- 2-hour session.

PARIS.

Contrary to expectation, the decision of the Chamber against payment of the American Debt instalment had only a slight effect upon the market. French rentes had a moderate setback, but semi-official support was forthcoming, and all offerings were quickly absorbed. Banking and railway shares lost ground fractionally. A sharp fall in copper adversely affected Rio Tinto. All sections of the market were strong on Thursday.

BERLIN.

BERLIN. After a bright opening, based chiefly on the disarmament agreement at Geneva, the Berlin Bourse became heavy on the uncertain tendency in Wall Street and the shortage of money consequent on the approach of Christmas. The defeat of M. Herriot also caused buyers to hesitate. Fixed-interest securities, however, were steady, and electrical shares improved, both Siemens and A.E.G. being marked up. Reichsbank, however, had an easier tendency. Mines were weaker for the most part, Hirsch declining slightly, though Rheinische Braunkohlen were in fair demand.

AMSTERDAM.

An optimistic tone prevailed at the opening, but events in Paris caused a sharp setback to sentiment. Business remained on a very small scale. Tea shares, exceptionally, rose a few points on the Dutch restriction decision. Among industrials, Unilever N.V. were well maintained on the appreciation of sterling. Royal Dutch were steady at the beginning of the week, but lost ground later.

OTHER CENTRES

" War Debts Week " passed without materially affecting most of the minor European Bourses. Brussels reacted after early firmness, occasional rallies failing to prevent irregularity at the close. Conditions were irregular at Budapest and Milan and easier at Stockholm.

INVESTMENT NOTES.

Building Societies and the Housing Act.—The Government's new Housing Bill, whose terms we discussed last week (see the *Economist*, December 10th, page 1075), gives the building societies practically all they asked for in the report submitted by the Housing Committee of the National Association to the Minister of Health at the end of October. The subsidy goes, and the societies obtain, for the last 20 per cent. of a 90 per cent. advance, the joint guarantee of the Government, the local authority and the building society concerned. Undoubtedly, the new opportunity will be welcomed by many Northern societies. The inception of the plan is credited to Mr Walter Harvey, of the Burnley Society, who was warmly supported by Sir Enoch Hill, of the Halifax Society. Whether it will be as enthusiastically taken up by the Southern and, particularly, by the Metropolitan societies, is an open question. There may still be wider scope in the South than in the North for activity in the field the building societies know best—the making of advances to owner-occupiers of houses costing from £600 to £1,200. That this business has not been quiescent, even under the somewhat exceptional conditions of the last twelve months, is suggested by the report of the National Building Society, the majority of whose business is done within a twenty-mile radius of London. During the twelve months to October 31st last, the net new subscriptions (less withdrawals) received by this society were £3,638,000, a decline of no more than 6½ per cent. from the previous year's figure of £3,881,000. Although new advances showed a larger proportionate decline, at £4,257,000, against £5,255,000 in the previous year, the total was, in fact, the highest in the society's history apart from the "record" figure of 1931. The returns of the Northern societies, and of the London societies with nation-wide operations are likely to show a more considerable falling off. The making of advances on properties valued at between £300 and £400 will have obvious social significance, but will definitely mark a new departure in building society technique. The "risk factor," undoubtedly, will be higher, and in other ways the movement will have new lessons to learn. Before the Bill reaches the Statute Book, it would be useful for acknowledged leaders of opinion within the movement, who have hitherto been chary of voicing criticism of the proposed new departure in public, would make a reasoned statement of their view. That the whole movement will sympathetically examine the practical possibilities, in the light of its serious national responsibility as an active agent in housing under the new Bill goes, of course, without saying.

Stock Exchange Education.—Sir Archibald Campbell, chairman of the Stock Exchange Committee, in his speech which followed the distribution of prizes and certificates awarded by the Stock Exchange Committee in connection with their evening classes, was presumably thinking in national rather than Stock Exchange terms when he emphasised the distinction between education and culture. The standard of culture is high among members of the great institution which Sir Archibald adorns, but every profession demands the highest skill and specialised knowledge from its practitioners. The excellent tuition given by bodies like the London County Council and the Business Training College is valuable precisely because its recipients must one day shoulder their burden of responsibility in the affairs of an institution whose importance, after all, is national. Sir Archibald, nevertheless, was right in stressing the importance of inculcating high moral

standards as well as professional skill in young men who adopt the Stock Exchange as a career. We rejoice to learn that the classes, admirably devised for their purpose, are being well supported. The older type of student, however, seems to be lacking in enthusiasm. This is unfortunate, as much of the work in the advanced classes is of a nature to appeal chiefly to the more mature mind.

Lower Brewery Profits.—The effect of reduced purchasing power and higher taxation on beer consumption is revealed by the fact that, for the year to September 30, 1932, the number of standard barrels of beer charged with duty fell from 17,412,000 to 13,610,000, or by nearly 22 per cent. Brewery companies whose results for the same period show a decline in profits of less than 20 per cent. may, therefore, be congratulated either on good fortune or good management, or both. In the following table we show the latest results of fifteen representative breweries. Seven disclose a reduction of 20 per cent. or more in earnings, and thirteen have reduced their dividend. In the aggregate, net profits show a decline of 20.5 per cent.

† Tax free. ‡ 15% tax free.

A certain correlation can be discerned between brewery profits and trade depression. Companies with a wide area of distribution or a trade localised in the South reveal, in general, the greatest powers of resistance to declining earnings. Thus Bass, Benskins (of Watford), Fremmins (of Maidstone), Ind Coope (of Romford), H. and G. Simonds (of Reading), and the Stroud Brewery have done relatively well. In view of the improbability of any early reduction of the beer tax, the immediate course of profits may depend on further rationalisation of brewery technique in accordance with a régime of reduced output.

Industrial Profits in November.—During November we received 173 company reports, aggregate profits showing a decline of 2.69 per cent., compared with a rise of 19.99 per cent. in October. Comparison, in all cases, is made

with the figures of identical companies in their preceding financial year. The following table shows the number of reports received each month since July, 1931, together with the monthly variation in net profits after payment of debenture interest :—

Reports Published in	No. of Companies.	Rise or Fall in Profits.	Reports Published in	No. of Companies.	Rise or Fall in Profits.
1931—		%	1932—		%

November ...	147	-35.59	July.....	152	-34.31
December....	157	-68.54	August	69	-26.66
1932—			September ..	82	-15.69
January.....	127	-19.65	October	123	+19.99
February.....	211	- 6.81	November....	173	- 2.69

The rise recorded in October was due, as we explained last month, to the favourable results of a few large companies. The November figures are dominated by a single concern, United Africa, which achieved in its latest financial year a profit of £81,673 against a loss of £1,288,123 in the previous year. Improved results were also shown by Tate and Lyle, Trinidad Leaseholds and Tobacco Securities Trust, while lower earnings were recorded by P. & O., British India Steam Navigation and Daily Mail Trust. Nineteen breweries showed an average drop in net earnings of 26 per cent., while five motor concerns had an aggregate loss of £858,000, against a debit of £98,000 in their previous accounts. The income of investment trusts continues to fall, nineteen of these companies issuing reports last month showing a 36 per cent. decline in profits.

Royal Mail Report.—The report of the Royal Mail Steam Packet Company for the year 1931 is interesting as a historical document, but has little immediate significance. From the viewpoint of creditors under the three-year moratorium, there is partial reassurance in the disclosure that the company made a profit on voyages last year of £29,536, against a loss in 1930 of £371,692—before provision for depreciation in both cases. Rents and other receipts bring gross profits up to £138,907, which was £95,174 short of the year's outgoings, largely because the company was required to pay interest on its 5 per cent. debenture stock for the first half-year. Under the scheme of arrangement sanctioned last spring, this interest is now contingent on profits. Unless depression has reduced receipts this year below those of 1931, the company will at least clear its outgoings, but will have very little for depreciation. The debit balance of £414,796 brought forward is increased to £509,970, to which £149,908 is added for interest obligations (including £94,000 to the International Mercantile Marine), of which payment is deferred under the scheme of arrangement. The balance sheet figures remain at the old levels, with a directors' note describing the valuation of assets as excessive. The Royal Mail Company's vessels have now been transferred to the new operating company, sanctioned under the scheme of arrangement, which was registered on August 4th last, under the title of Royal Mail Lines, Limited. Creditors can merely continue to exercise the supreme virtue of patience, for it is clear that any amelioration of their position demands a world-wide trade revival. It has yet to be seen whether such a movement will have gained decisive momentum before the three-year moratorium expires. Stockholders, meanwhile, have a purely platonic interest.

Waring and Gillow—New Company.—Particulars have been published relating to Waring and Gillow (1932), which is to take the place of its unfortunate predecessor. The business and assets of the old company have been purchased by Mr Ivan C. Sanderson, who has taken £1,573,000 in debentures and preference shares of the new company, which has a share capital of £920,000, divided into 150,000 10 per cent. non-cumulative first preference shares of £1, 380,000 7 per cent. non-cumulative redeemable second preference shares of £1, and 390,000 ordinary shares of £1. Mr Sanderson is offering

the old shareholders of Waring and Gillow the 150,000 first preference shares at par, each shareholder taking up one new preference share and receiving two £1 ordinary shares, fully paid, as a bonus. Shareholders will subscribe to this issue purely as a gesture of faith. No less than £993,000 of debenture stock ranks before the 10 per cent. preference shares. The profits of the old company, before charging income tax, debenture service and interest on loans, depreciation, etc., have varied from £223,000 to £45,720 during the past seven years. In the last three years, apart from non-recurring expenditure, the profit and loss account has shown a profit of £80,612, a loss of £76,723, and a profit of £45,720 respectively. Debenture interest now requires £60,510 per annum, so that on the basis of recent earnings the cover for the £15,000 dividend required by the 10 per cent. preference shares is not impressive. Economies of £150,000 per annum have been introduced since November, 1930, but these were effective during the last trading year.

Carreras.—That Carreras were able to increase their trading profits at all in a year of intense competition is something for which shareholders should be grateful. It is well-known that the sales of the popular brands of both Imperial Tobacco and Carreras have suffered from the competition of J. Wix and Company, a subsidiary of the American Tobacco Company, which has been a pioneer in the coupon method of cigarette selling. In the cheaper brands of cigarettes, Carreras have introduced the coupon "five-for-twopence" cigarette "Clubs," which is no doubt designed to compete with the Imperial Tobacco's "Woodbine" cigarettes. This move, in turn, has been countered by the Imperial Tobacco's placing in the market a five-for-2d. cigarette, with coupons, called "Four Aces." In spite of this competition, the net profits of Carreras have been more than maintained, after falling off in 1931.

* Including £10,000 Exchange Reserve.
 † Including £3,831 written off and £50,000 for development fund and taking £672,777 from premium on shares.
 ‡ Including £20,965 for development fund, to which also added £79,035 profit on sale of investments.

The balance sheet shows a strong financial position, current assets (including stock of leaf, £2,175,000) amounting to £3,752,000, against current liabilities of £827,000. Cash has risen from £195,000 to £264,000, but Government securities shown in the previous balance sheet at £431,000 have been eliminated. The fixed assets are shown at a slightly higher figure and goodwill remains unchanged at £204,000. The "A" shares of £1 are quoted in the market at 6½ to yield £5 15s. 6d. on 35 per cent. dividends.

Turner and Newall Results.—The preliminary profit figures of this great asbestos combine for the year to September 30th last show no repetition of the huge decline in receipts which the company experienced last year. Gross profit is £423,820, against £530,037, while as a result of a sharp fall in income tax provision, the net figure is only £55,000 down at £305,671. The final

dividend of 2½ per cent., making 3½ per cent. for the year (against 5 per cent.) was above market expectations:—

* After charging £11,021 income tax on final dividends for 1931, paid during year to September 30, 1932.

The report indicates that the sales of the company's products continue to expand, the demand for Crompton lamps being particularly satisfactory. During the year, a controlling interest was acquired in the British Electric Transformer Company and Derby Cables, Limited. The balance sheet reveals a sound liquid position with reserves totalling £281,920. The 5s. ordinary shares are quoted at 20s. 9d. to yield about £5 8s. 6d. per cent. allowing for the final dividend of 12½ per cent.

The Copper Conference.—The failure of the conference of copper producers in New York was not unexpected. A statement has been issued by the Roan Antelope Copper Mines rebutting the allegations that the sole responsibility for the breakdown of the Conference rested with the company. Roan Antelope began producing in the summer of 1931. In November, 1931, and in March, 1932, a group of leading copper producers of the world met to consider the question of over-production and accumulation of stocks. The proportions between the operating quotas of the participants of these conferences are now obsolete, and Roan Antelope directors claimed that for 1933 their company should be accorded treatment no less favourable than that accorded to other producers and to its neighbour in the same Rhodesian field. It claimed that the imposition of the American copper tariff in June,

1932, had brought about conditions that have subjected international co-operation to a severe strain. During the past few months American mines have exported large quantities of copper to Europe in competition with the producers who are barred from the American market. Further, American companies owning mines both within and without the United States have demanded the right to transfer to their foreign subsidiaries part of the operating quotas allotted to their United States mines. Such practices, the Roan Antelope directors claim, preclude the possibility of effective international co-operation. Though the company is willing to join in any logically-conceived plan for effective international restriction, it will not become a party to unfair and unsound arrangements. There is some force in the Roan Antelope arguments. The company has a special grievance, for its production capacity is in excess of what was initially calculated, and it has in mind the possibility of securing a share of the British domestic market which is now going to the Braden Mines, the South American subsidiary of Kennecott Copper, controlled by the Guggenheim interests. There is no doubt that the Empire output of copper will eventually be sufficient to supply British requirements. Since the breakdown of the Copper Conference, the American quotation for electrolytic copper c.i.f. to European ports has fallen to a new low record of 4.85 cents per lb. On the London Metal Exchange electrolytic has fallen to £33 5s. per ton, which is the lowest level since August, the lowest ever recorded being £27 15s. last July.

Rhodesian Copper.—The calculations made by the sponsors of the Northern Rhodesian copper industry have for the most part been justified by events. But one contingency which they obviously did not take into account was a catastrophic fall in the price of the metal—accompanied by a severe shrinkage in the demand. To meet this position, actual and prospective producers of copper decided upon the restriction policy described above. This, as regards the new Rhodesian undertakings, rendered necessary a lightening of the heavy prior charges with which the companies had been burdened, and energetic measures to that end were taken. In the initial three months of the operation to June 30th the Rhokana Corporation made an operating profit of £25,700. Administration and other expenses converted this sum into a deficit of £28,200. Debenture interest called for £78,750, and £50,000 was allocated to depreciation, giving a total debit of £157,000. Against the former amount of £4,500,000 there are now only £275,100 of debentures outstanding. Costs have been brought down to just under £23 per long ton delivered Europe. Consequently, even at the current low price of the metal (unprecedented on a gold basis) there is a small margin of profit. N'Kana ore, incidentally, contains cobalt in a form which can be readily separated and marketed. The Rhokana holds one-third and the Rhodesian Selection Trust two-thirds of the capital of the

Mufulira, whose quota is being produced by the former company. Of the Trust's debenture issue of \$6,612,000 some \$3,237,000 has been converted into shares. A curious procedure has been followed in the preparation of the balance-sheet. A surplus of £883,000 on revaluation of Mufulira shares is supplemented by £118,600 premium on shares. From the total of £1,002,500, preliminary and other expenses to the amount of £689,600 are written off. On September 30th cash stood at the comfortable figure of £102,200.

Tin Company Results.—Our Mining Correspondent writes: In view of the severity of output restriction, the latest returns of various Eastern tin producers make a better showing than might have been expected. Curtailment of output has, in fact, been partially counterbalanced by improvement in price and economy in costs. In the case of the Malayan Tin Dredging Company, profit fell so little that the total dividend was cut only from 17½ per cent. to 16½ per cent. Its subsidiary, Southern Malayan, earned £28,400, against £43,400, and the disbursement of 7½ per cent. (compared with 10 per cent.) left the increased balance of £22,500 to go forward. The Southern Perak repeated the previous year's 2½ per cent., absorbing £3,750. The profits for the two years were £4,590 and £1,930 respectively. The position as regards Kamunting has been complicated by the acquisition of the Pangnga's property, which is situated in Siam. Owing to the appreciation in local currency as measured in sterling, operations at the latter centre resulted in a small loss, which was written off the share premium account. Work in Malaya resulted in a net profit of £50,650, of which £17,500 was required for debenture interest and redemption. Dividends totalling 5 per cent. left an increased carry-forward of £60,800. Since the close of the financial year the debenture holders have agreed to accept 4½ per cent. interest instead of 8 per cent. The Ayer Hitam earned £21,100, against £28,700, but paid 10 per cent., an increase of 2½ per cent. as compared with 1930-31, when a special writing off of nearly £10,000 from property account was made. In the case of the Pahang Consolidated—the solitary reef-mining concern—the restriction of output was, naturally, accompanied by some expansion in costs, and profits declined from £35,200 to £19,300. Various special appropriations were made and provision of the fixed preference dividend of 7 per cent. required a draft upon the carry-forward. For 1929-30 the preference capital received 15 per cent. and the ordinary 12½ per cent. For 1930-31 the payments were 7 per cent. and nil respectively.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The British Overseas Bank, Bank of London and South America, Foster Clark, Anglo-Ecuadorian Oilfields, Low Temperature Carbonisation, Agar, Cross and Company, British Burmah Petroleum, Ind Coope and Company, Camp Bird, Santa Gertrudis, and Trepana Mines. At the annual meeting of Foster Clark, Mr H. C. Clark declared that the trade in canned English fruits and vegetables continued to expand, but, unfortunately, the production of fruit for canning was not yet sufficient to satisfy the industry's need. At the meeting of Ind Coope, Mr Louis E. Walner said it was only through economies effected during the year that further satisfactory results had been obtained. It was quite impossible to continue to reduce overhead charges in proportion to the decrease in sales. Presiding at the meeting of Santa Gertrudis, Mr F. W. Baker informed shareholders that reserves amounted to approximately 250,000 tons, which would probably be exhausted by September next unless exploratory work over a large area disclosed fresh fields for exploitation.

CAPITAL ISSUES.

TRUSTEE borrowers have again remained outside the market, and only two public issues have been made by industrial concerns. That of the *Midland Counties Electric Supply Company, Ltd.*, however, was of substantial character, the £700,000 of 4 per cent. debenture stock, at par, being regarded as a well-secured holding, likely to be readily absorbed by conservative investors. *United Counties Stores, Ltd.*, issued 6 per cent. cumulative preference shares without underwriting. The company owns grocery stores in the West of England. The shares are not generously covered, since net assets, excluding goodwill but including the proceeds of the present issue, cover principal only twice, and the company has power to issue a further block, of equal total amount, in the future. The sole issue by way of public notice prior to Stock Exchange "placing" was made by *Heinemann Holdings, Ltd.*, in connection with the acquisition of shares in two related publishing businesses.

PUBLIC OFFERS.

Midland Counties Electric Supply.—Issue of £700,000 4 per cent. debenture stock at par. The stock will be redeemed at par on December 31, 1932, but the company reserves the right to redeem on three months' notice (a) on December 31, 1936, or thereafter, at 103 per cent., or (b) on December 31, 1947, or thereafter, at 102 per cent. Net profits before debenture interest were: 1929, £236,975; 1930, £261,275; 1931, £271,597. There is outstanding £282,160 5 per cent. debenture stock, which will be repaid on March 10, 1933. Interest on the present issue requires £28,000 per annum.

United Counties Stores.—Issue of 100,000 6 per cent. cumulative preference shares of £1 each at par. No part of the issue is being underwritten. The company was incorporated as a private company in February, 1928, as the Boon Property Trust to finance the acquisition of high-class grocery stores. It was converted into a public company in November, 1932. The subsidiaries control 57 shops. Net profits for the past four years have been £17,905, £24,275, £32,126, and £32,690.

Rugby Gas Company.—Issue by tender of £10,000 4½ per cent. perpetual debenture stock at a minimum price of £105 per £100 stock, yielding at that price £4 5s. 9d. per cent. The net revenue of the company for the year to December 31st last was £15,125. Interest on loan capital, including the present issue, totals £4,286.

STOCK EXCHANGE "INTRODUCTIONS."

Heinemann Holdings.—Issued capital, £150,000 in 6 per cent. £1 cumulative redeemable preference shares and £75,000 in ordinary shares of 5s. each. The preference shares are to be redeemed by December, 1952, or prior to this at the company's option at a premium of 2s. per share. The company was incorporated in November, 1932, to acquire the shares of William Heinemann, Ltd., and 51 per cent. of the capital of World's Work (1913), Ltd. The average profits of William Heinemann for the last four years were £28,976, and of World's Work (1913), £5,813. The preliminary expenses of the company are estimated at £11,888.

FORTHCOMING ISSUES.

Godfrey Phillips, Ltd.—The subscription list for the issue at par of 300,000 6½ per cent. "C" cumulative preference shares of £1 each of Godfrey Phillips, Ltd., will open on Monday next.

RESULTS OF ISSUES.

Greyhound Racing Association Trust.—The lists in connection with the issue of 200,000 7 per cent. cumulative first preference shares of £1 each at par for the Greyhound Racing Association Trust were closed at 12 o'clock on December 10th. Allotment letters were posted the same night.

Midland Counties Electric Supply.—The subscription list for the issue of £700,000 Midland Counties Electric Supply Company 4 per cent. debenture stock at par, was closed at 9.15 Wednesday morning, owing to heavy oversubscription.

REPAYMENTS AND CONVERSIONS.

Three per Cent. Treasury Bonds.—The first drawing of 3 per cent. Treasury bonds, which were issued in April, 1932, took place on December 13th. The numbers of the bonds drawn for repayment, which is to be made at par on April 15th next, are published in a supplement to *The London Gazette*. The total amount is £11,000,000. There are altogether 19,800 bonds, the numbers and amounts for the various categories being:—

	£
2,640 Bonds of £50 each =	132,000
4,840 " of £100 each =	484,000
1,320 " of £200 each =	264,000
1,760 " of £500 each =	880,000
9,240 " of £1,000 each =	9,240,000
Total	11,000,000

Copies of the list of numbers drawn may be obtained at the Bank of England, 5 and 6 Lombard Street, E.C., or 18 Finsbury Circus, E.C.

Midland Counties Electric Supply.—The outstanding £282,160 5 per cent. debenture stock will be repaid on March 10th next at 105. It is intended, if Treasury regulations then permit, to make a further issue of £300,000 4 per cent. debenture stock to replace the redeemed stock.

Calls Due December 18th to December 26th.

The grand total of calls falling due in December, 1932, is £166,683,160, which compares with £1,605,286 which fell due in December, 1931. The following calls fall due from December 19th, 1932, to December 26, 1932.

VISCOUNT CHURCHILL ON NEED FOR GOOD WILL.

The thirteenth annual general meeting of the British Overseas Bank, Limited, was held on Tuesday, December 13th, at the Bank's premises, 33, Gracechurch Street, London, E.C.

The Rt. Hon. Viscount Churchill, G.C.V.O. (chairman of the Bank), presided.

The Chairman: I will call upon the Secretary to read the notice convening the meeting.

The Secretary (Mr A. E. Thorne) read the notice convening the meeting.

The Chairman: I have also to ask the Secretary to read the auditors' report.

The Secretary then read the auditors' report.

The Chairman: Ladies and Gentlemen,—It is now my pleasure to submit the report and accounts for your consideration. They have been circulated and you will no doubt wish me to take them, as usual, as read. (Agreed.)

The figures before you reveal very fairly our experience last year. A steady, if slight, shrinkage of business has been experienced throughout the greater part of this period. This was brought about partly by the lower prices of commodities and partly by dullness in business. This atmosphere of depression, however, gave way to definitely more active conditions in September, with the result that since the beginning of October the process that had formerly held good ceased and our figures began to indicate the greater activity of business. That experience, I am sorry to say, has recently not been maintained.

THE BALANCE SHEET.

The total of our balance sheet as a consequence is reduced to £8,217,612 5s. 8d., as compared with £9,608,977 18s. This shrinkage is shown chiefly in acceptances granted, which, as you will see from the figures before you, amount to £3,448,932 6s. 9d., being a reduction of some £800,000 as compared with last year. An equivalent reduction, of course, appears on the other side of our accounts. Current and deposit accounts also show a reduction of some £500,000 as compared with a year ago, while advances are diminished by approximately £400,000. Bills discounted, at £647,496 6s. 6d., show a contrary movement, being increased by about £400,000. This movement is, however, entirely a matter of policy as, owing to the unremunerative rates for money on the market, it was undesirable for us to retain more of our resources there than was actually necessary. Our portfolio of bills discounted, while yielding a better return, is of course available for increasing our cash resources whenever this is thought to be desirable.

I do not feel that it is necessary to say much about our investments. Our Government securities are mostly Treasury bills. Investments in Subsidiary Companies have increased on account of an issue of shares by the Dorpat Bank having been taken up by the local shareholders only to a limited extent. This increased our holding in the Bank above 50 per cent., with the result that this investment now appears under the heading of Subsidiary Companies along with our holding in the Anglo-Polish Bank.

Last year I mentioned that we unfortunately had a substantial shareholding interest in the Credit Anstalt, and we have felt it desirable that this asset should be written down to the nominal figure of £1.

In order to provide for depreciation on investments and other contingencies, the Directors have transferred from open reserves to contingencies account the sum of £50,000. Bad debts have, as usual, been provided for before declaring profits.

I think this deals with all outstanding items in our balance sheet, but you will see that the note at the foot of the balance sheet says "Contingency Liability on account of Endorsements on Bills Discounted amounts to £1,040." Last year this figure was given as

£1,254,673. The liability in any event is purely nominal and has this year almost disappeared because our Polish friends, for whom, I think you are aware, we have for a number of years arranged a syndicate credit in connection with the marketing of their sugar crop, did not desire the credit so early as usual for the present campaign.

You will notice from our report that we had with great regret to part company with Sir George May some months ago on account of the new responsibility that he has taken on as Chairman of the Import Duties Advisory Committee. Sir George May was a valued member of the Board, and the advice he gave and the interest he took in our affairs are greatly missed, but we are glad to feel that his services are being made use of in a wider sphere than we could offer.

WORLD-WIDE DIFFICULTIES.

Before moving the formal resolutions, I would like to say a few words about the state of affairs in general. At first sight a survey of the present world situation is certainly not encouraging. Exchange restrictions and "standstill agreements," tariffs, and import restrictions have crushed most of the life out of international trade, and exchange fluctuations add to the difficulties and risks, even where other positive impediments do not make trade impossible. Declining trade has aggravated unemployment, and the prospects of widespread distress and hardship through the coming winter make the situation exceedingly grave.

In addition, budgetary difficulties have multiplied, owing to the needs of unemployment relief and the abrupt falling off of revenue, and there are few countries whose finances are in at all a satisfactory state. Signs of inflation are to be observed in many places, and the maintenance of currency stability, in the face of these difficulties, is a problem of increasing embarrassment. At the same time the memories of the post-war collapse are still too much alive, in many countries, for any experiments with their currencies to be practicable, such as that of the so-called "sterling group"; so that even that slight relief is excluded.

HOPEFUL SIGNS.

But before accepting the pessimistic conclusions to which these considerations seem to point, there are some further underlying factors to take into account. It is undeniable, to begin with, that within the last few months there has been a distinct change of sentiment and some signs of trade revival, not only at home, but also, though to a lesser extent, both in America and on the Continent. This change, I think, is important and significant, and it is well worth enquiring into the reasons for it. I feel inclined to suggest that they are to be found in the fact that economic forces, if we may argue by the experience of trade depressions in the past, have, so to speak, a distinctly self-righting tendency.

The so-called trade cycle of alternate prosperity and depression has hitherto been a feature of economic experience, and the present depression has all the characteristic symptoms of this cycle. It has also a number of special features of its own in the shape of political complications, to which I shall refer later. But, setting these aside for the moment, I think it is possible that the purely economic forces making for depression have, for the time being, spent themselves, and are giving way to an underlying tendency towards revival. The change of sentiment from possibly exaggerated pessimism to possibly unreasonable optimism is, or has been in previous cases, the turning point whence recovery can begin.

The fact that there is so much sentiment in the process makes it difficult to give concrete facts in evidence, but I think the recent behaviour of prices gives some support to this view; I refer to the

recovery of the commodity markets, when prices quickly rose well above their low levels of the summer as a result of the favourable outcome of the Reparations Conference at Lausanne. This recovery has rather faded out for the moment, under the influence, mainly, of political uncertainties, but the fact of its occurrence certainly seems to signify that a tendency for improvement is present and can operate if not discouraged.

POLITICAL UNCERTAINTIES.

Assuming, then, that the economic situation shows a capacity for improvement, what is there to prevent that improvement taking place? The answer is, unfortunately, all too obvious—the political uncertainties of the international situation. To a great extent these are a legacy of the War and of the Peace Treaties, from which arise, for instance, the problem of war debts and reparations, and the nationalistic hysteria of tariff barriers and exaggerated armaments. These factors have all played their part in promoting our economic difficulties, and economic difficulties, in their turn, have aggravated and multiplied political differences until the international atmosphere is charged with mistrust and suspicion. Lack of confidence in the economic sense is a feature of trade depression which is to be expected and can be overcome. But we have to contend with something far more difficult, and powerful enough to stifle any of the hesitating tendencies towards recovery that may appear.

The restoration of international confidence, then, is at the centre of our problem. As I have already indicated, I do not mean by this merely reanimating the international capital markets, or reassuring the creditors of the weaker countries, but the wider question of restoring international good feeling and the will towards international co-operation in the many directions where it is so urgently needed. Disarmament, treaty revision and war debts, are matters which can only be dealt with by intelligent common action, and agreement on these issues is an indispensable condition for economic revival.

Again, the fear that the political differences—not only of Europe, but in the Pacific, the Far East, and elsewhere—may lead to situations not to be solved by peaceful means further discourages initiative and enterprise. The atmosphere that makes these problems so difficult to handle, and creates these anxieties in the public mind, must first be cleared if recovery is to come; given this, it is not impossible that the economic obstacles that seem so insuperable now will, in their proper perspective, be effectually dealt with.

NEED FOR CONFIDENCE.

Much is being said—particularly in the United States—as to the part monetary policy is playing in the depression, and must play in bringing us out of it; but the breakdown of the monetary system is only another manifestation of the general lack of confidence, and unless that is remedied monetary policy alone cannot solve our problems. If a proper atmosphere is restored to political relations, the financial structure is perfectly capable of responding and making available the necessary basis of credit for new enterprise. Without confidence, however, inflationary policies can do little beyond possibly tiding over temporary difficulties at the cost of more serious trouble in the future.

I do not mean to suggest that the concrete problems to be faced are not of the utmost magnitude, both politically and economically. Many major adjustments are necessary, but I would repeat that they cannot be effected except by international co-operation, and in an atmosphere of good will. Given these, I believe there is some reason to hope that our problems may prove more easily soluble than they appear to be at the present moment.

Ladies and Gentlemen,—I do not think I need trouble you with any further remarks at the present time. We have been through a very serious position in the past year, and I feel that on such an occasion as this it is better not to prophesy.

I now move the following resolution:—

"That the report and accounts for the year ended 31st October, 1932, as audited and certified by your auditors, now before the meeting, be approved and adopted; that the final dividend of 3 per cent. recommended on the 'A' ordinary shares be approved, and paid to shareholders on the register of members at the closing of the books on November 29th, 1932."

I call upon Mr Norman L. Hird to second the resolution.

MR NORMAN HIRD'S SPEECH.

Mr Norman L. Hird (Advisory Director): My Lord, Ladies and Gentlemen,—Our Chairman has dealt so adequately and so concisely not only with the position of the Bank itself, but also with world affairs, that in seconding the motion there is really very little left that I need add. In banking, as in trading, the last twelve months have been extremely difficult. Probably the year has not been as exciting as the previous period, but it has been a period full of

anxiety and worry. Lord Churchill referred to the extraordinary wave of nationalism that has spread over the various countries of the world, and it is quite clear that that—very largely the result of the war—has been a curse to the world.

It is also very clear now that if the process of over-nationalisation is not checked the world will freeze up from a trading point of view. It is gradually freezing up now, but I do not know that people realise what a further freezing up of the world really means. It means a definite setback to civilisation, chaos in many countries and a very definite setback to the standard of living of the individual all over the world. In fourteen years since the end of the war I think we have realised very clearly the real economic damage done by the war, and one feels that, although that damage would in any case have been difficult to repair, much might have been done in mitigation of it if the statesmen of the world had been bolder and if they had faced the truth and told the truth to democracy.

One thing is very clear—that the war benefited no one, neither victor nor even non-participant, and in that, of course, there is a certain amount of hope for the future as regards the conduct of nations towards each other. I think it is also obvious, as the Chairman has said, that the adoption of a new monetary policy—this theory or that—is going to be useless as a cure unless it is accompanied by confidence.

Well, Ladies and Gentlemen, I hope that when we meet twelve months hence there will be a proper realisation of this matter, not only by statesmen, but also by the various parliaments of the world, and that we shall meet in a more cheerful atmosphere. In the meantime, I think you will all agree with me that it is a matter for congratulation that this Bank has weathered the storms so successfully. (Hear, hear.) I have much pleasure in seconding the resolution.

The Chairman: I shall be very happy, if there are any questions which any lady or gentleman would like to ask, to listen to them and to answer them to the best of my ability.

A SHAREHOLDER'S CONGRATULATIONS.

Mr A. J. Thorogood: I have no questions to ask, Mr Chairman, but I should like to comment on the extraordinarily strong position of this relatively small Bank in regard to its liquid assets. I think that all shareholders must be extremely pleased to see that our liquid assets—not including those assets with banks abroad, which are always a rather uncertain quantity—amount to over £800,000, which is an extremely satisfactory state for any bank to be in. In fact, I suppose, Mr Chairman, it is the basis of sound banking that liquid assets to a very large extent should be kept in hand.

Another thing which I should like to mention, and which is also complimentary to the Directors, who have done extremely well, is that they have written off the investment in the Austrian Bank to a nominal sum—so nominal that it hardly exists—which is a very satisfactory state of things from the point of view of the shareholders. There is still another point which I should like to make and which is also complimentary to the Board. It is that none of the accounts of the Subsidiary Companies shows a loss. In many cases that, unfortunately, is a means of covering up liabilities which sometimes wreck companies. We do not look to bankers to do that sort of thing in England, and I may say from my knowledge of figures and economics that the operations of this particular Bank seem to be carried on in the very best traditions of English banking. (Hear, hear.)

The Chairman: Well, Ladies and Gentlemen, I can only thank Mr Thorogood for the very kind remarks he has made. I am sure it is very gratifying to know that he so thoroughly approves the policy followed by the Bank. Before I actually put the motion to you I am sure you would like to hear a few words from my old friend, the Deputy-Chairman, Mr Gairdner, if he would be good enough. (Applause.)

MR GAIRDNER'S REMARKS.

Mr Arthur C. D. Gairdner (Deputy Chairman and Managing Director) said: Lord Churchill, Ladies and Gentlemen,—Rather than words, which frequently have a mystifying effect, the present time seems to demand action. I will, therefore, confine myself to an endeavour to clarify one or two points underlying those aspects of the situation more briefly touched upon by Lord Churchill.

There are, of course, many contributory causes leading up to the present crisis. Two, however, stand out beyond all others. I refer to the fact that developments in science and finance have gone ahead more rapidly than man's power to control them, or to understand their reactions.

In regard to finance, its over-development has brought about the burden of national debts, excessive municipal and rural expenditure, the rise in the individual standard of living, aided and abetted as it has been by instalment buying and kindred devices. The inevitable result has been the disbursement of capital as revenue by both governments and individuals. As difficulties became

greater, the temptation to encourage consumption by inflation also increased, but relief on these lines was temporary and local. The consequence of maintaining or increasing consumption was that imports were encouraged, whereas the capacity was lacking to make the necessary exports to pay for them; in fact, a lower standard of living had become essential, and inflation had merely delayed for a time the recognition of this. In some cases, after the necessities of life had been paid for, the balance of trade was too unfavourable to meet the service of foreign loans, and defaults on these obligations have been of somewhat frequent occurrence.

The development of machinery received a great impetus during the war owing to the demand for man-power to fill the armies. On the conclusion of peace, dependence on machines was increased in order to replace the material losses caused by the war, but this development only accentuated the tendency towards unemployment, which at this point made further progress through rationalisation. This process had the further result of intensifying international competition, and so of increasing the difficulties of those nations whose scientific progress was less highly developed. This increased competition was replied to by the erection of tariff barriers and Customs restrictions, thus producing for the time being still further stagnation.

In close connection with this competition another factor played a prominent part. Industry and, to a somewhat greater extent, agriculture are largely dependent upon unskilled labour, and, when this is coloured, competition becomes even greater, while recently the effect of forced labour has had to be taken into account. The standard of living, where it was highest, thus became increasingly difficult to maintain.

SIMPLER FORM OF LIFE NEEDED.

I feel that real progress cannot be made until these facts are fairly faced, and the manner in which public opinion is gradually realising the situation and the necessity for dealing with it in a broader and more sympathetic fashion than has yet been attempted is most encouraging. Let us grant that the objective of the theorists—a general raising of the standard of life—is desirable, but let us also realise that, as the French say, "Il faut reculer pour mieux sauter," by which I mean, let us make the economies which are necessary, reduce burdens to a point that is bearable, refrain from calling science to our aid to the extent that machinery renders humanity in the bulk largely unnecessary, and return to a simpler form of life until the other factors that go to the making of civilisation are brought into line. It is as if a boy were to take charge of a high-powered car and, being able by setting his foot on the accelerator to reach a certain speed, should proceed to do so without taking into account the roughness of the track, its curves and inclines. Possibly, if the conditions were perfect the results forecasted could be obtained, but with imperfect conditions a crash is the inevitable sequel to such conduct.

It must be realised that the world has now become so closely knit that in many respects it must be regarded as a unit, and it is a natural law that no component parts of a unit can be developed unduly except at the expense of the remainder. Consequently, to obtain real progress, the whole, that is to say all the parts composing a unit, have to go forward more or less at the same pace. Let us hope that the basis for this ordered progress will be found in the approaching Economic Conference and in the clearer appreciation of the necessity for this equilibrium. (Applause.)

The Chairman: Ladies and Gentlemen,—I will now put the resolution to the meeting. Those in favour will kindly hold up their hands; to the contrary; carried unanimously. I will now ask Mr Hindley to be kind enough to move a resolution.

RE-ELECTION OF RETIRING DIRECTORS.

Mr R. T. Hindley (Advisory Director): My Lord Chairman, Ladies and Gentlemen,—I consider myself very fortunate that such a pleasant duty has been entrusted to me as the moving of the resolution: "that the Rt. Hon. Viscount Churchill, G.C.V.O., and the Hon. Henry McLaren, C.B.E., be re-elected as Directors of the Bank." We have been very fortunate to have had the services of these two Directors since the early days of the Bank, and, as they are prepared to stand again for another term of office, I consider that we are again fortunate and I have no doubt that you will share my feelings.

They have given steadily and regularly their time and ability to the conduct of the affairs of this Bank, and the present position of the Bank and its balance sheet bear testimony to the good work that has been done by the Board. They are not narrow-minded specialists. Whether you go to the coalfields of Yorkshire or to the lovely coast and valleys of North Wales, or down into Devon and Cornwall, you will find their names respected and you will find evidence of their organising ability. If those journeys which I

have suggested are too long for you, and if you will take the Tube either to Vincent Square or to Paddington, I have no doubt you will find equal evidence of their guiding intelligence. I have not the slightest doubt that you will heartily approve the resolution that we should keep what we have and should re-elect them. I beg to move that. (Applause.)

Sir James Caird, Bt. (Director): My Lord, Ladies and Gentlemen,—I can thoroughly endorse all the remarks which Mr Hindley has made with regard to our worthy Chairman and Mr McLaren, and I have very much pleasure in seconding the resolution.

The Chairman: Will you kindly put it, Mr Hindley?

Mr Hindley: I have much pleasure in putting that. Those in favour kindly signify in the usual way; against; carried unanimously.

The Chairman: Thank you, Ladies and Gentlemen, very much. The Hon. Henry McLaren: Thank you.

The Chairman: I will now ask one of the shareholders to be good enough to propose the reappointment of the retiring Auditors.

Mr Thorogood: Mr Chairman, I beg to move: "That the retiring Auditors, Messrs George A. Touche and Company and Messrs McClelland, Ker and Company, be reappointed as Auditors of the Company for the current year at the same remuneration, namely, a collective fee of £750." I feel sure that the shareholders will agree with me that the audit could not be placed in better hands.

Mr Walter Scott: I beg to second that.

The Chairman: Will you kindly put it to the meeting?

Mr Thorogood: Are you agreed, Ladies and Gentlemen? (Agreed.)

The Chairman: Ladies and Gentlemen,—I think that brings our proceedings to an end, and I can only thank you most sincerely for having come here to-day. I am very glad that in these serious times we have been able to put such a report before you. After what has been said I will only thank you once more for your support. I assure you that it is the greatest encouragement to all of us here, including the staff, to whom I should like to pay a tribute—and I am sure that Mr Gairdner will agree with me—for the admirable and loyal way in which they have carried out their duties to the Bank. (Applause.)

VOTE OF THANKS.

Mr James M. Gairdner: Ladies and Gentlemen,—Before we separate I am sure we should like to pass a hearty vote of thanks to our Chairman for presiding over us to-day. You have had an opportunity of showing your confidence in him by re-electing him as a member of the Board. I am sure we should all like to take this opportunity of thanking him and the Board for their services during the past year. (Hear, hear.) I hope that they will have a much pleasanter time in the coming year. They must have been through a very trying time, and it would doubtless have given the Chairman greater pleasure in meeting us if he had been able to produce a more brilliant set of figures, but those figures are as good as we could possibly have expected, and we can only hope that they will be able to present an even stronger position next year, and that the business will continue to prosper under their very able management. I ask you all to pass a very hearty vote of thanks to our chairman. (Applause.)

The Chairman: Thank you very much indeed. The proceedings then terminated.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

MR J. W. BEAUMONT PEASE ON THE POSITION AND OUTLOOK.

The seventieth ordinary meeting of the Bank of London and South America, Limited, was held, on the 13th instant, at the head office of the Bank, 6, 7 and 8, Tokenhouse Yard, London, E.C.

The Secretary (Mr J. A. Stark) having read the notice convening the meeting and the report of the auditors,

Mr J. Beaumont Pease (the chairman), in the course of his speech, said:—It is common knowledge that the depression in trade which so adversely affected the period I reviewed two years ago and again at our meeting last year has continued in even greater degree, and, unfortunately, still persists.

I had occasion last year to outline the factors which were deferring the return to normal conditions in those countries in South America where we are established, and it is disappointing to have to record that the impediments to a recovery have not been removed. Internal political unrest has, in some countries, stayed a progress in course of initiation, while international disagreements between others have threatened peace, and this menace alone has been sufficient to constrain enterprise and to divert the attention of the peoples from their efforts at reconstruction.

BRITISH TRADE WITH SOUTH AMERICA.

Our particular interest lies in trade with South America, of which Great Britain is accustomed to enjoy a large share. It continues to be affected by high and frequently augmented duties.

Uncertainties arising from the exchange controls, under which payment in foreign currencies may or may not be forthcoming at due date, make exporters to South America diffident to fulfil orders, and in neither duties nor control are there any signs of relaxation.

Local moratoria suspending the payment of foreign commercial debts have locked up the resources of creditors, whilst proposed legislative measures in some centres are having a detrimental effect on industrial and business movement, with the result that banking operations are becoming increasingly difficult.

Widening of the present restricted channels to allow a fuller flow of commerce is recognised by statesmen, bankers, and traders the world over as urgent and imperative, and hopes are entertained that, from the deliberations of the Economic Conference next year, the practical measures may arise for achieving this desired end. The fact that the call to a conference has been so largely accepted points to the conviction that the burdens of the suffering world can be lightened only by a united effort. The idea that in modern times any one country can live within itself should be finally dispelled, and the Conference, it is hoped, will check that dangerous reversion to insularity which is having such a bad effect on the peace and prosperity of the world at large. We realise that individual action can have but little effect on the re-establishment of the world's well-being, but this Bank is willing and eager to co-operate as far as may be possible with any sane endeavour in this direction.

STRONG FINANCIAL POSITION MAINTAINED.

In present circumstances, and in continuance of the policy which has always been followed by your Bank, your board has considered it essential to protect the interests of its depositors by the maintenance of a strong financial position. This is reflected in the balance-sheet before you. Its total of £56,722,000 compares with £52,252,000 last year, or, say, an increase of £4,470,000, which in part is accounted for by the higher rates of exchange applied to the conversion of some of the South American currencies, notably those of Argentina, Brazil, and Uruguay. Current and deposit accounts, which this year stand at £41,368,000, are higher by £7,057,000 than last year's figures of £34,311,000, and this testimony of continued public confidence in the Bank will, I am sure, be welcome to you.

Bills payable, at £829,962, show a reduction of £1,582,000, due partly to restricted imports into South America and partly to the more general use of the telegraphic transfer as the mode of payment.

The total of bills for collection this year is £7,823,000, as compared with £8,569,000 a year ago. Local bills for collection in the hands of the various branches abroad show a reduction of £576,000. The total of head office collections, representing principally British exports, is but 6 per cent. less than that of a year ago. The turnover, however, was only a third of that of 1928—a normal year.

Turning to our assets, we see that cash in hand and at bankers has increased by £6,494,000, being now £17,069,000, as compared with £10,575,000 last year. This item, in itself, represents over 41 per cent. of our liability to customers in current, deposit, and other accounts, which shows a very strong and liquid position.

DEARTH OF SOUND COMMERCIAL BUSINESS.

It is significant that the increase in current and deposit accounts is almost entirely held in cash, which is but another instance of the present state of trade, and demonstrates the lack of a suitable outlet for funds through the dearth of sound commercial business, added to which prevailing restrictions in exchanges preclude the movement and employment of our resources in a manner that would tend to a more profitable return.

Taking the next two items of our assets together—viz., bills receivable and advances and other accounts receivable—they total £28,659,000, or £970,000 less than a year ago.

At the closing rates of exchange on September 30th last the capital of the Bank employed abroad shows some depreciation, but this is fully provided for.

The maintenance of an extremely liquid position, advisable as it may be, has an unfavourable effect on our earning capacity, for a diminished revenue cannot rapidly be compensated by a reduction in expenses. Much, however, has been done in the latter direction, although the full benefit of the enforced economies effected has yet to be felt.

PROFIT AND DIVIDEND.

I told you last year that the earning of profits might be difficult, and in some places might even be impossible, and this has proved to be the case. Commercial failures have continued on a large scale, and heavy provision has again been required for bad and doubtful debts.

Gross profit this year stands at £1,395,700, which is £58,910 less than that of last year. Charges at head office and branches, including directors' fees, on the other hand, show a reduction of £39,121, the profit after deducting all expenses and charges, other than bad and doubtful debts, which have again been provided for out of contingency reserve, being only £19,789 lower than that of last year. It stands at £312,108, and after adding £186,342 brought forward from last year, the balance available reaches a total of £498,451.

Your board feel that a conservative attitude must be adopted in the recommendations which they make to you as to the distribution of profits. We therefore recommend that a dividend of 3 per cent. for the year be payable on December 19th next, subject to income tax, absorbing £106,200, and a transfer made to contingency reserve of £200,000, which will leave the sum of £192,251 to be carried forward in profit and loss account.

ARGENTINA.

During the last year the volume and value of the trade of the Argentine Republic have fallen in comparison with the two previous years; in the case of imports to such an extent that the operations of many old-established houses have had to be greatly curtailed. Increased duties have played their part in restricting imports, although a greater handicap is the lesser spending power of consumers. An efficient control on exchange has not only sustained but enhanced the value of the Argentine peso. Throughout the year all national and provincial obligations, internal and external, have been duly met, save in the case of the province of Santa Fé, which has declared a three years' moratorium. In contrast to this act may be set the emphatic declarations made on more than one occasion by the Minister of Finance to the effect that no such step has ever been contemplated by the National Government, nor, he adds, is there any truth in the rumours that among the measures to be taken to relieve financial pressure, emission of currency and further gold shipments have been discussed.

URUGUAY.

With regard to Uruguay, the dearth of foreign exchange became pronounced at the end of last year, and to cope with the position a partial moratorium of commercial debts in foreign currencies was instituted. In spite of this measure and of the control of exchange which had previously been established the dearth increased, and important amounts of Uruguayan dollars accumulated in the banks awaiting remittance. To liberate this massed money a scheme has been evolved whereby creditors may obtain the equivalent of their Uruguayan dollars in bonds issued in foreign currencies which, under the operation of an annual sinking fund will be repaid within five years and will, meanwhile, earn 6 per cent. per annum. Bonds are guaranteed by the State, and, although only recently issued, are meeting with ready acceptance. The political situation is clear and relations with all other countries are friendly and cordial. Uruguay is feeling the pinch, as we all are, but it is not extravagant to envisage a return to her former prosperity as soon as the world-wide depression of trade gives way to a more liberal and welcome expansion.

BRAZIL AND CHILE.

The past year has been a most difficult one for Brazilian administrators. The country is in a state of transition, passing towards a modernised form of Republican Constitution.

Many improvements have been accomplished under the present Administration; expenditure has been reduced in all public departments to a level covered by current revenue, and the finances of the States are now being seriously cared for by the governors nominated by Dr. Getulio Vargas.

Exchange control is vested in the Bank of Brazil, and during the first nine months of this year the volume of exchange cover acquired was over £26,200,000. The Bank of Brazil has repaid this year £3,556,000 on account of the consolidation credit granted to them by London bankers in 1930.

Chile has been hard hit by circumstances not altogether under her control, and especially by the waning demand for and devaluation of her products. More attention is now being given to agriculture and in this respect she is usually self-supporting, but it must be some time before her exports of grain and wool assume sufficient importance to compensate the reduced returns from her mines.

THE OUTLOOK.

I have no doubt that there is a question in the minds of many of you as to the future outlook of our business, and I wish, for your satisfaction as for my own, that I could satisfactorily answer that question. The success and progress of the bank must be dependent upon the prosperity or otherwise of the countries in which we do our business. If the circumstances of those countries improve you may depend upon it that your bank will obtain its full share of such progress, as we are well equipped and ready to take advantage of any improvement in trade and to reflect such improvement in the results of our banking operations. Meanwhile, we can only wait with patience upon the turn of events, but while so waiting we are leaving no stone unturned to effect, by reorganisation and careful investigation, all possible economies in the overhead expenses of the bank, to offer even better service to our customers, and generally to conserve in every possible way the resources of the bank. You may rest assured that in these very difficult and anxious times your interests are being fully and unceasingly cared for.

The report and accounts were unanimously adopted.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.

GRATIFYING PROGRESS.

GOOD PROSPECTS.

The fourteenth annual general meeting of the Anglo-Ecuadorian Oilfields, Limited, was held, on the 12th instant, at Winchester House, London.

Mr H. C. R. Williamson (the chairman) said that the most gratifying feature of the past year's operations was that they were able to show a profit of £72,668 instead of a loss of £42,719 in the previous year. This result was due to the smaller amount written off to development account, to increased cheap production, particularly from two wells, and to the programme of rigid economies, which was bearing fruit. The production of crude oil had increased from 204,663 tons to 214,060 tons for the year under review. During the year 28 producing wells had been brought in, not a single dry hole having been drilled. At June 30, 1932, there were 370 producing wells, and two were in course of drilling. As to their drilling policy, they were aiming at retaining their monthly production at round about 16,000 tons. To arrest the natural decline in the production from the deeper oil horizons the directors recently decided to place one rig on deep-well drilling. The board recommended writing down development account by £22,596, which was the amount expended in 1931-32, in addition to the usual writing off corresponding to expenditure in 1930-31. They also recommended setting aside £8,000 to reserve for depreciation and obsolescence. Sooner or later the whole of their percussion drilling equipment would have to be replaced by the more efficient rotary equipment, and for this reason they considered it prudent to commence the building up of a fund to meet this expense. Their investments in British Government securities had been increased during the year to £388,133, and their market value at June 30, 1932, was £416,680.

As to the company's prospects, not many months of the year had gone, but upon the facts at present known to them, and if oil prices and exchanges did not become more unfavourable, they hoped to present at their next meeting a balance sheet fully as good as that now under consideration.

The report and accounts were unanimously adopted, and a dividend of 3½ per cent. was declared.

AGAR, CROSS AND COMPANY, LIMITED.

MR WILLIAM AGAR REVIEWS A DIFFICULT YEAR.

The twenty-sixth ordinary general meeting of Agar, Cross and Company, Limited, was held, on the 12th instant, at Dorland House, 14-16, Regent Street, London, Mr William A. Agar (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, after referring to the loss the company had sustained through the death of the late chairman (Mr Thomas F. Agar), said that the main cause of the adverse trading was undoubtedly the extremely low prices ruling during the year under review for the principal Argentine products, and more particularly those which affected the agricultural interests of that country, such low prices reacting directly on the fortunes of the farming community, reducing their purchasing power to such an extent that in many cases it was non-existent. The changes in prices had come so quickly that the farmer had had no time in which to readjust his costs of production to the new conditions, and as he had had long periods of prosperity his ideas in this connection had become somewhat extravagant. Further, under the conditions on which business was usually carried on in the Camp in the Argentine, practically all the farmers were caught at a time when they were heavily in debt to the regional stores, who, in turn, were in debt to the large houses in Buenos Aires and other principal towns. In all these circumstances, and as the farmer had found it very difficult to obtain credit, the company's sales, especially in agricultural implements, had been disappointingly reduced.

Reference was made to the new taxes imposed by the Argentine Government; and the all-important question of exchange was dealt with at considerable length in its bearing on the company's trading—for which reason the board had thought it desirable to alter the method this year of compiling the figures in the balance sheet, in order to show as clearly as they could the company's position. Explaining the economies which had been effected throughout the organisation, the chairman stated that Mr Henry S. F. Alexander and Mr Thomas F. Agar, jun.—the latter having been elected on the retirement of the chairman and his late brother—were now filling the posts of managing directors. In consequence of this, a very considerable saving in managerial expenses would be made in the current year, and, in addition, all the directors had voluntarily reduced their fees by 20 per cent. for the same period.

As to the prospects for the current year, the board were very diffident about making any forecasts at all.

Generally speaking, however, the chairman summed up the position as follows:—"We should, if prices do not get worse or new restrictions be imposed, have improved sales for the current year. We should have some further reduction in the expenses, a very large reduction in the amount required to meet doubtful debts, and some reduction in interest charges. The board consider it impossible to give a more accurate forecast of the probable results of the current year. What must be borne in mind is that the company's organisation has been maintained to take care of any quick reaction in trade conditions, and that owing to the economies effected and for the other reasons given above a comparatively moderate improvement in sales should enable the company to make a small profit, or at least make ends meet. As was said in the directors' report, we now take a much more hopeful view of the outlook for the current year, more especially as we feel that the balance sheet which is now before you for the year ended June, 1932, has made very ample provision for any possible or prospective losses which may arise."

The further difficulty the company had to face on the question of obtaining remittances from the Argentine owing to the regulations and restrictions of the Exchange Control Board appointed by the Argentine Government was explained, and the chairman added that the great credit was due to the local board there for the manner in which they had handled this difficulty.

Mr Henry S. F. Alexander then dealt with the balance sheet and accounts, and, in doing so, made particular reference to the new basis on which the balance sheet had been prepared and presented. He made particular reference to the basis adopted for arriving at the balance-sheet figures for the fixed assets, such as properties, and also to the reduction of the stock and book debts, and the manner in which the reserve accounts had been dealt with, and explained that, although it was not shown on the face of the balance sheet, the company had made very ample provision for depreciation, not only on the buildings, but on the plant, machinery, motor vehicles, etc. He also referred to the increase in the sundry investments, explaining that there was included under this heading a sum which had been invested in the Argentine Patriotic Loan—which had been issued in the spring of the year. He also referred to sundry debtors and the provision which had been made to meet doubtful debts, and to the reason for the apparent increase in the amount of sundry creditors.

The report and accounts were unanimously adopted.

FOSTER CLARK, LIMITED.

STRONG FINANCIAL POSITION.

LARGE INCREASE IN SALES.

EXCELLENCE OF PRODUCTS MAINTAINED.

The annual general meeting of Foster Clark, Limited, was held, on the 12th instant, at Maidstone.

After the meeting had stood in silence for a minute as a mark of respect to the memory of Mr George Foster Clark, the late chairman and founder of the business,

Mr H. C. Clark, J.P. (the chairman), said: Ladies and gentlemen, with your permission we will take the report as read. There was a considerable increase of sales during the year, but the average rate of profit showed some decrease. Due to world-wide depression, income from investments was naturally less.

The sales of investments have yielded an additional profit of £12,757 to that shown in the accounts, and this amount has been used to write down the book cost of investments.

DIVIDEND OF 22½ PER CENT.—STRONG RESERVE POSITION.

The net profit for the year amounts to £115,850 10s. To this should be added the amount brought forward, £63,360, giving a total of £179,211 available for allocation. The dividends already paid amount to £40,625, leaving a balance of £138,586. The directors recommend that this should be allocated as follows: Preference dividend for three months to September 30, 1932, £1,875; final dividend on ordinary shares of 12½ per cent., less tax, £43,750; making a total dividend for the year of 22½ per cent.; to taxation reserve, £10,000 (making this £39,047); to general reserve, £5,648 (making this £60,000); special provision for advertising, £10,000, thus leaving a balance to carry forward to next year of £67,313.

The balance sheet is absolutely clean and reveals a very strong position. The taxation reserve, in the opinion of the directors, is sufficient to pay the income tax on all profits to date, payable in January, 1933, and January, 1934. The reserves are invested outside the business, and are therefore available for any development that may be desirable.

On the assets side of the balance sheet, goodwill, although of great value, stands at the nominal figure of £100. Stock and other assets have been valued on a conservative basis.

The investments total £533,024, and cash at bank amounts to £78,316. Since June there has been a considerable rise in securities, and at the end of the year the market value was in excess of the aggregate amount shown in the balance sheet. There is also an investment reserve of £50,000. Although the income from investments shows a decrease compared with last year, a reasonable average rate of interest was earned under the prevailing conditions.

FACTORS IN COMPANY'S SUCCESS.

I feel sure that you will agree that the figures before you are reasonably satisfactory, especially considering that they represent results of a year during which competition for the lessened purchasing power of the public was at its very keenest. Several factors have contributed to this success: first, the carefully maintained excellence of our products, and, second, the energy, and I think I may say also the courage, which has been put into the popularising and selling of them. Our policy has always been to produce the very best article at a reasonable price; this, when I mentioned from conviction—the conviction that we were offering the public the best at the best price. We have not hesitated to announce this conviction far and wide. Continuous and ever-increasing use has been made of advertising, with the result that our Eiffel Tower lemonade, Foster Clark's cream custard, jellies, canned fruit, garden peas, soup squares, and many other of our products are to-day household words. Very large sums of money have been spent in various forms of publicity, and I claim some experience as to their relative values.

PART PLAYED BY ADVERTISING.

Advertising in the newspapers and magazines of this country has played a most valuable, indeed an outstanding part in maintaining and increasing our trade during the past year. We have great faith in this form of salesmanship, and if all newspapers could be persuaded to issue net circulation certificates your company—and no doubt others like it—would feel that this great selling force was in better harness and more exact control for their particular purpose. The big advertiser can no more afford to take chances on circulation than on the value of any other product he buys.

Another important factor is our intimate knowledge of the requirements of the distributing trade. The late Mr Foster Clark, the founder of the company, our sales manager, and myself, were all originally grocers, and therefore we feel that we understand in a somewhat unusual way for a manufacturing firm, the requirements of the trade and the public. We have always been mindful of the valuable and important part distributors play in business development, and it is largely because of the mutual confidence and respect between the distributing trade and ourselves that we occupy the successful position we do to-day.

THE AUSTRALIAN COMPANY.

Our Australian company has had to cope with difficult conditions owing to depressed trade and lessened purchasing power of the public. In spite of these difficulties, the company has made a larger trading profit than in the previous year, which the directors consider very satisfactory, but, owing to loss on exchange, the net profit has been considerably reduced. Under the circumstances the directors considered it prudent not to pay a dividend for the past year. Dividends have always been on a conservative basis and the company remains in a strong financial position.

The trade in canned English fruits and vegetables continues to expand and develop. About a year ago we realised that our existing capacity was quite inadequate to produce the quantity of these goods that we could sell. We therefore decided to build and equip with the best and most up-to-date machinery a new factory for this purpose. This came into operation at the commencement of the past season, and the output of fruits and garden peas, compared with the previous year, was largely increased. Unfortunately, owing to weather conditions, the strawberry and raspberry crops were of short duration, otherwise the pack would have been still larger. We are looking forward to a steady development of this side of the business. At the present time the supply of fruit is limited. Growing fruit for canning is profitable to the farmer and the acreage is being steadily increased. We hope that before long the production will keep pace with the rapidly growing requirements of the canning industry.

The report and accounts were unanimously adopted and the meeting terminated.

At an extraordinary general meeting which followed, resolutions altering the Articles of Association were adopted.

TREPÇA MINES, LIMITED.

GOOD RESULTS—STRONG POSITION.

The annual general meeting of Trepça Mines, Limited, was held, on the 12th instant, at the Institute of Chartered Accountants, Moorgate Place, London, Mr W. Selkirk presiding.

The Chairman said: In describing the results as satisfactory, I would remind you that they have been achieved in the face of exceptional disadvantages.

