed to have their instalments funded at an interest rate of 4½ per cent. At a later date it was proposed to introduce legislation providing for a definite remission of a substantial portion of the annuities. In the meantime, bounties on exported eggs, poultry and livestock will be continued. Thus, the struggle of tariffs *versus* export subsidies is to continue, with no visible way out of the deadlock; but though Mr de Valera, thanks to Labour support, obtained a vote of confidence on Tuesday by 75 votes to 70, it still remains to be seen how Irish agriculture is going to get through what must prove an exceedingly difficult winter.

Parliament and Tariff Orders.—While the House of Lords was giving speedy passage to the Ottawa Agreements Bill, the House of Commons spent a few brief hours in debating perfunctorily the series of Additional Import Duties Orders (Numbers 4-8) made by the Treasury in accordance with recommendations of the Advisory Committee on various dates between the end of July and the end of October. The result was, of course, a foregone conclusion: a thin House on each occasion gave automatic sanction to the new tiers laid on the British tariff wall. In the case of the first two Orders, covering horticultural products, the Government boasted proudly that they had yielded £700,000 in duty and had reduced the import of practically every article made chargeable—a consequence of which less well-to-do consumers of fruit and vegetables this year have been only too painfully aware. Having disposed with little enough discussion of Orders Numbers 5 and 7, imposing duties on a quaint assortment of commodities, ranging from meat pastes to screws and rubber shoes, the House proceeded at 3.15 p.m. last Friday to consider the far more important decision to continue for a period of two years the protection of a 33½ per cent. duty on crude iron and steel. It is to be supposed that the Government's hope had been to "railroad" this Order through before the House rose at 4 o'clock. The hope was disappointed, and the discussion had to be continued on Monday—but only late at night, after the adjournment. In all, not more than two hours was spent on this vitally important issue. The Government were content to defend the Order simply on the ground that it was necessary to make it clear to the foreign exporter of iron and steel that it was idle for him to sell at a loss in this market in the hope that, by thus retaining the goodwill of British importers, he might be able to secure reasonably profitable sales at the end of our phase of "reorganisational" protection. The Opposition made pretty play with the conscience of the President of the Board of Trade, whose speeches delivered not long ago on the dangers of an iron and steel tariff to-day make curious reading. The Government's withers, however, were unwrung; and when Dr. Burgin had wound up the debate with the curious argument that the comparative success of the British steel industry in avoiding the worst ravages of the world depression was obvious justification for tariff shelter, the House approved the Order by 200 votes to 42. Thus, listlessly and indifferently, Parliament has approved for two years ahead the application of a high tariff whose repercussions on the whole structure of the international steel trade will be far-reaching. Ultimately, we are convinced, this "shelter" in respect of crude steel will be to the gravest possible detriment of the finishing sections of the industry, in which Britain has so far succeeded, and is best adapted to succeed, in holding her ground.

Butchery at Geneva.—If the *Conseil d'Etat* at Geneva has laid the seeds of a dangerous revolutionary movement in Switzerland, it will only have itself to blame; for the horrible events which occurred on Wednesday of last week

seem fairly attributable to an inexcusable combination of hysterical alarm and military incapacity. Let us grant that the course of the municipal election had seen tempers running high, and that Switzerland is no more free than any other country from a sprinkling of subversive Left Wing elements; let us grant that the authorities, having sanctioned a Fascist meeting in a public hall, were under an obligation to protect the meeting from Socialist aggression, and that the demonstration, which was organised outside the hall, was at once ill-considered and provocative. The fact remains that all the evidence from unbiassed witnesses is to the effect that the crowd which assembled—including, as always on such occasions, a large proportion of merely curious spectators—was in no sense dangerous; was armed with nothing more deadly than bags of pepper; and was never beyond the control of firm shepherding by the police. To use a company of raw recruits for police purposes in the circumstances was technically rash; and to adopt tactics whereby these troops in single file mingled with, and were swallowed up by, the crowd was a blunder for which a raw subaltern could not hope to be forgiven. To follow up this incompetence by machine-gun fire, turned on the crowd with no more warning than a bugle call, was an act of indefensible butchery. The sequel has been an attempt to whitewash those responsible for the massacre by much wild talk of Communist plots, and by the arrest of the Socialist leader, M. Nicole, on a charge of conspiring to overthrow the State. These patent exaggerations of the "Red Menace" do little to palliate the bungling brutality of the authorities; nor do we imagine that foreign investors with liquid funds lodged in Switzerland will be favourably impressed by the somewhat ridiculous mobilisation of regiments, the constant parading of armed forces through the streets of Geneva, or the hysterical attitude which led to placing the Assembly Hall of the Disarmament Conference in such a state of defence that it was deemed necessary to keep a machine-gun trained on the foreign correspondents' Press room.

The Political Situation in Germany.—Nearly a fortnight has now passed since polling-day in Germany; and, as we go to press, the resignation of the Cabinet is announced. Political power and prestige lie now with President von Hindenburg, who has more than recovered the position which he seemed to be losing earlier in the year. The President is an honourable and a conscientious man. He is known to take seriously his oath to respect and maintain the republican Constitution of Weimar; and an evasion of his oath by some legal quibble is not likely to appeal to his temperament. It is therefore not surprising that President von Hindenburg should have been putting pressure upon his Chancellor to come to some arrangement, if possible, with the political parties; for the election returns show at least one thing unmistakably, and that is that the majority of the German electorate is opposed to a non-parliamentary dictatorial Government. Both the Social-Democrats and the Nazis had refused this week to enter into negotiations with Herr von Papen; and it is obvious that there must in any case be great difficulties in constructing even the semblance of parliamentary government out of the very conflicting elements that compose the Nazi, the Nationalist and the Centre Parties. The President has not solved the problem merely by letting his Chancellor go; for, even if the "Cabinet of Barons" is replaced by one composed of men more acceptable to the Reichstag, there is as yet no indication that the parties, in their present strength, can so permute and combine themselves as to turn out any parliamentary majority with the necessary margin of votes in the Reichstag to ensure some stability to a real coalition Government. Herr von Papen's resignation may ease matters; but whether Herr Gessler or another can form a Government embracing the Centre and the Nazis remains to be seen. On the other hand, it seems equally hard to believe that the pre-war Prussian system of government can now be restored. For the two mainstays of the old Prussian system were the momentum and prestige of an unbroken tradition and the solid support of the Ost-Elbisch agrarian

interest. To-day the Hohenzollerns are discredited and the Junkers ruined; and even if it accorded with President von Hindenburg's conscience to set Humpty Dumpty up again, it would seem to be a superhuman task. At the moment, the indications are that a composite Cabinet will be formed. If it contrives to gain the necessary Reichstag support it will undoubtedly restore confidence in the final stability of the post-war constitutional régime in Germany.

The Future of Manchuria.—The Lytton Report is to come before the League of Nations next week, and this week Mr Matsuoka, the head of the Japanese Delegation, has arrived in Europe. His pronouncements at this stage are more conciliatory than those which he was reported to have made upon his departure from Japan. He has contented himself, on this occasion, with expressing the opinion that Japan's action in Manchuria is bound to prove advantageous to everybody, including the Chinese, and that law and order will be re-established in Manchuria within the next six months. This last prediction hardly accords with our information from the spot. The latest news is that the recalcitrant Chinese general at Manchuli still holds his Japanese hostages, and that a party of Japanese officials is on the way to discuss with him the terms of the hostages' liberation. At the other end of this vast country, in the mountainous Province of Kirin, adjoining Korea, a new "drive" is being started against the bandits who have never ceased to control this region. But this time the Japanese are adopting new tactics. The mailed fist is being muffled in a velvet glove; and the machine-gun detachments are being preceded by officials bearing olive-branches on a mission of "bandit suppression by persuasion." This is more in the Chinese than in the Japanese manner and we can imagine what contempt the Japanese would have poured upon any Chinese authorities that deigned to deal with the bandits on these lines. But the Chinese always tell us that the barbarians who invade China invariably succumb to "Sinification"; and history seems to be repeating itself in this instance with extraordinary rapidity. On the whole, we think that the Japanese are just as likely to restore order within six months in Manchuria as the Chinese Government in Nanking is likely to restore it, within the same period, in the bandit-infested provinces south of the Yangtse. For our part, we give M. Matsuoka until the Greek Kalends to make his prediction good.

The Burma Elections.—The India Round Table Conference held the preliminary meeting of its new session in London on Thursday, and the regular sittings are to begin on Monday. In the meantime, one of the questions that have to be settled in the drafting of the new All-India constitution has been pronounced on—decided is scarcely the *mot juste*—as a result of the general election which was held in Burma on November 9th. This Burma election was held mainly on the issue whether Burma should enter, as one of the constituent States, into an All-India Federation, or whether she should pursue the road towards full self-government as a separate State-member of the British Empire. The election returns show 39 anti-separationists, 29 separationists, and nine neutrals, with three results still to come. From one point of view this result might be regarded as satisfactory, if it could be interpreted as a reaction against the world-wide mania of Nationalism which has been splitting the world up into an ever larger number of ever smaller political fragments at a time when the whole tendency of development on the economic plane is towards world unity. If Burma has really risen superior to the prevailing nationalistic craze and has voted for continuing her political association with India because she realises the value of a large-scale State in the modern world, then we could ask for nothing better. There is, however, apparently some reason to suppose that the anti-separationist vote is not so much a vote in favour of solidarity with India as a vote against certain fantastic tales of what the English intend to do with Burma if Burma elects to stand alone. A rumour current in the election

seems to have been that England intends to exploit an isolated Burma by making the country a field for mass-colonisation by the British unemployed. Again, as Sir Samuel Hoare explained in the House on Wednesday, many Burman voters appear to have been under the mistaken impression that Burma could enter a Federation and leave it whenever she pleased. If these were really the bases of the anti-separationist vote, then it is to be feared that the election returns throw little light upon the attitude of the Burmese people towards the real issue which it was intended to put before them. The Secretary of State is clearly wise in his declared intention of waiting for a definite vote in the new Burmese Council, before making up his mind how the election results should be interpreted.

A New Danzig Dispute.—The number of times that Danzig has appeared on the agenda of the League Council is legion, and this week the legion is receiving a new recruit. The Council has been seized, on the initiative of the League High Commissioner in Danzig, of a dispute which has arisen between the Free City and Poland over the question of the currency in which railway fares are to be paid in Danzig territory. On October 25th it was announced by the Polish Minister for Transport that all railway fares in the territory were to be charged, as from December 1st, in Polish zloty instead of in the local currency, even when it was a question of taking a ticket between two stations within the territory of the Free City and not of travelling from Danzig into Poland. The Danzig authorities maintain that this order is contrary to treaty. In any case it is highly vexatious; and although, in itself, it is as petty a matter as the majority of the innumerable "incidents" that have arisen between Poland and Danzig since the peace settlement, it is not merely annoying but wantonly provocative on Poland's part to create another "incident" of this kind in the present critical international situation. Really, if the Poles wished to give reason to the most militant school of German Nationalism they could not have done anything better calculated to produce that result; and their French allies will not thank them for it. As the efforts of European diplomacy bring the problem of Disarmament and Security down to concrete issues, it is becoming more and more apparent that the issue of the German Ostmark and the Polish Corridor cannot be shelved if Europe means to attain a state of peace which will be really durable. This latest news from Danzig serves to point the moral.

The Situation in Palestine.—From the report which the British High Commissioner for Palestine and Transjordan has been making to the Permanent Mandates Commission of the League of Nations, it appears that the Mandatory Administration has been grappling gallantly, under adverse world conditions, with the economic plight of the Arab peasant population, especially in the hill country, in which the standard of living has always been lowest and the struggle for existence most severe. A Director of Development has been appointed, and he has discussed various projects of amelioration with the Arab Executive, as well as with the Jewish Agency. There is no doubt that the economic depression was one of the causes of the Arab outbreak against the Jews in 1930. On the other hand, it is unfortunately too much to hope that economic improvements, however successful in themselves, will effect a radical cure of the political trouble, for the roots of this trouble, after all, are not economic but political. The difficulty is to persuade the lion and the lamb to lie down together in Palestine as a common "national home" for Jew and Arab. The Arabs continue to regard the Jews as dangerous intruders, and the Jews to regard the Arabs as a nuisance. The High Commissioner admitted to the Mandates Commission that several Arab members had recently resigned from a number of administrative boards, and that the number of Arabs who refused to co-operate with the Mandatory Administration was increasing. The problem of persuad-

ing the two national communities in Palestine to work out some kind of bi-national constitution as a basis for Palestinian self-government seems to be still as far as ever from solution.

The Syro-Iraqi Frontier.—A League of Nations Commission of three members—one Swiss, one Swede and one Spaniard—has been investigating the question of the frontier between the two Arab States of Iraq and Syria between the Euphrates and the Tigris. The provisional frontier which was laid down, a dozen years ago, in an agreement between Great Britain as mandatory for Iraq and France as mandatory for Syria was an imaginary straight line running from Abu Kamal on the Euphrates to Feish Khabur on the Tigris; and this line was unsatisfactory in two ways: it cut across the pastures of a number of nomadic Arab tribes; and it partitioned the Jabal Sinjar, a block of mountains which is inhabited by the picturesque community of the Yazidis, or Satan Worshipers. The League Commission was sent to look for ways and means of overcoming these inconveniences. In regard to the nomads, they suggest the appointment of a Syro-Iraqi inter-governmental commission on the pattern of the Swedish-Norwegian Commission that regulates the annual migrations of the Lapps in Northern Scandinavia. In regard to the Jabal Sinjar, a majority of the Commission has recommended a line which leaves the whole of the Yazidi territory within the bounds of Iraq. A divergent line has been proposed by the Spanish member in a minority report. The League Council has declared in favour of the majority report, but has asked for an opinion from the Permanent Mandates Commission.

The French Budget.—When the French Government came into power last June they were faced in 1933 with estimated expenditure of Frs. 55,980 millions and estimated revenue of Frs. 43,880 millions, or with a prospective deficit of Frs. 12,100 millions. Their budget proposals were issued on Tuesday night, and are summarised by our Paris correspondent upon a later page. In brief, revenue is to be increased to Frs. 47,802 millions and expenditure to be reduced to Frs. 47,780 millions, thus leaving a small surplus of Frs. 22 millions. The details given by our correspondent show that fresh revenue is to be obtained mainly from a strengthening of the collection of existing taxes, from the upward revision of certain duties and from the imposition of new duties on coffee, heavy motor lorries and apéritifs. Economies include a further general reduction of departmental expenditure, reductions in the pay and allowances of public servants, the reduction and suppression of war pensions and former soldiers' allocations, and the reduction of administrative staffs. All these proposals are essential, though painful; and it is right to testify to the resolution of the Government in bringing them forward. Our only doubt is whether they will be able to carry them through the Chamber. There are, however, two further proposals in the budget of a more questionable character. These are, firstly, the transfer of war pensions services (Frs. 2,070 millions) from the budget to an autonomous Caisse des Pensions, to be financed by a special loan; and, secondly, the transfer of various public works charges and loan services (Frs. 1,550 millions) from the budget for incorporation in the pending programme of new public works, to be financed by loan. We cannot agree that these transfers in any way contribute towards the balancing of the budget; it is obvious that the budget still remains unbalanced to the extent of the sums involved.

Japan's Finances.—The provisional figures of Japan's draft Budget for 1933-34 indicate that expenditure is estimated to attain the record total of 2,235 million yen, whereof 662 millions are absorbed by the War Office and 472 millions are accounted for by the Navy estimates. Ordinary revenue is put at 1,330 million yen, or little more than the aggregate cost of the fighting forces, so that the deficit reaches the formidable total of 905 millions. It is reported that the Finance Minister considers that increased taxation would be inadvisable, having regard to

the economic depression, and proposes to bridge the gap by an issue of bonds. The pronounced weakness of the yen is a fair comment on this proposal; for though the fall in the yen's exchange value since the suspension of the gold standard has stimulated exports and improved the visible balance of merchandise trade—increased cotton and rayon exports going far to offset smaller shipments of raw silk—the monetary policy of a Government which proposes to finance 45 per cent. of its total expenditure by loans is not very reassuring. There is, however, a reverse to the medal. It may be that even a military Government, faced with the risk of plunging Japan into uncontrollable inflation, will be inclined—if it can "save its face" by proclaiming "loyal adhesion" to League recommendations—to shorten sail in Manchuria.

Compensated Trade.—The difficulties under which British traders are labouring in foreign markets subject to a growing network of exchange restrictions are very real; but the proposals published at the end of last week by the London Chamber of Commerce for the establishment of a clearing system in this country represent an ill-considered leap from the frying-pan into the fire. The suggestion is that statutory clearing houses should be established in this country to act in reciprocity with all countries in which exchange dealings are under control. This done, an external trade barter unit ("bartex") should be created, negotiable only between Britain and the particular foreign country concerned. The procedure would be for the foreign seller in, say, Ruritania to draw on the English buyer for the invoice value of the goods in "bartex" and then to pass the draft, with the usual shipping documents attached, to the Central Bank of Ruritania, who would transmit it to the Bank of England. The English buyer would take up the document by payment of the sterling equivalent at the current rate of exchange. The Bank of England would then remit the "bartex" to Ruritania, and the Ruritania merchant would duly receive Ruritanian currency for it. Trading transactions in the reverse direction would follow a similar course. Under this system, it is argued, excess sales by one country to the other would lead to an accumulation of "bartex," the depreciation of whose exchange value would automatically bring about a corrective in the form of a reduction of sales to, or an increase in purchases from, the other country as the only means of liquidating the "bartex." To avoid goods being shipped via another country, certificates of origin would have to accompany all shipping documents. Whether such a scheme could be made workable in practice we take leave to doubt. To ensure that no payments were made outside the clearing house would involve the establishment of an extremely stringent control of imports, and it would be unsafe to place too much reliance on certificates of origin. Moreover, it would be difficult to provide against the contingency that Ruritania, having become the possessor of an excess of "bartex," might defeat the intentions of the plan either by accumulating "bartex" against the day of restored normal trading, or by purchasing British goods for resale to our other normal customers abroad at the expense of British exporters. These difficulties, however, are not the vital objection, which is that the whole conception of the canalisation of trade into "compensated" bilateral movements means that foreign trade would be woefully curtailed. The proposals put forward by the London Chamber of Commerce might be defended under the present abnormal conditions as a poor makeshift; as an alternative to attempting to deal radically with trade impediments, they are frankly deplorable.

Private Members and Economy.—The publication of the Economy Report produced by Conservative Private Members has been attended by a great deal of pother with which we are not concerned. What appears to have happened is that a number of sub-committees were formed whose conclusions were arrived at with little enough co-ordination or liaison; and the result is a medley of recommendations, whereof some individual proposals merit consideration, but whose effect in the aggregate

might well appal any Conservative member who lacks a cast-iron seat. Altogether over £100 millions a year are to be saved by proposals which include, *inter alia*, the abolition of all housing subsidies; drastic retrenchment in educational expenditure, including a reduction of teacher's salaries and larger classes; the abolition of the Ministry of Transport, and the reduction of expenditure on roads by one-third; the suppression of the Department of Overseas Trade; and hosts of other economies, good, bad and indifferent. A Chancellor bent on "contraction" would find enough material in this report to occupy his mind for many evenings of Budget planning; a wiser Chancellor would reach for the waste-paper basket. Not by such indiscriminate lopping of services is the salvation of England to be secured.

Canada and the Wheat Preference.—A statement made by Mr Bennett in the Canadian House of Commons on Monday, after communication presumably with the British Government, appears to have settled a question which had been greatly exercising Canadian opinion. Mr Bennett stated that Canadian wheat would be eligible for preference under the new British duty even if it were shipped through United States ports, provided that shipments were definitely of Empire origin and that they were consigned to the United Kingdom. This would apply to wheat held in bond in the United States even if transit were delayed. In this connection our Ottawa correspondent writes:—Every winter large quantities of Canadian wheat are kept in store at Buffalo or some other American point where storage facilities in the shape of laid-up grain boats are cheaper than in Canada, and it is a matter of vital importance to the Canadian grower that the preference should be available to wheat thus stored. Admittedly it will be difficult, if this wheat is made eligible for the preference, to prevent a certain amount of American wheat getting the benefit; for it is virtually impossible to distinguish between wheat grown in Manitoba and Minnesota, and regulations about the preservation of the identity of shipments would be hard to enforce on foreign soil. Indeed, the case for withholding the preference on these grounds has been strongly pressed by certain interests in Canada, who visualise benefits for themselves. The Canadian lake shipping interests feel that closer restrictions upon the availability of the preference would drive Canadian wheat to Montreal and other Canadian points for storage, and that, thanks to the provisions of the Canadian coastal navigation laws, they would be relieved of the competition of American vessels, which now get a large share of the wheat traffic on the inland waterways, and would secure for themselves a virtual monopoly of the export movement of Canadian wheat down the Great Lakes. Again, the Atlantic ports of Halifax and St. John think that the concentration of the export trade in Canadian channels would mean a large increase in their business. But the prairie farmers calculate that, if the grain export movement was confined to Canadian channels, the cost of transporting wheat to tide-water might easily be increased by 5 or 6 cents per bushel, and that any possible value of the preference would thereby be destroyed.

Canadian Wheat Marketing.—The Canadian Government has now decided not to renew the wheat bonus of 5 cents a bushel, but to continue, instead, to support the market. In announcing this decision last Monday, Mr Bennett explained that Mr Macfarland, the general manager of the Central Selling Agency of the pools, had operated in the market with the support of the Federal Treasury in order to secure "an orderly marketing of the Western wheat crop." Unfortunately, writes our Ottawa correspondent, the prospects for Canadian wheat are not encouraging. Canada entered the new crop year with an exportable surplus of 425 million bushels. Thanks largely to the fact that wheat prices in the United States have been uncompetitive since August, the export clearance of Canadian wheat from August 1st to October 21st has

amounted to 54 million bushels, as compared with 29 million bushels in the parallel period of 1931. Canada, however, has benefited less from the poor Russian and Danubian crops than she might have expected to do, because wheat crops in Western and Northern Europe have resulted in a reduction of 37 per cent. in the volume of world shipments to date. Moreover, promising forecasts of the Argentine and Australian crops suggest that in the New Year world competition will be keen. In January, Canada's export surplus will probably still amount to 300 million bushels, and wheat prices in Winnipeg have been falling accordingly. The pressure of indebtedness on the Western farmer has resulted in heavy deliveries, and on October 21st Canadian wheat in store amounted to 229 million bushels, as compared with 154 million bushels a year ago. In face of the selling pressure which has developed, there evidently came a point when the Federal Treasury could not afford to risk more money in the wheat market, and the theory commonly held in Winnipeg is that the sharp slump in wheat prices was partly caused by the sudden withdrawal of Mr Macfarland's support. Furthermore, it is suggested that at present the Federal Government is faced with very heavy losses on its wheat commitments, the estimates varying between 10 and 20 million dollars.

Ten Months Overseas Trade.—The October trade returns show further declines, as compared with last year, under all headings, but the percentage decline in imports was, as it has been for some time, much greater than that in exports. The tables below give the October figures, and the cumulative figures for the first ten months of the year, with comparative figures for the two preceding years:—

MONTH OF OCTOBER. (000's omitted.)					
	1932.	Increase or Decrease as compared with			
		October, 1931.		October, 1930.	
	£	£	%	£	%
Imports	60,828	19,858	-24.6	30,029	-33.1
British exports	30,440	2,392	-7.3	16,482	-35.1
Re-exports	3,693	1,584	-30.0	3,517	-48.8
Total exports	34,133	3,976	-10.4	19,998	-36.9
Excess of imports over total exports	26,695	15,882	-37.4	10,031	-30.0

FIRST TEN MONTHS. (000's omitted.)					
	1932.	Increase or Decrease as compared with First Nine Months of			
		1931.		1930.	
	£	£	%	£	%
Imports	581,017	120,975	-17.1	294,803	-33.6
British exports	301,548	23,675	-7.3	186,480	-41.6
Re-exports	42,721	10,811	-20.2	32,167	-42.9
Total exports	344,268	34,487	-9.2	218,657	-38.8
Excess of imports over total exports	236,749	86,488	-26.8	76,146	-24.3

Comparisons with preceding months are apt to be misleading, owing to seasonal and other causes, but as much has been made of the fact that exports in October were £5 millions higher than in September, it may be well to examine the figures of recent months:—

EXPORTS OF UNITED KINGDOM GOODS. (In Millions of Pounds.)			
	1930.	1931.	1932.
April	46.9	32.5	34.8
May	51.0	35.9	30.2
June	42.8	29.4	29.7
July	50.7	34.3	29.3
August	42.8	29.1	28.6
September	42.7	29.8	26.2
October	46.9	32.8	30.4

This shows the October improvement in a much less favourable light. September was a month of exceptionally low exports, and if the October figures are compared instead with August, they show less seasonal recovery than in either of the preceding years. Again, in both 1930 and

1931 the October exports were roughly the same as those of April and substantially higher than the June exports. This year exports in October were much lower than in April and very little higher than in June. The figures are definitely better than the worst, and to that extent are encouraging; but the improvement shown so far is small.

Iron and Steel Production in October.—Iron and steel production was fairly well maintained in October, pig-iron production rising from 260,400 tons in the previous month to 275,600 tons (representing a slightly higher daily rate) and steel production rising from 430,300 tons to 438,500 tons. Both in pig iron and steel, however, production was slightly less than in the corresponding month in the previous year. Probably owing to fears that the duty on iron and steel imports might be increased when the Treasury Order fell due for renewal on October 25th, imports of iron and steel, which in September were 107,100 tons rose to 163,200 tons. Increased imports took place in practically all products with the exception of pig iron. Exports of iron and steel at 160,400 tons also showed an increase over September, but for the first time since February they were lower than the imports. The most favourable feature of the iron and steel situation in October has been the continued upward trend in the export prices of Continental products. Sheet bars, for instance, are now quoted at 43s. per ton (f.o.b. Antwerp on a gold basis), compared with 40s. at the end of September, but the most marked increase has occurred in the case of merchant bars, which are now 60s. per ton (f.o.b. Antwerp gold), compared with the low level of 40s. to 42s. per ton in July. Comparing steel production in the first nine months of 1931 with the corresponding period of 1932, it will be found that Great Britain is the only country (except Russia) whose production is not substantially less than last year:—

	Jan.-Sept., 1931.	Jan.-Sept., 1932.
	Tons.	Tons.
United Kingdom	3,840,000	3,910,000
Germany	6,600,000	4,110,000
France	6,020,000	4,090,000
Saar	1,200,000	1,050,000
Belgium	2,330,000	2,060,000
Luxemburg	1,520,000	1,410,000
United States	20,410,000	10,170,000
Total	41,920,000	26,800,000

It will be seen that whereas steel production in the United Kingdom showed a slight gain of 1.8 per cent., the decline in other countries varied from 7.2 per cent. in Luxemburg to 50 per cent. in the United States.

Sterling and International Prices.—The past fortnight has seen a slight recovery from the pronounced slump in international "gold" prices which occurred in the second half of October. The latest figures of our various indices, compared with those of foreign countries, are summarised below:—

SEPTEMBER 18TH, 1931 = 100.									
Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistische Reichsanstalt, Germany.		
	British Composite Index (sterling).	British Primary Products (sterling).	International Gold Prices.						
1932.									
Jan. 27th	108.3	115.7	93.8	93.5	93.6	95.8	91.6		
Feb. 24th	110.9	120.9	89.6	92.4	95.1	97.2	92.0		
Mar. 22nd	108.1	111.9	86.5	91.5	96.3	97.0	91.4		
Apr. 20th	103.8	105.4	83.6	89.6	97.0	95.3	90.3		
June 1st	100.2	101.0	79.8	87.3	94.0	91.7	88.5		
June 29th	97.4	99.3	80.5	86.4	91.5	89.5	88.1		
July 27th	99.5	103.5	84.1	88.3	91.3	88.5	88.1		
Aug. 24th	102.5	111.8	89.3	89.8	89.0	89.3	87.1		
Sept. 7th	107.1	120.2	94.7	91.7	89.0	91.5	87.9		
Sept. 21st	106.0	117.4	89.6	90.5	89.7	91.2	87.1		
Oct. 5th	104.6	115.3	85.7	89.6	89.7	91.2	87.1		
Oct. 19th	103.1	112.3	84.0	88.6	88.8	92.7	86.8		
Nov. 2nd	102.6	110.9	79.4	87.3	88.4	92.8	86.4		
Nov. 16th	103.8	113.0	82.9	87.4*	...	92.3*	86.3*		

* These figures relate to November 9th.

So far as British wholesale prices are concerned, the chief movements since November 2nd have been conflicting. Flour, barley, rice, oats and potatoes have been cheapened; but, as a result of the quota proposals, the

prices of beef, mutton and bacon have risen sharply. Among "other foods," small rises in the prices of sugar and butter have been offset by reductions in the case of tea, coffee and cheese. Textiles show little change on balance, but the tendency of non-ferrous metals has been upwards. Sectional figures are given below:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Nov. 2, 1932.	Nov. 16, 1932.
Cereals and meat	64.5	61.8	64.7
Other foods	62.2	63.9	62.9
Textiles	43.7	50.1	50.2
Minerals	67.4	74.7	76.0
Miscellaneous	65.8	62.2	62.3
Complete index	60.4	62.0	62.7
1913 = 100	83.1	85.3	86.3
1924 = 100	52.2	53.6	54.2

It will be observed that, as compared with a year ago, the whole of the slight rise in sterling wholesale prices is accounted for by raw materials. The cost of foodstuffs as a whole shows practically no change.

International Production.—In the following table we have converted the indices of the physical volume of production of various countries to a percentage of the average of 1928:—

INTERNATIONAL PRODUCTION INDICES.
(1928 = 100)

Period.	Canada. Do- minion Bureau of Sta- tistics.	France. Sta- tistique Générale de la France.	Ger- many. Insti- tut für Kon- junktur- for- schung.	Poland. Insti- tut für Reco- nomo- Re- search.	Sweden. Sveriges Indus- tri- Förbund.	United King- dom. Board of Trade.	United States. Federal Reserve Board.
1929 average	(b) 111.6	(c) 109.4	101.8	99.8	100.9	106.0	107.2
1930 "	94.9	110.2	84.3	82.2	97.2	97.9	86.5
1931 "	79.2	97.6	69.1	70.1	86.1	88.8	73.0
1931—First quarter	84.9	104.4	70.2	72.0	80.6	90.0	76.9
Second "	81.0	101.3	74.9	72.3	84.9	87.1	77.5
Third "	78.7	95.3	68.7	71.4	87.4	84.6	70.9
Fourth "	72.2	90.0	62.5	64.6	89.8	91.8	66.1
1932—First "	72.6	79.5	55.0(d)	52.2	88.3	90.1	62.5
Second "	70.8	74.0	57.7(d)	54.5	79.0	89.2	54.7
Third "	63.0(e)	73.2	53.2(d)	54.0	71.7(f)	...	55.3

(a) Quarterly Index. (b) Adjusted for seasonal variations. (c) Partly adjusted for seasonal variations. (d) Provisional. (e) July. (f) July–August.

A comparison of the third quarter of the current year with the April–June period reveals a further deterioration in the industrial activity of the principal foreign countries with the exception of the United States. A similar comparison of the development of production in the United Kingdom is not possible as the official figure for the third quarter has not yet been published. It will be seen that the volume of production in the United States, Germany and Poland has fallen to about one-half of that of 1928. Recently, it is true, there have been indications of a slight improvement. Thus, the monthly index for the United States, which is adjusted for seasonal variations, has risen from 52.3 in July to 54.1 in August and 59.5 in September. The monthly indices for France, Germany, and Sweden also show a slight advance in September. Yet, though the latest information suggests that the improvement has so far been maintained, the table above does little to suggest that the turning point in the world depression has definitely been reached.

The 1930 Census of Production.—Volume XXI of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, deals with the building materials, manufactured abrasives, coopering and flock and rag trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms),

and the net output per person employed in the various industries in 1924 and in 1930:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Building materials	Thous. £ 9,599	Thous. £ 13,657	Thous. £ 5,762	Thous. £ 7,330	£ 284	£ 253
Manufactured abrasives	1,296	1,515	596	725	309	292
Coopering	2,418	1,784	896	671	245	205
Flock and rag	6,345	3,782	1,357	825	208	153

The net value of the output of building materials shows an increase of about 10 per cent. between the two census years. The expansion in the production of artificial stone and paving materials has been substantial. The average number of persons employed in this industry increased from 20,307 in 1924 to 28,929 in 1930, but the net output per person employed declined by £81. The returns for the manufactured abrasives trade reveal a substantial increase in the net value of the industry's products. The output of grinding wheels of artificial carborundum advanced from 1,110 tons in 1924 to 2,490 tons in 1930, and the total value of the output of emery, at £183,000, shows an increase of £87,000. In the absence of quantitative data, it is not possible to measure the change in the volume of production of the coopering, and flock and rag trades. The net value of the output of these two industries in 1930 shows a reduction on 1924 of 24 per cent. and 39 per cent. respectively.

Banque Belge Pour L'Etranger.—The accounts and report of this bank, issued as we go to Press, reflect to the full the general situation prevalent throughout the world during the past year. The fall in the pound, trade and exchange restrictions, and the consequent shrinkage in international commerce have all had their effect upon the bank; and the prevailing uncertainty and lack of confidence has forced the directors to maintain very liquid resources during the year, and to reduce the bank's engagements. The heavy contractions in acceptances, "debtors" (i.e., advances), bills receivable and investments and participations can be discerned in the following summary of the balance sheet, which equally brings to light the serious shrinkage in "creditors" (i.e., deposits):—

	June 30, 1930. Fr.	1931. Fr.	1932. Fr.
Capital (subscribed)	200,000,000	200,000,000	200,000,000
Reserves (paid up)	158,424,125	158,424,125	158,424,125
Creditors	120,000,000	130,000,000	130,000,000
Acceptances	3,770,511,168	3,861,760,453	1,880,222,903
Note issue in China	730,027,093	672,000,311	388,694,879
Debtors	6,432,179	4,296,563	4,472,698
Bills Receivable	2,392,028,892	1,625,446,169	943,489,635
Investments and Financial Participations	935,751,994	1,382,379,030	474,568,167
Shares in Allied and Affiliated Banks	216,688,822	293,542,331	193,131,288
Net Profits	177,183,203	142,962,844	142,867,501
Dividend (free of Belgian Coupon Tax)	30,854,599	23,098,594	14,824,146
	10 per cent.	8 per cent.	8 per cent.

The bank has also felt the effects of the difficulties of its subsidiary and affiliated banks. The Banque Italo-Belge has had a favourable year, and is paying a dividend of 8 per cent., while certain of its Balkan affiliates have also been able to declare dividends. It is common knowledge, however, that the Wiener Bank-Verein has recently had to rectify its position and reorganise its capital, while a certain number of banks in which the Banque Belge Pour l'Etranger holds an interest have either kept their profits in hand or devoted them to depreciation. Still, the bank's difficulties are no more than those experienced by most banks engaged in international business, and it must be admitted that the bank has done well to earn and pay a dividend of 8 per cent. and also to maintain its liquidity. This is more than many banks have been able to do during the past year.

Great Britain's Fish Supplies.—A correspondent writes:—The wet fish landed at the ports of Great Britain by British and foreign-owned fishing vessels and imported during the third quarter of the year had a first-hand value of just upon £5 millions sterling, or £300,000 less than in the corresponding three months of last year. The aggregate quantity also showed some falling off. The following summary relating to wet fish only is compiled from the returns of the Ministry of Agriculture and Fisheries:—

July–September.	Weights in Cwts.		Value.	
	1931.	1932.	1931.	1932.
British caught—				
England and Wales	£ 3,501,078	£ 3,104,705	£ 2,903,248	£ 2,729,012
Scotland	1,926,639	2,109,574	1,278,443	1,368,482
Shell fish	...	...	103,621	102,947
Foreign landings	5,427,717	5,214,279	4,215,253	4,200,441
Imports	254,140	205,889	297,868	212,381
Exports	269,534	269,899	782,219	570,133

The British landings in England and Wales were 396,373 cwts. down, while the value fell by £174,236. On the whole, better prices were obtained, the average working out at 17s. 7d., against 16s. 7d. per cwt. In Scotland the reverse was the case, an increase of 182,935 cwts. in quantity being accompanied by an increase of £90,039 in value, so that the average was 13s., against 13s. 3d. per cwt. The landings by foreign-owned vessels showed some decline in both weight and value, while imports were approximately at last year's level, but cost considerably less. Our exports of wet fish during the quarter had a value of £150,837, compared with £207,417 in the July–September quarter of last year. In the three months Great Britain also sent abroad fish, cured or salted, to the value of £1,105,630, as against £1,283,149. This consisted mainly of herrings, the principal destinations being Germany, Russia and Poland. The imports of cured or salted fish from abroad were small, the value being only £49,976, as against £102,464, and rather more than one-third being re-exported. On the other hand, imports of canned fish are substantial, the declined value being £1,011,315, or £2,428 more than a year ago. Looking at the figures for the nine months ended September 30th, we find that the landings of wet fish by British-owned vessels are slightly in excess of a year ago, and those of foreign-caught fish (including imports) somewhat less; and in each case the aggregate value shows a decline. Both imports and exports of cured and canned fish also have a smaller total value. The import duties on wet fish of foreign origin appears to have had some effect in restricting imports, but not to the extent the fishing industry would like to see. An increase in the 10 per cent. tax to a much higher figure is, therefore, being demanded.

LEAGUE OF NATIONS.

Disarmament — French Plan — German Attitude.

(FROM OUR CORRESPONDENT.)

GENEVA, November 15.

THE hopes raised by the earlier and simpler outline of the French proposals, and by the encouraging Parliamentary statements of Sir John Simon and Mr Baldwin, have been somewhat damped by the complicated issues involved in the French plan, as now revealed, and by the aggressive criticism launched from Berlin. It becomes still more necessary to have a bold initiative from the British Government, and Sir John's statement on Thursday is awaited with greater interest than ever.

To many it is a disappointment that France brings up again several of the old bones of contention, and seems once more to make disarmament depend largely on a series of difficult innovations. How far arms reduction is to go

and whether it is to be parallel with or subsequent to the political and other elaborations is obscure. It would be altogether unfortunate if this led to long and tedious repetitions of the controversies which have been continuing for so many years on security, instead of a frontal attack on armaments themselves. There is a distinct danger of getting away from the only promising method of approach, which is so to strengthen means of defence as to make aggression extremely dangerous—a principle accepted in the French plan, but not very logically, or perhaps far too logically, conditioned. No nicely calculated system of security would give anything like the same safeguards; and that is a conviction which has steadily developed out here during the last twelve months.

The preliminary indications of the French plan gave hopes that the French Government was beginning to think more promisingly in that direction, and the plan now comes as something of a setback. Apart from the uncertainties about the standards of strength of the various national armies and the unsatisfactory evasion of the destruction of arms which may be prohibited to those armies, there are highly delicate political questions, like that of the suggested majority vote of the Council for the application of sanctions, which involve very serious considerations.

There is a variety of other points, such as the Mediterranean Pact; and while there is much that is valuable in the way of new ideas which should be examined, there is an air of unreality about the scheme as a whole. The main trouble, however, is that the outstanding question of the admission of equality of status to Germany is obscured, that the chances of an early German return to negotiations are not made brighter, and that, unless discussion can be diverted along other lines, the reduction of armaments may cease to be the immediate task that it ought to be. It is a moment which calls for a great effort of constructive diplomacy on the part of all other Governments, and especially the British. The problem is to make the most of the French plan and French goodwill, and to endeavour to shift the emphasis. On the other hand, Germany is not setting about the business in a helpful way. It is quite unreasonable to suppose that, before she condescends to talk, a scheme, satisfactory to her in all its aspects, should be humbly and ceremonially served up for her acceptance. The French scheme as it stands may not be good enough for Germany to regard the central claim as conceded. (We may hear more about that by way of explanation from France.) But it is beside the point to protest, as the Berlin statement does, that the French scheme is designed, not only to maintain French hegemony, but also to maintain the political and territorial *status quo*.

The first accusation is probably not true of the present French Government, and the second is irrelevant. Germany has undertaken in the clearest possible way not to attempt to upset the present political status by force, and the military situation, therefore, should have no relation to that otherwise important element in European politics. No amount of French troops and armaments would either help or prevent Germany from attempting by peaceful methods to obtain what she considers redress. The French plan for compulsory arbitration and so forth, however much it may be open to criticism, does not affect that situation, for it is the situation to which Germany is already bound. Her protest, therefore, on this head lends new

SCIENTIFIC INVESTMENT

By HARGREAVES PARKINSON, B.A., B.Com.

This book has become extremely popular in the financial world. It explains how securities may be subjected to new and searching tests; outlines simple methods of critically analysing balance sheets; and puts forward a scientific technique for measuring the long range value of investments. 244 pp. 10s. 6d. net.

"Will well repay study by all who have the responsibility for looking after investments," says SIR WALTER LATYON.

Order from a bookseller, or

SIR ISAAC PITMAN & SONS, LTD., Parker Street, Kingsway, W.C.2.

importance to Sir John Simon's idea of a European agreement not to resort to force. The argument that this is superfluous in view of the existing engagements appears now to have less weight. The reasonableness of a system of arbitration *ex aequo et bono* is a separate problem, and Germany cannot fairly make that an issue of the armaments problem. She had given her pledge not to use force to upset the treaties, whether they be equitable or inequitable, and the French proposals for compulsory arbitration change nothing in regard to the political *status quo* or to Germany's commitments on the subject.

The longer the discussion continues the more obvious it becomes that nothing short of a frank acceptance of Germany's claim to equality of status and a drastic reduction towards Germany's level—by stages if necessary, but by clearly defined stages—can bring a solution. Germany makes this difficult, and complicates the task of the French Government, however great may be the goodwill in Paris. Germany has had a greater opportunity than any State to persuade France away from her stubborn security obsessions. She has made no use of it, and as a result has added immensely to the burden of other States which desire a fair settlement. The Disarmament Conference remains a tremendous problem still, and a large measure of patience will be needed before it takes real shape towards practical decisions.

FRANCE.

Budget — Military Expenditure — Civil Servants.

(FROM OUR CORRESPONDENT.)

PARIS, November 16.

THE Government's Budget proposals for 1933 were made known in detail last night. At the time of their advent to power last June the situation of the national finances for the coming twelve months was presented as follows:—

	Francs.
Estimated expenditure	55,980,000,000
Estimated revenue	43,880,000,000
Estimated deficit	12,100,000,000

This estimated deficit, as it stood in June last, represented 23 per cent. of the then projected expenditure, and the preamble to the Bill states that it must be regarded as the strict minimum, in view of the facts now known. Proposed expenditure for 1933, when the present Government took charge, represented an increase of over 2,500,000,000 francs on that for 1932 (if the current nine-months' Budget expenditure be worked out at the full year's equivalent rate), and would have set up, had it been translated into fact, a new high record for this country. The huge deficit, however, was due less to increased expenditure than to a diminution of resources, items under this latter heading including not only the loss of 2,000,000,000 francs this year, owing to the cessation of German reparation payments, but over 4,000,000,000 francs as a result of the heavy drop in yield from taxation, owing to the economic crisis. Another reason for the exceptionally large deficit is the method adopted during recent years of engaging future revenue in advance, by applying new scales of pensions and other allowances progressively, in such a manner that they impose only nominal burdens for the moment but involve future Budgets in heavy liabilities. The law of 1930, for example, which created special old-age annuities at 50 for all former soldiers, involved the 1930-31 Budget to the extent of only 800,000,000 francs, but imposed a charge of 660,000,000 francs on the current financial year, while next year the amount required under this heading will be 1,266,000,000 francs, rising by 100,000,000 francs annually from 1934 onwards.

The proposals put forward for 1933—although certain of them are admittedly questionable from the point of view of sound finance, while others, it is already certain, will meet with opposition which, at the time of writing, renders their adoption doubtful—are designed to bring about a balanced Budget on the following basis:—

	Francs.
Estimated revenue	47,801,879,053
Estimated expenditure	47,779,739,843
Estimated surplus	22,139,210

The figures imply reduction of expenditure by over 8,000,000,000 francs and a simultaneous increase of revenue by 4,000,000,000 francs. About one-third of the 12-milliard deficit, it will be remembered, was got rid of under the Emergency Finance Act of last July (which, among other stipulations, reduced military expenditure during 1933 by an all-round cut of 1,485,000,000 francs), and by the law of September last, authorising the great Rentes Conversion operation (which alone benefited the 1933 Budget by 1,407,000,000 francs of economies). The deficit balance still remaining, therefore, was in the neighbourhood of 8,000,000,000 francs, and this it is proposed to raise as follows:—

	Million Fra.
A further all-round compression of departmental expenditure (other than military), in addition to the 5 per cent. reduction under the law of September last	550
Stricter control for repression of tax evasion	1,000
Revision upwards of certain existing taxes, and imposition of new taxes on coffee, heavy motor lorries, and certain of the stronger aperitifs	1,500
Reductions in pay and allowances of public servants in receipt of over 12,000 francs a year	773
Reduction and suppression of war pensions and former soldiers' allocations	595
Reduction of administrative staffs	100
Transfer of war pensions service from the Budget to an autonomous Caisse des Pensions, to be financed by special loan	2,070
Transfer of various public works charges and loan services from the Budget, for incorporation in the pending programme of new Public Works, to be financed by loan	1,550
	8,138

The preamble of the Bill points out that, for the first time, the 1933 Budget will register a substantial diminution of military expenditure. Non-commissioned officers and men will be 43,000 fewer in 1933 than at present, and officers 527 fewer (this "marking a beginning of a still more important reduction of the *cadres*, which will be spread over several years"), while the period of military service has been successively shortened from two years to 18 months in 1923 and from 18 months to 12 months in 1928.

The proposals concerning reductions in the pay and extra allowances of the public servants (with the exception of those of the Postal Department, which are subject to an independent Budget), suppression of pensions to remarried war widows, and annuities at 50 to ex-soldiers who are assessed for income tax, and revision of invalidity pensions granted to non-combatants, have already excited intense opposition on the part of the syndicalised organisations concerned. The reductions of pay proposed are of 2, 3, 5, 7 and 10 per cent., according to scale of pay, only officials receiving over 12,000 francs a year being affected. The reductions proposed concern chiefly extra allowances (except those in respect of family charges). The total cost of the personnel of the public services, under the Budget, is now 23,287,000,000 francs, or nearly one-half of the total expenditure proposed for 1933. Of this total 11,717,000,000 francs represents pensions drawn by retired public servants. The civil and military personnel on the active list now totals about 770,000 men and women and represents a Budget charge of 11,570,000,000 francs, of which 8,700,000,000 francs is in respect of pay and 2,870,000,000 francs of allowances of various kinds.

The attitude of the Civil Servants' General Federation, manifested at a special national congress which met in Paris last week for the purpose of organising resistance to the Government's proposals, has caused serious alarm throughout the country. Although the legality of the existence of their *syndicats* has always been challenged, the members of the congress made no secret of their intention to oppose at any cost all economies at their expense, and threats of resort to sabotage were openly expressed. The congress passed unanimously a resolution pledging all public servants to boycott all business concerns who venture to support the Government proposals, and appointing a special national committee to draw up a programme for "systematic dislocation of the public services by strict application of the regulations, the slowing down of professional work," etc., and for "the eventual general and simultaneous cessation of work in all branches of the public services." Methods publicly discussed and ap-

proved included passive resistance and sabotage, seizure of the services and their exploitation by the personnel. Public opinion is closely focussed on the struggle between the Government and its own employees, and it is rumoured to-night that it is possible, should the necessity arise, that the method of mobilising the public servants under military conditions, as was done by M. Briand in the great pre-war railway general strike, may again be adopted.

The outstanding feature of the Bill is that, if it is adopted, the Budget for 1933 will be the first since 1904 which has not been marked by an increase of expenditure. The amount of actually fresh taxation proposed is 1,500,000,000 francs, of which 800,000,000 francs, or more than half, represents the expected yield from the creation of a direct tax on heavy motor vehicles (one object of which is to reduce the keen competition now offered by road transport to the detriment of the railways). The provisions for a well-justified strengthening of the machinery for prevention of "tax-dodging," which it is estimated will increase the yield from existing incomes by 1,000,000,000 francs (through stricter control of declarations), provides for the setting up of local income-tax commissions, which will deal solely with declarations by members of the liberal professions (from which an additional 150,000,000 francs is expected), and stricter control over incomes from securities (expected to yield 450,000,000 francs more).

The need for stricter fiscal control was strikingly demonstrated last Thursday, when a Socialist Deputy revealed to the Chamber that the judicial authorities have begun the investigation of over 2,000 alleged cases of fiscal frauds, operated for several years past, with the complicity of a Swiss bank, for the purpose of enabling wealthy French holders of foreign securities to evade paying the 18 per cent. (since last July 20 per cent.) dividend tax due to the French Government. It was announced yesterday that prosecutions have been begun against 1,018 persons, the cases (owing to the magnitude of the affair) having had to be distributed among 38 *juges d'instruction*. In addition to evasion of coupon taxes, the alleged frauds are stated to have taken the form of concealment of income from interest-bearing bank deposits and evasion of succession duties. The 1,018 cases in question are alleged to represent a direct loss to the revenue of over 4,000,000,000 francs a year, extending over many years, all but three of which are statute-barred.

GERMANY.

Politics — Quotas — Agriculture — Mortgages.

(FROM OUR CORRESPONDENT.)

BERLIN, November 15.

THE first week following the elections has not brought to light any means by which a fresh dissolution might be avoided. The rumours of a dissolution before the Reichstag meets, or before the Government has definitely done away with Parliament, are not, it is true, to be taken seriously, for President von Hindenburg would never give the Cabinet the necessary powers. Signs of any kind of parliamentary solution are, however, just as wanting. The Chancellor wishes to have a discussion with the party leaders. He has emphatically stated that he will receive "with open arms" anyone who sincerely intends to co-operate with the Government, and he has further stated that personal considerations should not play any part. He is apparently even ready to resign if a Chancellor who is less unpopular with the parties can be found to carry on his policy with more success.

It is, however, impossible to obtain a majority in the Reichstag, not only for the Chancellor in person, but for the policy of the present Cabinet. The National Socialists seem to be adhering to the slogan of "No compromise" which Hitler adopted immediately after the election. They are not indeed demanding the entire Government for themselves, but they want the office of Chancellor for Hitler. This demand cannot, of course, be conceded without a change of policy of fundamental importance.

The Centre has repeatedly stated that it is not prepared to follow the Government in its programme of Constitutional reform; and the Social Democrats are most decidedly in opposition.

At the moment the relation of the Government with the States seems more hopeful. The conference of committees of the Reichsrat produced, not the sharp protest against the Government which many people were expecting, but a resolution which leaves the way open for a compromise. The State Governments are ready to put up with the combination of the Prussian executive with the executive of the Reich if their rights as against the Reich Government are extended. That would mean that the consolidation of governmental organisation in the North would be purchased by a substantial increase in the autonomy of South Germany. Even if the Reich Government should be ready to concede such autonomy in principle, the negotiations will be extraordinarily difficult, and complete agreement is still a distant prospect.

The proposal to introduce quotas for agricultural imports seems to have been abandoned, and the letter of protest against the proposal which the directors of the Reichsbank addressed to the Government has now been published. In it the directors state that there is a hope that Germany will have a sufficient foreign exchange surplus to meet the payments abroad which are required of her, provided that there is no political interference. The introduction of quotas would, however, constitute such interference, and the Reichsbank expresses particular anxiety lest Germany, by joining the ranks of countries whose imports are subject to a quota system, may give rise to a "general exchange war." This letter was certainly decisive in deterring the Government from arbitrarily introducing the quota system.

The impossibility of carrying out the quota policy has left the agricultural politicians entirely without a programme. In this, indeed, Germany is not alone; the hopes of farmers in all European and many non-European countries of finding a way out of the agricultural crisis have sunk to a minimum. Germany has, however, a particular problem of her own. The excessively poor soil of her Eastern provinces is incapable of competing with other districts, even under favourable economic conditions. Their grain and potatoes can only be marketed if a large part of them is artificially cheapened by Government action and sold as fodder. Apart from the fact that the stock farmers of the West and South are injured, and their ability to compete with producers abroad is reduced if they are compelled to use as fodder the rye and potatoes of East Germany instead of the much cheaper fodder obtainable from abroad, it is also very doubtful how much further Germany can extend her production of animal products. Improvements in agricultural technique have brought German production nearer and nearer to the point where it is able to meet the requirements of the home population along every line. Long before this point is reached, output along individual lines is liable to exceed this demand when harvests in other countries are particularly favourable. That could be avoided if the town populations of Germany were in a position to consume larger quantities of the higher-grade agricultural products, for the German consumption of butter, sugar, eggs, and to some extent also of meat, is relatively low. No increase in consumption capacity is, however, in sight for the time being.

In these circumstances the idea has been mooted of helping German agriculture by the formation of cartels. This suggestion has been under consideration by the Pomeranian farmers for a long time, and now, to everybody's surprise, Karl Bosch, a director of I.G. Farbenindustrie, has come forward in support of it. An agricultural cartel could only be formed with the help of the Government. Even if such help were forthcoming, however, it would not be possible to stop at a pure sales cartel. The sale of agricultural products cannot be restricted unless output is also restricted, as otherwise there is a danger that the surplus products which are excluded from the market will find their way to consumers by evasion of the official organisation, and thus undersell the official prices. The farmer will, therefore, have to have the amount of his

production, not only of grain and potatoes, but also of milk, butter and pigs, prescribed for him. If this were successful it would enlarge the sphere of State interference to an unprecedented extent, and it has been not unjustly complained against Bosch and the other supporters of the cartel idea that it would introduce a sort of socialisation of agriculture. The idea probably is, however, completely impossible to carry out, though it is not beyond the bounds of possibility that the attempt will be made.

A new emergency decree concedes to debtors on mortgage who are not already protected by other decrees a moratorium until April 1, 1934. The decree does not affect revalorisation mortgages, which, according to arbitration awards based on previous legislation, can be prolonged, or agricultural mortgages, which are already protected until April 1, 1935, or mortgages whose interest was reduced by the fourth emergency decree, as these already enjoy immunity from foreclosure until the end of December 1933. The most important mortgages affected are those granted by foreigners, or out of credits which were raised abroad for the purpose. Such mortgages have been hitherto excluded from protection, and the new decree was necessary because the system of protection has hitherto worked unfairly. The immunity granted is to cease if interest is not paid punctually.

ITALY.

Collective Agreements — Extensions to Metayers — Compromise Reached.

(FROM OUR CORRESPONDENT.)

TURIN, November 13.

AN important event in the history of the Corporative State was the recent report by Senator Raineri on the extension to *metayers* of the collective contract regulations. Hitherto the principles laid down in the law of April 3, 1926, and in the Labour Charter have been completely accepted. It is a well-known feature of the corporative system that, as strikes and lockouts are prohibited, only one association or federation, local, provincial and national, can be recognised; and that the employers' and employees' associations have power to conclude an agreement on wages, hours and other conditions of labour, which is compulsory for all employers and employees whether they are members or not. This binding power is characteristic of the corporative system, in which trade unions and industrial associations are public bodies in the same sense as the State, or a Province or a Municipality, whose lawful orders must be observed by all citizens concerned.

At first it seemed easy to extend this system to the vast agricultural field governed by the old system of partnership known as *mezzadria*, or *colonia parziaria*, under which the whole product of the land is divided between landowners and *metayers*. A national federation of *metayers* was hurriedly constituted under the ægis of Signor Razza, M.P., a former Socialist leader and the present general secretary of the General Confederation of Agricultural Workers. On the part of the Agriculturists' (Employers) Federation this creation was met by the formation of the special sections of employing proprietors. In a short time 86 collective agreements in 60 provinces were reached and duly made public in the official, provincial and national gazettes.

As, however, the *metayer* system was not explicitly contemplated in the 1926 law, a question soon arose as to whether the agreements were compulsory according to the law, and, therefore, legally binding not only on members of the associations, but also on all interested employers and employees. Eventually a certain number of Justices of the Peace decided that they were universally binding. At this point landowners took alarm. What was becoming of the celebrated *metayer* system, which is grounded not on the wage-system, but on full partnership of gains and losses, so that the *metayer*, being a partner, does not

grumble about hours of labour, nor insists on fixed minimum wages?

Three years ago, the Government, desiring to settle the matter, presented to the Lower House a Bill extending the 1926 law to *metayer* agreements. The House, in giving assent, added that the collective labour agreements ought to take account of the special limitations and qualifications required by the peculiar nature of the system, but no further progress was recorded after the Bill reached the Senate. Now, after two years of diligent inquiries, Senator Raineri, an ex-Minister of Agriculture, has presented, on behalf of the Senate Committee, his report. The Senate Committee votes for conciliation. The 1926 law will be extended to all partnership agreements in agriculture. Collective labour agreements will be compulsory, as all the other corresponding contracts are in Italy; but they will not contain any regulation relative to hours of labour, wages, rest time, initial probation period or other conditions characteristic of the wages labour contracts. They must respect customs, traditions and economic requirements of the different Italian agricultural regions. In short, collective agreements are not to change the fundamental character of the partnership system, the payment by means of a share in the total product and freedom from limitations in methods of work. If the Senate adopts the Raineri report, the important principle will be affirmed that legislation by agreements between syndicates must be limited to those fields where the wage-system exists.

HUNGARY.

Politics — Trade — Transfer Moratorium — Banking.

(FROM OUR CORRESPONDENT.)

BUDAPEST, November 14.

THE Prime Minister's journey to Rome will be followed in all probability by visits to Vienna and Berlin, as the new Premier is anxious to improve trade relations with Italy, Austria and Germany, the principal markets for Hungarian agricultural products. The news of an Italian-Hungarian special commission, which will meet in December to discuss means of reviving commercial relations between the two countries, was all the more favourably received here, as exports to Italy, especially grain and cattle, have become increasingly difficult in the last two years. Whereas in 1930 the value of exports to Italy totalled 117.3 million pengő, in 1931 it fell to 57.3 million pengő. Even worse are the prospects for 1932, as in the first nine months the value of exports reached only 19.6 million pengő, less than half of that of the same period of 1931 and barely a quarter of exports in the same months of 1930.

The strangulation of Hungary's foreign trade is strikingly demonstrated by the comparative figures for the last three years, which are as follows:—

Nine months of—	Exports.	Imports.	Balance.
	(In million pengő.)		
1930	665.6	620.6	+40.0
1931	399.2	431.4	-32.2
1932	233.0	244.4	-11.4

Great as the fall of prices has been in the last two years, the shrinkage of the value of exports to about one-third of the 1930 level cannot be explained by it. Ever-increasing tariffs, quota and exchange restrictions are chiefly responsible for the catastrophic contraction of trade in the Danubian countries. In order to meet the extraordinary circumstances brought about by the exchange chaos, clearing and "compensation" trade treaties were concluded with a great number of countries, but most of them failed to achieve their purpose. In spite of international conferences and plans to restore Danubian trade, the situation is growing worse every day. Germany, far from granting any practical help to the Danubian agricultural countries, so often promised at various international conferences, dealt a heavy blow to Hungarian agriculture by limiting exports to 40 per cent. of the 1931 quotas. The commercial treaty with Austria, which lapsed on July 15th, has not yet been renewed, and the customs war with Czechoslovakia is still going on.

In view of the unsurmountable obstacles, it is very probable that the total merchandise exports in 1932 will not substantially exceed 300 million pengő, a sum which, according to the League inquiry in October, 1931, would be needed to cover Hungary's foreign debt service. It is obvious therefore that Hungary is in a state of collective insolvency so far as the principal of 4,300 million pengő foreign debts (of which 1,800 million pengő are short-term loans) and its service of 250-300 million pengő are concerned. Consequently the transfer moratorium which was decreed on December 22, 1931, for a period of one year will be prolonged for another year. The provisions of the new transfer moratorium decree will be substantially different from those of the former decree, which was based on the false assumption that, though Hungary as a whole is insolvent in foreign currency, the original debtors could meet their obligations in full in pengő. The operation of the Foreign Creditors Fund, into which the long-term debt service ought to have been paid, showed that defaults are increasing at a dangerous pace, and what actually was paid into the fund was obtained directly or indirectly through the bill facilities given by the National Bank. On the other hand, the demands for redemption of the coupons of the long-term bonds in pengő grew as these coupons were being smuggled into Hungary, so that it became clear that the policy of reinforcing the fund from monies obtained from the National Bank, and redeeming the coupons in full, is diluting the currency and defeating the very purpose of the transfer moratorium, which was to avoid inflation.

The October return of the National Bank is a serious warning that the provisions of the transfer moratorium and banking policy in general must be changed. The total credit facilities accorded by the National Bank amounted to 636 million pengő, as against 570 million pengő at the end of October, 1931. Thanks to the liberal policy of the National Bank in the critical months of June and July, 1931, and afterwards up to the present, there was no bank failure of importance. The liberal policy of the National Bank, of course, brought about an abnormally high bill portfolio, which is steadily increasing owing to the continued decline of banking deposits, the total absence of new savings or foreign funds, and the financing of the budget deficit. According to official statistics, saving deposits and current account balances of all Hungarian banking institutes (including the Postal Savings Bank) decreased from 2,078.8 million pengő at the end of June, 1931, to 1,809.8 million pengő at the end of 1931, and to 1,658.7 million pengő at the end of August, 1932, a fall of more than 420 million pengő within fourteen months. The National Bank's bill portfolio has increased approximately by the corresponding amount in the same period, because the banks were unable to call in credits from their clients on anything like the scale necessitated by the withdrawal of deposits, and the credit demands of the State and other public bodies. The Hungarian banking system cannot be put on a sound basis until the short-term debts of the State and other public bodies, amounting to some 300 million pengő, are taken over in part or altogether by the National Bank.

It is the avowed policy of the new Government to bring about the necessary banking mergers at the earliest date. Negotiations to this effect have reached an advanced stage. Their success depends on the principal debtors and the creditors. The principal debtors are the State and its enterprises; the principal creditors are the National Bank and the foreign bankers. As the State cannot give any material assistance to the proposed big banking merger, as did Germany, Austria and Czechoslovakia in similar cases, it is essential that the National Bank should agree to turn over the banks' frozen bills to the State as its permanent debt with the National Bank, and thus reconstruct its own balance sheet as well as those of the banks. It should be remembered that the banks do not disclose in their balance sheets either the rediscounts with the National Bank or the total amount of foreign obligations.

According to official statistics, the foreign short-term obligations of the banks amount to 610 million pengő, of which 210 million pengő were lent by American, 99.5

million pengő by British, 81.7 million pengő by Swiss bankers. The rest was lent by Austrian, German, French, Dutch, Italian, Czechoslovak and other banks. As more than half of the banks' foreign credits were obtained from London and New York, it is obvious that the Anglo-Saxon bankers have a greater interest in the reorganisation scheme of the Hungarian banks than the others. Their co-operation among themselves and with their Hungarian debtors is absolutely necessary to protect their commitments. They must realise that the frozen loans in Hungary cannot be thawed out for many years to come and act accordingly.

CZECHOSLOVAKIA.

Industry — Trade — Finance — New Government.

(FROM OUR CORRESPONDENT.)

PRAGUE, October 31.

SINCE last summer there have been in Czechoslovakia, as in some other countries, certain signs of economic improvement. The depression has not advanced any further and the prevailing lack of confidence has somewhat diminished. These signs of improvement have, however, recently begun to wane.

This year's harvest in Czechoslovakia was above the average and considerably better than last year. On completion of the harvest a decline of agricultural prices set in, despite the efforts of the Corn Syndicate to regulate imports, and recovery has been only very gradual. Consequently, the agricultural interests are clamouring loudly for the creation of an organisation of sales, warehousing and agricultural credits.

In some industries there has been better employment in the last few months, owing partly to such seasonal factors, e.g., in building and agriculture. On the termination of these activities unemployment rose somewhat again, but on the whole there has been some slight improvement. The export trades are still the greatest sufferers. A partial improvement in the textile industry is due to the recovery in raw material prices, and to the fact that stocks are getting low. The output of iron and steel, notwithstanding some slight improvement, is unusually low; in September it amounted to 35,012 tons of iron and 54,688 tons of steel. The engineering and metal trades, too, are still seriously depressed.

Foreign trade in August and September was the lowest on record. The imports for the first nine months of 1932 amount to 6,120 million Cz. K., against 8,415 millions for the same period last year. Exports amounted to 5,377 millions, as against 9,708 millions a year ago. Czechoslovak foreign trade for the first nine months of this year exhibited an adverse trade balance of 139.5 million Cz. K., as against an active balance of 1,291.5 million Cz. K. last year for the same period. Exports are not only suffering from the nature of commercial policies on all sides, but especially from the difficulties of payments. Czechoslovakia followed the negotiations at the Stresa Conference with considerable interest, but the recent discussions of the International Chamber of Commerce at Budapest showed a certain scepticism concerning the possibilities of a speedy realisation of the Stresa recommendations.

Clearing agreements have been concluded with several countries, but they do not always function satisfactorily, and the "compensation" system encounters many difficulties when put into practice. The issue of necessary permits to effect "compensation" business has been concentrated in the Ministry of Commerce and in the Foreign Exchange Commission. To facilitate the matter several "compensation" organisations have been formed, the most important of which is the Central Compensation Bureau created by mutual agreement between the Central Association of the Czechoslovak Industries and the Chambers of Commerce.

The money market on the whole exhibits an improvement since last summer. In the summer months a certain decline in deposits was noticeable, owing to

unemployment. Upon termination of the harvest an opposite tendency was apparent, but this has recently weakened again. The Stock Exchange showed a better feeling reflected in the recovery of the quotations and in greater calmness, notwithstanding the fact that the quotations declined slightly in the last weeks. The Stock Exchange index rose to 83.79 at the end of September in comparison with 77.14 a month ago.

State finance is strained by the persistent crisis. The year 1931 ends with a deficit of 1,241.5 million Cz. K., while the deficit for this year is anticipated at about 1,100 million Cz. K. The decline of the tax revenue for the seven months of the current year is estimated at 411 million Cz. K., and the decline of the tobacco monopoly at 126 million Cz. K. On the other hand, expenditure in general is undiminished, and some of it is rising; for instance, the unemployment relief necessitated 700 million Cz. K. of expenditure for the seven months of the current year. The Budget is heavily burdened by the deficit of the State railways. The Minister of Finance is endeavouring to balance the Budget partly by a reduction of 900 million Cz. K. in expenditure, partly by raising the revenue and stricter methods in levying taxes. The present increases in the income tax, turn-over tax, match and remuneration tax, as well as the newly introduced tax on yeast and raised prices of tobacco, are insufficient, and it will be necessary to reduce expenditure. The Finance Minister has proposed as a necessary sacrifice a reduction in the salaries of the State servants by about 15 per cent., starting from November 1st. He also suggested a number of other reductions in State expenditure and other economies in State administration, especially through its simplification and reduction of its cost. Similar economies are being introduced in the coming Budget for 1932.

The suggested measures of the Finance Minister, especially the question of reduction of salaries of the State servants led to the Cabinet crisis. The new Government was formed on October 30th and the members agreed in principle that the proposed measures should be taken. In parliamentary and Government quarters, and also in the responsible economic corporations, a firm will be apparent to effect financial equilibrium through strict economies and reduction of State and public expenditure and the conviction prevails that this will ultimately be realised.

SPAIN.

Politics — Exchanges — Finance — Issues — Bank Reform.

(FROM OUR CORRESPONDENT.)

MADRID, October 28.

THE political horizon has been clear during the last month, and the present Government seems more strongly entrenched than ever. The treatment inflicted upon those who were implicated in the recent rising has caused the malcontents to keep very quiet, and Parliament is also well in hand. The possibility of radical changes, in the event of general elections taking place at the beginning of next year, is becoming more remote, especially after the decision of the Socialist Party to maintain its representatives in the Government.

Refusing to be coerced by coal mining interests, the Minister of Public Works recently stated that no further measures will be taken to restrict the importation of British coal, so that any reprisals on the part of England with regard to the Spanish orange trade will be avoided. The fall in the pound is causing considerable uneasiness in the fruit-producing districts, especially as exporters are at present unable to cover their forward exchange. It is rumoured, however, that the Government will provide the necessary insurance against further fluctuations of sterling rates.

The Official Gazette of October 25th published a decree in which the Minister of Finance instructed the Bank of

Spain to reduce the official bank rate from 6½ per cent. to 6 per cent., for strictly commercial transactions. This measure took effect as from October 26th, and it is hoped that some degree of relief may be afforded thereby to industry. The fact that the reduction was effected in the face of considerable opposition on the part of the Bank shows that, as threatened, the Government intends to take this matter out of the hands of the Central Institution.

The Income Tax Law has finally become a fact. In its present form it is very mild, as it only applies to incomes of Ptas. 100,000 or more, and then only to the extent of 1 per cent. of the net income; but it is the thin edge of the wedge. It is thought that the cost of collecting this tax may be almost equal to the amount collected in the beginning, but all administrative experiments in Spain are costly at first. There have been four attempts in the past to impose an income tax in Spain, the last being that of Sr. Calvo Sotelo during the Dictatorship of Primo de Rivera. The minimum income taxable according to that project was Ptas. 300,000, as against the present amount of Ptas. 100,000. Nevertheless, the mere announcement of the Dictator's project was sufficient to cause a considerable export of capital, and the scheme fell through. In the present instance severe measures were already in force against the export of capital, so that no movement has been noticed in this direction, although the Stock Exchange showed weakness.

The total of the proposed Budget, which was read recently in Parliament by Sr. Carner, amounts to 4,720 million pesetas, against 4,541 millions last year. The increase of 189 millions is in reality some 524 millions owing to the fact that 335 millions represent amortisations effected in 1931-2. The total revenue is estimated at 4,100 millions, and application will be made to the market for Ptas. 600 millions, against short-term Treasury bonds of similar characteristics to those issued to cover the previous deficit.

There has been a slight revival of issuing activity in Madrid, and two fairly important operations in this line were very successful, both being considerably oversubscribed. It is possible that advantage will be taken of the large amount of funds awaiting investment to place a few more issues.

The gross receipts of the principal railway companies continue to decline, the deficit of the Northern Railway having reached 5.3 million pesetas for this year's working. The Madrid, Zaragoza and Alicante Railway has, by a policy of strict economy, reduced the unfavourable margin to 1.8 millions, but the position is not very brilliant and many other industries are naturally affected; the wagon building works of Beasain have been particularly hard hit and it is rumoured that the factory may have to close down unless conditions change.

A recent official measure requires all foreigners earning their living in Spain to be in possession of an Identity Card; this innovation is admittedly a retaliative measure in view of the restrictions placed on Spanish workers abroad, especially in France.

The National Agrarian Bank, which is to carry out the financial programme in connection with the Agrarian Reform Act, recently voted, is being pushed forward rapidly. Although the Bank was not specifically mentioned in the Act, the Minister of Agriculture is of the opinion that the reform cannot be carried through without the help of a special financial institution, and a committee of experts is therefore drawing up a scheme of organisation which is to be submitted to the Government without delay.

During the past month the peseta has been firmer, not only against sterling but also against gold currencies; the task of the Central Office for Foreign Exchange has therefore once more been made easier and the clamour for foreign currency has died down to some extent. The orange season having started there should be no further trouble in this direction for some time.

CANADA.

General Business — Railway Legislation — Ottawa Agreements — Federal Loan.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 2.

THERE are scattered signs of improvement in some lines, but there is general disappointment at the failure of business as a whole in Canada to respond to what were regarded as favourable seasonal and financial influences, and the latest slump in grain prices with its implications for western trade has produced a widespread feeling of pessimism about the outlook for the remainder of the year. It is true that retail trade has shown a moderate expansion, particularly in ready-made clothing, household appliances, radios and small electrical equipment; the boot and shoe factories have kept their output up well; and the furniture factories record a substantial improvement in orders. Agricultural implement firms have secured some business through a new policy of writing off portions of farmers' debts in exchange for fresh orders, and the metal manufacturing industries of Ontario are more active thanks to orders from the mining camps, while the plants manufacturing industrial chemicals have also been busier. As a result, the Bureau of Statistics' employment index for October 1st showed a slight gain at 86.7, as compared with 86.0 for September 1st, but it still remains far below the figures of 103.9 and 116.2 for October 1, 1931 and 1930 respectively. On the other hand two basic indices of general business, those of carloading and electrical power production, which made a good showing in August, have since been disappointing and show less than the normal seasonal gains. The coal-mining industry is also seriously depressed and the output of Canada's coal mines for September was only 914,467 tons, which is 28.9 per cent. below the five-year average for this month. In the mining industry the one bright spot is gold mining, and already its output has surpassed the record value of 55 million dollars worth of gold secured in 1931, but the lowness of the price of base metals keeps other branches of this industry depressed. The lumber industry has experienced a slight improvement, but the fortunes of the newsprint industry go from bad to worse and a further cut in prices has aggravated its troubles. The latest business survey of the Bureau of Statistics gives the following indices of the physical volume of business for September, based on the monthly average for 1926 and corrected for seasonal variation:—

	September, 1931.	August, 1932.	September, 1932.
Total business	92.9	78.1	77.1
Industrial production ...	90.9	73.6	71.9
Distribution	98.4	90.4	91.3

As the result of the heavier grain movement from the West the earnings of both the railway systems have shown a welcome improvement in recent weeks, but they are still in each case far from satisfactory, and it remains to be seen whether the legislation embodying practically all the recommendations of the Royal Commission on Transportation problems, which the Government has now introduced in the Senate, will provide any adequate solution of them. The Bill is divided into three parts, of which the first deals with the reorganisation of the control and management of the Canadian National system and provides for the substitution of a Board of three competent trustees for the present amorphous directorate; the duties of these trustees, who are to be responsible to Parliament, are rigidly specified and there is an effort to protect them from political influence and community pressure. The second part concerns the scheme propounded by the Commission for co-operative arrangements between the two railways which would make for economical pooling of facilities and the elimination of wasteful duplications of services. The third makes provision for the establishment of the proposed Arbitral Tribunal which will be charged with the duty of adjudicating disputes between the two companies about plans for co-operation. The only serious departure from the recommendations is that Parliament is to appoint independent auditors for the C.N.R. instead of the Government. Senator Meighen, the Government leader, in intro-

ducing the Bill, declared that the Government was not wedded to all or any of the provisions; and the fact that he seemed to go out of his way to invite criticism and amendment left the impression that the Bill might have a rough passage.

The House of Commons is still debating the Anglo-Canadian Agreement, and the Liberal Opposition has been keeping up a persistent barrage of criticism against it. Mr Mackenzie King has announced that his party has embarked upon "one of the historic fights of Liberalism" and has intimated in so many words that, if he comes back to power, he will not consider himself bound by the Conference agreements. The main indictments of the Liberals against the Anglo-Canadian Agreement are that its principal economic effect as far as Canada is concerned is to increase the protection of the domestic manufacturers, that the arrangements infringe the fiscal autonomy of Canada, and that they introduce into the relations of the British Commonwealth the dangerous principle of tariff bargaining and put them upon a purely materialistic basis. The Government, anxious to curtail the debate, have allowed the Liberals their full fling of criticism and only put up occasional speakers to keep their case before the public; the latter have made light of the objections about bargaining and invasion of fiscal autonomy and have stressed the value of the preferential privileges accorded by Britain, at the same time emphasising that the interests of Canadian industry have been reasonably safeguarded. The Labour group opposes the agreement, but the Independent Progressive Party is divided; some of them are antagonistic, but others are prepared to vote for it and give it a trial. However, most of these Progressives who represent the agrarian interest take the view that the preferences given by Britain will be comparatively valueless until Canada, by formally abandoning the gold standard, takes steps to close the present gap in the exchange situation between her dollar and the pound. One interesting feature of the debate has been that several Liberals, taking note of the utterances of Governor Roosevelt and other Democratic leaders, during the Presidential campaign in the U.S., have asserted that what would contribute more to the revival of Canadian prosperity than the Conference agreements would be some reasonable measure of trade reciprocity with the United States. A few Liberals, however, who represent fruitgrowing constituencies, will support the pact and, with the adhesion of these and some Progressives, the Government should have more than its normal majority.

The Minister of National Revenue has introduced a Bill which aims to remove, as far as British goods are concerned, the authority conferred by Section 43 of the Customs Tariff Act, which empowers him to impose for Customs purposes an arbitrary valuation upon imports which are produced under conditions prejudicial to Canadian manufacturers and producers. The continuous exercise of this power, whose application has been steadily directed for the benefit of local manufacturers, has resulted in serious abuses. But apparently the Bill is not to be retro-active in its scope, and the maintenance of the arbitrary valuations which have already been imposed by Order-in-Council destroys much of its value.

IRISH FREE STATE.

British Duties — Dairying — Protection — Fisheries.

(FROM OUR CORRESPONDENT.)

DUBLIN, November 14.

THE failure of the negotiations between the British and Irish Governments has made matters worse than they were already. It looks as though both parties were determined to fight to a finish. A war of attrition between the two countries will benefit neither and injure both, and it is devoutly to be hoped that some way may even yet be found out of the existing deadlock. The very strength of the combatants is one of the worst features of the struggle, as an economic war might continue for years without their resources being exhausted, though not, of course, without considerable suffering and progressive debilitation. There

is nothing in the financial position of the Free State to compel an early surrender, and the hostilities will be brought to an end only by the emergence of a new mutual desire for settlement or by the force of political pressure demanding a compromise.

Even those Irishmen who are most critical of Mr De Valera's policy and conduct during his six months of office are unable to approve of the British Government's behaviour towards the Free State. The recent doubling of the import duties on Irish agricultural produce is regarded as a step in the general policy of agricultural protection, taken under the pretence of collecting the land annuities. Indeed, the most sinister feature of the whole situation is that both Governments are taking advantage of the economic war to advance their domestic protective programmes without adequate parliamentary discussion; and there is a danger that the stoppage of trade may come to be regarded as a normal rather than an emergency condition. Meanwhile, each new reprisal inflicted by Mr Thomas strengthens the hand of Mr De Valera and renders more distant the prospect of a settlement. One would have thought that British Governments should have learnt the lesson in the years preceding the Treaty that coercion only makes matters worse in Ireland, and creates many more difficulties than it solves.

A speech by the Minister of Agriculture made this week in Cork clarifies the position regarding the future of the dairying industry, which accounts, directly or indirectly, for the greater part of the agricultural income of the Free State. The further reduction of costs is apparently regarded as impracticable, and farmers must look for their profit to an increase in prices in the home market and the development of an export trade in condensed milk and tinned cream. It seems that the Government regards the future of the export trade in butter and meat to Great Britain as unprofitable on account of the growing competition from other countries and the fall of prices, and that it has decided that the dairying industry can survive only by an increased home consumption and the manufacture of new products for overseas markets. The Minister must be hopeful of the openings in these directions, as he stated that, in spite of the depression, the increase in the output of milk must be the principal aim of agricultural policy.

For some reason which has never been made perfectly clear, the Fianna Fail Party has for many years advocated the encouragement of wheat growing in the Free State. Proposals of this nature were decisively rejected by a very strongly constituted Commission in 1928, and every argument used by that Commission applies with double force to-day on account of the collapse in wheat prices. In spite of this advice the Government have introduced a Bill designed to increase the wheat area. All the usual protectionist machinery of subsidies, guaranteed prices and licences, is employed in order to deflect farmers into an essentially unprofitable line of production. The cultivation of other cereals is to be encouraged by the compulsory mixture of home-grown with imported feeding stuffs, and the cost of production of the harassed live stock producers is to be consequently increased. If the wheat scheme succeeds to any extent it will prove very expensive to the taxpayer, but the probability is that the farmers will refuse to be tempted into an unsatisfactory crop by the subsidy and that the experiment will not prove so costly as it might at first sight appear.

Scarcely a single day passes without the publication of a long list of new tariffs. With subsidies on wheat and beet, bounties on agricultural exports, and an all-inclusive import tariff, the protectionist programme of the Government is certainly being carried into practice. It is impossible in the absence of official statistics, and in the face of the contradictory statements of public men, to say what has been the effect of the new economic policy on employment, but it is certain that the demonstrations by the unemployed have been increasing both in frequency and in size. The relief measures are well meant and are good as far as they go; but they only reach the fringe of the problem, and it is difficult to see in what way the existing measures can be supplemented except at prohibitive cost to the already overladen taxpayer.

ARGENTINA.

Ottawa — Public Finances — Reform Committee.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 22.

THE effect of Ottawa will be to hold Argentine trade at its present low level until such time as it can readjust itself to new markets. For instance, meat exports to the United Kingdom will be limited to an average of 388,000 tons chilled beef per annum during the years 1933-34, with 25,000 tons per annum of frozen beef. For frozen mutton the annual average works out at 58,000 tons. Contrasted with a year such as 1925, when beef shipments to the United Kingdom, chilled and frozen, totalled 510,550 tons and frozen mutton 83,041 tons, it will be realised that continued expansion of what is always popularly termed the "mother industry" of Argentina calls for new markets and much more economic exploitation than has hitherto been general. In respect to cereals, Argentina is better placed, being less dependent upon the one market; but this is not a favourable factor when reviewing the possibility of increasing the sale of British manufactures here. For, with her cattle industry and all its subsidiaries virtually kept within predetermined bounds during the next two years, to look no further ahead, Argentina must have as free a hand as possible for disposing of her crops. This basic consideration renders nugatory all the newspaper talk of "special concessions" to be made to British imports; there is, indeed, grave reason to fear that, where the Argentine market for manufactured goods is concerned; Ottawa has also set a limit, invisible but real nevertheless, to British shipments. Thus the net result of the altered fiscal policy of Great Britain cannot but be detrimental to Argentine trade generally, but more particularly does it look like maiming that direct Anglo-Argentine trade movement which has been so strenuously advocated during the past decade.

The outlook for the next two years is further darkened by the strong probability that Argentina cannot expect to obtain those loans from Great Britain which formerly took the shape of capital raised in London and sent to the Plate as machinery and heavy goods generally. Enforced economy and a further spell of marking time in both governmental and private expenditure are inevitable.

The greatest blot on the record of the late Government was the heavy raising of import dues on the plea that the result would be to diminish unemployment by increasing local industrialism, and at the same time swell the Treasury receipts. Neither end has been attained; and the 1932 Budget estimates are hopelessly out as regards receipts from Customs dues and Inland Revenue taxes, to say nothing of the almost certain shortage in the takings of the income tax. With but two months to go, there is a shortage of some \$85 millions paper on Customs, \$40 millions on Inland Revenue, and \$40 millions on income tax, but, thanks to the expedient of the Patriotic Loan, the severe pinch that such shortfalls might have implied has been spared to the Government, giving it breathing time. Economies have been effected, but the immense army of Argentines who have been brought up on the belief that a job at the expense of the Budget is the implied right of every voter, cannot be cut down at short notice.

These evils, and the handicaps they create, are fully recognised by most leading Argentines; but this makes the task of economic and financial reform under existing conditions no easier. An honorary committee has just been named to assist the Government "to restore the economic and financial health of the country." All its members may be described as non-political, with high reputations for probity, as well as a sound grasp of material problems of the moment. They are given power to call for any technical information or assistance desired, and it is generally understood that their main utility will consist in deterring Congress from will-o'-the-wisp schemes prejudicial to Argentina's credit.

* Our correspondent was writing before the subsequent agreement on further limitation of shipments.—Ed. Econ.

Books and Publications.

BOOK OF THE WEEK.

PLANNED MONEY.

To the more conservatively-minded the word "planning" carries with it a strong Muscovite odour, and the first few chapters of this book,* which are devoted to planning in general, will probably not appeal very strongly to the impatient individualist, though they should certainly help him to do some hard thinking. But they are a little bit off the main track of the argument, which is concerned only with monetary policy: planning not *à la Russe*, but *à la Financière*! Planning, indeed, here seems to mean nothing more revolutionary than a "managed currency"—though to the purists of Threadneedle Street that may seem revolutionary enough. For to the central banker it is almost a Copernican innovation to be asked to look primarily to the price level rather than to the foreign exchanges.

Sir Basil Blackett has no difficulty in pointing out the evils wrought by unplanned money in the shape of the post-war gold standard, whose operation (though not, be it said, its inherent defects) has resulted in such a disastrous fall in prices that the fulfilment of the ordinary monetary obligations of commerce has in many cases become impossible. Unstable money is the root of almost every kind of evil, more especially when its instability is working in a deflationary direction, because by increasing the weight of debts it strikes indirectly at the principle of the sanctity of contract. For the tacit assumption underlying all monetary obligations, though not expressed in so many words, is that the value of money should be stable. Unfortunately in the past central bankers and Governments—in spite of the Genoa resolutions—have never regarded it as part of their business to keep the value of gold stable, with the result that the international gold standard, like a monetary Humpty-Dumpty, had a great fall. The question therefore arises, should we or should we not try to put him together again?

To this question Sir Basil Blackett gives a clear and challenging reply in the negative. He feels, as Professor Cassel also seems to feel, that the restoration of the gold standard on a satisfactory basis is for the moment, at any rate, impossible; and he is therefore impelled to look for a solution of the world's monetary problems in a different direction. He is perfectly aware of the convenience of gold as a medium for international payments, an anonymous asset for the balancing of international accounts, and he concedes—a very big concession indeed—that if the monetary authorities in this country and the United States could arrive at a firm agreement to keep the value of gold stable at an appropriate level of prices higher than the present, then it would be worth while restoring the gold standard. But he regards such an agreement as most improbable, and therefore decides in favour of a "managed" paper standard, so regulated as to raise prices deliberately and then to keep them stable, after rejecting *en passant* the alternative of bi-metallism.

Sir Basil Blackett consequently pictures the monetary future of the world on the following lines. The world will be divided into two main groups—a gold-standard group and a managed-currency group more or less loosely united to sterling, which he calls for convenience "sterlingaria." Sterlingaria will consist of a number of countries, including most of the British Empire except South Africa, Scandinavia, and some of the South American countries, each with an independent currency managed with a view to maintaining the level of wholesale prices constant. Absolute stability of exchanges between these countries is not necessary, but suitable measures are suggested for eliminating wide fluctuations. As a result of this arrangement, the countries comprising "sterlingaria" will tend to trade more with each other than with the gold-standard

countries, and capital—both long- and short-term—will tend to move more freely between them. The sterling-dollar exchange will form the link between the two systems, and London and New York will be the two principal financial centres of the world, each leading the countries in their respective groups. The picture thus presented is not altogether an encouraging prospect. But the only logical alternative, according to the author, is a world super-bank endowed with sufficient power to control the monetary policies of the different countries—a state of affairs which present-day nationalism renders impossible.

These stimulating ideas are vividly present for the non-technical reader, and they contain much food for thought. It is perhaps natural enough that the difficulties in the way of such an ordered evolution should be minimised in a book of this nature. Those who are acquainted with Mr Keynes' "Treatise on Money" will be inclined to inquire a little more closely than the author has done what index number exactly it is proposed to stabilise, and to ask themselves whether the same index number will really suit the policy of differently constituted countries. They will wish to know, moreover, how the exchanges between the two groups are to be regulated in such a way as to permit prices in "sterlingaria" to remain constant while they vary in the gold-standard countries. To these and to a hundred other technical questions the book gives no adequate reply—but that, after all, could hardly be expected in the compass of 180 pages. Nevertheless, Sir Basil Blackett has performed a useful service. What the world needs to-day is a strong antidote to deflation, and Sir Basil Blackett has had the courage to recommend it in a much more thorough-going manner than the Ottawa Conference. Whether reflation by itself will cure our troubles may be doubted, but this book has at least the merit of stating a case for reflationary action boldly and intelligently.

SHORTER NOTICES.

"Gold and Monetary Stabilisation." (Lectures on the Harris Foundation, 1932). Edited by Quincy Wright. Cambridge University Press for University of Chicago Press. 11s.

This course of lectures, given in collaboration by a number of American economists, is interesting especially because it was accompanied by a series of private discussions, which resulted in a round robin to the American Government setting down certain recommendations on which the economists in question were agreed. These recommendations included the broadening of the basis of Federal Reserve credit on lines since accepted in the Glass-Steagall Act, the pursuance of a vigorous open-market policy by the Federal Reserve system, the energetic use of the Reconstruction Finance Corporation as an instrument for unfreezing the banks, the maintenance of Government spending on public works and social services in order to avoid deflationary effects, and, finally, action by the American Government to cancel or greatly reduce inter-State debts and to bring about "a reciprocal and substantial lowering of tariffs." The lectures reprinted in this volume expound and advise (with one dissentient) various parts of this policy. The lecturers include Professor Viner, highly critical of the gold standard as an international force; Dr. Habroher, summarising the view of the younger Austrian school; Professor Bulie, making sensible suggestions about the reform of the Federal Reserve system; Dr. Parker Willis; and Professor J. H. Williams. Taken together, they form a useful note on the current problems and perplexities of the American banking world.

* "Planned Money." By Sir Basil P. Blackett. (Constable. 5s.)

The Stock Exchange.

LEAGUE LOANS.

BETWEEN 1923 and 1928 eight loans were offered on behalf of European Government borrowers under the auspices of the League of Nations. Of their total of £79,000,000 (sterling equivalent at par), some £38,000,000 was issued in this country, and taken chiefly by British investors. To-day, some of these loans are in default, and others have slumped badly in the market. Holders, not unnaturally, are inclined to criticise both the offending debtors and the League. How far is their criticism justified?

The loans raised "under League auspices" may be conveniently tabulated as follows:—

(000,000's omitted.)

Loan.	Total Issue.*	Countries of Issue.			
		Great Britain.	U.S.A.	France.	Other Countries.
Austrian Gold Loan, 1923	32.0	£	£	£	£
Hungarian State Loan, 1924	14.1	4.0	5.1	1.4	11.5
Greek Refugee Loan, 1924	12.3	7.5	2.3	...	4.7
Bulgarian Settlement Loan, 1926	3.2	1.7	0.9	...	2.5
Estonian Banking and Currency Reform Loan, 1927	1.5	0.5	0.8	...	0.2
Danzig (Tobacco Monopoly) State Loan, 1927	1.9	1.5	...	...	0.4
Greek Stabilisation and Refugee Loan, 1928	7.6	3.4	3.1	...	1.1
Bulgarian Stabilisation Loan, 1928	6.2	1.5	1.8	1.0	1.9
Total, eight loans	78.8	38.0	15.5	2.4	22.9

* Sterling equivalents at par of exchange.

These loans were raised for the purpose of either financial reconstruction or the establishment of refugees. They were all issued on the basis of schemes recommended by the Financial Committee of the League and approved by the Council. In some cases a definite system of League control was included in the scheme; but, except in the case of the Austrian loan, varying proportions of which, totalling 100 per cent., were guaranteed by external Governments, no financial guarantees were given.

There can be no doubt that the investor legitimately expected that he would, in some respects, have greater security because of the League's association than if the borrowing Government had raised the loan without such aid. This is illustrated by the fact that, where fair comparison is possible with loans raised outside the League (for example, by Poland), the League loan was at a lower rate of interest, and also by the fact that in some instances it would obviously have been impossible without League aid to issue the loan at all.

This extra security, and the corresponding League responsibility, comprised at least three factors. In the first place, the League certified that, on the advice of its experts, the general scheme was a good one, calculated, if properly carried out, to achieve its purpose. Secondly, the League assumed some further responsibility, varying with the kind of control or supervision specified in the scheme, for seeing that its terms were duly carried out. Thirdly, the schemes in all cases included provision for the service of the loans by the assignment of revenue (necessarily in the currency of the country) for the purpose. Some commentators would add a more controversial fourth condition, namely, that the League, having specially recommended the loans as being reconstructive in character, assumed some moral responsibility for seeing that, in comparison with other loans, they should be recognised as having a special status and being entitled, in times of difficulty, to some preference in treatment.

It will scarcely be contested that the League has adequately discharged its responsibility, at least as regards the three first factors. The schemes were, in every case, financially sound in the economic circumstances in which they were framed. They were efficiently carried out, and they achieved their object. The refugees were suc-

cessfully established, and the financial reforms effected. It was never intended, of course, that the assisted countries should be in perpetual tutelage. The League's task was to restore nations whose economic position, through exceptional disaster, had fallen below that of their neighbours, and, within the sphere to which the schemes related, to re-equip them as normal members of the European system. The League performed its duty so thoroughly that when its control was withdrawn from Austria and Hungary, the finances of these countries, and the reserves against their currencies, compared favourably with any in Europe. It is true that the League did not succeed, as the world did not succeed, in securing such a change in the commercial policies of Europe and of other continents as would have cured the economic weaknesses of small economic units imprisoned in tariff walls. Nor did it avert a world depression, whose impact has, necessarily, been especially severe upon such units. The question of responsibility for the world's present straits, however, has no primary relationship to the making of League loans.

Further, the arrangements for securing the allocation of revenues in national currency for the service of the loans were adequate, and were properly carried out. Current difficulties in payment have arisen, not from an inadequacy of revenue in national currency, but solely from shortage of foreign exchange. The losses suffered by investors, in short, have been attributable, not to any inadequacy of the internal measures which the League supervised, but to the impact of external conditions.

Have League loans a claim to preferential treatment? This is a more doubtful question. Hungary has answered it in the affirmative by continuing to pay League bondholders after suspending payment on other obligations, but a similar distinction has not been made by Greece and Bulgaria. It seems difficult to argue that the League gave anything which might have been reasonably construed as a moral undertaking that loans not specifically guaranteed should be secure under every imaginable condition. All foreign bond issues carry two distinct "risks." On the one hand, the schemes on which they are based may be badly conceived or imperfectly executed, so that, e.g., hypothecated revenues are not duly assigned. On the other hand, debtors may be unable to honour their obligations as a result of internal economic defects or external misfortunes, involving, possibly, the danger of social collapse and revolution. The League undoubtedly assumed a definite responsibility as regards the first of these risks, and has no less certainly discharged it. The investor himself of necessity assumed the second risk. His acceptance may be inferred from the fact that it was found necessary to offer yields of over 7 per cent. to obtain his initial subscription.

How much have investors lost so far? The obligations of Danzig, as regards current interest, sinking fund and reserves alike, have been fully maintained. Austria has defaulted on some of the reserve provisions of the 1923 loan, but the bonds, guaranteed by external Governments, stand around par, allowing for accrued interest. Bulgaria, after meeting her earlier obligations in full, remitted only half the April-September payment. Greece paid in full till the May coupon, on which she made no payment. She has since undertaken to pay a sum which will enable 60 per cent. of this coupon to be met. Hungary has defaulted on the reserve provisions of her loan, but interest payments have so far been made and are assured up to and including August of next year. The market position is summarised in the next column.

It will be seen that only one of the loans was issued, in London, on a yield basis lower than 7 per cent., while three were floated to yield 8 per cent. or over. No stock subsequently attained a yield basis better than 6 to 7 per

* Presuming complete service.

cent., even at the top of the market, except the Austrian Guaranteed Loan, with its special security. This loan is clearly regarded as in a class by itself to-day, when all others on which default has not occurred are, in fact, standing at what the market would regard as only a little better than "default levels."

What is the present position of a hypothetical investor who expended, say, £10,000 in subscribing to each of the eight loans, on their first flotation? The next table supplies an answer:—

Loan.	Amount Expended in Cash. £	Present Cash Value.* £
Austrian 6% Guaranteed	10,000	12,350
Hungarian 7½% State	10,000	5,050
Greek 7% Refugee	10,000	4,080
Bulgarian 7% Settlement	10,000	2,830
Estonian 7% (Bank. and Curr.)	10,000	5,930
Danzig 6½% (Tobacco Monopoly)	10,000	5,500
Greek 6% (Stab. and Ref.)	10,000	3,300
Bulgarian 7½% Stab.	10,000	2,920
Total	80,000	41,960

* On ex-interest basis, at lower market quotation.

Such an investor would be confronted with the formidable capital depreciation, at present market prices, of about 47½ per cent., equal to 47½ per cent. on his £80,000, in round figures, equal to 47½ per cent. on his total cash investment of £80,000. This figure is based on the lower official quotations in the London Stock Exchange List in every case, and may slightly exaggerate the total depreciation, as the quoted "margin" in most instances is abnormally wide. On the income side, however, our hypothetical investor would have fared comparatively well before this year's crop of defaults began. From start to finish he would have received £36,000 gross in interest. It is not feasible to make any direct comparison between aggregate interest receipts (which, in any case, are subject to British taxation) and capital depreciation. Further, the experience of investors who bought or sold at intermediate dates may vary widely from that of the imaginary holder in the above example.

Undoubtedly, investors, in retrospect, may perceive that investment, say, in British Government stocks would have paid them better. They took a risk, and, if matters had turned out differently, might well have profited by buying admittedly more speculative stocks. The crisis, however, has come, and the risk which justified the high rates of interest has matured.

Certain fundamental facts require to be borne in mind. As a result of the fall in prices, the burden of payment represents, in every case, about twice the volume of exports that was contemplated. The depression has greatly reduced, not only the value, but also the volume of the debtors' exports. These facts result from the impact of world conditions, and not from any defect in the League's schemes or in their execution. The arrangements recommended to investors by the League Loans Committee are, in these circumstances, eminently reasonable. As and when conditions improve better arrangements will, of course, be made. In the meantime, the benefits to Europe, as a result of the making of the League loans, are tangible and permanent. The fate of whole populations was made incomparably happier for several years by virtue of their flotation, and it is still substantially better than if they had never been undertaken.

The tone in practically all markets was reactionary, but whereas last week's recession was largely technical, this week's reflected a perceptible worsening of sentiment. Gilt-edged stocks were affected, partly by a continued state of indigestion as regards the Three per Cent. Conversion Loan, but chiefly by anxiety over the American Debt position, accentuated by the fiery breathings of some members of Congress. Industrial equities suffered from lack of interest rather than actual selling, though the market generally was more disposed to listen to those who urged that an average yield of 4½ per cent. on British Ordinary shares left little scope for a further rise in values. During the week the "British Government" Index of *The Financial Times* showed a decline of 1.3 per cent. and the "Ordinary Share" Index of *The Financial News* a fall of 1.0 per cent. The speculative markets were influenced by the less favourable trend of commodity prices, and the absence of support from the Continent. Immediate prospects in all markets must remain uncertain until America's decision, one way or the other, has been published and assimilated.

The gilt-edged position is discussed on page 943. Selling this week was not confined to new Conversion Three per Cents., but was particularly evident in the case of Funding Loan and Assented War Loan. Long-term India stocks declined sharply. Now South Africa scrip remained on offer, but Australian issues were relatively steady. Foreign bonds were dull and heavy. Brazilian issues were marked down on adverse political reports, though little liquidation occurred. Selling of Japanese bonds was more or less continuous, statements regarding a huge Budget deficit (discussed in our last week's issue) being, unfortunately, confirmed by later information. German bonds were lower on the uncertain political situation and the unexpected strength of official hostility to the French disarmament proposals.

The dullness of home rails was attributable more to general market depression than to the slightly less favourable showing of the week's traffic figures, which remained above the average for the previous month. Little business was done in foreign stocks, a few scattered sales of Argentine issues finding the market unsupported. Canadian Pacific continued slowly to give ground, partly in sympathy with the trend of prices for American railroads.

Trading in industrial shares was quiet, demand from small investors being highly selective, while professional dealings were hesitant. Tobacco shares were lower on the reported decision of the Imperial Company to introduce a coupon scheme. Brewery shares remained undecided, the market abandoning all hope of early profits from exports to a "wet" America. Electrical shares, normally one of the firmest sections of the market, tended

LONDON NEW ISSUE PRICES.

This table will be found on page 949.

(Continued from page 939.)

fractionally to lose ground, prices being regarded as discounting all possible increases in earnings for some little time. The passing of the P. & O. dividend (discussed in a Note on page 943) caused a decline of 2s. 6d. in the company's deferred stock units, and unfavourably affected the whole market for shipping shares. "International" and "Transatlantic" issues were irregular, with a downward trend, neither America nor the Continent being inclined to give much support. Rayon shares moved within narrow limits, but cotton textiles were depressed by the decision of the Fine Spinners to pay no interim dividend. Bank shares were dull, and insurance shares mainly unchanged.

Rubber shares were marked down, dealers showing a strong disinclination to put even small lines on their books after the publication of American questionnaire figures for October showing a further contraction in rubber consumption and a rise in stocks. Tea shares were quiet, but, if anything, harder, although no reliable news was forthcoming regarding the progress of the restriction negotiations. Dealings in oil shares were on a small scale, professional operators being apprehensive of possible public selling if American crude oil production continued to increase.

The public showed little interest in mining shares, apart from a slight amount of buying of Kafir favourites from Paris. Randfontein reached their highest level since 1911 on news that rich ore had been encountered, but Brakpan were lower on the announcement of a new issue. Among the finance houses, Gold Fields were in fair demand. Copper shares were dull after a fall in the metal and the announcement of the postponement of the Ottawa copper duty. The report of Roan Antelope, covering an initial year's production, was well received. Paris showed an increasingly conservative attitude as regards "Chartered." London Tin fluctuated fairly widely before the opening of dealings in British Tin Investment, whose objects are described on page 946. West Australian shares were quiet, Wiluna remaining out of favour.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Events have confirmed the diagnosis of the more conservative section of the market, which remained unmoved by pre-election talk of another speculative recovery. Towards the end of last week, indeed, business increased, and prices rose sharply, but sentiment has since become much more reactionary. The volume of business has contracted to the levels prevailing before the midsummer rise, the number of share transactions having fallen below the million mark on more than one day this week. Two influences are making for caution among professionals and public alike. The first is uncertainty over the action of Congress on the European Debts question. The financial community generally endorses the views of a group of economists, headed by the President of General Motors, who have urged the revision, though not the cancellation, of War Debts in the interests of American foreign trade and prosperity. Pending next week's "informal" conversations between Mr Hoover and Mr Roosevelt, the intransigent attitude of a number of Congress members is producing a state of damaging uncertainty. A second cause of weakness is the unsatisfactory trend of many "pointers" of the internal business situation. In some industries the improvement of the last few weeks is being approximately maintained. The October cotton consumption figures, for example, were the highest since 1930. Car loadings, however, for the week ended November 5th showed, at 588,200, a decrease of 29,300 as compared with the previous week, and of 128,700 as compared with the corresponding week of 1931. Considerable selling of railroad stocks followed the announcement of the figures. Steel production remains about 19 per cent. of capacity, but demand is poor except in the automobile and building branches. The returns of electric power production show a normal seasonal recession. The Oil Conservation Committee of the American Petroleum Institute has estimated that consumption for the six months to March next will be 12 per cent. below that of the corresponding period of 1930-31, the inference being that further efforts to restrict production may be necessary. The Government credit situation may become an increasingly important stock market factor in the next few weeks. It is essential that the large Reserve Bank holdings of Government bonds should be reduced at the earliest possible moment by public long-term offerings. The present tendency is to defer action, in view of the probable effect of large-scale operations on present bond prices. It may be dangerous, however, to wait until the new Administration takes office, and, presumably, sets about the task of improving the Treasury position and creating a stronger Federal Reserve situation.

PARIS.

The Paris Bourse opened with buyers reluctant to operate pending some indication of American policy on War Debts. Business was small and price movements irregular. The Government's Budget proposals were adversely criticised, brokers asserting that measures to check and control revenue from market operations would restrict business. Rentes sagged in the absence of normal demand, and industrials were uncertain. Internationals were weak at the start, but improved later.

	Nov. 10, 1932.	Nov. 11, 1932.	Nov. 12, 1932.	Nov. 14, 1932.	Nov. 15, 1932.	Nov. 16, 1932.	Nov. 17, 1932.

Royal Dutch	14,700	15,550	14,915	149	153	152	152

BERLIN.

The Bourse was quiet and prices were little changed. War Debt uncertainties had no influence on the market, which was preoccupied with the domestic political situation. Among leading shares, Ise Genusse fell 1½ to 95½ and Leopoldgubbe ¾ to 33½. Dye Trust were weak. The Bourse was closed on Wednesday.

	Nov. 10, 1932.	Nov. 11, 1932.	Nov. 12, 1932.	Nov. 14, 1932.	Nov. 15, 1932.	Nov. 16, 1932.	Nov. 17, 1932.

Norddeutscher Lloyd	17.75	18.00	17.30	16.80	16.80	16.25	16.25

AMSTERDAM.

The Bourse opened with a firm tone, the British and French War Debt Notes creating a favourable impression. Business was small, but prices were generally higher. Reaction, however, speedily set in following the depreciation of sterling and unfavourable New York cables. Sugar shares were on offer on less favourable reports regarding the cartel negotiations in Java, Amsterdam Trading falling 4½ to 179½. Royal Dutch shares were neglected, but became steadier after declining 3½ points to 148½ on offers from Paris. Unilever and Philip's Lamps reacted. The market closed listless, with business at a minimum.

A Christmas Gift?

Deferred Assurances for Children with valuable options

The Special Scheme of this Institution enables a parent or guardian to secure an attractive provision for the future of a child at very low cost.

An Annual Premium of £10 secures for a child age 1 next birthday an Assurance of £1,596, to come into force at age 21.

Full particulars will be sent on application.

The Scottish Provident Institution for Mutual Life Assurance

OTHER CENTRES.

The minor European Bourses were irregular. Budapest was quiet, Milan had a dull and heavy tendency, and closed weak. Brussels was fairly active at the outset, but reacted later. Frankfurt was listless, prices showing a weaker tendency all round.

INVESTMENT NOTES.

Gilt-edged Recession.—The gilt-edged market continues to show evidence of indigestion. The new 3 per cent. Conversion Loan, after recovering to ½ discount at the beginning of this week, fell again to 2 discount, and at the moment of writing is 7½ discount. The "stags" have not yet been eliminated, and the uncertain outcome of the War Debts question, by restraining buyers, has added to the irregularity of the market. It is not believed that there has been any change in the basic conditions which govern prices in the gilt-edged market. Bank deposits and investments continue to rise and advances to fall, although the pace of the decline slackened perceptibly last month. Short-term money remains as cheap as ever, and signs of a revival in world trade, sufficient to bring about a rise in the long-term rate of interest, are conspicuous by their absence. The technical disturbance caused by the excessive "staggering" of the 3 per cent. Conversion Loan should be remedied by December 1st when the 52½ per cent. call on this loan is payable. Seeing that the gilt-edged market receives more in maturities than it has to pay up in calls on new loans on December 1st, there is some hope that conditions will then permit of a general recovery. While buyers may temporarily be deterred in the event of unsatisfactory news from Washington on the Allied demand for a further War Debts moratorium, it is clear that the pressure of cheap money must ultimately bring about a recovery. Whether this will be sufficient to correct the existing disparity between the price-level of the long-dated stocks and that of 3 per cent. Conversion Loan remains to be seen. It is much too early, as yet, to condemn the Government for miscalculating the price of its last Conversion operation.

P. and O. Position.—The £1 units of Peninsular and Oriental Deferred stock fell 2s. 6d. to 15s. 3d. on Wednesday, on the passing of the dividend for the year ended September 30th. In the previous year the company

earned and paid 6 per cent., free of tax. The British India Steam Navigation Company has reduced its ordinary dividend from 8 per cent. to 2½ per cent., both free of tax, while the Orient Steam Navigation Company's distribution will be nil against 5 per cent. The decisions presage the publication of accounts showing a considerable decline in earnings, of which, doubtless, an adequate explanation may be found in the depression of shipping in general and the difficulties of Far Eastern and Australasian trade in particular. Whether the decision has a wider significance may appear in due course. The P. & O. remains, throughout the East, the symbol of Britain's peculiar maritime strength, and the name of the late Lord Inchcape will be indelibly associated with the record of its high enterprise and steady progress during a crucial period. It was as recently as 1910 that the company started the policy of outside acquisitions which by 1920 had given it ownership or control of the Blue Anchor Line, British India Steam Navigation, New Zealand Shipping, Union Steam Ship of New Zealand, Hain Steam Ship, Orient Steam Navigation, and General Steam Navigation. Throughout the next decade its disclosed profit balances remained remarkably steady, once the post-Armistice depression had been surmounted, but the accounts were never informative, and profits were fully divided, although large sums were, in fact, set aside for redemption of debenture stock, £7,000,000 of which is repayable by 1940. A few years ago, when the difficult financial position of the Royal Mail group first became apparent, Lord Inchcape disclosed certain figures showing that P. and O. internal finances were indubitably strong, and recent accounts have been somewhat more detailed than their immediate predecessors. An issue of £1,000,000 of deferred stock, towards the end of 1927, brought in £2,000,000 of money, and provided the company with valuable new tonnage. The conservative valuation at which the fleet was carried in its books was exemplified by the transfer of £2,000,000, two years ago, from insurance fund, to write down values. Shortly after the new deferred stock issue, however, depression in general trade in the East became noteworthy, and disclosed earnings, after depreciation, declined from £1,316,000 in 1928 to £948,000 in 1931. Last year, the requirements of fixed-interest stocks (including debenture redemption) absorbed over 70 per cent. of available earnings, and the market realised that any further decline in earnings would, necessarily, fall directly upon the deferred stockholders. The company's liquid position will undoubtedly be of the greatest assistance in the present difficult time. The last balance sheet showed a holding of liquid investments of £7,822,000, including £6,679,000 of British Government securities, and a surplus of liquid assets over current liabilities of £6,054,000.

"Rothermere" Group Financing.—The "funding" of the provincial newspaper commitments of the Rothermere group has been carried through according to plan. As we explained in the *Economist* of November 5th last (page 846), £3,000,000 5½ per cent. debenture stock of Northcliffe Newspapers, Limited, the group's provincial subsidiary, is being paid off, and Associated Newspapers, Ltd., and Daily Mirror Newspapers, Ltd., are being released from their guarantee of interest and principal. The greater part of the assets of Northcliffe Newspapers is being taken over by Associated Newspapers. The first part of the necessary finance was provided by an issue of £1,500,000 Associated Newspapers 4½ per cent. ten-year notes which were sold at 98½. The second step was the allotment to the Daily Mail Trust of 1,500,000 5s. deferred shares of Associated Newspapers, taken by the Trust at 18s. The Trust, in turn, has issued this week £1,200,000 in 5 per cent. cumulative £1 preference shares at par, out of £1,500,000 authorised at a meeting on November 11th. The Trust is raising additional capital by an issue to ordinary shareholders of 251,852 new ordinary £1 shares, in the ratio of one in eight, at 25s., against a current market quotation of 87s. 6d. The re-

maining funds for the paying off of Northcliffe Newspapers debenture stock will be provided out of the group's own liquid resources. Thus the legacy of the so-called "provincial war" has been liquidated at minimum cost, without the necessity of charging any of the group's assets—an eminently successful operation.

S. & M. Preference Scheme.—A scheme affecting the rights of preference shareholders has been put forward this week by S. & M. (1928), Limited, a mantle and fur business founded in 1900 and refinanced in 1928. The public holds £125,000 of preference capital, in 10s. shares, entitled to an 8 per cent. cumulative dividend, and a further 2 per cent., non-cumulative, out of one-third of surplus profits after the ordinary have received 8 per cent. The ordinary capital of £100,000, in shilling shares (which alone carry normal voting rights), is held by Swears and Wells. Another of the latter's subsidiaries, Henry Dodgson, Limited, recently agreed to a scheme under which preference shareholders gave up their participating rights in return for a guarantee of their 8 per cent. cumulative dividend for eight years by Swears and Wells. The S. & M. scheme follows the same lines, but is more severe, the preference shareholders being asked not only to give up their participating rights, but to consent to a reduction in their cumulative dividend from 8 per cent. to 6 per cent., and to waive two years' arrears of dividend, in return for an eight-year guarantee by Swears and Wells of their reduced dividend rate. The offer does not appear reasonable from the preference shareholders' viewpoint. The £10,000 required for a cumulative 8 per cent. dividend has been earned, with something to spare, in every year since the company's formation as a public concern. There is no suggestion that it will not be earned in the future, or that the preference shareholders' participating rights have permanently lost their value. The retention in the business of the amounts earned and available for preference shareholders in the last two years has presumably helped the company, and it is unfair to penalise the shareholders on this account. The benefits of the sacrifice demanded from these holders will inure entirely to the ordinary capital, of which Swears and Wells will hold 90 per cent. The ordinary capital is to be written down by 50 per cent., but this does not affect its equity rights in the least. Preference shareholders appear to be entitled to a clearer statement of the advantages they are likely to obtain in compensation for their very real sacrifices.

Gramophone "Combine's" Problems.—At the annual meeting of Electric and Musical Industries, on November 10th, the chairman, Mr Alfred Clark, spoke frankly of the trading problems of the company, whose financial results were discussed in an *Economist* leading article last week. Mr Clark pointed out that the international organisation of the group made it particularly vulnerable when faced with universal trading restrictions and widespread depression. At the time of the merger of the Gramophone Company and Columbia Graphophone there were fifty assembly units owned by the two companies or their subsidiaries, situated in nineteen countries, two being in Australia, three in South Africa, seven in Asia and thirty-eight in Europe. The factories as a whole, consequently, depended for economical production on a considerable amount of export business. Difficulties were encountered in the form of tariff restrictions and quotas, reduced purchasing power abroad and the frequent insistence upon cash payments in the wholesale trade. After the merger, steps were taken to effect manufacturing economies, but the entry of the combine into radio production necessitated the partial replanning of existing factories. The concentration of manufacture had involved expenditure—it was hoped of a non-recurring type—which had had to be charged to trading account. The whole speech was a significant commentary on the difficulty of carrying out the rationalisation of large groups in any industry during a period of intense trade depression.

Brewery Reports—Bass and Peter Walker.—According to our last quarterly industrial profits survey, twenty breweries whose reports appeared in the three months ended September 30th suffered an aggregate decline in net profits of 24.1 per cent. The Bass results, showing a fall of under 15 per cent., may therefore be considered comparatively satisfactory. Considerable savings have been effected in a number of items. Earnings would have practically covered a repetition of last year's 17 per cent. ordinary dividend, but the directors, conservatively, recommend a reduction to 14 per cent.

	Year to June 30.

* Tax free.

Peter Walker (Warrington) received only £180,000, against £300,000, from Peter Walker, Warrington and Burton, and profits are consequently reduced from £523,337 to £344,236. After payment of directors' fees, debenture interest, and preference dividends, £160,000, the distribution of an ordinary dividend of 3 per cent., against 7½ per cent., reduces the carry forward from £141,068 to £104,359. Bass £1 ordinary shares stand at £13, to yield £4 16s. 6d. per cent. tax free. Peter Walker £1 shares are quoted at 10s. 6d., to yield about £6 per cent. less tax.

United Steel Companies.—Slightly improved results are shown in the latest accounts, despite another year of "extraordinary depression." After the inclusion of gross dividends on shares in subsidiaries (less reserve for losses), but before depreciation, there is a trading profit of £330,289, against a figure for the previous year of £180,791, when dividends received were shown net. The sum of £175,000 is set aside for depreciation, but the auditors again query its adequacy. A net balance of £12,355 is added to the carry-forward.

† Being balance of profit for year to June 30, 1930, and reserves no longer required.

Demand throughout the world has continued to fall to "almost incredible" levels, but the company has, nevertheless, increased its volume of trade, though the value of sales was lower. The combined trading profit of the company and its subsidiaries (including associated companies) increased by £106,676. The iron and steel import tariff, in force since April, has so far had little effect. The report of Steel Industries of Great Britain, which controls United Steel, shows a loss of £10,661 for the

year, and a total debit balance of £17,097 goes forward. The dividend on the £3,299,467 6½ per cent. cumulative preference shares of the company will not be paid on January 1, 1933.

Insurance Share Index.—Insurance share values, which frequently move in sympathy with those of gilt-edged stocks, have shown a rising tendency of recent weeks, after a slight setback during the summer months. This is exemplified by our index, given below, which sets out the history of an imaginary investment, in 1913, of £1,000 in the ordinary shares of each of 25 leading companies. The figures are based on the mean of the highest and lowest prices in each year, except in the case of the last four columns, which relate to the middle market prices on the dates specified. In all cases where an issue of bonus shares has been offered, due allowance has been made by assuming that the rights are sold and the proceeds utilised to purchase an additional holding in the original shares.

SHARE INDEX.
(1913 = 1,000 in every case.)

Only two shares—those of the Gresham Life and the Life Association of Scotland—have fallen in value over the first nine months of this year. During the depressed period which followed the country's departure from gold last year, the average yield on insurance shares reached the level of over 6 per cent. Even on September 30th last, according to the Actuaries' Investment Index, the yield was still well over 4½ per cent. Though it is anticipated that trading profits this year are unlikely to show much, if any improvement on those of 1931, the greater portion of last year's depreciation in investments has already been recovered. All things considered, the outlook for the life offices to-day is appreciably brighter than at any time in the past twelve months.

Berlin Stock Exchange Conditions.—The German capital markets have become much more animated during the last few weeks, writes our Berlin correspondent. As late as last summer it could still be maintained, with every justification, that one of the most important prerequisites of improvement was still lacking. In spite of the decline in economic activity, and the consequent release of capital, even the best German rentes were still on a 10 per cent. yield basis. During the last three months this figure has been reduced to 8.5 per cent. This is still unduly high, and makes new issues impossible, but the

THE PACIFIC ERA.

Oxonian, 32, with AMBITION, good brains and personality, wants position in N. American business. 11 years' valuable experience. Will accept nominal salary at start. Write Box 100. The Economist, 8, Bouverie Street, E.C.4.

continuance of the disposition to purchase, which is shown by large sections of the population, is evidence that capital is no longer afraid of every form of long-term investment and that a certain confidence is developing in political and economic stability. The following table shows the extent of the recent rise in some of the most important German rentes:—

	End July.	Early October.	Early November.
Reich loans—			
6% long term inscribed	56½	63½	70
6% tax-free, 1929	67	72	87
5½% Young loan	58½	66	71½
Munich loans—			
Average	46½	57	61
6% Munich	51½	59	66½
Mortgage bonds 6%—average ...	70	75	77
Industrial loans—			
6% Vereinigte Stahlwerke	40½	51	52½

The difference between the yield on long-term loans and short-term money rates is still unprecedented. Savings bank and bank deposits subject to two months notice yield only 3½ per cent. and the acceptance rate is 3½. The lateness of the rise in the rente market and its very modest character is due primarily to the fact that the market was uneasy for months as to the plans of the Government, and is still very uncertain that all ideas of a compulsory reduction in interest rates have been finally abandoned. If, however, the market is not disturbed by any further interference, a continuance of the rise is to be anticipated. In contrast to the rente market, the share markets have not recently shown a large turnover. Most rates declined, though the extent of the decline was relatively small in comparison with the rise in August and September, and the declines on most foreign stock exchanges. The latest reports on the economic position are favourable, but the idea prevails on the Stock Exchange that the improved prospects of German industry are already discounted in the present quotations. Immediately after the elections, however, there was a somewhat larger demand for shares, as the results were regarded optimistically by the Stock Exchange.

Anglo-Spanish Construction Company.—The chairman of this company indulged in plain speaking at last week's meeting of debenture holders. Sir Evelyn Wallers declared that the company, since its inception in 1924, had been the object of persistent political attacks by opponents of the Dictatorship. The formulation, at long last, of definite charges now enables a reply to be made. The Commission of Responsibilities—a committee appointed shortly after the inauguration of the new republic to inquire into and review the acts of the Dictatorship—asserts that the concession given to the company in 1924 was illegal and prejudicial to the State, and was obtained by irregular methods. A detailed reply, handed to the Government by the Santander-Mediterranean Company, contends that the charges have no basis in law or equity. The concession to build a railway of about 415 kilometres was granted in 1924 and modified in 1927 by the sovereign authority in Spain at the time. The cost of building the railway, it is declared, compares very favourably with that of similar lines in Spain. Its commercial usefulness is proved by the progressive increase in its takings. While allowance may be made for the disturbed political atmosphere inevitable after all far-reaching constitutional changes, it is inconceivable that the Spanish Government will not see justice done to the company's interests, for no nation to-day can afford to countenance any action which, rightly or wrongly, may be interpreted as a reflection on the sanctity of international contracts. A settlement eminently fair to both parties should be discoverable by friendly negotiation.

Burma Corporation.—In the annals of this important silver and base metal producer the year ended June 30th last was a particularly eventful period. It witnessed, on the one hand, Great Britain's departure from the gold standard and, on the other, the quotation of lower prices for certain metals than were ever previously recorded.

The effects of metal market developments were more than offset by general economy, increased technical efficiency and restriction in the scale of operations. The latter played its part in the saving of £424,440 mentioned in the report. We summarise the results of the past three years:—

	1929-30.	1930-31.	1931-32.
Ore mined	500,590	462,180	362,780
Yield refined lead	79,270	76,520	70,560
Yield fine silver	7,225,880	6,512,780	5,842,790
Working profit	1,059,560	462,630	522,520
Sundry revenue	81,970	72,180	43,310
Depreciation, &c.	225,650	179,930	149,240
Taxes and duty	222,270	189,780	200,850
Net profit	693,600	165,100	215,440
Per cent. earned	6.8	1.6	2.1
Per cent. paid (free of Indian and British tax)	8.1	1.9	2½
Reserve	235,640	202,760	151,750
Carried forward	71,650	46,320	7,860

For the past session two distributions of two annas each were made, as against one of three annas in respect of 1930-31. By this payment the carry-forward was reduced to an almost nominal amount, but in view of the improvement in metal prices since June the directors felt justified in pursuing a liberal policy. The reduction in the reserve fund arises from a transfer to income-tax reserve to make good a deficiency arising through advance in the rate of tax payable. Investments of £552,900 at market quotations show the substantial increase of £177,200. Of the total, 86 per cent. comprise Government securities, the value of which has appreciated considerably since the date of the balance sheet. The surplus cash assets amount to nearly £400,000. At 4,126,200 tons the ore reserves indicate a decrease of 107,000 tons; the total still represents over eleven years' supply for the mill at the 1931-32 rate of extraction. On the basis of four annas dividend Burma Corporation shares at 10s. yield no more than approximately 3½ per cent., free of both British and Indian income tax. Holders await a sustained recovery in metals.

Roan Antelope.—Our mining correspondent writes:—Opinions regarding the report issued this week will depend largely upon the angle from which the view is taken. In some respect the results must be regarded as distinctly satisfactory. The official estimates in regard to production cost and other matters have been more than fulfilled. Despite restriction of output to about one-third of capacity the all-in cost per ton of blister delivered to European consumers in the quarter ended March 31st last averaged only £29 4s. per long ton. For the succeeding session the ratio was reduced to £25 7s. and in the September period to £23. The current quotation for standard copper (a purer variety than blister) is over £33 per ton. In the ten months of production to June 30th the company made an operating profit of £189,150. Administration expenses and loan interest absorbed £32,850; debenture interest £87,500. After the allowance of £100,000 towards depreciation, a balance of £30,760 remained to go forward. So far so good, but it may be argued that even these results represent a poor return upon the employment of nearly three millions of share and debenture capital, and there is little prospect of any appreciable increase in the scale of output for some time to come. The share are quoted at about 130 per cent. premium.

British Tin Investment Corporation.—Particulars have been published of a private issue of 254,808 10s. ordinary shares at 10s. 6d. by the British Tin Investment Corporation. This company was promoted by the British-American Tin Corporation to invest in shares and debentures of tin-producing companies. It acquired from British-American Tin Association the major part of that company's assets, consisting of large holdings of representative tin-producing company shares, together with a substantial holding in Consolidated Tin Smelters, which smelts and

markets about 50 per cent. of the world's output of tin. The purchase price of the assets acquired was £875,000 satisfied by (1) the allotment of 1,750,000 ordinary shares of 10s.; (2) the liability to discharge a debt of £127,404 in cash, together with the promotion expenses of the vendor company; and (3) options at par over 683,282 ordinary shares of the company until December 31, 1934. The debt liability was later satisfied, by arrangement with the creditor, by the allotment of fully-paid shares to the nominal amount of the debt together with an option at 10s. 6d. over 50,941 ordinary shares up to December 31, 1934. The company, after its new issue of shares is fully paid-up in December, will have about £130,000 cash available for investment. Presumably those associated with the company, including such well-known names as the British Metal Corporation, New Consolidated Gold Fields, London Tin Corporation and Patino Mines, consider that the time is ripe for the purchase of tin-producing company shares. They may or may not be correct. It is true that the demand for tin has lately been increasing, and that, in view of the rigid restriction scheme which is at present in force under Government control, covering more than 85 per cent. of the world's total output, the prospects of a rise in tin prices appear to be more promising. The increase in the deliveries of tin last month is shown in the following statement:—

	(Tons).	1932.
		September. October.
United Kingdom	586	587
Dutch	278	368
United States	2,680	3,130
Continents	898	1,167
Other Countries	380	461
	4,822	5,713

There was a slight reduction in the visible supply, including carry-over in the Straits Settlements, from 56,297 to 55,948 tons. The present price of tin is £154 17s. 6d. per ton, as compared with £117 10s. at the end of June, 1932, and £127 5s. a year ago. The British-American Tin Corporation paid no dividends and British Tin Investment has a good deal of leeway to make up. The shares are quoted in the market at 11s. 6d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-Spanish Construction, Dalgety and Company, North Charterland Exploration, Birmingham Small Arms, and Trinidad Leaseholds. At the meeting of North Charterland Exploration Company, Mr H. B. Spiller protested against the action of the Colonial Office in regard to the company, and moved a resolution, which was carried unanimously, demanding that the enquiry should be reopened. We hope to deal with this matter in a later issue of the *Economist*. At the annual meeting of the Birmingham Small Arms Company Mr A. H. Pollen told shareholders that in order to find a new load for the Birmingham factory the company had used the Daimler fluid-flywheel transmission as the basis for the new 10 h.p. B.S.A. car, which was introduced at the last Olympia Show, and would be ready for sale in the New Year at a price of £240. We deal with the case of the Anglo-Spanish Construction Company against the Spanish Government in an Investment Note on page 946.

CAPITAL ISSUES.