The principal feature of the year has been the completion and bringing into commission of the third unit of the treatment plant, which was effected gradually during the early summer. This has increased our treatment capacity to over 1,400 tons per day; the reduction in costs resulting from this increased scale of operations became effective only during the latter part of the year under review, and it is with great satisfaction that I tell you that our all-in costs for the months of October and November, excluding depreciation and taxation, were less than 15s. per ton, as against an average for last year of 17s. 4d.

The shipment of our products has proceeded throughout the year without a hitch, thanks to the admirable railway service provided by the Yugoslav and Greek Governments and to the excellent work done by our agent at Salonica, Mr de Charnaud. We have recently acquired the lease of additional storage accommodation at this port which will enable us to load two steamers simultaneously, and so cope comfortably with the shipping of our increased tonnages.

Some anxiety may have been caused to shareholders by the recent earthquakes in the Balkans, but I am pleased to say that our operations were in no way affected, as the centre of disturbance was far removed from our properties. Moreover, while we consider the risk of damage by earthquake to our mine or plant to be very remote, we have, since production started, always carried an ample policy of insurance against loss of profits and standing charges; this policy covers losses arising from dislocation of operations due to fire and other causes, and includes the earthquake risk.

Summing up the position as it stands to-day, we own one of the very few lead-zinc mines able to earn and pay dividends under existing conditions, and we have no prior charges ranking ahead of our ordinary capital. We have ample ore reserves, a modern plant of large capacity, a convenient outlet for our products, and a first-rate organisation.

The report and accounts were unanimously adopted.

CAMP BIRD, LIMITED.

THE NEW INTERESTS.

The thirty-first ordinary general meeting of Camp Bird, Limited, was held, on the 14th instant, at River Plate House, London, E.C., Mr F. W. Baker (the chairman) presiding.

The Secretary (Mr R. H. A. Neuschil) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—The directors' report sets out the position clearly. The loss for the year represents the sum of £40,256; adding to this amount £20,000 for interest on debentures and instalment of premium, and £54,448 in respect of amounts written off investments, advances and loans, makes a total loss of £114,704. The deduction from this sum of £54,377, credit balance brought forward from the previous year, and the amount transferred from income tax reserve, £5,386, which is no longer required, leaves a debit balance to be carried forward of £54,941.

The loss on realisation of investments is attributable almost entirely to the heavy loss we made on the sale of our holding in the Creole Petroleum Corporation. That this policy was justified is instanced by the fact that we made a substantial investment in Wiluna shares which to-day shows us a very large appreciation, and I feel confident that as development progresses in respect of the interests acquired we shall have better opportunity of speedy capital appreciation in reduction of this year's loss.

I may say that whereas part of our Creole holding was sold during the period covered by the report, the balance was written down to the price at which it was subsequently realised after June, 1932, so that this year's accounts are burdened with an amount which, strictly speaking, should have been charged in the period 1932-33, in which case the accounts before you would have shown a balance carried forward to the debit of profit and loss account of under £10,000, as against £54,941.

I will now deal with the several interests which this company owns and the development of the mines in which we are interested. First of all I would like to dwell on the position of Santa Gertrudis. A large amount of development work was done, all charged to revenue, with results that added but little to the ore reserves. This development work did, however, disclose the possibility of proving a future supply of ore from the Elena and Necesidad Claims. The ore reserve position as at June 30th is estimated at 229,000 tons, having a gold content of 21,390 ozs. and 4,731,000 ozs. silver.

We still retain a substantial interest in the Mexican Corporation and our interest in Siparia Trinidad Oilfields, Limited. This company is developing its oil territory, but, in its turn, like most oil companies, is feeling the effect of world over-production of oil and the restriction of imports into the United States.

The property of the Lagares Tin Mines, Limited, is shut down; recent reports indicate that the mine and plant are being kept in excellent condition and could restart at very little cost as soon as the price of tin warrants. It has been decided not to reopen the mine until tin reaches a price of over £160 a ton with a reasonable certainty of stabilisation at that price or better.

I now turn to our new business. When the New Consolidated Gold Fields, Limited, took up the subscription of the debenture issue of this company it was part of the terms of the arrangement that Gold Fields should give us an opportunity of taking up to a 10 per cent. interest in any new business undertaken by them. This arrangement may have a very important bearing on the fortunes of our company. Through their good offices we have been offered and have taken a participation in the six undertakings referred to in the directors' report.

Our Wiluna investment has to-day proved a very profitable one. I attach a great deal of importance to the possibilities of West Witwatersrand Areas, Limited. I look upon this as one of the most important pieces of constructive mining development that have taken place in the city for many years. An interest in the Gold Fields Australian Development Company, formed to prove the extension into the areas acquired by it, of the Wiluna ore system, and for the purpose of acquiring options on properties in Western Australia, should give hopes of satisfactory results.

The Gold Mines of Australia, Limited, controlling the Mount Coolon Mine, should again be a useful asset. Milling operations at the Mount Coolon Mine have commenced with satisfactory results. The other two Transvaal interests referred to in the directors' report are sponsored by Gold Fields and other leading South African mining houses, which should encourage optimism as to their future. We also propose, as I have already told you, taking a participation in a syndicate being formed by the Santa Gertrudis Company to acquire and develop mining interests in Mexico.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr J. A. Agnew, and, after the Chairman had replied to questions, was carried unanimously.

SANTA GERTRUDIS COMPANY, LIMITED.

ACTIVE DEVELOPMENT POLICY.

The twenty-fourth ordinary general meeting of the Santa Gertrudis Company, Limited, was held, on the 14th instant, at River Plate House, Finsbury Circus, London, Mr F. W. Baker (chairman of the company) presiding.

The Secretary (Mr R. H. A. Neuschil) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: The net result of the year's operations is that there is a credit balance to profit and loss account of £44,194, out of which reserve for income tax absorbs £37,644, leaving a balance of £6,550. Adding to this the amount brought forward from the last account, viz., £35,767, there is a total available of £42,317, from which is deducted dividend No. 24 of 6d. per share paid in January last, and which absorbed £38,835, leaving a net sum of £3,482 to be carried forward to next year.

It has been decided that a policy of active and still further increased development should be undertaken at Santa Gertrudis, and, secondly, that we should continue the policy outlined to you at last year's annual meeting of investigating, with a view to acquisition, other mining interests in Mexico.

The work which we propose to carry out in our search for further and new ore reserves will be to test all the possibilities of our large unexplored area, and that we have more than reasonable justification in carrying out this policy is instanced by, firstly, the discovery made on a north-south vein system on the Elena area, carrying good values, but broken, and faulted at the point of intersection, and a discovery on the Necesidad property of an east-west vein showing large widths with a high-grade pay streak. In both cases the ore encountered was at a horizon which Santa Gertrudis technical advisers have reported as probably being at the top of the ore shoots. We propose to sink, drift and diamond drill at both the Elena and Necesidad to determine whether in these two locations we can develop further reserves and values that would add to our mining life.

Advices from our management show that the tonnage reserves amount to approximately 250,000 tons, and should probably be exhausted by September next unless the exploratory work, details of which I have given you, opens up fresh reserves. The possibilities are really good, but only the future can determine how good or how bad. If past work is any criterion, then we may duplicate the Santa Gertrudis experience in the discovery of the Dos Carlos vein, for I can recall to your minds the fact that ten years ago the Santa Gertrudis vein system was practically exhausted. In a cross-cut from the Santa Gertrudis we intersected the Dos Carlos vein, which was a pure blind vein, with no surface indications to suggest that it existed. Development of the Dos Carlos property added ten years to our life, yielding us an enormous silver production.

Economies effected maintained a low operating cost and offset for the most part the increased outlay for development. All property and equipment were kept in excellent condition. The average milling rate was 27,371 tons per month. There was crushed and treated by cyanide 328,450 dry tons of ore, the gross value of which was \$2,764,000, equal to \$8.42 per ton. The bullion recovered contained 28,726 ounces of gold and 6,390,000 ounces of silver. The ore reserve position as at June 30th is estimated at 229,000 tons, having a gold content of 21,390 ounces and 4,731,000 ounces silver.

In the Mexican Corporation, which, through its Mexican subsidiary, holds a 50 per cent. interest in the Fresnillo, we still retain a substantial interest. The Fresnillo Company reports that low base metal prices resulted in operations at the mine being carried on at a loss, which was kept within minimum limits by reducing the scale of operations to a point consistent with maintaining the mine organisation on the most economical basis. It also reports that basic operating conditions at Fresnillo are now more favourable than at any time in the history of the company and that with any appreciable upturn in metal prices, profits would be higher than at corresponding metal prices ruling during previous years, when considerable profits were made.

The Fresnillo Company owns a great mine whose reserves have been largely added to during the past year. Metallurgical improvements and operating conditions have led to substantial economies, and there are few mines in the world which are working under such economical conditions as have been created by its management. Mr J. A. Agnew seconded this resolution, and it was carried unanimously.

A resolution of thanks to Mr Hugh Rose, Mr F. H. Walsh and the staff in Mexico for their work during the past year was unanimously accorded, and the retiring directors, Mr F. W. Baker and Mr R. Annan, having been re-elected and Messrs. Price Waterhouse and Company having been reappointed auditors, the proceedings terminated.

LOW TEMPERATURE CARBONISATION, LIMITED.

REVIEW OF PAST YEAR'S OPERATIONS.

THE DEMAND FOR "COALITE."

PRODUCTION OF FUEL OILS.

ASSISTANCE FOR THE MINING INDUSTRY.

COLONEL BRISTOW'S VIEWS.

The fifteenth annual general meeting of Low Temperature Carbonisation, Limited, was held, on the 13th instant, at Winchester House, London, E.C.

Colonel W. A. Bristow, M.I.E.E., F.R.Ae.S. (the chairman and managing director), presided.

The Chairman said: Ladies and gentlemen,—The report and accounts are before you and I propose that they shall be taken as read. Nevertheless, there are several items in the accounts to which I would direct your especial attention.

The credit balance on the trading account is £39,079, to which must be added £9,166, representing interest on your investment in Doncaster Coalite, Limited, and £1,582 other sundry revenue.

These credit balances amount to £49,828, from which must be deducted all the expenses for the year amounting to £16,790, leaving a balance of £33,038. These total expenses are only 7½ per cent. on the turnover, an unusually small proportion for any manufacturing and distributing business.

This balance of £33,038 provides the £12,000 debenture interest and £5,899 for depreciation, leaving £15,138 to be carried to the profit and loss account on the balance-sheet.

It says much for the inherent soundness of the business that for the past six years 8 per cent. has been paid regularly on the whole of the effective capital invested in the reconstructed company managed by your present directors. This year the total of the interest aged by your present directors is £27,138—that is to say, more than 18 per cent. on this effective capital.

You will observe that the cash at the bank has increased during the year from £19,874 to £37,369. In addition we have this year extended the works at Askern by 50 per cent., and the two new batteries of 72 retorts were brought into operation in October. The increased output should benefit next year's results.

"COALITE."

The sales of "Coalite" and oils totalled £222,163, an improvement of £27,353 on last year. The works have run without a stop during the whole of the period and at maximum possible production. In the heat-wave in August the ordinary daily orders totalled 531 wagons for the week, and at no time this year has it been possible to accumulate any stock. In spite of the 50 per cent. increase in supplies from Askern, demand continues in excess of production.

In the first five weeks of this financial year both works have established new records for output and profit. The plant at Green-wich owned by the South Metropolitan Gas Company has worked continuously throughout the year without the slightest difficulty.

Exactly five years ago there were 32 retorts in operation, as against the 556 now installed at Barugh, Askern, and Greenwich. These figures show the great advance that has been made in the manufacture and sale of the smokeless fuel, and also indicate the remarkable growth of the engineering side. The carbonisation or distillation of coal is a difficult business, and its operation on a commercial scale is beset with innumerable pitfalls. The care and maintenance of 556 retorts and all the subsidiary plant constitutes a task of some magnitude, and only a short time since the continuous operation of such a large number of low temperature retorts would have been declared impossible.

The company's oil distillation plant at Barugh has worked throughout the year and has this month established a new output record. Your directors have placed a contract for a 50 per cent. extension of this plant, and the new portion is expected to come into operation before the end of March next. The oils produced are being distributed over much wider markets, and some of the derivatives are sent to almost every country in the world.

Coal Petrol.—During the year the company's research department have been developing a new method for the refining of coal petrol, and have evolved a process which has yielded greatly improved results. The petrol now produced is water white, free from any objectionable odour, and official tests show that it possesses

anti-knock properties about 25 per cent. better than those of any other normal petrol. (Hear, hear.) It is also highly volatile, and its many special properties make it the ideal motor fuel.

Naval Fuel Oil.—Work has continued on the production of fuel oil suitable for naval use. On December 5 last we dispatched to an Admiralty fuelling depot the first bulk consignment of naval fuel oil produced from British coal by any process of low temperature carbonisation. To the best of my knowledge and belief, this is the first occasion in history on which a warship has proceeded to sea fuelled only by oil produced from its national coal. (Applause.) In view of the success which has attended the preliminary trials of our naval fuel oil, it is expected that this will lead to regular and increasing contracts.

The outstanding success of "Coalite" Smokeless Fuel is the keystone of the company's success, from which all other of the company's activities depend. Although the use of "Coalite" has increased in a remarkable manner, it is not yet even 1 per cent. of the total consumption of domestic fuel. From the manner in which "Coalite" has been taken up by every class of user it is obvious that only the question of supplies stands in the way of rapid development, and I see no reason that should prevent the consumption of at least 5,000,000 tons per year, and that within a very short time. This would necessitate the carbonisation of about 7,000,000 tons of coal, and, taking the combined oil yields as 8 per cent. only, there would be produced each year 560,000 tons of oil and petrol, a valuable addition to our national resources, and one that might prove decisive in any future war.

HYDROGENATION.

The treatment of the oil now being made from coal should precede any scheme for the hydrogenation of solid coal, and our views have been confirmed by the letter of Mr H. T. Tizard, Rector of the Imperial College of Science, published in *The Times* of December 10.

Mr Tizard in the last paragraph of his letter asks a very pertinent question. He says: "Is it really wise at a time when there is general agreement that serious troubles are caused by the over-production of primary materials to contemplate adding to the over-production of one of these materials by methods which are demonstrably uneconomic?"

It is important, however, that the public should realise that this question does not apply to the case for the hydrogenation of coal oil. This oil already exists, is bound to increase in quantity, and its accretion in value by hydrogenation would be of national importance.

FUTURE DEVELOPMENT.

The report and accounts now before you constitute a most important advance in the history of this company. This is all the more significant, bearing in mind that it has been won at a time when the general conditions in the country and in trade have been by far the worst we have ever experienced.

Your directors are, however, by no means satisfied and have prepared a further programme of development and extension of such a character as should ensure an adequate return for the ordinary shareholders. (Hear, hear.)

Our work will be assisted by the manifold efforts which are being made to restore prosperity to the mining industry. As you know, the conditions in this industry have been getting worse. Modern and efficient mines are working at little, if any more, than half their capacity, and many thousands of miners have been thrown out of employment apparently for ever. The raw coal is usually burnt in an inefficient manner, and each year many millions of pounds' worth of the valuable volatiles contained therein are either wastefully consumed or discharged as soot and smoke to poison the air we breathe and cut off the sunlight.

The very existence of the industry is also being seriously threatened in its foundations by the ever-growing menace of

imported oil, and what the end may be one does not care to contemplate.

Further, the British Navy and Air Force, and to an important extent the Army also, can only move when supplied with large quantities of oil, so that one day the fate of the British Empire may depend from the fine and delicate thread of hundreds of miles of pipeline in a hostile country.

This company has already unmistakably indicated the direction in which some reforms can be carried out. The "Coalite" process converts coal dust into first-class fuel of high calorific value. In the course of manufacture oil and petrol are obtained as by-products, thus raising the value of a large portion of the treated coal and helping the coal industry to fight the competition of oil by itself producing oil. The value of the oil and petrol produced improves the balance of trade by reducing the imports of foreign oil, and, lastly, a supply of home-produced oil is provided for the Navy, Army, and Air Force. I know of no other development which leads to the solution of so many of these urgent problems simultaneously, and it appears to me inevitable that when we do seriously take in hand the task of reforming these industries, as reform them we must, we shall find ourselves occupying a very prominent place in the new order.

The report and accounts were adopted.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.

The twenty-second ordinary general meeting of this company was held, on the 12th instant, at Southern House, Cannon Street, London.

The Hon. Lionel Holland, the chairman, who presided, said that there was little in the accounts to give satisfaction. But for a fortuitous profit accruing from the sale of investments, the year's working would have resulted in an actual loss. The position was due to the low value of oil products and the crushing taxation levied on the oil industry in India. Largely owing to the action of the Government in lowering the measure of protection formerly enjoyed by indigenous kerosene, Indian producers had had to sell in a market flooded with cheap production. They had sold a couple of million gallons more of kerosene, but had received less revenue by over £150,000, and to the heavy fall in receipts they had had to add the loss of revenue from increased taxation in India, which had been raised to a level which the industry as a whole was quite unable to support. Indian income tax, Excise duties, and royalties had cost them over £270,000—a sum four times in excess of the company's whole trading profit.

It was possible that the coming months would see the company's interests outside India increase. The potentialities of the German oilfields had recently attracted much attention, and they had joined with certain foreign interests in testing a couple of selected areas held under favourable options with opportunities of considerable extensions. They were also investigating the possibilities of the large deposits of shale and torbanite in the Transvaal, the retorting and refining of which presented no insuperable difficulties. Generally, the company was in a position, thanks to a conservative financial policy, to hold its ground until normal conditions were restored and prices improved.

The report and accounts were adopted.

IND COOPE AND COMPANY, LIMITED.

EFFECT OF INCREASED BEER DUTY.

The twentieth ordinary general meeting of Ind Coope and Company, Limited, was held, on the 12th instant, at the Great Eastern Hotel, Liverpool Street, London.

Mr Louis E. Walker (the chairman) said that the accounts now under review covered a complete year during which the increased beer duty had been in operation. Unfortunately, the exceptionally heavy duty placed on beer in September, 1931, had coincided with a period of unprecedented trade depression, the combined effect of which had been to reduce their output materially. To meet to some extent the decrease in profit as a result of such loss of sales, economies had been effected during the year, and it was only on account of such economies and careful working that the present results had been obtained, which, under the circumstances mentioned, he thought shareholders would agree, were fairly satisfactory.

The position, however, remained that it was not possible to continue effecting economies without trespassing on efficient working. With a business like theirs, with three breweries in different parts of the country, it was quite impossible to reduce overhead charges in proportion to a decrease in sales such as had been experienced during the past year, and which they were still having to face. It was only right to tell the shareholders that while one did read

occasionally of some slight evidence of improvement in trade in various parts, it had not yet reached the brewing industry. It had been their experience in the past that brewers were frequently the last to feel trade depression, and were nearly always the last to feel the benefit of any recovery.

He was glad to be able to say, however, that the shrinkage in their output was not due to loss of customers, but to smaller orders received from them as a consequence of the depressed conditions prevailing.

While the brewery business was under a cloud at present, he was confident that when times became more normal, and the Government could see their way to take off the extra duty imposed, there was little doubt whatever that their company would be in an excellent position to take advantage of the improved trading conditions. In the meantime the shareholders could congratulate themselves on the very sound position disclosed by the figures in the balance sheet.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended December 10, 1932, amounted to £10,560,200 against ordinary expenditure of £12,889,700. After making no allocation to Sinking Fund, but allowing for an increase in Exchequer Balances of £208,600, the operations for the week, as shown below, increased the National Debt by £2,708,000 to approximately £7,948 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

(000's omitted.)

Treasury Bills	£ 19,103	Bank of England Advances	£ 17,800
Public Department Advances	10,600	5% War Loan repaid	5,170
3% Conversion Loan	1,850	4% War Loan repaid	600
		Treasury Bonds repaid	1,175
		National Savings Certificates	190
	31,553		22,945

A complete analysis of the National Debt at September 30, 1932, was printed in the *Economist* of October 8, 1932.

Commercial Reports.

MARKET SUMMARY.

The tendency of prices in terms of gold of the principal primary products during the past week, though irregular, has on the whole been steadier. In the United States, the course of non-ferrous metal quotations shows a further decline in tin and copper. Lead and spelter are unchanged on the week. Rubber was again lower, but raw cotton advanced a few points. Among cereals, wheat, maize, rye and oats have maintained last week's advance. Coffee sold at firmer. Sterling quotations of commodities subject to international arbitrage, moved in sympathy with gold prices, but other products, such as tea, and dairy produce, are scarcely changed on the week. The recent advance in the price of meat was maintained. Reports from various industrial centres reveal a further expansion in the activity of the coal trade. There has been no similar tendency in the iron and steel industries, but the recent improvement appears to have been maintained. Demand for cotton manufactures has tended to broaden, and activity in the rayon trade has been maintained, but combing and spinning machinery in the wool trade appears to have been slightly less active.

THE COAL TRADE.

SHEFFIELD.—Demand for best steams for export has improved, a number of orders having been diverted from other centres which have reached their quotas to South Yorkshire. Prices remain at 17s. 6d. and 17s. 9d. f.o.b. The working of collieries is irregular. The call for industrial fuel is only slightly better than it has been and there is a surplus of small and secondary sorts. Increased activity in house coal is reported, but the quantities disposed of lately have been considerably less than normal for the season. Prices of best ordinary house vary from 23s. to 24s. at pits. There is little expansion in blast-furnace coke, although considerable quantities are being used for domestic heating. Good qualities fetch from 9s. 6d. to 10s. 6d. at ovens, and bargains are to be picked up.

GLASGOW.—Strong conditions continue in the Scottish coal market, and for export the shipping collieries are mostly fully booked until the end of the year, any odd lots of fuel being eagerly taken up. Screened coals are notably scarce, and washed material is strong, apart from Lothian doubles. Contrary to last week's increase, the Scottish Executive Board have applied for a further increase in the current quarter's quota of 150,000 tons, but the decision of the Central Council is not yet known. Shipment prices (f.o.b. district ports): LANKARSHIRE.—Ell best, 16s.-16s. 6d.; navigation second, 13s. 6d.; Hartley, 16s. 6d.; steam, 16s.; 11s. 9d.-12s. 3d.; doubles, 12s. 6d.-13s.; singles, 11s.; pearls, 16s. 6d.-17s. 6d.; dross, 9s. 6d. FIFE.—Screened navigation, 17s.-18s. 6d.; first-class steam, 15s.; third-class steam, 13s.; 12s.; pearls, 11s. 6d.-12s. LOTHIAN.—Prime steam, 14s.; secondary steam, 13s. 6d.; 12s. 6d.-13s.; doubles, 12s.-13s.; singles, 11s. 3d.-11s. 6d.; pearls, 11s. 3d.-11s. 6d.; dross, 9s. 6d.

NEWCASTLE-ON-TYNE.—The demand for Northumberland coal is so insistent that colliery owners have made an application for a further increase in quota. This was recently raised by 3 per cent. to 87½ per cent., and there is no doubt that if 100 per cent. is granted, the supply will be absorbed. It must be borne in mind, however, that more than half of this trade is English coal, which is now being placed with Northumberland owing to lower prices. In Durham, the activity in prime brands of unscreened steam continues, which is due to a better cooling-station demand, and in ballast on homeward charter. The foundry coke market is fairly quiet, but there is a good demand for coke nuts from the United States, four or five vessels having been chartered during the last fortnight to load cargoes. To-day's f.o.b. prices are as follows: NORTHUMBRIA.—D.C.B. screened steam, 14s. 3d.; smalls, 8s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s.; Main, large, 13s.; smalls, 8s. 3d.; smalls, 9s.; Hartley screened steam, 16s.; smalls, 11s.; Wear Special, unscreened gas, class gas, 13s.; coking, unscreened or smalls, 12s. 6d.; Prime, 13s. 3d.; Prime foundry coke, 16s. 6d.; Newcastle and District gas coke, 19s.

CARDIFF.—During the past week the French State Railways have placed contracts for the supply of 230,000 tons of large coals and 70,000 tons of small coals, and the British Admiralty for about 100,000 tons, delivery in both cases to be over next year. There is also an inquiry in the market for the supply of 60,000 tons to in current requirements, but exports are being fairly well maintained, and the shipments, foreign and coastwise, last week totalled 369,815 tons, compared with 344,200 tons in the previous week, and 466,977 tons in the corresponding week last year. The market for dry smalls and washed coals continues firm, and with the reopening of two blast-furnaces and the resumption of operations at a few steel and tinplate works, there are prospects of an

increased demand for coke and ordinary smalls. There has been little change in the position of large steam coals, which are in abundant supply on the basis of the scheduled minimum prices. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dross, 19s. 3d. to 19s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d. to 14s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 26s. 6d.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 36s. 6d. to 45s.; rubbly culm, 8s. 6d. to 9s.; special foundry coke, 32s. 6d. to 34s.; patent fuel, 20s.; pitwood, ex ship, 27s. to 27s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland pig iron keeps steady, and, although the tonnage of iron being sold is not large, the position is satisfactory. When the holidays are over and conditions resume their normal course, it is expected that there will be an expansion of business generally. All the local consuming works will be affected more or less by stoppages during the last ten days of the month when reduced quantities of pig iron will be required, but as the make is confined to three furnaces only, it will cause no accumulations of importance. Fair sales of foundry iron have been made during the past week, and a moderate business was reported at the weekly market on Tuesday. Official prices were unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; No. 4 forge, 57s. f.o.b. or f.o.t. There is a little more Cleveland iron booked to go forward to Scotland, where the concessions are still operative and rebates are also allowed in other special cases. In hematite there is a little more business doing, but mostly for early dates, though there has been some inquiry within the last week or two for forward, and consumers seem to be taking more interest in business ahead. The quotation for ordinary mixed numbers for early delivery is 59s. per ton, and a shade more is asked forward, but little business has resulted so far. Shipments of pig iron this month are only moderate, the quantity cleared to 13th inst. being 3,753 tons, compared with 3,855 tons to November 13th. In manufactured departments there is more doing all round and several good contracts are under negotiations in which local firms are interested. Messrs Dorman Long and Company, Ltd., are expecting to secure on the 21st inst. from the Swansea Electricity Committee confirmation of an order of the value of about £151,000 for structural steel work required for the Swansea new power station, which will prove a welcome addition to the firm's present undertakings. Prices for steel material are generally unchanged. In the imported ore trades there is not much new business, consumers' needs being practically covered by arrears of old contracts, though an odd extra cargo or two requires to be purchased now and again. Prices are higher, owing to the advance in freight rates and scarcity of tonnage. Best rubio is nominally £151,000 for structural steel work required for the Swansea new power station, which will prove a welcome addition to the firm's present undertakings. Prices for steel material are generally unchanged. In the imported ore trades there is not much new business, consumers' needs being practically covered by arrears of old contracts, though an odd extra cargo or two requires to be purchased now and again. THE WOOL TRADE.—Bradford.—The soundness of wool values, writes our correspondent, was demonstrated during the seventh series of London sales, which closed last Tuesday. Extending the auctions into two days of another week roused a little criticism.

but the offering of an extra few thousand bales this week, instead of closing last Friday, has done no harm. On the day named the market was firm. Whilst big quantities of wool have been offered in London and elsewhere, and disturbing financial influences have been at work, the first half of the Colonial selling season is closing with no small measure of confidence in values. It is not expected that there will be any marked variation during the next few weeks, and by the time another series of London sales commence, there is every probability of quite as much interest being shown in all descriptions of wool as during the auctions just closed. Some excellent Australian new clip has been available, and both home and Continental buyers have competed readily. Good combing merinos show par to five per cent. improvement, compared with the close of the September-October auctions. Faulty classes are five per cent. cheaper, though Continental competition was largely instrumental in the level of values forthcoming. More interest was shown towards the end of the series in scoured merinos. For special lots, very good figures were forthcoming, but generally speaking, prices were irregular. Greasy crossbreds have not been in large supply, and consisted mostly of medium and low sorts. Good greasy halfbreds were fully firm, while medium and coarse classes declined 1d. Home trade topmakers bought freely of the large supply of alipes, halfbred lambs being par to 5 per cent. cheaper, other classes declined 10 to 15 per cent. About 117,000 bales were sold; 65,000 bales went to the Continent, and 52,000 bales to the home trade, which leaves about 42,500 bales for the next series. The Bradford market is quiet, but quotations for all qualities of tops are barely steady. The pressure on combing and spinning machinery has abated somewhat, particularly in the section working up fine qualities of wool and tops. There is no profit in these at the prices realisable to-day. Medium and low crossbreds are nearer a working basis, but more business is needed.

THE JUTE TRADE.—Dundee.—There is little movement in the jute trade. Business in all sections is very slow, and only the merest trifling lots are being bought. Prices, however, are all more or less maintained, and spinners and manufacturers display great unwillingness to allow their rates to decline further. There is a great lack of demand for goods in Calcutta, but an undertone of steadiness prevails, and the value of 10 oz. 40 in. continues in the vicinity of 19s. and 8 oz. 15s. for early shipment positions. Even in normal times, the present month is usually one of quietude, so that no improvement in business can be expected during the remainder of the year. The holidays at New Year will probably extend to a fortnight in most cases, but some of the works here will be off for only one week. Prices of raw jute have slightly fluctuated round about £14 12s. 6d. for Daisee assortment full group, and £14 10s. has been accepted yesterday, with four's ruling at £13 15s., December-January. Single marks are offered at from £14 12s. 6d. for Rangali to £15 5s. for Mahabir, same shipment. Tossa assortment is quoted at £15 12s. 6d. and four's at £14 12s. 6d., PR being offered at the latter figure, December-January. Substitute-M First Mark is named at £16 15s., and good Lightnings at from £16, with Hearts of good quality at £15 5s. for Ram assortment, December-January. Only a few small sales have taken place during the past ten days. Jute yarns are quiet, but nominally steady. Spinners are not quoting less than 1s. 10½d. for common 8 lb. cops, and 1s. 11½d. for 8 lb. spools, but buyers are unwilling to pay these rates, and are holding off after recent fair purchases at 1s. 10d. and 1s. 11d. respectively. Twist has been sold at from 3½d. to 3¾d. for 3 ply 8 lb., and sacking yarns have been in rather better demand on account of more doing in the cloth. For 24 lb. web 2½d. is lowest, and 3¾d. for 8 lb. chains. Rove is irregular, at from £18 5s. for 48 lb. and £15 10s. for 200 lb., while the finer yarns are practically neglected at 2s. 5d. for second quality 8 lb. Rio warp, 2s. 2d. for third, and 2s. for fourth. Carpet yarns are dull. Cloth business is confined to small lots for early delivery. Nevertheless, manufacturers are very steady in their prices and are still refusing to accept less than 2½d. for 10½ oz. 40 in. and 2d. for 8 oz. Inquiry has been more prominent during the past few days. Linoleum hessians are very quiet, and, with exception of an improved business in sackings, heavy goods remain slow.

WHEAT.—The international wheat situation is scarcely changed on the week. Importers' requirements continued to be satisfied, mainly by Canada and Australia. According to the first official estimate of Argentina's crop, it is expected to yield about 29 million quarters, against an actual harvest of 28.2 million quarters a year ago. The feature of the week has been the further decline in Canadian quotations from 44½ cents per bushel to 42½ cents per bushel. Despite the depreciation of the Canadian dollar, Winnipeg quotations are therefore lower than quotations for United States wheat in Chicago. It is because of this discrepancy in prices that only a small volume of United States wheat finds an outlet abroad. Mr. Broomhall has now published a revised estimate of exporters' surpluses and importers' requirements during the current season. Thus, the world's export surplus is estimated at 122.5 million quarters, against 88 million quarters likely to be required by importing countries, leaving an unsold surplus of 34.5 million quarters at the end of the season. On Wednesday, "December" futures were quoted in Chicago at 44½ cents per bushel, against 44½ cents the week before, and 44½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 27s. per 496 lbs., against 27s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 26s., against 27s.; No. 3 Northern Manitoba, Vancouver, ex ship, 25s. 6d., against 26s. 6d.; Australia, ex ship, 26s. to 27s. 6d., against 26s. 3d. to 27s. 3d. a week ago.

WHEAT FLOUR.—Business in flour has been on a small scale. North American shipments were 87,000 sacks, compared with 163,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 23s. 6d. to 26s., against 23s. 6d. to 26s.; Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. last week.

BARLEY.—The market in feeding barley was again dull. "December" futures were quoted in Winnipeg on Wednesday at 28½ cents per bushel, against 28½ cents last week and 32½ cents a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s. to 23s., against 22s. to 25s. a week before.

OATS.—The volume of international trade in oats has been small. In Chicago, "December" futures were quoted at 15½ cents per bushel on Wednesday, against 15½ cents per bushel a week before and 17 cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 9d. per 320 lbs., against 18s. a week ago; "River Plate," ex ship, 16s., against 16s. 3d.; "Chilean White," landed, 22s.—24s., against 22s.—24s. a week earlier.

MAIZE.—Heavy shipments of maize from Argentina and Danubian countries have again been recorded, and prices gave way under the influence of a slightly less active demand. "December" futures in Chicago were quoted on Wednesday at 22½ cents per bushel, against 22½ cents on Wednesday of last week and 26½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., compared with 20s. last week; "Plate," ex ship, 18s. 9d., as against 19s.; "Plate," December-January, 19s., as against 19s. 3d. Yellow maize, ex wharf, was quoted at £5 12s. 6d. per ton, against £5 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1922-23, 1931-32, 1930-31, 1929-30 :—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to December 10	Cwts. 267,558	Cwts. 82,018	Cwts. 105,929	Cwts. 373,751
15 weeks to December 10	4,047,365	1,119,075	2,047,452	4,156,789
Average price of English wheat per cwt.	s. d. 5 4	s. d. 6 5	s. d. 6 2	s. d. 9 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1928 to 1931:—

Week ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Dec. 3, 1932 ...	316,455	395,707	50,559	5 5	6 11	5 9
Dec. 10, 1932 ...	267,558	346,273	54,633	5 4	6 11	5 9
Dec. 8, 1928 ...	244,819	473,911	66,252	9 9	10 5	9 1
Dec. 7, 1929 ...	260,293	389,605	48,502	9 4	8 11	7 3
Dec. 13, 1930 ...	105,929	358,394	43,522	6 2	8 3	5 8
Dec. 12, 1931 ...	82,018	363,143	52,183	6 5	8 6	7 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930 :—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Dec. 16, 1931.	Jan. 4, 1932.	Dec. 7, 1932.	Dec. 14, 1932.
Winnipeg (No. 1 Manitoba) — per 60 lb.	148½	56½	60½	62½	44½	42½
Chicago (No. 2 Winter)— Cents per 60 lb.	130½	79½	54½	55½	44½	44½

The visible supply of wheat in Canada, at 83,547,000 bushels, shows a decrease on the week of 318,000 bushels. Supplies a year ago stood at 56,859,000 bushels.

SUGAR.—The New York market in raw sugar has been a little steadier and values show a slight advance on the week. December futures were quoted in New York at 0-74 cent per lb. on Tuesday, against 0-71 cent a week before and 1-05 cents a month ago. Wednesday's sales of raw sugar in London include "December delivery" at 5s. 24d. per cwt., against 5s. 4½d. to 5s. 5d. a week before, and "March, 1933," at 5s. 3½d. to 5s. 5½d., against 5s. 8½d.

A NEW ATLAS
BARTHOLOMEW'S
GRAPHIC
ATLAS
of the
WORLD

TO publish a large general atlas of the World at the price of a new novel is a task undertaken by few. The production, however, is in no way "cheap"; the only cheap part is the price. The atlas, which is absolutely up to date, contains 128 pages of fully coloured maps of every part of the world, along with an index of 64 pages, is excellently printed on high-class paper, is very strongly bound in cloth boards and finished with an arresting coloured jacket. Without a doubt this is the finest value offered to the public for many years. The size of the book is 7½ in. by 10½ in by 1 in.

JOHN BARTHOLOMEW & SON LIMITED
DUNCAN STREET, EDINBURGH.

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

Last week 15,629 14,251 15,117 13,390 132,348 79,412

COFFEE.—There was a slight improvement in coffee quotations in New York at the end of last week. On Monday quotations began to sag under renewed selling and by Wednesday the whole of the earlier advance had been lost. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., against 8½ cents per lb. on the corresponding day a week ago. Tuesday's London auctions were characterised by a moderate demand, and "Costa Rica" was easier. Last week's movements of coffee in London were as follows: Brazilian, landed, 194 bags; delivered, for home consumption, 35 bags; exported, 73 bags; stocks, 8,843 bags, against 2,637 bags a year ago. Central American, landed, 4,118 packages; delivered for home consumption, 2,354 packages; exported, 2,425 packages; stocks, 55,589 packages, against 61,266 last year. Other kinds: Landed, 9,048 packages; delivered for home consumption, 2,245 packages; exported, 2,011 packages; stocks, 67,344 packages, against 45,539 last year.

COCOA.—The market in cocoa has been a little steadier. December futures were quoted at 3.65 cents in New York on Tuesday, against 3.59 cents a week ago and 3.92 a month ago; Accra, December-February, at 25s. 9d. per cwt. c.i.f. Continent, shows a rise of 3d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 4,128 bags; delivered for home consumption, 5,956 bags; exported, 494 bags; stocks, 102,521 bags, against 133,017 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 54,888 packages of Indian and 27,959 packages of Ceylon tea. Monday's "Indian" auctions encountered a good demand for common grades but other qualities were irregular. With the exception of common varieties the price paid for Ceylon teas on Tuesday was generally lower. On Wednesday, the demand for "Indian" tea of common and fine quality was active, but medium sorts were easier. The following table shows the average

prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.
Dec. 10, 1931.....	10-56	12-27	16-70	8-95	7-77	7-21
Nov. 17, 1931.....	9-25	7-28	11-34	6-34	5-36	6-16
" 24, ".....	8-78	7-78	10-60	6-67	5-32	6-46
Dec. 1, ".....	8-20	7-13	10-02	6-56	4-81	4-97
" 8, ".....	7-71	6-58	9-72	6-08	4-88	4-05

RICE.—Business in rice was quiet but prices were slightly firmer. The spot price was 9s. per cwt., against 9s. 3d. per cwt. a week ago, while the forward quotations at 7s. 0½d. per cwt. show a rise of ½d. per cwt. on the week. Movements in London during the past week were as follows: Landed, 166 tons; delivered, 29 tons; stock, 2,626 tons, against 1,817 tons a year ago.

POTATOES.—The principal potato markets have been well supplied and prices showed little change on last week. At the London Borough Market, "King Edward" light soil, were quoted at 6s. 9d. to 6s. 3d. per cwt., against 6s. to 6s. 6d. a week ago.

SPICES.—The market in spot pepper was again quiet and forward quotations were largely maintained. Spot pepper, "Black Singapore," was quoted at 6d. per lb. on Wednesday, against 6d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 12 tons; delivered, 9 tons; stock, 386 tons, against 323 a year ago. White, landed, 23 tons; delivered, 66 tons;

THE JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED, GROUP.**DECLARATION OF DIVIDENDS.**

NOTICE IS HEREBY GIVEN that DIVIDENDS have been declared payable to Shareholders registered in the books of the under-mentioned Companies at the close of business on the 31st December, 1932, and to persons presenting the respective coupons, detailed below, detached from Share Warrants.

The dividends are declared in the currency of the Union of South Africa, but the London Office will pay on the basis of the equivalent British currency calculated at the rate of exchange ruling on the date fixed for payment of the dividends from the Head Office, Johannesburg, viz., 27th January, 1933. Amounts payable in respect of Share Warrants will be on the same basis irrespective of the date of presentation of coupons.

Warrants in respect of dividends payable in South Africa will be posted from the Head Office, Johannesburg, on 26th January, 1933. In order to provide time for preparation of warrants after the rate of exchange has been determined, those payable from the London Office cannot be posted until 16th February, 1933.

Warrants despatched from the London Office to persons resident in Great Britain or Northern Ireland will be subject to a deduction of United Kingdom Income Tax at rates to be arrived at after allowing for relief in respect of Dominion Taxes.

Shareholders with registered addresses outside South Africa who desire to have their dividends paid to an address therein must give notice to the Companies to that effect on or before 21st January, 1933.

The Transfer Books and Register of Members will be closed in each case from 2nd to 10th January, 1933, both days inclusive. The Dividends on the shares included in Share Warrants will be payable to the persons presenting the relative Coupons at the London Office on or after 17th February, 1933, in accordance with a Notice to be issued by the London Office after the rate of exchange has been fixed.

Coupons must be deposited FOUR CLEAR DAYS before being paid, and those lodged at the London Office will, unless accompanied by Inland Revenue Declarations, be subject to a deduction of United Kingdom Income Tax as above.

THE MONEY MARKET.

MONEY has been a little more usable this week, mainly because this week's Treasury bill maturities were largely held by the banks so that their proceeds have not reached the market. The usual week-end glut of funds was absent last Saturday, and ½ per cent. was charged for both old and new money. On Monday conditions were definitely easier. This was because there were a relatively small number of Treasury bills to be

paid for that day. On Tuesday money was again easy until late in the afternoon, when some borrowers had to pay $\frac{1}{2}$ per cent.; but on Wednesday and Thursday conditions were harder. Some calling by one of the clearing banks was found necessary on Wednesday, but the main cause of the firmness lay in the heavy Treasury bill payments due on those days. Money has been lent freely into the New Year at $1\frac{1}{2}$ per cent.

The Chancellor's warning last week regarding a likely advance in discount rates was fully reflected in the result of the tender of December 16th, for the average rate rose sharply from 16s. 5.98d. to £1 5s. 6.41d. per cent. Hot Treasury bills were initially quoted at $1\frac{1}{2}$ per cent., but the advance in rates had the inevitable result of stimulating a foreign demand for bills. This foreign demand caused the rate for hot Treasuries to react to $1\frac{1}{8}$ per cent., but by Thursday the rate had once more hardened to $1\frac{1}{2}$ per cent. January and February Treasuries were quoted at $1\frac{1}{8}$ per cent. early in the week and at $1\frac{1}{2}$ per cent. later on, but the banks were not buying, and so business was very limited. Three months' bank bills were quoted at $1\frac{1}{2}$ per cent. for the finest bills and at $1\frac{1}{2}$ -2 per cent. for standstills.

It is now possible to trace the effects of the American war debt payment on Thursday of last week. As regards the national finances, the revenue return for December 17th contains a special entry, immediately below the Sinking Fund allocation, entitled "Payment to U.S.A. Government on December 15, 1932, £28,956,349." This represents the amount issued by the Exchequer in payment for the gold purchased from the Bank of England, and it is returned in this way so as to keep it out of the Budget. Consequently, Ways and Means Advances from Public Departments have risen by £1,950,000 and Treasury bills outstanding by £34,065,000. This increase of £36.0 millions in the floating debt agrees closely with the amount of the American debt payment, together with the week's deficit between current revenue and expenditure.

In interpreting the Bank return, it is necessary to remember that the changes due to its gold sale are to some extent merged in the normal changes arising out of the conduct of its business during the week. Gold coin and bullion shows a reduction of £19.6 millions. This represents the value at par of the gold sold by it, for the Bank customarily values its gold at par, any profit or loss on its sales or purchases being a matter for the Exchange Equalisation Account. Therefore, of the £28.9 millions of Treasury bills issued by the Government in payment for the gold, £9.3 millions passed to the Exchange Equalisation Account, and £19.6 millions to the Bank; and as the fiduciary note issue was not increased, these last bills have been lodged in the Banking Department. The note circulation has been reduced during the week by £2.1 millions, the inference being that, as we suggested a week ago, the clearing banks have been reducing the notes held by them in reserve. There is no other obvious explanation for the fact that the Christmas note circulation apparently reached its peak so early as December 14th.

The Banking Department shows a reduction in the Reserve of only £17.5 millions, the gold sale being offset by

the contraction in the circulation. Government Securities have risen by £25.4 millions, which is £5.9 millions more than is accounted for by the gold sale. This extra amount must arise from such normal factors as the discrepancy between Treasury bill payments and maturities. Other Securities are higher by £3.5 millions, and as a result of all these changes, Bankers' Deposits have risen by £12.6 millions to £98.9 millions. The Proportion is 18.1 per cent. The main impressions left by the Bank return are, firstly, that it shows the Bank in quite a strong enough position, and, secondly, that there is not the smallest evidence of deflation.

The Foreign Exchange market was considerably more active this week, and sterling steadily improved as a result of a strong demand, principally from Paris. Some reaction set in towards the close, however, when this was satisfied. The New York rate rose from 3.28 $\frac{1}{2}$ to 3.33 $\frac{1}{2}$, after 3.34 $\frac{1}{2}$. Montreal fell away from 3.79 to 3.84 $\frac{1}{2}$. Paris, after touching 85 $\frac{1}{2}$, settled at 85 $\frac{1}{2}$, against 84 $\frac{1}{2}$. Brussels reacted to 24.05 after 24.15. Milan was at one time one lira cheaper at 65 $\frac{1}{2}$, but finished at 65 $\frac{1}{2}$. Madrid weakened by $\frac{1}{2}$ to 41.00. Lisbon fell away to 109 $\frac{1}{2}$, against 108 $\frac{1}{2}$. Amsterdam lost 14 points at 8.31, and Berlin 20 points at 14.00, after touching 14.04. Switzerland lost 25 points on balance at 17.34, after being 17.37. The Scandinavian currencies were by comparison very much firmer. Stockholm only lost one point at 18.34; Oslo was unchanged at 19.40; while Copenhagen gained 2 points at 19.28. Most of the other Continental currencies moved slightly in our favour. The South American exchanges were rather weaker, Buenos Aires losing $\frac{1}{2}$ at 35d. and Rio $\frac{1}{2}$ d. at 5 $\frac{1}{2}$ d. (sellers). Lima was unchanged. In the Far East the rupee was unchanged at 1s. 6 $\frac{1}{2}$ d., but the yen gained $\frac{1}{2}$ d. at 1s. 3 $\frac{1}{2}$ d. Batavia fell away by 10 points to 8.30. In the forward market one month's New York fell away by $\frac{1}{2}$ to $\frac{1}{2}$ cent discount, three months being unchanged at $\frac{1}{2}$ cent discount. Paris from par for both deliveries moved to 2 and 9 centimes discount. Brussels was considerably weaker at wider discounts of 13 and 28 centimes for one and three months respectively. Milan improved to $\frac{1}{2}$ lira and $\frac{1}{2}$ peseta discount. Madrid, one month, was unchanged at $\frac{1}{2}$ peseta discount, but gained $\frac{1}{2}$ at $\frac{1}{2}$ peseta discount for three months. Amsterdam remained unchanged at par for both deliveries, as did Switzerland at $\frac{1}{2}$ and 1 centime premium. Silver prices fell away with the advance in sterling and as a result of China sales in a quiet market. Cash was $\frac{1}{2}$ d. lower at 16 $\frac{1}{2}$ d. and forward $\frac{1}{2}$ d. lower at the same quotation. The China silver exchanges reacted in sympathy, Hong Kong weakening by $\frac{1}{2}$ d. to 1s. 3 $\frac{1}{2}$ d., and Shanghai by $\frac{1}{2}$ d. to 1s. 7 $\frac{1}{2}$ d.

New York money rates are unchanged, with call money at 1 per cent. and 90-day bankers' acceptances at $\frac{1}{2}$ - $\frac{3}{4}$ per cent. Bankers' acceptances outstanding at end of November are returned at £719.6 millions, this representing an increase of \$20.9 millions during the month, but a decline of \$282.8 millions since a year ago. Still, there has been a total improvement of \$87.0 millions from the low point touched at the end of August. The Paris exchange rate has improved from 8.90 $\frac{1}{2}$ to 8.90 $\frac{1}{2}$ cents, and there has been a sharp recovery in the has fallen from 40.18 $\frac{1}{2}$ to 19.25 $\frac{1}{2}$ cents. The Dutch rate include \$1,830,000 from England, \$997,000 from Canada and \$486,000 from China. Foreign ear-markings have been reduced by \$15.1 millions. Gold imports for November are returned at \$94.4 millions and exports at \$5.0 millions. The November trade returns show commodity imports of \$104 millions and exports of \$189 millions, compared with respective figures of \$148 and \$193 millions a year ago. The returns for the first against \$2,240 millions in 1931; and imports \$1,225 millions, against \$1,936 millions. It is reported that since the Glass amendment to the Home Loan Bank Act \$160 millions of National Bank notes have been issued against Treasury bonds bearing interest at 3 $\frac{1}{2}$ per cent., or less.

MR HOOVER'S MESSAGE.

If the roads along which the parliaments and statesmen of the United States and of America's European debtors are moving still bear a strong resemblance to those parallel lines which only meet at infinity, there is no gainsaying that one, at least, of the roads is paved with good (presidential) intentions. Mr Hoover's special war debt message to the United States Congress may not represent exactly a Christmas present to Europe—there is little chance of the President figuring as *le père Noël* in the cartoons of the French Press—but its tone and substance are none the less welcome as an indication of growing recognition on the part of the retiring President that American prosperity is bound up with that of the rest of the world; that the economic crisis, with its concomitant problem of war debt payments, requires treatment on comprehensive lines; and that there is grave danger in a policy of drift. If Mr Hoover is no longer in a position to act effectively alone, and if, as seems likely, he is to be denied co-operation by the leaders of the Democratic Party so long as his official tenure of office lasts, he has at least demonstrated that he means well. For, though his message reveals here and there an inclination to adhere obstinately to points of view which seem, in the eyes of the debtor countries at least, to be untenable, he has nevertheless eschewed scrupulously the "popular" line of vilifying the defaulters and dwelling on the easy theme of "justice for America." Indeed, his measured approach to the problem from a broad viewpoint should be of real value in its educative influence on American public opinion.

The message begins with a salutary reminder to Congress that the question of war debts cannot be considered apart from the world economic crisis and its repercussions on the United States. In dealing with the crisis, the President suggests that the most urgent economic effort still before the world is the restoration of price levels, whose fall, menacing debtor-creditor relationships through the world, has been due in part to "international influences," including latterly the instability of currencies. Trade and prices must be disorganised until some method of monetary and exchange stability has been attained, but "it seems impossible to secure such a result by individual action by the different countries each striving for a separate defence."

Having thus emphasised the need for international co-operation in the spheres of monetary and economic policy, the message goes on to observe that there are other factors in the situation. Heavy expenditure on armaments has contributed to creating the present unbalanced state of many national budgets and, consequently, instability of credit and currencies. In addition, the problem of war debts "has entered this world situation." The importance of these payments "relative to other world economic forces in action is exaggerated," but "in times of deep depression some nations are unable to pay, and, in some cases, payments do weigh heavily on exchange and currency stability," while—significant admission—"the emotions of the peoples must be taken into account."

After this preamble, which endeavours in effect to lead Congress gently up to the question of war debts in their proper perspective against the economic background, Mr Hoover gives an account of his policy in relation to the December 15th instalment and propounds suggestions for the future. He defends his insistence on payment—not that such defence was needed so far as Congress was concerned—on the ground that agreed postponement would have meant a departure from the policy of dealing separately with the obligations of each nation, and would have created a situation in which war debts would have been regarded as a counterpart to reparations. Furthermore, "it would not be proper to call upon the American people to make further sacrifices unless there were definite compensations." Nevertheless, the President bids Congress recognise that America is "confronted with the

realities of a situation in connection with debts not heretofore contemplated."

He is at pains to make it clear that he has not committed himself to acceptance of the contentions of the debtors, and in one passage he appears to imply that he is still under the impression that the problem of transfer would be eliminated by lessened expenditure on armaments by the debtors even if it be not already circumvented by "triangular trade" and American tourist expenditure. The moratorium year meant for America double the sacrifice of any other nation, and any further concessions in the way of the adjustment of cash payments "must be compensated by definite benefits in the markets overseas." Nevertheless, the request for discussion "by the nations who have sought to maintain their obligations to us" must be honoured; and though the question of the war debts is not suitable for inclusion on the agenda of the World Economic Conference, since it is a problem concerning only a few of the participants, the successful outcome of that Conference would be greatly furthered if the debt problem were explored in advance, "even though final agreement might well be contingent on the satisfactory solution of the economic and armament questions in which our country has a direct interest."

Accordingly, in Mr Hoover's view, the immediate task is to create "adequate and proper machinery" for negotiation, a task in which the co-operation of Mr Roosevelt is sought. Failing reconsideration by Congress of its refusal a year ago to recreate the Debt Commission, Mr Hoover's proposal is that a delegation should be constituted, including some members of Congress and some of the American representatives already attending the Disarmament Conference, with the dual function of preparing both for the World Economic Conference and "exchanging views upon the debts questions with certain nations and advising others on the course to be pursued." The constitution of such a body would in no way commit Congress, to whose approval any conclusions would be subject; but it would provide for subsequent presentations of the "deliberations, intricacies and reasoning of facts" upon which recommendations might be based.

There are many *minutiae* in this message which are open to criticism. However much it may reflect predominant American sentiment, the linking of the problems of war debts and armaments gives rise to many practical difficulties, of which not the least is the vast growth of armaments expenditure in the United States. The demand for "compensation" offers little hope of practical fulfilment in view of America's already insupportable export surplus. The implication that the Hoover Year was an act of pure altruism on America's part and had no connection with the commercial investments of the United States is a trifle disingenuous. The suggestion that an "exchange of views" is apparently to be confined on the debtors' side to those nations who have paid, and that the non-payers should be given only "advice," is as unhelpful as is Mr Hoover's refusal to countenance "any collective conference with our debtors." Above all, there is a singular absence in the message of any signs of recognition that the United States tariff has played a great part both in rendering the collection of war debts impossible and in leading to the general economic crisis. With these qualifications, however, we find in Mr Hoover's attitude a refreshing sense of internationalism, very different from his standpoint a few years ago, which makes his message noteworthy. As a "lame duck" President he appears to us to be playing a rôle which is neither partisan, narrow-minded nor ungenerous; and we wish that we could add that Mr Roosevelt showed signs of corresponding political stature.

The President-Elect has again been invited to co-operate; but unhappily at the time of writing there is no

sign that he will accept Mr Hoover's invitation, or take any part in the affair unless he is asked to assume full responsibility at once. Mr Hoover on his side, however, is apparently not prepared to go to this degree of self-effacement; so there for the moment the matter rests. If this dilemma is unresolved, it means that nothing more than unofficial talks can take place until March; for clearly the European debtors can only negotiate with the representatives of those who have power to bring talks to a conclusion. It looks, therefore, as though we must possess our souls in as much patience as we can command and hope for the best when spring-time comes.

HOUSING AND THE COMMONS.

THE House of Commons last week devoted three days to the discussion of the Government's housing measures—the Rent Restriction (Amendment) Bill and the Housing Bill. The debate was maintained at a very high level; and the House, with a refreshing absence of party spirit, showed itself capable of a really serious and impartial consideration of a great national problem. But the effect was somewhat marred by the ambiguity of the Government's policy which appeared, like Janus, to be double-headed, combining in a rather incongruous synthesis the benign visage of Lord Marley with the more forbidding countenance of Sir William Ray. Indeed, the Government seems to be pursuing two divergent courses which are hard indeed to reconcile with each other. For the Rent Restriction Bill carries out almost to the letter the Report of the Inter-departmental Committee of 1931, while the Housing Bill is obviously inspired by the much less liberal spirit of the Committee on Local Expenditure.

The net result is, to say the least of it, more than a little confusing. On the one hand the Government is suspending for a further five years the decontrolling of Class "C" houses, the smallest type of working-class dwellings, on the ground that decontrol would involve a very substantial rise in rents, while on the other hand it is pursuing the contrary policy of abolishing the Wheatley subsidy under the Act of 1924 for the ostensible reason that building costs have now sunk so low that private enterprise is able to supply small houses at a rent which is within the reach of the low-paid worker. The mutual inconsistency of these two divergent lines of action certainly did not escape the notice of some of the Government's supporters, who evidently felt acutely uncomfortable about the second of these measures. And though they filed obediently into the Government lobby, it was plain enough that their approval was dictated in more than one instance rather by loyalty than by reason.

The essential fact about the housing situation to-day is that, in spite of the effort which has been made by successive Governments since the war, there is still a very substantial shortage of Class "C" houses. The Minister of Health, in presenting the case for the Rent Restriction Bill, himself admitted that, whereas the rent of controlled houses is 50 per cent. above the 1914 figure, the rents of decontrolled houses have risen on an average by about 85 per cent. If that is so, it is difficult to believe, notwithstanding the recent fall in building costs, that private enterprise without a subsidy will be ready and willing to supply houses to let at "controlled" rents. Such an act of self-denial would be almost unprecedented. The speculative builder and the building society, as Miss Rathbone pointed out, will naturally endeavour to get the biggest rent they can, and will therefore continue to cater for the artisan rather than the labourer.

Moreover, the figures produced by Sir Hilton Young in his speech on the Second Reading of the Housing Bill are open to a much less optimistic interpretation than he gave them. On his own showing, there would still be on an average a gap of 5d. per week—the Ray Report reckoned it at 9d.—between the rent of the subsidised house and the house built by unaided private enterprise. That means that even if costs continued at their present low level, the difference in a large number of cases would be very much greater. Moreover, as the building trade is

to-day notoriously depressed, it must surely follow that any considerable revival in activity would be likely to lead to a rise in costs. All the indications point clearly in this direction. Finally, the fact that there is to-day an acute shortage of suitable accommodation for the lower-paid worker, as is proved by the appallingly high rents exacted for sub-tenancies in many parts of the country, and the serious overcrowding that undoubtedly still exists, is in itself a convincing proof that an immediate return to *laissez faire* would mean a definite postponement of progress in the housing conditions of the poorest class.

Meanwhile, the housing problem remains almost as acute as it was before the war. The problem of slum clearance, as the Minister of Health pointed out, has barely been scratched, and overcrowding in many districts is as bad as, if not worse than, ever before—all owing to the shortage of Class "C" houses. For, unless there is an adequate supply of small houses, slum clearance and the reduction in the number of inhabitants per house are alike impossible. The Government has, it is true, attempted in the Rent Restriction Bill to alleviate the problem of overcrowding by restricting the liberty of the tenant in the matter of sub-letting; but so long as the supply of houses is inadequate, these measures are likely to prove unavailing.

The only solution to the housing problem is to increase the supply of small houses, and it is difficult to see how the abolition of the subsidy is going to help towards this end. It has frequently been alleged that the only effect of the subsidy has been to increase the cost of building, and the figures seem at first sight to lend some plausibility to this view. There can be no doubt whatever that, so far as assisting the building of Class "C" houses is concerned, the money spent in subsidies has been largely wasted. This fact was admitted candidly enough by Miss Rathbone; but she was careful to point out the reason: *viz.*, that the subsidy has hitherto been applied to the larger type of houses (let mainly to the higher-paid wage-earners and the lower middle classes) owing to the policies pursued by most local authorities. That does not prove that a subsidy is no longer needed; it only shows that what is wanted is a change in the method of application. The lowering of interest rates and the fall in the cost of building should certainly enable the subsidy to be substantially reduced; and there is much to be said, too, for altering the conditions, which in practice are such that only local authorities have been able to take advantage of it. This has undoubtedly been a serious defect since it has deflected. But it should not be impossible to invent a form of subsidy which would be applicable on equal terms to local authorities and private builders. In filling up the gap that still exists in the national supply of Class "C" houses, there is surely room enough for a form of assistance which, while avoiding the notorious risks of an indiscriminate subsidy to private speculators, would assist both municipal and private building. There might even be something to be said for adopting the interesting but rather revolutionary alternative suggested by Miss Rathbone, that the subsidy should be applied not to the landlord, but to the tenant under a strict means test. This might perhaps prove a more economical method seeing that it would permit a much closer adaptation to the real needs. Housing conditions differ very widely in different parts of the country, and a flat rate of subsidy has this distinct disadvantage, that it tends to be inadequate in some cases and grossly extravagant in others.

In the meantime, the attempts made by the Government in the second clause of the Housing Bill (which embodies proposals made by the building societies) to encourage private enterprise are all to the good. The only question is whether, in the absence of a subsidy, they will be adequate to fulfil their purpose. Some doubts were expressed on this subject by Lord Eustace Percy, who envisaged some further plan for co-ordinating private effort. But we doubt whether unaided private effort is enough. We fully recognise the great improvement that has been made in the housing conditions of a very large part of the population; we realise also that we are to-day very much nearer to an economic basis for the housing industry than we were a year or two ago. But if costs

and interest rates have fallen, so too has rent-paying capacity. We are, therefore, driven to the conclusion that a further effort on the part of local authorities is still urgently needed.

It is difficult to avoid the inference that the Government's optimistic trust in the efficacy of private enterprise has really been inspired by a totally misguided zeal for what it chooses to call economy, a ruthless cutting down of all forms of capital expenditure, which is precisely the wrong policy at the present time. An increase in taxation is, of course, most undesirable; but is taxation really the appropriate source for capital expenditure? To-day houses are urgently needed by the community, while savings are idle and trade depressed. Is not, therefore, this precisely the right moment for a vigorous "drive" to make up once and for all the shortage of Class "C" dwellings. The notion of a National Housing Corporation, working in conjunction with local authorities and the building societies, seems forcibly to suggest itself.

Finally, what is the use of continuing to subsidise slum clearance, as the Government proposes to do, while the immense shortage of houses still continues? Some improvement might indeed be hoped for from a subsidy for reconditioning, for which Sir Austen Chamberlain, in an eloquent and profoundly moving speech, recalling the radical spirit of his father, made a powerful appeal, but the crux of the matter still remains the Class "C" house. However undesirable subsidies and rent restriction may be in themselves, both would appear to be still necessary until the existing shortage has been made good. As things are there is a grave danger that the Janus policy of the Government will only stultify itself, and that the abolition of the subsidy will, in fact, make the decontrolling of small houses which the Government hopes to achieve in five years' time quite impracticable.

"FLAT RATES" ON THE RAILWAYS.

BOTH "Ayes" and "Noes" have had their say on the Salter Report, and the next decisive move in the road *versus* rail controversy lies with the Government. The railways have every incentive to press for an early official statement of policy, for the gross receipts of the four British main lines from goods traffic this year will show a decline of about £9 millions as compared with 1931, and of no less than £25 millions as compared with 1929. Moreover, even if the main findings of the Salter Committee are, as we hope, implemented by Parliament, the position of the railways will be by no means on all fours with that of their road-haulier competitors. The latter will be free to choose traffic which suits them best, and will not—initially, at least—be subject to statutory machinery for the regulation of their charges. Under these conditions, the recent decision of the Railway Rates Tribunal, refusing consent to the quotation of a "flat rate" by the Great Western Railway in the neighbourhood of Bristol, has come most inopportunistically for the railways, and may bring to a head their dissatisfaction with the whole question of legislative restrictions which hamper their freedom of competitive management.

The principle of statutory regulation is as old as the railways, but the present "charging" machinery dates only from 1921, when road transport competition, despite the stimulus given to design and employment of commercial vehicles during the war, was only in its chrysalis stage, and the occurrence of the present trade depression was unforeseen. Part III. of the Railways Act, following the report of a Rates Advisory Committee published in 1920, gave concrete expression to two major principles. The first was that railway charges for the carriage of merchandise must in no case be less than the cost of the required services to the railway companies; the second was that charges must in no case be more than the value of the service rendered. The Committee's report made it clear that the former requirement would be satisfied if out-of-pocket costs of carriage were covered, with a balance sufficient to contribute to general costs, provided that other traffic existed which could bear sufficiently high rates to meet the remainder of the general costs.

PURCHASING

REVERSIONS AND REVERSIONARY ANNUITIES is a specialised business.

£2,360,255 invested in the purchase of these securities and over £13,155,582 representing Loans on other classes of security demonstrates the activity and usefulness of the Society in this phase of its business. Forms of application on request.

LEGAL & GENERAL ASSURANCE SOCIETY Limited

Established 1836

10 Fleet Street, London, E.C.4.

Assets exceed £25,000,000

General Manager W. A. WORKMAN, F.I.A.

Since the passing of the Act, trade depression has depressed the railway companies of a significant part of their heavy traffic, and road transport, which has no large proportion of fixed costs, no statutory charging principles, and extensive facilities for door-to-door carriage, has obtained a substantial share of the higher-paying traffics. On a percentage basis, the falling off in railway gross receipts has, in fact, been even more serious as regards the heavier than the lighter traffics, a comparison between the figures for 1931 and for 1929 showing a decline of 27 per cent. in traffic classes 1 to 6 (comprising minerals and heavy merchandise), as compared with 17 per cent. in classes 7 to 21 (including all other merchandise except coal, coke and patent fuel). The companies, therefore, have been driven to discover ways and means of alleviating a difficult situation by rendering their charging structure more flexible, within the four corners of the Railways Act. The existing railway merchandise classification has represented hitherto the resultant of four main considerations, applied to any particular traffic:—(1) its "value" ("what the traffic will bear"); (2) its bulk in comparison with its weight; (3) its cost of handling; and (4) the possibility of effecting important savings in costs on the transport of consignments of more than average size.

In the past, (1) has been the dominant factor in the fixing of rates, but hard times have tended to shift the emphasis towards (2) to (4). So long as adequate high-paying traffic was obtainable, to subsidise, in effect, much of the heavier traffic, there was no urgent incentive to explore the ultimate possibilities of cost-saving by "good loading"—using the term in its widest sense. The first important break with tradition was the introduction, in 1931, by the London and North Eastern Railway, of an arrangement under which traffic between London City stations and depôts, including docks, and certain Eastern towns was charged according to a classification based on weight per wagon, irrespective of the nature of the traffic. The experiment proving successful, a similar expedient was adopted for traffic between Newcastle and specified Northumberland towns. More recently, the London Midland and Scottish and the London and North Eastern obtained sanction for a further experiment between London and Southend. "Per truck" rates may be a valuable weapon in areas of acute road competition, and will doubtless be steadily extended, with the approval of the Railway Rates Tribunal. Their universal adoption, however, is impracticable, for a variety of reasons.

A second new departure, which also, in selected cases, gave promising results, was the quotation to certain of the larger commercial and industrial undertakings in the country of "averaged" rates, covering the whole of their consignments. These "flat rates" were found, in practice, to secure important economies, as regards charging, handling, and clerical expenses, both to the consignors and the railways. Although earlier applications obtained the consent of the Rates Tribunal, the latter's refusal to sanction the Great Western application, in respect of a Unilever subsidiary at Bristol—regarded, by general consent, as a test case—threatens to make any further extension of the principle dependent upon far-reaching amendment of the Railways Act.

The judgment of the Rates Tribunal was supported by reasoning which appears, in the present state of the law, to leave no loophole for successful appeal. The Tribunal declared that every statutory undertaking must neces-

sarily be limited by the terms on which its powers were granted, and that the intricate method of rate regulation embodied in the Act of 1921 could be fulfilled only if the railway companies duly applied their authorised statutory charges to the traffics they carried. They were required to make separate charges for every consignment at a given rate per ton per mile, for conveyance according to distance and class of traffic, plus terminal charges. They were not authorised to quote "averaged" rates, which were independent of some of these factors. The Tribunal also stated that, in their judgment, the evidence was conclusive that the experimental flat rate at issue had seriously affected the trade of the Bristol district, since by making under-cutting possible it had put the business of other traders in peril. This suggests that the Great Western application might not have succeeded, even if the Rates Tribunal had been sole arbiter on the question, unhampered by the specific legislative provisions of the 1921 Act. It may, indeed, be strongly argued that the granting to the railways of plenary powers to make "flat rates" at discretion may have undesirable and even dangerous public possibilities. At the same time, there is almost universal recognition that the machinery of Part III. of the Railways Act has been rendered, in important respects, anachronistic, by conditions which can be reversed only by setting back the clock, and that both the companies and the community will benefit, in the long run, if rate-fixing machinery is made more flexible.

The *via media* may not be readily perceptible. Prolonged experience of the working of "flat rates," on a wider scale and under more normal conditions of national trade, may well be demanded as a prelude to the formulation of any final policy. The railways are unlikely, on the other hand, to acquiesce in the perpetuation of what they may regard as a crippling disability, in a life-and-death struggle with non-statutory forms of transport. It would appear that the legitimate interests of both the companies and railway-users might be safeguarded, with the minimum of immediate interference with the existing legislative position, by the enactment of a supplementary clause to the Act of 1921, empowering the railway companies to quote any special rates they considered necessary, subject to the prior consent of the Railway Rates Tribunal itself. Under such an arrangement, the Tribunal would remain, as at present, the expert but impartial final arbiter in every case, but would be free to consider all applications on their individual merits, without reference to any rigid provisions regarding the basis of charging. The Tribunal, in fact, would be free to make the public interest its main criterion, and gradually to build up a valuable body of precedents, based on steadily-widening experience of the working of "flat rates" under practical conditions.

CANADIAN NEWSPRINT.

(BY A CANADIAN CORRESPONDENT.)

THE fortunes of the Canadian newsprint industry have for some time past been a source of anxiety; but now, as the result of a progressive aggravation of the troubles, they may be said to have reached an acutely critical condition. One or two companies which enjoy special advantages or have been extremely conservative in their financial management are able to pay their bond interest, but the great majority are not even contriving to show operating profits. Some idea of their plight can be gleaned from the last reported income statements of some leading companies:—

RESULTS IN 1931.

Company.	Trading Profit.	Profit after meeting Fixed Charges.
Abitibi Power and Paper	5,199,946	481,245
Price Brothers	— 633,769	— 3,612,327
Mersey Paper	1,093,573	333,464
Donnacona Paper	434,879	— 835,931

The Abitibi Power and Paper Company, reckoned one of the strongest concerns, is now under a receivership, and its bonds can be bought for less than 25 cents on the dollar; a similar fate has overtaken the Backus-Brooks Corp., which operates in North-Western Ontario. Price

Brothers has defaulted on its bond interest, and its common stock, which stood at \$71 in 1929, can be bought for 50 cents; its bonds are now selling for about \$35 (par \$100); and a total market valuation of about \$4 millions is placed on newsprint mills, timber limits and other properties, whose value two years ago was conservatively estimated at \$45 millions. Investors have incurred great hardship, while it is an open secret that more than one Canadian bank is heavily involved through advances made to newsprint corporations which now rank as frozen credits. Equally, and even more serious, has been the effect on many communities which largely depended for their prosperity upon a local newsprint plant; not only did it afford employment in the mill, but its purchases of pulpwood furnished a valuable reinforcement to the incomes of the adjacent settlers. To-day pulpwood brings a pitiable price, and many of the mill workers are subsisting on public relief.

At present very few of the newsprint plants are working at more than 50 per cent. of their operating capacity, and in some cases the ratio is as low as 30 per cent. There seems little hope of an immediate improvement in the American market, which takes all but a fraction of Canada's exports of newsprint and pulp, and, in view of the numerous casualties and amalgamations which the depression has caused in the newspaper world of the United States, it is very doubtful if the American demand for newsprint will regain its former volume for many a long year.

The Canadian newsprint producers considered that the price of \$53 per ton, which was agreed upon as the standard rate for 1932, was too low to be profitable; but further reductions which have recently taken place have brought them to a mood of desperation. Scandinavian producers, who are reported to be offering newsprint in New York at below \$40 per ton, are credited with the main responsibility for the latest break in the market; but the trade figures do not support the view that Scandinavian competition is increasing in severity. In the first seven months of the present calendar year imports of newsprint into the United States from Scandinavia, placed at 89,811 tons, showed an increase of only 189 tons over the figure for the parallel period of 1931; and slight gains in the exports of Norway and Finland were offset by declines in the shipments from Sweden. Scandinavian competition may be a certain factor, but the real source of trouble lies in Canada itself and in the chaotic condition to which the newsprint industry has come.

In 1928, when the troubles of the industry were trivial by comparison with the present difficulties, the Newsprint Institute of Canada was organised for the purpose of allocating business to its members and maintaining prices, and the majority of the newsprint producers of Eastern Canada joined it. Mutual jealousies and distrust wrecked the Institute; but when its disappearance was foreseen, banking interests took a hand in the game and organised the Canadian Newsprint Committee, whose avowed objective was to secure a common policy for the industry through the consolidation of the principal producers. Its sponsors took the view that centralised control was necessary for the evolution of a co-ordinated standard policy for the industry in regard to prices and other matters. Sub-committees were formed, and elaborate questionnaires were sent to each company asking for data on properties, costs, tonnage, etc., in order that the Committee should have a clear picture of the situation as a prelude to the formulation of its proposals for a consolidation of the industry.

The task of collecting the desired material is now understood to have been completed, and for some weeks past the Newsprint Committee has been meeting regularly in Montreal and trying desperately to evolve a plan of consolidation which will satisfy all parties. Every interest involved is faced with the necessity of making substantial sacrifices; but naturally they all want to keep their sacrifices down to as low a level as possible, and the task of reconciling divergent viewpoints and claims has been extraordinarily difficult. So far, there has been no definite announcement of the consummation of a generally acceptable plan, but it is understood that considerable progress has been made in this direction.

Recently there was great alarm in newsprint circles when it was announced that Price Brothers were offering newsprint at \$47.50 per ton; but worse was to follow, for the Great Lakes Paper Company, of Fort William, Ontario, has been taking orders on a basis of not much more than \$40 per ton; it is under a receivership on behalf of the bondholders, and the receiver has only to find earnings sufficient to cover the bond interest. Consumers of newsprint under these circumstances will not be content to renew their contracts for 1933 at \$53 per ton; but if the current price level were reduced to \$45 per ton or lower the aggregate annual loss in income to the industry would be something between 15 and 20 million dollars, and the situation of practically every company would become hopeless. The power interests have been seriously concerned with the troubles of the newsprint industry, and are following the negotiations for its reorganisation with keen interest. At the beginning of 1931, out of a total Canadian installation of 6,666,337 h.p., no less than 1,594,020 h.p., or nearly one-fourth, was used in the pulp and paper industry; and of this it is estimated that some 900,000 h.p. was purchased from power companies, the balance being furnished by power plants owned by the pulp and paper companies themselves. Power is one of the principal items in the cost of newsprint, and some companies which have to buy power have found great difficulty in meeting their power bills. In most cases they are tied up by long-term contracts, but requests for modification have so far not been sympathetically received. Already there is a serious glut of power in Eastern Canada, and a further collapse of the newsprint industry might have serious consequences for various power companies.

AN IMPRESSION OF GERMANY.

To an English observer who paid his last visit to Germany eighteen months ago, on the eve of the collapse of the Darmstädter Bank, the impression made by Germany, revisited this month, is decidedly that of a country which is once more travelling on the up-grade. Not that the majority of Germans at this moment would be likely to agree with this proposition. For the majority, after all, are the poor; and upon the poor the pressure of the economic crisis has been cumulative. If you ask the railway porter or the hairdresser how the present time compares with eighteen months ago, he will reply without hesitation that it is far, far worse; and in the streets of Berlin his testimony is superficially borne out by the number and the desperation of the beggars, whose plight in that city is even more painful than it is in New York. It is in the middle and the upper classes that the foreign observer notices the change for the better. It is not so much that they are materially better off (though, of course, they are; for, if the paper pound sterling buys as much to-day as eighteen months ago, the gold reichsmark buys perceptibly more; and you can see the difference in the people's clothes). The deeper reason for the German bourgeoisie's greater ease of mind is that, for the first time for three or four years, they are now seeing a glimmer of economic light.

In Germany, at this moment, notwithstanding the depressing returns of unemployment, there is a perceptible improvement in a number of aspects of the economic situation; and the bourgeoisie, who perceive it, are supremely concerned to harvest it. Compared with this economic objective, all political interests have become subordinate. "Will it help or hinder economic recovery?" is, in fact, the test by which any political question is being judged by the politically-minded elements in Germany to-day. And in this respect there is at present no fundamental difference of interest or aim in Germany to-day in each of the different classes, in spite of the sharpness of the outward diversity in their fortunes and the resulting acuteness of class-consciousness.

This nail was deftly hit on the head by the new Chancellor, General von Schleicher, in his broadcast speech of December 15th:—

"Their programme," he said in the new Government's name, "contained only one point, the provision of work, and all the Government's measures would more or less serve this end."

Recent travels throughout the country had convinced him that Germans of all classes were dominated by that single idea. Nothing else interested them—least of all constitutional changes and such petty things, which filled no stomachs."

This authoritative judgment is certainly confirmed by one's foreigner's observations, for what they are worth. And in face of this overmastering urgency of the unemployment problem—a problem which must be solved if society is to be saved—the old distinctions between "Capitalism" and "Socialism" seem to have lost their sharpness. "The first business of capital is not to earn profits, but to provide employment" is a sentiment which you will hear freely expressed in bourgeois circles in Germany to-day. The truth is that the social menace of unemployment is so formidable for all classes that, in all minds alike, the reduction of unemployment has an unquestioned priority over all other aims.

At the present moment, the German bourgeoisie—though not, as yet, the German working-class—see a substantial prospect ahead of gaining some ground in this desperate economic battle for life. But though this prospect has put fresh heart into them, they are at the same time most sensitively and salutarily aware that Germany cannot make any definitive progress towards economic recovery except *pari passu* with the world as a whole. Hence a deep and widespread solicitude in Germany over the fate of the pound sterling—a solicitude which has its ludicrous side for the English visitor because it is so much more lively than the concern over the pound which is being felt by the man in the street at home.

When we turn to internal politics, we find that, here too, "a quiet life" is the desideratum which determines the present attitude on almost all issues. Anything that seems to stand in the way of getting back to business and harvesting the opportunity for economic recovery now arouses impatience; and this unpopularity is shared by the Reichstag, by the problem of constitutional reform, by the political parties, and by the private armies—including the Brown Army and the National Socialist Organisation that is behind it. Hitlerism is assuredly on the wane—as the split in the Nazi ranks testifies. For the moment, Herr Hitler has kept the upper hand over Herr Strecker and has declared his implacable opposition to the Schleicher regime. But his slogan that von Schleicher is as bad as von Papen is not the popular view, which is that the present Chancellor and his predecessor are at opposite poles; and for practical purposes this view is correct.

The gist of von Papen—apart from the personal charm which endeared him to President von Hindenburg—was his unrivalled genius for raising storms and creating enemies; and in the week ending December 3rd, when his re-appointment to office was on the cards, there was a real fear that the consequence would be something like a general *émeute* in which the sober Social Democrats would make common cause with the Communists and the Nazis. Hence, the appointment of General von Schleicher to the Chancellorship was hailed with almost universal relief. His uniform is misleading; for this is not the calm strong Prussian soldier with the iron will and the ruthless hand. Those who know him describe him as a *Stimmungsmensch*—"a temperamental fellow"; and the reverse side of this psychological defect is his political flair and tact and ability to talk to many different kinds of people—including the Social Democrats—in their own language. The quality which, at this moment, commends him perhaps most strongly to his countrymen is his freedom from partisanship. He has no party attachments, no faith either in transcendental creeds or in shoddy nostrums; in fact, he is free from "enthusiasm" in the depreciatory eighteenth-century meaning of the word. To know that an able man of this temperament is now at the helm is an excellent sedative for German nerves. To sum up in one word the impression which General von Schleicher's appointment to the Chancellorship has made upon his countrymen, one may say that above all the impression is "reassuring."

On the whole, then, the present mood of the German people and the German Chancellor is a mood of sober and constructive common sense; and this is a psychological asset of inestimable importance, not only for Germany, but

for the world. There remain, however, certain snags in the fairway. We may sum them up in the words "Conscription," "Gleichberechtigung," and "Ostmark."

Conscription is in favour in Germany now. In this, as in the rest of his programme, Chancellor von Schleicher has accurately gauged and echoed the prevailing sentiment in the country. But it must be added that conscription, to-day, in German eyes, is primarily an internal and not an external issue. "The young men will wear uniforms of some sort. Shall they put on a brown shirt or a red shirt and join an unruly private army? Or shall they be given the alternative of putting on the national uniform and being trained in unity and discipline instead of in turbulence and discord? We cannot afford private armies if we are to throw ourselves into the task of economic reconstruction; and nothing but a conscript national militia can drive these private armies out of favour with the rising generation." That is the German argument for conscription as one hears it now; and in this form it is no menace to Germany's neighbours. But supposing Germany obtains the consent of the other signatories of the Versailles Treaty to the reintroduction of conscription without anything being done to consider, and as far as possible remove, her grievance over the Polish frontier? May not conscription in Germany then assume a menacing complexion?

This is not a practical question to-day. In Germany, as in the rest of the world, the problem of depression and unemployment puts all political problems into the shade. But, if Germany and the world recover, these awkward political questions will re-emerge. If we are wise, we shall show sufficient faith in the prospects of recovery to prepare for its awkward, as well as for its desirable, consequences in good time. The folly of attempting to discriminate against a great nation in perpetuity must be undone while there is still time to undo it peaceably.

Notes of the Week.

Cabinet Secrets.—The personal controversy as to the part played by various British statesmen in the issue of the Balfour Note and the Debt Funding Agreement with America, which provided the only dramatic incident in the War Debts Debate last week, has been followed by a request, which has been refused by the Government, for the publication of the Cabinet Minutes in question; by a short exchange of letters in the Press between Mr Lloyd George and Sir Robert Horne; and finally, the curtain has been rung down on the whole affair with a touch of comedy by a debate in the House of Lords, in the course of which Cabinet Ministers have been solemnly warned by the Lord Chancellor and Lord Hailsham of the severe penalties which attach to the disclosure of official secrets. So the world is not to know after all what Mr A. or Mr B. said on a particular occasion, or why he voted in this way or that. Having regard to the course which events have taken, we can sympathise with politicians who have been refused the opportunity of proving that they were on the side of the angels. Apart, however, from the personal reputation of those concerned, it does not seem to us that any public interest would be served either by publication of the Cabinet Minutes or by pursuing the controversy any further. The Balfour Note was a great State paper, but was marred by one very unfortunate phrase and robbed of its effect in the United States in the manner of its issue. The Debt Funding Agreement, though onerous, was one which, to the great mass of opinion in the country at the time, seemed wise and capable of being absorbed into the international exchanges of the world. We suspect that the publication of the Cabinet Minutes would merely give grounds for fresh disputes regarding their interpretation, rather than set the controversy at rest. On the other hand there are very strong reasons why Cabinet discussions should not be revealed, at all events while those taking part are still alive and hold responsible positions. Moreover, if the doctrine of joint Cabinet responsibility is not to be reduced to a farce, Cabinet Ministers must deny themselves the luxury of explaining afterwards

the differences of opinion they may have had with their colleagues, and thereby shifting from their own shoulders their personal responsibility for actions which subsequent events may prove to be mistaken or unwise.

The Last Stages of the R.T.C.—To the accompaniment of succeeding waves of optimism and pessimism, which always mark the culminating stages of an international negotiation, the Round Table Conference is now at grips with a few outstanding important points that still remain at issue. The Conference clearly cannot finish before Christmas, and it would be a thousand pities to rush matters in such a way that there might remain any doubt or ambiguity as to the main features that will appear in the new Government of India Bill. Indeed, it is to be presumed that, before the Indian delegations leave, the points of agreement will be embodied in a report or summary of decisions which the delegates may take back with them to India. There is, we think, good reason to expect that such a statement will show that the present Conference has led to decisions on a large number of controversial points, and that the British Government has loyally adhered to the underlying principles laid down at the First Round Table Conference. If it is able to do this, the statement will set at rest the fears that have been very widely held that the Constitutional progress of India had received a setback compared with two years ago. Whether this satisfactory outcome is to be achieved or not, the next few days will show. Solutions have yet to be found in regard to the form of certain of the financial safeguards which have to reconcile security for the Army budget, pensions and loan interest with responsibility to the Indian Parliament of the Federal Finance Minister; keen controversy is still going on between the States and the spokesmen of British India regarding the allocation of resources—a matter which is particularly difficult at a moment of extreme financial stringency—and finally there remains the question of the date at which the Federation is to come into existence. But determined efforts to find solutions have been successful in so many directions that it is difficult to believe the Conference will refuse to take these last few hurdles. Some City opinion is a little uneasy at the effect on India's credit of any relaxation of the Secretary of State's control over finance. But it is not possible to put back the clock. It must be accepted that under a new "responsible" constitution the basis on which India will be able to borrow in the future is unlikely to be on the same low level as Britain's credit commands; but that is part of the price to be paid for self-government. And, after all, the important point for the City to consider is that the credit-worthiness of a contented India will be intrinsically far better than that of an India seething with discontent. Even from the purely financial point of view, this country could not go back on its promises to India except at grave risk and the danger of putting a burden on the British taxpayer which he would be extremely loath to undertake.

The New Government in France.—M. Camille Chautemps, the Minister of the Interior in M. Herriot's defeated Government, having tried and failed to form a new Ministry, the task was handed on by the President of the Republic to M. Paul-Boncour—the free-lance Socialist statesman who was M. Herriot's Minister of War. Last Sunday evening M. Paul-Boncour was able to announce his success. He has formed a Government which has received promises of parliamentary support from groups in the Chamber which muster, between them, some 400 votes out of 614. In substance, the new Government is of the same political complexion as the old; and M. Paul-Boncour has publicly described his Ministry as "a continuation of M. Herriot's"—to whom he refers as "our leader of yesterday and to-morrow." The chief differences between the positions of the old Government and the new appear to be two. In the matter of Inter-Ally Debts, M. Paul-Boncour, unlike M. Herriot, is personally free to bow to the will of the Chamber—at any rate, long enough to "wait and see." On the other hand, in the matter of balancing the French Budget, he can no longer put off the evil day which

M. Herriot was fortunate in being able to postpone until his own handsome exit from the stage on account of the debt question. As for Inter-Ally Debts, when one considers the temper of the respective parliamentary bodies which M. Paul-Boncour and Mr Hoover have to humour, it may be long indeed before the French Premier and the American President, with the best will in the world, are successful in arranging negotiations. And, long before that moment arrives, the Budget problem may have settled M. Paul-Boncour's political fate. The new French Prime Minister has shown his recognition of the formidable character of the internal financial problem which he has to face by choosing for his Minister of Finance M. Chéron—the "strong man" who saved French public finances for M. Poincaré in 1926. M. Chéron has the reputation of being a veritable dragon; but it looks as though M. Paul-Boncour has rather spoilt his hunting in advance. For, in an attempt to secure the participation of the Socialists in his Ministry, he appears to have committed himself to an undertaking not to make any reductions in salaries and pensions; after which he forfeited the political support which he had purchased at this high financial price by refusing, on his part, to pledge himself to any reduction in public expenditure on armaments until after a satisfactory settlement of the question of security. Thus M. Chéron has to start operations with both the two most promising fields ruled out of bounds. But, fortunately for the new French Minister of Finance, the French direct taxpayer is still to-day a less emaciated creature than his British counterpart; and apparently M. Chéron can look forward to making quite a good meal off his victim by a touch of sternness in insisting upon the payment of such income tax as is already legally due. This is a resource which has long been exploited to the uttermost by English Chancellors of the Exchequer. Yet, even allowing for a substantial margin here, M. Paul-Boncour's financial problem is formidable enough to make his tenure of office seem precarious.

Italy and Yugoslavia.—It is disappointing to have to record a recrudescence of manifestations of hostility between Italy and Yugoslavia. It is, of course, one of the most serious dangers inherent in the long continuance of the economic crisis that nerves subjected to an intolerable strain of economic anxiety tend to seek relief in outbursts of political extravagance. This is probably the true, as well as the charitable, explanation of the recent acts of violence against Italian nationals, and vandalism against historic monuments of Italian origin, that have been perpetrated at a number of places on the sea-board of Yugoslavia and have evoked counter-manifestations of feeling in Italy. These incidents in Dalmatia have been the subject of an interpellation in the Senate at Rome, which gave occasion for Signor Mussolini to make a public statement in reply on December 14th. The statement was conciliatory in tone; but there was also a sting in Signor Mussolini's words in the shape of the distinction which he was at pains to draw between the Croats and "all those persons in Yugoslavia who had assimilated Western civilisation" as against "certain elements who guided the dominant political class" in Yugoslavia. This is a natural Italian retort to Yugoslav provocation at a time when, within Yugoslavia itself, the tension between Croats and Serbs is apparently more acute than it has ever been at any time since the foundation of the Yugoslav United Kingdom after the war. In the circumstances, it is perhaps only human that Signor Mussolini should speak softly to the Croats and rap the Serbs over the knuckles. But his speech brings home the danger of the situation. Yugoslavia certainly cannot afford to cultivate an internal feud and an anti-Italian policy simultaneously. That road leads to disruption; and the very threat or foreboding of a disruption of Yugoslavia is against everybody's interest, since it involves a serious danger to the maintenance of European peace. It is to be hoped that the sport of breaking the pillars surmounted by lions of St. Mark, which are the monuments of the ancient Venetian regime on the Dalmatian Coast, will now be dropped. It is a political folly as well as an archaeological misdemeanour.

Political Unrest in Argentina.—On Friday of last week a conspiracy—or reputed conspiracy—in the Argentine was forestalled by the arrest of two ex-Presidents, Dr. de Alvear and Dr. Irigoyen, together with a number of Radical leaders. There has been no breach of the peace; but the Government, having apparently decided to take no risks, has proceeded to proclaim martial law. When the Argentine succumbed to the revolutionary epidemic which swept over Latin America in 1930, this was taken as something of a portent in this country, where the investing public had come to regard the Argentine as a stable country in the same category as the British self-governing Dominions rather than as a volatile Latin republic in the style of Portugal or Nicaragua. The events of the last two years have shown that the current British estimate of the Argentine was justified after all; for, while the continuance of the economic depression has weighed upon the Argentine as heavily as upon the other principal overseas raw-material-producing countries, President Justo's Administration has shown remarkable determination, and has achieved on the whole substantial success, in preserving political tranquillity while pursuing a sober policy. In neighbouring South American countries—in Chile on one side and in Brazil on the other—the revolutionary fever has turned during these last two years into a quartan or a tertian ague. The history of the Argentine has been calm and happy by comparison; and we trust that, notwithstanding the present threat of upheaval, this relative immunity from political alarms and excursions may continue. For experience shows that while political unrest is a natural reaction to economic distress, it is a form of convulsion which can only aggravate the disease and cannot possibly relieve it.

South African Politics.—An interesting development is reported in the political situation in South Africa. Mr Tielman Roos, formerly Minister of Justice in General Hertzog's Nationalist Government and leader of the Transvaal Nationalists, has resigned his seat on the Bench of the Supreme Court in order to return to politics. His policy, to judge from a speech which he delivered on December 16th, is to work for co-operation between the Afrianders and the English-speaking section of the population; and the suggestion is made that by a concordat with the South African Party he can bring about the defeat of the Government and its succession by a coalition Cabinet, including General Smuts. If Mr Roos can achieve his objective, a coalition on these lines should hold the promise for South Africa of a valuable sense of National unity. More immediately, in the economic sphere, it seems probable that the defeat of the present Government would be the first step towards the abandonment by the Union of the gold standard.

The "Tote"—The effect of the High Court judgment delivered last Friday on the subject of totalisators is to emphasise the authority of the Betting Act of 1853, except in so far as it was amended by the Race Course Betting Act of 1928, which legalised the totalisator for horse-racing on approved courses. Thus totalisators operating on a ready-money basis, either on greyhound-racing tracks or in the "tote clubs," whose mushroom growth in England during recent months has been a novel and far from desirable feature, now pass outside the pale of the law; and the Home Secretary announced in the Commons on Monday that the law would be enforced. In so far as the "tote clubs" are concerned, the decision is to be welcomed on social grounds. These institutions, formed for the profitable exploitation of human frailty by a combination of facilities for betting and in some cases—through an ingenious manipulation of the licensing laws—twelve hours' continuous drinking, were a very unsavoury form of "racket" whose suppression is distinctly in the public interest. We should be surprised if any support could be raised in Parliament to amend the law in their favour. The "dogs," however, stand on a rather different footing; for if the blessing of the State is to be given to totalisator betting on racecourses it is difficult to see by

what logic a distinction can be made between equine and canine contests. Unless all "on course" betting is to be suppressed—and public opinion would not tolerate such a step—totalisators on greyhound tracks are clearly no more immoral than at Newmarket; and in both instances there is much to be said in their favour as against the traditionally legalised (because moveable) bookmaker. The Government apparently propose to await the report of the Lotteries Commission before making up their mind whether to extend to greyhound tracks the enabling provisions of the Act of 1928. Let us hope that the Commission will be able to wed logic to commonsense reform in a most difficult problem.

—**Mr J. M. Keynes.**—By a commonsense treatment of the problem of betting, sweepstakes and similar forms of gambling, we mean a policy which takes into account the fact that reformers' zeal may frustrate the best intentioned efforts if it runs too far counter to the current instincts of *l'homme moyen sensuel*. To endeavour to stamp out by the rigour of the law every form of betting or gaming for money stakes would be regarded by the vast majority of the population as an unwarrantable interference with liberty; and if betting on credit or club bridge with high stakes is to remain within the four corners of the law, the suppression of the race-course "tote" or bookie, patronised as they are by large numbers of people to whom clubs and credit betting are unobtainable luxuries, is bound to be tinged with an air of anti-democratic class discrimination. This, however, is not to say that we regard betting as anything but a regrettable propensity. In the submissions which he recently made to the Lotteries Commission, Mr J. M. Keynes appeared to find an analogy between the poor man's "flutter on a horse" and the rich man's speculative investment. He suggested that in both cases a form of enjoyment was derived which might become uncontrollable indulgence, like drug-taking, but, within reasonable limits, was better for people than having to look forward without hope to a life of poverty. We question gravely Mr Keynes' sense of values in this problem. Conceivably the glow of satisfaction at a successful "redouble" is analogous to that obtained from correct divination of a coming change in Bank rate. But we have yet to be convinced that gambling makes for happiness, even in the case of those who have a large margin out of which to stand losses. In the case of four-fifths of the population of this country the situation of family budgets is generally such that following "the horses" or "the dogs" brings aggregate misery out of all proportion to individual enjoyment. For the great mass of wage-earners economic life surely involves quite enough uncertainties and dangers without need for the extra stimulation of risk-taking. We do not believe that it is impossible to-day to find the necessary colour for life except by means which often mean that in a "losing" week there is not enough for the family to eat.

—**And the Newspapers.**—On the same day as Mr Keynes appeared, the Newspaper Society also laid its evidence before the Lotteries Commission and took, in our opinion, a very sensible line. So long as racecourse betting is legal it is impossible for newspapers, as servants of the public, to deny their readers the service of racing news. Equally, the Press can hardly be blamed for publishing the results of "illegal" sweepstakes, such as those organised in Dublin, seeing that participation in them by the British public has been to a large extent winked at by the authorities in this country. All that newspapers can fairly be required to do is to refrain from encouraging by publicity activities which the State is endeavouring sincerely to repress. As for competitions organised by the newspapers themselves, it is obviously difficult to say where the element of skill ends and that of pure chance begins. The offer of huge money prizes for successful forecasts in which the odds against correctness run into millions is scarcely distinguishable from running a lottery pure and simple. But the same charge cannot be laid against, say, a prize of £100 for solving a

really difficult puzzle. If the Lotteries Commission could succeed in laying down some rough and ready line of demarcation, the newspapers, we are confident, would be glad to co-operate in applying it reasonably. As for the problem of the gigantic sweepstake, we agree with Mr Keynes that it is better to have State lotteries rather than State connivance at illegalities in this direction which it cannot or does not care to suppress, but we should not look forward with any satisfaction to the prospect of regular, and probably increasingly frequent State lotteries, with all their distracting and demoralising effects. To the specious argument that distractions of this sort are a necessary safeguard against Bolshevism we would reply that beer is on the whole a less socially evil political sedative.

The Free List.—The Import Duties Advisory Committee has given the British consumer a welcome Christmas present in the form of a decision, which takes effect by Treasury Order from December 29th, to place on the Free List manila hemp; iron bromide; pig bristles; artificial pearls, non-precious stones, and beads; imitation tortoiseshell, mother-of-pearl, amber and coral; foreign Patent Office specifications, and tantalum metal. Of these commodities the most important are bristles and manila hemp. The Committee observe that in 1931 bristles to the value of £811,000 were imported, whereof £348,000 were re-exported. The retained imports form a raw material for the brush-making industry, and their preparation in this country is held by the Committee "not to be a commercial possibility." Imports of undressed manila hemp in 1931 were valued at £854,000. In the first schedule of the Import Duties Bill all undressed hemp was on the Free List, but in the interests of the East African sisal industry the exemption from duty was subsequently limited to "true" hemp, thus rendering manila and other hems liable to the general *ad valorem* duty. The Committee observe that though ropes of sisal and other Empire fibres are now being tested under sea-going conditions, shipowners are still reluctant to change from manila ropes, which long experience has proved to fulfil the high standards of safety required. Moreover, the export trade in rope is being prejudiced by the duty. An agreement is stated to have been reached between the Hard Fibre Section of the British Empire Producers' Organisation and the British ropemakers for co-operation in extending the use of Empire fibres in those fields in which their suitability may be proved; but for the present the Advisory Committee consider that the case for free entry of manila hemp is established. We welcome this rational decision.

Canadian Wheat and the Tariff.—On Wednesday night an official statement was issued by the Treasury defining the position of Canadian wheat shipped via United States ports. As a test case three car-loads of wheat were recently shipped down the Great Lakes to Buffalo, received there by a local elevator company, railed to New York, and thence shipped to Liverpool. The decision of the British Customs is that the preference cannot be accorded in this case. The Ottawa Agreements Act provides that, in order to obtain preference, goods must not only be of Empire origin, but must be consigned to the United Kingdom from a port of the Empire. In the present case it is held that, though the origin of the wheat is not in dispute and its transit from Canada to Liverpool can be traced by the documents, there is no evidence that when the wheat left Canada "it was definitely consigned to the United Kingdom." The Treasury statement observes that though mere transit through a foreign country does not of itself form a fatal obstacle to preference—

"This requirement of consignment from a part of the Empire has been an essential principle of preference ever since its initiation in Sir Austen Chamberlain's Budget of 1919, and it has always been regarded as of primary importance, in order to ensure as far as possible that the benefit of preference is not diverted to non-Empire traders, as may well be the case where goods pass through foreign countries." It is a principle from which we strongly dissent. So long as the documents give adequate proof of origin, insistence

on direct consignment is an additional form of preference in an aggressive form which, in the present instance, is calculated to create the worst possible impression in the United States; for the present ruling, even though shipments via Buffalo may not altogether cease (since presumably stocks can be held at the Canadian instead of the American Lake terminal) must entail great and needless disturbance of the normal course of trade.

Persian Oil.—The Anglo-Persian dispute duly came before the League Council last Monday; but the only step which it was possible for the Acting President, Mr Lester (Irish Free State), to take at this stage was to postpone a detailed examination of the question until January 23rd, in order to give the Persian Government the time which they require in order to prepare and communicate their case. In the meanwhile, the British case has been communicated to the League already in a memorandum, which has now been made public. If both Governments mean all that they have already said up to date, the way ought now to be open for a friendly and reasonable discussion of the whole issue in all its bearings, in equity as well as in law. While the Persian Government, in declaring the d'Arcy Concession cancelled, repudiated responsibility for any damage that the Anglo-Persian Oil Company might suffer, they have hastened to add that they have no intention of doing the company any damage themselves. On the other side, the British Government repudiate the allegation that their action has prevented or impeded an amicable and fair agreement between the company and the Persian Government. In fact, they maintain that the company had made manifest its readiness to negotiate, right down to the moment when the Persian Government precipitated a crisis by its high-handed declaration of November 27th. The Persian Government, on their part, in a Note of December 12th, have put on record their hope that the company would send their duly authorised representative to Teheran "in order that he might enter into negotiations forthwith with the Persian Government with a view to concluding an agreement which would safeguard the legitimate interests of Persia." For our part, we believe that direct negotiations of this kind offer the best prospect of a speedy and a mutually satisfactory settlement; and there seems no reason why such negotiations should not be put in hand forthwith now that they have received the official blessing of both the Governments concerned. The Council of the League would assuredly not object.

Supplementary Estimates.—On Monday the Government presented to Parliament two Supplementary Estimates. One of these—for £3,410,955—in substitution for payments due from the Government of the Irish Free State, is a timely reminder of the waste involved in the dispute about the Land Annuities and the deplorable tariff war to which it has driven both countries. The other, a much larger item—namely, £19,010,000—is in respect of the cost of unemployment, of which £12,600,000 is for transitional benefit and £6,400,000 for the deficiency grant for the Unemployment Fund. An eloquent contrast to these items is formed by the niggardly sum of £10,000 to be devoted to grants for assisting the voluntary provision of occupation for unemployed persons. The presentation of this estimate, which is an interesting commentary on the failure of the Government's fiscal policy to provide employment, will cause no surprise to those who understood the basis of the votes on the Ministry of Labour's estimate in this year's Budget. It was clear at the time that the Government, anxious, no doubt, to swell the total of its hypothetical economies, had taken an unduly optimistic view of the probable course of unemployment—not a particularly creditable piece of window dressing. The effect of these "supplementaries" is to turn the anticipated Budget surplus of rather under a million into a substantial deficit. Mr Clay's note in the Report of the Royal Commission on Unemployment, suggesting that the Unemployment Fund might be permitted a certain amount of temporary borrowing in bad years is one which is undoubtedly open to discussion. But if the Government intend to act

upon it, they should surely say so and indicate the actuarial basis of the plan. To slip into borrowing though loose estimates is not a course which is calculated to inspire confidence.

The Salter Report—Second Round.—The Report of the Conference on Rail and Road Transport was signed on July 29th, and in the ensuing months criticisms of the proposals have been made by various interested parties, most of which have been summarised in the *Economist*. In a letter dated last Saturday and addressed to the Minister of Transport, Sir Arthur Salter and his colleagues have replied to their critics. They wisely take their stand on the fact that their Report was the product of three months' study of the problem by representatives of both sides. They point out that the Conference was not concerned with the burden of taxes on passenger vehicles, and made no recommendations affecting them. The figure of £23½ millions was decided upon, after considerable study, as the proportion of the total estimated annual roads expenditure of £60 millions which it was fair to ask the owners of goods vehicles to pay, having regard to the relative use of the roads by this and other classes of vehicles. There is admittedly a large element of discretionary judgment in any such figures, but the composition of the Conference must constitute the authority of the recommendations. In distributing the £23½ millions among the different categories according to the single criterion of arriving at a just incidence of contribution, the Conference was keeping strictly to its terms of reference, which it would have exceeded if it had considered matters such as the advisability of encouraging the use as fuel of British coal. In particular, the Conference rebuts the suggestion that its proposals were intended to equalise the fiscal burdens of road vehicles and the railways. It was concerned only to see that neither industry should be subsidised by the community. On two of the most controversial points of their report, the setting-off of "community use" of the roads against the "legacy of the past" and the estimate of future road expenditure at £60 millions per annum, the Conference has nothing to add to its previous statement. The higher duties recommended for the heavier petrol vehicles and for all vehicles using a motive power other than petrol are defended on the perfectly reasonable ground that these vehicles do not at present pay their fair share of road costs. Of the present total of commercial goods vehicles, 80 per cent. would be unaffected by the Conference's recommendations; the present burden of taxation on the remaining 20 per cent. is so manifestly too low that drastic increases are inevitable. We are not aware of any alternative proposals which are nearly as equitable and logical as those made by the Salter Conference. The same comment can be equally applied to the recommendations for regulation and licensing, where the need for bringing some beginnings of order out of chaos is admitted by all parties. We endorse the suggestion of the Conference that the owners of commercial goods vehicles "would do well to consider seriously whether they would not be ill-advised to attempt to secure the rejection of the scheme agreed in the Conference and to take all the chances of an alternative policy."

The More Looms Agreement.—The draft agreement which was outlined in these columns last week was ratified by the General Council of the Weavers' Amalgamation last Saturday. The ratification, however, was made on the understanding that certain questions should be further discussed with the employers. The most important of these, it is understood, are the reinstatement of strikers and the displacement of labour that will be caused by the adoption of the more looms system. There is dissatisfaction among the weavers in many districts with the rate at which the strikers have been reinstated, but the employers state that they have fulfilled the spirit of the agreement and reinstated the workpeople as fast as they could. Now that the main questions at issue have been definitely settled, it is, however, not too much to hope that these few remaining points will not be allowed to stand in the way of complete agreement.

Irish Railways Truce.—The prospect of a general railway strike in Ireland during Christmas week has apparently been averted, as the men have accepted, and the companies' leaders have agreed to lay before their principals a compromise postponing the coming into effect of the wages cuts. The threat to strike arose out of the finding, issued on November 25th, of the Irish Railways Wages Board, which reduced the rates of wages and salaries as paid prior to May, 1931, by 10 per cent., a reduction equivalent to about 6 per cent. of present earnings. The Irish Free State Government offered to pay the difference as far as lines operating within its boundaries were concerned if the companies would maintain the old rates until the end of April; but the Government of Northern Ireland declined absolutely to pay a similar subsidy to the northern lines, while the Free State Government was adamant in its refusal to extend its payment outside its own frontiers. As far as the workers on the Great Northern system were concerned there was, therefore, no half-way course between acceptance of the reduction and a strike. The situation was further exacerbated by the fact that the companies had, on grounds of economy, given notice of dismissal to a certain number of men; but the unions have now decided that the number is not sufficiently great to justify strike action, and they propose instead to make representations to the Great Southern Railway Company with a view to withdrawal of the notices. After prolonged negotiations last Sunday the men agreed to accept the proposal that cuts should not be put into operation for Northern Ireland until January 23rd and in the Irish Free State until April 30th. This will give the Wages Board time to reconsider the matter as it affects the railways in Northern Ireland, but it is not easy to see along what lines they may be expected to find a solution.

New Steel Development.—One of the earlier experiments in the rationalisation of steel production was the formation of the Lancashire Steel Corporation, for which the Bankers' Industrial Development Company was primarily responsible. The progress of the Corporation has evoked less public attention than the more recent enterprise of Messrs. Stewarts & Lloyds at Corby, with similar financial support; yet in its sphere it is equally important, and the extension announced this week indicates that the method of what might be described as a limited vertical form of organisation is gradually gaining in favour. The original Lancashire merger brought into one control unit the iron, steel furnace, and rolling-mill plants of four firms—the Partington Iron and Steel Company; the Wigan Coal and Iron Company; Messrs. Pearson and Knowles; and Messrs. Rylands Brothers—while the mining properties were separated and merged in an associated Coal Corporation. This was a break from a semi-vertical to a horizontal organisation from the point of view of management and administration. Arrangements were made for the concentration of steel production at a new plant, with continuous operation from coke ovens to rolling mills, at a convenient centre on the Manchester Ship Canal. The Corporation has now acquired the Whitecross Company Limited, a Warrington firm of wire manufacturers. A new continuous wire rod mill is being laid down as part of the steel plant; and, in addition to supplying the associated companies and other users of wire rods with their material, it will be possible to develop the manufacture of wire products in one continuous process. Considered in conjunction with the application of the same method to the manufacture of motor cars at the Ford works at Dagenham, and the production of tubes at Corby, it will be seen that a notable development of the steel industry in this country is beginning. The resulting economies in fuel, power, and transport have yet to be measured in conditions of full production, but the prospects of ultimate financial advantages are promising.

Poland's Default.—Our Warsaw correspondent writes:—Asserting that no formal reply has been received from Washington to their second Note on December 9th, and forbidding the Press to comment on the matter, the Polish Government failed to meet the interest payment of

\$3,070,000 due December 15th to the United States on account of war relief debts. Arrangements were made last September, in accordance with a provision in the Debt Funding Agreement, for suspension of the amortisation payment of \$1,387,000 likewise due on December 15th. While it is generally assumed that Poland's failure to make the interest payment of \$3,070,000 is a consequence of the decision of France not to pay its debt instalment to the United States, the Polish Government in their second Note are understood to have explained that the payment could not be made on the due date without serious danger of having to abandon the gold standard, or at least being compelled to impose restrictions on money transfer which so far they have been able to avoid. Poland at great sacrifice during the past year or two has met all her foreign obligations promptly and with good grace, and it is very unfortunate that she should now be classed as a defaulter for such a comparatively small amount. In support of their request for the suspension of the December 15th payment, the Polish Government are reported to have pointed out that during the years 1929-31 inclusive their commercial balance with the United States was adverse in the amount of 744 million zlotys, plus 388 millions for interest payments and a further 121 millions for amortisation of long-term loans. During the present year moreover, it is stated, the balance of payments with the United States is "passive" to the amount of more than 180 million zlotys. The conclusion appears accordingly to have been reached by the Polish Government that, in the final analysis, it is in the best interest of American private and commercial creditors of Poland that this country should continue on the gold standard without exchange restrictions.

An Important Banking Judgment.—Early this month, an important judgment was delivered by the House of Lords in the case of R. B. Savory and Company v. Lloyds Bank, Limited. The plaintiffs, a well-known firm of stockbrokers, unfortunately had in their employment two dishonest clerks, who, between them, stole from time to time crossed bearer cheques made payable to various stock jobbers. These cheques were paid into two banking accounts with Lloyds Bank, standing respectively in the name of one of the clerks and in that of the wife of the other clerk; but the thieves were careful to pay in the cheques, not at the branches where those accounts were kept, but at other offices of Lloyds Bank. In accordance with the recognised banking practice of forty years and more, the receiving branch passed the cheques in question straight through the Clearing House to the banks upon which they were drawn, and forwarded only the paying-in slip to the branch where the accounts were kept. Eventually, of course, the whole business came to light, and the clerks were prosecuted and convicted. Then Messrs. Savory and Company sued Lloyds Bank for negligence, on the ground that it was a bank's admitted duty to scrutinise closely all cheques paid into accounts kept with them, with a view *inter alia* to detecting such malpractices, and that this system of accepting cheques at one branch for the credit of an account at another branch divided responsibility between the two branches; for the one branch had no knowledge of the customer, and the other branch never saw the cheque. The trial judge decided in favour of the bank, but his judgment was reversed by the Court of Appeal, and now the House of Lords has found for the plaintiffs by a bare majority of three to two. The House of Lords' judgment leads to two consequences, which are of some public interest. The first is that the banking practice described above must be modified, so that the customer's branch has some means of knowing what cheques are paid into the customer's account. This is an inevitable consequence of this case, and it is conceivable that paying-in slips may have to bear the drawer's and drawee's name in respect of each cheque paid in. The second question arises from the fact that one of the clerks used his wife's account, and this is likely to give rise to greater public perturbation. Both Lord Justice Scrutton and Lord Buckmaster have stated that when a bank opens an account for a married woman, it is the bank's duty to ascertain the name of her husband's employer—and a

fortiori in the case of the husband himself. This dictum appears to put the banks in a very invidious position, and we feel that in this case employers have received greater protection at the hands of the law than they really merit. The real lesson of the case, however, is one for the banks themselves, for in all such cases of alleged negligence the banks are liable to find themselves at a disadvantage owing to the multiplication of their own rules and regulations and to the differences in practice between the various banks and the absence of any standardised code of practice which in course of time would obtain the force of legal custom. It is only natural for the Courts to interpret rigorously the rules drawn up by the banks themselves and also to go back to first principles in the absence of any banking custom. The result often bears hardly upon the banks, and in this particular case will also affect the obligations and convenience of the general public.

Transvaal Gold Output and Profit.—The output of gold of the mines of the Transvaal for the month of November amounted to 978,716 ounces of fine gold as compared with an output of 974,965 ounces in October. The output during November, 1931, was 900,510 ounces of fine gold. The total estimated working profit of the gold mines of the Transvaal for the month of November, 1932, amounted to:—Witwatersrand, £1,174,637; outside districts, £82,080; total, £1,256,717. The estimated working profit in October, 1932, was:—£1,181,448, £81,826, £1,263,274. In the following table we show the monthly output since the beginning of 1926:—

Month of	1926.	1927.	1928.	1929.	1930.	1931.	1932.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	796,270	839,782	843,857	876,452	882,801	914,576	936,784
February	753,924	779,339	816,133	815,284	818,188	839,937	914,012
March	834,340	860,511	877,380	866,529	889,370	910,998	960,035
April	803,303	824,014	825,907	872,123	868,606	882,337	949,796
May	849,214	859,479	886,186	897,598	916,213	910,279	965,644
June	852,145	855,154	862,363	856,029	887,867	897,750	959,011
July	860,134	851,861	867,211	889,480	912,652	916,843	981,160

September	839,939	842,118	857,731	849,553	903,176	916,024	961,501
October	853,296	855,743	897,720	888,690	926,561	945,113	974,965
November	840,276	848,059	872,484	861,593	884,753	900,510	978,716
December	836,157	851,225	859,761	851,134	908,492	923,353	...
Total.	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	10,874,145	...

The following table shows the number of natives employed at the mines during the past nine months:—

	March, 1932.	April, 1932.	May, 1932.	June, 1932.	July, 1932.	Aug., 1932.	Sept., 1932.	Oct., 1932.	Nov., 1932.
Gold mines	214,024	214,334	215,926	217,077	217,525	217,658	216,398	216,298	219,024
Coal mines	12,009	11,943	11,972	11,833	12,056	11,727	11,642	11,353	11,207
Diamond mines	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil
Total	226,033	226,277	227,898	228,910	229,581	229,385	228,040	227,651	230,231

The number of natives employed at the gold mines showed a pronounced increase during the month.

The New Zealand Reserve Bank.—Late last week it was announced by cable that the New Zealand Government had introduced their Bill for the establishment of a reserve bank on the lines recommended by Sir Otto Niemeyer. The few details that have been made available show that the new bank is to conform to modern central banking practice. It will have the sole right of note issue for twenty-five years, will keep all Government accounts, and will act as a bankers' bank, other banks being required under the Bill to maintain balances with it and make monthly returns to it. It may also be required to manage the public debt. It is to have a capital of £2,500,000, divided into 500,000 shares of £5 each, and the Government is contributing £1,000,000 to the reserve fund of the bank. It is still too early to know what views have been voiced on the Bill since its introduction, but earlier this year, when it was realised that the introduction of the Bill was imminent, one or two bankers expressed doubts as to whether New Zealand

was large enough to need a reserve bank. Certainly the commercial banks hitherto have between them provided the Dominion with an adequate currency and credit system, but inasmuch as many of the commercial banks have their headquarters in Australia, the New Zealand Government may well see certain advantages in setting up its own central bank.

Overseas Correspondence.

LEAGUE OF NATIONS.

Manchuria — Disarmament — Persian Oil.

(FROM OUR CORRESPONDENT.)

GENEVA, December 20

It is perhaps well, for various reasons, that the Christmas interval has arrived to give opportunity for reflection before the League comes to further grips with the Manchurian question, disarmament, and now the Anglo-Persian oil dispute. But it means an accumulation of serious tasks for January, to which all these problems are postponed, and during which there is also to be the meeting of the Preparatory Commission of Experts for the Monetary and Economic Conference. On the Manchurian affair, the Committee of Nineteen proposes still to continue its efforts to find a basis of conciliation, and is to meet again not later than January 16th. Its Drafting Committee drew up a resolution indicating the lines upon which conciliation should be effected; and, though the text has not been published, its terms are generally known. The President and the Secretary-General entered into negotiations with China and Japan, and, as anticipated, the indications from Japan are that she opposes everything in the resolution that is essential. The implications of the resolution leave no room for doubt that conciliation should be based on the principles of the Lytton Report, and this Japan cannot accept unless she completely changes her attitude.

The attempt inside the Committee of Nineteen to obtain conciliation procedure without conditions of any real importance failed, and as soon as that satisfactory stage was reached, it became clear that Japan would refuse the only possible alternative, namely, conditions at least approximating to the conclusions of the Lytton Report. It may possibly be wise for the Committee to continue, hoping against hope that by so doing Japan may be persuaded to be more reasonable, or at all events that she will be in no position to complain that the Committee has not made every possible effort to avoid, until compelled to make it, a pronouncement on the situation. There would be greater approval of the course now being pursued if there were any confidence that it had this calculated purpose; but, unfortunately, experience leads to the suspicion that the step has been guided largely by the reluctance of some Powers to face their responsibilities. Nobody expects Japan to alter her course by any further efforts at conciliation.

The President of the Committee of Nineteen, in explaining its attitude, says that the Committee is fully conscious of the necessity for early decision, but it is none the less conscious of the extreme importance of the issues involved. It feels that it would be failing in its duty if it did not exhaust every effort for conciliation and show the utmost patience in trying to reach a settlement. The problems raised (he said) concerned not only the parties themselves, the League as an institution, and the Member or non-Member States individually; they affected also the principles of world co-operation as a whole and the new and developing system of international relationships. The Committee believes the two parties should be able to accept substantially the text which has been submitted to them, and, while considerable differences exist, necessary time must be given not only to continue conversations, but also to permit all Governments to work together to find a solution.

The best that can be said for the moment is that Japan now knows what the Committee of Nineteen thinks should be the basis of settlement and what the probabilities are, if the Assembly is driven, in default of a solution, itself to declare what the settlement should be.

The meeting of the General Commission of the Disarmament Conference, at which the agreement of the Five Powers was reported, showed signs in some quarters of a certain hesitation in accepting fully the work which had been done outside. Some of the smaller Powers in Europe were not too well pleased with the satisfaction given to Germany, but it is surely pushing the matter a little too far to complain of the procedure of doing outside the Conference what, in view of Germany's attitude, it was impossible to do inside. A rather sharp controversy also has arisen over the semi-official interpretation issued in France, where it was contended that if agreement is not ultimately reached on the terms of the ultimate disarmament convention, which is to include the basis of negotiation reached by the Five Powers, the *status quo* must subsist, and Germany remain governed by the conditions of the Versailles Treaty. No doubt, from a strictly legal point of view, this is accurate; but from every real political standpoint there is not the slightest doubt that equality of rights is definitely established for Germany, and that if there is failure to reach an agreed convention, Germany will not consider herself bound by the Treaty. It is waste of time to discuss the strict legality or propriety of Germany's attitude; the only sensible policy is to work for a good disarmament convention; without it, all talk of security would be idle.

The apparent purpose of the British Government in its demand for an urgent meeting of the Council on the Anglo-Persian oil controversy has achieved its aim. The Council has met and has obtained, both from the representative of Persia and by telegram from the Persian Foreign Minister, an undertaking that Persia will abstain from any act calculated to aggravate or extend the dispute. In these circumstances there was no reason why the examination of the substance of the question should not be postponed, as was decided, until the next ordinary meeting of the Council on January 23rd in order to meet the reasonable Persian request for sufficient time to prepare its case and send qualified people from Teheran to Geneva.

The British Memorandum made a good impression here, and the main point that emerged from the Council meeting was the Persian representative's emphasis on the paragraph in this Memorandum which expressed the hope that the dispute would not disturb the relations between the two countries and which added that Great Britain would do everything to contribute to a settlement. Persia, he said, was also anxious to maintain friendly relations. The President—who, ironically enough, was the representative of the Irish Free State—said there was nothing to prevent the parties themselves reaching direct agreement. That may be the result of the reference of the dispute to the Council, the mere fact of which brings some order into the affair; otherwise it may be rather complicated. We are not escaping the criticism that we are playing the usual imperialist game against a small State; but whatever opinions may be held on foreign exploitation, a contract is a contract, and the riches of Persia's soil would not have been exploited without foreign capital, from which Persia benefits. The British Memorandum, though firm, is altogether fair and moderate, and shows a readiness to discuss the basis of these benefits. The true imperialist doubtless dislikes the restriction which membership of the League puts upon the kind of national action that he would like to see taken in such a dispute; but reasonable folk will comprehend the all-round advantages of getting a fair deal by fair methods, in observance of the League Covenant. The League still means something to a State which has a regard for its obligations and its self-respect.

UNITED STATES.

Congress — Budget — Money — Railroads — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 9.

A RESOLUTION for submission to the 48 States to repeal the Eighteenth Amendment to the Constitution, which prohibits the manufacture and sale of intoxicating beverages, was the first business to come before the House of Representatives. Without waiting for the customary opening Presidential Message, the house voted on the Speaker's own measure, which fell only half-a-dozen votes short of the necessary two-thirds majority. Should repeal later pass the Senate, the House might reconsider it, but at any rate the next order of business will be modification of the Volstead Enforcement Act. Hearings are now being held with the purpose of permitting beer with low alcoholic content to be made and sold.

Feeling on the prohibition question is high, and while many who otherwise would be opposed to the return even of beer or wine are now willing to see it in the hope that it will help to keep down income taxes, the social factor is still by far the largest. Undoubtedly the legal manufacture and sale of beer would, for a time at least, do much to improve the morale of the public; but the economic benefits are held by most observers to be more doubtful. Incidentally, President Hoover did not mention the prohibition question, either in his annual message or in his special Budget message to Congress.

Admittedly, with the recently-elected Congress overwhelmingly Democratic and with the next President of the opposite party, President Hoover's policies are of no great moment. However, his special Budget message will at least start Congress to work on a programme of economy and tax revision, which ought to result in a balanced Budget for the fiscal year beginning July 1st next. The President estimates the deficit for the current fiscal year at \$1,644 millions, including debt retirement from the sinking fund, but excluding the extraordinary Budget for Reconstruction Finance Corporation account. Actually, the public debt is rising on account of R.F.C. loans to the extent of over \$1,000 millions for the fiscal year.

To bring the Budget for 1933-34 within comparatively easy reach of a balance, President Hoover proposes, first, to reduce appropriations by a net amount of \$580 millions, of which \$127,000,000 is to be cut from Veterans' Bureau expenditure. Some of the saving also is to come from an 11 per cent. cut in civil service wages, on top of the furlough system, which will mean net reductions, according to the Treasury estimates, of nearly 15 per cent. This will still leave the Treasury with a deficit, on estimates of tax collections, of around \$840 millions. President Hoover would fill this gap partly with a general sales tax of 2½ per cent., to replace the "nuisance taxes" now in force, and the carrying over of a gasoline sales tax. He estimates \$355 millions from the one and \$137 millions from the other. The indicated deficit would be only \$807 millions, exclusive of sinking fund debt retirement, and consequently, if these cuts were made and if the new taxes yielded as much as is hoped, the 1934 year would bring no further rise in public debt.

Reduction of public works expenditures, paring of the emergency construction programme, cutting of appropriations for roads, rivers and harbours are included in the economy programme. The message was given favourable reception in Wall Street, but it had been hoped that more stress would be laid on economy. It is felt that the saving on veterans' service could easily be doubled or tripled, and that departmental appropriations also could be reduced much further. Moreover, those who are inclined to criticise feel that every proposal made would have been better made a year ago.

Supporters of the legalisation of beer claim that the tax to be expected from it would just fill the deficit of \$807 millions. Whether a balance will be achieved if President Hoover's suggestions are carried out depends largely on the state of business. A somewhat better level of trade

must be anticipated if revenue estimates are to be realised. Already much opposition is developing against the sales tax, but it has the support of strong interests who, although disliking it for itself, feel that it is the only means of bringing in the necessary revenue, and that some form of tax which extends to the whole nation will be a good thing. It is likely to be carried, although opposition will be vigorous, and the rate may need to be raised unless Congress takes more kindly to economy than it did last time.

It is felt that the discussion on war debts has at least had the effect of directing public attention to the necessity for re-examination of the question. Payment on December 15th will probably be seized upon by the inflexible collectors as proof that Europe was bluffing about ability to pay, but odds favour a subsequent revision of terms, chiefly on the ground that continued payments on the present scale may, in the long run, even if possible, be undesirable for this country.