ACCORDING to an official statement this week, the authorities have no present intention of relaxing restrictions on foreign issues in London, but the position as regards domestic "optional conversions" is under consideration—not out of due time, in view of the facility with which

the intentions of the authorities are being over-ridden. Although the Gilt-edged market has remained dull, a new trustee issue has been made this week by the *Metropolitan Water Board*, whose (E) Stock, 1953-73, offered subscribers a flat yield of £3 4s. 6d. per cent. and a redemption yield, to the latest date, of £3 6s. 4d. per cent. This issue will appeal to trustees desiring a relatively long-term stock with a definite redemption date, rather than a generous income. Of the two industrial issues of the week, the *Daily Mail Trust* Preference offer is discussed in a Note on page 944. Annual dividends should be well covered. *Prices Tailors*, a multiple "Fifty Shilling" tailoring business, offered 7 per Cent. Cumulative Preferred Ordinary shares whose dividends, taken in conjunction with those of the existing Preference shares, are twice covered by average profits for the last three years. The company's business is profitable and progressive, but its capital, after the present issue, has a top-heavy appearance, £750,000 of Preference and Preferred ranking in front of only £175,000 Ordinary capital. Particulars have been announced of three Stock Exchange "placings," the most important of which—that of the *British Tin Investment Corporation* is dealt with on page 946. *Central Commercial Properties* is a freehold and leasehold property investment company which was privately started in November, 1927. The prospects for Ordinary shareholders depend almost entirely on the results obtained from properties at present vacant or under construction. The public statement of the *General Consolidated Investment Trust*, in connection with a Debenture stock "placing," was singularly uninformative. Finally, repayments and "conversions" announced during the week were varied and extensive, the authorities concerned ranging from the Belfast Corporation and the Government of Siam, to the Distillers Company and Bryant and May.

PUBLIC OFFERS.

Metropolitan Water Board.—Issue of £2,000,000 3 per cent. Metropolitan Water "E" stock, 1933-73, at £93 per cent. Trustees are authorised to invest in this stock. The proceeds of the issue will be applied to meet bills falling due and to new expenditure. If not previously redeemed, the stock will be repaid at par on July 15, 1973, but the Board reserves the right, on three months' notice, to redeem the stock in whole or part on or after July 15, 1953. The total outstanding debt of the Board is £53,810,000, for which full redemption provision is being made.

Daily Mail Trust.—Issue of 1,200,000 5 per cent. cumulative preference shares of £1 each at par. In case of a winding up, holders will be entitled to a return of 22s. per share. The trust holds 53 per cent. of the deferred shares of Associated Newspapers, whose profits were: 1929-30, £1,108,573; 1930-31, £907,509; 1931-32, £506,895. The issue of preference shares, with issue of 251,852 ordinary shares at 26s. per share, will meet the cost of 1,500,000 deferred shares of 5s. each of Associated Newspapers, which the company has contracted to acquire. The profits of the Trust were: 1929-30, £470,505; 1930-31, £481,532; 1931-32, £232,128.

Prices Tailors.—Issue of 500,000 7 per cent. cumulative preferred ordinary shares of £1 each at par. The Standard Industrial Trust has been authorised to receive applications. The object of the issue is to provide for completion of the purchase of 106 shops and other assets from Stewarts Clothiers and additional working capital. The company was incorporated in October, 1928. Net profits after depreciation were: 1927-28, £54,667; 1928-29, £75,754; 1929-30, £83,524; 1930-31, £114,677; 1931-32, £118,598. Preference share dividend requires £20,000 per annum and the dividend on the present issue £35,000 per annum.

STOCK EXCHANGE "INTRODUCTIONS."

British Tin Investment Corporation.—Issued capital, £1,180,712. The company was incorporated in April, 1932, to invest in shares and debentures of tin-producing companies. The corporation acquired the major part of the assets of the British-American Tin Corporation, which

in 1930 made a profit of £1,598 and in 1931 a loss of £1,425. Messrs Laing and Cruickshanks and Messrs Vivian Gray agreed to underwrite an issue of 254,808 10s. shares in consideration of a commission of 6d. per share.

General Consolidated Investment Trust.—Particulars of an issue of £300,000 4 per cent. redeemable debenture stock, 1953-73, which was sold at 91 per cent., less ½ per cent. commission. The stock will be repaid at par on January 1, 1973, but the company reserves the right to repay the whole of the stock on January 1, 1953, at 105 per cent. on three months' notice.

Central Commercial Properties.—Issued capital, £129,972 in 129,972 7 per cent. £1 cumulative preference shares and £70,837 in ordinary shares of 2s. each. The company was converted into a public company in January, 1929, and its object is to deal in freehold and leasehold property. Reserve in 1930-31 was £22,602; in 1931-32, £18,069.

FORTHCOMING ISSUES.

Bovril, Limited.—Lord Luke of Pavenham, speaking at a meeting of preference shareholders of Bovril, on Tuesday, said that the new 6 per cent. preference shares would be offered at a premium of about 25 per cent., at which price the yield on them would be about £4 16s. per cent. The board hoped to be able to make an offer to the shareholders about the end of December.

Brakpan Mines, Limited.—In connection with the acquisition of the assets of the Witpoort Gold Areas, Limited, the directors of Brakpan Mines, Limited, have decided to issue 102,000 new shares and to offer these to shareholders in the proportion of one new share for each ten shares held. Circulars will shortly be sent to shareholders giving full details of the offer. It is understood unofficially that these new shares will be offered to the shareholders on the basis of about £2 10s., South African currency.

British Greyhound Investment Trust.—It is understood that the offer for public subscription of 1,000,000 ordinary shares of 5s. each at par in the British Greyhound Investment Trust will be made next week by the Cavendish Investment Corporation, 1, Budge Row, E.C.4.

Essex County Council.—It is proposed to make an issue of £1,000,000 3½ per cent. redeemable stock, 1952-72. The sanction of the Ministry of Health is being sought. The Council, at its meeting in London on Tuesday, agreed that the money will be devoted to general county purposes and public services. It was also agreed that six months' notice be given to repay all outstanding mortgages on which interest of 5 per cent. or over is being paid. These mortgages amount to £405,506.

John Blundell.—The directors propose to raise the capital to £475,800 by the creation of 100,000 6 per cent. first cumulative redeemable preference shares of £1 each. The object of the issue is to provide funds for the repayment of loans and for the development of the business.

The Electric Supply Corporation.—This company is contemplating making an issue of ordinary shares to the existing shareholders. The number of shares and the terms of issue have yet to be decided. Existing capital is £500,000, equally divided into £1 ordinary and preference shares.

RESULTS OF ISSUES.

Daily Mail Trust.—The lists for the 5 per cent. cumulative preference shares of the Daily Mail Trust were closed at one o'clock on Monday, the issue having been oversubscribed. Applications from the country were considered until Tuesday morning, and applications from debenture holders or shareholders were accepted until Wednesday morning.

Grosvenor Electric Batteries.—The recent offer to shareholders of Grosvenor Electric Batteries of 20,154 new ordinary shares at par has been considerably over-subscribed. The shares were offered in the proportion of one in four, and while shareholders will get full allotment, excess applications have had to be scaled down. Allotment letters were posted on Wednesday.

Prices Tailors, Limited.—The Standard Industrial Trust announces that the subscription list in connection with the issue of 500,000 7 per cent. (cumulative) preferred ordinary shares of £1 each at par of Prices Tailors, Limited, was closed at 10.45 Tuesday morning, the issue having been oversubscribed. Country applications were considered if received in London not later than first post Wednesday morning.

REPAYMENTS AND CONVERSIONS.

Colonial Loans.—Principal of Grenada Government 4 per cent. inscribed stock, 1917-1942 (£123,870) and St. Lucia Government 4 per cent. inscribed stock, 1919-1944 (£80,264), will be repaid at par on May 15th.

Belfast Corporation.—£2,000,000 3½ per cent. stock, redeemed at par January 5, 1973, for conversion of existing 3½ per cent. stock redeemed January 5, 1938.

Royal Siamese Government.—Redemption at par of 7 per cent. sterling loan, 1922 (£2,000,000) on March 1, 1933.

Distillers Company.—£450,000 4½ per cent. debenture stock (1887 issue). Whole amount to be redeemed May 15, 1933, at 110 plus interest.

Bryant and May.—Meeting called in connection with proposed redemption of £750,000 5 per cent. debenture stock, and issue of a 4 per cent. debenture stock in substitution.

Baltimore and Ohio Railroad.—This company has a further loan of £6,325,000. This will enable the company to offer 50 per cent. in cash and 50 per cent. in bonds to holders of 4½ per cent. issue maturing March 1, 1933.

SOUTH AMERICAN.

THE FINANCIAL AND ECONOMIC POSITION OF AUSTRIA.

The financial and economic position of Austria, which, whilst the World Crisis had reached its peak, seemed almost desperate, now shows, as has been confirmed by the Financial Committee of the League of Nations, in part immediate and tangible signs of improvement, in part symptoms of considerable improvements to be expected—even if the situation, in all its bearings, must still be regarded as "precarious."

It was the collapse of the "Creditanstalt" in May, 1931, which gave the impetus for the Austrian Crisis of the same year, and, in the opinion of many, for the World Crisis. The workings of this have to-day been largely counteracted, and for the rest the lines of a settlement can already be definitely traced out, the speedy arrangement of which would be of extraordinary importance to the re-establishment of public confidence. The State Finances which, in 1931, threatened to fall into confusion, have been so far brought into order that it was possible to balance the Budget for 1932, and that proposed for 1933 should show a small surplus, according to estimates which may be regarded as honest and trustworthy. The Foreign Loan agreed upon in the negotiations at Geneva and Lausanne of July, 1932, will, it is hoped, become available in the course of the present year, and serve to secure the balancing of the public finances and to strengthen the position of the National Bank.

The settlement of the problems arising from the Creditanstalt, the measures taken to restore the State Finances, and the conclusion of the Foreign Loan, may be expected favourably to affect public feeling, which is very essential, as it is proposed to float an Internal Loan to set the crown and seal upon the work already done.

The financial crisis of 1931, owing to the flight of capital which set in on a great scale, considerably affected the currency position in Austria. The metallic cover for notes in circulation went down from 855 millions of schillings to 359 millions of schillings in the five months from May to October, 1931. To protect the stock of exchange remaining, and to secure that industry should be supplied with the necessary raw materials, Austria thought herself obliged to follow the example already set by other countries, and to issue a series of measures which may be summed up as "Regulations of Exchange." These measures, which are often viewed with scepticism alike in theory and practice, were only meant as transitory emergency regulations, and were not proposed to inaugurate any permanent system. Thus the increased confidence of industry during the recent months has been utilised to abolish the control of industry gradually but energetically. This process has not yet been completed.

The Currency Control Regulations have, indeed, for some time fulfilled their purpose and done much to hinder the reduction of the stock of exchange possessed by the National Bank. Nevertheless, in June, 1932, this sank to 192 million schillings, a niveau which made it unavoidable that the provision of exchange for the payment of debts abroad should be suspended. In July, 1932, there was issued an Order in Council to the effect that the equivalent of the obligations arising from debts abroad, for which the National Bank was unable to place exchange at disposition, should be deposited in schillings, according to the official rate, at a closed account with the National Bank. This regulation affects also the loans of the Federal Republic placed abroad, including the loan made by the League of Nations. On August 25th of the current year the Austrian Government declared its firm will to begin again, as soon as possible, with the transfer of exchange to meet its obligations for the payment of debts abroad. Austria's good will to do everything in her power in this connection has also been acknowledged by the Council of the League of Nations.

Austria's efforts have been directed for a considerable time to the improvement of her balance of trade. It has for years been stressed that an adverse balance of a milliard schillings, as has been the case for many years, can be tolerable for no country, and least of all for such a small country as Austria. In the course of long drawn-out international negotiations, Austria has managed to help forward the recognition of the ruinous effects of the rigid use of the most-favoured-nation clauses. The Conference of Stresa has passed resolutions which, for the present, provide open preference tariffs in favour of the Agrarian States. But after Austria had said that she had a series of trade treaty negotiations on hand, with a series of States on a basis of preferences for Austrian industrial and Agrarian products, the conference recommended that Austria should continue these negotiations, and lay their results before the European Commission. Meanwhile Poland, Germany and France, acting in the sense of this recommendation, have already declared their readiness to grant preference to Austria. The negotiations with Hungary and Italy are also likely to produce preferences, although on a different basis. In this fashion it is hoped to achieve such an increase of exports that the deficit on the trade balance will be reduced, and the balance of payments will be so far free from burden as to facilitate the covering of the Foreign Debt Service.

The State Finances.

The Budget for 1933 laid before the National Rat is based in accordance with the example set by most foreign countries, on the principle of net accounts with regard to working expenses and social insurance, instead of the gross estimates provided hitherto.

It envisages expenditure to the amount of 1,324.1 millions of schillings, and income of 1,324.3 millions of schillings, thus giving a surplus of 0.2 millions of schillings. As compared with the current year, there is provided an increase of income of 28.7, and of expenditure 28.5 million schillings. The net increase of expenditure of 28.5 million schillings shows items of increase amounting to 69.8 million schillings (of this 33.8 million schillings go to the National Debt, and 26.3 million schillings for social insurance); against this may be set savings from all other branches of management of, in sum total, 41.3 million schillings. The above-mentioned increase for National Debt is due to the taking over by the Federal Government of bills due to the National Bank by the Creditanstalt.

The Creditanstalt and the National Bank.

It is of the very greatest importance not only to industry, but also to the State finances, that the problems arising from the Creditanstalt should be solved. In connection with this, there are two special points to be considered, namely, the guarantee given to the foreign creditors. An arrangement has been already made with the National Bank which, although it will form a considerable but not intolerable burden upon the Federal Budget, will still provide a feasible liquidation of the debt. The Federal Government has taken over bills issued by the Creditanstalt to the amount of 571.4 million schillings, as its own debt. Of this sum, 171.4 millions have been added to the existing Federal debt to the National Bank (now called Federal Debt A); while the remainder has been written down by the National Bank as Federal Debt B and C to the amount of 200 million schillings in each case. The Federal Debt B (in accordance with the spirit of the Lausanne agreement) is to be liquidated as speedily as possible by an Internal Loan.

After these arrangements had been made the statement issued by the Austrian National Bank ran, as concerns its most important item, as follows:—

	Oct. 15, 1932.	Oct. 7, 1932.	Dec. 31, 1931.	May 15, 1931.	May 7, 1931.
CREDIT					
Cash (including those Exchanges not reckoned as cash)	189.1	189.1	317.6	826.4	855.8
Bills	322.9	861.1	807.8	297.6	69.5
National Debt	A. 200 B. 200 C. 200	91.6	95.6	98.1	96.1

DEBTS:—
Notes in circulation and drawing accounts 1,070.9 1,074 1,311 1,223.8 1,024.6
* All figures are in millions of schillings, and for the purpose of comparison the statements of October 7, 1932, of December 31, 1931, together with those of May 15 and 7, 1931, are added.

Negotiations are still in progress with creditors abroad. At the present time a scheme is under discussion according to which one-half of the demands of the foreign creditors should be liquidated by shares of the Creditanstalt, as well as shares and obligations of a holding society, which should take over the credits of the Creditanstalt abroad. The Federal Government is to cover the other half of these foreign liabilities by means of annuities.

The Position of the Private Banks.

Banking business has suffered severely under the shocks to public confidence which occurred during the previous year, but however, has shown remarkable resisting power. The banks have in general used the profits of the year 1931 in order to reduce their obligations, and in consequence have not paid out dividends. The Niederösterreichischen Escomptegesellschaft showed a clear profit of 3.9 million schillings, which was carried over to new accounts. The Wiener Bank Verein and the Merkur Bank have availed themselves of a law passed in the summer which facilitates the reduction of the share capital for the purpose of writing off bad debts, and have simultaneously proposed an increase of their share capital in the near future.

The Austrian banks ensuing upon the agreement made between the Creditanstalt with its foreign creditors, have twice made similar agreements with their own foreign creditors, and at present negotiations are in progress as to a new arrangement. These particular banks were indebted abroad to the extent of about 60 million dollars, at the time of the crisis due to the collapse of the Creditanstalt. They strained every nerve afterwards to make repayments, thus by the conclusion of the first arrangement in August, 1931, their liabilities did not extend to more than 33 millions, and, up to the present this debt has been reduced to about 15 million dollars.

Foreign Trade.

The foreign trade relations, the principal side of which has already been discussed, may be illustrated by a few statistics given below, dealing with the last two years and the first nine months of the current year.

	(In millions of schillings).					
	January, 1932, to September.	1931.	1930.	1929.	1928.	1927.
In sum total	1,070.7	569.8	2,208.2	1,340.6	2,738.9	1,897.6
Live stock	86.5	8.2	168	17.7	227.3	25.7

COMPANY MEETINGS, &c.

THE ANGLO-SPANISH CONSTRUCTION COMPANY, LIMITED.

DISTRIBUTION TO DEBENTURE HOLDERS.

COMPANY'S CONCESSION—REPLY TO GROUNDSLESS CHARGES.

At the general meeting of debenture holders of the Anglo-Spanish Construction Company, Limited, held at 1 London Wall Buildings, E.C.2, on Friday, the 11th instant, the chairman, Sir Evelyn Wallers, K.B.E., said:—

Since the last ordinary general meeting of the company held on July 5th, £1,000 of the debentures have been bought and cancelled, and the amount outstanding is now £1,902,400.

I intimated in July that the board intended to propose a distribution to debenture holders when sufficient funds were available in London.

Since June last we have been permitted to transfer the modest sum of Pesetas 250,000 per week, and have now £204,000 in hand in sterling. This sum is sufficient to enable us to propose a repayment of 10 per cent. capital, together with interest accrued on that amount at the rate of 6 per cent. per annum. Accordingly, the resolution of which you have received a copy will be put to the meeting in order to give powers to the company to make distributions when justified by the financial position.

ASSETS POSITION.

The assets of your company in Spain have undergone certain changes since I gave an account of them last July. We have continued to sell slowly and with proper regard to the market, the Spanish Government bonds, the last fifth of which was released from the Bank of Spain in May. There now remain unsold approximately 16 per cent. of these bonds; the prices realised have improved so that the decline in value on the figure of Pesetas 52,500,000, at which the deposit of bonds was made, so far amounts to 4.8 per cent. approximately.

As we are at present only allowed to transfer 250,000 pesetas per week, our peseta balances in Madrid have steadily increased during the year. In order to protect as far as possible the exchange value of these pesetas, we have added to our holding of 6 per cent. tax free gold Treasury bonds, redeemable in 1940. The interest on these bonds is paid to us quarterly in gold currency.

In July I gave an estimate of the value of the liquid assets based on three assumptions, namely, that the price of the internal peseta bonds will be maintained until we have disposed of our holding, that the gold bonds will realise their nominal value in gold and that the sterling value of the present equivalent in £ sterling, and that the sterling value of the peseta does not decrease. On that basis the value of the liquid assets represented approximately 66 per cent. of the debentures outstanding. To-day, making the same assumptions, and mainly owing to the fall in the value of sterling, the same calculation would give a slightly more favourable result.

While this is true, it must not be forgotten that, in addition, there is behind the debentures the large amount of £1,750,000, excluding accrued interest, advanced by and owing to the Central Mining and Investment Corporation for financing the completion of the construction contract.

ATTITUDE OF SPANISH GOVERNMENT.

Since the annual general meeting of the company the Santander-Mediterraneo has received nothing from the Spanish Government, either on account of sums owing for construction or repayment of taxes overpaid. These two sums amount to Pesetas 53,000,000 and Pesetas 3,592,000 respectively. The Government has made no attempt to meet the claims of the company in any way, and the reason given for this failure to comply with their obligations has been the inquiry in the origins of our concession by the Commission of Responsibilities appointed shortly after the inauguration of the Republic to review the acts of the Dictatorship. As I have had occasion to say at previous meetings, our railway, since its inception, has been the object of a persistent political attack, and the concession became one of the vaguest and commonest charges against the Dictatorship.

Now at last the Commission of Responsibilities has published in the Press an extract from its report on our concession, although the full report is not yet available. The extract gives no real foundation for the charges made, but it is a satisfaction to the company to have them in black and white, since it affords for the first time the opportunity of completely disposing of them. The Commission asserts:—

- (1) That the concession is illegal.
- (2) That it is prejudicial to the State, or, in other words, uneconomic.
- (3) That it was obtained by irregular methods.

THE COMPANY'S CASE.

In collaboration with their legal adviser in Madrid, the Santander-Mediterraneo Company has prepared and handed to the Spanish Government a detailed reply, which shows in the clearest manner that all three charges are groundless in fact, and have no basis in law or equity. Our case consists of the three following irrefutable facts:—

(1) The concession was granted in 1924 and modified in 1927 by the sovereign authority in Spain at the time under which the whole activity of the State was then carried on.

(2) The cost of building the railway compares very favourably with similar lines in Spain; its commercial usefulness has been amply proved by the progressive increase in takings, and an examination of the map of Spain shows at once its strategic importance.

(3) The Anglo-Spanish Construction Company paid, as is customary, a commission to the original concessionaire. It has not paid a penny in commission to anyone else, and the Santander-Mediterraneo, which is the object of the present charges, has never paid a commission to anybody.

We have made the strongest representations to all in authority on the injustice of the treatment we are receiving, and while allowance must be made for the political atmosphere in a country shortly after a successful revolution, our case is so manifestly just that we cannot contemplate the Government of that important nation refusing to meet the contractual obligations of the State to the British and French capital, which, at great financial sacrifice, has faithfully carried out its side of the contract.

The resolution was carried unanimously, and the chairman announced that, under the powers conferred by the resolution, a payment would be made on December 1st next of 10 per cent. of the debenture capital outstanding and interest accrued thereon to the date of repayment.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED.

SUCCESS OF DAIMLER FLUID FLYWHEEL TRANSMISSION.

The ordinary general meeting of the Birmingham Small Arms Company, Limited, was held, on the 15th instant, at the Queen's Hotel, Birmingham.

The Chairman (Mr A. H. Pollen), having dealt with the balance sheet and accounts, explained that, while the company's interests embraced cars, cycles, guns, machinery, tools, and steel, the magnitude of the business in cars and cycles is now greater than the combined value of the rest of the trade.

During the last few years the Daimler Company has been applying itself to the problem of an improved transmission mechanism, and the result has been to introduce into the car a device which had not hitherto been used in that field at all—the fluid flywheel transmission.

This has produced new effects which have opened a new era in safer motoring through greater ease of driving control. With the Daimler fluid flywheel transmission gear-changing is easy even to the novice, and the fatigue of clutch work is eliminated.

The possession of this new transmission system has paved the way for an expansion in the range of the company's cars, and there has already been placed on the market this year a new small car—the 10-h.p. Lanchester—which is listed at £315 complete, and takes its place alongside the 18-h.p. Lanchester, which was placed on the market last year and achieved definite success.

In addition to these cars, a new 15-h.p. Daimler is about to be placed on the market at a price of £450.

As a result of this programme, said the chairman, the company had been able to interest motor-car dealers throughout the length and breadth of the country, and their contracts had been sufficient to justify the directors in authorising a works programme which is bringing the Coventry factory to its full capacity.

In order to find a new load for the Birmingham factory the company has used the Daimler fluid-flywheel transmission as the basis for the new 10-h.p. B.S.A. car which was introduced at the last Olympia Show, and will be ready for sale in the New Year at a price of £240.

This car, said the chairman, has been well received by the B.S.A. dealers who have so long supported the B.S.A. Company, and their contracts have also justified the authorisation of a works programme which, together with the B.S.A. motor-cycles, pedal-cycles, and three-wheelers, will at an early date occupy the Birmingham factory.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

NORTH CHARTERLAND EXPLORATION COMPANY, LIMITED.

RE-OPENING OF ENQUIRY URGED.

MR. H. B. SPILLER'S PLEA.

A special meeting of the shareholders of the North Charterland Exploration Company (1910), Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London.

Mr H. B. Spiller (chairman of the company) said that in 1923 the Secretary of State for the Colonies concluded an agreement with the British South Africa Company, whereby that company purported to grant to the Crown rights over the North Charterland Company's property. About that agreement the company knew nothing until 1926, their secretaries, the British South Africa Company, remaining silent on the subject. He referred to the Crown's answer and plea to the company's Petition of Right, which asserted that the company knew all about the negotiations, and that the British South African Company were at the time the managers as well as the secretaries. Mr Ormsby-Gore, when giving evidence at the inquiry in June last, did not say that, but he did support the Crown's answer and plea in the statement that he negotiated the 1923 agreement on the understanding conveyed to him by his officials that the company was both financially and as regarded its directorate subordinate to the British South Africa Company, and that that company therefore had authority to bind the company to the terms of the agreement.

The Chairman, continuing, said: "Had this information been conveyed to us, as, of course, it should have been in 1923 and again in 1926, our reply would have been that we knew nothing about the negotiations, that we were in no way subordinate to the British South Africa Company, that they were not our managers, and had no authority whatsoever from our company. That would have made it doubly clear to the Colonial Office that the Crown had been deceived and that we had been defrauded."

"Why the Secretary of State concealed the truth from us passes comprehension; that he did so cannot be denied, neither can it be denied that his action amounted to a violation of the inalienable right of the subject to the protection of the Crown, and that it inflicted upon our company a serious financial loss. Whether it was done by accident or design makes no difference; the fact remains that we could not have been defrauded had the servants of the Crown fulfilled their obligations."

"Instead of affording us the Crown's protection by telling us the truth, the Colonial Office flung at us a letter, dated August 12, 1926, containing threats and statements which the inquiry had proved to be baseless. We did know this at the time. The Colonial Office knew they were baseless, as they had documents in their possession which proved them to be so. The counterpart of these documents should have been in our possession, but they were extracted from our files during the time when the British South Africa Company was acting as our paid and trusted secretaries and transferred to their own. At the time in question, my colleagues were literally terrified into believing that unless we submitted to the Secretary of State's demand the company might lose the whole of its property. I disagreed from my then colleagues, but they impressed upon me that if I persisted in my opposition the company might meet with disaster and the blood would be on my head. I subsequently consented, much against my wish, to acquiesce in the Colonial Office demand, but only on the clear understanding that our company was given a freehold title to the remainder of its concession."

The Chairman concluded by moving: "That this meeting of members of the North Charterland Exploration Company (1910), Limited, approves the action of its directors in respect of the recent public inquiry respecting the company's claims and allegations, protests against the action of the Colonial Office purporting to decide in its own favour a dispute to which it was itself a party, on the findings contained in Mr Justice Maugham's Report, which findings clearly establish the justice of the company's complaint, and this meeting, accordingly, respectfully requests the Prime Minister to direct that the inquiry be reopened, and further to direct the production of the evidence supporting paragraph 7 of the Crown's Answer and Plea to the company's Petition of Right, also the evidence referred to in the Treasury solicitor's letter of October 6, 1931, to the company's solicitors, Messrs Parker, Garrett and Company."

Mr. J. Clifford Rowe seconded the resolution, and it was carried unanimously.

A resolution was also passed unanimously, being proposed and seconded by shareholders, protesting against the action of the Secretary of State for the Colonies in making, in the House of Commons, a statement calculated to cause serious injury to the company and refusing to correct it.

DALGETY AND COMPANY, LIMITED.

REHABILITATION OF THE COMMONWEALTH'S CREDIT.

THE HON. EDMUND W. PARKER'S REVIEW.

The forty-eighth annual general meeting of Dalgety and Company, Limited, was held, on the 17th instant, at 65-68, Leadenhall Street, London.

The Hon. Edmund W. Parker (the chairman) said that on this occasion he addressed the shareholders under much more favourable circumstances than enveloped them at this time last year. At that time there was an element of gloom pervading Australian affairs, and it was pleasant to be able to feel that the clouds were lifting and that, if matters pursued their present course, next year they might have a brighter story to tell.

Reviewing events which had taken place during the year in Australia's endeavour to rehabilitate her credit, the Chairman said that since the formation of the National Government various measures had been carried out which had done much to regain the confidence of the world in Australia's ability to meet all its commitments. The people of the Commonwealth were to be congratulated on the magnificent efforts they had already made to restore confidence in their country.

An important matter which had greatly exercised the minds of the directors and the management was the question of exchange. During the year the control of fixing the rate had been taken over entirely by the Commonwealth Bank, and in December last the rate, which stood at £130 Australian for £100 sterling, was reduced to £125 per cent. Any rise in the Australian pound in relation to sterling must be a gradual process. This high rate of exchange was a tremendous burden on the company, and this year it had cost them over £175,000 to bring their funds to this side. Fortunately, as a result of prudent management in the past, they had been able to provide for this large debit out of reserves, without encroaching on the invested reserve.

However, there seemed to be a feeling of optimism abroad as regarded Australia. The season was a good one, and prices had risen, while an appreciable reduction in production costs had been achieved. The recent agreements arrived at at the Ottawa Conference would, he hoped, assist in the restoration of trading conditions.

CONDITIONS IN NEW ZEALAND.

As far as prices for their products were concerned, New Zealanders had little to congratulate themselves on during the past year—wool, meat and dairy produce prices had remained on a very low level and had affected the whole community. Once again the Dominion had failed to add its quota to the credit side of the company's profit and loss account, and, not only this, but heavy losses had been incurred. They had over £2,500,000 invested in New Zealand, and of late years this investment had been anything but a payable one. To his mind there were too many people seeking the same business, with the result that cut-throat competition prevailed, while expenses as a result were far too heavy. In an endeavour to better the position, every channel had been explored in search of further economies. The financial situation of the Dominion, as a result of the measures taken by the Coalition Government under Mr Forbes, had much improved, but the exchange position still remained adverse to the country, and again, in this case, was a costly charge to the company—although not to such a grave extent as in Australia.

A year ago he said that future dividends were dependent on a substantial and sustained rise in prices. This did not eventuate during the period under review, although recently there had been some improvement. He thought, therefore, shareholders must all feel relieved that on this occasion the directors were able to recommend a dividend of as much as 2s. per share, free of income tax, making 5 per cent. for the year. It had not been earned, but had been provided out of reserves.

He must again state emphatically that the future largely depended on a further increase in prices for the primary products of both Australia and New Zealand, good seasons, and a general restoration of world trade and confidence. Further economies had been effected, which were beginning to have an effect on the accounts, and he hoped the current year's accounts would show a further beneficial result. He did not wish to stress unduly the sound position of the company, but, in comparing their figures with those of kindred concerns, he felt that shareholders could be nothing less than satisfied with the balance sheet presented. Considering the chaotic conditions under which they had laboured during the year, he thought it was a matter for great thankfulness that things were no worse.

The report and accounts were unanimously adopted.

TRINIDAD LEASEHOLDS, LIMITED.

SUCCESS OF REGENT SPIRIT.

The nineteenth ordinary general meeting of Trinidad Leaseholds, Limited, was held, on the 17th instant, at Winchester House, London.

Mr F. R. Phillips, M.C. (the chairman), said that the year had been one of special difficulty, world prices of oil products having continued to decline, and intense selling competition prevailing in all markets. One factor, however, so far as their company was concerned, which had proved of great advantage was the departure of Great Britain from the gold standard, from which material benefit accrued to them through sales effected under contracts in American currency. The imposition of the long-talked-of import duties by the United States Government on oil products in June proved the wisdom of the board's decision two years ago to become distributors of petrol in this country. The recent increase of 3d. per gallon in retail prices in the United Kingdom had assisted in putting this market on a more economic basis.

The success which had attended the company's marketing activities in this country was an eloquent testimony, not only to the desire of the public to "Buy British," but also to the efficiency of their marketing organisation. The exceptional quality of Regent spirit had contributed largely to the success achieved. Despite the hampering conditions with which their distributors had to contend, and which were outside the control of the company, the retailers of Regent motor spirit had achieved remarkable results. An important contract had recently been secured for the supply of motor spirit to a group of passenger transport interests. It was due to their having available a highly efficient distributing organisation capable of rapid expansion, when that contract had been open for tender, that they had been able to entertain it.

Oil profits and other revenue for the past year amounted to £486,776, an increase of £141,763, and the net profit was £272,719. A final dividend of 7½ per cent., less tax, was recommended. The cash and Government securities at the close of the year were £529,918, an increase of £197,922. The profits for the first four months of the current year compared favourably with the monthly average for the year under review, although it was too early to hazard any opinion as to the ultimate results of the year. He could not help feeling, however, that the prospects of the oil industry were distinctly more hopeful.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 12, 1932, amounted to £9,708,000 against ordinary expenditure of £7,445,600. After making no allocation to Sinking Fund, but allowed for an increase in Exchequer Balances of £265,900, the operations for the week, as shown below, decreased the National Debt by £1,736,000 to approximately £7,899 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

(000's omitted.)

Treasury Bills	+ 3,847	Public Department Advances ...	£ 7,100
National Savings Certificates ...	+ 50	P.O. Telegraph Money	400
3% Conversion Loan	+ 1,867		
	+ 5,764		- 7,500

A complete analysis of the National Debt at September 30, 1932, was printed in the *Economist* of October 8, 1932.

CONQUISTADORES!

It is a far cry since the adventurous days of the Spanish Conquistadores and their pioneer expeditions to the ancient American civilisations.

To-day, a great and growing volume of overseas trade is transacted annually by the Republics of the New World, and unrivalled facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST., LONDON, EC2

Messrs Samuel Montagu and Company write on November 16 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,094 on the 9th instant, and shows no change as compared with the previous Wednesday. Substantial amounts have been on offer in the open market and although moderate purchases have been made on Continental account, most of the gold available has again been taken for a destination not disclosed.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.

Average	124s. 2.8d.	13s. 6.1d.

SILVER.

The firmer tone shown in the market last week was not maintained, the tendency having since been downward. Prices declined on reselling by the Indian bazaars and China, and a fall of ½d. on the 14th instant, due mainly to a sudden appreciation in sterling, brought prices down to 17½d. for cash and 18d. for two months' delivery. There was a slight reaction yesterday, in sympathy with movements in the exchanges. The week, on the whole, has been quiet, demand being rather poor, although there has been a little buying for near shipment to China, but American operators have continued inactive. There is little indication as to tendency, but no decided change is anticipated at present.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 7th instant to mid-day on the 14th instant:—

IMPORTS.	£	EXPORTS.	£
Soviet Union (Russia)	39,800	China	50,000

NOTICES.

Mr R. G. Thomas, after twelve years' service as general manager of The British Linen Bank, has retired, and has been succeeded by Mr Adam Dempster, general manager's assistant. Mr Dempster entered the service of the bank at Carlisle, and after considerable experience at head office, was appointed to the agency at South Bridge, Edinburgh. Fourteen years later he returned to the inspectors' department, and became a superintendent of branches in 1922. Two years ago he was appointed general manager's assistant.

Sir Edward Davson, Bart., has been elected to a seat on the Central Board of Barclays Bank (Dominion, Colonial and Overseas). BARCLAYS BANK LIMITED announce the opening of a new branch at 343 Bath Road, Hounslow West (adjoining Hounslow West Station).

REPORTS AND NOTICES.

The directors of Associated London Properties, Limited, announce that Mr F. W. Crutenden, F.C.I.S., who represents large shareholding interests, has been elected a director of the company.

The Honourable Alexander Francis Baring has been appointed a director of the Alliance Assurance Company, Ltd.

MISCELLANEOUS.

SECOND CO-OPERATIVE INVESTMENT TRUST, LIMITED.—The report and accounts for the six months ended September 30, 1932, shows net income for the half-year of £20,805. This compares with £20,761 for the half-year ended March 31, 1932, and £23,410 earned during the corresponding half-year of 1931. The dividend for the six months is 2 per cent., making with the interim dividend of 1 per cent., 3 per cent., for the year against 3½ per cent. for the previous year. After allowing for the preference and ordinary dividends, and placing £5,000, the same amount as a year ago, to general reserve (thereby increasing this reserve to £30,000) there remains to be carried forward £4,925, compared with £4,517 a year ago. According to a valuation of the Trust's investments at September 30, 1932, the depreciation in the Trust's investments which figure in the balance sheet at £1,211,771, was 45.71 per cent. This is an improvement compared with the depreciation of 49.96 per cent. reported six months ago, and compares with 44.31 per cent. a year ago. During the year, notice of repayment of the Trust's 5 per cent. (minimum) withdrawable preference shares was given. Holders of approximately 50 per cent. of these shares availed themselves of the invitation to take up an equivalent number of 4 per cent. withdrawable preference shares.

SLATERS & BODEGA, LTD.—A reduction in trading profit from £148,305 to £118,279 is announced by the directors of Slaters and Bodega, Ltd., in their report for the year to September 30, 1932. Net profit for the year was £60,289, compared with £94,401. After placing £18,000, against £10,000, to development account, and £11,000, compared with £13,000, to tax reserve, it is proposed to pay a dividend of 6 per cent. on the ordinary shares and to carry forward £9,213. The dividend for the previous year was 10 per cent. Meeting: Southern House, Cannon Street, November 25th, at noon.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LIMITED.—At an extraordinary general meeting, held November 16th, Mr A. C. Bournier, F.C.A., the chairman, presiding, the following resolution was passed without a single dissentient:— "That the capital of the company be increased from £2,000,000 to £3,000,000 by the creation of 1,000,000 additional shares of £1 each and that such shares may be issued with such rights and privileges annexed thereto as the directors may determine, and in particular any such shares may be issued by them with a preferential or qualified right to dividends or in the distribution of assets and with a special or without any right of voting." The proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

TRINIDAD LEASEHOLDS DIVIDEND.—In a "Note" on page 895 of last week's issue the dividend on Trinidad Leaseholds was shown as 7½ per cent. This figure, in fact, was that of the final dividend, the total for the year being 12½ per cent. The percentage was correctly shown in our Summary of Profit and Loss.

UNILEVER INTERIM DIVIDENDS.—The boards of Unilever, Ltd., and Unilever N.V. have declared interim dividends, payable on December 2nd, on their respective ordinary shares, which in the case of the Dutch company is 30 florins on every share of 1,000 florins. In accordance with the previous practice, the £1 shares of the English company have been taken as equivalent to 12 florins each, so that the equivalent dividend on the English shares amounts to 36 Dutch cents per share. Converted into sterling at the present exchange rate, this is equal to 10½d. per share, or 4½ per cent.

† Free of income tax.

MIDDLEBROUGH.—The market for Cleveland iron is better, and prospects are regarded as improving. The increase of stocks in producers' hands has now stopped, owing to the reduction of production in the district, and stocks are now likely to be steadily reduced, after which, it may be found necessary to restart more furnaces, some of which could be got quickly ready for relighting. There has been more doing since the Skinninggrove works closed down, and although there is not a great rush of orders offering on the market, the prospects are considered good, and further developments are awaited with some interest. **Makers** have been carrying a fair quantity of stock for some time past, and this is likely to be cleared before further furnaces are restarted. In the meantime, official prices are still upheld by makers, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4, forge, 57s. f.o.b. or f.o.t., with special concessions for Scotch trade, but business is still slow in that connection. The hematite iron trade is rather hesitating. Recently, makers have been able to maintain the price of ordinary mixed numbers at 59s. per ton, but the output has been larger lately, and requirements somewhat restricted, so that 59s. could now be shaded a trifle for decent quantities. Shipments of pig iron this month to 15th inst. total only 3,860 tons, against 3,816 tons to same date in October. In the finished trades some new orders have recently been booked, and there is a better outlook generally.

The tendency of gold prices of the chief primary products has been firmer during the past week. In the United States non-ferrous metals have not only been maintained, but there has been a further advance in spelter, tin and copper for domestic consumption. Cotton, too, gained a few points, while rubber remained unchanged. Among cereals, wheat, rye, oats and maize all show a rise on the week. Coffee has been steadier, but cocoa and sugar moved in buyers' favour. In this country the outstanding feature has been a further sharp rise in the price of foreign beef and mutton. Reports from various industrial centres in Great Britain are a little more hopeful. The improvement in the coal trade has been maintained, and the volume of business in the iron and steel industries appears to be expanding gradually. Similarly, inquiries for cotton manufactures and rayon fabrics have been on a larger scale.

STATE OF SAN PAULO 7% COFFEE REALISATION LOAN, 1930.—With reference to the announcement which appeared in the Press on August 17th last, although communications have been resumed with the State of San Paulo, the administrative departments are still disorganised as a result of the recent disturbances. Advances of some small remittances have, however, been received, and it is hoped that resumption of the regular remittances will be effected shortly.

The tendency of gold prices of the chief primary products has been firmer during the past week. In the United States non-ferrous metals have not only been maintained, but there has been a further advance in spelter, tin and copper for domestic consumption. Cotton, too, gained a few points, while rubber remained unchanged. Among cereals, wheat, rye, oats and maize all show a rise on the week. Coffee has been steadier, but cocoa and sugar moved in buyers' favour. In this country the outstanding feature has been a further sharp rise in the price of foreign beef and mutton. Reports from various industrial centres in Great Britain are a little more hopeful. The improvement in the coal trade has been maintained, and the volume of business in the iron and steel industries appears to be expanding gradually. Similarly, inquiries for cotton manufactures and rayon fabrics have been on a larger scale.

SPELTER.—Although business in this metal was not as brisk as a week ago, slight concessions from sellers, sufficed to prevent any substantial decline in demand. Sales were 500 tons on Monday, against 2,100 tons a week before; 550 tons on Tuesday, against 850 tons the week before; and 550 tons on Wednesday, against 500 tons. The New York quotation on Wednesday was 3 1/175 cents per lb., against 3 0/00 cents the week before, and 3 0/00 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 7s. 6d. for November shipment, against £15 8s. 9d. last week.

THE JUTE TRADE.—**Dundee.**—There are still no outstanding features in the jute industry. Prices of raw jute fluctuate slightly, without showing much real change, but buyers in all sections cannot regain the confidence necessary to purchase more than their

immediate needs. Only small quantities of jute cloth are bought as a rule, but the total is sufficient to keep prices fairly steady. Calcutta goods have varied a little in price, but even the fact that the stocks of hessians and sackings at the end of October were materially reduced had little or no effect on the position. The stocks of hessians at the end of October were down to the lowest point for some years past at 91,545,000 yards, compared with 159,575,000 yards at the same date last year, while stocks of sackings were 72,000,000 and 78,876,000 yards respectively. The total output of the Indian jute mills during October this year was 63,598 tons, against 53,891 tons for October last year. The value of Daisee-shipment is now £15 10s. for the full group, and single marks are offered at £15 12s. 6d. for Rangali to £16 5s. for Mahabir, and Daisee-4 full group sold at £14 10s., November-December. Tossa assortment rules at £16 7s. 6d. and four at £15 10s., same shipment. Lightnings are quoted at £16 15s. for Triangle Jajodia to £17 10s. for Green Circle Ram, while good Hearts are from £16 to £16 5s., November-December. Spinners are showing only a small interest this week, but a good few sales were negotiated during the previous week, when prices held a steady small advance almost daily. Yarns are quiet, buyers, having bought common 8-lb. cops at 1s. 10d. and 8-lb. spools at 1s. 11d., refusing to concede 1s. 10½d. and 1s. 11½d. respectively, which are now the lowest rates quoted by spinners. Twist rules from 2½d. to 3½d. for 3-ply 8-lb., and sacking yarns are from 2½d. to 2½d. for 24-lb. web and 3½d. for 8-lb. chains. Rove is quoted at £16 for 200-lb. and £19 for 48-lb., and the finer yarns are so much neglected that spinners have reduced their rates to 2s. 6d. for second quality 8-lb. Rio warp, 2s. 3d. for third and 2s. 1d. for fourth. Carpet yarns are slow. Business in jute cloth continues quiet, but manufacturers are adhering to their rates of 2½d. for 10½-oz. 40-in., and from 2½d. for 8-oz. in the narrow widths and ½d. more for the wider makes. A good inquiry is being made all the time, but buyers are hesitating to buy more than small lots for their near requirements. Linoleum hessians are dull and more or less nominal, only an occasional order coming in from the home trade. Sacking, bagging and tarpaulin are quiet.

THE GRAIN MARKETS.

WHEAT.—There have been no important developments in the wheat situation since last week, but prices showed a steadier tendency. International trade continued on a limited scale, and Canada continued to supply a substantial proportion of importers' requirements. On November 10th the Dominion Bureau of Statistics issued its second estimate of Canadian crops, according to which wheat is estimated to yield 431 million bushels, against 467 million bushels estimated in the September report, and an actual yield of 304 million bushels last year. Australia's crop has been estimated at about 200 million bushels, and the probable export surplus of Argentina at between 200 and 216 million bushels. Both countries are, however, not expected to export on a large scale before the beginning of the New Year. On Wednesday, "December" futures were quoted in Chicago at 44½ cents per bushel, against 43½ cents the week before, and 49½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 6d. per 496 lbs., against 27s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 3d., against 27s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s., against 27s.; Australia, ex ship, 26s. 3d.-27s. 6d., against 27s. 6d. a week ago.

WHEAT FLOUR.—Export business in flour continued restricted. North American shipments were 126,000 sacks, compared with 125,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 24s. per 280 lbs., against 24s. last week; delivered London, 23s., as compared with 23s. a week ago. Manitoba patents, ex store, 23s. 6d. to 26s., against 24s. to 26s. Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. last week.

BARLEY.—The market in feeding barley has been quiet. "December" futures were quoted in Winnipeg on Wednesday at 31½ cents per bushel, against 30½ cents last week and 25½ cents a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s. to 23s., against 22s. to 23s. a week before.

OATS.—Continental countries continue to import substantial quantities of this cereal. In Chicago, "December" futures were quoted at 17 cents per bushel on Wednesday, against 16 cents per bushel a week before and 16 cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 3d. per 320 lbs., against 17s. 6d. a week ago; "River Plate," ex ship, 16s., against 16s. 9d.; "Chilean White," landed, 22s.-24s., against 22s.-24s. a week earlier.

MAIZE.—Although shipments of maize to Europe have been large during the past week (710,000 quarters from Argentina and 423,000 quarters from other countries), prices show a slight improvement owing to the expansion in demand. "December" futures in Chicago were quoted on Wednesday at 26½ cents per bushel, against 25½ cents on Wednesday of last week and 25½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. 3d. per 440 lbs., compared with 19s. 9d. last week; "Plate," ex ship,

19s. 3d., as against 18s. 6d.; "Plate," December-January, 19s. 7½d., as against 18s. 3d. Yellow Maize, ex wharf, was quoted at £5 12s. 6d. per ton, against £5 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to November 12	Cwts. 317,953	Cwts. 89,271	Cwts. 124,658	Cwts. 231,816
11 weeks to November 12	2,848,168	823,761	1,574,094	3,172,788
Average price of English wheat per cwt.	s. d. 5 6	s. d. 6 10	s. d. 6 9	s. d. 9 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Week ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Sept. 5, 1932	Cwts. 334,481	Cwts. 408,323	Cwts. 56,941	s. d. 5 6	s. d. 7 7	s. d. 6 0
Sept. 12, 1932	317,953	463,293	55,545	5 6	7 7	6 0
Nov. 10, 1928	288,752	606,559	85,299	9 11	10 10	8 11
Nov. 9, 1929	216,554	516,386	54,570	9 5	9 8	7 7
Nov. 15, 1930	124,662	456,923	46,189	6 9	9 8	6 11
Nov. 14, 1931	89,271	456,512	63,526	6 10	9 0	6 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Nov. 17, 1931.	Jan. 4, 1932.	Nov. 9, 1932.	Nov. 12, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	64½	62½	46½	46½
Chicago (No. 2 Winter)	130½	79½	59½	65½	43½	44½
Oats per 60 lb.						

The visible supply of wheat in Canada, at 91,270,000 bushels, shows a decrease on the week of 686,000 bushels. Supplies a year ago stood at 58,502,000 bushels.

OTHER FOODS.

SUGAR.—Following last week's improvement, raw sugar values declined steadily under the influence of liquidation, closing on Wednesday substantially below the level of a week ago. December futures were quoted in New York at 0.97 cents per lb. on Tuesday, against 1.05 cents a week before and 1.10 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 8½d. to 5s. 8½d. per cwt., against 5s. 10½d. to 5s. 10½d. a week before, and "March, 1933," at 6s. 2d., against 6s. 2½d. to 6s. 2½d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons. Tons.						
London	105	15	1,014	840	11,358	6,833
Liverpool	23,187	12,413	14,532	12,780	80,699	40,064
Total	23,292	12,428	15,546	13,620	92,057	45,897
Last week	25,553	32,035	15,241	13,712	84,311	47,089

COFFEE.—Business in coffee has been quiet in New York, but quotations were steadier. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb., against 8 cents per lb. on the corresponding day a week ago. Only a small proportion of the coffee offered at Tuesday's London auctions was sold. Last week's movements of coffee in London were as follows: Brazilian, landed, 22 bags; delivered, for home consumption, 158 bags; exported, 18 bags; stocks, 5,952 bags, against 2,358 bags a year ago. Central American, landed, 992 packages; delivered for home consumption, 1,923 packages; exported, 1,700 packages; stocks, 57,995 packages, against 65,565 last year. Other kinds: Landed, 3,974 packages; delivered for home consumption, 2,231 packages; exported, 1,023 packages; stocks, 61,037 packages, against 51,269 last year.

COCOA.—Owing to the poor demand for cocoa, last week's gain in prices had been lost by Wednesday. December futures were quoted at 3.92 cents in New York on Tuesday, against 3.96 cents a week ago and 4.20 cents a month ago; Accra, December-February, at 26s. 6d. c.i.f. Continent, shows a fall of 9d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 3,043 bags; delivered for home consumption, 5,301 bags; exported, 80 bags; stocks, 119,803 bags, against 142,748 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 59,357 packages of Indian and 31,475 packages of Ceylon tea. Monday's "Indian" auctions opened with a better demand for common and finest grades. The results of the "Ceylon" sales on Tuesday were less satisfactory, chiefly because of a deterioration in quality, but on Wednesday, buyers again showed a good demand for common and fine Indian grades. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

OVERSEAS TRADE RETURNS.

RICE.—The market in rice has been dull and both spot and forward positions declined. The spot price was 9s. 7½d. per cwt., against 9s. 9d. per cwt. a week ago, while the forward quotations at 7s. 4½d. per cwt. show a fall of 1½d. per cwt. on the week. Movements in London during the past week were as follows: Landed, 214 tons; delivered, 72 tons; stock, 2,559 tons, against 1,646 tons a year ago.

POTATOES.—There has been a steady demand for potatoes but the pressure of supplies caused a slight weakening in prices. At the London Borough Market, "King Edward," light soil, were quoted at 6s. to 6s. 3d. per cwt., against 6s. 6d. a week ago.

SPICES.—The market in pepper has been quiet. Spot pepper, "Black Singapore," was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 68 tons; delivered, 13 tons; stock, 371 tons, against 370 a year ago. White, landed, 100 tons; delivered, 63 tons; stock, 655 tons, against 416 a year ago.

MEAT.—Last week's rise in the price of foreign beef and mutton has been followed by a further substantial advance in quotations.

freely, while in the end some special buying of December bills at $\frac{3}{4}$ per cent. was thought desirable. On Thursday money was again in request, and during the whole of the week there has been a bigger demand for clearing bank money than has lately been experienced. To a large extent this slight increase in stringency is due to the fact that £60 millions of Treasury bills had to be paid for against maturities of only £45 millions. It is also suggested that certain holders of January and February bills are prepared to hold them until early December, even if their borrowings against them cost them $\frac{3}{4}$ and 1 per cent., because they will then be in request by the banks who will wish to invest the surplus funds released by the payment of the War Loan dividend until early next year, when they will be re-absorbed by income tax payments.

As expected, last week's Treasury bills went at an average rate of 17s. 7.24d. per cent., against 14s. 11.17d. per cent. the week before. This rise in the rate to just over $\frac{7}{8}$ per cent. is the natural consequence of the increase in the allotment to £60 millions, and as a similar quantity is being offered this week, it was expected that the tender rate would again harden to about $\frac{7}{8}$ per cent. Early this week bill brokers tried to secure a turn by offering hot Treasury bills at $\frac{7}{8}$ per cent., but the banks held out for the full $\frac{7}{8}$ per cent., and the market had to give way. Thus the ruling rate for hot Treasury bills has been $\frac{7}{8}$ per cent. all the week, but the banks only bought a few bills, and on Thursday it was reported that hot Treasuries were being offered at $\frac{3}{4}$ per cent. December Treasuries were quoted at $\frac{3}{4}$ per cent., and Januaries at $\frac{3}{4}$ per cent. The market rate for three months' bank bills was $\frac{7}{8}$ per cent., and standstills remain at 1-2 per cent.

This week's Bank return records a contraction of £1.5 millions in the note circulation, and as gold holdings are unchanged there has been an equivalent increase in the Reserve. This is probably the last contraction in the note circulation before the end of the year, as next week the Christmas increase is due to begin. Earning assets in both departments show only minor changes, but Public Deposits have risen by £6.1 millions to £26.5 millions. This increase is easily explained by the large number of Treasury bills being paid for this week, but in view of the calculations given below, it will certainly help the Government to have funds in hand by the end of the month. Bankers' Deposits are reduced by £4.4 millions to £78.1 millions. This movement, which is not a large one, is a resultant of the increases in the note circulation and Public Deposits.

Some interest is being taken in the large movement of funds due to take place on December 1st. Capital payments due by the Exchequer are £165 millions for Dissent War Loan, £12.8 millions for 4½ per cent. War Loan, and £140.4 for 1932-34 Treasury bonds. This makes a total capital repayment of £318.2 millions, to which must be added £50 millions for the half-yearly War Loan dividend, this being the last payment at the rate of 5 per cent. The final total is thus £368.2 millions. On the other side of the account the Exchequer is due to receive a call of £142.5 millions on the 2 per cent. Treasury bond issue and one of £157.5 millions on the 3 per cent. Conversion Loan issue, or a total of £300 millions. Thus on balance the Exchequer will have to pay out £68.2 millions, but not all this money will reach the market, as part of the maturing loans are held internally.

When all these payments to and from the Exchequer are complete, money should be very easy, unless indeed a large amount of the £18.2 millions of money due by the Exchequer on capital account is absorbed internally. For a day or two, however, money may be sticky. For one thing it takes a little time for the War Loan dividend warrants to be presented, but apart from this, while the turnover of funds is actually in progress, banks and other lenders will experience some difficulty in determining their position. The banks probably hold no dissented War Loan, but will receive payment on their own holdings of maturing Treasury bonds and on their customers' holdings of all maturing stocks. Against these they will have to meet their own and their customers' calls on the new loans. A further imponderable factor arises from the call on the Conversion Loan. It is known that this was heavily "staggered," and some holders are waiting until the last moment on the chance of being able to sell without undue loss. If they are disappointed, they may borrow from their bankers in order to meet the call, and so far the banks do not know how much they will have to lend for this purpose. For these reasons, banks will have to keep a margin in hand for a day or two, but once they know where they are, money should be very easy until the surplus funds are absorbed in the normal course of events.

The Foreign Exchange market was intermittently active this week, and fluctuations were frequent and wide. The general tendency was unfavourable to sterling. New York moved from 3.29½ to 3.24½ after touching 3.24. Montreal gained a point at 3.76½. Paris moved from 84½ to 82½, and Brussels from 23.77 to 23.46. Milan was 1½ dearer at 63½, and Madrid appreciated fairly sharply to 39½. Lisbon went from 109 to 107½. Amsterdam gained 12 points to 8.09, and Berlin 11 points at 18.65. Switzerland improved sharply to 16.88. The Scandinavian currencies were again variable, Stockholm improving by 17 points to 18.69, and Oslo by 11 points to 19.56, while Copenhagen was unchanged at 19.22. The other European currencies moved slightly against sterling. The South American currencies were rather firmer, but still largely nominal. Rio gained ½d. at 5½d., while Buenos Aires and Montevideo were unchanged at 35½d. and 29d. respectively. In the Far East the rupee was steady at 1s. 6½d., and the yen improved by ½d. to 1s. 3½d. Batavia gained 15 points to 8.10. In the forward market one month's dollars remained at ½ cent discount, but three months' were dearer by ½ at ½ cent discount. Paris was at ½ centime and 2½ centimes premium. Brussels was better at 4 and 18 centimes discount. Milan was unchanged at last week's levels. Madrid was firmer at ½ peseta discount for one month, and ½ peseta discount for three. Amsterdam and Switzerland were unchanged. Silver prices remained at last week's levels of 18½d. for cash and 18½d. for forward, buying by the United States and China being offset by sales by India and the Continent in a very quick market. Hongkong, however, was dearer by ½d. at 1s. 4½d. and Shanghai also appreciated by ½d. to 1s. 9½d.

Money rates on Wall Street remain unchanged, with call loans at 1 per cent. "inside" the market and 90-day bankers' acceptances at $\frac{3}{4}$ per cent. With the exception of the Dutch rate, which remained at 40.15½ cents, the chief gold exchanges moved in favour of the dollar. Paris was quoted on Wednesday at 3.91½ cents, against 3.92 cents the week before, Brussels at 13.85½ cents, against 13.87 cents, and Swiss francs at 19.23 cents, against 19.24½ cents. Gold imports for October are returned at \$20.7 millions, while exports were negligible. This brings total imports for the first ten months of the year to \$240.7 millions and total exports to \$809.5 millions. As regards the week's gold movements, imports amounted to \$4.2 millions, including \$1.7 millions from India and \$1.0 million from Canada. Ear-markings on foreign account were reduced by \$32.8 millions. This brings foreign ear-markings down to only \$85.0 millions, against \$390.0 millions last June. This is the first time since September, 1931, that foreign ear-markings have been less than \$100 millions.

MR HOOVER AND THE DEBTS.

As we write, the official American reply to the British, French and other European Notes addressed to Washington on the subject of the war debts has not yet been published. The two-and-a-half hours' interview between the President and the President-elect on Tuesday was followed by a non-committal *communiqué* that "progress had been made," but it quickly became known that Mr Roosevelt had shown no sign of being willing to help the President out of his difficulties with this "lame duck" Congress. He retired next day to the country, and has, so far, committed himself to nothing more than the guarded view that existing diplomatic channels afford the best opportunity for "contacts" between the debtors and the United States Government. If his intentions are, as represented in Press cables, to leave a minority President to wrestle alone with this great world question for another five months, he will have missed a great opportunity for helpfulness, and the hopes that were entertained in various countries of the world, that he would use his great power with courage and imagination to break through the universal crisis, will begin to fade.

Meanwhile, having discussed the situation with the leaders of Congress, without apparently moving them from their die-hard attitude even to the extent of permitting the re-establishment of the Debt Funding Commission, Mr Hoover, for his part, issued, on Wednesday, a lengthy statement of his position. On it opinions must now be formed and action taken.

The statement is inspired by the strong sense, which Mr Hoover has always shown, of the importance to America of good international understanding; but though he makes some suggestions which are intended to be helpful and may play an important part in subsequent discussions, the President, in view of the attitude taken by Congress, is unable to meet the request contained in the Notes of Britain, France and other European countries. Mr Hoover sets out *seriatim* the American point of view towards the debts, namely, that they were created in good faith on the assumption that they would be repaid; that the American Government had always taken the position that it could only deal with each debtor Government separately; that the settlements made in each case were based on the capacity of each debtor to pay; that the United States had never recognised that these payments were in any way associated with reparation claims, which Mr Hoover himself regards as "necessarily a wholly European problem with which we have no relation"; and that the agreements are entirely within the control of Congress, which refused, a year ago, even to set up the Debt Funding Commission again for the purpose of making revisions that might be needed to meet emergencies.

Nevertheless, this does not relieve the President of the responsibilities of his office, and he therefore puts forward his own view, which is that while the world crisis has steadily increased the burden of debts throughout the world, and made repayment more difficult for some nations, the aftermath of the war and the incidence of the depression have fallen with great weight on the American people who, like other nations, have their very serious budgetary problem. His view is, therefore, once again opposition to cancellation; and he further declares that "I do not feel that the American people can be called upon to make further sacrifices." He reverts, however, to the idea, which he repeatedly expressed through the election, namely, that compensating advantages could perhaps be found in forms other than cash by concessions that would allow an expansion of markets for the products of American agriculture and labour. These and similar suggestions are mentioned as means for overcoming the difficulties of transfer, which the President clearly recognises.

This leads Mr Hoover to seek for means of discussion; for, as he observes, "it is unthinkable that within the comity of nations and the maintenance of international good will, our people should refuse to consider the request of a friendly nation to discuss an important question in which they and we both have a vital interest." The

World Economic Conference will meet in a few months to discuss matters affecting both America and the world, while the Disarmament Conference, which in the American mind is closely associated with the debt question, is in progress. Mr Hoover believes that Congress "should authorise the creation of an agency to exchange views with those Governments, enlarging the field of discussion as above indicated, and report to Congress." Such an agency, through complete or partial identity of its membership with the two Conferences referred to, might co-ordinate efforts towards the solution of world problems in general.

Remembering that one of the chief American delegates at the Disarmament Conference and on the body which is preparing the agenda for the World Conference is a Democrat in close touch with Mr Roosevelt, we can perhaps trace in this suggestion one of the few definite consequences of the talk between Mr Hoover and the President-elect. In any case, there is nothing very new in all this; nor do we propose to discuss *seriatim* all the points which Mr Hoover makes. There is another side to many of the questions he raises; but his statement may serve a useful purpose if it leads to a better understanding of the American point of view. Whether Congress will accept this powerful plea to enter into discussion and will allow negotiations to take place in the way proposed, remains to be seen.

It is when he comes to the immediate problem that Mr Hoover's statement is more open to criticism. No facts, he says, have been presented by the debtor Governments which would justify the suspension of the payments due on December 15th "under the principles hitherto laid down by this country." The course taken at the Lausanne Conference is not, in his view, a precedent; for in the case of Germany the facts presented over many months dictated the course then adopted. In the present instance, he considers, suspension would not improve, but would impede, the prospects of discussion. This assertion is qualified by the suggestion that, if currency depreciation or trade conditions generally render the transfer of the next payment in dollars impossible, the American Government should not be unwilling to consider a proposition for the payment of this instalment in foreign currency—the transfer to be made from time to time as the situation permits. Any case submitted on such grounds as this he will certainly transmit to Congress, but, meanwhile, the agreements are to be respected until modified by mutual consent.

In the literal sense, perhaps, there is justification for Mr Hoover's assertion that the case for suspension has not been stated in detail in the European Notes; and the President's hint will doubtless be acted upon promptly and a statement issued by each of the European debtors giving forcibly the position which calls for the suspension for which they have asked. A careful exposition of this kind might well have a great effect upon American opinion. We have dealt so fully with this matter in recent issues of the *Economist* that there is no need for us to attempt to anticipate the form of this reply; but its main theme, which is, of course, well known to Mr Hoover and to Mr Roosevelt, is that unless a creditor country is willing to lend back what is due to it, international debt payments can only be made in the form of goods, services or gold. At present, trade conditions make it impossible to pay in goods. Indeed, in the case of Great Britain our balance of payments with the world as a whole still shows an adverse margin in spite of the effect of the depreciation of the pound upon the terms of trade, while *vis à vis* America the exchange of goods is five to one against us. To pay in gold will weaken our resources for checking the fluctuations of the pound and will delay the time when we shall be able to stabilise.

Nor is fresh lending by the United States a solution, for, as the Wiggan Committee clearly pointed out, this merely leads to the piling up of debt; and if the moment comes when creditors feel a lack of confidence in the debtor country, they are in a position to call for repayment on a scale which brings about catastrophe. We cannot be a

expected the total amount collected in rates to fall by an equivalent amount. That this has not in fact taken place is clearly shown in the following table:—

YEAR ENDING MARCH 31.
(£ millions.)

England and Wales.	1914	1928.	1929.	1930.*	1931.	1932.
Receipts from rates	71.2	166.7	166.5	156.3	149	148
Average per head of population	£ s. d. 1 18 11	£ s. d. 4 4 10	£ s. d. 4 4 4	£ s. d. 3 18 11	£ s. d. 3 14 10	£ s. d. 3 14 1

* De-rating took place during the course of this year.

Between 1928-29 and 1932 rates have fallen by about £18 millions. Though the figures for local expenditure are not yet available, this fact seems to point to a considerable increase in the expenditure of local authorities during the past three years. Thanks, however, to the "new" money added to the Exchequer grants and to their redistribution on a more rational basis, the actual poundage of rates, which varies enormously from district to district, has decreased in most areas. As Dr. Robson points out:—

"In 75 per cent. of all the rating areas of the country there was a decrease in the poundage rate in 1931-2 as compared with the preceding year. In 220 areas there was no change. An increase occurred in 233 places, which is only 13 per cent. of the total number. The areas in which decreases were recorded comprise 36 county boroughs, 25 metropolitan boroughs, 755 other boroughs and urban districts, and 514 rural districts, making a total of 1,330. The decreases run from less than 5 per cent. up to over 20 per cent. The largest average reduction occurred in the rural districts where the rates in the £ levied in 1931-2 showed an average decrease of 6.6 per cent. over the preceding year."

The decrease was most marked in the very highly rated areas such as Durham and Glamorganshire, which received a substantial relief from the redistribution of the Exchequer grants. "Thus, in 1927-28 seven local authorities levied rates of 30s. in the £ or more; in 1928-29 three local authorities touched this figure. But for the last three years no municipality has levied a rate of 30s. or over. Moreover, there are only 18 urban authorities who demanded rates of 20s. or over in 1931-32, compared with 27 in the previous year, 36 in 1929-30, 64 in 1928-29, and 73 in 1927-28. Again, the number of authorities whose rates were 25s. or more has been reduced from 22 in 1927-28 to two in 1931-32."

Thus the financial changes brought about by the Local Government Act have, on the whole, been beneficial. The de-rating of industrial and transport hereditaments to the extent of three quarters, and the complete de-rating of agricultural land have removed an appreciable, though often exaggerated, burden from the shoulders of industry. Moreover, the redistribution of Exchequer grants has done a little, though not very much, to iron out the enormous, and indeed undesirable, difference in the level of rates from district to district. But the actual poundage of rates still moves over a wide range. As Dr. Robson observes:—

"The lower limit consisted last year of a parish in Nottinghamshire, where the inhabitants pay only 1s. 4d. in the £, and the upper limit of a parish in Glamorgan where the rate was fixed at 28s. 3d. in the £. In Roxby-cum-Risby, in Lincolnshire, the rate last year was 5s. 0d. in the £, as compared with 26s. 0d. in Abertillery. . . . The great majority of rates are, however, to be found within a fairly narrow compass. Thus, in 684 urban areas out of a total of 1,148 the rates lie between 10s. and 14s. in the £; and if we extend these limits by a further 2s. in both directions we shall find that in 1,018 urban areas the rates lay between 8s. and 16s. in the £. Similarly, in 438 rural districts out of a total of 643 the rates were between 8s. and 12s."

It is, of course, inevitable that as a result of de-rating the basis of taxation of the local authorities should have been narrowed. They received, it is true, compensatory

Exchequer grants, but these grants, being based upon the statutory year 1928-29, do not include any compensation for potential rateable value lost owing to the fact that any new factory, for instance, coming into existence would have been rated at its full value and is now only rated upon a quarter of that figure. Nevertheless, the total assessable value upon which rates are leviable has shown a remarkably quick recovery which it is not easy to attribute entirely to the growth in national wealth or to the operation of the Rating and Valuation Act of 1925.

YEAR ENDING MARCH 31.
(£ millions.)

	1914.	1925.	1928.	1930.*	1931.	1932.
Total assessable value at beginning of year	211.5	241.9	258.8	284.3	257.4	265.3

* First half: before de-rating.

It is not unnatural to assume—in spite of Dr. Robson's denial—that there has been a slight tendency to put up valuations as a result of de-rating, though it would be difficult to substantiate this statistically.

The general balance sheet of the local authorities for England and Wales for the year 1929-30 is approximately as follows, excluding the trading services, which are more or less self-balancing at £113 millions:—

INCOME.

	(£ millions.)
Rates	156
Grants	107*
Fees from schools, parks, rents, &c.	47
Total	310

* Including £13 millions in compensation for loss of rates during part of the year owing to de-rating. The amount for the full year 1930-31 was £22.5 millions.

EXPENDITURE (£ millions.)

	Mainten- ance, &c.	Loan Charges.	Total.
Education (including libraries and museums)	80.8	4.8	85.6
Public health (including mental deficiency)	40.2	3.3	43.5
Housing and town planning	8.9	26.2	35.1
Poor relief	32.8	1.0	33.8
Agriculture and fisheries	1.8	1.6	3.4
Highways, bridges, lighting	48.7	8.8	57.5
Fire brigades, police, justice	24.9	.5	25.4
Miscellaneous, including administration	20.1	7.3	27.4
Total	258.2	53.5	311.7

The expenditure out of rates in 1929-30 amounting to £156.3 millions was divided among the different services as follows:—

	£ millions.
Education	37.5
Relief of the poor	30.0
Highways and bridges	34.7
Police and police stations	10.4
Mental hospitals and mental deficiency	6.7
Public health	29.0
Miscellaneous	8.0
Total	156.3

If the suggestions made by the Royal Commission on Unemployment Insurance are carried into effect, both revenue and expenditure of the local authorities will be increased by the assumption of the new burden of unemployment assistance, which will involve an additional £58 millions of revenue from the Exchequer and a liability which cannot be calculated, though with a live register of three millions and a rise in agricultural unemployment it may well, as Mr Trouncer suggests in his note, exceed the sum estimated by the Commission, leaving an additional charge upon the rates of unknown dimensions. Incidentally, the addition of another £58 millions to the total of Government grants will materially alter the proportion of grants to rates, leaving the latter quite definitely in a secondary place as a source of revenue. The effects of such a charge on the general structure of local government may well prove to be of very great importance.

GERMAN DEBTS AND FOREIGN EXCHANGE.

(BY A CORRESPONDENT.)

THE latest report of the British Commercial Counsellor in Berlin opens with the remarkable statement that during the year "the whole of German economy has been dominated by and subordinated to one aim, namely, the protection of the mark exchange." In order to do this, Germany has developed as perfect a machine as it is humanly possible to construct for forcing into Germany and keeping there a maximum of foreign exchange, while permitting a minimum to go out. The Commercial Counsellor might have added that a secondary aim of the stringent regulations he describes was to enable Germany to meet the service of her foreign debt without recourse to a moratorium, which was regarded by many as almost inevitable in the autumn of 1931. There is, indeed, no doubt that the foreign exchange and debt position of Germany is to-day the dominant feature of her economic life.

The Report of the Young Plan Advisory Committee pointed out the extreme difficulty of arriving at an exact estimate of the net foreign debt position. The German Delegation to the Committee gave the gross total of debt in July, 1931, at between 28.5 and 30 milliard reichsmarks, and the Sub-Committee regarding German assets abroad stated that such assets must be estimated at considerably over Rm. 8 milliards. This would leave the net total debt at about Rm. 20 milliards. The gross annual service of the debt was estimated at between Rm. 1,600 millions and Rm. 1,850 millions, and the receipts from foreign assets at between Rm. 300 and Rm. 400 millions. The net service would thus amount to between Rm. 1,200 and Rm. 1,550 millions per annum. Since the export surplus for the first six months of 1932 was only Rm. 602 millions, and the present average monthly figure is between Rm. 80 and Rm. 90 millions, while the annual favourable balance in respect of services is probably less than Rm. 100 millions, the exchange position would seem to be very precariously balanced. This impression is strengthened by the Reichsbank reports, which show a loss of gold and foreign exchange during the year amounting to Rm. 200 millions.

The situation, however, takes on a somewhat different appearance in the light of a factor which has for some time been the subject of discussion in European financial circles. This factor is the repurchase by Germans of German securities issued or sold abroad. The extra-German securities issued to which German securities fell in ordinarily low levels to which German securities fell in the world markets have been mainly responsible for the transactions, which have undoubtedly attained considerable proportions in spite of the stringent foreign exchange regulations. They have been partly legal and partly illegal. German companies which had issued bonds abroad, and whose cash position was liquid, have naturally had a very strong incentive to buy their own bonds when they saw them go down to 30 or 40 per cent. of par value. They have bought large amounts for cancellation, either employing previously held foreign assets with the consent of the Reichsbank, or obtaining from the Reichsbank the necessary foreign exchange. The rule has been that in cases in which German export firms have satisfied the authorities that they could effect an "additional" export of German goods, provided that they were permitted to invest a part of the proceeds in German dollar bonds, and sell the latter in Germany, such permits have been granted. Nor has scrutiny of the proof of "additional" exports been too severe. There is no doubt that, to a considerable extent, foreign exchange has been allocated for this purpose, which is obviously in the national interest. There have also been considerable purchases by private individuals. While these have probably found the Reichsbank less accommodating, there have, as always, been ways and means of circumventing the exchange restrictions. In any case the authorities have almost certainly turned a blind eye when Germans whose capital was previously

outside Germany have brought it back in this way, even if the strict letter of the law had not been complied with. The offenders who have suffered the penalties of the law have been mere speculators, who smuggled marks out of Germany, bought securities in Amsterdam, London and elsewhere at knock-out prices with the proceeds, and sold their purchases in Germany at huge profits. This illegal trade has been, however, but a small proportion of the whole.

It is quite impossible to estimate the amount of these transactions with any degree of accuracy. In some quarters it has been suggested that the rate of repurchase has probably exceeded Rm. 500 millions per annum, cash, which would represent perhaps Rm. 1,500 millions par value. Assuming that a part of this represents the return of German capital previously invested abroad, it may be seen that this figure is by no means impossible or even improbable. But if individual experiences are to be believed, a considerable amount represents actual payments out of current foreign exchange receipts.

How is this possible in view of the fact that the surplus of trade and services appears at the best hardly to meet the requirements for debt interest and sinking fund payments as estimated by the Basle Committee? In the first place some part of the large favourable balance of trade in the concluding months of 1931 was paid for during the current year. Since, however, it is doubtful whether these amounts were more than sufficient to meet the considerable capital repayments under the Standstill Agreements, etc., further explanations must be found. The Basle Sub-Committee itself admitted that it was quite unable to estimate the German resources abroad and gave the figure of Rm. 8 milliards as an absolute minimum. In view of the flight of capital these resources may be very much above the estimate. Moreover, the amount of German securities issued abroad and repurchased before the report of the Basle Committee may have been under-estimated, and lastly the saving of interest and amortisation caused by this year's repurchases must of itself be very considerable, even assuming that in many cases corresponding assets abroad have been realised. Taking the interest and sinking fund charges on a representative German loan at 9 per cent. and its price at 40 per cent., then a German who exchanged, say, Liberty Bonds for the loan would save his country's balance of payments nearly 20 per cent. per annum on the cash amount of the exchange. The sum is simple. Selling \$400 worth of 3½ per cent. Liberty Bonds loses \$14 per annum in interest. Buying \$1,000 of a German loan saves interest and sinking fund totalling \$90 per annum. In many cases the saving will have been even greater. It will thus be seen that assuming the estimate of repurchases (Rm. 500 millions per annum cash amount) given above to be correct, the saving to the balance of payments would total over Rm. 100 millions per annum for each year the repurchases continue.

In the light of these considerations it would be by no means impossible to assume that the net annual charge on the German balance of payments in respect of foreign debt is now little more than Rm. 1 milliard, instead of the Rm. 1,200 to 1,550 millions given by the Basle Committee. Taking the favourable balance of services at 100 millions, a monthly surplus on trading account of 75 to 80 millions would be sufficient. The figures for the last two months was in each case Rm. 84 millions, and it is noteworthy that the financial editor of the *Berliner Tageblatt* in a recent article regarded the balance as established for the time being. The latest trade figures are particularly encouraging since they show a considerable expansion in the volume of trade. It is true that a revival of internal activity or the much to be desired rise in prices of raw materials, which are the principal German imports, would materially change the picture unless exports showed a corresponding expansion; but for the world's greatest debtor country to balance her international account in the midst of the present depression is no mean achievement.

As long as the prices of German securities remain at or near the present low levels, there is no reason why the position should not progressively improve. The conversion of foreign assets into German securities can certainly continue for a long time at the present rate and should

be stimulated by cheap money and conversions abroad as well as by any revival of confidence in Germany. Theoretically, the conversion of only half the German assets abroad, or, say, Rm. 4 to 5 milliards, would practically wipe out the whole long-term debt. This is, of course, merely theory since in practice it is very doubtful whether the realisable assets, as opposed to those tied up in various ways, are as high as this; and from a market point of view such a big movement would be out of the question. The Germans are sometimes accused of staging an enormous "ramp" with their debt—threatening a moratorium and then repurchasing external bonds at the low prices resulting from the threat. However that may be, the recent movement represents a natural as opposed to a forced solution of the problem of excessive debt. Viewed in this way the German foreign debt problem appears much more manageable, and the hope that once the standstill credit problem can be solved the way should be clear to abolition of exchange restrictions seems more possible of realisation.

THE DISTRIBUTION OF EMPLOYMENT.

ONE of the incidental and minor inconveniences of the changes in unemployment insurance administration which have characterised the last few years is the difficulty of interpreting the insurance statistics, admirably analysed from time to time in the *Ministry of Labour Gazette*, in such a way as to obtain a clear picture of the trend of industrial employment. Provided, however, the fact is borne in mind that changes in the numbers insured are partly a reflection of changes in the conditions for the receipt of benefit, and cannot in every case be taken as reflecting an exactly corresponding change in the demand for labour in the industry concerned, a very fair picture of the considerable redistribution of industrial activity in this country during the last nine years can be gathered from the analysis in the November *Gazette*.

The total insured population has grown from 11,485,800 persons aged 16 and over in 1923 to 12,808,000 persons aged 16 to 64 in 1932. From 1923-1928 the rate of expansion per annum was about 1.3 per cent. of the numbers insured in 1923. Then followed a considerable acceleration; and between 1930 and 1931 the corresponding rate of increase was 3.3 per cent. In 1931-32, however, it dropped to 0.3 per cent. During the last three years the rate of increase among juveniles slowed down and in the last two years gave place to a decline, presumably due partly to the fall in the birth-rate during the war years and partly to difficulty of obtaining employment on leaving school. There was a decline in the numbers of married women during 1931-32 which must largely be attributable to the changed conditions for the receipt of benefit. In the following table the figures showing the net changes in numbers insured, given as percentages of the numbers insured at the beginning of the year, are separated into new entrants and net exitants (separate figures are not available for exitants and re-entrants):—

Year.	New Entrants into Insurance, Per cent.			Exitants from Insurance, minus Re-entrants, Per cent.			Net Increase or Decrease, Per cent.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
1925-26	5.6	12.4	7.4	-4.1	-11.6	-6.1	+1.5	+0.8	+1.3
1926-27	5.2	11.6	6.9	-4.5	-10.4	-6.0	+0.7	+1.2	+0.9
1927-28	5.1	11.8	6.7	-4.6	-10.1	-5.9	+0.5	+1.7	+0.8
Average 1925-28	5.3	11.9	7.0	-4.4	-10.7	-6.0	+0.9	+1.2	+1.0
1928-29	5.0	11.5	6.7	-3.5	-9.1	-4.9	+1.5	+2.4	+1.8
1929-30	5.0	11.4	6.7	-3.0	-7.3	-4.2	+2.0	+4.1	+2.6
1930-31	4.7	9.9	6.2	-1.8	-6.6	-3.2	+2.9	+3.3	+3.0
1931-32	4.2	8.8	5.5	-2.9	-11.0	-5.2	+1.3	-2.2	+0.3

Usually about 75 per cent. of new entrants are juveniles and the rest consist of persons transferred from uninsured industries; persons who give up business on their own account, men discharged from the Forces, and non-manual workers whose salaries have fallen below the £250 limit. From 1925-1931 there was a decline in the net rate of

exit. This was probably due to the decline in emigration, the reduction in the numbers of persons entering business for themselves, the downward movement of salaries, which tended to keep more non-manual workers below the £250 limit, and the relaxation, during 1928-30, in the conditions for the receipt of unemployment benefit. The increased net rate of exit in 1931-32 was largely due to the more stringent conditions for the receipt of benefit.

These changes in the numbers in insured employment as a whole have been accompanied by a considerable shifting as between different industries. The insured industries are classified in nine groups, and the percentage changes in these groups since 1923 are shown below:—

GREAT BRITAIN AND NORTHERN IRELAND.		
Group.	Estimated Number Insured at July, 1932.	Percentage Increase (+) or Decrease (-) since 1923.
Fishing	31,140	+ 30.0
Mining and quarrying	1,149,440	- 12.0
Manufacturing	6,011,720	+ 5.3
Building and contracting	1,147,280	+ 42.6
Gas, water and electricity supply	174,210	+ 5.6*
Transport, communication, storage and distribution	2,424,300	+ 41.3*
Commerce, banking, insurance and finance	243,130	+ 7.8
Miscellaneous services (including professional services; entertainments and sports; hotel, public-house, restaurant, boarding-house, club, &c. service; laundries, dyeing and dry cleaning)	765,150	+ 46.0
National and local government	461,630	+ 16.4
All Industries and services	12,808,000	+ 14.8

* Excluding a large number of exempted persons. It is estimated that if they were included the increases would be: Gas, &c., 13 per cent.; transport, &c., 33 per cent.

The industries within each group are further analysed in a table too large for reproduction here. This shows that there has been a considerable divergence of movement within these groups. In the mining and quarrying group, which was the only one to show an absolute decline in numbers employed, the contraction was due entirely to the coal and metallic ores sections, whereas the number of persons employed in the production of stone, slate, chalk, sand and gravel increased by 45.6 per cent. The manufacturing group, which shows the smallest expansion of any, includes over six million insured employees and covers 75 industries. Of these the 49 which have grown include just over 3½ million workpeople, and they have expanded by 23.7 per cent. since 1923. The remainder, covering 26 industries with just over 2½ million workpeople, contracted by 12.8 per cent. The biggest advance has been in the electrical trades, especially wiring and contracting, which has increased by 117.7 per cent.; artificial stone and concrete (116.4 per cent.); silk and artificial silk (93.8 per cent.); and heating and ventilating apparatus (76.6 per cent.). Some other trades ancillary to the building trades have also advanced by over 50 per cent., and several industries manufacturing domestic and personal requisites have expanded by over one-third since 1923. Some of these latter, as also the silk and artificial silk industries, have, however, declined during the past year. Other industries which have expanded since 1923 at a rate above the average include hosiery, printing, publishing and bookbinding, miscellaneous metal industries, miscellaneous food industries, tailoring, rubber manufacture and general ironfounding. The manufacturing industries which have declined are on the average much larger than those which have grown, and include cotton, wool and worsted, general engineering, iron and steel manufacture, shipbuilding and ship repairing.

The striking expansion in the building and contracting group is due largely to the heavy transfers of men from the depressed industries into the contracting section between 1929 and 1931; the building industry expanded by 25.8 per cent. over the ten-year period. In transport and distribution there were increases of 71.2 per cent. in tramway and omnibus service; 58.5 per cent. in the distributive trades; 44.1 per cent. in other road transport, and 28.6 in shipping service. The numbers employed in the remaining services in this group, mainly railway workers and dock, harbour and canal employees, show contractions. All the "miscellaneous services" show large increases.

The increase in the national and local government group is the net result of a decrease of 29.9 per cent. in national government mainly due to the reduction in temporary staffs which continued until 1930, and an increase of 51.4 per cent. in the local government figure. The heaviest increases in the latter took place between 1929 and 1931, at the same time, and probably for the same reason, as the increase in public works contracting.

The industries which have expanded since 1923 now include more than twice as many insured workpeople as the contracted industries; the change in the proportions in which the insured population is distributed over the various industries is shown in the table below:—

Industry Group.	Percentages of Total Number Insured at	
	July, 1923.	July, 1932.
Shipping and fishing	1.3	1.5
Mining and coke ovens	11.9	9.1
Metal trades (including engineering, vehicles and shipbuilding)	19.2	16.4
Pottery and glass	1.0	0.9
Chemicals	1.8	1.7
Textiles	11.4	9.9
Leather trades	0.6	0.5
Clothing	5.0	4.7
Food, drink and tobacco	4.4	4.2
Woodworking and paper	4.7	5.1
Building, public works contracting, bricks, artificial stone, cement, &c.	8.1	9.9
Gas, water and electricity	1.5	1.4
Transport and communication (except shipping)	5.8	5.6
Distributive	10.9	15.2
Commerce, banking, insurance and finance	2.0	1.9
Other miscellaneous manufactures and services	10.4	12.0
Totals	100.0	100.0

The most marked changes are the declines in the relative importance of mining and coke ovens (mainly due to coal-mining) and the metal trades, and the enormous increase in the proportion of the population now engaged in distribution.

The movement of industry from the North to the South, which was so marked up to 1929, appears from the table to have continued, but in a less pronounced degree:—

INDEX OF INSURED PERSONS. (1923=100.)

	July, 1928.	July, 1929.	July, 1930.	July, 1931.	July, 1932.
London	110.2	113.6	115.7	120.4	121.4
South-Eastern	118.4	122.0	126.9	132.8	135.9
South-Western	109.8	113.0	116.2	120.4	122.1
Midlands	107.0	109.7	113.0	115.8	117.7
North-Eastern	103.5	104.4	106.2	108.9	109.5
North-Western	103.9	105.2	108.3	110.4	109.0
Scotland	101.1	101.6	104.6	108.0	107.2
Wales	99.1	97.6	99.1	101.4	103.6
Northern Ireland	101.3	104.1	107.3	108.9	106.9
Great Britain and Northern Ireland	106.1	108.0	110.8	114.1	114.4

It must be remembered, however, that the numbers insured represent, not persons actually in work, but persons attached to the industry. The increase in the number insured in the North is largely attributable to the changes of the Unemployment Insurance Act of 1930, which resulted in the retention within the scheme of insurance of large numbers of persons in the distressed areas who would otherwise have ceased to be included in the statistics. The otherwise have ceased to be included in the statistics. The spread of the depression to other areas and the slight improvement in the textile industries have, however, caused a real check to the movement, and between 1931 and 1932 the numbers actually in employment in the South decreased slightly more than those in the North. By July, 1932, the Southern section of Great Britain and Ireland included 48.6 per cent. of the insured population, as compared with 45.7 per cent. in July, 1923.

The final table shows which are the important industries which are tending to move Southward. Owing to the absence of figures for persons aged 16-64 in the earlier years, 1927 is taken as the starting date, and the table shows the changes since that year in the numbers of persons aged 16-64 insured in those industries which have

expanded much more rapidly in the South than in the North:—

Industry.	Southern Section.	Northern Section.
Commerce, banking, insurance, finance (excluding special schemes)	+ 6,420	- 1,680
Oils, greases, glue, soap, inks, matches, &c.	+ 5,560	- 1,290
Pottery, earthenware, china, porcelain	+ 5,270	- 310
Glass (excluding bottles and scientific glass)	+ 2,700	- 910
Dress and mantle making, millinery, &c.	+ 2,020	- 3,840
Musical instruments	+ 1,610	- 100
Textile bleaching, printing, dyeing, &c.	+ 1,150	- 3,920
Railway carriage, wagon and tramcar building	+ 870	- 5,830
Cotton	+ 670	- 44,780
Manufacture of brass, copper, zinc and lead, &c.	+ 500	- 1,550
Drink industries	+ 180	- 600
Pig iron manufacture (blast furnaces)	+ 160	- 5,450
Distributive	+ 213,190	+ 171,040
Hotel, public-house, restaurant, club service, &c.	+ 44,860	+ 28,960
Building	+ 37,820	+ 8,270
Electric cable, apparatus, lamps, &c.	+ 30,500	+ 3,240
Printing, publishing and bookbinding	+ 23,180	+ 11,070
Laundries, dyeing and dry cleaning	+ 16,780	+ 7,390
Construction and repair of motor vehicles, cycles and aircraft	+ 16,090	+ 5,530
Metal industries not separately specified	+ 14,940	+ 6,140
Furniture, upholstery, &c.	+ 14,320	+ 9,100
Professional services	+ 14,410	+ 7,760
Gas, water, electricity	+ 11,100	+ 80
Electrical engineering	+ 10,100	+ 5,940
Hosiery	+ 9,980	+ 4,760
Food industries not separately specified	+ 7,670	+ 2,390
Stoves, grates, pipes, &c., and general ironfounding	+ 7,000	+ 790
Electrical wiring and contracting	+ 6,700	+ 3,890
Paper and paper board making	+ 4,910	+ 1,430
Cardboard boxes, paper bags and stationery	+ 4,600	+ 670

Some of these industries, as, for example, oils, etc., pottery, textile finishing, printing and the electrical and metal trades, show what appears to be a real movement Southward. Most of the figures, however, suggest rather an expansion in the South of those industries, especially those involving services rather than manufacture, which serve a comparatively local demand and which are therefore bound to grow more rapidly outside the depressed areas. The fact that a certain number of expanding trades are located in the South is sufficient to bring about a corresponding expansion over the same area in a very wide circle of industries and services catering for commercial and personal requirements.

To conclude, a study of the foregoing analysis should serve as a corrective to the view that, since the war, Britain has made little or no progress towards re-adaptation of her economic life. Admittedly, owing to housing difficulties and other obstructive influences, it has proved difficult to drain away the "stagnant pools" of unemployment created by the decline of many of our staple trades in localised areas. But the extent to which migration and re-absorption of labour is revealed in the period under review encourages the hope that this century may yet succeed in solving, as did its predecessor, the problem of labour displacement.

BELGIAN NEUTRALITY.

On the whole, it is remarkable how little of sensational secret information has come to light as a result of the voluminous publication of pre-war official documents from the archives of the various European Powers; and this is conspicuously true of the British series. In Volume VIII of this record,* however, which was published the other day, there is one group of three documents which are at first sight rather startling when they are read together. The first and longest document of the three is a memorandum dated November 15, 1908, by Sir Eyre Crowe, "respecting Belgian Neutrality and Great Britain's Obligation to defend it." The memorandum was written on two questions asked by the then Secretary of State for Foreign Affairs, Sir Edward Grey, to the following effect: "How far would England's liability under the treaty guaranteeing the neutrality of Belgium be affected, if (i) Belgium acquiesced in a violation of her neutrality; or (ii) the other guaranteeing Powers or some of them acquiesced?" The memorandum, which is a characteristic example of Sir Eyre Crowe's clear, forceful and

* "British Documents on the Origin of the War" (1898-1914). Edited by G. P. Gooch and Harold Temperley. Vol. VIII. (London, 1932: H.M. Stationery Office).

thoroughly straightforward work, comes to the conclusion that—

Great Britain is liable for the maintenance of Belgian neutrality whenever either Belgium or any of the guaranteeing Powers are in need of, and demand, assistance in opposing its violation.

This memorandum was minuted as follows by the Permanent Under-Secretary of State for Foreign Affairs, Sir Charles Hardinge:—

The liability undoubtedly exists as stated above, but whether we could be called upon to carry out our obligation and to vindicate the neutrality of Belgium in opposing its violation must necessarily depend upon our policy at the time and the circumstances of the moment. Supposing that France violated the neutrality of Belgium in a war against Germany, it is, under present circumstances, doubtful whether England or Russia would move a finger to maintain Belgian neutrality, while if the neutrality of Belgium were violated by Germany, it is probable that the converse would be the case.

The papers then came up to the Secretary of State himself, who added the following minute of his own:—

I am much obliged for this useful minute; I think it sums up the situation very well, though Sir C. Hardinge's reflection is also to the point.

The publication of this group of documents—or, rather, of a summary of them—has evoked a letter to *The Times* from Lord Grey himself in which he deals with two distinct points: first with the substance of the documents and then with the question whether documents from the hand of permanent officials ought to be published.

On the first point, it is really clear from the full text of Lord Grey's own minute that he was not intending to lend his authority to a machiavellian attitude towards our obligations under the Belgian guarantee treaty of 1839. It is evident that the "minute" to which Lord Grey here refers is Sir Eyre Crowe's memorandum and not Sir Charles Hardinge's minute upon it; and in his letter to *The Times* Lord Grey goes on to show what he had in mind in writing that "Sir Charles Hardinge's reflection" was "also to the point." His own attitude is made clear by the policy which he afterwards pursued. "The hypothesis suggested by Sir Charles Hardinge," he now writes, "could not be excluded; and undoubtedly, if it had come to pass, it would have placed a British Government in a position of the greatest difficulty and embarrassment. We desired, therefore, to prevent any violation of Belgian neutrality, and for this we worked continuously during the subsequent years."

Lord Grey goes on to record the assurance which he subsequently gave, with unquestionable sincerity, to the Belgian Government; and he adds the following highly interesting—and rather lurid—passage *à propos* the relations, on this matter, between Great Britain and France.

I am told that the Memoirs of General Joffre, which have just been published in Paris, show that the French General Staff—not the French Government—had various hypothetical schemes, one of which would have involved the invasion of Belgium in anticipation of a German invasion, but that this was definitely abandoned in deference to warnings that it would alienate Great Britain. This leaves no doubt whatever of the serious view taken of the obligation to defend Belgian neutrality and of our determination not to countenance a violation of it.

In the light of this postscript of Lord Grey's it seems to us that nobody comes out very badly. Sir Eyre Crowe's memorandum does him honour; and as for Sir Charles Hardinge's minute and the French General Staff's plan, these British and French public servants were, we suppose, doing their duty in giving the responsible Governments, whose servants they were, the means, and placing before them the considerations, for doing either good or evil, as the Governments themselves might decide. In the event, neither the British Government nor the French Government chose to do evil. The British Government exerted itself to see that Belgian neutrality should be respected, while the French Government, in deference to British representations, seems to have abandoned any idea which it may have entertained of acting on this particular plan of its General Staff.

On the first, and more important, of Lord Grey's two points we thus have the pleasure of finding ourselves in

agreement with Lord Grey. On his second point, however—that it seems very undesirable to publish the minutes and memoranda of permanent officials in Government Departments—we agree with Dr. Gooch and Mr. Temperley, who have commented upon Lord Grey's letter in a letter published over both their names in *The Times* on Tuesday.

The two distinguished editors of the British series of documents accept Lord Grey's proposition that "permanent officials have no responsibility for ultimate decisions and policy." But they contend on the other hand that "without these documents the record and understanding of British policy would be incomplete"; and they quote a declaration of their own, in the preface to a previous volume, that—

They would feel compelled to resign if any attempt were made to insist on the omission of any document which is in their view vital or essential.

Here we think that the editors are right, with all respect for Lord Grey's chivalrous desire (an honourable legacy from his period of office) to shield the permanent officials who once worked under him. If the documents of the pre-war years are to be published at all (and that is no longer an open question), then it is quite impossible to leave the memoranda and the minutes of the permanent officials out of the published record. We should be showing little recognition of the importance of the permanent officials' work if we were to accept the view that, with their contributions deleted, the record would remain intelligible. For although "they have no responsibility for ultimate decisions and policy," it is nevertheless the permanent officials who think the thoughts and submit the information out of which the Governments' policies are made. And it is impossible to understand a policy without some insight into its genesis.

This truth is no *arcaneum* of the professional historian. It is a commonplace of official practice, in which all the drafts and minutes that go to the making of policy are circulated round the office (together with "back papers") while the policy is in process of being made. If the permanent officials know that their lucubrations are likely to see the light of publicity a quarter of a century after their composition, we do not believe that this prospect will hamper their freedom in expressing their views, as Lord Grey fears that it may. So far as the prospect is in their minds at all, we think that it will merely have the wholesome effect of making them express their views more carefully, and with fuller explanation of motives, in delicate cases like that in question here. "Publish and you won't be damned" is the moral of this story.

Notes of the Week.

Parliament Resumes.—In the debate on the Address the Prime Minister treated the House to some more "thinking aloud" of a not very illuminating kind. He referred picturesquely to the Government as a Council of War planning to defeat the old enemy—unemployment—and promised that in due course it would produce a scheme, but his rather incoherent hints of future action gave little enough sign of any strategical ideas. He cast doubt upon the idea of relief works, but affirmed the intention of the Government to encourage every form of "normal municipal enterprise," with the added warning that "rates and taxes cannot be drawn upon extravagantly." Finally, he threw out a hint of some form of training scheme, which, if current rumours be correct, will be worked through the National Council of Social Service. Admirable as is the "self-help" accomplished by this institution, it seems to us more than doubtful whether the mere encouragement of voluntary effort is adequate to to-day's needs. Moreover, we are still left with the uneasy impression that the Government, lacking any convictions of its own on monetary policy, may continue to secure the worst of both worlds. Very properly it is determined to avoid direct, deliberate deflation; and it approves the continuance of a regime of ultra-cheap

money. Yet it shrinks from the logical consequence—that, in pursuance of the aims of controlled reflation, it should reverse its "contractionist" attitude towards productive public works, and give the country an assurance that it is not to be faced with another Draconian Budget next April. Mr MacDonald's references to agriculture, another topic which figured prominently in the King's Speech, were hardly more enlightening. If, as the announcement of a Meat Reorganisation Commission seems to suggest, the panic policy of shutting out imports by quotas and endeavouring to bring about a rise in prices through an artificially induced scarcity is the "trail" the Government is engaged in "blazing," then the outlook for the country is serious indeed. During the past three years of contracting exports and shrinking international trade, the fact that we were able to import at low prices the foodstuffs that we vitally need has been the one thing that has saved us from disaster. If food is now to be made dear, in the interests of the farmer, we may well find our position, with a falling exchange, becoming exceedingly unpleasant, not to say dangerous—with three million unemployed near the starvation line. It would be useless to deny that agriculture in this country is in a bad way and needs assistance; the real question is what form of assistance is best for it and the country as a whole? Part of the answer to this question is at any rate easy. Of all possible forms of assistance quotas are the worst; anything is better than that, even a high tariff or a subsidy. But we are inclined to think that none of these is really the appropriate remedy. The real trouble with British agriculture is distribution, and a properly co-ordinated series of marketing schemes, aided if necessary by a liberal measure of financial assistance from the Government, would probably do more to make the farmer prosperous than all the tariffs and quotas in creation; and it would certainly do much less harm to the world in general. How long will it take the Government to discover that casting out devils by Beelzebub is an unprofitable game?

British Commercial Policy.—In view of the charge of "impossibilism" which is so frequently levied against Free Traders, who are represented as clinging to a museum piece of fiscal theory, we welcome particularly the practical suggestions put forward by Sir Herbert Samuel in the House on Tuesday. It must be recognised, he said, that it would be idle to expect to-morrow a universal levelling of tariff barriers. What we should do is to endeavour to form a group, as extensive as possible, of low-tariff Powers. The group should undertake that tariffs should be reduced among themselves to a maximum of 10 per cent. on any article, apart from specially-defined revenue duties; and should agree to make the necessary modifications in most-favoured-nation policy. The combination should promise not to increase tariffs against non-participants; and membership should be accorded to all nations desirous of joining. Here, we are convinced, is the outline of a policy which this country can fruitfully pursue both in its negotiations with Scandinavia and at the World Economic Conference. It is a policy which even the Government's Conservative supporters—except such of them as love tariffs for their own sake—should surely endorse as eminently reasonable and practicable.

The Economic Conference.—The Organising Committee of the Monetary and Economic Conference met at Geneva on Tuesday, under the chairmanship of Sir John Simon, and decided that, after the Preparatory Committee of Experts had completed its task of preparing an annotated agenda, three months would be necessary for the various Governments to consider the agenda before the actual plenary session of the Conference. It was further agreed to adjourn until the second half of January and to ask the experts to finish the preparation of the agenda by that date. The intention apparently is not that the experts, who have in any case dispersed until early in January, are to be required to complete in a few days a report crystallising the various monetary and

economic problems—much less achieve agreed recommendations for their solution—but that the annotated agenda shall be, as it were, a first instalment of the experts' work. This compromise, which would seem to indicate the end of April as the contemplated date for the full Conference, represents presumably an attempt to satisfy the British Government's desire for a minimum of delay. In the House of Commons on Tuesday Mr MacDonald—who made the curious assertion that if experts had been set to tackle the various problems before the politicians met at Lausanne, the Lausanne Conference would still be sitting—stated that the Government will continue to press for "the earliest meeting of the Conference that it finds possible." Sir Herbert Samuel also suggested that if the experts at Geneva proved unable to make practical proposals at an early date, "statesmen themselves should take the matter in hand." Greatly as everyone must regret every week that elapses before a resolute attempt is made to get to grips with the world's economic problems, we are still not convinced that the assembly of a conference of statesmen before the medley of complex issues has been reduced to simple terms can result in anything but confusion and fiasco.

Disarmament.—Last Tuesday the Bureau of the Disarmament Conference adjourned for a few days without yet knowing whether, when it resumes its work, the participation of Germany will have been secured. This is, of course, the capital question; and it is the question which is under direct discussion *à deux* at Geneva between Sir John Simon, Mr Norman Davis, Baron von Neurath and M. Paul-Boncour. The crux seems to be that while the French as well as the British Government has actually acknowledged Germany's right to equality of status, the French acknowledgment, unlike the British, is not unconditional. The French have only made the acknowledgment as part of the French Plan; and their position seems to be that their acknowledgment holds good only if the Plan as a whole is accepted as a basis for discussion. The Germans, on their side, are obstinate in their unwillingness to accept this French condition. And so the stubborn conversations go on. But it is at least something to the good that Baron von Neurath has been brought to Geneva by the Manchurian affair, and that the informal discussion of disarmament has not been forbidden him in his instructions. In the meantime, a certain change in English opinion, following upon Mr Baldwin's speech in the House of Commons the Friday before last, is possibly indicated in an interesting series of letters to *The Times* from Sir Edward Grigg, Lord Howard of Penrith and Admiral Richmond. The sense of these letters is that the risk involved in committing ourselves to moderate sanctions (the sanction of the boycott in preference to the sanction of the blockade) is probably worth while as an insurance against the calamity of another war. Lord Howard has touched the heart of the matter when he asks why it is that, in spite of the pacts which we have signed, "we have not yet got confidence in peace and security and therefore, as a natural consequence, disarmament"; and when he answers that, in his opinion, the simple reason is "that the Great Powers of the World, and particularly Great Britain and America, cannot yet decide to sacrifice so much of their own independence of action as to join together to punish, if necessary, a violator of the world's peace." If this opinion becomes the public opinion of this country, one of the greatest of the present obstacles to disarmament will be well on the way towards being overcome.

The German Political Crisis.—The political crisis in Germany remains still unresolved as we go to press, though Herr von Papen tendered his resignation as long ago as November 17th. President von Hindenburg's first step was to receive, on November 18th and 19th, the leaders of five political parties—the Conservatives, the Centre, the People's Party, the Bavarian People's Party and the Nazis—in the hope of inducing them to co-operate in forming a "Government of Concentration"

resting on a parliamentary majority. The President is evidently determined, first and foremost, to secure an effective Government; and if a "Presidential Government," without parliamentary backing, proves to be the only kind of Government that will fulfil this requirement, then the President's conscience will not forbid him to put such a Government into office. But he would much rather instal an effective Government within the four corners of the Weimar Constitution. His main difficulties come from Herr Hugenberg, who is seemingly concerned to prevent the restoration of parliamentary Government, and from Herr Hitler, who is concerned to secure a special position and special terms for himself if he takes office. Since the interview between the President and Herr Hitler last Saturday the crisis has taken the form of a correspondence in writing between the President and the Nazi leader. From the outset Herr Hitler has been at a disadvantage in this fresh encounter with the President as compared with his position at the time of the famous interview on August 13th last, when National Socialism was at the height of its prestige. This time Herr Hitler is asking for something less than dictatorial power, and President Hindenburg is offering him something very much less indeed. Evidently the President has taken to heart Herr Hitler's brutal reference to their disparity in age; and has made up his mind that Herr Hitler shall not take office on terms which would allow him, in the event of the President's death, to usurp dictatorial power under the clause in the Weimar Constitution which gives the Chancellor the provisional administration of the Presidential office if the Presidency falls vacant. The President appears, therefore, to have insisted that the Ministry of Defence shall remain in General von Schleicher's hands and the Ministry of Foreign Affairs in Baron von Neurath's, that the present course of "constitutional reform" shall be continued, and that Herr Hitler shall not have the benefit of Article 48 of the Constitution, under which Parliament can be overridden and a virtual dictatorship introduced by Presidential Decree. If Herr Hitler agreed to take office on these terms he would, of course, be writing himself down as no more than the leader of the momentarily largest party in the Reichstag—a position in which he has poor prospects, considering that he has secured his following on the assumption that he is flying far higher. If he did take office under these conditions he might soon find himself out of power, with his party dwindling as rapidly as it once swelled to its present dimensions. It is therefore not surprising that Herr Hitler has refused the President's terms. But he has refused them politely, without closing the door on further discussion. Discussion, however, implies willingness to "talk" on both sides. It is doubtful if the President is in a mood to argue at length with Herr Hitler; and if the next move is the establishment of a new "Presidential Cabinet" without the Nazi leader, we shall not be surprised.

Danzig and Poland.—There is no more news of the dispute between Danzig and Poland, to which we referred last week, about the currency in which railway fares should be paid in the territory of the Free City. But the perennial controversy between these two East European children of the Peace Settlement is hydra-headed; and this week three decisions on other pending controversies have been published by the Acting High Commissioner in Danzig of the League of Nations. All three decisions relate to questions arising over re-exports from Danzig into Polish territory; and on all three points the Polish Government appears to be challenging the High Commissioner's rulings and appealing to the League Council. This unceasing friction, which has been going on since the morrow of the Peace Settlement, goes to show that the present arrangements are unworkable; and it may be, as well to point out once again that these arrangements were originally made for Poland's convenience, as part of a scheme to ensure her a fair outlet to the sea. There was no question of including the German city of Danzig in the territory of the new Polish State. That would have been too gross a violation of the principle of nationality for the principal Allied and Associated Powers to countenance at the Peace Conference—even at an ex-

enemy Power's expense. Danzig was, however, cut off from Germany against her own will and Germany's will and was erected into a Free City which was constrained, under League of Nations' supervision, to grant Poland certain facilities in the sphere of trade and communications. The expectation was that Danzig would at least be compensated economically for her political loss by becoming the Baltic port for a great Polish hinterland; and that a common economic interest would gradually draw the two States together in spite of national antipathies. Yet, notwithstanding the admirable supervisory and mediatory work that has been performed, in the interests of both parties, by the League Council and its representatives on the spot, this expectation has never been fulfilled. Poland has treated Danzig as a step-sister; and while she has insisted upon the continued separation of Danzig from the German fatherland, she has bent all her energies to the enterprise of creating a brand-new port on Polish territory at Gdynia. This enterprise is perfectly legitimate; but now that it has been crowned with success, the case for the artificial separation of Danzig from Germany falls to the ground. At present, Danzig is getting the worst of both worlds. She is separated politically from Germany and is kept at arm's length by Poland in economic matters. This is an injustice.

Indian and Burman Affairs.—While the third Round Table Conference is gathering in London there are two minor setbacks to be recorded in India and Burma. In Burma, there seems to be little prospect of a Government being formed on the basis of the recent election returns; and the results of the election are being increasingly challenged on the ground that the electors voted under a misapprehension about British policy and that the anti-separationists themselves, who in consequence have secured a majority, are not prepared to face the condition—which was laid down by the British Government in advance—that if Burma now decides to enter an All-India Federation, the decision cannot be revoked at a later date. At the same time, there comes from Delhi the news that a joint conference of the Working Committee of the All-India Moslem Conference, the Council of the All-India Moslem League, and the Working Committee of the Jamiat ul Ulema has repudiated the draft resolutions which were signed by the Moslem participants in a Hindu-Muslim-Sikh "unity conference" held recently at Allahabad. The representation of the several communities at this "unity conference" does not appear to have been authoritative; and the progress of India on the road towards self-government does not depend on its findings, since the gordian knot of the electoral representation problem, which the Indian communities themselves have failed to untie, has been cut by the British Government's award. At the same time, it is extremely desirable that this *ultima ratio* of a British award should be replaced by a direct agreement between the parties; and it is unfortunate that any attempt to arrive at such an agreement should end in failure when once it has been made. These setbacks, however, are both slight in themselves; and their effect will be overcome at once if substantial progress is made in London. Here the outlook seems to call, not for pessimism, but for guarded hopes. Good will on both sides may work wonders; but it would be foolish to minimise the practical difficulties—e.g., in the matter of financial "safeguards"—which have to be surmounted.

Events in Spain.—A correspondent writes:—The long-deferred trial of the surviving members of the Military Directory and other accomplices of General Primo de Rivera's "brief parenthesis in Spain's constitutional march" (as the Dictator himself called it) began this week. The charge is one of high treason to the nation, and is being heard before a panel of 21 Deputies to the Cortes, constituting a kind of High Court of Civil Jurisdiction. The prosecution has made it clear that the sentences on the army chiefs for meddling in the political sphere—an old Spanish custom—will be relatively lenient. They may be sent to prison and deprived of their civil rights—but with a good prospect of amnesty, which is

never long delayed in Spain. The line taken by the defence is that the conspiracy against the weak Cabinet of the Marquis de Alhucemas in 1923 was a "patriotic action" intended only to be a threat. Interest centres on the fresh incriminating evidence with regard to ex-King Alfonso's personal responsibility for the *coup d'état*. Señor Salvatella, Minister of Education in the Prieto Government, is the latest to convict the ex-King out of his own mouth. There seems to be little doubt—no Spaniard certainly has any doubt about it—that the Moderating Power was rightly impatient with the Parliamentary Constitution of 1876, which had never worked, and was ready to take a leap into the dark, trusting to the "divinity that doth hedge a (Bourbon) King." Meanwhile, a more positive charge of electricity in the atmosphere of Spain has been provided by the first election in autonomous Catalonia. Out of 85 seats in the Generalitat, Colonel Macia's party—the Esquerra, or Catalan Left—has won the maximum number of 67. The Conservative Lliga, sponsored by Señor Cambó failed to stage its hoped-for comeback. Communists, Separatists and extreme Catholic Monarchists were completely swamped. Evidently the present Spanish Government—with its loyal colleagues in autonomous Catalonia—is in an enviable position of continued popular esteem.

Canada and the Tariff.—The closing debates in the Canadian Parliament on the Bill to ratify the Ottawa Agreement have increased rather than diminished the obscurity of the position, so far as the future functions of the Canadian Tariff Board are concerned. It will be recalled that under Articles 11 to 15 of the Anglo-Canadian agreement, signed at Ottawa, the Canadian Government undertook to constitute a Tariff Board; to cause the Tariff Board to review the duties charged on any commodities in respect of which the British Government asked for reconsideration; and on receipt of the Tariff Board's report to invite Parliament to give effect to any modification "full necessary to give effect to the general principle of 'full opportunity of reasonable competition' for British producers. The Canadian Government also undertook that "no existing duty" would be increased except on a report from the Tariff Board and in accordance with the facts as found by that body. Finally, the promise was made that British producers would be entitled to "full rights of audience before the Tariff Board." On Monday night, however, Mr Bennett declared that the Government did not consider itself bound to accept the Tariff Board's decisions; he declined to give any general pledge not to increase the tariff against British goods save with the approval of the Tariff Board. Though the cabled reports of his speech do not make the matter quite clear, his implication presumably was that the Government would feel themselves free to remove any articles from the Free List—a freedom which would go far to stultify the Ottawa Agreement. Even spirit, if not the letter, of the Ottawa Agreement. Even more unsatisfactory was his announcement that British manufacturers would have no direct right of appeal to the Tariff Board, but could only submit applications through the British Government to the Canadian Government. He hinted that the British Government would not be over-anxious to forward applications. Doubts whether the Tariff Board will in practice prove of much advantage to the British export trade cannot but be strengthened by these indications of Mr Bennett's attitude.

Financial Procedure in the Commons.—The Report of the Select Committee of the House of Commons on Procedure, which was issued last week as a White Paper, contains some important recommendations for improving the wholly ineffective means of controlling public expenditure at present enjoyed by the elected guardians of the public purse. The proposals of the Select Committee, which resemble those of the Committee which reported in 1917, are chiefly intended to enlarge the scope and the functions of the Estimating Committee so as to bring them into line with those of the Public Accounts Committee. The admirable work done by the latter body has long been recognised, but its function is after all

only that of a coroner holding post-mortem examinations upon the dead corpse of expenditure which has already taken place. The Select Committee appears to have recognised that, even more than a coroner, the House needs a policeman to detect the financial criminal *before*, not *after* the crime has been committed. It consequently recommends that the Estimates Committee should be enlarged, that a close working agreement should be established between it and the Public Accounts Committee, and that it should be provided with an official adviser analogous to the Comptroller and Auditor-General, who is responsible not to the Treasury but to the House of Commons. The Committee is inclined to recommend that the adequate technical advisers for the Estimates Committee should be taken from the staff of the Exchequer and Audit Department, but the Comptroller and Auditor-General has evidently impressed them with the view that for various technical reasons there would be difficulty in carrying out this recommendation. It has therefore suggested that, if these difficulties prove insurmountable, the Estimates Committee should be provided with an independent technical staff. The Committee evidently envisages much wider powers for the Estimates Committee than it at present possesses. It should be within the competence of the Estimates Committee to consider policy as well as administration, and one of its regular duties should be to survey the relation of the total public expenditure to the national income. There can be no doubt that if these recommendations are carried out the control of the House over public expenditure will be considerably strengthened. As things are at present the fate of the taxpayer is sealed as soon as the estimates have been published. For a vote on Supply is always a vote of confidence, and the only method of reducing an estimate is to turn out the Government. Moreover, the Estimates and Accounts as presented to-day are practically meaningless, since they are devised merely on a cash basis. They do not show the real cost of any of the services performed by Government, and the House is consequently unable to bring any effective criticism to bear on them. But an Estimates Committee armed with real power of criticism and the right, which the P.A.C. possesses, of examining officials, would be in a very different position. It would be able to detect extravagance and to expose departmental waste in a way which is at present quite impossible.

The Fife Coal Scheme.—The effectiveness of the Coal Mines Reorganisation Commission set up under the Coal Mines Act, 1930, is at last to be put to the test. At the beginning of this week the Commission announced that, following on an inquiry held at Dunfermline, it has formally called upon all the coalowners in the County of Fife to amalgamate. On Thursday a similar announcement was made concerning the South Staffordshire coalfield at Cannock Chase. The output of these two coalfields is not very great. Fife, with eleven undertakings, produces annually some 7,000,000 tons, and Cannock Chase about 5,000,000 tons. But the importance of the steps now being taken by the Commission is altogether out of proportion to the comparatively small output involved, because it is the first instance of the employment of statutory powers to effect compulsory amalgamation in the coal industry. It is clear that in the case of Fife the Commission has given up the hope that amalgamation might be effected by voluntary means, and that it has only resorted to the use of compulsion as a last resort. We may also perhaps be justified in assuming that the Commission is at the same time satisfied that if the assistance of its compulsory powers is given, sufficient goodwill and leadership exist in these coalfields for the working of a scheme of amalgamation to be practicable. According to the procedure laid down in the Coal Mines Act the Commission must first require the mineowners to submit a scheme for amalgamation to the Board of Trade. If the owners fail to do so, then the Commission itself is charged with the duty of formulating a scheme. The procedure for carrying amalgamation schemes into effect is exceedingly cumbersome. All schemes must be submitted to the Railway and Canal

Commissioners—not a very suitable body for deciding economic issues of this kind—which is only empowered to sanction them provided that they comply with certain conditions. They must (a) be “in the national interest”; (b) “result in lowering the cost of production or disposal of coal”; (c) “not be financially injurious to any of the undertakings” which it is proposed to amalgamate “unless the scheme contains provisions for the purchase at a price to be fixed in default of agreement by arbitration,” and (d) the terms of the scheme must be “fair and equitable to all persons affected thereby.” How the two last-mentioned conditions are to be satisfied still remains to be seen; but it is clear from the way in which they are drafted that they may cause endless trouble. Still, it is something to feel that this machinery, cumbrous as it is, has been set in motion. For it is surely plain enough that the quota, as the recent correspondence on the subject in the columns of *The Times* has shown, can do nothing by itself to cheapen the production of coal; indeed, its effect must ultimately, if it is left un-supplemented by a thorough reorganisation, be to maintain precisely that dispersion of output which it is the main object of rationalisation to correct. As a permanent feature of an unrationalised industry a quota system is obviously most undesirable. Its continuation can only be justified if it is used as an integral part of the technique of reorganisation.

British Production.—The physical volume of production in the United Kingdom in the third quarter of 1932, as estimated by the Board of Trade, was 7.4 per cent. smaller than in the second quarter of the current year, and 2.2 per cent. smaller than in the corresponding period a year ago. The following table shows the comparative figures for the various industrial groups:—

INDEX OF PRODUCTION (1924 = 100).

Group.	Year 1930.	Year 1931.	Sept. Quarter 1931.	June Quarter 1932.	Sept. Quarter 1932.
1. Mines and quarries...	91.3	81.6	75.7	77.3	68.8
2. Iron and steel and manufatures thereof	88.8	65.9	61.0	66.6	61.5
3. Non-ferrous metals...	119.1	100.1	96.7	93.4	91.7
4. Engineering and ship- building	116.6	94.9	89.2	90.4	84.2
5. Textiles	79.5	77.0	70.7	86.9	75.9
6. Chemical and allied trades	99.3	95.2	90.7	103.0	97.5
7. Leather and boots and shoes	101.4	99.3	95.4	96.6	92.9
8. Food, drink and tobacco	104.9	103.7	108.5	101.7	97.9
9. Gas and electricity...	138.7	142.4	(a)	(a)	(a)
Total of manufacturing industries (2-9)* ...	106.1	96.7	92.7	98.6	92.1
Total of all groups (1-9)*	103.2	93.7	89.3	94.3	87.3

* Includes also various industries not specified above.

(a) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.

Making due allowance for seasonal trend, the figures point to a certain setback, which appears to have been almost general, as the figures for each of the eight industrial groups show a decrease. The recession was most pronounced in the textiles, mining, and iron and steel groups, whose figures record a decline of 12.7 per cent., 11 per cent. and 7.7 per cent., respectively.

Royal Bank of Scotland.—The report and accounts of this institution are of great interest, for they provide the first indication of how British banks have fared during the current difficult year. When allowance is made for the low level of interest rates, profits at £805,000 show a very small drop below last year. Possibly any diminution in current income has been offset by the fact that last

year's appropriations against the depreciation of banking investments have not had to be repeated. An indication that times are still far from normal is found in this year's diversion of the reserve appropriation from the Rest (or published reserve) to inner reserves against contingencies. This follows the precedent set a year ago:—

Liabilities.	Year ended October 8th.		
	1930.	1931.	1932.
Deposits	£ thous. 50,387	£ thous. 49,416	£ thous. 55,899
Notes	2,773	2,781	2,781
Acceptances	781	933	1,075
Assets.			
Cash	5,454	5,125	5,479
Call money	7,002	6,848	7,180
British Government securities	13,728	15,109	20,940
Other securities	1,452	1,303	1,878
Williams Deacon's bank shares	2,084	3,094	3,094
Treasury bills	2,740	2,680	2,795
Other bills	3,606	2,353	2,106
Advances	21,895	21,418	21,468
Loans on stocks and securities	1,768	1,398	1,244
Net profits	534	611	605
To rest	71	...	...
Other allocations	50	50	50
Dividend	17%	17%	17%

Several points of interest emerge from the balance sheet. The increase in deposits is not unexpected, but the expansion in acceptances is contrary to the usual run of banking experience. The maintenance of the note circulation at last year's level provides some confirmation of the general view that trade and purchasing power have been fairly well maintained during the past twelve months. Coming now to the bank's assets, there is the expected big increase in investments, mainly in British Government securities, and it is needless to add that this increase represents fresh purchases and not the writing-up of last year's securities, which is contrary to British banking practice. There is a very moderate increase in Treasury bills, while the decline in other bills is much less marked than it was a year ago. This again points to a greater stability of trade. Finally, the bank has been able to keep its advances (except those against stocks and securities) not only at last year's level but also at that of the year before. Clearly in this respect Scottish banks have fared better than English banks, which are naturally more exposed to the contraction in world trade as distinguished from purely internal trade.

English, Scottish and Australian Bank.—The accounts of this Australian bank to June 30th last are in some respects more encouraging. It is true that gross profits have fallen by £270,000, but substantial reductions have been made in expenses and taxation is also slightly less, so that net profits have only fallen by £100,000. The dividend has necessarily been reduced from 8 to 5 per cent. The accounts are summarised below, the unit of account being the pound sterling:—

Liabilities.	Year ended June 30th.	
	1931.	1932.
Capital	£ thous. 3,000	£ thous. 3,000
Reserve fund	1,590	1,620
Special depreciation reserve fund	1,585	1,585
Perpetual stocks	1,873	1,873
Deposits at interest	18,736	19,403
Current accounts	9,787	9,969
Bills payable, &c.	1,553	1,859
Assets.		
Cash	8,589	9,528
Investments	1,464	1,585
Bills receivable, &c.	2,097	3,065
Advances	25,699	24,763
Gross profits	1,276	1,056
Expenses	782	706
Taxation	227	201
Net profits	267	148
Dividend	8%	5%

The balance sheet shows signs of more active movement in Australian business. Thus current accounts have risen by £200,000, while bills payable have increased by £300,000 and bills receivable by nearly £1,000,000. The reduction in advances and other assets is probably also a

good sign, for it may point to the gradual liquidation of outstanding loans. It will be noticed that the special reserve fund to cover the depreciation of the Australian pound, due to the valuation of Australian assets and liabilities at the par of the exchange, still remains in being. This was created out of the general reserve fund a year ago, and must obviously be maintained for the present. Apart from this and the shrinkage in profits the accounts suggest that Australian business, and with it Australian banking, is beginning to turn the corner.

Medical Sickness Assurance.—The operations of the small but excellent undertaking whose full title is the Medical Sickness Annuity and Life Assurance Society, are confined to members of the medical profession. The rate of interest earned in the financial year ended June 30, 1932, was £4 6s. 6d. in the life department; and in the sickness department—which is taxed not on interest income but on profits—the rate was £3 16s. 2d. As no commission is payable by the society, the expenses are moderate, and last year amounted to 7.5 per cent. and 17.4 per cent. of the premiums in the life and sickness departments respectively. A quinquennial valuation was made on June 30th last; and it is interesting to observe the general development that has taken place in the operations of the society during the last five years. Thus the funds of the life department have increased from £161,000 to £351,000 and the total funds from £495,000 to £808,000. There has been a progressive increase in new business, the number of policies issued last year being 364 for a total sum assured of £275,000, against 228 for a total sum assured of £146,000 in the year ended June 30, 1927. The following table shows the surpluses earned in the last two quinquennia in the life department and the way in which these surpluses were distributed. A further table sets out the results of the sickness department over the last five years:—

Life Department—	Quinquennium ended	
	June 30, 1927.	June 30, 1932.
	£	£

Satisfactory bonuses have been declared in both departments in respect of the last quinquennium. In the life department the declaration has been in the form of a reversionary bonus of 23s. per cent. per annum—against 20s. per cent. five years ago. Bearing in mind the very low rates of premium charged, this rate compares very favourably with the results shown by the higher rates of bonus generally declared by offices under their participating contracts.

Overseas Correspondence.

LEAGUE OF NATIONS.

Manchuria — Armaments — Economic Conference.

(FROM OUR CORRESPONDENT.)

GENEVA, November 22.

The stage is now set at Geneva. Japan has definitely and comprehensively rejected all the substantial findings and suggestions of the Lytton Commission; her masses of documentation and speeches may all be reduced to the one point that the establishment of “Manchukuo” is the only solution possible, and that Japan cannot enter into consideration of an alternative solution. This, of course, is contrary to all the facts and findings of the Lytton Report, and it makes impossible any beginnings of negotiations with the Chinese. Further discussion between the two parties before the Council or the Assembly would be nothing more than vain repetitions. The work to be done now is for the League to make up its mind whether it considers the developments in Manchuria to be in accordance with existing international treaties and practice, and to say what the proper solution should be. The cynical precision of the Japanese thesis precipitates the necessity for the League to take its stand. What exactly the process will be is a matter of anxious conjecture. It seems clear that the issue must shortly be referred to the Assembly, and this stage may not be taken without stubborn opposition on the part of the Japanese. There is no further hope of solution in the Council, and the issues before the Assembly will be stark naked.

In the circumstances, any detailed analysis of the statements made to the Council by the two parties is almost superfluous. It is no longer a matter of surprise that Japan's case, as presented to the Council, is one of complete justification in self-defence (to avoid the possibility of “being driven into the sea”) within the meaning of the reserves made regarding the Kellogg Pact. She claims the right of Japan alone to judge both of the necessity and the appropriateness of the measures taken (measures which Japan “cannot allow to be the subject of discussion”); she asserts that the “Manchukuo” movement was absolutely spontaneous, and expresses surprise that it should be ascribed to the machinations of Japan; that in face of Chinese anarchy Japan must be pronounced to have done precisely what any other Power would have done in similar circumstances, and that general recognition of “Manchukuo” is the only solution adapted to existing circumstances. Because of the abnormal conditions of China, it is difficult to apply “the formulae normally applied in dealing with international questions in ordinary circumstances.” Yet at the same time it is argued that no single action taken by Japan has infringed any of the relevant treaties. Why, therefore, emphasise “the abnormal conditions”? Japan, for no explained reason, except that it would be rejected by “Manchukuo” and by Japan, objects to what she describes as the “disguised international control of Manchuria” suggested by the Commission.

One very pertinent question was put and answered by Mr Matsuoka. “Why did we not refer the matter of Manchuria to the League of Nations?” His answer was illuminating. Japanese national sentiment, he said, “would not permit outside interference in the Manchurian question.” This he put first and foremost, and his other answers cited the serious situation of Japanese subjects, the difference between Japanese and Western mentality, delays, and so on. The whole substance of the statement was that Covenant or no Covenant, and Pact or no Pact, Japan was determined to go ahead, and would brook no interference from anyone, this attitude being at the same time justified by the claim that nothing had been done or was being done contrary to the treaties.

Perhaps the most effective part of Dr. Wellington Koo's address to the Council was his short improvised reply to

Mr Matsuoka before he delivered his prepared statement. He asked whether, if all that Mr Matsuoka had said of disorder in China were accepted, it would have justified the military occupation of territory as large as that of France and Germany combined. The second point he made was that the justification of such action under the Kellogg Pact was a matter he would confidently leave to the other members of the Council who were signatories of that Pact and some of whom, perhaps, had played some part in its actual negotiations. If that was what the Kellogg Pact meant, the sooner they discarded it the better. In his statement, Dr. Koo said the real difficulty was Japan's failure to respect her engagements and to carry out her pledge made before the Council and the Assembly to withdraw her troops and to refrain from aggravating the situation. Whether this failure was due to native unwillingness on the part of the Japanese Government, or to a want of authority to enforce its will on the all-powerful military chiefs, its effect on the world at large was equally disturbing. One could not help asking in these circumstances, he said, how well organised was Japan as a nation? Japan's traditional policy had been to put every obstacle in the way of Chinese unification and to use disunity as an excuse for her actions. The long series of war, military expeditions and acts of aggression carried out at different periods and places were only different phases of the unchanging policy of expansion, domination and conquest in accordance with the Japanese "continental" policy. For the most part, Dr. Wellington Koo supported his main case by references to the report of the Lytton Commission. No premium, he said, should be put on aggression. It was inadmissible that Japan should benefit from it by obtaining new rights. Furthermore, a State guaranteed against aggression was entitled to reparations for damages sustained, and the Chinese Government reserved the right to claim such reparation at the settlement of the conflict. The resolutions of the Council and of the Assembly remained in force, and, amongst others, the obligation of the Japanese Government to withdraw its troops remained unchanged. This withdrawal was still an essential and previous condition to the fundamental settlement of the dispute.

On the other great problem—armaments—which mainly occupied attention last week there has not been much development since Sir John Simon's important statement of policy. Sir John has seen Baron von Neurath, the German Foreign Minister, who is here for the Council, and this and other contacts are valuable. But the French are lying rather low, and the governmental changes in Germany make it difficult for Baron von Neurath to give any assurances regarding Germany's return to the Disarmament Conference. He is credited with the intention of returning to Berlin next Monday, but it is said he may very likely remain Foreign Minister, and it is to be hoped that he will then come back to Geneva to continue his conversations. The interval may do no harm, and the statesmen here have their time amply filled meanwhile with the Sino-Japanese quarrel. They have no enviable task.

The Council Committee for the organisation of the World Monetary and Economic Conference met to-day under the chairmanship of Sir John Simon. They considered the report of the President of the Preparatory Committee of Experts on the work of the first session, and decided to ask this Committee to prepare the annotated agenda relating to the questions mentioned in Annex V. of the Final Act of the Lausanne Conference by a date which would enable the Council Committee to communicate it to the Governments during the session it proposes to hold in the second half of January. It is understood that the Committee of Experts might then, if it thought fit, carry out the preliminary examination of the questions submitted to the Conference. The Council Committee, which is anxious that the Conference should be summoned at the earliest possible date, proposes to settle that date at its January session.

UNITED STATES.

Election — Debt — Trade — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 11.

REPUBLICAN diehards in Wall Street had accepted the defeat of President Hoover as inevitable, and remarkably little tendency toward gloomy prediction is to be found. Some mutterings were heard before the event, but the general attitude now is to accept the President-elect as a man capable of giving the country a good administration. The heavy majorities of the Democrats in Congress are favourably regarded as tending to promote co-operation among the two parties and as making it easier for the Democrats to carry out a legislative programme.

Wall Street expects Mr Roosevelt to choose an exceptionally strong group of official advisers, but guessing on the personnel is premature. Such well-known and highly-regarded Wall Street men as Owen Young and Jackson Reynolds have been mentioned for posts in the Cabinet. Meanwhile, there is no ground for expecting any early change in policy on the part either of the Federal Reserve Board or of the Reconstruction Finance Corporation.

The new Congress will not meet before March (and then only if called in special session), and in the meantime important legislation involving national policy is unlikely in the Congress which convenes in December. In all probability the old Congress will take up the prohibition question, and is likely to consider foreign debts; but such matters as tariff, banking reform and a general taxation and fiscal programme are more than likely to be left over.

In the campaign President Hoover stoutly defended the high tariff, but Mr Roosevelt was careful not to propose substantial reduction, except by implication, and he was equally careful not to state his position on debts, soldiers' bonus or farm relief. It is not considered likely that the Democrats will regard their landslide vote as a blanket endorsement for any legislation which they may now decide to favour, but rather that they will take the view that the country merely wanted a change, in the blind hope of better times. Firmness in share markets before and after the election reflects in part the professional trading view that business has nothing to fear from the Democrats, and that, even if some inflation in currency takes place, the "bull" side will be the proper one to follow.

Mature views are that the movement toward recovery is too powerful to be held in check by either party and that it will continue, albeit slowly. Tariff changes will, in all likelihood, be made only over a considerable period of time, and the Democrats, great numbers of whom are as much devoted to protection as are the Republicans when it comes to specific articles, will seek trade agreements rather than a general lowering of duties; but further increases are scarcely to be expected.

Wall Street anticipated the reopening of the debt question. In view of the large Treasury deficit and the short period of office remaining to him, President Hoover could scarcely take the lead in suggesting an adjustment, but Wall Street thinks that a composition of the matter will certainly take place; nor need it wait for the induction of the new President.

Wall Street believes that the country has become educated to reduction of the debts and that it realises that a compromise, with the possibility of rising foreign trade, might result in forced default. Only the more rabid port-believe in forcing Great Britain or France to default. Outright cancellation has many proponents, but that probably is too strong a dose for a President or Congress to accept at once, and in any case anything more than mere postponement of payments will be somewhat difficult so long as the United States Treasury has a deficit of around \$1,000,000,000.

Shares of companies calculated to benefit from the legalisation of beer are showing strength, and the increased revenues which it is hoped the Government will

secure from early modification or repeal of prohibition, coupled with the supposition that this will stimulate employment, are in part responsible for the rising markets. Actually, modification appears rather doubtful, and repeal of the constitutional amendment providing for prohibition is at best a year or more away.

The railroads intend to ask for an extension of the freight rate surcharge granted them about a year ago, but with elimination of the provision for pooling the revenues and lending them to roads in distress. Some observers hold that the higher rates have cost the roads more than they have brought in, but majority opinion favours retaining the increases, particularly now that the tide is moving toward strict regulation of motorway and waterway competition. Railroad executives will meet with labour leaders early next month to discuss the question of wages at the expiration of the present agreement for a 10 per cent. reduction.

Much interest was drawn to an address on the gold standard made this week by Dr. B. M. Anderson, of the Chase National Bank. Dr. Anderson cited figures in his address to show that the gold standard never was in doubt, and that had it been necessary to take protective measures, the only result would have been some tightening of money rates. He declared this country's gold position impregnable, and noted that the Glass-Steagall Bill was passed, not to prevent abandonment of gold, but to make possible a continued policy of easy money. It increased the amount of free gold from \$416 millions in February to \$1,398 millions on March 2nd, by releasing gold impounded as collateral for Federal Reserve notes.

FRANCE.

Politics — Budget — Public Works.

(FROM OUR CORRESPONDENT.)

PARIS, November 23.

EVENTS are already proving that the problem of evolving a stable French Cabinet, dependent on a reliable majority, has by no means been solved, and that the Herriot Ministry, as far as internal policy is concerned, is under the domination of the Socialists to an extent that the Premier, before the recent General Elections, insisted would never again be possible. The first test of the new session was applied a few days ago, when the Government's future wheat policy came up for decision. To the Minister for Agriculture's declaration of a policy comprising measures for protecting wheat growers by systematising holding grain off the market, with financial help for the farmers, the Socialists opposed demands for the creation of a National Wheat Office, to control distribution of bread-making cereals, and the fixation of wheat-selling prices, in order to prevent speculation in grain. The Radicals refused to accept either proposal, and for a time there was a deadlock, which provoked forecasts of a fresh Ministerial crisis. The Radicals eventually compromised with their Socialist friends, by accepting the creation of a National Wheat Office, and the Socialists dropped their demand for Government control of wheat quotations. The vote left everybody dissatisfied, especially the agriculturists, but gave the Government a majority of 379 against 170, with 60 abstentions.

Among the numerous financial preoccupations of the Government the situation of the Treasury in the near future is again exciting the attention of both the Cabinet and the Chamber's Finance Commission. Supplementary issues of Treasury Bonds which were authorised in July to a total of about 3,000,000,000 francs (including 1,500,000,000 francs for Algeria), are officially stated to remain practically intact, as confirmed by the fact that last week the Government, in the preamble to the Budget Bill, was able to assert that the total Treasury Bonds then in circulation was barely 100,000,000 francs in excess of the previous authorised maximum of 5,000,000,000 francs. It is probable, however, that by the end of the year the existing balance will have been entirely absorbed, as it is approximately equal to the maturities of the last

NATIONAL BANK OF GREECE Established 1841

Capital paid up and Reserves Drs. 1,205,000,000.

quarter of the year. Should this happen the Treasury floating debt by December 31st will exceed 8,000,000,000 francs, which is in itself significant of the need for the creation of a soundly-balanced Budget.

The Budget Reporter, M. Lamoureux, has made an attempt to apply orthodox methods in regard to the Government Public Works proposals, which have been designed not only for the purpose of diminishing unemployment, but also to replace by a loan issue a large amount of Budget credits, in order to relieve the coming year's Treasury obligations. He explained that out of the programme of 670,000,000 francs of public works authorised in March, 1931, 146,000,000 francs still remain to be met from the Budget, and that there is a similar outstanding balance of 1,223,000,000 francs in regard to the programme applied under the Bill authorising an expenditure of 2,842,000,000 francs in December, 1931. In addition to taking over this authorised expenditure, the new Bill is intended to liquidate other similar credits engaged to a total of 1,578,000,000 francs. The Reporter insisted that the so-called Public Works Bill really constitutes, to some extent, a kind of Extraordinary Budget for the relief (by loan) of the Budgets for 1933 and 1934, which he stigmatised as a dangerous practice. He pointed out that, by this system of avoiding the burden of supplementary credits, which would otherwise have to be met by the Treasury, and by the proposed issue of 30-year bonds (since the works to be carried out under the cover of the project are not to be paid for immediately, from the produce of the loan), the Treasury will be provided with supplementary available funds. In these conditions, M. Lamoureux suggested, the money market will not show itself very favourable, and he urged the Finance Commission not to accept the transfer to the Public Works Bill of credits which were in reality supplementary Budget credits, which should be borne by the Budget.

During the examination of the measure by the Finance Commission, the Socialists put forward a remarkable counter-proposition for the financing of future Public Works projects, which may be taken as a forecast of French Socialist constructive legislation. M. Bedouce—basing his proposal on the fact that, as from January 1st, the interest rate on savings bank deposits will be brought down from 3½ per cent. to 2½ per cent., admittedly to bring out part, at least, of the existing enormous mass of sleeping savings for productive investment—proposed on behalf of the Socialist Party the creation of a new regime, authorising the savings banks to receive deposits invested for a period of five years at 3½ per cent., or for ten years at 3½ per cent. These deposits would be carried on special accounts, without maximum limits. The holder of such a savings bank book, it is proposed, would be able to withdraw the earned interest every year, but would be unable to touch his capital till the end of the investment term (with certain exceptions relating to death, or marriage). Such depositors would be able to transform their investments into 4 per cent. 30-year bonds, issued for the

purpose of financing public works projects by annual instalments spread over five or six years. The advantage to holders of such bonds would be that they would be negotiable in the market at any time. The proposal has been withdrawn for the moment, but is to be brought up again in the general discussion on the Bill.

French Government savings bank deposits during the 15 months ended March 31st last are reported to have shown an excess over withdrawals of 4,044 millions, while deposits in "ordinary" (or private) savings banks during the year ended December 31st last are reported to have been 5,606,000,000 francs in excess of withdrawals. The funds in the care of the Caisse des Depots et Consignations is returned as now amounting to 74,000,000,000 francs, which includes a large proportion of the stagnant savings bank deposits, and consists mostly of investments in Rentes.

GERMANY.

Political Crisis — French Treaty — Economic Improvement — Conversion.

(FROM OUR CORRESPONDENT.)

BERLIN, November 22.

ON Thursday of last week the von Papen Cabinet handed its resignation to the President, who accepted it. After a conference with the leaders of the parties of the Right and Centre, President von Hindenburg on Monday requested Herr Hitler to try to discover whether a Government with himself at the head would be able to command a certain majority for a unified programme. A definite and binding outline for this programme was laid down by the President: the economic programme of the von Papen Government was to be continued; all question of limiting the rights of the President by a new Act of Parliament was to be excluded; the union of the Prussian Administration with that of the Reich was to be maintained. Further, there was to be no change in the offices of Minister for National Defence and Foreign Minister.

At the moment of writing the results of this attempt are not yet known, but even if the Nazi leader succeeded in giving an affirmative answer to the President's question, he would not have achieved the object at which he was aiming in the summer and which he demanded in vain from Hindenburg on August 13th, namely, the sole leadership and control of the State. Hitler knows very well—that is why he at first showed no particular eagerness on this occasion—that if he became Chancellor he would be under close and effective inspection. Herr von Hindenburg would prevent any misuse of the armed forces, and the Centre would withdraw the parliamentary foundation of a Government under National Socialist leadership the moment Hitler and his friends attempted any rash experiments. Last summer the position was different: Germany was still mesmerised by the belief that the National Socialist movement was expanding irresistibly. Hitler might hope then that he would eventually be able to burst any bounds that might be set for him. Although during the past year the National Socialists have always laid great stress on their strong parliamentary opposition to a "Presidential Government," Hitler would now have been very glad to become the head of a "Presidential Cabinet," in order to have greater freedom as against the Reichstag. Hindenburg has, however, expressly assigned to him the part of a parliamentary Chancellor who has to secure a majority, not that of a personal nominee of the President to whom the President necessarily gives such powers against Parliament as the constitution allows.

Negotiations between Germany and France for the renewal of the commercial treaty began this week. The agreement concluded in 1927 no longer meets France's wishes, and as France threatened to denounce it, Germany was obliged to declare herself ready for a revision. France had already, for more than a year, greatly reduced the value of the treaty by availing herself of the clause which permits special measures in grave economic emergencies to introduce quotas. Her experience of these quotas has, however, been unfortunate, and she now wishes to get rid

of them; but she wishes to introduce other protective measures in their place, and it looks as though these are to take the form of very high duties. The trade treaty with Germany, however, stands in the way of this. It is not yet clear what the result of the negotiations will be, but it is certain that the new treaty will have far fewer provisions relating to duties than its predecessor. There have even been hints on the French side that no more duties should be fixed at all, but that it should be laid down for the individual commodities in whose export to France Germany is interested, what percentage of the French minimum or maximum rates they are to pay, so that France will remain free to fix the absolute level of her duties. It is, however, hardly possible to believe that Germany will agree to this.

The rumour that the treaty is no longer to contain an unconditional most-favoured-nation clause will probably not be substantiated. The treaty of 1927, whose benefits were extended by the most-favoured-nation clause to other States, has had an important influence on commercial policy throughout Europe, and it is hardly an exaggeration to say that it became the basis, at least, of Continental commercial policy. The new treaty will not be able to continue this rôle. Germany, which has the greatest interest in preventing the European tariff level from being left without strong restraint, will have to find a substitute for the former treaty with France. It is widely desired in Germany that the impending negotiations with England may lead to an agreement which will establish the more important duties at a moderate level, and thereby prove as serviceable a protection against unrestrained protectionism as the Franco-German Treaty of 1927 has done for many years.

The symptoms of business improvement in Germany are multiplying. There have, in particular, recently been symptoms of a very favourable development in coal and iron production, as the figures below show:—

(In thousands of tons.)					
	Raw Iron.		Raw Steel.		Coal.
	1931.	1932.	1931.	1932.	(Ruhr area.)
August.....	499	268	690	416	265
September	438	273	592	392	269
October	434	333	603	522	286

Russian orders constitute a large part of the contracts received by the iron industry.

The latest trade union statistics also show an improvement in the labour market. Unlike the official statistics, they only include the organised workers, but they do include them all, whereas the official statistics, owing to the incomplete returns of the employment exchanges, conceal a certain amount of "invisible unemployment," which has recently been the subject of much discussion in Germany. It is therefore important that the union statistics too are now showing more and more clearly that the labour market is developing much more favourably this year than last. Of the organised workers, 44.4 per cent. were unemployed last July and 43.4 per cent. in October. Last year, in the same period, the percentage rose from 31.6 to 37.2.

An attempt is now being made, for the first time in many months, to place a public issue in Germany. On January 20, 1933, Rm. 180 millions of 6 per cent. Prussian Treasury bills fall due for payment at 102. Unlike some of the Communes, which are negotiating for the prolongation of their loans without any repayment, Prussia intends to meet her obligations punctually and in full. A very favourable conversion offer is now being made to holders, with the object of substantially reducing the amount to be repaid in January. Every holder of these bills has the right to receive new 6 per cent. bills to the same value, half of which are repayable on January 20, 1935, at 100, and half on January 20, 1936, at 102. In addition a cash premium of 8 per cent. of the nominal value is paid on conversion, so that the price of issue works out at 94. The Prussian Government are also offering the new bills for subscription at 94. The lists remain open till December 10th, the repayment is due on January 10th, so that the Government hope by this means to secure funds for the repayment. The conditions of issue are so favourable

that success is certain. The new Treasury bills yield over 9 per cent., although as a short-term security they are in an advantageous position. The consortium of Prussian bankers felt that an offer more favourable to the issuers would have no chance of success; for in spite of the recent improvement in the German rentes market, the shortage of capital and the lack of confidence among capitalists is still reflected in very high interest rates.

U.S.S.R.

Anniversary — Relations with Japan — Agriculture.

(FROM OUR CORRESPONDENT.)

MOSCOW, November 10.

THE fifteenth anniversary of the Bolshevik Revolution, which was celebrated here on November 7th, was not accompanied by any such flourish of legislative activity as marked the tenth anniversary five years ago. At that time a special declaration of the Soviet Central Executive Committee decreed, among other things, the gradual introduction of the seven-hour working day in industry. The sole decree which was published this year on November 7th provided for an increase in the pay of officers and enlisted men of the Red Army and Navy.

An interesting spectator at the large military and civilian parade which was held on the occasion of the revolutionary anniversary was Mr Matsuoka, Japanese delegate to the forthcoming session of the League of Nations. Mr Matsuoka stopped off in Moscow for several days on his way to Geneva, and while his talks with Foreign Commissar Litvinov and Assistant Foreign Commissar Karakhan were of a strictly private character, his presence here served to concentrate attention upon the factors which are making for understanding between the Soviet Union and Japan in the Far East after the period of strain in the relations between the two countries which prevailed during the previous winter and spring.

Among recent signs of friendlier Soviet-Japanese relations are the conclusion of a fisheries agreement, the placing of Japanese contracts for the purchase of Russian petrol, and the willingness of the Soviet Government to permit the opening of a general consulate, representing the Manchukuo State, in Moscow. It is very probable that such agencies of wider agreement as the signature of a mutual non-aggression pact and a Soviet-Japanese pact of mutual non-aggression and neutrality (which the Soviet Government proposed almost a year ago), and Soviet formal recognition of the Manchukuo State were at least touched on in the conversations between Matsuoka and Litvinov and Karakhan. However, there is no indication that the consummation of these proposals is a likely development in the near future. There is still considerable opposition to the non-aggression and neutrality pact in Japanese military circles. The Soviet Union, with an eye to a possible change in the previously uncompromising negative policy of the United States after the election, may be reluctant to take a step that would be contrary to American policy in the Far East.

Developments in foreign relations here are somewhat overshadowed by the urgent internal problems which the first Five Year Plan, which will end on December 31st, has left behind it. Far and away the most serious of these problems is the disproportion between industry and agriculture. Industrial construction has proceeded at a rapid pace during the last four years; whole new cities have sprung up around such enterprises as Magnitogorsk, and old centres of population have swollen immensely. Side by side with this industrial growth agriculture, on which the country's food supply depends, has manifested a distinctly retrograde tendency, despite the fact that such modern machines as tractors and harvesting combines have become increasingly numerous in the fields of the Soviet Union. The crop yield of 1931 was less than that of 1930, and foreign observers are inclined to believe that the 1932 harvest will be less than that of 1931, despite the fact that climatic conditions this year were better than in 1931; there has been an appalling growth of weeds, attributable to the neglect and indifference of

the peasants. The livestock situation is extremely gloomy. An unofficial but reliable estimate of the numbers in the Dnieprepetrovsk region of Ukraina gives an idea of the havoc that has been wrought in this basic form of agricultural capital as a result of the slaughtering of beasts, which first occurred on a big scale in the winter of 1929-30 as a protest against forcible collectivisation, and was repeated on a smaller scale last winter as a result of excessive requisitions and lack of fodder. This estimate is as follows:—

	(000's omitted.)		
	1913.	1928.	1931-32.
Horses	951	1,300	555
Cows	949	2,163	648
Sheep	591	1,940	261
Pigs	1,367	1,463	354
Chickens	1,960	2,937	2,115

Some measures to redress the formidable disproportion between the top-heavy industrial superstructure and the narrowing food basis of the country may be expected in a not very distant future. Industrialisation will probably be drastically curtailed and an effort will be made to devise some policy calculated to revive the peasants' will to work, seriously undermined, if not quite broken, by heavy requisitions and an inadequate supply of city products.

Almost nothing is being said or written about the second Five Year Plan, which will go into effect on January 1, 1933. There is not the slightest likelihood that the Soviet Government will give up its system of planned national economy; but it is not improbable that the details of the second Plan are being deliberately held back until definite decisions are taken on means of solving the present agrarian and food crisis.

AUSTRIA.

League Report — Credit Anstalt — Trade.

(FROM OUR CORRESPONDENT.)

VIENNA, November 21.

THE latest report of the delegate for Austria from the Financial Committee of the League of Nations for the quarter ending September 30, 1932, is essentially different from previous statements. There has been less ground for criticism, and the report has an undertone of considerable optimism. Dr. van Rost recognises that great and successful endeavours have been made to restore public confidence. In the first place, he points out that the Budget has been balanced, as on the basis of the development of the 1932 revenue up to the present he expects a deficit of at most 10 to 15 million schillings (about 0.3 to 0.5 million pounds sterling). Cash in hand is adequate, and but for the unsatisfactory returns from the Federal Railways, which, however, appear to be almost inevitable in view of the conditions prevailing throughout the world, the Austrian Budget would be very satisfactory. The Federal Railways demand a subsidy of 45 to 85 million schillings.

The report also indicates recognition of the currency policy of the Austrian National Bank, and it is pointed out that there has been an improvement and stabilisation of the Austrian schilling. The National Bank has suspended the allocation at official exchange rates of foreign currency for commercial purposes, which amounted to 108 million schillings during the seven weeks of October 10th to December 1, 1931, and during the period of the report, namely, July to September, 1932, to 23.3 million schillings. The whole of the export trade in merchandise has now been left to private clearing, in which a premium of about 22 per cent. is being paid at the moment over and above the official rates for the monetary values of Western States; this rate may be regarded as the depreciation coefficient of the schilling. Whereas in July the turnover in private clearing amounted to only four million schillings, in September it had risen to 16 millions. Even if the sums derived from State clearing agreements and from the official allocations up to the present are added, the total accounts for only a part of the foreign trade turnover. From this fact it appears that, on the

[November 26, 1932.]

one hand, the commercial indebtedness of Austria has increased, and, on the other hand, that Austrian merchants and industrialists must have extensive foreign credits over which the National Bank has no influence.

The report of the League of Nations delegate states that still greater progress might have been made in currency policy and in State finance if the problem of the Credit Anstalt had been cleared up. This condition has now been fulfilled by the arrangement arrived at between representatives of the Austrian Government and the London joint committee of the foreign creditors of the Credit Anstalt. If the agreement is definitely approved by the Austrian Government and Parliament, and by the individual creditor banks, in which connection no doubt is entertained, the liability of the Austrian State for the foreign commitments of the Credit Anstalt will be cancelled. The foreign debts of the Credit Anstalt were fixed by agreement at 420 million schillings. Half will be paid out of the Credit Anstalt's own resources. The basis for this part of the settlement is the foreign assets of the Credit Anstalt, most of which are in the Succession States and some in Western Europe (for instance, sugar factories in Ireland). In regard to the evaluation of these assets no information has yet been published. The only thing that is certain is that the interests are to be concentrated in a holding company, the head office of which will also be abroad. This holding company will issue priority bonds to the foreign creditors and also its own stock to a value of about 150 million schillings, of which 130 millions will be debentures. The creditors will also receive about 70 million schillings in shares of the new capital of the Credit Anstalt itself, when the share capital of 173 millions, after a drastic writing down, has again been brought up to 141 million schillings. The majority of the shares will remain in the hands of the Austrian State. For the other half of the foreign debt the State itself has undertaken to be the direct debtor, but the creditors are remitting about a third. This debt is to be paid in annual payments of 20 million schillings, plus 4½ per cent. interest, so that for the first year the amount is about 26 million schillings.

The Credit Anstalt itself is to be reorganised, with a view to achieving further savings and opening up fresh possibilities of business. Whether close relations will be established with the other big banks, as is often rumoured, has in no way been determined. The rates of the other big bank shares on the Vienna Exchange are unfavourable, and after the reorganisation of the Credit Anstalt it is possible that a portion of the dwindling bank business might be diverted to the remodelled institution.

Most reports on the business position in Austria are unfavourable, and the recent stoppage of important works belonging to the Alpine Montangesellschaft is a symptom of insufficient orders in hand in the heavy industries. In the cotton industry things are so bad that the weaving mills have agreed to reduce output by 25 to 33 per cent. as compared with the beginning of the year, when things were already pretty bad. On the other hand, the position in coal mining and in various branches of the foodstuffs industry (especially sugar production) is better. The branches which are suffering most are those which are dependent upon foreign sales. This can be seen clearly from the figures of foreign trade. Exports of finished goods sunk during the first ten months from 817 to 457 million schillings, while imports of finished goods receded from 711 to 403 millions. In addition to this, home industry is declining on account of the general reduction of purchasing power in the country itself. Up to the present the fight against the deficit in the balance of foreign trade has met with but little success, for though the deficit during the first ten months was reduced from 692 to 537 million schillings, the percentage of the reduction in the volume of the turnovers was greater than ever. Nevertheless, there is a slight improvement discernible in the commercial balance, and it is possible that the trade treaty negotiations, which are shortly to be concluded with Hungary, and the preference treaties pending with Germany, France and Poland, will mean a further improvement.

JUGOSLAVIA.

Industrial Improvement — Exchanges — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BELGRADE, November 16.

THE seasonal improvement which began in July was maintained throughout September. Internal trade after the harvest, although not brisk, compared favourably with that of the summer months, while the building industry had an exceptionally good season, and has not yet been checked by the weather. In State finance also the gap between receipts and expenditure narrowed down considerably during September; the actual cash deficit was reduced to 61,000,000 dinars. Total receipts for the first six months of the budgetary year 1932-33, excluding self-balancing State enterprises, amounted to 2,794,000,000 dinars, or 993,000,000 below the estimate, against an expenditure of 2,855,000,000 dinars. During the same period the net increase of the floating debt was 150,000,000, so that the actual deficit of the first half-year was 211,000,000 dinars; but this figure may be somewhat reduced when the receipts from the State enterprises are published.

The position of the foreign exchange market is, however, much less satisfactory. The shortage of *devisen*, natural in an agricultural State with a passive balance of payment, has had a depressing effect on the dinar rate abroad, and consequently also raised the agio on the "black bourse." This actual discrepancy between the stabilisation and the market rate was finally acknowledged by the Government in the introduction of a "premium" of 10 per cent. payable on exporters' bills above the official rate, and chargeable to importers on purchase of *devisen*. A short wave of panic, following exaggerated news in the foreign press of troubles in the Lika district, depressed the dinar even more, and obliged the National Bank to raise the premium to 20 per cent. Since then, now that the real proportions and significance of the Lika troubles have been recognised, the dinar has improved again both abroad and on the "black bourse" from a discount of 30 per cent. to near the official premium rate of 20 per cent.

This shortage of *devisen* brought to head another problem which has been shirked by the creditor powers both before and after Stresa, namely, that of transfers. On November 1st the Government, instead of paying the coupon of the gold 7 per cent. Blair Loan in dollars, deposited the equivalent in dinars at the National Bank, thus bringing about a *de facto* transfer moratorium. No official explanation followed, except a general declaration by the Premier that "all foreign debts will be regulated by common accord with the countries who have lent money to Yugoslavia. Yugoslavia will do all she can to maintain her acquired reputation as a good and honest payer." But it is difficult to see how this problem can be solved until international payments in goods resume a more normal course.

Trade figures for the third quarter still show all the signs of depression, exports for the nine months amounting to 2,033,600,000 and imports to 2,121,500,000 dinars, as against exports in the corresponding period of 1931 of 3,682,000,000 and imports of 3,800,000,000 dinars. The deficit is thus reduced from 118 to 88 million dinars. The fall in the exchange rate of the dinar, however, had a stimulating effect on export trade during October and November. Many export articles have stiffened in price, especially pigs, maize, fruit and, since the election of Roosevelt, wine, Yugoslavia having a large selection of light table wines. Export may also have been helped by the conclusion of clearing arrangements with Italy, Germany and Spain. Should maize become an important export article Yugoslavia would profit greatly, since maize yielded a record harvest of 42,500,000 quintals, as against the best figure hitherto of 39,000,000 quintals, or a post-war average of 30,000,000 quintals.

The general impression of the economic situation, apart from the problem of foreign *devisen* and transfers, is one of forced adaptation to the new semi-autarchic conditions

November 26, 1932.]

prevailing now throughout the world. Foreign economic relations are so much reduced that the centre of gravity of economic life is now definitely shifting towards internal economies. Under such conditions it appears that rock-bottom has been reached and that all fear of a collapse may be safely discounted. The winter will of necessity be hard, but there are definite signs of a gradual revival of economic activity. Whether this accumulation of strength for a renewed economic life will be sufficient to expand beyond the national borders and find its natural solution in international trade, and consequently in international payments, remains yet to be seen.

A problem which has been attracting much attention recently is that of peasant debts. Official investigations have revealed that these amount to about 7,000,000,000 dinars, a sum equivalent to about 40 per cent. of the national income from agriculture. The crux of the problem lies, however, in the heavy interest rate, which frequently exceeds 24 per cent. A special law has now forced this rate down to 10 per cent. for all registered debts. The law is subjected to severe criticism from certain quarters on the ground that it will make all future peasant credits impossible. This criticism may be easily met by the fact that reduced credit is now withholding peasants from rushing headlong into unsound economic experiment, and that there are signs of cheaper money in the future. Now that banks have reduced the rate on deposits to 5 per cent., 4 per cent., and even 3 per cent., and that the feverish building activity has reduced the yield from houses from 12 per cent. to 9 per cent. to 14 per cent., with the likelihood of another severe drop in the spring, much of the money which is now lying idle will have to be satisfied with a considerably lower rate. This is becoming evident in the bond market, where a distinct firmness has been prevalent for over a month.

NORTHERN IRELAND.

Parliament — Employment — Ottawa.

(FROM OUR CORRESPONDENT.)

DUBLIN, November 23.

THE official opening by the Prince of Wales of the newly-erected parliamentary and administrative buildings at Stormont, Belfast, took place on November 16th, and the first session of the Northern Ireland Parliament in the new building was opened on November 22nd. Throughout Northern Ireland the new buildings, on their commanding site at Stormont, have come to be regarded by a large section of the population as the visible evidence of the successful culmination of the constitutional experiment which was taken over ten years ago in the creation of a subordinate State within the United Kingdom, with its own legislature to deal with its local affairs. Unfortunately, the ten years which have elapsed since the creation of the Northern Ireland Parliament do not appear to have led the Nationalist Party seriously to modify their attitude of hostility and distrust. For several years following the setting up of the Northern Ireland Parliament the Nationalist members elected to it refused to take their seats, but since 1926 they have attended. At the end of the last session, however, following a disagreement with the Speaker, they again absented themselves in a body while the opening of the new buildings at Stormont was made the occasion for the issue of a lengthy manifesto containing the statement: "We regard Partition as a national evil, disastrous to the Six Counties and injurious to the Twenty-Six. . . . It is appropriate, therefore, that we, as representatives of the six sundered counties—the Alsace Lorraine of Ireland—should avail ourselves of the opening of a new Northern Parliament to renew our protest and reiterate our demand for self-government for a United Ireland." On the two opening days of the new session no Nationalist member was present. It is to be hoped, however, that pursuit of the phantom ideal of a United Ireland will not induce the Nationalist members once again to boycott the Northern Parliament and refuse to take part in its practical, everyday work. To most observers in Northern Ireland to-day the prospect of re-union with the Irish Free State appears to be growing

ever more remote. Apart altogether from the political objections to such a proposal, every year which passes accentuates the economic and social distinctions which are growing up as between Northern Ireland and the Irish Free State. The tariff barriers erected in Southern Ireland have greatly reduced the commercial connections which formerly existed between Belfast and what are now the northern and midland counties of the Free State, while differences in the scale and the administration of unemployment insurance and other social services have made the movement of labour from one part of Ireland to another a matter of difficulty.

The parliamentary programme for the new session outlined in the King's Speech is not, on the surface, an elaborate one. A variety of Bills is promised dealing with matters such as local government reform, schemes for the marketing of agricultural produce, the making of advances from the Consolidated Fund to the Road Fund, money-lenders, amendment of the bankruptcy law, and dangerous drugs. The full intentions of the Government with regard to several of these matters are not yet fully known, however, and some of the measures may prove more comprehensive than is at present suggested.

The latest return showing the number of persons unemployed in the Province refers to October 24th, when the number was 69,934. This figure is 3,706 more than at the corresponding date in 1931, but is nearly 7,000 less than the figure for July, 1932, which was 76,854. The number of persons between the ages of 16 and 64 estimated to be in employment in Northern Ireland at October 24th was 179,600—some 3,000 more than a month earlier, but 7,000 less than a year ago. The increase in employment which has occurred recently is due to increased activity in the linen trade. Considerable efforts have also been made by the Government to stimulate local authorities to undertake public utility works, and since June schemes of this character involving an expenditure of £552,554 have been approved.

The position of agriculture is specially difficult. In very many cases prices have shown a further substantial fall during the past year. Last week the official average price of potatoes selling at markets in Northern Ireland was 1s. 6½d. per cwt., as compared with 4s. 11d. per cwt. a year ago. Oats are selling at 4s. 11½d. per cwt., as against 8s. 1½d. per cwt. a year ago; wool at 2½d. per lb., as against 3½d. to 4d. per lb. in 1931; pork at 43s. 4d. per cwt., as compared with 44s., and eggs at 1s. 2d. per doz., as against 1s. 5½d. For some time past agricultural opinion in Northern Ireland has been strongly in favour of an active policy designed to foster the live-stock industry. About 80 per cent. of the agricultural output of the country consists of live-stock and live-stock products. Under normal circumstances the very heavy special duties imposed upon similar produce entering Great Britain from the Irish Free State would have redounded to the advantage of farmers in Northern Ireland, but in face of the large imports of meat from foreign and dominion countries the reduction in the supplies of store cattle from the Free State consequent upon the imposition of the special duties has had little effect on prices for Northern Ireland store cattle. The quota arrangements in regard to the importation of meat and bacon which have been made by the Imperial Government should, however, ultimately prove of very special benefit to Northern Ireland farmers, in view of their concentration on the production of live-stock and live-stock products.

PITMAN'S BUSINESS BUDGETS AND BUDGETARY CONTROL

By A. W. WILLSMORE, F.R.Econ.S.

OUTLINES a system of budget control that can be readily adapted to suit the requirements of any commercial undertaking, and shows how leading British businesses apply budget principles to reduce costs, increase the efficiency of management, and to secure a closer control of inventories and expenses. Send for details. 238 pp. 10/6 net.

BOOK OF THE WEEK.

INSTITUTIONAL REVENUE.

THE object of Mr Dickinson's study* is to draw attention to "the essentially institutional nature of distribution"—in other words, to the fact that the distribution of wealth in any community is bound to depend to a considerable extent on the nature of the social and economic institutions which exist within that community. The system of *laissez faire*, Mr Dickinson points out, involves fully as much as any other the existence of a particular institutional framework within which the laws of economics have to work. And, accordingly, "the prevailing form of distribution is not more natural than others that are known to history. It depends on a complex of social institutions just as they did." There can be no doubt about the essential truth of this thesis, or about its importance in relation to orthodox economic theories of distribution. It is, indeed, the neglected factor in the structure of orthodox economic thought, with its assumption of a perfectly free market and its attempt to meet the complexities of the actual economic system merely by subsequent reservations and footnotes.

Mr Dickinson, however, goes a very odd way about the treatment of his subject. His book covers not much more than two hundred pages, but it is not until page 156 that he provides the reader with anything like a definition of that institutional revenue which gives the volume its name, or makes it clear what his book is intended to be about. In fact, he has felt it necessary to lead up to a study of the institutional influences on distribution, which covers barely more than fifty pages, by nearly one hundred and fifty pages of introductory matter. He begins with a discussion of the nature and classification of social institutions, including both those which are embodied in definite associations such as joint-stock banks, trade unions, public corporations, State departments and the like, and those such as inheritance, marriage and property, which do not take at all or completely the associative form. This chapter is interesting, but somewhat slipshod in its classifications.

Mr Dickinson then proceeds to two long chapters which attempt to restate the entire theory of value, including that part of it which relates to the values of the various "factors of production." In this restatement he follows very closely the doctrines of the Austrian school, both in insisting on the importance of subjective or psychological valuation as the basis of the marginal theory, and in stressing the importance of demand rather than supply as the ultimate determinant of value. He denies the dualism involved in Marshall's "pair of scissors" theory and reverts to the analysis put forward by Menger, Böhm-Bawerk and Wieser in its conception of all values, including those of intermediate goods, raw materials and "factors of production," etc., as derived ultimately from the subjective values of the ultimate consumers as objectified in the market. He stresses, indeed, the fact, recognised but not stressed by Marshall, that inequalities of income are fatal to the assumption that the prices offered in the market represent equal satisfaction-offers in the case of different consumers, he tends to slur over the transition from subjective to objective market value. His book is, in fact, important neither for the restatement of the Austrian doctrine, which takes a full half of it, nor for its preliminary discussion of the nature of social institutions, but almost solely for the last fifty pages, which form an interesting and suggestive essay in new economic thinking. Mr Dickinson has not, however, pursued far enough the suggestions made in this final part of his book, nor does he appear to have given enough consideration to the extent to which their acceptance would involve a fundamental reformulation of the entire theory of the market which he puts forward in his earlier pages.

SHORTER NOTICES.

"The Coming Struggle for Power." By John Strachey. (London) Victor Gollancz. 396 pp. 9s.

The publication of Mr Strachey's very well-written book should be welcomed alike by those who share and those who do not share its conclusions. Mr Strachey is a Marxian Communist; and at this date, when over a hundred and sixty millions of people are actually living under the dictates of Marxian Communism, it is very important to have a clear statement of what Communism to-day means and intends, and what is the mental attitude to life's problems induced by it. Unfortunately, the bibles of Communist doctrine have always been singularly unreadable by Englishmen, especially by Englishmen trained in any cultural tradition. *Das Kapital*, in its English version at all events, is a difficult and obscure book, made almost perversely difficult by its entanglement in an obsolete theoretical controversy between its author and David Ricardo; and even if this hurdle be surmounted, there is the additional difficulty that much of the most vital parts of Marx's teaching is not in *Das Kapital* at all, but is buried in elongated philosophic works and obscure pamphlets. Nor is much of the labour of Marxian commentators and expounders, from Lenin onwards, of a character to make much appeal to those bred in a different tradition. Accordingly, an exposition of Marxian Communism, written in a language and terminology acceptable to an ordinary intelligent English reader, is welcome, and this Mr Strachey, aided perhaps by the fact that he is neither a professional philosopher nor a professional economist, has produced.

He opens with a brief but useful historical description of the economic and social development of Great Britain from Adam Smith to the present day. This is followed by an analysis of the present position of capitalist civilisations and of the views of those who would remedy their defects, with especial reference to currency and financial reformers. Then comes a section on Culture, including therein philosophy and "social writing" as well as literature in the narrower sense, in which Mr Strachey enjoys himself thoroughly in having a tilt at Mr Wells, Mr Keynes, and Mr Shaw, as well as D. H. Lawrence, Mr Joyce and Mr T. S. Eliot. Finally, a section on the political present and future analyses the British Labour Party and the National Government and its leaders, and prophesies the future—which is, as might be expected, Communism in Great Britain as well as the rest of the world.

Throughout his book Mr Strachey writes with pungency as well as vigour. With his conclusions his readers will agree or disagree according to their own convictions. It may be suggested that his vision of future developments is inclined to be over-simple and clear-cut; that British politicians—even Labour Party politicians—are neither as wicked nor as consistent as he makes them sound; and that the "march of Marxism" in the world which he prophesies, even if the prophecy be correct, is likely to be neither as steady nor as undeviating as he seems to envisage. But these traits are characteristic of the Marxian view, and particularly of one who has recently and suddenly found in it his spiritual home; they do not detract from the interest of his book as an exposition of it.

OUTLOOK FOR GOVERNMENT STOCKS.

THE sharp setback in British Government funds still monopolises discussion in the City, and is no doubt also the subject of anxious consideration in Whitehall. Although this week's recovery has not been seriously checked by the unfavourable American Debt decision, the outlook is by no means clear, and a brief review of recent events may help the investor to see the problem in its true proportions. Under the pressure of superabundant cheap money, and with every encouragement from the Government, the gilt-edged market enjoyed a remarkable rise after the Chancellor of the Exchequer announced on June 30th the £2,000 millions' War Loan conversion scheme. This rise culminated on November 2nd, when what was regarded as the final act in the great National Debt Conversion came with the issue of a £300 million 3 per cent. Conversion Loan.

As is inevitable with major market movements, speculators in large numbers had followed the rise. The knowledge that the Government would not have finished its work until a Conversion Loan had been issued to deal with the cash repayments of 5 per cent. War Loan (£165 millions) and other maturities on December 1st next and February 1st, 1933, had kept speculative money in the gilt-edged market up to the beginning of this month. The terms of the 3 per cent. Conversion Loan 1948/53, made public on November 2nd, caused a final upswing in prices, for it was observed that the Treasury had fixed an issue price (97½) which could hardly be justified without a further rise in the prices of long-dated Government securities. The flat yield on the 3 per cent. Conversion Loan at 97½ was only £3 1s. 5d. per cent. and the redemption yield to its final date (1953) only £3 2s. 11d. per cent. This compared with a flat yield of £3 4s. 4d. per cent. on 2½ per cent. Consols, then the dearest long-dated stock, and a redemption yield of £3 4s. 1d. per cent. on 5 per cent. Conversion (to 1944) obtainable at the prices ruling on the morning of November 2nd. The highest prices of this gala day were not held and the reaction which followed developed further when it became known that the 3 per cent. Conversion Loan had been heavily "staggered" and might conceivably open at a discount.

When dealings in the new loan started, matters became worse. Subscribers who had expected to be allotted from 30 per cent. to 50 per cent. of their applications were distressed to find that they had received 70 per cent. and promptly sold sufficient stock to reduce their allotments to manageable proportions. The new loan fell below 2 discount on the second day of dealings. This, however, did not correct the extreme disparity between the price of 3 per cent. Conversion Loan and that of 3 per cent. Local Loans, seeing that the braver holders of the new loan decided to sell some of their long-dated and other Government holdings in order to meet the call of 52½ per

cent. payable on December 1st. Thus, the whole of the gilt-edged market suffered a severe fall.

On the top of this technical disturbance came the news that a war debts moratorium was unlikely to be granted by the United States Congress. The reception of Allied Notes to Washington had revealed a strong opposition to a further postponement of the December 15th payment. This caused a reaction in the sterling exchanges and the gilt-edged market became a prey to "bearish" rumours that sterling would fall below \$3, that a Supplementary Budget would have to be introduced and an extra sixpence added to the income tax, and that until the year's end there would be heavy sellers and no buyers of British Government funds. The slump which followed raised the yield on the long-dated stocks from an average of £3 6s. 10d. per cent. on November 2nd to an average of £3 12s. 10d. per cent. on November 21st. The prices and yields of the individual stocks on these two dates are shown in the table at the foot of this column, together with the prices and yields on November 22nd, after a fair recovery had been enjoyed.

The table shows that the 3 per cent. Conversion Loan stood the shock of the reaction comparatively well. From the issue price to the lowest level on November 21st it fell 3½ points, whereas 3 per cent. Local Loans fell 8½ points, indicating probably that the speculative position in 3 per cent. Conversion was not as vulnerable as that in 3 per cent. Local Loans. Further, although 3 per cent. Conversion Loan still appears to be dearer than other Government stocks on a gross yield basis, it is cheaper on a net redemption yield basis (after deduction of 5s. tax) than Conversion 4½ per cent. and 5 per cent.—reckoning redemption in 1940 and 1944 respectively. Should taxation be increased, 3 per cent. Conversion Loan, on the net redemption yield basis, becomes still more attractive. The fact that it is the only medium-dated redeemable stock standing at a discount should allow 3 per cent. Conversion to command a lower "flat" yield basis than the rest of the market. However, until it is fully paid up—the calls being 52½ per cent. on December 1st and 40 per cent. on February 1st—it is not likely to find its true market level.

Technical considerations apart, the investor will naturally ask whether the setback in the gilt-edged market is the forerunner of a general fall, anticipating dearer money, or whether the pressure of cheap money will bring about a general recovery. These questions inevitably revolve round the central question of war debts and world trade. We need not here debate the outcome of the American decision on war debts, for it is obvious that if we have to meet the December 15th payment without any prospect of a conference being called to scale down future payments, there is likelihood of an immediate fall in sterling and the gilt-edged market; while a payment

LONDON NEW ISSUE PRICES.

This table will be found on page 996.

INVESTMENT NOTES.

Capital Market Prospects.—The outlook for the new capital market, as for all other markets in the City of London, has been clouded by War Debt uncertainties. It is not surprising, therefore, that the flow of new issues since the partial raising of the Treasury's "ban," which was perceptibly checked by the consequences of the unfortunate "over-stagging" of the Treasury's Three per Cent. Conversion Loan offer, has now been more definitely interrupted. The fact that underwriters of the only trustee issue made since the Treasury's offer—comprising £2,000,000 Metropolitan Water Board "E" 3 per Cent. Stock at 98—have been compelled to take up 87½ per cent., may have been due as much to the stock's low yield as to the unfavourable turn of the market. The omens are, however, that first-class borrowers will deem it the better part of valour to postpone action, for the time being at least. The field, indeed, has been left this week to a single industrial borrower and a couple of "greyhound" concerns, whose monopoly of the market, in such a context, is the more significant. Since the end of the Five per Cent. War Loan conversion period, on September 30th, the pace set in the market, by borrowers other than the Treasury, has been fairly fast, allowing for the continued embargo on certain branches of new issue activity which are normally of considerable importance. During the last eight weeks over £22,000,000 of new money (excluding amounts for conversion) has been offered for subscription directly to the public or to shareholders, while a further £5,000,000 has been "placed" through Stock Exchange "introductions." Naturally, an overwhelming share of the total has taken the form of fixed-interest securities, direct offerings having included £17,000,000 of debentures and bonds, £3,000,000 of preference shares and only £2,000,000 of ordinary shares. We suggest in an earlier article on the prospects for gilt-edged stocks that market conditions, as regards sound fixed-interest securities, may be firm for some little time to come, apart from certain near and disturbing factors. The same conditions apply as regards the new issue market, but the forces making for limitation of activity are likely to be sufficiently powerful to prevent an immediate resumption of operations on any large scale—at least until the Anglo-American Debt situation and its consequences have been cleared up, and the mass of undigested Three per Cent. Conversion Stock no longer presses on the market.

War Loan "Commissions."—The amount of commissions paid by the Bank of England to stockbrokers, bankers and solicitors in respect of the War Loan conversion scheme came to approximately £4 millions. This is the largest amount that has ever been paid by the Government or any other body in commissions on any financial operation, and it represents not the remuneration of risk—for no risk was taken by these agents—but payment for services rendered in obtaining the assent of clients to conversion. Bankers and stockbrokers were thus enabled to claim commissions for securing the consent of themselves and their friends to the conversion holdings under their personal control. The commission paid was at the rate of 5s. per cent. from July 1st to 31st and at the rate of 2s. 6d. per cent. thereafter. It is impossible to estimate the proportions of the total commission paid applicable to the different periods, but if it were divided as to 95 per cent. for the 5s. and 5 per cent. for the 2s. 6d. commissions the amount of stock on which agents claimed a reward would be equivalent to 87 per cent. of the amount converted. It is absurd to suppose that agents really influenced the conversion of so large an amount of stock. For this reason we must regard the payment of £4,000,000 out of the Exchequer as a generous reinforcement of the City of London's patriotic views and sound investment instincts.

"Grid" Scheme in Mid-East England.—Authorised undertakers of electricity in the Mid-East England area have been notified by the Central Electricity Board that from January 1, 1933, trading operations in that area will be brought under the provision of the 1926 Electricity Acts. The Mid-East England includes important industrial centres and also wide agricultural stretches where electrical development has been comparatively recent. Its total electricity output in 1931 was about 1,300 million units, equivalent to 11.4 per cent. of the national total. The length of main transmission lines is 323 miles and of secondary lines 202 miles. The tariff has been published of the terms on which the Board will sell electricity in bulk in this area. In view of the investor's large interest in the "Grid" scheme, the terms of this tariff—the first published scale of charges—are of particular interest. The tariff is based on the "two-part" principle of a fixed charge per kilowatt of demand plus a rate for each unit of current consumed. Each undertaking is assigned a "basic demand" representing its maximum demand in 1932, or 2,000 kilowatts, whichever is the greater. The charge per kilowatt of the "basic demand" is fixed at £3 10s. and the tariff contains a sliding scale by which a declining rate is charged for successive increments of "maximum demand" of the undertaking over the "basic demand." In addition to this fixed charge, the undertaking is to pay a running charge of 0.186d. for each kilowatt-hour supplied and taken during the year. These terms compare favourably with the average contract for the supply of electricity by undertakers. This tariff price, however, does not apply to the owners of the "selected" stations in which the production of electricity will be concentrated. In the Mid-East scheme sixteen stations have been selected, the principal being Ferrybridge, Rotherham, Kirkstall, Thornhill, Blackburn Meadows (Sheffield), Hull and Bradford. The owners of these stations are entitled to buy from the Board in bulk at cost of production plus a proportion of the Board's expenses, but if they can prove that their own costs of production would be lower than the Board's, they are entitled after a period to be charged accordingly. On its sales to authorised undertakers outside the "selected" stations the Board has to recoup itself in its tariff price for the service of the debt it has incurred, except for the debt represented by the expenditure on the standardisation of frequency. For the first few years the tariff is so framed that the Board will be trading at a slight loss, which will be paid from capital, but on the Board's conservative estimates of increase in demand the trading should be on a profit-earning basis by 1943. The Board, incidentally, has power, which it has not used, to ask for a Treasury guarantee in respect of the bulk of its expenditure.

Bulgarian Loan Service.—The question of the status of League of Nations loans, which was discussed in a leading article in the *Economist* last week, has again been raised by the arrival of the Bulgarian Minister of Finance in London to discuss the service of the Bulgarian 7 per cent. Refugee Settlement Loan 1926 and the 7½ per cent. Stabilisation Loan. By a previous arrangement the Bulgarian Government undertook to transfer 50 per cent. of the service of the two loans until September 30, 1932. This agreement was carried out and, pending a new settlement, the Government continued to transfer 50 per cent. of the monthly service up to and including the payment due on November 15th. It is now urged that since the previous conference budgetary and exchange difficulties have been intensified and that some further alleviation of the burden is imperative. Following protracted conversations, it is understood that the Bulgarian Government has agreed to transfer sums sufficient to the six months November, 1932, to April, 1933, the remaining 60 per cent. being invested in leva in Bulgaria. The League Loans Committee (which now includes representatives of Dutch, Italian and American interests) suggests that bond-holders would be well advised to accept this offer on the understanding that if Bulgaria should after all find herself in a position to pay more than 40 per cent. the League loans will receive at least as favourable treatment as any other Bulgarian External Loan.

Coal Amalgamation.—We deal on page 977 with the economic implications of the "notice to amalgamate" served by the Coal Mines' Reorganisation Commission on the owners of colliery undertakings in the Fife and the Cannock Chase districts. If and when the Commission extends its amalgamating policy to some of the larger areas investors may be directly interested. In neither of the districts at present concerned, however, has a large amount of capital been raised by a public issue. Of the eleven undertakings, with 38 pits, in the Fife area, the largest, Fife Coal, is quoted in Edinburgh, but not in London, and has a capital of £417,813 in 5 per cent. cumulative preference and £1,224,398 in ordinary shares, all of £1 fully paid. The company has been reasonably prosperous, having paid an ordinary dividend for many years without interruption, the last distribution being 3 per cent. for 1931. Of the other companies in the coal field, Wemyss Coal has a capital of £300,000, of which £150,000 in ordinary shares is held by Wemyss Collieries Trust, which has passed its own ordinary dividends since 1929-30. Lochgelly Iron and Coal, with a large export trade, made a loss of £77,802 in the year to May 31st last, and is carrying forward a debit of £193,798 to profit and loss, against a capital of £1,019,670, of which £827,750 is in ordinary shares. Wilsons and Clyde Coal has made small profits throughout the depression (the net figure for the year to February 29th last was £11,404), and has regularly paid its preference dividends. Holders, however, of its £675,000 of ordinary shares (out of a total issued capital of £725,000) have been dividendless since 1927-28. Coltness Iron (whose £350,000 of 5 per cent. first cumulative preference shares have a London quotation) has been one of the best profit-earning concerns in the industry in Scotland. In 1931, net profit, after income tax and depreciation, was £105,201, and a dividend of 8 per cent. was paid on the £787,500 of £1 ordinary shares. The financial problems involved in the amalgamation of these Scottish companies will necessarily be intricate, but the relatively satisfactory financial situation of the largest undertakings should facilitate a successful conclusion. The Cannock Chase area includes 29 pits, but none of the companies is of large size. Littleton Collieries has an issued capital of £421,300 and paid ordinary dividends of 12½ per cent., tax free, in 1929-30 and 1930-31. Cannock and Rugeley, whose preference shares are quoted at Birmingham, has a called-up capital of £312,000. Other collieries included in the prospective merger, like West Cannock Colliery, Cannock Chase Colliery, and Hilton Main and Holly Bank Collieries, are privately owned. Whether amalgamation in these and other areas will involve an appeal for the financial co-operation of the public investor, at some future stage, will appear in due course.

Rover Company.—This company's fortunes have been chequered. One of the earliest of Coventry cycle concerns, it was reconstructed in 1903, when 50 per cent. of its capital was written off. Later, having turned over to motor-cars, it made good, and established a reputation as a steady profit-earner. A return of bad times, however, compelled a second reconstruction, when 60 per cent. of its capital was written off, early in 1929. This was followed, in turn, by a temporary recovery and renewed losses. The report for the year to July 31 last shows a loss on trading of £95,983, increased by appropriations for maintenance and depreciation (£89,859), loss on investments (£30,431), etc., to £225,413. The addition of a reserve of £112,507 for loss on property and plant due to the vacation of a works and other reorganisation expenses, less £58,895 brought forward from the previous year, leaves a total debit balance to be carried forward of £279,024—a discouraging figure in view of the fact that the balance-sheet was thoroughly "cleaned up" less than four years ago. Presumably the debit, which represents a loss of approximately 5s. 8d. per 8s. share, will be met by a further capital reduction in due course, but it would seem imperative first to allow an interval sufficient to reveal the dimensions of the company's real earning power. It is clear that a reorganised management is

making strenuous efforts to retrieve the company's fortunes by drastic reorganisation and concentration of its activities. An uneconomic works in Coventry is being disposed of, surplus assets are being converted (where possible) into cash, a New Zealand subsidiary company (formed only a few months ago) is being sold, and surplus leasehold policies are being surrendered. These and other measures to improve the liquidity of the financial position are indispensable, for the company, with little in the way of cash, has a bank loan of £169,714 outstanding. On the production side a centralisation of operations is being combined with a greatly reduced output programme. Many of the company's troubles have been due to ambitious production of large numbers of models which, having failed to win proportionate public favour, have been left in large numbers on its hands. The directors' report, though couched in guarded terms, suggests that the market prospects for the reduced programme are reasonably satisfactory and that, while no spectacular improvement can be looked for, losses have been arrested. The 8s. shares are quoted at 2s. 6d.

Tobacco Securities Trust.—The accounts of this Trust, which was established in 1928 to acquire shares in associated and subsidiary companies of the British American Tobacco Company, show a moderate recovery in profit, after the previous year's sharp decline. No explanation is given in the report.

	Year to October 31st.		
	1930.	1931.	1932.
	£	£	£
Net profit	800,954	644,050	672,003
Brought forward	52,331	110,285	114,335
Ordinary dividend—			
Amount	594,000	560,000	577,500
Earned %	19.6	17.6	17.8
Paid %	18	17½	17½
Deferred dividend—			
Amount	99,000	80,000	82,500
Paid per share	8.229d.	6.857d.	6.857d.
Reserve	50,000	Nil	Nil
Carried forward	110,285	114,335	126,338

The balance sheet shows few changes of importance, debtors being £75,104, against £28,438, while Treasury bills have matured and cash has been augmented, the total being £190,030. General reserve remains at £100,000. The present price of the ordinary £1 units of stock is 66s. 3d. and the yield about £5 9s. 6d. per cent.

Worthington.—The accounts of this company of Burton brewers, which is controlled by Bass, Ratcliff and Gretton, show a decline in gross profits of a little over 12 per cent. for the year to September 30th last—a moderate figure. The usual payments are made in regard to the two debenture stocks, the 5½ per cent. preference stock and the

Tel.: Mansion House 7685.

"B" preference stock, in which the chief interest of the investing public lies. The surplus available for dividend on the ordinary shares, most of which are held by the controlling company, has fallen from £293,962 to £250,526.

	Year to September 30th.		
	1930.	1931.	1932.
Profit	369,080	357,522	314,085
Directors' fees	500	500	500
Trustees' fees	210	210	210
Debenture interest	20,720	20,720	20,720
Net profit	347,650	336,092	292,655
5½% pref. div.	14,630	14,630	14,630
"B" pref. div.	27,500	27,500	27,500
Surplus	305,520	293,962	250,526

It is not possible to discover from the accounts the precise amount of ordinary dividend paid each year, but the fact that the amount brought in has increased during the past two years, despite the decline in profits, suggests that a cautious policy has been adopted. All the subsidiaries have again made profits and the balance sheet reveals a satisfactorily liquid position.

Tate and Lyle.—The preliminary figures of Tate and Lyle, the leading firm of sugar refiners in this country, indicate very satisfactory trading. Net profits for the year to September, 1932, were £1,075,030, against £992,732, and the total ordinary dividend for the year will be 16 per cent., against 13½ per cent. in 1930-31, and 10 per cent. in 1929-30. Appropriations to reserves were, as usual, liberal. The figures are shown in detail below:—

	Years to September 30.		
	1930.	1931.	1932.
Net profit	385,938	992,732	1,075,030
Debenture interest	46,354	91,250	91,250

Dividend reserve	Dr. 80,000	80,000	10,000
Carry-forward	40,850*	61,832	65,112

* Including £80,000 transferred from dividend reserve.

The report of the directors, which will be published shortly, may disclose whether the directors have written up stocks in accordance with the rise of sugar values. Apart from the question of inventories, however, this ably managed company is believed to have increased its turnover. The ordinary shares are quoted at 58s. 6d. (as compared with a low level of 38s. 6d. this year), to yield over 5½ per cent.—a return above the average for seasoned British industrial equities.

S. Smith (Motor Accessories).—Results for the year to July 30th show marked improvement. Gross profits have increased from £77,179 to £86,833. The surplus available for deferred shareholders represents over 12 per cent. of their capital, but the directors have been conservative:

	Aug. 2, 1930.	Aug. 1, 1931.	July 30, 1932.
Trading profit	140,048	75,573	85,833

Reserve	23,417	Nil	Nil
Forward	42,597	44,329	49,476

The company's main products have now been standardised on most British cars and aircraft. Expenses in connection with a new branch of business, domestic clock-making, have been borne out of revenue. The balance sheet shows a reduction in cash from £59,469 to £20,201, and an increase in stocks of £15,533.

Copper Curtailment Conference.—In regard to the vexed question of control of the world's copper production during 1933, writes a trade correspondent, some progress appears to have been made in unofficial talks between the producers concerned, some of whom assembled at New York a week or two ago. The full-dress debate should open on Monday next, and it is more than likely that the London standard market will reflect the receipt of conflicting rumours next week. Recently copper values achieved a brief rally on the strength of a report that the American interests favoured additional curtailment, and it is, of course, possible that the banks, which are shouldering the burden of unsold stocks in the United States of America, will press for a revision of the rate of production calculated to encourage withdrawals from stock. The low cost producers are credited with the intention of claiming a higher quota, but with the price only a little above 5 cents, or about £25 gold, and with demand at a very low ebb, there does not appear to be very much inducement to augment output. True, the Empire producers must take care of the English market under penalty of losing the Ottawa preference, but this condition will only apply to electrolytic copper, and the date of application for the duty is still in doubt. No appreciable fall in stocks and only a modest increase in price have occurred since the 20 per cent. rate of production was put into force, so that a premature return to a higher percentage points clearly enough to the certainty of a decline in the quotation. From the point of view of certain mining companies and their shareholders production at 100 per cent. capacity would be desirable if the copper could be sold and values maintained. In the present state of the trade, however, there is little doubt but that such a policy would produce a further slump and make confusion worse confounded.

Industrial Profits in October.—During October we received 123 company reports, aggregate profits showing a rise of 19.99 per cent., compared with a decline of 15.69 per cent. in September. The following table shows the number of reports received each month since July, 1931, together with the monthly variation in net profits after payment of debenture interest:—

Reports Published in	No. of Companies	Rise or Fall in Profits, %	Reports Published in	No. of Companies	Rise or Fall in Profits, %
1931—			1932—		
July	185	-39.46	March	210	-13.37
August	55	-19.59	April	244	-13.66
September	74	-44.02	May	196	-33.30
October	170	-58.26	June	235	-21.80
November	147	-35.59	July	152	-34.31
December	157	-68.54	August	69	-26.66
1932—			September	82	-15.69
January	127	-19.65	October	123	+19.99
February	211	-6.81			

The increase of nearly 20 per cent. in aggregate profits last month—the first since the inception of our monthly records, in April, 1931—is none the less gratifying because it reflects the results of a few large companies. The most noteworthy names in the list are United Dairies, Sudan Plantations, British Celanese, Standard Motor and Imperial Smelting. The largest absolute declines in individual profits were reported by companies like Elder Dempster and The Times Publishing Company. As regards individual groups, six iron and steel concerns showed microscopic profits, and five breweries a drop in earnings of 16 per cent., but two large motor companies achieved an increase in profits of nearly 50 per cent., and satisfactory gains were shown in the "Financial, Land and Investment" and "Textile" groups. The income of practically all investment trusts continues to decline,

eleven companies whose reports were published in October showing an aggregate drop of 23½ per cent. In the large composite group, included in our quarterly surveys under the heading of "Other Companies," last month's reports of thirty-seven companies showed aggregate earnings of £1,323,000, against £1,333,000 in the previous year.

Speculation in West Africans.—Our mining correspondent writes:—The outstanding feature of the Stock Exchange during the past week has been the activity in the shares of companies associated with gold mining in the West Africa. The movement started last Saturday and in some cases reached its apex on Monday. After a natural but only partial setback, renewed activity carried certain shares to new high levels. Each of the three chief producing companies has for some time past shown progressively improving results, the advance in the sterling price of gold being accompanied by appreciable reductions in working costs. Last month's profit of the Ashanti—the doyen of the group—amounted to £62,000; a record total, comparing with around £57,000 to £62,000; a record total, comparing with around £57,000 to £62,000; a record total, comparing with around £57,000 to £62,000. For the financial period about the middle of the year. The financial period ended September 30th last the company paid dividends aggregating 90 per cent., in addition to 1932-33 two interim one share for three. On account of 1932-33 two interim distributions of 25 per cent. each have been made. Within the past six months the monthly operating surplus of the company has expanded from around £6,000 to over £13,000, and the company has entered the dividend list with a 10 per cent. interim. The earnings of the third company—Taquah and Abosso—have risen from just over £5,000 to nearly £8,000. Dividends for the financial period to March last totalled 18½ per cent., against 12½ per cent. for the preceding period. A 9½ per cent. interim has just been received by the shareholders. These results, though highly encouraging, are not the immediate cause of the revival of speculative activity in West African shares, which has been associated with the departure for the Gold Coast of technical experts and representatives of important financial groups. The natural inference is that if expenditure upon prospecting and development is considered in well advised, the necessary funds will be forthcoming. In the Consolidated Gold Fields of South Africa group, after acquiring an interest in the Ashanti, began to back the Ariston Company—a measure which at the time appeared somewhat speculative—and finally obtained participation in the Taquah and Abosso. In each case, results have so far vindicated the wisdom of its intervention. Doubtless the recent minor instances of refinancing. Doubtless the recent advance has over-discounted present possibilities in some cases. Whether the whole movement, however, is likely to be overdone cannot be judged merely in the light of the rapid rise in quotations. Everything depends upon the prospects of individual properties.

Lake View and Star.—Thanks to the modification and expansion of the treatment plant accompanied by a noteworthy saving in costs, this company last year made an operating profit of £284,150, as compared with £102,100 in 1930-31. The bulk of the former amount, having been absorbed by capital outlay, has been written off, the modest balance of £35,100 being carried forward. Hopes of a dividend for the past session were disappointed, but an interim distribution of 6d. per 4s. share is being made in the near future. The proved and probable ore reserves are now placed at 1,832,400 tons, value 34s. per ton. These figures show an increase of 532,000 tons in quantity and a decrease of 2s. 3d. in average value compared with the special estimate of Mr. Carl O. Lindberg a year ago. For some time past the monthly profits have displayed an almost uninterrupted expansion, and the company is regarded as having definitely entered upon a career of prosperity. In the course of his speech at Monday's meeting, the chairman, Mr. John A. Agnew, dealt at length with the development position, and indicated that work this year would reach a very interesting stage. He emphasised the endeavours which were being made to enable the company to earn profits without the adventitious aid of the gold and exchange premiums. He foreshadowed future distributions of profits twice and possibly thrice a year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Johannesburg Consolidated Investment, New Modderfontein Gold Mining, Lake View and Star, Wall Paper Manufacturers, and Goode, Durrant and Company. Dealing with the mines of the group at the annual meeting of Johannesburg Consolidated, Mr. H. J. Joel said the gross profit for the year to June 30th last had totalled £5,190,119, which was the highest figure reached. Records had also been created in tonnage crushed, which totalled 8,858,000 tons and yielded 3,151,029 fine ounces of a value of £13,380,000. The group's gold mines accounted for 26.5 per cent. of the tonnage crushed on the Rand, 29.7 per cent. of the gold output, and 39 per cent. of the profit. Presiding at the meeting of New Modderfontein, Mr. John Martin told shareholders that the continued efforts to counteract a tendency towards increasing costs had been successful, the average costs for the first quarter being 14s. 9d. per ton milled, or 7d. per ton less than for the previous year. At the annual meeting of Wall Paper Manufacturers, Mr. A. V. Sugden said that the effect of duties on wallpaper imported into England had been negligible, though one or two new competitive undertakings in which there were foreign interests had commenced operations in this country.

CAPITAL ISSUES.

PROSPECTS in the capital issue market are dealt with in an earlier Note on page 992. This week's offers have been of minor importance. *The Yorkshire Dyeing and Proofing Company*, through the Dunedin Syndicate, offered ordinary shares, at a premium of 20 per cent. to yield 11 per cent. on the basis of the average profits for the last four and a half years. The aim of the chairman has been "to maintain plant as near perfection as possible." Investors will trust that this high ideal will at least secure a continuance of the slow but steady upward trend of profits. *The British Greyhound Investment Trust* offered ordinary shares of 5s. without giving any inkling of its objects or policy beyond a *carte blanche* to the directors to purchase or finance greyhound share propositions. *The*

PUBLIC OFFERS.

Yorkshire Dyeing and Proofing.—Offer for sale of 350,000 ordinary shares of 10s. each at 12s. per share by the Dunedin Syndicate. The company was registered in December, 1920, as a private company to carry on the business of cloth-dyers, bleachers, finishers. Profits before income tax and bank interest were: 1928, £23,171; 1929, £22,079; 1930, £24,133; 1931, £28,246; six months to June 30, 1932, £16,754. The average yearly profits over the last 4 years are equivalent to 13 per cent. on the issued capital, and 11 per cent. on the basis of a premium of 2s. per share.

British Greyhound Investment Trust.—Issue at par of 1,000,000 ordinary shares of 5s. each. The company has been formed to give established greyhound racing businesses the benefits of a sound investment and financial trust, and to carry on general investment business. Directors, and their friends, have sub-underwritten 300,000 ordinary shares, of which 120,000 are sub-underwritten firm.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

Stock Exchange "Introductions."

Bournemouth and Southampton Stadiums.—Authorized capital, £100,000 in 1,000,000 ordinary shares of 2s. each, all of which are issued or agreed to be issued. The company was incorporated in October, 1932, to carry on greyhound racing at Southampton Stadium and Bournemouth Stadium. Profits before income tax, directors' fees, depreciation and amortisation were: July 13, 1931, to July 16, 1932, £18,991; July 17, 1932, to October 15, 1932, £14,223. The Tokenhouse Securities Trust has agreed to accept 140,000 2s. shares in part payment for the freehold properties involved.

FORTHCOMING ISSUES.

Prussian Bond Issue.—The Prussian Government is issuing new 6 per cent. bonds repayable as to 50 per cent. of the nominal amount on January 20, 1935, at par, and as to 50 per cent. on January 20, 1936, at 102. The bonds will be offered at 94, and holdings of the 6 per cent. bonds repayable on January 20th next at 102 can be converted into the new bonds at 94. There are Rm. 130,000,000 outstanding of the 6 per cent. bonds, 1933.

Godfrey Phillips.—An extraordinary meeting of Godfrey Phillips, tobacco and cigarette manufacturers, will be held at Winchester House on December 1st at noon to consider resolutions authorising an increase in the capital from £1,450,000 to £2,000,000. It is proposed to create 250,000 additional ordinary shares and 300,000 "C" preference shares, all of £1 each, the latter carrying a fixed cumulative dividend of 6½ per cent., ranking next after the dividend payable on the existing preference and "B" preference.

Oswald Tillotson Ltd.—An issue will be made during the week-end of 100,000 7 per cent. cumulative preference shares of £1 each at par for Oswald Tillotson, Limited, whose authorised capital is £300,000 in 7 per cent. £1 preference shares and 5s. ordinaries. There are no debentures. The issue is being made to acquire further interests in road transport businesses, and for general purposes.

Clapton Stadium, Limited.—The directors propose to offer to shareholders registered on Wednesday 45,000 5s. shares at a premium of 15s. per share. This will bring the issued capital up to £125,000. The company, it is stated, has availed itself of the opportunity of acquiring the Reading Greyhound Race-course upon terms which it considers favourable.

RESULTS OF ISSUES.

British Greyhound Investment Trust, Ltd.—Subscription lists in connection with the issue, at par, of 1,000,000 5s. ordinary shares of the British Greyhound Investment Trust, Ltd., were closed at mid-day Tuesday. Country applications were considered if received by mid-day Wednesday.

Lyme Regis District Water.—The issue of 1,000 £10 shares recently made by the Lyme Regis District Water Company, Ltd., was over-subscribed to the extent of 93½ per cent.

Metropolitan Water Board.—The list for the issue of £2,000,000 of Metropolitan Water Board 3 per cent. "E" stock at 93 per cent. was open for the full advertised period. Underwriters have had to take up 87½ per cent.

South Suburban Gas.—Applications for the £300,000 4 per cent. perpetual preference stock recently offered for sale by tender totalled £350,010. Tenders ranged from 101 to 108.

COPPER.

RESULTS BEAT MOST OPTIMISTIC FORECAST.

DIAMONDS.

The report and accounts were unanimously adopted.

REDUCED WORKING COSTS.

At the last annual meeting (said Mr Martin) I mentioned the possibility that costs might show a tendency to rise. Fortunately, the continued efforts made to counteract this tendency have been successful, and a further gratifying reduction has been effected during the current financial year, the average for the first quarter being 14s 9d. per ton milled, or 7d. per ton less than for the past year.

YEAR'S DEVELOPMENT WORK.

The payable ore developed on all reefs during the past year totalled 666,200 tons, averaging 5 dwt. per ton in value. Compared with the previous year, the tonnage shows a decrease of 227,600 tons, and the average value is less by 1.1 dwt. per ton, due to the lower proportion of payability and the lower values that are being encountered in development generally.

The consulting engineer's report contains the customary details of the ore in reserve on the various reefs, as re-estimated at June 30th last. The total reserve amounted to 7,294,700 tons of an average value of 7.5 dwt. per ton over an estimated stoping width of 49.8 inches, but this included 1,285,200 tons, averaging 6.2 dwt. per ton, contained in shaft and safety pillars which are not at present available for stoping. The total tonnage in reserve is 730,100 tons less than it was twelve months before, the average value is lower by 0.3 dwt. per ton, and the estimated stoping width is unaltered.

CURRENT OPERATIONS.

As regards recent results, the rate of crushing during the first quarter of the current financial year averaged 173,333 tons per month, an increase of 6,666 tons on the past year's monthly average. The yield decreased to 7.358 dwt. per ton milled, but working costs were further reduced to 14s. 9d. per ton milled, and the working profit averaged £143,188 per month, or £8,650 less than the monthly average for the previous twelve months. There has been no unexpected change in the position or prospects of the mine. The results of the extensive programme of prospecting and development conducted during the past year on the Upper Leaders and South Reef have confirmed previous indications regarding the limitations of the areas in which we can expect them to furnish additional tonnages for inclusion in the reserve. Equally, however, these results have confirmed the prospects of further important tonnages of ore of marginal value being obtained from sources outside the ore reserve and exploited profitably in the course of future operations.

The report and accounts were unanimously adopted.

GOODE, DURRANT AND COMPANY, LIMITED.

FAIRLY ENCOURAGING OUTLOOK.

The thirty-fourth ordinary general meeting of Goode, Durrant and Company, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London.

Mr W. E. Pennick, vice-chairman, presided, in the unavoidable absence of the chairman through illness, and said: We very much regret having to put before you another balance sheet which shows a loss, but, on the other hand, we are grateful that such loss is so much less than last year. Last November you were given general information regarding conditions prevailing in Australia, and although this year I have spent several months in Australia, I do not propose to burden you again with a long report on the troubles there. There is a definite sign of improvement as disclosed by these accounts, but the difficulties of trading are still very severe. With Australia in particular low prices for both wheat and wool are a very serious drawback to trade, and we are bound to suffer until such time as these products can be sold at remunerative prices. During the year there was a slight improvement in the volume of trade done, but it is still far below the amount required for satisfactory profit making. We are constantly watching expenses, and these have shown a further reduction during the past year.

A year ago I told you about the severe loss and winding-up of a subsidiary company, which operated the Torrens Mill, and informed you that we had engaged a new manager to work the mill as a department of this company's business under the direct supervision of your directors. You will be glad to know that the mill is now working at a profit, and we have every hope that it will continue to be a source of income instead of a liability.

With regard to the future, it is extremely difficult to say anything, but I can assure you that our trade is showing some improvement up to date as compared with last year, and the latest reports from Australia are as follows: A telegram from our Adelaide office, dated 17th inst., indicates that trading conditions are still difficult, the harvest prospects are good and the feeling throughout is one of confidence, and also that the future prospects are much brighter and on the up-grade. A message from our Perth branch regarding Western Australia informs us that trading conditions are difficult in the town, but the country and goldfields districts are maintaining fairly well. Primary production is good and with improved prices trade will revive quickly.

These messages are fairly encouraging, and we can assure you that your directors and our staffs are all keen to make profit, and, given any improvement in world conditions, we shall again do well. We are all of us working our hardest, and will not leave a stone unturned to bring back the company into a prosperous condition.

The report and accounts were unanimously adopted.

LAKE VIEW AND STAR, LIMITED.

NET PROFIT OF £284,145.

DEVELOPMENT POSITION SATISFACTORY.

The twenty-second ordinary general meeting of Lake View and Star, Limited, was held, on the 21st instant, at River Plate House, Finsbury Circus, London, E.C.

Mr John A. Agnew, the chairman of the company, who presided and moved the adoption of the report and accounts, said that it gave him very great satisfaction to report a net profit for the year of £284,145. The considerable increase over the previous year was, to a large extent, accounted for by the increased price of gold since this country departed from the gold standard. The benefit which they had received from the exchange and increased price for gold had enabled them to finance out of profits the whole of their capital requirements, and to discharge their loans as they had become due.

Milling operations throughout the year were carried on while the plant was under reorganisation, but in spite of this they showed a very large increase in tonnage as compared with the previous year.

There was not the slightest doubt that the expenditure on new plant which had been installed for increasing the milling capacity had been fully justified, and, notwithstanding that the increase only partially operated during the year, it was satisfactory to report that a saving of 7s. 6d. per ton had been made in working costs which was equal to £88,000 on the tonnage of company's ore treated. A further reduction in these costs would result as the capacity of the plant was further increased. The underground work had been reorganised and improvements for more economical working and improved methods of mining and development were being introduced every day. In this respect the general manager and his able staff were to be congratulated on the favourable results so far obtained.

Dealing with the operations on the property itself, it might be said that those, both underground and on the surface, had been in every way satisfactory. That was in particular the case in connection with the developments on the No. 2 Lode at various levels. A great amount of work had also been carried out, and was in progress at present, on lodes which, while of lesser importance so far as tonnage was concerned, were certainly not so from the point of view of value. He referred particularly to the Boulder lode, which had been developed south of the Ivanhoe-Horseshoe Boundary at several points with highly gratifying results.

Shareholders would regard the increase shown in the ore reserve position for the year just ended as satisfactory, and he would emphasise that all values quoted in respect of development work and those relating to ore reserves were in terms of the pound as it had stood at the beginning of September, 1931; in other words, the ore reserves shown at 34s. per ton gold were equal at to-day's exchange rates to 62s. Australian. From the summary of working costs given in the general manager's report they would note that a very satisfactory reduction had been made in all departments.

He need scarcely express to the shareholders the satisfaction which the directors felt at being able to carry out their implied promise of a year ago in the matter of a dividend. Some might have been disappointed at the amount of the dividend just declared, but he was sure that a perusal of the balance sheet, and an appreciation of the fact that they could not possibly devote profits towards what ought to be capital expenditure, and at the same time utilise them for dividend-paying purposes, would convince such shareholders that their attitude had been unreasonable. As to future dividends, it was not the board's intention to pay them quarterly—the work and expense entailed would be unwarranted. He thought, however, it might be safely taken that the intervals between dividends would not be greater than six months, and the board would give every consideration to decreasing the interval to four months. The amount to some extent would depend upon a continuance of the present price of gold when expressed in sterling.

To summarise the operations of the year, they had, out of revenue, almost entirely extinguished the company's indebtedness, had brought within measurable distance the completion of the plant capacity to 40,000 tons monthly, and had carried out much useful work in preparing the mine to ensure in a sound and economical manner a regular and continuous supply of ore to the mill. To have accomplished the above, to have strengthened the ore position, and to have placed the company in a situation where the resumption of what they hoped would be regular dividends could be deemed advisable, was, he ventured to suggest, no mean achievement. (Cheers.)

The report and accounts were unanimously adopted.

THE WALL PAPER MANUFACTURERS, LIMITED.

INCREASED PROFITS.

COMPANY'S ARTISTIC AND COLOURFUL PRODUCTIONS.

MR ALAN V. SUGDEN'S SPEECH.

The ordinary general meeting of the Wall Paper Manufacturers, Limited, was held, on the 24th instant, at the Holborn Restaurant, Holborn, London.

Mr Alan V. Sugden, the chairman, who presided, having dealt with the accounts for the period under review, said: Whilst we are all conscious that the profits for the year are smaller than those of a few years ago, it must be a matter of satisfaction that as compared with the previous year, we have held our own.

Our results have not been greatly affected by the depreciation of sterling. An increase in export sales which might have been stimulated has been neutralised by additional duties, quotas and exchange restrictions introduced by many of the countries which buy our products.

The effect of duties on wallpaper imported into this country has also been negligible, partly by reason of anticipatory buying, but we feel that the position would have been worse had these duties not been introduced. On the other hand, one or two new competitive undertakings have commenced operations in this country in which there are foreign interests.

RESOURCEFUL MANAGEMENT.

The slight improvement in our profits this year is mainly due in my opinion to resourceful and efficient management at our factories, and in this, I include the ability to adapt costs of manufacture to meet changed conditions, not only in volume, but in the classes of product most in demand.

At the same time it will be appreciated that there is a limit to the distance we can travel in this direction as we must maintain quality and we do not wish to suggest reducing wages, believing these to be fair and in line with other comparable industries.

We all greatly deplore the short-time working which has been occasioned by lessened demands on machine output, but it seems only fair to observe, that the percentage of short-time working has been considerably less than the fall in output.

The continuance of a reduction in volume as well as the fall in value of our sales, can only be attributed to the diminished spending power of the consumer. It certainly cannot be explained by any diminution in the quality, beauty, or intrinsic value of our productions.

There has never been a time when more thought, taste, artistic skill and colour sense has been employed in maintaining the supremacy, which I do not hesitate to claim, for British-produced wall-papers.

We cater for a thousand tastes and for a thousand degrees of difference in the means of the user, studying the requirements of the cottage and the small home as carefully as that of the mansion or palace.

I referred last year to the apprehension we felt as to the effect which the three quarter payment of income tax in January would have on Spring decorating. This apprehension has proved to be only too well grounded. Unemployment amongst decorators at their normal peak period between Easter and Whit Week has been a most regrettable feature.

WALPAMUR.

The Walpamur Company has again well maintained its trade and has increased the cordial relationship existing between it and its merchant and decorator customers.

We would invite our shareholders, whenever they require paint products, to specify the products manufactured by the Walpamur Company.

The pension schemes continue to operate most satisfactorily, and we already have over 200 old employees in receipt of pensions. Concluding, I wish to acknowledge most sincerely the services rendered by our staff and employees during the past year, in which they have shared loyally in our anxieties and difficulties.

We also owe a debt of gratitude to their help in making smooth the Federation of Trade Unions for the industrial council and to the relations between employer and employed, always delicate in times of shorter mill hours and when new avenues of economy have to be explored.

May I also tender my personal thanks to all members of the board for their loyal and efficient help and counsel at all times. The report and accounts were adopted, and resolutions were passed authorising the conversion of all the issued shares of the company into stock, and adopting new Articles of Association.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 19, 1932, amounted to £12,582,100 against ordinary expenditure of £11,300,800. After allocating £135,000 to Sinking Fund, and allowing for an increase in Exchequer Balances of £67,059, the operations for the week, as shown below, decreased the National Debt by £1,076,000 to approximately £98 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

Messrs Samuel Montagu and Company write as follows on November 23, 1932:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,094 on the 16th instant, and shows no change as compared with the previous Wednesday.

The amounts of gold offered in the open market during the week have been large. Only comparatively small purchases have been made on Continental account, as the bulk of the available supplies were secured for a destination not disclosed.

Prices have fluctuated owing to the erratic movements of the exchanges, but as a result of the weakness of sterling yesterday the price was fixed at 126s. 1d. per fine ounce, which, so far, is the highest quotation this year.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
November 17.....	124s. 10½d.	13s. 7-3d.
" 18.....	125s. 7d.	13s. 6-3d.
" 19.....	125s. 0d.	13s. 7-1d.

" 22.....	126s. 1d.	13s. 5-7d.
" 23.....	125s. 10½d.	13s. 6-0d.
Average.....	125s. 5-8d.	13s. 6-5d.

Gold shipments from Bombay last week were about £1,300,000. The s.s. "Rajputana" has £602,000 consigned to London and £10,000 to Holland, and the s.s. "Clan McVicar" £176,000, also consigned to London. The s.s. "President Adams" carries £516,000 consigned to New York.

SILVER.

Prices have shown very little fluctuation during the past week, the market having been rather quiet. Both the Indian Bazaars and China have re-sold, but further purchases for shipment to the latter quarter were also made. America was inclined to give support on occasion, but buyers have not pressed.

As will be seen, the fluctuations in exchanges did not affect prices to any extent but, at the same time, the movements lent uncertainty to the market and seemed to deter operators; consequently, there is little indication as to tendency.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 14th instant to mid-day on the 21st instant:—

IMPORTS.	£	EXPORTS.	£
Japan	73,311	Portugal	33,312
Australia	24,614	New Zealand	19,500
New Zealand	4,013	China	10,100

MALAYA GENERAL COMPANY, LTD.—Accounts for the year ended August 31, 1932, show a net profit of £192. A dividend of 2½ per cent. less income tax, will be paid on December 8th. Transfer books will be closed from November 24th to December 10th, both dates inclusive.

CRITALL MANUFACTURING COMPANY, LTD.—The directors regret that owing to the continued depression they deem it advisable to defer payment of the dividend on the 7 per cent. cumulative preference shares, due on December 1st. The six months' interest due on the company's 6 per cent. debenture stock will be paid on December 1st as usual.

FIRST BRITISH FIXED TRUST.—A semi-annual distribution of 7d. per sub-unit, free of income tax, has been declared by the First British Fixed Trust, which will be payable on December 15, 1932, on presentation of Coupon No. 3 at the head office of the trustee, Lloyds Bank Limited, 72 Lombard Street, London, E.C.3. A fractional earned balance of 0-051d. per sub-unit is being carried forward. The present distribution of 7d. compares with 6d. for the previous six months.

GILLETTE SAFETY RAZOR COMPANY OF BOSTON.—The directors of the Gillette Safety Razor Company of Boston have on November 23rd, declared a regular quarterly dividend of one dollar twenty-five cents on preference stock, which is to be paid on February 1, 1933. This will be paid on the record of shareholders of January 3, 1933. There will also be a dividend of twenty-five cents on common stock, payable on December 30th to shareholders on record of December 3, 1932. Mr. S. C. Stampelman was elected a director.

OTHER METALS.

TIN.—Despite the reserve of sellers, tin declined steadily from Monday to Wednesday under the influence of a poor demand. Sales on the London Metal Exchange were 225 tons on Monday, against 325 last week; 150 tons on Tuesday, against 400 tons last week; and 225 tons on Wednesday, against 300 tons last week. The New York quotation on Tuesday was 23.15 cents per lb., against 23.85 cents a week ago and 23.40 cents a month ago. Wednesday's official closing quotation in London for standard cash was £152 12s. 6d. to £152 15s., compared with £156 2s. 6d. to £156 5s. last week. Stocks in London and Liverpool at the end of last week were 30,556 tons, a decrease of 163 tons on the week.

COPPER.—The course of the copper market was very similar to that of tin. The metal declined in value owing to the uncertainty resulting from the war debts problem. Sales at the London Metal Exchange were 600 tons on Monday, against 800 tons last week; 450 tons on Tuesday, against 1,350 tons last week; and 600 tons on Wednesday, against 350 tons last week. Domestic spot was quoted 5½ cents per lb. New York on Tuesday, against 5½ cents a week ago and 5½ cents a month ago. Wednesday's official closing price for standard cash in London was £31 18s. 9d. to £32, compared with £32 17s. 6d. to £32 18s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 30,938 tons, show an increase of 294 tons, and stocks of rough copper, at 5,596 tons, an increase of 190 tons.

LEAD.—On Monday there were no sales of lead at the London Metal Exchange. On Tuesday and Wednesday the market was quiet and quotations declined. Sales at the London Metal Exchange were nil tons on Monday, against 500 tons last week; 350 tons on Tuesday, against 250 tons last week; and 400 tons on Wednesday, against 150 tons last week. The New York quotation on Tuesday was 3.00 cents per lb., against 3.15 cents a week ago, and 3.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £11 15s. for November shipment, compared with £12 8s. 9d. last week.

SPELLTER.—Spelter was alone among the four principal non-ferrous metals to maintain its value during the past week in London. Sales were 700 tons on Monday, against 500 tons a week before; 350 tons on Tuesday, against 550 tons the week before; and 550 tons on Wednesday, against 500 tons. The New York quotation on Wednesday was 3.175 cents per lb., against 3.00 cents the week before, and 3.00 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 7s. 6d. for November shipment, against £15 8s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was again quoted at £100 per ton. Nickel was unchanged at £250-£255 per ton. Quicksilver was again sold at £10 10s.-£11 per flask. Platinum was again quoted at £9 10s. per ounce, and foreign antimony at £27 10s.-£28 per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for week November 17th to 23rd (inclusive) are 71,611 bales, of which 55,486 are American, 3,006 Peruvian, 7,612 Egyptian, 27 African, 5,382 East Indian, and 98 sundries.

Manchester.—The recent improvement in the market has been fairly well maintained during the past week and spinners and manufacturers continue to meet with a larger inquiry. Some traders have been rather disturbed by the fluctuations in sterling and uncertainty with regard to developments relating to the war debts question. Manufacturers of cloth have met with a substantial demand for India and a considerable turnover has taken place in light bleaching descriptions, prints and fancies, with occasional sales in white shirtings and dhooties. More favourable advices continue to be received from the other side relating to clearances. Transactions for China have been isolated, but a few more offers have come through in standard makes and fancies for Shanghai. There has not been any free buying for the several minor outlets East and West, but numerous small orders have been booked which in the aggregate have totalled to very fair dimensions. Rather mixed reports have been received from the home trade. Quotations in the yarn market have continued firmer. Rather more business has been done in medium American counts and certain qualities in Egyptian descriptions have attracted rather more attention. Export trade, however, remains slow.

THE WOOL TRADE.—Bradford.—According to our correspondent, the opening of the seventh series of London sales has not had much effect upon consuming centres. It was generally expected that values would be quite firm compared with the close of the September-October series. Here and there the possibility of a slight advance in merinos was suggested, though there was

nothing to justify this in the demand for tops, &c. The best feature is the good all-round competition, and, generally speaking, prices are maintained on a parity with the close of the previous auctions. Very little change is seen in greasy and scoured merinos and fine crossbreds. Anything of good style in these descriptions commands a ready sale at unchanged rates. Though there is, perhaps, not likely to be quite the same pressure for wool of hosiery style, these are still doing very well at the auctions. Fine greasy crossbred are selling readily at firm rates, and only in medium and coarse wools, including slipes, is there anything approaching a movement in buyers' favour. Bradford topmakers are naturally indisposed to bid big prices for these wools at this juncture, for B.A. crossbreds are cheap, and the New Zealand clip will shortly be coming forward. Nevertheless, at present prices medium and low wools should be a sound proposition, and there is nothing wrong with the demand. Whatever description of the offerings in Coleman Street this week is considered, their position is encouraging. A steady meeting of the market is calculated to exert a beneficial influence. The statement of the Australian Minister in London to the effect that no drastic measures will be adopted with the marketing of Australian wool in the future, is in accordance with the ideas of users both in this country and on the Continent. The Bradford market is still rather hesitant. Topmakers are determined not to make any concessions to spinners. Their contention is that a profit cannot be made on current bids for tops, and that they need nothing less than 23d. for warp 64's.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation is still far from encouraging. During the past week a new low record of prices has been established. The policy of the chief Continental importers to stimulate home production and prevent imports at low prices is, of course, seriously hampering the disposal of wheat in exporting countries. As a consequence, prices in the latter have been forced down to a lower level than would have been the case in the absence of import restrictions. The futility of these restriction schemes, even from the point of view of importing countries, is clearly illustrated by the situation in France, where prices have fallen sharply as a result of a good harvest. A ray of hope is, however, provided by reports that winter crops in some important countries have made a poor start and that acreage has been somewhat reduced, chiefly "December" futures were quoted in Chicago at 42½ cents per bushel, against 44½ cents the week before, and 44½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. per 496 lbs., against 27s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 27s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 27s.; Australia, ex ship, 26s. 9d., against 27s. 6d. a week ago.

WHEAT FLOUR.—The demand for flour was moderate, but international trade continued on a limited scale. North American shipments were 125,000 sacks, compared with 126,000 the week before. Wednesday's London quotations were: Straight run, London, 23s., as compared with 23s. a week ago. Manitoba patents, ex store, 23s. 6d. to 26s., against 23s. 6d. to 26s. Australian, ex store, 20s. 3d. to 21s., against 20s. 6d. to 21s. last week.

BARLEY.—There has been a slight improvement in the demand for feeding barley on the Continent, a large proportion of which is being satisfied by shipments from Danubian countries. "December" futures were quoted in Winnipeg on Wednesday at 31½ cents per bushel, against 30½ cents last week and 27½ cents a month ago. Quotations in London on Wednesday were: "English before," f.o.r., per 448 lbs., 22s. to 25s., against 22s. to 23s. a week before.

OATS.—Trading in oats has been increasing in Great Britain and larger sales have also taken place on the Continent. In Chicago, Wednesday, against 17 cents per bushel a week before and 15½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 7½d. per 320 lbs., against 17s. 3d. a week ago; "River Plate," ex ship, 16s.-16s. 9d., against 16s.; "Chilean White," landed, 22s.-24s., against 22s.-24s. a week earlier.

MAIZE.—Last week's improvement in the demand for maize, which brought about a rise in prices despite heavier shipments, has been maintained. Recently shipments from Danubian countries have, however, become so large that quotations lost part of the gain recorded a week ago. "December" futures in Chicago were quoted on Wednesday at 24½ cents per bushel, against 26½ cents on Wednesday of last week and 24½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. per 19s., as against 19s. 3d.; "Plate," ex ship, 19s. 3d., against 19s. 7½d. Yellow maize, ex wharf, was quoted at £5 15s. per ton, against £5 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to November 19	Cwts. 313,075	Cwts. 73,670	Cwts. 145,502	Cwts. 215,048
12 weeks to November 19	3,161,241	897,431	1,719,596	3,387,836
Average price of English wheat per cwt.	s. d. 5 5	s. d. 6 10	s. d. 6 7	s. d. 9 5

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Week ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Sept. 12, 1932 ...	Cwts. 317,953	Cwts. 463,293	Cwts. 55,545	s. d. 5 6	s. d. 7 7	s. d. 5 11
Sept. 19, 1932	313,073	408,724	57,531	5 5	7 3	5 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Nov. 25, 1931.	Jan. 4, 1932.	Nov. 16, 1932.	Nov. 23, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	60½	62½	46½	45½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	130½	79½	64½	55½	44½	42½
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 87,943,000 bushels, shows a decrease on the week of 3,327,000 bushels. Supplies a year ago stood at 59,579,000 bushels.

OTHER FOODS.

SUGAR.—Raw sugar declined sharply during the past week under the influence of heavy selling, hedging operations and a poor demand. December futures were quoted in New York at 0.89 cents per lb. on Tuesday, against 0.97 cent a week before and 1.06 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 8½d. per cwt., against 5s. 8½d. to 5s. 8½d. a week before, and "March, 1933," at 6s. 0½d. to 6s. 1d., against 6s. 2d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	3,918	186	1,193	753	14,083	5,266
Liverpool	33,352	46,603	14,316	12,415	99,735	74,252
Total	37,270	46,789	15,509	13,168	113,818	79,518
Last week ...	23,292	12,428	15,546	13,620	92,057	45,897

COFFEE.—Following the gradual decline of values since the re-opening of Brazilian ports, coffee showed a steadier tendency in New York during the past week. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb., against 8½ cents per lb. on the corresponding day a week ago. Only a small proportion of the 4,733 packages offered at Tuesday's London auctions was sold. Demand was poor. Last week's movements of coffee in London were as follows:—Brazilian, landed, nil; delivered, for home consumption, 5,868 bags, against 2,465 bags a nil; exported, 84 bags; stocks, 2,499 packages; delivered year ago. Central American, landed, 2,306 packages; for home consumption, 2,258 packages; against 61,987 last year. Other kinds: stocks, 55,930 packages, against 61,987 last year. Other kinds: landed, 4,550 packages; delivered for home consumption, 1,816 packages; exported, 1,378 packages; stocks, 62,393 packages, against 48,183 last year.

COCOA.—The downward movement in cocoa prices continued during the past week. December futures were quoted at 3.07 cents in New York on Tuesday, against 3.92 cents a week ago and 3.99 a month ago; Accra, December-February, at 24s. 9d. c.i.f. Continent, shows a fall of 9d. per cwt. on the week. Last week's movement, shows a fall of 9d. per cwt. on the week. Landed, 212 bags; ments of cocoa in London were as follows: Landed, 212 bags; delivered for home consumption, 5,998 bags; exported, 200 bags; stocks, 113,817 bags, against 140,583 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 63,219 packages of Indian and 27,881 packages of Ceylon tea. Monday's "Indian" and Tuesday's "Ceylon" auctions were characterised by keen competition for common and low medium grades at occasionally higher prices. The improvement was not maintained on Wednesday and medium grades were irregular. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.

Oct. 27, 1932	10-75	7-72	12-75	6-40	5-12	5-99	10-67						
Nov. 3, 1932	10-22	7-47	12-34	6-32	5-37	5-87	10-39						
" 10, "	9-57	7-34	11-72	6-26	5-03	5-78	9-88						
" 17, "	9-23	7-28	11-34	6-34	5-36	6-16	9-54						

RICE.—The market in rice was quiet and quotations again show a substantial decline on the week. The spot price was 9s. 3d. a substantial decline on the week. The forward price was 7s. 1½d. per cwt. show a fall of 3d. per cwt. on the quotations at 7s. 1½d. per cwt. during the past week were as follows: Landed, 52 tons; delivered, 108 tons; stock, 2,503 tons, against 1,722 tons a year ago.

POTATOES.—The principal markets have again been well supplied with potatoes which sold at steady rates. At the London Borough Market, "King Edward," light soil, were quoted at 6s. to 6s. 3d. per cwt., against 6s. 6d. a week ago.

SPICES.—The market in pepper was quiet. Spot pepper, "Black Singapore," was quoted at 6d. per lb. on Wednesday, against 6½d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 25 tons; delivered, 5 tons; stock, 391 tons, against 370 a year ago. White, landed, 72 tons; delivered, 46 tons; stock, 681 tons, against 504 a year ago.

MEAT.—Following the sharp rise in prices during the past fortnight, foreign beef was slightly easier. On the other hand, New Zealand mutton was again firmer. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 10d. to 4s. 6d. per 8 lbs., as compared with 4s. 2d. to 4s. 10d. last week. New Zealand frozen mutton was 2s. 10d. to 3s. 2d. per 8 lbs., against 2s. 8d. to 3s. 2d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,312 tons, against 9,661 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.6 per cent. of the beef supplies, against 83 per cent. a year ago. Imported mutton, mainly New Zealand, formed 69.5 per cent. of the total supply of mutton and lamb, against 70.8 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Irregular conditions prevail and business is on modest lines. Something approaching stagnation has been reached in regard to linseed owing to the fact that the operation of the new duties has been suspended in consequence of the delay of the Indian Assembly in coming to a decision on the Ottawa Agreements. Indian growers do not think a preference of 10 per cent. *ad valorem* will be much use in helping them to meet the competition of Plate linseed. Meanwhile, crushers here are buying no more than sufficient to cover immediate requirements, Plate linseed on spot now being at a good premium over shipment. Current values are for spot, £9 5s., and afloat to December, £8 15s., with new crop, January-February shipment, nominally £8 13s. 9d. The quantity afloat for Europe is 168,000 tons, or 2,400 tons less on the week. Egyptian cottonseed has taken on a firmer tone and for black on passage £7 10s. is now asked, later positions being at a discount. Trade in vegetable oils is very disappointing. Linseed oil is easier, and for November delivery £16 5s. per ton naked ex Hull mill is quoted, and for December, £16 7s. 6d. Cotton oil is neglected. Crude Egyptian, ex Hull, offers at £21 15s. and technical refined at £23 10s. Other seed oils are quiet and unchanged. A better trade in oilcakes is reported at late quotations.

HIDE, LEATHER AND ALLIED TRADES.—A steady trade has again been done in hides from home-slaughtered cattle, and at the sales held in Manchester this week several weights in both clear and warbled were again from ½d. to ¼d. per lb. dearer. Calfskins show little alteration in value, but the market for sheepskins is weaker owing to the low prices being realised for pelts and wool. Trading in foreign hides also has been slightly better, and rather more remunerative figures have been realised for some sorts. In the South American market wetsalted Argentine ox have changed hands at 4½d., while light ox have made a fraction under 4½d. and Montevideo ox 5½d. Business in dry River Plate hides is mainly confined to the Continent, where B.A. Americanos are selling at 6d., M.V. Americanos at 6½d., Sierra Cordobas at 7½d., and Cuyabanos at 5½d. Although rather more interest has been taken in African hides, business so far has not developed to any great extent. Dry-salted Capes are quoted at 5½d. and 4½d. for firsts and seconds, while drys are selling at up to 6½d. and 5½d. in the same selections. Mombasas are a steady market at 5d., with heavy unbathed Adis Abebas making sales at 5½d. The market for Australian hides continues quiet. Business in regard to sole leather has been of moderate dimensions, with the aggregate turnover up to the level of recent weeks. There has been a tendency for the inquiry for dry hide bends to become less, but at the same time some fair orders have come to hand for medium weights. Turnover in regard to English and wetsalted bends has been slightly larger, the request for these covering both light and medium weights. Pinned offal, with the exception of bellies, has inclined to be slow, as is also the case with both rough shoulders and bellies. In the upper leather section orders for willow calf and glacé kid are still fairly frequent, in addition to which patent and reptiles in some quarters have accounted for a trifle more business. There has also been some inquiry for the cheaper grades of upper stock in semi-chrome, but, generally speaking, the latter goods are wanted in only limited quantities and then at very low prices.

TIMBER.—Market conditions are favourable to spot sellers of European woods. Stocks in the country are moderate, and it needs but a little extra demand, writes our correspondent, to bring prices to a more remunerative level. Building-trade operations, which have been small throughout the year, are expanding, costs of buildings in the provinces for which plans were passed last month showing satisfactory increases both as compared with the preceding month and also for October last year. More timber business also is being negotiated by agents here between United Kingdom importers and Finnish and Swedish shippers, for there is not too much time for delivery this year; ports in the far north are already closed by ice, and the shipping season is well on the wane. Timber prices for this year's shipment c.i.f. and f.o.b. are firm, and stocks left in shippers' hands are comparatively light for the time of year owing to the smaller 1932 "cut." The latter was a judicious move on the part of producers, and is likely to be repeated next year, when

The Bankers' Gazette—

ALTHOUGH December 1st with

It is true that there was a fair demand for clearing bank money at 1 per cent., and some of the clearing banks themselves had to call a little money from the market in preparation for any possible loss of funds through the afternoon clearing. The Scotch banks and other outside banks, however, could determine better where they stood, for cheques drawn on them were presented during the course of the day, and they did not have to await the result of the clearing. The net result was that while money was inclined to be patchy and to be wanted in some quarters, no difficulty occurred, and the general rate was $\frac{1}{2}$ -1 per cent.

Money and discount rates, however, are definitely higher than they were earlier in the month. Exchange and debt uncertainties, and more particularly the huge weight of the £60.0 millions of Treasury bills issued on November 24th, raised the average tender rate to £1 2s. 4.44d. per cent., which is the highest rate recorded since May 6th last. Early this week the absence of Treasury bill maturities made money more usable at $\frac{1}{2}$ per cent. and occasionally 1 per cent., so much so that some special buying of bills took place on Monday. Owing to a general disinclination to buy bills before December 1st, the "hot" Treasuries were quoted at $1\frac{1}{8}$ per cent. On Thursday itself, however, when it had become clear that there was no shortage of funds, some buying of "hot" Treasuries was reported at $\frac{1}{8}$ and $\frac{3}{8}$ per cent. A few December bills changed hands during the week at $\frac{3}{8}$ per cent. Three months' bank bills were quoted at $1\frac{1}{8}$ - $\frac{1}{2}$ per cent. until Thursday, when the rate eased to $1\frac{1}{8}$ - $\frac{1}{2}$ per cent. Standstills were quoted on Thursday at $1\frac{1}{2}$ per cent.

	Nov. 10, 1932.	Nov. 17, 1932.	Nov. 24, 1932.	Dec. 1, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$2\frac{1}{2}$ (June 30, '32)
Banks' Deposit Rate..	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 12, '32)
Discount (Call)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (May 12, '32)
Houses' Notice	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$1\frac{1}{2}$ (May 12, '32)
Market rate ("hot")	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Treasury bills)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Market rate (3 months' bank bills)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	...
Market rate (stand-still bills)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	...

This week's Bank return shows that the Christmas currency expansion is beginning, for the note circulation has risen from £357.8 to £358.8 millions. No bullion operations took place, and so the reserve has fallen by £1.0 million to £58.8 millions. In the Banking Department there was a big turnover of funds from Public to Bankers' Deposits, the former falling by £16.4 millions to £10.1 millions and the latter rising by £12.5 millions to £90.5 millions. The probable explanation is that most of last week's Treasury bill applications were for bills to be paid for after December 1st, and, apart from the disinclination to make payments on or before that date, March bills are a better maturity. This means that up to November 30th, the date to which this week's Bank return relates, maturities were in excess of payments, and so the Exchequer lost funds to the market.

As regards the immediate outlook for money, there was some disposition on Thursday to expect more stringent conditions for the next few days. It was pointed out that there were large numbers of Treasury bills to be paid for at the end of the week, which might absorb most of the War Loan dividend which would be reaching the market during those days. Again, attention was called to the special purchases of early December bills during the past two months, and it was feared that as a result much of the proceeds of Treasury bill maturities during the next week or so would not reach the market. On the whole, these fears appear unjustified. As we pointed out a week ago, by the time all Thursday's dividend and other warrants are cashed, the market will on balance be in funds to the extent of anything up to £68 millions, while it must also be remembered that the recent special purchases of December bills in the aggregate have comprised

a very small proportion of the maturities. Hence it seems safe to assume that the ease customary immediately after a War Loan dividend payment will once more prevail.

The Foreign Exchange market was active this week, and fluctuations in sterling were frequent and wide. After touching 3.14 $\frac{1}{2}$, the New York rate recovered on Thursday to 3.23 $\frac{1}{2}$, and at one time touched 3.24, against 3.24 $\frac{1}{2}$ last week. Montreal weakened by 2 points to 3.78 $\frac{1}{2}$. The Paris rate fell at one time to 80 $\frac{1}{2}$, but recovered to 82 $\frac{1}{2}$, against 87 $\frac{1}{2}$ last week. Brussels was at 23.35, or eleven points better than last week. Milan closed weaker on balance by $\frac{1}{8}$ at 63 $\frac{1}{2}$. Madrid improved by $\frac{1}{8}$ to 39 $\frac{1}{2}$. Lisbon went with the dollar to 106 $\frac{1}{2}$ against 107 $\frac{1}{2}$. Amsterdam gained 4 points at 8.05, and Berlin and Switzerland 6 at 13.59 and 16.82 respectively. The Scandinavian currencies were very firm, Stockholm going to 18.40 from 18.69, and Oslo from 19.56 to 19.50. Copenhagen was unchanged at 19.22. The South American currencies remain largely nominal, Rio being quoted at 5 $\frac{1}{2}$ d. sellers, or $\frac{1}{2}$ d. higher than last week, and Buenos Aires at 35 $\frac{1}{2}$ d., and advance of $\frac{1}{2}$ d., while Montevideo was unchanged at 29d. In the Far East the rupee was firm and unchanged at 1s. 6 $\frac{1}{2}$ d. The yen, after some show of strength on news of an improvement in the Japanese trade balance, fell away towards the close and was $\frac{1}{2}$ d. lower at 1s. 8 $\frac{1}{2}$ d. Batavia was unchanged at 8.10. In the forward market dollars were more offered at wider discounts of $\frac{1}{8}$ and $\frac{1}{4}$ cent for one and three months respectively. Paris was firmer for one month's delivery at one centime premium, against $\frac{1}{2}$ centime premium last week, but fell away by $\frac{1}{2}$ to 2 centimes premium for three months. Brussels was weaker at 7 centimes discount for one month, but unchanged at 18 centimes discount for three. Milan fell away by $\frac{1}{4}$ for one month to $\frac{1}{2}$ lira discount, but was unchanged for three. Madrid was better by $\frac{1}{8}$ for both deliveries at $\frac{1}{4}$ peseta and $\frac{1}{2}$ peseta discount. Amsterdam was considerably firmer at enhanced premium quotations of $\frac{1}{2}$ cent and $\frac{1}{4}$ cent. The silver market was quiet, and prices fell on some speculative sales in the absence of support. Cash was $\frac{1}{2}$ d. lower at 17 $\frac{1}{2}$ d. and forward $\frac{1}{2}$ d. at 17 $\frac{1}{2}$ d. The China silver exchanges fell away in sympathy, Hong-kong by $\frac{1}{2}$ d. to 1s. 4 $\frac{1}{2}$ d. and Shanghai by $\frac{1}{2}$ d. to 1s. 9 $\frac{1}{2}$ d.

It appears, therefore, that despite this week's fall in sterling to a new low level it only needed a slight change in sentiment and some covering by "bear" operators to bring the rate up again. It is also significant that forward dollars have been at a discount all the week, for this suggests that there is no real or widespread loss of confidence in the pound. Indeed, it would not have been surprising if this week's rise in London discount rates, with their consequent attraction to American short money, had caused forward dollars to move to a slight premium. No significance need be attached to this week's arrangements for gold shipments to New York, for it has been stated by the Chancellor that they have no connection with Government operations.

Money rates on Wall Street are unchanged, with call money at 1 per cent. and 90-day bankers' acceptances at $\frac{1}{2}$ - $\frac{1}{4}$ per cent. Most of the leading gold exchanges moved in favour of New York, French francs falling from 3.90 $\frac{1}{2}$ to 3.90 $\frac{1}{4}$ cents, Swiss francs from 19.23 to 19.22 $\frac{1}{2}$ cents, and belgas from 18.85 $\frac{1}{2}$ to 18.84 $\frac{1}{2}$ cents. The Dutch rate improved from 40.15 $\frac{1}{2}$ to 40.18 $\frac{1}{2}$ cents. Gold movements were unimportant. Imports only consisted of \$998,000 from Canada and \$364,000 from Uruguay, while foreign earmarkings were reduced by \$1,305,000. The Reconstruction Finance Corporation authorised with \$139 millions in September. \$50 millions were authorised to finance institutions compared with \$64 millions in September, and \$21 millions to banks and trust companies, compared with \$28 millions in September. No single bank loan was in excess of \$1 million. The total of loans granted up to the end of October, less repayments, was \$1,059 millions, and Treasury purchases of R.F.C. capital stock and notes amount to \$1,176 millions.

THE BRITISH NOTE.

THE days spent in the drafting of the second British Note to the United States on the question of the War Debt have, necessarily, been a period of uneasy suspense, filled with conflicting rumours and disturbing fluctuations of sterling. But the time has been well spent in the sense that careful draftsmanship has produced a forceful, lucid and closely-argued statement which will become a historic document.

Prefaced by the observation that H.M. Government welcome the invitation, implicit in the United States despatch, that they should set out in greater detail the considerations which actuated them in proposing a suspension of the payment due on December 15th, the Note begins by recalling the declaration of the Basle Committee last December to the effect that the "adjustment of all reparations and war debts to the troubled circumstances of the world is the only lasting step capable of re-establishing confidence, which is the very condition of economic stability and real peace." Brief reference is then made to the nature of the loans made for the prosecution of the war; these were taken not in the form of money but in the form of goods and enormously augmented the volume of exports of the lending countries. For example, the United States' export surplus, which before 1915 had varied from \$200 millions to \$600 millions annually, exceeded \$3,000 millions in 1917 and 1918, and reached \$4,000 millions in 1919.

By the end of the war inter-Allied loans reached the colossal total of approximately \$20,000 millions (£4,000 millions at par) whereof the United States had lent \$10,000 millions (£2,055 millions), the United Kingdom £1,600 millions (\$7,800 millions) and France the equivalent of \$2,237 millions. "If the course of commerce were deflected to the extent required to pay these war-time debts it would entail a radical alteration in the economy of the debtor and of the creditor countries." When both of the debtor and of the funding settlements began, repayment on the basis of the funding settlements began, the problem of transfer was at first surmounted by the flow of investment capital from the United States to Europe; but even then the seeds of future trouble were being sown. The harvest was the crisis of 1931, in which the international monetary mechanism is being "broken into pieces."

"The countries of the world cannot even begin to consider how to restore this mechanism until the causes which undermine confidence have been removed. One of the most important of these is the system of inter-Governmental debts."

The Note goes on to observe that the repayment of these war debts necessitates "unnatural transfers which provoke widespread economic evil."

"The creditors in so far as they have refused to accept payment in goods have compelled their debtors to pay in gold. This has led to a drain on the Gold Reserves of many countries and this in turn has forced up the price of gold in terms of commodities or, in other words, has forced down the price of commodities in terms of gold currencies. This fall in prices has caused widespread ruin to producers in debtor and creditor countries alike and threatens disastrous social and political repercussions. It has seriously increased the burden of commercial debts; but it has rendered intolerable the peculiar burden of unproductive war debts."

Recalling the statement of the Secretary of the United States Treasury in his annual report for 1924-25 that "no settlement which is oppressive and retards the recovery or development of the foreign debtor is to the best interests of the United States or of Europe," the Note declares that a resumption of war debt payments in the present circumstances "appears altogether inconsistent with the principles then laid down."

The Note next turns to the argument that any remission of war debts represents merely the transfer of liability from the taxpayer in the borrowing country to the taxpayer in the lending country. It observes that in this respect the taxpayers in the United Kingdom and in the United States are in much the same position. Both are already bearing a large share of the burden of war debts and would continue to bear it even if all the existing debt payment programmes were maintained. In the case of Great Britain the taxpayer will in any case have to find

over £80 millions a year for interest on the internal loans out of which £1,600 millions were advanced to the Allies; for any receipts we may obtain from our debtors will be passed on as a contribution towards whatever we may have to pay to the United States. Thus, while cancellation of war debts would involve the annual sacrifice at present of \$270 millions on the part of the American taxpayer, similar sacrifices on the part of the British taxpayer are inevitable. But, it is suggested, a wider point of view is essential.

"So long as debtor nations are compelled by every means to augment their export surpluses, in order to meet these inter-Governmental debt burdens, they cannot play their part in the normal economic operations of commerce, and their diminished purchasing power will reflect itself in diminished receipts for the producers in the creditor country, with consequent fall in prices, depression of industry and unemployment. Even a partial recovery of business activity in the creditor countries as a consequence of the removal of these abnormal conditions would result in additional receipts from taxation on the existing scale which would compensate the exchequers of the creditor countries many times over for the loss of revenue involved in the revision of the War Debt Settlements."

Apart from these reasons which have actuated the British Government in asking for a re-examination of the whole of the war debt structure, which has proved in their view to be inconsistent with the present economic organisation of the world, the Note reminds the United States of the magnitude of Great Britain's war and post-war effort. Total British war expenditure in the United States amounted to approximately \$12,000 millions, whereof only one-third was financed by borrowing from the United States Government. About \$3,000 millions were obtained by the sale of gold and securities and \$1,480 millions were raised by market loans, whereof nearly all have been repaid. Including repayments to the United States Treasury up to date, the total debt repayments made by Britain to the United States since the war amount to \$3,063 millions. On the other hand, whereas the United States Government have received for the benefit of their taxpayers \$2,112 millions on account of the \$10,000 millions lent during the war, the British Government, which lent the equivalent of \$7,800 millions, have received nothing for the benefit of their taxpayers: they have passed on all their receipts from reparations and inter-Allied debts to the United States and have paid out of their taxpayers' pockets \$650 millions to the United States in addition.

The Note then proceeds to call attention to the changes of circumstances which have increased the burden of the obligations, namely, the suspension of the gold standard, the fall in commodity prices, and the shrinkage of trade between Britain and the United States as a result partly of the American tariff policy. These points are illustrated by very striking statistics with which readers of the *Economist* are familiar. Regarding Anglo-American trade, the Note observes cogently:—

"If, therefore, War Debt payments had to be resumed, it is apparent that the exchange position of this country would need to be strengthened by a reduction of the very heavy adverse balance of visible trade between the United Kingdom and the United States of America, which amounted to £78 millions in 1931. In present circumstances this could only be done by adopting measures which would further restrict British purchase of American goods. The United Kingdom has up to the present generally been the best customer of the United States and the result of such restrictions would inevitably be to reduce specially the market in the United Kingdom for American farm products. To the extent therefore that payments were resumed to the United States Treasury a definite and unfavourable reaction must follow to the United States producer."

The Note recalls that the Lausanne Agreement was made with the "cognisance and approval of the United States Government," and that whatever view of the inter-connection between reparations and war debts "is academically correct, there is a *de facto* connection between these two sets of inter-governmental obligations"; and this was by implication admitted by the United States when they proposed the moratorium on all inter-governmental obligations last year.

"His Majesty's Government take it for granted that preferential treatment would never be claimed for the War Debts due to the United States of America as compared with those due to this

country; and a situation in which this country was required to continue war debt payments while foregoing the war debt payments due to it would be admitted at once to be unthinkable. Thus, if the payment of the sums due in respect of the British War Debt to the United States Government were to be resumed, His Majesty's Government would be obliged to reopen the question of payments from their own debtors—France, Italy, Portugal, Yugoslavia, Roumania and Greece, and also the British Dominions. The debtor countries would, in turn, have to demand the payment by Germany of her obligations under the Young Plan, and the United Kingdom would have to do likewise. Without a readjustment of war debt obligations the Lausanne Agreement could not be ratified; the question of reparations would remain unsettled; the improvement in confidence which followed the Lausanne Agreement would be undone; and fatal results might well be found to have accrued to the solution of many grave political, as well as financial, problems now under discussion.

Emphasising the conviction of H.M. Government that a suspension of the December payment "is necessary," the Note points to the fact that though Britain has taken all possible steps to mitigate the fluctuations in the exchange value of sterling, nevertheless the reserves in gold and foreign exchange acquired, though adequate for the purposes for which they were designed, "would not suffice to cover, as well, the payment of \$95 millions due on December 15th." Nor would the exchange difficulty be eliminated by the device of payment in sterling to a blocked account for "the existence of a large sum awaiting transfer would affect the market almost as seriously as an actual purchase of exchange." The only remaining alternative would be payment in gold, which would involve the sacrifice "of a considerable part of the gold reserves of the Bank of England which are widely regarded as no more than sufficient for the responsibilities of London as a financial centre." The Note ends with the expression of the hope that the United States will now appreciate the ground upon which their request for a suspension was based, namely, their profound conviction "that a resumption of War Debt payments as they existed before the Hoover Moratorium would inevitably deepen the depression in world trade and would lead to further falls in commodity prices with disastrous consequences from which no nation would be exempt."

In conclusion the British Government offer to consider with the Government of the United States any manner in which postponement "might be most conveniently arranged."

The case, thus presented, both for a radical revision of the Debt Funding Settlements and for the extension of the Hoover Moratorium to cover the December 15th instalment accords closely with the views repeatedly expressed in these columns and is, in our judgment, unanswerable. We find it difficult to believe that it will not evoke a sympathetic response from the United States; for there can be little doubt that during the past fortnight public opinion in that country has begun to appreciate, as never before, the real factors involved in the War Debt problem. There are signs of a distinct modification of the attitude which led to the cold, and in some quarters, angry reception of the first British Note.

At the same time, the fact has to be faced that between now and December 15th the time is short for the conversion of this "lame-duck" Congress to a wise and realistic debts policy. There is a possibility that Mr Hoover's Administration, with Congress in Session from next Monday onwards, may be constrained to frame once again a negative reply to the British proposals. What then? Clearly the choice of policy for Britain must be carefully weighed. Debtors in circumstances such as these have their duties and responsibilities no less than creditors; and if the Government feel that payment would create exchange and other difficulties on an international scale to which they have no right to expose the world, then they should not shrink from whatever odium attaches to default.

It will be time enough for the Cabinet to reach its considered decision on this particular question next week, when the American reply—for reply there clearly must be—is received. This, however, we would say now. If it is decided, as a matter of expediency in the hope of facilitating future negotiations, to make one more final payment under the old schedule, then the payment—whether it be in the form of gold shipments or gold "earmarked" at the B.I.S. in favour of America, or even by the establishment of a "suspended" sterling account—

should be accompanied by a clear statement of our policy for the future. Drift and uncertainty lasting month after month until next June's payment is due would be disastrous. Let us endeavour, so far as lies in our power, to minimise the disturbance caused by even a temporary or partial resumption, and in consultation with our own debtors endeavour as far as possible to keep intact the results achieved at Lausanne; let us put forward a definite plan of our own for the final settlement of all the war debt obligations, and let us make it clear that we shall expect any payment which we now make to the United States to be absorbed into that settlement.

FEDERAL INDIA IN FORMATION.

WITH the war debts negotiations monopolising the headlines of the Press and overshadowing even such a major critical issue as that of Manchuria, the proceedings of the Indian Round Table Conference have not figured prominently in the news, and comparatively little public attention has been given to the problems which have to be settled during the present sessions, before the federal constitution can take final shape. But time is slipping away, and it is of the highest importance that in the few weeks that remain available for the present sittings agreement should be reached on as many points as possible. This is necessary if the Parliamentary draftsmen are to be in a position to produce a Bill acceptable to moderate Indian opinion; but it is equally necessary that, when the present delegates return to India, they should be able to tell their countrymen that on all major questions the British Government have come to terms with the Indian representatives. If, after this third and last Conference, it can be made to appear that a new constitution is to be imposed from this country, there is a real danger that the present lull in political activity in India may be rudely disturbed. It is evident, however, that on a number of vital questions a considerable divergence of view has to be bridged; indeed, the reception on Tuesday by the Indian delegation of some observations by Lord Irwin on the general question of responsibility at the Centre suggests that the British Government will have to exercise their powers of persuasion to the full if agreement on all major points is to be reached.

Lord Irwin described federation, responsibility and safeguards as "the three legs of the constitutional tripod"—the safeguards being designed to provide a working partnership between Great Britain and India. He suggested that the Viceroy of a Federated India should not merely control the reserved Departments of Defence and External Relations, but should also be empowered to discharge special responsibilities in respect to commercial discrimination; the rights of the States, the services and Minorities; and the prevention of grave menace to the peace and tranquillity of India. These suggestions appear to have created a feeling on the Indian side that "responsibility" at the Centre might thus be whittled down to a shadow; but since there seems to be general agreement that, at least for a transitional period, there must be certain political "safeguards" vested in the Governor-General, the problem should probably be regarded as essentially one of definition and limitation. Given goodwill on both sides, and on the assumption that future Governors-General would exercise their constitutional rights with tact and discretion, an acceptable compromise on most points should not prove impossible of realisation.

Some phrases used regarding "Imperial interests," taken in conjunction with the institution of Imperial preferences between England and India by the Ottawa agreement, have suggested doubts as to whether limitations are to be imposed on India's fiscal autonomy. We think this fear is groundless. Indeed, having regard to the "fiscal convention" which has been observed in India for many years past, under which this country has accepted the decisions of the Indian Legislature in the matter of fiscal taken. The Indian Ottawa Agreement was negotiated by representatives of India, and has been confirmed by the Legislature for three years. At the end of that time it is to be presumed that a new Constitution will be in

The New York Trust Company

being, and there is no reason to suppose that the new Government will be in any way less free than other self-governing members of the Commonwealth to determine its future fiscal policy.

The real stumbling-block is obviously the question of the financial safeguards—a matter in which much more of substance is involved. We have yet to learn what the British Government's proposals may be in this connection; but in view of the fact that Lord Irwin's general observations on Tuesday were closely reminiscent of the terms of the Government of India's Despatch of September 20, 1930, commenting on the findings of the Statutory Commission, it is worth while recalling the line which the Government of India, under Lord Irwin's Governor-Generalship, then took with regard to financial responsibility.

The Despatch began by emphasising several fundamental objections to the unqualified transfer of the control of finance to a popularly elected Minister responsible to the Central Legislature. In the first place, Defence being a reserved subject, it would be essential to ensure that the funds to meet the cost of Defence were available. Secondly, the British Government could not relinquish responsibility for ensuring that public debt incurred by India under the British Raj was duly honoured. Thirdly, the British Parliament must remain responsible for the pay, pensions, etc., of officials whom the Secretary of State had recruited. In addition, the Despatch pointed out that the Government of India has hitherto had a special responsibility in connection with the currency, whose transfer to a political Minister would be undesirable in any country.

Having reached the conclusion that a transfer of financial responsibility would demand the fulfilment of certain general conditions, such as the restoration of normal economic conditions and the re-establishment of credit and confidence—conditions which themselves depended upon the renunciation of non-co-operation and assurances by leaders of Indian opinion that they entirely disavowed the doctrine of the repudiation of debts—the Government of India expressed the view:—

(1) That the formation of a reserve bank on sound lines, working in close co-operation with (and on lines approved by) the Bank of England, must be a condition precedent to the transfer of financial responsibility.

(2) That after such transfer some powers of supervision and control should still be vested in the Governor-General for the purpose of maintaining financial stability. Interference should not be carried to the point of destroying the Minister's responsibility, but there might be occasions of financial danger short of actual default when a power to hold up, rather than to veto, inadvisable action might be of value. The Governor-General might usefully be assisted by a financial advisor.

(3) The Budget should include a Consolidated Fund to cover such items as interest on debt, defence expenditure and pay, pensions, etc. Such a fund should be a first charge on revenue.

Financial safeguards on lines such as these would undoubtedly be an unpalatable pill for Indian opinion, especially since the acceptance in principle of a federal constitution has encouraged the belief that the British Parliament would be willing to take greater risks in transferring responsibility than would have been the case if a constitution for British India only had been under consideration. If, as seems possible, the proposals which the Government have in mind are found not to differ in essentials from those indicated two years ago, the problem which the Conference has to face is to see how far it is able to evolve a workable compromise from a basis of this kind.

While agreement in principle on points (1) and (3) may not be difficult, point (2) may prove a stumbling block. But the case is one where a solution may be found by getting down to specific propositions. For example, if a constitution could be devised for a central reserve bank which would keep it out of the tangled web of Indian politics and ensure that its policy was guided by the best available advice with a single eye to the maintenance of India's credit, it would go a long way towards reassuring investors. An agreement in regard to the Bank should make it easier to evolve a budgetary system which would give real financial autonomy to India while safeguarding the points to which this country attaches importance. Obviously, Defence and a Consolidated Fund on the lines of the Despatch must be a first charge on revenue; and it would be necessary to vest in the Governor-General powers to resume absolute financial control in the event of the constitutional machinery breaking down. It would go far to meet Indian difficulties if the British Government were prepared to accept this reservation in substitution for the Governor-General's present powers of certification.