The Treasury announced its December 15th tax date financing by offering \$600 of one-year and four-year certificates and notes, at a low coupon, which has been largely oversubscribed. Since the new issue was only equal to tax date maturities, it is supposed that the Treasury plans to allot far in excess of the nominal issue, or intends to allow its cash balances to run down, or, as is more probable, is planning interim certificate issues or larger discount bill sales between this and the March tax date. The financial district had rather expected an offering of \$800 millions, but the other terms were about as anticipated.

Money continues easy, with gold imports offsetting the usual year-end rise in currency in circulation. Open-market bill rates have dropped another ½ per cent., bringing ninety-day documents to ½ per cent. asked. Time funds for four months' maturity are now also ½ per cent. Gold imports this week were \$16 millions, of which \$13 millions were from England, and metal earmarked for foreign account rose \$5.5 millions. The week's gain in monetary gold stock was \$14 millions, and money in circulation rose \$21 millions. Other items in the Federal Reserve system's statement are virtually unchanged. Some expansion is being shown by member bank loans and investments, but it is entirely in the New York district. That is often seen toward the close of a business depression and is regarded as the forerunner of expansion in the interior.

The life of the Reconstruction Finance Corporation will be extended another year, as anticipated; in fact, it is supposed that the R.F.C. will be with us for many years. Hearings are being held this week before the Coolidge Commission selected by leading insurance companies and investors in railroad securities to provide a complete plan for guidance of the country's transportation system. A lively dispute has developed on truck and motor bus regulation, while railroad labour is alarmed at the suggestions for further wage cutting. Meanwhile the Inter-State Commerce Commission in its annual report has restated its old recommendations for legislation, such as repeal of the "recapture clause" of the Transportation Act, and makes a new request for legislation to facilitate capital structure reorganisation without receivership and to permit greater speed and less expense in reorganising under receivership. Opinion on all sides leans in the direction of a scaling down of investment and property values as a permanent thing.

Few people believe that the present level of traffic and earnings—about 50 per cent. below what railroad men consider normal—will not be raised, but it is doubted whether, for a good many years at least, railroad traffic will return to the old pre-depression volume. Undoubtedly Congress, within the next year, will recognise the situation sufficiently to give some legislative relief to the railroads, but rehabilitation can scarcely come without some acceptance by investors of the losses which already are apparent in the markets.

Business continues to recede along seasonal lines. The steel trade is operating at around 15 per cent. of capacity, with little new business in sight. Some motor companies

are busy on new models; and sales in November of 61,000 units, as estimated by the National Automobile Chamber of Commerce, were a little higher than for October. General Motors, on the other hand, produced only 2,405 cars in November, as against 5,810 in October, the smallest monthly volume in the history of the company. However, stocks of new and used cars in dealers' hands were reduced sharply.

FRANCE.

New Cabinet — Finance — Treasury.

(FROM OUR CORRESPONDENT.)

PARIS, December 21.

THE problem presented by the fall of the third Herriot Ministry last Wednesday has been solved with unexpected ease by M. Paul-Boncour, after an attempt by M. Chautemps, Minister for the Interior in the Herriot Cabinet, had failed. On Monday morning decrees were promulgated confirming the nomination of a new Ministry, which can fairly be described as a continuation of its predecessor. M. Herriot himself definitely declined office, and with him disappeared M. Germain-Martin, his Finance Minister, and M. Palmade, Minister for the Budget (a post which has again been suppressed). M. Paul-Boncour has assumed, as was expected, the post of Foreign Minister, as well as that of Premier, with M. Henri Chéron as Finance Minister, and M. Georges Bonnet, a former Budget Minister, at the Ministry for Public Works, where a financial expert is badly required, in view of the confused state of railway finance. There has been a reshuffling of four of the other more important portfolios, including the promotion of M. Daladier, M. Herriot's second in command, from the Ministry of Public Works to the War Office, in place of his new chief. Twelve of the seventeen Ministerial portfolios are held by Ministers in the previous Cabinet, and six of the twelve Under-Secretaries have also been retained.

It is not surprising that M. Paul-Boncour, who was one of the leaders of the Socialist Party until his recent transfer from the Chamber to the Senate, should have attempted to induce his old colleagues to participate in his Ministry. But last Saturday the Socialists met M. Paul-Boncour's overtures by demanding, as their price for co-operation, acceptance by him of a programme which included cutting down military expenditure to the 1928 level, nationalisation of railways and all insurance business, State control of the banks, application of unemployment insurance, prohibition of private manufacture of arms, enforcement of a 40-hours' week, and the balancing of the Budget by other means than cuts in social services and Civil Service pay. M. Paul-Boncour, although really more favourable to Socialist aspirations than M. Herriot, declined to pay the price asked. Further substantial reduction of military expenditure, he said, was impossible unless security without armaments could be internationally guaranteed. Prohibition of commerce in arms and the 40-hours' week also would depend on international agreement, while a balanced Budget would be impossible without sacrifices by all classes. This brought all question of Socialist participation to an end, and M. Boncour formed his Ministry from the same groups as those represented in the preceding Cabinet.

The new Ministry, which is to meet the Chamber to-morrow, appears likely, at the time of writing, to secure a favourable reception for its declaration of policy, but the real test will probably not come until the Chamber returns to work after the holidays, when the Budget is to be taken in hand in earnest. M. Chéron's return to the Finance Ministry was received at first by the Bourse with a sharp recovery in Rentes, but reflection over the grave difficulties existing in regard to the national finances subsequently somewhat damped this optimism. It is now known that M. Chéron was at first "pencilled" as Budget Minister, and that it was not until the superior post had been declined successively by M. Pietri, M. de Monzie and Professor Rist, that the Finance Ministry was offered to M. Chéron. This will be M. Chéron's third Budget, and by far his most difficult one. When he last

left office, in the spring of 1930, he left the Treasury with an accumulated surplus in hand of 19,000 million francs, the result of the taxation policy which M. Poincaré deemed necessary to render the franc impregnable. Lavishly increased expenditure, imprudently heavy taxation relief and the general slump have within two years left the Treasury practically empty, and the framers of the 1933 Budget Bill are faced with a deficit of 12,000 million francs, of which 8,000 million francs have yet to be found.

Last March M. Chéron, in a remarkable speech in the Senate, insisted that the country must choose between currency inflation (which he said it was impossible to accept) and Budgetary deflation. Increased taxation, in present circumstances, he declared, is impossible; as is also resort to further loans, at a period when it is imperative to reduce rather than increase the debt service burden. "The country must be told the truth," M. Chéron said last March (and M. Paul-Boncour repeated the same doctrine last Sunday); "we are living beyond our means. Expenditure must be cut down and certain promises must be renounced. It will be sufficient if we will it, and refuse to be stopped by the protests and cries of those who have got into the habit of asking everything from the State." This programme was that of M. Chéron's predecessors over two years ago. It remains to be seen whether, in the present more ticklish circumstances, he will be strong enough again to enforce it, against the opposition of the public servants. It is significant that the members of the Socialist Party, who are *rapporteurs* of several of the departmental budgets, have unanimously refused to hand in their reports for advance consideration by the new Ministers (as is customary in circumstances like the present, following a change of Government) unless the Cabinet, as a condition precedent, withdraws the proposal concerning cuts in Civil Service pay, allowances to former soldiers, remarried war widows, etc.

M. Chéron announced yesterday that he proposes to put in hand forthwith preparatory measures for the application of the recommendations of the commission which has for three years (on his own initiative) been considering drastic simplification of the public accounts. He has also notified that he proposes to move, before the House rises for Christmas, for a single *douzième provisoire* (vote on account), but that this shall be made automatically renewable month after month, for as long as may be necessary. The Finance Minister further denies emphatically that he proposes to raise money for immediate needs by the application of a special form of poll tax.

The revenue returns for November register a yield from indirect taxation of 587 million francs less than Budget estimates, thus bringing the deficit for the first eight months of the nine-months' financial year to around 3,500 million francs. The retiring Ministers of Finance and for the Budget, MM. Germain-Martin and Palmade, on handing over to M. Chéron yesterday morning, presented a statement showing that on December 14, when the Herriot Ministry fell, the total funds at the Treasury's disposal were 3,392 million francs, made up as follows:—

	Francs.
Cash in hand and at bank	605,000,000
Balance of authorised issue of Treasury Bonds	1,787,000,000
Repayment due at end of month from—	
(a) Moorish loan, in respect of advances	400,000,000
(b) Another loan by the Caisse des Dépôts, made to reimburse other advances made by Treasury	600,000,000

The deficit, apart from the fall in the revenue, it was stated, amounted to a further sum of "over a milliard, in consequence of the fictitious character of resources inscribed in the 1932 Budget" (presumably the lapsed German reparation instalment). "In the absence of accumulated reserves, the Treasury has had to furnish 800 million francs on account of frontier defence expenditure." The Minister of Finance, it was pointed out, notified the Chamber Finance Commission, as far back

as October 20th, that it would be necessary for him to ask, at the end of the year, for a further 3,000 million francs to meet the needs of the Treasury.

"A severe policy, due to the opposition of the two Ministers of Finance and the Budget, during their whole term of office, to solicitations for supplementary credits, explains," the retiring Ministers declared, "the existence of larger Treasury facilities than were forecast in preceding months. As a matter of fact—and for the first time for many years—the supplementary and extraordinary credits authorised during the period June-December, 1932, have been insignificant." Criticisms of these statements advanced to-day suggest that the balance of Treasury bonds still available for issue is not 1,787 millions, but between 250 and 300 millions, and that if the volume of supplementary credits to be provided for is exceptionally low, it is because the greater part of the items usually found under this heading have already been transferred to the section of the new public works programme now before the Chamber, with the intention of their being met out of the proposed loan, instead of directly from the Budget. Looked at impartially, however, it seems clear, from the above figures, that the Treasury has emerged fairly satisfactorily from an exceptionally difficult six months, as the result of an effort which has perhaps been the greatest it has been called on to make since the end of the war.

GERMANY.

Chancellor's Speech — Banking — Municipal Debts.

(FROM OUR CORRESPONDENT.)

BERLIN, December 20.

On Thursday of last week the Chancellor expounded his programme in a broadcast speech which lasted an hour. The Chancellor's speech was conciliatory towards all parties, and the principal point he made was that he did not intend to force a decision on any questions of principle. He was "an adherent neither of capitalism nor of socialism," and expressed the view that "the thing to be done is the thing that seems reasonable at the moment." The Government does not propose to undertake any constitutional reforms; they "interest nobody at present." That constitutes a decided renunciation of the policy of the preceding Cabinet, though Herr von Schleicher, in another passage, spoke of ex-Chancellor von Papen, his "friend," as "a knight without fear and without reproach." In foreign policy, too, the Government will work with calmness, steadfastness and decision, "for they know that the vital interests of the German people cannot be served by bold experiments and venturesome policies."

The task of the day, said the Chancellor, is the provision of employment, and in connection with the carrying out of this task the agricultural settlement scheme is to be accelerated. The programme of settlement which the Chancellor outlined would mean that of the land which is now held in large estates, about as much would in future be transformed into peasant holdings as has already been so transformed since 1919. The Chancellor also proposes to take decisive steps to raise the prices of agricultural produce, but care is to be taken not to contravene the provisions of existing commercial treaties. The Government will merely make use of the tariff autonomy they recover when treaties which have been denounced expire. At the same time, the Chancellor considers "a lively interchange of goods with other countries" to be indispensable, and he is therefore not in favour of unrestrained protectionism. Great as is the importance which Herr von Schleicher ascribes to the provision of employment, which will preclude all danger of inflation. "The co-operation of the President of the Reichsbank, Dr. Luther, that."

The Chancellor's speech, characterised primarily by its prudence, thus differed completely in tone from the speeches of Herr von Papen. Its reception by the German people showed that the prudence was perhaps carried

a little too far. German public opinion would probably have been very receptive to the tone of the speech, considered on its own merits, for the public wants to hear no more of adventures and "radically new policy," but it remembers that Herr von Schleicher also had a very great influence on the policy of the preceding Government, and therefore shares the responsibility for its, in some instances, very drastic measures. For that reason a speech from him of so conciliatory a character, in which he endeavoured to avoid all dangerous statements, could not be heard in Germany entirely without misgiving. People would have liked some concrete announcement of proposed policy, and for that reason Herr von Schleicher did not receive such a good Press as his very rational speech deserved. All the same, it is a great advantage for him that no section of the Opposition has found any point to attack in his speech.

At the assembly of the Central Association of German Banks and Banking Houses, Dr. Georg Solmsen, of the Deutsche Bank and Diskontogesellschaft, lamented the injustice of public opinion towards the banks:—

"We feel it bitterly hard that large sections of the German people, nourished upon party misrepresentations, have worked themselves up into a sort of hostility to the banks and are inclined to attribute to banks and bankers the chief share of responsibility for the difficulties with which our economic life is struggling. It is always being pointed out, with a certain satisfaction, that it was banks and bankers who availed themselves of State help, and on the basis of this doctrine our profession is reproached with having adopted as its slogan the socialisation of losses. In reply to this it cannot be too strongly emphasised that during a downward movement of the trade cycle the banks and bankers, as intermediaries in the trade in money and capital, are forced into situations which are entirely beyond their resources. That the German banks were able notwithstanding to pay back, between February, 1930, and November, 1931, Rm. 4½ milliards, or 30 per cent. of their deposits, and between February, 1931, and the end of the year almost 3½ milliards, or 24 per cent. of the deposits which they held at the beginning of 1931, was an immense achievement, unparalleled in the history of international banking."

Dr. Solmsen further pointed out that the "socialisation of losses" was preceded by a "socialisation of profits," as many of the banks' debtors had collapsed under the growing burden of taxes and other payments. He also attacked the notion which prevails among many industrialists that obligations towards the banks do not need to be fulfilled with the same conscientiousness as obligations towards other creditors.

After prolonged negotiations the holders of the Rm. 30 millions of Frankfurt City Treasury bills, originally due on September 30, 1932, have concluded an agreement with the city which removes all danger of its insolvency. The Treasury bills were prolonged in the first place until December 31st by an emergency decree, in order to give time for further negotiations. There was from the beginning no question of repayment in full, for the heavy unemployment payments have left the city without any funds of its own, and a new issue is impossible in Germany just now, but discussion as to the partial amounts to be repaid and the means of raising them has been going on for weeks. Finally the city procured Rm. 3 millions from credits of the Prussian State and a banking consortium. The creditors will receive back 10 per cent. of their capital and have agreed to leave the rest, at 6 per cent. interest, until September 30, 1934. Attempts are being made to arrive at a similar solution for the Rm. 40 millions Treasury bills of the City of Cologne, which are also overdue, but the funds for this repayment have not yet been secured. The avoidance of municipal bankruptcies is of the greatest importance for the German capital market.

HOLLAND.

Gold Movements — Money — Trade — Sugar Reorganisation

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 12.

WITH the renewed drop in sterling, international gold movements have again become important. New gold shipments to America are being reported almost daily in the Press, with the Netherlands often figuring as a gold-

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.
Branches throughout Greece.
New York Agency, 51 Maiden Lane.

Capital paid up and Reserves Drs. 1,205,000,000.

exporting country. It is remarkable that the weekly returns of the Netherlands Bank do not give the slightest indication of an efflux of gold, the gold cover of the Central Bank remaining unchanged. Evidently the export of gold is entirely for account of third parties and private banking institutions. It is undeniable that Amsterdam, in consequence of the completely disorganised monetary conditions in the world, has become a centre for the "outside" trade in gold—that is, the trade in gold beyond the control of the Central Bank. Amsterdam is assuming increasing significance in this trade, and the following figures, taken from the official returns of the Central Statistical Bureau, give some idea of its volume:—

GOLD MOVEMENTS (value in guilders).		
Week ended:—	Imports.	Exports.
November 5	4,269,937	3,914,695
" 12	2,565,628	2,100,174
" 19	2,495,261	13,277,270
" 26	4,099,750	6,277,356
Total	13,430,576	25,569,495

From the stocks accumulated in the open market in Holland, gold to a value of 12,138,919 guilders on balance has accordingly left the country during this period; and these figures do not include a shipment of £3,000,000 which is said to have been sent to America last week. The shipments, it should be pointed out, have no direct connection with rates of exchange. The purchase and selling prices of the Netherlands Bank have not been a criterion of the possibility of exporting and importing gold since the private banks started storing up the precious metal as an investment for surplus funds.

The following list of the countries chiefly involved in these gold movements will give some impression of the nature of the trade:—

	(Guilders.)	
	Exports to:	Imports from:
United States	8,808,400	...
Germany	7,757,792	...
Dutch Indies	...	4,491,925
British India	...	3,629,890
Great Britain	...	3,140,763
Belgium	3,077,500	...
France	2,254,546	...
Switzerland	1,336,600	...

Numerous other countries also participate in the gold trade with the Netherlands, but to a less important extent.

Despite these exports of gold, great liquidity still continues to characterise the Amsterdam money market. The average rate for prolongation money was 1 per cent. in November, 1932, as compared with 1.76 per cent. in November, 1931, and during the past month the rate never varied from the average figure. It will be seen that a remarkable degree of stability has been reached, and this is also noticeable in the private discount rate, which has been on the level of $\frac{1}{2}$ to $\frac{3}{4}$ per cent. for weeks at a stretch, that is to say, far below the official rate of discount. A certain stability has also set in on the capital market, and the rates for State and municipal loans have fluctuated

within very narrow limits. The few domestic loans launched here in the course of November were a success. As has been the case in recent months, they were all for account of public bodies. Issues publicly offered for subscription during the first 11 months of this year totalled 436 million guilders, of which 29 millions fall in November. In November of last year the issues totalled less than 6 millions, while the total for 1931 was 338 millions.

Our trade returns for November show a decline both as regards imports and exports:—

VALUE, IN MILLIONS OF GUILDERS (excluding gold and silver).

	Nov., 1931.	Oct., 1932.	Nov., 1932.	Jan.-Nov., 1931.	1932.
Imports	140	117	106	1,752	1,193
Exports	101	82	70	1,231	776

It is apparent from these figures that the seasonal improvement recorded in exports during the last couple of months has again become a thing of the past. For two important export lines, however, the upward trend has continued; electric lamps rose from 703,000 guilders in October to 741,000 guilders in November, and exports of wireless apparatus increased from 3,727,000 guilders in October to 4,286,000 guilders in November. Our exports of artificial silk, on the other hand, declined from 1,662,000 to 1,369,000 guilders. It is reported that the Dutch Government is to enforce quota restrictions on the importation of all cotton goods into this country. All preparatory measures have been taken to enable the quota to be put into operation forthwith. The measures apply only to the importation of cotton goods into the Netherlands. As regards the Dutch East Indies, no decision is expected for the time being; the advisory report submitted to the Government was not in favour of it.

The new plans for the organisation of the Java sugar industry have now become known. The old sugar trust, the V.I.S.P., has lost its power and significance through the resignation of a number of members, and will not be prolonged after 1932. The Government has accordingly intervened, and it is proposed to set up a compulsory single seller for Java sugar in the form of an association to be founded under the name of Nivas, which will have the monopoly of the marketing of Java sugar entirely in its hands. Although participation in the association is optional for the Java sugar producers, they will, nevertheless, have to join in order to market their sugar. The independent sugar mills are, of course, violently opposed to the formation of this association under Government supervision. The necessary legislation has already been submitted to the approval of the National Council in the East Indies, and it is expected that the new measures will become binding upon the entire Java sugar industry very shortly.

HUNGARY.

Politics — Deficit — Transfer Moratorium — Banking.

(FROM OUR CORRESPONDENT.)

BUDAPEST, December 12.

THE new Government has to its credit that it has refrained so far from any hasty ventures. General Gömbös, the Prime Minister, has proved to be a very different man from Captain Gömbös, the rising political extremist of twelve years ago, and his popularity, especially in the rural districts, is the greatest asset of his Government. If Hungary struggles through the coming winter without disturbances, it will be in no small degree the merit of the new Premier, who knows how to speak to the farmers in distress and is trusted by them. But the great popularity of General Gömbös may become as time passes rather embarrassing, as he will find himself soon confronted with the choice between embarking on a ruthless financial policy demanding further sacrifices from all sections of

the population, risking thereby his great popularity, or letting the situation drift towards a financial collapse with all its attendant social evils. In all fairness to the new administration, it must be pointed out that it inherited a Budget hopelessly out of balance, an inadequate banking system which needs urgent reorganisation, a Parliament which had never yet faced facts, foreign creditors who show little understanding for the problems of an insolvent debtor nation, and exchange and trade restrictions which paralyse international trade.

Treasury receipts are very disappointing. According to the last report of the Finance Minister the revenue of the Administration in July-October amounted to 221.7 million pengö and about 80 million pengö are estimated for November, a total of 300 million pengö, as against 842 million pengö in the same period of 1931; a drop of 12½ per cent. Assuming a drop of 10 per cent. only for the remaining seven months of the current year, from the 440 million pengö, revenue realised in the previous financial year, the total receipts for the Administration in the present financial year will be at best around 700 million pengö, as against 806 million pengö budgeted for by the previous Administration, and 782 million pengö realised in 1931-32. Thus the Budget of the Administration alone threatens a deficit of 100 million pengö, unless drastic measures are taken to effect immediate cuts.

The finances of the State undertakings are in an equally bad state. Their receipts in July-October amounted to 120.2 millions, as against 137.4 million pengö in the same period of 1931. Railway and postal revenue showed a decrease of 15 per cent. since last year, so that it is obvious that the revenue estimates of the past Administration, amounting to 401 million pengö are quite out of touch with realities. Considering that the total receipts of the State undertakings amounted to 362 millions in the previous financial year, at best 320 million pengö can be reasonably expected in the current fiscal year, which means a deficit of 50-60 million pengö to be met from the Treasury. Thus the new Administration is confronted with a deficit of 150-160 million pengö, as compared with the total gross receipts of 700 million out of taxation.

Great pressure is being brought to bear again on the Government to permit the repayment of mortgage debts with bonds, which the previous transfer moratorium strictly prohibited beyond the original schedule. This is a most inopportune and unfair demand as the debtors are unable even to meet the payment of interest. It is hoped that the Government will resist this prejudiced proposal, which would incidentally be a great danger to the stability of the pengö, as any relaxation of the strict prohibition would give a new impetus to the smuggling of the bonds from abroad into Hungary and would create an excessive demand for foreign exchanges in the black market, thus undermining the none too strong position of the pengö. Apart from the danger to the currency it is obvious that a permission to repay the mortgage debts with bonds would benefit chiefly the speculators and the banks, but not the original debtors, who have no liquid funds to buy these securities. In point of fact there have been numerous complaints in Parliament and in the Press that the commercial and mortgage bond issuing banking institutions have repurchased their own bonds in spite of the prohibitive clause of the transfer moratorium decree. Considering that the banks have scarcely any liquid funds and their bill liabilities with the National Bank are steadily increasing, this practice is very objectionable as, further, it is worth while to point out that the total debt of all the banking institutions with the National Bank decreased to less than 30 million pengö, as against an average of 90 million pengö in the same period of last year. The police recently arrested several smuggling brokers, but the only effective weapon to stop smuggling and to protect the currency and the National Bank would be to make the outstanding mortgage and commercial bonds ineligible for capital repayment *sine die*, the more so because the proposed new transfer moratorium decree will suspend all amortisation payment.

IRISH FREE STATE.

Politics — Railways — Currency — Agricultural Credit.

(FROM OUR CORRESPONDENT.)

DUBLIN, December 16.

NEVER were the politics and economics of any country so inextricably intermixed as in the Free State to-day, where the whole economic life of the community is affected by the political quarrel with the British Government. Economic forces on both sides are being employed simply as weapons in the political struggle, which now appears to have reached a position of complete stalemate. Trade in both directions is gradually disappearing, partly as a result of the hostile tariffs, but also, it is to be feared, partly as a result of a public boycott in each country of the goods of the other. If this economic trench warfare continues much longer, the injury will be permanent, and the old conditions of mutually advantageous trade will never be restored. Yet the politicians remain adamant, and no settlement appears anywhere in sight.

An intensification of the struggle rather than a settlement is an imminent danger, if the report be true that Mr Thomas intends to raise the duties on Irish imports in the new year. It is doubtful if the ordinary Englishman realises the full implications of the policy which the British Government is pursuing on this matter, which may quite possibly have the effect of severing the last political tie between the Free State and the rest of the British Commonwealth. The present Government in Dublin is perfectly frank that it is prepared to remain in the Commonwealth simply because of the commercial benefits to be derived from that position, and its declaration of an independent Republic would be immensely facilitated by a continuance of the present hostile tariff policy in Great Britain. There is not the slightest doubt that Mr Thomas has been Mr de Valera's most useful political ally, and nothing would assist the latter more in the coming bye-elections than an intensification of tariff "frightfulness" on the part of Great Britain.

The idea that the Irish electorate can be bullied into voting against Mr de Valera is based upon ignorance of the character of the people and the circumstances of the country. The more the "war" spirit is fomented by further reprisals, the more the voters will swing to the left as a protest against "coercion." Up to the present the tariff warfare has not hit the farmers very much on account of the equivalent export bounties that are being paid on agricultural produce, and the class adversely affected are the payers of income tax, whose voting power is small, especially in rural constituencies. A policy of bounties may amount to feeding the dog on its own tail, but it is a quite satisfactory sedative as long as it lasts and induces an illusion of satisfaction. The same method

is being utilised to allay the clamours of the railway workers.

Rumours continue to circulate to the effect that the Government is contemplating the severance of the link between Free State currency and sterling. It is certain that proposals of this kind have been discussed in high quarters, and that a certain section of political opinion is in favour of such a departure. What would take the place of the existing sterling standard is a matter of extreme uncertainty, since some Ministerial utterances seem to favour the adoption of a gold or dollar standard, which would be deflationary, while others appear to point to the adoption of some fancy credit scheme, which would be certainly inflationary. The one thing on which both sections of opinion agree is that sterling must be abandoned. Needless to say, such a step at the present critical juncture would be fraught with danger both to the price level and the exchange of the Free State; and, if it is taken, it will be taken in defiance of all academic, banking, and business opinion. The passion for change, which is rampant, may, however, prove strong enough to overbear the most informed opposition.

The work of providing credit for farmers on favourable terms is being carried on with growing success by the Agricultural Credit Corporation, which was established in 1929. The Corporation has already lent £1,115,000 on long-term loan and has experienced practically no defaults in repayment. Of the total loans outstanding 90 per cent. are for sums less than £500, and the average amount lent is £125, which shows that attention is being paid to the needs of the small farmer. The minimum amount advanced has been recently reduced from £50 to £30. Many of the Government's new agricultural schemes involve the outlay of further capital; this will, no doubt, be provided through the Corporation, which will itself probably soon find it necessary to borrow again from the public. In view of the fact that the Corporation's existing 5 per cent. bonds stand at 111, any further borrowing will be done on easy terms, and the rate on advances to farmers will be proportionately reduced.

The growth of trans-oceanic aviation has aroused interest anew in the facilities available at Galway for a great Atlantic terminal, and an ambitious scheme of development is under consideration. Plans are in preparation for the construction of an air port, harbour and docks at Furbo, seven miles west of Galway, at a capital expenditure of two and a-half million pounds. Apparently, the co-operation of Imperial Airways, Limited, and the L.M.S. Railway has already been sought, and the approval of the British and Canadian Governments obtained. Pending the initiation of the full scheme, a minor scheme is in contemplation, which would improve the existing accommodation for liners at Galway and provide an airport for "feeder" services to Dublin and Great Britain.

Books and Publications.

BOOK OF THE WEEK.

RECOVERY??

MR KNICKERBOCKER is known throughout Europe as one of the liveliest and most sensitive of America's impressionistic journalists; and his contribution, made after a rapid survey of the principal European capitals, to the great question of the likelihood of Europe's economic survival will therefore be read with interest in countries other than his own.

Mr Knickerbocker is undisguisedly an optimist. "The undertakers," he says in his final chapter, "have moved out of Europe's parlour, and the nurse is feeding the patient with broth. Relapse might come; but relief is certainly here. The patient may not get up and walk tomorrow, but he knows he is not going to die." And, in

* "Can Europe Recover?" By H. R. Knickerbocker. (London.) John Lane. 308 pp. 7s. 6d.

a final sentence which has a paragraph all to itself, and seems to be crying out for capitals or italics, he adds: "Europe will recover."

It is all to the good that remarks to this effect should be widely circulated in the United States, whose citizens' sudden conviction that Europe not only would not recover, but was rapidly descending into a bottomless pit, was so largely responsible for the events of the period which Professor Toynbee in a recent publication aptly christened the *Annus Terribilis*; but a closer examination of Mr Knickerbocker's book causes one to doubt a little, not merely the evidence on which he bases his optimistic conclusions, but whether the conclusions are so optimistic after all. Certain points he makes are undoubtedly true. It is certainly correct that there is, at the moment, a psychological arrest of "slump feeling" which may or may not be lasting. The worst-hit countries are, for the most part, no longer trembling in fear of social revolution; the situation is not at the moment growing rapidly worse; the bourgeoisie in Danubia, for example, has become

rather more acclimatised to its post-peace scale of living, and is finding that it does not mean actual starvation; there is an impression abroad, whether it be right or wrong, that the bottom of the slump is reached. Further, it is also true that a good deal of the present distress, particularly in Central and Eastern Europe, which has attracted attention among people who, to all intents and purposes, had never before considered a Hungarian as having an economic life or as being, in fact, anything but a political complication in Franz Joseph's Empire, is not due to present conditions, but is endemic in areas inhabited by a backward and poverty-stricken peasantry. It is good that Western European complacency, which has been a little shaken by the events of the last few years, should be reminded that millions of persons in the Europe of 1913 lived in conditions of shocking squalor and poverty, which could at that time be ignored because it was not believed that poverty was infectious. Now we have discovered that poverty, like cholera, tends to spread from the slums of civilisation to its respectable middle-class areas; and it is well that we should be told that it existed even in the days when we were too comfortable and well-fed to notice its existence. It is probably true that the beggars of Buda-Pesth are no more numerous and no worse off, actually, than before the war; and if it is true, it had better be known.

Nevertheless, it is rather poor comfort for the better-off parts of Europe to be told, as Mr Knickerbocker in effect tells them that, even if they all descend to the economic level of Hungary, it will not therefore mean their complete destruction. It is not even certain whether that is so; great as is the proved endurance of humanity, a serious decline in productivity and prosperity may produce results quite different from those of a mere continuance of century-old misery; but at any rate it can hardly be termed "recovery." Nor is it encouraging to realise that Mr Knickerbocker's hopes for the Danubian States depend a good deal upon their practical administration as bankrupts by commissioners of the League of Nations or some such body, who, being impervious to national political pressure, will be able drastically to reduce wage-rates, doles, and such types of expenditure. It sounds a grim prospect for the workman of Belgrade.

As to Mr Knickerbocker's evidence, it seems, to one reader at any rate, to be based rather unduly upon a series of interviews with leading nationals in the leading cities of the various countries, and upon little else. It is, for instance, very interesting to read Signor Mussolini's views upon the economic situation of Italy; but one would hardly expect Signor Mussolini to inform a representative of the

American Press that the Italian workman was underpaid, even if he thought so; one would like a little more evidence. In England, again, Mr Knickerbocker saw only London, and noticed, as any observer would notice, the really astonishing way in which the level of spending has been maintained in its central districts. He did hear that it was not so in the North and Midlands; but he did not go to see for himself. He did not, apparently, even visit one of the harder-hit suburbs, so that his picture of England reads rather as though it had been drawn by Dick Whittington. Finally, anyone who could deduce from the phenomenally unenthusiastic observations of President Masaryk, here quoted, the dawn of a new era of Central European co-operation must be an optimist indeed.

It may be that he is right. We will hope so, and hope, even more, that his countrymen will think so. As an impression, meantime, his book should be read and compared with the impressions of another journalist, Mr Tiltman, which were recently noticed in these columns.

SHORTER NOTICES.

Modern Money. By Lord Melchett. (London) Martin Secker. 10s. 6d.

Lord Melchett's *Modern Money* is a curious book. In the first place, it is much more than a treatise on money, for the author appears to have been unable to resist the temptation to throw into it any observation on any point relating to industry or politics which seemed to him even remotely relevant to the general subject under discussion. The reader thus encounters in the midst of a discussion of monetary problems a brief treatise on political theory, in which the achievement of Italian Fascism comes in for high praise, while the Russians are cautiously commended for their planning activities and at the same time reprimanded for their fundamental mistake of believing in the class war. There are also sections dealing with rationalisation and the future organisation of industry, with the prospects of Empire, and with many other matters not obviously pertinent to a treatise on monetary questions.

The first part of the book does, however, deal mainly with money. Lord Melchett wants a dual system of money, one kind for internal and one for external use. He profoundly disbelieves in the gold standard and in the limitation of the internal supply of currency and credit on any basis dependent on the adequacy of the stock of gold; and he also puts forward a curious scheme for ensuring the automatic liquidity of the banks through the creation at the Bank of England of a discount and securities corporation prepared to make advances on company debentures, commodities, real estate, stock exchange securities and any other non-liquid assets on the basis of which bank advances are at present given. This extension of rediscounting from self-liquidating paper to long-term securities would obviously make the operations of the joint-stock banks completely liquid, but would do this only by transferring the risk of getting "frozen up" from these banks to the new securities and discount corporation. Another part of the book puts forward a scheme for the use of stocks of commodities as a "stabilising factor." In this case the Central Banks of the leading countries are to "accept and such further stocks as are necessary to bring each stock up to twelve months' supply based on averaging world consumption for the past ten years, the price fixed to be the average cost of production of the last ten years, less 10 per cent." Once again it is difficult to visualise any great enthusiasm on the part of the Central Banks for such a scheme. Lord Melchett argues in support of his proposals with a fine vigour and impetuosity, but his book would have been more valuable if he had covered a good deal less ground and that more thoroughly.

OTHER BOOKS RECEIVED.

Le Mats dans le Commerce Mondial. Compiled by V. Desmirean. (Rome) Treves, Treccani, Tumminelli. 135 pp.
A statistical monograph prepared for the International Institute of Agriculture.

Capitalism at the Cross-Roads. By Dr. Jan Loevenstein. (Prague) Orkis Publishing Company. 151 pp.

The author maintains that the fundamental cause of the present crisis is the disturbance between production and consumption, brought about by too rapid rationalisation in conjunction with the capitalist system of distribution.

The Stock Exchange.

P. AND O.

Few who occupy their business in great waters recall a more cheerless Christmas than 1932. International trade has been reduced by nearly two-thirds within three years. Nearly 15,000,000 tons of shipping are laid up in the ports of five continents. The world's largest and fastest liner is a "suspended" hulk in a Clydebank shipyard.

Along the grim road of shipping depression the passing of the deferred dividend of the Peninsular and Oriental Steam Navigation Company marks a new milestone. For generations the P. and O. flag has been a symbol of British enterprise, commercial power and social tradition. In every major port, from Gibraltar to Sydney, the black hulls of the company's vessels have been as familiar as the British Ensign. On the Stock Exchange the company's stocks have steadily attracted conservative investors. Between 1911 and 1928, when the capital of the P. and O. (including debenture stocks) increased from £4,120,000 to £16,120,078 and its reserves from £1,250,000 to £6,773,279, dividends on the equity stock averaged as much as 13½ per cent., and never fell below 10 per cent. Since 1928, however, earnings on the stock have fallen from 14½ per cent. to nil, and dividends from 12 per cent. to nothing.

For seventeen years to 1932 the story of the P. and O. was the story of its late chairman, a historic figure, whose name was writ large in the trade of the East. James Lyle Mackay, first Earl of Inchcape, became head of the P. and O. board in January, 1915. The company, incorporated by Royal Charter in 1840, had just entered a new phase of its career with the acquisition (in 1910) of the Blue Anchor Line and (in 1914) of the British India Steam Navigation Company. Under Lord Inchcape's strong personal rule the extension of its interests—and commitments—proceeded rapidly. Control of the New Zealand Shipping Company and the Federal Steam Navigation Company was acquired in 1916, of the Union Steam Ship of New Zealand and the Hain Steam Ship in 1917, of the Orient Steam Navigation, the Khedivial Mail, and the Eastern and Australian Steam Ship in 1919, and of the General Steam Navigation in 1920.

Thus the P. and O., which in 1910 had a tonnage of 454,000, is to-day the head of a group owning or controlling 2,217,724 tons, of which the P. and O. fleet accounts for 485,595 tons. The group holds an interest in a lengthy list of companies. The extent of its shareholdings in some of the more important is shown on the next page. The period of P. and O. expansion was associated with a rise in declared profits, before debenture interest, from £272,000 in 1910 to £1,565,000 in the "boom" year, 1919. The war-time period, however, during which many of the new interests were acquired, was a time of high values as well as of handsome profits in the industry as a whole, and subsequent conditions have offered a forcible contrast in both respects. Under Lord Inchcape the company's accounts could not be accused of prolixity. Stockholders, in fact, were never taken into the late chairman's confidence on such matters as the original cost and current valuation of the group's tonnage, the annual depreciation charge, or the extent to which disclosed P. and O. earnings were derived, respectively, from the parent company's trading, from subsidiary companies and from outside investments.

The report for 1932 has made a welcome break with tradition. From its detailed figures stockholders may learn that the group, as a whole, owns 354 steamers originally costing £39 a ton, of which the P. and O. fleet itself comprises 41 steamers with first cost of £59 a ton. To-day, the total tonnage is carried in the group's books at under £15 a ton, and the P. and O. tonnage at £33½ a ton. The latter has an average age of under eleven years, and includes some practically brand-new vessels of the highest class, like the *Strathnaver*, *Strathaird* and

Viceroy of India. The average age of the subsidiary companies' fleets is about twelve years. These comprise some 1,732,129 tons of shipping, of smaller average size than the P. and O. Company's vessels, valued at under £10 a ton. In all, a "group" fleet costing £87,000,000, which, depreciated at 5 per cent. per annum, would now be worth £44,000,000, is actually valued at £33,000,000.

To attempt to assign the writings-off, inducted by these figures, to any particular year is impracticable, but it may be surmised that a considerable share of the whole fell into the late war and early post-war period, when large profits afforded ample scope for the exercise of soundly conservative financial principles. Subsequent opportunities, for all shipping concerns, have been more restricted. Recently, indeed, current P. and O. earnings have not been providing full depreciation, and other sources have been drawn upon. For example, £2,000,000 was taken from the insurance fund in 1930 to write down tonnage values. In other words, the decline in the *gross* earning power of the group, from its post-war peak, has been steeper than that shown by the *net* figures. In 1932 the parent company set aside £350,000 for depreciation of its steamers, against £1,400,000 "ordinarily required" on a basis of 5 per cent. of original cost. A similar condition has applied to some subsidiary companies' earnings. A directors' note to this year's P. and O. profit-and-loss account states that the earnings of these companies, in the aggregate, were insufficient to cover depreciation of their fleets on a 5 per cent. basis. The report of the Orient Company discloses that only £113,000 was earned for depreciation this year, out of the £220,000 required by the articles of association. The recent profit and dividend figures of the P. and O. and its two most important subsidiaries, set out below, must, therefore, be qualified in this sense.

NOTE.—Financial Years to September 30 for P. and O. and British India; to June 30 for Orient.
(000's omitted.)

* Provident fund only; other charges not stated.

† Tax free.

‡ Before debenture interest and redemption.

(a) Not including amounts reserved for debenture redemption, £90,000, £100,000 and £110,000, in three years respectively.

(b) After crediting £101,000 profit on sales of investments.

(c) Required to pay preference dividends.

Stockholders have appreciated the frank *exposé* of the position made by the new chairman, the Hon. Alexander Shaw, this month. It is clear that, pending the removal of crippling factors like world trade strangulation, economic insularity, foreign shipping subsidies, *et hoc genus omne*, the efforts of a strong board must be concentrated on the maintenance of the company's organisation, connections, and financial structure for better times. Meanwhile, there will doubtless be further prosecution of economies, which even last year reduced expenditure by £255,000, despite increased port and Suez Canal charges of over £184,000, resulting chiefly from Britain's departure from the gold standard.

Whenever recovery begins, the group should compete effectively for its full share of Eastern trade. In the interim, its past conservatism may be of the greatest

service. Last year the receipts of the parent company from its ships, subsidiary companies and ancillary undertakings totalled £1,372,000, while current expenses and loan interest aggregated £1,157,000. The figure of receipts from subsidiaries (£357,000) must be interpreted in the light of the statement regarding depreciation, previously referred to. In view of the continuance of severe shipping depression, a further decline in receipts during the coming year may, unfortunately, be unavoidable. On the other hand, the company has a valuable source of income, against its payments for debenture interest (which required £419,000 last year), in the shape of dividends from its "outside" investments, miscellaneous income, rentals, etc. These produced £683,000 in 1932. A successful market conversion of its 5½ per cent. and 5 per cent. debenture stock to a 4½ per cent. basis would lower the annual interest burden by £58,000, and by extending the date of final repayment, would lighten annual appropriations for debenture redemption, which have averaged nearly £100,000 in the last four years.

While earnings are limited by *force majeure*, the determination of policy as regards depreciation must needs be a matter of careful deliberation. Although assets have been generously written down, the group could not indefinitely reduce its maintenance expenditure or abandon new tonnage construction without risking serious impairment of its competitive position. If it were necessary, for the time being, to entrench on reserves for the purpose, the combined balance sheet shows that the current finances of the group would be much more liquid than those of the parent company. The latter, on September 30th last, had only £7,278,000 of floating assets against £15,480,000 of current liabilities, but the consolidated group balance sheet showed £16,151,000 of floating assets against £12,428,000 of current liabilities. Of the total floating

assets, no less than £10½ millions were marketable securities, chiefly gilt-edged, while a further £1½ millions of investments were held against reserve for redemption of debenture stocks. Any sales of gilt-edged securities would, naturally, reduce *pro tanto* the group's income from interest, which, as we have suggested, may represent an important part of its revenue in the immediate future.

The P. and O., in short, is better equipped to ride out an economic storm than the majority of its competitors who are not State-aided, but future payments to preferred as well as deferred stockholders may be contingent on the date of trade revival. This, clearly, is the view of the market, which values P. and O. 8½ per cent. perpetual debenture stocks on a 4½ per cent. yield basis and the 5 per cent. cumulative preferred stock on a 6½ per cent. basis. The £1 units of deferred stock have fallen to 14s., from a high point this year of 24s. 6. and a post-war maximum equivalent to 189s.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
January 10.ACCOUNT.
January 12.

The markets were quiet and "professional" in the pre-holiday week, but the undertone remained firm. British Government stocks, indeed, came back strongly to favour, encouraged by an advance in sterling, by foreign (especially French) investment, and by the tepidly satisfactory reception of President Hoover's debt message.

Gilt-edged stocks started irregularly, though Treasury bonds responded to easier money rates. On Tuesday, prices advanced generally and held their ground. Indian and Roumanian issues were strong, and home corporation stocks in demand.

The strength of German bonds is discussed in a "Note" on page 1203. Austrian Sevens were assisted by the new loan agreement and the prospect of the January coupon payment. Hungarian 7½'s and Greek 7's were better, but Argentine loans were again depressed by political news. Brazilian stocks were offered, but San Paulos improved on a favourable announcement regarding the January coupon and the reserve fund of the 7½ per cent. loan.

Home rail prior charges had an improving tendency, but the week's traffic figures were disappointing. Uninteresting conditions prevailed in foreign rails, another batch of poor Argentine figures accentuating the downward trend of prices.

Dealings in industrial shares were restricted by a three week's holiday account. Iron and steel and textile shares were bought from the provinces. Electrical shares continued to improve, the new Midland Counties Electric debenture scrip being actively dealt in. Carreras were firm after the chairman's speech. Leyland Motors, Sudan Plantations and Woolworth were popular, while greyhound issues partially recovered after the first shock of the "tote" decision. The outlook for the market is discussed on page 1202.

In the oil share market a moderate demand arose for the established leaders, particularly Burmah. Anglo-Persian improved on hopes of a direct settlement. Rubber shares were featureless, and quotations nominal. Interest in tea shares, similarly, remained suspended, and prices were lower.

Mining shares were quiet, though the tone was firm. Kaffirs were out of favour while the sterling exchange was rising. Copper shares and West African issues were mostly easier. Australians were dull, both Lake View and Star and Wiluna being marked down. Tin shares were fairly steady, the market being convinced of the ability of "the group" to maintain the price of the metal.

FOREIGN STOCK EXCHANGES.

NEW YORK.

THE markets continue to drift to lower levels. A little professional buying lasted only for a few hours on Monday and a fairly general reaction followed. A contributory cause was selling to establish tax losses, but sentiment generally was dispirited. Although the reported intention of the Steel Corporation to sell its cement plants to strengthen its cash resources was denied, both its Preferred and Common stocks came on offer. The reduction or omission of the Preferred dividend, after the January directors' meeting, was freely canvassed. Railroad bonds were weak, New York Central being particularly affected. Tobacco shares made an unfavourable showing on further rumours of price cutting. The market was greatly disappointed with a further contraction of operations in the steel industry to 14 per cent. of capacity, which badly belied prophecies of stability till the end of the year and a subsequent upturn in activity. Car loadings for the week ended December 10th were 521,000, a decrease of 26,000 as compared with the preceding week and of 92,400 as compared with the corresponding week of 1931. The railroad wage negotiations continue. The Union leaders have conceded an extension of the present 10 per cent. cut for six months but refuse to agree to the inception of new steps, under the Railway Labour Act, to secure a reduction of basic wage scales by 20 per cent. before the expiration of the present agreement. On Wednesday, the House of Representatives passed, by 230 votes to 165, a Bill to legalise the manufacture and sale of beer with a 3.2 per cent. alcoholic content. It is probable, however, that, if the measure passes the Senate, the necessary two-thirds majority of Congress may not be forthcoming to override Mr Hoover's veto. Christmas trade has not been particularly active, and little tightening of money rates over the year-end is expected.

PARIS.

A recovery in Renten, in several instances to the highest for a number of weeks, took the market rather by surprise. It was supposed that the appointment of M. Cheron as Finance Minister had encouraged sentiment, though subsequent rumours that he was contemplating a special "crisis" super-tax upset the market, until an official denial was published. Suez Canal showed weakness and Young bonds were out of favour, but the Dawes loan enjoyed a swift rise, adding 100 in a day. Several of the more speculative issues went ahead on Wednesday.

	Dec. 15, 1932.	Dec. 16, 1932.	Dec. 17, 1932.	Dec. 19, 1932.	Dec. 20, 1932.	Dec. 21, 1932.

BERLIN.

Following the spectacular improvement in some sections on Saturday, professional profit-taking set in. After initial strength, mining shares sagged heavily, with the notable exception of Laurahütte, which advanced against the trend. Fixed interest securities were moderately firm, and Reichsbank was supported. Siemens shared the weakness of the electrical section. In mid-week the markets became lifeless, with changes mostly against holders.

AMSTERDAM.

Conditions on the Amsterdam Bourse were mainly firm at the opening, though the volume of business was extremely small. Royal Dutch were fairly active and the price strengthened, but the stock came on offer later on Paris account. Rubber shares were firm, Amsterdam Rubber advancing, while Philips' Lamps held their own. Sugar shares were firm and the shares were

higher. Business became scantier as the week progressed, and the market developed irregularly.

	Dec. 15, 1932.	Dec. 16, 1932.	Dec. 17, 1932.	Dec. 19, 1932.	Dec. 20, 1932.	Dec. 21, 1932.

OTHER CENTRES.

Most of the minor European bourses took their cue from Paris and London, and business was of extremely small proportions. Brussels was an easy market, declines being fairly general, though Frankfurt was more irregular, Rheinische Braunkohlen and Deutsche Linoleum being among the better issues. Prices at Stockholm moved uncertainly, while at Vienna the few changes which occurred were mainly to slightly higher levels.

INVESTMENT NOTES.

Greyhound Racing Promotions.—The decision that totalisators are illegal on greyhound racing tracks in England (discussed on page 1187), may serve to check the spate of new greyhound company issues which has followed the partial raising of the new issue "embargo." The "industry" first came to the notice of the public in the halcyon days of speculation which preceded the 1929 collapse. Some of the survivors of that hectic period have since achieved admitted prosperity. Early this year the success of half a dozen companies in selected centres encouraged the belief, in some quarters, that greyhound racing, unlike midget golf, had become a permanent feature of our national economic life. In 1932, therefore, seven new companies have been floated to invest in greyhound tracks and electric hares and one to invest in the shares of its forerunners. The chief characteristics which these flotations have had in common have been the sale of ordinary or deferred shares of low denomination and the avoidance of any cut-and-dried prophecies regarding profits. Indeed, the grounds upon which investors have been expected to favour the new companies are, in the main, statistics of attendances during recent years at other courses. A list of greyhound concerns is given below:—

Name of Company.	When registered.	Prof. Capital.	Ord. or Def. Capital.	Last Net Profit.	Last Div.	Denom. of equity Shares.	Present Price.

‡ Authorised.

We do not regard the employment of any part of the nation's capital resources for the expansion of the betting industry, at this juncture, as desirable either socially or financially. From the investors' point of view, in any case, the industry is intensely speculative, as the events of the last few days have shown. The attitude of local authorities is not uniformly friendly, and there may be increasing opposition to the indefinite expansion of greyhound racing, both on town planning and on general social grounds.

Cosach Sterling Bonds.—Holders of prior secured 7 per cent. sterling bonds of the Nitrate Corporation of Chile ("Cosach") have been informed that the trustee for the bonds has not received, in respect of the last eight months of 1932, the monthly payments provided for under

the Trust Deed. The total funds now in the trustee's hands exceed only slightly the amount required for interest on the December coupon, and unless further remittances are received, the payment of that coupon will practically exhaust the funds available. The bonds were issued in London last year at 96. They are not specifically secured as to principal, but for interest and sinking fund requirements they have a prior claim on a charge of 30s. per metric ton of nitrate extracted from grounds worked by Cosach or its subsidiaries. The charge is actually collected on shipment, and to cover the loan service an annual total of approximately 700,000 tons is required. In 1931 the requirements of the bondholders were amply covered, but throughout the present year shipments have fallen rapidly, and since midsummer have almost completely ceased. Only in January did they exceed the minimum monthly average of 59,000 tons required to cover loan service. In February they were 54,800 metric tons, and in June only 16,300 metric tons. During the three months from July to September last they totalled only 6,800 tons. The outlook for bondholders is anything but encouraging. No settlement has been reached as yet with the Chilean Government as regards the company's future, and although the prospect of a regime of more settled authority under the new President, Don Arturo Alessandri, may provide a basis for firm negotiations in 1933, the various groups of creditors involved in the complex tangle of Cosach finances have yet to find a practicable *modus vivendi*.

German Bonds.—An all-round improvement has occurred this week in leading German bonds, and quotations in most cases have touched their highest points of the year. Some State and Municipal loans have risen by as much as twelve or fourteen points. Recovery from the lowest prices of the year has been spectacular:—

Stock	High. 1932.	Low. 1932.	Nov. 25, 1932.	Dec. 14, 1932.	Dec. 21, 1932.	Yield Flat. %
German 7% (Dawes)	90	52½	79	86	88	£ s. d. 7 19 0
German 5½% (Young).....	83	39½	75	78	83	6 12 6
German Potash 7%	107½	58	98½	101½	107½	6 10 3
German Potash 6½%	106½	54	98½	100½	106½	6 2 0
Berlin City 6%	63½	25	50½	50	63½	9 9 0
Colonne 6%	63	31	52½	49½	63	9 10 0
Hamburg 6%	62½	24	50½	49½	62½	9 12 0
Munich 6%	72	28½	58½	57½	72	8 6 8
Saxony 6%	65	26	55	50	60	9 12 0
Prov. of Westphalia 7% ..	72½	39½	55	55	72½	9 13 3

The appointment of General von Schleicher as Chancellor has had an unexpectedly strong moral effect. Germany's return to the Disarmament Conference has been another subject of favourable comment. The trade returns show a modest improvement and the foreign exchange position is perceptibly better, following repayments of short-term credits and the slow but steady repatriation of German capital. It is generally recognised, however, that the narrow market in the bonds tends to exaggerate both upward and downward movements of quotations.

Estonia's League Loans.—In connection with our recent review of the position of loans issued under the auspices of the League of Nations (see the *Economist*, November 19, 1932, page 938), a correspondent draws attention to Estonia's excellent record as regards her Banking and Currency Reform Loan of 1927. Like Danzig, Estonia has fulfilled all her "commercial" contractual obligations completely, punctually and without question—though, in common with certain larger States, she has not remitted her December war debt payment to the United States. The necessary *devisen* for the payment of the January, 1933, coupon of the League Loan has already been procured, and there is no ground for supposing that Estonia will not continue to meet her subsequent obligations. The gold and foreign exchange reserves of the Eesti Banki, which reached their lowest point at September 30, 1932, have been increasing as a result of the continued active trade balance. The

note circulation is covered, according to the last return of the Eesti Banki, dated December 7th, by 49½ per cent. gold and 62½ per cent. gold and gold exchange. In view of these facts, our correspondent suggests, with reason, that the 7 per cent. bonds of the Currency and Banking Reform Loan at 65 (including five and a half months' interest) fall into a different category from certain other League Loans, whose unfortunate recent experience has depressed the market.

London and Suburban Traction—Position under London Transport Bill.

—We have received a reasoned private estimate of the position, under the London Transport Bill, of the London and Suburban Traction Company, Limited—a holding concern, controlling practically all the privately-owned tramway undertakings in the Metropolis, and controlled, in its turn, by the "Underground" Company. Under the Bill, the London and Suburban Company will be liquidated and its assets distributed among its shareholders. Our informant surmises that, in the first place, the settlement of outstanding debtor and creditor relations with subsidiary companies will leave the London and Suburban in funds (including its own cash in hand) to the extent of £100,000, in round figures. Next, its receipts from the liquidation of its subsidiaries may be considered, in due order. It is computed that the company's holdings in the London United Tramways should produce £122,884 of London Transport Board "C" Stock, and its Metropolitan Electric Tramways holdings some £483,920 of "C" stock. Under the terms of the Bill, it would appear that the London and Suburban is entitled to the whole of the London Transport stock exchanged for the undertaking of the Tramways (M.E.T.) Omnibus Company, viz.:—£182,634 4½ per cent. "A" stock, £101,545 5 per cent. "B" stock, and £348,015 "C" stock. The holding in South Metropolitan Electric Tramways and Lighting should produce about £475,000 in cash and £46,875 in Transport "C" stock for the London and Suburban Company. Lastly, the company's block of 75,021 North Metropolitan Power ordinary shares, if sold to the "Underground" Company at, say, 45s. per share, would produce £168,000 in cash. The company, now having approximately £750,000 in cash, might exercise its right, under Section 88 of the Bill, to subscribe for Transport 5 per cent. "B" stock, at 95, and would thus become possessed of, say, an additional £800,000 of that stock. Thus, the total Transport stocks obtained by the company would comprise £182,635 4½ per cent. "A" stock, about £900,000 "B," and £1,001,693 "C." These are to be distributed among the company's stockholders. After debenture holders have received pound for pound in Transport "A" stock (£182,635) and "A" debenture holders, similarly, "B" Transport stock (£47,787), the company will be left, in round figures, with £850,000 of "B" and £1,000,000 of "C" stock. In theory, this should belong entirely to the preference shareholders and, even so, would be insufficient to repay capital and arrears

of dividend (now 66½ per cent. gross). Its complete distribution would give preference shareholders approximately 10s. in the £ in "B" stock and 12s. 6d. in the £ in "C" stock. They might, however, regard a small *ex gratia* payment to the ordinary shareholders as well advised, since the latter, possessing a voting majority, have a distinct "nuisance value." If 2s. 6d. in the £ in "C" stock were distributed on the ordinary shares, this would leave sufficient "B" and "C" stocks to cover the par value of the preference capital. London and Suburban 5 per cent. (£1) preference shares are quoted at 10s. 6d. to 12s. 6d. and the ordinary (£1) shares at 9d. to 1s. 9d.

Turner and Newall Accounts.—The accounts confirm the favourable impression given by last week's preliminary figures, and are supplemented by an informative survey of the company's finances in the chairman's "speech"—a copy of which accompanies the annual report. From the fixed assets shown in the consolidated balance sheet a total of £248,173 has been written off for depreciation, including £92,220 shown in the profit and loss account of the parent company. Trading stocks are heavily reduced, partly owing to lower prices and partly to reduced quantities. Current finances are strong, cash at bankers and in hand being £500,000 more than a year ago. In addition, investments totalling £271,274 have been made since the end of last year. The surplus of floating amounts is nearly £2½ millions. As regards the mining companies, operations have been further curtailed in Rhodesia, and production has been brought into balance with the requirements of the market without any undue increase in costs. The position has been rendered somewhat difficult by South Africa's retention of the gold standard. The export subsidy of 10 per cent. has not prevented a drastic reduction of output. The volume of business of the textile manufacturing companies has been lower than in 1931, but the asbestos cement section has almost maintained its volume of sales. In the insulation section, nine subsidiary companies which previously dealt with the sale of insulation materials have been amalgamated into one major organisation under the title of Newalls Insulation Company, Branch of Turner and Newall.

British American Tobacco.—The accounts of this prosperous company speak for themselves and, as usual, are left to do so. Profits have risen from £5,334,448 to £5,438,253 during the year to September 30th last. The ordinary dividend is maintained at 20 per cent. tax free:—

	Year to September 30,		
	1930.	1931.	1932.
Profit	£ 6,501,560	£ 5,334,448	£ 5,438,253
Brought forward	1,748,764	1,800,144	1,833,040
Preference dividends	555,000	585,000	585,000
Ordinary dividend—			
Amount	5,895,180	4,716,552	4,716,552
Earned %	25.2*	20.1*	20.6*
Paid %	25*	20*	20*
Carried forward	1,800,144	1,833,040	1,969,741

* Tax free.

The company's position has always been strong and liquid. Creditors total £8,816,252, while among current assets "debtors" amount to £2,094,742 and cash to £8,634,119. The £1 units of ordinary stock yield about £3 19s. per cent. tax free at 5½, allowing for the final dividend.

Dorman, Long Finance.—Shareholders in Dorman, Long and Company were taken very fully into the chairman's confidence, as to the company's position and prospects, at last Tuesday's annual meeting. The misfortunes reflected in the report for the year to September 30th last (summarised in the *Economist* of December 10th, page 1096) were due to two main factors—under-employment of productive resources and the unhappy dénouement of the Sydney Harbour bridge contract. Some £179,859

was charged last year against the maintenance of idle collieries, mines and works. The company's steel works operated only at 30 per cent. of capacity. Since 1929 the company's production, under various heads, has fallen off by the following percentages: Coal, 40 per cent.; coke, 58.2 per cent.; pig-iron, 61.5 per cent.; steel ingots, 55.6 per cent.; finished steel, 53.4 per cent.; invoiced value of sales (excluding bridges), 55.2 per cent. These figures tell their own story. The Sydney Bridge contract was made in 1924, when the depreciation of Australian currency was unforeseen. Possibly the company would have been better advised to stipulate for payment in London in sterling. Further, when work was started it was discovered that Australia was not well equipped for structural engineering enterprise, and it was found necessary to create, inside the country, substantial assets in the way of plant, buildings and machinery. These, it was hoped at the time, would eventually be realisable on advantageous terms. Instead, the company was compelled to dismantle and bring home much of the plant, and to write down the valuation of the whole to a very small sum. The company, altogether, has paid heavily for inability to predict an economic crisis which was equally unforeseen by every other trading body. Hopes of better results in the company's business generally depend much more upon a revival in economic conditions than upon direct assistance from the British Government's tariff policy. At the moment, public works or every kind have come under the economy axe, and the company's order book has been depleted. An order secured last October for the West Ham Viaduct, to the value of £330,000, is particularly welcome. The chairman threw out a strong hint that a capital reconstruction scheme would eventually be unavoidable.

"Apex" and the Oil Position.—The preliminary statement of the Apex (Trinidad) Oilfields for the year to September 30th last shows that profits are practically unaltered, in spite of an increase in output of crude oil from 522,194 to 546,700 tons. A final dividend is declared of 17½ per cent., less British tax of 2s. 6.59d. in the £, making a total dividend of 25 per cent. for the year to September 30, 1932, against 20 per cent. in the previous year:—

	Year to September 30,		
	1930.	1931.	1932.
Oil profits	£ 330,128	£ 335,236	£ 332,457
Brought in	120,022	159,273	100,114
Amortisation	120,713	139,272	115,058
Office expenses	3,818	7,573	3,956
General reserve	...	100,000	40,000
Tax reserve	35,096	42,550	40,528
Dividends—			
Amount	125,000	100,000	125,000
Rate	25%	20%	25%
Directors' extra fees	6,250	5,000	6,250
Forward	159,273	100,114	101,779

The full accounts will be published by the company early in January. It is unfortunate that the balance sheets of oil companies to be made up at the end of the calendar year 1932 will be affected by the recent cut in crude oil prices in America. We pointed out in our issue of December 10th that the trend of oil prices in America was downward, and that a further rise in British petrol prices would not be justified. The attempt to raise the price of crude oil in America was finally wrecked last week by the Texas Company. Gasoline prices have been falling, both for internal consumption and for export. The outlook is by no means promising. A complete shut-down has been ordered in the East Texas field. American crude oil prices, except in California, are now lower than at the beginning of this year. Only in the case of gasoline has a price advance been maintained, amounting to 1 cent per gallon in America and 8d. per gallon in Great Britain. It would be unwise to assume that the last advance in British petrol prices could be maintained in the event of a complete break in American oil prices.