There is no serious risk that the Federal Legislature might refuse to vote taxes sufficient to produce a yield adequate for meeting the prior charges of Defence and the Consolidated Fund. For such an attitude would mean that, since *ex hypothesi* no money whatever would be available for ordinary administration, the whole government of Federal India would come to a standstill. The Federal Legislature might surely be trusted to refrain from such a suicidal act, which would in any case be the occasion for the resumption by the Governor-General of the emergency financial powers vested in him. For the rest, we can conceive it possible that the Federal Legislature might impose unwise taxes or distribute the burden of taxation in a manner which the Governor-General might consider to be inequitable. Here, we suggest, it is essential to leave India to learn by experience. After all, many other countries have managed their Budgets none too well and yet have surmounted the resulting difficulties. Provided always that the currency, placed under the control of an autonomous reserve bank, can be convincingly secured from rash experiments, we see no option but to make the transfer of financial responsibility real in substance. Failing a decision by the British Government in this sense, there is grave risk that finance may prove a rock on which the Round Table Conference will founder.

THE RAY REPORT.

THE Report of the Ray Committee on local expenditure and its Scottish counterpart, which appeared too late to be reviewed in our last issue, are very much what we expected. Conceived in a "contractionist" spirit the Committees lay the axe about them lustily and indiscriminately, apparently oblivious of the fact that the instrument in question will appear to progressively minded persons as "far less like a hatchet than a dissipated saw." The total economies contemplated in the Ray Report, which deals only with England and Wales, are estimated at between £35 and £40 millions (in addition to the cuts already made by the National Government), of which something between a third and a quarter is contributed by education. The Scottish Report contemplates total savings amounting to rather over £3 millions.

The economies recommended by the Committee are very varied in character. Some of them are purely administrative and have for their object the elimination of waste in all its forms. Most, though not perhaps all, of these will commend themselves to the great majority of sensible people. Others, on the other hand, are definitely calculated to lower the standard of service, in the supposed interest of the taxpayer and the ratepayer, by cutting down not only capital but also current expenditure without much regard to the ultimate consequences of precipitate parsimony. This criticism applies most strongly to the recommendations with regard to Education, Housing and Public Health services.

Education, always the first and easiest victim of the would-be economiser, fares badly at the hands of the Committee. Some of the recommendations for securing administrative economies, such as the closing of redundant schools and the amalgamation of small departments, are sound enough in principle, but in the nature of things they can only account for a very small proportion of the £10,000,000 which the Committee hopes to save under this head. The major "cuts" advocated are thoroughly retrograde, as, for instance, the proposal to increase the size of classes and thereby to abolish 5,000 teaching posts in elementary and 1,000 in secondary education. That is a penny-wise pound-foolish piece of "economising" which no considerations of financial stringency can possibly justify, because its only effect must be to lower the standard of education all round in a degree wholly disproportionate to the actual money saved. There is even less to be said for the suggestion that the provision of special training for mentally deficient children should be postponed, and that a number of children at present attending these institutions should be transferred to the lowest grade classes of reorganised schools. Nothing surely could be more reactionary than to reverse the painfully-won progress that has been made since 1921 in segregating mental deficients. Nor can we commend the raising of fees for evening and day classes and the cutting down of maintenance allowance and grants to students (which are to be transformed into loans) at a time when earnings and employment are rapidly shrinking. The only result of "cuts" of this kind would be to diminish the comparatively small number of persons receiving secondary and higher education in this country, and so to throw still more young persons and adolescents upon the streets.

The recommendations of the Committee with regard to Housing are even more drastic. The Committee has apparently made up its mind that the time has arrived when housing can stand on its own feet—a conclusion with which few who are intimately acquainted with the problem would agree. It has accordingly recommended that the subsidy under the 1924 Act should be abolished, that the subsidy and rate contribution under the 1930 Act should be reduced, that applications under the Housing (Rural Authorities) Act, 1931, should be limited to 2,000, and that power to consolidate subsidies under the Act of 1919 should be extended to those given under the Act of 1923 and 1924. Local authorities are also recommended to increase revenue obtainable from their housing estates by requiring tenants who can afford it either to pay higher rents or in some cases to buy their houses or to vacate

them; to apply a means test to their tenants; and generally to encourage the sale of houses, "not necessarily on the basis of the existing subsidised rentals."

There can be no doubt whatever that a great deal of housing legislation in the past has been wasteful and has not in fact benefited those for whom the subsidies granted were intended, namely, the very poor, but it is more than questionable whether the Committee's proposals, taken as a whole, would really improve matters. The reduction of interest rates and the fall in the cost of building probably warrant some reduction in the present scale of subsidies, but we doubt very much whether so hurried a return to *laissez-faire* as the Committee contemplates is really practicable. Indeed, four members have signed a reservation disagreeing with the sudden termination of the housing subsidy on the ground that it would arrest the progress of building houses to let at low rents. There is some ground for supposing that the Committee's estimate of present building costs is, to say the least of it, a little optimistic; and, with incomes falling and unemployment unabated, it is hardly likely that the private builder and the private investor will turn quite so readily as the Committee supposes to the provision of unsubsidised houses for the working classes, who still stand in the direct need of accommodation, especially in places where the pressure of the migration of labour from derelict areas is slowly but steadily making itself felt. It is quite evident that the Committee has been inspired in these recommendations by purely "contractionist" motives, and the result of their proposals would in fact be to depress still further the already depressed building trades at a time when all the economic factors are indicating precisely the opposite policy.

The suggestions of the Committee with regard to Roads and Bridges are another example of homeopathic treatment for the world slump. Highway expenditure has been enormously diminished during the past twelve months, and the proposal to postpone still further all major improvements and new construction borders on the fantastic. Though, taken as a whole, road development may have been overdone during the past twelve years, there is nothing to be said in favour of cutting down the considerable volume of expenditure by way of by-passes, widening and so forth which is still required to get the most economical use out of the existing road system.

The proposals with regard to the Public Health services contain many useful suggestions for effecting economies, through increased co-operation between neighbouring authorities in sewerage and in the provision of hospitals for infectious diseases and the introduction of costings for refuse collection and disposal and street cleansing; but many of them are definitely retrograde in tendency, e.g., those implying a lowering of the standard of service with regard to mental hospitals. In particular, the recommendation that charges should be made for the treatment of venereal diseases is most short-sighted. It is difficult enough as it is to persuade patients to resort to early treatment—which is more than half the battle—on a free basis, and the charging of a fee would only act as an additional deterrent most dangerous to public health. Nevertheless the attempt which the Committee recommends to establish more uniform standards of maintenance costs is well worth trying. Much of our public health administration is extravagant and a great deal of waste could be eliminated without endangering efficiency in any way.

The question of outdoor relief seems more or less to have completely defeated the Committee, and they suggest that the responsibility of granting relief to able-bodied men should be removed altogether from the purview of Local Authorities—a course which is the exact opposite of the recommendation of the Royal Commission on Unemployment Insurance which proposed to transfer to local bodies the administration of the Unemployment benefit. Failing this rather drastic step, for which, nevertheless, a fairly plausible case could be stated, the Committee recommend that the Minister of Health should be empowered to supersede any local authority which does not carry out efficiently the duty of administering relief

out of a hat nor a "short, sharp and decisive" pronouncement by our Foreign Secretary.

Major differences of interpretation, vitally affecting the concession, have persisted between Persia and the company for almost a decade; more than once, these have been all but bridged, and it is regrettable that an attempt (however tentative) to proclaim a Papal decree of annulment should now threaten the domestic felicity of Persia and Persia's premier industry.

Royalty from the company comprises Persia's chief source of national revenue, and therefore one in which a measure of stability is important—no less so, in fact, than in the case of our own income tax yield from year to year. Far from having attained this, however, the record of its fluctuations in the last ten or twelve years resembles a fever-chart, with receipts ranging from £1,410,000 to £130,000. The dissatisfaction thus caused has been greatly increased, in Persia, by the wave of fervid nationalism which in recent years has swept over the world. The company has granted to Persian nationals an increasing share in the management there, as well as showering much wealth and many material comforts upon the 20,000 nationals in its employ—and indeed upon the entire population of the Southern area. Perhaps in its generosity it has gone farther than cold prudence might have demanded. For the Persian, however, in his lately-awakened state of political consciousness, it has not nearly gone far enough. The grant, last year, of minimum revenues to the Iraq Government by the company's related enterprise, the Iraq Petroleum Company, and the automatic influence of the British suspension of the gold standard—factors discussed in an Investment Note on page 1044—have brought matters to an acute issue, and now the concession itself is assailed.

In these circumstances it is clearly desirable for all who are interested in the welfare of one of the world's great enterprises to understand the point of view that has led to brusque and, to most people, unexpected action. The purported grounds of repudiation, as popularly conceived in Teheran, would follow some such lines as these:—

(1) The concession is bad, because in practice its terms have proved impossible of performance.

(2) In particular, it was a naïve document and quite inapplicable to the company's post-war operations, because it contemplated business in Persia only—the oil won to be sold at a Persian place of export—and did not provide for the contingency of the company establishing a great fleet of ocean-going vessels and extending its trade in Persian oil to all parts of the Eastern Hemisphere, as a result of which the accounts of its operations in Persia became difficult to segregate from the much more widespread activities of the company as a whole.

(3) In 1920 an interpretative agreement was found necessary and was negotiated between the company and the late Sir Sydney Armitage-Smith (Financial Adviser of the then Persian Government). Even as so modified, however, the concession and the purported agreement of 1920 lack force, because of the absence of the sanction of the Mejlis—a body which may not approximate to Parliament in terms of English electoral ideas, but is Persia's nearest approach to St. Stephen's.

(4) Persia has never been satisfied with the application of this 1920 Agreement and in particular has been dissatisfied with the amount of royalty that has accrued

—a safeguard which, unhappily, has been found necessary in more than one instance in the days of the old boards of guardians. The conditions attached to out-relief by the Committee are, as might have been expected, rather on the severe side, and in the interests of true economy some severity is certainly necessary; but the proposal to reckon the whole resources of an applicant's family as a single unit is particularly unjust. The observation, however, that the practice of granting relief automatically to bring an applicant's income up to an agreed minimum is in certain parts of the country causing a large amount of waste, rightly draws attention to the difficulty of establishing any uniform scale, and has obvious bearings upon the Unemployment Assistance scheme. For a scale of relief which is adequate in the most expensive areas must be extravagant in those where the cost of living is much lower.

With regard to salaries and wages the Committee's recommendations are not unreasonable. They include the slowing up of the increments in the pay of teachers and other local government officers and a review of the wages of manual workers which is long overdue, especially among the unskilled grades. Wage scales of municipal employees have in many cases tended to be excessive, and some reduction would certainly help to correct the disparity between sheltered and unsheltered wages which for years has been one of the chief causes of economic disequilibrium in this country.

Finally, two other recommendations of the Committee are worth something more than passing notice, namely, the substitution where possible of the "block" for the percentage grant, and the suggestion that the expenditure of local authorities should be presented to Parliament with the Budget. The first of these has long been a matter of controversy. There can be little doubt that the percentage grant has definitely encouraged spending: indeed it was expressly designed for that purpose. There is, therefore, much to be said to-day on grounds of economy for discontinuing it where it still exists, provided that some method can be found of enforcing among the more backward authorities a proper standard of service. The second proposal also has a good deal to recommend it. Even if Parliament does not and should not exercise any direct control over the expenditure of Local Authorities, it will always be salutary for the members of the House of Commons to contemplate the full financial results of their activities, which are only too often forgotten where they do not appear directly on a departmental vote.

To sum up:—The Report contains a large number of useful suggestions for administrative economies. But its "contractionist" bias gives it altogether a false perspective, and it fails to make the vital distinction between two quite separate things which in the public mind are lumped together under one word, economy, namely, doing things in the financially most efficient way, and going without something that you need. The former is the touchstone of good administration; the latter, under the peculiar conditions of the world depression, merely a senseless and damaging form of deflation. Vicarious asceticism at the expense of the ignorant and the needy is not the royal road to trade revival.

PERSIAN OIL. (BY A CORRESPONDENT.)

THE idea that a Palmerstonian stroke is called for in order to affirm the sanctity of the Anglo-Persian Oil Company's concession is wrongly conceived. The company can plead, and doubtless will plead, a very strong case, even while at the same time seeking a friendly settlement in terms of a radically different concession. But it is not helpful to assume, without a hearing, that H.M. the Shah and his Ministers are wholly without excuse for having themselves assumed the Palmerstonian rôle. It is always wise to strive to consider the strength as well as the weakness of the "other side's" position. Not to do so here is to lay an insupportable burden upon the Anglo-Persian Company's directors. They can be trusted to show sagacity and skill as well as zeal in seeking a remedy for the present disorder; but that remedy is neither a rabbit

under it. Her apologists claim that Persia's contentions in this respect are supported by professional advisers, in London, of unquestionable status.

(5) Not only is the concession obsolete in its structure; 16 per cent. is far too low a share in the profits of what has proved—to the universal astonishment—to be one of the premier industrial enterprises of the oil world.

(6) Attempts to arrive at an entirely new concession have proceeded intermittently since 1928, when the matter first engaged the special attention of His Highness the Persian Minister of Court—then on a visit to London. The opinion is held in Teheran that even the company has, at least tacitly, admitted that the old D'Arcy concession ought to be a dead letter. The present declaration of annulment is mainly, though not merely, an attempt to speed things up.

(7) Persia is a sovereign people. The company chooses to operate in Persia. Terms can doubtless be arranged—but by the parties alone. International law hesitates to assert its status in purely domestic affairs.

(8) The absence of any provision for annulment in the old concession itself is unimportant. Persia asserts that *de jure* there never was a valid concession.

So much for a purely *ex parte* outline of what officials of the Persian Government doubtless have in mind in support of the intimation of annulment, coupled with the invitation to negotiate. Part of that "case" would be flatly controverted by the company; and much more—the company would assert—bears no real relevance. But the company has a "short answer"—and one hard, indeed, to set aside. "Ever since, in 1909, oil first was won, the whole course of your conduct has been inconsistent with repudiation, and consistent only with acceptance. Protest upon protest you have recorded, it is true; but in principle you have from the first admitted the commercial validity of the old concession by receiving the proceeds after first conducting a painstaking search for more. Your dissatisfaction with the concession was mildly expressed in 1927—when royalty appropriated £1½ millions; and ever since the company has been prepared to conclude a quite new concession on fair and generous terms."

The argument in favour of taking the rough with the smooth is always cogent and sometimes conclusive. The question, however, is here one of degree, and when circumstances over which Persia has no sort of control reduce her main source of revenue to a tenth of its amount within a space of five years, it is natural enough that criticism should arise as to the basis on which the royalty is calculated. In the most favourable circumstances the proper basis of inter-company charges raises very complex issues and may give rise to endless dispute. For example, the price charged for bulk oil supplied to refineries conducted by subsidiaries vitally affects the profits of the producing concern. Again, the proper treatment, for royalty purposes, of profits (if any) earned by the company's fleet of eighty ocean-going vessels has never been the subject of unanimity, although on this, as on many other points of difference, a short-lived and precarious *modus vivendi* has been achieved.

The prospects of a settlement advantageous to both parties, and suggestions as to the most promising field for negotiation, must await examination in a subsequent article. For the present, what emerges is that shareholders should neither be alarmed nor impatient. A ten-years' divergence of view—now that the divergence has become acute—is not to be composed overnight. H.M. Government, in particular, will have to weigh very carefully the points in Persia's case before deciding whether, and if so in what manner, to support the company's representations. A moment's reflection will show that here is no simple case for a State to proclaim the rights of her nationals to trade in foreign lands. The British Government's own direct pecuniary interest in the company's prosperity may itself well cause initial hesitation.

Meanwhile, shareholders will do well to realise that the claims now brought to light have on various occasions been sympathetically considered by the company's directors who have gone far to meet them. Indeed, the figures alone are sufficient to show that they cannot be dismissed without some basis in equity. If the grievances of Persia

can be satisfactorily met it would strengthen rather than weaken the basis of the company's prosperity in so far as it depends on its Persian activities. In any case, this only covers a portion of the company's operations, which include the sale and distribution of oil in countries other than Persia—a mechanism which might be adaptable in large measure to other sources of supply; and in all this, the Royal Dutch-Shell and the Burmah Oil groups stand as potent allies of Anglo-Persian.

In dealing with a dispute of this kind, in which arguments have to be conducted with an Eastern Government awakened, since the war, to the same sense of new-found nationalism as permeates Turkey, a patient policy is generally wise. Negotiations, or, it may be, reference to some arbitration court, there will probably have to be. The process of final agreement may be slow; but if there is willingness in this country to appreciate that there is some substance in Persia's case, it may also be discovered that Persia's claims can be reconciled with increased prosperity for the company itself.

POVERTY IN EAST LONDON.

THE growth in the power of trade unions on the one hand, and the development of the social services on the other, have been such a spectacular feature of the last two decades that the modern reader of Charles Booth's survey of London life and labour forty years ago is likely to exclaim: "Things are very different now." Just how far they are different, on matters relating directly to poverty, he can now verify, as far as East London is concerned, by reference to the third volume in the "New Survey of London Life and Labour."

This volume, for all it contains one of the most formidable collections of tables that ever delighted the heart of a statistician, is a most absorbing document full of human interest. Interspersed with deciles and quartiles and medians and averages of all kinds, one may read what are the first economies by which a workman meets a short period of unemployment, how a sandwichman or a news-vendor lives, what are the secrets of success in the coster trade, and how solitary old age pensioners pass their spare time (and what reader's heart will not go out to the old lady whom the Survey investigator found "reading the 'Pilgrim's Progress,' but longing for Edgar Wallace"?). This section of the Survey, which covers the eastern part of the area, both north and south of the Thames, with a population of nearly 2½ millions, is based mainly on the results of two special inquiries: a house sample inquiry into over 12,000 households selected at random, and a street survey, primarily based on the conditions prevailing in families with school children in all streets in the area. One result of this latter inquiry has been an admirable series of maps in which every street is coloured according to the degree of poverty prevalent in it. It is necessary to bear in mind that the inquiry covered the period from the middle of 1928 to the middle of 1930, and therefore does not include the worst of the present depression.

In order to keep the results comparable with those of forty years ago, the same standard of poverty has been retained, though it must necessarily appear extraordinarily low on present-day standards. Charles Booth's "poverty line" was intended to represent the absolute minimum satisfaction of the primary needs for food, shelter, clothing and warmth, and he defined the word "poor" as describing those "who have a sufficiently regular though bare income, such as 18s. to 21s. for a moderate family." Allowing for price changes, that is equivalent to 88s. to 40s. now. A hypothetical budget (which shows a reasonable regard for existing habits and conventions) is given to show that such an income would just suffice to keep a man, wife and two children from want. A very careful analysis of the incomes of the families covered by the survey leads to the encouraging conclusion that the percentage of the population of the Eastern Survey Area who were below the poverty line was only one-third of the percentage found by Charles Booth in his East London

* "The New Survey of London Life and Labour," Volume III. Survey of Social Conditions: I. The Eastern Area; Volume IV. Maps. P. S. King. 17s. 6d. each.

forty years ago, though it is less satisfactory to learn that one in ten of the inhabitants of the area and one in seven of the inhabitants of Booth's East London are still in a state of acute privation. This conclusion is based on the analysis of a mine of interesting information about the composition and the income of working-class households. The investigation also yields a great deal of fruitful suggestion as to the causes of poverty, the more so as, in order to enable the effects of unemployment to be especially studied, the incomes were tabulated, not only as they were in the week of the investigation, but also as they would be if each member of the household were working full time. The average full-time earnings of adult males (excluding dock labourers) in the area are 63s. 1d.; one-tenth earn less than 43s. 6d.; one-half earn less than 61s. 10d.; and one-tenth earn 81s. 11d. or more. As unskilled work is rarely paid as much as 60s., this means that over half the men on regular time wages are to some extent skilled. The average weekly family income is about £4, but allowing a deduction of 5½ per cent. for short time, illness and unemployment (based on the results of the investigation week and a full-time week respectively), and 2½ weeks for holidays, a rough estimate of £187 per annum is arrived at as the average, but this, of course, conceals enormous variations.

These wage statistics suggest that, whereas low wages were the principal cause of poverty forty years ago, the major causes to-day must be sought elsewhere, for average unskilled wages are now about 17s. above the poverty limit. Analysis of the statistics for a full-time week shows old age or illness to be responsible for nearly half the families in poverty, but a small proportion of the individuals, as many "families" consist only of one aged person. Large families (of four or more children) are responsible for about 14 per cent. The main cause of poverty, however, is revealed by the statistics for the week of investigation, when 38 per cent. of the families and 49 per cent. of the persons who were in a state of poverty owed their condition to unemployment, short time or casual work.

This question of unemployment as a cause of poverty is dealt with by Sir H. Llewellyn Smith in the first of a number of special studies which is of exceptional interest just now in view of the problems presented by our unemployment insurance system. In it tribute is paid to the value of unemployment benefit as a means of tiding over temporary periods of unemployment (about 2 in 5 of the families whose principal wage-earner was unemployed in the week of investigation were found to be above the poverty line), but after careful consideration the assumption is held to be justified that an average working-class family whose principal wage-earner has during the previous six months lost a quarter of his working time through unemployment will be living below the poverty line. The 1927 analysis of the Ministry of Labour showed that only 47 out of 797 male unemployed persons were receiving poor law relief, and it is believed that most of these were of the unemployable class. A terrible consequence of the present depression is indicated by the fact that whereas that analysis showed that the percentage of claimants to benefit who would probably be steadily employed in a year of normal trade was 59, in 1931 the proportion had risen to 77. The rising tide of unemployment is thus submerging an increasing number of fully competent workers.

The special study of "Old Age and Poverty" must leave the taxpayer feeling that at all events part of his semi-annual sacrifice is made in a good cause, for it allows no doubt that old age pensions are the means of enabling vast numbers of aged people to maintain their independence and self-respect. As might be expected, the old age pension of 10s. a week, while it suffices for the needs of an old person living as a member of a larger household, is barely adequate for an old person living with another pensioner and is definitely insufficient for a person living alone. This is borne out by the fact that nearly half of the old age pensioners living alone were found to be receiving domiciliary relief, against one in five of those living in couples and one in nine of those living with relatives. The survey, which covers only persons living

in "private families," excludes the large number of aged poor (some 10,000 in the County of London) who live in institutions. One interesting fact which appears to emerge is a decline in the extent to which the aged are helped by subsidies from relatives and by occasional work from former employers. The former may be rather a result of the economic situation than of a declining sense of responsibility, but it is noteworthy that in many of the interviews published in an appendix the old people say that they are determined not to accept help from their children because they think it might spoil the excellent relations which at present exist between them. The general impression left by this chapter is one of great courage, resourcefulness and self-respect.

The studies of the homeless poor, the street trading community and the hop-pickers are absorbing reading, and answer many of the questions that the average member of the middle classes often asks himself as he speculates idly on the people he passes in the streets. But in case anyone should be led by the heartening results shown by some of the other chapters to close the book with a feeling of smug satisfaction at the improvement which forty years have brought in so many respects, there is a chapter on overcrowding, illustrated by an admirable separate map, which would make it impossible to look the social reformers of forty years ago unblushingly in the eye. From this chapter it appears that although the average number of persons to a room in the Survey Area as a whole declined from 1.04 in 1921 to 0.95 in 1931, there was actually an increase in the acutest overcrowding—the percentage living more than three to a room rose from 3.1 to 3.3. Over the whole area 9 per cent. of the tenements contain more than two persons to a room, but this proportion varies from 1 per cent. in Lewisham to 23 per cent. in Shoreditch. Most disquieting of all is the revelation that in many boroughs something like half of the children under 14 are living in a state of overcrowding. In short, for all the attempts at improvement in housing during the last ten years the success which has been achieved has not been sufficient to remove the widespread prevalence of disgraceful conditions, and the housing question still remains London's acutest social problem.

The dominant impression left by this volume is that during the last forty years the problem of low wages as the principal cause of distress in London has given place to the problems of unemployment and of housing. It was found from the house sample inquiry that more than half the persons who were in poverty during the week of investigation would not have been so if all wage-earning members of the family had been fully employed. This suggests that a large part of the poverty recorded was of a temporary character, so that about half the personnel of that section of London's population which is below the poverty line is constantly changing. This makes the problem in one way less hopeless, for it is chronic poverty which drags down the standard of life; but at the same time it must be remembered that the process of becoming poor is far more painful than that of being poor and never having known anything else. In so far as the substitution of unemployment for low wages as the principal cause of poverty has increased this "dynamic" element, it may well have increased the amount of human misery associated with a given volume of poverty. To weigh the results of forty years of change in psychological terms is, however, impossible. The important and unmistakable

lesson to be learnt is that, broadly speaking, wage developments have been on sound lines socially, and the social services, whatever their blemishes, have proved and are proving of incalculable value; but that the causes of poverty will never be tackled at the root until the two problems of unemployment and housing are brought nearer a solution.

A BRITISH FILM INSTITUTE?

(BY A CORRESPONDENT.)

THE public and entertaining conflict between the Bishop of Croydon and his Free Church colleagues has obscured, for many people, a problem which is little less important than Sunday opening of cinemas. The Cinematograph Fund is established; from January 1st money will accumulate in it, and will accumulate faster and faster as Sunday opening spreads. The Privy Council is required by law to attend to the disposal of these funds, and it has a very short time in which to reach a decision.

Some of the proposals made for the use of the money available can be condemned out of hand. It has been suggested, for example, that it should be paid out to teachers in the form of assistance towards installing projectors in classrooms. Were the money available sufficient to equip all such deserving cases, the proposal would still be objectionable. It is quite probably true that all schools would be improved by the installation of cinemas, but that is a matter which should be dealt with in the ordinary way in the Education Estimates. As it is, the funds will be limited in amount, and their allocation would be arbitrary, probably unfair, and certainly an unsuitable burden to lay upon the Privy Council.

Again, an application, it is believed, was at one time drafted for a Royal Charter and the constitution of a film corporation similar to the B.B.C. Were such an application actually made, it would probably be refused, and for good reasons. The money available cannot for the first year be more than about seven thousand pounds; and the B.B.C. deals in millions. There is no occasion for the administration of comparatively small sums to set up a cumbersome machinery of governors, directors-general, and so forth; further, no institution which could conceivably claim rights over the film industry similar to the control exercised in the ether by the B.B.C. is likely to be set up by any but a Socialist Government.

Yet the money, by order of Parliament, will be there and must be used. It is likely, therefore, that "the trade" and certain educational bodies interested in the cinema (now organised in the Commission on Educational and Cultural Films) will shortly produce some scheme for a voluntary Film Institute. What is done quickly need not be done ill; nevertheless there is danger in speed, and more public discussion and consideration than has occurred can be nothing but beneficial.

Two conditions may fairly be regarded as essential for the wise disposal of this money. The first is that the activities of the new Film Institute should be positive and not negative. There is already a sufficiency of censoring and restrictive bodies in the film trade. There is no genuine reason for the agitation of the moralists who are anxious to make the new Institute yet another suppressive body. The films which reach the British public are censored by the British Board of Film Censors; they are subject to the usual restrictions of the law and the police; they are not infrequently mutilated by further censorship by local authorities; and in most cases have at the very beginning been censored by Mr Will B. Hays' American censors. Morals are sufficiently protected; it is not occasional impropriety but consistent fatuity which may be charged against the films and the reason why many parents object to their children visiting picture theatres and stay away themselves is not the fear of "corruption" but the certainty of silliness in 90 per cent. of the pictures shown.

The Film Institute, while it would be well advised to be chary of producing its own films, might well subsidise the production of films which for their unusual or experimental character are not likely to be profitable to the

average studio. It could classify educational films, organise their production, and open up large areas of possible utility which are as yet untouched. It could most valuably review the whole field of ordinary films and issue a "certificate of character" to productions which deserved the attention of intelligent audiences, for their artistic as well as for their educational character. Such a "selection," like the selection of a Book Society of a novel, might often save a valuable film from neglect by giving it the necessary extra publicity at the crucial moment.

But to be able to act in such a way successfully—to behave in short as a film academy—the Institute must command general confidence and respect. There is, therefore, a strong case for holding, as a second condition, that it must not consist (as it too easily might) of representatives of "the trade" and professional educators alone. There must be others who will represent the public in its capacity as audience and critic—men who by their literary or artistic abilities are fitted to encourage so young an art. The Government may well hesitate to nominate such men itself at the present moment. Time does not allow of the cumbersome process of selecting representatives of the various "interests," even if such a procedure were desirable. As a temporary measure, why should not the film trade and the Commission on Educational and Cultural Films agree upon a list which would satisfy the public?

Notes of the Week.

Disarmament.—Signs of positive progress in the disarmament sphere this week have not been substantial. At Geneva the attention of the statesmen present has been occupied with the Manchurian issue—resulting, as our League correspondent recounts on a later page, in a decision of the Council to refer the question intact to a special meeting of the Assembly next week. Mr Norman Davis has been in Paris conferring with M. Herriot, and the next move is the opening of a five-power talk at Geneva, in which Mr MacDonald will participate, with a view to providing a basis on which Germany may be persuaded to return to the Disarmament Conference. Meanwhile, however, the question has figured in debates in both Houses of Parliament. On Tuesday, in the House of Lords, Lord Cecil intimated his general approval of British policy as outlined in the recent White Paper, but was critical on two points. We ought, he contended, to advocate the reduction of the unit size of battleships to 10,000 tons; and he was apprehensive lest the omission of any reference in the White Paper to the French "security" thesis might mean unwillingness on our part even to examine these proposals. Lord Hailsham, replying for the Government, did little to clarify our attitude towards "security" undertakings; but a debate which took place on the following night in the House of Commons on naval policy elucidated considerably the Government's attitude with regard to battleships—and in a most unfavourable sense. The First Lord of the Admiralty, winding up the debate, emphasised the great reductions which would be accomplished by 1936 in British naval strength under the London Naval Treaty. There would, he said, be no further unilateral reduction on our part; but, subject to "certain conditions" (undisclosed), the Government desired that the maximum size of battleships should be reduced to 22,000 tons. The 10,000-ton ship, he said, would not only "fail to command general acceptance"—the phrase used in the White Paper—but is "unacceptable to us"—a statement which the White Paper did not make. This nature. The 10,000-ton ship would be "incapable of fulfilling the functions of a battleship" and would not even lead to economy.

"If every nation is limited to ships . . . of 10,000 tons, all nations will have them; and if we had to meet any possible hostile concentration of these ships in any part of the world we should have to have so many 10,000-ton ships that the cost of the Navy would be greatly increased."

This really will not do. Given an agreement to limit the unit size of future construction to 10,000 tons, there would be no insuperable difficulty in including in a disarmament convention a total tonnage limitation for each country. Does the British Government really mean to imply that the cost of a 10,000-ton battleship is so trivial that every minor Power in the world would begin to acquire battle fleets like children collecting toys? It may or may not be impossible to secure universal agreement that no future warships shall be made with a tonnage exceeding 10,000; but at least it is the duty of the British Government to try to secure such an agreement. Otherwise its declarations on the principle of equal status for Germany would appear to mean that the intention is that Germany is to be free to join with the rest of the world in a mad competitive race in the building of 22,000-ton battleships.

The Franco-Soviet Pact.—On Tuesday of this week a non-aggression pact between France and the U.S.S.R. was signed in Paris after two years' fitful negotiations, which dragged on inconclusively owing to the difficulties encountered in the attempt to reach similar understandings between Soviet Russia and France's two eastern protégés, Poland and Roumania. A Polish-Soviet pact was finally signed last July; but even now the Soviet-Roumanian negotiations are held up by the stumbling-block of Bessarabia, though the Soviet Government is reported to have given France an assurance that Russia will in no circumstances attempt to solve the Bessarabian question by force. By the terms of the Franco-Soviet pact, the contracting parties agree not to resort to war or any other form of aggression against each other; and if one of the signatories is attacked by a third party, the other signatory undertakes not to render assistance to the aggressor. In the economic field France promises not to take part in any international agreement tending to prohibit the purchase of Russian goods, and in return she is promised most-favoured-nation treatment by Russia, who also undertakes to discountenance Communist propaganda in France and, more particularly, in the French colonies. From an international point of view the pact is to be welcomed. Its main importance and value seem to be that it should allay considerably the alarmist fears of an anti-Soviet combination of Western Powers which have recently coloured Russian psychology, and should help to dispel in France apprehensions of a Russo-German combination to re-draw the map of Europe.

London Passenger Transport Bill.—The House of Commons showed itself at its worst on Tuesday, when the resuscitated London Passenger Transport Bill was debated in Committee. Mr Pybus was neatly tripped up over a point of procedure and manoeuvred into voting against his own motion. Meanwhile the Conservative opponents of the Bill "ragged" him unmercifully for a couple of hours. The Government emerged, it is true, with no damage except to its tail feathers, but the general impression left by the proceedings was rather discreditable. It cannot be said that the principal amendments introduced by the Government which inherited the Bill from its predecessors are altogether an improvement. The transfer of the powers of appointing the new Transport Board from the Minister to an electoral college, the almost comic composition of which somewhat recalls the early history of the Board of Trade, is merely a piece of political pedantry, introduced to "save the face" of Conservative politicians who opposed the measure while in Opposition. We sincerely hope it will not be made a precedent. Nor is the addition of two representatives of the L.C.C. to the membership of the Board likely to increase its efficiency. What real connection, after all, is there between transport management and local government? The substitution of the Railway Rates Tribunal for the Minister as the controlling authority for rates and charges, on the other hand, has much to be said in its favour. These alterations for better or worse do not affect the real essence of the Bill, which, though it was hailed by Mr Morrison as "a triumph of Socialism," bears on

it the marks of its true origin, namely, the Ministry of Transport. It is unmistakably a "Ministry" Bill, and a very sound and sensible one. The main object of the Bill is to fuse into a single financial unit, privately owned but publicly controlled, the warring elements that compose the present chaos of London's passenger transport services, namely, the main line railways, the Underground Railways, the Metropolitan Railway, the London General Omnibus Company, the L.C.C. and other municipally and privately owned trams and the non-combine omnibus undertakings. As things stand to-day, the unregulated competition between all these undertakings is proving a very wasteful and expensive business. On the one hand, there is extensive under-employment of capital, unnecessary duplication and growing congestion both by road and rail; on the other, present financial conditions prevent the raising of the fresh capital required to develop much-needed services in the growing outer suburbs, especially to the east and north of London, and to improve existing facilities. The merging of all these multifarious interests in a statutory monopoly, which is the only possible solution of the problem, for the first time renders possible a rational planning of London Passenger Transport. With the financial estimates accompanying the Bill we deal critically in an Investment Note on p. 1043; but, on general grounds, the proper co-ordination which the Bill for the first time makes feasible should certainly benefit the public.

Argentine Finances.—In view of the magnitude of British investments in the Argentine, considerable interest attaches to Sir Otto Niemeyer's acceptance of an invitation from the Argentine Government to proceed to Buenos Aires and study "the banking organisation, the monetary regime and stabilisation, exchange problems and the law of banking control." It may be presumed that Sir Otto's advice is desired primarily on the projects formulated by the late Administration for the technical reform of the banking system, but his study and recommendations can hardly leave out of account the more general questions of Argentina's balance of payments and the situation of her national finances. In the former connection a correspondent writes:—

"Indications from the Argentine are encouraging, provided that no serious damage to the crops occurs in the short time remaining before the seasonal outward shipping movement begins. Reliable estimates place at 200,000,000 gold pesos the merchandise trade surplus which must be established by Argentina in order to balance the international accounts, including all visible and invisible items. The annual amount which, it is estimated, is required every year for the full service of the long-term external debt of the Republic is £12,000,000 sterling; thus, reckoning 200,000,000 gold pesos as equal to £40,000,000 sterling, there would remain a balance of £28,000,000 for the service of municipal and other debts, as well as general commercial and other obligations. The latest official figures of Argentine foreign trade, covering the first nine months of 1932, show that by the end of September there was an export surplus of 180,249,000 gold pesos, so that the desideratum for 1932 of 200,000,000 gold pesos may not only be reached but may even be exceeded."

Argentina's policy of refraining from any schemes of artificial restriction of shipments of her staple exports has lately stood her in good stead. At the same time it has

to be borne in mind that the greatly improved balance of merchandise trade has been due predominantly to a drastic reduction of imports, not only by the official policy of discouraging purchases from abroad, but also by stringent exchange restrictions. The security of Argentina's future balance of payments depends both on her ability to forego imports and on the maintenance of the present volume of exports without a further fall in prices. With regard to the national finances, the returns for the first ten months of 1932 show that in paper pesos expenditure has risen from 681 millions to 905 millions. Revenue has mounted from 673 to 923 millions, so that a small surplus is shown; but out of the total revenue no less than 304 millions have been obtained by "credit operations," including 255 millions raised by the Patriotic Loan. Our correspondent at Buenos Aires has emphasised in recent letters the growing determination among the public to see Argentina through her difficulties on sound lines; but it would be idle to pretend that her problems are not considerable.

The Seneschal of Ireland.—The humorous episode of the appointment of Mr Donal Buckley to the office of Governor-General of the Irish Free State must be accounted as "one up" to Mr de Valera. Lacking a formal mandate to tear up the Treaty and declare a republic, the President was constitutionally bound to recommend the Crown to nominate a successor to Mr McNeil, but was evidently in no mind to instal a new personality at Vice-regal Lodge who could cut a dash as ceremonial head of the State. Hence, presumably, the choice of Mr Buckley, a lately retired shopkeeper in a little country town whose modest record has a patriotic chapter in that he shouldered arms in Easter Week, 1916, but who sat in the Dail for a number of years without apparently ever opening his mouth. Mr Buckley, it is reported, will occupy a villa on the outskirts of Dublin; will waive the greater part of his official salary; and desires to be known as the Seneschal of the Irish Free State—thus satisfying at one stroke both the Irish taste for novelty and the Exchequer's need for economy. Let us at least be grateful that even this sorry Anglo-Irish quarrel has its lighter moments.

Railway Flat Rates.—The judgment given by the Railway Rates Tribunal last week disallowing a "flat" rate granted by the G.W.R. to a subsidiary of Unilever, Ltd., for the conveyance of animal foodstuffs within a prescribed area, is something of a test case which may be expected to have important consequences, as a number of similar arrangements are in operation. The Tribunal disallowed the rate on the ground that "flat" rates are inconsistent with the provisions of the Railways Act of 1921, and held that railway companies are only entitled to charge "per consignment by distance." Moreover, the president, Sir Walter Clode, stated that the rate granted to Messrs Robinson had "seriously affected the trade of the district, and by making undercutting by them possible put the business of other trades in peril." The question thus raised is of first-rate importance not only to the railway companies but also to industry in general. The "flat" or blanket rate, which is common in the U.S.A. for example, offers a distinct convenience to traders in that it eliminates a great deal of complicated accounting, and the railway companies are afraid that if it is disallowed they will lose a considerable volume of traffic to the road hauliers, who are bound by no such restriction in the matter of charges. At the same time, it is clear that the removal of the present restriction on the railway companies might lead to serious abuse, and it is easy enough to see how the "flat" rate principle might become an instrument of undue preferences. If the railway companies decide to appeal from the judgment of the Rates Tribunal and lose their case in the higher court, as appears probable, an awkward situation will arise, and the Government will be faced with the difficult alternative of either amending the Act of 1921 or else, if they are going to hold the balance fairly between road and

rail, of imposing a similar restriction on the road hauliers, which may prove quite impracticable from the administrative point of view. In any case, the amendment of the Act of 1921 will need very careful consideration in view of the desirability of imposing adequate safeguards against undue preference. It should, however, be possible to devise legislation which will safeguard the interests of other traders without depriving the firms who are in a position to benefit by them of the advantages of the "flat" rate. The case is only one more instance of the urgent need for dealing with the road-rail problem.

The Corby Steel Plans.—An interesting development in the British iron and steel industry is announced this week. Messrs. Stewarts and Lloyds, Limited, who produce about four-fifths of the steel tubes made in this country, have completed arrangements to erect at Corby, near the large undeveloped iron ore beds of Northamptonshire, steel works which are to cover every operation from the extraction of ore to the dispatch of finished tubes. The works are to operate on the basic Bessemer process, and the designed output is 300,000 tons of steel per annum. Finance is to be provided through the Bankers' Industrial Development Company, and the total costs of the scheme are estimated at £3,300,000. It is expected that production can be started in two years' time. The venture should go far to show the extent to which the British steel industry can hope to reap advantage from a reversion to the basic Bessemer process, in whose operation our Continental competitors have achieved high efficiency of practice and low costs of production. For many purposes open-hearth steel is undoubtedly a more satisfactory and reliable article, but if Messrs. Stewarts and Lloyds can produce by the basic Bessemer process a steel adequate in quality for tubes, and if the production of the new works can be absorbed in the Midlands without incurring the burden of transport costs to other areas, the scheme holds promising possibilities.

The Social Services.—The useful annual return* of total expenditure under certain Acts of Parliament in respect of "Public Social Services" has now been published for the financial year 1930-31. We summarise below comparable figures for recent years for England, Scotland and Wales:—

	"SOCIAL SERVICES" EXPENDITURE. (In Millions.)				
	1924.	1928.	1929.	1930.	1931.
Unemployment insurance...	48.0	42.8	53.8	53.3	101.6
Health insurance	30.9	37.6	39.9	38.6	38.6
War pensions	69.6	56.9	54.0	51.4	49.2
Other pensions	24.0	45.6*	58.7*	62.2*	72.1*
Education	86.6	94.4	97.0	100.5	104.2
Working-class housing	16.6	26.7	31.6	35.6	37.5
Poor relief	41.9	45.5	43.9	45.0	42.5
Miscellaneous†	14.5	16.5	16.9	17.4	17.6
Total	332.1	366.0	395.8	404.0	463.3
Total, less War pensions	262.5	309.1	341.8	352.6	414.1

* Includes widows', orphans' and old age contributory pensions under the Act of 1926.
† Including expenditure on hospitals, maternity and lunacy.

Apart from the huge increase in unemployment insurance expenditure—a development too well known to call for fresh comment—perhaps the most disquieting feature which emerges from the foregoing table is the steady increase in expenditure on "other" pensions, which now cost three times as much as they did in 1924. The receipts financing our "social" expenditure fall under the three heads indicated below:—

	1923-24.	1929-30.	1930-31.
Local rates	£ Mn.	£ Mn.	£ Mn.
Parliamentary votes and grants	78.8	93.0	98.2
† "Other" receipts	175.3	184.0	198.0
	86.7	124.3	156.5

† Fees, insurance contributions, rents, &c.
The increase of approximately £70 millions in "other" receipts between 1924 and 1931 is largely accounted for

* Cmd. 4197 (London). H.M. Stationery Office, 4d.

by contributory pensions and rents and by the inclusion in the 1931 figure of over £36 millions on account of Government borrowing for the Unemployment Fund. The aggregate expenditure of £463 millions in 1931 compares with a pre-war figure of £63 millions expended in 1910-11.

Sterling and International Prices.—The past fortnight has seen a catastrophic fall in the level of international gold prices *pari passu* with the depreciation of sterling. The latest figures of our indices as compared with those of foreign countries are shown below:—

SEPTEMBER 18TH, 1931 = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistisches Reichsamt, Germany.
	British Complete Index (sterling).	British Primary Products (sterling).	International Gold Prices.				
1932.							
Jan. 27th	108.3	115.7	93.8	93.5	93.6	95.8	91.6
Feb. 24th	110.9	120.9	89.6	92.4	95.1	97.2	92.0
Mar. 22nd	108.1	111.9	86.5	91.5	96.3	97.0	91.4
Apr. 20th	103.8	105.4	83.6	89.6	97.0	95.3	90.3
June 1st	109.2	101.0	79.8	86.4	91.5	89.5	88.1
June 29th	97.4	99.3	80.5	87.3	94.0	91.7	88.5
July 27th	99.5	103.5	84.1	88.3	91.3	88.5	88.1
Aug. 24th	102.5	111.8	89.3	89.8	89.0	89.3	87.1
Sept. 7th	107.1	120.2	94.7	91.7	89.0	91.5	87.9
Sept. 21st	106.0	117.4	89.6	90.5	89.7	91.2	87.1
Oct. 5th	104.6	115.3	85.7	88.6	88.8	92.7	86.8
Oct. 19th	103.1	112.3	84.4	87.3	88.4	92.8	86.4
Nov. 2nd	102.6	110.9	79.4	87.3	88.4	92.3	86.5
Nov. 15th	103.8	113.0	82.9	87.6	88.4	92.3	86.5
Nov. 30th	103.1	112.3	77.7	87.7*	...	92.1*	86.2*

* These figures relate to November 22nd.

It will be seen that whereas the complete *Economist* index and the index of the sterling prices of primary products have each declined by approximately three-fifths of one per cent., our international gold prices index has fallen by nearly 7 per cent. Practically every commodity participated in this abrupt recession. Sectional figures for the complete *Economist* index are given below:—

	"ECONOMIST" INDEX. (1927 = 100.)		
	Sept. 18, 1931.	Nov. 16, 1932.	Nov. 30, 1932.
Cereals and meat	64.5	64.7	63.8
Other foods	62.2	62.9	62.0
Textiles	43.7	50.2	49.8
Minerals	67.4	76.0	75.4
Miscellaneous	65.8	62.3	62.5
Complete index	60.4	62.7	62.3
1913 = 100	83.1	86.3	85.7
1924 = 100	52.2	54.2	53.8

Fluctuations in sterling prices were irregular and for the most part of comparatively small dimensions.

Railway Wages.—On Tuesday of this week the National Wages Board for the railways began its hearing of the claim of the companies for a reduction of wages and salaries. In presenting the case for the proposed all-round reduction of 10 per cent.—in substitution for the 2½ per cent. reduction, with a further 2½ per cent. on earnings above 40s., which was agreed in 1931—Sir Ralph Wedgwood, the chief general manager of the L.N.E.R., emphasised the progressive deterioration in the position of the railways. The March, 1931, reduction had saved £3,660,000 a year, and the present application was for a further reduction of £4,600,000. Notwithstanding economies and improved methods of working, the railways' net revenue had fallen from £37.7 millions in 1930 to £33.4 millions in 1931, and this year would probably be £26 millions. The railways were suffering the adverse effects of our tariff policy, which tended to localise production and minimise carriage; and a realistic view would anticipate revenue substantially lower in 1933 than in 1932. Even in the present year the net revenue earned would represent only 2½ per cent. on all capital, as compared with 4.41 per cent. in 1913 and 4.17 per cent. in 1929. In 1913, after meeting costs of material and miscellaneous charges, 51 per cent. of the companies' receipts went to wages and 49 per cent. to capital. In 1929 the proportions

were 71 per cent. to wages and 29 per cent. to capital, and in 1931 the share of capital had amounted to only 25 per cent., as compared with 75 per cent. allocated to wages. In 1932 the average remuneration of workers on the railways was 61s. 7d., an increase of 117 per cent. over 1914. The present level of wages was too high to enable the companies to compete effectively with road transport or meet the needs of industry. The burden of railway rates, at approximately 60 per cent. above the pre-war level, was acutely felt by the depressed trades. On the other hand, railways could not do without more capital, and such capital could now be raised only by the issue of prior-charge stocks, which must in time make the financial structure top-heavy. Development schemes and improvements were having to be postponed, and there was a creeping paralysis on the railways due to their excess burden of costs and their consequent lack of credit with the investor. Sir Ralph Wedgwood was followed on Wednesday by Mr W. V. Wood, vice-president of the L.M.S., who was pressed—unsuccessfully—in cross-examination by the union representatives to agree that the railway companies' capital was "watered," disproportionate to earning capacity, and in need of drastic writing down. The cross-examination may probably be regarded as an indication of a main plank in the railwaymen's case. If this be so, the unions are in danger of basing their defence on a very fallacious argument. Capital reconstruction is no substitute for the restoration of lost earning power.

The Copper Duty.—A correspondent writes:—There have of late been persistent rumours that the duty on foreign electrolytic copper would become effective on December 1st, and this, coupled with the fact that American and Chilean producers had thought it worth while to ship several thousands of tons to this country, has had the effect of diverting forward business in this grade entirely to Empire sources of origin. As is well known, consumers have been opposing the Empire preference on the grounds of insufficient quantity and inferior quality, but it was understood that, as far as electrolytic copper was concerned, Canada was building up stocks in this country with a view to satisfying the Government that imposition of the duty would be plain sailing. Apparently progress in this direction has not been very rapid, for it became known this week that the date of application for the tax on "electro" had been deferred, rather indefinitely. The Canadian producers have their own peculiar difficulties to face; but it does not seem unreasonable to suppose that, had the duty on foreign electrolytic been confirmed at this juncture, negotiations at the New York conference would have become very much more difficult. As it is, the Canadians have a bargaining counter, which, no doubt, they will use, particularly as American producers are credited with demanding a share of the export market while putting up the bar against imports. Consumers are naturally relieved that a further period of free entry has been granted, but, failing some definite statement by the Government, the position can hardly be called satisfactory. Metal Exchange interests are also pleased that copper will remain on the free list, for taxation of imports cuts right across present methods of dealing in futures.

Indian Census of Population.—A summary of the results of the Census of the Indian Empire,* taken in February, 1931, has now been published. The total population, at 352,837,778, shows an increase of 33,895,298, or 10.6 per cent., since 1921. The number of inhabitants of the British Provinces rose from 246,856,191 to 271,526,933, and the population of the Indian States increased from 72,086,289 to 81,310,845. The sex composition of the population in 1931 was in the proportion of 940 females to 1,000 males. The substantial increase in the total population is explained by the absence during the past decade of pestilence, plague and famine and by the

* East India (Census, 1931), Abstract of Tables. Cmd. 4194. 9d. net.

opening-up of new territories. The urban population in 1931 was 11.0 per cent. of the total, as compared with 10.1 per cent. in 1921. The following table shows the occupational distribution of the working population in India in 1931:—

	Persons.	Males.	Females.
Pasture and agriculture...	102,454,147	73,763,185	28,690,962
Fishing and hunting.....	1,308,292	1,145,817	162,475
Mines, quarries, salt, &c.	346,000	259,583	86,417
Industry	15,361,933	10,807,507	4,554,426
Transport.....	2,341,406	2,099,198	242,208
Trade	7,913,797	5,785,816	2,127,981
Army and Navy.....	318,036	316,300	1,736
Air Force.....	1,863	1,838	25
Police.....	521,675	516,415	5,260
Public administration ..	995,284	962,741	32,543
Professions and arts	2,310,141	1,986,260	323,881
Domestic service	10,858,254	2,094,487	8,763,767
All others.....	9,659,784	5,823,347	3,836,437
Total.....	154,390,612	105,562,494	48,828,118

The proportion of the working population engaged in agriculture was 66.4 per cent., and 9.95 per cent. derived their livelihood from industrial occupations. The proportion of the population aged five and over who could read and write in 1931 was 156 males per 1,000 and 29 females per 1,000. The corresponding proportions (of all ages) in 1921 was 122 males per 1,000 and 18 females per 1,000.

Poland's War Debt.—Our Warsaw correspondent writes:—Taking advantage of a provision in the funding agreement made with the United States in 1924, when the global amount of the indebtedness was fixed at 178 million dollars, the Polish Government on September 15th last arranged that the sinking fund payment of 1.3 million dollars due on December 15th would be deferred for a period not exceeding two years. The agreement, however, does not provide for any suspension of interest payments, and the Polish Government accordingly requested the postponement of the approximately three million dollars due on December 15th pending a reconsideration of the debt problem. The Government of the United States replied in terms similar to those used in response to the British and French Notes, and the Polish Government announce that a second Note is now being prepared for despatch to Washington giving fuller explanation of the desirability for suspending payment of the three million dollars due on December 15th. While under normal conditions the payment of three million dollars would not be a serious matter, it is not believed that the Exchequer has this amount available at the present time—no provision having been made for it in the present year's Budget. The Budget, moreover, is already seriously in deficit, and, if payment has to be made on December 15th, the Government will probably have to borrow the money from somewhere. Poland's final decision in the matter will no doubt depend entirely on what action is taken by Great Britain and France.

Australian Budgets.—The Budgets of the Commonwealth and six States show estimated deficits for 1932-33 aggregating £10,068,812, against a net total of £19,490,124 for 1931-32, writes our Melbourne correspondent. A comparison of the estimated revenue and expenditure for 1932-33 with the deficits for 1931-32 is as follows:—

	Revenue 1932-33.	Expenditure 1932-33.	Deficit 1932-33.	Deficit 1931-32.
	£	£	£	£
New South Wales ...	45,185,082	49,535,082	4,350,000	14,227,844
Victoria	23,414,974	24,266,133	851,159	1,608,322
Queensland	13,299,535	14,790,403	1,490,868	2,075,180
South Australia.....	10,056,807	11,244,300	1,187,493	1,063,360
Western Australia...	8,417,577	9,181,243	763,666	1,557,895
Tasmania	2,434,090	2,558,094	124,004	271,614
Total.....	102,808,065	111,575,255	8,767,190	20,804,215
Commonwealth	91,486,000	92,787,622	1,301,622	1,314,091*

* Surplus.

In this table the Commonwealth figures are shown on a gross basis including the total interest on both Common-

wealth and State debts, for which it is responsible, in accordance with the Financial Agreement. The interest on State debts amounts to £33,084,912 for 1932-33, towards which the States provide £25,500,000, the difference being contributed by the Commonwealth itself. Between this and other items in which the Commonwealth and State transactions are intermingled there is a considerable duplication in the various Budget figures. The total expenditure of £111,575,255 shown for the six States includes the interest in question. The figures also include the usual sinking funds. The estimated total revenue of the States, £102,808,065, shows an increase of £2,388,071 as compared with 1931-32, but the estimated total expenditure, £111,575,255, shows a decrease of £9,648,954, the decrease in New South Wales expenditure alone being £7,109,552. Taxation, direct and indirect, collected by the Commonwealth and the States in 1931-32 amounted to £75,131,750, to which is to be added the unemployment relief taxation in New South Wales (shown as a separate item), £5,799,519. The total of nearly £81 millions compares with £92 millions for 1929-30, though, owing to various methods of stating certain items, the comparison is not exact. A great falling off is shown by Customs revenue, which a few years ago exceeded £30 millions but reached only £18,565,630 for 1931-32 and is estimated at £17,800,000 for 1932-33. Income tax receipts have shrunk as the effect of the decline in taxable incomes, though efforts have been made to extend the scope of the tax amongst the smaller taxpayers. On the other hand, the Commonwealth sales tax introduced two years ago has produced £8,425,067 for 1931-32 and is estimated at £8,250,000 for 1932-33. The deficits for 1931-32, in addition to public works expenditure usually provided for by loans, have been financed by additions to the floating debt.

Australian Banks.—Our Melbourne correspondent writes:—The quarterly average returns to September 30th of the trading banks in the Commonwealth show deposits amounting to £268,026,117, or an increase of £12,253,351 as compared with a year ago; advances, £231,423,436, or a decrease of £9,279,271; and Government and municipal securities, £48,081,968, or an increase of £20,195,971. These figures apply to business within the Commonwealth only, excluding London. The decrease in advances is the result of contraction of trade and lack of fresh enterprise, while the increase in securities is due to the assistance given by the banks to the Governments. In addition to the increase of £20 millions under the latter heading in Australia, the banks in New Zealand have similarly assisted the New Zealand Government to the extent of about £5 millions, as shown by the quarterly banking returns.

German Wages Deflation.—The average fall in wages in Germany from the "peak" post-war level reached in 1929 to the middle of this year is estimated at 25 per cent. by Mr J. W. F. Thelwall, Commercial Councillor at the British Embassy in Berlin, in his recently published report on Economic Conditions in Germany. The decline to the end of 1931 was about 14 per cent., and the effect of the Emergency Decree which came into operation on January 1st this year (as noted in the *Economist* in a recent survey of European wage movements) was approximately 11 per cent. Statistics published by other authorities show that the total reductions, as affecting various groups of workers, ranged from 15 to over 30 per cent., the cuts having been most drastic in the building trades. The results of an official inquiry into wages in the boot and shoe industry (published in the November issue of the *Ministry of Labour Gazette*) show that from March, 1929, to March, 1932, gross weekly earnings declined by 23.4 per cent.—this being attributable partly to wage reductions and partly to a falling off in the average weekly rate worked. The saving in labour costs, in relation to the competitive position of German industry, is probably in the region of 20 per cent., if the higher cuts of the building and other home market workers is allowed for. Mr Thelwall notes that the actual loss of income by the

German workers has been greater than the above figures indicate, owing to a wide extension of short-time working and to increased deductions for income tax and social service contributions. This point has been stressed by the trade unions, which suggest that the average loss of income is 28 per cent., as compared with a fall in the cost of living in the two years of about 21 per cent. The further decline in wage income resulting from the operation of the Presidential Orders in September, which imposed a further complicated scheme of reductions as a set-off against the employment of more workers on a forty-hour week basis, cannot yet be estimated. While the unions generally acquiesced in lower earnings equivalent to the reduction in weekly hours, workers in many trades struck in resistance to the additional cuts proposed. The problem of enforcing these Orders is for the time being overshadowed by the political difficulties. The ultimate effect of the wage deflation already accomplished in Germany, however, is a matter of serious concern to other industrial countries.

The British Overseas Bank.—The accounts of this institution show clearly how difficult a year it has been for international banking. Net profits, which two years ago were £140,000, after rising to £166,000 last year, have now fallen to £112,000, while heavy appropriations for contingencies are still necessary. Last year the board allotted £100,000 from net profits to contingencies, and to do so had to reduce the dividend on the "B" shares from 6 to 2 per cent. This year a further £100,000 was required, and as net profits were insufficient both to provide this amount and also to maintain the "A" shares dividend at 6 per cent., the directors had to make a difficult decision. In the end they decided to pay the "A" shares dividend, to transfer £50,000 from net profits to contingencies, and to transfer a further £50,000 from the bank's Reserve Fund to contingencies. As the Reserve Fund is now left at only £175,000, they are presumably hoping for an early improvement. The balance sheet is summarised below:—

	1930.	1931.	1932.
	£'000.	£'000.	£'000.
Liabilities:			
Capital.....	2,000	2,000	2,000
Reserve fund.....	225	225	175
Deposits.....	4,549	3,047	2,532
Acceptances.....	3,927	4,277	3,449
Assets:			
Cash	294	197	252
Call money	1,820	1,267	596
Balances abroad	215	201	193
Discounts.....	1,071	205	647
Government securities	354	470	450
Other investments.....	589	622	563
Advances	2,149	1,981	1,594
Net profits	140	166	112
To contingencies	Nil	100	50
Dividend:			
"A" shares	6%	6%	6%
"B" shares.....	6%	2%	Nil

Clearly the bank's resources and earning power have suffered from the general contraction and dislocation of international trade. In interpreting such items as discounts, acceptances and advances, due allowance must be made for such immobilisation of the bank's assets as has taken place through exchange restrictions and standstill agreements abroad. At the same time, the ratio of cash and call money to deposits is 33.6 per cent., so that the bank's position is very liquid.

Royal Bank of Scotland.—The note struck by the Duke of Buccleuch at this week's annual meeting of the Royal Bank of Scotland was one of very restrained optimism. On the affairs of the bank he had little fresh to add to what is already known of the general banking position. He alluded to the marked change in the position of the bank's investments, due to the conversion operation, which had altered the whole yield basis of British Government securities. He called attention to the unusually liquid position of the bank, as shown by the increase in its holding of Treasury bills, but admitted that the increase

in both the bank's investments and Treasury bills was due to the present weight of unemployed money. He also said that in view of the bank's increased resources it was in a position to make advances on a much increased scale, and the board was looking forward to the time when, owing to recovery in conditions, fresh proposals for accommodation on legitimate banking lines would be submitted in substantial volume. It will be noticed that he did not enter into the vexed question of the rates charged on bank advances, but in discussing the fall of £6,000 in the bank's profits he mentioned that the year had embraced a period of extremely high rates in the earlier months, and quite a low level in the latter period, which still continued. The bank's published reserves, he pointed out, were slightly in excess of the paid-up capital, and there was no call to add to them. For this reason, and in view of the difficult times when it was impossible to avoid losses, the board felt it better to make their usual appropriation from current profits, not to published reserves, but to the contingency funds. As regards the general state of Scottish trade, there was some evidence of improvement and of a return of confidence, but there was as yet no general recovery. This, he urged, was dependent upon a settlement of the major world problems.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal for the month of October amounted to 974,965 ounces of fine gold as compared with a record output of 961,501 ounces in September. The output during October, 1931, was 945,113 ounces of fine gold. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	796,270	839,782	843,857	876,452	882,801	914,576	936,784

November	840,276	848,059	872,484	861,593	884,753	900,510	...
December	836,157	851,225	859,761	851,134	908,492	923,353	...
Total..	9,962,852	10,130,630	10,358,596	10,414,056	10,719,760	10,874,145	...

The following table shows the number of natives employed at the mines during the past nine months:—

	Feb., 1932.	March, 1932.	April, 1932.	May, 1932.	June, 1932.	July, 1932.	Aug., 1932.	Sept., 1932.	Oct., 1932.
Gold mines	216,171	214,024	214,334	215,926	217,077	217,525	217,658	216,398	216,298
Coal mines	12,177	12,009	11,943	11,972	11,833	12,056	11,727	11,642	11,353
Diamond mines	1,363	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil
Total ..	229,711	226,033	226,277	227,898	228,910	229,581	229,385	228,040	227,651

There was a slight decline in the number of natives employed at the gold and coal mines during October.

Overseas Correspondence.

LEAGUE OF NATIONS.

Manchuria — Danzig.

(FROM OUR CORRESPONDENT.)

GENEVA, November 29.

JAPAN has lost all along the line during the public discussions of the Council, which have now come to an end. The debate between Mr Matsuoka and Dr. Wellington Koo has been a slow, relentless and dramatic emphasis on the weakness of Japan's moral position. For Dr. Wellington Koo it has been an easy diplomatic triumph. There has been nothing like it in the history of the League, or, for that matter, in the general record of diplomatic history

as a whole—this steady stripping bare in public session after public session of a great Power's sophistries in attempting to justify policy which runs counter to the world's conscience. The naïveté of the Japanese spokesman before public opinion and the Council of the League has been almost incredible. There can be no doubt about its effect on the minds of the Council, whatever view individual Governments may take of their responsibilities in the matter as Members of the League and signatories of relevant international engagements. Dr. Wellington Koo well observed that the purpose of these engagements was not the mere collection of autographs on scraps of paper.

The time, however, is passed for arguing upon the rights of the case. The only question now worth discussion is what action the League is to take. Opinion has definitely hardened against Japan, and nearly every step she has taken has further exposed the weakness of her case. She objected to the Council's request to the Lytton Commission to say whether it wished to make any alterations in its report; this objection was over-ruled, and the Commission's short, significant reply that it desired to change nothing was an appropriate comment on the duel in the Council. Japan raised objections to the Council's intention to refer the Lytton Report and the Minutes of the Council to the Special Assembly; this again was over-ruled, and, while Japan did not vote against the decision that was ultimately taken, she raised again her reservation against the problem being discussed by the Assembly under Article 15. This reservation were merely noted. The Assembly will certainly discuss the problem under Article 15, for that is the Article upon which the existence of the Special Assembly is based. The Japanese perhaps showed an intelligent anticipation of what the general view of the Assembly would be by insisting that its duty was only to attempt a settlement by conciliation and not to impose a solution. It is obvious that no settlement can be reached by conciliation unless the Japanese entirely change their attitude, and the duty of the Assembly will therefore be, not, perhaps, in the first place to attempt to impose a settlement in the strict sense of the term, but to say what form it considers the settlement ought to take. It will, however, have several matters to consider before it comes to that final point, and it is felt that the least it can do to begin with will be to approve in a general way the Report of the Lytton Commission and in some form or other to express itself upon the Manchukuo regime.

The Council showed its disbelief in any possibility of successful mediation by entering into no discussion of the problem at all. Mr de Valera, as President, explained that in the circumstances members must make known their views in the Assembly, which is summoned for next Tuesday. It is expected that there will be some outspoken declarations and that, after the general debate is over, the Committee of Nineteen, or some other Committee, will be asked to draw up a resolution in the light of what has been said. Critical weeks are ahead, but at no time during the last twelve months has sober opinion been so critical of the Japanese attitude. Japan has lost ground through the searching test of public discussion, and by the effect of the Lytton Report, which she has completely failed to shake. Mr de Valera put his finger on the spot when he intimated the advantage which would have accrued if there had not been such delay in setting up the Commission.

An interesting development has taken place over Polish-Danzig controversies. Just as the Council was about to set up a jurists' committee over the question of the introduction of the zloty as the sole means of payment on the railways in the territory of the free city, they were informed by the Acting High Commissioner that an agreement had been reached between representatives of the two parties on this and several other outstanding questions. The Polish Government has undertaken not to put its decree of October 25th into force. The Council congratulated the two parties on their good sense, and expressed their appreciation of the efforts of the High Commissioner.

UNITED STATES.

Politics — Finance — Debt — Prices — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 18.

THE political factor continues uppermost in the country. Congress meets on December 5th, with a membership little changed from that of the body which laboured so long over tax legislation, relief appropriations, the soldiers' bonus, etc., and which reluctantly consented to the year's moratorium on foreign debts. Congressmen elected at the November elections will not take office until March, and whether they will then meet in special session depends on the accomplishment of the present Congress; otherwise there will be a legislative holiday from March until next December.

It is becoming increasingly evident that something will have to be done toward wiping out or at least keeping down the Treasury deficit for the current fiscal year. It is true that the tax measure which went into effect last summer has not had a fair chance of showing what revenue it can produce. Nuisance taxes were slow in taking effect because they were anticipated by merchants and consumers, and the higher income tax rates will first appear in payments to be made next March. Moreover, it is still possible to retrench in administrative expenditure. But, in spite of an improvement in tax collections in the last half of the fiscal year and some further economies, the fact remains that the Treasury deficit, including that of the extraordinary Budget covering Reconstruction Finance Corporation disbursements, amounts to around \$1,000 millions.

High hopes are entertained in many quarters of a modification of the Prohibition Enforcement Act, to permit the manufacture and sale of wine and beer, pending a possible repeal of the prohibition amendment to the Constitution. Modification, however, is by no means certain. To begin with, the necessary majority may be difficult to obtain in Congress, and if there were a Presidential veto it would be even more difficult to override it. Moreover, the Supreme Court might rule unconstitutional an act of Congress which in effect nullified the Eighteenth Amendment. Finally, even if beer and wine were legalised by Congress, each State would continue to have power to permit or forbid sale within its borders, and many unquestionably would forbid it. However, it is likely that legalised beer, if permitted, would produce \$300,000,000 or \$400,000,000 additional yearly revenue, which is not to be overlooked in these times. Meanwhile, the proponents of a general sales tax are preparing an active campaign for early passage of such a measure.

Continued weakness in farm produce prices is increasing the agitation for some form of farm relief. Plans take two forms. One is a scheme of bounties. Another is to re-finance farm mortgages with Government money. Some \$9,000 millions are outstanding, and on land which has a present market value far below that sum. To assume this burden appears out of the question, yet the heavy press of foreclosures is rapidly turning farm owners into tenants or driving them off the land. The farm problem will most certainly mean some new legislation at the next session of Congress, and doubtless it will take a form which will increase the burden of the taxpayer. The soldiers' bonus, on the other hand, no longer appears to be a live issue.

The deficit overhanging the Treasury helps to explain the opposition among Congressmen to the British and French proposals for an extension of the debt moratorium and a reopening of the settlements. Allowance must be made for the fact that some Congressmen are talking for home consumption, and the sentiment in favour of a fresh settlement or at least extension of time for resumption of payments is stronger than appears on the surface. When clearer for taking a commonsense view of the position, which obviously is to consider the course likely to result in the largest collection on the debts and the greatest benefit to trade. Wall Street itself strongly favours the granting of time, and probably a reduction in amounts, as a

means of promoting trade, as it is realised that the debts have become a symbol for the trade depression, however much or little they had to do with bringing it on. The Wall Street view, and that of the majority of public men, was well summed up this week by Mr Thomas W. Lamont, who termed the war debts "perfectly just, but impossible," and urged this country to lead the way toward economic peace.

There have been some banking troubles chiefly around Pittsburgh, Pennsylvania, resulting in three failures and a smaller reduction in currency in circulation than was expected. The R.F.C. is in control of the situation and no duplication of last autumn's troubles is at all likely. Reconstruction Finance Corporation loans in October were down moderately, and repayments by banks amounted to \$27 millions. Total loans authorised to the end of October were \$1,843 millions, and money actually taken out was \$1,397 millions. A total of \$135 millions has been authorised for projects having for their primary purpose the creation of work, but none of this actually has been spent.

Industrially the picture is changing little. Seasonal recession continues. Steel orders are scanty except from the automobile industry, which produced in October only 50,000 units. The hoped-for increase in orders from all directions has not followed the election. Railroad traffic also is now undergoing a seasonal decline, and the same is true of the electrical industry. Cotton consumption in October was surprisingly good, being higher than that for October of last year. Exports also were higher than a year ago. Building contracts awarded in the first half of November were almost as large as for the same period of the previous month, but the October total was down about 20 per cent. from last year. For the first ten months, construction contracts amounted to \$1,164 millions, compared with \$2,804 millions, according to calculations of the F. W. Dodge Corporation. Building permits in principal cities in October rose 2.3 per cent. on the month, but were less than half a year ago.

FRANCE.

Debt Question — Budget — New Taxes.

(FROM OUR CORRESPONDENT.)

PARIS, November 30.

THE predominant question of the week, as might be expected, has been that of the American debt, which has largely diverted public attention from the much more serious problem of the Budget. As to the debts, French opinion is obviously opposed to any resumption of payments to Washington, and the Chamber has already demonstrated that, whatever decision Great Britain may take in regard to the payment due on December 15th, the French Cabinet will have some difficulty in securing ratification of any resumption of payments by France. Opinion is apparently crystallising itself in the slogan "*Nous ne payons pas*," and official voices continue mute, although every member of the Cabinet is regarded as bound by the doctrine on which its acceptance of the Lausanne decision was based. The payment of \$19,000,000 actually due from this country in a fortnight is, of course, comparatively trifling. From the French point of view the vital factor is that, if American debt payments are to be resumed, the absence of countervailing income from German reparation obligations must necessarily throw the coming Budget into worse confusion than ever, apart from the catastrophic condition into which currencies of all kinds must be placed if the Americans persist in insisting on even substantially reduced annuities.

The budgetary situation, it is now generally admitted, is steadily becoming more serious, and the widespread fear that the deplorable conditions of 1924-25 may be renewed is now apparently affecting the Rente market. The franc having been placed out of danger, the movements of Rentes now furnish the most sensitive barometer of national credit, and particularly the huge mass of the new 4½ per cent. conversion issue. These bonds were

introduced to the market on November 12th at 97½, but closed last Thursday at 93, although there has been a slight improvement to 93.70 since. The market situation, in view of the fact that some 20,000,000,000 francs of new Government issues will probably be necessary in the near future, cannot be said to be satisfactory. This is not so much a question of the Bourse, as of the state of mind of the average small investor, who has always been the soul of financial France, but who is now persistently hoarding his resources to an even greater extent than his bigger brethren.

The revenue returns for October indicate total yield from all normal and permanent Budget sources of 4,016 million francs, as compared with 5,203 millions in October last year and 5,487 millions in October, 1930. Total recoveries include 1,177,000,000 francs from direct taxation (or over 23 per cent. less than in October last year), and from indirect taxes and monopolies 2,839,000,000 francs (or 16½ per cent. lower than in the corresponding month). The yield from indirect taxes in October was 754½ millions below Budget estimates. It is officially announced that, now the *collectif de Novembre* (opening or annulment of supplementary credits in respect of the general Budget) has been disposed of, the situation down to November 17th may be set forth as follows:—

	Francs.
Credits	53,315,603,299
Revenue	47,704,578,200
Excess of expenditure	5,611,024,499

The (independent) Budget for the Postal Department closed for the department's financial year with a deficit on working of 200,000,000 francs, which the Finance Minister proposes to demand from the Treasury.

The proceedings of the Chamber Finance Commission, which is in majority Cartellist, suggest that, so far as pending expenditure is concerned, there is little hope for many of the economy proposals under consideration. A Socialist proposition which appears to enjoy favour is that the present public works loan proposal (involving some 3,500,000,000 francs of expenditure during each of the coming two years, part of which is designed to provide for the relief of the 1933 Budget) shall be extended systematically to around 30,000,000,000 francs, spread over several years. A significant incident a few days ago was the successful attack of the public school teachers against the decree fixing the pension age for the teaching profession at 60 (instead of 55, which is the age fixed for certain other categories of public servants whose occupations are considered by the Conseil d'Etat as involving "special risks and exceptional fatigues"). The teachers, through their C.G.T. and Communist syndicalist organisations, succeeded in forcing the Government to capitulate on the point in the Chamber, and the objectionable decree is to be abrogated.

Analysis of the clauses of the new Budget Bill enforcing stricter control over income tax returns shows that the local commissioners to be created in regard to incomes from liberal professions will consist (unlike the British corresponding commissioners) entirely of public servants. The number of doctors, lawyers and others of this category of taxpayers who declare incomes of over 50,000 francs has fallen off from 9,296 in 1930 to 8,781 last year, which the Government considers substantially too small a proportion. The scale of general income tax (as distinct from the schedule rates), which was revised upwards last July by from 5 to 25 per cent., according to totals involved, is to be again modified, the proposal being that it shall be based at 1.6 per cent. for that part of the income between 10,000 francs and 20,000 francs, rising per *tranche* of 10,000 francs to 14.4 per cent. at from 90,000 francs to 100,000 francs; and then, per *tranche* of 25,000 francs, from 16 per cent. to 33.6 per cent. at 375,000 francs to 400,000 francs; with 40 per cent. as the rate for anything above 550,000 francs (with schedule rates, where such are applicable, in addition). Another section of the Bill proposes stricter control over declarations of industrial and commercial profits, by the creation of a consultative commission of traders and manufacturers. Declarations involving profits of over 50,000 francs from trading (including both private concerns and companies) declined in number from

66,647 in 1929 to 56,514 in 1931, which the Finance Minister considers "manifestly insufficient." It is now proposed to base the assessment for the schedule tax on the volume of business subjected to turnover tax, minus general trading expenditure, as being likely to render just assessment easier and freer from contests. The varying rate of the tax applied to this category of schedule assessments is to be suppressed and a flat rate of 15 per cent. imposed on the entire income.

The new taxes proposed include imposts of 7 per cent. on receipts from goods traffic and 12 per cent. on those from passenger traffic by motor transport concerns (which are expected to yield 500,000,000 francs a year), tonnage taxes of from 600 francs a year on lorries of from five to 10 tons, to 1,000 francs on those over 13 tons (expected to yield 118,000,000 francs), and "dimensions" taxes on all motor vehicles of over 10 square metres superficial area, with a reduced rate for trailers (117,000,000 francs). It is also proposed to extend the turnover tax to omnibuses, trams, and other public service vehicles (expected yield, 300,000,000 francs). Customs duties on coffee (now 231.20 francs per quintal, plus an "internal tax" of 180 francs) are to be increased by 180 francs, while the warehousing tax, which has been left unchanged for 40 years, is to be quintupled (expected yield, 300,000,000 francs, including a single 8 per cent. impost representing turnover tax). In the interest of the State match monopoly a special tax of 15 francs per kilo is proposed on ferro-cerium used for "stones" used in mechanical lighters (expected to yield 15,000,000 francs a year), this tax being in addition to the existing taxes, ranging from 5 francs to 240 francs per unit (according to size and quality of metallic composition) at present imposed on these appliances. The announcement of the proposal to impose stricter control over privately-rented bank "safe deposit" units had the effect of an immediate sharp rise in quotations of safe manufacturing companies' shares.

GERMANY.

Political Crisis — War Debts — Credit.

(FROM OUR CORRESPONDENT.)

BERLIN, November 29.

ADOLF HITLER has not carried out the President's commission to attempt the formation of a Cabinet which would command a majority. He did not negotiate officially with the leaders of other parties, in order to discover whether they were or were not willing to support a Cabinet under National Socialist leadership, but spent the time which the President intended for such negotiations in a correspondence with the President's office. This correspondence has its importance, although Hitler's candidature for the Chancellorship was only a fleeting episode without result. In his letter of November 22nd, Dr. Meissner, the Secretary of State, made an authoritative declaration, at the instance of the President, as to what constitutes a "Presidential Cabinet." As Germany has been governed by a "Presidential Cabinet" since 1930, this clears up the salient points of the present constitutional position as President Hindenburg sees it:—

"The Presidential Cabinet, born of the needs of the time and the failure of Parliament, will as a rule put into force the necessary governmental measures without the previous consent of Parliament, on the basis of Article 48 of the Constitution. It thus holds its plenary powers in the first instance from the President, and, in general, only has need of Parliament to sanction or tolerate these measures. It follows that the head of a Presidential Cabinet can only be a man in whom the President has particular confidence."

A Parliamentary Cabinet, on the other hand, is usually formed by the leader of one of the parties which would be included in the formation of a majority or of a coalition, out of the members of these parties, and pursues in essence a policy in which the President has only a slight and indirect influence. A party leader, and especially the leader of a party which demands the exclusion from power of everyone outside the movement which it represents, is ineligible as head of a Presidential Cabinet.

The President has thus once more stressed the fact that a Presidential Cabinet is only justified when Parliament has failed and when there is urgent need for action, and that every Cabinet of this type still requires a Parliament to sanction or tolerate its actions. In doing so he has placed a stricter interpretation upon his constitutional duties than many of his advisers probably do.

The second important result of this correspondence was to establish the fact that Adolf Hitler cannot assume the rôle of a trusted nominee of the President, because, as was stated in a later letter to Herr Meissner, the Hitler Party is always reaffirming its exclusive character and is overwhelmingly opposed to the President personally, as well as to the political and economic measures which he considers necessary. This attitude of the President is undoubtedly intended to strike a blow at Hitler's authority in the eyes of public opinion. The man in the street will read that Hindenburg has, on account of the nature of the National Socialist agitation, found Hitler unworthy to be his personal nominee.

In the letter of November 23rd, in which Hitler renounces the President's commission, he states that this commission is inconsistent, as the President hedged it round with conditions which prevent the formation of a Parliamentary majority. This would have been correct had not Herr Meissner expressly stated in the preceding letter that the conditions could be further discussed if they proved to be a complete bar to the formation of a safe majority. Hitler had, of course, to be prepared for the opposition of Hindenburg in any attempt to form a majority, but he had great opportunities of bringing pressure to bear on the Nationalist leader. The fact that he did not once attempt to do so is susceptible only of the explanation that he did not want to be the Chancellor of a majority because such a position would limit his activity too narrowly by making him unconditionally dependent upon his allies in the coalition. In his counter-proposal he asked for "those powers which have never been refused, in such difficult and critical times, even to a Parliamentary Chancellor," that is to say, the right to dissolve the Reichstag and make what use he liked of the emergency clause of the Constitution. Had he been given such powers, he would certainly have formed a party dictatorship under which there would have been no more question of free elections or of any kind of popular freedom. For all the confusion which has now developed in the political situation, Herr von Hindenburg has rendered an historical service in barring this road to the National Socialist leader.

After the failure of the negotiations with Hitler the National Socialists announced that they would not tolerate a Cabinet under any other leadership. Nevertheless the President commissioned the Centre leader, Herr Kaas, to try once more to find a majority. Herr Kaas, however, renounced this commission after a further short discussion with the party representatives. The President then commissioned General von Schleicher to negotiate with the parties as his personal nominee. It had long been rumoured that General von Schleicher was preparing a Government whose basis would extend from the employers' groups among the National Socialists to the Socialist trade unions. General von Schleicher, however, showed himself most unwilling to be a candidate for the Chancellorship, but he could not refuse the request of the President to sound the opinions of the parties. He found no desire among the National Socialists to enter into fresh negotiations; the Social Democrats returned him a refusal, and not even his renewed discussions with the representatives of the trade unions and other economic associations had any result. Now, therefore, that this attempt too has failed, it is probable that Herr von Papen will once more be appointed Chancellor. Important changes in the Cabinet are likely, however, and another dissolution of the Reichstag is inevitable.

The uncertainties of the home political situation are having little influence on the stock exchanges or on the economic situation generally, as people have become thoroughly inured to disturbances from this quarter. The acuteness of the war debt question has aroused interest in Germany, but it is not thought that refusal by America

to remit the debt payments can lead to the revival of reparations. Public opinion in Germany is inclined rather to regard the non-ratification of the Lausanne agreement as inconceivable, as the resumption of reparation payments is impossible and any attempt to renew them would annihilate all hope of economic recovery.

By far the greatest cause of economic disturbance in Germany at the moment is the renewed decline in sterling. In addition to the general world economic disturbance, which must be particularly damaging to Germany, it is feared that it will cause further prejudice to German exports, and therefore to the balance of payments.

The contraction in the volume of German credit has still not been checked, as the bank balance sheets for the last two months show. Between the end of September and the end of October the obligations of the big banks on account of creditors and acceptances declined from 8,212 millions to 8,176 millions, and debtors from 4,631 to 4,614 millions. That does not seem quite to correspond with the state of trade, as all production and employment figures showed an improvement which must have led to an increased demand for credit. The explanation of this apparent paradox may be that the heavy reduction in stocks has provided industry with more liquid resources of its own, and that industrialists are drawing on their bank balances before applying for credit, and are even to some extent repaying loans out of further sales of stocks. That would explain the equal shrinkage on both sides of the balance sheets.

HOLLAND.

Conversion — Mining — Foreign Trade — Stock Exchange Reorganisation.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 22.

LEGISLATION has been introduced into Parliament by the Minister of Finance, empowering him to negotiate one or more loans aggregating a maximum of 300 million more guilders, for the purpose of consolidating the floating debt and converting a considerable portion of the national debt. Although no further details have been announced so far, it can be taken for granted that the Minister of Finance now intends to launch a big 4 per cent. loan in the near future. As the old 4 per cent. State loans are already quoted well above par, the position of the capital market in Holland appears to be such that the Government can readily proceed to voluntary conversion up to an important amount. The outstanding 5 per cent. and 4½ per cent. State loans will all be liable to conversion, as these loans, with a few exceptions, are subject to redemption at any time. The amount needed for conversion purposes is estimated at around 187,000,000 guilders, so that apparently the Minister proposes to secure about 120,000,000 guilders of new funds. In some quarters it is thought that the issue will take place before the end of the year, but it is more likely that it will be towards the end of January or the beginning of February.

In connection with the 1933 budget of the State collieries, a number of members of the Second Chamber have again drawn attention to the unsatisfactory state of affairs prevailing in the mining industry. Although the consumption of coal in the Netherlands approximately keeps pace with the production of the coal-fields, it is pointed out that unemployment is threatening the population of the mining district to an increasing extent. These members accordingly urge the necessity of encouraging employment, and consider that the Government should take the lead in this respect. The measures they propose include: (a) Limitation of the import of foreign coal for consumption in this country; (b) the safeguarding of Dutch mines against dumping; (c) the encouragement of cheap means of transport for the produce of the Dutch mines and for mining equipment; and (d) encouragement of the use of Dutch coal.

The Minister for Economic Affairs and Labour has issued a memorandum to the Second Chamber concern-

ing the results of the quota policy adopted by the Government. The Minister states, *inter alia*, that in all instances there has been a pronounced decline in imports, and the share of Dutch-made products in the domestic market has increased considerably in some cases. In all branches of industry covered by the quota measures the retrograde movement has not only been brought to a standstill, but has given place to an improvement in most cases. In no case has the operation of the quota system involved a rise in prices; on the contrary, the Minister states, the downward trend of prices has continued to include the articles subjected to the quota restrictions.

The trade returns for the Netherlands have been more satisfactory during the last few months, at least as far as exports are concerned; they have increased from 63 million guilders in July to 67 millions in August, 77 millions in September and 82 millions in October. According to the monthly returns compiled by the Central Statistical Bureau, our imports in October totalled 2,202,000 tons with a value of 117.2 million guilders, against 2,034,000 tons and a value of 101.8 millions in September and 2,719,000 tons in October, 1931. Our exports in October amounted to 1,307,000 tons with a value of 81.6 million guilders, as compared with 1,151,000 tons with a value of 77.1 millions in September, and 1,484,000 tons with a value of 111.2 millions a year ago. It is striking that this year the value of imports in October, as compared with September, advanced to a much greater degree than either last year or in 1930. Further examination of the monthly returns reveals that the increase in imports is due mostly to tea, tobacco, petrol and petroleum. The considerable increases in the import of tea and tobacco are presumably attributable to the proposed legislation for an increase of 30 per cent. in the import duties. Imports of gold and silver in October amounted to 8,424,081 guilders, and exports to 23,425,891 guilders. The latter are principally for account of private parties, and not for account of the Netherlands Bank.

The report compiled by a committee of members of the Amsterdam Stock Brokers' Association, regarding reorganisation of the Amsterdam Stock Exchange, recommends changes in the system of quotations, in the position of the bankers on the exchange, in the specialised jobbers' business, in the admission of clerks, and in the new issue business. The recommendations involve such drastic encroachment upon the existing organisation that vigorous opposition has arisen in many quarters, and it is considered very doubtful whether the reorganisation scheme will be put into practice in its entirety. The committee describes the existing system of quotations as inviting corruption, and proposes the introduction of the so-called "call" system. The "call" price would, in fact, constitute the official quotation.

NORWAY.

Budget — Shipping — Paper — Trade — Banking.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, November 25.

THE final accounts for the financial year 1931-32 revealed a deficit in the Budget of 35.4 million kroner. The trend of national receipts during the first quarter of the present financial year is not promising, and the question of balancing the Budget has therefore become still more pressing. The Government have discussed the advisability of asking the Finance Committee to meet in Oslo before the opening of the Storting, so that some definite measures might be agreed upon and put before the Storting at its re-opening in January. It is difficult to conjecture what new taxes could be suggested to meet the exigencies of the situation, unless it were some sort of consumption or turnover tax, which, even at a moderate rate, would be likely to cover the greater part of the existing deficit.

The result of the impending trade negotiations between Great Britain and Norway is eagerly awaited in this country. It is stated that a large Norwegian shipping company has signed a contract with a British coal

exporter for 50,000 tons of coal, part of which is conditional upon a successful outcome of the negotiations. A further order for 70,000 tons of British coal for gradual delivery has been placed by one of our largest industrial concerns.

Conditions seem considerably better at present in the shipping industry, and the number of vessels employed is actually larger than in 1929. In the course of October the laid-up tonnage was reduced by 166,800 tons, which means that 43 vessels have resumed trade. During the last six months the number of re-employed ships amounts to 143, but most of these are smaller vessels trading on the Baltic and White Seas. As to larger ships, October brought no real improvement, but lately favourable freights in the Pacific trade have been obtained by Norwegian companies engaged in this market.

As a result of prolonged negotiations, a price agreement has been reached between Swedish, Finnish and Norwegian paper mills as regards kraft paper, with a view to establishing stable conditions in the market. The total production of the three nations amounts to 250,000 tons annually, of which Norway contributes about 45,000 tons. This new association has been joined by nearly all producers of kraft paper in the above-mentioned countries, and an association under the name of Scankraft has been formed to act as a sales organisation. This step has been taken in order to facilitate negotiations with England for a reduction of duty on this grade of paper, which has its chief market in Great Britain.

Foreign trade in October showed an excess of imports over exports of 20.55 million kroner, as compared with 18.93 million kroner last year. This is the first month of the year to show a higher import excess than the corresponding month of 1931. Comparing the figures for October, 1931, and October, 1932, it appears that there is no important alteration in the various items comprised by the compilation, except the item "ships imported," which increased from 760,000 kroner last year to eight million kroner this year. During the first ten months of the current year, imports decreased from 693.9 million kroner to 571.4 million kroner, while exports increased from 388.9 million to 461.4 million kroner. As the figures for the remaining two months of the year do not as a rule bring about any noticeable alteration of the situation, there is every reason to anticipate a very substantial improvement of our trade balance.

While the Bank of Norway was able to increase its balances abroad during the period August to October, there has been a movement in the opposite direction during the last four weeks, the balances having decreased by about five million kroner. In spite of this the gold exchanges have moved against us; the krone has not, however, closely followed the movements of sterling, which has therefore been quoted at somewhat lower figures.

HUNGARY.

Politics — Trade — Exchange Problems.

(FROM OUR CORRESPONDENT.)

BUDAPEST, November 28.

THE recent visit of the Hungarian Premier to Rome and that of the Austrian Chancellor to Budapest gave rise to rumours, both at home and abroad, that the purpose of these diplomatic conversations was to prepare the ground for a Customs Union between Italy, Austria and Hungary, which Germany might join later on. Overwhelming as is the case for larger Customs areas in Central Europe, there is little hope that any of these projects will materialise in the near future. But the project of a Customs alliance between Italy, Germany, Austria and Hungary, which originated before the abortive Austro-German Customs Union plan, is not dead, and it will certainly crop up at a later date as a counter proposal to the French Danubian schemes.

The visit of the Austrian Chancellor to Budapest has paved the way for the conclusion of a new commercial

treaty between Austria and Hungary. Trade between the two countries has greatly suffered since the old treaty, on the most-favoured-nation basis lapsed on July 15th. The new treaty is to come into force on January 1, 1933, and unless it is denounced after three months it will operate until the end of 1933. The projected treaty—built up on a compensation basis—is not favourable to Hungary. It reduces considerably the favourable balance attained in the previous years. Whereas in the period 1929-32 the ratio of merchandise exports to imports was more than 200 to 100, the ratio for 1933 is fixed at 150 to 100. Considering that Austria was the only country with which Hungary had in the past a large favourable balance, the new treaty is bound to affect adversely the balance of trade. It can be taken for granted that so long as the present system of quotas and compensations, exchange and other prohibitions paralyse trade, there is no hope whatsoever that Hungary can produce any merchandise trade surplus balance with which to resume transfers on her foreign debts.

The last report of the League representative contains valuable data regarding the exchange control. It is stated therein that export *devisen* surrendered to the National Bank in the first nine months of the year amounted to 118.3 million pengő, as against a merchandise export of 233 million pengő returned by the Statistical Department. The foreign exchange allotted for merchandise imports in the same period amounted to 86.8 million pengő only, as against an import value of 244.4 million pengő. It is obvious from these figures that a considerable portion of foreign trade escapes the exchange control. The authorities, realising that the stiff regulations requiring the surrender of export *devisen* at the official quotations of the National Bank are hindering the exportation of a wide range of commodities, have decided to embark on a more liberal exchange policy.

Various industrial undertakings have offered to pay 15-17 per cent. premium over the official price of the foreign exchanges necessary to acquire their raw materials (cotton, oil, metals, etc.), and have pledged themselves not to raise but to lower the prices of their finished products, because hitherto they were compelled to pay a premium of 25-35 per cent. for the exchange bought in the black market. The National Bank has accepted the proposal of the industrialists, and the premium paid by them will go into a special fund, from which agricultural exports, which at present are not marketable abroad, will be given premiums ranging from 6 to 15 per cent. It is hoped that the additional agricultural exports, which could not be marketed abroad without the premium paid by the industrialists, will amount to some 50 million pengő per annum if the plan operates successfully. There is another modest plan for "additional" industrial exports in order to transfer the interest of the frozen short-term loans, where the foreign creditors undertook to bear the burden of the 20 per cent. premium, the difference between the external and internal valuation of the pengő.

The external value of the pengő is slowly improving. The difference between the external and internal value of the pengő, which amounted to more than 50 per cent. a year ago, has decreased to 20-30 per cent., as the strict supervision of the foreign frozen balances makes their utilisation abroad almost impossible, and as there are practically no pengő notes available abroad. The premium paid in the black market in Budapest on foreign exchanges follows the amount of premium paid for fine gold over the official buying price of the National Bank. In the last six months this premium fluctuated between 25 and 35 per cent. At present one kilo. fine gold changes hands at the produce market at 4,800 pengő, as against 3,800 pengő, the official buying price of the National Bank; thus the premium amounts to 26-27 per cent. On the other hand, the premium proposed by the merchandise compensation between agricultural exports and industrial raw material imports ranges only from 6 to 17 per cent. There is little doubt that the new departure in the exchange policy of the National Bank will have important consequences for the future international valuation of the pengő. The recent decision of the Austrian National

Bank to depreciate the schilling *de facto* by 22 per cent. is also bound to affect the valuation of the pengő in the long run, as the compensation trade treaty with Austria retains the par ratio between the Austrian and Hungarian currency.

CANADA.

Crops — Ottawa Debate — Inflation — Prices — Business.

(FROM OUR CORRESPONDENT.)

November 14.

HARVESTING operations are now completed and the Bureau of Statistics has now fallen into line with other authorities in reducing its earlier estimate of the wheat crop by some 36 million bushels. Meanwhile, with a slackening of the export demand, stocks of wheat continue to pile up, and on November 4th were placed at 242,088,307 bushels, as compared with 170,642,297 on the parallel date of 1931.

The grain growers of the prairie provinces are persevering with their agitation for a renewal of the wheat bonus, and in some districts a movement has been started to organise a farmers' strike against planting any more wheat until prices improve. The controversy about the application of the wheat preference still rages and has been responsible for several highly controversial debates in the House of Commons. The debate on the Ottawa Agreements is still proceeding and although the pacts with other Dominions have been endorsed by the House of Commons, the Opposition are maintaining a steady fire of obstructive criticism against the Anglo-Canadian agreement. During the discussion the Liberals, after severe pressure, extracted from Mr Stevens, the Minister of Trade and Commerce, the admission that the terms of Article I of the Anglo-Canadian agreement do not debar the British Government from reducing duties for the furtherance of trade negotiations with foreign countries upon any commodity which is not specifically mentioned in the schedules of the agreement.

The most interesting development of the past week has been the decision of the Bennett Ministry to embark upon a deliberate policy of currency inflation. On November 1st the Federal Government borrowed from the Canadian banks \$35,000,000 on two-year Treasury bills bearing interest at 4 per cent., and all the banks were immediately asked to rediscount their allotment at par under the provisions of the Federal Finance Act. Explaining the Government's new policy to the House of Commons on November 8th, Premier Bennett declared that the best conservative opinion in Britain, the United States and other countries was committed to the idea that the easing of money and credit was highly desirable in the interests of business recovery, and that, while the positive benefits of the steps which had been taken in this direction in Britain and the United States had still to be achieved, there was no doubt that they had prevented the situation from becoming decidedly worse. He said that Canada had used the only machinery available for such action, and that the result would be to swell the reserves of the banks and increase their lending capacity. But while he felt that Canada was justified, to the very limited degree necessary in her case, in joining with other nations in the adoption of monetary measures designed to promote recovery, he declared that no broad action along these lines was necessary and that Canada would "not depart from the established principles of sound money." A variety of effects from this move were immediately experienced; the discount on the Canadian dollar in New York, which had fallen to about 8 per cent., quickly rose to about 13 per cent.

The new monetary policy should check the downward trend of commodity prices, which has been persisting. The Bureau of Statistics index of wholesale prices fell to 65 for October, against 66.9 in September. The largest decline was in the classification "Wood Products and Paper," for which the index fell from 69.9 to 64.5, but the vegetable products index also fell from 53.5 to 52.2.

The beginning of winter finds the business and industrial situation still very unsatisfactory and no hope is now entertained of any serious improvement until the spring. There has been a certain seasonal stimulus to the demand for warm clothing, heavy footwear, furs and some kinds of groceries, but continuing cuts in wages and salaries and the general lowness of purchasing power forbid any briskness in wholesale or retail trade, and the movement of merchandise has slowed down. The carloading figure for the week ending November 5th, at 45,536 cars, showed a decline of 1,157 cars as compared with the previous week and of no fewer than 16,023 cars compared with the corresponding week of 1931. In the industrial sphere conditions are very uneven. The woollen and rayon mills are reasonably busy, but the cotton plants are working on reduced schedules. The iron and steel plants find orders very hard to secure and the "Besco" steel mill at Sydney, N.S., which has so far been kept running at low capacity by spasmodic railway orders, may have to shut down. There has been some increase in the output of boots and shoes, but all the industries concerned with construction work and the provision of machinery for other plants are experiencing very difficult times.

The new tariff schedules are now in operation, but so far there has been no evidence of any noteworthy increase of imports from Britain. Some of the worst artificial obstacles other than tariffs still remain to curtail the inflow of all imports; for instance, the Bennett Ministry, in accordance with the terms of the Anglo-Canadian agreement, has introduced a Bill to exempt British goods from the application of the powers conferred by Section 43 of the Customs Act, namely, arbitrary valuations for Customs purposes. But, so far, there is no suggestion that this measure is to be retroactive in its scope or that the numerous Orders-in-Council imposing arbitrary valuations on British goods will be cancelled. One interesting development of the tariff adjustments now being made is that hereafter linen goods of certain kinds, being on the free list, will be substantially cheaper than similar cotton goods.

Letters to the Editor.

THE IRISH ANNUITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Now that it is clear that the policy of H.M. Government is—in effect if not admittedly—to sacrifice Anglo-Irish trade in order to extort submission from the Irish Free State in the Annuities controversy, it is important to realise something of what the sacrifice means to Great Britain now and ultimately.

The total turnover of trade between the Irish Free State and Great Britain was, in 1928-30, £80 millions annually. About 40 per cent. of this trade represents exports of this value on the quays at the port of export. The remainder represents imports on the quays at the port of entry into Britain, i.e., at their value plus cost of freight and insurance. Now this is a large trade, and an enforced shrinkage of, say, one-third or one-half or two-thirds must necessarily cause grievous dislocation and hardship on both sides. Naturally, however, as it is practically the whole of the Free State's trade and only a portion of Britain's trade that is being hit, the hurt to Ireland is greater than the hurt to Britain. But for those who console themselves with this pious reflection, it must be added that Great Britain is losing the whole (or virtually the whole) of the charges for freights and insurance in respect of the extinguished portion of the two-ways trade. This is a not unimportant factor in the dismal balance sheet of reciprocal losses—and one to be specially noted by those who are interested in "invisible exports" as a factor of mitigation in assessing Britain's adverse trade balance for the current financial year.

Again, it must be remembered that the Irish Free State is a creditor nation with large funds invested directly, as well as indirectly, through the agency of the Irish banks in British securities. So far, therefore, as the policy of destroying Irish trade temporarily can be made to succeed, the result will be to cause Irishmen to resort to their savings in order to pay their losses and keep going—and to withdraw money from London. And this is a not unimportant factor for those who are interested in maintaining a high level of prices for gilt-edged

securities and an abundant supply of cheap money in the Money Market.

Again, there will be diminished takings in respect of harbour and dock charges, warehousing, railway freights, market dues, agents' commissions and the like in respect of so large a volume of trade. And these, together with the increase of unemployment which must necessarily occur in the affected areas, will not be without their effect on the produce of direct and indirect taxation. Not a very large effect, perhaps, but on the other hand, not a negligible effect in the eyes of those who realise how much is at stake on the issue of a balanced or an unbalanced budget account of March 31st next.

Another test of the size and quality of the trade which is being destroyed: every citizen of the Irish Free State (on the average) spent in 1931 on goods exported from Britain the sum of £10 6s. 7d. The corresponding figures for Canada were £1 19s. 9d., for Australia £2 4s. 9d., for New Zealand £7 9s., for South Africa £2 14s. 6d., for India 1s. 10d., for Soviet Russia 11d., for Germany 5s. 8d., Denmark £2 8s. 5d.—and so on. Otherwise put, the Irish Free State in 1931 took 7.82 of Britain's total exports and 13.9 of Britain's total re-exports. The fine flower of the National Government's declared policy of fostering Imperial trade is to be seen in the Ottawa agreements topped up with the deliberate destruction of this highly-developed and most lucrative Anglo-Irish trade. And all over one single little point, whether a justiciable dispute between the two countries should be referred to one type or another type of competent arbitration tribunal—over, in short, a punctilio! Is it likely that such a trade, once destroyed, can ever be revived in its pristine vigour? Is not the sufferer quite certain to vow—and to make good the vow—never again to let itself fall into the position in which it can be so squeezed and injured for ulterior purposes?

The policy of the Secretary of State for the Dominions resembles the policy of the Chinaman who burned down his house in order to roast his pig. In both cases a certain measure of success in the immediate object was attained. There was no question but that the pig perished in the flames and possibly became edible. But the action of the Chinaman has long been held up to human derision as a unique specimen of superlative fatuity.—I am, Yours faithfully,

London,
November 22, 1932.

HENRY HARRISON.

BUTCHERY AT GENEVA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In its issue of November 19th, the *Economist* published some information on Geneva, of which the title alone, "Butchery at Geneva," plainly betrays its purpose.

The basis of this information is incorrect. The municipal elections are far removed from the November 9th riots, and were carried out peaceably and without any resentment; the assembly of a national political and democratic party, which has nothing in common with "Fascism" and which served as the excuse for the riot, took place in a closed hall, and, if there was any manifestation outside this hall, such manifestation was organised expressly by seditious elements; the crowd on which the soldiers opened fire was not a crowd of onlookers, since of the thirteen victims only one was really

innocent. The agitators were armed with bludgeons and some with firearms; the authorities did nothing to provoke the riot, where they only intervened with force at the last minute. On the contrary, they have been blamed by many for having hitherto treated Socialist provocations with too much forbearance. Finally, your mockery of the precautions taken at the site of the League of Nations are mortifying to a small nation which deems it a matter of honour to protect an international institution which happens to have chosen its territory wherein to organise the peace of the world.

It is a well-known fact that, in the first instance, an army always seeks to take possession of bridge-heads, points of communication and other first-line strongholds. With similar strategy, Bolshevism, which has already duped some of the greatest Powers with commercial bait, now directs its strongest attacks against Switzerland, the seat of the League of Nations, and a country which, notwithstanding the economic difficulties of the present moment, has, by her political stability and her financial security, suffered no loss of international confidence.

No doubt you ignore these facts, just as you seem to ignore the destructive propaganda which has been carried on in our country for a long time by agitators maintained here by the Soviet Government under the guise of delegations to the League of Nations (since Switzerland has refused to recognise the Bolshevik Government); and you are also ignoring the abhorrence of the Swiss people, free and democratic as they are, for public disturbances, as well as their repeated and periodic manifestations of loyalty to the existing constitution, both political and social. The last of these manifestations, which took place in Geneva barely a month ago, was a plebiscite which rejected by an overwhelming majority the demagogic gesture of the Socialists to free 60 per cent. of the population from paying income tax.

Your correspondent, obviously inspired by Socialist views alone, may have hidden all this from you, and your article, in spite of the distorted facts it presents, might therefore be excused on account of its ignorance. But the end of it betrays the malicious pleasure you had in publishing it. We have seen, as I told you, that foreign revolutionary forces are at work—happily without success—to undermine our security. We have also seen certain countries, in the throes of financial difficulties (and who has none?), uphold this assault of false rumours wilfully spread abroad against certain sections of our "bourgeoisie." Jealousy is a bad counsellor.

But allow me to express my astonishment that a paper which is as respectable as yours (and I have been an ardent reader for more than thirty years) should permit itself to take an attitude so little in conformity with objectivity and the fair play which we, who are no longer young, were pleased up to the present to admire in the English people.

I am, however, counting on this attitude on your part for the publication of this rectification in a future edition of your paper, for which I thank you in anticipation.—I remain, sir,

Geneva,
November 25, 1932.

ROBERT JULLIARD,
President of the Geneva
Chamber of Commerce.

[We are glad to publish M. Julliard's letter, though we cannot agree with his version of the facts.—ED. *Econ.*]

Books and Publications.

BOOK OF THE WEEK.

CHAOS—AND THE WAY OUT?

CHAOS is a word that fitly describes not only the condition into which the world has fallen, but also the mass of literature that has been poured out upon us by writers anxious to describe the present discontents and to prescribe remedies for them. Three books stand out conspicuous for their merits. Of these the "Macmillan Report" (1931) was mainly confined to our monetary troubles, and the League of Nations Report on "The Course and Phases of the World Economic Depression" (1931) was an unbiased description and explanation of the development of the industrial catastrophe in which we have been involved, but did not discuss possible methods of recovery. In both these books the present

economic system was implicitly accepted, but Mr. G. D. H. Cole not only takes a wider scope,* but attacks his problems from another angle, with the ultimate aim of building up a new economic structure.

It is no easy task to give even the most summary account of a book which contains, as the publishers assure us, 250,000 words; and in what follows the author's order is not in all cases followed. He begins with an introductory survey, in which he finds the leading characteristics of the crisis to be the outstripping of population by production, the limitation of the market, the "failure of the present economic system to adapt itself to technical forces," and the growing demand for leisure. It is undoubted that production has grown faster than population, but the figures quoted by Mr. Cole should be taken

* "The Intelligent Man's Guide Through World Chaos," (Gollancz. 672 pp. 5s.)

only as indications of the direction of movement and not as precise measures; in particular, the figures relating to the United Kingdom, though supplied by the staff of the Economic Advisory Council to the Macmillan Committee, are unsound since they involve the valuation of all manufactured goods on the basis of export prices. Next comes a discussion of the economic consequences of the War, from which it appears that the collapse on Wall Street in 1929 was the immediate cause of the slump, though war debts, reparations, tariffs, the return to the gold standard, etc., exacerbated the economic troubles. Here one notes the omission of any reference to the industrial upheaval in this country in 1926, which beyond question impaired our power to compete to a degree which, especially in the coal industry, has not yet exhausted itself. Seeking for the deeper causes of disorganisation, Mr Cole gives a really brilliant summary of the last two centuries of economic growth, which have ended in the supersession of skill by the machine, and in "the steady decrease in the amount of labour needed to produce and deliver into the hands of the consumers a given quantity of goods."

Turning now to his own specialist sphere of economist, Mr Cole asserts the truism that "the object of a sound economic system is to put the available resources to the best possible use—so as, in the phrase of the economists, to realise the *maximum utility*," a standard which "sets up a strong presumption in favour of equality of incomes." In eight chapters he discusses such subjects as profits, prices, money, capital, unemployment, foreign trade, public finance and economic organisation, all from the standpoint just indicated. So extensive a survey cannot be followed in detail, but some points may be noticed. The industrial problem is stated to be the maintenance of a correct balance between production and consumption, so as to ensure that all the goods produced are, in fact, consumed at prices remunerative to the producers. The desire for profit is generally assumed to be an effective regulator of production between consumers' goods and capital goods (factories, etc.), that is, between consumption and investment, but profits, from which arise savings, may be increased by reducing costs, and in particular by reducing the element of wages either by actually lowering them or by substituting machines for men. But by these very acts the market for consumers' goods is diminished, and thus, as Mr Cole maintains, arises one of the chief and permanent disharmonies of the present system. Herein, since industry is largely conducted by non-co-operative units, lies the chief cause of industrial fluctuations, though these may be made more violent by monetary or psychological factors. The urge for profits and the ever-widening grasp of industrialisation on countries once primarily agricultural make world competition ever fiercer and drive the industrialists to more and more mechanisation and rationalisation of industry. These labour-saving devices lead to unemployment and unemployment to restriction of markets, which in turn brings production to a standstill with still more unemployment. Improved production methods applied according to no definite plan displace labour, produce disorganisation, and destroy confidence, while new industries are necessarily slow in "taking up the slack" of labour. This is the gravamen of Mr Cole's charge against the present system, and it is undeniable that in many respects it is justified.

Mr Cole suggests that our premature return to the gold standard was the chief cause of the immediately following fall in prices, forgetting, as already said, the events of 1926, and omitting to mention that the precise amount of the over-valuation, if any, of the pound is very contestable. The United States tried to stabilise prices, but industrial production increased while wages did not rise proportionately, and the attempt "broke down because of the failure of consuming power" and "the diversion of bank money to speculation. The simultaneous follies of insisting on payment of intergovernmental debts and refusing to take that payment in goods have introduced the final elements of disorganisation. Mr Cole thinks matters would have been easier for us had we gone off the gold standard a year earlier, and for the future he desires a managed currency (not on an index-number basis) to keep the supply of money concordant with current needs.

To the planless economic structure of the world, slightly modified as it is by international trusts and cartels, Mr Cole opposes the Soviet "five years' plan," not as a model to be followed, but as a portent and as a proof of the necessity and feasibility of national planning. In his last two chapters he sets out his own suggestions for Great Britain. "The things that must be done at once and simultaneously are the socialisation of the banking system, the creation of agencies for the carrying through of a policy of national investment and national economic development, and the devising of means for preventing a 'flight from the pound' and the successful engineering of a financial panic in the early stages of Socialist construction." Next to finance comes industry. "National economic planning in any real sense involves a strongly organised control over almost every aspect of the economic life and, above all, over production, over the distribution of purchasing power in all its forms, and over the fixing of prices." He would, therefore, socialise the basic industries, but while nationalising the land and monopolising the trade in agricultural products, would "leave the actual conduct of production in the hands of the individual farmers." Even if we admitted the theoretic feasibility of such schemes, Mr Cole gives us little hope of finding persons capable of carrying them out, for he has already rejected the possibility that the capitalist world can clear up the European economic tangle, settle war debts, unify world finance through co-operation of the central banks, or regulate wages internationally—all smaller tasks than those he now proposes. And he reproaches the Labour Party for failing to make use of "the large resources of technical and administrative ability among its own followers," but does not name these supermen. More constructive planning is certainly required, but in industry as in architecture, it is well to begin at the bottom. Let us reorganise the industries before we tackle "industry"; already we are making some approaches in coal, iron and steel, cotton, and transport.

H. W. M.

SHORTER NOTICES.

"The Rise of the British Coal Industry." By J. U. Nef. London. Routledge. 906 pp. With maps, diagrams and appendices. 2 vols. 42s.

This, the sixth volume in the series of studies in economic and social history edited for the London School of Economics by Mr Tawney and Dr. Eileen Power, is a most valuable publication, valuable as much to the student of economic history generally as to the more specialised reader. Dr. Nef has dealt with the British coal industry only between the years 1550 and 1700, and, as he says in his introduction, has been forced to make a rigorous selection among the facts which he has accumulated; nevertheless, enough remains to throw a flood of light upon the growth of English economic life during a period which is still far too inadequately known, even to historians. The coal-mining industry, for reasons largely peculiar to itself, shows most clearly and earliest of any English industry the change-over to capitalist methods of finance and production; but it is also so deeply connected, even at that early period, with other trades and industries as to involve, if it is to be properly treated, a considerable examination of those industries as well as of the financial and commercial policy of the State.

This examination Dr. Nef has carried out, with admirable

PITMAN'S BUSINESS BUDGETS AND BUDGETARY CONTROL

By A. W. WILLMSMORE, F.R.Econ.S.

AN IMPORTANT new book that shows how the principles of budget control are being practically applied by leading British industries. It indicates a system that can be readily adapted to suit the requirements of any business in which a closer control of inventories and expenses, and a fuller co-ordination of the various departments, is required. Many charts, diagrams, etc. 238 pp. 10/6 net.

Order from a bookseller or

SIR ISAAC PITMAN & SONS, LTD., Parker St., Kingsway, W.C.2

results. His main thesis, namely, that the rate of industrial growth in Elizabethan and Stuart England has been greatly underestimated by historians concentrating on the later periods, is not a new one; but he has supplied it with a great many more facts and figures, particularly for the first fifty years of his survey, than have hitherto been easily accessible. One of the services which his book has performed, apart from matters concerned directly with its subject, is to bring together facts and figures—such as those relating to the price of timber in the seventeenth century, which have hitherto been buried in comparatively ungetatable sources such as the transactions of county antiquarian societies.

As regards coal itself, his information is full, detailed, documented, and interesting. It covers the distribution as well as the production of coal, and in both cases it is comprehensive, not confining itself, as too many economic studies have hitherto done, to the production of the Northumberland and Durham coalfields and the Newcastle-London trade. There are detailed descriptions of the organisation and growth of all the principal coal-providing districts, and elaborate analyses, with tables of price and quantity, of the distribution of coal through various centres and by various means. There are also chapters on mineral rights and ownership, on the methods of association evolved for the provision of the large amount of capital involved and on the fluctuations of fortune experienced by the early *entrepreneurs*, on State policy towards coal and the coal trade, and on labour supply, wages, and conditions. The last-named chapter fully refutes the common belief that the well-known "slave status" of the Scottish mineworkers was the result of the survival of medieval conditions, and shows that it was an innovation for the purpose of securing large masses of labour, made possible by the control exercised over the Privy Council by the Scottish coal and iron masters. Each of Dr. Nef's chapters, adorned with a wealth of quotations, instances, and references, would make an interesting small book in itself; and it only remains to add that it is not every learned historian who can wear his learning so easily, or weave so comprehensive a mass of facts into so interesting a narrative. Author, editors, and publisher are alike to be congratulated.

"British Slave Emancipation, 1838-1849." By William Law Mathieson. (London) Longmans. 239 pp. 12s. 6d.

Dr. Mathieson has now followed up his valuable study of the abolition of slavery in Great Britain and her Colonies with a supplementary study of the actual process of emancipation in the West Indies and in Mauritius, and the difficulties found in its course. As in the previous volume, Dr. Mathieson brings to his task a very full knowledge of the history and all the relevant documents; and if the sequel is rather less full of interest and rather more in the nature of a prolonged footnote, that is less the fault of the author than inherent to the nature of his task. After all, the subject-matter of the sequel is in the nature of an appendix. The battle, the important battle, was fought and over by 1838; as compared with that, the efforts of the Colonies to adjust themselves to the new conditions are bound to appear rather like a tailpiece.

Nevertheless, there is much that is of interest in the narrative. The opening sections show clearly how difficult it was for the planters ever to bring their minds to bear on the changed conditions—the demand for pound-for-pound compensation, which, as Dr. Mathieson points out, assumes

that when the negroes were emancipated they would automatically cease to exist, is a case in point. Later chapters deal with the effects of the change from forced to free labour, with its resulting fall in the output of sugar. This in its turn, by rendering it impossible for the planters to maintain their monopoly of the home sugar market, stimulated the revolt against protection; and the book closes with the transition to free trade under the very unfavourable conditions engendered by the commercial crisis of 1847. All those interested in the economic problem of Imperialism, as well as those concerned with English colonial history, will find valuable information in this book.

"Agricultural Russia and the Wheat Problem." By Vladimir P. Timoshenko. Food Research Institute, Stanford University, California, U.S.A. (Grain Economic Series, No. 1.) Obtainable in London from P. S. King and Co. 508 pp. \$4.00.

This enormous study of the grain-producing capacity and grain production in pre- and post-war Russia, by the former Professor of Economics in the Ukrainian University of Prague, would be more useful if it could have been cut down before publication. Professor Timoshenko belongs to the class of writers on economics whose endeavour it is to make each set of statistics go as far as possible, and there is consequently in his book a good deal of needless repetition. It is also unfortunate that he has not visited Russia since 1919, so that practically all his post-revolutionary information is derived from printed sources. For instance, his account of collective farming is not at all clear, drawing no distinction between the collective farm as pressed forward before the Nep period and the collective farm of present-day Soviet policy. Indeed, his information for any period after the middle of 1930 is disappointingly meagre. Nevertheless, there is valuable information about the character and quality of Russian land, its distribution, its availability for different types of crops, its actual and potential productivity, etc.; and it is written in a calm statistical style, without attempts to insist upon the author's political opinions. It is perhaps unfortunate that the "terms of reference" of this study should be so narrow; it would have been more useful to students had they been widened to include more about crops other than food-stuffs and foodstuffs other than cereal crops; and we should then be in a better position to judge whether Professor Timoshenko's pessimistic views about possible increases in the productivity of Russian agriculture are justified. Perhaps the foundation which produced this study may in time fill up the gap.

The Stock Exchange.

HOME RAILWAY POSITION.

THE market has shown its appreciation of the doggedness with which the railways are fighting a retreating battle. The recent improvement in debenture and preference stocks has followed a perceptible thawing of the investor's frigid attitude towards railway prospects, rather than a merely sympathetic movement, in common with all fixed-interest securities, under the Government's conversion policy.

It is unfortunate that the railways are compelled to stress the less satisfactory features of their position in their frequent appearances before the bar of public opinion. Their case, as presented this week before the National Wages Board, for example, has naturally been a *quanta patimur*. Stockholders, preoccupied with the licking of their wounds, may be unaware that the British railways have, in fact, shown greater resistance to depression than those of any other country in the world. To-day, most State-owned railways are a burden on their respective taxpayers. Some large American companies show operating deficits, and others are not earning their fixed charges. The Canadian Pacific Railway will probably pay this year's preference dividends out of non-railway income. One of the four largest British-owned systems in the Argentine has been compelled to obtain a moratorium on part of its debenture interest. Every British line, however, will earn its full debenture and guaranteed payments for 1932, and two of the Big Four may even have a small "token" margin of earnings on their equity capital.

The current position may be indicated by a few simple aggregates. The four main lines require net annual earnings of approximately £12.9 millions to meet debenture and fixed-charge requirements. (Guaranteed (i.e., cumulative preference) stocks are covered when total earnings reach £19.2 millions, and preference (non-cumulative) requirements by earnings of £34.7 millions. Aggregate net receipts of £48.4 millions would allow of a 5 per cent. return on the combined equity capital of the four companies. Aggregate net earnings (before fixed charges) in the four years from 1928 to 1931, have been, respectively (in millions), £41.0, £45.0, £38.4 and £33.4. The estimated net figure for 1932 has been put by the railway's spokesmen, this week, at £26 millions, which fully covers debenture and guaranteed capital requirements, but leaves a number of preference stocks within the "deficiency zone."

Depression, however, has emphasised differences in the earning power of individual companies which first became prominent with the formation of the present groups, ten years ago. These have been attributable less to differential year ago. These have been attributable less to differential features in management (for executive efficiency is high, by universal admission, in every case) than to unequal incidence of industrial depression in the areas served. The "northern" lines, with "black spots" like Lancashire, the North-East Coast and the Clyde, have suffered more (and, conversely, have wider potentialities for future recovery) than the "southern" systems. This feature is clearly apparent in the following table, showing how net receipts, before fixed charges, have varied since 1923:—

EARNINGS (BEFORE FIXED CHARGES).
(1923 = 100.)

	London Midland and Scottish Railway.	London and North- Eastern Railway.	Great Western Railway.	Southern Railway.
1923	100	100	100	100
1924	94	82	90	101
1925	89	70	89	103
1926	50	29	51	84
1927	93	86	103	102
1928	87	86	92	105
1929	92	99	107	107
1930	74	86	93	101
1931	68	72	74	92
1932 (estimated)	55	56	65	80

A comparison of gross and estimated net receipts, as regards the present year and 1931, is given in the next table:—

	L.M.S.R.	L.N.E.R.	G.W.R.	S.R.
Gross railway receipts, 47 weeks, 1932, compared 1931 (Thous. £)	— 4,717	— 4,392	— 2,274	— 1,605
Gross railway receipts, estimated 52 weeks, 1932, compared 1931 (Thous. £)	— 5,100	— 4,800	— 2,400	— 1,650
Net revenue, first half 1932, compared 1931 (Thous. £)	— 1,000	— 924	— 275	— 800
Estimated total, 1932, compared 1931 (Thous. £)	— 2,400	— 2,100	— 700	— 740

The estimated decline in net receipts, in every case, is much less than in gross, the railways having continued to effect substantial reductions in working expenses. On the basis of these figures, it is possible to construct a further table showing how various groups of stockholders are likely to fare when this year's final dividend distributions are made:—

EARNINGS AND DIVIDEND REQUIREMENTS.

	L.M.S.R.	L.N.E.R.	G.W.R.	S.R.
Estimated earnings, 1932, before fixed charges (Thous. £)	10,250	7,400	5,000	4,850*
Percentages of total earnings taken by

Equity Stocks	Nature Ordinary Earned..... Nil	Pref. and def. ord. Nil	Ordinary ½% (c)	Pref. ord. ½% (d)

* Based on recent prospectus estimate.
† Five per cent. rent charge and 5 per cent. consolidated guaranteed stock.
(a) Interims 1 per cent. and 1½ per cent. already paid. (b) No interim paid.
(c) ½ per cent. interim paid. (d) No interim paid.
NOTE.—The Southern Railway figures do not allow for the future requirements of £4,750,000 of 4 per cent. redeemable debenture stock, issued in October last, and ranking *pari passu* with existing debentures.

These figures make a slightly more favourable showing than those given by Sir Ralph Wedgwood, this week. They are based on the assumption that the recent improvement in weekly receipts will be maintained to the end of the year, and they allow for exceptional incomings, by way of profits on sales of securities, etc. Broadly, the Great Western should be able to retain "Chancery status," for its prior stocks in England, by paying a small ordinary dividend for 1932. A 3 per cent. ordinary payment necessary to maintain trustee status in Scotland, however, may require a draft of something like £1,200,000 on reserve and the company may not consider the game worth the candle. The Southern, which reverted to "Chancery status" early this year, should retain it without any substantial payment from reserves, but preferred ordinary stockholders must expect, at best, a purely nominal return. If the London, Midland and Scottish does not consider it advisable to draw on its reserves to the tune of over £2½ millions, to pay all its preference dividends, its prior issues may no longer be eligible, after this year, for new trustee investment. London and North-Eastern stocks have already lost their eligibility, but earnings may cover guaranteed stocks with a little to spare.

If these estimates are borne out, some £318 millions of L.M.S. debenture, guaranteed and preference capital

will lose trustee status early next year, and holders should allow for the discounting of this possibility by the market over the next two months. It may be necessary, for investment purposes, to divide home railway securities into two main groups, namely trustee and non-trustee stocks, and to distinguish individual stocks, in each group, according as their dividends are "covered," "doubtful," and "uncovered," respectively, on the basis of current earnings. The lines of demarcation fall differently on every railway. The position of each stock, and its potential yield at present prices, assuming dividends in harmony with the estimated earnings given in the preceding table, is indicated below:—

EARNINGS AND YIELDS.
(Bracketed stocks rank *pari passu* for dividends.)

The investment appeal of any given stock, in the light of the above showing, obviously depends on the view taken by investors, first of the future course of railway receipts and, secondly, of the field for further economies in expenditure. Of these, the latter is, possibly, the more important for holders of "doubtful" stocks, whose position must necessarily be largely influenced by near developments, but the former is crucial for railway stockholders in general. Under the spur of depression, the "economy" achievements of the railway managements have been herculean, but the field is narrowing. In particular, it is limited by the fact that as regards wages, the largest single element in operating costs, the railways are not free agents, but have hitherto based their policy, in the last resort, on the awards of a National Wages Board, on which they do not enjoy majority representation. We deal on another page with the issues involved in this week's application to the Board for a wages reduction, and their bearing on the railway outlook. Apart from this *sub judice* question, a further decline in gross receipts, in 1933, at a rate comparable with the £14 millions drop in 1932, might involve questions of an alteration in standards of physical maintenance of railway properties—which would, naturally, be repugnant to executives trained under British traditions—or the closing down of sections which were not earning their keep. The potential benefits of recent new departures, such as "pooling" of competitive traffic, though highly significant, are as yet an unknown quantity.

On the other hand, a substantial early recovery in trade, particularly foreign trade, might make many railway stocks highly attractive at present prices. The percentage of railway expenses which does not directly vary with the level of gross receipts is so high, and the cumulative reductions made under this heading have been so considerable, that net earnings must needs increase much more rapidly than gross receipts in the first phases of revival. How far the railways, in competition with the roads, would obtain a full proportionate share in an increased quantum of traffic is a matter on which we cannot dogmatise. If the omens can be regarded as favourable to the eventual passing into law of a new order based on the main concepts of the Salter Report, the railways will probably be content to leave the issue to the arbitrament of "straight" competition, with the possibility, in the background, of closer co-operation, on the goods as well as the road passenger side. Whether they will be permanently content with their present legislative restrictions in the matter of rates and fares is another matter. Last week's decision by the Rates Tribunal against the Great Western application for exceptional flat rates, to which we make reference elsewhere, is likely to accentuate the railways' dissatisfaction with legal handicaps imposed when their "monopoly" position was much more watertight than it will ever be again.

The general conclusion would seem to be that no immediate development—not even a 10 per cent. wage reduction—is likely to be sufficient to restore the earnings position of the more "doubtful" railway stocks if traffic remains sub-normal. A purchase of railway stocks to-day is, in fact, a gesture of faith in general trade recovery, which will permit of the passing-on to stockholders of the fruits of reorganisation and enhanced efficiency.

P. AND O. FINANCES.

THE report of the Peninsular and Oriental Steam Navigation Company—which pays a merited tribute to the work of the late Lord Inchcape—is an admirably detailed document. We congratulate the board, and the new auditors, on its presentation. Never have stockholders in any British shipping concern been presented with so clear a picture of their financial position.

Unhappily, the results are eloquent of depression. Out of gross earnings of £2,256,548 for the year to September 30th last, only £1,371,736 comes from trading sources. This figure includes dividends from subsidiary undertakings, some of which have not earned sufficient to allow of depreciation of their fleets on the normal scale. A further £569,789 comes from general investments "outside the business," £113,049 from "miscellaneous income," and £201,974 from windfalls (income tax and profit on investments sold). In other words, nearly 40 per cent. of total profit derives from non-trading sources. Some £350,000 is set

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

TICKET.	SETTLING DAYS.	ACCOUNT.
December 6.		December 8.

THE week opened inauspiciously, Gilt-edged stocks being subjected to steady liquidation, while the volume of business in industrial shares was greatly reduced. The rapidity of the decline in the Funds, coinciding with a fall in sterling to the lowest point yet recorded, was checked, however, before a crisis atmosphere could develop. Underlying sentiment was, in fact, firmer than the Official List suggested, and some bears were badly caught by the unexpected recovery. This started on Tuesday and lasted over Thursday, December 1st, with its heavy payments and repayments. That the influences affecting the market were internal rather than external was suggested by the prices of "international" and "gold" securities, which showed less than their normal sensitivity to adjustments in the sterling exchange, both ways. How far the market is discounting some American Debt concession is not clear, but the week's experience at least suggests that there has been no undermining of confidence so far.

Movements in Gilt-edged stocks were unusually wide. Old Consols, for example, declined ½ on Monday and recovered 1½ on Tuesday and a further ½ on Wednesday. Three-and-a-half per Cent. War Loan, similarly, fell ½ and rose 1½ and ½ respectively. India loans revived in sympathy with the Funds, and Dominion stocks were firm, particularly Commonwealth Five per Cents. Foreign bonds moved within narrower limits than Gilt-edged stocks. Chinese issues were moderately active and Japanese steady. Argentine stocks were unchanged on the announcement of a forthcoming enquiry into the national banking and financial system by Sir Otto Niemeyer, but among Brazilians, San Paulo Coffee were weaker on fears regarding the sufficiency of receipts to cover sinking fund requirements. German bonds obtained fair support despite the absence of a solution of the political impasse.