Kreuger and Toll Secured Debentures.—An article in a leading Swedish newspaper discusses the value of Kreuger and Toll 5 per cent. secured sinking fund gold debentures of 1929. These bonds recently fell to 10 per cent. of par in New York, but their true value, it is suggested, is nearer 25 to 30. The security consists of various holdings in bonds of Ecuador, Yugoslavia, Hungary, and Latvia, most of which have no market quotation. A forced sale would result in a heavy loss, but it is suggested that if the Kreuger bondholders took over and managed the securities, considerably better prices would be procured. Even if the Hungarian and Yugoslavian loans were valued on a 20 per cent. basis and the Ecuador loans were regarded as worthless, the value of the securities would still correspond to 25 per cent. of the Kreuger and Toll loan. An estimate is put forward of a probable dividend of about 10 per cent. in the bankruptcy of Kreuger and Toll. The holders of secured debentures must be paid in full before any dividend is paid on participating debentures and "A" and "B" shares. The argument appears largely to depend on somewhat arbitrary estimates of the ultimate value of foreign Government securities, whose present status cannot be assessed with confidence. Meanwhile, the protective committee has informed holders that proof of claim, accompanied by the actual debentures, is required in the American bankruptcy. Arrangements may be made through the Guaranty Trust Company, 32, Lombard Street, E.C. 3.

The Rand December Dividends.—Our mining correspondent writes—So far as the announcements for the current half-year have contained any surprises, the pessimists rather than the optimists have had the best of it. Recent Johannesburg buying of Consolidated Main Reef was believed to have been based upon the prospect of an increased distribution, as well as upon additions to the property. Despite some expansion in the earnings, however, the rate is unchanged. The Sub Nigel was expected in certain quarters to improve upon the June announcement, but has failed to do so. The year's total, of course, largely exceeds that of 1931. Both the New State Areas and the Randfontein are paying more, but certain operators had been hoping for an increase of 6d. instead of 8d. The one striking example of realisation of the highest expectations is provided by the Crown Mines, whose declaration of 42½ per cent. compares with 35 per cent. in the June session. We give below our usual table of company dividends:—

Company.	Dec., 1931.	Total, 1931.	June, 1932.	Dec., 1932.	Total, 1932.
Brakpan	20	40	15	20	35

New Era Consol.	...	5	...	...	...
Rand Mines	40	80	40	40	80

* Tax free, in sterling.

This table does not include declarations made at dates other than June and December.

The balance of the purchase consideration for the Witpoort undertaking—together with some additional working

capital—having been secured by the issue of 102,000 shares at £2 10s. (South African), the Brakpan is able to revert to what may be regarded as its normal rate. The increase in the percentage of the Geduld Proprietary reflects the receipt in respect of that company's interest in the East Geduld, whose initial distribution of 5 per cent. has been followed by 8½ per cent. A feature is the re-entry into the list of the Luipaards Vlei. The progressive decrease shown in the case of the New Modder arises from the development position. Prospective capital expenditure in connection with the Southern Area precludes any payment on the part of the Rose Deep. As regards the finance concerns, the Rand Mines alone makes any announcement. Shareholders in the New Era have received nothing for eighteen months. The directors of the Johannesburg Consolidated Investment Company—whose financial year ends June 30th—decided not to make any interim distribution on account of 1932-33. With the exception above indicated, the amounts are declared in Union currency and will be paid at the rate of exchange ruling on the day of payment in South Africa—January 27th. A few weeks ago the difference on exchange represented an addition of 50 per cent. to the sum receivable by a shareholder in this country. What rate will rule on January 27th is a very open question, but probably less than that lately prevalent.

North Charterland Case.—A new circular has been issued by the North Charterland Exploration Company, to whose unhappy experience we referred in our last issue. The circular dilates upon the conditions the company was asked to accept before a public inquiry was held, declaring that these would, in fact, have prejudiced its prospects at the inquiry. It also deals with the position of certain witnesses whose evidence for quasi-medical reasons was not taken. The legal position is also discussed, the circular asserting that the company had been encouraged to suppose that if at the inquiry it succeeded in establishing a moral, as distinct from a legal, grievance its rights would be recognised. In law, indeed, the position of North Charterland has grave elements of weakness. It may be advantageous, however, on general grounds, to clear up the main issue as to the right of the British South Africa Company to act for North Charterland, in order that no charge of lack of sympathy may be sustained against any of the authorities concerned.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mexican Railway, National Bank of Scotland, Orient Steam Navigation, India Rubber, Gutta Percha and Telegraph Works, Samuel Allsopp and Sons, Showell's Brewery, Hall's Oxford Brewery, Carreras, E. W. Tarry, and Luipaards Vlei Estate and Gold Mining. At the annual meeting of the Mexican Railway Company, Mr Vincent Yorke said that probably well over a million sterling was still owing by the Mexican Govern-

Américo Calametz, Accountant. Juan José Amézaga, Préndent. Hector Olivera Rizzo, Manager.

ment. Presiding at the meeting of Carreras, Sir Louis Baron said that the company's stock of raw material was the largest in the history of the business, and had been bought at rates securing the full benefit of lower prices. At the annual meeting of the Orient Steam Navigation Company, Sir Allan Anderson pointed out that the official reports of the United States Shipping Board showed that during the five years to June, 1928, the United States taxpayer paid about £5,000,000 annually in operating losses and in laying-up expenses, while the total loss for the twelve years from 1920 had been about £600,000,000.

CAPITAL ISSUES.

BEFORE the start of the holiday "close season," new issues were made by *Godfrey Phillips, Limited*, and *United Canners, Limited*. The former enterprising tobacco concern has suffered a certain falling off in profits since 1929. The prospectus, issued in the last fortnight of its 1932 financial year, ought to have contained a preliminary figure of profits. The shares now issued are a Third Preference, and were covered 2½ times in 1931 profits, but only 1.6 times in 1930 (calculating requirements of Notes and prior preference capital cumulatively). United Canners is a merger of four Lincolnshire concerns, which were so recently established that percentage figures of increased production in their latest periods are meaningless. The purchase consideration is generous.

PUBLIC OFFERS.

Godfrey Phillips.—Issue of 300,000 6½ per cent. "C" cumulative preference shares of £1 each at par. The company was registered in 1908. The proceeds of the issue are to be applied in further reduction of loans recently raised to finance the acquisition of ordinary shares of Cohen Weenen. Net profits, before charging bank and loan interest on an amount equivalent to the net proceeds of the recent issues of 6 per cent. and "B" preference shares and the estimated proceeds of the present issue, were: 1928, £132,893; 1929, £168,821; 1930, £90,013; 1931, £126,069. Net profits for the current year to September 30th show that ordinary dividend could be maintained at the previous rate.

United Canners.—Issue of 600,000 shares of 5s. each at par. The company was incorporated to carry on the business of canners of English vegetables, fruits and other products. The company has agreed to purchase the issued capital of English Preserved Foods, Sandring, Ltd., and Lincolnshire Products, and will entertain proposals for co-ordinating other businesses. No dividends have yet been paid by the three companies, but from May 31, 1932, to November 30, 1932, they experienced an increase in output of over 40 per cent. compared with the corresponding period of last year.

RESULTS OF ISSUES.

United Counties Stores.—The list in the issue of 6 per cent. cum. pref. shares £1 at par was closed at 12.30 p.m. on December 16th owing to oversubscription. Applications made on the special forms from the shareholders of H. H. and S. Budgett and Company were accepted up to first post December 17th. Allotment letters were posted Tuesday night.

Godfrey Phillips, Ltd.—The list in issue of 6½ per cent. "C" cum. pref. shares £1 at par was closed at 11.20 Monday morning, having been heavily oversubscribed. Applications on the special forms provided, and country applications received in London not later than the first post Tuesday, received consideration.

United Canners.—The subscription lists for the offer of 600,000 shares of 5s. each were closed Tuesday at 12.15 p.m. Applications from the country and upon special forms received by first post Wednesday were considered.

Rugby Gas.—Issue of 4½ per cent. perp. deb. stock was considerably oversubscribed at prices ranging from £110 down to the minimum of £105 per £100, the average price obtained being £106 8s. 4d. per cent.

REPAYMENTS AND CONVERSIONS.

Northcliffe Newspapers.—Northcliffe Newspapers announces its intention to wind up voluntarily and to redeem at 107 per cent. on December 31st its 5½ per cent. guaranteed debenture stock.

Calls Due December 28th to December 31st.

The grand total of calls falling due in December, 1932, is £166,683,160, which compares with £1,605,286 which fell due in December, 1931. The following calls fall due from December 28th, 1932, to December 31st, 1932.

	Due Date.	Call.	Already Paid.	No. of Shares or Amount.	Now Due.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED.

CONTINUED FALL IN TRAFFICS.

MR VINCENT W. YORKE'S SPEECH.

The 135th ordinary general meeting of the Mexican Railway Company, Limited, was held at Winchester House, Old Broad Street, London, E.C., on Wednesday, December 21, Mr Vincent W. Yorke (chairman of the company) presiding.

The Secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors,

The Chairman said: It is my sad duty in the first place to refer to two deaths within our small circle which have occurred since our last meeting, namely of Mr Henry Goschen and Mr B. E. Holloway. Mr Goschen had been a director of the company for the almost incredible number of sixty-three years and was for a short time its chairman. Up to quite a short time before his death he was most regular in his attendance at board meetings, and his long experience of affairs and his great interest in our business were highly valuable to us. We shall long mourn his genial presence and regret the loss of his services. Mr Holloway was for eight years our secretary in London. He left this post to take that of manager in Mexico at a very difficult and critical time in our history. He was successful in obtaining the return of the railway to private management in 1920, and for this alone he is entitled to a deep sense of gratitude on our part. He continued to act as our manager until 1925, after which he was manager of the National Railways for about two years, retiring from active business in the year 1928. During his management of our railway he showed great skill in difficult negotiations with the Mexican Government, and considerable administrative ability. I am sure that you will join with me in offering our sincere condolence to his family on his premature decease.

TRAFFIC FIGURES.

I very much wish that in reviewing the half-year to June 30th last I could point to any improvement in any direction, but honestly I cannot. Gross traffic, which had fallen below 30,000 pesos per diem in 1931 and which we then thought a very low figure, have fallen by 20 per cent. to just below 24,000 pesos per diem, and were 40 per cent. lower than in the first half-year of 1928. Both passenger and goods traffic have fallen off, practically speaking, to the same extent, but national goods have shown a greater decline than foreign goods. Fruit traffic, consisting mainly of the all-rail movement of bananas to the American border, shows a decrease of no less than 47,000 tons, owing to the small demand and consequent bad prices for this fruit in the American markets.

Every effort has again been made by the management to curtail expenses in all directions, but it has, of course, been impossible to reduce them to a commensurate extent. Thus, while gross traffic have fallen off by 1,060,000 pesos, expenses are only \$508,000 less, though, in my opinion, our general manager is much to be congratulated on having so far succeeded in what is always a most unpleasant task.

The net result has been an actual loss on working for the half-year of over £34,000 which, when added to the debenture interest chargeable to the period, produces a total net debit of £108,000.

The Gross receipts for the current half-year have continued to fall away and only average about \$21,500 per diem as compared with \$24,000 during the first half of this year, or a decline of about 10 per cent., and though expenses are still being reduced, the actual loss on working for the four months to October 31st last is, as stated in the report, \$572,000, or about £57,000.

MORATORIUM FORESHADOWED.

It must be obvious to you from my recital of these losses that we have reached a very critical and anxious position. The payments on account of indemnity, which we have been receiving for many years past and which have helped us considerably to pay our way, are based automatically on our gross traffic and have naturally also declined, with the result that we have very nearly arrived at the end of our cash resources. There is a very considerable sum still owing to us by the Mexican Government, probably well over a million sterling, payment of which we have been anxiously soliciting, and though the Government take up a sympathetic attitude in the matter, I do not see that there can be any immediate prospect of their liquidating a portion of this debt sufficient to get us through our difficulties.

This being so the board have come to the conclusion with the greatest reluctance that there is no course open to them, but to lay the position before the debenture and debenture stock holders, and to request a moratorium of interest for three years. A scheme on these lines has, therefore, been prepared, and when it has received the sanction of the Courts, will be laid before meetings

of all classes of debenture and debenture stock holders. I can only sincerely hope that they will take a reasonable view of our difficulties and grant the moratorium for which we shall ask.

GENERAL SITUATION IN MEXICO.

Turning now to the general situation in Mexico I am glad to be able to say that political affairs continue to be thoroughly stable. The change of Presidents from Señor Ortiz Rubio to General Abelardo Rodríguez took place without disturbance of any sort, and was followed by few changes in the Cabinet. Trade, however, is showing no sign of revival. The Northern Continent of America has, probably suffered more severely from the present depression than any other part of the world, and it is only to be expected that Mexico should be suffering as much as her neighbour. There has been no rise in the price of the primary commodities which she produces, and silver, a commodity of the greatest importance to her, is lower than ever in terms of gold. The high tariff wall erected by the United States, in many ways the natural market for Mexican products, creates a very difficult problem for the Mexican producer. The public revenues have, of course, fallen below expectations in these difficult times, but it is believed in well-informed quarters that the Budget is being balanced. Exchange has taken a distinctly favourable turn in the last few months and the peso stands at about three to the dollar. From this it results that the depreciation of the peso and the pound sterling stands at the same ratio, and the relation of the peso to the pound is very nearly as ten to one, or two shillings. It is much to be regretted, therefore, that we have at the moment no earnings for remittance.

FUTURE OF THE BUSINESS.

As to the future of the business, it is impossible to speak with any confidence until there are some signs of a revival in world trade. We shall continue to endeavour to reduce our costs of operation by negotiations with our men for lower wages and by curtailing our services to the lowest point allowed by the authorities. Fortunately the excellent condition of the property means that we have little or no capital expenditure to face in the near future, and the only programme we had in view, the adaptation of the shops at Apizaco for the steam repairs of the whole line, has been suspended. Meanwhile, we are losing no opportunity of impressing on the Mexican Government the urgency of our situation and endeavouring to obtain a settlement of some portion of our large financial claims. I do not despair in the least of our ultimate success in the matter, but, as is common knowledge, the collection of Government debts in my country at this moment is a difficult task.

I will now read the cable just received from the general manager:—

"Coffee crop good though shipments will be limited on account of low prices and sugar crop also confined to quota of about 14,000 tons, of which 50 per cent. will be exported. Textile factories at Orizaba and Puebla working approximately at normal rates. Imports continue on a reduced scale and local traffic is still poor. Oil traffic shows decreased earnings, but we may possibly secure oil movement by the Aguila Oil Company from Vera Cruz to Puebla. Three foreign excursions, Vera Cruz to Mexico City, are projected for early part of next year.

"In spite of stagnation and depression in business, slight improvement may be expected shortly.

"Agreement just signed with Labour Unions, reducing wages on sliding scale, which will amount to a saving of approximately \$20,000 per month for a period of three months from January 1st next, and if conditions not then improved the arrangement is to continue for a further three months. Salaries of officials reduced from November 1st and with other economies will result in a saving of \$8,500 monthly. Government current freight service punctually paid. Completion of programme of concentration of shops at Apizaco will have to be postponed until next half-year.

"Government appears strongly consolidated and working well."

DEFINITE LABOUR AGREEMENT.

This cable very largely confirms most of what I have said to you to-day. It is good news that a definite agreement has been reached with the Labour Unions, from which he anticipates so large a saving as \$20,000 per month, and I must express our gratitude to him and the other officials who have consented to have their salaries reduced, which again will help us.

I cannot conclude without again expressing our appreciation of the valuable services rendered by our general manager and his staff through these difficult times. They have, I know, been reviewing the whole of our expenditure most carefully and anxiously, and from the latest news that we have received by cable, it would appear that their efforts are about to meet with success.

The Chairman concluded by moving the adoption of the report and accounts.

Mr John A. Gibbs seconded the resolution and it was carried unanimously.

CARRERAS, LIMITED.**SUCCESSFUL RESULTS—CONTINUED PROGRESS.****GOOD PROSPECTS FOR CURRENT YEAR.**

The twenty-ninth annual general meeting of Carreras, Limited, was held, on the 19th instant, at Arcadia Works, London, N.W.1. Sir Louis B. Baron, Bart. (chairman and managing director), presided.

The Chairman, in moving the adoption of the report, said: Your directors are happy to place before you the very satisfactory results of the past year, and to point to the stronger position of the company in all directions, not only in the maintenance of the dividend, but by the increase in the reserve fund from £972,777 to £1,000,000 and in the figure carried forward from £1,104,918 to £1,140,892, after having made provision for every expense incurred in the past year. This was no easy task, and I would be failing in my duty to you, and ungrateful to my co-directors, if I did not express how ably I have been supported by them. Each in his turn, and in his respective sphere, was constantly at his post, and worked continuously and harmoniously to achieve this result.

EXPORT BUSINESS.

During the past year our export business has shown an improvement, and the difficulties which were experienced the previous year have to some extent been overcome, so that we are able to record some progress in this section of our activities. We are watching every opportunity of getting our business still more firmly established in the various overseas markets, and in spite of all the problems confronting us we have every confidence of this achievement. In the home market we are still surrounded by difficult conditions and keen competition, and the cost of advertising and selling our products has exceeded by a considerable amount the figure for any preceding year, but for all this every one of our principal brands has shown a substantial increase.

Not only have we been able to employ our entire staff of contented workpeople throughout the year at full wages, but we have been able to increase our staff by nearly one thousand more people, which is particularly pleasing to your directors, when so many are unfortunately unable to find employment.

QUESTION OF EXCHANGE.

Owing to the present situation, arising out of the debt problem with which our country is faced, and the fact that we are compelled to buy a large proportion of our raw material from abroad, the question of the rate of exchange will, no doubt, be in your minds, and you will naturally like to have some information regarding the position of this company in that respect. All our commitments for tobacco have been fully covered, and the exchange already effected from sterling into dollars. Further, I am glad to be able to inform you that our stock of raw material, of the very best quality, is the largest we have ever had in the history of our business, and bought at rates which secure to the company the full benefit of the lower prices for commodities which have been prevalent during the past year.

CURRENT YEAR'S PROSPECTS.

With regard to the prospects of the coming year, I cannot be expected to forecast the course of events. As far as our own company is concerned, your directors will endeavour to carry on in the same progressive spirit that has marked the conduct of the business in the past, and to see that this progressive spirit is developed throughout the whole organisation. We make a point of keeping our factory equipped with every modern device for turning out goods in as perfect condition as is humanly possible, and to include everything which will add to the comfort and efficiency of our workers.

We realise the problems which confront the world of commerce to-day; nevertheless, we are not among those who think that all is lost, we still have faith in the qualities of honesty, tenacity, and courage peculiar to the people of this nation, which have enabled them to overcome what appeared to be insurmountable difficulties.

With this thought in mind, we still look forward with optimism, and, even though we have many problems to solve, we enter into the coming year in the same spirit that has carried us through so successfully in the past, and if business continues at the rate of progress which has marked the first two months of this new financial year the directors are hopeful of being able to show you, at the close, results that are as good as, if not better than, those reported to-day.

The report was unanimously adopted.

INDIA RUBBER, GUTTA PERCHA AND TELEGRAPH WORKS COMPANY, LIMITED.**MR B. H. BINDER ON POSITION AND PROSPECTS.**

The sixty-ninth ordinary general meeting of the India Rubber, Gutta Percha and Telegraph Works Company, Limited, was held, on the 21st instant, at Southern House, London.

Mr B. H. Binder, F.C.A. (the chairman), in the course of his speech, said: In October last your directors unanimously invited me to join the Board and accept the position of chairman. As certain calls on my time in other directions had been reduced, I felt able to consider the proposal. I therefore visited the company's works at Persan and Silvertown, and, after conferring with the directors, accepted their invitation in the hope that I might, with their co-operation, be able to help in carrying out the programme already inaugurated of progressive methods combined with economy, with the object of bringing back the company to a profit-earning basis. Changes in a big business take time, and especially when one has to carry on "business as usual." The trying period of transition is reflected in the accounts now before you, which have been further adversely affected by the difficulties arising from the general depression and severe competition.

As summarised in the directors' report, there is a loss for the year of £88,893, thus bringing up the total debit balance on profit and loss account to £212,648. These figures are most disquieting, but I can assure you, as a newcomer on this Board, that every effort is being made to cope with the situation.

It is satisfactory to note that the total floating assets at £431,000 amount to about three times the total of current liabilities. Cash at bankers has inevitably shown a considerable reduction, due not only to the losses incurred, but also to the amount of capital and special expenditure made during the year.

REORGANISATION FORESHADOWED.

You will observe a note on the balance-sheet to the effect that the value of the fixed assets is less than their book value. As indicated by my predecessor at last year's meeting, proposals for a scheme of reorganisation, including the writing down of certain items in the balance-sheet, will in due time be submitted to you, but it would be advisable for this step to be deferred until the general outlook is less uncertain and a profit-earning basis is again in sight. Such a scheme must deal not only with the value of the fixed assets, but also with the debit balance on profit and loss account and the balance on reconstruction suspense account. The debit balance on this account has increased during the year from £30,689 to £97,257, representing further expenses, mainly in connection with the removal from Burton, machinery, etc., scrapped, and special expenditure in connection with the reconstruction of the Silvertown factory. The transfer from Burton to Silvertown was completed during the first half of the financial year and, while this work was carried out with a minimum of disturbance to the other sections of the Silvertown factory, yet it caused certain unavoidable delays which had had some adverse influence on the result for this year. In addition, the training of new hands for the processes transferred from Burton to Silvertown inevitably involved time and expense. Certain key men were brought to Silvertown, but in general it was necessary to train new labour, and the cost of production in consequence suffered while this was taking place.

Competition in both home and foreign markets in products manufactured at Silvertown has increased in intensity during the year, and I am informed that it has been admitted in the industry that the market prices of certain rubber products have been unremunerative. Steps have recently been taken to alleviate the situation. However, our sales of goods classified as general rubber products were fully maintained throughout the period.

Reviewing the golf ball side of Silvertown's activities, the management are satisfied that "Silver King" and "Lynx" balls, and particularly the "King Plus" ball are retaining their popularity.

PERSAN FACTORY.

Having been advised of the past results of the Persan factory, I went there with the preconceived idea that it should be closed down, but the information given to me on the spot caused me to change my views. The facts demonstrated to me—and these applied to some extent also to Silvertown—were that the difficulties and losses have been accentuated because the factory cannot produce quickly enough to meet the sum of sales that can be made. That is a question of organisation, and the returns received for the first period of the new financial year indicate that progress is now being made at Persan towards increased production at lower cost, which is the necessary basis for its continued existence.

The report and accounts were unanimously adopted.

SAMUEL ALLSOPP AND SONS, LIMITED.**BURDEN OF TAXATION.**

The forty-fourth ordinary annual general meeting of Samuel Allsopp and Sons, Limited, was held, on the 21st instant, at the Great Eastern Hotel, Liverpool Street, London, Sir William B. Peat, C.V.O. (the chairman), presiding.

The Chairman, in the course of his speech, said that the profits for the year amounted to £131,402, as compared with £174,111 in the previous year, the reduction being £42,709, which was approximately 24 per cent. of the profits of the previous year. On the ordinary shares they were paying 8 per cent. for the year, as compared with 9 per cent. in the previous year. Every chairman of a brewery company who had spoken up to the present had referred to the burden of taxation extracted from the brewing industry. He did not think that their troubles were wholly caused by the additional taxation, but that to some extent they arose from the present unemployment in the country and the reduced earning of the people, but he thought that the main cause was the heavy taxation to which brewers were subject. He proceeded to quote figures which showed that the taxation on tea, coffee, and sugar had shown a considerable reduction as compared with 1918, but that the taxation on beer was now 114s. a barrel, as compared with 50s. in 1918, or more than double.

It was not surprising that beer drinkers, who had contributed this year about 7½ millions to the revenue of the State, should feel that they were badly treated in comparison with the users of other products, and resented it to such a serious extent that they declined to be customers at the prices brewery companies were compelled to charge.

Their trade had been seriously diminished, their licence holders were in financial distress; labour of every class connected with the industry was diminished, and plant, buildings, and public houses had diminished in value owing to diminished use of it. What the Government's loss would be in income tax, super tax, and widespread discontent, it was impossible to say, and what was worse, even under better conditions, it would be difficult to get their trade back. A bigger reduction than the recent addition to the Beer Tax would be necessary. The financial position of the company was satisfactory, and he was hopeful in regard to the future if their efforts to get the beer duty reduced were successful.

The report was unanimously adopted.

SHOWELL'S BREWERY COMPANY, LIMITED.**EFFECT OF EXCESSIVE TAXATION.**

The forty-sixth annual meeting of Showell's Brewery Company was held, on the 19th instant, at Winchester House, London, Mr James Davenport, the chairman, presiding.

The Chairman said that for the first time he had to report a severe setback in their profits, which had been pretty well cut in two. That reduction in profits arose from no fault of theirs. The article which was produced for them by Messrs. Allsopp and Sons had not lost anything of its high quality. The fact was that they were being taxed out of existence and their business was being strangled by confiscatory legislation. He thought they were entitled to put one simple question to the Government. Was the present rate of beer duty imposed for revenue, or was it meant for bringing about prohibition in this country? If it was meant for revenue then he was confident it would fail. A year ago their contribution to the finances of the country by way of beer duty, income tax, etc., amounted to £271,000. He calculated this year, notwithstanding that the increased duty had ruled for the whole period—that they would pay as a maximum £250,000.

Their barrelage had shown a material reduction, their tenants had suffered severely, and he ventured to say that allowing for the reduction in income tax and sur-tax, not only directly from the brewing industry, but from the trades dependent upon it, the revenue would not only not benefit from the retention of this grossly unfair duty, but would eventually come out very materially on the wrong side.

They might ask what the prospects were for the current year. It was his duty to tell them that they were unfavourable. Barrelage was still declining and would continue to decline until excessive duties were reduced and a revival in trade took place. He anticipated therefore that their profits for the current year would show a further reduction. Taking the longer view, however, he had no hesitation in saying that the company would give a good account of itself.

The report and accounts were adopted. Mr J. J. Calder was re-elected a director, and the proceedings closed with a vote of thanks to Mr James Davenport for presiding, and expressions of satisfaction for the splendid service given by Mr Holland and the staff during a year of unexampled difficulty.

HALL'S OXFORD BREWERY, LIMITED.**SALES RESTRICTED BY EXCESSIVE TAXATION.**

The annual meeting of Hall's Oxford Brewery, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Lieut.-Colonel Sir Rhys Williams, Bart., K.C., D.S.O. (the chairman), presided.

Mr C. Robinson (the secretary) read the notice calling the meeting.

Sir Rhys Williams, in moving the adoption of the report and accounts, said he wished that he had a more satisfactory report to place before the shareholders.

At the annual general meeting held in December, 1931, he proceeded, I had to report a considerable decrease in our trade, and I lamented that an additional tax of 31s. per standard barrel should have been imposed at a time when all industries were in such a depressed condition.

The trading accounts for the past year show a serious decline upon the figures of 1931. Week after week these declines have continued, and the weekly returns since September 30th last, the termination of the year, show a still further drop in our sales.

ECONOMIES EFFECTED.

The management has done everything in its power to meet this loss of trade. All expenses have been cut down as low as possible, and a reduction has been made of £2,000 in the cost of repairs to our licensed houses. But the accounts show that the profits are nearly £2,000 less than for the preceding year notwithstanding the economies effected. There is little hope of an improvement while this most unpopular tax remains.

Last year, in my speech, I pointed out this tax would cause decreases in the staff of brewery companies, disastrous loss of profits to licence holders, loss of trade to growers of barley and hops, to maltsters, transport workers and all the trades dependent on the brewing industry, with a consequent increase in unemployment.

All these things have come to pass, and I can only repeat my earnest hope that this disastrous tax will shortly be repealed.

Captain R. H. E. Hall seconded the adoption of the report, which was carried.

On the proposition of Mr J. J. Calder, a vote of thanks was passed to Sir Rhys Williams for presiding.

E. W. TARRY AND COMPANY, LIMITED.**BETTER OUTLOOK.**

The annual general meeting of E. W. Tarry and Company, Limited, was held, on the 20th instant, at Southern House, E.C.

Commander Oliver Locker-Lampson, C.M.G., D.S.O., M.P., who presided in the absence, through indisposition, of Sir Fortescue Flannery, Bart. (the chairman), said that in South Africa, apart from the gold-mining industry, they had passed through a period of dwindling exports, falling retail prices and increased unemployment.

SEVERE COMPETITION.

The orders for goods from the mines, railways and private firms had been reduced to the minimum, and competition for these orders had been very severe. Turning to the brighter side, there were reports of gold-mining revival in Southern Rhodesia, and it was claimed from Johannesburg that the main reef continued beyond its present known limit for a distance of approximately 40 miles. If this should prove true, big developments might be looked for. A tangible sign of improvement in business was in respect of railway earnings, which during October last showed a considerable recovery. This season there was an advance of about 20 per cent. in the price of wool, which, with the 25 per cent. subsidy granted by the Government with the object of counteracting to some extent the adverse effects of the exchange, made it possible for farmers to ship their clip with the hope of making a profit.

The accounts submitted showed a gross profit of £27,377 in excess of that of the previous year—nearly double—and the net result was a loss of £4,968, against £52,179 in the previous year. With regard to the current financial year, the company's turnover had slightly improved, and it was believed that they were turning the corner.

COMPANY WELL EQUIPPED.

The Rt. Hon. Viscount Knollys, D.F.C., said he had just returned from South Africa, after three years' residence in that country. The company was well equipped, and, with its excellent connection, added to its first-class name, was ready to take full advantage of an improvement in general trade whenever that might come.

The report was unanimously adopted.

THE LUIPAARDS VLEI ESTATE AND GOLD MINING COMPANY, LIMITED.**RESUMPTION OF DIVIDENDS.**

The annual meeting of the Luipaards Vlei Estate and Gold Mining Company, Limited, was held in London on the 19th instant.

Mr E. Turk (the chairman) said that the report before them disclosed a substantial improvement on the previous year's operations, and that the net profit in sterling at £63,676 showed an increase of over 40 per cent. compared with that of the preceding period. This had enabled them to reduce development account to a satisfactory figure and recommend a dividend of 12½ per cent., after payment of which they would carry forward £23,701. The balance sheet showed that their assets were standing at very conservative valuations, particularly having regard to the reserve account of £100,000 for depreciation of plant, machinery, etc., and against development account. The year's development results showed an average of 6.3 dwts. and 60 per cent. payability, while the exposures at the deepest points were most encouraging. Should, as they hoped, the reefs improve with depth, the effect on profits would be considerable, an increase of only ½ dwt. would almost double their profits. The arrangement with the West Rand Consolidated Mines, Limited, for the extension of a deep level drive into the Luipaards Vlei property for 3,000 feet would greatly accelerate development of the Western section in depth and would provide 1,500 feet on the incline of the reefs below their present workings. This drive had already been commenced.

The most important acquisition during the year was the purchase from the Government of the Midas section, which contained considerable tonnages of South Reef and the Midas shaft should ultimately prove invaluable for the further exploration and development of the eastern section in depth.

Should South Africa decide to link their currency with sterling or to devalue in any other way, the result would be of considerable benefit to a low-grade mine like the Luipaards Vlei. Summing up, he stated that they had now attained the position towards which they had been steadily working during the past few years. They had increased their output from 20,000 to 35,000 tons monthly, resulting in regular profits which had enabled the resumption of dividend payments. Ore reserves standing at 1,100,000 represented two and a half years' supply ahead of present milling requirements. The report and accounts were unanimously adopted.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.**"DUMPING" OF SHIPPING SERVICES.**

The thirty-third ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 20th instant, at the company's offices, 3 and 5 Fenchurch Avenue, London, E.C. Sir Alan G. Anderson, K.B.E. (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: You have already heard that to our regret we are unable this year to recommend a dividend to the ordinary shareholders. The dividend on both classes of preference shares has been paid as usual. This is the first time since I became a manager in 1900, the first time in 32 years, that the ordinary shareholders have had no dividend. I need not tell you how much the managers regret our bad result, but I hope it will not take you by surprise, as I told you last year what we must expect. We have been guided in this recommendation not so much by our cash, which would enable us to pay a dividend, as by the prospects of our trade. The Australian passenger trade has gone from bad to worse in the last three years and does not yet show those clear signs of improvement which would alone justify us in paying a dividend from reserves.

The profit and loss account shows an operating profit of £112,000, or approximately half the sum required to cover the depreciation required by the articles. This figure is arrived at after charging £27,000 loss on sale of investments, which might have been charged against investment reserve account, but as we brought in a profit from the sale of investments last year we deduct the loss this year. As the fleet has by reserves in previous years been written down well below the required figure, we do not recommend a transfer from reserves to meet depreciation this year. No one can pretend to be satisfied with this result from the operation of seven vessels, five of which are in their first youth and, as we believe, well designed and well run. Even this poor result is only reached by including the interest on large reserves invested outside the business, but, bad as it is, I expected a year ago to have to tell you an even worse tale. We have reason to be thankful that, in this year of collapse, we have not only avoided actual loss, but have realised a cash profit of over £100,000.

CHEAP PLEASURE TRAVEL.

Continuing, the Chairman said that their main business was to carry passengers and cargo to and from Australia, and this having been suddenly restricted by forces outside their immediate control, they had tried to develop business on other lines, and to offer the public services which they were willing to buy. They had for the last forty-five years catered for pleasure travel, which had developed rapidly, and they now offered what must be about the cheapest and best of holidays, a round ticket to Brisbane and back at £150, three months' board, lodging and recreation and 28,000 miles travel at 30s. a day.

As an instance of how these cruises helped to solve our employment problem, he might mention that last year the company's cruises employed the equivalent of 1,000 British seamen, in addition to many hundreds of workers in ancillary trades, at a time when the ships would otherwise have been laid up.

Sir Alan went on to emphasise the disastrous effects of Government subsidies on shipping. He said that it was as bad to dump services as to dump goods, but one nation after another had become obsessed with the desire to fly its flag on merchant ships, and by giving enormous subsidies had dumped shipping services on the world market, with the apparent object of ruining shipowners who tried to make ends meet. The official reports of the United States Shipping Board showed that during the five years to June, 1928, the United States taxpayer paid about £5,000,000 annually in operating losses and in laying up expenses, while the total loss for the twelve years from 1920 had been about £600,000,000. It was difficult to exaggerate the injury the U.S.A. did to world trade, and incidentally to herself, by devoting such a mass of wealth to rejecting payment by her debtors in the form of shipping services.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

THE NATIONAL BANK OF SCOTLAND, LIMITED.**ANNUAL MEETING.**

The one hundred and seventh annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 22nd instant, in the bank's head office, Edinburgh.

The Most Hon. the Marquess of Zetland, P.C., G.C.S.I., G.C.I.E., the governor of the bank, presided.

The Governor said: In submitting the bank's accounts for the year which ended on November 1st, the directors are pleased to place before you results which they regard as satisfactory in view of the manifold difficulties of the period under review. The balance at profit and loss account available for distribution is £338,094, a reduction of £6,000 compared with the previous year, and I would direct your attention to the fact that of this sum only £132,000, or little more than two-fifths, is proposed to be dispensed in dividend. Of the balance, a sum of £100,000 has been allocated to the bank's contingent fund, £25,000 to the heritable property account, £5,000 to the staff widows' fund, and the remainder, £76,094, falls to be carried forward. All bad and doubtful debts have been duly provided for.

Comparing the balance sheet with that of the previous year, you will notice a substantial increase of nearly £5,000,000 in the will deposits, which stand at £33,867,000, the highest figure reached for some years past. Note circulation remains at approximately the same level as before, while acceptances show a small contraction. On the assets side of the balance sheet the immediately liquid resources of the bank show a substantial increase at nearly £8,000,000, apart from a large holding of British Government Treasury Bills. It will be seen, therefore, that the liquidity of its resources, an essential feature in the position of any bank, is extremely well secured. In addition, there are investments in British Government Securities standing in the books at £12,607,000, and Indian and Colonial Government Railways and other stocks and Investment at £975,000, showing a considerable increase over last year. These figures are well below the market value at November 1st.

A study of the balance sheet and of the figures to which I have called your particular attention will satisfy you, I hope, that while your board has been rendering generous assistance to trade and industry during a period of acute depression, it is also in a strong position to meet any demands which, on a revival of business, may legitimately be made upon it.

The report and accounts were unanimously adopted.

Government Returns, &c.**NATIONAL ACCOUNTS.**

The total ordinary revenue for the week ended December 17, 1932, amounted to £11,100,300 against ordinary expenditure of £14,801,300. After allocating £135,000 to Sinking Fund, paying £28,956,349 to the U.S. Government on War Debt Account, and allowing for an increase in Exchequer Balances of £63,654, the operations for the week, as shown below, increased the National Debt by £33,849,000 to approximately £7,982 millions†:—

† Including £150 millions on account of Exchange Equalisation Fund.

GOLD MOVEMENTS.

1932. ARRIVALS. Dec. 16-21 inclusive..... £19,633,976 out. During 1932, £1,198,906 out. Since April 29, 1925, £48,588,541 out. Since September 21, 1931 (Gold Standard suspended), £16,184,127 out.

Measrs. Samuel Montagu and Company write on December 21, 1932, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £139,422,097 on the 14th instant, showing no change as compared with the previous Wednesday. The next return will show a reduction in the gold holding of the Bank, owing to the sale announced on the 15th instant, of £19,632,831 in bar gold and £1,145 in foreign gold coin. This represents gold purchased by the Government to meet the payment of \$95,500,000, which became due on the 15th instant in respect of this country's War Debts to the United States. Purchases of gold by "undisclosed buyers" were made in the open market during the week, but most of the substantial amounts which came on offer were taken for export.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
December 15th	125s. 3 1/2d.	13s. 6.73d.
" 16th	124s. 9 1/2d.	13s. 7.38d.

Gold shipments from Bombay last week amounted to over £1,500,000. The s.s. "President Hayes" carries £1,156,000, consigned to New York, and the s.s. "Comorin" £331,000, consigned to London, £14,000 to New York, and £21,000 to Holland.

SILVER.

Although until to-day movements in prices were very small, the tendency was still downward; to-day, following weak advices from the East, quotations fell 1/4d. and 1/2d. respectively, being fixed at 16 1/4d. for both cash and two months' delivery, which were the lowest since July 6th last.

China buying has again been met by selling by the Indian Bazaars and America, but demand continued poor and the market quiet, the low prices, so far, attracting little interest.

For the first time since August 15th last, level prices were quoted during the week.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 12th instant to mid-day on the 19th instant:—

IMPORTS.	£	EXPORTS.	£
Japan.....	66,168	China.....	74,477
Poland (including Dan- zig).....	21,202	Poland.....	22,800

‡ 3s. 9d. in £.

JETINGA VALLEY TEA COMPANY, LTD.—The directors regret that, owing to the continued unsatisfactory state of the tea market, they do not see any prospect of the company earning a profit on this year's crop. They are, in consequence, unable to pay the dividend on the preference shares due on 31st instant. The quantity of tea manufactured to the end of November was 1,159,440 lbs., of which 462,053 lbs. have been sold in London at an average price of 6-4½d. per lb., the corresponding figures to the same date in 1931 being 1,040,960 lbs. and 15-12½d. and 15-18d. per lb. The board continue to insist on rigid economy, and estimates of expenditure for next year are being cut down to the lowest possible point consistent with reasonable efficiency.

REPORTS AND NOTICES.

Mr Francis Maurice Grosvenor Glyn has been elected a director of the Rio de Janeiro City Improvements Company, Ltd.

♣ Captain A. O. Pollard, V.C., M.C., D.C.M., has joined the board of the Low Engineering Company, Ltd.

INSURANCE.

"ROYAL" LIFE BONUSES.—The directors of the Royal Insurance Company announce that interim bonuses on "Royal" participating policies, which may become claims or be surrendered during the twelve months to December 31, 1933, and which are entitled to an interim bonus, will be at the rate of 45s. per cent. per annum, the same rate as for the current year.

MISCELLANEOUS.

ASSOCIATED LONDON FLOUR MILLERS.—The directors of Associated London Flour Millers announce that the offer put forward by them to their shareholders on December 3rd on behalf of a prospective purchaser has now been accepted by the holders of the requisite percentage of the ordinary capital, and the agreement to purchase the shares has, therefore, become absolute. The directors confirm the reports that the offer was on behalf of Joseph Rank, the £4,206,500 private milling company. Associated Company's ordinary capital totals £833,043 and the percentage required was 51. The offer was dealt with in the *Economist*, December 10th, page 1096.

PEASE AND PARTNERS, LTD.—At meetings of the 5 per cent. debenture stockholders, unsecured creditors and shareholders of Pease and Partners, Ltd., which were held December 16th, the scheme of arrangement dated November 24, 1932, was approved by overwhelming majorities. At an extraordinary general meeting of the company which followed, resolutions to give effect to the scheme were passed by overwhelming majorities after a poll had been taken.

Commercial Reports.

MARKET SUMMARY.

The steadier tendency of the gold value of the principal primary products noticeable a week ago has been maintained. A survey of the course of quotations in New York reveals a hardening tendency in the price of copper and tin. Lead and spelter are again unchanged on the week, and rubber was sold at previous rates. On the other hand, raw cotton declined to a slightly lower level. Among grains, wheat, maize, rye and oats are scarcely changed on the week. Coffee was steady, but raw sugar and cocoa suffered a setback. Sterling quotations of primary products were lower in accordance with the improvement in the gold value of sterling. According to reports from various industrial centres, the coal trade continues active and the outlook for the iron and steel industries is more hopeful. Similarly, Manchester goods have been in better demand, and sales of rayon piece-goods tend to broaden, both at home and abroad.

THE COAL TRADE.

SHEFFIELD.—The closing period of the year is being marked by increased activity in all departments and better prospects in the overseas markets. The output quota for South Yorkshire is to be increased substantially as from the New Year. A larger tonnage of best steams for export has been sold and shipped lately, and this improvement is likely to continue. Prices are firm at 17s. 6d. to 18s. f.o.b. The pre-Christmas demand for house coal has been brisk, with tonnage below normal. Blast-furnace coke is selling freely for heating, whereas iron-trade consumption continues low. The price remains about 10s. at ovens.

GLASGOW.—The main activity this week has been the search for odd lots of coal to complete cargoes due for dispatch before the end of the month. With supplies still scarce, however, and that despite the further increase in the production quota, requirements have not been easily covered, and values remain strong. Most of the extra output will, it seems, be absorbed in the home market. Little forward business is being arranged, but a number of collieries are well placed for the month of January.

NEWCASTLE-ON-TYNE.—The Northumberland market for all classes of screened steam, trebles and doubles, is firm, and there is a steady arrival of tonnage, but if the present mild weather continues there is a possibility of an ease in the position after the holidays, as most of this coal is shipped for domestic purposes. The inquiry from abroad is much better than was experienced at this time last year, and of the 27,000 tons inquiry from the Swedish State Railways, 20,000 tons have been placed in this district. The Durham market in unscreened gas and coking is steady. Foundry coke is quiet, but the demand from the United States for nuts continues, good sales having been made over next year.

CARDIFF.—The most important development in the coal trade situation this week has been an understanding between the colliery owners and the miners' representatives to secure the peace and stability of the industry during the coming year. The Conciliation Board Agreement entered into in January, 1931, is operative till the end of January, 1934, and thereafter subject to a month's notice, and under this agreement either side has the power to apply for the revision of the minimum wage and the subsistence allowances at the

end of each year. At a meeting of the Joint Disputes Committee on Tuesday the representatives of the coalowners stated that they had waived this right in order that no uneasiness should be created as to the possibility of a discontinuance of work next July, when the undertaking given by the owners nationally last July that they would not disturb existing wage rates for a period of at least twelve months expires. A joint statement, moreover, was issued to the effect that "there cannot possibly be any difference of opinion on any question of wages or conditions of employment until, at the earliest, some time in 1934," and that an early meeting of the Conciliation Board is to be held "with the definite object of endeavouring to ensure that the period of stability is extended far beyond 1934." These official pronouncements have not merely cleared up a point on which some doubt had existed, but have also removed all cause for hesitation over the arrangement of contracts for the new year. The tenders for the Egyptian State Railways contract for 60,000 tons of large coals were opened at Cairo on Tuesday, when the quotations were found to range from 23s. to 25s. 9d. c.i.f. Alexandria, and from 17s. 4½d. to 18s. 7½d. f.o.b. The lowest tender was for German coals. The general position on the market is unchanged.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland pig iron, whilst not showing any outstanding improvement, remains steady, and a fair number of small transactions have been put through during the past week mostly for home consumers. Local foundries will be closed down during the holidays next week, and, although this will mean slight additions to the stocks of pig iron in makers' yards, it is not anticipated this will have any effect on prices. Official prices remain unchanged. So far as hematite is concerned, a regular flow of small orders continues, and makers are inclined to increase prices for forward delivery, having in mind the recent rise in the costs of raw materials. For prompt, the price of ordinary mixed numbers is 59s. per ton. One good sign here is that home users are tentatively inquiring for delivery up to the middle of next year. In the manufactured departments there is a slight improvement all round in the number of orders received. It is announced that Messrs Dorman Long and Company have received an order for 4,000 tons of tram rails from the London County Council, which is very satisfactory. Prices for steel material show no alteration. Deliveries of imported ore consist chiefly of arrears under old contracts, although here and there buyers are compelled to buy an odd cargo of special quality.

SHEFFIELD.—Business has been curtailed this week owing to holiday influences, but orders and inquiries are more numerous than twelve months ago, and the outlook for most sections of the steel trade continues to improve, partly as a result of lower imports. Consumption of steel for sheets, tinplates, constructional material and tools is considerable, although still substantially below normal and there are still many bad patches about. The keenness of competition keeps down prices of steel goods to a level which cannot yield a profit on many of the transactions. On the other side, it should be noted that the steelmakers have carried out this year big economies in operating costs, and there has been substantial progress in the modernisation of processes in nearly every branch of local industry. Demand for scissors and razor blades increases every week, but business continues extremely flat in knives, spoons and forks and silver and electro-plate. The tool industry maintains its former position. The export trade in cutlery and tools tends to expand.

GLASGOW.—In the heavy steel trades business this week seems in the main to be confined to small parcels for immediate delivery to meet requirements for repair work to be carried out during the approaching holiday season or for the completion of urgent orders on hand. In the heavy trades little important business has been placed, and for semis also the demand is poor. During the week

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

Also at NEW YORK & PARIS

there has been a considerable amount of ship-repairing work done at Clyde yards, but the tonnage of steel involved is small. Bookings of black and galvanised sheets, both for home and export, have been satisfactory, and mills have been fully employed. It is understood that a large proportion of the sheet mill plant will be stopped for the holidays this week-end, instead of a week later, when the general stoppage in Scotland takes place, and that one concern will be closed down for about a fortnight to permit of extensive repairs. In the tube trade the position is unchanged.

CARDIFF.—On the Swansea Metal Exchange on Tuesday prices of tinplates were steady to firm at from 15s. 9d. to 16s. 3d. per basis box, and a feature of the market is an increased demand for wasters. The competition of foreign steel bars continues negligible, and local bars are still quoted at 95s. per ton delivered. Galvanised sheet prices are unaltered at from £10 to £10 15s. per ton. Shipments of tinplates from Swansea last week were 27,000 boxes greater than in the previous week, and stocks were consequently reduced from 164,272 to 144,952 boxes. There was a spirit of quiet optimism as regards business in the New Year.

OTHER METALS.

TIN.—Business at the London Metal Exchange was quiet during the past week. The demand for tin was slow and sterling quotations tended to sag from Monday to Wednesday. Sales on the London Metal Exchange were 275 tons on Monday, against 400 last week; 125 tons on Tuesday, against 750 tons last week; and 150 tons on Wednesday, against 175 tons last week. The New York quotation on Wednesday was 22.85 cents per lb., against 22.55 cents a week ago and 23.15 cents a month ago. Wednesday's official closing quotation in London for standard cash was £148 15s. to £149, compared with £148 5s. to £148 10s. last week. Stocks in London and Liverpool at the end of last week were 29,808 tons, a decrease of 333 tons on the week.

COPPER.—The reaction in prices which followed the news of the failure of the New York Copper Conference gave way to a slightly steadier tendency during the past week. Sales at the London Metal Exchange were 400 tons on Monday, against 1,100 tons last week; 350 tons on Tuesday, against 225 tons last week; and 400 tons on Wednesday, against 700 tons last week. Domestic spot was quoted 5 cents per lb. New York on Tuesday, against 5 cents a week ago and 5½ cents a month ago. Wednesday's official closing price for standard cash in London was £28 3s. 9d. to £28 5s., compared with £27 15s. to £27 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 30,233 tons, show an increase of 23 tons, and stocks of rough copper, at 6,353 tons, an increase of 25 tons.

LEAD.—Prices hardened on an active demand on Monday, but part of the advance was lost on Tuesday and Wednesday, when buyers showed less interest in this metal. Sales at the London Metal Exchange were 1,000 tons on Monday, against 600 tons last week; 350 tons on Tuesday, against 150 tons last week; and 200 tons on Wednesday, against 300 tons last week. The New York quotation on Tuesday was 3.00 cents per lb., against 3.00 cents a week ago and 3.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £11 1s. 3d. for November shipment, compared with £10 18s. 9d. last week.

SPELTER.—The expectation that the cartel will continue to curtail output at the present rate resulted in a firm tendency on Monday, but owing to the lack of buyers, quotations receded slightly on Tuesday and Wednesday. Sales were 350 tons on Monday, against 500 tons a week before; 200 tons on Tuesday, against 350 tons the week before; and 150 tons on Wednesday, against 400 tons. The New York quotation on Wednesday was 3.125 cents per lb., against 3.125 cents the week before, and 3.15 a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £15 6s. 3d. for November shipment, against £15 1s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel was unchanged at £255-£260 per ton. Quicksilver was lower at £10-£10 15s. per flask, against £10 5s.-£11 2s. 6d. per flask a week ago. Foreign antimony was again sold at £27-£27 10s. per ton. Platinum remained unchanged at £9 per ounce.

TEXTILES.

THE COTTON TRADE.—**Liverpool.**—Imports for the week December 15th to 21st (inclusive) are 83,570 bales, of which 57,660 are American; 24 Peruvian; 9,003 Egyptian; 1,025 East Indian; 14,853 Russian; and 105 sundries.

Manchester.—Although trading in the market during the past week has not been at all active, the general inquiry has been well maintained and a fair miscellaneous business has been done. There have been no indications, however, of buyers being prepared to increase the size of orders, and numerous contracts have been for very trifling lots. General advices from India continue rather more encouraging and a steady trade has been done in piece-goods, especially in light bleaching descriptions and fancies. The outlook for China has again been disappointing, and very few bids have been met with in staple makes and fancies. Limited quantities of bleaching, printing and dyeing cloths have been sold for the Near East, West Africa and the Continent, but rather less demand has been mentioned for South America. Active buying for the home trade is not usual at this time of the year, but business has not been at a standstill. Spinners of American yarns continue to present a stiffer front to their customers. A fairly encouraging turnover has taken place, especially in coarse and medium counts. A varied business has been put through in Egyptian yarns, and spinners have experienced some difficulty in preventing loss of ground.

THE WOOL TRADE.—**Bradford.**—The first half of the selling season finished at Melbourne on Wednesday, with prices at the highest point since the season opened. A sale last Monday at Perth went most satisfactorily, and a very firm market is being witnessed for merinos everywhere. Another very encouraging feature, writes our correspondent, is the report of the Dunedin sale on Tuesday, at which the best prices were made since the opening of the selling season in the Dominion. Another very pleasing feature is the fact that every country is disposing of its clip at a much faster rate than last year. Home markets do not display very much activity. Bradford topmakers are finding quarters somewhat slack, but prices are steady. In one or two but spinners are very reluctant to pay more for any quality. During the week some sales have been made of B.A. 40-44's at 4½d., clean, c.i.f. Liverpool—a record low level. The result is that medium and coarse crossbred tops are still on the easy side, but 56's and upwards are firm.

THE GRAIN MARKETS.

WHEAT.—The setback in international wheat prices caused a week ago by cheap Argentine offers has persisted throughout the week. Although Russia is not now important as a market factor, and the United States is holding aloof, a substantial improvement in prices seems precluded by the smallness of importers' demand. At the same time, it is doubtful whether the acreage under wheat will be substantially reduced during the current crop year. According to the Crop Reporting Board of the Bureau of Statistics of the United States Department of Agriculture, the area sown to winter wheat during the current season is 39,902,000 acres, against 38,682,000 acres a year ago. The final official estimate of the United States wheat crop, published on December 15th, is 726,930,000 bushels, against 892,271,000 bushels in 1931. The total acreage under wheat, at 55,177,000 compares with 54,949,000 in the preceding year. On Wednesday, "December" futures were quoted in Chicago at 44½ cents per bushel, against 44½ cents the week before, and 42½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 25s. 6d. per 496 lbs., against 27s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 24s. 9d., against 26s.; No. 3 Northern Manitoba, Vancouver, ex ship, 24s. 6d., against 25s. 6d.; Australia, ex ship, 25s. to 27s. 6d., against 26s. to 27s. 6d. a week ago.

WHEAT FLOUR.—Business in flour has been quiet despite the lower level of quotations. North American shipments were 106,000 sacks, compared with 87,000 the week before. Wednesday's London quotations were: Straight run, delivered country, 23s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 22s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 23s. to 25s., against 23s. 6d. to 26s.; Australian, ex store, 20s. to 20s. 6d., against 20s. 6d. to 21s. last week.

BARLEY.—The demand for feeding barley in importing countries has been poor, although Canadian and Argentine varieties were offered at reduced rates. "December" futures were quoted in Chicago on Wednesday at 28½ cents per bushel, against 32½ cents last week and 29½ cents a month ago. Quotations in London on Wednesday were: "English feeding," f.o.r., per 448 lbs., 22s. to 25s., against 22s. to 25s. a week before.

OATS.—The market in oats has been dull. In Chicago, "December" futures were quoted at 15½ cents per bushel on Wednesday, against 15½ cents a week before and 15½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 3d. per 320 lbs., against 17s. 9d. a week ago; "River Plate," ex ship, 15s. 9d., against 16s.; "Chilean White," landed, 22s.-24s., against 22s.-24s. a week earlier.

MAIZE.—Contrary to that of many other cereals, the demand for maize continues active, but shipments from Argentina and from Danubian countries have recently been so large that their absorption was only made possible at a slightly lower level of values. "December" futures in Chicago were quoted on Wednesday at 22½ cents per bushel, against 22½ cents on Wednesday of last week and 24½ cents a month ago. Quotations in London, Wednesday: "Plate," landed, 19s. 3d. per 480 lbs., compared with 19s. 9d. last week; "Plate," ex ship, 18s. 3d., as against 18s. 9d.; "Plate," December-January, 18s. 3d., as against 19s. Yellow maize, ex wharf, was quoted at £5 12s. 6d. per ton, against £5 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1932-33, 1931-32, 1930-31, 1929-30:—

	1932-1933.	1931-1932.	1930-1931.	1929-1930.
Estimated sales of home-grown wheat—				
1 week to December 17.....	Cwts. 262,930	Cwts. 82,348	Cwts. 116,523	Cwts. 273,751

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 2, 1931.	Dec. 23, 1931.	Jan. 4, 1932.	Dec. 14, 1932.	Dec. 21, 1932.
Winnipeg (No. 1 Manitoba)	148½	56½	58½	62½	42½	40½
Chicago (No. 2 Winter)	130½	79½	52½	55½	44½	44½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 84,896,000 bushels, shows an increase on the week of 1,349,000 bushels. Supplies a year ago stood at 58,329,000 bushels.

OTHER FOODS.

SUGAR.—The slight improvement in raw sugar values in New York, noticeable last week, has again given way to a sagging tendency. December futures were quoted in New York at 0.68 cent per lb. on Tuesday, against 0.74 cent a week before and 0.94 cent a month ago. Wednesday's sales of raw sugar in London include "March, 1933, delivery" at 5s. 4½d. per cwt., against 5s. 3½d. at 5½d. a week before, and "December, 1933," at 6s., against 5s. 11½d. to 6s. 1d. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports.		Deliveries.		Stocks.	
	1932.	1931.	1932.	1931.	1932.	1931.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	1,867	456	831	1,319	13,857	4,282
Liverpool.....	41,656	32,731	14,415	12,406	156,619	91,841
Total tons ...	43,523	33,187	15,246	13,725	170,476	96,123
Last week ...	25,562	10,676	15,711	13,427	142,199	76,661

COFFEE.—The New York market in coffee has been steady. On Wednesday, Rio No. 7 (cush) was quoted at 8½ cents per lb., against 8½ cents per lb. on the corresponding day a week ago. Tuesday's London sales met with a better demand at steady rates. Last week's movements of coffee in London were as follows: Brazilian, landed, 141 bags; delivered, for home consumption, 15 bags; exported, 23 bags; stocks, 8,946 bags, against 2,733 bags a year ago. Central American, landed, 1,886 packages; delivered for home consumption, 2,358 packages; exported, 3,443 packages; stocks, 51,674 packages, against 59,296 last year. Other kinds: Landed, 2,594 packages; delivered for home consumption, 2,987 packages; exported, 1,898 packages; stocks, 65,053 packages, against 42,410 last year.

COCOA.—After a slight advance a week ago, cocoa prices began to decline again during the past week. December futures were quoted at 3.54 cents in New York on Tuesday, against 3.65 cents a week ago and 3.67 a month ago; Accra, December-February, at 25s. 3d. per cwt. c.i.f. Continent, shows a fall of 6d. per cwt. on the week. Last week's movements of cocoa in London were as follows: Landed, 8,174 bags; delivered for home consumption, 4,648 bags; exported, 21 bags; stocks, 106,026 bags, against 131,225 a year ago.

TEA.—The quantities catalogued for this week's auction comprised 27,661 packages of Indian and 27,616 packages of Ceylon tea. At Monday's "Indian" auctions, the demand for common grades was again active, but medium qualities were irregular. A similar tendency was noticeable on Tuesday, when "Ceylon" tea was on offer. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during past weeks:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	
Dec. 17, 1931	10-18	12-07	16-03	8-59	8-17	7-36	11-99						
Nov. 24, 1932	8-78	7-78	10-60	6-67	5-32	6-46	8-97						
Dec. 1, "	8-20	7-21	10-02	6-56	4-81	4-97	8-47						
" 8, "	7-71	6-98	9-72	6-08	4-88	Nil	8-03						
" 15, "	7-46	7-06	9-08	6-05	4-86	6-04	7-84						

RICE.—The market in rice was quiet, but "forward" quotations were slightly steadier. The spot price was 9s. per cwt., against 9s. per cwt. a week ago, while the forward quotations at 7s. 2½d. per cwt. show a rise of 1½d. per cwt. on the week. Movements in London during the past week were as follows: Landed, 98 tons; delivered, 101 tons; stock, 2,623 tons, against 1,739 tons a year ago.

POTATOES.—There has been a good demand for potatoes, but prices eased slightly under the pressure of supplies. At the London Borough Market, "King Edward," light soil, were quoted at 5s. 6d. to 6s. per cwt., against 5s. 9d. to 6s. 3d. a week ago.

SPICES.—The pepper market was dull. Spot pepper, "Black Singapore," was quoted at 6d. per lb. on Wednesday, against 6d. per lb. a week ago. Forward positions were easier. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 9 tons; stock, 382 tons, against 311 a year ago. White, landed, 23 tons; delivered, 45 tons; stock, 602 tons, against 471 a year ago.

MEAT.—As a result of excessive supplies of beef, mutton and lamb, at the Smithfield market, prices were generally easy. Wednesday's quotation for Argentine beef, chilled hindquarters, was 2s. 8d. to 4s. per 8 lbs., as compared with 3s. 10d. to 4s. 6d. last week. New Zealand frozen mutton was 2s. 8d. to 3s. 2d. per 8 lbs., against 2s. 8d. to 3s. 2d. a week ago. According to the Smithfield market official report, supplies during last week amounted to 10,578 tons, against 11,236 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.7 per cent. of the beef supplies, against 82.0 per cent. a year ago. Imported mutton, mainly New Zealand, formed 69.6 per cent. of the total supply of mutton and lamb, against 74.8 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—On the whole markets have a fairly steady tone, but business is not large. In view of the coming into operation shortly of the 10 per cent. import duty, linseed on spot is firm and at a substantial premium, Plate being quoted £9 10s. per ton, while for shipment January to March £8 15s. has been paid. There is still a fair quantity afloat for Europe, viz., 171,700 tons, besides which there is available for shipment between now and December 31st 126,000 tons from South America and 59,000 tons from India. The official estimate of the yield of the new crop in Argentina is 1,350,000 tons, as against 2,170,000 tons harvested in the past season. To what extent India will increase production as a result of the 10 per cent. preference remains to be seen. Trade in linseed oil is quiet and current value of raw oil ex Hull around £16 10s. per ton for December delivery and £17 10s. January-April. Cottonseed is steadier, but in slow demand, shippers indicating £7 10s. for black Egyptian afloat and December loading. Cotton oil is neglected and crude Egyptian readily available at £23 per ton ex Hull. Oilcakes are in fair request at late prices.

HIDE, LEATHER AND ALLIED TRADES.—At the Manchester auctions of hides and skins this week, when supplies were sold for a fortnight, prices for several weights of ox and heifers were lower by ½d. per lb. Cow hides declined by a similar amount, while calfskins showed little alteration. The market for sheepskins remains steady, but in view of the low prices realised for felled mongers pelts, it is quite likely that slight reductions in the figures for woolled skins will be made. Trade in foreign hides has been of moderate dimensions and quotations for most descriptions have continued steady. Turnover of leather has been affected by the approaching holidays and consumers generally have taken only just sufficient to carry them on until the closing down.

RUBBER.—The market in rubber has been quiet at the lower level of prices. In New York, Wednesday's spot price for rubber, at 3½ cents per lb., shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for April-June, 1933, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 512 tons; delivered, 1,975 tons; stocks at the end of last week, at 93,229 tons, show a decrease of 1,463 tons as compared with the preceding week.

THE MONEY MARKET.

WHILE no borrowing from the Bank was thought necessary on Christmas Eve, large amounts were borrowed immediately after the holidays on Wednesday and Thursday of this week. It is clear that the easy experience of last June is not being repeated, but that a fair amount of preparation has been necessary for the end of the year. Meanwhile, day-to-day money has not been quite so abundant as might have been expected. Over the week-end $\frac{3}{4}$ and $\frac{1}{2}$ per cent. were the general rates, while $\frac{3}{4}$ per cent. had again to be paid fairly freely on Wednesday.

The clearing banks have been lending a certain amount of day-to-day money at their minimum rate. January money was obtainable this week from outside quarters at $1\frac{1}{2}$ and 2 per cent. The clearing banks were not lenders, as they had previously lent all the January money they could spare at 1 per cent. As matters have turned out, it appears that it would have been better for them to have waited, but it must be remembered that it was by no means certain before it actually began that on this occasion there would be anything like the normal end-year pressure for funds. The Bank of England's rate has been $2\frac{1}{2}$ per cent., and by Thursday some borrowers had found themselves in the Bank for eight days. It is also reported that a few early January bills have been discounted at $2\frac{1}{2}$ per cent., as their holders preferred this course of action to borrowing at the Bank. Bank rate, of course, does not apply to bills with only a week or ten days to run.

The cause of the year-end pressure, which had not been generally anticipated, lies in the present heavy weight of Treasury bills. Allotments of £50 and £60 millions per week have lately been the general rule, and both this week and last the allotment amounted to £50 millions. Naturally, the banks have not been tendering for or buying bills during the last few weeks, for they wished to accumulate cash for the end of the year, and the same motive has led them to acquire as many late December maturities as possible. The result is that this week the discount market has had to pay for practically all the new bills itself, while few maturities have come its way to put it in funds. This accounts for the pressure for funds over the end of the year, whereas, in view of the general abundance of money, the market might have expected an easy time.

Bill-brokers, however, are likely to make a good turn out of this week's bills. The average tender rate on December 23rd was £1 5s. 2.8d. per cent., or practically $1\frac{1}{2}$ per cent., though it is known that there was a considerable divergence between individual tenders, so that many applicants probably put in for their bills at rates more like $1\frac{3}{4}$ and even $1\frac{1}{2}$ per cent. Hot Treasury bills were on offer this week at $1\frac{1}{2}$ per cent., this being a "spot" rate for payment and delivery before the end of the year. Against this, the banks are ready to buy bills next month to a limited extent, and consequently there has been a certain "forward" market in hot Treasury bills at $\frac{3}{4}$ per cent. for payment and delivery next week. The cost to a borrower from the Bank for, say, ten days at $2\frac{1}{2}$ per cent. is only $\frac{1}{4}$ per cent., so that it has well paid bill-brokers to take up bills this week, borrow against them from the Bank, and sell them for payment after the turn of the year. Three months' bank bills have been generally quoted this week at $1\frac{1}{2}$ per cent., though some dealings at $1\frac{3}{4}$ per cent. are reported. Standstills may be called $1\frac{1}{2}$ up to 2 and even $2\frac{1}{2}$ per cent.

	Dec. 8, 1932.	Dec. 15, 1932.	Dec. 22, 1932.	Dec. 29, 1932.	Previous Rate and Date Changed.
Bank Rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$2\frac{1}{2}$ (June 30, '32)
Banks' Deposit Rate..	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Discount (Call)	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	1 (May 12, '32)
Houses (Notice) ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$1\frac{1}{4}$ (May 12, '32)
Market rate ("hot" Treasury bills)	$\frac{1}{2}$	$1-1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	...
Market rate (3 months' bank bills)	$\frac{1}{2}-\frac{3}{4}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}-1\frac{3}{4}$	...
Market rate (standstill bills)	1-2	$1\frac{1}{2}-2$	$1\frac{1}{2}-2$	$1\frac{1}{2}-2\frac{1}{2}$	...

This week's Bank return gives some clue to the extent of Wednesday's market borrowing, for Discounts and Advances have increased during the week ended Wednesday night by £6.7 millions. One estimate, consequently, is that by December 31st the market will have borrowed £25 or even £30 millions. A comparison with a year ago is inadmissible, for December 31, 1931, fell in the middle of the week, with the result that the market could pay for that week's Treasury bills after the end of the year and so conserve its funds over the critical day. It is in

part true to say that the market made the Exchequer borrow for it. Two years ago the market borrowings amounted to about £40 millions, so that it is obvious that this year's abundance of money has helped to reduce the market's needs.

The other interesting feature of the Bank return is a slight increase of £1.1 millions in the note circulation. This may cause some surprise, as it follows a slight contraction of the previous week, though we have already suggested an explanation of that contraction. This week's increase, however, is a perfectly natural movement. Christmas currency was in use for shopping purposes right up to Christmas Eve, while an appreciable amount of currency must have been needed for travelling and other personal expenses during the holiday itself. As Monday and Tuesday were Bank Holidays, there was no time for this currency to return from circulation before the Bank return was made up on Wednesday. The result of this and other movements in the Bank return is that, despite market borrowings, Bankers' Deposits have only increased by £3.6 millions. The Proportion has been reduced from 18.1 to 16.8 per cent., but this may be the full extent of the decline, as henceforward currency will be returning from circulation into the Reserve.

The foreign exchange market was quiet before the holidays, but displayed greater activity afterwards. Sterling reacted after early strength, and closed rather lower on balance for the week against most of the principal currencies. The New York rate declined from 3.33 $\frac{1}{2}$ to 3.32 $\frac{1}{2}$, after touching 3.34 $\frac{1}{2}$ and 3.31 $\frac{1}{2}$. Paris improved by $\frac{1}{4}$ to 85 $\frac{1}{2}$. Brussels gained 11 points at 23.94. Milan moved against sterling by the same margin to 64 $\frac{1}{2}$, and Madrid by $\frac{1}{4}$ to 40 $\frac{1}{2}$. Berlin was 5 points dearer at 13.95, and Switzerland 9 points dearer at 17.25. The Scandinavian currencies showed less movement, Stockholm improving by 4 points and Oslo by 3 points to 18.30 and 19.37, respectively, while Copenhagen was unchanged at 19.28. The South American currencies remain at nominal quotations, Rio being unchanged at 5 $\frac{1}{2}$ d. (sellers), Buenos Aires $\frac{1}{4}$ d. cheaper at 34 $\frac{1}{2}$ d., and Monte Video unchanged at 29d. In the Far East the rupee improved $\frac{1}{2}$ d. to 1s. 6 $\frac{1}{2}$ d., but the yen weakened by $\frac{1}{4}$ d. to 1s. 3 $\frac{1}{2}$ d. Batavia gained 2 points at 8.28. In the forward market dollars, after some earlier weakness, were at $\frac{1}{2}$ cent and $\frac{3}{4}$ cent discount, or little change from last week. Paris was more offered at wider discounts of 5 and 10 centimes, as were belgas at 10 and 25 centimes discount. Milan was weaker at $\frac{1}{4}$ lira and $\frac{3}{4}$ lira discount for the two deliveries. Madrid was unchanged. Amsterdam went from par for both periods to $\frac{1}{4}$ and $\frac{1}{2}$ cent premium. Switzerland was weaker for one month at $\frac{1}{2}$ centime premium, but unchanged for three months at 1 centime premium. The silver market was quiet with the holidays, and prices fell, first with the temporary improvement in sterling and later on account of China, India and America selling in a restricted market. Cash silver was $\frac{1}{4}$ d. cheaper at 16 $\frac{1}{2}$ d., and forward $\frac{1}{4}$ d. cheaper at 16 $\frac{1}{2}$ d. The China silver exchanges fell away in sympathy, Hongkong and Shanghai both being $\frac{1}{4}$ d. cheaper at 1s. 3 $\frac{1}{2}$ d. and 1s. 7 $\frac{1}{2}$ d., respectively.

New York money rates are unchanged at 1 per cent. for call money and $\frac{1}{2}-\frac{3}{4}$ per cent. for 90-day bankers' acceptances. The Paris exchange was unchanged at 3.90 $\frac{1}{2}$ cents, but the Dutch rate improved from 40.14 $\frac{1}{2}$ to 40.17 $\frac{1}{2}$ cents, while the Swiss rate weakened from 19.25 $\frac{1}{2}$ to 19.24 $\frac{1}{2}$ cents. Gold imports totalled \$9.5 millions, of which \$8.3 millions came from England and \$1.1 millions from China. A reduction of \$7.8 millions in ear-marked gold held abroad was reported on the same day as the arrival from England. Foreign ear-markings in New York are practically unchanged. The total of Reconstruction Finance Corporation loans to November 30th is given as \$1,634 millions. Banks and trust companies have had loans of \$616.1 millions authorised to them, and railroads loans of \$316.6 millions

THE INDIAN CONFERENCE ENDS.

THANKS to a last-minute hustle the third session of the Indian Round Table Conference came to an end on Christmas Eve. Thus terminates one more chapter in the slow evolution of a new constitution for India; the stage of conferences is past, and the way is now clear for the introduction of a new Government of India Bill in the Imperial Parliament a few weeks hence. Two winters ago the Indian delegates met the representatives of the British Parliament in the full glare of the limelight, and the public imagination was caught—at a moment when India was seething with discontent and civil disobedience—by the hope suddenly held out that the Indian tangle might be unravelled by Federation. This year the Conference, greatly reduced in numbers, has been much less spectacular, but the delegates have come down to detail with regard to the outstanding points of the new Constitution. Full details of the points that have been discussed will not be available until a White Paper is issued next month or in February in preparation for the proceedings in Parliament; but the statements issued to the Press, and the public speeches of the Secretary of State and others, have made it clear that in spite of pressure from Diehard quarters in this country, the British Government has not wavered in its intention of fulfilling the hopes held out to India two years ago.

Several serious difficulties have, it is true, been thrown up in the course of the present session; but although, on some of them, certain of the Indian delegates have gone home without being entirely satisfied, the British Government representatives have tried in one way or another to meet the objections that have been raised. In regard to the Army, for example, which the Indian delegates agreed two years ago should be a reserved subject, it was urged that the Military Member of the Governor-General's Cabinet, though not responsible to the Indian Parliament, should be chosen from members of the Legislature; that, inasmuch as the Army Budget must radically affect the resources at the disposal of the Federal Finance Minister, the amount to be found by India should be a subject of discussion with the Governor-General's Ministers before being finally decided. It was also urged that it should be a statutory obligation upon the Governor-General to provide for the increasing Indianisation of the Army. The British Government maintained their preference, however, for giving the Governor-General unfettered discretion to choose his Army Member, though without ruling out the possibility that the practice of selecting him from the Chamber might develop. They accepted the view that there should be close consultation with the responsible Ministers of the Governor-General in regard to the Defence Budget and are prepared to lay down this principle in the Governor-General's Instrument of Instructions. As to Indianisation of the Army, the Government is not prepared at the present stage to lay down a comprehensive and definite scheme, and holds that the pace at which the change can be brought about must depend on circumstances; but they are prepared to consider enunciating the principle that the Defence of India must be to an increasing extent the concern of the Indian people. These decisions regarding the Army illustrate two points which emerge from the results of the Conference generally; for they show, on the one hand, that the Government is genuinely seeking to meet the practical needs of a responsible Indian Parliamentary system, and, on the other, that in seeking to devise a practical working Constitution they are resorting to devices which may undoubtedly prove cumbersome or even generate friction, but may prove triumphantly successful if carried out with good will on both sides, and a genuine desire to make a success of self-government in India.

On the question of the distribution of resources between the federal units and the centre—a subject which has proved a very thorny one—the report of the Committee

of the Conference dealing with this subject is clearly a compromise. The dispute has centred round the problem of direct taxation. The Princes are unwilling to give the Federation the right to impose an income tax, though they have yielded so far as to allow the corporation tax to be levied in their territories. But they are anxious that the Federation shall have at its disposal a substantial share of the proceeds of the existing income tax raised in British India—for clearly it is not a very safe plan to leave the Federal revenue almost entirely dependent on Customs duties. There has therefore been a rather inconclusive wrangle about figures. The problem is complicated by the need of supplying funds to those provinces which cannot possibly meet their expenditure. It is agreed that a sum must be made available to the centre from income tax for a period of years; but the details of a final system of Federal finance have yet to be worked out. This important practical matter, however, is one of rival claims between various parts of India, and does not seriously affect the issues involved between Britain and India as a whole.

Britain is, however, vitally interested in the important question of financial safeguards. In this connection the four chief points at issue have reference to the powers of the Governor-General to secure financial solvency; the powers of the Legislature over currency and exchange; the setting up of a Federal Reserve Bank, and the appointment of a financial advisor to the Governor-General. In regard to the first point, the existing power of certification is not to be embodied in the Constitution. But as the Governor-General is to have a "special responsibility" in financial matters, he is to have power to intervene "if methods are being pursued which would seriously prejudice the credit of India in the money markets of the world." Unless this situation arises, the responsibility of the Ministry as to means of raising the necessary revenue wherewith to balance expenditure in the responsible field, and allocating the programme of internal and external borrowing, is to be unfettered. If ever the Governor-General has occasion to intervene and exercise his power, his action will be in such a form as to make it clear that his Ministers bear no responsibility for it. His financial Advisor will have no executive power, and though his services should be available to the Finance Minister as well as to the Governor-General, he will be appointed by and responsible to the latter alone, though after the first appointment the selection will only be made after consultation with the Ministry.

Provision is also apparently to be made that no legislation is to be introduced into the Legislature affecting currency and exchange without the prior consent of the Governor-General. This provision was suggested two years ago, when the rupee ratio question was still a burning political issue. This controversy has now receded into the background, and when once a Reserve Bank is set up to control the currency, it is hard to see that a case can be made out for retaining this provision as a permanent feature of the Constitution. It remains to be seen what Parliament will do in regard to plans of this kind, which are clearly appropriate only to an "interim period."

As to the setting up of a Reserve Bank to deal with the management of currency and exchange, the Secretary of State has undertaken to see that a Bill is introduced into the Indian Legislature for the purpose as soon as possible. Warning has, however, been given that its successful establishment requires that the Indian Budgetary position shall be assured; that the short-term debt both in London and in India shall be reduced; that reserves shall be accumulated, and India's normal export surplus restored. Hard doctrine this, when it is remembered that New Zealand is setting up a Central Bank in the midst of a great depression, that the National Banks of the United States were set up in the midst of civil war and that the present Central Bank of Austria was created with foreign

assistance at a time when the country was in virtual bankruptcy. Clearly no one can foresee when these conditions will be fulfilled, and one of the chief difficulties of the Conference has been that if—as the British Government now maintain—Federation cannot be introduced until the Bank is established, these conditions may mean an indefinite postponement. The suggestion has been considered that, if in other respects the arrangements for Federation have been satisfactorily completed, some interim arrangement for the control of currency might be designed, but the British Government take the view that the difficulties and complications of such a plan would be very great. They have therefore in a sense shelved the question by insisting on the establishment of a Reserve Bank as a "condition precedent" of Federation, but have given an undertaking to India that if a situation arises when Federation is ready to be launched, but it is still not possible for the Bank to be set up, they will consult afresh with India's representatives as to the steps that should then be taken. In such circumstances the conditions previously mentioned may clearly have to be reconsidered, for it would be a great mistake to give India the impression that her constitutional progress may be held up indefinitely while we wait for the economic horizon to clear.

Indeed, this question of date is naturally one of the chief preoccupations of the people of India. Though a small section of Indian Nationalist opinion has hesitated to accept a plan of Federation which gives considerable influence to the representatives of Indian States, the majority have realised that this is the path of advance for India. But if Provincial Autonomy were to come into being far in advance of Federation, there is a real danger that the Separatist tendencies of the great areas of India might become so strong as to prevent Federation from coming into being. The Indian delegates, therefore, pressed not merely that the two parts of the Constitution should be in one and the same Act, but that a definite date should be fixed for the Federation. Sir Samuel Hoare has not seen his way to agree to this; but he has been able to reassure the Indian delegates first by convincing them that the British Government is really keen on securing Federation in India; secondly, by assuring them that he will do his utmost to persuade a sufficient number of Princes to take an early decision to take part (and by a sufficient number he means the inclusion of States covering at least half the population of Indian States); and finally, by his statement that the new autonomous constitution of the Provinces will not be brought into effect until the way is clear and it is possible to fix a time for launching the Federation.

The next step is the passage of the new Act. In his closing speech Lord Sankey intimated that some Indian representatives will be required again in London in connection with the sittings of a Joint Committee of Parliament in the early spring, the hope being that the Act will finally be passed before the summer recess of 1933. Clearly, there are still some rough surfaces to be smoothed out; but if Parliament approaches the problem in the same spirit as has been shown by the British members of the recent Conference, we may hope by that date to see a far-reaching and practicable Constitution upon the Statute Book. Then will come the great testing time not only for the British statesmen entrusted with the difficult task of putting it into effect, but also for the people of India itself.

The launching of the new Constitution in the form now contemplated will be the greatest constitutional experiment of modern times. The attempt to transfer responsibility by peaceful evolution from alien rulers to an Eastern people representing a substantial proportion of the world's population, and to implant Western ideas of democracy in an Asiatic country which is the most populous State in the world that is effectively administered as a single unit, is a unique event in history and one which will never be repeated. Its success or failure will profoundly affect the history of the world, and, in particular, will influence for good or ill the future relations, political and economic, as well as social, between the white and coloured races.

GOLD IN KENYA.

If Thomas Hardy were alive to-day to cast the world crisis into the shape of a drama in the manner of "The Dynasts," he would assuredly include among his scenes the session of the Kenya Legislature which was held on December 21st—four days before Christmas—at Nairobi. For there was something in this session that recalls the first act of a Greek tragedy, when the gods are tempting the hero to commit a transgression for which they will turn and rend him before the play is over. The situation is indeed strangely tragic. A world endowed with unprecedented potential wealth has lapsed into poverty because the peoples cannot agree to distribute and utilise their existing gold stocks wisely. While Paris and New York are glutted with more gold than they can do with, the other financial centres are starved of gold, with the result that many countries, including most parts of the British Empire—have been driven off the gold standard. The discovery of new supplies of gold is at a premium; and, at this juncture, the eagerly-awaited discovery—and possibly a grand discovery—is made in British territory, beneath the soil of a Native Reservation.

The dramatic irony is heightened by the fact that this territory happens, of all territories, to be Kenya Colony, where the treatment of the African by the white man has been particularly open to criticism, and most of all in the matter of the compulsory alienation of native land. For years there has been a struggle over this question in Kenya—a struggle which has been recognised, on both sides, as being momentous for the future of the whole of Tropical Africa. In Kenya itself the worst mischief has already been done. The best lands have been alienated wholesale, and the residual Native Reserves are manifestly inadequate. In its last stages, therefore, the struggle in Kenya has turned not so much upon local justice as upon the establishment of a principle which may at least stop the injustice in Kenya from going further and may possibly prevent a similar injustice from being committed in adjoining Tropical African territories.

This principle seemed at last to be embodied in the recent Native Land Trust Ordinance of Kenya Colony, which provided that no leases of land in Native Reserves should be granted except for purposes of direct benefit to the natives, and that, in every case in which such a grant was made, the natives affected should be compensated by the grant of an equivalent amount of land elsewhere. The consideration which inspired these stringent provisions was sound. It was the recognition that, in the abnormal situation created by the sudden wholesale introduction of the Western social system into primitive Africa, the sole hope of social salvation for the native African is his association with the land. So long as he retains his land he has a chance of keeping his feet economically until he has become socially acclimatised to the new conditions of life that are being introduced all around him. Divorce him from his land, and he is lost. This is palpably true and desperately important; yet the Kenya ordinance in which this truth has been given practical effect has not been strong enough to stand in the way of the white man's gold-hunger. The business of the Kenya Legislature last week was to approve an amendment to the Lands Trust Ordinance, whereby land in the Reserves may now be granted for mining purposes, with discretion to give compensation in cash and not in an equivalent amount of land elsewhere.

The amendment is sweeping in its terms: the white prospectors for gold in Native Reserves are empowered "to use and divert water, to dig trenches, to sink shafts, to cut down trees, to take fuel, to graze cattle, to erect buildings, to instal machinery, and to employ salaried personnel to any number for their own industrial purposes" (we quote the summary given by Major Ross in a letter published in the *Manchester Guardian* of December 27th). In other words, the amendment sanctions a regular invasion of native reserves in Kenya by the white man with his economic steam-roller, if gold is the object of the white man's quest. And the compensation to the native for his dispossession is to be paid not in real estate, but in money—which, as all the world knows, it is virtually impossible for natives unversed in western economic

methods to retain in their hands. And so we can see the end of this miserable story. By one channel or another, the monetary compensation that will be paid out of white men's pockets into native hands will flow out of native hands into white men's pockets again. In a few years, the dispossessed native will have been dispossessed without having anything left to show for it. And Kenya Colony will be cursed with a landless native proletariat.

These thoughts must have been in the mind of the Chief Native Commissioner, to whom (of all people) it fell to propose the amendment in the session of the Kenya Legislature on December 21st. At any rate, from the report of his speech on this occasion, a reader would judge that the Commissioner found his task unpalatable. He admitted that the Bill would not be popular with the natives, because it involved a conception of the use of land which was foreign to native ideas; he also admitted that no amount of compensation would induce the natives to agree to the leasing of land voluntarily.

"I am afraid," he said, "we shall have to hurt their feelings, wound their susceptibilities, and in some cases violate their most cherished and sacred traditions by moving natives from a piece of land on which they had the right to live and setting them up on another piece, the holders of which would have the right to eject them. We have to face these difficulties."

But why have we "to face these difficulties," or, in more candid language, to commit this injustice in violation of our pledged word? The Commissioner, in his speech, went on to state the British case for doing evil in the sight of the Lord. No doubt this was his official duty; but also, no doubt, the policy was not of his making.

"I can think of no other alternative," he went on to say, "unless we allow to lie undeveloped wealth that may provide prosperity to the country in which every single community can share. It is not with the greatest pleasure that I introduce something which will not be popular among the natives, whose interests it is my duty to protect; but the natives are going to be among the greatest gainers. They have opportunities of wealth and prosperity they have never known or imagined before, and, despite the inconvenience and the injury to their feelings and susceptibilities, it is certain that they will derive greater advantage from the proper conduct of this matter. In any case, we are treating them the same as any of His Majesty's subjects. If gold is found in their lands, that gold must be developed."

This passage makes strange reading. For if the Commissioner really thinks that the natives are going to be the greatest gainers, why is his conscience troubled about his duty to protect his protégés? And how can he really think this when he knows what will happen if the natives are given an evanescent monetary compensation for the alienation of their land? And how can a juridical equality of treatment as between natives and white men be represented as justice when the native is incomparably less capable than the white man of looking after his own economic interests? Juridical equality of treatment may be the opposite of equity when the parties are of unequal strength. In advancing the juridical argument, the poor Commissioner's drowning conscience is clutching at a

straw; and in the next sentence—"If gold is found in their lands, that gold must be developed"—he blurts out the commandment which is constraining him to play a part which is confessedly "not the greatest pleasure" to him.

The commandment is presented in the form of a truism, but actually it is a burning question. Is it really a maxim of British policy that it is impossible to procure gold at too high a price? The question was ventilated at question time in the House of Commons at Westminster on the day before the amendment to the Ordinance was introduced into the Legislature at Nairobi, and the statements that were elicited on this occasion from Sir Philip Cunliffe-Lister were not reassuring. He spoke of the sanctity of the Native Land Trust Ordinance as "a technical point"; he announced that, though the minerals belonged to the Crown, the right to mine them was going to be granted on leases—presumably to private white men. And he added that "nobody could tell when a goldfield had just been discovered how much land would be taken."

Is this the Government's last word? If we cannot touch their sense of equity, perhaps we may penetrate the armour of their conscience through the joint of superstition. It is a common superstition that gold is apt to carry a curse; and this superstition is an allegory of sober truth. If this gold in Kenya is mined without first assuring the economic welfare of the native dwellers, it will carry as heavy a curse as the treasure of the Niebelungs.

STERLING AND THE PRICE LEVEL.

In the past fifteen months which have followed Great Britain's suspension of the gold standard considerable controversy has arisen as to the influence which the depreciation of the pound has exercised on the level of international gold prices. The assertion has been made with assurance in many quarters that the depreciation of sterling has had a definitely deflationary effect in the "gold" world, as a result of (a) the restriction of British imports from "gold" countries; (b) the necessity imposed on producers in these countries of cutting their prices in order to retain some hold on the British market, for which there is no alternative; (c) the effect on markets generally of the lower prices in gold at which British exports are being sold; (d) the aggregate shrinkage of trade in the world as a result of exchange uncertainty and the inability of traders to shoulder the risks which it involves. Clearly there is much force in these considerations, and the conclusion has been freely drawn, not merely that a stabilisation of the pound would be helpful—as it obviously would—to international trade, but that a rise in the exchange value of sterling would have a stimulating effect upon international prices.

These questions are obviously of great importance as factors to which careful consideration must be given in determining British monetary policy in the future. The preceding considerations, however, are not the whole

of the story, for a moment's glance at the price curve will show that it came tumbling down long before Britain went off gold, and there is no reason to doubt that the causes which were operating prior to September last year have been operating since. The tendency to impose restrictions upon trade, for example, though no doubt encouraged by exchange depreciation, has been in full swing both before and after September, 1931. To the extent that the downward price movement is the result of previously existing causes, a continued depreciation of sterling may quite well be regarded as a natural consequence and not a cause of falling gold prices. It is indeed the only condition under which prices could be made relatively stable in this country.

Clearly, therefore, it is by no means easy to distinguish cause and effect, and it is certain that a narration of the bare facts of the case in the last fifteen months cannot answer the question. It will, however, be useful to those who are trying to seek for an answer to have before them the broad outline of the picture of what has happened in this period.

In the following diagram we have plotted four index numbers of prices. The two continuous lines (A1 and A2) represent, respectively, the Irving Fisher index of wholesale prices in the United States, and the complete *Economist* index of British wholesale prices. The dotted lines (B1 and B2) depict the course of (1) the fortnightly index number published in our columns of international "primary" gold prices (as the quotations for all but one of the eighteen commodities composed in the index are taken from the various American markets, the index can fairly be described as being one of United States prices), and (2) our index of sterling "primary" prices computed from a list of seventeen commodities, whereof all but one are imported, so that the list corresponds fairly closely to that forming the basis for our "gold" index.

DIAGRAM I.—BRITISH AND AMERICAN PRICE LEVELS
(September 18, 1931 = 100).

In the first five months covered by the chart the general level of sterling wholesale prices remained fairly stable around a point roughly 10 per cent. above the datum line, whereas the sterling price of primary products had, as was to be expected, a more pronounced upward tendency. On the other hand, American prices continued to fall from the middle of November onwards. In the spring and early summer of this year both sterling primary prices and sterling general prices fell sharply, and it was not until midsummer that all four curves showed a sharp recovery which lasted until September. Looking at the charts in a general way, we find, as is to be expected, that the divergence between the indices of primary prices has been greater than that of the indices of general prices, which contain in both cases a number of products whose price depends to a greater extent on internal factors than those commodities which are almost entirely products of international trade. Indeed, if we had taken retail prices, wages and other fixed charges into account, we should have arrived at indices which would have shown a much smaller divergence still.

Clearly, however, if the price level in gold and sterling countries could immediately adjust itself to a movement in the exchange, this "divergence" would correspond exactly to the exchange. In order to show how far this adjustment has occurred we have plotted in a second diagram curves showing the price ratio in the first instance of the general indices and in the second of primary products, and we have compared these curves with a third curve showing the movement of the exchange itself. In the case of all the curves of prices and price ratios the base (100) is September 18, 1931; sterling is plotted as a percentage of its gold parity. In studying the charts it should be appreciated that for considerations of space the full scale from zero upwards is not shown, so that, in consequence, fluctuations look more marked to the eye than they would do if presented on an untruncated diagram.

DIAGRAM II.—RATIOS OF AMERICAN TO BRITISH PRICE LEVELS
(September 18, 1931 = 100), and sterling's percentage of parity.

As one would expect, the price ratio for international products has followed sterling much more closely than the price ratio of the general indices. Both curves, and in particular that for primary products, show, however, some interesting divergencies from the exchange curve. In the first place, during last winter the exchange curve showed a much more marked movement than was reflected immediately in the price movements. In other words, sterling prices did not jump, nor did gold prices drop to the full extent of the exchange depreciation. This fact made it possible for the exchange to recover considerably over the turn of the year, and in January and February—a movement largely brought about by the repatriation of capital—without altering the trend of prices. In the spring, however, the continued improvement of sterling was accompanied by a fresh fall of sterling prices which narrowed the gap between gold and British prices. From April onwards the sterling exchange has shown a continuous and almost steady depreciation. General prices have shown a slight, but not very marked, tendency to adjust themselves to this trend, while primary prices have adjusted themselves fairly closely, with, however, an important variation between July and October. From June onwards, indeed, there is one of the most interesting features of the whole chart, namely, a sharp rise of prices, particularly in primary products, that took place in the two months following the conclusion of the Lausanne Conference. This movement began a little earlier in the United States than in Great Britain and seems definitely to have originated in the "gold" area. It was followed by an even sharper rise in sterling prices, but there was no corresponding movement in the exchange, which continued to sag owing, partly, to the fact that the normal seasonal pressure on sterling began somewhat early in 1932, but even more to the effect of the short-lived activity in Wall Street during the early months of the summer. This activity, coinciding with a reduction of interest in Britain by our War Loan Conversion, attracted British and other funds to the United States, and thus put a strain upon the exchange.

From the various phases of the situation thus depicted we find little evidence to support the conclusion either that the sterling exchange has been dominated by the ratio

between British and American prices or that the movements of gold prices have been consistently conditioned by the exchange value of the pound. Beyond doubt the whole influence of a general situation of currency instability has been to restrict trade and so make for depression of prices. Nevertheless, the discrepancies between the curves of the United States prices and of sterling exchange are very considerable. Just as it would be a mistake to deduce from the present relationship between the sterling exchange and the price ratio A1:A2 that the pound is so undervalued that it must recover, irrespective of such factors as capital movements or the current balance of payments, so, we would suggest, is it unsafe to infer that the British price level has governed that of the United States. The latter, it seems to us, has acted with a substantial degree of autonomy and has been followed rather than dictated by British prices. In other words, if the depreciation of sterling has been an influence tending to depress world prices, it is certainly not the only or even the predominant cause. If this be so, it is unreasonable to assume that the stabilisation of the pound is all that is required to turn the economic tide.

THE OUTLOOK FOR THE "GRID."

With the Central Electricity Board starting to function in the New Year as a wholesale trader in electrical energy, particular interest attaches to certain observations of the Electricity Commissioners on the outlook for the national "grid" scheme which are contained in their recently issued Report.* The Commissioners allude to the wide differences in various parts of the country in the degree of electricity development and in the nature and extent of the facilities offered to existing and potential consumers. Not even in the most developed areas can it be said that the saturation point of economic electrical development is yet in sight of attainment. The Commissioners suggest that all electrical supply undertakings should take an early opportunity of reviewing their policy, organisation and methods with the object of providing the general public with a better electrical service. Whether the national "grid" scheme is to yield in practice the advantages claimed for it or whether it is to prove an expensive white elephant depends fundamentally upon the distribution service of the electricity supply industry. Unfortunately, in the matter of salesmanship, electricity is far behind an industry even so Victorian as gas.

The Report of the Electricity Commissioners deals only with the twelve months ending March 31, 1932. In this period, in spite of a decline of 104 million units in output in Central Scotland and North-East England, the electricity supply industry was able to show a net increase in output of 537 million units, or nearly 5 per cent., as compared with the output of the previous twelve months. Excluding the depressed areas above mentioned, the gross increase in output would have amounted to 6.9 per cent. Detailed figures for the period under review are not available, but it is clear that the slowing down in the rate of growth in output was due entirely to the further decline in the sales of electricity for power purposes.

The past decade has witnessed a remarkable expansion of the electricity supply industry. The annual sales of electricity by authorised undertakings have increased from 3,512 million units to 9,074 million units; that is, an average increase of 556 million units per annum. The Electricity Commissioners point out in their Report that the total output of the electricity supply industry in 1931-32, namely, 11,609 million units generated, accords very closely with their estimate of 11,500 million units, forecast by the original curve of growth for the country as a whole, which they prepared in 1926 as a preliminary to the "grid" scheme. On the other hand, the total output has not attained to the aggregate shown by the sum of the individual curves of growth adopted in connection with each of the regional schemes. In the case of the regional schemes for the whole of England and Wales and the industrial belt of Central Scotland covering nearly 98 per cent. of the population and electricity output in

SKANDINAVISKA KREDITAKTIEBOLAGET

Great Britain, the actual realised output fell short of the forecast by about 10 per cent. The approach of a period of acute industrial depression could not have been foreseen when these estimates were made, but, trade depression apart, there is scope for much greater expansion in the future. The Electricity Commissioners estimate that, with the resources of centralised generation behind the supply industry and with the fullest co-operation of the distribution companies, the annual sales of electricity by the end of next decade should show an increase of the order of 10,000 million units over the present figures. To achieve this expansion the national "grid" scheme will have to be exploited to the utmost.

In order to enable a proper measure to be taken of the "grid" scheme, it is necessary to appreciate the fundamental nature of electricity supply costs. Considering the costs of generation and distribution as a whole, it may be broadly stated that the total cost of supply is made up as to 47½ per cent. by capital charges for interest, reserves, depreciation and sinking funds; 40 per cent. for maintenance, rates, wages and salaries; and 12½ per cent. for the fuel bill. The significant point is that only the last item is directly variable with changes in the number of units sold. The other portion of costs is a function of the installed capacity rather than of units sold, so that any increases in sales of current not necessitating additional generating plant can be made economically at a very low figure. Correspondingly, any additions to capital plant not directly associated with increases in load imply an increase in the average cost per unit sold.

Broadly speaking, the activities of the Electricity Board have so far resulted in the creation of an additional burden on the electricity supply industry represented by the capital charges on the cost of construction of the grid and associated developments, and by the general operative and administrative expenses of the Board itself. As compensation for this additional burden, certain advantages should accrue to the industry from the operations of the Board. In the first place, an economy in capital expenditure, with a corresponding reduction in the fixed charges per kilowatt, is expected on the following grounds:—(1) Through the use only of the largest and most efficient plants to generate the anticipated load, the capital cost per kilowatt installed will be reduced; (2) through the co-ordination of the system of generation there will be a substantial reduction in the aggregate amount of spare plant needed to cope with the peak load. Secondly, the concentration of the load on the selected stations is expected to lead to substantial reductions in operating costs apart from capital charges, and, by removing the technical problems of generation from the distribution authorities, it will enable them to devote themselves more fully to the problem of improvements in the distribution field. Finally, the general availability of electricity supply will be increased, and this should facilitate the exploitation of undeveloped areas.

There can be no question but that these advantages should ultimately outweigh the additional charges implied by the construction of the "grid." Unless, however, the distribution authorities realise to the full their responsibilities for encouraging new business and developing sales to "fill up the grid," the potential asset may prove to be a temporary liability. The advantages claimed for the "grid" are, in fact, based on the assumption of an increase in demand. The benefits from a reduction in spare plant

capacity can, for example, only be realised as demand develops up to a point where the present surplus plant can be put into operation. The nature of the "grid" tariff itself indicates quite clearly that advantages will only accrue when sales develop and the load factor is improved. For example, under the proposed two-part tariff established for the Mid-East England and Central Scotland areas a company with a maximum demand of 8,000 kilowatts and sales of 25,000,000 units would pay £47,375 to the Central Board for its supplies, representing .4548d. per unit. If, as a result of sales efforts, the company was able to induce its consumers to use their supply for longer hours without increasing the maximum demand, it would pay only .186d. per unit for the additional units sold. Similarly, if by the development of rural electrification and domestic utilisation of electrical energy the sales of energy were increased to 35,000,000 units with an increase of only 2,000 kilowatts in the maximum demand, the additional supply would cost the undertaking .354d. per unit. Such an increase in sales would also benefit the distribution company by enabling the capital charges on the distribution system itself to be spread over a larger volume of business.

If the success or otherwise of the national "grid" depends upon an upswing in consumption above the previous rate of growth, the problem of salesmanship must command the full attention of the electricity supply industry. There is enormous scope for development in methods of educative propaganda to discover new uses for electricity and to encourage existing consumers to take more current. Industry still offers a wide field for electrification. Rural electrification has not as yet been developed to any appreciable degree, while, compared with American standards, the domestic utilisation of electricity in this country is on an absurdly low level, not only in the number of units sold per consumer, but also in the actual proportion of dwellings connected. On the technical side, as the Electricity Commissioners point out, it is obviously desirable that the co-ordinated system of generation at a standard frequency under the direction of the Central Board should find its counterpart in a standardised system of distribution, at any rate in the undertakings which will derive their bulk supplies directly or indirectly from the "grid." The official statistics of the Commissioners for 1930-31 show that 253 undertakings were distributing alternating current only, 288 both alternating and direct current, and 121 direct current only, while there were as many as 45 different voltages, between the range of 100 and 480 volts, at which supplies were being given to consumers in different parts of the country. Great advantages would undoubtedly accrue not only to the supply companies, but also to manufacturers of electrical equipment and apparatus by a standardised system of distribution, with, say, two standard voltages for supplies to consumers. The Electricity Commissioners are advocating standardisation on the basis of 3-phase 50-cycle alternating current, with declared voltages of 230 volts (single phase) and 400 volts (three-phase), and we hope that their plea for this and other essentials of efficient salesmanship will be seriously considered by the supply industry. The efficiency of the supply companies in the matter of distribution in the next twelve months will largely determine the success of the great national electrification scheme.

CAPITAL ISSUES IN 1932.

THE history of the new capital market in London during 1932 falls into three phases, all of which have one factor in common—an extreme dearth, as might be expected in the depth of a world-wide depression, of speculative enterprise. The first phase, which lasted from January until the end of June, was characterised by successive reductions of Bank rate; the "financial crisis" passed into the stage of "economic stagnation," and riskless borrowing became possible at steadily cheapening rates. During that period, in contrast to the complete paralysis of the last quarter of 1931, a limited number of first-class bond

issues were successfully floated. This modest and selective revival of new financing, however, was abruptly terminated at the beginning of July by the British Government's announcement of a conversion issue to repay the 5 per cent. War Loan; and the next three months formed a phase in which the whole capital market was monopolised by this gigantic and successful operation. The third phase, from October onwards, witnessed some relaxation of the "ban" on new issues, but, whether or not complete decontrol would have resulted in appreciably greater activity, the crop of new issues in the fourth quarter of the year was not impressive.

The total figure of offers for conversion purposes in 1932 amounted to no less than £2,511 millions, as compared with £12 millions in 1931. A résumé of the British Government's refinancing is given below:—

BRITISH GOVERNMENT CONVERSIONS IN 1932.

Month of Offer, 1932.	Nature of Offer.	Amount Converted, £
March	Conversion of 4½% Treasury Bonds into 4½% Conversion Loan	116,467,382
July	3½% War Loan to repay 5% War Loan	1,920,000,000
October	2% Treasury Bonds at par	150,000,000
November	3% Conversion Loan at 97½%	292,500,000
Total converted by British Government		2,478,967,382

In a market dominated by these immense operations, which are excluded from our statistics of borrowing, the total of capital issues involving "new" money is comparatively insignificant. As will be seen from the following summary, the total new capital raised in 1932 amounted to approximately £189 millions, or £87 millions more than in the previous year; but £103 millions of the aggregate was represented by British Government borrowing:—

NEW CAPITAL ISSUES. CLASSES OF BORROWERS. (£ million.)

	Total.	British Government.	Foreign and Colonial Govt.	British Colonial and Foreign Corpns.	Foreign Railways.	Mines, Finance, and Exploration.	Rubber and Oil.	Balance (Mainly Home Industry).
Total whole year, 1927	355.1	66.0	67.5	37.9	5.4	33.2	11.0	134.1
Total whole year, 1928	369.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2
Total whole year, 1929	285.2	65.4	30.0	12.1	7.8	41.5	6.4	122.0
Total whole year, 1930	267.8	65.6	70.3	44.7	7.6	11.5	9.3	58.8
Total whole year, 1931	102.1	10.7	32.2	8.0	2.9	12.2	0.2	35.9
1932—1st quarter	17.7	Dr. 3.0	4.1	9.8	Nil	0.5	0.4	5.9
1932—2nd quarter	145.9	106.2	12.0	17.2	Nil	...	...	10.5
1932—3rd quarter	Dr. 1.0	Dr. 1.5	...	...	...	...	...	0.5
1932—4th quarter	26.3	1.1	7.7	1.9	...	2.2	0.4	13.0
Total whole year, 1932	188.9	102.8	23.8	28.9	...	2.7	0.8	29.9

The figure of British Government borrowing is made up of £107.6 millions, being the cash received from the issue of 3 per cent. Treasury Bonds on May 7th, less an excess of £4,850,000 in repayments over receipts on account of National Savings Certificates. The destination of the £189 millions of new capital is analysed below:—

DESTINATION OF NEW CAPITAL.

	1913.	1928.	1929.	1930.	1931.	1932.
United Kingdom—Government	Nil	83,861,000	65,400,000	65,640,000	10,700,000	102,739,200
Other	35,951,200	179,722,100	132,626,500	105,006,100	43,802,000	60,332,800
British Possessions—Government	35,951,200	263,583,100	198,026,500	170,646,100	54,502,000	163,072,000

Grand total	196,537,000	369,058,100	285,239,400	267,800,700	102,144,300	188,910,000

With foreign borrowing virtually out of the picture and loans to the Dominions confined almost entirely to Governments and municipalities, it is not surprising to find that an analysis of the nature of the year's financing

should reveal an even greater tendency towards "absence of risk" than in 1931:—

NATURE OF BORROWING.

	Debtentures, Bonds, &c.	Preference Stocks and Shares.	Ordinary Stocks and Shares.	Total.
Year 1927	228,958,000	36,836,600	89,371,400	355,166,000
" 1928	212,817,900	45,062,600	111,177,600	369,058,100
" 1929	137,670,300	31,543,400	116,025,700	285,239,400
" 1930	230,364,800	15,824,600	22,090,100	268,279,500
" 1931	74,935,600	6,911,900	20,296,800	102,144,300
" 1932	170,172,800	12,773,800	5,963,400	188,910,000

Apart from bonds, the new capital raised amounted to less than £19 millions, as compared with £27 millions in 1931. The industrial entrepreneur had little temptation or encouragement to approach the market, even after the Government's conversion operations had been got out of the way. The circumscribed scope of new financing in 1932 is brought out even more clearly in the detailed analysis which we give below:—

Description.	Whole Year, 1931.	Year 1932.		
		Three Quarters to Sept. 30.	Fourth Quarter.	Total, Whole Year, 1932.
British Government Loans	10,700,000	101,639,200	1,100,000	102,739,200
Dominion and Colonial Government Loans	30,571,600	16,041,200	7,720,000	23,761,200
Foreign Government Loans	1,740,000	Nil	Nil	Nil
British Corporations, County and Public Board Loans	8,007,300	26,971,800	1,860,000	28,831,800
Colonial Corporations and Public Board Loans	Nil	117,200	Nil	117,200
Foreign Corporations	Nil	Nil	Nil	Nil
British Railways	Nil	3,412,500	4,750,000	8,162,500
Colonial Railways	Nil	60,000	Nil	60,000
Foreign Railways	2,910,000	Nil	Nil	Nil
Australasian Mines	Nil	Nil	Nil	Nil
South African Mines	371,900	Nil	Nil	Nil
Other Mines	8,963,500	541,400	185,000	726,400

Total	102,144,400	162,674,800	26,235,200	188,910,000

Bearing in mind the fact that the third quarter of the year, except for the War Loan conversion scheme, was a complete blank in the capital market, it will be observed how limited was the revival of new financing after the partial removal of the embargo at the beginning of October. Whereas, in the first half of the year, nine Colonial Government loans accounted for £16 millions in all, the fourth quarter witnessed only an issue of £8 millions of 3½ per cent. stock by the Union of South Africa, though mention should be also made of the £12 millions short-dated 3½ per cent. issue by the Commonwealth of Australia for conversion purposes. Similarly, only one new issue was made in the last quarter of the year by a British public board, namely, £1,860,000 of 3 per cent. Metropolitan Water Board E. Stock, whereas borrowings by corporations and public bodies amounted in the first quarter to nearly £10 millions, and in the second quarter to over £17 millions. For the rest, it will be seen that the only important sums raised during the year were £8 millions on account of British railways, whereof the Southern Railway took £4,750,000 in 4 per cent. debenture stock at par during October, and the Underground a total of £3,412,500 in 5 per cent. stock at 97½ in two issues during March; £6 millions raised by various electricity supply companies; and £10 millions spread over the miscellaneous group. In the last-named category, offers of shares were confined in the main to shareholders only and, with the exception of an issue of £2 millions in 6½ per cent. cumulative preference shares by Allied Newspapers, the flotations (excluding those wholly or mainly

for conversion purposes) were for comparatively small amounts.

In the next table we show the current prices, as compared with the issue price, of the principal securities offered for public subscription during the year:—

Month of Issue.	Name and Description.	Nominal Amount.	Issue Price.	Price, Dec. 28 1932.
1932.		£		
January	Uganda 5% Ins. Stk., 1951-71	1,600,000	96	113
February	Nyasaland 4½% Guar. Stk., 1952-72	2,000,000	97½	112
February	Central Electricity 5%, 1955-75	7,000,000	95	112
March	Metropolitan District Rly. 5% Stk., 1985-95	1,500,000	97½	113½
March	Metropolitan Railway 5% Stk., 1957-62	2,000,000	97½	113½
March	Port of London 5% Stk., 1950-70	2,000,000	101½	115
March	Lever Brothers 5% Deb. Stk., 1950-70	3,440,000	98	109½
April	London and Home Counties Joint Electricity 5% Stk., 1955-75	1,500,000	101½	114
April	New Zealand Govt. 5% Stk., 1956-71	5,000,000	98½	113
April	Agricultural Mortgage Corporation 4½% Deb. Stk., 1961-91	2,000,000	95	110
April	Bristol Corporation 4½% Stk., 1952-62	2,250,000	100½	111½
April	Government of India 5% Stk., 1942-47	10,000,000	95	109
May	3% Treasury Bonds	110,000,000	(a)	102
May	Hull Corporation 4½% Stk., 1952-72	1,000,000	100½	109
May	British Columbia 5% Stk., 1957-67	1,500,000	99	107½
May	Edmundson's Electricity 6% Cum. Pref.	1,250,000	21/-	25/9
June	Allied Newspapers 6½% Cum. Pref. £1	2,000,000	Par	22/-
June	Central Electricity 4½% Stk., 1957-62	10,000,000	96	107
October	2% Treasury Bonds, 1935-38 (i)	150,000,000	Par	99
October	Australia 3½% Stk., 1936-37 (i)	12,051,877	97½	98½
October	Union of South Africa 3½% Stk., 1953-73	8,000,000	96½	94½
October	Southern Rly. 4% Deb., 1962-67	4,750,000	Par	100
November	3% Conversion Loan, 1948-53	300,000,000	97½	96½
November	Met. Water Board E. Stk., 3%	2,000,000	93	93
December	Midland Counties Electric 4% Deb.	700,000	Par	102

(a) Issued by tender. Price accepted, £97 15s. 1-97d.

(i) For conversion purposes. || £6,000,000 for conversion purposes.

As a result of the progressive fall in the long-term rate of interest, stimulated as it was by the success of the War Loan conversion scheme, subscribers to bonds placed in the first half of the year have had the satisfaction of seeing their securities rise to a substantial premium.

In the final table we give our usual analysis of the cash involved in issues by Stock Exchange introduction:—

CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION.

	United Kingdom.	Colonies.	Abroad.	Total.
Year 1931—				
1st Quarter	£ 2,174,200	£ 632,900	£ Nil	£ 2,807,100
2nd Quarter	1,121,600	2,366,500	581,900	4,069,800
3rd Quarter	1,289,500	Nil	265,500	1,555,000
4th Quarter	Nil	451,500	Nil	451,500
Total Year 1931	4,585,300	3,450,700	847,500	8,883,500
Year 1932—				
1st Quarter	473,800	96,500	Nil	570,300
2nd Quarter	4,866,500	1,515,100	Nil	6,381,600
3rd Quarter	2,200,000	Nil	Nil	2,200,000
4th Quarter	5,851,000	550,000	Nil	6,401,000
Total Year 1932	13,391,300	2,161,600	Nil	15,552,900

In this by-path to the new capital market a distinct revival of activity is to be seen as compared with the stagnation of the winter of 1931-32. Yet, when the picture of the year is viewed as a whole, it is difficult not to feel a little regret that, whereas up to June a market in new bonds was developing satisfactorily, even though the long-term rate of interest at that time could only be regarded as moderately low, the dramatic change from moderate to extremely low rates of interest brought about by the War Loan conversion success was not followed during the autumn by any such revival of refinancing by high-class or other borrowers as would encourage hopes that the benefit of cheap interest rates was filtering down to industry. For this, the Treasury policy of retaining, even in partial form, an embargo on new issues under conditions when complete freedom would have been fully warranted, cannot escape some responsibility.

THE POLITICS OF IRAK OIL.

(BY A CORRESPONDENT.)

IN 1926 King Feisal opened the petroleum works in connection with the exploitation of the oil reserves in the Karkur district in Irak. The works belonged to a Turkish company which, although it had undertaken the enterprise on its own behalf, obtained most of its backing from German interests. At about the same time the King inaugurated the development of a second oil reserve in Kankin, which

is adjacent to the Persian Gulf. In both these celebrations of five years ago the King of Irak dwelt with great emphasis upon the significance of oil to his under-developed land, and envisaged the laying of pipe lines to connect the oil reserves with the Mediterranean. Since that date a complex chapter of diplomatic history has been written.

The question facing the various interested Governments was not merely who should exploit the oil and operate the wells, but which routes the pipe lines should take on their way to their terminus on the Mediterranean. It is now common knowledge that the Quai d'Orsay had very strong views as to the route to be prescribed, and the question whether the route should pass purely French or purely British territory, or both, formed the subject of more than one strongly worded memorandum. The Dutch Government was a not disinterested observer in that diplomatic battle, while German interests were equally concerned—not without a strong political *arrière pensée* reminiscent of the "Berlin-Baghdad" ambitions of pre-war days. In the past four or five years the battle waged mainly around the question of the allotment of shares in the company which was to become the ultimate concessionaire of the Mosul petroleum. In 1927 a deadlock was reached; British, French and Dutch interests refused to co-operate with one another in the acquisition of the concession. The Turkish Petroleum Company, which was then regarded as the almost certain recipient of the concession, found itself in a dilemma. It was a British concern, but was financed largely by American interests. In the end, a unity of purpose was temporarily secured. In June, 1929, the Turkish Petroleum Company changed its name to the Irak Petroleum Company, Limited, and that company became the final recipient of the concession, which was originally signed on March 14, 1925, between the Government of Irak and the Turkish Petroleum Company.

The final agreement between the Irak Petroleum Company and the Iraqi Government was signed in March, 1931. Subsequently there was a very full debate in the French Chamber of Deputies as to the rôle played by the French Government and French capital in the final outcome of the concession. The debate revealed that French diplomacy had managed to secure two points:—

- (1) The pipe line was to pass through French, as well as through British territory; and
- (2) The line was to have two termini, one of them at Tripoli.

The French Government acquired a considerable interest financially in the Compagnie Française de Pétroleum participating in the concession.

It is obvious that it was not economic interests alone that prompted the French Government to secure its due share in the concession. The navy authorities had insisted upon oil-filling facilities for Mediterranean ships in a Mediterranean naval centre under French control. To this end a political bargain was struck with England; for England was anxious to introduce Irak in 1932 as a member of the League of Nations, and this required a two-thirds majority which, of course, it was impossible to secure without the wholehearted support of France and her friends in the League.

Yet, although on the face of it, the two pipe lines are to enjoy the same status, there is no question which line is destined to become the most powerful instrument for development in Near-Eastern countries. This will unquestionably be the one drawn to Haifa, and there is more than one reason for its predominant importance. First, unlike Tripoli, which is a rather obscure and undeveloped naval centre on the Syrian coast, Haifa, as the only modern harbour on the Syrian and Palestine coast, is destined to become a serious competitor alike to Beirut in the North and to Alexandria in the South. It will offer anchoring facilities to ships of all sizes and denominations, and its petroleum installation will be perfect and up to date. Secondly, the pipe line will run parallel to the Baghdad-Haifa Railway, for which the preliminary survey operations have already been completed. Again, in the case of Haifa, both the ends of the pipe line, the beginning as well as the terminus, will be under British control, a factor of no mean import in Oriental lands, where treaties, to mean anything, must invariably be backed by authority.

Last, but not least, the speedy development of Palestine, agriculturally as well as industrially, would tend to enhance the value of Haifa as a clearing house for much of the trade between Europe and the Middle East.

The drawing of the pipe line between Mosul and Haifa was the subject of a very elaborate concession which was signed in Jerusalem on January 5, 1931, between the then High Commissioner for Palestine, Sir John Chancellor, and one of the directors of the company, Mr J. Skliros. A convention, valid for 70 years, gave the company a number of important concessions, which have been made the subject of great controversy in both the Arabic and the Hebrew Press of Palestine. It freed the company of any taxation on products, whether in a crude state, or in any other form of derivatives; it exempted it from all Customs duties and from import dues upon all its equipment and materials, etc., and promised facilities by the Government for the importation of its plant. The concession further promised a number of general facilities and exemptions in matters of State and private lands, which, it was provided, would be expropriated in the interests of the company should this be deemed necessary.

The Irak Petroleum Company has proceeded with the preliminary survey of the land to be crossed by the proposed pipe line. Engineers and survey parties have been at work for the last twelve months or so; an elaborate installation has been built in Haifa by both the Shell Company of Palestine and the Vacuum Oil Company, with huge drums and filling instruments from which the oil from Mosul will be loaded upon the ships waiting at anchor to take it to European ports. But the success of the enterprise, which may yet have serious political repercussions, does not depend only upon the very fine quality of the oil expected to be pumped from the wells. A successful issue of the enterprise depends, firstly, upon a number of world marketing conditions over which neither the company nor the Government of Irak can have any control; and, secondly, on the foresight and understanding with which the Irak Petroleum Company utilises the powers of development which it has secured, but which have been the subject of much hostile criticism in the Irak Parliament.

Notes of the Week.

The Holiday Interregnum.—In one sense it may be said that the world has been able to avail itself of the traditional Christmas break in financial and industrial activity with somewhat better heart than was the case a year ago. The Christmastide of 1931 was clouded not only by the general depression, but by a general sense of apprehension, accentuated by the first shock of the depreciation of sterling and other currencies, that the fabric of ordered civilisation might be in the initial phase of a disintegration whose end no man could foresee. This at least may be placed to the credit of 1932, that, though the depression itself shows little sign of lifting, civilisation has given reassuring proof of its "toughness" and ability to withstand an unparalleled economic strain. We shall have further opportunity to evaluate the record of the past year and to measure the tasks for the future. Here we would merely observe that consolation is to be found in the fact that even though "hopes were dupes," the worst fears were not realised; and in consequence there are signs even in the hardest hit centres of the depression that public opinion is psychologically steadier and less apt to be swayed by emotional foreboding than was the case a year ago. At the same time there can rarely have been a mid-winter recess in which so many major unsolved world problems were temporarily laid aside in favour of a brief season of relaxation. Manchuria, disarmament, war debts, the future of the world's international monetary standard, fiscal policy, and, above all, the reabsorption into productive activity of 30 million unemployed in the world's chief manufacturing countries—all these sombre issues loom large in the New Year. In addition, news published during the holidays strengthens the impression that, as was to be expected, the protracted depression is bringing into being a crop of formidable budgetary

problems. Apart from the astronomical figures of the accumulating American deficit, the debit balance of the French Budget, excluding a large railway deficit, is now put at 17 milliard francs; and Italy reports a deficit of over 3,000 million lire. Whoever may be destined to be the recipients of happiness at the hands of Fortune in 1933, Finance Ministers, it is clear, are unlikely to be in that favoured company.

South Africa and the Gold Standard.—During the past few days events in South Africa have moved fast. As soon as it became known that Mr Roos, the former leader of the Transvaal Nationalists was re-entering politics in opposition to his former party's policy of maintaining the gold standard, the conclusion was widely drawn that the Government's days were numbered and that within a few weeks the South African pound would undergo a substantial depreciation. Right or wrong, this conclusion naturally gave rise to a serious flight from the South African pound, and it is reported that during the week before Christmas several million pounds left the country. On Tuesday last, at the conclusion of the Cabinet meeting held during the holidays, it was announced that, in order to check the hoarding and export of sovereigns, the Government, acting under its emergency powers, had relieved the Reserve Bank of its obligation to redeem its notes in gold coin. The effects of this step on the future value of the South African pound remain obscure. Following the ambiguous official pronouncement that the Union is now upon a "regulated gold exchange standard" a further complication was quickly added in the shape of an announcement by the Chamber of Mines that it now considers its agreement with the Reserve Bank at an end and that it proposes in future to sell its gold to the highest bidder. If the Government permits the free sale and export of gold, and the free sale of exchange drawn thereagainst, the exchange value of the South African pound will inevitably fall to a level at which all demands for foreign exchange can be satisfied. If, on the other hand, the Government uses its emergency powers to compel the mines to sell only to the Reserve Bank, the responsibility for the foreign exchange policy of the country will devolve upon that institution. In any case, if the exchange is allowed to fall to a level below parity—and it seems unlikely that this can be avoided—it will be interesting to see whether the Government will permit the mines to obtain or retain the whole of the benefit of the gold premium. At the time of writing, it is officially admitted that South Africa is "off the gold standard" and the Government is said to be considering the rival policies of allowing the exchange to slide or of devaluing to a new gold parity. Meanwhile, South African pounds are being unofficially quoted in London at a heavy discount against gold, and the commercial banks in Africa are said to be offering exchange on a similar basis. But the Reserve Bank has not yet shown its hand. If it attempts to maintain its sales of exchange at gold parity, it will be compelled to introduce a strict rationing system. In view of the experiences of a year ago, the efficacy of such a policy of exchange restriction as a means of preventing the outflow of capital is doubtful. In view of the large export surplus (including gold), the banks could perhaps finance a capital outflow up to a figure of some £2,000,000 per month for a considerable time without serious difficulty; but if the outflow should exceed this figure, it is to be feared that the consequent depletion of bank deposits would involve a continuation of a state of acute strain. The political excitement that is accompanying the financial crisis makes it evident that such a state of affairs would not be tolerated.

Canada and Russian Trade.—While Mr Bennett has been in London, for reasons undisclosed, but connected, according to rumour, with a desire on his part to secure a British embargo on timber imports from Russia, and, if possible, a loan in the London market, a situation has arisen in Canada which is likely to tax the Canadian Premier's diplomacy. A Winnipeg syndicate is reported

to have negotiated an agreement with the Soviet Government to barter 100,000 head of cattle and 10,000 tons of hides in exchange for Russian petroleum and anthracite. The terms of sale are apparently highly attractive to the Canadian cattlemen; and though Mr Bennett, from mid-Atlantic, has stated in reply to a wireless inquiry from London that "the report is obviously without foundation," the Canadian Cabinet, to judge from a pronouncement by the Minister of Agriculture, seems to have been actively occupied with this deal and to favour its conclusion. This would involve not merely the repeal of the present Canadian embargo on imports of Russian anthracite, but also, it is understood, an arrangement whereby, until the transaction was completed, Russian bills would be discounted by the Canadian banks on the strength of the Canadian Government's guarantee to the extent of 60 per cent. of their face value. If Mr Bennett sanctions this scheme, what becomes of his famous fulminations against Bolshevism and his demands for the suppression of the Anglo-Russian Trade Agreement? But if he vetoes it he will do so in defiance of a tremendous pressure from the agricultural interests, which, if denied, might go far to wreck his Government.

A Timely Warning to Belgrade.—At the end of last week, there was published in the daily press of this country a letter, dealing with the present situation in Yugoslavia, which is authoritative both by reason of what it says and in virtue of its signatories. The list of signatories contains the names of distinguished Englishmen and Englishwomen of many different parties and points of view. They are all authorities on international affairs; many of them have an intimate knowledge of Yugoslavia; some of them—for example, Sir Arthur Evans and Professor Seton-Watson—are old and tried friends of the Yugoslav cause; not one of them is its enemy. Accordingly, we hope that the very serious warning which this letter conveys—a warning which is not the less impressive for the friendliness and the moderation of the language in which it is expressed—will be taken to heart by the present Dictatorship at Belgrade. The letter gives a masterly review of all the factors that have gone to the making of the present acute crisis—the difference in cultural tradition between the "Orthodox" Serbs and the "Occidental" Croats and Slovenes; the advantage taken by the Serbs of the military preponderance with which they issued from the war in order to ride roughshod over a situation which was the outcome of more than a thousand years of history; their deliberate effacement of historic frontiers and their policy of filling administrative posts with Serb officials, from top to bottom of the hierarchy, in the non-Serb parts of the present United Kingdom of the Serbs, Croats and Slovenes. The inevitable opposition which this policy has aroused has latterly been met by a repression which has run over into sheer terrorism.

"The press is gagged. Official espionage is general. Police methods have reached such a pitch that, following on the successive murders of, or attempts to murder, prominent leaders of the Opposition parties, the belief, whether justified or not—and it must be hard to substantiate it—is universally shared throughout a large part of the country that guardians of public security are in league with assassins."