Home rails were inclined to sag early in the week, but subsequently became steadier, though business was sparse. The traffic returns showed no worsening of the position, but some holders were apprehensive regarding the attitude of organised labour in the event of a reduced wage award by the National Board. The appearance of the London Transport Bill at the head of the Parliamentary list, and the turbulence of back bench opposition, tended to unsettle the market for the London passenger group of stocks, and prices eased slightly day by day. Argentine rails, after a bad start, showed a modest improvement in mid-week, despite the continued unfavourable traffic returns, particularly on the Central Argentine.

The industrial markets showed the same improvement as Gilt-edged, after a dull opening, but movements both ways were confined within narrow limits. Professional speculation was noticeably restricted, and the volume of dealings remained below the average. Stewarts & Lloyds rose on the publicity given to the company's Corby plans, which are discussed on pages 1024 and 1044 of this issue. Other steel shares attracted a little demand, but electrical shares were irregular, on a reduced volume of small investment. The week's brewery reports were no better than had been expected, but share values showed an increased tendency towards "stabilisation" at current reduced levels. Tobacco shares obtained investment support, though some holders remained slightly apprehensive of the effects of reduced home consumption and increased competition. Woolworth were active on talk of an increased dividend and a capital issue with "rights." London Brick improved after an unexpectedly favourably interim dividend. The Tate and Lyle accounts (summarised on page 1045) confirmed market views of the strength of the company's position. Textile shares were slightly better where changed, rayon issues responding to the increased production figures. The lucidity of the P. & O. report (ana-

(Continued on page 1042.)

aside for depreciation of the P. & O. fleet. After other expenses, the net earnings, before debenture interest, are £694,616, against £947,802 in 1930-31 and £1,165,004 in 1929-30. This year's figure, however, cannot be compared with those of earlier years, for stockholders do not know how much was set aside in those years for depreciation. The report, however, makes it clear that this year's appropriation is below normal, and mentions £1,400,000 as the amount required on the basis of 5 per cent. per annum on the original cost of the vessels. In the circumstances, no question of a deferred dividend payment arises:—

	Years to September 30.		
	1930.	1931.	1932.
Total earnings	£	£	£
Depreciation of steamers	(?)†	(?)†	350,000

Other charges			60,965†
Net earnings	1,165,004	947,802	694,616
Provident fund	50,000	Nil	Nil
Debiture interest	419,565	419,565	419,080
Reserve for debenture redemption	90,000	100,000	110,000
Preferred dividend (5%)	152,000	152,000	152,000
Balance for deferred	453,439	276,237	13,536
Earnings % (tax free)	9.9	6.0	0.3
Paid % (tax free)	10	6	Nil
Amount of dividend	459,252	275,551	Nil
Brought forward	120,865	115,052	115,738
Carried forward	115,052	115,738	129,275

* Made up as follows: Receipts from voyages, £881,770; dividends from subsidiary shipping companies, £356,619; dividends from coaling, wharfage and engineering undertakings, £133,347; dividends and interest on other investments, £569,789; profit on sale of investments, £98,009; miscellaneous income, rentals, &c., £113,049; income tax, £103,965.

† Report mentions £1,400,000 per annum as amount "ordinarily required."

‡ Made up of loss on sale of steamers, £51,572; depreciation of tugs, &c., £3,269; directors' fees, £6,124.

The P. & O. group, obviously, is not covering its normal depreciation charges by current earnings. Pending a revival in world trade and shipping, much depends upon the strength of its internal financial position. The balance-sheet figures are fairly reassuring on this point. A combined statement for the whole group, including the parent and subsidiaries, shows that steamers originally costing £86,785,837 have been written down to £32,876,602, whereas their value would be £43,696,883 if depreciation were allowed at 5 per cent. per annum. Obviously, the price at which the ships were originally purchased is a material factor, but the group appears to have avoided excessive acquisitions during the post-armistice period of inflated values. The report does not give the average age of the fleets, but the following figures, based on the current edition of "Fairplay's Annual," suggest twelve years as a working figure:—

FLEETS OF P. & O. AND CHIEF SUBSIDIARIES.

	Gross Average			Gross Average	
	Tons.	Age. Years.		Tons.	Age. Years.
P. & O.	517,804*	11	Orient Steam	126,744	7½
British India ...	744,560	7	Khedivial Mail	17,480	18
New Zealand			General Steam	47,107	10½
Shipping	166,516	10½	Eastern and		
Union Steamship			Australian	17,931	19
of N. Zealand	232,370	14	Australasian		
Hain Steamship	200,908	11½	United	26,162	9½
			Total	2,097,582†	12

* Company's report gives total 485,595 tons, but mentions disposal of seven ships, for breaking-up purposes.

† Total fleets of entire group comprise 354 steamers of 2,217,724 tons.

On the whole, the group could probably afford a period of reduced depreciation allowances, if trading conditions remained adverse, without risk of inflated values, though ability to finance fresh tonnage construction out of earnings might be temporarily affected. The current financial position is eminently satisfactory, the group as a whole holding £16,150,909 of floating assets, against £12,626,464 of current liabilities. The £1 units of deferred stock are quoted at 15s. 6d., against a high point for 1932 of 25s.

LONDON NEW ISSUE PRICES.

This table will be found on page 1047.

(Continued from page 1039.)

(analysed on page 1038), created a good impression, but the stock was marked lower owing to the absence of normal earnings for depreciation. Bank shares failed fully to recover after an easier tendency at the outset, and the trend of insurance shares was downward.

The rubber share market again suffered from pronounced lack of interest, prices being a shade lower when changed. Tea shares were similarly featureless, the semi-official announcement of a complete agreement, in principle, on output restriction, failing to prevent a fall in tea prices at the auctions. The denunciation of the Anglo-Persian's concession (discussed on pages 1019 and 1044), came as a bolt from the blue in the oil market. The decline in the shares was accentuated after the company's decision to pay no interim dividend.

Business in mining shares was restricted. West Africans improved, without again reaching boiling point. West Australian issues were firm, interest centring chiefly in Lake View and Star. Kaffirs, however, remained quiet, Paris, preoccupied with the monthly settlement, giving limited support. Apart from a little speculative buying, stimulated by the opening of the Copper Conference, base metal shares attracted limited attention, holders lacking confidence in the stability of metal prices.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Towards the end of last week, after the Thanksgiving Holiday, the markets became firmer, but quiet. This week opened under dull conditions, prices being maintained chiefly owing to the absence of sufficient dealings to test them. On Wednesday, however, the number of shares transacted rose from 500,000 to 1,100,000, and the market became heavy once more. The Anglo-American Debt position was not an active market factor, except by way of the general realisation that the attitude of Congress was not a bull point for trade, domestic or international. More popular interest was given to the possibility of a modification of Prohibition. It was understood that Mr. Garner, the Vice-President-Elect and Speaker of the present House of Representatives, would persist with his

decision to submit a resolution for the repeal of the Eighteenth Amendment to the House at next week's meeting, and that no more than 75 Republican votes would be necessary, if a solid Democratic vote were secured, to give the necessary two-thirds majority. On the other hand, the probable veto by President Hoover of a Beer Bill would upset the plans of the Democratic Party for balancing the Budget by means of an excise duty. This, in turn, might necessitate a March session of the new Congress, which Mr. Roosevelt is understood to be anxious to avoid. The general trade situation is, at least, no worse. Railroad car loadings for the week ended November 19th showed an increase of 88,000 as compared with those of the previous week, and were only 11 per cent. below those of the corresponding week of 1931, thanks mainly to increased carriage of coal. Steel output has increased to about 17 per cent. of capacity, but orders are not coming in as well as was expected, although automobile manufacturers are reported to be accelerating production, especially of the lower-priced cars, in anticipation of improved demand over the turn of the year. Electrical power production is running about 8 per cent. below last year's level.

PARIS.

The Bourse opened heavy and prices tended to fall in all sections, French conversion stock being particularly heavy. Later in the week an improvement in the value of sterling induced repurchases by previous sellers. The improvement also led to a welcome cessation of bear pressure. On the Coudisse diamond issues were steady. Gold-mining shares lacked a definite trend, although Sub Nigel were an exception, rising 11 points to 544.

	Nov. 24, 1932.	Nov. 28, 1932.	Dec. 1, 1932.		Nov. 24, 1932.	Nov. 28, 1932.	Dec. 1, 1932.

BERLIN.

The Bourse opened briskly in anticipation of General von Schleicher's nomination to the Chancellorship. Prices, both of shares and fixed-interest securities, moved sharply upwards; the fresh fall in sterling having no effect. A reaction set in on Tuesday, however, and the previous day's gains were in many cases wiped out. The decline caused keen disappointment. Towards the close the tone became more favourable on renewed hopes of a satisfactory solution of the political crisis. Fixed-interest securities, however, remained almost completely neglected. "Heavy" industry shares, however, were fairly well supported, Gelsenkirchen, Harpner, Siemens, Steel Trust and Schuckert all advancing.

	Nov. 24, 1932.	Nov. 28, 1932.	Dec. 1, 1932.		Nov. 24, 1932.	Nov. 28, 1932.	Dec. 1, 1932.

AMSTERDAM.

Depressed conditions prevailed under the influence of the fall in sterling, though selling pressure remained restricted. The tone remained listless until shortly before the close, when a small recovery set in, in sympathy with the improvement of the pound. Rubber shares remained dull, despite the decrease in London stocks, and sugar shares were inactive.

	Nov. 24, 1932.	Nov. 28, 1932.	Dec. 1, 1932.		Nov. 24, 1932.	Nov. 28, 1932.	Dec. 1, 1932.

CANADA.

During the latter half of October prices trended steadily downward with a very small volume of trading, but many stocks subsequently regained part of the lost ground. A helpful factor was the result of the American Presidential election, which opened up the prospect of a termination of the Prohibitionist regime. The stocks of Canadian distillery companies (most of which have large stocks of whisky) rose sharply. The upward movement in New York also had sympathetic reactions. Simultaneously, the Canadian Government's move towards a modest dose of currency inflation was construed as a bullish factor. The bond market has been very steady, Government bonds having risen fractionally, and provincial and municipal securities held their own. The Bureau of Statistics' "Investors' Index" for all common stocks was 48.0 early in November, against 50.1 four weeks earlier.

OTHER CENTRES.

The minor European Bourses were all affected by the fall in sterling. At Frankfurt prices moved sharply upwards at the opening, but fell away later in the week. Vienna remained dull and weak, but at Budapest a steadier tone prevailed. Brussels, after a weak opening, revived on the recovery of sterling. Stockholm opened strong, but finished dull.

INVESTMENT NOTES.

Gilt-edged and the American Debt.—Last week's recession in gilt-edged securities attained unwelcome impetus at the beginning of this week. The American debt crisis came, inopportunely, when the market was coping with technical difficulties due to the "over-staggering" of 3 per cent. Conversion Loan and the desire of some institutions to lighten their portfolios of long-dated securities. On Tuesday, however, a better tendency started, and recovery was even more rapid than decline, as the following table suggests:—

Issue.	Highest Price on Nov. 2, 1932.	Mon., Nov. 21.	Tues., Nov. 22.	Mon., Nov. 28.	Wed., Nov. 30.	Thurs., Dec. 1.
Consols 2½%	78½	71½	74	72½	74½	74½
Locals 3%	91½	83½	86½	85	87½	87½
Conversion 3½%	102½	96½	97½	97	98½	98½
War 3½%	102	96½	97½	96½	98	98
Consols 4%	110½	105	106½	105	106½	106½

Victory 4%	110½	105	106½	105	107	107½

The amount of stock which changed hands, though considerable, was by no means proportionate to the movements of prices, dealers marking numerous issues down and up partly on "sentiment." The City of London, by instinct and tradition, favours the payment of the December instalment of the American debt as a matter of principle, and is admittedly more concerned with the honouring of a British obligation than with its economic consequences. The beginning of the market recovery coincided with the circulation of unofficial, but obviously not uninspired, reports that payment, if insisted upon, would assuredly be made. Bear closing quickly followed. Significantly enough, while Wednesday's upward movement was accompanied by a recovery in the sterling-dollar exchange, the revival began, on Tuesday, when the exchange was still falling. The downward phase had no character of a "flight from fixed interest" due to fears of currency inflation, for the trend of ordinary ("real value") shares was adverse throughout. The market, clearly, has not seen the end of the disturbances which brought the July-October rise of fixed-interest values sharply to an end last month. The critical December 1st date, however, with its complex payments and repayments, has been safely passed, and, apart from further debt alarms and excursions, the basic influences making for firm gilt-edged markets, which we discussed last week, may be expected to regain their ascendancy.

London Transport Bill—Revised Estimates.—Sir William McLintock's revised financial estimates, in connection with the London Passenger Transport Bill, have been published this week.* The net revenue is put at £5,798,602. This figure does not take account of the decline in London transport earnings owing to depression, since it is based on average annual earnings for three years to December, 1930 (March 31, 1931, in the case of local authorities). On the other hand, it does not reflect any

* Cmd. 4204. Id. H.M. Stationery Office.

anticipated economies from unification. The interest requirements of the prior stocks are set out as follows:—

Estimated net revenue	£ 5,798,602
Interest to Local Authorities, and Tramway Debt	
Liquidation	59,613
Interest on transport stocks:	
On £24,379,372 4½% "A" stock	1,097,072
On £16,263,950 5% "A" stock	813,197
On £12,583,000 4½% "T.F.A." stock	566,235
On £9,554,000 4½% "L.A." stock	429,930
On £24,250,708 5% "B" stock	1,212,535
Balance for "C" stock and reserve fund	1,620,020

During the first two years interest on the "C" stock at 5 per cent. will absorb £1,216,951, leaving £403,069 for the reserve fund. From the third to the tenth year, interest on the "C" stock, at the standard rate of 5½ per cent., will require £1,338,646. On the basis of the estimated net revenue, the stock will receive a further ½ per cent. (making 6 per cent. in all) as a maximum out of its moiety of the balance of £281,374. This additional interest will require £121,695, leaving £159,679 for reserve fund. A *pro forma* balance sheet shows that the London Passenger Transport Board will have £111,370,057 of capital stock (including £24,339,027 of "C" stock). On the basis of the latest reports of the undertakings to be absorbed, fixed assets will have a value of £103,385,591, and net working capital, including stocks of stores and materials will be £10,507,361. The estimate of net revenue is obviously based on a three-years' average giving a higher figure than is being earned at present. In fairness to potential "C" stockholders the authorities should give an additional figure, showing the revenue which would actually have been available on the basis of the results for 1931, with some indication of probable results for 1932.

Stewarts and Lloyds' New Undertaking.—On page 1024 of this issue we set out the details of a scheme made public this week, for the erection at Corby, near Kettering, for a large-scale basic Bessemer steel plant for Stewarts and Lloyds, Limited. The scheme is being financed, at the outset, under the auspices of the Bankers' Industrial Development Company, by a group of large banks, who have agreed to provide £3,300,000 for its all-in costs. There is no intention to make an immediate public issue, or to approach the market at all until the completion of the works in two years' time. Unofficially, it is understood that Stewarts and Lloyds are desirous, if possible, of avoiding an eventual debenture issue. In view of the melancholy examples of the dangers of heavy iron and steel prior charges provided by some other companies during the last ten years, such an attitude is readily comprehensible. At present the company, with no debentures, has £1,700,000 of first, second and third preference shares ranking in front of £4,626,742 of £1 deferred shares and £625 of liaison deferred £1 shares, the last-named having special rights in connection with a mutual profit-sharing arrangement with Tube Investments Limited. In front of the preference shares are guarantees of £300,000 6 per cent. first cumulative preference shares of Stewarts and Lloyds of South Africa, Limited, and of dividends of subsidiaries aggregat-

ing £20,880 per annum. At present the company could not float a large deferred share issue at par. Although it earned 2.4 per cent. on its deferred capital last year (against 6.8 per cent. in 1930 and 12.1 per cent. in 1929), the directors allocated practically the whole to special reserve and passed the deferred dividend. The shares now stand at 14s. 9d., after being as low as 10s. 3d. earlier this year. In no year before 1931, however, were they quoted below 22s., and even a moderate trade revival, before the completion of the new works, might enable the undertaking to be permanently financed by an issue at a substantial premium.

More "Good Recoveries."—In the *Economist* of July 9th last we gave a list of companies whose latest results were in striking contrast to the general downward trend of industrial earnings. In the table below, we set out the figures of another batch of companies showing "good recoveries." Of the thirteen companies, six have passed on part of the fruits of recovery to ordinary shareholders. In the aggregate a net loss of £859,679 has been converted into a net profit of £1,194,824:—

Name of Company (and ord. share denomination),	Net Profit, 1930-31.	Ord. Div.	Net Profit, 1931-32.	Ord. Div.	Price, June 30, 1932.	Price, Nov. 30, 1932.	Present Yield.

* Tax free.

Six of the companies are engaged in one branch or another of the textile trades, to which the departure from gold appears to have brought tangible benefit. British Celanese, however, is not yet within sight of the payment of an ordinary dividend. Leach's Argentine Estates is one of several land companies whose results have recently shown a moderate improvement, while Standard Motor is conspicuous in an industry which has shown gratifying powers of resistance to the decline in world purchasing power. The success of the Standard "Nine" model appears to have brought a welcome accession of earning power. Sudan Plantations has benefited from the slightly improved cotton situation and from exceptionally good crops. Our table shows that the shares of all these companies have risen substantially during the last few months.

The Anglo-Persian Oil Company.—The oil share market was unpleasantly surprised to learn this week that the Persian Government had annulled the D'Arcy concession of the Anglo-Persian Oil Company. As the directors simultaneously decided to omit the interim dividend, the news caused a sharp setback in the ordinary shares of the company from 46s. to 37s. 6d. The statement by the Persian Government that it was willing to negotiate a fresh concession on terms was not regarded as reassuring. D'Arcy in 1901 for 60 years, contained no provision for the first of two articles on the main factors in the dispute, which appears on page 1019. One grievance of the Persian Government, unfortunately, is beyond the company's power to remedy. The departure of Great Britain from the gold standard has not only involved the Persian Government in heavy losses on its sterling balances in London, but has diminished the budgetary value of the Anglo-Persian's royalty. This royalty is based not on the gross selling value of the company's oil, but on the net profits of the producing subsidiary company. These are neces-

sarily subject to considerable fluctuation, especially if the parent company voluntarily seeks to restrict its production. The dissatisfaction of the Persian Government with this basis of royalty payments was intensified by the discovery that the Iraq Government had been able to secure from the Iraq Petroleum Company a minimum annual payment by way of royalty even though the Iraq oilfields were not being developed. The issue is complicated by the fact that the British Government holds 7½ millions out of the company's 13,425,000 ordinary shares of £1. It is to be hoped that a compromise will quickly be reached which will avoid any threat of diplomatic friction. The following table gives the trading profits of the company and the royalties paid to the Persian Government as shown in the profit-and-loss accounts:—

	Trading Profit.	Royalty.	Total Net Profits after Tax and Depreciation, but before Deb. Interest.
1929	£ 7,355,417	1,161,589	5,034,014
1930	6,542,189	1,014,595	3,842,837
1931	3,211,661	134,750	1,988,520

In 1931 the company produced 5½ million tons. A royalty payment of £134,750 on this amount certainly cannot be regarded as extravagantly high. Fortunately the company is a cheap producer of crude oil, and even if it feels compelled to compromise with the Persian Government, it should be able to afford a fixed minimum royalty without serious discomfort to the shareholders.

Tate and Lyle.—The report and accounts for the year ended September 30, 1932, confirm the good impression created by the preliminary figures. The company is the leading sugar refining business in Great Britain, its principal works being in Liverpool and Silvertown, London. Its trading profits have shown a steady expansion, except in 1930, when stocks of sugar had to be heavily written down to meet current market values. In 1931 the trading profits recovered to a figure which represented the normal growth, disregarding the abnormal previous year, and for the year to September 30, 1932, a further increase was shown:—

	1930.	1931.	1932.
Trading profit	£ 213,949	905,372	1,010,366
Dividend and rent received	179,503	94,582	72,386
Total	393,452	999,954	1,082,752
Fees	7,514	7,222	7,722
Depreciation reserve	Nil	100,000	100,000
Debenture interest	46,354	91,250	91,250
Earned for dividends	339,584	801,482	883,780
Gross preference dividend	71,500	71,500	71,500
Earned for ordinary dividend	268,084	729,982	812,280
Ordinary shares—Earned %	7.9	24.1	26.5
Paid { Interim (%)	4	4	4
Final (%)	6	9 1/2	12
To investment reserve	Nil	70,000	55,000
To general reserve	26,651*	100,000	200,000
To dividend reserve	Dr. 80,000	80,000	10,000
Carry forward	40,850	61,832	65,112

* Debenture issue expenses were written off against general reserve in 1930.

The company has maintained a conservative financial policy, £515,000 having been applied to investment, dividend and general reserves in the last two years, apart from £200,000 placed to depreciation reserve. The balance sheet is strong, current assets (excluding stocks) exceeding current liabilities by £1,064,523. The stocks as valued by the directors amounted to £1,797,577, against £1,465,829 in the previous year. If fixed assets of £6,362,762 be added and debenture and preference capital be deducted, the net break-up value of the ordinary shares is, on the balance sheet showing, 37s. 6d. On an earnings basis the ordinary shares appear to be conservatively valued at their present market price of 58s., at which the dividend yield is £5 10s. 4d. per cent. The

chairman, on December 6th, will doubtless discuss the sugar outlook. The company's prosperity depends largely on the success with which it buys its raw sugar supplies. Sugar prices have risen since June, but this does not imply that the company has written up its inventories.

Pease and Partners Reorganisation.—The committee set up under a moratorium scheme last year to advise on the finances of this ironstone and colliery undertaking has now recommended an entire reorganisation. The scheme provides for the reduction of the capital from £3,000,000 to £1,500,000 by cancelling 10s. of each £1 share. The shares are to be divided into 1s. units, and nine out of each ten surrendered. The remaining units will then be re-consolidated into 10s. shares. The 5 per cent. debenture stockholders are to surrender 30 per cent. of their holdings for cancellation and are to receive in exchange £40 in fully-paid shares for every £30 of stock surrendered. Arrears of interest are to be cancelled and no further interest will be payable until March, 1938, when a 5 per cent. non-cumulative interest will be payable out of yearly profits. Sinking fund payments are waived to the date of the scheme, but till March 31, 1938, two-thirds of the available profits are to be applied in redeeming the 5 per cent. stock and a bank debenture. After March, 1938, 2 per cent. of the stock and 2 per cent. of the bank debenture is to be redeemed each year, irrespective of profits. Payment of interest on the 4 per cent. irredeemable debenture stock is to be continued. Unsecured creditors are asked to waive accrued interest and are to receive credit notes of a nominal value of 70 per cent. and fully-paid shares of a nominal value of 30 per cent. of the amounts owing. The notes will bear no interest until March, 1938, but thereafter will carry 4 per cent. non-cumulative, payable after payments have been made to the 5 per cent. stockholders. Lenders of the Trade Facilities Loan and a secured loan from the bankers will look to their collateral security for payment of interest and principal until 1942. Interest not so paid will be satisfied by the issue of further 5 per cent. stock. The company is authorised under the scheme to issue new capital and borrow on specific mortgages. The scheme is undoubtedly drastic, but inevitable in view of the company's position. No dividend has been paid since 1924-25, and on March 31st last there was a deficit at profit and loss of £1,714,139. The substitution of a largely nominal ordinary capital for heavy prior charges will relieve the company of an insupportable burden during the period of reconstruction.

A Dunlop Alliance.—An important merger of elastic thread interests has been brought about by the formation of a new company, to be known as the Dunlop Revere Thread Company. The new organisation will be responsible for the manufacture and sale of the standard

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd."

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

products of Dunlop Rubber and United States Rubber, the two large interests concerned. It will also develop new lines, including a thread produced directly from the "latex" of the rubber tree. Hitherto all rubber thread has been square and cut from fine sheets of milled rubber. The new round thread offers considerable material advantages in the manufacture of corsets, garters, suspenders, braces, abdominal belts, etc. Another process developed by the United States company is concerned with the production of elastic yarns, embodying the use of cotton, silk and other textile fibres, which can be knitted or woven into fabrics of all types—though the new company will leave the manufacture of fabrics and completed manufactures to the weaving and knitting industries. In America it is understood that a significant part of the corset trade has adopted the new material, and its application to the dressmaking trades may follow.

Swedish Match Capital Reorganisation.—The last legal stage in the salvaging of this company from the Kreuger wreck was accomplished in Stockholm this week, when shareholders accepted a proposal to reduce the share capital to 90 million Swedish kronor, the nominal value of each share to be Kr. 25, against Kr. 100. The number of shares is not changed, the "A" series amounting to 900,000 shares and the "B" series to 2,700,000. The meeting was called to consider the administrators' report. The moratorium which was granted to the company after the Kreuger collapse has now expired, and a renewal is not being sought. British shareholders are to nominate two of the twelve members of the control board which is to administer the company's profits. The agreement reached with the creditors stipulates that the company is to pay 6 per cent. interest on its debts, with amortisation dependent on yearly earnings. It was stated at the meeting that interest on the bond loan of 1931 would soon be paid. It is anticipated that profits for a considerable time will be absorbed by the payment of debts, but the creditors have agreed that some small fraction of profits shall be set aside for dividend purposes when each of the creditor's claims has been reduced by 80 per cent.

Consolidated Gold Fields.—Our mining correspondent writes:—Twelve months ago this company's incursion into West African mining appeared unlikely to yield satisfactory results, while the outcome of its participation in the West Australian gold industry seemed equally doubtful. Subsequently, good progress has been made in both fields, and at the moment these interests promise to be among the company's most successful ventures. Its most profitable Transvaal subsidiary—the Sub Nigel—is giving increasingly satisfactory results, but an improvement in world conditions is a necessary condition of a better return from the company's base metal and miscellaneous interests. The results of the past three years are summarised below:—

	1930.	Year ended June 1931.	1932.
Investments	4,290,610	3,826,520	3,254,660
Shares in subsidiaries	1,147,590	1,118,640	1,475,590
Properties and ventures	399,090	477,490	523,020
Loans at short call	338,130	17,400	33,060
Debtors	263,090	177,440	295,650
Cash advances, &c.	672,450	1,234,390	1,423,640
Cash	376,220	150,090	210,030
Creditors	200,950	466,250	383,850
Net profit*	330,890	149,790	136,380
Dividends, preference*	127,740	146,460	133,640
Dividend, ordinary, per cent.*	7½	Nil	Nil
Carried forward*	55,780	59,110	61,860

* Gold Fields Company. Other figures relate to the New Consolidated Gold Fields.

Last year's gross profit of the operating company, the New Consolidated Gold Fields, was £448,560, as against £368,140 in 1930-31. Substantial depreciation has again to be faced, but the sum required is no more than £278,850, as against £718,280—the bulk of which was met out of reserve. The payments on the company's preference issues are sufficient to cover the service of the

parent company's preference capital, but once again there is no dividend on the ordinary. The financial position of the New Consolidated Gold Fields has been considerably strengthened. The surplus of cash assets now exceeds £150,000. Since the date of the balance sheet "the value of the company's investments has appreciated very considerably." There is a disposition on the market to expect a distribution on Gold Fields ordinary as a result of the current year's operations.

Wiluna Gold Corporation.—A casual glance at the company's accounts—which are made up to March 31st last—may convey an erroneous impression of the real position. A net loss of £37,870 is indicated. This is due mainly to the payment of interest on the 10 per cent. notes, and raises the debit balance to £61,560. The company, however, operates through an Australian-registered undertaking, and as the latter paid no dividends, the income of the corporation consisted merely of "sundries." In fact, the monthly operating surpluses were of very modest dimensions until the beginning of 1932, after which—partly as the outcome of a change in book-keeping methods—a noteworthy expansion occurred. In place of the usual statistics relating to the financial period, the manager gives a tabulation of the results from the commencement of crushing, in March, 1931, to the end of that year, the figures being contrasted with those for the eight months ended August last. In the one case, revenue was £377,200; in the other, £480,000, the corresponding surpluses being £105,000 and £215,700. An appreciable improvement is indicated on the percentage of extraction, but the chief factor in the position has been the expansion in the gold exchange premiums. Shares in and advances to the Wiluna Gold Mines figure in the balance sheet at £1,185,100, and cash at £73,460. Against the Government-guaranteed note issue of £300,000, the last-named concern has repaid £25,000 and will clear off a further £50,000 in January next. Possibly the decision as regards the payment of dividends on the shares of the Wiluna Gold Corporation will depend largely upon the policy followed in regard to the liquidation of the balance of the subsidiary's notes. As the corporation's notes are convertible into shares at par, it may be taken for granted that holders will exercise their rights. In that case the issued capital will stand at £1,030,000. The current price of the shares is around 45s., and of the notes, £185. On the mining side a feature is the increase in the ore reserves. At August 31st the tonnage was estimated at 1,257,000, an expansion of 478,000 tons upon the computation of August 1, 1931. The average value of 38s. 4d. (gold) is practically the same as before. Satisfactory exposures have been made on a third ore body named the No. 2 Westlode, and indications have been obtained of the existence of lode matter at a considerable distance north of the main workings. In view of these discoveries the management has taken the precaution of securing leases all round the original area. Work in connection with the extension of the treatment plant is making good progress, and by the middle of 1933 the originally projected tonnage of 40,000 tons monthly should be going through the mill. The outlook, consequently, promises still larger profits, subject to the rate of exchange. Given a continuance of favourable developments, the flotation of one or more subsidiaries may be expected.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Scotland, English, Scottish and Australian Bank, Charterhouse Investment Trust, Beaver Trust, and Richard Thomas and Company. At the meeting of the English, Scottish and Australian Bank Mr Andrew Williamson pointed out that total Australian savings bank deposits had shrunk from over £220 millions in December, 1929, to approximately £193,500,000, but by June, 1932, the figure had recovered by £4,500,000. At the annual meeting of Richard Thomas and Company Sir W. Firth said that he doubted whether the steel plant of

the world had been working much above 80 per cent. of capacity during the past twelve months. It was conceivable that the only way to avoid losses would be by entering into international arrangements between producing countries and allocating to each a percentage of world demand. Presiding at the annual meeting of the Charterhouse Investment Trust, Sir Arthur Marshall referred to plans regarding the company's holding in the Monument Property Trust, whose preference and ordinary shares, of a nominal value of £194,190 stood in its books at £172,311.

CAPITAL ISSUES.

THE issue market remains quiet. This week's public offers included a 7 per cent. preference share issue by Oswald Tillotson, Limited, a progressive business, which holds the selling rights of Associated Equipment Company vehicles in the North of England, and has interests in three goods transport companies. Earnings afford satisfactory cover for a high-yielding security. Bowater's Mersey Paper Mills, Limited, which is only just completing its first year of full normal production, has contracted for its entire newsprint output until the end of 1935. The preference shares rank after £650,000 of 6½ per cent. first mortgage debenture stock, and, from an income point of view, appear to place a full valuation on the company's future prospects. The week's Stock Exchange "placings" included the inevitable greyhound issue, a 5 per cent. mortgage debenture stock by a brewery, to pay off bank loans, and a London "introduction" of the shares of a Canadian gold mining enterprise.

PUBLIC OFFERS.

Oswald Tillotson.—Issue at par of 100,000 7 per cent. cumulative preference shares of £1 each. The business was established in 1910 and transferred to the present company in 1929. The company has the selling rights in nine northern counties of vehicles manufactured by the Associated Equipment Company. Combined adjusted profits for the past three years were £25,498 in 1929; £30,513 in 1930; £26,202 in 1931. A dividend of 10 per cent. was paid in respect of the years mentioned.

Bowater's Mersey Paper Mills.—Issue of 500,000 5½ per cent. cumulative preference shares of £1 each at par by London

and Yorkshire Trust. The company was formed in 1929 to manufacture newsprint paper. Approximately the whole of the company's present output has been disposed of under contract until the end of 1935. The directors state that the profits for the year to December 31, which is the first year of full normal production, will exceed £95,000 before debenture interest. On this basis there will be a balance of £32,750 to cover the dividend on the present issue. Profit at full capacity should amount to £180,000 per annum.

Stock Exchange "Introductions."

Ashley Gold Mining.—Authorised capital, £3,000,000 in shares of \$1 each. Of these, 2,516,672 are fully paid, or credited as fully paid. The company was formed in Canada in January, 1931, to carry on mining developments, explorations, etc. At the present stage it is impossible to make any accurate estimate of profits. There is no loan capital.

Wells and Winch.—An issue will be made of £150,000 (part of an authorised issue of £200,000) 5 per cent. mortgage debenture stock. The stock will be secured under terms of a trust deed in favour of the Royal Exchange Assurance and will be redeemed by means of a cumulative sinking fund of 17 per cent., calculated to redeem the issue by December, 1962. Interest on the new stock will be paid half-yearly. The object of the issue is to pay off bankers' loans. Net profits for the three years from 1930 are £50,837, £46,880, £52,020. Messrs Rowe, Swann and Company have agreed, for a fee of 1 per cent. of the nominal amount, to place the whole of the issue at 98 per cent.

Albion Greyhounds.—Total issued capital is £57,500, of which £38,500 is in ordinary shares of 5s., and £19,000 in deferred shares of 1s. The company was formed in 1927 and was among the first to be licensed by the National Greyhound Club. Net profit, after deducting the usual fees, was £51,033 in 1930-31, £71,475 for 1931-32, and £57,084 for the seven months to December last.

RESULTS OF ISSUES.

Oswald Tillotson.—The lists for the 100,000 seven per cent. cumulative preference share issue were closed at 10.16 on Tuesday owing to over-subscription.

COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND.

ANNUAL GENERAL COURT OF PROPRIETORS.

SUCCESSFUL RESULTS—DIVIDEND MAINTAINED.

STRONG LIQUID POSITION.

WORLD ECONOMIC AND TRADE CONDITIONS.

DUKE OF BUCCLEUCH'S SPEECH.

The Annual General Court of Proprietors of the Royal Bank of Scotland was held at Edinburgh on Wednesday, 30th ultimo, His Grace the Duke of Buccleuch, K.T., Governor of the Bank, presiding.

In moving the adoption of the report, His Grace said:—

I presume it will be your pleasure that the annual report and balance sheet, which have now been in your hands for some days, shall be taken as read. The directors are pleased, in a year of exceptional difficulty, to submit a statement of so satisfactory a nature.

INCREASED DEPOSITS.

The deposits are up by nearly six and a half million pounds—the amount as appearing in the balance sheet being £55,898,000. A certain increase in deposits is believed to be common to all banks at present, and is due to several obvious causes. With such high figures there is, of course, a tendency to fluctuation from time to time. The scheme for the encouragement of small depositors continues to grow in popularity.

Notes in circulation at £2,780,000 are practically the same as last year, whilst drafts outstanding and acceptances show increases.

STRONG LIQUID POSITION: INVESTMENTS.

On the other side of the balance sheet there is marked evidence under all the usual heads of the highly liquid condition of the bank. In view of the rise in deposits it is not surprising to find an increase of £5,800,000 in British Government securities alone—the total held being nearly £21,000,000. At this time last year we had to record quite an abnormal fall in the prices of British Government securities following upon the serious political and financial crisis; but, thanks to the strong internal position of the bank, we were able to state that all the bank's investments were valued at or under the low prices then ruling. It is scarcely necessary to remind you of the marked change in the position since that time owing, in a large measure, to the various conversion schemes which have been carried through, and especially that stupendous operation the conversion of the 5 per cent. War Loan. A further factor is, of course, the increasing weight of unemployed money. The whole basis of British Government securities as regards yield has been altered, and there has been a remarkable rise in prices from which we have necessarily benefited.

BANKING ADVANCES: AMPLE RESOURCES FOR TRADE.

It is interesting to note that, notwithstanding the inactivity in many trades, our banking advances on cash credit and current accounts at £21,468,000 remain at about the same figure as last year. In view of our increased resources it is manifest that we are in a position to make advances on a much increased scale to our trading and other borrowing friends, and we are looking forward to the time when, owing to recovery in conditions, fresh proposals for accommodation on legitimate banking lines will be submitted to us in substantial volume.

BILLS DISCOUNTED: TREASURY BILLS.

Owing to existing conditions, and especially to the falling off in foreign trade, there is still a marked dearth of bills of exchange, and our portfolio of commercial bills discounted shows a slight reduction. On the other hand, our increased holding of Treasury bills amounting to £2,795,000 contributes a further strong element of liquidity to our assets.

PROFITS.

Looking now at the profit and loss account, we have to note that the profit shown for the year records a reduction of over £6,000 compared with the previous year. The year has been one of quiet and unexampled character as regards rates—embracing a period of extremely high rates in the earlier months and quite a low level

in the later period. This latter condition continues. In all the circumstances the directors think it a matter for satisfaction that the profits of the year have been so little affected—keeping in view that, according to our usual custom, before these are arrived at, all bad and doubtful debts have been fully and carefully provided for.

APPROPRIATIONS.

The directors have, accordingly, been pleased to find themselves in the position to recommend a dividend for the half-year, payable at Christmas, at the same rate as formerly—17 per cent. per annum—and to make the usual appropriations to bank buildings and heritable property and pension reserve fund. After making these appropriations there is a surplus of £72,790, which, following the precedent of last year, the directors now propose should be carried to inner reserves against contingencies. The published rest of reserve of the bank remains at £3,780,928, being slightly more than the paid-up capital. This, it is submitted, is an impressive figure, and there does not seem to be any call to add to it on this occasion. The directors rather take the view that in these difficult times, when it is impossible to avoid losses, it is the better policy to supplement the bank's contingency funds, upon which they are able to draw when exceptional provision falls to be made. The general business of the bank and of its various constituents, including its associate Williams Deacon's Bank, Limited, has been well maintained during the year.

TRADE IN SCOTLAND: FARMING.

The greatly hoped-for general recovery of trade is still a thing of the future, although there are not lacking evidences of improvement in different industries, and with returning confidence a better feeling prevails. A few very brief observations may be offered on conditions in Scotland. Coal exports have increased and lost markets are being recovered, but quota restrictions complicate the position. Shipping and shipbuilding continue at a low ebb, and there is no substantial relief as yet for the great heavy industries. The manufacture of hosiery is better, and there are encouraging reports of paint, colours, etc., as well as of certain special branches of chemical manufacture. In certain sections of textiles there is an increased turnover and the outlook is favourable. Turning to one of the newer trades—on its retail side—it is satisfactory to note the increased sales of motor cars—due, no doubt, in some measure to the skill and enterprise of manufacturers in supplying the types of car required at exceptionally cheap figures. A number of other examples of improvement might be given, but they only provide an indication of favourable tendencies—some of them due to the measures adopted by the National Government. It may be noted that in a number of trades stocks are quickly reflect itself in increased orders for the manufacturer. As something new there has been a development of the canning industry. Our great industry in Scotland—farming—continues in a depressed condition, and there is no department of our economic life where alleviation is more urgently called for. Meanwhile the recent restrictions on imported beef and mutton are making themselves felt in a much-needed increase of prices, whilst under the Government's quota scheme growers of wheat can look forward to better results. Much more, however, remains to be done towards restoring agriculture to a satisfactory profit-earning basis.

THE WORLD POSITION: RESTRICTIONS WHICH ARE STIFLING TRADE. Taking the larger view, it is obvious that no general return of profitable trading conditions can be looked for until a great change has taken place in the state of the world at large. The situation is dominated by two vital issues affecting the relations of nation to nation, namely, war debts and reparations. All over Europe, as well as in other parts of the world, there is a highly organised system of barriers, exchange controls, import monopolies, bounties, licences, quotas, prohibitions, and numerous other devices, which are

paralysing the normal interchange of commodities. We have it on the highest authority that "none of us liveth to himself," and it has been demonstrated as equally true that no nation can live to itself. Under modern conditions, more than ever before, all the nations are bound together and prosperity cannot be isolated in one area whilst depression and poverty rule in another. What is urgently called for is the operation of forces—strong moral and economic forces—which will cut through all the jungle of restrictions which are stifling the trade of the world, and so set free the natural flow of commerce between peoples.

WAR DEBTS: THE WORLD ECONOMIC CONFERENCE.

The United States of America need only to be mentioned in this connection. That country does not appear to have gained in any proper sense by the payments she has received to account of her war debt claims, and, notwithstanding all her great stores of gold, her trade is in no better case than that of some of her stricken debtors. Her answer to the request of Great Britain and other debtor nations for an extension of the moratorium is a refusal, and Great Britain must now address herself to the prospect of having to make a further payment on December 15th. This can be accomplished, but only by adding to the sacrifices which this country has already so abundantly made, without even the satisfaction of knowing that the United States is herself to benefit. In the form in which payment is likely to be made it would seem that it can only result in further contracting American trade and intensifying world depression. The repercussions from this attitude of the United States must affect the prospects of the World Economic Conference which is to be held in London with a view to arriving at some solution of the great problems to which I have referred. Substantial progress was made at Lausanne, although its fruition must be affected by the latest decision from Washington. There are many difficulties and complications, but we must all earnestly desire that in the long run this great assembly upon the success of which so much that is vital depends, will bring permanent relief from those ills which are bearing so heavily upon the economic life of the world. Meanwhile, hopes are being built upon the work accomplished by the Conference at Ottawa.

BRITAIN'S RECOVERY: HER BANKING SYSTEM.

In the meantime, so far as our own country is concerned, there is nothing for it but hard work and a constant effort to make the utmost of conditions as they are. We have only to think of the serious and critical position fourteen months ago to realise the extraordinary recovery that has already been made. In this connection it is a subject of pride that the banking system of the United Kingdom has met the strain of a period of much difficulty in a remarkable way, and has provided an example of strength and stability.

TAXATION.

It is extremely difficult at this moment to see how it is to be accomplished (and America's decision regarding her debt has added greatly to that difficulty), but there is no doubt that some remission in direct taxation would do more than almost anything else to encourage our sorely burdened traders and citizens. The case for a reduction in the income tax has been rendered all the more clamant by the sacrifices the holders of the 5 per cent. War Loan and other issues have been called upon to make on patriotic grounds when giving their loyal support to the conversion schemes.

DIRECTORATE.

The directors have to record with profound regret the death of the Right Hon. the Earl of Inchcape, whose name has occupied an honoured place in the list of extraordinary directors for the last sixteen years.

THANKS TO OFFICIALS AND STAFF.

The directors again desire to place on record their high appreciation of Sir Alexander Wright's services to the bank during the past very difficult year, and to extend their expressions of thanks to the other officials and whole staff at head office, London—the City and West End offices—Glasgow, and Dundee, and all the other branches, for their loyal and willing support.

APPROVAL OF ACCOUNTS: DIVIDEND.

With these observations, I beg to propose the report now submitted, containing a statement of the accounts and balance sheet, be approved, and that out of the profits of the year a dividend at the rate of 17 per cent. per annum for the half-year, under deduction of tax, be now declared in conformity therewith.

The report was approved, and the governor, deputy-governor, extraordinary directors and the retiring ordinary director were re-elected, and the auditors were reappointed for the ensuing year.

CHARTERHOUSE INVESTMENT TRUST, LIMITED.

SIR ARTHUR MARSHALL ON THE POSITION AND OUTLOOK.

The seventh annual general meeting of the Charterhouse Investment Trust, Limited, was held, on the 29th ultimo, at Southern House, Cannon Street, London.

Sir Arthur H. Marshall, K.B.E. (the chairman), said: Our balance carried to balance sheet, or net profit, as it might be called, is down by £13,422, of which £7,862 is represented by provision for balance of loss on sale of Associated British Maltsters shares, and is not, therefore, comparable with the previous year. Omitting this item, the fall in net profit is £5,560, or about one-half of 1 per cent. on our capital.

The balance sheet discloses a strong liquid position with cash amounting to over £300,000. I specially mentioned last year that it was our policy to be liquid and thus able to take advantage of suitable business when the time arrived. I am now more than ever convinced that this policy is the right one. Those having the best class of financial business to negotiate are naturally attracted to a finance house which is patently in a position to carry through its commitments, and we feel sure that our annual accounts are constantly studied in this light by those intending to offer us their business.

My speech last year and our report this year have dealt very fully with our holding of ordinary shares in Associated British Maltsters, Ltd. It must, of course, be a matter of the keenest disappointment to us and to those shareholders who purchased shares from us that the Maltsters company has had a poor year's trading and that no dividend has been paid on its ordinary shares. In the circumstances, I am bound to say that that company has done well to earn sufficient net profit to pay its preference dividends, and as stated in our report, we hope and believe that it will show a substantial recovery when circumstances alter.

In regard to the Monument Property Trust, Ltd., you will see that preference and ordinary shares of a nominal value of £194,190 stand in our books at £172,311, or nearly £22,000 below their par value. We have been making plans for several months which should now shortly mature, whereby we hope to deal with this holding to the advantage of your company.

In many ways the past year has been the most difficult and the most critical in our seven years' history, but I am thankful to say it has ended better than it began. I am on dangerous ground in making a prophecy, but I really think there are grounds for hoping that it will prove to have been the low point of our profit history.

At the date of the closing of your company's yearly accounts, it is true to say that there were signs of returning confidence. New issues were being carried through successfully. The courageous steps taken during the summer months by the Government in regard to the conversion of loans had been met by the wonderful response of the holders of those loans; the larger capitalist and the small investor alike played their parts. The situation had definitely improved.

At this moment we are confronted with a difficult situation in the sphere of international finance. Problems of an unprecedented nature have to be faced. I most devoutly hope that those who are engaged in the direction of international and national affairs in this and other countries will find a speedy and satisfactory means of stimulating the growth of that tender plant—confidence. (Hear, hear.) For confidence is at the very foundation of all our own and the world's trade and commerce.

Mr H. Nutcombe Hulme, M.C. (managing director), said: The new issue market would appear to be re-opening, although I think the process will be a slow one and will present some novel features. I have often said that our business is subject to the vagaries of fashion and that the public taste shifts from Government securities to industrials, and from debentures to equities, as surely as the fashion changes in ladies' hats. Apart from swift changes, there are major and slower changes, and I think one of them is going on now. The great demand since the war has been for larger and larger capital issues, which therefore made fashionable and indeed practicable the many mergers and amalgamations which have taken place. Now, I see signs of a change, and I believe the reason for it is this.

It has been found, particularly on the productive side of industry, that very large concerns are less resilient to violent fluctuations in the trading and exchange conditions of the past three years. The well-managed smaller business, on the other hand, seems to have been better able to adjust itself to the quickly changing conditions, and in the result, as a group, these smaller businesses are showing a more stable record of profits. Thus the securities of what I would term, with all respect, "the lesser lights," are making a greater appeal both to professional and private investors, and will, I think, continue to do so provided they are offered upon fair terms.

The report and accounts were unanimously adopted.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED.

POSITION IN AUSTRALIA—PREMIER'S PLAN.

IMPROVED TRADE BALANCE.

MR ANDREW WILLIAMSON'S REVIEW.

The fortieth ordinary general meeting of English, Scottish and Australian Bank, Limited, was held, on the 30th ultimo, at 5, Gracechurch Street, London, Mr Andrew Williamson (the chairman) presiding.

Mr E. M. Janion (London manager and secretary) having read the notice convening the meeting and the auditors' report,

The Chairman said that the year covered by the accounts to June 30, 1932, had again been one of great difficulty and anxiety, not only to bankers but to the whole community, and it was not too much to say that it had been the most momentous year in the history of Australia. It had, however, also been one of some real constructive achievement, and it closed in a more hopeful atmosphere than that in which it opened. It began with divided counsels with regard to the working out of the Melbourne agreement and with a critical state of affairs both politically and socially prevailing in New South Wales. It closed with harmony in plan and in practice between all the Governments.

PREMIERS' PLAN.

In April, 1931, the position had become so acute and menacing that the Commonwealth Bank found it necessary to intimate to the Loan Council that it would not continue to provide finance for the various Governments beyond a definite limit. The result of this was the appointment of a strong committee, who made a close investigation of the position and set out the steps which they considered necessary in order to restore financial equilibrium. A conference of the Federal and State leading Ministers was then summoned to consider the report of this committee. At that time the position was that the national income had fallen seriously; the inflow of borrowed money had ceased entirely; the Federal and State Governments were all living far beyond their means; and world prices for Australia's primary products had fallen alarmingly.

The result of the conference was the decision resolutely to face this dangerous situation and the adoption by the Commonwealth and all the States of drastic measures to extricate Australia from the financial morass into which it was all too obviously sinking.

Those measures were contained in a scheme which had since been known as the Premiers' Plan, the great objective of which was the progressive balancing of the Budgets of all the Governments.

A CONSTRUCTIVE ACHIEVEMENT.

The real constructive achievement of the past year was that, notwithstanding wholly unexpected and serious difficulties by the defection of the then Government of New South Wales, the largest and most populous State, the main features of the Premiers' Plan had been put into force, and, under new Governments of the Commonwealth and of New South Wales, the Governments of the whole of Australia now presented a united front in their determination to carry out this scheme of rehabilitation.

Notwithstanding the temporary breakaway of New South Wales, the combined Budget deficits were brought down to just over £20,000,000 from a previous estimate of about £40,000,000. This was substantially aided by the British Government immediately sharing with the Dominions the concessions arising out of the Hoover Moratorium, and for the current year the estimated combined deficits had been reduced to £9,000,000, assuming that the British Government again postponed the annual payments in connection with the war debt due to them. If not, the deficit for this year would be increased by about £2,500,000.

CO-OPERATION OF THE BANKS.

The banks had loyally from the first co-operated in supporting the measures of the Premiers' Plan, as being essential in the best interests of the whole community, although these measures had involved severe inroads for the present upon their normal earnings. The reduction of interest on deposit receipts and advances immediately adversely affected them, and they were also adversely affected by the heavily increased taxation and the reduced interest on Government loans. Again, the mobilisation of overseas exchange, whereby the banks agreed to give the Government prior claim on their London exchange to the extent of £36,000,000 per annum, so as to ensure the Governments having at all times sufficient money in London punctually to discharge all their obligations for loan interest,

etc., still held, and necessarily curtailed banking profits. Another aspect of the exchange question which was a source of substantial loss to all the banks last year was the sudden alteration, by the Commonwealth Bank, of the rate from £130 to £125, right in the middle of the export season, when all the trading banks had for some months been buying largely exporters' bills on London, without which the overseas trade from Australia would have been brought to a standstill, and when there had been no opportunity of covering their purchases in the ordinary way.

At a time of national emergency such as the present this was not a loss that should fall on the trading banks, who had no control over the movement of the rate of exchange, but upon the Commonwealth Bank, who, as the central reserve bank of the nation, exercised that control, and who, it had to be remembered, had no shareholders dependent upon them for dividends, and paid no taxes.

The trading banks' views in this really vital matter were submitted for consideration in the proper quarter, and he was glad to say he did not think they would again be subjected to this onerous burden. The Commonwealth Bank had undertaken to purchase from the trading banks their surplus London funds over a given datum line. In undertaking the duty of control of the exchange rate the Commonwealth Bank had made it clear that they must be free from interference by the Government of the day, and the present Government had publicly stated that the bank should be "free from both the fact and the fear of political control." This was extremely important and reassuring.

The manner in which the Commonwealth Bank had hitherto discharged the duties of the office of a central bank had been so admirable that the whole community had solid grounds for relying upon them now and in the future.

The breakaway of New South Wales and the deliberate default on its overseas obligations, even though these were rapidly assumed and discharged by the Commonwealth Government, affected disastrously for the time the credit of Australia, which was immediately apparent in the heavy fall in Australian Government stocks. The united stand, however, taken to ensure adherence by all to a sound economic policy, and the unqualified determination to discharge all obligations, caused an immediate upward movement in all Australian securities, both internal and overseas. The improvement had indeed been most striking, and, although the phenomenal successful conversion of our own War Loan and the rise in all gilt-tribute of this country's appreciation of the way in which Australia was facing her difficulties. The conversion of the £12,000,000 5½ per cent. New South Wales loan, which matured on the 1st of the present month, into a 3½ per cent. five-year Commonwealth of Australia stock at 97½ was a wonderful achievement. He trusted that Mr Bruce, while he was in London, would be able to follow up this initial success by the conversion on favourable terms of a number of the higher interest-bearing Australian stocks, which could be repaid in terms of their issue.

The Commonwealth Government fully realised that the heavy taxation necessary at present for balancing the Budgets was a tremendous burden on industry and a definite impediment to industrial recovery, and they had declared that taxation would be reduced at the earliest possible moment. By a cable of the 10th of this declaration was now being made, this beginning in reduction of taxation being made possible by a gratifying increase in revenue. Among the taxes to be reduced were:—

- (1) The land tax, which presses heavily on primary producers, and indeed on all owners of land, which was enacted in 1910 for a specific object, is no longer justifiable and should be abolished; this is to be reduced by one-third;
- (2) The level of exemption from the 10 per cent. property super-tax is to be raised; and
- (3) The sales tax is to be removed from a considerable list of articles. This action by the Government will be widely appreciated as a first instalment.

Drastic reduction in Government expenditure was absolutely necessary to render possible the full measure of relief from excessive taxation so urgently required to expedite recovery.

The Commonwealth Government were at the present time issuing in Australia at par a 3½ per cent. loan of £8,000,000 with a currency of ten years.

SAVINGS BANK DEPOSITS.

He thought it would be of interest and encouragement for them to have the half-yearly movement in the deposits in the savings banks in Australia during this anxious time. Beginning with the close of 1929 to the end of June last these were the figures:—

December 31, 1929	...	...	£220,052,000
June 30, 1930	...	...	217,552,000
December 31, 1930	...	...	196,845,000
June 30, 1931	...	...	193,407,000
December 31, 1931	...	...	194,515,000
June 30, 1932	...	...	197,926,000

They thus saw that at June 30, 1931, the total savings bank deposits had shrunk from over £220,000,000 to approximately £193,500,000, equal to over £26,500,000, but that by June 30, 1932, these had recovered by £4,500,000 and stood then at £197,926,000.

OVERSEAS TRADE.

Referring to the position of Australian overseas trade, the Chairman said that, whereas in 1930 the total amounted to £256,208,468, in 1931 it fell to £149,863,775 and in 1932 to £129,652,709. This had of itself told heavily against the earning powers of all the banks, but, so far as the reduction applied to imports, it was essential in the best interests of the community as a whole, and as it applied to exports, which in sterling had shrunk from £125,000,000 to £85,000,000, it was due to the fall in world commodity prices caused by the world depression, over which Australia had no control whatever. The exports last year, notwithstanding the discouragement from the low prices of the previous year, were greater in volume by about one-third, and yet from further falls in price they actually returned nearly £4,000,000 sterling less than in 1930-31.

He had repeatedly emphasised that their prosperity as a bank was dependent on the prosperity of Australia, and when shareholders realised how seriously the world crisis had affected Australia, and temporarily arrested her wonderful progress, they could not be surprised, however disappointed they might be, that the earnings of the bank were for the time being very seriously affected. The whole of Australia was suffering from diminished income, but was facing the adverse situation with unflinching courage and determination, and a great deal of personal sacrifice. This bank's share in this was the curtailment in their dividends, a curtailment, however, which still left them, as a result of their operations in this specially critical year, with a 5 per cent., tax free, dividend upon their paid-up capital.

From what he had said it would be seen that the Governments were making earnest and carefully conceived efforts progressively to balance their Budgets and live within their income. However successful they might be, that alone could not bring back prosperity unless a favourable balance of trade could be maintained. The Australian position in that respect was steadily improving, but trade carried on at a loss, or at a threadbare margin of profit, was equally impotent to conjure back prosperous times. This recovery required relief from crushing taxation, but could only be fully secured by an increase in world commodity prices. How that was to be brought about was the question of the hour in every country. No clear, convincing answer had yet been given to this question of how to raise commodity prices.

CAUSES OF WORLD-WIDE DEPRESSION.

There could be little doubt that the root cause of the present world-wide depression was to be found in the Great War, with all the economic evils which had flowed from it. As to subsidiary causes, there was pretty general agreement, such as prohibitive tariffs, exchange restrictions, maldistribution of gold, largely through war debts on a gigantic scale when the principal creditor refused to take payment in anything but gold, thus completely dislocating nature's immemorial two-way traffic in commerce. Another cause, which so far had received comparatively little attention, had been the fall in the price of silver. There could be no doubt that this had been a factor, and an important factor, in the universal fall in world commodity prices, and no scheme of recovery that ignored it could be completely successful. The seriousness of the fall in the price of silver, as contrasted with other commodities, was that the currency of so large a part of the world was in silver.

Broadly speaking, this depreciation in silver had reduced by approximately one-half the purchasing power of more than 50 per cent. of the whole population of the world. Partly, at any rate, this had been caused by legislation, and how far either by legislation or by international agreement this calamitous state of things could be corrected or ameliorated was surely a matter so important as to call for full and unprejudiced consideration. That this was a grave question in the world economic situation seemed to him to be in-

contestable. So recently as January last the Governor of the Imperial Bank of India, when addressing the Indian Institute of Bankers, said:—"The purchasing power all over the world could only be stimulated by the rehabilitation of silver through a reasonable stabilisation of its value in relation to gold." In stressing the enormous importance of a readjustment of international money values he was not advocating any special theory, but advancing a plea for an international consideration of the problem of silver.

Until world purchasing power was increased it was difficult to see how under-consumption could be cured.

Inflation of currency could not effect a permanent cure; it at best was a merely temporary stimulant, always ending in a worse reaction. Deflation alone could not restore purchasing power. Increase of purchasing power along some line of sound economic principle would be a self-propagating force leading to continuous increase of wealth and the cure of unemployment. Mere manipulation of currency seemed hopeless. Readjustment of currency on an international basis, scientifically carried out, would be a very different thing, and seemed worthy of the closest and most expert consideration. This world problem of commodity prices intimately concerned shareholders in this bank; until we got back to a correlated position of consumption to production, and a restoration to the peoples of the world of purchasing power, the earning power of the bank would necessarily be diminished.

BALANCE SHEET FIGURES.

Dealing with the balance sheet, the Chairman said that the reserve fund, with the addition of £15,000 from the past year's profits, now stood at £1,620,000. The special reserve of £1,585,000, covering depreciation in Australian currency, was the same as in the last balance sheet. As the Australian £ in the course of last year, through the improvement in the balance of trade and general conditions, appreciated in value—£125 Australia now providing £100 sterling, whereas last year it required £130—this special reserve now more than covered the present depreciation.

The deposits at interest, including Government balances, at £19,403,464, had increased by £667,897, and current accounts, at £9,968,820, showed an increase of £181,966. It was a remarkable feature of the present period that the deposits, on which they had to pay interest, were in amount nearly twice as large as the current accounts, on which they paid no interest—a striking result of the present depression in trade and industry.

Cash in hand amounted to the substantial sum of £9,527,623, an increase of £938,431. When this was added to the increase last year of £1,811,454 it would be seen that the cash was greater than at June 30, 1930, by £2,749,885. This exceedingly strong cash position represented a ratio of liquid resources to each £ of current account deposits of 19s. 1½d., and, adding investments, the ratio was the abnormally high one of 22s. 3½d. in the £. Apart from the solidity and strength implied in this position, it was not a profitable one and only arose from the restricted outlet for sound advances in this time of business stagnation and the extent to which the Government had to lean upon the banks. Investments, at £1,585,338—which was under the market value—showed an increase of £121,208. Advances and other assets stood at £24,762,786, and showed a reduction of £936,237.

NET PROFIT AND DIVIDEND.

The gross profit, at £1,055,987, showed a reduction of £219,838, but when the savings in administration and taxes of just about £101,000 were set against this, the net reduction was just under £119,000, which, having regard to the circumstances of the past year, must be regarded as satisfactory. Expenses of management were lower by £75,375, this having mainly arisen from the 10 per cent. reduction in salaries which applied to the entire service, from the directors downwards. The net profit amounted to £147,719, and, after paying a final dividend of 2 per cent., tax free, making 5 per cent., tax free, for the year, they were carrying forward £274,854.

With regard to the outlook for the coming season for Australia generally, in Queensland the seasonal conditions so far were not favourable in the North-West and Central districts, but in the South-Western areas rain had fallen and the position was satisfactory. In New South Wales, with the exception of parts of the North-West and Central Western Divisions, the outlook was favourable. Throughout Victoria the season was good. In South Australia the pastoral conditions were favourable, with the exception of certain districts in the North-Eastern part of the State, and the agricultural outlook was excellent. In Western Australia generally the outlook was fairly good.

The report and accounts were unanimously adopted. The retiring directors, the Rt. Hon. Lord Forster of Lope, P.C., G.C.M.G., and Mr Sidney Marr Ward, were re-elected, and cordial votes of thanks to the chairman, directors and staff terminated the proceedings.

RICHARD THOMAS AND COMPANY, LIMITED.

POSITION SUBSTANTIALLY IMPROVED.

SIR W. FIRTH ON BENEFITS OF STEEL DUTIES.

The eighty-third ordinary general meeting of Richard Thomas and Company, Limited, was held on the 28th ultimo, at River Plate House, Finsbury Circus, London, Sir William Firth, Chairman and Managing Director, presiding.

The Chairman, having dealt with the figures both of the group and the holding company, said: I will now refer to Ottawa. What was achieved there is not, I think, fully appreciated. In the steel trade we entered into an arrangement that will result in our receiving from India steel bars and pig iron, commodities that are made in Great Britain, and to this extent it is a bad arrangement for the steel and pig iron makers of this country and a good arrangement for India, but, counteracting this disadvantage, India has undertaken to give us a preferential duty on British sheets made from Indian steel bars, and has also undertaken to give us a preferential duty on British sheets made from steel bars other than Indian. Reviewing the arrangement as a whole, it is an arrangement that benefits both England and India. It protects steel sheet manufacturers in both countries against Continental competition in sheets, a commodity of which India is a large importer in normal times.

So far as tinplates are concerned, Canada has granted us free admission, whereas previous to Ottawa a duty of 7½ per cent. was imposed. That is not all—she has raised the duty against all other countries and fixed it at 20 per cent. Thus, as a result of Ottawa, Welsh tinplate manufacturers have a protection against foreign competition of 20 per cent. As a direct result of this revision of duties, your company has secured an order for 1,000,000 boxes of tinplates from an American company operating in Canada.

I should like to pay tribute to Sir George May and his colleagues of the Import Duties Advisory Committee. These gentlemen are making a determined effort to force the steel manufacturers and consumers of this country to co-operate and to reorganise and to take a long view. Meanwhile, as you know, they have granted steel manufacturers protection against the importation of foreign steel. No argument opposing tariffs that prevent subsidised steel being dumped into this country can be sustained. No export trade has been lost as a result of the tariffs imposed. The full benefits of the duties have not yet matured owing to heavy shipments during the first few months they were imposed, but I am satisfied that from now on the workpeople of this country will reap the benefit, and steel manufacturers will, at last, be given a chance.

I think you would wish me to comment on trade and world conditions so far as they affect your company's interests. The published figures of the seven largest steel manufacturers in America, representing 82 per cent. of that country's steel ingot capacity, disclose a trading loss for the nine months ending September last of \$98,620,000. This almost unbelievable trading loss is due to their inability to sell their product, and I refer to these losses as an indication of the danger of raising the foreign value of our currency. America is perhaps the greatest industrial country in the world. If we were to return to the Gold Standard at par in the near future, we should undoubtedly lose a large portion of our export business to America and the Continent.

I doubt if the steel plant of the world has, during the past twelve months, been working much above 30 per cent. of capacity, and I further doubt if for many years the world demand for steel will approach 100 per cent. of existing capacity, and it seems conceivable that the only way to avoid losses will be by entering into international arrangements between producing countries and allocating to each country a percentage of world demand. The alternative to this course appears to be the erection of tariff barriers and the subsidising of export trade.

I will now revert to the more domestic view. The workmen of Wales are making a splendid and consistent effort to improve the product of their labour. The quality of your company's product has in recent years substantially and consistently improved, and is to-day recognised as equal to the best produced in the world, but we are leaving no stone unturned to effect further improvement, and your workpeople are enthusiastically supporting us with that objective in mind.

I am sure, with world conditions so fluid, you will not expect me to attempt to forecast the future earning power of your company, dependent as it must be upon an improvement in demand, but I am at least entitled to say that the position of the company to-day, despite all the difficulties of the time, is substantially better than it was twelve months ago, and I do not think I shall be misleading you if I tell you that I have reason to hope it will be possible twelve months hence to report further progress.

The report and accounts were unanimously adopted.

BEAVER TRUST, LIMITED.

STRONGER INVESTMENT POSITION.

The ordinary general meeting of the Beaver Trust, Limited, was held on the 29th ultimo, at 1 Queen Victoria Street, London. Mr John G. B. Stone (the chairman) presided.

Mr W. R. Elston (the secretary) having read the notice and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The final result is a balance on revenue account of £16,857, as compared with £16,491 for the previous year. Out of this balance we have paid the interest on the debenture stock and the dividend on the preference shares, and we propose to pay a dividend of 3½ per cent., less income tax, on the ordinary shares, leaving an amount of £857 to be added to the balance carried forward on revenue account, which will then stand at £5,269.

The balance sheet shows an improved position as regards our investments compared with this time last year. The book value of the investments has been reduced by £23,055, representing sales during the year in excess of purchases, and the valuation of the investments now held shows a depreciation on book values of 33.51 per cent., as compared with 37.27 per cent. a year ago.

The year ended September 30th last, which is the period included in these accounts, probably covered the depth of the depression. There are signs of greater confidence in the principal trades, which we hope may before long be reflected in the return to or the commencement of payment of dividends. The outlook for the current year generally points to better conditions, but I doubt whether it justifies us in returning to the payment of an interim dividend. We shall probably wait for the full year's results before we consider the distribution on the ordinary capital.

It is probably worth while to point out that the investments which we have in the Indian Empire have proved, perhaps, the most satisfactory, both from the capital and the revenue point of view. The, to my mind, unwarranted anxiety which was displayed by many people with regard to India seems to have passed away.

The credit of our Colonies has also been restored, but in many foreign countries the exchange question is the dominant one, and the cost of remitting funds to this country for payment of dividends, etc., seems for the time being prohibitive.

Mr C. O. Webb seconded the resolution, which was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 26, 1932, amounted to £8,020,300 against ordinary expenditure of £7,154,200. After making no allocation to Sinking Fund, but allowing for an increase in Exchequer Balances of £162,112, the operations for the week, as shown below, decreased the National Debt by £474,000 to approximately £7,898 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

	£	Public Department Advances	£

REPORTS AND NOTICES.

MISCELLANEOUS.

MISCELLANEOUS.
BRITISH ROPES.—Year's trading resulted in profit of £48,287. This is an improvement over the preceding year's trading, but the world-wide depression has caused a considerable contraction in the demand for the company's products. Net profit, before providing for depreciation, was £42,423, and after crediting £23,282 profit in liquidation of subsidiary companies and sharing £33,087 loss on sales of shares in subsidiaries, the sum of £119,108 is carried forward. No dividends are being paid.

LEWIS BERGER.—Profit for the year, including dividends from subsidiaries, was \$57,322. To this has to be added a balance of \$38,519 brought forward from the preceding year, leaving a balance of \$125,841 available for distribution. The directors recommend the payment of a dividend of 5 per cent. (less income tax) on the ordinary shares, which absorbs \$28,304. Preference dividends take \$28,000, and the remaining \$71,477 is carried forward to the next account.

STRAND HOTEL.—The balance from trading account for the year to September 30 last was £130,500. Debenture stock interest absorbed £11,360, leaving a net profit of £119,140, against £119,181. The usual dividend on the 7 per cent. and 8 per cent. preference shares absorbs £37,000, while the preferred ordinary shares receive 10s. 5-2d. per share, requiring £32,200, and the deferred ordinary shares 64d. per cent., or £32,200, as last year. The carry-forward is £27,916, against £10,176.

THE CHARTERED INSTITUTE OF SECRETARIES.—Mr Frederick Gurdon Palin, secretary of the British Metal Corporation, Ltd., has been elected president of the institute in succession to Mr F. R. E. Davis, O.B.E. Mr W. G. Hislop, London secretary of Rand Mines, Corporation, Ltd., and Mr Hildred Carlisle, secretary of the Investment Trust Foulds, secretary of Callender's Cable and Construction Company, Ltd., has been elected treasurer.

JOHN I. THORNYCROFT.—The accounts for the year to July 31st last show a loss of £47,538, after transferring £130,000 from reserve. This figure compares with a profit of £4,569. No preference dividend is recommended, the cumulative charge being paid to July 31, 1931. The last ordinary dividend was 13 per cent. in 1929-30.

Commercial Reports.

MARKET SUMMARY.

The renewed downward movement of the price of the principal primary products in terms of gold proceeded further during the past week. In most cases the setback can be traced to the unsettling effect of the uncertainty regarding the War Debt position. A survey of the movement of prices in the United States shows a further weakening of the chief non-ferrous metals. Copper, spelter and tin all show a decline on the week. Raw cotton suffered a further setback and rubber lost its recent gain. Among cereals, wheat, maize and oats touched low records, but rye was a little steadier. The firmer tone of coffee prices was maintained, but cocoa failed to recover. Raw sugar declined sharply in value on heavy realisation. Sterling prices of commodities which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices. On the whole, however, the response of prices in this country to the fall in the gold value of sterling has been small. According to reports from various industrial centres, the uncertainty about the future of the war debts has led to hesitation among producers and consumers alike. The improvement in the coal trade has so far been maintained, but the London Iron and Steel Exchange reports a slowing down in activity. Business in Manchester goods has been less active, but the situation in the wool and rayon trades is scarcely changed on the week.

THE COAL TRADE.

SHEFFIELD.—Conditions in the South Yorkshire market remained unchanged. Best steams for export continue in short supply, but demand fails to expand and forward business is extremely slow. Prices keep firm at 17s. 6d. and 17s. 9d. f.o.b. Fuel requirements of the iron and steel industries *do not* move up, at any rate perceptibly. The textile areas, however, are taking more boiler slacks. Sales of house coal are below former averages, and the market is none too firm. Best ordinary qualities fetch 23s. to 24s. at pits. There is a surplus of secondary quality coal of all descriptions. Demand for blast furnace coke does not improve and best brands can be bought at 10s. at ovens.

GLASGOW.—The news of the increase of some 300,000 tons in the Scottish quota for the current quarter has done little to impair the strength of the market. The addition will involve only two days' more work at the collieries, and supplies of prompt material for and for shipment this year are difficult to obtain. The only exceptions are navigation kinds generally and washed doubles in the Lotherians. Home domestic needs show a seasonal expansion, and it is likely that the extra quantities will be disposed of in the (and it is likely that the extra quantities will be disposed of in the) and it is likely that the extra quantities will be disposed of in the

LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 6d.—17s.; splint second, 15s. 6d.—16s.; navigation, 14s. 3d.; navigation second, 13s. 6d.; Hartley, 16s.; steam, 14s.; trebles, 15s.—16s.; doubles, 13s.—13s. 6d.; singles, 11s.; pearls, 11s.—11s. 6d.; dross, 9s. **FIRE.**—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 14s.; third-class steam, 12s. 6d.; trebles, 17s.—18s. 6d.; doubles, 13s. 6d.—14s. 6d.; singles, 11s. 6d.—12s.; pearls, 10s. 6d.—11s. **LOTHERIANS.**—14s. 6d.; singles, 11s. 6d.—12s.; secondary steam, 12s. 6d.; trebles, Prime steam, 13s.—13s. 6d.; pearls, 10s. 6d.—11s. 6d.; singles, 11s. 6d.—12s. 6d.; doubles, 12s.—12s. 6d.; singles, 11s. 6d.—12s. 6d.; pearls, 10s. 6d.—11s. 6d.; singles, 11s.—11s. 3d. **AYRSHIRE.**—Unscreened navigation, 15s.; jewel, 16s. 6d.; steam, 14s.—14s. 6d.; trebles, 15s. 6d.—16s.; doubles, 13s. 6d.—14s. 6d.; singles, 11s.; pearls, 10s. 6d.; dross, 9s.

NEWCASTLE-ON-TYNE.—The Northumberland coal-field has received a small increase in quota, but as this was anticipated by collieries the firm position is unchanged. Collieries producing screened steam are fully sold over the winter, and the feature of the market is the increase in business from Scandinavia for shipment over next year. During the last week there has been a much improved market for the better classes of Durham unscreened steam, and a few collieries are fully sold over the next few weeks. Apart from shipment at Commissioners, where most collieries have an extra lead, there is, however, little change in values. To-day's f.o.b. prices for export are as follows: **NORTHUMBERLAND.**—D.C.B. screened steam, 14s.; smalls, 8s. 6d.; Howards, Bentineck, Newbiggin screened, 12s. 6d.; smalls, 8s.; Tynne prime large, 13s. 3d.; smalls, 9s.; Hartley Main large, 12s. 9d.; smalls, 8s. **DURHAM.**—Lambton South Hetton screened steam, 15s. 6d.; smalls, 11s.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened, 14s. 6d.; second-class gas, 13s.; coking unscreened or smalls, 12s. 6d.; prime unscreened bunkers, 14s.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 16s. 6d.; Newcastle and District gas coke, 19s.

CARDIFF.—The volume of the coal exports of the South Wales ports is being fairly well maintained. Shipments last week in the foreign and coastwise trades totalled 396,430 tons, compared with 396,275 tons the previous week, and 413,783 tons in the corresponding week last year. The tonnage position, however, is less favourable, and on Wednesday 27 berths were idle, principally at Barry, Newport and Penarth. Washed and dry smalls continue scarce and very firm, and the market for dry large is also relatively active, particularly for central heating purposes; but other large classes are inactive, and in abundant supply on the basis of the minimum schedule figures. The improving condition of the heavy branches of the iron and steel industry is reacting on the furnace coke market,

and more ovens are likely to be fired if this improvement is maintained. The following are the current approximate quotations: *Best Admiralties*, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drays, 19s. 3d. to 19s. 9d.; *Black Veins*, 18s. 3d. to 18s. 6d.; *Western Valleys*, 17s. 9d. to 18s.; *Eastern Valleys*, 17s. 3d. to 17s. 7½d.; best steam smalls, 13s. 6d. to 14s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 8s. 6d. to 9s. 6d.; special foundry coke, 32s. 6d. to 34s.; patent fuel, 20s.; pitwood, ex ship, 22s. 6d. to 23s.

IRON AND STEEL.

MIDDLESBROUGH.—Conditions remained unaltered in the market for Cleveland iron. There is no increase in the production so far and stocks in the hands of the makers are being steadily reduced. There is a steady demand for iron locally, but the aggregate cannot be called heavy overhead and makers evidently consider that they can take care of requirements on the present basis of operations without recourse to the lighting of additional furnaces, although as soon as any decided improvements in the demand occurs it will be necessary for more iron to be produced. A steady business has been put through by makers during the last week, there being no difficulty in obtaining official prices except where conditions qualify for special reductions. Official figures remain: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; No. 4 forge, 57s., f.o.b. or f.o.t. There is a moderate business in hematite, but transactions are still confined to parcels for early delivery. Makers generally stand out for 59s. for ordinary mixed numbers for early delivery, but are still shading the price under very special circumstances. The position does not lend itself to "bear" sales on the part of the merchants as prices of raw materials show a rising tendency and foreign ore is already higher. In the finished departments a fair amount of business is coming to hand and more is expected as a result of present negotiations. Steel prices for home consumption under the rebate scheme are: Steel angles, £8 7s. 6d.; steel joists, £3 15s. Other prices for export are: Iron crown bars, £9 5s.; heavy steel rails, £8; 24-gauge galvanised corrugated sheets, £10; and 24-gauge black sheets, £8 5s. In the ore trades there is exceedingly little buying, most of the imports at present being arrears of old contracts. Best rubio is nominally 15s. c.i.f., and the current freight Bilbao/Middlesbrough is 4s. 9d. Imports of all kinds of ore into Middlesbrough to November 29th totalled 46,878 tons, against 41,122 tons for the whole of October. Coke continues in plentiful supply and good blast furnace qualities are offered at 14s. 6d. per ton delivered works. The number of blast furnaces in operation in the district is unchanged at 15.

SHEFFIELD.—There are definite signs of a broadening tendency in a good many branches of iron and steel, and a belief in the imminence of a substantial revival now appears to be generally entertained. Concrete evidence of movement is not lacking. Turnover at the local works has been increasing for a month. In certain specialities full-time operation is the rule. Open-hearth steel and steel for heavy engineering are not at present sharing in the improvement, but better conditions are in sight, and these branches will benefit as soon as existing stocks of foreign material are exhausted, as no considerable quantities have been bought from overseas sources since early October. Makers of stainless steels are benefiting by the tariff and the difference in currency values. Formerly, large quantities of such material were imported at prices 25 or 30 per cent. below those of the home makers. This trade has now ceased. Tariffs are also helping makers of steel strip, magnets, tools, razor blades and scissors. On the other hand, demand for Sheffield steel for railways and shipbuilding has dropped to the lowest point ever recorded. Rolling mills are busier on sheets but quiet in the rod and bar department. The acute depression which has pervaded the plate and cutlery trade for several years is unrelieved and a number of firms have been compelled to close down or sell out. The figures of unemployment continue to drop and compare favourably with a year ago.

GLASGOW.—The steelmaking plants which have been engaged on the Soviet Government work, having now completed these contracts, are not so well employed at the moment, but it is reported from different works that the number of miscellaneous specifications coming in is showing improvement, and that there are several promising inquiries on the market at present. The demand for semis is still small, but local makers have been able to secure a considerable proportion of such orders as have been placed recently, although Continental competition is very keen. In the sheet-trade business on the whole is satisfactory, both home and export demand being well maintained, although there has been a falling off in the tonnage booked of thin sheets for the Far East. It is announced this week that the Glasgow engineering firm of James Howden and Company have secured several large contracts for air pre-heaters and other power-station equipment.

CARDIFF.—There has been no material change in the position of the South Wales iron and steel market. Quotations for tinplates and steel bars are unaltered, and the import trade in foreign bars continues negligible. At the annual meeting of Richard Thomas and Company on Monday the chairman, Sir William Firth, announced that the company had secured an order for the shipment of 1,000,000 tinplate boxes to Canada, the business being on account of an American company operating in the Dominion. Shipments of tinplates at Swansea last week totalled only 65,981 boxes, compared with 92,332 the previous week and 100,925 in the corresponding week last year. Stocks at warehouse have been increased to nearly 136,000 boxes, compared with 149,400 in the corresponding week last year.

OTHER METALS.

TIN.—The London market in tin opened dull on Monday, and despite the heavy decline in the gold value of sterling, quotations for this metal declined further on Tuesday. On Wednesday, support was forthcoming which resulted in a slight improvement in prices. Sales on the London Metal Exchange were 300 tons on Monday, against 225 last week; 225 tons on Tuesday, against 150 tons last week; and 525 tons on Wednesday, against 225 tons last week. The New York quotation on Tuesday was 22.50 cents per lb., against 23.15 cents a week ago and 23.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £151 15s. to £151 17s. 6d., compared with £153 12s. 6d. to £152 15s. last week. Stocks in London and Liverpool at the end of last week were 30,370 tons, a decrease of 186 tons on the week.

COPPER.—The volume of transactions in copper during the past week was not large. There was a further decline in New York prices, while sterling quotations, despite the fall in sterling, are scarcely changed on the week. An interesting feature in the copper situation is the steady accumulation of stocks in this country in anticipation of the new duty. Sales at the London Metal Exchange were 200 tons on Monday, against 600 tons last week; 250 tons on Tuesday, against 450 tons last week; and 700 tons on Wednesday, against 600 tons last week. Domestic spot was quoted 5½ cents per lb. New York on Tuesday, against 5½ cents a week ago and 5½ cents a month ago. Wednesday's official closing price for standard cash in London was £32 3s. 9d. to £32 5s., compared with £31 18s. 9d. to £32 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 31,161 tons, show an increase of 223 tons, and stocks of rough copper, at 5,746 tons, an increase of 150 tons.

LEAD.—The demand for lead was quiet on Monday and Tuesday. An improvement in demand caused an advance in quotations on Wednesday. Sales at the London Metal Exchange were 350 tons on Monday, against nil last week; 150 tons on Tuesday, against 350 tons last week; and 700 tons on Wednesday, against 400 tons last week. The New York quotation on Tuesday was 3.00 cents per lb., against 3.00 cents a week ago, and 3.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £12 1s. 3d. for November shipment, compared with £11 15s. last week.

SPELTER.—The market in spelter was quite active, and prices rose slightly on Wednesday on the adoption by sellers of an attitude of reserve. Sales were 550 tons on Monday, against 700 tons a week before; 450 tons on Tuesday, against 350 tons the week before; and 600 tons on Wednesday, against 550 tons. The New York quotation on Wednesday was 3.125 cents per lb., against 3.15 cents the week before, and 3.00 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 2s. 6d. for November shipment, against £15 7s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium was again quoted at £100 per ton. Nickel was advanced from £250-£255 per ton to £260-£265 per ton. Quick-silver was lower at £10 5s.-£11 5s. per flask, against £10 10s.-£11 per flask a week ago. Platinum was again quoted at £9 10s. per ounce, and foreign antimony at £27 10s.-£28 per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week November 24th to 30th (inclusive) are: 98,977 bales, of which 67,931 are American; 2,685 Peruvian; 14,145 Egyptian; 2,435 African; 3,556 East Indian; and 8,225 Sundries.

Manchester.—A very unsettled tone has prevailed throughout the Manchester market during the past week. This has been due to the war debts situation and the depreciation in the sterling rate of exchange. Buyers have displayed increased cautiousness in placing orders, and the turnover in yarn and cloth has shown a definite falling off. On all sides there is a tendency to mark time until the debts question is settled. There has been less inquiry in piece goods for the overseas outlets. Orders for India have been for limited quantities, but there has continued a steady demand in light bleaching fabrics, prints and fancies. There have been no indications of any increased trade with China. Buyers for certain of the smaller outlets have been testing prices and a miscellaneous business has been done. Producers generally are still able to resist low bids. Business in American and Egyptian yarns has been on a smaller scale, and there have been indications of a little more irregularity in prices.

THE WOOL TRADE.—Bradford.—The wool sales in London have gone very well this week, though, writes our correspondent, it is impossible to report higher prices. It has been suggested in some quarters that values are slightly against the buyer, but we have not been able to find anything definite in that way. The firmness is chiefly attributable to the fact that merinos suitable for the Continent are meeting a very good demand, and anything for which France and Germany bids, realises fully opening values. Those countries have a distinct advantage in buying in Coleman Street to-day, owing to the depreciation in the British pound. Converting Continental currency into sterling gives a very substantial buying margin, and along with the firmness in Coleman Street, we have a similar tendency in Australia and South Africa. Prices in the former centres are reported slightly in sellers' favour, and higher quotations are received from the Cape. This is helping to put a very good face on the wool market at a most opportune time. Second-hand offerings in Coleman Street do not always realise as good prices as were bid last series, but sometimes more money is forthcoming. The existence of large stocks of shipes bought last series by Yorkshire users seems to be going against any improvement in this description. It is being found rather difficult to maintain prices for these, most Continental buyers preferring to put their capital into merino wool. The Bradford market is quiet but not depressed. Business in tops is virtually at a standstill, and whilst 23d. is still wanted for warp 64's tops, and 22½d. for average, spinners are refusing to pay more than 22½d. and 22d. Some offers of business pending a few days ago have been withdrawn.

THE JUTE TRADE.—Dundee.—If anything, the jute trade is slightly improved, and manufacturers have booked orders more freely and for larger quantities for delivery some distance ahead. Business, however, has not been of dimensions sufficient to enable producers to raise their prices. The raw material has been rather irregular, sometimes tending to go dearer, on which occasions buyers of cloth displayed more willingness to place contracts, but, whenever the fibre indicated weakness, interest evaporated. Inquiries for cloth continue on a fair scale, which would indicate that buyers would purchase more largely if they were convinced that prices would not go lower. Values are low enough already, however, and there is no profit in manufacturing at those ruling meantime. Prices of jute fell to £14 12s. 6d. for Daisies assortment, full group, and a considerable business was done with Dundee spinners at up to £15, with four's sold at £14, December-January. The price has varied between £14 12s. 6d. and £15 for assortment during the past few days. Tossa assortment has ruled between £15 10s. and £16, with £15 15s. now quoted, and four's at from £14 17s. 6d., December-January. Good First Marks are obtainable at £17, and good Lightnings at £18, whole Hearts are quoted at from £15 10s. to £15 15s. for good quality, December-January. There is not much business in jute yarns, which have been sold at 1s. 10d. for common 8 lb. cops and 1s. 11d. for 8 lb. spools. These are the best rates that buyers will pay, though the majority of spinners continue to quote 1s. 10½d. and 1s. 11½d. respectively. Twist has been sold at from 3½d. to 3¾d. for 3 ply 8 lb., and sacking yarns are quiet at from 3½d. for 8 lb. chains and 2½d. for 24 lb. woff. Rove is of small interest at from £18 10s. for 48 lb. and £15 10s. for 200 lb., while the finer yarns are more or less neglected at from 2s. 6d. for second quality 8 lb. Rio warp, 2s. 3d. for third and 2s. 1d. for fourth. Carpet descriptions are quiet at from 3½d. for 14 lb. warp. Prices of jute cloth continue unchanged at from 2½d. for 10½ oz. 40 in. and 2d. for 8 oz., these rates being possible for the narrow widths, and ½d. to ¾d. more for the wider makos. The latter are in most demand, the narrows being practically neglected in view of the competition from Calcutta goods. Linoleum hassians are dull, and nominal and heavy goods remain quiet. Calcutta goods have ruled round about 19s. for 10 oz. 40 in. and 15s. 3d. to 15s. 6d. for 8 oz., December-March, with spot quoted at 20s. and 16s. respectively.

THE GRAIN MARKETS.

WHEAT.—The international wheat situation has undergone no change during the week. The movement of prices has been affected by the uncertainty about war debts and by the depreciation in the gold value of sterling. On Tuesday, "December" futures were quoted at 41½ cents per bushel, which constitutes a new low record. International trade in wheat has again been on a small scale, and Canada continued to satisfy a large proportion of importers' requirements. Shipments from the Southern Hemisphere, though still small, are increasing. Thus, Australian exports of wheat and flour during the week ended November 28th were 248,000 quarters, against 163,000 quarters in the preceding week. Similarly, Argentine and Uruguayan shipments rose from 104,000 quarters to 129,000 quarters. On Wednesday, "December" futures were quoted in Chicago at 42½ cents per bushel, against 42½ cents the week before, and 43½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 28s. per 400 lbs., against 28s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 6d., against 27s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 27s., against 27s. 6d.; Australia, ex ship, 26s. 6d. to 27s. 6d., against 26s. 6d. a week ago.

WHEAT FLOUR.—Business in flour has been a little more brisk at lower prices. Home-milled flour was advanced 6d. per sack in this country. North American shipments were 171,000 sacks, compared with 125,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. last week; delivered London, 23s. 6d., compared with 23s. a week ago. Manitoba patents, ex store, 23s. 6d. to 26s., against 23s. 6d. to 26s. Australian, ex store, 20s. 6d. to 21s., against 20s. 3d. to 21s. last week.

THE BRITISH OVERSEAS BANK, LIMITED

ESTABLISHED 1919.

Report by the Board of Directors to the THIRTEENTH ANNUAL GENERAL MEETING of SHAREHOLDERS to be held in the BANK PREMISES, 33 GRACECHURCH STREET (LOMBARD COURT), LONDON, E.C.3, on Tuesday, the THIRTEENTH day of DECEMBER, 1932, at 12 noon.

The Directors submit to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1932, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all Bad and Doubtful Debts (other than provided for out of Contingencies Account), for the year ended 31st October, 1932, amounts to £ 111,790 8 7

Balance available from last account £ 59,707 6 11

Making a total of £ 171,497 15 6

Interim Dividend paid on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the Half-year ended 30th April, 1932, and Income Tax thereon £ 30,000 0 0

Leaving a Balance of £ 141,497 15 6

which has been appropriated as follows:—

In payment of a Dividend on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the Half-year ended 31st October, 1932, which, together with Income Tax thereon amounts to 30,000 0 0

To Contingencies Account £ 50,000 0 0

Leaving a Net Balance to be carried forward to next year of £ 61,497 15 6

In order to provide for Contingencies, Depreciation on Investments, etc., the Directors have transferred from Reserve Fund to Contingencies Account the sum of £50,000.

In the course of the year under review Sir George E. May, Bart., resigned his office as Director on his appointment as Chairman of the Import Duties Advisory Committee. The Board desires to express its high appreciation of the services that he has rendered since the inception of the Bank.

The Directors retiring by rotation are The Right Hon. Viscount Churchill, G.C.V.O., and The Hon. Henry McLaren, O.B.E., who, being eligible, offer themselves for re-election.

The Auditors, Messrs. George A. Touche and Co., and Messrs. McClelland, Kerr and Co., also retire, and, being eligible, offer themselves for re-appointment.

By Order of the Board, A. E. THORNE, Secretary.

London, E.C., 1st December, 1932.

BALANCE SHEET, 31st October, 1932.

AUDITORS' REPORT TO THE MEMBERS.

We have examined the above Balance Sheet and compared it with the Books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange, and are of the opinion that the Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

BARLEY.—The market in barley has been less active. "December" futures were quoted in Winnipeg on Wednesday at 28½ cents per bushel, against 31½ cents last week and 29½ cents a month ago. Quotations in London on Wednesday were: "English feeding," f.o.b., per 448 lbs., 22s. to 25s., against 22s. to 25s. a week before.

OATS.—The demand for oats has been poor, despite lower quotations in Canada and in the U.S.A. In Chicago, "December" futures were quoted at 14½ cents per bushel on Wednesday, against 15½ cents per bushel a week before and 15½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., against 17s. 7½d. a week ago; "River Plate," ex ship, 16s.-16s. 9d., against 16s.-16s. 9d.; "Chilean White," landed, 22s.-24s., against 22s.-24s. a week earlier.

MAIZE.—In contrast to other cereals, the heavy shipments of maize from Argentina and Danubian countries continued to be absorbed readily, though at slightly lower prices. "December" futures in Chicago were quoted on Wednesday at 21½ cents per bushel, against 24½ cents on Wednesday of last week and 24½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 20s. last week; "Plate," ex ship, 19s., as against 19s.; "Plate," December-January, 19s. 3d., as against 19s. 3d. Yellow maize, ex wharf, was quoted at £5 12s. per ton, against £5 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat:				
1 week to November 26	Cwts. 302,111	Cwts. 77,941	Cwts. 119,574	Cwts. 234,909
13 weeks to November 26	3,463,352	975,372	1,839,270	3,522,745
Average price of English wheat per cwt.	s. d. 5 5	s. d. 6 9	s. d. 6 5	s. d. 9 3

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Week ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Sept. 19, 1932 ...	Cwts. 313,073	Cwts. 408,724	Cwts. 57,531	s. d. 5 5	s. d. 7 3	s. d. 5 11
Sept. 26, 1932	302,111	427,915	47,352	5 5	7 2	5 10
Nov. 24, 1928 ...	322,998	593,782	85,493	9 11	10 5	9 1
Nov. 23, 1929 ...	215,048	474,277	47,869	9 3	9 2	7 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Dec. 2, 1931.	Jan. 4, 1932.	Nov. 23, 1932.	Nov. 30, 1932.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	14½	56½	59	62½	45½	44½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	79½	54	55½	42½	42½

OTHER FOODS.

SUGAR.—Raw-sugar values declined sharply during the past week. The main reasons for this setback are continuous liquidation on unwilling markets and the reduction in the United States of refiners' quotations. December futures were quoted in New York at 0.71 cent per lb. on Tuesday, against 0.89 cent a week before and 0.98 cent a month ago. Wednesday's sales of raw sugar in London include "December delivery" from 5s. 6d. per cwt., against 5s. 8½d. a week before, and "March, 1933," at 5s. 9½d. to 5s. 10½d., against 5s. 0½d. to 5s. 1d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1,257	686	799	904	14,541	5,048
Liverpool ...	31,808	11,360	14,248	12,109	117,295	73,503
Total	33,065	12,046	15,047	13,013	131,836	78,551
Last week	37,270	46,789	15,509	13,168	113,818	79,518

COFFEE.—The New York coffee market has been a little steadier. The improvement may be ascribed partly to the publication on November 24th of a decree in Rio de Janeiro under which the planting of new coffee trees will be forbidden during the next three years. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents per lb. on the corresponding day a week ago. At Tuesday's London auctions demand was more active than last week, and values were generally firmer. Last week's movements of coffee in London were as follows: Brazilian, landed, 43 bags; delivered, for home consumption, 39 bags; exported, 73 bags; stocks, 5,799 bags, against 2,320 bags a year ago. Central American, landed, 3,482 packages; delivered for home consumption, 1,732 packages; exported, 2,333 packages; stocks, 55,347 packages, against 63,079 last year. Other kinds: Landed, 4,777 packages; delivered for home consumption, 2,985 packages; exported, 2,768 packages; stocks, 61,417 packages, against 48,254 last year.

COCOA.—Although the New York quotation remained unchanged, sterling prices were higher as a result of the depreciation of sterling. December futures were quoted at 3.67 cents in New York on Tuesday, against 3.67 cents a week ago and 3.92 a month ago; Accra, December-February, at 26s. per cwt. c.i.f. Continent, shows a rise of 1s. 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 2,696 bags; delivered for home consumption, 6,449 bags; exported, 134 bags; stocks, 109,930 bags, against 136,909 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 59,849 packages of Indian and 28,743 packages of Ceylon tea. Monday's "Indian" auctions were dull with common and medium teas the weakest feature. On the other hand, common "Ceylon" grades sold well on Tuesday, but other varieties were somewhat irregular. Wednesday's "Indian" sales were characterised by a poor demand and generally lower values. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.
Nov. 26, 1931	d. 10-86	d. 11-67	d. 17-33	d. 8-51	d. 7-61	d. 6-99
" 3, 1932	10-22	7-47	12-34	6-32	5-37	5-87
" 10, "	9-57	7-34	11-72	6-26	5-03	5-78
" 17, "	9-23	7-28	11-34	6-34	5-36	6-46
" 24, "	8-78	7-78	10-60	6-67	5-32	6-46

RICE.—The market in rice has been dull, and forward quotations declined further. The spot price was 9s. 3d. per cwt., against 9s. 3d. per cwt. a week ago, while the forward quotations at 7s. per cwt. show a fall of 1½d. per cwt. on the week. Movements in London during the past week were as follows: Landed, 35 tons; delivered, 101 tons; stock, 2,437 tons, against 1,834 tons a year ago.

POTATOES.—Again the principal potato markets were well supplied and prices remained generally unchanged. At the London Borough Market, "King Edward," light soil, were quoted at 6s. 3d. per cwt., against 6s. to 6s. 3d. a week ago.

SPICES.—The market in spices was quiet, and the price of spot pepper failed to recover. Spot pepper, "Black Singapore," was quoted at 6d. per lb. on Wednesday, against 6d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 13 tons; delivered, 22 tons; stock, 382 tons, against 336 a year ago. White, landed, 41 tons; delivered, 52 tons; stock, 670 tons, against 529 a year ago.

MEAT.—Meat prices at the Smithfield market have been firm during the past week. Both beef and mutton are scarcely changed on the week. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 6d. to 4s. 6d. per 8 lbs., as compared with 3s. 10d. to 4s. 6d. last week. New Zealand frozen mutton was 2s. 8d. to 3s. 4d. per 8 lbs., against 2s. 10d. to 3s. 2d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,434 tons, against 9,486 tons in the corresponding week last year. Imported beef, principally Argentine, formed 80.8 per cent. of the beef supplies, against 83.7 per cent. a year ago. Imported mutton, mainly New Zealand, formed 70.1 per cent. of the total supply of mutton and lamb, against 70.1 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—On the whole rather steadier conditions prevail, though markets are still affected by exchange fluctuations consequent on the decline in sterling, the uncertainty regarding War Debt repayment, and the delay of the India last-named the operation of the proposed 10 per cent. import duties on foreign linseed and an increased tax on imported linseed oil remain in suspense. In the circumstances British crushers are buying only to cover current requirements, though the demand for linseed is firm, and "afloat" is quoted £9 5s., and shipment, including January-February (new crop), £9; but there is practically nothing passing forward. Shipments from the River Plate are heavier and the quantity on passage to Europe has advanced to 192,000 tons, or 24,000 tons more than last week. Cotton seed has been in better demand and is dearer, shippers now asking for black Egyptian afloat £7 15s., and November shipment £7 12s. 6d. A better trade in vegetable oils is reported. Linseed oil is steady and raw oil for December delivery is quoted £16 12s. 6d. per ton.

normal, for it is obviously advisable to offset as soon as possible the temporary surplus of funds due to so big a disbursement of public money. It may be recalled that this is the last of the War Loan dividend payments on the old scale, and that next June the amount to be absorbed by the market will be only about £35.0 millions. It may also be pointed out that the Christmas notes are now going into circulation, and that this will further reduce the present superabundance of money.

Discount rates have steadily weakened since the end of November. The Treasury bills offered on December 2nd went at an average rate of 17s. 4.67d. per cent., against £1 2s. 4.44d. per cent. the week before. To some extent this big fall in the rate is due to a reduction in the number of bills offered and allotted from £60.0 to £55.0 millions, but the present glut of money and also the firmer tendency of sterling were contributory factors. During the current week discount rates have again weakened, until on Thursday hot Treasury bills were quoted at $\frac{1}{8}$ per cent., while some business was done at $\frac{1}{16}$ less. The banks bought a few December Treasuries at $\frac{1}{8}$ per cent., and later dates at $\frac{1}{16}$ per cent., but the market view is that, now that currency is being withdrawn from them, they will be buying very few bills until the New Year, and this will give market rates a chance to stiffen. Three months' bank bills are quoted at $\frac{1}{8}$ per cent. and standstill bills at 1-2 per cent. Tenders for £500,000 Ayrshire County Council six months' bills lodged on Thursday totalled £1,200,000. All the bills were allotted at an average rate of $1\frac{1}{2}$ per cent.

	Nov. 17, 1932.	Nov. 24, 1932.	Dec. 1, 1932.	Dec. 8, 1932.	Previous Rate and Date Changed.

Market rate (standstill bills)	1-2	1-2	1-2	1-2	...

The Bank return shows that the Christmas note circulation expansion is making rapid progress, for during the week ended December 7th the circulation rose by £6.8 millions. As no gold movements were reported, the Reserve fell by the same amount. Changes in the Banking Department mainly reflect the effects of the big movement of funds on December 1st. Government Securities are higher by £17.0 millions, an increase which, allowing for the difference in dates, corresponds fairly closely with Government borrowings on Ways and Means from the Bank, which were shown at over £21 millions in the Revenue returns for December 3rd. The reduction of £1.6 millions in Public Deposits to £8.5 millions can equally be ascribed to Government disbursements. Bankers' Deposits have risen by £13.7 millions to £104.3 millions, which is an unusually large figure. This expansion is again directly due to the big December 1st payments.

The revenue returns for December 3rd provide further evidence of the magnitude of these transactions. Ordinary expenditure exceeded ordinary revenue by £47.3 millions, a deficit which almost exactly corresponds to National Debt interest payment (mainly War Loan interest), which amounted to £47.6 millions for the week. Repayments on capital account included £151.0 millions for dissented War Loan, £10.7 millions for 4 $\frac{1}{2}$ per cent. War Loan, and £64.2 millions for 1932-34 Treasury bonds; or a total of £225.9 millions. Receipts included £155.1 millions for the call on the 3 per cent. Conversion Loan and £72.8 millions for the call on the 2 per cent. Treasury bonds; or a total of £227.9 millions. Repayments of the two War Loans have so far fallen a little short of the full amount due, but it will obviously take some time for all the dissentients to encash their claims. Both the amount received for the 2 per cent. Treasury bonds and the amount

repaid in respect of the 1932-34 Treasury bonds fall about £70.0 millions short of the nominal sum involved. This discrepancy shows that about £70 millions of the old bonds have been converted into the new bonds.

The net result is that the Treasury judged its capital receipts and payments within two millions of each other, which for an operation of this unprecedented magnitude is a most notable achievement. The Floating Debt was increased by £45.3 millions during the week. £21.25 millions were borrowed on Ways and Means from the Bank, and £24.7 millions from Public Departments. The Treasury bill issue was reduced by £1.2 millions. The advances from Public Departments have an easy explanation. No doubt a certain amount of the cash issued from the Exchequer in repayment of the maturing loans went to Public Departments who were holders of these loans. This cash was not required immediately by the recipient Department, and it was therefore at once lent to the Exchequer so as to obviate the needless immobilisation of funds. This, of course, is the normal Treasury practice.

The Foreign Exchange market was again active this week, and fluctuations in sterling were frequent and wide. After touching 3.16 $\frac{1}{2}$, the New York rate recovered to 3.25 $\frac{1}{2}$, and at one time business was done at 3.25 $\frac{1}{2}$, against 3.23 $\frac{1}{2}$ last week. Montreal improved to 3.77. Paris, after 80 $\frac{1}{2}$, moved in our favour to 83 $\frac{1}{2}$, against 82 $\frac{1}{2}$ last week. Brussels fell away to 23.50. Milan gained $\frac{1}{2}$ at 63 $\frac{1}{2}$. Madrid was cheaper by $\frac{1}{8}$ at 39 $\frac{1}{8}$. Lisbon weakened to 107 $\frac{1}{2}$ and Amsterdam lost 5 points on balance at 8.10. Berlin was 11 points worse at 13.70, and Switzerland 6 points worse at 16.88. The Scandinavian currencies varied, Stockholm and Oslo moving 5 and 7 points against us to 18.35 and 19.43 respectively, whilst Copenhagen lost 6 points to 19.28. The South American exchanges were not much changed, Rio being quoted at 5 $\frac{1}{2}$ d. (sellers), Buenos Aires at 35 $\frac{1}{2}$ d., and Montevideo at 29d. In the Far East the rupee was unchanged at 1s. 6 $\frac{1}{2}$ d., while the yen improved by $\frac{1}{8}$ d. to 1s. 3 $\frac{1}{2}$ d. Batavia was unchanged at 8.10. In the forward market dollars were more on offer at wider discounts of $\frac{3}{4}$ and $\frac{1}{2}$ cent. for one and three months respectively. Paris remained at 1 and 2 centimes premium. Brussels was cheaper at 9 and 25 centimes discount, against 7 and 18 centimes last week. Milan remained at last week's levels. Madrid was unchanged for one month, but the three months' rate weakened by $\frac{1}{8}$ to $\frac{1}{16}$ peseta discount. Amsterdam from $\frac{1}{8}$ and $\frac{1}{4}$ cent premium went to par for one month and $\frac{1}{8}$ cent premium for three months. Switzerland was unchanged for one month at $\frac{1}{4}$ centime premium, but was considerably harder at 1 $\frac{1}{2}$ centimes premium for three months. The silver market was made uncertain by the wide fluctuations in sterling, but steadied towards the close. Prices improved by $\frac{1}{8}$ d. to 17 $\frac{1}{2}$ d. for cash and by $\frac{1}{4}$ d. to 17 $\frac{1}{2}$ d. for forward as a result of some Chinese buying in a narrow market. The Chinese silver exchanges fell away, Hong Kong being cheaper by $\frac{1}{2}$ d. at 1s. 4 $\frac{1}{2}$ d. and Shanghai by $\frac{1}{4}$ d. at 1s. 9 $\frac{1}{2}$ d.

While call rate in New York remains at 1 per cent., the open market rate on 90-day bankers' acceptances was reduced early this week from $\frac{1}{8}$ to $\frac{1}{16}$ per cent. The reduction is attributed entirely to the lack of demand for funds. In the foreign exchange market French francs improved from 3.90 $\frac{1}{2}$ to 3.90 $\frac{1}{2}$ cents, and belgas from 13.84 $\frac{1}{2}$ to 13.85 $\frac{1}{2}$ cents, but Swiss francs receded from 19.22 $\frac{1}{2}$ to 19.22 $\frac{1}{2}$ cents and Dutch florins from 40.18 $\frac{1}{2}$ to 40.16 cents. Gold imports from England during the week amounted to \$12.4 millions, while \$994,000 came from Canada, \$893,000 from Holland and \$488,000 from India. The arrival of \$925,000 from China was also reported at San Francisco. Against these imports there was a net increase during the week of \$7.3 millions in gold held under foreign earmark. The actual gross increase in coincides in date with the arrival of the gold from England. It, therefore, looks as if the bulk of this gold still remains under foreign ownership and has merely been transferred to New York in anticipation of possible future needs.

THE CHOICE BEFORE BRITAIN.

THE United States reply to the British Note has finally extinguished any remaining hope that America might agree to suspend the payment of the war debts due on December 15th. Any suggestions made by Britain "which will facilitate payment," will be submitted to Congress—that is the only promise extended. For the rest, Mr. Stimson, speaking for a President who cannot commit either Congress or his successor, intimates that Mr. Hoover is prepared, through any appropriate agency, to "survey the entire situation"—in regard to which he admits that debt payments "have a very definite relationship to the problem of recovery"—but adds, after much disputable argumentation which we must reserve for our next issue, that the causes of the depression "lie in much more potent factors than these debts transactions." In so far as the immediate problem of December 15th is concerned, the American Note makes it clear, just as last Tuesday's Presidential Message to Congress did, that Mr. Hoover would like to see America co-operating with Britain and other nations in formulating policies for world reconstruction, but that the United States insists on replacing, next week, one of the great obstacles which make recovery impossible.

In these circumstances European Governments must act, and will, in fact, have made their vital decisions before our next issue appears. As all the world realises, the decision whether Great Britain should pay or not is a choice between two evils. To refuse to carry out the strict letter of the agreement without the consent of the United States would be a grave step, particularly in view of the international importance of our keeping on friendly terms with the United States and doing nothing that would make it more difficult for us to co-operate with her in tackling the great problems before us all. On the other hand, it is a great responsibility to adopt a course which, in the considered judgment of the British Cabinet, will deepen world depression, probably lead to a further fall of prices, and certainly delay co-operation for the stabilising of currencies and initiating steps to economic recovery. Equally serious is the fact that payment on December 15th will reopen the debt question, not merely between ourselves and America, but between the European debtors and Great Britain, and may revive bickering over the reparations question itself, which was, after so many years of pain and trouble, finally reduced to negligible proportions at Lausanne.

This being the dilemma, we may distinguish four currents of opinion in this country. The first may be called the "ultra-purist" school, which holds that, whatever may happen, we must keep the letter of our bond, until we are released by the United States. Since, however, we have put it on record so definitely that war debts are a damage to the international system, it would be going back on all the doctrines we have enunciated if we were to ask our European debtors to pay. Britain should therefore shoulder the burden of its debt to America out of its own pocket and hope for the best. There are, however, very few who think that we should accept, with such magnificent disregard for justice and practicality alike, a situation which the British Note described as "unthinkable."

The second school also believes that we should hold to our bond whatever the conditions may be; but it is not prepared to stand the racket of another shilling or more in the pound on the income tax. This school would therefore insist that our European debtors should be asked to pay and help us out with America. The weak point of this plan is that the prospect of obtaining indefinitely £12 $\frac{1}{2}$ millions sterling a year from France, plus £4 $\frac{1}{2}$ millions a year from Italy, with Germany paying nothing, is extremely remote; while the hope that Germany will be good enough to provide the cash is remoter still.

The third school, which we believe is very largely represented in the City of London as well as elsewhere,

would satisfy its conscience by paying just once more, but never again. On the question of morals we can see very little to be said for this point of view; for if it is a crime to default in chilly December, there is no less moral turpitude in defaulting in the palmy days of June. The only argument for this course that needs to be seriously considered is that by giving the United States a further period to think things over, we may perhaps reach, in the meantime, some basis for agreement. The weakness of this argument is that events in America have shown the prospects of such an agreement to be extremely small. If we pay on December 15th the average Congressman will draw the conclusion either that the last British Note was bluff which America has "called," or that the transfer problem has no reality. The recent canvass of Congressmen and Senators by the *New York Times* showed an overwhelming opinion against either cancellation or revision, and there is no reason to suppose that the new Congress will take a different view. Indeed, the latest American Note, in its insistence that debt payments have not been responsible for the maldistribution of gold stocks, that American tourist expenditure goes far to eliminate the transfer problem, and that any debt revision must be purchased at the price of "tangible compensation" in markets for American exports—a totally impossible proposition—is likely to stiffen Congressmen's necks.

When we remember how deep are the pre-occupations of the great farming communities of the United States with their own immediate concerns, and the long time that it requires, even for people much more closely in touch with international conceptions of trade and finance, to take a larger view of their own interests than is dictated by their day-to-day affairs, it seems useless to expect that America will voluntarily accept an additional burden to her Budget within a matter of weeks, months, or even years. The best that could be hoped would be some modification of the British payment. For example, the British interest charge might be reduced from 3 $\frac{1}{2}$ per cent. to 2 per cent. But such a concession, though of great value as a sign of goodwill, would not go to the root of the matter, for it would merely reduce the total payments by Europe from nearly \$300 millions to \$230 millions a year. This would not sufficiently reduce the pressure on the exchanges; it would retain in being the full obligations of France and Italy, which are due to increase over the next thirty years from \$65 millions to \$170 millions; and it would leave us with the difficult problem of European indebtedness still unsolved.

There remains the fourth school, which holds that the only logical conclusion of the British Note is that, in the interests of the whole world, action should be taken now to reduce the burden of the debt payments. To the argument that a contract is a contract and must be honoured, it replies that a contract ceases to be binding if the conditions implied when it was entered into are not realised. The contracts in this instance were based on assumed capacity to pay at a time when prices were far higher than at present, and it was expected that expanding trade would make the problems of collection and transfer of diminishing importance. The opposite has, in fact, been the case; the fall in prices has doubled the burden. But an even more cogent argument is that whereas international debts can only be paid in goods and services, the nations between them have brought things to such a pass that international trade has been subjected to what is in effect a form of blockade and has shrunk to a third of its value three years ago. Very few nations can escape some form of blame for this situation; but, however history may ultimately apportion responsibility, there is no doubt that the tariff of the United States, which is "anti-European" in its effect, whatever its intent may have been, has played a very great part both by its actual

obstruction and by its example. However highly we may rate the sanctity of contracts, there is no shame if they are broken by *force majeure*. This, after all, was the justification for the loss which we inevitably imposed on central banks all over the world a year ago when we departed from the gold standard—a step at which even the City feels no twinges of conscience—and considerations of *force majeure* apply with equal emphasis to-day.

As to the danger of precipitating a general default, it is urged that the fears are greatly exaggerated. The war debts undoubtedly stand in a class by themselves in public estimation. They are inter-governmental obligations and not commercial debts; the very fact that the creditors one and all agreed when they were funded to terms which wrote them down to a greater or less extent shows that the payments were not an ordinary return for services rendered, but an attempt to adjust the cost of the war to capacity to pay; and finally their payment or their non-payment is intimately linked with politics.

Commercial debts are on quite another footing. The annual sum paid from abroad to private investors in Britain includes large amounts from commercial and industrial companies of all kinds (many of which are on the English register), profits of British companies operating partly at home and partly abroad, and many other sources of income arising from the international activities of British citizens. It is really a fantastic flight of imagination to suppose that the whole of these will collapse if Great Britain and other European debtors decide to cut the knot of the war debts. Nor is it to be feared that the prospects of Anglo-American co-operation will be worse, as the result of taking a definite stand now, than they would be if we were to have six or twelve months' uncertainty. Still less would co-operation be helped if we negotiated some modest concession for ourselves, leaving France either to pay both America and us in full, or to default.

For our part we believe that the weight of the argument lies with the fourth school, and that the British Government would be doing a service to the world, and not in any sense acting in a way of which we need to be ashamed, if it were to bring matters to a head forthwith and announce definitely that the December 15th instalment will not be transferred to the United States. This action should not, however, consist merely of a simple refusal to pay; it should be accompanied by a statement, in a general way, of the terms and conditions under which some payment might be resumed. The statement might be somewhat along the following lines:—

We have done our best to fulfil the bargain made ten years ago, but conditions not then contemplated have arisen which make that bargain impossible of fulfilment. With international credit destroyed, and the movement of goods hampered and reduced to a fraction of the normal, no payment at all is at present possible which will not increase world depression and cause new political complications. We see no future possibility, even under the most favourable conditions of trade, of reviving our payments on the scale originally contemplated; but, provided the American tariff is moderated in favour of European goods, the volume of international commerce may be expected to revive sufficiently to enable a modest transfer to be made without involving a distortion of normal trade or an undue strain on the international system which we hope, with your co-operation, to be able to restore. But it is imperative that if confidence is to revive the debts should not be left hanging over the world as an uncertain quantity. It would assist your immediate financial difficulties and remove all danger of future complication if the debts were settled now by a lump sum payment which would not immediately involve a large transfer. The only way by which this can be done is to limit this financial payment to the capital sum which can be raised in your market on the credit of the countries in Europe in the next twelve months—a figure which we believe might amount to somewhere near a billion dollars. We are prepared to enter into negotiations with you separately on this basis, but beyond this we cannot go.

The course we suggest is, in our view, the only logical conclusion of the last British Note. For years past the world has suffered from the fatal policy of doing the right thing too late. If we acquiesce now in letting matters drift, we shall be running the risk of repeating once again this most disastrous of blunders.

SHIPPING AND THE WORLD CRISIS.

The fortunes of the shipping industry are so intimately connected with the prosperity of the world as a whole that its leaders have traditionally been inclined to take what may be described as an "international" standpoint on economic problems. British shipowners, in particular, have consistently set themselves against the application to their industry of policies conceived in a spirit of economic nationalism, and have realised, as the chairman of the P. & O. Company observed in his speech at the annual meeting of the company this week, that in the complex system of the present-day world no nation can expect to avoid in isolation "the bitter blast of adversity" if fellow nations are laid low.

To the campaign for the formulation of sane commercial policy, as the foundation on which alone renewed prosperity can be built, a welcome contribution has been made by shipowners during the past few days. At a meeting of the International Chamber of Commerce in Paris on November 30th a report was submitted by a Committee of Experts set up to consider the problem of surplus tonnage. The conclusions of the report, which extend to questions of much more general application, are that, in a world of plenty, civilisation is being starved because the world market is being destroyed.

"The world can either allow itself to slide back to self-contained primitive life by reducing the standard of living in all countries, or it must formulate and respect the principles of the world market. . . . The principles of the world market are:—

"(a) The creditor countries must be prepared to receive payment for their debts, as well as for their exports, in goods or services. A creditor nation with an "active" balance of exchange of goods and services (i.e., a creditor country which maintains its exports and debt claims, but prevents adjustment of its trade balance by refusing payment in goods and services) breaks the world's market by depressing its debtor customers.

"(b) Debtor countries must not exclude themselves from the world market by raising the level of costs of production (by inflated apparent wage structure and prices).

"(c) Trade barriers of all kinds, including artificial or stimulated production of goods or services, currency restrictions, unnatural interference with trade or artificial stimulants to commerce, must be reduced and ultimately abolished as dangerous palliatives which have done more harm than good.

"(d) The nations which are prepared to enter the world market on these terms should agree to support the market and enforce its principles by limiting their most-favoured-nation treatment to those nations who observe such principles. The principle of equality of treatment should be secured on a basis of reciprocity."

At a meeting on December 1st the British Chamber of Shipping unanimously endorsed the conclusions of the Paris report. It also adopted a report presented to it by its own Committee on Shipping Policy. This committee drew attention to the continued and increasing decline in the volume of the world's overseas trade, which, it observed, would now barely provide employment for the whole British mercantile marine, even if it were all carried in British bottoms. Emphasising the serious effects which have resulted from the direct and indirect subsidisation of foreign shipping, the committee deprecated retaliatory measures by this country, save as a last resort, and urged that at the World Economic Conference the British policy should be to demand the abolition of all forms of flag discrimination. The objective for Great Britain should be to secure the co-operation of as many nations as possible pledged to work for the re-establishment of world trade through the removal of trade barriers, including the modification of tariffs. At the same time, we should warn the world that unless such co-operation is secured, retaliatory action may have to be taken by this country, with disastrous results for all concerned.

We hope that these declarations of policy made by British shipowners, and particularly the admirable Paris resolution which we have quoted above, will receive the attention which they deserve. They represent in our view a constructive policy whose endorsement by the British Government would go far to warrant hopes of fruitful progress in our commercial negotiations with foreign

countries. To-day, if we read the situation aright, a large majority of public opinion in Great Britain, irrespective of party allegiance, is seeking anxiously for a practicable road out of the tariff *impasse* in which international trade is fettered. Taking a realistic view of possibilities, this body of opinion sees little hope of a sudden reversion, either by this or other countries, to a system of unqualified Free Trade; but it is prepared to see many of the steps towards protection which Great Britain has taken retraced if reciprocal steps are taken by other countries in association with us to reduce their tariffs to a level which does not spell prohibitive barriers to the movement of goods. If the British Government would intimate in the clearest terms its adherence to "the principles of the world market" as outlined in the foregoing report, decide to modify in the sense suggested its interpretation of most-favoured-nation treatment, and give a definite lead in the formation of a "sane tariff" group, it would, we are convinced, evoke far-reaching support.

GERMANY'S BANKING CREDITS.

IN a recent article in these columns it was suggested that the German international trading position was now in equilibrium. That is to say, the favourable balance of international merchandise trade plus services is to-day sufficient to pay the interest and sinking fund charges on the German foreign debt and, probably, to provide a modest surplus as well. When the progressive improvement of the debt position through the repurchase of German bonds held abroad is taken into consideration, it is evident that Germany appears in this respect to be rather better off than is generally believed. But this has only been rendered possible by the banking "Standstill" agreement, and by a system of exchange restrictions which immensely hampers trade and has, in the words of the British Commercial Counsellor in Berlin, turned the whole country into a machine for the production and retention of foreign exchange. Nor should it be overlooked that the "freezing process" in Germany's economic life has been accompanied by a dangerous extension of the obligations and guarantees—amounting to at least Rm. 2,000 millions—assumed by the Reich, in addition to the finance provided for writing off the capital and bad debts of banks, co-operative societies and mortgage institutions. How is it possible to achieve the necessary transition to normality and how long is this likely to take?

It may be taken as generally agreed that the solution of the problem of the short-term debt is a necessary preliminary to lifting the exchange restrictions. A solution of this problem is equally essential for the creditor countries, whose banks—at any rate those engaged in international business—are greatly hampered by the large credits tied up in Germany. The amount involved in the banking standstill is estimated at Rm. 4 milliards, to which must be added several milliards of non-banking credits held up by the exchange restrictions. Yet, though these sums may appear large, they are not unmanageable. Indeed, they only appear really large when wholesale repayment is contemplated. But such an objective is not feasible, or even desirable, from the creditors' point of view. There is no advantage to be gained by the world's chief financial centres severing business and credit relations with Germany. In short, if a magician could by a stroke of his wand convince the world that Germany was a good credit risk, then there would be practically no short-term debt problem for Germany at all. Seen in this light, the essential problem to-day is how to transform the attitude of the world towards German credits without permitting withdrawals large enough to upset the foreign exchange position.

In less than three months the present Standstill Agreement expires and numerous plans are being put forward for its renewal. The present agreement provides for gradual reduction of indebtedness in four ways—firstly, an annual 10 per cent. reduction of outstanding credit lines to the extent that they are not actually utilised;

secondly, the creation of trust certificates by the Reichsbank in respect of cash advances to banks redeemable by semi-annual payments at the approximate rate of 10 per cent. per annum; thirdly, repayment by the Gold-discount bank of the amounts originally guaranteed by it in three equal annual instalments, plus further instalments in respect of amounts subsequently guaranteed; fourthly, under the much-discussed Clause 10, by the long-term investment (minimum five years) of the limited amounts permitted to be demanded in marks from German debtors. The working of this agreement, satisfactory as far as it goes, has had little effect in achieving the desired transformation in the general attitude towards German credits, and in view of the slow, more or less fixed rate of repayment, seems unlikely to have great results.

The modifications now suggested, both in Germany and in the creditor countries, have two main objects in view. Firstly, it is vital that there should be a "loosening-up" of the internal situation. The standstill agreement was intended to protect the German exchange position, not individual bankrupt or doubtful debtors. Yet these have in fact been protected, and it is generally agreed that in the interests both of Germany and her creditors some way of forcing overdue liquidations and producing the inevitable accommodations between creditors and debtors must be found. This is only possible if the creditors are permitted to demand repayment, at any rate in blocked marks. Under the last agreement creditors had the right to demand such repayment in each six-monthly period, for the purpose of long-term investment, to the extent of 25 per cent. of outstanding balances from banking debtors and 15 (rising to 20) per cent. from commercial debtors. This is obviously quite insufficient for the purpose in view, and it is understood that the creditors' committees are proposing an extension of this clause permitting, with certain restrictions, a demand for repayment in full by equal quarterly instalments. Whether the Germans are prepared to go as far as this remains to be seen; but it is noteworthy that the financial editor of the *Berliner Tageblatt* recently advocated the complete freeing of internal payments, pointing out that the inevitable liquidations, bankruptcies and accommodations would be to the direct advantage of Germany.

The second group of modifications suggested aim at extending the utilisation of the blocked marks arising out of internal liquidation. Under Clause 10 of the present agreement, of which relatively little use has been made, except by the Swiss banks, blocked marks could be invested in long-term mark loans or equities in Germany, with the proviso that the investment must remain blocked for five years. A memorandum, however, recently published in Germany, and said to emanate from the creditors, proposed the extension of this facility to all forms of short- and long-term investment, whether in marks or in foreign currencies, and the creation of a special loan of the German Reich payable in foreign currencies and redeemable over a long period, into which the blocked marks would be exchangeable if desired. The blocked marks, the memorandum suggested, should also be available for tourists and for so-called "additional exports." While creditors would have the free disposal of their marks within Germany on these lines, machinery would be set up through the Reichsbank and a trustee organisation to

manage the funds on behalf of the creditors and prevent evasion of the provisions. The marks or other investments would be transferable at will through the trustee, though presumably only to other foreign holders. A particularly interesting suggestion is that any foreign creditor who grants an additional credit to a German debtor should be entitled to free one-third of the amount granted out of his blocked marks if the credit is for one year, two-thirds if for two years, and an amount equal to the credit if for three years.

Are these proposals on the right lines? To some extent they merely embody and seek to legitimise practices which have grown up under the old agreement. This is particularly the case of the proposal for the free transfer of blocked marks or investments. The Reichsbank already recognises such transfers in the form of assignments to take effect at the end of the five-year period, and a fair number of dealings have taken place at rates varying from about 12 to 22 per cent. discount. Obviously such transactions are all to the good, in that, for one thing, they substitute willing for unwilling creditors. This is undoubtedly a step in the direction of changing the attitude of the world towards German credits. The new proposals would, of course, largely extend the market from both directions—the “production” of blocked marks through internal liquidation and their “consumption” through the increased utility which they would be given. But, we think, the chief merit of a scheme on these lines would be the automatic furtherance of repayment by the chief, or, indeed, perhaps the only means by which repayment can be secured. Such means are obviously fresh investment in Germany, additional German exports, and repatriation of German capital. During the past year all these factors have played a part in German repayment of debt, but mainly to the advantage of the long-term creditors. Since the prices of German securities have been far higher in Germany than abroad, fresh investment in Germany was obviously driven to take the form of purchase in the foreign markets. The same applies to the repatriation of German capital, a subject which was fully dealt with recently in these columns. Moreover, as was then pointed out, “additional” German exports were stimulated by granting German exporters permission to invest the proceeds of their sales in German securities abroad, which were then sold in Germany at a profit. The system of blocked marks quoted at a discount would enable the short-term creditors to have their turn if, like the long-term creditors, they were prepared to take a loss. It would cheapen, and therefore encourage, direct investment in Germany, the repatriation of German capital, and “additional” German exports. Incidentally, there is no reason why the scheme should be confined to the banking creditors; it could easily be extended to creditors outside the Standstill agreement.

Admittedly the proposals described above do not solve—or, at any rate, immediately solve—the standstill problem. There are advocates, particularly in Germany, of a comprehensive funding scheme for all “bad” credits, by which is apparently meant all credits not genuinely commercial and liquid. The “good” credits, it is argued, could then be left in Germany with perfect safety, and there would be no more need for a standstill agreement. Apart, however, from the difficulty of placing, at present, any funding loan or increasing substantially the rate of “transfer,” the trouble here obviously lies in separating the sheep from the goats; and there seems little or no prospect of agreement on these lines. The foregoing proposals, however, would involve an automatic separation of the “good” from “bad” debtors, since creditors could liquidate and change their credits within Germany. In addition, they could always get out of Germany, if they wished, at a loss which would get smaller as confidence in Germany revived; and a large reduction or disappearance of the discount on “claims” would be an excellent indication of the moment for the complete removal of restrictions. In short, the scheme represents an attempt, with some prospect of success, to allow the standstill situation to work itself out by the most natural means possible rather than to “solve” it. If greater freedom and elasticity in Germany’s relations with her foreign

banking creditors can be secured; if steps, as indicated above, are taken whereby the creditors can more effectively test the situation for themselves; and if Germany’s national policy is directed towards facilitating the ultimate repayment of those who are no longer willing lenders, there is no reason why a year or two should not work a great change for the better in her foreign credit situation.

RENT RESTRICTION.

THE Rent and Mortgage Interest Restrictions (Amendment) Bill, which was presented to Parliament last week, merely carries out the recommendations of the Interdepartmental Committee on the Rent Restriction Acts, appointed by the late Labour Government, which reported in July of last year. The Committee, of which Lord Marley was the chairman, made a careful survey of the working of the Acts, and its conclusions, though not very original, were an eminently sensible attempt to deal with a very difficult and complicated problem. Although, as the memorandum issued last month by the Government shows, the figures on which the Committee based its recommendations were perhaps rather more pessimistic than the subsequent revision seems to indicate, nothing has occurred in the meantime to upset its main conclusions.

The Rent Restrictions Acts, as everybody knows, were originally introduced as a war measure, to prevent the shortage of housing created by the cessation of building operations resulting in severe hardship to the working classes, especially in those areas where the influx of munition workers was pressing heavily upon the available accommodation. The first Act which was passed in 1915 confined itself to the cheaper working-class houses having an annual rateable value not exceeding £35 in London, £30 in Scotland and £26 in other parts of the country. But as time went on it was necessary by successive stages to bring within the purview of restriction a large number of what may for convenience be called “middle-class” houses, and the Act of 1920 included houses with as high a rateable value as £105 in London and £78 in the provinces.