Considering the information that has come to light, since the war, about the relation between Serb terrorists and murder-gangs and individual Serbian Ministers of State in the pre-war years, the passage from the letter which we have just quoted is particularly disquieting. The writers go on to point out that the present opposition to the Belgrade Dictatorship is not confined to the Croats but includes the Bosnian Moslems and also those Orthodox Serbs who before the war were Hungarian or (in Dalmatia) Austrian subjects. In fact, the recent armed uprising in certain parts of Croatia and Slavonia has been the work of Serb bands. The writers plead for a federal solution of the Yugoslav problem, and rightly demand that whatever system of regional devolution satisfies the Western Yugoslavs shall also be applied in Macedonia. The alternative to a federal solution which they foresee is "absolute disruption"; and they hint at the danger

for European peace which this Yugoslav catastrophe would involve. They conclude by urging the British, French, Czechoslovak and Roumanian Governments to use their friendly offices at Belgrade in order to persuade the present masters of Yugoslavia to withdraw, while there is still time, from a position which is manifestly untenable. We sincerely hope that, in all quarters concerned, this letter will have the influence that it deserves. Nobody wishes to see Yugoslavia go to pieces; but the world cannot help the dictators at Belgrade unless they come to their senses sufficiently to help themselves.

Japanese Embarrassments.—While the issue between Japan and the rest of the world is momentarily in abeyance during the recess at Geneva, Japan's embarrassments are on the increase in Manchuria and at home. The Japanese Press campaign for anticipating a hypothetical Chinese military offensive in Manchuria by a Japanese occupation of Jehol—the fourth of the four eastern provinces of China outside the Great Wall—indicates that the Japanese Army, unable to report the pacification of the provinces already overrun, is playing with the desperate idea of diverting public attention in Japan from the realities of the military situation on the Continent by staging another spectacular advance which will merely increase Japan's ultimate continental commitments. The inability of the Japanese Army to restore law and order and prosperity in Manchuria is extremely serious for the Army on two grounds. In the first place, it is keeping up a drain on Japanese public finances which is making ever more remote any prospect of balancing the Budget. In the second place, it is disappointing the hope of "the millennium while you wait," which the Japanese Army was rash enough to promise, more than a year ago, to the Japanese farmer, who is down and out, as the sure first fruits of the Manchurian military adventure. The formal introduction of the Budget was the only business transacted at the perfunctory meeting of the Diet, which opened a new session at Tokyo on December 26th, only to adjourn until January 24th. As for the awakening of the Japanese farmer from his Manchurian fool's paradise, the dangerous agitation and exaltation of the public mind in Japan in these times is testified by news of the formation of a new political party called "the National League," which appears to be the Japanese equivalent of Fascism or Hitlerism. The new organisation is reported to have equipped itself with the whole Nazi-Fascist apparatus: banner, colours, uniform, "juvenile section," and the rest. This is not so difficult. The really difficult problem which the present masters of Japan have to solve is how to make figs grow on thistles. Prosperity is not the natural fruit of their violent courses.

The End of the Piatiletka.—On December 31st the first Soviet Five-Year Plan comes to an end, four years and three months after its initiation. In a later issue of the *Economist* we hope to discuss the achievements and deficiencies of this quinquennium in some detail. In the meantime, the broad results industrially have been published for the first ten months of 1932. Production in the heavy industries increased by 22 per cent., compared with the corresponding period of 1931, output being valued in each case on the basis of 1926-27 prices. Pig-iron production was 28.3 per cent. higher; coal production 16.7 per cent. higher; and the output of machinery 30.8 per cent. higher than last year. The continued "enforced abstinence" of the Soviet consumer—leaving out of account the foodstuffs problem—is demonstrated by the fact that the production of "light" industry rose by only 5.9 per cent. A sum of 7.5 milliard roubles was spent on industrial construction, against 5.4 milliards in 1931. It is pointed out in authoritative quarters that one of the least satisfactory features of the year was the widening gap between "output per man-day" and nominal wages. The daily wage in roubles in the coal industry showed an increase in 1932 of no less than 30.9 per cent., while the output per man-day actually fell by 2.6 per cent. Similar

conditions prevailed in other industries, wages in the metallurgical industry rising by 30.1 per cent., while output per man-day rose by 8.6 per cent. It seems clear that, as wage rates are fixed in accordance with a planned output, and not revised downwards as deficiencies in the plan appear, there is a constant tendency (the exact reverse of that prevailing outside the U.S.S.R.) for purchasing power to exceed the volume of goods available for consumption; and disequilibrium ensues in the finance plan. There are three ways of remedying this situation:—(1) By increasing output, (2) by revising wage rates in accordance with results, and (3) by recalling a part of wages by means of loans and voluntary subscriptions. The latter method is largely employed, though it is interesting to note that the "plan for the mobilisation of resources" from January to November, 1932, was only 63.3 per cent. fulfilled. As the Soviet Government has to pay very high rates of interest on its internal loans, it may be anticipated that in the course of the next plan a more drastic attempt will be made to bring the output of goods and the volume of purchasing power nearer together.

Light and Shade in Latin America.—The past week's news from Latin America is variegated in its colours. In the Argentine, all seems quiet once more; and in Chile the inauguration—or re-inauguration—of Don Arturo Alessandri as President on December 26th has passed off with a calm that portends, we hope, a less disturbed history for Chile in the coming year than in that just ended. In Peru, again, there have been pacific changes in the personnel of the Government. The most chequered news comes from the heart of the South American Continent, in the Gran Chaco, where for months past a war between two republics, which would have been sensational news in other times, has been dragging on almost unnoticed in the midst of the pressing preoccupation of the rest of the world. Diplomacy has left no stone unturned to bring this war to an end. The latest proposal, put forward by the Commission of Neutrals at Washington, is that hostilities should cease and that neutral military representatives should be sent to the spot to see that this proposal is carried out. The proposal was recently commended to both belligerents by the Council of the League of Nations; and Bolivia which are couched in ironically similar terms. Neither party is prepared to cease fighting unless and until the whole guilt is assessed upon the other party, and unless the other party—as on this premise is most meet and right—makes preliminary amends by evacuating the territory in dispute! This attitude on both sides is tragically ridiculous; but happily this dismal news from Geneva has been followed by better tidings from Rome. It is now reported that, in response to an appeal from the Pope, the Bolivian and Paraguayan Governments agreed to observe a Christmas truce; and it is hoped at the Vatican that this break in the hostilities may lead to their permanent suspension. At the moment of writing, we have no further news from the spot to tell us whether the Christmas truce really did take effect; and, if it did, it is still too early to say what the upshot may be. Meanwhile, we must welcome the report from Rome as a sign of grace in these two particularly intractable Latin American peoples.

The Maintenance of the Peace.—On December 17th Mr Tom Mann, the well-known labour leader, and Mr Emrys Llewellyn were summoned at Bow Street and ordered to find sureties for their future good behaviour and to keep the peace. This they refused to do, and in consequence were committed to prison for two months. The proceedings arose out of an article in the Communist journal, the *Daily Worker*, calling for further mass action by the unemployed, followed by a letter to the Prime Minister—written on behalf of the National Unemployed Workers' Movement, of which the defendants were described as officials—asking Mr MacDonald to receive a deputation. This case, which was discussed on December 22nd in the House of Commons on the motion for

the adjournment, has several difficult and somewhat disquieting features. It is clearly the duty of the authorities to take all possible steps to prevent mass demonstrations of a kind which are likely to lead to a breach of the peace and which in any case create a serious public nuisance. On the other hand, the prosecution was based, in part, upon a notorious Act of Edward III., passed originally to deal with the very different problem of the soldiery disbanded after the French wars, and subsequently mutilated (so it has been alleged) into its present established text by a careless copying clerk in the reign of Henry VI. Here we would venture the opinion that if powers of this kind are still required they should rest upon fresh legislation which Parliament should pass for the purpose. On the wider question of "preventive" arrest and prosecution it is difficult not to feel some misgivings. Personal liberty is a traditional British right, which should be preserved even if it entails some risk and throws extra burdens upon those responsible for the maintenance of law and order; and, in any case, once freedom of speech is interfered with, complaints of discrimination must inevitably arise. On the other hand, it is intolerable that self-appointed leaders of the unemployed should be at liberty to bring unconstitutional pressure upon Parliament and the Government, even though it is very difficult to determine where the border-line between proper and improper action lies. On the whole, we cannot see why the defendants in this case could not have given the required undertaking without any loss of prestige or inequitable sacrifice of their rights; but at the same time we have an instinctive dislike of the exercise of powers of this kind, and we hope that they will be used very sparingly in the future and under the most rigid and jealous scrutiny. It is particularly essential that at the present juncture the administration of the law should not give ground for the faintest suspicion of partiality.

India's Foreign Trade.—The Indian trade returns, writes a correspondent, continue to reflect the difficulties confronting countries dependent mainly on the export of primary products to provide the resources necessary to meet external debt obligations and to pay for imported materials outside the range of domestic production. In the decade ending March 31, 1930, the average value of Indian merchandise exports was about £243½ millions sterling, and of merchandise imports about £181½ millions sterling, leaving a favourable balance of about £62 millions sterling. In 1931-32 exports dropped to £120 millions and imports to £92 millions, reducing the favourable balance to £28 millions; while in the six months ending September, 1932, the trade in merchandise reveals an adverse balance of about £6 millions, compared with a favourable balance of about £9 millions in the corresponding half-year in 1931 and of over £29½ millions in the same period in 1930. The Government, in order to meet its loans obligations, has to find about £30 millions sterling annually, while a further margin of at least £7½ millions is required to meet other items in the adjustment of payments on private accounts. In the past, not only has this balance been achieved; there has normally been a margin of £15 to £20 millions, which India has utilised to import gold and silver. To-day, the holder of gold in India is finding it the most profitable commodity to sell. Shipments of gold, which began when Britain abandoned the gold standard, are expected to aggregate £80 millions sterling by the end of this year. Without these bullion exports India would have been unable to maintain her import trade even on its present attenuated scale, and, in that event, the losses sustained would not have been confined to the producing industries in the countries from which these imports have been derived. To India herself a very much more important consideration is that, to the extent of approximately 50 per cent., the Government of India depends on Customs duties for its tax revenues, and that if these revenues had declined to the level to which they would have certainly descended if merchandise imports

had fallen to the same extent as merchandise exports, the results would have included a new budgetary deficit which, in present conditions, it would have proved extraordinarily difficult, if not impossible, to balance. Let it be added that the reduction in Indian commodity imports has not been due exclusively to the decline in foreign demand for Indian produce, but is also traceable to some extent to the forced suspension of capital outlay on public utility projects, especially railways—owing partly to the decline in the revenues at present derived from such undertakings, but, even more, to the inability of the Government of India to borrow for such purposes on terms offering the assurance of a reasonable return on the funds available for investment. A necessary corollary has been a steep decline in the importations of machinery, locomotives, etc., which normally figure so largely as an item in India's import trade. The direct loss thus occasioned has not ended there, for, to quote only one reaction, in order to compensate the Tata steel works for the reduction in contracts for rails from 200,000 to 38,000 tons, tariffs have been imposed to assist development in other directions, including the manufacture of galvanised sheets, etc., thereby curtailing the importation of competitive products. There has been a considerable recovery in imports of cotton goods, but mainly to the advantage of Japan rather than of Lancashire, followed by new tariff impositions likely to stimulate Indian mill production at the expense of all imported materials, whatever their source.

Sterling and International Prices.—During the past fortnight the level of international gold prices as measured by our index number more than lost all the slight improvement recorded in the first half of December and established a new low record. Cereals, cotton, tin and sugar all participated in the decline. The fall registered up to December 21st by the foreign indices quoted in the following table was most pronounced in the case of the United States:—

SEPTEMBER 18TH, 1931 = 100.

* These figures relate to December 21st.

Sterling prices did not escape altogether the effect of the fall in gold prices. The complete *Economist* index is approximately 1 per cent. lower on the fortnight, while our index of the sterling price of primary products has fallen by slightly over 2½ per cent. Fuller details of the complete *Economist* index are given below:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Dec. 14, 1932.	Dec. 28, 1932.

Other foods	62.2	60.6	60.0
Textiles	43.7	48.8	48.6
Minerals	67.4	75.9	73.9
Miscellaneous	65.8	62.1	61.9
Complete index	60.4	61.7	61.1
1913 = 100	83.1	84.9	84.1
1924 = 100	52.2	53.3	52.8

Movements of individual commodities were for the most part of small dimensions.

Cotton Trade's Stocktaking.—Our Manchester correspondent writes:—The improved trading conditions in the Lancashire cotton spinning and manufacturing industry during the past twelve months are reflected in the financial reports of mills. The accounts of 121 concerns show that during 1932 nineteen made profits totalling to £35,090, whereas in the previous year six companies only returned profits totalling £17,733. In 1931, 115 companies made losses totalling £968,546, an average loss per company of £7,858; but during the past year the losses of the 102 "non-profitable" mills amounted to £471,532, an average loss per company of only £3,607. The average dividend in 1932 of 210 cotton spinning and manufacturing companies was 1.41 per cent., compared with 1.39 per cent. for the same companies in the previous year. The total paid-up ordinary share capital of these 210 companies is £30,760,351, controlling 21,445,806 spindles and 25,875 looms. Of the 210 companies 179 paid no dividend, against 178 in 1931. The remaining 31 companies paid dividends absorbing £232,526, equal to 0.75 per cent. In 1931 the dividends of 225 companies absorbed £273,155, equal to 0.84 per cent. on a total capital of £32,528,405. The profit and loss accounts for 204 of the companies revealed that 57 have credit balances of £864,349, and 147 debit balances totalling £6,931,314. There was a big reduction in the amount of money called up by mills on unpaid shares. Twenty-eight companies called up additional share capital totalling £655,583, as compared with 73 companies and £3,464,339 in 1931.

British Crops in 1932.—The Ministry of Agriculture and Fisheries has issued its usual return of the production of cereals and other crops in England and Wales during 1932. The following table shows the average, the total yield, and the yield per acre of the various crops during the last two seasons:—

PRELIMINARY CROP STATISTICS.

Crops.	Estimated Total Produce.		Acreage.		Estimated Yield per Acre.		Average of the Ten years, 1922-31
	1931.	1932.	1931.	1932.	1931.	1932.	
Wheat	Thous. Cwt. 19,230	Thous. Cwt. 22,092	Thous. Acres. 1,197	Thous. Acres. 1,288	Cwt. 16.1	Cwt. 17.2	17.3
Barley	15,457	15,542	1,029	961	15.0	16.0	15.6
Oats	24,786	25,018	1,552	1,580	15.0	15.8	14.9
Mixed corn	1,688	1,841	121	114	13.9	16.2	15.0
Beans	2,403	2,363	145	139	16.6	17.1	16.3
Peas	1,046	893	75	66	14.0	13.6	14.2
Seeds hay*	Thous. of Tons. 2,608	Thous. of Tons. 2,176	1,726	1,538	30.2	28.3	28.1
Meadow hay†	5,317	4,662	4,778	4,547	22.3	20.5	20.5
Potatoes	2,454	3,308	447	504	5.5	6.6	6.3
Turnips & swedes	6,978	7,535	619	578	11.3	13.0	12.6
Mangolds	4,529	4,336	270	229	16.8	18.9	19.1

* Hay from clover, sainfoin and grasses under rotation. † Hay from permanent grass.

The feature of the past year has been a further reduction in the acreage under the principal crops, with the exception of wheat and potatoes. The yield per acre has, however, been higher than a year ago, except in the case of hay, and, on the whole, compares favourably with the ten-year average from 1922 to 1931. As a result, the estimated total production of oats, mixed corn, turnips and swedes exceeded last year's harvest despite the reduction in acreage. The potato crop was particularly satisfactory, and the total yield, at 3,308,000 tons, was 228,000 tons above the average production during the past ten years. The declining tendency in the acreage under crops generally is an inevitable consequence of the low level of prices. It should, however, be remembered that the value of farm crops sold off farms is only about 18 per cent. of the total value of the output of agriculture in England and Wales.

British Film Progress.—During the past year in British cinemas the silent film may be said to have been finally ousted by the "talkie." The following table, which shows the average weekly length, in feet, of films registered with the Board of Trade, gives some indication of the quantitative development of the British cinema industry during recent years:—

Period	Silent.		Synchronised.		All Films.	
	Total feet.	British proportion of Total.	Total feet.	British proportion of Total.	Total feet.	British proportion of Total.
Weekly average:		%		%		%
1928	112,532	13.6	Nil	—	112,532	13.6
1929	72,065	14.9	61,482	7.5	133,547	11.5
1930	44,752	15.0	96,074	14.5	140,826	14.7
1931	7,701	15.3	97,084	16.8	104,785	16.7
1932*	756	77.8	90,784	21.6	91,540	22.0

* January–November.

It will be seen that, while the total length of films registered shows an appreciable decline in 1932, the proportion of British films advanced from 16.7 per cent. to 22 per cent. This advance was, of course, assisted by the operation of the Cinematograph Films Act of 1927, which imposed a renters' quota of 15 per cent. during the year ended March 31, 1933. It has been said in the United States that trade follows the film, and that every foot of film shown abroad results in a dollar's worth of trade. The Cinematograph Act has ensured the production of a certain quantity of films in this country, but it could not guarantee quality. It is therefore to be hoped that producers in this country will shirk no effort to establish at last a serious reputation for their output in foreign countries.

The 1930 Census of Production.—Volume XXIII of the preliminary reports of the Census of Production of 1930, published in a recent issue of the *Board of Trade Journal*, covers the railway, clothing, bread, and motor and cycle repairing industries. The following summary shows the gross value, the net value (gross value less cost of materials and work given out to other firms), and the net output per person employed in the various trades:—

Industry.	Gross Output.		Net Output.		Net Output per Employee.	
	1924.	1930.	1924.	1930.	1924.	1930.
Railways.....	Thou. £ 70,727	Thou. £ 63,152	Thou. £ 43,146	Thou. £ 39,154	£ 173	£ 171
Clothing	106,810	99,714	43,772	43,107	152	151
Bread and biscuit	72,169	70,899	26,645	29,397	279	257
Motor and cycle repairing	5,117	13,365	2,933	7,811	174	176

The returns relating to railways show that in 1930 the companies still carried out themselves a large proportion of construction, maintenance and repair work. The average number of employees in the construction, maintenance and repair department declined from 248,555 in 1924 to 228,452 in 1930. The number of main-line steam locomotives built by the companies rose from 223 in 1924 to 324 in 1930, and the number of carriages constructed, at 1,417, shows an increase of 804 on the earlier year. On the other hand, the number of complete wagons and trucks built by the companies declined from 26,494 in 1924 to 19,363 in 1930. The quantity of steel rails made increased from 17,170 tons to 19,620 tons. The total cost of manufacturing and repairing rolling stock and permanent way equipment in 1930 was about 14 per cent. less than in 1924. In the case of repair work the decrease was 17 per cent., but the cost of new equipment showed a decline of only about 9 per cent. The value of work done in 1930 on stations, buildings, on hoists and cranes, and on ships and boats was substantially higher than in 1924. On the other hand, less money was spent on the improvement of docks, harbours and wharves, and on the construction of telegraphic and telephonic lines. The total quantity of electricity used by these departments rose from 77 million kilowatt-hours in 1924 to 109.8 million kilowatt-hours in

1930. There has been a substantial increase in the proportion of electric power purchased by the companies. Of a total of 109.8 million kilowatt-hours used in 1930, only 10.4 million kilowatt-hours were produced by the companies' own generators.

British Fire Insurance in the U.S.A.—The amount of fire insurance premium income obtained in the United States by British companies has shown a diminution each year since 1926, the premiums received in 1931 amounting to less than 80 per cent. of the corresponding figures for 1926. This has been due to a variety of causes, but in the last few years is due probably in the main to the fall in commodity prices. Competition from local offices has also become increasingly keen, though it is encouraging to notice that while the premium income of the American offices fell by 12 per cent. last year, the decrease in the case of the British offices was only 8 per cent. The table which follows is based on the official reports of the companies furnished to the American insurance authorities, and published annually by the Spectator Company of New York. The figures have been converted into sterling at par of exchange. The 21 companies or groups of companies have been selected to comprise all the principal British offices operating in the United States and the figures of underwriting profits have been adjusted to conform with the British practice of allowing for an unexpired risk reserve equal to 40 per cent. of the total premiums. The aggregate results for each of the past six years on this basis are as follows:—

Year.	Premium Income.	Amount.	Underwriting Profit. Percentage of Premium Income.
	£	£	%
1926	33,601,253	752,354	2.2
1927	31,710,646	2,110,373	6.7
1928	31,417,664	2,540,633	8.1
1929	31,224,583	2,236,280	7.1
1930	27,945,315	624,882	2.2
1931	25,814,406	40,521	.2

The results of individual companies and groups of companies for each of the last two years are shown in the following table:—

Company or Group of Companies.	1930.			1931.		
	Premium Income.	Underwriting Profit or Loss.		Premium Income.	Underwriting Profit or Loss.	
		Amount.	Percentage of Premium Income.		Amount.	Percentage of Premium Income.
1. Atlas	£ 887,378	£ 2,488	.3	£ 805,758	£ 67,225	8.3
2. Eagle Star and Brit. Dominions	520,993	34,424	6.6	470,802	9,512	2.0

It will be seen that both as regards premium income and underwriting profit, a reduction has been almost universally experienced, and while present economic conditions in America continue results are scarcely likely to improve. With regard to the individual results, once again each of the four British companies operating on the largest scale in the United States, viz., the Commercial Union, North

British and Mercantile, Royal, and Liverpool, London and Globe, report a profit, though with reduced margins. It will be seen that no less than fourteen out of the twenty-one companies or groups of companies disclose a loss on the year's operations.

Overseas Correspondence.

UNITED STATES.

Debts — Gold — Prices Industry — Railroads.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 15.

WHILE a good impression has been created in this country by full payment of the December debt instalment due from Great Britain, and while, if partly by contrast with the non-paying nations, British credit has been strengthened, the French deferment is regarded in most Wall Street quarters as by no means an unmixed evil. Leaders of opinion regret that the matter was handled in such a way as to increase the chances of default by France. While the first response of Congress appears to be resentment toward France, and many of the staunchest friends of that country fear that some harm may result to future negotiations, talk of retaliatory measures, such as embargoes on investment in defaulting countries, may be regarded as the outcome of the passions of the moment. Nothing, of course, is likely to come of such talk.

Meanwhile, by opening eyes to the realities of payments, the French action is believed to have increased the probability of early negotiations for debt revision. The matter will doubtless impress upon the country the desirability of a new settlement and the close relation which the debt payments have to world trade. Some gold shipments are expected here from Paris, but no flight from the franc is anticipated.

Shipment of the \$95,550,000 of gold from London to cover the British debt instalment, together with imports now known to be on the way, will completely restore the monetary gold stock position of this country for the New Year, with 15 or 20 millions in addition. Excess of gold exports from the beginning of the year to the middle of December were \$512 millions, but deductions from released earmarked gold reduced the net loss to \$137 millions. The monetary gold stock as at December 7th was only \$106 millions less than at the beginning of the year, but that included new gold produced during the year.

Little or no progress is being made in Congress on new revenue measures and ways and means of cutting expenditures. Debate is still largely devoted to prohibition, with farm relief schemes coming forward occasionally. The Secretary of the Treasury, Mr. Mills, said this week that he did not think the Government could obtain more than \$150 millions yearly from a beer tax, and urged a general manufacturers' sales tax as a supplement to beer taxes as a means of bringing the budget into balance.

Doubtless a vote in this Congress or early in the special session of the new Congress, which is now believed likely, will be taken on that form of farm relief which enjoys current popularity among the self-styled saviours of the farmers. This scheme envisages a bounty to farmers on wheat, for example, equal to the existing tariff, in case prices are below cost of production; on cotton, which has no tariff, an arbitrary bounty of 5 cents a lb. is proposed. This bounty will be paid to farmers agreeing to limit production in the ensuing year to, say, 20 per cent. of current output. It will in turn be levied by the Government on consumers, through a tax on spinners, millers and users of the raw materials.

Opposition to such a scheme is bound to be great, owing to the obvious temptation constantly to increase the bounty, to be lax in enforcement of production restrictions, and to tax one class of people in favour of another.

Actually, the farmer is in far better position than is the unemployed general labourer. Distress is rare on the farms, although purchasing power is so low that only the necessities of life are had in many instances.

Christmas shopping is giving some stimulus to wholesale and retail trade, but the volume is lower than a year ago, and business enterprise is still lethargic. Prices for many raw materials, while comparatively steady, are not acting in a way suggestive of an upturn. The Bureau of Labour Statistics wholesale commodity price index for November is down three-quarters of 1 per cent., but is only 9 per cent. under a year ago, against a recent monthly decline of 12 per cent.

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS AND SUB-GROUPS OF COMMODITIES.

(1926 = 100.0).

Groups and Sub-Groups.	Nov., 1931.	Oct., 1932.	Nov., 1932.
All commodities	70.2	64.4	63.9
Farm products	58.7	46.9	46.7
Foodstuffs	71.0	60.5	60.6
Hides and leather products	81.6	72.8	71.4
Textile products	62.2	55.0	53.9
Fuel and lighting materials	69.4	71.1	71.4
Metals and metal products	82.6	80.3	79.6
Building materials	76.2	70.7	70.7
Chemicals and drugs	76.1	72.7	72.4
House furnishing goods	80.9	73.7	73.7
Miscellaneous	68.7	64.1	63.7
Raw materials	62.0	54.6	54.2
Semi-manufactured articles	64.9	60.7	58.9
Finished products	74.8	69.6	69.3
Non-agricultural commodities	72.6	68.1	67.5
All commodities other than farm products and foodstuffs	73.5	70.2	69.8

Major industries continue to decline slightly, mostly for seasonal reasons. Steel mills are operating at about 15 per cent. of capacity, and it is expected that the year-end "shut downs" will send the general rate to a new low level of around 10 or 12 per cent. The United States Steel Corporation's unfilled orders at the end of November were down moderately, wiping out the slight gains of the preceding three months. Ford is working on new models, and mild hope is entertained in the motor industry that enough spring revival in trade will take place to stimulate car sales. Railroad traffic is sagging with the season, but November earning reports now coming to hand indicate that, for the first time in three years, the railroads have done as well as in the corresponding month of the previous year. In October the net earnings were only six-tenths of 1 per cent. under those for October, 1931.

The copper trade is rather pessimistic over the failure of the conference and the fall in price of the metal to under 5 cents a pound. Some think it may have to go lower before any improvement is possible under existing production agreements. The oil trade also has taken a turn for the worse, and the attempt to put up crude oil prices has ended with cutting by a number of leading companies, preceded by lower gasoline prices. The lower prices will be reflected in year-end balance sheets, but for all that most oil companies have done fairly well this year. One recently resumed dividend payments.

Progress is being made on an understanding between the railroads and the labour unions on wages. The 10 per cent. cut agreed to a year ago expires on February 1st. It now looks as though the unions would be willing to grant a year's extension, but it is not certain that the roads would accept that, many thinking a 15 to 20 per cent. cut is justified by the state of earnings and living costs.

Currently the tenor of railroad executive opinion is that the least the roads will agree to is an indefinite extension of the 10 per cent. cut from the old scale, and later the screws will be tightened for a further reduction. Since the majority of railroad men actually employed are the older men, it is unlikely that the negotiations will end in strikes. As time passes resistance to wage cutting is weakening. An example was had in the recent experience of New York City. Refusal of the city officials to put into effect genuine economies destroyed the long-term bond market for New York obligations and caused the banks to refuse further short-term loans. The result is that the city has been forced into a comprehensive economy programme,

made possible through legislation passed at a special session of the State Legislature called for the purpose and including wage reductions for school teachers, policemen, firemen and other services.

Short-term money is more redundant than ever. Tax date financing was carried through with a \$50 million overdraft for the Treasury at the Federal Reserve Bank. On December 15th the Treasury redeemed \$604 millions of four-year notes, and allotted approximately \$700 millions in new one- and four-year notes. Quarterly tax collections were around \$180 millions and interest paid on Government bonds was \$100 millions. Six nations paid a total of around \$100 millions on war debts, while about \$26 millions was in default. Altogether the financial turnover, including corporation interest and dividends, was over \$1,500 millions. Commercial paper rates have weakened another $\frac{1}{2}$ per cent. to one-half to three-quarters of 1 per cent., and time money is available for four months at three-quarters of 1 per cent.

FRANCE.

Finance — Railway Deficit — Production.

(FROM OUR CORRESPONDENT.)

PARIS, December 28.

THE new Government's declaration of policy was accepted by the Chamber, on a vote of confidence, by a majority of 213 votes (379 against 166, with 61 abstentions) when it made its first appearance before the House last Thursday, but exactly what its financial and other proposals are to be it was impossible to gather from M. Paul-Boncour's very skilfully-phrased text. "We will indicate when the moment comes," the document stated, in regard to its Budget proposals, "their method and their amplitude." So far, as several sly hits by Opposition interrupters have shown, the new Ministry has kept its secrets closely, and it now appears probable that these will not be revealed until after the Chamber returns from its short recess over the New Year holidays, during which M. Chéron proposes to perfect his plans. There are indications, however, that most, if not all, of the Herriot proposals have been thrown into the melting pot again, and there are suggestions that the re-drafted Budget Bill will probably be much more exigent in the way of Socialistic demands, than the original measure.

For a first step there was the end-of-the-year situation of the Treasury to be got over; and to this end M. Chéron, the new Finance Minister, and M. Lamoureux, the *rapporteur* of the Chamber Finance Commission, have been devoting much time before the Commission and the Chamber. One of the outstanding factors of the proceedings in Commission was the statement by the *rapporteur* that the deficit to be met under the pending Budget will not be 12,100 million francs, as hitherto estimated, but certainly in the neighbourhood of 16,550 million francs. He added that economies already realised by the Rente conversion operation justified this total being brought back perhaps to 11,750 million francs, but he emphasised the fact that this left entirely out of the account the deficit on the railways, which, with the accumulations of previous years, would amount by the end of 1932 to around 10,000 million francs. The Finance Minister himself, before the Chamber, placed the total deficit (exclusive of that on the railways) at 17,385 million francs (6,707 million francs for 1930-31, 5,611 million francs for 1931-32, and (to date) 5,067 million francs for 1933). The figures, it is reported, made a deep impression on the majority of the members.

The Finance Minister yesterday morning formally asked the Chamber for a Vote on Account equivalent to one month's supplies, to tide the Treasury over January. He startled the House by stating, at the outset, that when he returned to power last week he found "just sufficient funds in the hands of the Treasury to continue the public services until December 31st," which explained why it was absolutely necessary to ask for authority for an issue of Treasury Bonds. The Bill asked for provisional credits

amounting to a total of 5,292,627,000 francs (4,825,472,000 francs for the General Budget, and 467,154,000 francs for the Post Office and other annexed Budgets), and that the necessary funds should be made available by an issue of Treasury Bonds, which would necessitate raising the present legal limit of such issues by a further 5,000 millions. Since April 1st the total amount of Treasury Bonds issued has amounted to 9,190 million francs, so that the new issue will bring the total of this renewed form of short-term debt to nearly 15,000 million francs, and, with the 28,000 million francs of Defence Bonds now in existence, raise the total short-term debt to 43,000 million francs. Significant clauses of the Bill were those stipulating that the yield from the new bills shall be applicable in the course of January, 1933, and that Ministers are made personally responsible for seeing that "no new measures shall be taken involving increased expenditure imputable to the credits now opened, and which does not arise from previous laws."

Another clause approves of the convention signed last September, at the time of the Rente Conversion operation, under which the Caisse d'Amortissement undertook to take over the redemption charge in respect of Tranche A of the new 4 $\frac{1}{2}$ per cent. Rentes (representing an annual burden of 52,000,000 francs); agreed to take over other redemption charges amounting to 205 million francs, in respect of credits hitherto figuring in the Budget, plus a further 36 million francs "which may be there included"; and also consented to renounce to the State the profit to be derived from the minting of silver currency during 1933, estimated at 343 million francs. M. Louis Marin made a characteristic but vain effort to induce the Finance Minister to reduce his new Treasury Bond issue to 2,000 million francs, instead of 5,000 million francs, the voting of which, he insisted, will "bring back the tragic days of 1926." He also described the clause concerning the Caisse d'Amortissement as the "assassination" of that organisation. Another deputy demanded the reduction of the new issue to a maximum of 4,000 million francs, so long as the balancing of the Budget was not assured; which drew from M. Chéron the retort that he "refused to accept five francs less than the total asked for by the Bill." M. de Tinguy du Pouët, one of the Chamber's financial experts, pointed out that the new convention would reduce the annual disbursements of the Caisse d'Amortissement to 1,200 million francs, with which to deal with the 28,000 million francs of Defence Bonds and other increasing short-term debt, and would not be sufficient. "Henceforth," he said, "there will be no more debt extinction except through the Caisse, and the smallest decrease in that body's constitutional revenue will compel recourse to another constitutional law and a subsidy from the Budget." The debate finished the same day with the approval of the Bill by a show of hands (after two amendments had been rejected by (in round figures) 370 votes against 200); and thus the first step towards what the *Temps* described as M. Chéron's "impossible miracle" was accomplished.

In view of the importance of the railway deficit as a factor in the present involved financial situation, it will be interesting to set forth some of the causes of the present position of the lines. Down to the war, railway passenger and goods rates, which are fixed to the last detail by the Ministry for Public Works, were gauged to enable the companies to pay a moderate dividend after covering working costs and capital charges, the State benefiting from a 10 per cent. tax on passenger tickets, while goods traffic was practically free from taxation. After the war, when the lines were entirely in the hands of the State, and a huge deficit was accumulated, the Government, by the convention of 1921, became much more closely associated with the financial side of the undertakings. It agreed that the State should guarantee the capital charges and give the companies "management premiums," and itself take the risk of benefit, if there were profits, or loss if none were earned. To minimise the risk, it was agreed that if deficits resulted two years in succession, rates should be raised to re-establish a balance. When the franc met disaster in 1925 and 1926, and Finance Ministers were at their wits' end for new resources, M. Loucheur imposed the heavy tax of 32 $\frac{1}{2}$ per

cent. on passenger tickets (equivalent to one-third of the companies' receipts from this source), plus taxes of from 5 to 10 per cent. on goods traffic. This was anti-economic in itself. What was perhaps worse, was that the companies were refused power to raise their rates, and have been refused it ever since. The companies, therefore, have for some years enjoyed their "management premiums" for acting as tax collectors for the Government, the public has enjoyed (and is still enjoying) cheaper railway travelling facilities than before the war, the shareholders have had their dividends paid under the Government guarantee, and the taxpayers as a whole have had to pay the difference under the Budget. This situation caused no great difficulties during the period of artificial prosperity, between 1928 and 1930, but since then the lean years have come. Traffic receipts have dropped seriously, under both passenger and goods headings, in consequence of the crisis, while normal expenditure, which has increased enormously owing to the high post-war material prices and higher wage scales, has been still further inflated by the coming into full operation of the eight hours' and the national insurance laws, and capital charges have risen substantially owing to constant new bond issues, which are now necessary to finance the working of the lines. The result is a steadily-growing deficit, now estimated to be equivalent to 10 million francs per day, which must be met from the Budget. The comparatively slight deficit in 1930 has been increased, it is understood, to one of 4,000 million francs for the current year. The solution of the railway problem is therefore one of the most difficult and urgent tasks facing the new Government.

Coal production returns for November, for the fourth month in succession, indicate fractionally increased output. Total tonnage extracted from the French mines during the 24 working days of the month was 4,182,896 tons, with 254,760 labour units employed, against 4,091,508 tons in October (24 days and 254,800 units), and 4,163,219 tons (24 working days and 276,555 units) in November last year. The output of metallurgical coke by the colliery plants was 279,096 tons, or over 5,000 tons more than in October, but about 1 $\frac{1}{2}$ per cent. less than in November last year. The metallurgical industry, which a few weeks ago showed distinct signs of recovery, is again dull, which accounts for the slower improvement in coke figures, while the increase in coal production has been due to increased protection against foreign entries. Coal imports in November, nevertheless, were 1,902,000 tons, or 210,000 tons more than in October. It is announced that, with a view to reducing imports of anthracite for domestic use, the Vicoigne, Nœux and Drocourt Colliery Company has successfully applied a system of making "smokeless anthracite blocks," similar to those which have been used for some years in Great Britain. The blocks are made from anthracite residue, washed in order to reduce ash waste to 6 per cent. It is stated that the popularisation of these "anthracite" blocks will appreciably reduce the amount of imported hard coal, which normally averages about 2,500,000 tons a year, mostly from Great Britain.

GERMANY.

Employment Plan — Agriculture — Bank Rectification.

(FROM OUR CORRESPONDENT.)

BERLIN, December 27.

THE fact that the provision of unemployment constitutes the most important economic item in the programme of the Schleicher Government was once more brought home to the German people just before Christmas in a speech of the new Reich Commissioner, Dr. Gereke. There are, it is true, some very confused ideas abroad as to the extent of the intended measures, for the Government are naturally concerned to make their plans appear as comprehensive as possible, so that the figures officially mentioned are often arrived at only by means of somewhat artificial arithmetic. Actually the Government are adding Rm. 600 millions to the Rm. 700 millions of public works which the Brüning and Papen Cabinets had already sanctioned, but which to a large extent have not yet begun to affect the labour market. In addition,

there is the additional employment of labour by private economy which was to result from the issue of taxation vouchers as bounties on the engagement of new workers, as planned by the Papan Cabinet. This was originally expected to cost Rm. 700 millions, but it is now likely to take only about Rm. 200 millions, as it is not thought that *entrepreneurs* can be induced to take on new men on a larger scale than that. This point is, however, still the subject of dispute between industry and the Government.

The Rm. 500 millions of taxation vouchers which, according to the Government plan, will thus be saved out of the financing of private employment, will be used for the financing of public works. They will be placed at the disposal of individual communes and associations of communes, through the agency of the German Public Works Society and the Rentenbank-Kreditanstalt, and the communes will be pledged to place contracts to an equivalent amount. The remaining Rm. 100 millions, which completes the sum of Rm. 600 millions, is to be taken from the Unemployment Fund. The Reichsbank has declared its willingness to take over bills in unlimited quantities and without strict scrutiny from anybody who deposits taxation vouchers as additional security. (This concession also applies to the taxation vouchers which are issued, not as employment bounties, but as rebates of taxation, but it is no longer supposed that any great demand will arise for loans against these.) This announcement by the Reichsbank does not mean that its loans will increase by the full Rm. 500 millions. By far the larger part of the taxation vouchers which are issued to employers and used by them to procure capital will probably remain with the banks. The banks are now easily in a position to furnish the necessary sums themselves, and they will be glad to do this, as the Reichsbank's concession makes the taxation vouchers a particularly liquid investment. The liquidity of the money market has thus greatly altered the considerations upon which criticism of the programme must be based. It will not lead to a great expansion of credit, and therefore, as long as it does not exceed the limits at present planned, it involves no danger to the currency. There is perhaps more reason to fear that it might absorb too much of the liquid resources of the money market and so have the undesirable effect of slackening the downward pressure which the abundance of money is exercising upon interest rates.

The Schleicher Cabinet was unable to bring itself to make important decisions on agricultural questions before Christmas. Quotas were, indeed, introduced for pulpwood and lard, but otherwise the idea of quotas seems to have been finally buried. On the other hand, in renewing the commercial treaties which are about to expire, the duties on agricultural products will certainly be raised, and this intention has already been announced to Holland, with whom negotiations open in January. The next aim of agriculturists is to secure the compulsory admixture of butter with margarine. The draft of a decree to this effect is already before the President, but has not yet been signed. The demand is being vigorously resisted both by consumers and by the margarine industry, as, if it is conceded, it will inevitably cause a substantial rise in the price of margarine.

The number of unemployed increased in the first half of December by about a quarter of a million. This is a normal seasonal increase, and is substantially less than the increase a year ago; but the public is none the less somewhat disappointed, after the excessively optimistic prophecies in which the Papen Government indulged last summer, when the first signs of improvement set in. The improvement in the depression is not yet sufficient to counteract the influence upon the labour market of the beginning of frosty weather, which is always very great.

In November the surplus of exports over imports was almost unchanged at 82 millions, though the trade balance usually becomes worse at this season. In comparison with the preceding year, both the absolute amount of exports and the export surplus have diminished substantially; but, considering the extraordinary difficulties with which German exports have had to contend, the results of recent months are not unsatisfactory.

Just before Christmas the two institutions were formally founded which had been planned some months ago as instruments for the further consolidation of German banking: the Deutsche Industriefinanzierungsinstitut A.G. and the Tilgungskasse für gewerbliche Kredite. The Deutsche Finanzierungsinstitut will take over parcels of securities from the banks in order to free them from the necessity of disturbing the stock exchanges by unloading their holdings too quickly upon the open market. This necessity would then only arise if the banks needed new money. That may be the case if business improves further, but at the moment the banks are thoroughly liquid. The Finanzierungsinstitut can also take over other assets of the banks, but only those of unquestionable soundness. The 10 million preference shares of the Finanzierungsinstitut have been taken over by the Golddiskontbank, the Akzept- und Kreditbank and the Bank für Industrieobligationen; the 25 million ordinary shares are at present in the hands of a large consortium of banks and are to be disposed of on the open market. All shares are 25 per cent. paid.

The Tilgungskasse is to take over up to 150 millions of the "debtors" of the small and medium-sized banks which have to be written off. The banks remain responsible for the recovery of the debts and are to hand over to the Tilgungskasse for writing-off purposes $1\frac{1}{2}$ per cent. of the total debts in each of the first four years and $\frac{1}{2}$ per cent. each year afterwards. The debts which are paid up will be handed back to the banks according to the rates of redemption, and they should all be redeemed in twenty-five years at latest, after which the Tilgungskasse is to be liquidated. The Tilgungskasse represents for the banks a means of rectifying their balance sheets. They can substitute for very dubious claims a holding at the Tilgungskasse, and in return for this they are required to pledge a part of their future earnings.

AUSTRIA.

Exchange — Foreign Debt — Credit-Anstalt.
(FROM OUR CORRESPONDENT.)

VIENNA, December 18.

THE National Bank has just issued an edict, whereby it renounces its rights to the surrender of the so-called "raw" material quota. This means, in substance, that the exporters need not hand over at the official rates any part of the proceeds of their exports, but are at liberty to dispose of the whole amount in private clearing, in which the rates ruling are 22 per cent. higher. For dollars, French and Swiss francs the respective private clearing rates are calculated for imports and exports, and the consequence will undoubtedly be that the export premiums the Government has so far cancelled or modified all State rates and not the fictitious rates of the Austrian National Bank are applicable; the only exception is the Austro-Hungarian clearing treaty, which functions satisfactorily and is therefore being retained, as the Austrian schilling and the Hungarian pengő have fallen in about the same degree on the international money markets.

The position in regard to financial relations is, however, entirely different from that in regard to merchandise trade. For financial operations the compulsory official exchange rates, on the one hand, and the transfer prohibition, on the other, are as strictly maintained as ever. In all foreign debt affairs this has produced considerable uncertainty, which is the more noticeable, as in the last decade at least 90 per cent. of the long-term commitments debts and insurance policies—have been concluded in terms of dollars or with a gold-value clause. As the fusion exists: many mortgagees are depositing their commitments, at the official rate of conversion, with the courts, as the creditors will not accept payment on this basis. Further, one of the big insurance companies is

refusing to accept schillings in payment of premiums on policies made out in dollar values, so that the insurance contracts are endangered.

Foreign creditors still come under the provisions of the transfer moratorium of last summer. Up to the present, it is unknown whether and in what manner the annual coupon of the international Federal Loan of 1930, which calls for an issue of 20 million schillings' worth of foreign values, will be met. The December coupon of the League of Nations Loan has been honoured both abroad and at home; indeed, contrary to the express regulations of the foreign exchange restrictions, the holders were paid in "effective" dollars. For the debt service of the League of Nations Loan and of the Federal Loan of 1930 the total revenue from customs and tobacco is pledged. Each month the trustees should receive—at the official conversion rates—one-twelfth of the amount corresponding to the annual debt service for these loans; but in the months of June to September, though the customs and tobacco revenues amounted to 182 millions, only 41 million schillings were paid into the trustee accounts of the two loans. Interference with the foreign debt service through the foreign exchange restrictions and the transfer prohibition involves big sums, as the consolidated indebtedness to foreign countries comes to 1,922 million schillings, the long-term and medium-term debts to 502 millions and the short-term debts to 1,100 million schillings, of which a total of 1,733 million schillings is due from the State.

In the short-term indebtedness is included the 410 million schillings of foreign liabilities of the Credit-Anstalt, which, after the ratification of the London agreements—expected shortly—will be regulated for the greater part through the issue of shares and bonds. In connection with this agreement a holding company with a share capital of 30 million schillings, of which the foreign creditors are to receive ten millions, is to be founded, probably with its office in Switzerland or in Holland; the holding company will look after the foreign participations and claims of the Credit-Anstalt. It will take over these assets at low rates, so that there is a great possibility of improvement, and from this anticipated improvement the foreign creditors, who are to receive 130 million schillings of the nominal obligations of the holding company, are to profit. The Credit-Anstalt itself has determined to undertake a rigorous internal adjustment of its balance sheet. For the time being, it is exempt by special law from publishing a balance sheet. In comparison with the level of December 31, 1930, there has been tremendous depreciation in the most important items: "debtors" have fallen from 1,382 to 553 million schillings, "creditors" from 1,359 to 474 millions, savings deposits from 316 to 92 millions, shares and participations from 173 to 47 millions, bill portfolio from 92 to 27 millions, and the total of the balance sheet from 1,884.6 to 879.2 million schillings. After this reconstruction, the share capital will amount to 142 millions, as compared with 177.5 millions, and of the new capital 70 million schillings will be in 5 per cent. preference shares.

Political events in France are being watched with the greatest interest in Austria, as there is a danger that the fall of Herriot might affect the ratification of the Lausanne loan protocol by the French Chamber by December 31st, the term set. The Bill to empower the French Minister of Finance to guarantee 100 million schillings of this loan has already been brought before the Chamber, but it is very doubtful whether it will be carried.

SWEDEN.

Production — Trade — Banking — Stock Exchange.

(FROM OUR CORRESPONDENT.)

December 3.

RECENT economic developments in Sweden have been similar to those of the world in general. An improvement in the late summer has given way to increasing uncertainty. The index number of production compiled by Industriförbundet (1930=100) reached its lowest point, 74,

in July, and recovered to 81 in August and 83 in September, the latest figure available. Some part of the increased activity in September is to be attributed to the fact that the pulp industry was able to resume production during the later part of August after the settlement of the prolonged labour conflict.

The statistics of production are not yet available for the present quarter, but that the improvement has not continued appears clearly from the statistics of unemployment, which indicate an undoubted deterioration of the position. Thus from September to October the number of unemployed seeking assistance increased, according to the Unemployment Commission, from 106,000 to 123,600, a figure which is almost double that of the corresponding period a year ago, namely 57,100.

There has been a progressive decrease in the tremendous adverse balance of trade of last year. Whereas it then amounted to Kr. 272 millions for the period January-October, the corresponding figure this year is Kr. 193 millions. Should this tendency continue during November and December, we can count upon the adverse balance of trade for 1932 of between Kr. 215 millions and Kr. 220 millions, a deficit which there will be no difficulty in rectifying by net freights and the invisible items in the balance of payment. The result of movements of capital to foreign countries during the first three quarters of the year was a net import of Kr. 72 millions, a figure which was increased in October by a further Kr. 11 millions. During the same period our total exchange reserves increased from Kr. 290 to Kr. 354 millions, and during October the sum was increased by a further Kr. 12 millions to Kr. 366 millions.

It is not surprising under these conditions that the Swedish crown has recently shown a very marked firmness. Had not the Riksbank, in consequence of the instructions issued by the Riksdag in the spring, found itself compelled slowly to depreciate the international value of the crown, our currency would in all probability have shown quite a different curve from that which it actually has shown. If we measure its gold value by the exchange rate on New York, the crown has successively depreciated from an average of 70 per cent. in May to the lowest point of not quite 64 per cent. at the end of October. This depreciation, however, could not have been effected had not the Riksbank been a buyer of all available exchange in the market. Since the beginning of the year the Bank's exchange reserve has increased from Kr. 49 millions to Kr. 216 millions.

If foreign trade, the balance of payments and the exchange market to some extent reflect a slow revival, developments in the money market illustrate the uncertainty and stagnation of the position during recent months. The official Bank Report for October, the last available, is very eloquent from this point of view. It points to continued restriction of the demand for credit, combined with great liquidity on the part of the commercial banks, which have unexampled reserves of cash. This almost abnormal liquidity is to be found throughout the world, and has been conspicuous since last autumn. But it has never been so marked as it was in October. Whereas normally the sight means of the commercial banks stand at between Kr. 80 and 90 millions, rising at the end of the quarter to about Kr. 100-110 millions, and a little more at the turn of the year, they have now far exceeded these limits. The previous maximum was Kr. 175 millions at the end of July. At the end of October the record of Kr. 211 millions was reached, or more than double the corresponding sum of a year ago.

The general stagnation thus visible has naturally also dominated the Stock Exchange. Since the ebb of the newly awakened confidence of the summer the Stock Exchange has shown a quiet and dull tone which has gradually become accentuated in proportion as the international political unrest has increased. A further restraining influence was also the uncertainty as regards next year's labour agreements, which happily have now been concluded without any serious disturbances. The fall in prices on the Stockholm Stock Exchange has, however, been comparatively moderate. As against a rise in July

of Kr. 147 millions, in August of Kr. 207 millions and even during September of a further Kr. 24 millions, there was in October a decline of only Kr. 56 millions. To some extent, of course, this relative power of resistance is to be explained by the fact that the rise in the summer never assumed any exaggerated proportions.

TURKEY.

New Policy — Private Enterprise — Trade.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, December 5.

THE "new economic policy" set up by Angora in November is developing rapidly in the direction of greater toleration of private initiative. Private capital was almost in despair owing to increasing State usurpation, but the last three months have seen a beginning of attempts at co-operation between the State economic department and the capitalists. One of the determining gestures of the Government, making it clear that it is not going to take everything into its hands, has been the revocation of the Assembly decision to set up a State monopoly of the shipping trade and to force all private shipowners to sell their vessels to the State. Private shipowners are now to be allowed to form a company for the exploitation of certain lines independently, alongside the already existing State shipping service, but under Government supervision as to fares, rates, standard of comfort and so on. It is hoped that by leaving a section of shipping to private initiative Turkish shipping may later develop lines to foreign ports.

Apart from this move, the restrictions on imports are being progressively lightened. The new list for the first three months of next year places seventy more articles in the free category and gives the Ministries of Agriculture, Industry and Economy permission to authorise further imports beyond the quota lists. Besides this, a precedent is established which will be applied more fully in future lists. This is the division of import quotas between the importing countries with especial reference to the trade balances with Turkey of the respective countries. Thus, those countries in which the trade balance is definitely unfavourable will find their chances of importing into Turkey reduced. It is to be noted that British exports to Turkey this year have been higher than usual. Meanwhile the Minister of Economy is entering into specific trade arrangements with foreign countries for the purpose of eliminating restrictions and developing trade dealings. Such an arrangement has been made with Spain, one of Turkey's new customers, which is taking an increasing quantity of Turkish products. Barter treaties are being concluded with Austria, Hungary, and Czechoslovakia.

Another development which shows the tendency of the new economic policy is the engagement of foreign specialists in the economic departments of the national life. This is a definite confession that the policy of imitating foreign economic measures, but applying them without foreign expert aid, has broken down. The legacy of prejudice from the capitulations regime, and the desire to prove that the Turks were naturally competent in all matters, had led to over-confidence. But the application of measures was found more difficult than their adoption, and many tangles resulted. On the other hand, the Government has found that experts taken from Europe never met the needs of the country. What it sought and is now utilising more and more are foreign specialists who have had a pioneer experience in undeveloped or less developed States, as, for instance, in South America. It is taking these pioneer specialists chiefly from the United States at present. The whole Customs system is now being overhauled by an American controller, the State railways apparently are to undergo the same treatment, and the State monopolies are likely to come under the same system.

An attempt is being made to get the industrialists to work in with the mineowners of the country and, as far as possible, to provision themselves from home mines.

This will increase the already increasing development of Turkish coal, which is becoming an important export to neighbouring countries such as Greece. The Minister of Economy has stated that with the foundation of new sugar factories and with the utilisation of the Soviet credit in the establishment of textile factories, the country's needs in sugar and cotton goods will be fully covered in three years' time. The Industrial Bank will soon have a credit of one million Turkish pounds to aid industry. The Government have also decided to ask for credits to exploit a gold-producing area between Kagizman and Kalp in the valley of the Aras, which was exploited in the seventeenth century and which has been shown to be profitable, as well as certain oil areas.

In order to ensure the return to Turkey of the value of exports a decree has just been issued ordering exporters to deposit at the Central Bank or to sell to a Bank in Turkey the proceeds of their exports within a fortnight of their receipt. This will correct the leakage which has been going on. Meanwhile, trade returns show that Turkish exports for the first nine months of this year were 41 million kilograms more than last year, but that the value is down by nearly 20 million Turkish pounds. The trade balance, aided by the quota system, is favourable to the extent of six million Turkish pounds.

SOUTH AFRICA.

By-election — Poor Whites — Mealie Control — Census.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, December 6.

A BY-ELECTION at Germiston has given the Government the most severe and unmistakable blow it has yet received. Mr George Brown, the late Labour member was elected in 1924 as a supporter of the Pact Government, but had lately voted on occasion with the Opposition. The constituency is an industrial one, with several mines, the largest railway junction in the Union, and a number of factories. In these days of agricultural depression, numbers of poor country people have obtained employment in industries in Germiston and similar constituencies. Just after the late member died, the Government decided on a big deviation scheme at the junction and absorbed a number of the unemployed. After an exceptionally long and lively campaign—Brown died in July and the poll was on November 30th—and a record heavy poll, the Government lost the seat by nearly twelve hundred votes on a roll of eight thousand five hundred. In addition to the there were three "freak" candidates who all forfeited their deposits. The Nationalist candidate had the assistance of most of the Cabinet (except its two "Labour" members), but in South African politics at present the damage caused to the other side by party big guns is by no means proportional to the reverberations of their utterances. Before the poll, each side professed to think that their man would get in by a narrow majority—no one expected such a blow to the Government prestige in a seat which was regarded at the beginning of the campaign as a safe win for them. Mr J. G. Strauss, the new member, was at one time private secretary to General Smuts.

Although Government spokesmen disclaim any intention of resigning, political movement has become much more active recently. The Labour Party is reduced and divided, and Afrikaner workmen tend on the whole to be discredited. The success at Germiston will be a great encouragement to young South African Party men, and Government position are not lacking. It is to be hoped that we are not treated to too much of the jingoist enthusiasm which would restrain or kill any move of the country Afrikaner away from his more retrogressive and insular points of view.

In 1927, the President and Secretary of the Carnegie Corporation of New York visited South Africa, and initiated an investigation into the "poor white" question. The six members of the Commission appointed and

financed with the assistance of the Corporation were all South Africans of standing with the necessary knowledge of rural conditions; their report has just been issued. Poor whites are defined as poor farm squatters, hired men on farms, owners of dwarf holdings or of small undivided shares of land, poor settlers, and the growing group of unskilled or poorly-trained labourers and workers outside farming. The commissioners consider that the problem is not an isolated phenomenon, but is inherent in our social structure. It is considered that more than 300,000 in a European population of 1,800,000 are very poor. This estimate relates to 1929-30, when rural business of all kinds was much better than now. The report attributes economic decline to inadequate adjustment to modern conditions by a portion of the older European population. The influx of emigrants with modern business outlook, the industrialisation of parts of the country, and the rapid penetration of modern transport during the last fifty years had brought the older white population face to face with entirely changed conditions. Education had been insufficient and unsuitable, whilst isolation had bred an inflexible type of mentality. The report condemns the policy under which the State, in effect, bolsters up obsolete farming methods by providing financial assistance whenever debt becomes pressing. The Report has a good deal to say on the subject of education, particularly the domestic training of young girls. At present young European girls of the poorer classes are on the whole adverse to domestic service and not, as a rule, very satisfactory if obtainable. Speaking of industrial policy in colour questions, the Report says: "It will be disastrous for the poor white himself if any protection given him is of such a nature that it results finally in impairing his ability to compete with the non-European in the labour market." Consequently, the recommendation is in favour of utilising a period of protection as one of training for greater efficiency. Considerable criticism is extended to our policy in this matter, in questions of charity, and in regard to the problem generally. Another recommendation is for the creation of a Bureau of Social Welfare as a department of State.

The results of the Mealie Control Act are proving to be worse than was anticipated by even the most pessimistic critics. Last season's advance of seven shillings and sixpence per bag (200 lbs.) was known at the time to be somewhat generous, but it was generally hoped that the final settlement of local and overseas transactions would find the farmers still in credit. Co-operative Societies now find themselves in the position of owing large sums to the Land Bank on behalf of their members. The liability of members is unlimited in most cases, and the action of the Land Bank is a matter of much interest. On an advance of seven and sixpence sums as great as three shillings and sevenpence per bag are owing on some accounts.

The Director of Census has just published his Report on the Vital Statistics of the Union of South Africa for 1930 (U.G. No. 24-32). The Union birth rate and survival rate (for Europeans) are high, the birth rate being 26.4 per thousand. This is the highest of any British Dominion and comparable with Italy, Lithuania and Spain. The survival rate shows an excess of births over deaths of 16.8 per thousand. Over a period of twenty years this figure has averaged about 18. Its magnitude is due in part to the age-composition of the population of the Union. It is, however, one of the highest rates in the world and carries certain problems of its own—notably the numerical relation between the sections of population of working and of non-working age respectively.

HONGKONG.

Public Finance — Foreign Trade — Ottawa — Textiles.

(FROM OUR CORRESPONDENT.)

HONGKONG, November 1.

THE finances of this Colony are in a remarkably healthy condition. The year started with a surplus of over \$11 millions. The revised estimate of revenue for 1932 exceeds \$33 millions and the estimated expenditure is half a million dollars less. Thus, if these estimates are

realised, there will be half a million dollars to be added to the Colony's surplus funds, without taking into account a windfall of nearly two million dollars in respect of death duties payable on the late Lord Inchcape's estate in Hongkong. The Budget for 1933 is framed on the same lines as that for the current year, and no fresh taxation is to be imposed. The Government's policy is to maintain its present surplus in order to meet unforeseen contingencies; and in these days of world-wide financial embarrassment a reserve of one-third of the Colony's normal revenue forms a very solid backing.

Little local interest was shown in the proceedings of the Ottawa Conference, as no one thought that the Imperial Government would tamper with the commercial machinery of a colony which is entirely dependent upon a basis of free and unrestricted trade. It was, therefore, a shock to read one morning the following *communiqué* from the Hongkong Government:—

"The Ottawa Conference has made it necessary for all parts of the Empire to support the conclusions there made as far as circumstances permit. The conditions of Hongkong give few openings for reciprocating in the way of preference, but motor vehicles provide one such opening of which it is proposed to take advantage. A general import duty is possible, but it is considered that such a duty might interfere with the *entrepôt* trade in motor vehicles, and it has therefore been decided to recommend that the principle of preference should apply only to motor vehicles registered for use in the Colony and to add 20 per cent. of the c.i.f. value to the licence fee of all foreign made motor vehicles on first registration."

The position of motor agents who have a stock of unsold foreign cars appears to have been ignored. Such cars were imported in good faith, and it seems unfair to the agents for a penalty of 20 per cent. to be imposed without warning. The Treaty of Nanking, which secured Hongkong to the British Crown, lays it down that the trade of the Colony is to be kept free from any form of discrimination, and although revenue duties are imposed on liquors, tobacco and opium there has never, hitherto, been any distinction between the countries of origin. It is a matter of regret that the principles of the Treaty of Nanking should be sacrificed on the altar of Imperial Preference. However desirable it may be to foster the importation of British cars, the overwhelming presence of American cars is largely due to the difference in horsepower, American cars being far better adapted to the steep gradients of this Colony than British cars of similar price. The important trade in used cars which has now developed as a result of a growing demand from the interior may be restricted by the fact that foreign cars will have an inflated value due to the new tax. Moreover, many of the American manufacturers have provided the Colony with service depôts, whereas, with one or two honourable exceptions, British makers have done little to provide such facilities. The only other adjustment of the Colony's laws rendered necessary by the Ottawa Conference is a reduction of 50 per cent. of the duty on brandy in the case of such liquor produced within the Empire. So far, however, the public has not discovered any stocks of Empire brandy, or at any rate such brandy has not been advertised by any of the local wine merchants.

The trade statistics for the first nine months of the year record a decrease in local currency value, as compared with the corresponding period of 1931, but the sterling equivalent is higher. The following are the figures:—

	January— September, 1931	January— September, 1932
Imports	\$549,300,000 (\$26,700,000)	\$477,800,000 (\$31,400,000)
Exports	\$403,200,000 (\$19,700,000)	\$352,300,000 (\$23,200,000)

Imports from the United Kingdom during this period formed 13.2 per cent. of the total, as compared with 10.9 per cent. in the first nine months of 1931. On the other hand, imports from Japan were only 3.1 per cent., as compared with 11 per cent., Japanese piece-goods having decreased from \$22.6 millions to \$5.4 millions.