Besides restricting rents—for which the Act of 1920 fixed a maximum increase of 40 per cent. on the standard of 1914 plus 10 per cent. for increased rates—the Rent Restrictions Acts also limited the increase of rates of interest on mortgages (to 6½ per cent. under the 1920 Act), prevented mortgages being prematurely called in, and also made it illegal for landlords, except under very special circumstances, to evict tenants. These measures were never, of course, intended to be permanent, and it was hoped that as soon as the shortage of houses—greatly aggravated if not entirely created by the war—had been made good, it would be possible to “decontrol” rents and return to the pre-war system of *laissez-faire*.

In 1923 the first attempt was made to loosen the restrictions. An Act was passed decontrolling automatically all houses which had come into the possession of their landlords, and also those where landlord and tenant had entered into certain specified agreements. This Act, which expired in 1928, has been renewed annually, and in 1930 the Government decided to review the position in order to discover what amendments were appropriate.

In spite of the immense effort made since the war to improve housing conditions and to make up the existing shortage, it cannot be said that the results so far obtained have been at all satisfactory. It is true that over £1,000 millions have been spent in the last thirteen years, but they have been largely confined to middle-class houses, and the number of new houses built with a rateable value of £13 or under (£20 in the Metropolitan area) has been comparatively small—only about 700,000. Nor have the results of the Act of 1923 in effecting the decontrol of the cheaper class of houses proved very successful. The figures published last month show that out of about 5,000,000 “C” class houses only 850,000—less than a fifth—have been decontrolled up to date.

The following table embodies the figures and the new classification given in the Report of the Marley Committee and the review of the position at the end of September, 1932.

ENGLAND AND WALES.			
CLASS A.—Rateable value limits: Over £45 in London, or £35 elsewhere.			
	Marley Committee, 1931.	Sept. 30, 1932.	
Controlled	530,000	500,000	
Not controlled—			
Decontrolled.....	320,000	350,000	} 770,000
New	350,000	420,000	
	1,200,000	1,270,000	
CLASS B.—Rateable value limits: Between £20 and £45 in London, or £13 and £35 elsewhere.			
Controlled	1,350,000	1,300,000	
Not controlled—			
Decontrolled.....	200,000	250,000	} 1,085,000
New	700,000	835,000	
	2,250,000	2,385,000	
CLASS C.—Rateable value limits: £20 or under in London; £13 or under elsewhere.			
Controlled	4,375,000	4,150,000	
Not controlled—			
Decontrolled.....	625,000	850,000	} 1,550,000
New	600,000	700,000	
	5,600,000	5,700,000	

These figures show that nearly two-thirds of the houses built since the war have been of a rateable value too high to permit their occupation by any but the most prosperous and securely employed members of the working classes. As the Marley Committee pointed out, it was hoped that the increased supply of Class A and Class B houses would lead to a gradual “filtering up” which would relieve the pressure on Class C houses as the more well-to-do tenants gradually moved into the better-class houses. This filtering up has, however, not taken place to any great extent. As the Committee observed:—

“It appears to us that the decontrolling provisions of the Act of 1923 must have had the effect of deterring working-class tenants from moving, as any empty house to which they could move must normally be a decontrolled house. Thus, a tenant, if he moved, would lose his security of tenure and normally have to pay a considerably higher rent. In these circumstances, working-class tenants have had every incentive not to move and the figures supplied by the Ministry of Labour show that seven-eighths [later figures suggest about four-fifths] of the working-class tenants have, in fact, not moved, only one-eighth [later figures suggest about one-fifth] of the smaller working-class houses have become decontrolled since 1923. . . .”

The evidence placed before the Marley Committee indicated that the rents in “decontrolled” working-class houses range on an average from 85 to 90 per cent. above the pre-war rent (including rates), as compared with 50 per cent. (including rates) for controlled houses. Thus, a house with a pre-war rent of 6s. would have a controlled rent of 9s., and on decontrol the rent would rise on an average to 11s. 3d. Though the situation has probably improved somewhat in the meantime, a return to *laissez-faire*, such as was advocated by the Ray Committee, would involve the risk of a substantial rise in rents over more than 4,000,000 working-class houses. In view of the increase of unemployment which has taken place in the last two years—to say nothing of the imposition of the means test—it is clear that a further measure of decontrol would in many cases involve real hardship, especially in those districts where the slow but steady pressure of migration from the derelict areas is making itself felt.

In view of these facts the Government has been wise to adopt the recommendations of the Marley Committee in its Rent Restrictions Bill, the chief provisions of which are as follows:—

Class A houses are decontrolled. Class B houses are left where they stand under the Act of 1923, but class C houses are exempted from the decontrolling provisions of that Act. The Committee (with a minority of one) rightly refused to reimpose control on decontrolled or uncontrolled houses, but it felt that the suspension of decontrolling in class C houses, by giving new tenants the same privileges as the old with regard to lower rents and security of tenure, would increase the

It pays a bank to be used by its customers, though many of its services cost the customer nothing

It is the Westminster Bank’s policy to popularize its services by issuing simply worded accounts of various ways in which it is glad to be used. WESTMINSTER BANK
LIMITED

much-needed mobility of labour and so promote the process of “filtering up.” The Bill likewise provides for the continued control of mortgages so long as the mortgaged property remains subject to control, and extends somewhat the definition of “alternative accommodation” with a view to facilitating the regaining of possession of houses by landlords in the interests of development and improvement. This provision should not cause any hardship seeing that class C houses will no longer be decontrolled.

The Bill also contains a clause (4) intended to prevent an abuse to which the Marley Committee drew attention, namely the exaction by tenants of exorbitant rents on subletting. This clause gives the landlord the right to resume possession in the case of extortionate charging by a statutory tenant, requires tenants to notify their landlords if they are subletting, and in certain cases imposes a penalty for extortionate charges to sub-tenants. The Bill also gives the local authorities power to give information and advice for the assistance of landlords and tenants as to their rights and duties under the principal Acts and as to the procedure for enforcing them in accordance with the recommendation of the Marley Committee that local authorities should be empowered to set up committees for this purpose.

Considered as a whole the Bill is a commendable attempt to deal with a very intractable problem, but, like all previous legislation on this subject, it should be regarded as a temporary expedient designed to facilitate the transition to a state of “normalcy” which unfortunately it has not been possible to attain after nearly fifteen years of effort. For in a healthy society rent restriction cannot be accepted as a normal part of our social machinery: indeed, the very fact that it is still necessary shows clearly that we have not yet attained the proper equilibrium between supply and demand of one of the prime necessities of existence. If we are to rid ourselves of the incubus of rent restriction it is clear that we must first tackle the problem of class C houses. Until the supply of smaller dwelling has been substantially increased there is no possibility of the housing industry standing upon its own feet.

SUN LIFE OF CANADA.

By far the largest and best-known of the Life Assurance Companies operating on an international basis, the Sun Life of Canada has pursued since the war a policy of energetic and forceful expansion, which has been equally successful in countries differing widely in racial and sociological conditions. Unusually aggressive publicity methods have done a good deal to force the public to a wider realization of the need for assurance cover, and this process has been beneficial, not only to the public, but also to the

cause of life assurance in general. The costs of management and commission have naturally been very heavy, and the company has been subjected to criticism on this account, though much of this criticism has failed to make proper allowance for the huge annual increase in new business, with its attendant heavy agency and other expenses. The company, owing to its Canadian domicile, has virtually escaped income tax, and has been able to invest its funds until recently at a net rate of interest considerably higher than the gross rates earned by British offices. This factor has enabled it to meet the abnormally heavy expenses, and, it may be, to justify the policy which has been followed.

The company's total new business in 1931 was £104,000,000, a fall of £38,000,000 as compared with 1930. The new business effected in this country alone was £9,000,000, against £10,000,000 in the preceding year. As is well known, the Sun Life of Canada, in investing about one-half of its funds in ordinary stocks, has adopted an investment policy which differs from that of all other life assurance companies. So long as the unprecedented prosperity in America continued, this policy was highly successful, and on December 31, 1928, a large undivided surplus existed over the liabilities. This surplus had been built up over a series of years, during which the annual bonuses, which formerly were unattractive, increased in nine successive years to the handsome rates declared in respect of the dividend year ended on March 31, 1931. The catastrophic fall in the prices of American equity stocks in 1930 and 1931 much more than cancelled all the accumulated free surplus; in consequence, on December 31, 1931, the company could not value its Stock Exchange securities at the market quotations on that date. It availed itself of the permissive emergency basis of the Canadian Government Insurance Department; bonds held on December 31, 1930, and ordinary and preferred stocks held on June 30, 1931, were taken in the balance sheet at their market values on these respective dates. It is stated that this method, as applied to the assets of the company, is slightly more stringent than that adopted by the National Convention of Insurance Commissioners of the United States.

The complexity of the accounts makes a true analysis of profits extremely difficult, and the figures which follow necessarily contain an element of conjecture, more especially in regard to the year 1931:—

	PROFIT AND LOSS.			
	1928.	1929.	1930.	1931.
	£	£	£	£
Trading surplus....	3,193,403	3,440,393	3,603,128	3,740,000*
Profits from securities (realised and unrealised)	4,839,131	5,097,903	-9,406,618	-5,970,141
Brought forward....	7,205,340	8,752,058	8,803,490	2,197,384
	15,237,874	17,290,354	3,000,000	32,757*
Allocations to—				
Bonuses paid to or reserved for policyholders ...	3,597,970	5,690,168	6,007,126	4,000,000*
Shareholders	133,790	194,564	250,751	292,825
Strengthening of actuarial reserves	699,261	547,337	...	350,000*
Weakening of actuarial reserves	...	...	-1,500,000	...
Strengthening of investment reserves.....	2,054,795	2,054,795	...	...
Weakening of investment reserves	...	...	-3,955,261	-5,034,250
Carried forward .	8,752,058	8,803,490	2,197,384	358,668
	15,237,874	17,290,354	3,000,000	32,757*

* Approximation.

It should be stated that the amounts carried forward in the above statement are smaller than those shown in the accounts. The difference is accounted for by the fact that we have deducted from the published "carry-forward" the estimated amount of the contingent allocations which the company customarily shows for bonuses payable during the dividend year commencing on April 1st following; and it may be open to argument whether or not these amounts should be deducted in arriving at a "carry-forward" comparable with that of a British office. The published "carry forward" on December 31, 1931, was

£3,359,668. It will be seen that had market values on December 31, 1931, been used in the last balance sheet, a larger deficit would have resulted.

The fall in security prices has been accompanied by a severe drop in 1931 in the rate of interest earned:—

Year.	Rate of Interest.		
	£	s.	d.
1927	6	2	7
1928	6	3	6
1929	6	5	11
1930	6	0	8
1931	5	2	10

The average rate of interest assumed in the valuation of future liabilities is about 3½ per cent., so that even in 1931 there was a margin of almost 2 per cent., which is considerably greater than that enjoyed by the majority of British companies.

The expense ratio, suitably adjusted for single premiums and annuities, was 24.7 per cent. in 1931, against 29.0 per cent. in 1930, but the fall is due mainly to a decrease of £521,000 in commission payments, owing to the reduced new business. The net interest income, at £5,879,000, was £688,000 below the corresponding figure of 1930 and was less than the total expenses, which amounted to £6,256,881.

The liabilities of the company are valued on a basis which is stringent when considered in relation to the probable future interest earnings, and it is necessary to bear in mind that where, as in the case of the Sun Life of Canada, the income exceeds the outgo, a temporary rise or fall in the market value of the assets is of secondary importance; investments need not be sold at unfavourable times to meet current liabilities. What is of primary importance is the net rate of interest earned, not on the book values of the assets, but on the actuarial liabilities, which are unaffected by the vagaries of the Stock Exchange. This rate was well over 5 per cent. in 1931 in spite of the numerous defaults—at least temporarily—in interest payments which must have been experienced; and it is probable that, in spite of the lower rates earned on new money, the net rate of interest will not fall below 5 per cent. of the policy reserve liabilities for a number of years.

As a result of the crisis it is understood that Governmental regulation has intervened in Canada in a form which will make it impossible for the Sun Life of Canada to invest any new money in common stocks for many years. This may prevent the company taking the fullest advantage of a revival in world economic conditions, but we think a healthier position should result. We do not share the view that a life assurance company should eschew ordinary stocks, but we believe it is unwise to hold so high a proportion of the assets in that form as has been the custom of the Sun Life of Canada.

It is common knowledge that rumours have circulated regarding the stability of this office, but there is no evident cause for any policyholder to feel uneasy as to the security of his contract. Any early return to the high scales of bonus that have been enjoyed in recent years, however, seems to be improbable. The rates declared for the dividend year commencing April 1, 1932, are approximately two-thirds of those for the previous two years, which were the highest in the history of the company. The system of additional maturity bonuses which was established only a few years ago with much publicity has apparently been discontinued. The present scale of bonuses compares unfavourably with the average rates declared by British offices, but should show some improvement on a return to more normal conditions. Omitting capital profits arising out of the sale of securities, or appreciation in market values, which are inappropriate for distribution in the form of bonuses, the main sources of profits are interest earnings in excess of valuation requirements, mortality more favourable than that assumed by the company, and expenses smaller than are provided for in the premiums. The last source of surplus is perhaps more within the direct control of the management than the other two items and, having regard to the lower interest earnings, the expenses of the Sun Life of Canada are decidedly excessive. A slowing up of the aggressive expansionist policy of recent years, combined with a severe retrenchment in other directions, seems to be called for in the best interests of the main body of policyholders.

A TURKISH DECENNIUM

DECENNIAL celebrations are in fashion. A few weeks ago, the completion of the first ten years of the Fascist regime was being celebrated in Italy; and, more recently, the Turks have been celebrating the first decennium of Kemalism. The coincidence is interesting; for there are certain obvious similarities between President Mustafa Kemal's work and Signor Mussolini's. Both statesmen have swept aside an exotic parliamentarianism in order to rule as dictators; and both have used—and sought to justify—their dictatorial power for the purpose of overhauling the whole life of the countries over which they have assumed their high-handed control. Both have either cowed or fascinated the great mass of their fellow-countrymen, but have encountered unyielding opposition on the part of a small intellectual élite. This conflict has been tragic, for in both countries there had been a dearth of upright, disinterested, able, well-educated leaders; and it is regrettable that the leaders who came to the top should not have made it possible for their peers to collaborate with them. The Italian Duce, to his honour, has celebrated his first decennium by a far-reaching amnesty; and we respectfully commend this example to the attention of his Turkish confrère. To amnesty his opponents is a dictator's last and hardest triumph; but if he can achieve it, it is the most convincing demonstration that he can possibly make of his own security and success. If President Mustafa Kemal were to amnesty his exiles now, this would be one of the finest acts in his career for the good of his country and for the credit of his own name.

So much for the points of similarity between the Turkish and the Italian revolutions that have brought to the surface a Mussolini and a Kemal. But the Turkish Revolution has been by far the most drastic of the two—degree almost amounts to a difference in kind. In Italy, Signor Mussolini has merely had to quicken the pace of a nation that has always been one of the great nations of the Western World in order to bring this nation abreast of the vanguard of Western progress—the traditional place of Italy, from which she had only temporarily fallen back. In Turkey, on the other hand, Mustafa Kemal has set himself to turn an ancient, proud and self-conscious Oriental people into a Western nation; and this has meant a political, religious, economic, social and cultural revolution that has left no sphere of Turkish life unaffected, and has changed out of all recognition every feature that it has touched.

No doubt, Kemal and his companions who started the present movement at Angora in 1920 were not the first Turkish "Westernisers." By that date, a dozen years ago, Turkey had been in process of "Westernisation" for nearly a century and a-half; and she had already come a considerable distance to meet the West. The change which "Kemalism" has introduced is a change of pace and, perhaps even more, a change of attitude. Kemal's "Westernising" predecessors were "Westernisers" against the grain. They had realised that Turkey must "Westernise" her army or perish; and then the reform of the army involved them step by step in far-reaching financial, administrative and educational changes which they had never foreseen when they first entered upon this course. In spite of themselves, the Turkish reformers were drawn forward, decade by decade, step by step. But they took no pleasure in their advance; and they never moved a step except under the force majeure of an imminent prospect of annihilation. It was Kemal who realised—and made his countrymen realise—that, beyond a point, it is ridiculous as well as painful to kick against the pricks; and that, if you are fated to traverse a certain course, you had much better run your race joyfully. For ten years Kemal has been setting the pace—with a cat-o'-nine-tails in his hand to quicken the step of any good citizens of the Turkish Republic who may show signs of fainting by the way and lagging behind his tireless and remorseless President.

The catalogue of changes leaves the mere stick-in-the-mud Westerner gaping. In these ten years, the Ottoman

Turks, under Kemal's auspices, have renounced the Ottoman Empire and established a Turkish Republic, which is a Successor-State of the old Ottoman Empire in the same sense as Greece or Bulgaria. More than that, they have cast out the House of Osman—the dynasty that originally created the Ottoman Turkish State and people and endowed them both with the Founder's name. The first thing which the revolutionaries of Angora did when they became masters of Constantinople in the autumn of 1922 was to depose the reigning Sultan and abolish the Ottoman Sultanate. But the Ottoman Sultans had also been Caliphs of Islam; and should the Caliphate follow suit? After a brief experiment in keeping a seion of the House of Osman as a tame Caliph, Kemal proceeded to abolish the Caliphate likewise, and thereby severed the religious link between Turkey and the rest of the Islamic world.

The abolition of the Caliphate was extraordinarily bold; for, ever since Turkey had felt herself unable to stand on her own feet she had been leaning for support on her Muslim brethren all over the world. But Kemal cast away this crutch and told his countrymen that they must either learn to stand by themselves again or perish. And he has done far more than sever the link between Turkey and the last of the Islamic world by abolishing the Caliphate. He has "disestablished" Islam inside Turkey itself. And this is a *tour de force* which it is not easy for the Western mind to grasp; for in Islam Church and State are one, so that the transformation of Turkey into an imitation of the French *Etat Laïque* does not mean simply divorcing two institutions that have been artificially wedded. It means rending from top to bottom the seamless robe of Islamic society.

To most of us, perhaps, the disestablishment of Islam in Turkey has meant little more than the regulation that all male Turkish citizens must wear hats with brims. This has been one of the outward and visible signs of secularisation because a hat with a brim—which precludes the pious Muslim from touching the ground with his forehead in prayer—is in Turkey the traditional mark of the beast: the mark, that is to say, of the Frankish infidel. For a pious male Muslim to wear a hat is at least as shocking as for a pious male Christian to keep his head covered in Church; and this is the inwardness of an apparently arbitrary decree which has caught the attention and excited the amusement of the Western world. But this business of brims is after all only superficial. A deeper change has been involved in the adoption, almost at one sitting, of the Swiss Civil Code and the Italian Criminal Code by the Turkish Great National Assembly. The Canon Law of Islam was thereby abolished at a stroke; and the passage from polygamy to monogamy was only one incidental change among many.

But perhaps the most revolutionary change of all has been the substitution of the Latin for the Arabic alphabet, which obliterates from the Turkish mind the whole Islamic cultural heritage. The rising generation will have no access to the literature and civilisation of the Persian and Arabic classics, on which their forefathers have been reared. Their minds will be re-orientated, by the change of script, to the languages and literatures of the Western world. The slate is being wiped clean; and we can only wonder what is going to be written upon it. Perhaps nothing very startling after all; for imitation is generally prosaic.

There is one admirable trait which Kemalist Turkey shares with Fascist Italy, and that is its pacific foreign policy. It is noteworthy that a movement born out of a national struggle for existence has not been tempted by its success into passing over to the offensive. The Turkish decennium which has just run out was inaugurated by the overthrow of the Greek Army and the liberation of Anatolia. Yet in spite of the bitterness caused by the wholesale compulsory interchange of minorities, the Turks and Greeks have now composed their secular feud and have contracted a national friendship which is little short of miraculous. Turkey has renounced all ambitions in the Balkans, and likewise in her former Arab provinces. This moderation is a sign of strength, and encourages hopes for the future progress of Turkey in the decennium which lies ahead.

Notes of the Week.

The League and Manchuria.—In the light of Wednesday's proceedings in the Assembly of the League, the optimistic despatch, written on Tuesday by our League correspondent and published on a later page, will be read with feelings of bitter disappointment. The disappointment will be all the more bitter in this country in that though the Great Powers—with the possible exception of France, whose attitude was equivocally guarded—adopted an attitude which must gravely impair the moral authority of the League, the lead in this disastrous policy was given by the British Foreign Secretary. In a speech which reads like that of counsel for the defendant rather than the judicial summing up of a world tribunal, Sir John Simon on Wednesday appears to us to have dealt the League a serious blow. As if he had been furnished with a brief to exculpate Japan, he extracted from the Lytton Report every point which, detached from its context, appeared to tell in Japan's favour. In particular, he quoted with approval the conclusion of the Commission that "a mere restoration of the *status quo ante* would be no solution" and refrained from adding that the Report said with quite as much emphasis that "the maintenance and recognition of the present regime in Manchuria would be equally unsatisfactory." Again, expressing his satisfaction with Japan's declarations of "loyalty to the League," he had no word to say with reference to Japan's blunt announcement of her claim to pursue in Manchuria her own policy and not to brook there any League interference. He ended by proposing that the Assembly "should stand by the principles of the League and promote conciliation" and that for this purpose the Manchurian issue should be entrusted to the Committee of Nineteen, strengthened, if possible, by representatives of the United States and the U.S.S.R. The speech was applauded by Mr Matsuoka with the ironical comment that Sir John Simon had said in half an hour what he had endeavoured to say for Japan in the last ten days; and the British proposals as to procedure were endorsed by both the German and the Italian representatives. Now the Lytton Report recommended that there should be direct negotiations between China and Japan, but only on the assumption that the principles of settlement which the Commission laid down were endorsed by the League and accepted by the disputants. It is clear that the effect of Sir John Simon's proposals would be to remove the dispute effectively from the purview of the League and from the limelight of public opinion, while "negotiations" could be indefinitely protracted by the Japanese Government and Japan remain equally indefinitely in possession of the territory forcibly seized by her army in Manchuria. It is true that M. Paul Boncour, alone among the spokesmen of the Great Powers, hinted that, if conciliation failed, the Assembly would eventually be bound to make recommendations on the basis of the Lytton Report. But in existing circumstances to play for time is to play into the hands of Japan. However specious the arguments in favour of "conciliation" and "patient exploration of possibilities," and however real may be the difficulties involved in bringing an aggressor to heel, the hard fact remains that the attitude of the great European Powers in this dispute is bound to alienate American opinion, shatter the faith which the minor nations have placed in treaties and conventions, and encourage throughout the world the disastrous belief that the authority of the League, if boldly challenged, will find no effective defenders. We regard Wednesday's developments in the Assembly with grave misgivings.

Disarmament.—The present situation of the Disarmament Conference is bafflingly obscure. As we write, the Five-Power conversations at Geneva do not seem to have made much progress in arriving at a formula on the basis of which Germany would consent to re-enter the Conference. So far as can be judged from the meagre information available, the suggestion has apparently been made to Baron von Neurath that the Powers should join in a

simple declaration that it is the aim of all concerned "to accord equality of rights to Germany within a system which provides security for all nations." German insistence that there must be a clear definition of what "equality" is to mean in practice for Germany in the immediate future has apparently been countered by French insistence that there must not be any extension of armaments in Germany unless and until plans for security have been given concrete shape. If these accounts be correct, the *impasse* remains unaltered; and Mr Norman Davis, the American delegate, is actually credited with having made the suggestion that the Conference should "gather up the results achieved" in an immediate convention—obviously embodying almost nugatory points of agreement—and should then adjourn until 1936, leaving the study of disarmament, with the associated question of security and equality of status for Germany, to be studied meanwhile by a permanent commission. If this really be the proposal, the result will be hardly distinguishable from a fiasco. The world will be told that, until 1936, highly unsatisfactory, there is to be little actual levelling down on the part of the heavily-armed powers; and it is difficult to see how Germany could be prevented from acquiring during such a protracted adjournment at any rate the so-called "defensive arms" and thus giving renewed impetus to a fatal armaments' race.

The New German Cabinet.—After sixteen days of unresolved "crisis," President von Hindenburg on Friday of last week decided definitely to entrust the formation of a new Government to General von Schleicher; and the completion of the Cabinet was announced last Sunday. The changes in *personnel* are relatively small. General von Schleicher now emerges from the background as Chancellor and Minister of Defence, and the portfolios of the Interior and Labour, formerly held by Baron von Gayl and Dr. Schäffer, now go to Dr. Bracht and Dr. Syrup, respectively. Otherwise the new Chancellor has taken over Herr von Papen's team *en bloc*. How the new Government will succeed in its relations with the Reichstag still remains to be seen. Our Berlin correspondent, in his despatch this week, reflects what is probably the view of the majority of German opinion that the new regime is undoubtedly preferable to the re-appointment as Chancellor of Herr von Papen—a step which would have made open war between the Government and Parliament inevitable. From the international point of view there are disadvantages in the appointment of a soldier as Chancellor, but General von Schleicher is widely credited with tact and adaptability. So far as the domestic situation is concerned, the Centre appears disposed to support him, while the growing evidence of an ebb in the wave of Nazi enthusiasm may incline Herr Hitler and his followers in the Reichstag to be somewhat more accommodating. It seems quite on the cards that General von Schleicher will be able to secure by agreement an adjournment of the Reichstag for a month or two while his policy is developed. Whether, as he frames his programme in the economic sphere, he can succeed in reconciling the clash of opinions between the exporting interests and the agricultural interests—represented in the Cabinet by Dr. Warmbold and Baron von Braun respectively—is a moot point; but in Germany, as in Europe as a whole, it is difficult to-day to see far into the future.

The Round Table Conference.—From such accounts of the proceedings as are allowed to appear it is evident that the Indian Round Table Conference has now got to grips with the difficult problems involved in the transfer of responsibility at the Centre; but it is not so evident that there is any real approach to agreement. After a general statement by Sir Samuel Hoare, last Friday, of the Government's views regarding the special powers to be vested in the Governor-General and Provincial Governors—the Government apparently desire that in both instances there should be power to enact legislation as well as to pass limited-period Ordinances—the Conference proceeded to discuss the relatively simple issue of Defence. There appears to have been general agreement that responsibility

for Defence, during a transitional period at least, should lie with the Governor-General; but the British Indian delegation urged (1) that the preamble to the forthcoming Bill should declare that Defence must be to an increasing extent the concern of the Indian people; (2) that there should be a definite agreed programme of "Indianisation" for the army in India; (3) that the Defence Minister, although responsible wholly to the Governor-General, should be a member of the Legislature and should participate in Cabinet discussions; (4) that no part of the Indian Army should be employed outside the limits of India without the approval of the Legislature; and (5) that the Army Budget, though not subject to the vote of the Legislature, should be discussed by it. On Tuesday, Sir Samuel Hoare, winding up the discussion on Defence, appears to have rejected, in effect, all these proposals with the exception of the unimportant point (5). The defence of India, he said, might require the use of Indian troops outside the boundaries of India. The Governor-General must be the judge of military exigencies, though if Indian troops were used for Imperial purposes the British Treasury would find the finance. "Indianisation" must be subject to the over-riding consideration of military efficiency, and the Viceroy's choice of a Defence Minister must be unfettered. The wisest course was "to leave things to develop by usage." On Wednesday the Conference decided to remit to a committee the controversial issue of financial safeguards and also the general question of federal finance in its bearing on the relations between the Centre and (a) the States, and (b) the Provinces. At Tuesday's session Sir Samuel Hoare had drawn a rather gloomy picture of the financial position. The Government, he said, were anxious to give the Provinces real autonomy and the fullest possible freedom over the disposal of their revenue. But the latest figures indicated that, taking India as a whole, receipts would not balance expenditure. Unless the Federal Government had the main part of the income tax now being collected, it could not remain solvent, and the application of the proposals of the Peel Report in present circumstances would mean that transference to the Provinces of the proceeds of income tax must result in the whole amount being taken back in the form of contributions. He suggested tentatively that special measures should be taken by means of Central contributions to start the deficit Provinces on an even keel; that Provincial Governments should be vested with a limited right of surcharging income tax; and that Central revenue should be transferred to the Provinces as and when the financial position improved. The discussion of these proposals on the following day revealed a strong desire on the part of the British India delegation that the Provinces should be given adequate power to develop their own resources, and the suggested retention of income tax by the Centre appears to have elicited criticism from several quarters.

The American Taxpayer.—It is to be feared that the Budget message which Mr Hoover delivered to Congress on Wednesday will do little to foster willingness on the part of Congressmen to assent to war debt revision. The message predicts a deficit of \$1,146 millions in the fiscal year ending June 30, 1933, but this estimate is based on the assumption that foreign obligations, yielding nearly \$300 millions will be met in full. For the next fiscal year a deficit of \$307 millions is provisionally said to be in sight, but this figure would be increased to \$636 millions if receipts from war debts were not forthcoming. In asking Congress to remedy a situation which "cannot continue without disaster to the Federal finances," the President urged that Congress should (a) enact a manufacturers' excise tax of 2½ per cent., yielding \$355 millions; (b) retain the existing tax of 1 cent per gallon on petrol; (c) reduce the salaries of Government officials by 11 per cent.; and (d) cut the amount now being expended to war veterans by \$127 millions. Appropriations requested for the fiscal year 1933-34 amount to \$4,219 millions, a reduction of \$478 millions below the estimated expenditure for 1932-33. The appropriations include \$581 millions for the army and navy, a reduction of \$38 millions. The

budgetary prospects are sufficiently uncomfortable to suggest that Congress will endeavour to find a way out of the difficulties in the shape of revenue from an excise duty on legalised liquor. When Congress met on Monday the House of Representatives cast 271 votes, against 144 dissents, in favour of a resolution to submit to the States the issue of direct repeal of the Eighteenth Amendment. As a two-thirds majority was required for the passage of the resolution, the motion just failed, and, in any case, the Presidential veto would probably have been a bar to such root-and-branch procedure. The legalisation of beer, however, is certainly within the field of practical politics as a first step, and the revenue resulting therefrom would more than fill the gap caused by the discontinuance of war debt payments.

The Housing Bill.—The Government's new Housing Bill abolishes the "Wheatley" housing subsidy given under the Act of 1924; and, in so doing, it follows the recommendations of the Ray Report. The Bill will certainly arouse a great deal of misgiving among housing reformers. All the evidence shows that the supply of the smallest type of working-class houses is still woefully inadequate, and though interest rates and the cost of building materials have both fallen substantially, it may be doubted whether private enterprise will be able, without a reduction in building wages, to supply the needs of the poorest paid workers—to say nothing of the unemployed. On the Government's own showing there is still a gap of 9d. between the rent of subsidised and unsubsidised houses, and it is only as a result of a further fall in interest rates that this gap is likely to disappear. While, therefore, there is a strong case for reducing the "Wheatley" subsidy very substantially, there is grave reason to doubt the wisdom of abolishing it entirely. It is true that in Germany the abolition of the housing subsidy did in fact result in a cheapening of the cost of building, but this was only accomplished by means of wage reductions in the building trades—a method which private enterprise in this country would find it much less easy to adopt. The second clause of the Bill, which embodies the proposals recently made by the building societies to the Minister of Health, has much to be said in its favour. It enables local authorities to assist the building societies to provide houses for letting, by permitting them to guarantee two-thirds of the difference between the percentage of 70 per cent. which would normally be advanced by a society under the present rules, and a new maximum of 90 per cent.; and it also permits the Government to guarantee half of any loss which may be incurred under this procedure. The effect of this part of the Bill should be to stimulate to a limited extent the provision of houses by private enterprise, but we still doubt whether it will assist very much in overcoming the shortage in the smaller type of houses which still exists. To do this a much more extensive "drive," backed by Government credit in some form or other, would seem to be necessary.

London Passenger Transport Bill.—The London Passenger Transport Bill, after last week's comedy of errors, made a somewhat more rapid progress in Committee than might have been expected. Only the new clauses and schedules now remain to be considered, and it is hoped that another half-day will be sufficient to complete the Committee stage. The Conservative opponents of the Bill kept up a close fire of criticism, but the position of the Government was never in any real danger. An attempt was made by the Labour Opposition to restore the powers which the Bill originally contained permitting the Transport Board to manufacture its own equipment. These powers were very much cut down by the Joint Select Committee, and were confined to the manufacture of a limited number of omnibus bodies. The Government refused to make any concessions except on a point of detail, and in the circumstances it could hardly have acted otherwise. One of the principal amendments to the Bill introduced by the Government, embodying the agreement with the Metropolitan Railway, came in for a certain amount of criticism from the Conservative back benches,

but the Government was able to show that the guarantee given to Metropolitan common stockholders was given by the main line railways in respect of their "pooled" suburban receipts, and involved no additional burden on the finances of the Board. The most serious criticism was directed against the provision enabling stockholders with a minimum holding of £500,000 to apply to the High Court for a receivership in the event of a failure on the part of the Board to pay the standard revenue—5 per cent. for the first two years and thereafter 5½ per cent.—for two consecutive years. It was suggested that the figures should be reduced, for this purpose, to 3½ and 4 per cent., and the Attorney-General promised, on behalf of the Government, to give this proposal sympathetic consideration, at any rate so far as the first two years are concerned. With this question we deal more fully in an Investment Note on page 1094. Here we would merely say that, in view of the reduction in the earnings of the constituent elements of the new undertaking during the past two years we consider it absolutely essential that the Transport Board should be given greater elasticity. Under the present conditions of trade depression it may very well prove impossible for the Board to earn its full standard rate of dividend to begin with; and the threat of a receivership hanging so closely over the heads of the management would certainly not add to its efficiency. The Government will therefore be well advised to embody this amendment, which would in no way endanger the security of the "C" stockholder. Otherwise the situation of the Board might become very precarious, not to say impossible.

Railway Wages.—The National Wages Board on Tuesday resumed the hearing of the Railway Companies' claim for a reduction in wages and salaries. The case for the trade unions was opened by Mr Marchbank, of the National Union of Railwaymen. Mr Marchbank submitted that salaries and wages could not be reduced without serious hardship to those concerned. He contended that a reasonable return on capital should be secondary to the payment of wages and salaries consistent with the economic needs of the workers. In answer to the companies' statement that the present rates of railwaymen's wages showed a higher increase over the pre-war level than those of industry in general, he maintained that before the war the rates of railwaymen's wages were unduly low. The unions could not allow them, therefore, to be made the basis for calculating present-day conditions. Discussing the companies' wage proposals, Mr Marchbank stated that it meant increasing the hours of work from 48 to 50, with a minimum wage of 38s. As many as 27,245 men would have their rates of pay reduced to this figure, subject to possible additions for overtime and Sunday duty. More than half the men in the conciliation grades, 173,500, would be receiving wages not exceeding 49s. 6d. a week. He contrasted these figures with the rates of relief for a married man with six children—Bristol, 36s. plus rent allowance up to 8s.; Cardiff, 40s.; Lanark, 39s.; Manchester, 31s., with rent allowance up to 10s.—and stated that a large number of railwaymen were compelled to seek for public assistance. He also quoted figures purporting to show that the companies were not now working at a loss. Taking all the companies together, their capital was £1,095,000,000; the Stock Exchange valuation of which was £564,584,500. The amount disbursed to stockholders for 1931 was £34,359,200, representing 3.19 per cent. on the capital and 6.09 per cent. on the Stock Exchange valuation. From this fallacious basis of computation he argued that railway stockholders were receiving on an average a higher rate for their money than was yielded by Government securities and that the companies should therefore take steps to readjust their capital—not a very convincing piece of ratiocination.

The More Looms System.—Our Manchester correspondent writes:—After very lengthy negotiations the cotton weaving employers of Lancashire and the representatives of the operatives have reached an agreement relating to the "more looms per weaver" system. The present negotiations began nearly a month ago, with

Mr F. W. Leggett, of the Ministry of Labour, as chairman of the joint negotiating committee and mediator. Discussions have taken place on fourteen separate days, and the members of the committee have had to deal with numerous difficulties. On Wednesday, however, Mr Leggett announced that the committee had completed its immediate task and had prepared terms of a provisional agreement covering a limited range of cloths for submission to the larger body of representatives of both sides for ratification. It is pointed out that in the draft agreement provision has been made for safeguarding the earnings of the operatives under the conditions under which this system is to operate, and for assuring a weaver of a certain wage, irrespective of the number of looms running. Provision has also been made to prevent employers from exploiting the system. It is not proposed to publish the detailed provisions until the draft agreement has been considered by the respective organisations; but it is understood that the agreement fixes a basis for payment per 100,000 picks, with percentages up and down according to the width of cloth produced. The trade union officials have been very strong in their demand for a minimum or "fall-back" wage, and a definite figure has now been reached. The terms will have to be ratified by the Cotton Spinners' and Manufacturers' Association and by the Operative Weavers' Amalgamation, and it is understood that special meetings of these bodies will be held next week. If approval is given, it will probably be possible for manufacturers to start work on the new system at the beginning of next year. Undoubtedly this revised system of working will result in a reduction in labour costs in the production of cloth, and thus enable manufacturers to compete more successfully in the markets of the world.

Unemployment.—The Ministry of Labour return relating to November 21st shows a figure of 2,799,806 for total unemployment on that date. This represents an increase of nearly 53,000 in the numbers unemployed as compared with the position on October 24th, and a rise of 185,000 as compared with a year ago, without making any allowance for the effect of administrative and legislative changes in removing unemployed persons from the register. The deterioration in employment during November was due largely to the continuance of a seasonal decline in building, public works, shipping, road transport and the catering trades. Presumably the usual seasonal engagements in the weeks preceding Christmas will result in the December figure making a better showing, but we shall clearly be lucky if the post-Christmas reaction does not carry the total to very nearly 3 millions. On November 21st it was estimated that there were 9,373,000 insured person aged 16 to 64 in employment in Great Britain. This figure represents a drop of 149,000 in twelve months—a grim figure when allowance is made for the natural growth in the employable population.

The Health of the School Child.—One of the most serious dangers of prolonged trade depression is that it may give rise to unfavourable effects upon the health and nutrition of the younger generation. The report for 1931 of the Chief Medical Officer of the Board of Education (H.M. Stationery Office, 2s.) shows that up to the end of last year, at all events, no such ill-effects had been observed. On the contrary, in many districts the children were actually better nourished than in 1930. There were, however, many border-line cases in which there would soon be deterioration were it not for the provision of school meals. On the whole, however, Sir George Newman speaks with satisfaction of the steady improvement in the physique, cleanliness and general nurture of the children, and ascribes it to the fact that the present generation of parents themselves received, as children, the benefit of the school health services. Of 2,843,653 children inspected, representing 57.7 per cent. of the average attendance, 20 per cent. suffered from definite defects, other than dental, which required treatment. Defects of vision, and adenoids and enlarged tonsils were by far the most numerous, and occurred, respectively, in 87.7 and 64.6 per thousand of the children. In all, 800,000 defects

—sometimes more than one in the same child—are awaiting treatment. The average cost per capita of that part of the school medical service which concerns medical inspection and treatment is 8s. 2d., so that it would be difficult to argue that this modest investment is not bringing in a worth while return.

Poland and Russia.—Our Warsaw correspondent writes:—Taking advantage of Article 49 of the Polish Constitution, which permits—with reservations not apparently applicable in this instance—the President to conclude treaties with foreign countries without obtaining the approval of Parliament, a Presidential Decree promulgated on November 26th formally ratified the Non-Aggression Pact with Soviet Russia, signed in Moscow on July 25th last, and the Conciliation Convention which was drawn up on November 23rd. A simultaneous act of ratification was announced by the Soviet authorities. It is perhaps more than a coincidence that the signatures of M. Litvinoff and M. Patek were affixed to the Conciliation Convention on the same day that M. Titulescu announced in the Roumanian Parliament the rupture of negotiations with the Soviets for the conclusion of a Non-Aggression Pact. With immediate recourse to war for the settlement of disputes now legally denied as between Soviet Russia and Poland, the latter country's military alliance with Roumania appears to assume an entirely different status. There is, however, no evidence yet of any desire on the part of Poland to revise her treaty relations with Roumania. On the contrary, there is an earnest hope that Roumania will soon reconcile her differences with Soviet Russia and thereby set all minds at rest over the security of Eastern frontiers. The ratification of the Non-Aggression Pact and Conciliation Convention marks the first major accomplishment of Colonel Beck, the new Foreign Minister who replaced M. Zaleski about a month ago. Although the policy of conciliation *vis-à-vis* Soviet Russia was begun during M. Zaleski's regime, it is generally understood that Colonel Beck, while subordinate to M. Zaleski at the Foreign Office, had won over Marshal Pilsudski to this policy, and that the improvement in Russian-Polish relations, which has been increasingly noticeable during recent months, is due mainly to the efforts of Colonel Beck. One result of this policy so far has been to create a decidedly better atmosphere in economic relations between the two countries.

Germany's National Income.—According to an official estimate, published in the second November issue of "Wirtschaft und Statistik," Germany's national income in 1931 was Rm. 57,074 millions, as compared with Rm. 70,165 millions in 1930, and Rm. 76,098 in 1929. The following table shows the trend of the total national income of Germany during recent years and the amount disposable after deduction of reparation payments:—

Period.	Total Income.		After deduction of Reparation Payments.			
	Nominal Value.		Nominal Value.		In terms of Purchasing power in 1928 (c).	
	Aggregate (Millions of R.M.)	Per head of Population (R.M.)	Aggregate (Millions of R.M.)	Per head of Population (R.M.)	Aggregate (Millions of R.M.)	Per head of Population (R.M.)
1913(a)...	45,693	776	45,693	766	69,326	1,162
1925 ...	59,978	961	58,921	944	63,940	1,024
1926 ...	62,673	991	61,482	978	66,053	1,051
1927 ...	70,754	1,119	69,170	1,094	71,089	1,124
1928 ...	75,373	1,185	73,374	1,153	73,374	1,153
1929 ...	76,098	1,190	73,597	1,151	72,595	1,135
1930(b)...	70,165	1,091	68,466	1,065	70,511	1,097
1931(c)...	57,074	883	56,082	868	62,605	969

(a) Present territory. (b) Provisional. (c) Adjusted by official cost-of-living index.

It will be seen that the national income per head, after deduction of reparation payments and after adjustment for variations in the purchasing power of the mark, rose steadily from 1925 to 1928, when it nearly equalled the pre-war figure. It began, however, to decline in 1929, and the total fall between 1928 and 1931 amounted to

about 16 per cent. After allowing for changes in the age composition of the German population, the Statistische Reichsamt calculated that even in 1928 the purchasing power per head was 6 per cent. below the figure for 1913, and has since fallen to 78 per cent. of the pre-war figure. Owing to changes in the income structure, the standard of living of the German population has by no means declined to the extent suggested by the fall in the income per head. The proportion of salaries and wages to the total income, adjusted for variations in the purchasing power of the mark, has risen from 45 per cent. in 1913 to 57 per cent. in 1928 and 58 per cent. in 1931. The average income of wage earners and salaried persons, whether occupied or not, rose from Rm. 1,735 in 1913 to Rm. 1,865 in 1928, and was only 8 per cent. below the pre-war figure in 1931. The average wage of partly and fully occupied employees rose from Rm. 1,764 in 1913 to Rm. 2,008 in 1928, and, at Rm. 1,999 in 1931, was still about 12 per cent. higher than before the war. The results of this official investigation suggest that there has been a considerable redistribution of Germany's national income in favour of the working population, accentuated, of course, by the destruction of savings during the inflation period.

Tea Restriction.—Once more an attempt is to be made to raise the price of tea by the restriction of supplies in India, Ceylon and in the Dutch East Indies. A few months ago negotiations were initiated by representatives of growers in the Dutch East Indies as a result of the drastic fall in their receipts. The average price of tea sold at Mincing Lane in July last was 7.27 pence per lb., against an average of 12.24 pence per lb. for the whole of 1931. In addition, Dutch growers have been adversely affected by the depreciation in the gold value of sterling and by the reimposition of the duty on April 20th last, at the rate of 4d. per lb. on foreign tea, as against 2d. per lb. on tea grown in the Empire. As about one-half of the world's tea exports are consumed in this country, Dutch growers found it impossible to evade the effect of the differential duty. After prolonged negotiations between British and Dutch interests, it was announced on December 7th that an agreed scheme had been worked out by representatives of the Indian Tea Association, the Ceylon Association in London, the South Indian Association in London, the British Chamber of Commerce for the Netherlands East Indies, and the Amsterdam and Java Tea Associations. As the failure of the scheme of 1930 was largely due to the unwillingness of the Dutch authorities to assume control over native production and exports, it is proposed that the new scheme, which is to be operative for five years, should be controlled by the respective Governments. Supplies are to be restricted by means of export quotas. In order to avoid controversy, each country will be allowed to have its export quota based on the year of maximum exports between 1929 and 1931. The initial quota is to be fixed at 85 per cent. for the first year, and subsequent quotas are to be determined at the end of each year. As agreement has already been reached by the various associations on the method of restriction, the measures will now be submitted to the proprietors of tea estates in the form of a referendum. Finally, provided that the result of the referendum is favourable, the sanction of the Governments concerned will be sought. As the completion of these two stages must take time, it is doubtful whether the scheme will come into operation before next spring. In view of past experience with restriction schemes it would be interesting to know whether provision is made in the present proposals to cease regulation before the rather extended period of five years in case it is found to affect adversely the position of the tea-growing industry in any of the participating combines.

Shipping Freight Index.—The general level of "tramp" shipping freights, as measured by our index number, works out at 88.8 for November, an advance of 1.7 per cent. as compared with the previous month. The November figure, however, contrasts with 95.8 a year

ago, and 92.2 for the same month of 1930. Details of the index number are as follows:—

AVERAGE 1898-1913 = 100.

	Average, 1913.	Nov., 1931.	Sept., 1932.	Oct., 1932.	Nov., 1932.
European Waters	110.0	91.1	83.1	84.9	85.9
North America	113.1	92.0	85.8	84.4	85.9
South America	123.4	85.0	79.4	76.6	82.3
India	106.3	99.1	92.6	94.5	94.7
Far East and Pacific	117.4	98.8	86.1	87.4	89.2
Australia	127.9	108.6	92.6	96.1	97.0
Total	116.3	95.8	86.6	87.3	88.8

The outstanding feature of the month was the improved demand for grain carriers from South America and Australia. In other distant markets requirements were on a limited scale, with the exception of Manchurian beans, where increased activity was observable. The position in Europe underwent no marked change; outward coal business from Great Britain was again restricted, while homeward chartering for ore was small. Movements of the various sections of our index number are shown in detail below:—

AVERAGE 1898-1913 = 100.

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade	78.0	- 0.1	South America—out- wards	66.1	+ 0.9
Bay—outwards	102.7	+ 1.8	South America—home- wards	98.5	+ 10.6
Bay—homewards	87.1	+ 4.8	India—outwards	84.2	- 2.1
Mediterranean—out- wards	80.6	- 0.3	India—homewards	105.2	+ 2.5
Mediterranean—home- wards	89.1	- 0.1	Far East, &c.	89.2	+ 1.8
North America	83.9	- 0.5	Australia	97.0	+ 0.9

Expressed as a percentage of the average for 1913, the total figure of our index number for November works out at 76.3, compared with 75.1 in October, and 82.3 a year ago.

The 1930 Census of Production.—Volume XXII of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the timber and allied trades. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various trades:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Timber (saw milling, &c.)	Thous. £ 23,630	Thous. £ 24,611	Thous. £ 6,950	Thous. £ 9,789	£ 200	£ 190
Furniture and upholstery	26,108	31,164	13,466	15,892	199	187
Wooden crates, cases, trunks	5,899	4,834	2,525	2,039	187	173
Cane and wicker furniture	583	746	358	423	154	163

The output of sawn hardwoods in 1930 shows a decrease of about 10 per cent. as compared with the earlier Census year. There was no important change in the aggregate production of sawn soft woods. The output of deals, planks and battens was somewhat greater than in 1924, but the figures for boards (not planed or dressed) show a decrease. On the other hand, planed and dressed woods recorded an increase in quantity of between 30 per cent. and 40 per cent. Similarly the total value of timber manufactures shows an advance of about 15 per cent. The average number of persons employed in this industry rose from 48,324 in 1924 to 51,575 in 1930. The returns for the furniture and upholstery trade reveal a substantial expansion. The total value of furniture and cabinetware of wood rose from £15,617,000 to £20,635,000, and the average number employed in this branch of activity was 84,832 in 1930, against 67,555 in 1924.

The Motor Industry in France.—Figures compiled from official sources, writes our Paris correspondent, indicate that France now stands at the head of the list of European motor-car-using countries. The total number of motor vehicles of all descriptions in use in France in 1931

was 1,710,955. This represents an increase of 398,560 units (or over 30 per cent.) on the year, and brings the number of motor vehicles in use in the country to the equivalent of one for every 24 inhabitants. The French figures, as in previous years, comprise touring cars, taxis, motor omnibuses, "sight-seeing" cars and cycle cars, and also industrial vehicles and tractors. Of these, 7½ per cent. are returned as having been over nine years in use, the proportion of industrial vehicles of that age or more being put at 27½ per cent. of the total. Motor-car production in France in 1931 amounted to 201,000 units, as compared with 231,000 units in 1931, and exports totalled 30,210 units. Out of a total of 523,532 sales of motor cars registered in France last year, over 335,000, or 64 per cent., were second-hand vehicles, i.e., for every new car sold, two second-hand cars changed hands. In 1928 the proportion of new cars sold was as two, against three second-hand.

Commercial Bank of Scotland.—The accounts of this bank tell, in the main, the familiar story of an increase in deposits, a decrease in advances and consequently a large expansion in the bank's holdings of gilt-edged stocks and Treasury bills. Net profits are therefore slightly less than in the previous year, while further provision is required for contingencies. The dividend, however, is maintained on both classes of shares.

	1930.	1931.	1932.
Liabilities—	£'000.	£'000.	£'000.
Capital	2,250	2,250	2,250
Reserve fund	2,850	2,850	2,850
Note circulation	3,418	3,309	3,270
Deposits, &c.	33,183	32,112	37,503
Acceptances, &c.	240	135	162
Assets—			
Cash	4,241	4,152	3,842
Call money	4,179	2,165	2,877
British Government securities ..	10,838	12,492	18,338
Discounts	1,818	2,311	1,333
Advances	18,548	17,790	16,616
Net profits	390	386	377
To reserve fund	50	...	...
To contingencies	...	50	50
Other appropriations	75	80	80
Dividend—			
"A" shares	16%	16%	16%
"B" shares	10%	10%	10%

When allowance is made for the year's heavy fall in both long-term and short-term money rates, net profits may be termed relatively satisfactory.

Bank of London and South America.—The accounts of this bank for the past three years illustrate, firstly, the intensity of the trade depression in South America and, secondly, the steps taken to strengthen the bank against the effect of the crisis. The decline in trade is shown clearly by the contraction in such items as bills payable, acceptances, and bills for collection on account of customers, bills receivable are £2.5 millions less than two years ago. The summary of the bank's accounts given below also brings to light the shrinkage in the omnibus item of advances and other accounts receivable, securities, etc. In fact, the shrinkage also reflects the decline in trade, but inasmuch as the total is struck after making provision for bad and doubtful debts, it is probably also due to the heavier writing-down of such debts as must have been necessary during the past two years. It is, however, a pity that advances and investments are not shown separately:—

	1930.	1931.	1932.
Liabilities—	£'000.	£'000.	£'000.
Capital	3,540	3,540	3,540
Reserve	3,000	1,500	1,500
Deposits	39,363	34,312	41,368
Bills payable	2,994	2,212	630
Acceptances	2,091	1,513	1,153
Bills for collection	11,085	8,569	7,823
Assets—			
Cash	8,706	10,575	17,069
Bills receivable	12,864	9,474	10,355
Advances, securities, &c.	26,118	20,156	18,305
Net profit	390	332	312
To contingencies	100	1,650*	200
Dividend	9%	5%	3%

* Including £1,500,000 from the published reserve.

This table shows that during the whole of the period covered the bank has been at pains to strengthen itself. Thus it has placed no less than £1,950,000 to contingencies, of which £450,000 came from current profits. Furthermore, it has added to its cash to such an extent that the ratio of cash to deposits has risen from 22.1 to 41.3 per cent. It is true that dividends have suffered, but this is an inevitable consequence of the depression. The bank has done everything within its power to maintain the confidence of its customers, with the result that it is in a position to take immediate advantage of a recovery so soon as it occurs.

Overseas Correspondence.

LEAGUE OF NATIONS.

Disarmament — Manchuria.

(FROM OUR CORRESPONDENT.)

GENEVA, December 6.

It is difficult to write with precision about the disarmament conversations, as the Prime Minister, M. Herriot, Mr Norman Davis and Baron Aloisi are at this moment in conversation with Baron von Neurath, who, apparently, was presented last night with some suggestions arising out of the talks which had been held before his arrival. If the ideas put before him are such as they are supposed to be, it is not likely that Baron von Neurath will be able to accept them, but if, as is suggested but not confirmed, Baron von Neurath is considering the presentation of further proposals from the German side, and may be a valuable step.

No very great progress seems to have been made in bringing M. Herriot to a plain and simple acceptance of Germany's claim to equality of rights; he is taking his stand on the ground that the whole problem of equality, armaments and security cannot be split up into parts, but must be discussed as a whole. Before France can take any engagement, she must know exactly what the Germans have in mind. This does not appear to be an altogether unreasonable attitude. The general view, including that of Great Britain, has been that acceptance of the German claim must be accompanied by some security in the future against the use of force and against the rearmament of Germany. M. Herriot is saying that he cannot accept equality without knowing how it works out in terms of security; it ought not, therefore, to be impossible in the conversations to find out from Germany what precisely she has in mind, and for France then to accept the equality claim on condition that the way in which it is interpreted provides reasonable grounds for general security. It is all perhaps a little academic, for any admission by France of equality of rights would apparently depend upon an agreed convention covering the armaments allotted to each State; if this practical side of the work were unsuccessful, the parties would have to fall back on existing treaties and obligations. This would presumably mean, on Germany's side, an assumption of liberty of action, and that is the crucial point which seems not to be realised in France. Germany will be given equality of rights or she will take it, and it is better—however disagreeable it may be—to negotiate this rather than to let it be brought about by unilateral action in the worst possible political circumstances.

The discussions have been complicated by Mr Norman Davis' proposals to gather up as much as can be collected in a Convention now, and to have a Permanent Commission to consider for several years the possibilities of greater progress. Whether this includes a preliminary acceptance of the German claim is not perfectly clear, but it is doubtful whether that or any other plan could succeed unless this claim were conceded. Unless, also, the points agreed upon go considerably beyond some of the principles already accepted, it would be a meagre result to this first

laborious stage of the Conference, which would not be likely to meet again until 1936, when the Washington Naval Treaties reach their term. The best interpretation put upon the suggestion is that the equality claim should be admitted conditionally or otherwise; that between now and March or April an endeavour should be made to reach agreement on some outstanding practical points; and that, from then onwards, the Commission should sit in preparation for the resumption of the Conference in two or three years' time. But it seems unduly optimistic to imagine that a satisfactory arrangement in this sense can be reached before Christmas. If that is the idea, the results must almost inevitably be disappointing. Meanwhile, some more precise information must be awaited from the conversations now being pursued. M. Herriot and Mr MacDonald are leaving this evening, with the intention of returning again towards the end of the week, but there is some anxiety about the position of M. Herriot's Government. The whole situation is regarded with considerable disquiet.

The Assembly began its debate to-day on the Sino-Japanese conflict, and a very good beginning it was. Mr. Conolly (Irish Free State), Mr. Benes (Foreign Minister of Czechoslovakia), Mr. Unden (Sweden), and Mr. Lange (Norway) spoke the plainest language that has yet been officially heard, and placed the whole problem on the basis of the moral life or death of the League. They all stood frankly on the Lytton Report, with all its implications, and called for a firm, unhesitating pronouncement of the Assembly against the infractions of the Covenant, the Paris Pact and the Nine-Power Treaty. Mr. Conolly said that if the League shirked its duty in this affair it would not deserve to live, and similar terms were employed by Mr. Benes. These speeches have set a healthy tone and standard, which will make it difficult for the more timid and short-sighted to ignore. Things are approaching a critical and dramatic period, but the impetus is at present all in the direction of a courageous defence of the principles at stake.

What Dr. Yen asked the Assembly this morning was to declare that Japan had broken the Covenant and the treaties, to call upon Japan to put into execution forthwith the Council resolutions, so that all Japanese troops are withdrawn into the railway zone; to declare that it will not recognise or enter into relations with the "Manchukuo" Government; and to publish before a definite date and within the shortest possible time a report for the final settlement of the dispute under Article 15. He quoted, as did other delegates after him, the observation of Lord Lytton that, while Japan declared that Manchuria was the life-line of Japan, the League of Nations was the life-line of modern civilisation.

Mr Matsuoka (Japan) studiously presented a false analogy between Japan's action in Manchuria and Great Britain's action at Shanghai in 1927. Japan has repeatedly pretended, without refutation, that she has done no more than Great Britain then did, and it is time that the British Foreign Minister dealt with this point, if only for the reputation of Great Britain. Mr Matsuoka said that any suggestions made by the Assembly for a settlement should be governed by the following principles: The terms must be such as can be effectively put into operation and can accomplish and preserve peace; a solution must be found for the disordered condition of China; in the event of a plan for settlement being formed by the League, the responsibilities for its execution must be taken by the League. "Is any member of the League (he asked) ready to participate in such an undertaking?" This question was an illuminating explanation of the condition. For the rest, Mr Matsuoka vouched for the fact that the League had "fulfilled the high object of its existence" in preventing the Manchurian affair from leading to "open war between China and Japan," and added that, as to the apprehensions that the present conflict might weaken or undermine the principles of the Covenant, "we firmly believe that such apprehension is entirely groundless." This bland assertion was quickly and emphatically smashed by the speeches which followed. The time is past for finesse or bluff, and the majority of the Assembly has no more patience with it.

UNITED STATES.

War Debts — Taxation — Industry — Banking.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 25.

In the best informed quarters in Wall Street the foreign debt problem is regarded as far more complex than is apparently realised by the many Congressmen and others who have hastened to broadcast their views. Wall Street has no settled conviction on any of the more important points such as whether, in case payment be demanded in dollars, Great Britain will make it; whether postponement of the December money will be permitted by Congress; or if payment is made just how it will be done.

It is understood that no request has been made for a loan to Great Britain; and while it is taken for granted that one could be obtained, there is no great expectation that one will be sought. It is assumed that President Hoover's suggestion for payment in sterling for this Government's account, while on the surface answering one of the questions, that of transfer, will not be looked upon as a valuable concession in London. Bankers here think that the British authorities will consider the bad effect on the remainder of the world of blocked payments, an effect which might be little better than default at once or purchase of dollars or shipment of gold. In the light of the experience of Austria, for example, it is felt here that the world at large might regard "blocking" a British instalment on the American debt as a first step in the direction of insolvency.

Meanwhile, it is appreciated that every resource will be tapped before default will be considered, and the sympathy of the country for the position of the foreign debtors is perhaps greater than might be supposed from the tenor of published statements. It is regretted that circumstances have worked against a proper presentation of the case, especially the fact that too effective a plea of poverty might do more harm than good. Adequately presented, the case for postponement of the December payment due from Great Britain, at least, might move Congress; and while President Hoover seems to feel that Congress should co-operate in appointment of a debt funding commission, the view of Mr Roosevelt, which is shared by many others, is that the President is fully empowered to reach a settlement which Congress would have to approve after all the facts were available. It is stated on the best authority that in the case of the British and French dollar bonds held by private investors in America, amounting to \$136 millions and \$132 millions respectively, the service can be easily met whatever action is taken on war debts. It is felt that the future course of business both here and abroad depends upon an early satisfactory debt settlement, and also upon the possibility of holding the World Economic Conference.

When Congress meets in December it will have other things to plague it. Its leaders are leaning to the view that additional tax measures must be passed, and while sentiment is strong for legalisation of beer, to produce from \$250,000,000 to \$300,000,000 in estimated revenue, it is felt that this will be insufficient, with or without foreign debt payments, to stave off a deficit for this fiscal year or for the next. The chief need, at least until the old tax measures have full chance to prove themselves, is reduction of expenditure; but at the short session of Congress the proposals of the Administration in this respect will probably get less consideration than the easier method of looking for more revenue. Those who feel this way about it have the sales tax answer constantly on their lips.

Most industries are feeling seasonal recession in trade. The improvement in the past three months was more than seasonal, and while here and there the decline also seems to have exceeded the usual pace of this time of year, no branch of industry has yet sunk back to the summer low levels. Railroad traffic is slipping, but the roads reported earnings in October at virtually the levels of last year. Negotiations continue on wage cuts and

sentiment is in favour of retention for another year of the higher freight rates, but without the revolving fund.

The steel industry has dropped back to around 15 per cent. of capacity and prices are weaker in tone. New orders of consequence from the principal consuming industries are unlikely for the remainder of this year, but the trade, nevertheless, is optimistic of the usual spring rise. Wholesale commodity prices are moving upward, after dropping last month, in spite of the weakness of certain raw materials, such as wheat and cotton. The Bureau of Labour Statistics weekly index for November 19th is up two-tenths to 64.2, as against 64.4 a month ago.

After a drop to around \$400 millions, the excess reserves of banks belonging to the Federal Reserve system have risen \$75 millions, thanks largely to gold receipts and releases from earmark. Gold imports this week were \$3.4 millions and net releases from earmark were \$32.8 millions, of which the larger part was believed to be for French account. The Federal Reserve system reports a gain of \$36 millions in monetary gold stock and a slight rise in circulation. Total Reserve Bank credit outstanding was a little lower on the week, but no change was made in bill or Government bond portfolios. Of the excess member bank reserves about \$275 millions are in New York.

Federal Reserve Bank open market policy was discussed at the meeting of governors a few days ago. It is understood that there was general agreement on maintenance of the Government bond account at the present stage, at least until after the turn of the year. While it is said that the Treasury did not bring up financing matters, the December 15th operations are expected to consist of perhaps some one-year notes and some three- to five-year issues. The time is not yet ripe for long-term Government financing.

Bank failures increased moderately in October, and this month has again been marked by troubles in some districts. Nothing alarming has come of it, and at the moment the situation appears to be much stronger. However, the total of failures is still high enough to give point to the movement for a revision of the banking laws to permit a regional branch banking system. Some pertinent remarks on this subject were recently made by Mr Thomas W. Lamont, who said he wished all banks could be made members of the Federal Reserve system, and suggested that though under no circumstances was this country in danger of abandoning the gold standard, and the Federal Reserve Bank management had been of high quality, there was nevertheless great need of banking reform in order to strengthen the entire structure. He urged a change in the laws to provide for branch institutions.

The blow given to rural purchasing power is measured to some extent by a recent estimate of the Department of Commerce of farm income, which for 1932 is placed at \$5,240 millions, a drop of \$1,715 millions from a year ago and of \$6,710 millions from 1929. The total of farm mortgages is estimated at around \$9,000 millions. It is apparent that the farmers have been living in many cases beyond their means and can only be expected to purchase the necessities of life and to meet the most pressing debts this winter.

FRANCE.

American Debt — Budget — Production.

(FROM OUR CORRESPONDENT.)

PARIS, December 7.

With the due date of the pending payment of the next instalment of the debt to America only a week distant, opinion of all shades is naturally almost at fever heat as to the decisions to be taken by the French and British leaders. At the moment of writing, it has been decided in principle that the question whether the French instalment shall on this occasion be paid shall be settled by the Chamber on Friday; but that this will be so, in fact,

seems by no means certain. M. Herriot's own situation, as Premier, is not enviable. He is admittedly anxious that the right thing shall be done, but what this right thing is will depend largely upon the line taken by the British Government. In these circumstances the presence in Paris to-day of Mr MacDonald and the Chancellor of the Exchequer is a factor of supreme importance. If Great Britain is prepared to return a definitely negative answer to Washington's demand, then France will undoubtedly adopt the same line. Should Mr MacDonald, on the contrary, as representing the British Government, declare irrevocably for payment, then M. Herriot's troubles will have only begun. He will be able, doubtless, to agree with his British colleagues as to the method of payment to be adopted—whether in gold, or by deposit in the respective national banks, or with the B.I.S. at Bale—but this will not help him much in dealing with the Chamber (with, probably, determined opposition in the Senate also).

The prime difficulty facing M. Herriot lies in the fact that, when the French Parliament ratified the American debt agreement it did so under a unilateral (but unanimous) reserve that in no case would France pay more to the United States, in respect of her war debt, than the total amount she would receive in the form of German reparation payments. In so doing France irrevocably crystallised the nation's will even more solemnly and definitely than was done by her deputies and senators when they ratified the Treaty with Germany after the 1870 war, but attached to it a declaration refusing to recognise Germany's right to annex Alsace-Lorraine. The programme to be followed by the Government in the Chamber will not be decided until after the British final decision has been made known to the Ministry, but it is already clear that, so far as the Cabinet is concerned, every effort will be made to prevent any rupture of the good understanding which was laboriously created at Lausanne. The Herriot Cabinet is anxious not to risk France being left isolated in the solution of a problem of such importance, and, as matters stand, it seems probable, should the two Premiers feel compelled to comply with the American demand, that M. Herriot will find it impossible to avoid making the question one of confidence when the vote is taken in the Chamber. In such a contingency a defeat of the Government seems practically certain. This would involve the fall of the Ministry; but it is generally considered that, in such circumstances, there is every probability the President of the Republic would feel justified in calling on M. Herriot to be his own successor.

Apart from the debt problem, however, the Ministry is faced with many obstacles, any one of which may prove fatal to its continued existence. The much-discussed Budget Bill is marked by a score of highly controversial proposals, of which those for the creation of a colossal pensions bureau of an autonomous character, the further "readjustment" of income tax rates, the imposition of further burdens and numerous fresh irritating formalities on holders of securities, and, above all, the demand for cuts in public service pay scales, are perhaps the most notable. All possibility of the Budget being disposed of by January 1st has been abandoned, but care has been taken to ensure that proposed expenditure shall be fixed as early as possible, to prevent any serious derangement resulting from monthly credit votes, in which case, apparently, the hand-to-mouth system would resolve itself into a mere matter of book-keeping. Should the Minister find any of these obstacles unsurmountable, which is generally considered practically certain, it is forecast that M. Herriot's successor would probably be M. Daladier (at present Minister for Public Works) at the head of a rather more advanced Radical Socialist Cabinet, which would be prepared to work more closely in liaison with the Socialists than the present combination. Experts consider that such a Ministry would be short-lived—in view of the powerful opposition to be expected from the banking and other interests—and would very possibly be replaced by a more stable Cabinet, under the captaincy of M. Caillaux. The political situation of the latter has im-

proved appreciably during the last two or three years, both in the Senate and in the country as a whole.

A further step towards the development of a new economic policy has been taken by the Government in the introduction of an anti-dumping Bill, which marks several striking new departures. The Government asks for powers for instance, "to apply super-taxes, rising as high as general tariff rates, or equal to the value of the merchandise originating from a country which applies super-taxes or particularly high duties to French goods; to apply equivalent super-taxes to all or part of merchandise originating from a country which treats French goods less favourably than those of other countries (up to 50 per cent. *ad valorem* on all or part of articles exempted by the tariff); in the absence of contrary agreements, to subject by reciprocity such or such foreign goods to duties, taxes or formalities identical or analogous, as the case may be, to those which, in the countries of origin, are applicable to French goods; to establish compensating duties on goods (subject to import duties or not) which benefit from direct or indirect export bounties of any kind whatsoever; to apply urgently all necessary steps, in the case of measures being applied by foreign countries which are of a nature to hamper French production and trade; such authority to be exercised by Ministerial Decree or by administrative action, according to the case." The text of the Bill suggests that, in the case of its adoption, the Government will have power to increase Customs duties, establish special extra imposts or apply new import quotas for almost any motive. *La Situation Economique* very pointedly suggests that it is to be hoped that the present Minister of Commerce will not exercise such rights except for very well-founded reasons, but adds that "in any case, the introduction of such a measure constitutes a very bad example for other countries, and may lead to fresh abuses. There need not be the least doubt but that other Governments will wish to defend themselves, in their turn, under pretext of combating dumping by France, and thus cause international commercial struggles to become more vigorous than ever."

It is significant that the Bill has been introduced at a moment when pourparlers are in progress with this country at the initiative of both the United States and Germany for a revision of existing trade agreements. The French delegates have just returned to Paris from Berlin to report progress already made in that direction. Little hope exists that Germany will receive much satisfaction, if only because French exports to Germany have fallen from 5,680,000,000 francs in 1929 to 798,000,000 francs for the first nine months of this year, mainly owing to recent German restrictive measures (have thus given Germany a surplus of exports of over 2,000,000,000 francs for the nine months).

Coal, iron and steel production figures for October, which are made public this week, all show a slight improvement on the month, although to what degree this has been due respectively to any real improvement in the general economic situation or, on the other hand, merely to artificial restriction of imports, no indications are available. Total coal output for the month, of 26 working days, was 4,091,500 tons, as against 3,916,000 tons in September (26 days) and 4,432,000 tons (27 days) in October last year. From the fact that the French high record for average monthly coal production stands at 4,586,000 tons (in 1930) (against 4,096,000 tons in October last), it may be inferred that France has succeeded, by drastic use of the tariff weapon, in restricting to about 13 per cent. the drop in her coal production resulting from the economic slump. The decline in the United States and in Great Britain since 1929 has been almost exactly 40 per cent. in each case.

Pig-iron output from the French plants in October was 457,000 tons, against 446,000 tons in the previous month and 637,000 tons in October last year. The number of blast furnaces in operation by the French plants in October was 81, against 103 in October last year. Crude steel output was 467,000 tons, against 456,000 tons in the previous month and 626,000 tons in October, 1931. Production of metallurgical coke by the colliery plants in

October was 273,991 tons, against 264,265 tons in the previous month and 368,597 tons in October last year. Metallurgical export prices, which had steadily risen until a fortnight ago, owing to increased demands, are now, under the influence of the international debt situation and the weakness of sterling, again on the decline. Offers are again in excess of demands, as usual at this period, immediately preceding the annual stocktaking.

GERMANY.

Schleicher Cabinet — Provision of Employment — Business.

(FROM OUR CORRESPONDENT.)

BERLIN, November 6.

THE uncertainty whether Herr von Papen was again to be Chancellor or whether his place was to be taken by General von Schleicher lasted for several days. In the end, however, the matter was settled by the refusal of several members of the Cabinet whose participation seemed indispensable to the future Government—including Herr Bracht, who had been designated for the office of Minister of the Interior—to accept the offices assigned to them in a new Papen Cabinet. This was not due to any objection to Herr von Papen on personal grounds, but to the fact that a new Papen Cabinet would only have come into conflict with the Reichstag and the overwhelming majority of the public. Precisely for that reason the Nationalists wanted it, for Hugenberg desired just such a war between the Government and Parliament, and wanted to see the Cabinet's independence of the checkmate demonstrated. Neither the President nor the more sober Conservatives shared this wish, however, and Herr von Papen himself did not desire to fill that rôle. The President wrote a particularly cordial letter of farewell to the retiring Chancellor, in which he expressed profound regret at the necessity of a change of Government. The President, none the less, recognised this necessity and bowed to it.

Herr von Schleicher will find his position more favourable than did his predecessors, both because he is a new man and because he is very adaptable. For that reason his advent to responsibility, after having for many years exercised a decisive influence on Germany's political fate from behind the scenes, is widely welcomed. The Centre in particular is well satisfied, and it may reasonably be assumed that that Party will do its best to make things easy for him when he first meets Parliament, though the chances that this encounter will be successful are doubtful. Herr von Schleicher will not, however, have to face such bitter opposition, at any rate at first, as Herr von Papen, and, at worst, he will find it easier to govern, after a fresh dissolution of the Reichstag, until the next one meets, while the chances for the new elections have undoubtedly improved, partly because of the change of Government.

The greatest hope for the Cabinet lies in the fact that National Socialism is definitely on the decline. The communal elections in the State of Thüringen, which were held on December 4, afford an illustration of this. The poll was very much smaller than at the general election, but the decline of about 15 per cent. in the Socialist and Communist votes compares with a decline of about 23 per cent. in those of the National Socialists. It is noteworthy that the Nationalists, too, have undergone some heavy losses, even if they are credited with the votes of certain associated groups. The groups of the Centre, which had previously declined very much, show a definite increase.

Herr von Schleicher could have increased considerably the political strength of his Cabinet if he had changed the holders of certain offices instead of taking them over direct from the Papen Cabinet. One wonders whether he did not realise the advantages of a change or whether he was unable to find any suitable people who were willing to throw in their lot with his at this still very critical juncture. At any rate, only the Ministry of Labour has

changed hands. The previous holder of this portfolio, Herr Schäffer, was a well-meaning ex-civil servant, but he had not succeeded in getting into the necessary footing of confidence with the employers' associations and the trade unions. Moreover, he was formally, though not actually, responsible for that part of the September emergency decree which deals with social policy. Herr von Schleicher intends to rescind it. The new Minister, Dr. Syrup, hitherto President of the Unemployment Insurance Institute, is particularly experienced in negotiations between trade unions and employers' associations. His measures in connection with the organisation of unemployment insurance have indeed been the subject of lively criticism, but his very conciliatory attitude will probably correspond very well with the Government's policy in social matters.

The most vigorous discussion ranged round the re-appointment of Herren Warmbold and Braun, Ministers of Economics and Food respectively. The new Chancellor frankly did not wish his Cabinet to inherit the conflict between the export interests and agricultural policy. He could not avoid the conflict itself, but he could have prevented its leading to a dispute. There was only one way of doing this: to refuse point-blank to introduce import quotas or similar measures, and to appoint as Food Minister somebody who was not wedded to the idea of limiting imports. Instead he instructed Herren Braun and Warmbold to agree upon a common programme as the condition of their retention in the Cabinet. Both Ministers then produced a sort of programme, but it appears only to amount to a postponement of the dispute until the expiry in spring of the commercial treaties. Presumably import quotas will cease to form part of Germany's policy for the time being.

The retention by Herr von Schleicher of Herr von Papen's Foreign Minister reflects his intention of pursuing an unchanged foreign policy. He will attach great importance to Germany's equality of rights in the armament question. He will not, however, pursue a militarist policy in any sense. The new Chancellor, who has really always been more of a politician than a soldier, will certainly seek to establish international understanding wherever it is possible. His position as head of the Reichswehr, which he is retaining—this is the first time that this office has been combined with that of Chancellor and the President has throughout had doubts as to the wisdom of thus bringing the Reichswehr into connection with politics—gives him more freedom in international affairs than another Chancellor would probably have had. At home, too, Herr von Schleicher will certainly not play the part of a military Chancellor. Dr. Bracht, whom he has chosen as his Minister of the Interior, is only formally responsible for the harshness with which he had to proceed against the Left in Prussia. Actually this harshness was a part of the von Papen policy, and Bracht did more to tone it down than to accentuate it.

The practical task with which the Cabinet must begin, and by means of which it means to make a bid for public support, is the provision of employment. Landrat Gereke, who has long been a public champion of proposals for the provision of work, has been nominated Reich Commissioner for the creation of employment. Probably this Commissioner, who is not a member of the Cabinet, together with the Minister for Economics and the President of the Reichsbank, will form a Commission whose especial task will be the provision of work for the unemployed. At all events the co-operation of Dr. Luther is certain, which constitutes a guarantee that the expansion of credit which will be necessary for the provision of employment will not be allowed to reach dimensions which would endanger the currency. Dr. Luther declared, in a speech in Munich in which he was outlining the measures which had already been taken to provide employment, that he was prepared to take steps on a larger scale for the direct provision of work. The 700 million taxation vouchers which the Papen Cabinet had intended for bounties on the engagement of workers, and of which very little had been used, are to be placed at the disposal of the Communes to enable them to place contracts. That

December 10, 1932.]

will, of course, only be possible if the vouchers, which cannot be used directly as means of payment, are bought, or accepted as security, by the banks. The Reichsbank has already declared its willingness, as direct lending against the vouchers is legally permitted if only to a very limited extent, to grant credit in the form of discounts to a larger amount and on easier terms to holders of taxation vouchers. That makes it easier for the banks to take over the vouchers, as they acquire by doing so a right to more extensive recourse to the Reichsbank. At the same time it is unlikely that the Reichsbank will experience any excessive strain, if the plan is carried out with the 700 million vouchers, as against such a very liquid investment the banks will be able, to a large extent, to pay out money which they hold from other sources. The Rm. 1.5 milliard vouchers which were issued not for wage bounties or public contracts, but for refunds of taxation, have presumably for the most part been kept in the banks' portfolios and are therefore hardly likely to go to the Reichsbank. There is, however, no doubt that Dr. Luther will watch very carefully to see that the financing of the employment scheme has no unfavourable effects on the price level, and will give the alarm, if necessary, in good time. He has not committed himself in any way to provide credit facilities to the extent of the full 700 millions. By refraining from the adoption of a purely negative attitude to the scheme, and by himself championing that part of it which seems to him innocuous, he has secured the possibility of exercising a controlling influence on its further development.

The Institut für Konjunkturforschung has just published a quarterly report, in which it speaks of the contraction in economic activity as virtually at an end, both in Germany and abroad. The check to last summer's international rise in prices on the commodity and security markets is largely attributed to technical causes with no especial significance for the trade depression. In Germany the recovery is so far only due to orders for stock, and consumption has not yet increased. The reduction in bank "debtors" is due less to a calling in of debts than to voluntary repayment of unused credits. The Institute does not consider that the moment for real economic recovery has arrived yet, as, both abroad and in Germany, rates of interest are still too high.

AUSTRIA.

Commercial Treaties — Exchanges — Trade — Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, December 5.

THERE are a number of signs which in normal times would justify hope of a modest improvement in the economic position. Among the favourable circumstances, the most important is the relaxation of tension in commercial policy. On January 1st there comes into force the new commercial treaty with Hungary, the main lines of which have already been worked out. This treaty will facilitate trade between the two countries and, at the same time, it will guarantee that Austria's balance of imports from Hungary will not exceed a certain limit. Under this commercial treaty it will be possible to export to Hungary 7,000 wagons of timber, 1,700 wagons of cellulose and 900 wagons of newsprint (the last being free of duty) and also to secure a market for various textiles, hardware and other industrial articles, on which Austria will enjoy an actual preference in the form of customs rebates. The same applies to Hungary, which secures exportation of a large part of its surplus agrarian products to the Austrian markets under relatively favourable conditions. It is also important to note that the principle of prohibition of importation between Austria and Hungary will be suspended, except in those cases in which retention of import prohibition may render it possible to exclude supplies from a third country so that the parties to the agreement may be benefited.

The negotiations with Poland for the conclusion of a preference treaty are also well advanced. In view of its years of tariff war with Germany, Poland is prepared to make extraordinary concessions to Austrian industry in so far as they do not interfere with the existence of domestic industries. As, on account of the tariff war, the attitude of Germany is immaterial, and France is said to have expressed her willingness long ago to agree to preferential tariffs in favour of Austrian industry, Austria's prospects of arranging preferential treaties are good. At present there is an Austrian delegation in Paris dealing with questions of payments, and it is possible that it will at least raise the question of a preference treaty between Austria and France.

There is a close connection between these agreements in commercial politics and a steady relaxation of the foreign currency restrictions. The State clearing treaties are being slowly eliminated and are giving place to the principle that payments should be made not on the basis of the official rates of exchange of the schilling but upon its actual value abroad. The allocation of foreign exchange by the National Bank has been completely suspended, and all commerce is being dealt with by private clearing. In private clearing, premiums of 22 to 23 per cent. will be paid on the official rates for dollars and Swiss francs, about 19 per cent. on Czechoslovak crowns and lower premiums corresponding to the falls in the currencies of countries to the east of Austria. For the last few days a premium of 23 per cent. has been charged on railway tickets to stations abroad and on foreign currency bought for travelling purposes, so there are naturally protests against the maintenance of the official schilling rate, which is still causing complications and injustices; for instance, maintenance money for Austrian children staying abroad can only be bought at a premium of 23 per cent., while a poor man getting support from abroad is paid the schillings for the remittance at the official rate, which is 23 per cent. less than the actual value of the remittance.

The greatest confusion prevails in the matter of settling foreign debts. After the period of inflation very many debts were contracted in foreign money or in gold. There is now no basis on which to liquidate the debts when they fall due. Court decisions vary greatly in this respect, and the number of cases is increasing tremendously. The National Bank itself is making exceptions in the foreign-values restrictions; for example, the recently-matured coupon of the League of Nations loan was met in "effective" dollars even in the case of Austrian holders.

The clearing up of conditions in relation to foreign exchanges will have favourable influence upon trade. The reserve long exercised by consumers has given place to a slight rise in consumption. At the same time, stocks have been reduced. In October the insurance values of the goods in Vienna warehouses registered a low level of 5.8 million schillings, as compared with an average for the years 1927 to 1931 of eight millions. There is promise of a good turnover for Christmas; the money which is put into circulation will change hands rapidly. Foreign trade also shows a slight improvement. Imports in October rose to 107.3 millions from 98.3 millions in September. The corresponding figures for exports were 71.5 and 65.9 million schillings. This is the first expansion of foreign trade registered for the last six months. The Federal Railways also show an improvement in October. The index of the movement of wagons rose from 84.1 to 89.4, which is a high level for this year. Output figures in the heavy industries also show increase for November; for instance, iron ore went up from 24,300 to 34,300 tons, though no iron ore at all is being raised at the moment; crude iron from 19.3 to 21.1, crude steel from 19.8 to 31.1, rolled goods from 22.4 to 33.4 per cent. of normal capacity. The augmentation of unemployment is also not so rapid as it was last year; though, of course, the increase is on a much bigger basis this year.

SPAIN.

Catalonia — Foreign Trade — Railway Project.

(FROM OUR CORRESPONDENT.)

MADRID, November 28.

THE main political event of importance during the past month has been the celebration of the elections for the first autonomous parliament in Catalonia. As was expected, the extremists obtained a big majority and the number of seats conquered by the "Esquerra" (Left Party) is even more than the number of votes in their favour would seem to warrant, owing to the voting system employed. The fact that women were not allowed to vote in Catalonia, although they have obtained this right in the rest of Spain, may also have had some influence on the results. However, it is thought that as soon as the enthusiasm has died down somewhat, the moderate party will increase in strength; for the "Esquerra" contains elements of doubtful cohesion, and a split is quite possible as soon as the first serious difficulties have to be met. These may be furnished by the textile industry of the Barcelona district, which is rather a bad way in spite of high Customs barriers, and the application by the new-fledged deputies of their pet theories, even in a moderate form, will certainly not tend to keep down manufacturing costs.

In the rest of Spain business has been very dull and there has been a recrudescence of strikes and other social troubles. The economic crisis shows no signs of abating and there is little prospect of improvement in this direction in view of the situation abroad. The total foreign trade, to September 30th, is down by 387 millions when compared with the same period of 1931; of this amount 214 millions represents the reduction in imports and 173 millions the reduction in exports, so that the unfavourable balance of trade has been somewhat reduced. Revenue receipts to date are considerably below Budget estimates and it is now calculated that instead of a surplus of 80.9 millions of pesetas there will be a deficit at the end of the year of some 200 millions. The principal loss of revenue is in the tax on business, which is already down by 200 millions. On the other hand the petrol monopoly has yielded better results than had been anticipated.

An issue is to be made of Ptas. 20,000,000 in 6 per cent. 15-year bonds bearing the guarantee of the Spanish State, the proceeds of which are to be devoted to the execution of what is termed the "National Plan of Education," that is to say, a scheme for the improvement of the Spanish Educational system. In anticipation of a possible reluctance on the part of the market to absorb these bonds, it has been decreed that savings banks shall on and after December 1st devote 20 per cent. of the funds deposited with them to the purchase of such bonds.

The project of connecting the railway stations by means of a tunnel through the centre of Madrid with underground stations and even direct lifts to some of the principal hotels, has received the sanction of the Government. The full scheme is not to be put into execution for some time, but the main tunnel is to be commenced as soon as possible; this may serve to alleviate the scarcity of work available in the capital. The money for this and other schemes which are to be carried out in Madrid is to be provided by a Government grant of Ptas. 80,000,000, which Parliament has voted for the purpose of helping Madrid worthily to represent the nation. The tunnel in question will be an engineering feat, as it involves a severe gradient from the Northern Railway Station to the centre of the town. By the time the tunnel has been completed the Northern Railway at least will have been electrified to the Guadarrama Mountains and both winter sports and summer excursions will become even more popular than at present.

The peseta exchange has been stable during the past month and the Official Exchange Office continues to have the situation well in hand. On the other hand the Gold Treasury Bonds have been firm, owing, so it is said, to the estimated deficit on budgetary figures and to the fear of possible inflation.

ROUMANIA.

Budget — Foreign Trade — Banking.

(FROM OUR CORRESPONDENT.)

BUCHAREST, November 30.

THE beginning of Roumania's financial year has been changed from January 1st to April 1st. By this means the Minister of Finance has obtained three months' grace in which to prepare and submit next year's Budget, which in the ordinary course should have formed the principal business of Parliament during November and December. It would have been difficult to place before Parliament the estimates of receipts and expenditure for 1933 at a moment when negotiations are in progress which must have a far-reaching effect on the final commitments of the State and by which it is hoped to obtain concessions from the foreign creditors of Roumania, enabling the Minister of Finance to effect important economies.

Roumania's finances are, indeed, in a precarious situation. The ordinary Budget for 1932 amounted to 25,000 million lei, which was reduced to 23,500 million lei in the course of the year. The extraordinary Budget amounted to over 11,000 million lei; 3,000 million lei represented current requirements, the remainder all unpaid debts which were left entirely unprovided for. The actual receipts during the year have fallen far short of the estimates. The Treasury receipts for the ordinary Budget amounted to little over 10,000 million lei for the eight months ending August 31st, i.e., about 6 million lei short. The actual expenditure during the same months exceeded receipts by almost 500 million lei per month, causing a deficit of about 3,700 million lei by the end of August. The extraordinary Budget receipts amounted during the same period to almost 900 million lei, against an actual expenditure of only about 100 million lei. It is not unlikely that the resulting surplus will be diverted to the ordinary Budget. On the other hand, 2,000 million lei will have to be found before the end of the year to repay the temporary advance received from the National Bank at the beginning of the year in accordance with the Law of Stabilisation. The floating debt will therefore have increased by the end of the year to probably 10,000 million lei, to which will have to be added the deficit in the ordinary Budget of a further 8,000 million lei or so, less such sums as may have been financed by special measures.

It is now the difficult task of the Minister of Finance to find items in which he can make reductions. Of the 23,500 million lei of estimated expenditure, nearly 13,000 million lei are represented by salaries and pensions. The remaining 11,000 million lei are divided into 6,800 million lei for the funded debt service and only 4,200 million lei for Supply. So far, courage has failed the Government to effect radical economies in the Civil Service, and it is on the debt services that reductions are primarily to be effected. The total debt of the State, not including the above floating debt, amounts to about 100,000 million lei, plus about 40,000 million lei inter-governmental debts and 1,500 million lei Relief Bonds; a grand total of over 140,000 million lei. The yearly allocations for interest and sinking fund vary during the years 1933 to 1948 between 605 million lei and 609 million lei, but afterwards they are on a decreasing scale until 1988. By far the largest part of this debt is in foreign or gold currency. It will be seen that it is extremely unlikely that arrangements with Roumania's creditors, limited to a reduction in the yearly allocations for the debt service, would make an appreciable impression on the Budget deficit.

To provide funds for its most pressing expenses in view of the falling receipts, the Government has resorted to a number of special measures. It has taken 1,040 million lei from the profit resulting from the issue of token money—profits which, according to the original plan, were to go towards payment of the huge immobilised industrial bill holding taken over by the State from the National Bank under the stabilisation plan. It has further taken the sum of 400 million lei, which so far had remained unused, from the proceeds of the Stabilisation and Development Loans. This sum was originally earmarked

for the purpose of productive works. The State has also obtained 1,600 million lei from the National Bank under a discount arrangement with a group of Swiss banks. Of this amount there remained 722 million lei in the hands of the Treasury on September 3rd. Now that all these special resources are exhausted, it is difficult to see where the Minister of Finance will turn next.

The Monopoly Institute, however, is in a flourishing condition. Its profits cover amply the amounts necessary for the services of its two loans, the Stabilisation Loan of 1929 and the Development Loan of 1931. The sums required to cover the service are punctually paid to the National Bank, but the surplus, which goes to the State Budget, has been reduced by special charges which the Institute took over from the State.

So far, with the help of a favourable trade balance, it has been possible for Roumania to keep the value of the lei intact, although, mainly owing to the monetary policy of other countries, she has had to introduce very stringent restrictions applying to transactions in exchange and foreign accounts. These restrictions have led to a considerable reduction in imports. In June, July and August imports were about 20 per cent. less than in the previous months. This helps to maintain the exchange, but at the same time it means a serious reduction in economic activity. Foreign trade has fallen in 1932 as against 1931 by the following figures for the first eight months of each year:—

(In million Lei).		
	January to August, 1931.	January to August, 1932.
Imports	10,941	7,059
Exports	11,598	10,070

The reduction in imports has caused a considerable increase in the favourable trade balance. The diminution in exports is principally noticeable in cereals, the export of oil products having remained practically on the same level. It is to be feared that the reduced activity in the import trade will gradually produce its effects on exports which have already suffered, as shown by the above figures, from import restrictions in Roumania's best markets.

The note circulation of the National Bank, which stood at a little over 18,000 million lei during the first six months of 1931, and had risen owing to the banking crisis to 23,750 million lei in December of that year amounted to 21,313 million lei in September last. The circulation of token coins has risen to 2,652 million lei in September, as against 1,615 million lei in the same month of the previous year. The bills discounted at the National Bank amounted to 10,701,000 lei in September last. This compares with a fairly constant figure of between 7,100 million lei and 7,600 million lei during the first six months of 1931, from which amount it has risen to over 13,000 million lei in November last year owing to the banking crisis. These figures of increased circulation and increased discounts cannot be considered healthy in the light of the unmistakable signs of trade stagnancy.

POLAND.

Budgets — Bank — Anti-Usury Decree — Trade

(FROM OUR CORRESPONDENT.)

WARSAW, November 24.

As required by the Constitution, the ordinary session of the Sejm was convened at the beginning of November, and, in accordance with custom, was adjourned for a month. The House will re-assemble early in December, and its activity will be devoted mainly to the approval of Finance Bills for the fiscal year beginning April 1, 1933. Legislation is now enacted almost exclusively by decree. Parliament still retains nominal control over fiscal measures, but this control is no longer taken seriously.

The Budget Bill for the year 1933-34, as presented to the Sejm on November 3rd, asks for the approval of

revenues totalling 2,089 million zlotys and expenditure of 2,450 millions, of which the Ministry of War is to be allotted 823 millions. The Budget for the present year was voted in the amount of 2,377 million zlotys for revenue and 2,452 millions for expenditure, with 833 millions for the War Ministry. The new Budget, therefore, anticipates a deficit of 361 million zlotys—after making provision, it is believed, for the service of war debts or relief debts now in suspension under the Hoover moratorium. In his Budget speech to the Sejm the Minister of Finance stated that the indicated deficit of 361 millions could be covered as to a considerable portion by reserves that will be still available to the Exchequer. He did not specify in what form these reserves are now carried, but he intimated that the possibilities of economising had by no means been exhausted, and that, if the deficit should assume vital importance before the end of the fiscal period, world conditions in the meantime might have improved to the point where foreign borrowing could be resumed.

With revenue totalling 174 million zlotys and expenditure 182 millions, the Budget deficit for September was reduced to 8 millions. For the first half of the fiscal year (April-September) revenue is given as 1,007 millions and expenditure as 1,128 millions, leaving a deficit of 121 millions. The revenue is understood to include the increase of 70 million zlotys which has taken place this year in the Exchequer's non-interest-bearing overdraft at the Bank of Poland. On the other hand, the Exchequer had on deposit with the Bank at the end of September 20 million zlotys.

The reserve position of the Bank of Poland has been strengthened during recent weeks, and the misgivings which found expression a month or two ago, when an increase in the circulation of silver coinage was announced, appear to have been completely allayed. The actual gold reserve of the central bank on November 10th was 496 million zlotys, an increase of 8 millions since September 30th. During the same period foreign exchange serving as cover has increased by 2 millions (to 37 millions on November 10th), with a similar increase (to 105 millions) in the foreign exchange not used as cover. The percentage of cover for outstanding bank notes and sight liabilities now stands at close to 45. Owing to the placing in circulation of new silver coinage by the Ministry of Finance, the total bullion coinage outstanding at the end of October was 307 million zlotys—an increase of 17 millions during the month. The volume of silver coins in circulation appears to be increasing steadily, but not so rapidly as to cause apprehension.

In furtherance of the Government's campaign to curb "usury" and bring down the price of manufactured goods, a decree was published on November 7th for the regulation of interest rates. This decree provides that banking enterprises engaged in the granting of credit will not be allowed to make a profit in excess of 9½ per cent. per annum, except for credit co-operatives and communal savings banks, which may earn up to 10 per cent. Mortgage loans on property (securities and merchandise excepted) must not exceed 9½ per cent. per annum, inclusive of commission, with limits on the supplementary charges that may be made for insurance, appraisals, storage, etc. Previous attempts to combat "usury" have invariably broken down because lending institutions have added supplementary charges (commissions, etc.) to the maximum interest rate permitted. All-in interest rates of 2 and 3 per cent. per month, even in important industrial centres like Lodz, have not been at all uncommon for the past several years, and the purpose of the new decree is to relieve commerce and industry of such burdens—if it is possible to do so by Government regulation.

The following are the latest available figures on foreign trade:—

	Month of October, 1931.	Month of October, 1932.	January to October, 1931.	January to October, 1932.
	(In thousands of zlotys.)			
Exports	158,445	96,361	1,604,587	890,049
Imports	119,510	64,449	1,280,131	707,706
Excess of exports	38,935	31,912	324,456	182,343

The efforts of the Government are being increasingly directed toward the extension of merchandise exchange with foreign countries. Transactions of this character with Brazil, Bulgaria, Greece, Hungary, Persia and Jugoslavia have already been reported. Others with Argentina, Holland, Soviet Russia, Spain, etc., are said to be nearing completion. The general policy in this respect is to permit imports into Poland on a compensation basis, the officially-authorized importing group being granted a virtual monopoly in order to simplify the commodity exchange and to obviate as far as possible the purchase and sale of *devisen*.

SOUTH AFRICA.

Natal Separatism — Export Subsidies — British Loan — Banks.

(FROM OUR CORRESPONDENT.)

November 7.

THE Government, who have held office since 1924, and are now placed under the necessity of defending to ignorant supporters their actions in a time of great difficulty, must be grateful to Natal members of the South African Party for their very curious behaviour of the last few weeks. Mr Heaton Nicholls, the able but fanatical member for Zululand, has made the Government a rich present of a speech advocating unilingualism for Natal and describing the language clause in the Constitution as a "mere concession to sentiment." There are a good many people in South Africa who think the bilingual policy not only wasteful but regrettable in other ways. It is not, however, a tactful statement from a front bench member of the South African Party at the present moment. Much as British South Africans and a great many moderate Afrikaners deplore the attitude of left-wing Nationalists, it is not by Mr Nicholls' methods that we can hope at this stage in the development of the country to get nearer to peace and a sane attention to economic necessities.

It cannot be denied that Natal has considerable ground for complaint. There is no doubt that the Government have from time to time encouraged the movement of numbers of Afrikaners—not very important numbers so far—into certain constituencies, and that the newcomers are not of a class welcome in Natal. The whole Government policy is anathema in Natal, whose inhabitants feel themselves to be a homogeneous body under alien rule, rather than a political opposition like the South African Party members elsewhere in the Union. Prior to Union there was a strong body of Natal opinion opposed to the proposals. The Provincial Council system was in a great measure a concession to this opinion. Even if the Government were disposed to treat with Natal, it appears doubtful whether two sides, between whom exist such differences and such personal feeling, could come to a workable agreement. Natalians are not—in the general view of citizens of other parts of the Union—themselves the easiest people to deal with, and if they were to achieve any measure of separation it is unlikely that the sugar industry would receive the privileges of the local market it enjoys at present. Feeling in Natal is likely to prove a considerable difficulty to the protagonists of a South African Republic. It is politically unfortunate for General Smuts, and not unlikely to have serious consequences for the Union, that differences within his Party will impair the strength of its attack on a somewhat weary Government.

The leaders of the Natal Devolution League have been holding meetings on the Rand—the first held outside the Province of Natal. One of the professed objects of the League is to fight the Republican move of the left-wing Nationalists by means of its proposals for a Federal system of government. It is difficult to see, however, how republican proposals can possess more than academic interest in the face of the solid opposition of the whole of Natal, even though everyone in Natal is not a supporter of the League. In the meantime, Dr. Malan, the Minister

of the Interior and of Education, who took a prominent part in the Flag Bill controversy, is now active in proposing important technical alterations in the national status of South African citizens, the broad idea being the elimination of British citizenship, which would be a clear step towards a change to independent republican government. General Hertzog is strongly opposed to the step; whatever his personal and private views may be, the inadvisability of such action is certainly obvious to him. Moreover, Dr. Malan is the leader of the Cape Nationalists, who are not on the best of terms with their friends further north.

The Union Government Gazette for October 28th contains the Regulations for the Export of Deciduous and Sub-Tropical Fruit, and the Regulations under the Export Subsidies Act of 1931. The general amount of the subsidy is 10 per cent. on the value of the goods exported, except in certain cases of which the more important are referred to hereunder. This is not of great assistance in many cases of articles whose value in sterling is much affected by sea freight and charges overseas. The subsidy to coal is one shilling per short ton, but the coal trade is very dull at present. Deciduous fruit receives 20 per cent. on a fixed value of £12 per ton of 40 cubic feet, and citrus 20 per cent. on £8 10s. per ton of 40 cubic feet. Meat (live or chilled) is subsidised on a scale sliding downwards from 35 per cent. on a value of 28s. 9d. or more per 100 lbs. Maize receives sixpence per 200 lbs. There is provision for insuring as far as possible that the subsidy reaches the producer. Government speakers have lately alluded to the subsidy scheme as a temporary one, and have been warning producers of the necessity of standing on their own feet. This is presumably the best way of telling their supporters that they may not have the money to continue subsidising the export trade.

To those who have followed reports of speeches on the gold standard, and of our relations with Great Britain, the raising of South Africa's £8,000,000 loan in England is not without its humorous aspects. Fairly recent efforts in Holland and France had been unsuccessful, whilst American terms were excessively onerous and included the provision of a British guarantee. Perhaps it is understandable, therefore, that no references were made locally to the loan prior to the announcement that it had been underwritten. The news must have caused some surprise when published in the country papers whose readers believe Great Britain to be moribund and on the road to bankruptcy. It is understood that the proceeds will be spent in Great Britain in the settlement of South African indebtedness and the purchase of engineering material.

The summarised figures of the local banks, which have just been gazetted for September 30th last, are given below:—

(000's omitted.)						
Liabilities to Public in the Union.		Cash Reserves in the Union.				Advances and Discounts in the Union.
Demand.	Time.	Gold Coin and Bullion.	Subsidiary Coin.	S.A. Reserve Bank Notes.	Balance in S.A. Reserve Bank.	
£ Sept. 30, 1931, 33,815	£ Sept. 30, 1931, 27,583	£ Sept. 30, 1931, 500	£ Sept. 30, 1931, 631	£ Sept. 30, 1931, 1,558	£ Sept. 30, 1931, 4,486	£ Sept. 30, 1931, 45,621
1932, 28,695	1932, 24,749	1932, 345	1932, 770	1932, 1,238	1932, 3,977	1932, 37,946

The figures show clearly the shrinkage in the volume of business in the Union.

JAPAN.

Budget — Industrial Expansion — Amalgamation.

(FROM OUR CORRESPONDENT.)

Tokyo, November 11.

THE Budget estimates for the next fiscal year, which begins on April 1, 1933, were approved by the Cabinet Council on Wednesday night. The total national expenditure in the new Budget was fixed at 2,232 million yen,

showing a marked increase of 452 million yen upon the working Budget for the current year. The increase is principally accounted for by the military operations in Manchuria (166 million yen), re-equipment of armaments (243 million yen), and the farm relief and other remedial measures (193 million yen). The revenue for the fiscal year 1932-33 is estimated at 1,336.9 million yen, a slight increase of less than 10 million yen upon the current year, revealing an appallingly huge deficit of 895 million yen against the approved expenditure. The deficit will be met entirely by a new loan without resorting to fresh taxation, which, as the Finance Minister pointed out, would be impracticable in view of the general economic situation in the country. Government borrowing during the next fiscal year, including loans for the Special Accounts, will amount to over 1,000 million yen. Though taxpayers have been temporarily relieved of immediate taxation, an uneasy feeling is prevalent among them that the day of reckoning has only been postponed.

Greatly assisted by the further fall in the yen exchange, foreign trade records continue to be altogether encouraging. The October returns show that, in comparison with the corresponding month of last year, imports increased by 20,329,000 yen, or 26.3 per cent., while exports rose by 49,469,000 yen, or 50½ per cent. The increase in imports is mainly accounted for by raw cotton, rubber and crude oil, while timber, ammonium sulphate and woollen and worsted yarn declined substantially. The increase in exports spreads over the whole list, and manufactured goods generally have done exceedingly well, though textiles are as usual largely responsible for the expansion. The excess of exports over imports for October was 49,604,000 yen, compared with 20,464,000 yen in the same month of 1931, reducing the visible adverse balance of the year to 66,238,000 yen, against 55,904,000 yen.

In spite of the further depreciation of the currency, the upward movement in the general level of commodity prices slowed down appreciably during last month. The Bank of Japan's wholesale index number for October registered a comparatively small rise of 1 per

cent. on the month, following sharp advances of 5½ per cent. in August and of 7.4 per cent. in September. The advances, especially in metals and fuels, were largely offset by the falls in cereals and raw silk and silk manufactures.

There is evidence that the inducement offered by trade improvement has produced in several branches of industry a distinct disposition to launch into new capital expenditure. In the cotton industry 348,000 spindles were installed during the first ten months of the year, and another 60,000 spindles are to be fitted in the remaining two months. The total Japanese spindleage will reach 8,000,000 by the end of the year. Almost all rayon companies are enlarging or planning to enlarge their plants. The Kanegafuchi, one of the most powerful cotton mills, has decided to embark upon rayon manufacturing, establishing a plant with a capacity of two tons a day. Portland cement manufacturers also are reported to be planning to lay out more kilns with the aggregate monthly capacity of 130,000 tons. These extension schemes, however, are regarded with some misgivings in a sober section of business circles in view of the prevalent curtailment of production, though the curtailment rates are being gradually reduced or coming to an end in many cases.

Another feature in industry at the moment is an amalgamation movement, which has apparently been started with the big fusion in the paper manufacturing industry, which was consummated last month by the Oji taking over the other two large paper mills, the Fuji and the Karafuto. The combine controls 85 per cent. of the total Japanese production. A fusion scheme of three steel companies in Eastern Japan will be completed in the course of this month. It is also reported that the complete shipping union proposal has been revived, and conversations are going on between the managements of the two big steamship companies, Nippon Yusen Kaisha and Osaka Shosen Kaisha. As for the national electric power combine, of which we have heard so much, it seems at the present a remote possibility, and instead a merger by district has now been suggested and supported as more feasible.

Books and Publications.

BOOKS OF THE WEEK.

INDIA IN TRANSITION.

To say that this* is a book with a hero is to say that it is a book which deserves to be read. For the hero is Lord Irwin, while the author—a professor of economics in the University of London who has seen seventeen years' service in the Indian Police—is a man who knows his subject and who lies under no suspicion of being soft-headed. He knows the working of the Government of India from inside—and this from a key position; for the Indian Police is the buffer between the Indian people and the British Raj; and it is here that the pressure is most directly felt in times of social and political stress. But Professor Coatman, in his record of Indian history during Lord Irwin's administration, is not concerned to look at the situation from the standpoint of the service in which he himself has served. The responsibility which he emphasises is the responsibility of the Viceroy; and his admiration is evoked by the manner in which this responsibility was discharged by Lord Irwin.

Professor Coatman's book is admirable in a number of ways. First and foremost, it gives the reader a vivid impression of the swift and irrevocable march of events. "All the participants in what Fate holds in store for India—and they are the many Indian communities and the people of Great Britain—have taken irrevocable decisions and done things that cannot be undone." This sentence, which occurs a page or so from the end of the book, sums

up the sense of what the author has succeeded in conveying in the preceding 375 pages. Professor Coatman has also a flair for personalities. It is not only Lord Irwin who lives in these pages. We are given a whole gallery of Indian politicians, and the author gives us a vivid picture of their personalities in action. He does not hesitate to pass judgments on them; but his judgments are diverse and independent, and they are obviously founded upon a first-hand acquaintance. At the same time, Professor Coatman avoids the pitfall of treating the Indian drama as though it were simply an interaction among a limited number of personalities in India and England. He deplores the aloofness of the Government of India and the members of the Indian Civil Service from international affairs, because he is conscious of "the effect on India of certain international, long-range influences which are at work throughout the world, producing one more of the long, slow, cyclical changes in human conditions and relationships of which history is the record."

These are the materials with which Professor Coatman works; and in using them to paint his picture he shows discrimination and judgment. For instance, he does not shrink from criticising his hero, Lord Irwin, on occasion—for including the North-West Frontier Province in the Irwin-Gandhi Pact, and for allowing the Government of India to publish the despatch on the Simon Report which it did publish at the moment of the opening of the first session of the Round Table Conference. His criticism of Mr Gandhi is more trenchant:—

"A sharp division must be drawn between estimates of Mr Gandhi the man and Mr Gandhi the politician. As a man Mr Gandhi is justly revered by millions. As a politician, he is a sham, and a dangerous sham. He is dangerous because

* "Years of Destiny in India (1920-1932)." By Professor J. L. Coatman. (London: 1932. Cope. 10s. 6d.).

the prestige which he has acquired through his personal characteristics is attached to him in his capacity of politician, and earns for him the enthusiastic, indeed, the fanatical support of men and women who would not support his political tactics for one moment if they were not dazzled by the glamour of Gandhi the man and saint."

This judgment is obviously as sincere as it is outspoken. And it does not prevent Professor Coatman from dealing with Mr. Gandhi fairly and even sympathetically in the many pages in which the Mahatma is the protagonist.

The author particularly shows his judgment in his rejection of the crude formulations of the Indian problem at either extreme of the political gamut:—

"It is not, as enemies of Britain allege, a simple problem of a people struggling to be free and held down by a selfish and superior force, nor is it what so many apologists for British rule depict, namely, a vast population of simple, backward and much-divided people being stirred up against a rule, which at heart they love, by a few discontented intellectuals."

If we read Professor Coatman aright, he is deeply convinced of the reality of the Indian National Movement beneath the superficiality of much of what is said and done by Indian politicians, and believes that this Indian movement is a spiritual upheaval which is of English origin—for in this case it is possible to say where the wind which is sweeping over the cornfield has started. We are watching the impact, upon Indian hearts and minds, of the experiences and ideas and traditions and institutions which we have brought to India with us in coming to India ourselves. Our first task was to provide India with that framework of law and order and organised administration and economic equipment—railways and ports and irrigation canals and the like—which we have created for ourselves at home; and since all this was exotic to India when we came to her, we were bound to thrust it upon her from outside, bureaucratically. But every civilisation is a seamless garment, and these outward trappings presupposed an inward spirit. From the moment when we first set to work in India, we were challenging the Indians to take over the things that we were doing for them and to do them for themselves; and the hour for this transfer of responsibility has now come. History cannot stand still, and the bureaucratic British Raj was in its essence a transitory phenomenon. The Indian Empire must now either become self-governing or fall to pieces. That is the present issue.

SHORTER NOTICES.

"The Theory of Wages." By J. R. Hicks. Macmillan. 8s. 6d.

This book makes elaborate use of the method of abstraction characteristic of the Austrian economic school. Nor does it lack a certain gloomy pleasure in the drawing of unpleasant conclusions. Mr Hicks bases his entire analysis of the wage question on the doctrine of marginal productivity; that is to say, he treats wages as only one, though a somewhat peculiar, instance of the general principle that each factor of production tends, subject to frictions and interferences, to be rewarded in accordance with the productivity of the marginal dose. In common with other economists of the marginal productivity school he gives insufficient attention to the definition of productivity itself, or to the relation between productivity measured in terms of

money and the demand for commodities as affected by the magnitude of the incomes distributed in the course of production. He also makes somewhat confusing use of the doctrine of increasing and decreasing returns, without an adequate examination of the basis of these doctrines. He admits indeed that in strictness the theory of wages ought to regard each labourer as an individual, and to deal with the tendencies affecting the wage of each individual because each worker is in the last resort a special and singular factor of production. But after devoting some attention—rather more than is usually given—to individual differences between labourers, he goes on to treat of wage theory in terms of groups and classes. The latter part of his book is largely concerned with discussing the influence of such forces as Trade Unionism and State intervention which may tend to raise wages to higher levels than they would reach under purely competitive conditions. This treatment leads up to the view, which follows from Mr Hicks's premises, that such rises in wages must tend to cause unemployment—the more so because they accentuate the displacement of labour through the incentive which they afford to more capitalistic and highly mechanised methods of production. If once Mr Hicks's initial assumptions are granted, most of the remainder of his argument follows logically. But he has not added a great deal to the traditional wage theory of the Austrian school, nor has he improved upon the practice of that school in beginning with a study of wage relations which ignores the influence of the distribution of income upon demand, and endeavouring to introduce this vitally important factor only at a much later stage in the argument.

"The New York Money Market." Vol. II. Sources and Movements of Funds. Vol. III. Uses of Funds. By Benjamin H. Beckhart and James G. Smith. New York. Columbia University Press (H. Milford). 33s. 6d. net per volume; 106s. 6d. the set of four.

The first volume of this series, entitled "Origin and Development" has already appeared. It was mainly historical and traced the development of the New York money market up to the foundation of the Federal Reserve system just before the war. The next two volumes form the subject of the present notice. A fourth volume, on "External and Internal Relations," has yet to appear. While the period covered by these three last volumes is mainly that of the years 1913-31, in certain aspects the story is carried into 1932—a fact which encourages us to suggest that the last volume should be continued still further into 1933. The whole series forms one of those big pieces of joint research work which are so typical of American university activity.

Volume II. is concerned mainly with the banking side of the money market, and is based mainly on a consideration of member bank reserves. There is an important chapter showing how gold movements into and out of the United States affect the supply of credit. Volume III. describes the three great short-term money markets in the United States, these being the call loan market, the commercial paper market and the acceptance market. This will be found most useful by those who wish to study the mechanism of the New York money market, and to compare and contrast it with that of London.

The Stock Exchange.

AUSTRALASIAN PASTORAL COMPANIES.

EVERY investor who has been impressed by the recent improvement in the credit of the Australian and New Zealand Governments should examine the accounts of the principal Australasian farming and pastoral agency companies, whose prosperity is a major constituent in national credit-worthiness. In the last few months of cheap money Australian and New Zealand Government stocks have advanced to a 4½ per cent. yield basis. The most recent trading accounts of the pastoral and agency companies, however, show no uniform improvement. The directors in every case complain that the low level of wheat, wool and livestock prices is holding back recovery in spite of the good seasons which Australia, if not New Zealand, is enjoying. In the 1930-31 and 1931-32 seasons the wheat crops in Australia have been large, and a record wool clip (of nearly 3 million bales) has been disposed of in the 1931-32 season. It is reported that a still heavier wool clip will be grown in the current season, and that the wheat crop shows every promise of being excellent.

Prices, however, do not yet afford an adequate profit to producers, in spite of reductions in costs. Wheat has lost much of its improvement, and wool prices, which reacted throughout the last selling season, have not yet shown any material recovery. The following table shows that, although producers have been blessed by the abundance of Nature, prices have been far from satisfactory:—

	Years ended June 30th.		
	1930.	1931.	1932.
WOOL SALES.			
Australia:			
Bales	2,553,000	2,481,000	2,714,000
Value	£33,924,000	£27,616,000	£29,643,000
Average value per bale realised at sales	£13 15s. 9d.	£11 2s. 10d.	£10 18s. 5d.
New Zealand:			
Bales	426,000	445,000	475,000
Value	£5,131,000	£3,559,000	£3,572,000
Average value per bale	£12 1s. 0d.	£7 19s. 10d.	£7 10s. 4d.
WHEAT EXPORTS.			
Australia:			
Centals (100 lbs.)....	24,234,000	71,534,000	76,427,000
Value	£10,037,000	£14,744,000	£19,209,000
Average value per cental	8s. 3d.	4s. 1½d.	5s. 0½d.

Apart from the handicap of low prices for their primary products, the Australian and New Zealand pastoral and agency companies have had special difficulties to meet. In the first place, the companies registered in England have been required to pay their fixed interest charges in sterling, while their competitors registered in Australia have not only avoided exchange losses, but have had the advantage of a reduction in interest on capital borrowed in Australia. In December, 1931, the exchange rate was reduced from £130 to £125 Australian for £100 sterling.

This is still the prevailing rate, but a section of Australian producers is continually urging the Commonwealth Bank to depreciate the Australian pound still further. If the adverse balance of Australian visible trade of the first two months of the current financial year is not corrected, it is possible that the exchange rate may be altered; but even at 125 per cent. the loss to the British pastoral companies must be considerable. For example, the chairman of Dalgety's mentioned at the last meeting that his company had suffered a loss of £175,000 in the remittance of funds to London for debt service and preference and ordinary share dividends. Normally this company would have met its London debt and dividend service by the payments due to it from Australian importers, but the high tariffs and import prohibitions in Australia have upset the balance of its trade.

In the second place, the mortgage and agency companies have been adversely affected by the Australian legislation for a reduction in interest on mortgage securities by 2½ per cent., which formed part of the Premiers' Financial Plan. This Act was passed late in 1931, so that its effect upon the revenue account of the companies will be more severely felt in the current year. Another piece of damaging legislation was the Moratorium Act passed by the late Labour Government in New South Wales in 1931. Under the provisions of this Act purchasers were authorised to postpone the payment of instalments on their purchases so long as interest was duly paid, or within four months of the passing of the Act to rescind their purchase agreements, subject to the forfeit of all moneys paid on account. This Act, which has seriously upset the sales of land in New South Wales, has not yet been amended by the present New South Wales Government.

We may divide the companies examined in this article into two classes: those concerned directly with pastoral and cattle farming and those which mainly conduct a loan and agency business in connection with the pastoral industry, but have farming estates also under their control or management. In the first category we need consider only the Australian Agricultural Company, a comparatively small concern, with a capital of £800,000, and the more important New Zealand and Australian Land Company, with a share capital of £3,000,000 and a loan capital of £677,400. The extent to which the latter company's prosperity is dependent upon the price of wool and stock is shown by the fact that the profit on wool, sheep and cattle accounts during 1931-32 was nearly £450,000 less than in 1928-29—an amount equivalent to 22½ per cent. on the ordinary share capital.

Of the farming and agency companies, the most important is Dalgety and Company, which has a share and loan capital of £5,654,354. This company's balance sheet, at

NOW READY—PUBLISHED BY PITMAN'S

THE GENERAL TARIFF OF THE UNITED KINGDOM (LAW AND REGULATIONS)

Compiled by A. S. HARVEY, of H.M. Customs and Excise Department. A thorough guide to the working of the tariffs, and to the official regulations respecting the various dutiable goods, and the documents that must be completed. It is essential for a practical understanding of the full scope of the Import Duties Act, 1932. Well indexed for reference. 192 pp. 5/- net.

Order from a bookseller or

SIR ISAAC PITMAN & SONS, Ltd., Parker St., Kingsway, W.C.2

June 30, 1932, showed that £6,784,000 was held in advances on land and stock. The Chairman, in his speech to shareholders last month, was not too cheerful as regards Australian prospects and was even pessimistic as regards New Zealand, where the company has over £2½ millions invested. In recent years the New Zealand interests have not been a remunerative holding; while investments in Kenya and Tanganyika have also been unsatisfactory. It is remarkable that Dalgety and Company was unable to earn its debenture interest in the year to March 31, 1932, in spite of the greater volume of wheat and wool sales.

A similar comment applies to the next largest company in this group—the New Zealand Loan and Mercantile Agency, with a share and loan capital of £4,500,000. In spite of an improvement in earnings it is still unable to meet its debenture interest and preference share dividends. The Australian Estates and Mortgage Company, with a share and loan capital of £3,300,000, has an important agency business in addition to its farms. Preference dividends have been passed since June 30, 1930. No ordinary dividend has been paid since 1928.

The Australian Mercantile Land and Finance Company's profits for the year to June, 1932, showed some improvement, in spite of the negligible profit now derived from its own stations. This company, which has a total capital of £3,400,000, is still able to earn its debenture interest and to pay a small dividend on its ordinary shares. The New South Wales Land and Agency Company is a small company with a capital of £130,725 and no debenture debt or preference capital. It is still able to show earnings on its ordinary capital and to pay 8 per cent. dividends.

The table at the foot of the preceding page summarises the accounts of these companies for the last two years. It will be seen that, of the larger companies, only the Australian Mercantile Land and Finance Company is covering its debenture interest. Happily, the financial position of practically all companies is liquid. Dalgety has a surplus of current assets over current liabilities of £6,356,000, New Zealand and Australian Land of £1,049,000, Australian Mercantile Land of £903,000 and New South Wales Land and Agency of £240,000. The next table shows the present market position of the securities of the various concerns:—

* Based on dividend of 2 per cent., tax free.
† Based on 5 per cent. tax free dividends.
‡ Based on 8 per cent. dividend.

The market, altogether, appears to be taking a fairly optimistic view of the recovery in the prices of primary products on which the prosperity of these companies depends. How far this attitude is justified may be debatable, in view of the recent fall in sterling and the uncertainty of a war debt settlement. Moreover, Australia is fully stocked with sheep, world supplies of wheat are plentiful and markets are restricted. The primary producer, unfortunately, is not yet out of the wood.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
December 20.

ACCOUNT.
December 22.

LAST week's unsettlement was replaced by calmer, and perceptibly firmer, conditions. The immediate effects of a possible debt payment had been discounted and the recovery of sterling was accompanied by a steady improvement in the Funds. Trading throughout was narrow, while demand coming mainly from small investors, while professionals preferred to await definite information before increasing their commitments.

Gilt-edged stocks were dull at the outset, with sellers predominating. Subsequently, prices turned upwards, old Consols and the new 3 per cent. Conversion Loan being well supported. In mid-week the recovery became general. India loans were firm, the 3 per cents. and 5½ per cents. both gaining ground. Business in Dominion issues was more satisfactory, Australians, in particular, benefiting from reinvestment orders following the December 1st gilt-edged disbursements. South African scrip improved to 2 discount. Home Corporation stocks were firmer in sympathy with the Funds.

In the Foreign market, interest centred mainly in Sino-Japanese bonds. The foreign issues of the Chinese 1919 Loan attracted fair attention, and Japanese bonds were in short supply. San Paulo Coffee regained a modicum of favour. European bonds had stronger appearance, German bonds reflecting hopes of an improved political outlook following the appointment of General von Schleicher to the Chancellorship. Greek Sevens, exceptionally, were weak.

The Home Rail market was quiet. A modest demand, in mid-week, for Southern junior stocks, on a favourable traffic statement, subsequently petered out. On Thursday, Metropolitan reflected anxiety concerning the final terms of the London Transport Bill. Foreign rails were lifeless in the face of discouraging traffic returns. Buenos Aires and Pacific 5 per cent. debentures lost a point on Wednesday. American rails, however, were higher throughout the list.

In the Industrial share market dull and irregular conditions were relieved by a few high lights. Milling shares were good, Spillers being in demand, while Associated London Flour reflected the favourable offer for its shares made by an unknown buyer (see page 1096). Electricity supply issues met a better investment inquiry. Iron and steel shares were generally firm. Whitehead iron improved on the interim dividend announcement. Motor shares were undecided, Ford being slightly lower. Breweries remained under the influence of reduced dividend declarations and pessimistic chairmen's speeches. Godfrey Phillips were a bright feature among Tobacco shares. Woolworth were again supported. Shipping shares were depressed by the unfavourable tenor of the chairman's speech at the P. and O. meeting (discussed on page 1097).

Oil shares were firm at the beginning of the week, but the improvement was not maintained. Anglo-Persian suffered a fresh decline, failing any more hopeful development in the dispute with the Persian Government. The company's statement of its case is summarised on page 1095. A fair business was done in Shell, but the price slipped back. The Eagle issues were readily absorbed from Paris.

Rubber shares were lifeless, the few changes being invariably to lower levels. News of a tea restriction agreement (discussed on page 1077) failed to energise the share market. Mining shares, likewise, were out of favour, the gold mining issues falling as sterling rose. The Cape was inactive. A sharp fall in Sub Nigel created some uneasiness. Ashanti Goldfields were out of favour early in the week, but improved later, while Santa Gertrudis declined. Sherwood Starr continued to make progress, but the Western Australian issues were less prominent.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets turned firmer on the President's Message to Congress, which was well received throughout the financial district. The earlier vote of the House of Representatives, which failed to obtain the necessary two-thirds majority for the repeal of Prohibition, encouraged only moderate speculation, and the ensuing sales were not heavy. The Presidential Message, on the other hand, was praised for its determination to face unpleasant budgetary realities, though some of the proposals were recognised as being likely to provoke sectional opposition, while others, like the manufacturers' sales tax, had been rejected by Congress some months earlier. The market generally agreed with the President's diagnosis of the root cause of the troubles of many small banks, but was disappointed by the absence of any concrete programme in this connection. It was understood, however, that Senator Glass's Banking Reform Bill would shortly be taken up in the Senate. The War Debt position continued to be a negligible market factor, the eventual opening of discussions for revision being regarded as inevitable in well-informed circles. Bonds had a stronger tone, and some of the better shares, particularly certain railroads, achieved gains of 1 to 5 points. The volume of dealings simultaneously increased, Wednesday's turnover, for example, being 1,200,000 shares against 700,000 on Monday. Evidence was even forthcoming of a resumption of pool activity, on a small scale, in a few issues like Aircraft, Chrysler and Montgomery Ward. The market, however, was easier on Thursday. There are no signs whatever of a resumption of activity on the scale of last September. Large financial interests are avoiding fresh commitments owing to international uncertainties, while the domestic trade situation gives speculative operators little to go for. There has been no worsening of conditions, beyond the normal seasonal movement, but Christmas trade is likely to reflect the hardships which the community is experiencing. Freight-car loadings for the week ended November 26th, at 493,700, showed a decrease of 82,000 as compared with the corresponding week last year. Steel activity has fallen to 16 per cent.

of capacity. Power production, however, shows a slight rise. Retail sales continue to run below last year's level. Woolworth's figures for November, for instance, recording a decrease of 8 per cent.

PARIS.

Moderate professional activity developed after a dull opening. The payment of the Suez Canal dividend was a bull point, a steady demand for the shares persisting throughout the week. Bear covering tended to put prices up and the possibility of a compromise at Geneva encouraged cheerfulness. Ottoman Bank was well supported, but in the more speculative sections, Rio Tinto showed irregularity.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

AMSTERDAM.

Business was restricted, though the undertone remained firm. Unilever N.V. were marked higher on the reported purchase of the 1933 season's whale oil production. Rubber share prices were maintained. The rise in sterling was insufficient to overcome the general apathy of the market, but Royal Dutch remained active on Paris account.

OTHER CENTRES.

Inactive conditions prevailed on most of the minor European bourses, though prices had a perceptible upward tendency. Frankfurt was fairly active in the second half of the week. Stockholm was irregular, the bond market weakening on rumours of a forthcoming State loan. Quotations advanced slightly at Brussels and Copenhagen.

INVESTMENT NOTES.

The Capital Embargo.—The "consideration" which the Treasury promised a fortnight ago on the subject of the capital embargo appears to have had negative results, for the Chancellor of the Exchequer has now informed the House of Commons that he does not consider the present time opportune for any change in the regulations. This decision has caused disappointment and a certain bewilderment. Various dates have successively been suggested, in the market, as opportune for the removal of the embargo. These have been (1) the beginning of August, when the success of War Loan conversion was assured; (2) the beginning of October, when the operation was completed; (3) the beginning of November, when the Treasury rounded off its entire re-financing programme by the Three per cent. Conversion Loan issue; and (4) the

Address.....

beginning of December, when doubts as to the technical position in regard to the 52½ per cent. call on the Conversion issue, after its original "over-stagging," had been finally set at rest. The Treasury has given no explanation of its object in continuing an embargo which closes the market to concerns of the highest repute, desirous of reducing their burden of "callable" fixed charges, while allowing new greyhound racing companies, and other speculative domestic enterprises, complete liberty to appeal to the investor. The Chancellor's blunt statement at least abandons the pretence that the embargo is merely a "voluntary" measure on the part of the issuing houses. If restriction is to be more or less indefinitely maintained, it would seem incumbent on the authorities to state at least its main purpose. If it be contended that gilt-edged stocks must be "protected" against a possible drain of money into new issues, the reply may be made that the latter are not officially banned, and that, in fact, some £30,000,000 of new money has been raised in London, by borrowers other than the British Government, since the beginning of October. The maintenance of restrictions on conversion issues involving underwriting or application for cash, operates, in practice, inequitably as between large companies with a national reputation and standing (like the P. and O., which has nearly £7 millions of debenture stock eligible for conversion) and smaller concerns which can more readily employ devices honouring the letter but defeating the spirit of the regulations. A frank declaration of the Government's motives might go far to silence the suggestion of unfriendly critics that the authorities are not entirely satisfied as to the stability of the present basis of gilt-edged prices. The possibility of temporary disturbance owing to the war debts' crisis must clearly be borne in mind, but we have already given reasons for our belief that, on a longer view, firm conditions will continue without artificial aid in the gilt-edged market.

London Transport "C" Stock.—An important concession was extorted from the Government spokesman, last Tuesday, in the debate on the London Transport Bill. As the Bill now stands, holders of "C" stock in the proposed Traffic Board will have power to apply for a receiver upon the failure of the undertaking to pay, for two successive years, a dividend of 5 per cent. upon its "C" stock in its first two years, and 5½ per cent. thereafter. It is now proposed to make application for receivership contingent on a failure to pay 3½ per cent. during the first two years, but the Government has not committed itself as regards the subsequent period. The principle involved is not political, but financial. It is contemplated that the undertaking will have £87,031,030 of prior stocks ranking in front of £24,339,027 of "C" stock. The "C" stock would in normal circumstances correspond to the "equity" of the undertaking, but the Board will not, in theory, have any "equity," since the maximum dividend on the "C" stock normally is fixed at 6 per cent. The Bill, having thus limited the dividend position of the junior stockholders in the most favourable circumstances, seeks to protect it from less favourable contingencies by giving "C" stockholders, on the application of the Court for a receiver, if their "standard" 5½ per cent. dividend is not paid for two consecutive years. As "C" stockholders of the undertaking will contribute only 21½ per cent. of the total capital, many potential holders of senior stocks may be rightly dismayed by the possibility of receivership, on a mere fall in receipts of anything over £408,069 in the first two years, or £281,974 in subsequent years, below the *pro forma* estimate of £5,798,602—which is itself admittedly above the present earning power of the undertaking, as a result of economic depression. If "C" stockholders are to continue to hold this extremely far-reaching power, it is prudent, as well as equitable, to insist that it shall be exercisable only in the event of a "secular," and not merely a "cyclical" reduction in available earnings. Even if an estimate based on three years to December, 1930, be accepted as a fair measuring-rod of future earning power, it is obvious that fluctuations

of much more than 5 per cent. below this figure in "bad" years may not involve any suggestion of inefficient management or any necessity for a change of fares. The Government's concession promises slightly more elasticity in the first two years, but it is desirable that the Board should have a much longer period in which to establish the new undertaking on a thoroughly sound basis, undistracted by any fear of dispossession by a receiver on a temporary decline in profits.

Course of Equity Share Values.—The net result of last month's movements in equity share values, both in London and New York, was much of a stalemate. Prices finished more or less where they had begun, after rising appreciably in the meantime. Little practical importance attaches to the intermediate fluctuations in either centre, though the rising tendency of the first few days of November may be attributed to a vague hope of favourable developments after the American elections, and the subsequent recession to disappointment over the war debts crisis. The volume of business, in fact, has been subnormal, and the slightly firmer tendency since the turn of the month has reflected a very moderate amount of buying in a narrow market. In London, equities and gilt-edged stocks have receded and recovered *pari passu*, though "technical" factors have counted for more in the latter than in the former group. The really significant feature is the tenacity with which, during the last three months, British equities have held their rise of last summer, as is shown by the chart reproduced on this page. In Wall Street, similarly, though

the buying movement of August and early September was overdone, prices have exhibited no tendency to return to the low levels of midsummer. In the absence of indications of a pending trade recovery, British equity share values appear relatively high. The dividend yield on 132 representative shares in the Actuaries' Index is only 4½ per cent., against 7 per cent. a year ago. The corresponding yield figure for American stocks is over 6 per cent.

Anglo-Persian Company's Case.—The directors of the Anglo-Persian Oil Company have issued a statement to their shareholders relating to the correspondence which has passed between the Persian Minister of Finance and the company's resident director in Teheran in the matter of the royalty dispute. It is pointed out that the concession provided for royalty payments to the Persian Government at the rate of 16 per cent. of any annual net profits that might be made, and it was not until after fifteen years' work, when profits were first derived from the concession, that the Government's share was called into question. In 1920, an interpretative agreement was signed, which was referred to in the article appearing in last week's *Economist*. Under this agreement the Persian Government received a lump sum of £1 million in final settlement of questions then outstanding. In 1928 further discussions took place with the object of effecting an agreed revision of the concession. Sir John Cadman and other directors visited Teheran in 1929, and, although agreement was reached on most of the matters in dispute, there were certain vital points relating to the nature and extent of the increased participation which

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES June to November, 1932. (1928=100)

British: "Financial News" Index of 30 Ordinary Shares. American: "Standard Statistics" Index of 50 Common Stocks—Daily Figures.

the Government desired, on which final agreement proved impossible. Further negotiations were opened up in 1931 and a formal draft royalty was submitted to Teheran for formal ratification by the Government. Ratification, however, was never accorded. Later (in June) a new set of proposals was prepared by the Persian Ministers, and the resident director was asked to inform the chairman of the company that the Government's proposals were "based on reality." The next communication was the annulment of the concession on November 27th. "It will be seen," the statement declares, "that the directors cannot be accused of having failed to treat seriously the views of the Persian Government." Indeed, Sir John Cadman warned the Government as long ago as 1929 that conditions in the oil industry might change for the worse and that the profits of the company would suffer accordingly. The fall in the royalty from £1,288,312 in 1930 to £306,872 in 1931 was a bitter disappointment to the Persian Government, but the Government should not lose sight of the fact that the country has benefited to an immeasurable extent by the employment of her people and the raising of the workers' standard of living. The directors emphasise that the Board is, and always has been, desirous of settling all questions in a fair and friendly manner, but their duty is to preserve a fair equilibrium between the interests of the Persian Government and the interests of the company. The British Government despatched on Friday last week a Note to the Persian Government and the reply being unsatisfactory has stated that unless the annulment has been withdrawn by December 15th it will refer the dispute to the Hague Court as a matter of urgency under the optional clause.

Associated London Flour Millers.—In a circular dated December 3 the shareholders of this company were informed that a cash offer had been received for their 5 per cent. and 7½ per cent. cumulative prior-preference shares and their ordinary shares. The prices offered were 21s. per share for the 5 per cent. preference shares, 27s. 6d. per share for the 7½ per cent. prior-preference shares, 26s. per share for the 7½ per cent. preference shares, and 21s. 6d. for the ordinary shares, the prices to include any dividend accrued to the date of acquisition. The directors state that the offer is the result of prolonged and detailed negotiations and recommend acceptance. The arrangement is subject to the condition that the holders of 51 per cent. of the ordinary shares shall have signed an acceptance on or before December 15, 1932. The directors propose to accept the offer in respect of their own holdings. In the event of the proposed acquisition, Associated London Flour Millers will continue to function as a separate entity, and its flour and other products will be manufactured as before. It is intended that all its brands should be maintained, and that its affairs should be conducted in the same name and by the same management. The identity of the prospective purchaser is not revealed, but the name of Joseph Rank, the Hull flour miller, is mentioned in the market. The prices of the various classes of shares on December 6th were:—7½ per cent. prior-preference, 27s. 6d.; 7½ per cent. cumulative preference, 26s. 8d.; 5 per cent. preference, 22s. 6d.; and ordinary, 21s. 8d. Acceptance of the offer is probable, and will make for closer concentration of financial interests in an industry which has already realised the benefits of co-operation in its trading policy.

Dorman, Long.—A loss of £247,000 on the famous Sydney Bridge contract (due, in part at least, to exchange factors) has contributed to the net debit at profit and loss of £517,488 shown for the year to September 30th last by this great north-east coast undertaking. This is a melancholy sequel to one of the outstanding engineering achievements of the present age. Trading profit is down from £340,905 to £258,824, but dividends and other income have risen from £88,415 to £155,149. A sum of

£179,860 is charged for upkeep of idle plant and £89,635 for writing down stock values. A surplus of £119,344 is transferred from taxation reserve, leaving a debit balance of £387,768 to go forward:—

	Year to September 30.		
	1930.	1931.	1932.
	£	£	£
Trading profit	347,824	340,905	258,324

† After bringing in £454,582 taxation reserve, not required. * After bringing in £105,495 provision for government liabilities, not required. ‡ After charging £129,677 exchange loss on transfer of Australian payments. § After debiting £247,000 loss on Sydney Harbour Bridge. || Surplus transferred from taxation excess.

Expenditure on capital account during the year amounted to £63,902. The financial position inevitably reflects the difficulties of the time. Depreciation on the fixed plant has not been charged on the accounts, but all plant in operation has been fully maintained. The balance sheet shows "debts due to the company" of £935,326, "bills receivable" of £70,761 and cash of £11,281. An amount of no less than £2,786,536 is due to bankers on general and bridge contracts accounts. The £1 ordinary shares are quoted at 2s. 9d., and the 8 per cent. preferred ordinary shares at 3s.

Tube Investments.—The dividends received by this holding company from its tube-manufacturing subsidiaries have declined from £240,806 in 1931 to £196,107 for the twelve months to October 31st last. The ordinary shares again receive 8 per cent. and the "liaison" shares, £30,000:—

	Year to October 31.		
	1930.	1931.	1932.

* After applying £16,008 to writing down Government securities.

Prices and turnover suffered further contraction in 1932, which was "a most difficult and depressing year." Measures of rationalisation have been effected on the electrical side, which was found to be "susceptible to much improvement." A subsidiary has started the manufacture of steel furniture. "Full advantage has been taken" in the cycle fittings and allied trades group "of the assistance extended by the departure from the gold standard and by the import duties," but the effect on the total of profits is not impressive. The £1 ordinary shares are quoted at 26s. 8d. to yield about £8 9s. 6d. per cent.

Aerated Bread Company.—This famous catering firm continues to thrive under its present management. Profits for the year to October 1 last constitute a new "record." The ordinary dividend is maintained at 5 per

cent., and the directors are able to transfer £50,000 to a general reserve:—

	Year to September 30.		
	1930.	1931.	1932.
	£	£	£

Carried forward	20,847	53,449	40,394

The balance-sheet shows cash at £53,512 and debtors at £101,020, while creditors amount to £211,678. Most of the company's investments are in subsidiary concerns. Three new depots have been opened during the year, and a number of freehold sites and buildings have been purchased. In view of the upward trend of the company's business, it is proposed to seek powers to increase the capital by the creation of 500,000 shares. Of this total, not more than 250,000 shares will be issued as additional 6½ per cent. cumulative preference shares, subject to the consent of the preference shareholders. The £1 ordinary shares yield about £4 11s. per cent. at their present price of 22s.

South Durham and Cargo Fleet.—Both these Northern iron and steel manufacturing companies show reduced profits for the year to September 30. South Durham, the controlling company, reveals a trading profit of £49,077, compared with £56,411 for the previous twelve months. The depreciation allowance is halved at £15,000, and the preference dividend is just covered by earnings. The payment of 3 per cent. on the £350,000 ordinary capital (against 4 per cent.) requires a draft of £10,000 on dividend equalisation reserve. The balance-sheet is strong, cash and debtors aggregating £621,568, against creditors totalling £92,848. The reserve account still stands at £1,275,000, and exceeds the total issued capital.

The subsidiary company, Cargo Fleet, shows gross profits of £65,598, compared with £85,667. Debt interest, fees and an allowance of £25,000, against £45,000, for depreciation, absorb practically the whole amount, the carry-forward being increased from £187,904 to £189,756. The £1 ordinary shares of South Durham at 22s. 6d. yield about £2 14s. 6d. per cent., allowing for the dividend. The £1 "B" ordinary shares, which receive no dividend, are quoted at 7s. 6d.

P. and O. Meeting.—The exhaustive nature of the Peninsular and Oriental Steam Navigation Company's accounts left the chairman, the Hon. Alexander Shaw, little to add at Wednesday's meeting. Stockholders, however, were left under no misapprehension as to the

difficulties besetting the shipping industry. Mr Shaw declared, in effect, that no group, however strong, could earn profits, in a true economic sense, given the present attenuated movement of passengers and freight throughout the world. The P. and O. had considerably reduced its costs by reorganisation without lowering its standard of service. Total expenditure last year fell by £255,000, although port dues increased by £51,000 and Suez Canal dues by £133,000, thanks to the devaluation of sterling. A further reduction will be achieved in the current year's accounts, only a fraction of the total saving expected from the rationalisation of certain services having been reflected in the report for 1931-32. Stockholders, however, will realise the force of Mr Shaw's statement that "trade conditions for a good many years past have not been such as to permit the full depreciation necessary in each year to be found from earnings." This construction may not have been placed by all the proprietors on the somewhat oracular statements made at earlier meetings, while recent transfers from sources like the Insurance Fund for depreciation purposes may have been regarded as additions to, rather than appropriations in aid of, normal depreciation allowances out of revenue. Until this year, the actual dimensions of depreciation charges to profit and loss account have not been disclosed. There will be general commendation of Mr Shaw's decision to place the facts, so far as the present position is concerned, frankly before stockholders, and to face the implication that unless the company's earnings "are very much increased next year it will be necessary to draw upon . . . reserves to provide for depreciation." Happily, the group's reserves are strong and its current finances liquid. There is no doubt whatever of the company's ability to ride out the longest storm, but a revival in earning power depends upon world forces beyond the control of any one concern.

Second British Fixed Trust.—We have dealt, in earlier issues, with the formation of the First British Fixed Trust and have criticised the soundness of the "lock-up" principle, upon which fixed trust practice is based. A Second British Fixed Trust, has now been formed under the same auspices as the First. It has a "unit" of 2,720 shares, divided into 4,000 "sub-units." The First Fixed Trust unit included 1,280 shares divided into 2,000 sub-units. Although the Second Trust unit includes £500 nominal of Great Western Ordinary, which stands at a discount of 70 per cent., the unit as a whole is larger than its predecessor. As the Trust's calculations are based on a maximum life of twenty years for the units, the industries represented by the component shares can be regarded as epitomising the views of the Trust's founders as regards this country's future economic development. The selection, from this point of view, is significant. Of the basic British export industries, steel and engineering account for 11 per cent., and textiles for only 5½ per cent. of the present monetary

investment represented by a unit. The proportion allotted to transport is $7\frac{1}{2}$ per cent. Retail trade and "consumption" industries, on the other hand, take $44\frac{1}{2}$ per cent., made up as follows:—Catering and foodstuffs, 15 per cent.; stores, 12 per cent.; domestic requisites, $9\frac{1}{2}$ per cent.; newspapers, $4\frac{1}{2}$ per cent.; and tobacco, $3\frac{1}{2}$ per cent. The list is completed by fuel, light and power, 19 per cent., and building and allied trades, $12\frac{1}{2}$ per cent. The Trust's organisers appear to envisage a future in which little will be produced and much consumed. The truth is, of course, that selectors of every mixed bag of equity shares must needs be influenced, predominantly, by the conditions of their time. The 26 comprised in the present holding are, at least, eminently sound concerns, with good earning records under the fiery test of depression.

Second Co-operative Investment.—The Second Co-operative Investment Trust report, as at September 30, 1932, shows a depreciation on investments of 48.6 per cent. before and 45.71 per cent. after taking account of the reserves. Over $35\frac{1}{2}$ per cent. of the portfolio is held in European countries, mainly by way of Government or municipal bonds which have suffered heavy depreciation. It is doubtful whether depreciation to this heavy extent can ever be recovered. A final dividend of 2 per cent. is paid on the ordinary shares, making 3 per cent. for the year, and the carry-forward is slightly increased at £4,925. Holders of approximately 50 per cent. of the shares have accepted the invitation to convert their 5 per cent. withdrawable preference shares into 4 per cent. shares. The non-converting shareholders have been repaid in cash.

Oil Conference.—A conference has been held in Paris between the international oil groups and the Roumanian producers regarding the carrying into effect of the Paris Agreement which limited the exports of the contracting parties to the requirements of their respective markets on an approved quota basis. Since this agreement was reached the Roumanian producers have not been restricted in their output in accordance either with the spirit or letter of the agreement. The second conference has resulted in an agreement allowing a small increase in the proposed Roumanian quota, and it is hoped that the Roumanian producers will make this new agreement effective. The report was current in the oil share market that petrol prices would be raised by 2d. per gallon in the event of agreement being reached, but there was never any justification for this report seeing that a rise in petrol prices to-day would be contrary to the trend in oil prices in America at the present time. "U.S. Motor" gasoline, ex refinery, in America, began the year at 3 cents per gallon, rose to $5\frac{1}{2}$ cents, and has since relapsed to $4\frac{1}{2}$ cents. This movement scarcely justified the rise in British petrol prices which followed the Paris Agreement and would certainly not justify any further increase. Petrol consumption in America at the present time is declining, and stocks are showing their seasonal increase. Oil companies have, on the whole, been fortunate in being able to close the year with higher values for their inventories.

The North Charterland Case.—A dispute between the North Charterland Exploration Company and the Colonial Office has provoked considerable discussion. At a special meeting of the company held on November 15 last the chairman, Mr H. B. Spiller, stated that the Secretary of State for the Colonies concluded an agreement with the British South Africa Company in 1923 whereby that company purported to grant to the Crown rights over the property of North Charterland without any authorisation. In 1924, the Colonial Secretary set up a Commission to inquire into the provision of land for native reserves in the North Charterland concession. The majority report recommended that the company should be paid compensation. The minority report, signed only by the

chairman, Mr Justice MacDonnell, recommended no compensation on the ground that the company had been aware of the agreement made between the British South Africa Company and the Colonial Office. The minority report was accepted. Correspondence ensued with the Colonial Office, and an advisory committee of shareholders was appointed in December, 1927, to inquire into the whole affair. An Order-in-Council was made in March, 1928. In April, 1929, the company lodged a Petition of Right claiming that it had a valid title to its property, but without favourable result. Following further representations, a request for a public inquiry was granted, and the inquiry opened in May, 1932. The company claims that certain features of the inquiry, particularly as regards the absence of important witnesses, were open to grave criticism, and further alleges that the decision eventually given in favour of the Colonial Office was based only on a legal quibble. The special meeting of the company unanimously passed a resolution requesting the Prime Minister to direct that the inquiry be reopened and that additional vital evidence be produced. There the matter now stands.

Panama Corporation.—This concern, writes our mining correspondent, made its début early in 1926. Its capital was £2,000,000 in £1 shares, of which 500,000 were offered for subscription at par. Three subsidiaries formed to deal with portions of the property were absorbed in March, 1930. In April, 1930, a further 250,000 shares were issued at par, and about a year later £250,000 8 per cent. debentures were offered under guarantee of the British, Foreign and Colonial Corporation. The prospectus making this offer contained highly optimistic reports by Mr Hugh F. Marriott and Mr V. F. Stanley Low. The former expert, indeed, stated that the existing ore reserves were "much more than sufficient to cover and repay the debenture stock" on offer; and he drew a parallel between the new field and the Witwatersrand. Nevertheless, underwriters were called upon to take up the bulk of the stock, which went to a heavy discount. Still further financing being found necessary, and Great Britain's departure from the gold standard making the process unnecessarily expensive, the decision was arrived at to transfer of the company's locale to Canada, and the assistance of the British, Foreign and Colonial Corporation was once more invoked. The subsequent intensification of the difficulties and delays connected with the transfer. This week a meeting was held to consider a postponement of the debenture interest until July 1, 1935. At this gathering the chairman mentioned that contributions had been received from Mr D. Elliott Alves (one of the promoters), from the British, Foreign and Colonial Corporation, and from the parent undertaking, the Central American Exploration. Certain properties had been placed under option, and the intention was to lease others. In the end the stockholders present agreed to a moratorium only for a year, pending a full statement to be made before December, 1933, and a committee was appointed to confer with the board. Pointed criticism has previously been directed against the glowing statements published by Mr Marriott—who earned a high reputation on the Rand. It may be hoped that the company will eventually obtain some recompense for its expenditure of over half a million in Panama. So far less than £20,000 of gold has been recovered.

Van Ryn Gold.—In its declining days, writes our mining correspondent, this hardy veteran of the Rand has actually been able to earn increased profits, the operating surplus for the past session of £58,100 comparing with £51,100 in the year ended June 30, 1931. Owing to variations in the special receipts and appropriations, the net surplus fell somewhat below the total for the preceding period. With a larger balance brought forward, however, the directors saw their way to the pursuance of a liberal policy. The rate for the December half-year was

$3\frac{1}{2}$ per cent., and for the June period 5 per cent., as against $2\frac{1}{2}$ per cent. each time on eleven preceding occasions. As regards the mine earnings, expansion in the tonnage of ore treated, in conjunction with a fresh reduction in working costs, more than offset the renewed decline in the average yield. Of the ore treated last year, the record proportion of 35 per cent., or 293,600 tons, was obtained from reclamation. At 490,500 tons the reserves are down by 86,200 tons. The total, even allowing, say, 300,000 tons for reclamation material, represents barely a year's supply. Doubtless the mine will continue to be worked for several years to come; but the current market quotation of the shares is chiefly based upon the prospective liquidation distributions.

Trepca.—Last year's operations on the part of this Chester-Beatty enterprise, whose property is situated in Jugo-Slavia, were characterised by the bringing into commission of additions to the treatment plant. Between October, 1931, and September, 1932, the tonnage milled monthly rose from 25,500 to 42,600. Nevertheless, the net profit came out no more than £4,500 up at £114,350, the effects of the expansion in output being largely counterbalanced by a decline in metal prices and the loss incurred through the purchase of local currency in depreciated sterling. Out of the profits of 1930-31—the initial period of production—a dividend of 5 per cent. was paid and the preliminary expenses of £37,500 written off. On the present occasion, a final dividend of 7 per cent. is to be paid, making 10 per cent. for the year but leaving the reduced balance of £7,100 to go forward. It may be noted that the marketing of flotation pyrites concentrates was commenced towards the end of the period under review. A re-examination of the ore reserves in the Stantrg mine is deferred pending the completion of further development at depth, but values so far are stated to compare favourably with those in the upper parts of the mine. The exploration of certain outside areas was attended with rather mixed results. With working costs at only 17s. per ton—a low record we believe—the company is obviously in a position to make large profits given a sustained recovery in lead and/or zinc. Trepca 5s. shares are quoted around 9s.

New Issues in November.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in November, and in recent periods:—

Monthly Average.	(000's omitted.)				Total. £
	United Kingdom.	British Possessions.	Foreign Countries.	£	
1924	7,051	6,023	4,370		17,444
1925	12,918	5,077	1,356		19,351
1926	10,765	4,431	4,036		19,232

September, 1931	Dr. 50	750	Nil	21	721
September, 1932	150	Nil	Nil	Nil	150
October, 1931	Dr. 1,350	684	49	Nil	Dr. 617
October, 1932	Nil	6,595	7,880	Nil	14,475
November, 1931	Dr. 450	2,468	Nil	10	2,028
November, 1932	300	7,423	Nil	Nil	7,723

The absence of further Dominion borrowing left the total issues in November at little more than half the October

figures. Our table does not include the British Government's issue of £300,000,000 3 per cent. Conversion stock, the proceeds of which were earmarked for the repayment of existing obligations. Purchases of National Savings Certificates exceeded repayments by £300,000. The most important public lion was that of the Metropolitan Water Board, £1,860,000 3 per cent. "E" stock at 93. The Daily Mail Trust borrowed £1,200,000 in £1 preference shares at par. Only one "greyhound" issue was publicly floated, that of Dumpton (Thanet), though several companies raised money by private "placing."

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Peninsular and Oriental Steam Navigation, New Zealand Loan and Mercantile Agency, British Tar Products, Steaua Romana (British), Bowaters Paper Mills, Ansell's Brewery, Tate and Lyle, Malaya General, Strand Hotel, Roan Antelope Copper Mines, Consolidated Gold Fields of South Africa, Lewis Berger and Sons, Wiluna Gold Corporation, and Messina (Transvaal) Development. Presiding at the annual meeting of Tate and Lyle, Sir Ernest Tate said that the British Sugar (Subsidy) Act 1925 would expire on September 30th, 1934. If any fresh assistance were given, it should help agriculture and not give artificial assistance to factories competing with an old-established industry. At the Malaya General meeting, Mr George M. Weekley said that though the price of rubber had dropped at one time to the incredible figure of $1\frac{1}{4}$ d. per lb., their selling average for the year had been 3.28d., and this just covered their estate and London expenditure, the additional items of directors' fees and depreciation being more than met by income from investments. At the meeting of British Tar Products the chairman referred to the possibility that an attempt might be made to start a new distillation plant. He suggested that it would be difficult for any new company to obtain adequate supplies of crude products in regular quantities and at remunerative prices. The P. and O. meeting is discussed on page 1097.

CAPITAL ISSUES.

BORROWERS of the highest grade are still conspicuous by their absence. Of the week's three public issues, *Grosvenor Gardens Estates, Limited*, offered debenture stock to yield over 6 per cent. The proceeds will be used to fund obligations incurred in connection with the erection of office property on a West End site. The service of the stock will be covered 1½ times if the property is fully let, and in addition, is fully guaranteed by one of the oldest concerns in the building trade. The stock, as its yield suggests, is not free from speculative elements. Underwriting and overriding commissions amount to 5 per cent. *McMichael Radio, Limited*, is a wireless business which expanded rapidly up to 1930, but subsequently appears to have been held up by limited working capital. Whether the prospectus estimate of dividends of 16 per cent. on the £1 preferred ordinary and 26 per cent. on the 5s. ordinary shares will be realised depends on the management's ability to run a large business as successfully as a small one. The *Greyhound Racing Association Trust, Limited*, has shared fully in the prosperity of its "industry" in the last four years. Provided the popularity of this form of activity continues, and competition, financed by subscribers to other greyhound issues, is not overdone, the preference shares should be satisfactorily covered.

PUBLIC OFFERS.

McMichael Radio.—Issue at par of 150,000 participating preferred ordinary shares of £1 each and 150,000 ordinary shares of 5s. each. Gubbins and Company will receive applications. The company has been formed to acquire and develop the business of L. McMichael (Holdings), wireless

apparatus manufacturers. Profits before directors' fees, interest, depreciation and tax were: 1928, £12,799; 1929, £14,690; 1930, £28,670; 1931, £22,915; 1932, £25,539. After extensions the directors estimate there will be a net profit of £82,000 per annum.

Grosvenor Gardens Estate.—Issue of £200,000 6 per cent. guaranteed mortgage debenture stock at 99½ per cent. A mortgage of £165,000 will be redeemed out of the proceeds of the issue and a debt to Humphreys, Ltd., paid off. The stock will be redeemable on or before February 1, 1970, the company reserving the right to redeem in whole or part at any time after February 1, 1940, at 102½ per cent. on six months' notice. The company was incorporated as a private company in April, 1927. A new building known as "Terminal House" has been acquired; the estimated net revenue from the property is £27,375, which, after allowing £1,250 for the administration expenses of the company, will have upwards of £26,000 to cover debenture interest and sinking fund instalments. The payments are unconditionally guaranteed by Humphreys, Ltd., of Knightsbridge, whose profits in 1929 were £23,966; in 1930, £33,052; and in 1931, £38,234.

Greyhound Racing Association Trust.—Issue of 200,000 7 per cent. cumulative first preference shares of £1 each at par. The company was incorporated on December 1, 1927, and owns over 98 per cent. of the issued share capital of Greyhound Racing Association. Profits were: 1929, £91,094; 1930, £125,736; 1931, £145,817; 1932 (9 months), £156,028.

Newhaven Gas and Coke Company.—Offer for sale by tender of 5,000 £1 additional ordinary shares, ranking for standard dividend of 8 per cent., at minimum price of £1 9s. per share, yielding at that price £5 17s. 3d. per cent. Profits for the year to June 30, 1932, were £2,640, of which interest on loan capital required £487. The balance is more than sufficient to pay 8½ per cent. on the existing share capital, including the present issue.

FORTHCOMING ISSUES.

Aerated Bread Company, Ltd.—In order to expand and develop the business, and also owing to the fact that the company has no unissued capital, the directors are to ask shareholders to assent to the creation of 500,000 additional shares. Subject to the consent of the preference shareholders, the directors propose to create and issue not more than 250,000 additional 6½ per cent. cumulative preference shares. The new shares will rank equally with the 500,000 6½ per cent. cumulative preference shares already in issue.

Crompton Parkinson.—An extraordinary general meeting is to be held on December 22nd to consider resolutions that: (1) the capital be increased to £1,000,000 by the creation of a further 173,231 6 per cent. cumulative second preference £1 shares ranking *pari passu* with the existing preference shares; and (2) the Articles of Association be amended. The new preference shares are to be offered to existing second preference shareholders, as near as possible *pro rata* to their present holdings, at 22s. per share, with rights of renunciation. In addition, all other shareholders will be given an opportunity of tendering for any new shares not applied for by the second preference shareholders.

RESULTS OF ISSUES.

Bowater's Mersey Paper Mills, Ltd.—The London and Yorkshire Trust announces that the subscription list for the issue of 500,000 5½ per cent. cumulative preference shares of £1 each of Bowater's Mersey Paper Mills, Ltd., was closed at 9.30 a.m. on December 2nd, the issue having been over-subscribed.

London County Freehold and Leasehold Properties, Ltd.—The recent issue of 500,000 5½ per cent. cumulative preference shares of £1 each at £1 1s. 6d. per share to shareholders was over-subscribed.

McMichael Radio.—The lists in connection with the issue at par of 150,000 8 per cent. cumulative participating preferred ordinary shares of £1 each and 150,000 ordinary shares of 5s. each by McMichael Radio were closed at one o'clock on Tuesday. Country applications received by first post Wednesday morning received consideration.

REPAYMENTS AND CONVERSIONS.

Anglo-Portuguese Telephone Company.—It has been decided to redeem the 7 per cent. first mort. deb. stock at 102 per cent. £400,000 5½ per cent. first deb. stock has been created and holders of the 7 per cent. stock are invited to exchange their holdings on terms.

Bobby and Company, Ltd.—This company is redeeming its 10-year 6 per cent. reg. notes at 102 per cent., and is offering of price 99½.

Victoria Wine.—The directors are to redeem outstanding 6½ per cent. deb. stock, 1924, on May 31, 1933, at 103 per cent. and accrued interest.

SOUTH AMERICAN.

We have come to a very satisfactory arrangement with the Mersey Docks and Harbour Board, who have given us improved facilities for handling our raw sugar there, which will tend to economy in working costs. I wish on behalf of the directors to tender our thanks to the chairman and other members of that body for the sympathetic manner in which they have met our requirements.

THE IRISH FREE STATE.

I should like to refer in a few words to the unfortunate dispute which has arisen between this country and the Irish Free State. For as long as I can remember we always had a very considerable trade in Southern Ireland. Unfortunately this now has entirely ceased. We are still keeping our sales organisation going in that country, but of course this cannot continue indefinitely.

I have purposely avoided saying anything about the three resolutions which you are going to be asked to pass, and about which shareholders have received special notice, as I think it best that they should be dealt with separately. With your permission we will now conclude the ordinary business of the meeting.

THE DIVIDEND.

I beg to move: "That the directors' report and statement of accounts be adopted; and that the following dividends upon the company's issued capital be declared payable, namely:—(a) To the holders of preference shares, into rim dividend to March 31, 1932, at 6½ per cent. per annum, subject to tax, paid June 15, 1932; final dividend to September 30, 1932, at 6½ per cent. per annum, subject to tax; (b) to the ordinary shareholders, interim dividend of 4 per cent., subject to income tax, paid June 15, 1932; final dividend of 12 per cent., subject to income-tax, making a total of 16 per cent. for the year." (Applause.)

Sir Leonard Lyle, Bart. (the chairman), seconded the resolution, which was carried unanimously.

The retiring directors were re-elected; the auditors were re-appointed; and resolutions submitted dealing with the remuneration of the managing directors were duly approved.

A vote of thanks to the president and directors, proposed by Sir Bernard Greenwell, Bart., and seconded by Sir Douglas Newton, K.B.E., M.P., concluded the proceedings.

MALAYA GENERAL COMPANY, LIMITED.

DIVIDEND OF 2½ PER CENT.

The twenty-fourth ordinary general meeting of the Malaya General Company, Limited, was held, on the 6th instant, at 7 Great Winchester Street, London, Mr George M. Weekley (chairman of the company), presiding.

The Chairman said: When I addressed you twelve months ago your directors anticipated a very difficult year ahead, and we were quite correct, for the price of rubber at one time dropped to the incredible figure of 1½d. per pound. Our selling average, however, was 3.28d., and this just covered our estate and London expenditure, the additional items of directors' fees and depreciation being more than met by the income from our investments. As regards depreciation, we have only allowed £1,653 for the reasons stated last year, and a similar amount during each of the next seven years would write the cost of our buildings, plant and machinery down to zero. The immediate result is that revenue account shows a credit balance of £792.

We propose to pay you the modest, but no doubt acceptable, dividend of 2½ per cent., which will absorb £4,872, and to carry forward the balance of £14,378.

A year ago you were informed that our estimates were based on a crop of 2,200,000 lbs., but the further fall in prices caused us to rearrange our programme and further to reduce our output; and so long as the price of sheet is unremunerative we will keep our crop down to practically the "Revertex" requirements only.

One effect of the continued depression has been to curtail rubber outputs throughout the East and bring supplies more into line with demand. Although the world is still producing more rubber than it consumes, the margin of excess is not so wide, and with any general revival in trade the rubber industry must be one of the first to benefit. Stocks in the United Kingdom are gradually coming down to a more manageable figure, but those in America are still abnormally high.

Your board feel that, in spite of the extremely uncertain immediate outlook, prospects are better than they have been for two or three years, and your company should be one of the first to benefit from any general improvement in conditions.

Your property has been kept in excellent order, and the visiting agent, reporting at the end of September, stated that, in spite of some disappointment with the budded stump planting in the younger areas, he found the estate in good condition and all works going on satisfactorily.

The report and accounts were unanimously adopted.

WILUNA GOLD CORPORATION, LIMITED.

LARGELY INCREASED ORE RESERVES.

Presiding at the annual general meeting of the Wiluna Gold Corporation, Limited, held on the 6th instant, Mr F. H. Hamilton (chairman) said that the directors' report brought the position up to five weeks ago with regard to production, working costs and working profits. The working surplus for the ten months of this year aggregated over £277,000 (Australian), or approximately £222,000 sterling, a total which was the more satisfactory when it was remembered that the ore treated averaged only about 27,600 tons per month, as against the 40,000 tons which they expected to be treating after June next. At the end of this year the reserves of positive ore should stand at about 1,500,000 tons, equal to over three years' supply at the rate of 40,000 tons per month. That left a comfortable margin, but all of them who had read the reports of Messrs Vail and Prior would realise that it was impossible at that stage to define the limits of the Wiluna lodes or to say what the ultimate production capacity would be. Recovery had improved by 4.85 per cent., treatment costs had been lowered by 1s. 1d. per ton, and positive ore reserves showed an increase of over 60 per cent. made during the first eight months of this year, or at the rate of about 60,000 tons per month. Those, however, were by no means the most significant aspects of the record.

INTERESTING DEVELOPMENTS.

The discovery of that splendid ore body No. 2 West was notable in itself, but it was the more interesting because there was no indication of its existence at the surface, and because payable values appeared only to come in as the sulphide zone was reached—that was at a depth of about 300 ft. No. 2 West lies west of the West lode. In the opposite direction there was a fourth ore body, some 150 ft. east of the East lode, which they had provisionally named the Far East lode, and which would be explored during the coming year. At present they knew very little about it. He could only say as a layman that it was that aspect of magnitude which had most impressed them during the last twelve months. They were evidently dealing with a great mineralised zone, or channel, of undefined width, but which they knew extended between the No. 2 West and the Far East lodes, a distance of 850 ft., and of unascertained length, but which they had in effect demonstrated over one mile and traced over two.

THE FUTURE.

It might help to clarify the situation in the minds of shareholders if they considered what the position would be after July, if no unforeseen difficulties arose, if the anticipations of the management were fulfilled, and if the gold and exchange premiums did not show any marked variations from the average of the last ten months. On the basis of the results of the period under review, these improvements would show an average yield of just over 46s., and a working surplus of over 28s. per ton (Australian). On a monthly output of 40,000 tons that would give a total working profit of £872,000 (Australian), equivalent at the present rate of exchange to about £538,000 sterling per annum, subject to depreciation, administration and taxation.

TWO IMPORTANT OBSERVATIONS.

For practical and present purposes the chances of this country returning to gold at the old parity of the £ could, he believed, be ignored, while in any case the suspended Bounty Act guaranteed in effect an important premium to Australian mines until the end of 1940. The Wiluna mine to-day was earning profits independently of all premiums. Mr Vail and Mr Prior envisaged an extension as probable within the not distant future, and, as a fact, provisional estimates had already been prepared for an increase from 40,000 tons to 50,000 tons per month. They would agree that the position in which they found themselves to-day, and still more the prospect that was indicated, could not fail to afford keen satisfaction.

Mr J. A. Agnew, in seconding the resolution, described in some detail the significance of recent developments and exploration. At the Essex property they had recently proved beyond any possible doubt the continuance of the East lode. One of the exposures had disclosed the lode to be 52 feet in width, of which 10 feet went 40s. per ton. The Essex was situated 3,500 feet north of the main shaft. The extension of No. 2 West Lode had been established in a borehole 2,622 feet north of the shaft, and had been traced for a further 2,000 feet northwards. He had no doubt that the 40,000 tons programme would further be materially increased after next year.

The report and accounts were unanimously adopted.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

BOARD'S CONSERVATIVE POLICY.

STATE-AIDED FOREIGN COMPETITION.

THE HON. A. SHAW'S REVIEW.

The ninety-second annual meeting of the Peninsular and Oriental Steam Navigation Company took place, on the 7th instant, at the Company's Offices, 122 Leadenhall Street, London, the Hon. Alexander Shaw, chairman of the company, presiding.

The report and accounts having been taken as read, the chairman said that the board, after having made, with the assistance of their auditors, Lord Plender and Mr Kilpatrick, a most careful survey of the year's results, had unanimously agreed that it would be in the best interests of the company and the proprietors not to recommend any dividend on the deferred stock.

The late chairman at one annual meeting after another had frankly intimated that only the conservative finance of past years had enabled the board to recommend any dividend on the deferred stock. In bad times there came a juncture when the choice had to be made between the easy path of distributions to stockholders, and the thorny and uphill path of further drastic economy in operation and restraint in dividend policy. The board had deliberately chosen the latter road, and in that he was confident that the proprietors would support the board.

A CONSOLIDATED BALANCE SHEET.

The board had this year presented the accounts in more detail than ever before. In addition, a consolidated balance sheet had been furnished which gave a general view of the affairs of the P. and O. Company and its allied undertakings.

THE AUDIT.

In their consideration of the whole position it had appeared to the board that, in view of the wide range of the company's business to-day, it would be in accordance with sound modern practice if the company's accounts were audited by a firm of skilled professional accountants.

The board had invited Lord Plender, the distinguished head of the firm of Deloitte, Plender, Griffiths and Company, to act, in his individual capacity, as auditor and he had agreed to do so in conjunction with Mr Kilpatrick, a partner in his firm. These gentlemen had in the last few months given a great deal of time and labour to their task and had made themselves thoroughly acquainted with the company's affairs.

THE ACCOUNTS.

The accounts, audited by Lord Plender and Mr Kilpatrick, were clear and told their own story. The company's income from holdings in allied concerns had been considerably less for the past twelve months than in previous years.

As regards bills payable, at £1,499,000, compared with £1,309,000 last year, he would explain that two new vessels had been delivered and had had largely to be financed in the year under review. This had involved a considerable cash payment, and the balance had been met by bills.

The reserve for redemption of debenture stock, composed of gilt-edged investments, had been increased by transferring to it £110,000 which had arisen mainly from profit, amounting to £98,009 on sales of investments.

The board, he added, had by no means lost sight of the question of the conversion of the 5 per cent. and 5½ per cent. debentures to a stock bearing a lower rate of interest.

Investments in shipping subsidiary companies, at £10,588,665, compared with a figure in the last balance sheet of £13,654,070, which latter included interests not purely shipping. The book value of their investments in shipping subsidiaries was very conservative, and the income from the whole group did not reflect their inherent value.

DEPRECIATION.

As pointed out in the report, the company's ships stood in the books at a figure somewhat below that which would have been arrived at on the basis of a depreciation of 5 per cent. per annum on the initial cost.

In past years the substantial amounts charged to profits in respect of depreciation had been supplemented by considerable

sums transferred from other sources. By way of example he would refer to the year 1930, when the late Chairman stated that in addition to the charge to profit and loss account, the board had applied two million pounds from the insurance fund to depreciation. If in past years the board had divided profits up to the hilt they would not have been able to provide for the necessary renewals to the P. and O. fleet, and their position to-day would have been very different. Unless earnings were much increased next year it would be necessary to draw upon their reserves to provide for depreciation.

SHIPPING'S CONTINUED DEPRESSION.

Shipping was pre-eminently a world trade. The P. and O. Company depended for its revenue upon the prosperity not only of Great Britain, but of India, of Australia, of Ceylon, of the Straits and of China; and each of these countries in turn depended upon the ability of many other countries to trade with it to their mutual advantage. The prosperity of the P. and O. Company was therefore intimately bound up with the solution of those problems, some of which were to be grappled with at the World Economic Conference—among them, the problem of those largely unpayable War Debts, which were blocking the channels of healthy international exchange.

OPERATING ECONOMIES.

They had made very effort to bring down expenditure still further without sacrificing the efficiency of the fleet or the attractiveness of P. and O. vessels to passengers and shippers. It would indeed be a short-sighted policy to curtail the comforts and amenities which a P. and O. passenger enjoys. They had not done so; on the contrary, they had increased them.

There had been an intensification of the board's economy campaign throughout the whole range of the company's expenditure. In spite of a somewhat larger tonnage employed in the year under review, the operating expenditure, including fuel, wages, water, marine stores and repairs, had fallen by no less than £255,000.

Port dues had increased by over £51,000, and the increase of Suez Canal dues amounted to over £133,000 as compared with last year.

RATIONALISATION.

There was another aspect of economy to which he would venture to refer—a form of internal rationalisation which they had effected this year, and which for certain technical reasons could not until this year be brought into operation.

It had always seemed rather wasteful to have two P. and O. ships running alongside each other from Ceylon to this country and vice versa; for these ships—one the Australian, and the other the China mail steamer—tended to rob each other for that part of the voyage during a considerable portion of the year. Further, there was a gap of a whole fortnight in their passenger sailings between this country and Ceylon. They desired to give a better service to the company's clientele, and to provide a regular link, without disembarkation, between Bombay on the one hand and Ceylon, Australia, the Straits and China on the other.

Under the old conditions it was necessary for their direct Bombay mail steamers to remain for 15 days at Bombay on arrival there, and for 14 days in London at the end of their voyage. So long a stay as this at each end was unnecessary for ships' purposes on the Bombay Line.

Under the new scheme, the Australian and China mail ships sailed via Bombay, in alternate weeks, and these ships were now capable of taking the Bombay call. The company were therefore able, while giving Bombay a considerably better service, to effect a more economical use of the ships on the Bombay Line which, in the slack season, had always been run at a loss. The through Australian and China ships had thus a much needed addition to their earnings during the slack period, and the company was saved the dead loss of running purely Bombay vessels at that time. The estimated economy purely from this rationalisation of services was £300,000 in a full year; moreover, the quicker turn round at Bombay allowed exactly

the same services to be run with four ships instead of five. They thus saved a ship. Under the old system the company this year, or at latest in 1933, would have been faced by the urgent need to lay down a new Bombay steamer by way of replacement at a cost probably not far short of one million pounds sterling. That outlay would not now be incurred.

HOLIDAY CRUISES.

As a result of the new system they had this year been able to release in the summer season three most attractive vessels for cruising over and above those they would otherwise have been able to spare, and these three vessels instead of incurring a loss, as under the old system, had been cruising at a modest profit to the company.

STATE-AIDED SHIPPING.

Referring to the State-aided shipping, the chairman said that in every single trade in which the P. and O. Company was engaged, it was faced with the competition of foreign vessels built with the aid of foreign exchequers and run with the assistance of very large subsidies.

He would choose one example alone—and did so in no spirit of hostility either to the foreign line concerned, or to the great nation whose flag it flew.

Not very long ago an Italian newspaper had boasted, not quite accurately, that an Italian line had achieved a predominance in the Bombay trade. That trade consisted above all in the carriage of British subjects coming home to Britain on leave, or returning to India after it. The Italian Press, he continued, prints lists of such people who travel foreign and naturally gloats over a highly-placed civil servant or soldier who travels in an Italian subsidised ship. Meantime the P. and O. stockholders, in their capacity as taxpayers, had the privilege of paying the fares of those very gentlemen who patronised foreign lines, which, by virtue of the lavish subsidies showered upon them, were engaged in the endeavour to oust British ships from the trade of a British port.

TRAVEL BRITISH.

He did not wish to be misunderstood. They all had nothing but admiration for the endurance, the patience, the skill and the labour which the soldiers and civil servants of Britain give so gallantly and ungrudgingly to the service of the great Dominion of India. But not all of them could have reflected that the mercantile marine is the indispensable link of Empire in peace and in war; and that without it the Empire could not have been created, and could not continue to exist.

It was, he concluded, not theirs to control great economic forces; nor could any power avail to keep from the company's roof the depression which darkened every shipping undertaking. But they could place the facts and figures before the proprietors frankly, as they had tried to do; and could go forward proud to be the company's servants in fighting the most formidable economic depression with which they had ever been faced. They, the board, would do their best. With the stockholders' aid and confidence, he believed they would prevail.

The Chairman moved the adoption of the report and accounts. Sir J. Fortescue Flannery, Bt., said that on behalf of himself and his fellow stockholders he would like to support what the chairman had said regarding the late Lord Inchcape. His death was not only a loss to this company, and not only a loss to the shipping industry; it was a loss to the whole Empire. As chairman of this company he was a great man; as a director of the Suez Canal Company he was an international influence, and, as a patriot and a man who loved his country his loss was one which all who knew him would feel. He approved the action of the directors, and he believed that their policy of maintaining the fleet in perfect condition would have happy results, and that some day the stockholders would again be able to congratulate them upon the success of their operations.

The resolution was carried unanimously. Mr E. T. Hargraves said that he would like to propose a hearty vote of thanks to the chairman for his services in the chair. It was certainly a hard task, especially when there was no dividend to be proposed. It was interesting to know that after 90 years without having had anything in the way of a subsidy they were still standing straight up. He sympathised with the directors in having to run ships against others which were receiving subsidies.

Colonel Hanbury, in seconding the motion, said that he had known the chairman for some years and had the greatest confidence in his capacity and integrity. They could rest assured that the company was in good hands.

The vote was unanimously accorded and a brief acknowledgment by the chairman brought the proceedings to a close.

BRITISH TAR PRODUCTS, LIMITED.

INCREASED SALES AND PROFITS.

DIVIDEND OF 10 PER CENT. AND BONUS OF 5 PER CENT.

The annual general meeting of the members of British Tar Products, Limited, was held on Thursday, the 1st instant, at the Royal Victoria Hall, Sheffield.

Mr A. Woolley Hart (the chairman) said:—
Ladies and Gentlemen: May I take it that the report of the directors and the balance sheet, which have been in your hands for some time, can be taken as read?

When I had the pleasure of meeting you last year, we had entered into a very serious and depressing time, and as I then pointed out, marketing conditions had been exceedingly difficult in the preceding year, and were continuing so in the then current year. I mentioned also that the falling off in the demand for coke had affected our supplies of raw material, which, coupled with the decrease in selling prices, had lowered our sales values by approximately £50,000. I also had to call your attention to the fact that our investments, then £77,091, which we showed in the balance sheet, at cost or under, had depreciated at the moment I was speaking by some £14,000, and your board had suggested—which I am glad to say you confirmed—that we should transfer £7,000 to the general reserve account as a set-off against that deficiency, at the same time expressing the view that I hoped by the time we met again they would have recovered sufficiently for the above sum set aside to be an adequate cover. It is very pleasant for me to be able to say that that pious hope has happily been fulfilled, but let me add frankly that although our best judgment was used, it was perhaps more by luck than anything else that our securities have made the wonderful recovery they have.

You will note that we have been able to increase our investments from £77,091, at which they stood in the balance sheet last year (at cost), to £108,073, and that at the date of the balance sheet the market value was £101,987. In the intermediate period the values have considerably increased, the depreciation at one time showing less than 5 per cent.

We have since purchased £5,000 Southern Railway Company 5 per cent. debentures at par, making a total of approximately £112,000, at cost or under, and spread over 33 separate investments.

LARGE INCREASE IN SALES.

As regards the general business of the company, you will see that although conditions have continued exceedingly difficult, we have more than caught up last year's £50,000 decrease in sales, this year (£40,498) have been increased by £8,651.

On the whole I think we as shareholders ought to feel very satisfied with such a result. Judging from what we have gone through in the meantime it might have been very much worse. I do not like to raise your hopes too much as regards the now current year. There is no doubt that at present the commodities business in which you cannot rely upon having to work on day-to-day sales. Forward sales of large quantities have to be entered into for months ahead and therefore the sales require great consideration and very careful handling. I give it to you, however, and the world's financial troubles are again going to upset this, that our present year should be no worse in its results than the last, and I naturally hope it will be better.

GOOD DIVIDEND RECORD.

I may remind you that last year I called attention to the fact that for the past eight years we have paid a regular dividend of 10 per cent. per annum, with the sole exception of the great coal strike year, when we were only able to pay 5 per cent., and that we had also paid bonuses of from 2½ per cent. to 5 per cent. in addition thereto, and we can now happily add a further year to that record of a 10 per cent. dividend with a bonus of 5 per cent., being the maximum we have paid, and I hope that in the future we shall not fall back from these figures.

It has come to my knowledge that there is a possibility that certain people, trading upon this company's success, may try to raise capital to start a new distillation plant in competition with the very considerable number that already exists.

I would give only one word of warning to any intending investors, that the question of obtaining sufficient supplies of crude products which necessarily would form the basis of any such undertaking will be exceedingly difficult on any terms whatever, and even if obtainable would probably be in irregular quantities and at a cost that would leave little chance of any profitable return.

The strength of the position of most of the undertakings engaged in this industry is that they have accrued their raw materials for a fixed term of years.

PURCHASE OF NEW PROCESS.

Now I would like to let you know that we have taken up a process which we are trying out, and should it prove successful we have acquired the right to use it on very favourable terms so far as our Cadishead Works are concerned, and have also secured the right to a substantial interest in what I think we may shortly state as the world rights except United States and Canada. Should this realise its fullest possibilities it should prove a very valuable adjunct to the company's assets and source of income.

BALANCE-SHEET ITEMS.

With regard to the balance sheet, I have already referred to two of the most important items, namely, the amount of profit for the year—£49,150—and to our investments outside the business. Our general reserve account has been raised from £9,500 last year to £16,500 this year, and the company's position in regard to its debtors—£70,101, against creditors £19,061—may be considered very satisfactory. The cash in hand and at bankers is also increased from £5,042 to £16,383. The usual adequate depreciation has been provided and the plant and machinery maintained in first-class order and condition.

I will now, Ladies and Gentlemen, formally propose that the audited balance sheet and accounts and the directors' report for the year ended September 30, 1932, as presented, be and they are hereby approved and adopted, and that the dividend and bonus as recommended by the directors be paid forthwith to the members whose names appear on the register on this date, and that the balance—£3,216 19s. 5d.—be carried forward.

This was seconded by Mr J. H. W. Laverick and carried unanimously.

The retiring director, Mr T. Greensmith, was re-elected to the board.

Messrs Bryden, Johnson & Company, chartered accountants, were re-appointed auditors.

A vote of thanks to the chairman, managing director and staff was proposed, seconded and carried unanimously. The Chairman replied suitably, and the proceedings terminated.

STRAND HOTEL, LIMITED.

VITALITY OF THE BUSINESS.

The twenty-fifth ordinary general meeting of the Strand Hotel, Limited, was held on the 7th instant, at the Trocadero Restaurant, London.

Major M. Gluckstein (the chairman) said that, having regard to the slow recovery in British industry, and the increasing competition among all concerns to obtain the maximum share of business available, he regarded it as an achievement of no little merit to be able to report a credit balance of £130,500. If the figures this year showed no increase, they still demonstrated that the company's establishments occupied a unique position in the hotel industry. The erection of the new Cumberland Hotel at Marble Arch was proceeding, and before the end of the year the major portion of the building should be roofed in. The London Electric Railway having opened their new station, with an entrance on the Oxford Street frontage of the hotel, the company had taken possession of the old station on the eastern corner of the site, and a special effort was being made to advance the work on this latter portion, so that it might attain to the progress of the main block. The intention was to open the hotel towards the end of next year. The result of the year's trading, particularly in view of the unsettled times, indicated the vitality of the business, and the great public reputation of the company's hotels.

Mr Maurice Salmon said that luxury hotels had suffered rather severely under present conditions, but people must move about, and if they could not afford the expensive hotels, they were forced to the less expensive, in which event the company reaped some benefit.

The report and accounts were unanimously adopted, and a cordial vote of thanks to the chairman and directors terminated the proceedings.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

STEAUA ROMANA (BRITISH), LIMITED.

PROGRESS TOWARDS WORLD AGREEMENT.

The annual general meeting of the Steaua Romana (British), Limited, was held, on the 7th instant, at Winchester House, Old Broad Street, London, Sir Albert G. Stern, K.B.E., C.M.G., presiding.

The Chairman, in the course of his speech, said that since he addressed the shareholders in February last, progress had been made towards the re-establishment of the petroleum industry of the world on a sounder basis. As a result of discussions in Paris, a tentative agreement for a more economical distribution of exports from producing countries in accordance with the necessities of consuming countries had been ratified. It now remained for the various Roumanian companies to settle between themselves the various proportions which they would contribute towards the agreed total of the country's exports with a view to putting into effect the major scheme. Continuous discussions had been taking place in Paris between the representatives of the Roumanian group and the international group, and the latest information gave them great hopes that a very equitable agreement would be signed.

During the period under review the combination of a slightly firmer tendency in prices, further economies and improved technique, had brought about a great improvement in the financial situation of the Steaua Romana. In October he went to Roumania and made an inspection of the Steaua Romana properties, including fields and refinery, accompanied by Mr Anderson, the managing director, and he must stress the very great impression made upon them both by the noticeable progress in recent years. The distributing organisations of the Steaua Romana in Central European and Balkan countries had continued to suffer from the restriction of exchange facilities.

The production of the Steaua Romana Company for the year had been 1,005,358 metric tons, as compared with 886,421 metric tons in the previous year. The total profit of their own company, before making provision for taxation, was £110,014. The directors proposed to pay a final dividend on the ordinary shares at the rate of 2 per cent., less tax, making 4 per cent. for the year.

The report was unanimously adopted.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED.

EXCEPTIONALLY DIFFICULT YEAR.

The annual general meeting of this company was held, on the 7th instant, at Southern House, London, Lt.-Col. John P. Grenfell (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts showed a profit of £1,255, as compared with £29,144 in 1931, but this result was after charging South African exchange amounting to £66,885, and crediting £17,097, the export subsidy received in South Africa from the Government. They brought forward £53,610, and had now an available balance of £54,866, and after making the provision set out in the directors' report they were carrying forward £53,256. He regretted that the directors were unable to recommend the payment of a dividend. But for the loss in exchange, the accounts, even with the present low prices for copper, would have shown a profit sufficient to pay a dividend.

LOWER PRODUCTION COSTS.

Referring to the year's operations, he said that the ore production had gone up from 313,220 tons to 368,258 tons, with an increase in copper content of 680 tons, and the total operating costs had decreased from £334,700 to £253,780, representing a reduction of over £6 per ton on their cost of production. Most of the mining and development of the year had been on the "K" lode. This lode was of lower grade than the average of ore reserves, but owing to its great width, it was very cheap to mine. They had opened up good ore in this lode on all its levels, and at the close of the year had struck a body of ore on the 13th level which was some 342 ft. long and 7 ft. wide, and averaged 3.28 per cent. copper, which was a decided improvement on the "K" lode average.

The milling and smelting departments had operated successfully and economically, and the over-all recovery had again shown improvement. The price of electrolytic copper, which last year averaged £48, had this year only averaged £37, and as two years ago it averaged £78 shareholders would appreciate that it had been difficult to keep pace with the decline.

The report and accounts were adopted.

ANSSELLS BREWERY, LIMITED.

Thirty-second ordinary general meeting, held at the Queen's Hotel, Birmingham, on Tuesday, December 6, 1932.

	£	s.	d.
Profits	121,151	4	8
(12 months ended September 30, 1932) after deducting all charges and expenses for management (including directors' fees) and making provision for debenture interest, taxation, depreciation, bad and doubtful debts, and other contingencies.			
Brought forward	261,800	9	1
	382,951	13	9
Dividends on preference and ordinary shares (paid and to be paid)	97,500	0	0
To reserve account	20,000	0	0
	117,500	0	0
To be carried forward	£265,451	13	9

POINTS FROM THE CHAIRMAN'S SPEECH.

Our licensed properties have increased from £2,099,042 to £2,144,598. Our reserves by £20,000 and our carry-forward by £3,651.

In comparing our accounts with those of other breweries, ours cover a full year's working under the extra taxation imposed by the Supplemental Budget in September last year.

We complain of the penalising taxation to which we have been, and are now, subjected when the result has been merely to retard our, and the allied trades, without a corresponding advantage to anyone.

Any increase the Chancellor may receive from the extra tax will easily be wiped out by the resulting decrease in death duties, income tax, sur-tax, etc., from people interested in the trade.

Professor Saintsbury, who is now eighty-seven, and the greatest living authority on English literature, in a recent book, has stated that the three staples of life, bread—cheese and beer—were supplied without stint from the buttery at Oxford when he was an undergraduate.

I am very grateful for this authoritative description of beer; it is not only grossly unfair but economically foolish so to tax this staple of life as to put it increasingly out of the reach of many who require and enjoy it.

I may point out that in the years given below the consumption and taxation were, generally speaking, as follows:—

Year.	Tax per barrel.	Barrelage.
		England and Wales.
1913.	7s. 9d.	28,853,000
1923.	£5	17,353,910

The production for 1931 and 1932 shows a decrease despite the fact that in these two years the figures for Northern Ireland are included.

Copies of the Chairman's speech may be obtained from the Secretary, Park Road, Aston, Birmingham.

ROAN ANTELOPE COPPER MINES, LIMITED.**ABNORMALLY LOW COSTS.**

The fifth annual general meeting of Roan Antelope Copper Mines, Limited, was held on the 6th instant, at River Plate House, London, Mr A. Chester Beatty presiding.

The Chairman said that in the ten months covered by the accounts a profit of £156,740 had been earned, from which had to be deducted debenture interest amounting to £87,500. The ore, on account of its texture, had proved particularly suitable for easy drilling and blasting. That, combined with the adoption of a mining method admirably suited to the nature of the ore body, had resulted in a very large output per shift of labour and an abnormally low cost per ton for that type of mining. An adequate amount of development work was being carried on in the preparation of new areas. The mining cost, originally estimated at 7s. per ton, had averaged for the past six months 3s. 6d. per ton, and the mine was in a position, at very short notice, to increase its output to the full capacity of the concentrating plant, which was designed for a capacity of 2,000,000 short tons of ore per annum. The true capacity, as established by experience, was not less than 3,500,000 short tons per annum. That gave an output capacity of copper in the form of concentrates from average grade ore of not less than 90,000 long tons of copper per annum.

In the concentrating plant the estimated cost was 3s. per ton, but the current cost had averaged 1s. 6d. per ton—probably the cheapest concentrating cost ever achieved in copper milling in a plant of that nature. In the smelting plant also the average cost in the current financial year of £2 10s. per long ton was substantially below expectations. When embarking on that enterprise the estimated cost of producing blister copper with the plant operating at full capacity was £35 per long ton. For the quarter ended June 30th last, on a very curtailed production, the cost was down to nearly £25 and for the quarter ended September 30th it was £23.

A long-term contract had been entered into with British Copper Refiners, Limited, to purchase a large tonnage of blister copper for regular delivery to a refinery which was being erected at Prescott, in Lancashire. The terms of the sales contract included an option to the Roan Company, in certain eventualities, to take a substantial interest in the refinery company. All that was now required was an improvement in trade conditions.

The report and accounts were unanimously adopted.

BOWATER'S PAPER MILLS, LIMITED.**IMPORTANT INTERESTS CONSOLIDATED.**

The annual general meeting of Bowater's Paper Mills Limited was held on the 5th instant, at Southern House, London.

Mr Eric V. Bowater, the chairman, who presided, said that as against a slight decrease of about 4½ per cent. in the previous year, they were on this occasion able to record earnings £36,607 higher, at £181,359. They had operated the mills during the year in excess of 90 per cent. of their capacity, and to that greater basis of operations was almost wholly due the substantial increase in profits. For 1933 they had been able to make a further reduction in the price of newsprint, but orders on hand were already sufficient to assure the mills running full time, which should result in the most efficient basis of operations and enable them to maintain the present level of profits.

They had purchased the entire ordinary share capital of W. V. Bowater and Sons, Limited, whose sales organisation covered the United Kingdom and the principal newsprint markets overseas, and included amongst its customers most of the important newspaper publishing companies in Great Britain and the Dominion markets overseas. At the same time, they acquired control of Bowater's Mersey Paper Mills Limited, whose output was already sold under contract until the end of 1935.

To provide funds for those acquisitions, in May last 500,000 6½ per cent. £1 preference shares were issued with 120,000 ordinary shares from a new creation of 200,000 ordinary shares of £1 each. Applications for the new preference shares were extremely gratifying, amounting approximately to £2,000,000. He might add that from trading results to date both companies were likely to enjoy a satisfactory year. Their relations with the newspaper interests were always of the most cordial, and since the holdings to which he referred had been acquired, their business with them had substantially increased. He would like to acknowledge the wide and constantly increasing support accorded their company also by the many other newspaper publishing companies in this country and in the Dominions, and he was in a position to inform them that a large part of the increased output which would be available upon

completion of the extensions to Bowater's Mersey Paper Mills Limited had now been disposed of for the year 1934.

The recent issue of 500,000 5½ per cent. cumulative preference shares by the Mersey company had been subscribed three and three-quarter times over, and the lists were closed within half an hour of their being opened. The total applications for the 80,000 ordinary shares of this company at 25s. per share had amounted to nearly 500,000 shares.

The report and accounts were unanimously adopted.

NEW ZEALAND LOAN AND MERCANTILE AGENCY COMPANY, LIMITED.

The thirty-eighth annual general meeting of this company was held on the 1st instant, at 1 Coleman Street, London.

Mr Alfred Shephard (the chairman) said that since he addressed the stockholders last year world conditions had not, he feared, improved greatly, although there were signs of improvement which might develop into the beginnings of a return to more normal conditions. They must all unite in their admiration of the way in which both Australia and New Zealand had met the situation and determined to put their finances in order. Faced with a very heavy reduction in the price of wool, wheat, and other exports upon which they relied to balance their trade and to meet the obligations to this country and to America, they had taken strong measures to redress their adverse balances, with the result that their securities had very greatly improved and confidence in their financial position had been largely re-established.

It was gratifying to note that 28·6 per cent. of the wool sold in Australia during the past season, and no less than 54·5 of that sold in New Zealand was taken by buyers from the United Kingdom. The total quantity of wool handled by the company for the 1931-32 season was 311,914 bales of the value of £3,218,497, as compared with 303,629 bales of the value of £3,325,353 in the preceding 12 months. Since the close of the company's financial year the wool market had steadily improved; indeed, there was a much stronger feeling of confidence and stability in the future. Generally speaking, prices had advanced by from 15 to 25 per cent., and an important aspect was the fact that at the last London sales a large quantity of wool was sold at advanced prices.

Dairying in Australia and New Zealand had made good progress during the season, and the quantities of produce handled by the company in home markets had again marked a substantial increase. Indeed, in practically all the commodities which the company handled they had not only been able to maintain their volume of business but had gained substantial ground during the year. On account of the lower prices prevailing, the value of this produce, and consequently the company's commission, had not increased in anything like proportion to the greater volume of business done, but the results showed a substantial improvement on those of the previous year. They were able, after transferring £50,000 from general reserve to profit and loss, to cover the whole of the debenture interest with the exception of some £446, by which amount the carry forward was decreased, reducing it to £18,551. In the circumstances it was obvious that the directors were unable to recommend any dividend on either the preference or ordinary stocks.

The report was unanimously adopted.

LEWIS BERGER AND SONS, LIMITED.**SUCCESS OF POMPEIAN PROXCELIN AND LIFEGUARD.**

Lord Greenwood, the chairman, at the fifty-third annual general meeting of Lewis Berger and Sons, Limited, held, on the 8th instant, in London, said that despite abnormal depression sales of Pompeian Enamel-paint and Lifeguard car polish showed considerable expansion, due to continued national newspaper advertising. The general demand for paint and varnish showed shrinkage due to national and municipal economies and reduced prosperity of the building trades and shipping and railway companies. Notwithstanding the decline in motor-car output, sales of Proxcelin cellulose enamel had again advanced as they had done consistently since its introduction seven years ago. The company's position continued to improve amongst various users of fine colours. The plant was most efficient, the extensive technical staff was constantly investigating and developing improved types of finishes, and the 172 years' old policy of maintaining highest quality would continue.

Export demand had declined alike to all other manufacturers, due to reduced purchasing power, exchange restrictions, tariff increases and finally duties on imports of some of their raw materials. Trade would continue to be unfairly handicapped until the Government adopted a system of drawbacks. Lewis Berger and Sons were pioneers in Imperial trade and long ago had established businesses in Australia, New Zealand and South Africa.

The Berger modern factory of 15 acres was the largest plant in Australia, and, whilst its profits were naturally lower this year, economies effected had put the business in line with the conditions, which, however, had greatly improved. Despite difficulties, the South African company had earned a profit. New Zealand was down on last year, but current year sales showed an advance. The French company had benefited by economies outlined in the last report. Each of several English subsidiaries had operated at a profit.

Since the commencement of the present financial year, August 1st, the trade dealt with at Homerton showed an increase over the corresponding period of the previous year.

The report and accounts were unanimously adopted, and a dividend of 5 per cent. was declared on the ordinary shares. Lord Greenwood was re-elected a director.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED.**INTERIM DIVIDEND PROSPECTS.****IMPORTANT MINING DEVELOPMENTS.**

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 8th instant, at River Plate House, London.

Mr J. A. Agnew presided in the absence, through indisposition, of Lord Brabourne (the chairman), and read the speech which his lordship had prepared. In the course of this he said that the dividends received from New Consolidated Gold Fields, the operating company, amounted to £133,638. No dividend had been declared on the ordinary shares of either company in respect of the period ending June 30th last, up to which date the world had shown but slight signs of recovery from the economic depression. Since then, however, there had been a marked revival of interest in mining shares, and many securities which stood at a very low figure at the end of the company's financial year had shown a very decided turn for the better in the last few months; in fact, the appreciation had been so considerable that, if conditions continued as at present until the end of the year, when the board had six months' figures before them, they would be quite prepared to consider the possibility of paying a small interim dividend in respect of the current year. This was a departure from their usual practice, but in these days of burdensome taxation they considered that the shareholders would welcome such an innovation. (Hear, hear.) At the same time, it must not be taken that the payment of an interim dividend would justify the assumption that an equal or larger final payment would ultimately be made. That must depend on what the first six months of the new year brought forth, and in these days prophecy was inadvisable.

THE VOGELSTRUISBULT COMPANY.

Referring to the company's South African interests, a matter of major importance which had taken place in the past year was the formation by the company, in co-operation with the Central Mining and Investment Corporation and the Rand Selection Corporation, of a new company styled the Vogelstruisbult Gold Mining Areas, Limited, to exploit an area representing a total extent of over 4,400 claims, comprising 1,830 claims, the mining rights of which had been obtained from the Union Government, the mynpacht and claims totalling 1,631 claims on Grootfontein and Vogelstruisbult the property of their own company, and 948 claims belonging to the Rand Mines, Limited. Agreements had been made with Daggafontein Mines, Limited, and Springs Mines to enable the new mining area to be attacked in an expeditious manner, avoiding the necessity of shaft sinking in the immediate future. Some considerable time must, of course, elapse before any return could be looked for from the new company, but the day would no doubt come when the importance of this new organisation would be fully recognised.

Another area represented 2,470 claims to the east of Daggafontein Mines, to acquire the lease of the undermining rights of which a company was being formed by the Rand Selection Corporation, and the Gold Fields Company had taken a 25 per cent. interest in the initial working capital of £250,000, the subscribers to which would, with the vendors, have a preferential right to subscribe proportionately for further issues of capital of £700,000. This also should prove a profitable enterprise in the not distant future.

NEW OPTIONS.

A new development for which the Gold Fields Company was responsible was the taking of an option till the end of 1934—

which had now been exercised—on the property of Western Areas, Limited; also options for three to five years over 30,000 morgen between the boundaries of Western Areas and the Mooi River, a distance of 27 miles. This was the result of a magneto-metric survey which had been taking place during the last two years under Dr. Krahmann and detailed geological work by Dr. Reinecke, which apparently showed a total area available for mining, assuming an ultimate possible mining depth of 7,500 feet, of between 12,000 and 15,000 morgen.

Further geophysical work would be done, and it was estimated that the combined areas might contain as much as, or more than, 300 million tons of ore, this figure being based on the discovery of only one payable reef and 50 per cent. payability. An intensive bore hole sinking programme would be started at once with a view to testing, at depths varying from roughly 3,000 to 5,000 feet, that section in which it was expected that the sub-outcrop of the main reef series occurred. The cost of this was estimated at from £70,000 to £90,000, a trifling expenditure in view of the magnitude of the possible prize to be won. The reason why nothing had hitherto been done in this enormous area was that nearly the whole was overlaid by a dolomitic blanket, varying from 1,500 feet upwards in thickness, which had to be penetrated to reach the main reef series identified by Drs. Krahmann and Reinecke.

They had formed a company in Johannesburg, with an initial capital of £500,000, to take from Gold Fields their options and to purchase the mineral rights on all ground held by Western Areas, Limited. What would be the result of this venture it was impossible to guess. If the hoped-for success materialised it would unquestionably be the biggest mining development which had taken place in South Africa for many years, and by far the most important addition ever made to the Gold Fields Company's Witwatersrand interests; but they must not "count the unhatched chicken." At the same time, they should not forget that some fifty years ago the whole Rand was turned down as offering no prospects of profitable development at depth.

THE GOLD STANDARD

He did not propose to criticise the action of the Union Government in adhering to the gold standard. The views of the gold-mining industry were known and had been up to the present disregarded, though the mines unquestionably were the mainstay of the Union Government. They might hope that some compensation would be given to the industry by the adoption of some of the recommendations of the Low-grade Ore Commission by relaxing as far as it might become necessary the restrictions on the recruitment of native labour, and ultimately by a reduction of taxation which would make possible the working of ores which were at present on the border of or below the pay limit.

It seemed clear that there was insufficient gold in the world to serve as a basis for currency and the payment of war debts and reparations, and that a secondary metallic currency was required to maintain stability, which no managed paper currency could do. The remonetising of silver was no panacea, but many good judges were convinced that it would go far in the direction of alleviating trade stagnation.

The report was adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended December 3, 1932, amounted to £9,477,900 against ordinary expenditure of £56,798,200. After allocating £150,547 to Sinking Fund, and allowing for a decrease in Exchequer Balances of £1,050,344, the operations for the week, as shown below, increased the National Debt by £46,815,000 to approximately £7,945 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

Messrs Samuel Montagu and Company write on December 7 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,094 on the 30th ult., and showed no change as compared with the previous Wednesday. Fair amounts of gold have been on offer in the open market; some purchases were made for the Continent, but most of the available supplies were again secured for a destination not disclosed.

Quotations during the week:—

Average.....	128s. 7.3d.	13s. 2.55d.

Exceptionally large shipments of gold, amounting to about £2,600,000 were made from India last week. The s.s. "President Harrison" has £1,826,000 and £18,000 consigned to New York and Marseilles respectively; the s.s. "Corfu" carried £355,000 consigned to London and £14,000 to New York; the s.s. "City of Simla" has £75,000 and the s.s. "Clan Murray" £300,000, both these shipments being for London.

SILVER.

Influenced by prevailing conditions, the market has continued quiet and unsettled. Re-selling by the Indian bazaars on a poorly supported market caused falls of respectively ½d. and ¼d. in the cash and two months' prices on the 1st inst., when quotations were fixed at 17½d. and 17¼d. Subsequent movements were very small, further sales from India being offset by China buying, which imparted a little steadiness. America has been more inclined to sell.

Definite indications as to tendency are still lacking as the present uncertainty tends to restrict business.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 28th ult. to mid-day on the 5th inst.:—

IMPORTS.		EXPORTS.	
Poland (including Danzig).....	£ 20,979	Poland.....	£ 22,800
Germany.....	22,130	Czechoslovakia.....	51,800
France.....	6,736	China.....	144,470
British West Africa.....	5,700	French Possessions in India.....	8,000
Japan.....	37,761	Germany.....	2,440
Australia.....	14,173	Other countries.....	5,577
Other countries.....	1,332		
	108,811		235,087

Quotations during the week:—

REPORTS AND NOTICES.

INSURANCE.

BRITISH OAK INSURANCE COMPANY, LTD.—The directors of the British Oak Insurance Company, Ltd., desire to state that there is no connection whatever between this company and the Hearts of Oak Assurance Company, Ltd. No statement to that effect has been made at any time in the *Economist*.

MISCELLANEOUS.

BRITISH TAR PRODUCTS, LTD.—The report for year ended September 30, 1932, shows that this company has increased its investments from £77,091 at which they stood in the balance sheet last year (at cost) to £108,073. At the date of the balance sheet their market value was £101,987. The company has purchased £5,000 Southern Railway 5 per cent. debentures at par, making total investments approximately £112,000 at cost or under, and spread over thirty-three separate investments. The dividend for the year is 10 per cent. and a bonus of 5 per cent. is also paid. With regard to the balance sheet, the amount of profit for the year was £49,150. The general reserve account has been raised from £9,500 last year to £16,500 this year. Debtors stand at £70,101, against creditors £19,061. The cash in hand and at bankers is increased from £5,042 to £16,383. The usual adequate depreciation has been provided and the plant and machinery maintained in first-class order and condition.

FOSTER CLARK LTD.—The net profit for the year ended September 29, 1932, including income from investments, amounted to £115,850, compared with £135,984 for preceding year. Sales of investments during the year realised the sum of £12,757 in excess of book value, and this amount, together with £10,000 transferred from the investment reserve account, has been used to write down the book cost of investments. The ordinary shareholders again receive a dividend for the year of 22½ per cent. less tax. The sum of £10,000 is put to taxation reserve account, making this account £39,048. General reserve account receives £5,648, making it £80,000. A special provision of £10,000 is made for advertising. The sum of £67,313 is carried forward to next account, as compared with £63,361 brought in. Total assets amount to £941,650, as against £953,696 in balance sheet dated September 24, 1931. Cash stands at £78,317 compared with £63,521. Investments total £533,024, against £595,472 on September 24, 1931. Stock stands at £113,379, against £93,035. Debtors amount to £41,610, against £25,214. Goodwill remains at £100. The issued capital remains unchanged at £450,000 in ordinary shares of 10s. each £350,000 and 7½ per cent. cumulative preference shares (free of income tax up to 6s. in £) £100,000. Creditors amount to £84,010, against £63,431. Provisions for pensions amount to £42,867, against £46,372. Employees' deposit balance sheet, dated September 29th, 1932, at £193,400. The meeting will be held at Hart Street, Maidstone, on December 12th, 1932, at 12 noon.

ORIENT STEAM NAVIGATION COMPANY, LTD.—The operating profit for year ended June 30, 1932 (after charging income tax and income from investments amounted to £140,374 less loss on sale of investments £27,748, making £112,626. For the year ended June 30, 1931, the operating profit was £205,490, and there was a profit on sale of investments £100,597, making in all a profit of £306,096. The net profit of £112,626 has been transferred to depreciation on fleet. (The depreciation required by the Articles of Association is £219,810). For the previous year this amount, £219,810, was put to depreciation. The dividends on the preference shares have been provided out of the balance brought forward from previous year. No dividend is paid on the ordinary shares, against 5 per cent. free of tax in preceding year. The carry forward is

reduced from £153,321 to £71,061. The general reserve has been increased to £2,000,000 by a transference of £400,000 in repair and renewal account, and £575,000 from reserves for income tax and contingencies. Cash is higher at £282,043, against £78,565. Investments in government and other securities stand at £1,612,587, against £1,759,167.

IND COOPE AND COMPANY.—Trading profit for the year to September 30th last was £314,526, against £393,346. Net profit was £209,511, compared with £260,666. A final dividend on the ordinary shares of 9 per cent., less tax, &c., absorbs £59,010, and a bonus of 4 per cent., £26,227, making 19 per cent. for the year, against 22½ per cent. The sum of £19,400 is transferred to reserve for public-house improvements and £308,898 is carried forward, against £273,177 brought in.

ZINC CORPORATION, LTD.—Advice has been received that terms have now been settled with the labour unions at Broken Hill for a three years' agreement. These provide for a minimum wage of £4 4s. per week, to increase with any declared rise in the New South Wales basic wage over £3 16s. 6d. (now £3 10s.), and for a sliding-scale bonus when the price of lead is £16 (sterling) and over. Prior to August 26th, the New South Wales living wage was £4 2s. 6d. and the minimum wage at Broken Hill £4 10s. per week.

Commercial Reports.

MARKET SUMMARY.

Following the recent decline, the tendency of prices of the principal primary products has been irregular during the past week. The course of prices in the United States showed greater steadiness of the chief non-ferrous metals, with the exception of copper. Rubber remained unchanged at the lower level, but raw cotton continued to decline. Among cereals, the quotations for wheat, maize, oats and rye all show increases as compared with last week. On the other hand, cocoa was again cheaper, and raw sugar failed to recover. The market in coffee remained steady. Sterling prices of commodities, which lend themselves to grading and therefore to international arbitrage, moved in sympathy with gold prices. Among commodities whose value is largely determined in the British market, the restriction of supplies recently imposed by the Government. According to reports from various industrial centres, there has been a further improvement in the coal trade, and activity in the iron and steel industries records a slight, though sectional, increase. The demand for cotton and wool manufactures has been quiet, but a slight improvement has been noticeable in the rayon trade.

THE COAL TRADE.

SHEFFIELD.—No new feature has developed in the South Yorkshire coal market for a long period, although a slight increase in sales of industrial fuel is noted, and the prospects of this section of the trade appear to be improving. Association steams for export continue scarce and prices firm, with no substantial increase in quantities. Quotations are 17s. 6d. and 17s. 9d. f.o.b. The call for blast-furnace coke is a little stronger. Prices continue low, round about 10s. at ovens. There is more activity in house coal, but turnover keeps below normal. Best ordinary house commands 23s. and 24s. at pits.

GLASGOW.—Continued scarcity of supplies is the main feature of the Scottish coal market, and shipment values fully maintain recent levels. As a rule, large fuel in the Eastern districts is fully booked until the end of the year and, apart from doubles in the Lothians, washed smalls are also obtainable with difficulty. With the home demand more brisk, at firmer prices, only limited quantities came on the shipping market from the Lancashire field, and prime splint and Ell grades are notably firm. The recent quota increase has had little effect on market conditions. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 6d.—17s.; splint second, 15s. 6d.—16s.; navigation, 14s. 3d.; navigation second, 13s. 6d.; Hartley, 16s.; steam, 14s.; trebles, 15s.—16s.; doubles, 13s.—13s. 6d.; singles, 11s.; pearls, 11s.—11s. 6d.; dross, 9s. FIRE.—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 14s.; third-class steam, 13s.; trebles, 17s.—18s. 6d.; doubles, 13s. 6d.—14s. 6d.; singles, 11s. 6d.—12s.; pearls, 10s. 6d.—11s. LOTHIANS.—Prime steam, 14s.; secondary steam, 13s. 6d.; trebles, 15s. 6d.—16s.; doubles, 12s.—12s. 6d.; singles, 11s. 3d.—11s. 6d.; pearls, 11s.—11s. 3d. Ayrshire.—Unscreened navigation, 15s.; jewel, 16s. 6d.; steam, 14s.—14s. 6d.; trebles, 15s. 6d.—16s.; doubles, 13s. 6d.; singles, 11s. 6d.; pearls, 11s.; dross, 9s.

NEWCASTLE-ON-TYNE.—The firmness of the Northumberland market for all grades above single nuts continues. Screened coal is becoming increasingly difficult to obtain, and loading turns cannot be arranged for this year. More than half of this coal is being shipped to English coasting ports, which is seasonal, but nevertheless, there is a better inquiry from abroad, and for shipment over next year, much more trade is being done with Scandinavia. The Durham position remains steady, with some prime brands of bunkers difficult to obtain for the next week or so. There is little change in the coking position, inquiry being negligible both for prompt and ahead. To-day's f.o.b. prices for export are as follows:—NORTHUMBRIA: D.C.B. screened steam, 14s. 3d.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin screened, 14s.; smalls, 8s.; Tyne prime, large, 13s. 3d.;

smalls, 9s.; Hartley Main, large, 13s.; smalls, 8s. DURHAM: Lambton, South Hetton screened steam, 15s. 6d.; smalls, 11s.; Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened, 14s. 6d.; second class gas, 13s.; coking unscreened or smalls, 12s. 6d.; prime unscreened bunkers, 14s. 6d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 16s. 6d.; Newcastle and district gas coke, 19s.

CARDIFF.—The approach of the Christmas holidays has introduced a little more liveliness into the coal market. The tonnage position has improved, the increased import quotas recently authorised by France and Belgium, and a desire on the part of foreign consumers to obtain delivery before Christmas have all contributed to a slightly more active position. The volume of business is still considerably below normal, and the instability of sterling exchange is retarding new business, but the aggregate volume of trade is greater than it has been for some weeks past. Dry steam coals, however, are the only classes in which there is at the moment a shortage of supply. The position in the sized coal market continues favourable on the whole, though most of the business now passing in these classes is in the lower volatile grades. Smalls, generally, are firm, and washed grades are commanding in excess of the schedule prices. There is an improved demand for coke, and with expanding inquiries in the iron and steel trade, there are prospects of the re-firing of blastfurnaces. A report from Newfoundland states that a barter contract has been concluded for the exchange of 76,000 tons of pitwood for 40,000 tons of South Wales coals. Exports from the South Wales ports in November totalled 1,413,277 tons, compared with 1,242,448 tons in October, and 1,384,643 tons in the corresponding month last year. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 19s. 3d. to 19s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d. to 14s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best, large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 38s. 6d. to 45s.; rubbly culm, 8s. 6d. to 9s.; special foundry coke, 32s. 6d. to 34s.; patent fuel, 20s.; pitwood, ex ship, 24s. 6d. to 25s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland pig iron is in a strong position statistically. Current output, confined to three furnaces, is being consumed, and, in addition, substantial quantities are withdrawn from makers' stocks. There are no indications of any increase in the make at present, although it cannot be long before the position becomes one for serious consideration, particularly as the demand for iron shows indications of expanding. A steady business has been transacted during the past week, and at Tuesday's weekly market fair interest on the part of consumers was reported and a moderate turnover. Official prices were unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; No. 4 forge, 57s. per ton, with concessions for Scotland and other special cases. Hematite is a steady market. Sales have been fairly numerous at 59s. for mixed numbers, but most lots have been for early delivery, the lack of buying for forward being a disappointing feature and is difficult to understand under present market conditions. The shipments of pig iron last month were 10,145 tons, against 8,272 tons in October, and of this Scotland took 6,498 tons, against only 3,007 tons the previous month. For the first six days of this month the clearances are 1,109 tons, against 2,423 tons for the same period of November. In the finished trades there are more inquiries about, and the order for the Portuguese warships is a very substantial acquisition, providing, as it will, employment for a long period ahead. Altogether, the tone in regard to the future of the manufactured branches is very optimistic. The ore trades keep very quiet, as consumers needs are practically covered by their present commitments. Best rubio is nominally 15s. c.i.f. and the current freight Bilbao/Middlesbrough is 4s. 9d. Coke is rather firmer and some of the good medium blast-furnace qualities are now quoted at 15s. per ton delivered consumers' works. The number of furnaces in operation in the district remains at 15.

SHEFFIELD.—Business is decidedly more active in the finished branches of iron and steel, and there is a tendency to exaggerate the improvement. While the increase of orders is slight, however, the outlook for the New Year is much brighter. Fears are entertained lest the war debt crisis should check the upward tendency of trade, which is undoubtedly in actual evidence. The movement to produce Basic Bessemer steel, otherwise known as "Thomas steel" in this country will affect Sheffield only indirectly. For many years such steel has constituted a large proportion of our imports, as the material is not procurable in this country. England has specialised on the Siemens open-hearth steel. This gives good results as to quality, but costs 10s. or 12s. a ton more to produce than open-hearth. A number of local works are increasing their output in view of the approach of the end of the year. The market for ferro-alloys keeps unsettled and prices are being severely cut. Nevertheless, steelmakers cannot be persuaded to speculate. Toolmakers are moderately employed, and there has been a small monthly increase of exports of files and saws for over most of the present year. Nothing favourable can be said of cutlery and plate. This is the worst season these branches have ever experienced. A number of substantial firms have this year gone out of business.

GLASGOW.—While the expectations in regard to the improvement in the heavy steel trade have not materialised, there is more business being done than was the case a few months ago and the outlook is regarded much more favourably. The demand for home semis is increasing and there is less buying from the Continent, but there are in the hands of some users still considerable stocks of

Continental material. Sheetmakers continue well employed and bookings during the present week of both black and galvanised are satisfactory. Machinery makers and manufacturing engineers in the Glasgow district have recently secured a good deal of new work and employment shows considerable improvement.

CARDIFF.—On the Swansea Metal Exchange on Tuesday the outlook for the tinplate industry was generally regarded as considerably improved, and there are prospects of the resumption of work at some of the local steel works as well as at several of the tinplate mills. Continental Europe has been a large buyer, and contracts have been entered into for the shipment of considerable quantities to Canada over the first half of next year. Current quotations are steady at from 15s. 9d. to 16s. 3d. per basis box, and an advance is anticipated. The improved position of the tinplate market is also being reflected in the steel section, and competition of Belgian and French bars is at present practically negligible. Less than 400 tons of Continental bars are reported to have been discharged at Swansea during the past month. Galvanised sheets are steady at £10 to £10 15s. per ton for 24-gauge corrugateds in bundles. Shipments of tinplates at Swansea last week totalled 86,429 boxes, compared with 65,981 boxes, but apparently owing to the resumption of work at a number of mills stocks have increased from about 136,000 boxes to 160,000 boxes.

OTHER METALS.

TIN.—The London market in tin was active on Monday, but on Tuesday a lack of demand caused a further downward tendency in values which was, however, arrested by "inside" support. On Wednesday the market opened dull but recovered at the close of the session when the metal changed hands at last week's prices. Sales on the London Metal Exchange were 800 tons on Monday, against 300 last week; 350 tons on Tuesday, against 225 tons last week; and 400 tons on Wednesday, against 525 tons last week. The New York quotation on Tuesday was 22-80 cents per lb., against 22-50 cents a week ago and 23-70 cents a month ago. Wednesday's official closing quotation in London for standard cash was £151 12s. 6d. to £151 15s., compared with £151 15s. to £151 17s. 6d. last week. Stocks in London and Liverpool at the end of last week were 30,275 tons, a decrease of 95 tons on the week.

COPPER.—The copper situation has further deteriorated during the past week. The New York quotation of the metal for domestic consumption declined to 5 cents per lb. The turnover in London was moderate at the lower level of values. Incidentally, it is interesting to note that, as a result of the declining activity of the New York "futures" market, the Committee of the National Metal Exchange has decided to discontinue operation of the "A" contract as from December 1st next. Sales at the London Metal Exchange were 800 tons on Monday, against 200 tons last week; 500 tons on Tuesday, against 250 tons last week; and 750 tons on Wednesday, against 700 tons last week.¹ Domestic spot was quoted 5 cents per lb. New York on Tuesday, against 5½ cents a week ago and 5½ cents a month ago. Wednesday's official closing price for standard cash in London was £30 15s. to £30 16s. 3d., compared with £32 3s. 9d. to £32 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 30,735 tons, show a decrease of 426 tons, and stocks of rough copper, at 6,392 tons, an increase of 646 tons.

LEAD.—Lead declined sharply on Monday on heavy liquidation. Although there was a better demand on Tuesday, prices were carried down further. On Wednesday sellers were less predominant and values remained unchanged on the previous day. Sales at the London Metal Exchange were 1,500 tons on Monday, against 350 tons last week; 1,000 tons on Tuesday, against 150 tons last week; and 250 tons on Wednesday, against 700 tons last week. The New York quotation on Tuesday was 3·00 cents per lb., against 3·00 cents a week ago, and 3·15 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £11 6s. 3d. for November shipment, compared with £12 1s. 3d. last week.

SPELTER.—The predominance of sellers caused a sagging tendency in prices on Monday. Although demand showed no improvement on Tuesday and Wednesday, values remained steady at the lower level in the absence of selling pressure. Sales were 1,250 tons on Monday, against 550 tons a week before; 300 tons on Tuesday, against 450 tons the week before; and 500 tons on Wednesday, against 550 tons. The New York quotation on Wednesday was 3.125 cents per lb., against 3.15 cents the week before, and 3.00 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 2s. 6d. for November shipment, against £15 7s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminum was again quoted at £100 per ton. Nickel was unchanged at £280-£285 per ton. Quicksilver was higher at £10 5s.-£11 7s. 6d. per flask, against £10 5s.-£11 5s. per flask a week ago. Platinum declined from £9 10s. per ounce to £9 per ounce. Foreign antimony was reduced from £27 10s.-£28 per ton to £27-£27 10s. per ton.

TEXTILES.

THE COTTON TRADE.—*Liverpool.*—Imports for the week December 1st to 7th (inclusive) are 60,252 bales, of which 40,716 are American; 1,100 Peruvian; 1,105 Argentine; 4,472 Egyptian; 2,865 African; 1,577 East Indian; 8,610 Russian; and 7 sundries.

Manchester.—The market during the past week has been generally quiet. Trade developments have again been held back by the uncertainty relating to the war debts question and the fluctuations in sterling and raw cotton rates. Most buyers have

been in the mood to operate with caution. The general inquiry in piece-goods for export keeps up fairly well, but practically all the orders have been for trifling lots. A moderate turnover has taken place for India in light whites, dhooties, prints and fancies, but there has been no outstanding feature in the business done. Only isolated transactions have been put through for China, chiefly in white shirtings and dyed goods. Operations for Egypt and the Near East have been of limited dimensions. Printing, dyeing and bleaching qualities have been sold on a restricted scale for Central and South America and the Continent. Some manufacturers have had a fair week in home trade fabrics and on the whole favourable clearances are taking place in the wholesale houses. Quotations in American yarns have shown rather more irregularity. A fair business has been done, chiefly in the coarser counts. In Egyptian spinnings orders have been placed very unevenly.

THE WOOL TRADE. — **Bradford.** — According to our correspondent, there is a good demand for most descriptions of wool in London, Australia and elsewhere. All good greasy merino and fine crossbred wools are holding their own very well, though the latest cable information from Australia indicates just a slight tendency in buyers' favour. At this moment the outlook is rather obscure, but many holders of the raw material have confidence in their stock. It has been decided that the current series of London day's sale will be abandoned, which means that only one selling brokers are not anticipating much, if any, depreciation in value. Medium and coarse crossbreds are having an unfortunate experience, the large offering having its effect on values for these. There is a good demand for slip fine half-bred lambs, but other sorts are slightly in buyers' favour. Home trade woollen manufacturing requirements are inadequate in face of the big supplies. It is readily admitted that crossbred wool is too cheap, but at the moment nobody can see how the position can be improved. B.A. 40-44's wool has been offered at 5½d. clean, delivered this country, and even less has been accepted. It is evidently going to take some time longer before any description of crossbred wool gets a real turn. Good greasy merinos are selling on a parity with the opening of the series, but the demand for scoureds is rather indifferent, except for really superior lots. The Bradford market is simply marking time. Big spinning concerns who have top contracts running at less than to-day's selling prices are unable to find yarn orders at a corresponding basis. Standard makes of warp 64's are still quoted at 23d., but the best price realisable is 22½d. There is some demand for crossbred tops for export, but prices leave little margin in spite of the cheapness of wool and the depreciation of sterling.

THE GRAIN MARKETS.

WHEAT.—The past week has witnessed a slight improvement in the international wheat situation. This has not been due to an expansion in demand but to the news of a considerable deterioration in the Argentine crop and to reduced estimates of world production. According to the most recent estimate of the International Institute of Agriculture, the world's wheat production in 1932, excluding Russia, Persia, China, Turkey and Irak, was 3,673 million bushels, against 3,671 million bushels a year ago. This figure shows a reduction of 40 million bushels on the estimate made in October last. In addition, some delay appears to have been caused in winter sowing in some countries, while in North America part of the winter crop has suffered from drought. On Wednesday, "December" futures were quoted in Chicago at 4½ cents per bushel, against 42½ cents the week before, and 43½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. 6d. per 496 lbs., against 28s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. against 27s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 26s. 6d., against 27s.; Australia, ex ship, 26s. 3d. to 27s. 3d. against 26s. 6d. to 27s. 6d. a week ago.

WHEAT FLOUR.—The slight improvement in international trade in flour recorded a week ago has been maintained. North American shipments were 163,000 sacks, compared with 171,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago; Manitoba patents, ex store, 23s. 6d. to 26s., against 23s. 6d. to 26s.; Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. last week.

BARLEY—In view of the heavy maize shipments the demand for feeding barley in importing countries has remained poor. "December" futures were quoted in Winnipeg on Wednesday at 28½ cents per bushel, against 28½ cents last week and 31½ cents.

December 10, 1932.]

month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s. to 25s., against 22s. to 25s. a week before.

OATS.—The market in oats has been a little more active and shipments to the Continent show a slight increase. In Chicago, "December" futures were quoted at 15½ cents per bushel on Wednesday, against 14½ cents per bushel a week before and 16 cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. per 320 lbs., against 17s. 9d. a week ago; "River Plate," ex ship, 16s. 3d., against 16s. 18s. 9d.; "Chilean White," landed, 22s.-24s., against 22s.-24s. a week earlier.

MAIZE.—Although maize continues to be shipped in large quantities by Argentina and Danubian countries, prices have maintained. Last week Argentina exported 387,000 quarters and Danubian and Russian shipments totalled 491,000 quarters. "December" futures in Chicago were quoted on Wednesday at 22½ cents per bushel, against 21½ cents on Wednesday of last week and 25½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 20s. last week; "Plate," ex ship, 19s., as against 19s.; "Plate," December-January, 19s. 3d., as against 19s. 3d. Yellow maize, ex wharf, was quoted at £5 12s. 6d. per ton, against £5 12s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30 :—

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930 :—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Dec. 9, 1931.	Jan. 4, 1932.	Nov. 30, 1932.	Dec. 7, 1932.
Winnipeg (No. 1 Manitoba) —Dats per 60 lb.	146½	56½	57½	62½	44½	44½
Chicago (No. 2 Winter)— Cents per 60 lb.	130½	79½	52½	55½	42½	44½

The visible supply of wheat in Canada, at 83,865,000 bushels shows a decrease on the week of 614,000 bushels. Supplies a year ago stood at 56,543,000 bushels.

OTHER FOODS.

SUGAR—Raw sugar values failed to recover from last week's sharp decline, owing to the poor demand, and further heavy liquidation. December futures were quoted in New York at 0.71 cent per lb. on Tuesday, against 0.71 cent a week before and 1.05 cent a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 5s. 4½d. to 5s. 5½d. per cwt., against 5s. 6½d. a week before, and "March, 1933," at 5s. 8½d. to 5s. 8½d., against 5s. 9½d. to 5s. 10½d. The movements of raw sugar in London and Liverpool last week were as follows:—

Imports.		Deliveries.		Stocks.	
1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	346	1,113	1,546	13,341	5,136
Liverpool	15,283	13,138	13,571	12,365	119,007
Total	15,629	14,251	15,117	13,390	132,348
Last week ...	33,065	12,046	15,047	13,013	131,836
					78,551

COFFEE.—The New York market in coffee was steady during the past week. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8¼ cents per lb. on the corresponding day a week ago. At Tuesday's London auctions demand was only moderate, but prices were steadier. Last week's movements of coffee in London were as follows: Brazilian, landed, 3,683 bags; delivered, for home consumption, 723 bags; exported, 2 bags; stocks, 8,757 bags, against 2,806 bags a year ago. Central American, landed, 4,736 packages delivered for home consumption, 1,923 packages; exported, 1,916 packages; stocks, 56,250 packages, against 60,925 last year. Other kinds: Landed, 6,886 packages; delivered for home consumption,

THE ECONOMIST.

2,293 packages; exported, 1,858 packages; stocks, 63,152 packages, against 48,836 last year.

COCOA.—After a fortnight's relative steadiness at the lower level, cocoa quotations resumed a downward tendency during the past week. December futures were quoted at 3-59 cents in New York on Tuesday, against 3-67 cents a week ago and 3-96 a month ago; Accra, December-February, at 25s. 6d. per cwt. c.i.f. Continent, shows a fall of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 3,568 bags; delivered for home consumption, 8,314 bags; exported, 341 bags; stocks, 104,843 bags, against 132,397 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 62,873 packages of Indian and 27,757 packages of Ceylon tea. Monday's and Tuesday's auctions were characterised by a further decline in prices, but Wednesday's Ceylon sales showed a firmer tendency under the influence of a better demand. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

AVERAGE PRICE PER LB.

Dec. 1, "	8-20	7-21	10-02	6-56	4-81	4-97	8-47

RISE.—The market in rice has been quiet, and spot prices declined further. The spot price was 9s. per cwt., against 9s. 3d. per cwt. a week ago, while the forward quotations at 7s. per cwt. show no change on the week. Movements in London during the past week were as follows : Landed, 57 tons; delivered, 58 tons; stock, 2,436 tons, against 1,846 tons a year ago.

POTATOES.—There has been a good demand for potatoes at the principal markets, and prices were slightly firmer. At the London Borough Market, "King Edward" light soil, were quoted at 6s. to 6s. 6d. per cwt., against 6s. to 6s. 3d. a week ago.

SPICES.—The market in pepper was quiet at the lower level of prices reached last week. Spot pepper, "Black Singapore," was quoted at 6d. per lb. on Wednesday, against 6d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 2 tons; delivered, 1 ton; stock, 383 tons, against 331 a year ago. White, landed, 67 tons; delivered, 71 tons; stock, 667 tons, against 488 a year ago.

MEAT.—The course of quotations at the Smithfield market during the past week showed a firm tendency. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 10d. to 4s. 6d. per 8 lbs., as compared with 3s. 6d. to 4s. 6d. last week. New Zealand frozen mutton was 2s. 8d. to 3s. 2d. per 8 lbs., against 2s. 8d. to 3s. 4d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 9,710 tons, against 9,599 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81·6 per cent. of the beef supplies, against 82·9 per cent. a year ago. Imported mutton, mainly New Zealand, formed 71·7 per cent. of the total supply of mutton and lamb, against 68·9 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Reports that the Indian Assembly will ratify the Ottawa agreements and enable the new import duty to become operative on January 1st have imparted a steadier feeling to linseed, and there has been a renewed demand for seed on spot and “afloat” likely to reach port before that date. Plate nut at hand is thus at a premium over forward and to Hull is quoted around £9 10s. For new crop, December and January–February shipment, £9 is asked. The Continent has also been a buyer. Indian linseed is in better demand and firmer at £11, November–December shipment to London. Substantial shipments from the river Plate have increased the quantity of linseed afloat for Europe to 223,300 tons, or 31,300 tons more than a week ago. The quantity remaining for shipment from Argentina and India to the end of the year is estimated at 185,000 tons, as against 91,000 tons actually shipped in December last year. Cottonseed is quieter after an active demand. Black Egyptian afloat is quoted £7 15s. and December loading £7 7s. 6d.

Linseed oil is in poor demand from consumers and easier. December delivery ex Hull is quoted £16 7s. 6d. and January-April £17 per ton naked. Cotton oil is not so active and is a shade easier. Crude Egyptian ex Hull offers at £23 and common edible at £25 prompt. Oilcakes and meals are in moderate demand and mill prices are unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Hides from home-slaughtered cattle were lower in price at the sales held in the north this week. At Manchester all classes and weights in ox and heifers sold for 4d. per lb. less than the previous week, as was also the case with all first clear cows and 60 lbs. and up second clear, and first and second warbled. At Leeds the position was, if anything, weaker, as the reductions in price recorded there ranged from 4d. down to 4d. per lb. Calfskins at Manchester were unchanged in value, while at the Yorkshire market several weights were lower by from 4d. to 4d. per lb. Business in imported hides has not been good, and as a result lower figures have had to be accepted for some types, particularly South Americans. For instance, sales of Argentine ox have been made at just under 4d., while cows have realised 5d., and Montevideo ox 5½d. Dry hides from the same source also are weaker, B. A. Americanos having sold at 5½d., M. V. Americanos at 6½d., and Sierra Cordobas at up to 7½d. All things considered, the African market has remained fairly steady with dry Capes selling at 6½d. and 5½d. for first and seconds, and dry salted 20/30 lbs. at 5½d. and 4½d. Heavy Mombasas are still offered at 5d., and unbathed Adis Abebas at 5½d. Australian hides are slightly cheaper. A steady trade has been done in sole leather and considering the time of the year the aggregate turnover is up to average. The call for English and wet salted bends has not been quite so active as of late, but there has been an increase in the demand for dry hide stock in the light and medium weights. Inquiry for offal has been moderate, as although the demand for bellies has not been up to the standard of recent weeks, additional business has been forthcoming for shoulders in various substances. In the upper leather market regular sales have been made of glacé kid and willow calf, and these two lines appear to account for the bulk of the business passing at present. In addition, patent and descriptions of upper leather is generally limited to sufficient to meet the needs of orders in hand for footwear.

RUBBER.—The London market in rubber was quiet and prices tended to sag. In New York, Wednesday's spot price for rubber, official closing price for standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for April-June, 1933, as against 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 784 tons; delivered, 1,772 tons; stocks at the end of last week, at 98,041 tons, show a decrease of 988 tons as compared with the preceding week.

THE MONEY MARKET.

MONEY and discount rates were easy over the week-end, with new money running from ½ down to ¼ per cent., while the Treasury bills issued on December 9th went at an average rate of 16s. 5.89d. per cent. As the current week progressed, however, both money and discount rates definitely stiffened. The advance in money rates to ½ per cent. was due to such factors as the Christmas expansion in the note circulation, the current excess of Treasury bill payments over maturities, and a limited amount of special selling of bills designed to reduce the surplus of

funds left in the market by the War Loan dividend payments. The rise in discount rates from $\frac{1}{2}$ per cent. for hot Treasury bills at the week-end to $\frac{3}{4}$ per cent. on Wednesday was a reflection of the same causes; but the Chancellor's warning on Wednesday afternoon that the withdrawal of gold from the Bank would probably involve some stiffening in discount rates led to a sudden advance in rates on Thursday morning, which was accentuated by an unfortunate broadcast address the same evening which contained an erroneous passage predicting an immediate advance in Bank rate. As a result, hot Treasury bills were quoted on Thursday at $1\frac{1}{2}$ per cent., and three months' bank bills at $1\frac{1}{4}$ per cent. $1\frac{1}{2}$ per cent. was the rate for standstills.

Market rate (standstill bills)	1-2	1-2	1-2	1-2	1 (May 12, '32)

Market opinion is very critical of the broadcast address. It is felt that the broadcasting authorities should realise that wireless addresses are heard and acted upon in all neighbouring Continental financial centres, and that extreme care should be taken not only to ensure the accuracy of statements on financial subjects, but even to confine their deliverance to competent and recognised financial authorities who fully appreciate the likely repercussions of what they propose to say. As it is, much avoidable loss and uncertainty has been caused by this unfortunate error. The wider considerations involved in Mr Chamberlain's statement are discussed in a Note on page 1130.

This week's Bank return was dated too early to show the American debt gold withdrawals, and the Bank's gold holdings are returned at £139.4 millions, or the same figure as last week. There has been a further increase of £6.6 millions in the note circulation to £372.3 millions, and the Reserve is reduced by the same amount to £43.0 millions. Excess payments for Treasury bills over maturities and other factors have reduced Government securities by £12.3 millions, while Bankers' Deposits have contracted from £104.3 to £86.2 millions as the result of the increase in the note circulation and the decrease in Government securities. The Proportion stands at 33.3 per cent.

The Bank's gold loss of about £19.5 millions resulting from the American debt payment will reduce its gold stocks to a round £120 millions, or to practically the same level as a year ago. So far as can be told, the peak figure for this Christmas' note circulation is likely to be about £377 millions, or £7 millions more than a year ago. On this basis, the decision not to increase the fiduciary note issue means that the Reserve will fall to about £19 millions, and the Proportion to about 16 per cent. compared with £26 millions and 18.4 per cent. a year ago. It may be recalled that at Christmas, 1922, the Proportion fell to 13.8 per cent., but that no anxiety arose and Bank rate stood at what was then the very low level of 3 per cent., and remained there till the following summer.

Another point that will affect the Bank return for Christmas week is the extent to which the joint-stock banks think it necessary to strengthen their own currency reserves. Until a year ago, some special strengthening was their general practice, but it will be recalled that last year, in order to avoid too big a reduction in the Bank of England's reserve, they refrained from doing so. This change in practice worked perfectly smoothly, and so it may fairly be regarded as a valuable precedent which should be followed both now and in subsequent years. In fact, the tentative calculations made in the previous note are based on the assumption that it will be followed.

The November averages of the nine English clearing banks show that there is some tendency for the expansion in deposits to be checked, for the month's increase was one of less than six millions. There was a further increase in acceptances, for the second month in succession. Advances were reduced by £10.3 millions, and are now only 41.4 per cent. of deposits.

	Nov., 1931.	Aug., 1932.	Sept., 1932.	Oct., 1932.	Nov., 1932.
Capital and reserves.....	132.1	122.8	122.8	122.8	122.8

Discounts	238.2	372.5	390.4	388.8	389.4
Loans and advances.....	884.6	800.7	787.3	779.9	769.6
Cover for acceptances, &c.	145.3	122.8	119.0	123.1	127.6
Total assets	1,905.0	2,014.2	2,024.2	2,005.3	2,065.2

The banks have once more refrained from buying fresh bills and have been content to replace maturities. Instead they have employed their surplus resources in investments, which have risen by 13.4 millions. Apart from the further increase in acceptances, which rose by £4.4 millions, there is not much evidence of any recovery in trade.

In the Foreign Exchange market sterling improved considerably, but closed rather below the best. New York, after 3.29 $\frac{1}{2}$, went to 3.28 $\frac{3}{4}$, against 3.25 $\frac{1}{2}$ last week. Montreal lost two points at 3.79. Paris moved from 83 $\frac{1}{2}$ to 84 $\frac{1}{2}$, after being higher. Brussels weakened to 23.74. Milan was cheaper by $\frac{1}{2}$ at 64 $\frac{1}{2}$, and Madrid by $\frac{1}{8}$ at 40 $\frac{3}{4}$. Lisbon lost a point at 108 $\frac{1}{2}$, and Amsterdam 7 points at 8.17. Berlin fell away from 13.70 to 13.80, and Switzerland from 16.88 to 17.09. The Scandinavian currencies moved in different directions, Stockholm improving by 2 points to 18.33 and Oslo by 3 points to 19.40, while Copenhagen lost 2 points at 19.30. The South American currencies remain at largely nominal quotations, Rio being $\frac{1}{2}$ d. lower at 5 $\frac{1}{2}$ d. (sellers) and Buenos Aires $\frac{1}{2}$ d. cheaper at 35 $\frac{1}{2}$ d. Montevideo was unchanged at 29d. In the Far East the rupee was steady at 1s. 6 $\frac{1}{2}$ d. The yen, after some hesitation and weakness, closed at last week's level of 1s. 3 $\frac{1}{2}$ d. Batavia lost 10 points at 8.20. In the forward market, dollars were more offered at discounts of $\frac{1}{4}$ and $\frac{1}{2}$ cents for one and three months respectively, a decline of $\frac{1}{4}$ in each case. Paris went from 1 and 2 centimes premium to par for both deliveries (offered). Brussels was unchanged at 9.25 centimes discount. Milan was cheaper by $\frac{1}{8}$ at $\frac{1}{8}$ lira discount for one month and by $\frac{1}{4}$ at $\frac{1}{4}$ lira discount for three. Madrid lost $\frac{1}{8}$ for both deliveries and closed at $\frac{1}{8}$ peseta and $\frac{1}{8}$ peseta discount. Amsterdam was quoted at the spot rate for both deliveries. Switzerland was at $\frac{1}{2}$ and 1 centime premium. The silver market was inactive, and prices fell away with the improvement in sterling, both deliveries being cheaper by $\frac{1}{4}$ d. at 17 $\frac{1}{2}$ d. for cash and 17 $\frac{1}{2}$ d. for forward. The China silver currencies weakened in sympathy, Hong Kong and Shanghai both being cheaper by $\frac{1}{4}$ d. at 1s. 3 $\frac{1}{2}$ d. and 1s. 8 $\frac{1}{2}$ d. respectively.

In New York call money remains at 1 per cent., and the open market discount rate on 90-day bankers' acceptances at $\frac{1}{4}$ per cent. Among the leading foreign exchange rates, Paris fell from 3.90 $\frac{1}{2}$ to 3.90 $\frac{1}{4}$ cents and Brussels from 13.85 $\frac{1}{2}$ to 13.84 $\frac{1}{2}$ cents, but Swiss francs improved from 19.22 $\frac{1}{2}$ to 19.23 $\frac{1}{2}$ cents and Dutch florins from 40.16 to 40.18 cents. Heavy gold movements were reported on Tuesday and Wednesday, including the arrival of \$12.9 millions from England, \$905,000 from Canada and \$656,000 from China. Foreign ear-markings were increased by a net \$8.8 millions, so that most of this gold apparently retains its foreign ownership.

DECEMBER THE FIFTEENTH.

THE fateful day has come and gone. As the result of a month of high-speed negotiations, culminating in the last few days in a perfect barrage of diplomatic Notes, Britain has paid—conditionally; France has "deferred" payment pending negotiations for revision; Poland and Belgium are among the non-payers; while Italy and other debtors have met their obligations. Britain for the time being holds her claim against her European debtors in suspense, thus endeavouring to limit the area of the storm raised by America's insistence on this payment; but M. Herriot's Government is included among the wreckage.

So far as Great Britain is concerned, the decision to pay was conveyed in a Note despatched on Sunday. In that message the Government maintained its thesis that the only solution that would obviate the difficulties of transfer would be suspension of payment due on December 15th, and that the system of inter-governmental payments, as it existed prior to the Hoover moratorium, "cannot be revived without disaster." Since America was not in a position to accept this view, we would make the payment—in gold—but would regard it not "as a resumption of the annual payments contemplated by the existing agreement," but "as a capital payment of which account should be taken in any final settlement." Mr Stimson replied, with record promptitude, that the American Administration was not authorised to receive any payment except under the Funding Agreement, and that America's acceptance of our gold would not constitute approval of any reservations outside the terms of the bond. Naturally, we replied that our Note could only be read as stating our own position, and that, without in any way intending to touch upon any matter affecting the constitutional position of the United States Government, we retained the right to recur to the considerations they had set forth.

Parliament on Wednesday had, therefore, nothing to do but comment upon the decision which the Government had taken. The question raised by Mr Lansbury and others as to whether a payment which a debtor chooses to consider as something other than the fulfilment of his bond, but which the creditor regards as implementing it, constitutes technical default or not, is academic, and need never become important provided negotiations for revision are rapidly initiated and reach satisfactory conclusions. In fact, the test of the utility of making this present transfer will be afforded by the attainment, or not, of agreement between now and June 15th. The majority of the House, with the notable exception of Mr Lloyd George, appeared to differ from the view expressed in these columns last week, and to consider the "speculation" worth while. In any case it was too late for Parliament to alter the decision; there could be no withdrawal of our final offer; and, apart from a personal controversy as to responsibility for the Baldwin settlement—a question that can only be settled by the production of the documents—the chief interest of the debate lay in the explanation given by the Chancellor of the Exchequer as to the method of payment. Some questions raised in this statement are discussed in Notes of the Week.

Meanwhile proceedings across the Channel were far more stormy. After a talk with Mr MacDonald and Mr Neville Chamberlain, M. Herriot did his best to persuade France to fall into line with the British policy. But whatever chance he may have had of doing this was dissipated by Mr Stimson's blunt declaration to Great Britain that he could not concur in regarding any payments made as being conditional. Unwilling to make payment unconditionally, or without more definite assurance of final revision, the Chamber had the logic of its possibly "undiplomatic" convictions; and M. Herriot had to resign. The debate and the voting showed once again that, while we in this country may have accustomed ourselves to regard this problem purely from the practical economic point of view, in France it is one that

deeply stirs the national passion; for France it is a matter of equity that she should not be called upon to pay these external debts if she gets nothing from Germany. Both England and America would be wise if they accept this as one of the facts of the situation.

While from some points of view it would have been useful if France and England could have acted on a common principle, France's position may at least have the useful effect of re-emphasising the special character of these obligations. We shall be greatly surprised if, in the opinion of the world, France is considered to have humbled herself in the dust, or if her commercial debtors promptly proceed to repudiate their obligations. If France's considered decision enables some nervous folk in this country to realise that this whole question is in the realm of high politics, and not in the ordinary commercial sphere, it may perhaps strengthen the hands of our negotiators in the coming months in insisting on the sort of solution that the world really needs.

With the debtors thus sorted out into their various categories, the position revealed by the passage of "pay-day" may thus be said to have defined itself with a fair degree of clarity. The same, however, cannot be said of the future. In his statement in the House on Wednesday Mr Chamberlain accepted Sir Robert Horne's description of the December 15th transfer as a payment by which "we had bought time" to negotiate if possible an agreed settlement with the United States, and he claimed that Mr Hoover's expression of willingness to "survey the whole situation" was a major concession. Whether negotiations with America can be effectively begun before Mr Roosevelt's Administration enters into office, time will show. We shall have ample opportunity of indicating in these columns our views as to the nature of the final settlement which the realities of the case render imperative as the only alternative to complete cancellation, whether agreed or unilateral. To-day we are concerned merely to urge that no false move should be made in the general orientation of the European position.

In the debate in the Commons several members showed a disposition to suggest that we should cut ourselves clear of any "entanglements" with France or any other of our late Allies; and though Mr Chamberlain was at pains to point out that the "preferential offer" in respect of the December 15th instalment, which we were supposed to have declined as a gesture of solidarity with France, was, in fact, simply a suggestion that we should issue marketable bonds, and was therefore, in any case, unacceptable to this country, Mr Churchill was not alone in urging that we should "free ourselves from all contact with France" in our negotiations with the United States. If the receipt by the American Treasury of hard cash from Britain on December 15th overshadows in the eyes of Congressmen the reservations made by us in respect of the payment and creates a feeling in favour of treating Great Britain with exceptional leniency, there may well be a growing tendency in this country to consider that our best course is to enter into bilateral negotiations with the United States at the earliest opportunity and leave the rest of Europe to look after itself. Such a policy would be, in our view, a profound and disastrous mistake.

In the first place, it would frustrate the welcome desire which M. Herriot expressed so passionately in the Chamber that the good relations established at Lausanne and elsewhere between Great Britain and France should be maintained unimpaired; a Franco-British estrangement which left France smarting with a sense of isolation would not merely involve the risk of losing all the fruits of the laborious conference at Lausanne, but would jeopardise every hope of friendly co-operation and the laying of the spectre of nationalism in Europe. No results that could be achieved by Anglo-American harmony would be a substitute for such a deplorable setback in European relations. In the second place, it would hinder rather than promote the chances of our working out a

practicable agreed settlement of our own obligations to America.

For, though there is time enough yet to consider possibilities in detail, some considerations are already self-evident. We could not contemplate making any fresh bargain with America which left us in the position of having to collect from our debtors, including Germany, a sum which we should regard as intolerable if we had to bear it alone. Equally, it is manifestly fair that, in a general settlement of debts, account should be taken of the fact that we are a creditor as well as a debtor, and that our burden has hitherto been much the heaviest of those shouldered by the victors in the late war. Furthermore, it would obviously be inequitable that the debts of Continental countries to America should be regarded as having a prior claim over their debts to us, and we are glad to note that M. Herriot specifically stated in the Chamber that the French Government considered that there was absolute "equality" between the debts of France to Washington and her obligations to London. This being so, we would urge that before any of the debtor countries embarks on negotiations with America for debt revision, there should be a general understanding on the debtors' part as to the proportions of the ultimate liability—taking into account the potential receipts from Lausanne bonds—that each is to bear.

The idea of a "common front" of debtors is apparently regarded—with little justification that we can see—as being offensive to America, and Mr Chamberlain was concerned to make it clear on Wednesday that under the Lausanne understanding each country held itself free to make independent arrangements with the United States Government, subject always to prior communication with one another. This is quite proper; and though a general conference would be in many ways the most convenient method of negotiation, it may in practice prove essential, as a concession to the views of Congress, to hold the various parleys, as it were, in separate rooms. But of this we are convinced: there is no escape from the necessity of the European countries acting with a prior understanding of each other's intentions in an issue in which each factor depends on the treatment of all the other factors. A policy whereby Great Britain turned its back on the rest of Europe would be bad business and worse statesmanship.

A STEP TOWARDS DISARMAMENT.

THE signature of the Five-Power Disarmament Declaration at Geneva last Sunday is a notable event, not because it was unexpected—for few international negotiations nowadays turn out according to forecast—but because, for once in a way, the result has been distinctly better, instead of worse, than the prophets had foretold. The Five-Power negotiations, which lasted just a week, had opened in an atmosphere of pessimism. The delay in Baron von Neurath's arrival in Geneva, owing to the protraction of the internal political crisis in Germany, gave the negotiations a bad start; and then, when the German crisis was resolved at last and the German Foreign Minister was free to travel, hopes were further damped by the report of a pessimistic utterance, on Monsieur Herriot's part, as to the unlikelihood of an agreement being reached at Geneva during the few days left over for negotiations before the necessity of meeting the Chamber over the debts question would inexorably recall the French Prime Minister to Paris. In the event, all these forebodings have been falsified; for, in the brief interval between the day on which the German Government came out of the melting-pot and the day on which the French Government went into it, an agreement had been harvested which at all events reopens the way towards genuine progress in disarmament.

The Five-Power Declaration consists of four paragraphs. In the first, the four European Powers declare—"that one of the principles that should guide the Conference on Disarmament should be the grant to Germany, and to other Powers disarmed by treaty, of equality of rights in a system which would provide security for all nations, and that this principle should find itself embodied in the convention containing the conclusions of the Disarmament Conference."

This decision is interpreted as implying that the respective limitations of the armaments of all States should be included in the proposed disarmament convention. That is to say, the new convention is to supersede the disarmament chapter of the Treaty of Versailles and the other three European peace treaties. It is also set forth as "clearly understood" that the methods of applying the principle of equality of rights are to be discussed by the Disarmament Conference.

On the basis of this declaration, the willingness of Germany to resume her place at the Disarmament Conference is signified in the second paragraph.

In the third paragraph, the four European Powers declare their readiness to join in—

"a solemn reaffirmation, to be made by all European states, that they will not in any circumstances attempt to resolve any present or future differences between the signatories by resort to force."

Considering the number of times that this kind of thing has been said before, some critics may be inclined to feel that the Governments "do protest too much," and that these "vain repetitions of the Gentiles" may be nothing more than lip-service to a standard of behaviour which the Governments believe, in their hearts, to be too high for their moral capacity. All the same, the reaffirmation is not really otiose; for the point lies in the use of the word "force" instead of the word "war"; and in this case there is something to be said for the lawyer in international politics. Whether it was Sir John Simon or one of his foreign colleagues who drafted this paragraph, it is evident that the draftsman had in mind the history of the Far Eastern crisis during the past fifteen months. For Japan has shown how a Great Power can keep the letter of the Covenant of the League while violating its whole spirit and intention, by sedulously refraining from going to "war" with a victim against whom it is using "force" to the uttermost extreme. Nor need we look as far afield as the Far East in order to find instances of "force" without "war" which give point to this paragraph. One signal instance in Europe was the Polish General Zeligowski's military coup by which the Polish Government reaped—without ever taking responsibility for it—the gain of Vilna. Another instance of "force," albeit on different lines, was the Franco-Belgian occupation of the Ruhr; but here we strike a difficulty, for the French can quite legitimately point out that—force or no force—the occupation of the Ruhr could be interpreted as falling within the terms of the Versailles Treaty. What is to happen if the provisions of a treaty permit the use of force in certain contingencies? This question raises the whole issue of "automatic sanctions"; and the third paragraph of the Five-Power Declaration ends with an awkward gloss to the effect that the self-denying ordinance in regard to the use of force is to be "without prejudice to fuller discussions on the question of security."

In the fourth and last paragraph the Five Governments, including, this time, the Government of the United States, declare that they are resolved to co-operate in the Disarmament Conference with the other States there represented—

"in seeking without delay to work out a convention that shall effect a substantial reduction and limitation of armaments with provision for future revision with a view to further reduction."

In France and Germany alike, this agreement has had a good reception; and it is welcome news that French and German public opinion is simultaneously in a more or less reasonable and constructive mood. This is surely one of those rare moments in international affairs when there is a prospect of getting something substantial accomplished; and we are delighted to see it announced that Mr Arthur Henderson intends to follow up this success by promoting further conversations in London, with his own participation, in January.

The situation is now relatively favourable because both France and Germany have made genuine concessions. The French have abandoned their insistence that French recognition of Germany's right to equality of treatment must be conditional upon the acceptance of the Herriot Plan in its entirety. The Germans, on their side, have

waived their demand that their right to equality shall be worked out in detail in concrete terms before they participate in the Conference again. The formula of the first paragraph in the declaration—"Equality of rights in a system which would provide security for all nations"—is skilfully framed to bring out the underlying common interest of Germany and France; for Germany, after all, so long as she stands, disarmed, in the heart of Europe, with a ring of armed neighbours all round her, is in more obvious need of security than France herself.

The question remains whether this new opening for progress towards disarmament will be taken advantage of by the world. Some sceptics may foresee a re-armament of Germany up to something like the French and English and Italian levels on land and sea and in the air through a virtual collusion between the Admiralties and the War Offices. This is, no doubt, a real danger unless the respective Governments have the courage to carry out the mandates which they have received from their electorates by keeping their fighting services in order and refusing to allow them to dictate policy. At the same time, there is no evidence that re-armament is really desired either by the German people or by General von Schleicher's Government. Equality of treatment is an object which every German has at heart; and if he is refused it on any basis except re-armament, then, no doubt, he will eventually opt for re-arming. But this is not what Germany wants. She would much prefer to attain her *Gleichberechtigung* by persuading the ex-victorious Powers to come down gradually to the German level. The next move lies with us. Disarmament is in our grasp, if we have the resolution to put the experts in their place and insist upon the Governments giving the peoples what the peoples want.

BRITAIN AND PERSIA.

In the diplomatic sphere the controversy between the British and the Persian Governments with respect to the Anglo-Persian Oil Company's concession has been carried forward by an interchange of Notes along lines which give Persia no ground of complaint against the British attitude. In the House of Commons on December 8th, as briefly noted in our last issue, the Under-Secretary for Foreign Affairs announced that on December 5th a "wholly unsatisfactory" reply had been received from the Persian Government to the British Government's demand for the immediate withdrawal of the notification cancelling the concessions, which the Persian Minister of Finance had delivered on November 27th to the Resident Director of the Anglo-Persian Oil Company. In its Note the Persian Government declined to withdraw its notice of cancellation and stated that it had for some time past been of opinion that it was entitled to cancel the concession on the ground that its stipulations were "not in accord with the legitimate interests of Persia," and that the situation arising from the concession was unsatisfac-

tory. The Note, however, reiterated the willingness of the Persian Government to enter into direct discussions with the Anglo-Persian Oil Company with a view "to the negotiation of a new concession which would safeguard in an equitable manner the rights and interests of Persia."

Since a purely unilateral declaration that an agreement is working unsatisfactorily scarcely constitutes a valid case for the cancellation of a concession which contains no cancellation clause still operative, the British Government were well within their rights in declaring in a further Note, delivered on December 8th, that such a cancellation would be a confiscatory measure in clear breach of international law. Holding this view, the British Government, while expressing its desire that an amicable agreement should be reached between the Persian Government and the Anglo-Persian Oil Company, once more repeated its demand for the withdrawal of the notification of November 27th and declared that, failing a withdrawal by December 15th, H.M. Government would have no alternative but to refer the dispute to the Permanent Court of International Justice at The Hague, as a matter of urgency, under the Optional Clause. The Note added that in doing so H.M. Government would request the Court to indicate under Article 41 of the Statute the provisional measures that ought to be taken to preserve their rights.

To this Note the Persian Government replied on December 12th that it had nine reasons, summarised below, for cancelling the concession:—

- (1) That the original concession was obtained under pressure.
- (2) The amount of the royalty paid to Persia has been unfairly calculated.
- (3) That the Persians are not permitted to check the accounts.
- (4) That the royalty was not paid in war time in spite of repeated Persian complaints.
- (5) That the company has refused to pay income tax.
- (6) That the reckless expenditure by the company in other parts of the world is detrimental to the interests of the Persian oil industry.
- (7) That the cost of oil in Persia is excessive.
- (8) That the company has failed fully to exploit the Persian oilfields, while fields outside Persia have been developed.
- (9) The company's refusal to send a representative to negotiate last summer.

The Persian Government reiterated its refusal to withdraw the notice of cancellation and declined to accept reference to the Permanent Court on the very questionable ground that the Court could not adjudicate between a sovereign Government and a commercial company. The Note ended with the announcement that the Persian Government proposed to bring before the Council of the League the "threats and pressure" directed against it by the British Government.

In the House of Commons on Wednesday Mr Eden stated that, in view of this reply, H.M. Government had decided not to pursue their case for a reference to the Hague Court, but instead to join with Persia in referring

the matter to the Council of the League under Article 15 of the Covenant. In so doing they are undoubtedly acting wisely, though it remains to be seen how the Council will succeed in evolving appropriate machinery for adjudicating on the very complex financial issues involved. It should, however, find little difficulty in putting it on record that the British Government is guiltless of "threats" against Persia and that many of the nine points of Persia's Note given above have little substance.

It is to be hoped, however, that notwithstanding Persia's present attitude, which is that it is impossible to start negotiations with the company owing to the British Government's "threats," it may yet be found possible to explore *pari passu* with the working out of diplomatic procedure the possibility of an amicable settlement.

In a previous article in the *Economist** a correspondent outlined the various considerations which, rightly or wrongly, have led the Persian Government to the conclusion that the operation of the concession is inequitable. Comparing the description of the case as it presents itself to Persian eyes with the statement issued last week and summarised in our columns†, in which the Anglo-Persian Oil Company gave in measured and temperate terms its version of the history of the concession, we are inclined to think that a mutually acceptable accord to govern the future relations of the company and the Persian Government should not be impossible, but that it will probably have to involve a fairly drastic revision of the present provisos regarding royalty. It is, after all, an issue in which the British Government can afford to be generous. Admittedly, as Sir Arnold Wilson pointed out in a broadcast address on December 6th, the Persian Government has so far received about £11 millions in royalty, while Persian citizens have enjoyed the spending of about three times as much in the form of wages paid by the company. Indeed, without the increment directly and indirectly derived from the company, modern Persia could not have been born. On the other hand, when allowance is made for dividends received, taxation on the company's profits and the considerable savings on oil contracts, the British Treasury and the British investor between them have benefited to no small degree from the successful results of the exploitation of the oil in Persia with the assistance of British capital. There are strong arguments which may be adduced in support of the contention that Great Britain should go to considerable lengths in endeavouring to satisfy Persia's claim for "fair" treatment.

This being so, we would suggest that the most helpful lines of solution lie in an attempt to reconcile three separate principles:—

(1) It would go far to meet Persian views if an agreement were reached whereby each ton of oil removed from Persia should yield a fixed minimum royalty. Much of the present trouble would have been avoided had such a provision been incorporated in the original D'Arcy concession. It was doubtless thought in 1901 that the fixing of a royalty of 16 per cent. on the annual net profits of "any company or companies which might be formed to operate the concession" would be more satisfactory to Persia in the event of a great success, and would be fairer to the pioneer prospectors in the event of anything like failure. To-day, however, the abundance of oil resources is beyond dispute, and ample precedents are apparent for the devising of a "tonnage royalty." Indeed, it is believed that on more than one occasion negotiations to this end between the company and the Persian Government have been within measurable distance of agreement.

(2) There is much to be said for giving Persia an interest in the profits of the company *whenever arising*. The company's operations to-day are founded upon a very broad basis of financial and commercial enterprise. Admittedly, Persia has made no direct contribution to the development of the company's activities in spheres which the D'Arcy concession never contemplated; yet it is arguable that, for Persian oil, the present imposing structure of the

Anglo-Persian Oil Company and its subsidiaries could not have been built up. Lines of demarcation showing where Persia's contribution ends and the company's "independent" operations begin are all but impossible to draw; and the fact has to be faced that the history of the past decade has been one of continual disagreement arising out of the complicated problems of interlocking company finance. There would, we suggest, be no insuperable difficulty in providing that Persia should be paid a fixed percentage of the entire proceeds of the company derived in whole or in part from oil enterprises, whether from subsidiaries or otherwise. Many definitions would call for prior agreement, but none is incapable of adjustment.

(3) In order to assure to Persia a reasonably stable oil revenue, thus obviating budgetary difficulties occasioned by the violent fluctuations of recent years, the Anglo-Persian Oil Company might well agree that receipts accruing from (1) and (2) above should never fall below a certain minimum. In return for such a concession, the Persian Government should certainly be required to scale down radically the ideas which it is now believed to hold as to the appropriate magnitude of the total revenue which it is to derive. Provisions should also be made for periodic revision of the minimum, and it would be desirable to have a "cumulative" arrangement whereby payments made in excess of (1) *plus* (2) in order to make up the minimum in any year would operate in reduction of subsequent claims in years when (1) *plus* (2) actually exceeded the minimum.

Negotiations on some such basis, conducted less with an insistence on legal punctilio than with a desire to treat the Persian Government liberally and magnanimously, would, in our opinion, even to-day have a good chance of resulting in a new concession redounding to the mutual interests both of Persia and of the company. At the same time, it is right and proper that the British Government should have made it clear that it is not prepared to submit tamely to a brusque announcement of cancellation. Not by such methods can Teheran hope to advance its own interests. The Persian Government will, we trust, not fail to remember the story of the goose which laid golden eggs. It may draw therefrom a moral very pertinent to its own position.

RAILWAY WAGES.

THE National Wages Board this week continued the hearing of the railway companies' claim for a further reduction in wages. Both parties have now stated their case, but as the railways have still to reply to the trade unions' submissions the findings of the Board will not be published until after Christmas. The railway companies are asking that the "cut" of 2½ per cent. from all earnings and a further 2½ per cent. on earnings above 40s. a week, introduced in March, 1931, should be replaced by a deduction of 10 per cent. from all earnings, with a minimum wage of 38s. per week. According to the figures produced by Sir Ralph Wedgwood, the wages "cut" made last year resulted in a saving of £3,660,000 per annum, and the present application is expected to yield a further saving of £4,600,000, making a total of £8,260,000—about £1,250,000 less than the companies asked for in March of last year.

The companies' case is based upon a very simple comparison between the enormous contraction in receipts since 1929 and the large increase in railwaymen's wages since the war. The decline in earning power is shown in the following table:—

	(£ millions.)		
	1930.	1931.	1932.
Gross receipts	196.5	180.0	164 (estimated).
Net revenue	37.7	33.3	26
Per cent. on total capital earned	3.48	3.08	2.5
Per cent. earned on ordinary stocks	2.23	0.95	Nil

As compared with pre-war days, the position of the ordinary shareholder has greatly deteriorated. Earnings on ordinary stocks, which in 1913 amounted to 5.5 per cent.—not, after all, a very extortionate figure—have declined to vanishing point. Already last year 10 per cent.

of ordinary stocks went without return, and, as the story published in the *Economist* of December 3rd shows, it is more than likely that a substantial volume of preference capital will this year go without dividend.

The position of the wage-earner has, on the other hand, greatly improved. Of the receipts of the companies in 1913, after meeting costs of materials and miscellaneous charges, 51 per cent. went to wages and salaries and 49 per cent. to capital; in 1931 the respective figures were 75 per cent. and 25 per cent. The average remuneration of a railway wage-earner in 1932 was £3 1s. 7d. per week, an increase of 117 per cent. above the 1913 figure. When the rise in the cost of living is taken into account, the increase in "real" wages, according to Sir Ralph Wedgwood, amounts to 51 per cent. Though these figures are open to a certain amount of interpretation, the picture which they present is tolerably clear.

A rough idea of the effect of the increase in wages on the railway companies' finances may be gathered from the following data:—Standard rates and charges are approximately 60 per cent. above the pre-war level, but in 1931 the cost of wages and salaries, which amounted to rather more than two-thirds of the total costs of the railways, was no less than 114 per cent. above the 1913 figure. Meanwhile the railways are being subjected to a double competition from the road and from the sea. Shipping freights have sunk to 16 per cent. below the pre-war level, and Sir Ralph Wedgwood stated that the railways had recently lost the carriage of 2,000,000 tons of coal, because the Northumberland and Fifehire mineowners, with a coastwise freight, were able to drive the Midland coal-owner out of the London market. Competition from the road is sharper than ever, and the recent decision of the Rates Tribunal declaring "flat" rates illegal is likely to involve a loss of traffic to road hauliers, who are bound by no such restriction.

Against this very strong *prima facie* case for the companies the trade unions scarcely succeeded in producing very convincing arguments. Their reply may be reduced to two main contentions, namely (1) that the 1913 figures form an inequitable basis for comparison, because railwaymen's wages were much too low before the war; and (2) that the railway companies are over-capitalised.

The first of these statements certainly contains a large measure of truth, but it is not really so relevant as it might at first sight appear to be. When the war broke out, railway wages were undeniably low; but during the period of control the railway unions succeeded in extorting from the Government wage rates and conditions of service of a highly "sheltered" kind. It was, no doubt, expected that the economies arising out of the grouping of the companies would enable these high standards, the product of optimism and inflation, to be maintained; but, unfortunately they were improved just at the time when the monopoly of more than two generations was, in fact, being undermined by the development of road transport. If we compare the increase in wages which has taken place in other industries since the war, there can be no doubt that the railway unions made full use of their privileged position to obtain a very much greater increase than their less fortunate brethren in the unsheltered industries exposed to foreign competition.

The allegation that British railways are over-capitalised is one which cannot be dismissed out of hand, though the argument against the finance of British railways stands on rather different grounds from those made by the trade union leaders. It has been assumed by railway shareholders, not only in this country, but all over the world, that railways will always be worth their cost on the basis of profit-earning power, and that if the system is kept abreast of the times, largely out of depreciation, the financial structure will be sound. Now, if it had been foreseen that in the process of time railways might be superseded almost entirely by other means of transport, it would have been prudent to provide from the outset for the writing-off of capital on the basis of obsolescence. This was not done; but, given equal terms of competition between road and rail, and efficient co-ordination between them, it has yet to be proved whether the assumption of the railway builders was not justified. It has, moreover, to be observed that if railway capital had been written

Crowns, Fmks

SKANDINAVISKA KREDITAKTIEBOLAGET

Phone Stockholm 0101

off or "redeemed," the process would inevitably have involved either higher rates and fares, which would have meant slower national development, or even lower wages. In any case this is a matter of past history, and the fact that railwaymen are in employment at all is an indication that the country is endeavouring to maintain rail haulage as an integral feature of our economic life. Even the railway workers would scarcely contend that we should suddenly presume that the shareholders should be entirely sacrificed and the system handed over as, in effect, a free gift to the community.

Unless we accept this assumption that the assets of the companies are valueless to their owners and that the railways are incapable henceforth of earning anything except the wages of those who work on them, we must pay attention to the valuation of these assets, whether we look at the matter from the point of view of cost or of replacement. In this connection, Mr Wood was able to show that out of the total railway capital on amalgamation of approximately £1,100,000,000 there was not more than £10,000,000 in excess of cash received, and he estimated the replacement cost of the present railway system at £1,672,000,000, or more than 45 per cent. more than the total capital receipts. The arguments of Mr Walkden and his colleagues on railway capitalisation were certainly not strengthened by Mr Marchbank's preposterous assertion that 4 per cent. is an extortionate and outrageous rate of dividend. Moreover, the whole line of argument really involves a *petitio principii*, for the substance of the railway companies' case is surely that the high cost of labour is one of the chief factors which has reduced their earning power. The suggestion that railway capital should be reduced to its present Stock Exchange value begs the whole question of equity between shareholder and wage-earner. The ordinary shareholder, and even, in many cases, the preferred shareholder—a numerous class by no means composed of plutocrats—has already suffered heavy losses during the past few years, and the writing down of capital would merely make it impossible for the companies to obtain on reasonable conditions the fresh capital which is required for much-needed developments.

The argument *ex misericordia*, as presented by Mr Marchbank, has rather more substance. The proposed reduction of 10 per cent. may in certain cases press heavily upon the lowest grades. A minimum wage of 38s. per week is not very high in industrial areas when the well-known housing difficulties of railwaymen are taken into account. For the mobility of railway labour often makes it difficult to secure accommodation at suitable rents. The decision of the Government to stop the decontrolling of Class "C" houses should, however, make things easier. While therefore there is something to be said in favour of fixing the minimum wage at 40s. instead of 38s., at least in industrial districts—a concession which would not really cost the companies very much, seeing that only a small proportion of the workers would be involved—it can hardly be maintained that the cut of 10 per cent. would really inflict intolerable hardship on the higher grades. When the fall in the cost of living during the last six or seven years is taken into account, the cut claimed by the companies can scarcely be considered unreasonable. If railway wages were tolerably adequate in 1925, with the cost-of-living index at 175, it is difficult to see how, with the index at 143, a cut of 10 per cent. can be regarded as an insufferable lowering of the standard of living. There is, after all, a good deal of truth in the contention of the companies that to-day the railway worker is, in fact, 25 per cent. better off than he was in the most prosperous

* *Economist*, December 3rd, p. 1019.

† *Economist*, December 10th, p. 1095.

days after the war, during the early part of 1921. It is, of course, well known that, psychologically, a cut in money wages always appears unjust to those who are forced to undergo it; but, on economic grounds, the case for it is hard to resist. It might perhaps, from the railway companies' point of view have been more desirable to leave wage rates unchanged and to attempt to make the necessary savings by altering conditions as to overtime, Sunday duty, etc., but proposals on these lines would probably have aroused even more determined opposition from the trade unions. Moreover, however strong, on general grounds, the arguments against reducing wages at the present moment may appear to be, they are not really applicable to the present case. The disparity between sheltered and unsheltered wages in this country has long been an important cause of disequilibrium, and the reduction claimed by the companies may therefore be regarded as a salutary corrective.

Finally, the plight of the railway companies if their claim is rejected will indeed be serious. Hedged in by numerous restrictions from which their rivals are wholly free, and burdened with labour costs which are irreducible, how will they be able to help themselves? With the earning power on so much of their capital gone, they must inevitably be subjected to a process of financial deterioration which can only end in their becoming a burden on the already harassed taxpayer. This gloomy prospect might indeed be changed fairly quickly by a trade revival, but in the meanwhile how long can the companies afford to wait?

THE TREND OF OVERSEAS TRADE.

THE trade returns for November show a small increase over October on both sides of the account, though the number of working days was the same. Exports were only 2.4 per cent. below those of November last year, this year's slight increase in November contrasting with a decline in November, 1931. The figures for November, and for the eleven months which have been completed, are shown below:—

MONTH OF NOVEMBER. (000's omitted.)					
	1932.	Increase or Decrease as compared with			
		November, 1931.		November, 1930.	
Imports.....	£ 61,567	— £ 21,673	— 35.2	— £ 17,865	— 28.5
British exports.....	31,094	— 2,445	— 7.9	— 12,964	— 29.4
Re-exports.....	4,060	— 907	— 22.4	— 2,788	— 40.7
Total exports.....	35,154	— 1,677	— 4.6	— 15,752	— 30.9
Excess of imports over total exports.....	26,413	— 19,996	— 43.1	— 2,113	— 7.4

JANUARY-NOVEMBER. (000's omitted.)					
	1932.	Increase or Decrease as compared with			
		1931.		1930.	
Imports.....	£ 642,575	— £ 142,643	— 22.2	— £ 312,651	— 32.7
British exports.....	332,541	— 24,445	— 7.3	— 199,453	— 37.5
Re-exports.....	46,781	— 11,718	— 25.0	— 34,956	— 42.8
Total exports.....	379,322	— 36,163	— 9.5	— 234,409	— 38.3
Excess of imports over total exports.....	263,253	— 106,480	— 28.8	— 78,242	— 29.3

While imports were less than three-quarters of their value last November, when the figure was artificially inflated by "forestalling," it is satisfactory that less than one-tenth of the fall was due to diminished imports of raw materials; of a reduction of about £21½ millions, £15½ millions was due to reduced imports of manufactured goods. Though imports of raw materials over the eleven months' period are down by £6 millions, imports of textile materials have actually increased. The following are the quantity figures for certain leading materials:—

RETAINED IMPORTS. (January-November.)			
	1930.	1931.	1932.
Iron ore and scrap..... tons	4,102,890	1,963,108	1,748,117
Sawn soft timber..... loads	4,433,414	3,951,610	3,913,938
Raw cotton..... cents	9,480,421	8,528,428	10,528,935
Sheep and lambs' wool..... cents	4,375,632	5,158,503	5,358,606
Wet hides..... cwts.	573,117	679,868	783,141
Crude rubber..... cents	2,415,154	1,809,230	1,058,152

The increased imports of raw cotton and wool are accompanied by an improvement in exports of textile products which in some instances, as the table below shows, have more than recovered the 1930 level. Figures for other articles, however, are not so reassuring:—

SOME LEADING EXPORTS. (January-November.)			
	1930.	1931.	1932.
Coal..... tons	50,632,504	39,122,250	35,810,180
Pig iron and ferro-alloys..... tons	297,867	188,455	111,468
Tinned and terne plates and sheets..... tons	480,017	358,860	430,994
Railway material..... tons	379,425	187,232	92,857
Total iron and steel manufactures..... tons	2,988,381	1,805,631	1,724,679
Machinery..... tons	446,720	298,896	280,332
Cotton yarns..... lbs.	125,063,600	118,592,400	129,920,200
Cotton piece-goods..... thous. sq. yds.	2,276,612	1,566,549	2,002,213
Woolen yarns..... lbs.	29,454,100	27,145,900	29,121,400
Woolen piece-goods..... thous. sq. yds.	74,121,200	51,513,900	48,913,200
Linen piece-goods..... sq. yds.	57,248,400	59,821,900	59,626,600
Leather boots and shoes..... doz. prs.	854,132	635,733	595,351
Motor-cars and chassis..... number	27,509	21,591	34,925
Locomotives..... tons	48,243	19,784	2,931

Motor-car exports have recovered substantially, but exports of locomotives and other railway material, as well as of iron and steel manufactures in general, continue to be disappointing. Certain other groups of manufactures, of which it is impracticable to give quantity figures, were exported to a greater value in the first eleven months of this year than in the corresponding period of 1931. These include cutlery, hardware and instruments; chemicals, drugs, dyes and colours; and paper and cardboard.

While, on the one hand, there have been developments during the last few months which render the eleven months' figures, taken *en bloc*, an unsatisfactory basis for study, it is, on the other hand, useless to examine the trade returns one month at a time, as the results are confused by seasonal influences. In order to eliminate as far as may be this difficulty we have constructed the following table, showing a twelve months' moving average of imports and exports:—

AVERAGE MONTHLY IMPORTS AND EXPORTS. Twelve months ending—		
	Imports.	British Exports.
	£	£
October, 1931.....	72,627,446	33,978,229
November,	72,944,775	32,962,074

When the influence of seasonal factors is thus eliminated, it appears that imports have declined without a break from one twelve-month period to another since the period ending with last February, and the decline during those nine months has amounted to some 16 per cent. Exports, on the other hand, have declined much more slowly, with occasional upward flickers, and were only 5 per cent. lower in the last twelve-month period than in that which ended last February. Thus, in spite of the drastic curtailment of our imports, we have been managing, in recent months, seasonal influences apart, to keep our exports in the neighbourhood of £80 millions. While this is no sort of satisfactory figure for a country which lives by its exports, it would still be reassuring if it could be taken to represent an absolutely "cast-iron" minimum which we could count on selling, whatever our commercial policy, because the world could not get on without it. This may indeed be the case, and we should be very glad to think so, but another less

satisfactory explanation is possible. The great depreciation of the sterling exchange throughout the past fifteen months has given a continuing stimulus to our exports—limited, however, by the depressing reactions which this has caused to the world as a whole. Not until we know the conditions that will obtain when the pound is steady shall we be able to gauge whether British exports have really touched bottom.

WAR DEBTS—A POSTSCRIPT.

IN the rapid series of diplomatic interchanges between London and Washington on the subject of war debts, the Note of the day before yesterday has tended almost immediately to pass into the region of ancient history; and since the essence of wise policy in this problem is to look constructively towards the future rather than to revert argumentatively to *choses dites*, we are not inclined to occupy much space in amplifying the brief comments, which were all we could make in our last issue, on the American Note delivered on December 7th in reply to the reasoned statement of the British case both for radical revision of the existing debt obligations and the suspension of the instalment which fell due last Thursday. Nevertheless there are certain points in this Note from Mr Hoover's Government which seem to us to demand a brief reference in retrospect, lest it be thought in America that public opinion in this country accepts without demur the arguments therein employed.

The major points at issue may conveniently be considered *seriatim*:—

(1) In its Note of December 1st, H.M. Government had very properly reminded America that "the system of war debts was called into being by the war requirements of the belligerent nations . . . (which) could only be financed by means of loans from the producing countries . . . taken, not in the form of money, but in the form of goods." To this the reply of the American Note is that of the amounts expended in the United States by America's debtors during the war, less than one-third was spent on munitions and remounts, and that very large amounts were spent on food, tobacco, cotton, etc., in addition to the fact that part of the credits were utilised outside the United States. Moreover, a portion of the credits were given after the Armistice, representing relief loans and surplus supplies sold on credit. On the strength of these considerations the American Government traverses the implication of the British Note that the war loans differ from other normal forms of international lending in that they were devoted to expenditure on "destruction."

Thus stated, the American argument has little substance. As regards the periods of hostilities, it is impossible to distinguish logically between steel purchased for the manufacture of shells and food and clothing purchased for the maintenance of the armies in the field and the civilian population supporting the armies. All such purchases were made for the common purposes of the war. In so far as this country is concerned, we had to procure food and raw material on credit from America because our industries, whose exports would normally have enabled us to pay for our needs, were entirely engaged in supplying our own armies and those of our Allies with munitions and other war requirements. The proportion of the credits expended otherwise than in the United States—*e.g.*, in purchasing Argentine grain—was comparatively small, and in any case formed part of the concerted war effort. The fact remains that whereas America's loans to the Allies between April, 1917, and the Armistice totalled \$7 billions and her post-Armistice loans and sales of surplus stores on credit somewhat over \$3 billions, the Allied war purchases in the United States amounted, in 1917-20, to nearly \$12 billions. The goods purchased were sold at war-inflated prices—our imports from America in 1918 cost us treble their 1932 value—and large profits were made by American suppliers, to the benefit indirectly of the United States Treasury's tax receipts. Moreover, of the post-Armistice credits the greater part—in the case of Britain almost the whole—was utilised in winding up contracts for war supplies which obviously could not be

terminated abruptly on November 11, 1918. Finally, it is pertinent to recall that, excluding America's advances to the new countries created by the Treaty of Versailles, the amount of her receipts on war debt account to date, namely, \$2.6 billions, represents the repayment, without interest, of nearly the whole of her post-Armistice loans.

(2) The American Note next suggests that the British Government in its statement of December 1st exaggerated the difficulties of transfer. It points out that, in the period 1924-30, United States debt receipts totalled \$1,673 millions, whereas American tourist expenditure abroad amounted to \$3,900 millions and immigrants' remittances to \$1,495 millions net. The further observation is made that "in measuring the transfer question account must be taken not only of trade directly with the United States, but of the whole area of international dealings."

Here again, we find the American arguments singularly unconvincing. No considerations of the obvious fact that trade cannot be regarded as merely bilateral can serve to eliminate the difficulty that the ultimate creditor must have an import balance if transfers are to be effected; and American tariff policy has been consistently directed towards preventing an import balance arising. There is no disposition in this country to overlook America's "invisible" imports in the shape of tourist expenditure abroad, etc., but the fact remains that, as we pointed out in our recent supplement dealing with War Debts, when all allowance is made for "invisibles" on both sides of the account, America had a credit balance *vis-à-vis* the rest of the world of some \$5 billions in the nine years 1922-30, in the course of which she received some \$2 billions on war debt account; and the impossibility of war debt transfer was not disclosed in that period only because of the fact that America's net lending abroad on private account during that period, namely, \$4.3 billions, bridged the gap—save for \$700 millions which were paid to America in the form of gold.

(3) The British contention that the repayment of war debts has led to maldistribution of gold and consequently contributed to the collapse of prices is traversed in the American Note with the answer that, when war debt payments began, America's gold holding amounted to \$4,028 millions, and is to-day only \$4,338 millions; and that the most striking change in the distribution of gold is to be found in Europe's total holding, which now stands at \$6,963 millions, as compared with \$3,018 millions on January 1, 1924. It is suggested that "the distribution . . . as between the countries of Europe cannot be attributed to forces originating in the United States." Moreover, the Note argues, the causes of the present economic crisis lie generally "in much more potent forces than in these debt transactions."

On this point, let it be fully admitted that the whole responsibility for the present world depression cannot be laid to the door of reparations and war debts, still less to the latter alone. With this qualification, it would be difficult to find an economist of standing in the whole world who would dispute the view that these payments, taken together, played a dominant rôle in creating the conditions out of which the crisis of 1931 arose. To compare the present aggregate gold holdings of Europe and the United States, respectively, with the figures for 1924 is misleading, for the flow of gold from America to various Continental "gold" countries which took place following the breakdown of the gold exchange standard, represented not, as the American Note suggests, simply the withdrawal of "demonstrably temporary" deposits by other nations in the United States, but a direct consequence of the crisis itself. It is clearly open to America to argue that French reparation receipts played equally an important part in accounting for the great accretions of gold in France from 1928 onwards. But this is merely to say that reparations were as potent a disturbing influence as war debt payments. Moreover, the piling up of gold in France in 1928-31 was the result, to a great extent, not of her reparation receipts, but of the repatriation of private funds placed abroad during the preceding period of franc exchange depreciation. However deplorable may have been the effects on the world economy of this development, the

French Government is entitled to claim that whereas the United States has had a credit balance on merchandise account ever since the war, France from 1927 onwards has imported to an increasing extent more than she has exported in goods, thus accepting an obligation imposed on all creditor countries.

(4) Mr Hoover suggests that misunderstanding may arise from the British statement that "the initiative in devising a settlement of reparations was taken by the Creditor Governments of Germany at Lausanne with the cognisance and approval of the United States Government." We quite appreciate that the President desires, for domestic reasons, to make his position clear and to reassure America that he is under no responsibility for what happened at Lausanne, and did not commit America to follow on with a debt revision. But the British statement stands. It is not the fact, nor did the British Note suggest, that the United States Government approved or was specifically consulted about the actual terms of the Lausanne settlement. That settlement was admittedly made on the responsibility of the European Governments alone. Nevertheless the fact remains that after the visit of the French Premier to Washington in October, 1931, the joint *communiqué* issued by Mr Hoover and M. Laval stated that "the initiative" in respect to "some agreement" relating to inter-governmental obligations should be taken by the European Powers principally concerned. Further, Mr Neville Chamberlain pointed out in the House on Wednesday that the United States Government also indicated to the British Ambassador that "if the European Powers devised a reasonable settlement, that would be the best method of approach with a view to the revision of the war debts due to the United States of America." It is not open to the United States now to disclaim responsibility for encouraging, indeed, admonishing Europe to set its house in order by laying the spectre of reparations. If the consequences of that settlement are not palatable to the United States, that is not Europe's fault.

(5) Finally, the American Note asserts that in the debt funding settlements between the United States and her European debtors, no debtor country "set their hands to any agreement which they believed at the time did not fulfil" the policy laid down by the United States Debt Funding Commission, namely, that the settlement should take account of "the ability of the particular Government to put aside and transfer . . . the payments called for."

This is perfectly true; but it is quite beside the point. It is not given to man to foresee the future, and contracts which seemed feasible in 1923 may be demonstrably incapable of fulfilment if circumstances prove to be entirely different from those which were anticipated; and the case for change becomes unanswerable when it is proven that the contract is partly responsible for an economic cataclysm which is involving everyone in ruin.

In conclusion, we would express the hope that after this long-range bombardment with arguments which, for all practical purposes had better be left for settlement by the judgment of history, the American Government will feel satisfied that it has "had its say" sufficiently to assure the American taxpayer that his interests have not been abandoned lightly or without a due sense that America has a case of her own to state. It may be a long time before American and European opinion is in complete accord as to the rights and wrongs of the whole history of the attempt at financial liquidation of the war; but the intricacies of old controversial arguments are the worst possible line of approach towards agreement on the plain necessities of the future.

Notes of the Week.

December 15th and the Budget.—Mr Chamberlain's statement in the House of Commons on Wednesday cleared up several uncertainties with regard to the effects of the December 15th debt payment to America on both the Budget and the position of the Bank of England. The payment would, he explained, mean a deficit of £20½ millions in the Budget, but that deficit would be dealt with by having recourse partly to the saving arising

from lower rates of interest than he had anticipated on Treasury bills, and partly to the sums provided for sinking funds which were no longer required by statute on account of the rise in the value of gilt-edged securities. In view of the terms on which the British Government had stated that it was making this payment—i.e., as a capital sum on account of any future settlement—the Chancellor's policy, in so far as the budgetary treatment is concerned, is in the circumstances entirely justified.

The Fiduciary Issue.—We are less satisfied with the decision which has been taken with regard to the effects on the Bank of England's position. Mr Chamberlain announced that payment would be made in gold, as stated in the final British Note; that the gold would be provided in the first instance by the Federal Reserve Bank of New York, for whose account an equivalent sum in gold would be earmarked by the Bank of England, and subsequently shipped in such manner as might be arranged between the two Banks. The gold earmarked in London would be taken from the holding in the Issue Department and would be paid for by the Government at the current price of gold in Treasury bills. Since the gold in the Issue Department is valued at the old par value, and any profit or losses on gold dealings are dealt with in the Exchange Equalisation Account, the Bank would retain £19½ millions as the value of the purchase of the gold and £10 millions would go into the Exchange Equalisation Account, where it would remain as an asset until required for the purpose of buying gold again at the current price of the day. To offset the loss of gold in the Issue Department there would be no increase in the fiduciary issue. No request for such an increase had been made by the Bank of England and he, Mr Chamberlain, would have been surprised if such a request had been made because "it is in my opinion very essential at this time that we should not give the impression abroad either that we are careless about our resources of gold or that we want to mask the real truth or conceal anything of what is taking place." We agree with the Chancellor that there is every reason that it should be made clear to America what consequences are involved in the transfer of this instalment, but we cannot agree that a declaration that we were forced thereby to increase the fiduciary note issue—or, to put the matter another way, reduce the proportion of gold backing of our note issue—would have been "concealment." Nor do we think that it would have led foreign opinion to suppose that we were going to "inflate" the currency. There is hardly any country in the world which has a fixed fiduciary issue, and public opinion is content to leave the variations in the hands of the central bank—provided the ratio does not fall below a legal minimum. To-day our note is inconvertible and its value dependent on our monetary policy. The gold backing of our notes has, indeed, very little significance except that the more it shrinks, the less possible will it be for us to stabilise the pound. On the other hand the policy of drawing on the "banking reserve," which stood last Wednesday at £43 millions, will reduce it to a level suggestive of deflationary action to come. Indeed, Mr Chamberlain admitted that he expected to see "some rise" in the recent very low level of market rates for bills. He went on to say that he saw no reason for anticipating that any shortage of credit would result and he made the important declaration that he did not expect that the guardianship of the sterling exchange would "dictate any departure from the general line of policy"—i.e., decisively easy money—recently followed by the Bank of England on the lines of the Government's declaration at Ottawa. Nevertheless the fear remains. We do not anticipate that difficulties will arise in providing the exceptional requirements of the Christmas trade—a matter which is discussed elsewhere; but the more remote effects depend on the efforts—if any—which the Bank may feel itself called upon to make to reconstitute its "banking reserve." If no special steps are taken to do this, and we are content to await the result of our negotiations with America—which might well involve an arrangement for the replacement of this gold—the source of the gold now shipped is immaterial. But if we try to replace it—whether from India, South Africa, France or any other source—it would mean

that Thursday's instalment to the United States was not really being paid by a transfer of gold, but that we were attempting to fit it into our balance of payments at the cost of a corresponding contraction of imports other than gold. The results of this decision will require to be carefully watched by the Government, who will, we hope, not hesitate to reconsider their policy if it should appear that deflationary effects are beginning to develop. In a matter so vital, the responsibility must lie, not with the Bank of England, but with the Government of the country.

General von Schleicher Starts Well.—In domestic politics as well as in foreign affairs, General von Schleicher has made a good start. The *Prügelei*, between the Nazis and the Communists in the Reichstag on December 7th, has been atoned for by the subsequent passage, with the necessary two-thirds majority, of a Bill, introduced by the Nazis, for amending the constitution of the Reich in the matter of the appointment of an Acting President in the event of the President's death or "hindrance" from fulfilling his functions. Hitherto, the Acting Presidency has devolved upon the Chancellor of the day. The new amendment provides that the Acting Presidency shall devolve upon the President of the Supreme Court of the Reich at Leipzig—a dignitary who will possess the necessary prestige with the advantage of being, presumably, more or less neutral in the party conflict. The object of the amendment is to prevent the President from virtually appointing his own successor; and it has been supported by all parties except the Communists and the Conservatives—an even stranger pair of yoke-fellows than the Communists and the Nazis, who have sometimes been bracketed in this fashion. The Reichstag also passed a Bill, introduced by the Zentrum, which revoked Herr von Papen's measure—enacted on September 4th last by Presidential Decree—whereby employers of labour were authorised to reduce wages in proportion to the engagement of new hands. This measure has been as unpopular as it has been ineffective for reducing unemployment; and as the People's Party and the Conservatives were the only factions of the Reichstag which voted against its repeal. A more controversial question was that of an amnesty for persons convicted of political offences; but this matter was settled by compromise; and thereupon, last Friday, in the Reichstag adjourned—to reassemble, perhaps, in January. Thus the relations between the Reichstag and the new Government, at their first encounter, have passed off smoothly; and much may happen before the Reichstag meets again. In the Nazi organisation, for instance, there is something very like a split between the orthodox, led by Herren Hitler, Göring and Goebbels, who are in favour of uncompromising opposition to the Schleicher regime, and a heretical faction, led by Herren Strasser and Frick, who are in favour of co-operation. Herr Strasser seems to have got the worst of it in the first round; but the prevailing current of German public opinion is now flowing in the direction of political peace in order to give an opportunity for economic reconstruction; and it is by no means certain that Herr Strasser will not prevail over Herr Hitler in the end. It looks as if the Nazi movement were now faced with the wholesome choice of helping to reconstruct Germany or else destroying itself.

The League and Manchuria.—A full account of the proceedings of the League in the Sino-Japanese dispute will be found in the despatch from our League correspondent on a later page. Briefly, the position is that the representatives of Czechoslovakia, the Irish Free State, Spain and Sweden have presented the Assembly with a draft resolution which proposes to put it on record that "the relations between China and Japan were those of disguised war"; that the military operations undertaken by the Japanese troops "could not be regarded as measures of legitimate defence"; and that "without declaration of war an important part of what was indisputably Chinese territory has been seized by force and occupied by Japanese troops and that, as a sequel to this operation, it has been separated and declared independent of the rest of China." In the interests of "conciliation," the reso-

lution containing these plain statements has been shelved; and the Assembly, acting on the recommendation of its Bureau, has handed the whole business over to its Committee of Nineteen. The Nineteen has appointed a Subcommittee of Five to draft a resolution. The sub-committee is certainly representative, for it includes representatives of the Great Powers who want to confine themselves to the rôle of "honest broker," as well as representatives of the small States which feel that the maintenance of international law and order depends upon the vindication of the League Covenant and the Kellogg Pact. In consequence, the Subcommittee of Five is finding some difficulty in agreeing upon the draft of a resolution on which the Committee of Nineteen can act; but on one point there is no difference of opinion, and that is on the advisability of inviting the United States and the U.S.S.R. to send assessors to the Committee of Five in order to take part in the attempt to solve the Far Eastern problem. On this point Japan has not been slow to express her dissent, and China has once more declared her decision not to negotiate with Japan *à deux*. She has also resumed diplomatic relations with the U.S.S.R. after a breach which has lasted five years. We regard this as an ominous straw which shows which way the wind will blow unless the League finds the courage of the world's moral convictions.

Great Britain and the U.S.S.R.—An incident of a well-worn type between the British Government and the Government of the Soviet Union has passed, fortunately, without producing anything more serious than a storm in a tea-cup. It might have been supposed that, at the present juncture, the Soviet Government was really more sinned against than sinning as far as Anglo-Russian relations were concerned; for the British Government's action in terminating the existing Anglo-Russian trade agreement, while it was strictly within our rights, was disagreeable, if not positively unfriendly, from the Russian standpoint. The British Government, however, chose this moment to add another to their already innumerable protests against the anti-British propaganda of the Third International both in this country and in India. At the same time they demanded an apology for a ridiculous statement in the *Izvestiya* that the Foreign Office in Whitehall had instructed its agents to furnish documents, genuine or forged, to establish a connection between the Third International and the Soviet Government. Last Tuesday, it was announced in the House of Commons that this rather childish incident has happily been closed. The Soviet Government have returned a soft answer: they only take responsibility for official communications in the *Izvestiya*, and they dissociate themselves from the statements in the newspaper against which the British protest was directed. His Majesty's Government, on their part, seem content to have struck an attitude in which they have appeared in the right and the Russians in the wrong. It is to be hoped that they will now lose no time in getting back to business. Last weekend the Foreign Office published the text of a Note which it had received from the Soviet Ambassador to the effect that the Government of the U.S.S.R. accepts the proposal in the British Note of October 17th that negotiations for a new commercial treaty should be set on foot. We hope these negotiations will be pressed forward with good will and common sense on both sides, and we are glad to note Lord Londonderry's statement in the House of Lords on Wednesday that in the opinion of the British Government the market afforded by 180 million people is not one which can lightly be ignored.

The Japanese Naval Proposals.—At the moment when France and Germany have made a substantial contribution towards the progress of disarmament by arriving at an agreement on the difficult question of the German claim to equality of rights, Japan has intervened in a fashion which is distinctly unhelpful. She has put forward proposals for naval disarmament which reopen all the vexed questions settled at London in 1930 and at Washington in 1921-22—the most startling innovation being a proposal to modify the American-British-Japanese

ratio of capital ships from 10—10—6 to 11—11—8. Now the present naval ratios, together with the self-denying ordinance precluding the construction of fresh naval bases in a certain area in the Western Pacific, were expressly worked out in the Washington and London naval treaties with a view to rendering Japan immune from any possibility of attack by the English-speaking naval Powers in Far Eastern waters. This was done in order to reassure Japan that the termination of the Anglo-Japanese alliance did not imply any aggressive intentions towards Japan on the English-speaking Powers' part. The treaties left Japan navally and militarily dominant in the Far East; and, in consideration of this handsome concession, which gave Japan absolute security, Japan made a collateral agreement with the English-speaking Powers that she would not take advantage of this security in order to embark on an aggressive policy against China. This pact of non-aggression was embodied in the famous Nine-Power Treaty regarding China, which was one of the diplomatic instruments signed at Washington. Within the last fifteen months Japan has broken this treaty both in letter and in spirit; and now she comes to the British Empire and the United States with a proposal that, in these circumstances, the agreed naval ratios are to be modified in her favour. It is safe to prophesy that the proposal will not be accepted either by London or by Washington.

The World's Alternatives.—In an address to the National Peace Council last Friday Sir Arthur Salter made some wise observations regarding policy for the World Economic Conference, in respect of which, he argued, entry without a plan would mean leaving without a remedy. The objectives at which we should aim were, firstly, a world policy of controlled deflation: it was vital that the general level of prices should rise, and though monetary policy could not do everything, it could do much if it was co-ordinated. Secondly, the world's credit system must be reformed and restored—a task which involved some scaling down of existing indebtedness and encouraging a modest restarting of foreign lending, which must be better directed in future. Thirdly, there must be a reduction of tariff barriers. Britain's part should be to try to encourage and join low tariff groups and to formulate principles which would help countries to remove from their fiscal systems the tariffs which did most harm and brought least benefit. Sir Arthur concluded by remarking that the world to-day had two alternatives before it. It would either move towards a world order of peace and co-operation, or drift on towards "a system of closed preserves, of separate, opposed, and ultimately hostile economic units, regional, imperial and national." Do we intend, he asked, to utilise the gifts of science or destroy them? Do we wish to lessen distance with the advance of science or to increase it with the erection of trade barriers? Are the world's habitations to be fortresses or homes in a free society? There can surely be little doubt which answer to these questions should be given by this country even on the lowest basis of self-interest.

Canada's Textile Tariff.—Recent cables from Ottawa suggest that the reclassification, which is now being carried out, of several items in the Canadian tariff is likely to neutralise largely even the small benefits which seemed to accrue to Lancashire and Yorkshire from the Ottawa Agreement. For example, under that Agreement it was provided that woollen woven fabrics "in the gray or unfinished condition" should be admitted free if of British origin. The revised definition of "gray or unfinished" now issued by the Canadian National Revenue Department will have the effect of excluding from this category a large proportion of British woollens formerly covered by it, hence placing them in the categories subject to high rates of duty. Again, Canada made a concession at Ottawa whereby British cotton fabrics woven from yarns of counts of one hundred or more should be given free entry. Hitherto double-strand yarn has been reckoned by the Canadian Customs as equivalent

to two single strands; but a new reclassification provides that "doubles" are in future to be counted as "singles." As a result, a large volume of Lancashire's cotton exports to Canada will be placed in the highly dutiable classes. Here, surely, is a case in which friendly representations might be made by the British Government that the spirit of the Ottawa Agreement is not being adhered to by the Canadian Government.

Road Users and the Salter Report.—Further objections to the conclusions of the Salter Conference on Rail and Road Transport have been raised by the "Conference of National Organisations Interested in Road Transport," of which Sir William Lobjoit is Chairman, in the form of a statement circularised to the members of the House of Commons. Objection is taken to the proposal of Sir Arthur Salter's Conference that the taxation of mechanically-propelled road vehicles should be revised so as to yield £60,000,000 per annum. It is argued, in the first place, that the figure is an over-estimate of what will actually be spent over the next five years, and in the second place that it is inequitable to ask road users to bear the whole cost of road maintenance. The problem of estimating road expenditure is too complex to be discussed in a brief Note, but on the point of principle we are not greatly impressed by the arguments advanced. The Report of the Salter Conference, which was signed by the representatives of road transport as well as by the railway managers, decided to place the whole burden of the cost of road maintenance and of any future capital outlay on the road users, on the ground that the community value of the roads (that is, their value other than as a permanent way for road transport) could be roughly offset by the advantages enjoyed by road users as a result of expenditure by the community in the past, to which they had not contributed. Until this argument is directly refuted we think the public will remain unmoved by complaints of inequity. Further objection is taken, as was inevitable, to the "costly, complex and bureaucratic" licensing and regulation proposals, and, in particular, to the suggestion that the Minister should have power to prohibit the carriage of certain classes of traffic by road. Any form of regulation is always objectionable in the eyes of those submitted to it. As we have stated previously, we can see no reason to believe that the Minister of Transport would not use his powers with reasonable discrimination, and Sir William Lobjoit's Conference does not, and, indeed, could not, argue that no regulation of the present chaotic state of road transport is necessary. Finally, the Conference criticises the Salter Report for not proceeding to draw up a comprehensive plan for the co-ordination of road and rail transport. We have frequently emphasised that such an inquiry is urgently needed, and we believe that it should be undertaken as soon as the passage into law of the London Passenger Transport Bill sets the energies of the Minister of Transport free to be devoted to it. But the Salter Conference cannot rightly be condemned for refraining from going outside its terms of reference. Those terms did, indeed, include "division of function," but the words were used in conjunction with a "fair basis of competition." In our opinion, the elimination of the present subsidising of road transport, mutually agreed upon by the representatives of both parties in the Salter Conference, is a necessary condition for the establishment, as an interim step, of equitable conditions between road and rail.

The More Looms Agreement.—As we go to press, the Weavers' Amalgamation are considering the proposed agreement on the "more looms per weaver" system. The draft agreement, whose text was published this week, embodies a detailed price list which, after the manner of price lists in the cotton industry, is too technical to mean anything to the outside world, but which is designed to enable a weaver of average ability to earn about 41s. in a 48-hour week on six looms weaving standard cloth. Where conditions at a mill are alleged to be such that average wages fall 10 per cent. below this standard, provision is made for a joint investigation and for an increase

of wages as agreed upon by the investigators for the time being. The agreement only covers cloths made up to and including five lifts and with not more than 200 threads to the square inch, but provision is made, at a weekly wage of 45s. or 10 per cent. over normal earnings, whichever is the higher, for experiment, with not more than 6 per cent. of looms upon other cloths. The Joint Subcommittee is to continue discussions with the object of extending the agreement to other cloths. Where a weaver is employed in the mill with four or less looms running out of six under this system, he is to be entitled to a weekly wage of not less than two-thirds of his normal earnings from six looms, or not less than 28s., whichever is the higher. Provision is made for joint investigation of allegations that employers are working the four-loom system on six-loom prices, and for the payment of uniform list prices if the allegation is found to be true. This should help to remove one of the causes of the suspicion with which the weavers have been disposed to regard the system. Loom speeds are to be reduced by $7\frac{1}{2}$ to 10 per cent. of the average normal speed on the four-loom system, and it is provided that the displacement of labour shall be carried out in such a way as to reduce to a minimum the hardship involved. This proposed agreement has already been accepted by the employers, and as the Weavers' Committee intend to give a definite lead to their members in the direction of acceptance, it may be hoped that this important and thorny question has at last been settled.

Sterling and International Prices.—During the past fortnight the exchange value of sterling has recorded on balance a fractional improvement, and our index of international gold prices, after its catastrophic fall in the last half of November, has also shown a slight recovery. Our index of the sterling prices of primary produce is practically unchanged, while the complete Economist index records a decline of approximately 1 per cent.

* These figures relate to December 7th.

In the complete list of articles forming the basis of the Economist index almost the only exceptions to the general downward tendency were the prices of meat (including bacon) and copper.

"ECONOMIST" INDEX.

(1927 = 100.)

	Sept. 18, 1931.	Nov. 30, 1932.	Dec. 14, 1932.
Cereals and meat	64.5	63.8	63.5
Other foods	62.2	62.0	60.6
Textiles	43.7	49.8	48.8
Minerals	67.4	75.4	75.9
Miscellaneous	65.8	62.5	62.1
Complete index	60.4	62.3	61.7
1913 = 100	83.1	85.7	84.9
1924 = 100	52.2	53.8	53.3

It will be observed from the first of the above tables that, save for the case of Italy, the foreign indices quoted show no signs of recovery. Indeed, the United States' index dropped in the week ended December 7th in a dramatic fashion.

November Iron and Steel Production.—The latest return issued by the National Federation of Iron and Steel Manufacturers shows that there were fifty-nine turnarounds in blast at the end of November; this was the same as at the beginning of the month, for five furnaces commenced operations and five were blown out. The production of pig iron in November amounted to 267,700 tons—a figure which represents a slight increase in the daily rate. Steel production rose to 473,800 tons, compared with 439,800 tons in October. Except for February, this is the highest total registered during the year. The increase is doubtless due to the fact that recent rises in Continental steel prices have rendered Continental material uncompetitive in many products. Imports were high in October, owing to fears that the duty on iron and steel might be increased, but they fell in November to 57,900 tons, or the lowest figure reached since July, 1922. Exports of iron and steel rose from 160,400 tons in October to 170,300 tons in November. The principal item in the exports was tinplates and sheets, which amounted to 40,100 tons. Recently the rising tendency of Continental prices has sustained a check, and in several cases there have been declines of a few shillings per ton. British prices remain steady, the Board of Trade iron and steel index number (1913 = 100) standing at 104.4 for November, compared with 103.5 in October.

The American Cotton Crop.—Our Manchester correspondent writes:—At the end of last week the Crop Reporting Board of the United States Department of Agriculture published further statistics relating to the cotton crop for this season. The reports were contrary to market expectations, the information being definitely "bearish." The revised estimate of the crop was given as 12,727,000 bales, against 11,947,000 bales a month earlier. There was considerable surprise at this report, for the estimate was nearly half a million bales higher than expected. The ginning return to the end of November of 11,631,000 bales was also heavy. As compared with the previous return, the Government increased the yield per acre from 156.2 lb. to 162.1 lb., and the acreage left for harvest was stated to be 37,589,000 acres. The crop for last season was 17,096,000 bales, the production per acre being 201.2 lb. At the end of last season there was a "carry-over" of 13 million bales, so that current supplies are about 25,750,000 bales, or the equivalent of two years' world consumption at the present rate. In view of these statistics some surprise was expressed that prices did not fall after the figures were issued, but the New York and Liverpool markets kept steady; indeed, there has been a slight rise in values. Owing to the low level of prices market operators are afraid to adopt a "short" policy.

Chile's Finances.—A correspondent writes:—The recent political troubles in Chile and their effects upon an already impoverished Exchequer made it desirable for the present Government to institute a study of the position of the national finances. Following upon a preliminary examination, the Chilean Minister of Finance has issued a Report showing the position as at the end of September, 1932. With regard to the National Budget for the current year, the ordinary revenue for the nine months ended September, 1932, is placed at 346,499,838 pesos, as compared with expenditure of 412,199,167 pesos. The resulting deficit of 65,699,329 pesos is augmented to 96,699,329 pesos by outstanding payments as at September 30th of about 31,000,000 pesos. It is now estimated that the total expenditure on the ordinary Budget for this year will be 650,255,000 pesos—this figure comprising also certain items of supplementary expenditure—while the corresponding revenue is calculated at 494,500,000 pesos, thus indicating a deficit of over 155,000,000 pesos. Revealing the manner in which the floating debt has been increased to meet expenditure, the Report states that the deficit brought forward from 1931 was 357,697,000 pesos, of which 240,000,000 pesos have been met by the issue of "Cosach" Bonds to the Banco

Central, as well as by Treasury "Vales." Of the remainder of 117,697,000 pesos, as much as 65,178,000 pesos has been met by the issue of Treasury bills. The outstanding balance in this respect was therefore 52,521,000 pesos, which, added to the figure of 155,725,000 pesos mentioned above, gives a probable deficit on the 1932 Budget of 207,246,000 pesos. Extraordinary expenditure in connection with public works, unemployment, etc., totalled 118,457,599 pesos at the end of September, against which there were authorised issues of Treasury "Vales" amounting to 310,000,000 pesos; and in this respect the Banco Central had been drawn on to the extent of 190,000,000 pesos at the date mentioned. With regard to the public debt in foreign currencies, this—calculated in pesos of 6d.—totalled 2,807,778,000 pesos, or the same as at the end of August. The internal debt—mainly of a floating nature—had increased from 874,507,000 pesos at the end of August to 916,344,298 pesos a month later. The external consolidated debt of 2,430,829,000 pesos (of 6d.) does not include the unpaid interest on the external debt, which was suspended on July 30, 1931, and which now amounts to 172,606,047 pesos. State-guaranteed external loans (State railways, Hipotecario Bonds, etc.) aggregated 1,156,461,000 pesos, and the internal loans 54,978,000 pesos. Law No. 4,972 of July 30, 1931, declared a moratorium on the external guarantees, but the paying institutions have had to deposit the service of these loans in the Banco Central.

Barclays Bank (D.C.O.).—This bank operates in South Africa, the East and West African Crown Colonies, the West Indies, and other parts of the Empire, and also in Egypt and Palestine. Thus its accounts give a fairly good impression of banking conditions over a large part of the world. *Prima facie*, the following summary of the bank's position suggests that there was an expansion in its deposits during the year ended September 30, 1932; but, in interpreting the accounts, it must be remembered that one of the bank's main fields of activity is in South Africa, so that a large part of its assets and liabilities, therefore, would be expressed originally in South African currency. For incorporation in the balance sheet, however, such assets are reduced to the common denominator of sterling; and inasmuch as sterling was worth considerably more in South African pounds on September 30, 1931, than it was a year later, it follows that the items in the 1932 balance sheet have been inflated somewhat by the further depreciation of sterling. On balance, therefore, it looks as if there has really been a decline in most items in the balance sheet, quite apart from the fact that the actual sterling value of such items as call money, discounts and advances was reduced during the past year:—

	September 30th.		
	1930.	1931.	1932.
Liabilities—	£'000.	£'000.	£'000.
Deposits	62,690	68,462	71,622
Note circulation	919	781	744
Acceptances	3,975	3,559	3,544
Capital	4,975	4,975	4,975
Reserve fund	1,650	1,650	1,650
Assets—			
Cash	11,845	13,646	14,502
Call money	3,011	2,075	1,849
Remittances in transit	1,149	1,039	1,332
Discounts	14,081	13,103	12,713
Investments	12,970	14,509	18,315
Advances	25,090	29,262	27,858
Net profit	465	403	372
To contingencies	Nil	Nil	100
To reserve fund	100	Nil	Nil
Dividend—			
"A" shares	4½%	4½%	4½%
"B" shares	4½%	4½%	4½%

In short, there is ground for thinking that this bank has not been immune from the common fate of banks under existing conditions. Advances and discounts are both lower; and, as a result, the bank has had to add substantially to its investments. At the same time, trade in certain of the areas served by the bank is not too unsatisfactory in the present world circumstances, and the bank's own position remains strong. The fall in profits is not

surprising, but it is largely offset by a saving of £20,000 in provision for income tax, while the decision to transfer £100,000 to contingencies, even though partly at the cost of undivided profits, will help the bank to deal with such difficulties as arise. Any recovery in profits, of course, is dependent upon a revival in trade in the areas served by the bank.

Bank of Montreal.—As the appended summary of this Canadian bank's accounts for the past three years shows, there has been a moderate contraction in both the note circulation and in deposits subject to interest. The contraction in the note circulation is largely (but not entirely) explained by the fall in both wholesale and retail prices during the year ended October 31st last, but the decline in deposits is less easy to understand. To some extent it may represent a depletion of savings, but investment in Canadian Government loans may also be a factor:—

	October 31st.		
	1930.	1931.	1932.
	\$ mill.	\$ mill.	\$ mill.
Liabilities:—			
Capital	36.0	36.0	36.0
Reserve	38.0	38.0	38.0
Note circulation	39.7	38.0	34.1
Deposits:—			
(a) Not bearing interest	148.0	116.9	115.3
(b) Bearing interest	541.0	539.9	520.4
(c) Made by Canadian banks	2.6	1.7	2.8
(d) Made by banks elsewhere	5.8	10.4	10.3

Other securities	51.5	69.1	61.3
Loans and discounts:—			
(a) In Canada	290.9	291.1	252.1
(b) Elsewhere	42.5	23.0	17.9
Loans to public authorities	24.2	31.3	28.7
Net profits	6.5	5.4	4.7
Dividend	14½%	12%	11%

* Includes 2 per cent. bonus.

The heavy gold shipments from Canada to the United States during the past year have deprived the Canadian banks of part of their gold resources, and this accounts for the Bank of Montreal's gold losses, which incidentally have been replaced by Dominion notes, so that its total cash remains intact. A further contraction in both Canadian and external call loans is noticeable; this reflects the prevailing inactivity of Stock Exchange business. Holdings of Dominion securities are considerably higher. To some extent this is due to the falling-off in other means of employing bank resources, as witness the contraction in loans and discounts, but it may also be due to fresh Canadian Government borrowing. The decline in loans and discounts has been a common experience of banks this year. Bad trade is the most obvious explanation, but it is to be hoped that it also arises to some extent from a thawing-out of past loans of long standing. Profits have inevitably been affected by the decline in many of the bank's assets, and the decision to reduce the quarterly dividend from 3 to 2½ per cent. for the last half of the year now under review was no more than an obvious precaution.

The British Overseas Bank.—Viscount Churchill, in his address to the shareholders of the British Overseas Bank, had much of interest to say on the course of trade during the past few months. Basing his conclusions partly on the bank's own experience, he stated that the atmosphere of depression gave way to definitely more active conditions in September, with the result that since the beginning of October the bank's figures began to indicate some business expansion. Unfortunately that experience had recently not been maintained. Returning to this point at a later stage of his address, Viscount Churchill attributed the autumn revival in the commodity markets to the favourable outcome of the Lausanne Conference, and was equally certain that the subsequent check was due to prevailing political uncertainties, among

which he instanced "war debts and reparations, the nationalistic hysteria of tariff barriers, and exaggerated armaments." The centre of the problem, therefore, was the restoration of international confidence in the widest sense of restoring international good feeling and co-operation. If only this could be achieved, he was of the opinion that our economic system possessed sufficient reserve strength and resilience to be capable of working out its own cure.

Banque Italo-Belge.—The report of this institution, which operates largely in South America, states that owing to the "very appreciable" fall in the British and South American exchanges, it had been decided to convert the balance sheets of the bank's branches into francs at the rate of exchange for June 30th last—the date to which the accounts relate—instead of at par. It is claimed that this gives a more accurate view of the position, but the report admits that it makes it impossible to compare the accounts with those of previous years. In point of fact, practically all items in the accounts show substantial declines below those of 1931, and it is only fair to the bank to recognise that part of the decline is due to this cause. The report states that the results for the year 1931-32 are quite satisfactory, when regard is had to the prevailing adverse conditions in South America, which it reviews in detail. Net profits are returned at Frs. 11.2 millions, against Frs. 16.0 millions in 1930-31, and Frs. 20.0 millions in 1929-30. A dividend of 8 per cent. is proposed, against 10 per cent. in 1930-31 and 12 per cent. in 1929-30. Such results are fully as good as could have been expected.

British Textiles Exhibition.—In anticipation of the coming British Textiles Exhibition, to be held as a separate section of the British Industries Fair, at the White City, London, from February 20th to March 3rd next, the *Financial News* has published a special British Textiles Supplement, in which the articles, prefaced with a foreword by Lord Derby, the president of the Exhibition, are printed in English and in twelve foreign languages. We commend the enterprise of our contemporary in this novel experiment in multi-lingual journalism for the instruction of foreign buyers.

Overseas Correspondence.

LEAGUE OF NATIONS. Disarmament — Debate on Manchuria.

(FROM OUR CORRESPONDENT.)

GENEVA, December 13.

THERE has been a change in the turn of events. While the Assembly's early promise of firmness on the Sino-Japanese conflict had a set-back from the moment of Sir John Simon's intervention, last week's disquiet over the disarmament conversations has turned to satisfaction and modified hope regarding the prospects of a reasonable disarmament convention now that a formula has been found for Germany's return. Japan, however, has thrown something like a monkey-wrench into the machinery by her naval proposals, which, as anticipated, are directed solely to a definite increase in Japan's relative strength. If the first stage of the German difficulty has been satisfactorily negotiated, there will be an almost equally serious obstacle to be overcome in dealing with Japan's claims. The differences of principle and plan in the British, American and Japanese naval suggestions are very great, and they must not be lost sight of in the celebrations of Sunday's agreement between the five Great Powers. There are tremendous tasks ahead.

This is not to underrate the valuable progress made on Sunday, failing which it would have been difficult to see

any disarmament prospects whatever. Coming after so many months of gloom and indecision, it should not only have important political consequences but should also provide a much-needed tonic to the jaded statesmen. While no one here is unmindful of what is left to be done, there is a general feeling that a real step has been taken. The dangerous talk of closing down the Conference for several years without any substantial results has now ceased. The exact procedure is a little uncertain, but the intention is that the five Powers should meet in London about the middle of January, under the chairmanship of the President of the Conference, to consider how the agreement shall be translated into the practical clauses of a disarmament convention, and there should be no further suggestions of adjournment until the substantial reduction and limitation referred to in the terms of the agreement are achieved. The Bureau will meet again on January 23rd to hear the results of the London Conversations, and the General Commission on January 31st.

On the Sino-Japanese conflict, the central problem for the moment is whether the Assembly's Committee of Nineteen is to attempt conciliation after first framing the principles upon which conciliation should be based, or whether there should be an effort at unconditional conciliation. The Chinese have definitely insisted upon knowing within what framework any collective negotiations will be carried on. Japan, they said, had at every point refused peaceful settlement, and had declared emphatically that she would not enter into consideration of an alternative solution to that of "Manchukuo," which China would never accept. Negotiations, they urged, must be collective, must provide for an Assembly resolution pledging Members of the League not to recognise "Manchukuo" or enter into relations therewith, and must be begun upon the basis of, and be limited by, the resolutions of March 11th and the principles laid down in the Lytton Report.

There could be no mistaking M. Matsuoka's attitude. "Our nation (he said) is prepared to undergo even the severest sanctions under the Covenant of the League of Nations because they believe that it is a question of now or never." He proceeded to argue that some of the main suggestions for settlement laid down in the Lytton Report were an "absurdity," and then painted an astonishing picture of a Japan prepared to be crucified like Jesus of Nazareth but confident that, as with Him, world opinion would in the end understand.

It was only natural that most of the speakers in the Assembly debate, while showing every readiness to pursue any possible method of conciliation, recalled that there had been twelve months of this without result, and that it was of little use to continue in this direction without outlining the principles which must be at the root of any negotiations. As M. Paul-Boncour said, all efforts at conciliation would be wasted if there were not some specific basis upon which it was to be attempted, and in drawing up an outline for negotiations, the Assembly should be guided by the conclusions of the Lytton Report. A strong resolution was tabled by Czechoslovakia, Spain, Sweden and the Irish Free State stating on the basis of the Lytton Report, that Japan's action was not taken in legitimate self-defence, that "Manchukuo" is not a spontaneous expression of the will of the people of Manchuria, and that the existing conditions in Manchuria are contrary to the treaties. This disturbed Mr Matsuoka to the point of an implied threat of Japanese withdrawal, but the draft resolution, together with all the other suggestions made during the course of the debate, was referred to the Committee of Nineteen. No conclusion was reached, and a small committee, comprising Great Britain, France, Czechoslovakia, Spain and Switzerland, has been appointed to draw up some resolution in the light of the discussion. There the matter stands for the present, and everything depends upon the result.

It seems inevitable that the Assembly will have to face a decision; the attitude of Japan makes it almost impossible for them to run away from it, and Great Britain cannot forever press for conciliation in impossible conditions. Mr Quo Tai Chi, with considerable truth, declared that China was bearing the struggle far better than Japan.

Japan's economic and financial situation (he said) was growing daily worse; they were faced with a gigantic burden of taxation, and with a Budget deficit greater than in any country in the world. Bank deposits had steadily diminished, capital was flying abroad, markets were dwindling, and the burden of their adventure on Chinese soil grew daily greater. Japanese national currency had fallen to two-fifths of its value in 1931, and the two days' debate in the Council the week before was enough to drive down all stocks and shares on the Tokyo market by between five and seven points. Japanese securities and Japanese currency had fallen lower than those of China, whilst in the same period China, despite all her sufferings, had continued to grow stronger. The truth of the matter was that in the modern inter-dependent world no nation could long stand moral, political and financial and economic isolation.

The danger is that this protracted situation may lead to the issues being fought out between Japan and China in a long and disastrous struggle. So long as Japan finds comfort from Great Britain she will continue, as long as she can, to hold fast; and it would be a hazardous prediction to say that China has not the population, power and resources to stay the course. An interesting development here has been the exchange of notes between Mr Litvinoff and Dr. Yen announcing the resumption of diplomatic relations between China and Russia. Mr Matsuoka has made considerable play with the sympathetic attitude of Russia towards Japan, at the same time arguing that the sole reason why China is not completely Bolshevik is because Japan is there. The Chinese initiative in resuming diplomatic relations with Russia, on a merely narrow view, is an astute step, though Mr Litvinoff, in a statement to the Press, asserted that this in no way involved any change of relations with other Powers. At the same time, the resumption of relations between these two countries may not be without its risks if the League fails to stand by its principles, for there is always the possibility that China may in such circumstances throw herself into Russia's arms.

UNITED STATES.

Debts — Industry — Copper — Finance — Congress.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 1.

IN Wall Street the second British Note on debts made a good impression, but in this section of the country there was no great need for further argument. Wall Street has long been of the view that realities must be faced, that the debtor must be given a hearing, and that the question ought to be decided in the light of what would be to the best interests of this country in the long run and what plan would eventually bring in the most money. While outright cancellationists are in the minority in the financial district, the revisionists and those in favour of postponement of instalments are in a great majority. Most people are counting on payment, if insisted upon by Congress, of at least one more instalment, but are anxious as to the effect on sterling and commodity prices. Meanwhile, it is noted with satisfaction in Wall Street that the British Note has stuck to the principle of considering the debts of all nations at once. The tendency of some here to make a special case of Great Britain is disliked.

Uncertainty as to the debt outcome has acted as a drag on all markets, and has probably to some extent injured trade in general. In spite of the absence of external worries, the American business man has had plenty of trouble this autumn. Since the middle of October there has been a distinct slackening, no worse than seasonal in some industries, but exceeding it in others. Holiday trade has been slow in appearing in the cities, and has been non-existent in rural areas, where the recent fall in wheat and weakness in other farm products prices have further reduced purchasing power. Major industries are operating at a slower pace. The steel trade has eased to around 16 per cent. of capacity, and no improvement is

anticipated until after the turn of the year. Railroad traffic continues to decline along the seasonal slope. Motor factories have recently increased their production, but new models and not rising sales have been responsible. Output in October, as computed by the Department of Commerce, was 51,857 passenger cars and trucks in this country and Canada. For the ten months, total production was 1,262,000, against 2,278,000 vehicles a year ago. It is rumoured that the Ford works are preparing new models, but no one seems to have obtained an inkling as to what the new types may be.

The world copper conferences began this week, but a difficulty was encountered early in the proceedings with the insistence of the Roan Antelope interests upon an increase in their quota. The company, it is reported, instead of keeping to the 20 per cent. of capacity production as agreed upon a year ago, increased to 50 per cent. of capacity, and now insists on an 80 per cent. increase over the previous quota. This the other companies seem unwilling to allow, on the ground that it would imperil the whole restriction scheme. Only such American companies as have foreign mines are meeting, as this conference is under the aegis of the Copper Institute, and not Copper Exporters, as was the last. Domestic concerns wish to avoid any implication in price-fixing schemes that might involve them in anti-trust prosecutions, but that does not apply to the foreign field.

On the financial side little recent change has taken place. After a sharp reduction in excess member bank reserves in October, the tide has turned and the total now is again around \$475 millions. Since the middle of June, the Federal Reserve Bank of New York estimates, the country's gold stock has risen \$430 millions, the gain in November being \$76 millions. Money rates have been easy. In New York the principal development has been a cut of about one-half of 1 per cent. in commercial loans made direct to customers. The volume of commercial paper outstanding rose about 3 per cent. in October.

Banks have continued to build up their investment account in Government bonds, as deflation in loans continued, but more recently they have turned to the general bond market. Their Government security holdings are perhaps in some instances becoming a trifle top-heavy, important decisions must be made by the Government on wiping out the Treasury deficit, and Government bond yields are low. The Comptroller of the Currency recently published figures for banks as of June 30th last. They show that for the twelve months loans and investments for the country fell \$9,000 millions and deposits \$10,000 millions, which is eloquent testimony to the extent of deflation.

This week the Federal Reserve System reports a small drop in monetary gold stock, the first decline since last June. The cause was the usual preparations of the banks made at this time of year to provide a supply of gold certificates and gold coin for holiday purposes, and doubtless the condition will prove to be temporary. Money in circulation rose only \$13 millions, in spite of month-end operations and total Federal Reserve Bank credit outstanding was virtually unchanged.

Financial turnover this month will amount to around \$2,000 millions, including income-tax collections on December 15th and the Treasury operations. Corporate maturities foot up to \$95 millions. Interest disbursements amount to \$400 millions and dividend payments \$225 millions. It is estimated that about \$125 millions will be collected in income taxes, while the Treasury has \$600 millions in maturities to meet. However, the need of new revenues will mean, it is anticipated, total Treasury flotations at the income-tax date of \$800 millions, of which part will be in one-year notes and the remainder in three- to five-year notes. Longer-term financing will quite properly be left to determination by the incoming administration. Half the extra cash provided will probably go to the Reconstruction Finance Corporation and half to building up the Treasury's cash position.

The most recent issue of Treasury discount bills sold at a record low rate of 0.18 per cent. New financing in November sagged further to around \$80 millions, against

\$120 millions in October. Over half the November issues were municipal loans and nearly as much was in public utility refunding. Four Treasury bills issues last month totalled \$311 millions.

As the time for the reopening of Congress approaches hope is growing that enough constructive work may be done to improve sentiment this winter. The problems of the Treasury deficit and relief are outstanding. It is rumoured that President Hoover will suggest a sales tax to Congress to make good the \$1,000 millions deficit. This form of tax is generally favoured, not because it is believed intrinsically sound, but because it is the only means left of balancing the Budget, provided no drastic cuts in expenditure can be made. Best opinion is, of course, strongly on the side of heavy reduction in expenditure. Pressure on Congress from business men and others to do something real along this line will be indeed heavy this winter, as it is felt that tax relief rather than new forms of levies are badly needed. Economy guns are being concentrated on the ex-soldiers' relief expenditures, so much so that large cuts are expected in lieu of any fresh demand for a bonus. With the farmers the matter is different. If not in this Congress, at least in the next, some form of farm relief is sure to receive serious consideration. Meanwhile, the publicly expressed views of Democratic leaders on the subject of economy sound encouraging.

FRANCE.

Cabinet Crisis — Prices — Wheat — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, December 14.

AFTER an exciting sitting lasting over fifteen hours, the Chamber, at 5.30 this morning, rejected by an overwhelming majority M. Herriot's proposal that France should pay to-morrow the instalment of \$19 millions due on account of her American debt; and the country is again in the throes of a Ministerial crisis. M. Herriot entered the Chamber with a fairly certain knowledge that the vast majority of the Deputies had already made up their minds, and his task was exceptionally difficult. Prior to the sitting, the Finance Commission of the Chamber, which comprises a large majority of his own official Radical supporters and his Socialist semi-allies, had rejected his draft proposal for payment, and it was known that the Socialists intended to cast their 128 votes solidly against him.

The Premier's main arguments were that France must on this occasion honour her signature, but that she should accompany her payment of this instalment with a demand for the opening "without delay" of negotiations between America and her debtors, with a view to a fresh and final settlement of the problem, in view of the changed circumstances. He contended that France should maintain the closest liaison with Great Britain, in regard to the payment of the December instalment, in order that the solidarity established at Lausanne should not be broken. The Premier's stirring and often impassioned appeals had the sympathy of probably every member of the House, but all minds were already made up and, by a vote of 402 against 107 (with only 17 abstentions), the Government proposal was rejected. Early this morning the Cabinet tendered its collective resignation to the President of the Republic.

The majority consisted practically of the whole of the Right and of the Extreme Left of the House. The Radical Left, as usual, was split into two unequal parts, 31 voting against the Cabinet and 15 supporting M. Herriot. The fact that 10 of M. Herriot's own Party voted against him, and 11 others abstained, is sufficient to underline the unusual nature of the situation. The Republican Socialists were also divided (seven against and six for). Of the minority of 187, no fewer than 137 were Socialistic Radicals.

It is not yet possible to indicate whether M. Herriot will, as seemed likely a week ago, again "succeed him-

Have you covered the depreciation in the value of your Investments?

There is only one sure and certain method by which the depreciation in the capital value of Investments can be covered and that is by Life Assurance. To restore the value of your Estate at an expenditure of a few pounds per cent. is surely purchasing peace of mind at a cheap rate. Under the Distinctive System of this Institution you may obtain at early and middle ages a Whole Life Assurance of about £1,300 with right to bonuses for the same premium as is charged elsewhere for £1,000. Particulars and rates on application.

The Scottish Provident Institution

FUNDS EXCEED £22,000,000

self." The Premier, accepting the certainty of his defeat, warned the Chamber plainly that in no circumstances would he return to power to continue negotiations with either America or Great Britain, but that it would have to be either a Moderate, or a Socialist, who would follow him. Whether this is to be taken literally remains to be seen. Opinion in general appears to regard M. Herriot's return to power as likely.

The general (unweighted) index of wholesale prices at the end of November is 391 (1914 = 100), a drop of one point on the month, six points since the end of September, 13 since July, and 26 since November, 1931. The index for French products (29) is returned as 448, or four points higher on the month, but 27 points below the figure for November last year. The index for imported goods (16 products) is 290, representing a drop of eight points on the month, and 23 since November last year. The weighted figure, covering 126 commodities (100 = 1913), is 414, against 412 in the previous month and a mean of 502 in 1931. The weighted general index for retail prices in Paris in November, covering 34 articles of common household use, is returned as 533, representing a rise of 10 points on the month, but is 28 points below the figure for November, 1931, and 76 points lower than the mean for last year.

Simultaneously with the application of a much-discussed policy designed to maintain wheat prices, in the interest of the growers, the officially-fixed selling price of bread has been rapidly brought down. As from this week, best quality bread is to be sold in Paris at 1.75 francs per kilo, as compared with 2.25 francs in November, 1931, and 2.45 francs (highest) from April to July last year, this unusual level having been due to bad 1931 harvest prospects. The fall of the Herriot Ministry will probably render certain the expected rejection by the Senate of the proposal for the creation of a National Wheat Office for the control of bread-making cereals. It will be remembered that early last month, during the debate on the Government's plans for the stocking of wheat, the Socialists insisted that, as a first step towards wheat nationalisation, wheat market prices should be fixed by the Government and that a self-governing department should be created to deal with the country's entire supplies, including stocking, financing the growers' crops, etc. After having declared, on November 15, through its Minister for Agriculture, that a National Wheat Office was something which the Government "could not seriously envisage," the Government, on November 17th, through the same Minister, when faced with certain defeat in the event of a refusal, definitely promised that such an Office should be created, and that this would prove "an effective measure, which the Government believed would be final."

The Socialist proposal which the Radical Government thus felt compelled to accept involved the opening of a credit, under the pending Budget, for 670 million francs,

mainly designed to provide for immediate advances to growers, against the stocking of their grain, to prevent a drop in prices. The proposal adopted also provided for the utilisation of the stocked grain as cover for the increased note circulation accruing from the need to finance the farmers whose grain would be held back from the market. Experts have been denouncing the whole scheme as impracticable, and suggesting that the experience of Mr Hoover's unfortunate Farm Board experiment should be sufficient to prevent any such adventure in this country. The Farm Board, it is pointed out, endeavoured to hold market quotations at 120 cents, but had to liquidate their stocks at between 42 and 43 cents, at a cost to the taxpayers of the equivalent of some \$600 millions. In view of the proportional value of the respective crops, it is argued, the French Government, should the Socialist proposal be applied, would require some 6,500 million francs to finance it, instead of the 670 million francs the Government agreed to ask for.

Industrial production figures continue to improve. The general index for October is 95 (1913=100) (against means of 124 in 1931 and 140 in 1930). This continues the improvement of a single point per month which has been registered since the end of July. Of the nine great industries, four remain unchanged on the month (engineering, metallurgy, building and leather). The paper industry, which stood at 100 in July, went back a further two points to 94, and motor-car construction fell seven points to 398 (mainly a seasonal drop), as compared with 492 in October last year and a maximum of 657 in 1929. Textiles and extractive industries moved up three points each on the month, to 67 and 99 respectively. The improvement in the French textile industry, which touched its lowest level last April, when production was equivalent to only 53 per cent. of the pre-war volume, has moved up 14 points during the past six months, and to this extent (as in Great Britain and the United States) appears to have benefited more than other industries from recent general increases in import duties on foreign textile goods.

Bankruptcies continue abnormally numerous. "Failures and judicial liquidations" in November were 1,159, against 1,176 in the previous month, and monthly averages of 906 in 1931, 756 in 1930, and 726 in 1929. Railway receipts averaged 241 million francs daily in October (representing a decline of 6 million francs on the month), against 281 million francs in October, 1931, and means of 298,500,000 francs in 1929 and 1930. Loaded trucks in October were 50,400 daily, against 47,800 in September, 43,400 in August, and means of 53,900 in 1931 and 65,400 in 1930. Outward bound cargoes in October were 3,978,000 tons, against 4,498,000 tons in the previous month and 4,112,000 tons in October, 1931. Inward tonnage was 4,932,000 tons, against 4,714,000 tons in September and 5,095,000 tons in October last year.

Speaking generally, employment is increasing. Ministry of Labour figures, based on the monthly inquiry covering all concerns throughout the country which employ 100 or more hands, show that at the beginning of November the index figure for employment (1930=100) moved up on the month from 78.8 to 80.3, as against 90.5 in October last year. The proportion of workers on short time at the beginning of November was 43.1 per cent. of the whole, as compared with 46.6 per cent. in the previous month, 56.4 (highest) in February last, and a mean of 3.8 per cent. in 1930. The number in receipt of benefit in November was 255,411, against 303,218 (highest) in March last.

GERMANY.

Disarmament — Acts of Reichstag — Nazi Differences.

(FROM OUR CORRESPONDENT.)

BERLIN, December 13.

THE Geneva compromise on the disarmament question has been hailed by large sections of public opinion as an important success. It is, of course, recognised that its significance cannot be assessed until certain important points have been cleared up in the course of the Con-

ference, as, for example, the method of application of the principle of equality of rights; the kind of system which "would offer security for all nations"; and the question whether the principle of equality will be rendered ineffective by the imposition upon Germany of obligations which she cannot accept. A few papers criticise the agreement on these points: the Hugenberg Press, for example, characterises the Geneva announcement as a "dubious compromise," but apart from the Press of the extremist groups nobody expressly reproaches the Government with their return to the Disarmament Conference. However necessary it seemed to public opinion in the summer that Germany should keep aloof from the Conference, no reasonable German found any pleasure in this isolation.

The Reichstag rose at the end of last week, and will re-assemble when its National Socialist President summons it. That represents a success for the von Schleicher Government which was only possible because the Nazis are afraid of fresh elections. The Reichstag, before it rose, passed a number of important measures, of which one, the new law for the temporary representation of the President, received almost general assent. According to the Constitution, if the President dies or is prevented from exercising his office before the expiration of his term, he is represented "in the first place" by the Chancellor. If his incapacity lasts long his representative is to be appointed by Act of Parliament. When President Ebert died in the spring of 1925, the President of the Supreme Court was commissioned by a special Act to exercise the presidential functions until the new election. It was thus even then regarded as undesirable that the President, whose duty it is to supervise the actions of the Government, with special reference to their conformity to the Constitution, should be one and the same person as the head of the Government, even for a few months. That is, of course, far more important today, now that the President is obliged to exercise his plenary powers to an extraordinary extent, and has far oftener to consider, not only whether a given act of intervention is desirable as a matter of policy, but also whether it is in accordance with the spirit and the letter of the Constitution. The principle has therefore been laid down that the President of the Supreme Court shall take over the representation the moment that the President of the Reich is unable to exercise his office.

The National Socialists pressed for the passing of this law with particular urgency for two reasons: in the first place, they did not wish General von Schleicher to be in a position to combine the office of President with that of Chancellor; in the second place, they probably felt that President von Hindenburg would be more likely to agree to Adolf Hitler's becoming Chancellor if the possibility were ruled out of his exercising the plenary powers of the President at the same time. For the moment, however, Herr Hitler is further from the Chancellorship than ever.

The long latent conflict of leadership in the National Socialist Party has now broken out. Herr Strasser, a member of the Reichstag who has hitherto been the Nazi candidate for the office of Prime Minister of Prussia, has received three months' "sick leave" from Hitler because he wished, in co-operation with the Centre, to reconstruct the Prussian Government, and with this object in view would even have been ready to enter the Reich Cabinet as Vice-Chancellor. Herr von Schleicher is demanding—less indeed on principle than in order to force the National Socialists to share the responsibility—that the future Prussian Prime Minister shall become a member of the Reich Cabinet, and only on these terms will he withdraw the Commissioners from Prussia. That wing of the National Socialists, led by Göring and Goebbels, which at the moment exercises paramount influence upon Hitler, is not, however, willing to be hampered in its opposition to the Reich Government. Göring has therefore been substituted for Strasser as candidate for the office of Prime Minister. Göring has had an interview with the President, who apparently shares von Schleicher's point of view, and who in any case does not seem to like the idea of Göring as Prime

Minister of Prussia. Nor does Göring seem very popular among the Centre. Though the National Socialist leaders tried at first to deny the serious character of the differences of opinion between Hitler and Strasser, it has become common knowledge. At the same time, though for different reasons, the economic theorist of the National Socialist Party, Gottfried Leder, has also "gone on leave."

Among the important decisions taken by the Reichstag just before its adjournment were the passing of an Amnesty Act in favour of the instigators of acts of sabotage during the Berlin transport strike, and the repeal of the social measures contained in the emergency decree of September 4th. The clauses in question empowered the Government to alter at will all the laws which govern social insurance; labour agreements, especially wage tariffs; the protection of wage-earners and the assistance of the unemployed. The most important use which the Government made of this power was the issue of the decree of November 5th, by which they empowered employers to reduce wages below the tariff levels if they engaged additional workers. Most of these reductions were resisted by the employees, and the granting of this power was violently attacked by trade unions of every shade of opinion as a lasting danger to the structure of social policy. Probably the Government had never intended when they took these powers to use them to any great extent except to make these provisions for wage reduction. At all events, they did not attempt to do so in fact. The rescission of all that part of the Presidential decree which affects social policy, and the cancellation of the Government orders based upon it, make hardly any difference in practice. Politically, however, this gaining of their point by the trade unions is very important. Herr von Schleicher, who is tolerating this rescission and not even responding by a dissolution of the Reichstag, appears to the public to be a Chancellor with sound views on social policy. The Reichstag has, it is true, apparently been careful not to make difficulties for the Government on essential questions. The motions of the Social Democrats, the Communists and the National Socialists to give additional assistance to the unemployed during the winter, to raise social payments, and so on, have been referred to committees, which means that, for the moment, the Government retains a free hand in such matters. In the regulations relating to taxation vouchers the Government has made no changes, in spite of vigorous criticism. It is, however, not unlikely that the Government will withdraw the regulations which provide for the issue of taxation vouchers to employers as a bounty on the employment of additional workers, and will instead place the vouchers at the disposal of the communes to be used for the financing of contracts.

ITALY.

Italia Shipping Company — State and Private Concerns — Preferred Shares.

(FROM OUR CORRESPONDENT.)

TURIN, November 28.

MUCH comment has recently been caused by the change in the governing body of the Italia Shipping Company, a combine of the biggest Italian shipping companies (Navigazione Generale Italiana, Lloyd Sabaudo and Cosulich). As usual in combines where representatives of the former companies retain their places on the board of directors, there was, instead of a thorough reorganisation based on strict economies, much overlapping and subterranean rivalry. Suddenly the Genoese shipping world was startled by the news that the Duke of Abruzzi, president of the combine, together with all other directors, including such well-known names as Senators Rolando-Ricci, Biancardi and Signor De La Penne, had resigned, and in their stead a new board had been nominated, the most representative men in it being Marquess Federico Negrotto-Cambiaso, chairman of the Port of Genoa Authority, Rocco Piaggio and Giuseppe Lojaco, respectively as

president, vice-president and managing director. As the shareholders were in the dark a minute before the nomination of the new board took place, everyone saw in the change at the helm of the biggest Italian shipping company a true stroke of Mussolini policy, making for economy and strong unity of purpose.

Signor Rocco Piaggio, the present representative of a Genoese dynasty of shipowners, and one of the guiding minds of the new board, is said to be the author of a letter to Professor Cabiati (published in the August issue of *La Riforma Sociale*) in which a strong policy of reduction of the number of existing shipbuilding yards was advocated. This is, indeed, one of the crucial points of the situation. The number of active concerns is too great. Shipbuilding yards, although reduced from the maximum of 30 reached during the war to 15, are still far too many, and they must perforce work at an excessive cost. The nomination to the Italia board of first-rate men, free from political entanglements, may be the beginning of a policy of deflation in our industrial equipment. What will be the effect of this State intervention remains to be seen. For good or evil, the State is to-day interested in many private concerns, being in some instances their sole shareholder or owner, as, for example, in the Cogne Company (iron mines and metallurgy), the Idria Quicksilver Company, the Agip Oil Company, and the Miliani Paper Company. In other cases the State has an indirect responsibility, through the Istituto di Liquidazioni and other controlling agencies (such as the Sofindit). Signori Olivetti and Vassallo, the general rapporteurs to the Lower House of the State Budget, are much concerned as to the consequences of this State responsibility. They advocate the passing to the Istituto di Liquidazioni of all bad ventures and their winding-up within the shortest possible lapse of time. The granting of a new lease of life to unsound concerns would mean a regrettable use of public money.

Many good but financially embarrassed enterprises, heavily indebted to the banks, are now under the control of financial trusts, created to relieve the banks of their huge frozen assets. The Istituto Mobiliare Italiano (IMI) was to have issued debentures, with the proceeds of which the Sofindit and other similar trusts would have been enabled to pay to the banks the price of the assets bought from them. The success depended on the capacity of the market to absorb big debenture issues. That capacity is certainly not very high. As Signori Olivetti and Vassallo observe, the State Budget deficit alone has absorbed in the fiscal year 1931-32 the sum of 4,274 million lire from the market, and the requirements of the current year will be no less. Owing to the difficulty of converting at once the frozen credits of the banks transferred to the Sofindit and other financial trusts into debentures purchased by the investing public, another way was sought and a recent Cabinet Council approved of a decree authorising the issue by joint stock companies of preferred shares. The agitation thereby created in the stock exchanges may seem strange in other countries where preferred stocks are so popular. In Italy, however, shares having a prior claim to interest (simple or cumulative) or to capital are almost unknown. Moreover, in the present case, the issue of preferred shares, when approved by the Government, will take place without the equity shareholders being given the right to obtain the reimbursement of their capital, a right granted to them by the Commercial Code.

The scope for the issue of preferred shares is clearly the conversion of bank credits bearing high rates of interest into preference shares. The banks would renounce the frozen credits and acquire a privileged interest in the equity of the indebted concern, these acquiring in their turn an increased elasticity in the handling of their resources. The banks and their financial trusts hope to be able at some future time when the crisis is over to sell the preferred shares to the public. In the meantime the Stock Exchanges were unfavourably affected. Equity or ordinary shares, being the only ones dealt in on the market, were heavily marked down in all cases in which the issue of preferred shares was deemed possible, the market taking the view that the payment of preferred dividends would mean indefinite postponement of dividends on equity shares. It cannot be denied that transformation

of fixed-interest debt into preferred shares is the beginning of reorganisation. For the moment, as far as the market is concerned, the change is on paper only. It may be hoped that the present decrease in top-heavy charges of industrial concerns will be followed in better times by increased liquidity for banks and financial trusts.

FINLAND.

Short-term Debt — Money — Trade — Industry.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, November 25.

THE rapid repayment of Finland's short-term foreign indebtedness is still going on. In the course of the current year (up to the end of September) it is estimated that the total short-term foreign indebtedness has been reduced from about 2,200 to about 1,630 million marks (calculated at the par of exchange), or by about 570 million marks, 260 millions of which were redeemed between July and September. Part of the funds were obtained by exports and the rest by the use of Finland's foreign reserves. The reduction in the net amount of the short-term foreign indebtedness was about 160 million marks from January to June and over 100 millions from July to September. The net short-term indebtedness is estimated to amount at present to only slightly over 800 million marks in comparison with 3,100 millions at the end of 1929. In addition, interest and redemption have been paid regularly on the bond loans raised abroad, and small packets of bonds have also been bought from abroad.

The weak tendency of sterling since the end of October has increased the difficult position of the Finnish mark. A very large portion of Finland's income from abroad is received in sterling, while, on the other hand, a large part of the foreign indebtedness is in gold currency, so that the Finnish currency is between two fires. As it is vital that exports should not suffer, the mark has followed the pound sterling, with slightly modified fluctuations, so that all gold currencies have become dearer. The Finnish money market has therefore not grown easier, but has remained tight, especially as some internal conditions accentuated the tendency to stringency. There is a notable falling off in deposits in the Joint Stock banks and Savings banks. This is due to the consumption of savings, a phenomenon characteristic of hard times, and to endeavours to obtain a higher rate of interest than is offered by deposits, or to invest funds in real estate. The deposits of the Joint Stock banks fell off in September by 173.8 million marks and in October by 124.9 millions. Their credits were reduced simultaneously by 30.4 and 66.0 million marks respectively. The banks were therefore forced to increase the amount of their re-discounted bills at the Bank of Finland, the latter rising by 60.1 and 17.4 million marks during those months. The direct credits of the Bank of Finland also increased by 89.2 and 29.2 million marks, so that the total credits of the Bank at the end of October amounted to 1,219.6 millions, compared with 1,157.3 millions a year ago. On account of the redemption of debt already referred to, the foreign balances of the Bank of Finland have dropped to some extent, in September by 11.5 million marks and in October by 34.5 millions. The note circulation has been falling steadily, and is now lower than it has been since 1919. The ordinary cover for the notes has also decreased, and at the end of October it amounted to 54.3 per cent. of all liabilities payable on demand in comparison with 47.0 per cent. a year ago but 75.7 per cent. two years earlier. During the first fortnight in November the tendency was, on the whole, in the same direction.

The balance of trade was favourable during the autumn months, as it has been throughout the year. In October the volume of imports was 14.6 per cent. less than last year, while the volume of exports recorded a rise of 15.8 per cent. The value of imports amounted to 895.7 million marks and of exports to 470.7 millions, so that the balance of trade resulted in a surplus of exports of 75.0 million marks.

The available figures regarding economic activity in the country are fairly comforting. Trade inside the country has increased by about 11 per cent., which indicates greater purchasing power. One of the causes of this is the fairly good harvest. Several branches of industrial production have also considerably advanced since the autumn of 1931. The value of the whole industrial production during the third quarter is estimated to exceed the corresponding figure for the same quarter last year by approximately 22 per cent., only a slight part of which is a result of the rise in prices. Industry supplying the home market, in particular, has benefited by the additional protection afforded by the rise in the foreign exchanges. The sawmills have been less active, while in the cellulose trade there has been considerable expansion. Although the financial depression does not yet show signs of recovery, and although the feeling in wide circles of the population is extremely gloomy, there has been some economic improvement.

CANADA.

Unemployment — Finance — Business Conditions — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 28.

CANADA is already experiencing the full brunt of winter conditions which, beginning early, have been abnormally severe for November. If this severity persists, it will aggravate the difficulties of the unemployment problem, which is already taxing all the resources of the Federal, provincial and municipal authorities. The Minister of Labour has given a pledge that nobody will be allowed to want for food and shelter; but he admitted that in September some 800,000 people were getting some kind of public relief, and the latest employment survey of the Bureau of Statistics indicates that this number has probably now grown. According to official figures, the Federal Treasury since the Bennett Ministry came to power has disbursed about \$115 millions on special expenditure for direct and indirect relief, including loans and subsidies to provinces and industries, and the drain upon it this winter is likely to be much heavier than last; for several provinces and a substantial number of municipalities, faced with shrinking taxation revenues, are at their wits' end for money and cannot shoulder further burdens for unemployment relief.

The budgetary outlook at Ottawa becomes increasingly dark. The high tariff policy of the Government has inevitably resulted in a sharp curtailment of Customs revenue, and in the first seven months of the current fiscal year ending October 31st the yield is nearly \$21 millions behind the Budget estimate. Mr Rhodes, placing ordinary expenditure at \$369 millions and revenue on the former basis of taxation at \$319 millions, aimed by increased taxation to bring the revenues up to \$374 millions and have a surplus of \$5 millions apart from special expenditure. But in the seven months' period the Treasury, so far from securing \$30 millions of additional revenue, actually finds its receipts down by about \$7 millions, as compared with the parallel period of the last fiscal year. So, unless there is a sudden revival of trade, the Government will have to admit at the end of the fiscal year a deficit of between \$50 and \$60 millions on ordinary account. In addition, unemployment relief will absorb at least \$20 millions and about \$50 millions will be required for the public obligations of the Canadian National Railways, while capital expenditures will take some \$10 millions more. Altogether, it looks as if the Federal deficit may not be far short of \$130 millions. The recent Federal loan of \$80 millions was only disposed of with great difficulty and, speaking in the Senate recently on the railway problem, Senator Meighen, the Government leader, declared that the Federal Government had nearly reached the end of its borrowing powers. The financial plight of more than one western province is also causing anxiety, and Mr Rhodes has disclosed that up to November 8th the Federal Treasury has made advances totalling

\$37,085,778 to the four western provinces, of which Saskatchewan received \$20 millions, or more than half. Most of these advances were made to avert defaults in maturing obligations held in the United States, but in the case of Saskatchewan substantial sums were lent to defray provincial expenditures in connection with relief and other matters.

Nor are there many encouraging signs of an improvement in the business situation. The colder weather and snowfall has stimulated a retail demand for seasonal merchandise such as warm clothing, heavy footwear, rubber goods, and winter sporting equipment, but there has been a slight setback rather than a gain in industrial activity. The carloading figure for the week ending November 19th, placed at 45,950 cars, 10,231 cars below the figure for the parallel week in 1931, showed a gain of 1,674 cars over the previous week's figure, but the latter had been effected by a holiday and the index number of 59.27 in reality showed a sharp decline from the index of 63.25 for the previous week. The production of pig iron for October, 6,731 long tons, showed the first gain in output since March, being 15 per cent. over the September figure, but on the other hand the steel output, 17,102 tons, was 26 per cent. under the September total, and the output for primary steel for the first ten months of the year has only been 274,945 tons, as compared with 623,781 tons in the parallel period of 1923. There is continued dullness in the building trade and little improvement in the lumber business, but the gold mining industry is prospering and the ten months' gold output of Ontario, valued at \$38,701,345, shows a gain of \$3½ millions, or roughly 10 per cent., over the figures for the corresponding period of 1931.

The Federal Parliament adjourned on November 25th for a long Christmas recess which will end on January 30th. Its chief accomplishment was the passage of the legislation giving effect to the agreements reached at the other Conference and this task, in view of the determined opposition of the Liberals, occupied more than six weeks. The Government got the support of half a dozen Progressives for the agreements, but all the rest of the Opposition forces were arrayed against them and kept up their resistance to the last. During a discussion on the projected Tariff Board Mr Bennett explained that it would not embody specific recommendations about tariff changes and would not be mandatory for the Government, and that the British Government would have to endorse and assume responsibility for applications for hearings before it made by British exporters.

ARGENTINA.

Public Finance — Foreign Trade.

(FROM OUR CORRESPONDENT.)

November 26.

NOTWITHSTANDING the wordy war now being waged in the Argentine Press between the advocates of inflation and the supporters of the *status quo*, the general situation remains unchanged, and the Minister of Finance is as emphatic as ever regarding the necessity for adhering strictly to the principles of sound finance. It is to be hoped that he will be able to sustain this position, inasmuch as it is clearly demonstrable that there is no shortage whatsoever either of currency in circulation or of the means of payment, considered as a whole. At the close of November, 1929, notes in circulation amounted to 1,286 million pesos, whereas to-day the amount is 1,301 million pesos, while the percentage of cash in hand held by the banks has risen from 16.6 per cent. in 1929 to 24.7 per cent. at the present time.

Inflation on a scale of any importance would be a monstrous injustice. Not only would the labouring

classes, who are paid in paper, suffer immediately and severely, but a large proportion of those who have confided their savings to Argentine investments would also be hit. Moreover, the Argentine Government, and all national departments, have, in their official publications during the last twenty years, striven to the best of their ability to state all statistics in Argentine paper, even including items such as the gold holdings of the Conversion Office, their argument being that nowadays the gold peso is not sufficiently current even to be treated as money of account. Practically no firms in Argentina to-day carry any accounts in gold pesos, while a glance at the bank returns confirms this statement, for the gold holdings on October 31, 1932, were barely \$2,000,000 dollars gold, while deposits were \$400,000 gold and discounts and advances merely \$74,000 dollars gold. When it is mentioned that the paper deposits of the banks total \$3,657,583,025 paper and the discounts and advances \$3,217,426,384 paper, it will be realised that to all intents and purposes the Argentine gold peso has dropped out of commercial existence.

There is at present a growing and somewhat unreasonable anti-foreign feeling in certain quarters which appears to be fanned by those in favour of inflation. The fact that foreign interests are unanimously opposed to such a course, and wholly in agreement with the attitude of the Minister of Finance, is not, however, due to fears of the immediate result of inflation, but rather takes its rise in the knowledge that the adoption of such a course would throw Argentine progress back for at least half a century, especially having regard to the innumerable difficulties and complications which beset her external trade at present.

The recently appointed advisory Financial Committee has not hesitated to recommend a forced loan of \$700,000,000 paper, in the form of bonds to be issued at par and apportioned among all banks in Argentina to the extent of 15 per cent. of their sight deposits and 10 per cent. of their fixed deposits. Proceeds would be used to reduce the floating debt, and the bonds would be discountable with the Conversion Office, bringing down the minimum of gold cover to 35 per cent. This is but the bare outline of a scheme that has been formally drafted and presented by the body appointed to act as assessors in case of need to the Minister of Finance himself. It illustrates very clearly how imminent is the danger of inflation at the present time, and it would be idle to deny that everything indicates an increase rather than a decrease in the pressure. Budget estimates for 1933 have been published, and the total expenditure is put down at \$865,113,494 paper—an increase of \$23,700,000 paper over the figures for the current year. Practically the whole of this increase corresponds to debt service, which calls for \$320,947,805 paper. No figures showing estimated receipts have yet been published, but it has been stated that all existing taxation will be maintained, including the additional 10 per cent. on imports, and sundry new imposts applied. It is generally believed that when these estimates are discussed in the extraordinary sessions of Congress now about to be held the Deputies, irrespective of party, will refuse to consider the imposition of additional taxation; in which case there is a grave danger that Cabinet changes may take place, with results that cannot be foreseen.

Business in general is languishing. Uncertainty regarding exchange and currency possibilities reacts sharply upon the import trade, while a further drop in the prices of cereals and meat has limited export movement. For the first ten months of 1932 imports are less by 32 per cent. and exports down by 7 per cent., as compared with the values of the corresponding period of 1931. The complications brought about by protective tariffs and exchange restrictions have reduced the general commercial movement of Argentina to half what it was five years ago.

NEW ZEALAND.

Budget — Debt — Unemployment.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, October 31.

Owing partly to the fact that a special session was held early in the year, the usual session of Parliament did not begin until September 22nd, after the return of most of the Ottawa delegation. The annual Budget was introduced early in October. For the financial year ended March 31st last, revenue amounted to £22,719,733, compared with £23,068,931 in the preceding year. Customs yielded £5,900,000, or £1,700,000 less, while stamp and death duties and land tax (which had been revised), were each about £600,000 less than in 1930-31. Income tax increased by £510,000, but total taxation yielded £2,400,000 less than in the preceding year. Interest on public investments changed little and amounted to £2,868,000. Most of the departmental receipts were lower, but the Post Office profits were £940,000 higher owing partly to the higher rates of postage imposed, which have since been reduced. Revenue returns included £1,495,000 transferred from reserves.

Expenditure amounted to £24,860,552, which was £150,000 higher than in 1930-31. Debt Services, at £10,512,000, were about £400,000 lower than in the previous year, the decrease being due mainly to the agreement with the British Government to postpone payments on war debt. There was an increase of £1,119,000 in the subsidy (which has since been abolished) to the Unemployment Fund. Annual appropriations, including Departmental votes, decreased by £660,000 as a result of economies. The deficit declared by the Budget was £2,140,819, but, if account be taken of the transfer of £1,494,825 from reserves built up from accumulated Budget surpluses in the past, the shortage on the year's operations was £3,635,644. For the present year, 1932-33, the expenditure is estimated to amount to £22,507,442 and the revenue to £21,630,000, leaving an estimated deficit of £877,442. This is the first occasion on which New Zealand has budgeted for a deficit. Moreover, among the revenue items budgeted for is a transfer of £2,500,000 from Reserves. If this is omitted, the estimated shortage on the year's working exceeds £3,300,000.

Despite the unsatisfactory Budget position, no additional taxation was imposed, the Finance Minister stating that the Cabinet considered that the limits of taxable capacity were already nearly reached and that an increase in the tax burden would hamper trade recovery. The reserves drawn upon are from accumulated surpluses in the past amounting to £30,000,000. Of this amount about £6½ millions has been used mainly in the last three years, to meet Budget deficits and losses on discharged soldier settlement accounts. Another £6½ millions has been used for loan redemptions and the remainder is invested in a variety of public securities. Arrangements have been made with the banks to take up some of these securities to meet the present year's shortage.

The provision of money for unemployment relief now depends mainly on special unemployment taxation on wages and incomes being paid into a special fund administered by the Unemployment Board. This money is excluded from the statement of ordinary revenue and expenditure. It is estimated that for the present year the special taxation levied for unemployment will amount to nearly £4 millions. Last year, when the taxation was lower and a subsidy was paid from the Consolidated Fund, the receipts of the Unemployment Fund amounted to £2,439,000 and the expenditure to £2,253,000.

The reduction in estimated expenditure for the present year, amounting to more than £2 millions as compared with last year, is due largely to the recommendations of the National Expenditure Commission appointed in January last to recommend economies in public expenditure. The Interim Report recommended economies amounting net to £2,700,000, including salary and wage reductions £1,164,000, and transfer from the Highways Fund £800,000. The final report outlines a comprehen-

sive investigation of Departmental organisation and expenditure and proposes further economies totalling £845,000. Some of the economies recommended have already been imposed, others cannot be imposed immediately, but the reductions in expenditure are appreciable. They have been partly offset, however, by increases in items such as exchange on interest due overseas and increases in pensions and family allowances due to the prevailing depressed conditions.

Letters to the Editor.

A SETTLEMENT WITH AMERICA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The British Note to America, expounding the case for the cancellation or drastic curtailment of war debts, doubtless merited all the tributes paid to it as a great State document, but it revealed little practical recognition either of American psychology or of the American budgetary position, and the present *impasse* represents the inevitable sequel.

In the peculiar political situation in the United States, the over-riding need is to escape from five-thousand-word generalisations covering ground which is *terra incognita* to most American politicians, and to force, and focus, the issue by making a concrete offer, on the lines suggested in the *Economist*, on a basis which would render it extremely difficult even for the American Congress to resist. In other words, link the European debts with the United States budgetary deficit, offer a final payment adequate to bridge that deficit without recourse to new taxation, and let American legislators, in consultation with their constituents, decide, after full consideration, which is the safest policy to pursue—to accept an immediate and substantial cash payment, in final settlement, or to risk a general repudiation of all war-debt settlements, with the world-wide shock to credit and commerce which would undoubtedly ensue.

American politicians of all parties are pledged to the hilt to oppose cancellation, and no programme is worth the paper it is written on which does not make full allowance for that electoral commitment, and offer a solution which the American Legislature can accept, with honour to itself and advantage to its electorate, whose verdict is clear and recent, and cannot be set aside as of no account in devising a final settlement. Important developments, however, have occurred, even since the American elections, and of these the American Legislature, however unwillingly, will be forced to take full cognisance; the outstanding fact being that neither British nor French opinion will agree to a further payment on the present basis. Whether the justification for this refusal to pay is adequate or otherwise does not alter the fact that, in any event, the present payments will not be continued; and if default begins, it will not extend to all commercial debts without exception, but neither will it be limited to war debts, and, as a great creditor Power, America, on balance, would, in such a situation, probably be the heaviest loser. Faced with such a prospect, even American politicians might deem it advisable to revise their attitude; but it is equally clear that the initiative in formulating a definite proposal must come from this side.

The Hoover Administration cannot formulate proposals, nor can the "lame duck" Legislature by which the retiring President is nominally supported. The task remains of effecting a modification of American popular opinion adequate to enable the incoming President and Legislature to adopt a new attitude. The *Economist* has expounded "The Choice Before Britain"; but "The Choice Before America" can be made clear to the American electorate, which is unversed in world economics, only by laying before it, possibly in the form of a Joint Debtors' Memorandum, the choice between two inescapable alternatives—an immediate and substantial lump payment in final settlement, taking the form of a loan or loans issued by the debtor countries in America to eliminate all difficulties of transfer, or joint default, enforced by the proved impossibility of complying, in the new financial and economic situation which has emerged in the last two years, with the terms of an obsolete settlement. If, in such circumstances, America refused the first alternative, the position would be clear-cut, the debtor countries would escape the odium of deliberate default, and America herself would be the only loser. This being the position and the prospect, why should the debtor countries hesitate to force the issue?—Yours, etc.,

December 12, 1932.

Books and Publications.

BOOK OF THE WEEK.

CARTELS.

DR. LIEFMANN is one of the best-known students of the problem of industrial combination not only in Germany but also in its international aspects, and his small book on international cartels was translated into English some years ago. It is useful now to have in English his much larger work* dealing with the whole subject of industrial combination, together with an interesting introduction by Professor Macgregor, of Oxford, who attempts to carry the theoretical study of the effects of combination a stage further than Dr. Liefmann has carried it in his book.

To some extent Dr. Liefmann's study bears the impression of the circumstances under which it has reached its present form. Its author has been studying the problem for a great many years, and has constantly revised what he has written under the influence of changing economic conditions. Some of his chapters, particularly those which deal more generally with the economic influence of industrial combinations, read as if they were written a long while ago and have been rather amplified and modified to suit present conditions than thoroughly reconsidered in the light of more recent developments. But in general Dr. Liefmann's work has been brought thoroughly up to date, and it includes a vast mass of information, especially about the growth of the cartel movement in Germany and the post-war developments of international cartel organisation. There are also valuable chapters describing the growth of "concerns"—that is to say, of combined businesses under unified financial control, but falling short of complete fusion, and about the *interessengemeinschaft* in Germany.

On American and British developments Dr. Liefmann writes much less fully, and his work is chiefly valuable as a study of and comment upon the cartel movement rather than for its review of industrial combination in general. He writes with a strong bias against direct State intervention in industrial enterprise by way of the actual public operation of industries or services, though he fully admits the necessity which the growth of combination has brought about for a substantial measure of State regulation and indirect control. Even this necessity, however, he considers to have been exaggerated, for his view is that the power of cartels, or indeed of any kind of industrial combination, to raise prices at the consumers' expense is far less extensive than many critics of the combination movement suppose. He holds strongly to the view that prices are determined in the last resort on the demand side and not by costs of production, and that the marginal cost is set for the producer by the pressure of consumers' demand. He holds further that cartels, so far from leading as a rule to the concerted restriction of output, in the long run tend usually to increase output of the commodities which they control, both because any success which they may have in raising prices tends to bring in outside competitors who have subsequently to be included in the cartel, and because the cartel has usually a strong incentive to reduce costs by keeping its plants fully employed. He stresses, moreover, the services which cartels can render in the stabilisation of prices and employment and thus in evening out the trade cycle.

Professor Macgregor is on all these points a good deal more cautious, not to say suspicious, in his attitude. Dr. Liefmann defends the cartels, not only from the charge of extravagantly penalising the consumer, but also in comparison with trusts and other forms of industrial combination. This is largely because he holds that the cartel serves to maintain the incentives of private enter-

* "Cartels, Concerns and Trusts." By Dr. Robert Liefmann. With an Introduction by Professor D. H. Macgregor. (London.) Methuen. 21s.

prise within a system of regulated production. To all conceptions of organised public planning over industry as a whole he is strongly opposed, and indeed his defence of the cartels is based partly on the narrow limitation of their powers in these respects. Not the least interesting section of his book is that in which he surveys the cartel legislation enacted in post-war Germany, and compares the legal position of the German cartels with that of the various forms of industrial combination in other countries, particularly Great Britain and the United States. Though he is by no means a whole-hearted defender of the German cartel law, he greatly prefers the German system of regulation to the American attempt at prohibition or to the British system of withholding legal recognition from practices in "restraint of trade" without any positive outlawry of industrial combination. Throughout Dr. Liefmann illustrates his theoretical contentions with a mass of facts drawn mainly from German experience, and to anyone who wishes to understand the currents of industrial combination and State regulation of industry in post-war Germany his book is indispensable.

SHORTER NOTICES.

"The Functions of Money." By Leonard Alston, University Lecturer in Economics, Cambridge. (London) Macmillan. 5s.

Mr Alston's short book is addressed to the general reader rather than to the professional economist, and it possesses a delusive simplicity of language. The author writes well, and easily sustains his readers' interest throughout the whole of his argument, though he is inclined in pursuit of brightness to be sometimes unduly paradoxical in his method of statement. He begins with an interesting section of "English Monetary Habits," in which he puts before the reader an account of the working of the present banking system. In this section Mr Alston goes out of his way to tilt at the practice of paying interest on time deposits, for he holds that these constitute idle money held off the market by their owners and therefore incapable of breeding any real interest. This view follows from Mr Alston's contention that bank credits are created out of nothing and not by means of actual deposits placed by the customers of the bank in its custody. In Part II. he goes on to consider the changing value of money, criticising the traditional "quantity theory," and stressing the importance of monetary habits and psychological reactions in determining the level of prices. He is strongly opposed to all schemes for price stabilisation by means of any system of general index numbers, and, unlike many of his fellow economists, he believes that prices ought to be encouraged not to fall as productivity increases, but rather to move slowly upwards in order to give a greater encouragement to the development of production and gradually to amortise existing debts. He also delivers a strong attack on the policy of national economy in times of trade depression, but seems to push this to a point of unsoundness when he suggests that "when a State spends there is no less money than before," for is not this equally true—and untrue—of private spending? A third section deals with money and capital, but is much less clear and fully worked out than the other two.

PITMAN'S

AN INTRODUCTION TO INTERNATIONAL TRADE & TARIFFS

By R. A. HODGSON, B.Com.

An essential book for business men and students of modern world conditions. It treats of the problems of international trade and tariffs side by side in their proper relationship to each other, and contains much important and interesting information on the economic viewpoint of recent British experiences in tariff operation. 208 pp. 6/- net.

SIR ISAAC PITMAN & SONS, LTD., Parker St., Kingsway, W.C.2

"Statistics in Theory and Practice." By L. R. Connor. London. Sir Isaac Pitman and Sons, Ltd. 371 pp. 12s. 6d. net.

In attempting to comprise the whole theory and practice of statistics into one short book, Mr Connor has set himself a hard task, even though his theory only covers the elementary stage; but on the whole he has performed his task well. In the first part of the book, which deals with statistical method, he covers such ground as the organisation of a statistical inquiry, the collection of data, and classification and tabulation, as well as the use of the more familiar instruments of statistics, such as averages, dispersion, correlation and index numbers. We are glad that he has dealt with the preliminary organisation of a statistical inquiry, for that is a point too often neglected or scamped. At the same time we deduce from this part of the book that Mr Connor is in a position where he can often use compulsory or official power for the garnering of his data. He might have dealt more fully with the technique of the statistician who has to do the best he can with the very scanty material he can get.

The second part of the book is really a review of current statistical work, and it is here that certain *lacunae* have to be noted. For one thing, this section deals almost entirely with economic statistics to the total neglect of the vast amount of work being done in the medical field. But even in the economic field the review is incomplete. For example, the author implies that there are only three British wholesale price index numbers. In point of fact there are five, one of which, incidentally, would have given Mr Connor just that example of a chain index number that he needed to round off his theoretical comments. Again, he discusses "sensitive" index numbers, based on a few commodities. Here he has overlooked the new *Economist* gold and sterling index numbers of prices of primary materials, which would have illustrated not only this point, but also the theory of international price comparisons with which he is disinclined to grapple. Despite such omissions, however, the author has given a reasonably good "sample" of current economic statistical work, and the book provides a useful summary of both theory and practice.

"A Short History of the British Working Class Movement, 1789-1927." By G. D. H. Cole. Allen and Unwin. In one volume. 237 pp. 12s. 6d.

It is a great convenience to have between two covers the three volumes which compose this important history. The time is perhaps not yet ripe for a writing of the history of the five years which have elapsed since the first edition was completed, but meanwhile Mr Cole has given us a foretaste of his interpretation of it in his foreword to the present volume. From a brief analysis of the failure of the second Labour Government, he draws the lesson—which will not be accepted as valid by all his readers—that the Labour Party will in future have to be more clearly and decisively Socialist and that there is no future for a "gradualist" Labour Party. The trade union movement, Mr Cole suggests, will have to undergo a very considerable process of adaptation if it is to meet the profound changes in industrial conditions which have marked the development of recent years, and it will, in particular, have to become more and more political.

"The Mineral Industry of the British Empire and Foreign Countries, 1929-31." By the Imperial Institute. H.M. Stationery Office. 8s.

The Imperial Institute has done much to promote the development of the mineral resources of the British Empire by placing the experience of its technical staff at the disposal of producers and consumers. Not the least important of the Institute's work is the collection and dissemination of statistical information. Its annual statistical summary covers no fewer than 48 minerals, and shows the geographical distribution of their production, imports and exports during the past three years.

OTHER BOOKS RECEIVED.

International Trade. By Barrett Whale. (London) Thornton Butterworth. 254 pp. 2s. 6d.

In addition to a clear statement of the general theory and practice of international trade this Home University volume contains chapters on protection, commercial treaties and tariff bargaining.

Political Salvation, 1930-32. By Warden Chilcott. (London) Ernest Benn. 159 pp. 5s. net.

A reprint of articles appearing in the Press during the last two years in which the author urges the claims of national as opposed to party Government.

The Routine of a Public Issue. By Oswald M. Brown. With a Foreword by Harold G. Brown. (Cambridge) W. Heffer & Sons, Ltd. 236 pp. 7s. 6d. net.

A detailed account of the work involved in a public issue of capital by a joint-stock company.

Letters from Afar. 9d.; *The Tasks of the Proletariat in the Revolution.* 9d.; *The April Conference.* 1s.; *The Threatening Catastrophe.* 1s.; *Will the Bolsheviks Maintain Power?* 9d.; *On the Eve of October.* 9d. (London) Martin Lawrence.

The first five volumes are reprints from Lenin's *Revolution of 1917*, and the last from his *Towards the Seizure of Power*.

Days with Lenin. By Maxim Gorky. (London) Martin Lawrence, Ltd. 61 pp. 1s. 6d.

What America Owes Europe. By Francis Gribble. With a Foreword by Harold Cox. (London) Hurst and Blackett. 2s. 6d.

The author maintains that America owes to Europe more than Europe owes to the United States, giving the history of several American "defaults" as a basis for his somewhat crudely-stated claim.

Animal Industry in the British Empire. By A. N. Duckham. With a Foreword by J. O. Orr. (London) Oxford University Press. 216 pp. 15s.

An illustrated account of the methods, problems and potentialities of the Empire's livestock and dairy industries.

Business Budgets and Budgetary Control. By A. W. Willmore. (London) Pitman. 225 pp. 10s. 6d. net.

A detailed study of all branches of the subject which should prove of considerable value to all concerned with business administration.

An Introduction to the Practice of Foreign Exchange. By H. E. Evitt. With a Foreword by Alfred Hoare. (London) Pitman. 100 pp. 3s. 6d. net.

An extended reprint of four lectures delivered to the Institute of Bankers last spring.

The Stock Exchange.

NORTH METROPOLITAN ELECTRIC.

PARTICULAR interest attaches to the North Metropolitan Company because its ordinary shares are the most highly valued—on a yield basis—of any of the more important electric supply equities. More than 50 per cent. of the ordinary capital of £1,657,415 is held by the "Under-ground" group, while a further large block is understood to be owned by the Greater London and Counties Trust, whose ramifications were discussed in the *Economist* of July 23rd last, page 179. The market for the North Metro-

NORTH METROPOLITAN COMPANY'S AREA.

Boundary of Company's Area shown by thick black line. County boundaries shown by broken lines.

politan Company's shares, therefore, is more restricted than the amount of its issued capital would imply.

The Company was incorporated by Act of Parliament in 1900, and its various Acts were consolidated in 1928. It enjoys the right to supply electricity, in bulk and for power purposes, in perpetuity, over an area of 660 square miles in Middlesex, Hertford and Essex. This area extends from the northern suburbs of London to the northern

boundary of Hertfordshire. The map on this page shows the districts in which bulk supplies are being given. The distributing undertakers are the Willesden Urban District Council, the Colne Valley Electric, Harrow Electric, Hendon Electric, Tottenham Gas and Electric, and Welwyn Garden City Electric Companies, the Hitchin Urban District Council and the Bishop's Stortford, Harlow and Epping Gas and Electric Company. The last-named concern was recently acquired by the North Metro-

politan, which now owns over 93 per cent. of the issued ordinary and preference capital.

In addition to its bulk and power supplies, the Company distributes current retail, under various Lighting Orders, in the districts of Enfield, Edmonton, Tottenham, Barnet, Southgate, Kingsbury, St. Albans, Hertford, Stevenage and part of Epping Rural District. The undertakings in question are purchasable by their respective local authorities at various dates. Over the rest of its area the Company has "general powers" to distribute electricity where a supply is not already available. The table on p. 1146 shows sales of current in the Company's area in 1930, and illustrates the amount of business for which the North Metropolitan was directly responsible, as well as the comparative importance of the distribution done under its lighting orders and "general powers" respectively.

The Company was directly responsible, in 1930, for just over 60 per cent. of the total power sales, but for only 42 per cent. of the total lighting and domestic business within its area. If the sales in which the Company was indirectly interested, by virtue of its bulk supplies, be taken into consideration, the proportions were, respectively, power 88.2 per cent. and lighting and domestic 76.6 per cent. Since 1930 the Company has acquired the Bishop's Stortford Company—the smallest of the independent undertakers—but the position remains substantially unchanged. The percentage of lighting and domestic business in which the Company is directly interested

compares unfavourably with those of the Metropolitan Electric Supply and the County of London Electric Supply Companies, both of which have pursued a policy of acquiring control of the distributing companies within their areas. *Prima facie*, the North Metropolitan appears to have been somewhat less enterprising than its sister power companies in this respect. In practice, however, it is difficult to

REVENUE FROM SALES OF CURRENT, 1930.

	Revenue.	% of Total.	Revenue.	% of Total.
North Metropolitan Company—	£'000.		£'000.	
Distribution under "General Powers"	207.4	17.9	198.3	44.7
Distribution under "Lighting Orders"	278.9	24.1	72.2	16.2
Total, North Metropolitan Company	486.3	42.0	270.5	60.9
Independent Undertakers, receiving supplies from company	400.4	34.6	121.5	27.3
Other Independent Undertakers	271.5	23.4	52.5	11.8
Grand Total	1,158.2	100.0	444.5	100.0

appraise the merits of the policies pursued. Though it may undoubtedly be advantageous for a power company to control the distributing undertakings in its area—particularly when it has shown itself as successful as the North Metropolitan in developing its potential load—there is a real danger of the price of control becoming excessive. Under its "general powers" the Company is already doing a substantial business, and there is ample scope for future development. The Company may therefore be expected, in due time, to control an increasing proportion of the distribution business in its area.

In the case of all distributing undertakings, the purchase rights of local authorities are an important factor. Parts of the Company's undertaking, under its general powers, are subject to a limited right of purchase, but the rights are so restricted that it is doubtful whether they could ever be exercised. As regards lighting orders, under which more than half the Company's lighting and domestic sales are made, the purchase rights under two of the most important orders—Edmonton and Enfield—have recently become operative, and several others are apparently due for purchase in the near future. The Electricity Commissioners, however, are opposed to any multiplication of authorities or disintegration of supply areas, without strong justification. It is reported that negotiations have in view the extension of the North Metropolitan Company's tenure in these and other cases, subject to a sliding scale restriction of earnings. Whilst the scope for increased earnings in this sphere may therefore be somewhat curtailed in the future, serious adverse developments need not be expected.

The Company's sales of current have recently increased more rapidly than those of the London and Home Counties Electricity District, although the latter is one of the most rapidly progressing authorities in the country.

	Rate of Increase in Units Sold.				Proportion of Gross Revenue derived from each Class.	
	1930 compared with 1929.		Average Annual Increase since 1927.			
	North Metropolitan.	London and Home Counties.	North Metropolitan.	London and Home Counties.	North Metropolitan.	London and Home Counties.

	+9.9	...	+8.9	...	9.5	...
Total (excluding traction)	+16.0	+11.1	+18.3	+14.0	...	...

The extraordinarily rapid development of the Company's lighting and domestic load is significant both of the potentialities of its area and of the energy and resourcefulness of the "sales" side of the management. How far have increased sales been reflected in higher profits? Comparison of earnings with those of other electricity concerns is affected by the Company's practice of making no specific allowance for depreciation, but writing down plant, etc., out of substantial allocations to reserve. To obtain an approximation of net earnings, therefore, we have ventured to make a reasonable estimate of depreciation. We have also allowed for the total cost of generation, including estimated capital charges on generating plant. The following results for every year since 1928 are

shown by consolidating the figures for the North Metropolitan and its Power Station Company:—

PROFITS, 1928 to 1931.

(000's omitted.)

	Years to December 31.			
	1928.	1929.	1930.	1931.

* Including fuel, repairs and maintenance, other costs, rates, &c., on generating plant, interest and depreciation on generating plant and cost of current purchased.

† Including management, &c., rent, rates, and other costs.

‡ Including other operating revenue, non-operating income, and interest on generating expenditure charged back.

\$ North Metropolitan Company.

On this basis, the margin of undistributed earnings, though satisfactory from every viewpoint, is much less than a mere computation of published figures, without allowance for depreciation, would suggest. Our own allowances under this head are, of course, entirely unofficial, and may be somewhat on the high side, since the Company's charges for repairs and maintenance are liberal.

The fall in the rate of earnings in 1929 was a temporary feature, connected with the coming into operation of the Brimsdown "B" Station. This station belongs to the North Metropolitan Power Station Company, a wholly-owned subsidiary. It is leased to the parent company on terms providing for the payment of a rent equal to interest charges and sinking funds on the loan capital issued for its construction, and is planned for a final capacity of 150,000 kilowatts. An initial 50,000 kilowatts was completed and in operation by 1929, and a full year's rent was payable, although the increased generating resources could not be fully utilised for the time being. A further 50,000 kilowatts of generating plant has since been installed and is understood to have been put into commercial operation in the latter part of this year. The rent payable by the Company will be correspondingly increased, and there may, as in 1929, be a slight "lag" before revenue-earning capacity develops sufficiently to cover the charge.

It would appear that, despite the operation of the new station, the Company's generating costs are somewhat on the high side. In 1928 the old Brimsdown "A" and Willesden Stations accounted for the greater part of the total output was generated at the new Brimsdown "B" Station. The following tables show, however, that the total costs per unit have not yet fallen significantly under the new arrangements:—

UNITS GENERATED.					
Stations.	1928.*		1931.		Thermal Efficiency 1931.
	Units.	% of Total.	Units.	% of Total.	
Brimsdown "A" ...	Thous. 39,805	21.8	Thous. 9,097	3.6	10.28
Brimsdown "B" ...	62,800	34.4	165,714	63.4	20.73
Willesden	80,920	43.8	84,232	32.6	17.29
	183,625	100.0	259,043	100.0	...

* For 12 months ended March 31, 1929.

GENERATION COSTS.

(Pence per unit generated.)

	1928.	1931.
Fuel	0.2275	0.1805
Total running costs	0.3432	0.3021
Capital charges*	0.1534	0.1586
Total cost of generation	0.4966	0.4607

* Interest and depreciation on generating plant.

There is still scope, clearly, for increased use of the Company's present generating facilities. While, therefore, the plant which came into operation this year may not immediately earn a full return, the increase in output should ultimately produce substantially lower in capital charges per unit generated, and a decrease in the total cost of current. Possibly, geographical circumstances have much to do with the fact that the Company's fuel cost per unit generated is about 45 per cent. higher than that, say, of the County of London Electric Company, since at Brimsdown there are available neither cheap supplies of coal nor abundant supplies of water for condensing purposes.

Within the next few months the Company may have an opportunity for converting its debenture stocks, totaling nearly £1,300,000, of which £1,050,000 consists of 5½ per cent. stock and the balance of 5 per cent. stock. Both are redeemable on six months' notice at 102½ and 105 per cent. respectively. If the Company succeeded in refunding these stocks at 4 per cent., a saving of approximately £15,000 would result—equivalent to just under 1 per cent. on the ordinary capital. The Company has just placed £200,000 of £1 6 per cent. preference shares, privately, which will be available in the market at about 28s. 3d., free of stamp. The £1 ordinary shares, at 52s. 9d., yield £3 16s. per cent.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
December 20.

ACCOUNT.
December 22.

THE War Debt discussions, culminating in Thursday's payment, had a mixed effect on the market. Although sterling was firm, the announcement that the fiduciary issue would not be increased, and Mr Chamberlain's forecast of higher bill rates caused a slight reaction in the Funds on Thursday. The November trade returns were favourably received, but the approach of the holidays discouraged business, and most markets, though steady, were quiet.

Gilt-edged stocks strengthened in the earlier part of the week. Old and New Consols were in favour, and Local Loans were active. War Loan, Funding and Victory Bonds were all better on Wednesday. The market, however, was quiet on Thursday, with an easier undertone. Long-dated India stocks found fresh support, and Dominions issues were well maintained, with Australians in the forefront of the market.

Foreign bonds were stronger at the outset, but easier on Thursday. German issues improved on the country's re-entry into the Disarmament Conference, and Austrians strengthened on the report of steady progress in financial reconstruction. The market became easier on the fall of the French Government. Brazilian bonds showed initial strength on the news that coffee planting had been forbidden for the next three years, but Argentine stocks weakened on reports of a possible funding plan. Japanese declined after an early rise.

In the Home Rail market a recovery occurred in Metropolitan, the preceding fall, due to nervousness over the Passenger Transport Bill, having been overdone. Traffic movements of the "Big Four" were a little below expectation, but comparison was made with an unusually good week of 1931. London, Midland and Scottish stocks lost

ground on the directors' decision to defer first preference dividends till February. Business in foreign rails was practically confined to the Argentine group, where price movements were irregular. Among Brazilians, Leopoldina were firm.

Industrial shares were quiet, business being restricted by the approach of the holidays. Coal shares were in demand from the provinces, and Horden Collieries rose smartly, though profit-taking occurred later. Electrical shares were favourably regarded, investment inquiry for supply issues being encouraged by the success of the Midland Counties debenture offer. Tobacco shares improved after a shaky opening, Carreras being well supported. Brewery shares were steadier, though Allsopp reflected disappointment over the lower profits and dividend. Woolworth continued to gain ground on expectations of an increased dividend and a share issue with "rights." Turner and Newall advanced, the preliminary profit figures (set out on page 1152), being above market expectation.

Attention in the Oil share market was centred mainly on the Anglo-Persian position, the market welcoming the Government's decision to refer the controversy to the League of Nations. News of agreement at the Paris Conference had little effect on share values. Rubber shares were lifeless, the week being the quietest experienced for many months. Such movements as occurred were adverse. Tea shares failed to maintain a slight improvement on Tuesday. Mining shares were very quiet at the outset, though Sub Nigel continued to recover lost ground. On Tuesday, however, business improved in the West African and West Australian markets, Lake View and Star and Wiluna being active. On Thursday, "Kaffirs" came into the picture again, Randfontein being in special request. Base metal shares were depressed by the recession in tin and copper prices—the latter reflecting the break-up of the Copper Conference (discussed on page 1153), and the pessimistic views of Sir Auckland Geddes as regards the prospects of a new producers' agreement.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The market did not anticipate a French debt default. Wednesday's news from Paris accentuated the feeling of uncertainty which had previously restricted business. The attitude of Congress is anything but helpful. It has been reluctant to consider President Hoover's economy programme, and finds difficulty in making up its mind over the adoption of a Beer Bill. Another influence making for stagnation has been a clause in the new income tax provisions which disallows losses on sales of stocks which have not been held for two years. This stipulation, on the other hand, may reduce "tax selling" at the end of the year. The number of daily share transactions remained well below the million mark until Wednesday, when the market closed stronger after a more active day, advances being recorded by leading issues like Steel, Telephone and some of the better utilities. The movement, for the most part, was spontaneous, but did not appear to have a great deal behind it. Business advices are slightly more favourable, though steel activity is running only at 16 per cent. of capacity. Christmas trade, however, is slightly better than had been expected, and may not involve a full seasonal increase of money in circulation, which rose during November only from \$5,627 millions to \$5,647 millions. Car loadings for the week ended December 3rd, at 547,461, showed an increase of 53,761 as compared with the previous week. Unfilled orders of the U.S. Steel Corporation at the end of November totalled 1,968,301 tons, a decrease of 28,739 tons during the month. Railroad receipts continue slowly to improve, but discussions for further wage reductions have made no headway. Plans are being discussed for farm relief based on a tax on domestic sales of produce to provide a fund for compensating farmers who reduce their acreage. It is doubtful, however, whether legislation on these lines has any hope of passage during the present session.