The buying season for fancy cotton piece-goods is now at an end. As was to be expected, bookings were on a much reduced scale, owing to the substantial carry-over from last spring, and the quantity ordered was less than half of that ordered last year, probably not more than

seven or eight thousand cases, as compared with over 20 thousand cases in 1932. Towards the end of the buying season negotiations for some of the smaller lines were interrupted by a disagreement between the Chamber of Commerce and the Piece Goods Guild in regard to the terms of the standard contract. Clearances of woollen piece-goods are proceeding satisfactorily, but dealers are making a very bare margin of profit. The demand from up-country has been affected by a further increase in the Customs tariff, and it is reported that sales have fallen off considerably.

Letters to the Editor.

THE WAR DEBTS.

TO THE EDITOR OF THE ECONOMIST

SIR,—The supplement on war debts issued with the *Economist* of November 12th is being widely read in the United States, where the periodical has a reading circle much larger than the number of subscribers.

Among other American reactions, I venture to mention one and make mention and comment upon a second. Americans will not accept any statement on the Lausanne agreement as sweeping away "all pre-existing obligations of Germany on reparations account." On the contrary, prevailing American opinion, led largely by Keynes, holds that Germany has about paid the reparation bill laid upon her in the Armistice agreement. Therefore, the Lausanne agreement represented an agreed cessation of exploitation of Germany, rather than a default by Germany.

The second comment relates to the concept of the "clean slate." Americans have never regarded the proposal in the Balfour note as the equivalent of the clean slate. The clean slate is something more than mere bookkeeping. In wiping the slate clean, there must be observance of the spirit as well as of the letter; it must embody historical outlook as well as historical experience. Would the cumulative operation of the following erasures represent to the *Economist* such a clean slate?

(1) The United States to cancel all loans made during the war and since the war to seventeen European countries.

(2) All loans to Russia before, during, and since the war to be cancelled. Cancellation of loans to Russia is based upon the fact that these were largely political and contributed to the outbreak of the World War.

(3) Great Britain to cancel loans made during and since the war to France, Italy, Portugal, Yugoslavia, Roumania, and Greece, it being understood that loans to Belgium are already cancelled.

(4) France to cancel loans to Italy, Portugal, Poland, Czechoslovakia, Hungary, Roumania, Yugoslavia, Greece, Albania, and Georgia, it being understood that loans to Belgium are already cancelled.

(5) Italy to cancel post-war loans to Poland, Czechoslovakia, Roumania and Bulgaria.

(6) Great Britain to cancel war loans to the Dominions of the British Empire.

(7) Germany to pay a final sum equivalent to three billion gold Reichsmarks.

(8) All loans to Austria to be cancelled.

(9) All governments of countries receiving debt cancellation to pledge themselves not to raise a foreign loan for any purpose for ten years.

The pledge of governments not to raise a foreign loan during the next ten years would be necessary to prevent political flimflamming between countries, whereby a debt would be cancelled only to be renewed after the slate had been wiped clean.

This would leave the field practically clear for private capital. Does such a broad proposition strike the liberal *Economist* as wiping the slate clean in the spirit and in the letter?—I remain, very truly yours,

Box 3031,

Stanford University, California.

December 6, 1932.

A. E. TAYLOR.

[The view that the reparations obligations imposed upon Germany had, in fact, been fully liquidated before the Lausanne Agreement is a controversial question which will never be settled. What is not open to question is that Germany had undertaken to make the Young Plan payments in precisely the same way as the debtors of America had undertaken to make their debt funding payments. As for the "clean slate," our advocacy of revision so drastic as to approach complete cancellation has always been directed to inter-Governmental obligations. In the case of commercial obligations, if there are over-riding objections to repayment, there must be a downward revision, but the creditors have an obvious right to be consulted. With regard to (9) we are inclined to suggest that some well-directed fresh loans are a factor essential to recovery.—Ed. *Econ.*]

THE TOTALISATOR.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I'd be curious to know if the writer of the note on my recent evidence before the Betting Commission had read either the text of my evidence or my own summary of it in a letter to the *Manchester Guardian*. For he has been rash if he has relied for a balanced report of what I said on a *Press résumé* primarily prepared for papers belonging to groups which make their profits out of the provision of off-course betting news. At any rate, the reporters suppressed the passages in which I recommended, amongst other things, the total prohibition of off-course betting.

One may, it seems, make money out of facilitating off-course betting, which is socially the most disastrous form of gambling. That, as you express it, is being "a servant of the public." But one must not say that taking a chance is capable, in favourable circumstances, of adding to enjoyment, even if one couples this with drastic proposals for reducing the admitted evils to a minimum! To keep a public-house involves no loss of virtue. We save our hard words for the wretch who has the cynicism to declare that an occasional glass of beer may do a man good!—Yours, etc.,

46 Gordon Square,

Bloomsbury.

J. M. KEYNES.

December 27, 1932.

[We confess that when we wrote our Note we had not seen the full text of Mr Keynes' evidence, but we were not dealing in any general way with his views on the specific reform of the Betting Laws—merely with his reported *obiter dicta* on the psychological effect of financial risk-taking. If these were misleading, and if we misinterpreted the sense of his evidence as a whole, we owe him our apologies.—Ed. *Econ.*]

Books and Publications.

BOOK OF THE WEEK.

BREAD AND GOLD.

"Gold and corn," says Mr Fay on page 135 of his new book,* have ever roused men's passions. Over these there have been wars, not of words only: they have run the herring and the clove a close race." He then goes on to compare, with interest if not quite with conviction, the passionate pamphleteers of corn-growing and corn-trading, from the seventeenth century down to the Anti-Corn Law League and Henry George, with the motley

* "The Corn Laws and Social England." By C. R. Fay. Cambridge University Press. 215 pp. 10s. 6d.

crew which clusters round Major Douglas and his kin, as in past generations they clustered round Thomas Attwood and Malachi Malagrowther. Perhaps the best example of the type of circumstance which has caused men to rave over gold and corn is quoted by Mr Fay himself, from a letter received from an unknown farmer correspondent in Saskatchewan: "... Butter is 5d. lb., cockerels 5d. each, hides 1s. 8d. for a 50-lb. hide. Wool thrown out, a neighbour of mine was offered one halfpenny per lb. for a dressed carcass of beef. Pork is 2d. per lb. the best quality. . . ." This may not be typical of present-day Canadian farming, and one trusts it is not; but in a world where such conditions can obtain it is surprising that men rush to manipulations of tariffs or to "printed papers about the currency," in the hope of obtaining relief from such lunacy?

We in Great Britain, after sixty years during which we were in the curious and fortunate position of being able as a State to ignore the problem of food supply, the problem which has conditioned the policy of almost every other State since the days of ancient Athens, have recently changed our minds and embarked on a policy—or half a policy—which commits us again to State interference in the grain trade. It may therefore be valuable that Mr Fay's researches should remind us what particular difficulties and dangers were connected with State interference in the past; how sudden changes in the attitude to imported corn—either automatic, by the rigid working of a Corn Law, or designed, by the repeal of a Corn Law and the introduction of another—disorganised the market; how much room there was, under the "average" system, for deliberate swindling as well as plain inefficiency; and how difficult it was, as the experience of the Assize of Bread and attempts to regulate the economic behaviour of bakers and millers show, to combine any form of protection for the producer with protection for the consumer without controlling the price of the article from start to finish. Perhaps, if history can teach politicians, we may find some way of working a quota system while avoiding these pitfalls; at least Mr Fay can show us that they are there.

It is less clear what his own remedy is. He has much interesting information about the working of the corn bounties, the London corn market, the attempts to bring some sort of order and uniformity into that terrible jungle, the "English Weights and Measures," on the price of wheat at various dates, and on the effects, both particular and general, of Corn Law Repeal. Also, he would not be Mr Fay if his book did not contain a number of excursions and *obiter dicta* which, while strictly foreign to the argument, are often more illuminating and interesting than the argument itself. Of such a kind is the brief account of the rise and success of the Anti-Corn Law League, which for the student of political psychology must always be one of the most interesting phenomena in British nineteenth-century history. There are some useful pages about Huskisson, whom Mr Fay greatly admires, and a pleasant and suggestive section about the replacement of the baker, as the arch-stealer of the people's food, by the miller. (But surely Mr Fay has forgotten some of his folk-lore. Bakers may have had a bad reputation; but the Miller of the Dee was not a popular character). His remarks on the weakness of agrarian unrest in England, and the lack of fear which it has inspired—though this has not prevented savage repression in 1830 and at other times—are also very true. But what he would have us do is not so clear; at one time he seems to favour a return to complete Free Trade, and certainly speaks highly of those who brought it about; at another he deplores the results on English farming after the flood of Chicago imports began, and indicates that in his view a community of free small farmers, such as Bright and Cobden hoped to see, would far sooner have dammed the flood with a tariff; while at yet another he thinks we ought to do something to help the Canadian farmer with his glut of produce—but what, he does not say. Those who are looking for a British agrarian policy will not find it here; but they will find a good deal of food for thought.

SHORTER NOTICES.

"Deutschland im weltpolitischen Geschehen." By Dr Otto Leibrock. Leipzig. Deutsche Wissenschaftliche Buchhandlung G.m.b.H.

Dr Leibrock presents the German case in regard to the World War and the Peace Treaty. France and England, he says, worked for war—the former to maintain her "prépondérance légitime" on the Continent, the latter to smash the rising sea-power of Germany. Germany was "inclined to peace to the point of pacifism." Before, as after, the war, the German people failed to work together for the maintenance of German integrity. Revision of the frontier in Upper Silesia, restoration of Danzig and the Polish Corridor to Germany, and the freeing of the Saar from foreign control, are an economic, ethnographic and strategic necessity. The Eastern European states supported by France are waiting to absorb

the two Central European powers. "With seriousness, constancy and confidence the Czech people believe in a Czech Vienna." An Austro-German union is inevitable. Further, Germany must use the right given to her by Article 8 of the Covenant to re-arm.

Dr Leibrock reckons that all in all Germany made to the Allies payments to the value of far more than 200 milliard marks. The Allies' claims exceeded both the obligations and the ability of Germany to pay. The world crisis is largely due to the effort to make huge international transfers in the face of a universal policy of self-sufficiency, which prevents Germany from exporting. Protectionism, the author concludes, is strangling trade. Restoration of economic freedom and of a spirit of international co-operation is essential if Europe is to be saved from revolution and destruction.

The partisan spirit of the book leads to one-sided judgments (Britain obtained her Empire by a "policy of expansion" and force, "dividing up the world" and "hunting" concessions; Germany "offered to awaken the old civilisation of Turkey from economic death") and even to absurd mis-statements (the strikes in England before the war are attributed to the desire of English workers to attain the German workers' standard of living). But it gives a clear statement of a German point of view. It is worth while for Englishmen, even more than for Germans, to read it.

"The Class Struggle in Britain, 1880-1914." Part One of a work to be published in three parts. By Ralph Fox. London. Martin Lawrence. 96 pp. 2s.

This vituperative little work reproduces much of the matter of Lenin's writings on pre-war Britain, including Lenin's controversial style, which does not reproduce happily in modern English political writing. It contains, further, some history derived from Mr Cole's "Short History of the British Working Classes," and a few statistical tables, one at least of which has been remade by the author from undisclosed sources. Its moral is the same as that of Mr Strachey's book, reviewed in these columns some weeks ago; but it bears much less evidence of thought. It is a tract for the converted, and for only a few of them.

The Stock Exchange.

THE STOCK EXCHANGE IN 1932.

For the first time since December, 1928, our review of the Stock Exchange year makes moderately cheerful reading. Whatever the individual experience, the average holder of securities is to-day considerably richer, on paper, than he was twelve months ago. The joint-stock banks and discount companies have perhaps fared best, for the remarkable rise in British Government securities has not only wiped out the investment depreciation they suffered in 1931, but has given them a handsome additional profit. The insurance companies, with a more mixed bag of investments, have probably less profit to show, but should at any rate have recovered the depreciation on their funds of the previous year. The investment trust companies, which are not holders of British gilt-edged securities, but international investors, have perhaps benefited only slightly. The explanation of the year's recovery is comparatively simple. Cheap money has exerted its inevitable influence in a not unfavourable political environment—at any rate, up to the War Debt "crisis" of December. The history of earlier economic depressions has repeated itself to this extent—that low interest rates have acted as a stimulus to stock market activity well in advance of a definite revival in industry. There were few tangible signs of trade improvement in America or Great Britain when the remarkable recovery of equity shares began in July. Nevertheless, if the political weather-glass were to change from "unsettled" and "stormy" to "set fair" a further appreciation of security values might not unreasonably be predicted for 1933.

As regards individual markets, history has been made by the gilt-edged boom. Cheap money, symbolised by a decline in Bank rate from 6 per cent. to 2 per cent. in the six months ended June 30th, and relief from short-lived

fears of currency inflation after Britain's departure from gold, encouraged an almost unprecedented demand for fixed-interest securities immune from "trade risks." British Government stocks led the rise to the accompaniment of conversion rumours. The Treasury "played" the market with consummate skill, and when the War Loan Conversion scheme was announced on June 30th British Government long-dated stocks were already on a 3½ per cent. yield basis. When the final stage of conversion was reached on November 2nd with an issue of 3 per cent. Conversion Loan at 97½ to deal with the December 1st maturities, the long-dated stocks had touched a 3½ per cent. yield basis. The "staggering" of the 3 per cent. Conversion Loan, however, left the market in a condition of indigestion, from which, thanks partly to the War Debts crisis, it has not yet fully recovered.

The remarkable appreciation in gilt-edged stocks over the year has not been confined to British Government funds. Home corporation and public board stocks, India and Dominion Government loans have all participated. Indeed, judged merely by the number of points gained, stocks such as India 3½ per cent., and New South Wales 5 per cent. (1935-55) have, as our table on the next page show, fared even better than the long-dated British Government stocks. First-class debentures and preference shares of British industrial companies have also scored remarkable advances. Only foreign Government bonds, where defaults have been heavy, and the "trade risk" prior charges of commercial and industrial companies, have had no part or lot in the rise.

The following extracts from the Actuaries Investment Index show the general extent of the rise in fixed-interest

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES, 1931 and 1932.

securities. It will be seen that over the year British Government funds have moved from a 4½ per cent. to a 3½ per cent. yield basis, home corporation stocks from 5 per cent. to 3½ per cent., industrial debentures from 6½ to 4½ per cent., and industrial preference shares from 6½ per cent. to 4½ per cent. :—

The equity share markets continued to suffer from liquidation until June, when the Lausanne Conference gave wings to hopes of a trade recovery. Many operators, in Europe as well as Wall Street, assumed that the elimination of reparations would be followed by the disappearance of war debts from the international scene. Lausanne was the external and outstanding political event for which the cheap money forces had long been waiting. British industrial share values, as measured by the "Financial News" daily index (1928=100) rose from 51.3 (June 3rd) to 66.9 (November 9th)—a rise of 15.6 points, or 30.4 per cent. American industrial shares, measured by the Standard Statistics daily index, rose, on the same basis, from 20.9 (June 27th) to 42.9 (September 7th)—a rise of 22.0 points, or over 100 per cent. The course of these two indices, over the past two years, is shown by the chart on the preceding page. It will be observed that after the end of August the British and American curves no longer run in more or less parallel fashion. British industrial shares have maintained their gains—having reached, in fact, a new high level in November—while American equities in the last four months of the year have lost half their summer rise. An outstanding exception to the rise in British industrial shares was provided by home railway stocks. These continued to react with the heavy fall in traffic receipts, which left junior preference dividends "uncovered" on the two largest lines. Before the year closed, however, the decline in values was arrested, and there was a tendency to look more favourably upon a revival in the heavy industries, particularly iron and steel.

The more speculative share markets have made, generally, a less favourable showing, for the reason that the trend of prices of primary commodities has continued downwards. The slight recovery of "gold" prices in the midsummer period was fully reflected in share values. The movement lacked vitality, and few speculative shares stand higher to-day than a year ago, as the following *Investors' Chronicle* Index figures suggest :—

(December, 1923 = 100.)

	End Nov., 1931.	End June, 1932.	End Sept., 1932.	End Nov., 1932.
Gold mines	90.4	94.3	110.1	124.1
Rubber	65.5	63.6	117.2	107.4
Oil	39.0	19.1	43.0	36.3
Tea	53.3	40.3	48.2	47.7
Tin mines	65.7	50.5	73.5	61.2

Activity in South African gold mining shares was stimulated by the fall in the sterling exchange in the concluding months of the year, and overflowed into the West African gold mining market. The rise in oil shares, after the establishment of higher petrol prices in Europe, received a distinct check before the year's end, by reason of the Anglo-Persian oil dispute and the cut in American oil prices. Apart from a temporary (and somewhat exaggerated) recovery in the summer, rubber and tea shares were generally neglected by investors.

A review of a year's events may, advisedly, halt on the safe side of prognostication. One encouraging omen, at least, emerges from the story of 1932. Forced liquidation has ceased and investors are again showing a disposition to buy securities in anticipation of the long-deferred trade recovery. The next chapter is for the world's statesmen to write.

IRON AND STEEL SHARES.

THERE have lately been welcome signs of a return of interest in iron and steel shares. This market, taken by and large, has been one of the most consistently depressed on the Stock Exchange in the last ten years. The *Investors' Chronicle* index of nine iron and steel shares (December 31, 1923 = 100) stood only at 26.1 at the end of last month, as compared with 31.8 in November, 1931.

Numerous influences have contributed to the new movement, which does not yet deserve the name of "revival." In the last twelve months the industry has obtained protection at home and the competitive advantages of a depreciated pound abroad. It is true that progressive world trade shrinkage has so far nullified this latter boon,

that British exports of iron and steel manufactures, which were 3.0 million tons in the first eleven months of 1930 and only 1.8 millions in the same months of 1931, have shown a further slight decline to 1.7 million tons this year. British producers, however, are, naturally, obtaining a larger share of the home market, imports for the eleven months having been only 1.5 million tons this year, against 2.6 millions last year. Earning power in the industry, however, with a few exceptions, remains meagre. The following table is based on recently published reports:—

Company and Balance Sheet Date.	Earned after Debiture Interest.		Ordinary Dividend.		De-nomination of Ord. Sha.	1932 Prices.

The intervention of "the City" in the industry's financial reorganisation, through the medium of the Bankers' Industrial Development Company, has not been unfruitful. The amount of space devoted in the Press, however, to recent developments, such as the decision to build a basic Bessemer works for Stewarts and Lloyds at Corby, and the acquisition of the Whitecross Company by the Lancashire Steel Corporation (see the *Economist*, December 24, 1932, p. 1190), has given, possibly, undue publicity to the industry's better prospects. Nascent optimism may be tempered by a little of the caution expressed by company chairmen at recent shareholders' meetings. For example, Viscount Furness, at the South Durham meeting this month, emphasised the difficulties of all plate mills in view of the practical cessation of activity in shipbuilding, which in the pre-war year absorbed as much as one-third of the entire British steel output. During the year ended June 30th last the surveyors of Lloyds Society tested only 164,000 tons of shipping and boiler steel at home and 111,000 tons abroad—an insignificant tonnage compared with the average of nearly 1 million tons for the preceding four years. At the meeting of Tube Investments, one of the most profitable concerns in the whole industry, the chairman, Mr Arthur Chamberlain, declared that an isolated improvement in this country could only be a flash in the pan, and a removal of trade barriers throughout the world was vital.

Such a recovery, however, whenever it comes, may find the industry in a stronger competitive position than for a generation. Technical efficiency has been improved, wage costs on a gold basis have been lowered (mainly by the depreciation of the £), and the process of financial over-

.....

haul has proceeded steadily. During the last twelve months, for instance, reconstruction schemes have been formulated for important concerns like Cammell Laird, Ebbw Vale, and Pease and Partners. The industry has avoided grandiose "horizontal" amalgamations, but closer co-ordination of interests is imperative, and the success of tariffs as an instrument for producing enthusiasm for unity has not yet been conspicuous.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
January 10.

ACCOUNT.
January 12.

The markets were cheerful after the holiday, though the volume of dealings was seasonably restricted. Sterling was steady, and gilt-edged held their ground. Interest, however, tended to veer towards industrial securities, particularly steel company shares. An enhanced demand also arose for railway junior stocks. South Africa's currency policy provoked keen discussion, the market generally taking a cautious view of the "benefits" of potential devaluation from the viewpoint of the gold-mining industry.

Gilt-edged stocks made a satisfactory showing, though business was small. Sir Samuel Hoare's speech had a tonic effect on India loans. South African issues were unaffected by the currency decision. In the foreign market German bonds were again in demand—partly, it was believed, on German account. Austrian Sixes strengthened. Most Brazilian stocks were fractionally lower, but Argentine stocks were inclined to harden. The Argentine position is discussed on page 1250.

Home Rails were stronger than for some weeks past on improved reports regarding the North-East Coast coal trade, London and North-Eastern preference stocks being particularly in favour. Last week's returns showed an increase over 1931 in gross traffic on all lines, but the figures, unlike those of last year, did not include the returns for December 25th—a "dead" day on the railways. Business in foreign rails was very limited, interest being confined almost entirely to the Argentine "Big Four," whose stocks were sold on fears of a labour dispute.

Industrials experienced a steady investment demand, iron and steel shares being in special request. Textile shares, similarly, were firm after the signature of the "more looms" agreement. Tobacco shares were harder. Dealings started at a small premium in the Godfrey Phillips preference scrip. Electricity shares were well maintained. Provincial support was forthcoming for Dunlop, Pinchin Johnson, Imperial Chemical, and Wall Paper deferred. A tentative recovery occurred in shipping shares. British bank shares reflected the general view that possible dividend reductions, next month, had been fully discounted. Insurance shares more than held their ground.

The oil share market had a firm appearance, numerous buying orders having accumulated. Anglo-Persian continued to improve. Rubber shares were neglected and mostly unchanged, while the dullness of the tea share market remained unrelieved.

Mining shares were overshadowed by the currency position in South Africa. The high-grade gold mines, whose dividends have been declared but are not to be paid until the end of January, were marked down, though for a time dealing was a matter of difficulty. The low-grade mines were assisted by the prospect of an increase in payable ore, but the market generally was oppressed by uncertainty regarding the position of the mines vis-à-vis sales to the Reserve Bank, and the possibility that increased taxation and operating expenses might offset the advantages of a gold premium. In other sections business was dull, though West African issues were steadier and De Beers improved. Base metal prices showed little change, and only slight interest was taken in the shares.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets opened weak after the holiday, but subsequently showed the incipient firmness which is not uncommon at the end of a year, despite the incidence of selling to establish tax losses. This has been, on the whole, of less than normal dimensions. Railroads led the mid-week recovery, partly by way of a rebound after over-heavy liquidation, but many leading industrials, like Steel Corporation and General Motors, remained under selling pressure. Year-end news is not conducive to a sustained price recovery. Doubts are expressed whether Congress will balance the Budget this session, and a special meeting of the new legislature in March is regarded as more than probable. The steel industry is operating at an average of about 13 per cent., which is little above the extreme low point of 12 per cent. reached last July. Even this showing is slightly better than was expected, but the "Iron Age" describes 1932 as a disastrous year for the industry. Statements recently made by several leading automobile manufacturers point to renewed price-cutting in the New Year. The railway position is overshadowed by the possibility of further receiverships. Car-loading figures, over the

holiday season, have had a not unfavourable trend, and out of 40 railroads which have reported November earnings, 21 showed an improvement in operating income as compared with the corresponding month of last year. The result for the whole 40 systems, however, was a drop in gross revenue, as compared with 1931, of 17 per cent. and in net revenue of 11 per cent. Pressure for concessions as regards receiverships has been increased—the more so as some of the larger companies are not covering their fixed charges. The heavy imports of gold of the last few days have been without effect on stock market sentiment.

PARIS.

The Bourse opened quietly after the holiday, but prices were mainly firm. Interest centred in Banque de France, which rose 280 on the final dividend of 100 francs. German bonds were well supported, and South African gold shares were cheerful at the outset, but on Wednesday liquidation was induced by the uncertainty regarding the future of South African currency. De Beers were buoyant. On Thursday there was a further relapse in gold shares, but industrials were moderately firm, sugar and bank

WALL STREET.

Moody's Investors Service Ltd., acting as agents for their New York organisation, can supply immediately a complete statistical service on American Companies (up to date to the current week), company analyses for circularising, or any special service.

MOODY'S INVESTORS SERVICE LIMITED,

King William Street House,
Arthur Street, E.C.4.
Tel.: Mansion House 7685.

NOTE.—Shares with a New York quotation, or whose selling price is shown in American prices, are denominated in dollars. In calculating yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

BERLIN.

Most stocks were firm, and business tended to expand. Tax Credit Certificates were marked up, and Reichsbank strengthened. Dye Trust, however, were lower, and Siemens were sold. Mining shares were generally higher, but the improvement was not shared by lignite stocks. In the middle of the week quotations became more irregular, and a number of trading issues lost their earlier gains.

	Dec. 1932.	Dec. 1932.	Dec. 1932.		Dec. 1932.	Dec. 1932.	Dec. 1932.

AMSTERDAM.

Quiet conditions prevailed, but undertone was firm. Royal Dutch and Unilever advanced, and Amsterdam Trading improved, in common with most sugar shares. Subsequently the volume of business became more restricted, but prices were maintained.

	Dec. 1932.	Dec. 1932.	Dec. 1932.		Dec. 1932.	Dec. 1932.	Dec. 1932.

OTHER CENTRES.

The volume of business was fairly satisfactory on the minor European Bourses. Firm conditions obtained at Frankfurt in sympathy with the improved tone of Berlin. Quotations at Vienna showed a moderate improvement. Stockholm was quiet, but Brussels hardened. Irregularity, however, became more noticeable in most centres as the week progressed.

INVESTMENT NOTES.

Argentine Government Bonds.—To relieve the strain on its Budget, the Argentine Government is considering a somewhat novel debt conversion scheme. According to reports from Buenos Aires, the scheme consists in the conversion of all internal bonds, except the Patriotic Loan, and subsequently all external bonds, into new issues amounting only to the sums actually outstanding, thus wiping out the service on that portion of each original issue which has been already extinguished by amortisation. It is proposed that the new issues should carry the same interest as the original loans. The reduction in the sinking fund payments, however, would effect an estimated economy of 56 million paper pesos annually. The scheme has been discussed with leaders of the different parties and will be voted upon by Congress this week. It is doubtful, however, whether bond holders, if they were required to choose between two evils, would not prefer a temporary suspension of the sinking fund payments, such as has been freely advocated in the Argentine Press. The suggested scheme would operate unfairly as between different issues, for holders of the older loans would suffer proportionately more than the holders of more recently issued stocks. All the older Argentine loans are, in fact, sterling issues. Meanwhile, the Province of Buenos Aires has anticipated the Central Government by proposing (a) to suspend sinking funds of all internal and external loans (with one exception); (b) to pay interest on foreign loans (with certain exceptions) in

currency; and (c) to satisfy any balance by the issue of Arrears Certificates, bearing interest at 5 per cent. Full service will be resumed after three years. It is understood that certain sterling and franc bondholders have given the scheme their unofficial benison, but that dollar bondholders have yet to approve it. As the Argentine peso has depreciated only 12½ per cent. in terms of the £, but 40 per cent. in terms of the dollar, currency payments involve a larger immediate sacrifice for the American than the British holder. The American loans, however, are "younger" than the British, and the suspended sinking fund payments thus represent a smaller part of each year's service. The following table shows the loans affected:—

(000 omitted)

Province of Buenos Aires.	Service in full.	Interest in full.	Interest (less 12½%).	Amortisation, not to be paid.	Percentage of total service paid.
Sterling and Franc Issues.	£	£	£	£	%
5% Sterling, 1908 (Drainage Loan)	90	41	36	49	39.54
5% External Gold, 1910	63	27	24	35	38.25
4½% External 1909 (Railway Loan) English Issue	39	24	21	15	53.91
Do. French Issue	3,685	2,269	1,985	1,416	53.87
Dollar Issues.	\$	\$	(Less 40%)	\$	%
External 7½%, 1925	1,375	869	522	506	37.92
External 7%, 1926	901	621	373	280	41.36
External 6½%, 1928	2,877	2,333	1,340	544	48.64
External 6½%, 1930	876	709	425	167	48.56

* Extent of present depreciation of peso in terms of sterling and dollars, respectively.

The bonds of the new Internal 6½ per cent. Consolidated Loan are unaffected by the scheme, while interest on the 3 to 3½ per cent. Loan of 1906-09 and the 5 per cent. Consolidation Gold Loan of 1915 will be paid in full. The scheme appears to apportion the burden of inevitable sacrifice in rough-and-ready but not inequitable fashion.

And Argentine Railways.—British investors are concerned mainly with the effect of the Argentine Government's policy on the national economy, for whereas British holdings of Argentine Government and municipal stocks had a par value of little more than £32 millions in 1930, our total commercial and industrial holdings in the country have been put at over £290 millions. None of the "Big Four" railways paid an ordinary dividend for the year to June 30th last, and the position has subsequently deteriorated:—

TOTAL GROSS RECEIPTS.
(First 25 weeks of each year, at par of exchange.)
1931-32. 1932-33. Difference.

	(£000)	(£000)	(£000)	%
B.A. Gt. Southern	4,575	4,179	-396	-8.7
Central Argentine	5,555	4,646	-909	-8.4
B.A. and Pacific	3,109	2,456	-653	-7.9
B.A. Western	1,830	1,555	-275	-8.6

All the four companies show a decline in gross receipts, so far, of approximately 8 per cent. Stockholders will, in addition, be required again to bear the brunt of a depreciated exchange. The railways would benefit from any Government action resulting in a relaxation of the present severe restriction of imports. Argentina's "favourable" visible trade balance of \$237 millions (gold), in the year to June 30th last, was achieved by the shipment of heavy tonnages of primary products (her exports increasing during the year by 27.6 per cent. in volume, but by only 8 per cent. in value) concurrently with a reduction of no less than 36.8 per cent. in the value of imports. All the railways handled an increased "outward" traffic last year, but lost heavily on "inward" traffic and passengers. A single year of deficiency in the staple Argentine crops would obviously place the railways in an unenviable position. The period of heavy crop movements, for the present season, has still to come, but the official estimates, happily, indicate that while traffic may not reach last year's dimensions, the total falling off is unlikely to be considerable. The 1932-33 wheat crop is put at 29 million quarters, compared with a final figure of 28.2 million quarters for 1931-32, the maize crop at 83.8 million quarters, against 86 million quarters, and linseed at 1,350,000 tons, against 2,170,000 tons. In the absence of

prospects of an early amelioration of economic conditions, the railways are making strenuous efforts to reduce wage costs. In November, 1931, a reduction of 6 per cent. was agreed to with the enginemens, but the Union Ferroviaria (Railwaymen's Union) would agree only to a system of short-time working, which itself, from February 1st last, was abrogated as regards certain categories. The B.A. Great Southern has now announced an 8 per cent. wage cut, to take effect in January, and other lines may adopt a similar policy. The possibility of a railway strike is being canvassed, and long discussions have taken place between the railways and the President. In the last resort, the sympathies of the Government (which is fully cognisant of the railways' difficulties) may be with the companies, but the power of the unions is considerable and has been strikingly demonstrated in the past.

Co-operative Interest and Loan Policy.—As long ago as 1930, writes a co-operative correspondent, attention was drawn to the rise in the share and loan capital of distributive co-operative societies, despite the prevailing industrial conditions. While the sales of the societies had risen two and a-half times between 1913 and 1928, to £209,389,555, the capital had more than quadrupled in the same period. Many societies were paying 5 per cent. per annum interest to their members on share capital, and slightly less on loan, and were anxious to find securities bringing a minimum of 5 per cent. and avoiding speculative risks. This fact explains the steady flow of co-operative capital into municipal loans during 1930 and 1931. Although more than a hundred societies reduced the interest rates returned to their shareholders last year, this did not stem the flow of capital, and the committees have continued their policy of taking up municipal loans. At the present time the Leeds society has investments of £490,665, of which no less than £350,874 is on loan to corporations and local authorities. The Doncaster Society recently lent £25,000 to the Leeds Corporation. The Huddersfield Society has £46,000 with the local corporation. The society at Macclesfield has £30,000 loaned to the municipality and £79,000 invested in colonial securities. The Peterborough Corporation is indebted to the local co-operative society for £75,000. Ripley Society has £150,000 invested with local district councils. These examples are typical of similar investments throughout the country. Since the inception of the Government's War Loan conversion policy, the societies at Doncaster, London, Peterborough, Plymouth, Oldham, Birmingham, Carlisle, Hull, Middlesbrough, Weymouth and Rochester have all lowered their rates on share and loan capital, and it would seem that 4 per cent. will replace 5 per cent. as a standard return in the movement. Simultaneously, the latter may be forced more thoroughly into production. Many municipalities are already lowering loans interest to a point which is unattractive to the societies, which are urging their federations—the Co-operative Wholesale Society and the Scottish Co-operative Wholesale Society—to undertake new productive activities. Examples are the milk business, glass bottle manufacture, drugs, furniture, etc.

Lautaro Nitrate.—The latest accounts of the Lautaro Nitrate Company make unhappy reading. No shareholder familiar with the Chilean nitrate situation in the last eighteen months will be surprised that the company has made a heavy loss, or that the small surplus of liquid assets shown a year ago had, by June 30th last, been converted into a substantial deficit. The manner in which the year's results are set out, however, tends to hinder rather than facilitate comparison with earlier periods. The profit and loss account shows a net loss of \$48.3 millions (Chilean gold pesos); but the precise import of this figure is difficult to perceive. It is arrived at after crediting \$13.6 millions for exchange profit and profit on debentures retired, and before debiting \$12 millions of depletion and royalties, plus a further unstated amount for unpaid bond and debenture interest. Thus the total loss appears to have been a minimum of \$73 millions (gold pesos), or, say, £1,800,000 at par, compared with last year's loss of £656,511. Shareholders, however, have no

assurance that this is, in fact, the limit of their loss. Although the profit and loss account includes a debit of over \$15 millions for inventory losses, the extended references made in the auditors' report to the method of stock valuation employed makes it uncertain whether the auditors are themselves prepared to accept responsibility for the valuation as it stands. The most controversial feature of the balance sheet, however, is the valuation of the company's nitrate reserves. Exact comparisons with last year are not possible, since the nitrate reserves are now shown separately. That considerable "writing up" has taken place, however, is suggested by the fact that in the 1932 balance sheet the nitrate reserves, before depletion, are valued at the equivalent of £17,414,000, against a value of £9,145,351 set on nitrate reserves, plus all the Shanks plants and equipment, on June 30, 1931. The nitrate valuation is now at the rate of 10½d. per metric quintal. Seeing that a large part of that nitrate was bought only a little over three years ago at 4½d., the revaluation in present conditions seems excessive, altogether the directors may claim to be merely following the precedent set up by "Cosach." Altogether, the accounts suggest that whenever a revival occurs in the Chilean nitrate industry (at present, unfortunately, a remote contingency), the finances of the Lautaro Company may call for substantial adjustment.

"Coffee Loans."—Last week's announcement by the agents of the San Paulo Coffee Institute 7½ per cent. bonds serves to draw attention to the position of Brazilian Coffee Loans generally. The repayment of the Brazilian 7½ per cent. Coffee Security Loan of 1922, last October, left three coffee loans on the market—San Paulo 8 per cent. of 1921, San Paulo Coffee Institute 7½ per cent. of 1926, and San Paulo 7 per cent. Coffee Realisation Loan of 1930. The first, San Paulo 8 per cent. 1921, is secured on the surtax of 5 francs per bag on the export of coffee grown in the State. The collections of this tax being insufficient for the service of the bonds, the loan comes within the Moratorium Decree of April 30, 1932 (No. 5490), which provides for the payment of interest and sinking funds in two-year promissory notes bearing interest at the rate of 5 per cent. per annum. As cover for and in guarantee of the promissory notes, the Government undertook to deposit certain sums, beginning with 4,000 contos of reis per month. Only two such deposits have so far been made, the last being made in June. The San Paulo Coffee Institute 7½ per cent. bonds are secured as a first charge on a transport tax of 1 gold milreis (2s. 3d.) per bag of coffee grown in and transported through the State, as well as on the assets of the Coffee Institute and an equivalent amount of 7½ per cent. sterling bonds of the San Paulo Government. The amount required for the service of the bonds on July 1st last was completed by the temporary utilisation of part of the reserve fund. The reconstitution of the reserve fund was delayed by the revolution of San Paulo, which lasted from

July to early October. It is expected that the reserve fund will soon be completely re-established. The Coffee Institute is unable to make normal remittances in respect of the transport tax collections for the current half-year, but has informed its agents that arrangements have been made for future remittances to supplement the reserve fund, to provide for the sinking fund and to pay the interest in full at the rate of \$4.86 to the £. The agents are therefore making temporary use of the reserve fund to meet the January 1, 1933, coupon. The 7 per cent. Coffee Realisation Loan, 1930, has a specific charge on a special tax levied on all San Paulo coffee arriving at Santos or otherwise exported from the State. The principal is specifically secured by the deposit of the documents of title on 3 million bags of Government coffee to be redeemed at £2 10s. per bag and on planters' coffee to be redeemed at £1 per bag. A minimum average sum of £2,100,000 received each year on the redemption of pledged coffee is to be applied as to £2 millions in repayment of the loan and the balance to reserve. The agents of the Loan announced in August that owing to the revolution monthly statements had been suspended. Later, in November, it was stated that small remittances had been received, and on December 12th it was announced that \$635,000 had been received since November, when communications were reopened in San Paulo. The Government added that payments would be larger in future, and that supplementary remittances would be made to provide for the arrears. It is expected the monthly returns will shortly be resumed. The prices and yields returnable on the San Paulo Coffee Loans are shown in the following statement:—

	Lowest Redn. Dates.	Price, 1932.	Present Price.	Redemp- tion Yield %.	£	s.	d.
San Paulo 8%, 1921.....	1951 at 105	20½	25	...	...	...	...
San Paulo Coffee Inst. 7½% Bonds, 1926	1956 at 102	44	68	17 6	9*	...	...
San Paulo 7% Coffee Realisa- tion, 1930	1940	71	82	10 5	0	...	...

* Allowing for interest paid at \$4.86½ to £.

It is not expected that the return to normal conditions in San Paulo will be rapid, but the resumption of remittances in respect of the San Paulo Coffee 7½ per cent. and 7 per cent. loans is an encouraging sign.

Fairey Aviation.—During each of the three years since its incorporation in March, 1929, this progressive aircraft manufacturing company has recorded increased profits. For the year to September 30th last, trading profit, at £185,640, shows an increase of 6½ per cent., and an unchanged dividend of 10 per cent., tax free, is covered by earnings of 25½ per cent:—

	Year to September 30, 1930.	1931.	1932.
Trading profit	161,102	174,165	185,640
Other income	9,749	11,289	13,720
Fees	887	869	850
Income tax	36,000	48,000	45,000
Debt redemption	21,000	22,700	25,404
Net profit	112,964	113,885	128,106
Brought forward	24,904	32,868	26,753
Ordinary dividend:			
Amount	35,000	50,000	50,000
Earned %	22.6	22.8	25.6
Paid %	7*	10*	10*
Patents, &c., reserve	40,000	40,000	40,000
General reserve	30,000	30,000	30,000
Carried forward	32,868	26,753	34,859

* Tax free.

The distribution of the surplus follows the usual conservative lines. The balance sheet reveals a strong liquid position, the increase in cash resources to £448,846 suggesting the possibility of early repayment of the £220,330 6 per cent. debenture stock, which is redeemable at any time, on three months' notice, at 110. At 16s. 8d., the 10s. shares yield about £6 11s. per cent., tax free.

Great Universal Stores.—Shareholders in the Great Universal Stores have learned with surprise that, within seventeen months of the public offer for sale of a block of ordinary shares at a premium of 300 per cent., matters have arisen "which need careful consideration," and three directors have resigned, including the chairman, who founded the business and had made a five-year agreement, "thereby securing continuity of the... successful management." Three new directors—Sir Philip Nash, Mr R. H. Griffith and Mr T. H. Jones—have joined the board after an examination of the position by eminent accountants, with the approval of the company's stock-brokers. A full statement of the position is promised after the end of the current financial year on March 31st next, but in the meantime the 5s. shares stand at 8s. 9d., as compared with a maximum for 1932 of 23s. 6d. The offer for sale, made in July, 1931, suggested that both the company's profits and capitalisation had increased with exceptional rapidity in the preceding period, earnings, before income tax and depreciation, being (to March 31st), 1929, £110,000; 1930, £213,000; 1931, £411,000. Between March and July, 1931, the capital was increased from £15,000 to £600,000 by the capitalisation of undivided profits, and the inside interests retained for themselves 800,000 out of 1,200,000 5s. ordinary shares. The report to March 31, 1932, was disappointing. Profits were revealed as having fallen to £267,000, out of which income tax required £105,000, and ordinary shareholders would have received a mere 10 per cent. but for the generosity of three directors who, having received a capitalised £100,000 out of the year's profits, made the ordinary dividend up to 50 per cent. out of their own pockets—a somewhat unprecedented proceeding. The report also showed that the company's stock-in-trade, as a mail-order business, had risen between March 31, 1931, and March 31, 1932, from £369,000 to no less than £664,000. The board's latest circular hints broadly at the necessity for writing-down stock. Shareholders may speculate as to how far the statement that turnover has been satisfactorily maintained should be qualified by the proviso "under prevailing conditions." The reconstructed board do not hazard a categorical opinion as regards the company's prospects, but merely state that "there is nothing in the information... so far furnished to them" which suggests that the business cannot be steadily developed to earn reasonable profits under efficient direction. That is all to the good, but the next report, obviously, may not be pleasing. The vendor interests, who hold voting control, are now represented only by two directors on a board of seven. Further comment must needs be reserved for the issue of the accounts of March 31, 1933.

Chosen Corporation Affairs.—The financial transactions of this company have occasioned some discussion among shareholders. A year ago the corporation's auditors criticised certain share purchases by the company's Japanese subsidiaries. Following a requisition by a number of shareholders, a Board of Trade inspector was appointed. His report, which appeared in November, suggested certain irregularities. The auditors' certificate accompanying the corporation's latest accounts (to June 30, 1932) is, to say the least, unusual and disquieting. "We have been unable," the auditors declare, "to obtain all the information and explanations we have required." They point out that amounts aggregating £120,076 are said to have been invested in Chosen Corporation shares by the Japanese companies, the average price per share having been 14s. 4½d. This figure, they allege, is substantially in excess of the Stock Exchange quotation ruling during the course of the transactions. The present price is 8s. At the annual meeting on Wednesday the chairman, Mr H. H. Pounds, explained that documentary evidence as to the payments had been tendered to the auditors, though the share certificates were held on behalf of the Japanese companies by their own trustees. The accountants who audited the accounts of the Japanese companies, however, declared that they were unable to verify either the number of shares held or the total

amounts paid, owing to the fact that the necessary documentary evidence was in London. The report of the corporation's auditors, further, states that they were refused verification of the shareholdings, and that they obtained no satisfactory evidence either of the subsidiary companies' title or of the fact that the alleged purchases had been made. Their request to see a copy of the inspector's report was refused. A motion, at Wednesday's meeting, to re-elect the auditors was declared defeated on a show of hands, but a poll was demanded, whose result is to be announced at an early extraordinary meeting. Whatever the result, it is unlikely that matters can remain indefinitely in their present unsatisfactory state. Apart from the moral duty of the board to meet the points raised by responsible representatives both of the Board of Trade and the shareholders, the authorities, having once intervened, can scarcely be content, in view of their powers under the Companies Act, with anything less than complete satisfaction on all matters of fact.

Large Gas Co-ordination Scheme.—A new holding company has been formed to acquire controlling interests in a number of important gas undertakings in Kent. The company will be known as the South-Eastern Gas Corporation, and will have an initial capital of £323,000. Among the undertakings with which the new corporation is concerned are the Folkestone Gas and Coke Company (incorporating the Hythe and Sandgate Gas Company); East Kent Gas Company (incorporating Wye, Chilham and Bridge Gas Companies); Deal and Walmer Gas Company, and Whitstable Gas and Coke Company. The above companies, along with others not mentioned, will maintain their identities, the new company concerning itself purely with the co-ordination of financial and technical administration and policy. The formation of the new corporation is in keeping with the gradual trend towards the rationalisation of gas undertakings. It is understood that the developments announced represent only the first steps in a broad programme of co-operation and co-ordination in this field by the new corporation.

EGYPT AS A GOING CONCERN.

INTRODUCTORY

By H.E. Ismail Sedky Pasha, President of the Council.

The *Economist* has offered the hospitality of its columns for a statement of the present position of affairs in Egypt, an offer which is gladly accepted. Since, however, this journal is financial and economic, in presenting this co-operative picture of Egypt as a going concern, it is not my intention to enter deeply into Egyptian politics. The whole world, Egypt not excluded, has been, and still is, suffering from a surfeit of politics, to the repression of the much more vital economic policy. I shall content myself with reminding my readers that my Ministry is liberal, that we govern constitutionally, and shall continue to do so. Nevertheless, it may not be out of place to recall that liberalism cannot have exactly the same connotation in a country like Egypt, as it has in politically developed countries like Great Britain. The people here have been accustomed for scores of centuries to have many matters thought out, and many problems solved for them by the Government, and it is impossible, in a day, to break with this ingrained reliance on authority. The Government must perforce do many things for the governed, which sometimes seem to be done arbitrarily. But is Egypt the only country, I may ask, where such is the case? Still, despite these appearances of arbitrariness, I can assure my readers that the one object of the Government which I have the honour to lead has been to work for the greater good of the free to devote their undistracted efforts to facing and overcoming the economic difficulties that confront them. In this we have been successful. Egypt is free from political unrest. The country has responded with unexampled efforts to and we believe our interpretation to be in conformity with the intentions of those who drafted our engagements; we have had to call upon no external aid to help us out in our difficulties, and if our currency is depreciated, it is still as good as sterling. How many countries that pride themselves on more democratic institutions can say the like? Doubtless, withstanding these handicaps, I have the fullest confidence that the same policy, backed by the hard work and frugality successfully through the "economic blizzard," even if its worst blast may yet lie ahead. In continuing this policy, we shall do so with the greater assurance, knowing that, besides the confidence of the people and the support of Parliament, we enjoy the trust of His Majesty King Fuad, himself now as ever more solicitous than any for the highest interests of his subjects.

THE BUDGET.

The underlying idea of this exposé is to set forth the position of Egypt as a going concern, with achievements in the past, a multitude of cares in the present, but lively hopes for the future. As far as possible, figures will be left to tell their own tale and verbal exposition will be explanatory. In such an exposé it is natural that a beginning should be made with the Budget.

The following table sets forth condensed budgetary statements of the past three years, as estimated, and against them displays the results actually obtained. The financial year begins in May and ends in April.

BUDGET AND FINAL ACCOUNTS OF THE EGYPTIAN STATE (in £E.1,000)*						
	Estimates.			Final Accounts.		
	1929/30.	1930/31.	1931/32.	1929/30.	1930/31.	1931/32.
Revenue	38,950	37,477	39,316	41,886	38,584	37,771
Expenditure	47,410	46,115	38,884	41,128	41,222	36,992
Balance	- 8,460	- 8,638	+ 432	+ 758	- 2,638	+ 779

Adverse balances are met by drafts on, and favourable balances go to swell, the Reserve Fund (see below). When the present Cabinet took office in July, 1930, they inherited a budget which closed with an estimated deficit of £E.8.6 millions. The economic crisis which started in 1929 was then in full course, and there was little hope that, as had often happened in Egyptian public finance, a conservative estimate of receipts and a maximum estimate of expenditure would be falsified in the event. Accordingly, the first financial duty of this Cabinet was to overhaul the budget of its predecessors with a view to the most stringent economies. In this way, and by keeping a watchful eye on item by item of expenditure, and also by a small amount of additional taxation, the Cabinet was successful in reducing the final adverse balance to £E.2.6 millions, which came from the Reserve. Profiting by the experience of the last year, and still with a close eye on requests for additional expenditure, the Cabinet presented a budget for 1931/32, with a small surplus of £E.432,000, which grew, in the event, to £E.779,000. The budget for 1932/33, given in more detail below, estimates for a surplus of £E.183,000, which, at the moment of writing, appears likely to be exceeded.

BUDGET OF THE EGYPTIAN STATE FOR 1932/33
(in £E.1,000).

As will be seen, the budget in course shows a reduction of both expenditure and revenue. Reductions in expenditure have been obtained, as before, by a drastic reduction of such activities as can be either economised permanently or deferred, without prejudice to the well-being of the State. Vacant posts have been left unfilled wherever possible, or filled at reduced salaries, and universal cuts have been made, increasing in magnitude with the value of the salary. The Cabinet, however, has not carried the policy of economy so far as to stop public works of urgent necessity. The sur-elevation of Aswan Dam, begun in 1929, has, of course, been continued, and will entail further public works, if it is to be of any value. The project for a reservoir dam at Gebel Awlia, on the White Nile, near Khartum, has been resuscitated, and will be put in hand with a minimum of delay, for in truth this project is now half a generation in arrears, and its want begins to be felt. These projects and the institution of an electric power station at Aswan Dam are productive schemes of the first utility, the postponement of which would be a false economy of the worst kind.

Revenues have been marked down in many cases, in consequence of the decline in trade, which has affected customs receipts, railway, telephone, telegraph and postal receipts, and judicial and other

similar fees. The agricultural depression has affected the payment of land tax to some extent, but this revenue, the first line of guarantee for the service of the debt, is coming in rather better this year than last.

The success of these various measures may be gauged from the fact that, in the first five months of the fiscal year to September 30th, revenue was approximately £E.14,365,000 and expenditure £E.13,272,000, with a surplus of over one million pounds. Egypt has thus every reason to congratulate herself, firstly, because sail was shortened before the economic blizzard in good time—a year in advance of the United Kingdom, in fact—and secondly, because the results of the measures taken show that the ship of State is riding the storm staunchly and well.

THE RESERVE FUND.

Up to 1904 the Egyptian Government was precluded, by engagement with its creditors, from borrowing other than small sums on current account. Consequently, the Minister of Finance had perforce to budget for a surplus, since he could not seek refuge from a deficit in a loan. Although the disability was removed in 1904, the tradition remains, and it is *de règle* to budget conservatively. As one result of this cautious policy, there accrued, year after year surpluses, sometimes small, sometimes important, which were employed, not as is customary in other countries in paying off debt, but in building up a reserve fund on which the Minister could draw, in the event of a rainy day. It was the custom to allocate portions of this fund for the execution of works of public utility, as well as to meet unforeseen necessities, and practically the whole of the fund, which had grown to £E.17.1 millions by 1919, was wiped out in the following year, either owing to the slump of 1920, or in making good capital expenditure, postponed during the war. A return of careful finance in the ten ensuing years, together with a renewal of the postponement of certain works, raised the fund of £E.39.85 millions, or, allowing for the market value of silver coin, borne as an asset at face value, £E.38.6 millions, on May 1st, 1929. Since then, some £E.14 millions were immobilised by operations on the cotton market, £E.2.6 millions of deficit were written off in 1931, £E.608,000 were written off on the disposal of superfluous silver coin at its true, not face, value, and on the other hand, £E.779,000, surplus of 1932, was added. Thus the position of the fund on April 30th, 1932, was as shown in the table.

RESERVE FUND AS AT APRIL 30TH, 1932.

Investments (at cost).		£E.	£E.
Egyptian securities		9,358,033	
British securities		6,786,400	
Miscellaneous securities		540,435	16,684,868
Purchases of cotton		8,696,400	
Advances on cotton and agricultural advances		2,948,988	
Loans to Agricultural Credit Bank		1,285,251	
Loans to proprietors of agricultural land		763,022	13,693,661
Advances to co-operative societies		251,258	
Advances to industrial societies		742,763	994,021
Cash in the Treasury, including metallic coin at face value, and cash in bank (net balance)		1,518,707	1,518,707
Total		32,891,257	

In addition, the Commission of the Public Debt holds:—

Securities, nominal value £E.1,846,160	1,520,000
Cash	1,150,000
Total	2,670,000

It will be seen that the Government had then a reserve in gilt-edged securities of £E.16.7 millions sterling, now worth considerably more at market value, with another £E.1.5 millions of cash, or altogether £E.18.2 millions of liquid resources. A considerable portion of the cotton held has been sold, largely in introducing Egyptian cotton into markets where it has hitherto been a stranger, and the corresponding loss has been written off, but there was still outstanding some £E.11.6 millions tied up in cotton. If this were discounted to one-third of its cost, the value would have been about £E.4 millions. The other loans are on a good security, and need no writing down. Consequently, at a reasonable estimate of true values, the reserve fund represents assets of £E.25.3 millions. In addition, the Caisse de la Dette Publique held securities or cash worth £E.2.67 millions, so that the full cash and invested reserve of the Government was £E.28 millions, at that date. This is equivalent to six and a half years' full service of the outstanding loans, or over a quarter of their nominal value. But it must be repeated that much of this fund represents cash earmarked for public works of urgent necessity.

IS YOUR MONEY UNEMPLOYED?

If so, why not put it to work at once to protect your dependants and your own old age through the life assurance policies of

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended December 24, 1932, amounted to £9,150,400 against ordinary expenditure of £7,249,800. After making no allocation to Sinking Fund, but allowing for an increase in Exchequer Balances of £276,637, the operations for the week, as shown below, decreased the National Debt by £1,384,000 to approximately £7,981 millions* :—

* Including £150 millions on account of Exchange Equalisation Fund.

POTASH SYNDICATE OF GERMANY 25-YEAR SINKING FUND 1 PER CENT. GOLD BONDS SERIES "A" AND "B."—J. Henry Schroder and Company (who are entrusted with the application of the sinking fund of the Potash Syndicate of Germany Sinking Fund Gold Bonds Series "A" and "B") are instructed by the Potash Syndicate of Germany to publish the following notice: Owing to the depreciation of sterling in terms of dollars since the issue of these bonds the price on the London market may exceed £102 10s. per £100 nominal amount, but may yet be below the sterling equivalent of the dollar redemption price. It should not, therefore, be assumed that a drawing will take place merely because the London market price of bonds has previously exceeded £102 10s. per £100 nominal amount. The normal operation of the sinking fund will not be affected.

REPORTS AND NOTICES.

INSURANCE.

LEGAL AND GENERAL ASSURANCE SOCIETY, LTD.—The Legal and General Assurance Society, Ltd., announce the opening of two London branch offices on January 2nd next at 110A, George Street, Croydon, and 2, North End Road, Golders Green, N.W.11. The directors have appointed Mr Harold Watson manager of the Croydon office and Mr A. W. Pryke manager of the Golders Green office. Mr Watson has been for some time in the service of the society at head office and its City branch. Mr Pryke has represented the society as inspector in North London for many years. The Sheffield sub-office of the Legal and General Assurance Society, Ltd., will remove to 51, 53 and 55, Surrey Street, Sheffield 1 (telephone: 21653 Sheffield) on January 2nd next. Mr R. H. McLaren, lately inspector attached to Leeds branch, has been appointed resident secretary to succeed Mr Mower, who has retired, but who will continue his association with the society as special representative.

MISCELLANEOUS.

HAY'S WHARF.—Working for the year resulted in a profit of £208,808, as compared with £230,826. The sum of £81,710 has been brought forward from last year's account and makes a total of £290,518 available for distribution. Of this, the preference dividend absorbs £89,400. A final dividend of 6 per cent., making 10 per cent. for the year, is being paid on the ordinary shares, and £25,000 is carried to reserve. This leaves £76,118 to be carried forward to the next account. With reference to a statement in last year's report as to a Bill promoted by the Port of London Authority, the directors announce that the clauses in the Bill relating to the acquisition of the company's undertaking have been withdrawn.

VEGETABLE OILS AND OILSEEDS.—Markets opened quietly after the recess, but the undertone was firm to steady. Linseed offers freely, and both English and Continental crushers have taken fairly liberal supplies of the new Argentine crop now being shipped. Plate on spot is held for a premium, and is quoted £9 10s., while shipment to March is around £8 15s. per ton plus the 10 per cent. import duty which, the Indian Assembly having now ratified the Ottawa agreements, will, it is understood, become operative from January 1st. The quantity of linseed on passage to Europe

181,200 tons in addition to which there remained for shipment to the end of the year 146,000 tons (including 56,000 tons from India) as against 23,000 tons actually shipped in the remainder of 1931. The new crop in South America is estimated to yield under 1,400,000 tons, or about 700,000 tons less than last season, and the question is as to how far increased production in India favoured by the tariff will redress the balance. Cottonseed is quiet but steady, black Egyptian on passage being quoted £7 12s. 6d., and January loading £7 10s. Trade in vegetable oils is slow. Expectations are that the present 10 per cent. duty on imported linseed oil from Holland, &c., will be substantially increased to offset the duty on seed. Current value of raw oil ex Hull mill for December delivery is £16 12s. 6d., and January-April £17 10s. Cotton oil is quiet. Crude Egyptian, ex Hull, offering at £23, and refined £25 10s. Oilcakes are in fair request, and mill prices are unchanged.

HIDE, LEATHER AND ALLIED TRADES.—In consequence of the Christmas holidays no sales of hides and skins from domestic cattle will be held this week, supplies having been sold forward for two weeks at the previous auction. Prices then showed very little change in the presence of a fairly good demand and not too abundant supplies. Trade in foreign hides remained moderate until the closing down, but since then turnover has been very restricted at the fractionally lower prices being quoted. In South American wet-salted hides offers of Argentine ox have been made at 4½d., and cows at just over 4½d., but the majority of users have not appeared interested. Dry hides from the same source have perhaps been a better market, with B.A. Americans changing hands at 5½d., Inservibles at 3½d., and Sierra Cordobas at up to 7½d. There has been no change in the position of African hides, which have accounted for some business at last figures. The Australian market remained quiet, with prices firm. Since the holidays business in both sole and upper leather has been very small, and no improvement in the position is looked for until the shoe factories resume operations. The feeling is held that the market should then experience a fair amount of inquiry, as the bulk of leather consumers have for some time past limited their purchases to requirements only, and are therefore not carrying large stocks.

RUBBER.—The market in rubber has been dull and easy. In New York, Wednesday's spot price for rubber, at 3½ cents per lb.,

shows no change on the week. Wednesday's official closing price for standard ribbed smoked sheet in London was 2½d. per lb., against 2½d. per lb. on the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for April-June, 1933, as against 2½d. to 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,195 tons; delivered, 1,650 tons; stocks at the end of last week, at 92,769 tons, show a decrease of 460 tons as compared with the preceding week.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, JULY 30, 1932.

No. 110.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

ONCE more little change for the better is noticeable in the British industrial situation; all that can be said with assurance is that the approach of the holidays is temporarily causing a general slowing down. This is particularly noticeable in the heavy industries; for, although the June steel production returns showed some improvement over previous months, later reports are to the effect that business remains very quiet. Our indices of business activity, published on a later page, also give evidence of the continuance of a slow general decline, and the sharp fall in the consumption of electric power, particularly by the heavy trades, is ominous.

The unemployment returns for the end of June are in some respects more cheerful. It is true that the total percentage figure shows a slight increase over May, but this is explained by a substantial increase in the number of coal miners temporarily stopped from work, and it is conceivable that this arises from the exhaustion by certain collieries of their quotas under the Coal Mines Act for the second quarter of the year. Now that the third quarter has opened work should once more be available for the miners so affected. Apart from this, June witnessed a slight improvement in employment in a large number of industries. These include cotton and jute; bleaching, dyeing and furnishing; boots and shoes; iron and steel manufacture, general engineering and iron-foundry; building; printing and publishing; the distributive trades; and transport and hotel and boarding house services. In some cases this improvement is seasonal, and in others it may reflect the inclusion in the May unemployment returns of those out of work as the result of extensions of the Whitsun holidays. There was also a decline during June in employment in the pottery, wool textiles, motor vehicle and tinsplate manufacture, and in public works contracting. The general lesson of the June returns is that no real change has occurred, but that the employment position generally is perhaps no worse.

While the inception and success of the War Loan conversion scheme has undoubtedly been a great encouragement to the country at large, it is not likely to be of any direct immediate benefit to British industry. Ultimately industry will benefit from being able to raise fresh long-term capital upon cheaper terms as the result of conversion, but apart from the fact that in only a small number of cases can outstanding debentures be redeemed at an early date, it will be difficult to arrange fresh capital issues on behalf of industrial concerns at reasonable interest

rates unless and until confidence is restored in the earning powers of British industry. The War Loan conversion scheme, therefore, can only be of deferred benefit industrially, and the same applies to the Lausanne agreement. So far as European business is concerned, the substantial benefits which will accrue from a final settlement of the reparations question can only gradually take effect. At the moment, business conditions on the Continent are no better than they were a month ago, and in certain respects the position has deteriorated. The Belgian coal industry

has been in the throes of a strike which is only just approaching its termination, and the recent hardening of cotton and wool prices has only been of temporary assistance to the French textile industries. The German business situation is overshadowed by political troubles, while a tariff war between Austria and Hungary is adding to the difficulties of Central Europe. No settlement has yet been reached as regards the Credit Anstalt's liabilities, and Austria has lately had to impose further restrictions upon the payment of foreign debts.

Still, difficult as the situation is, once the Lausanne agreement is ratified the outlook may be regarded less pessimistically. If the projected World Conference can lay down a basis for the liquidation of international commercial debts, the termination of standstill agreements, and—still more important—the removal of restrictions upon the movement of goods and funds, the psychological effect of

the beginning of reconstructive work should quickly assist business. To-day is still too early to expect any tangible improvement, and indeed it is not impossible that, owing to the inevitable time-lags that must occur, a further deterioration may take place before the world business curve turns upwards. This makes it all the more important to accelerate the work of reconstruction, for the business curve has already fallen well below the danger-point.

In the meantime it is necessary to await the conclusion of the holidays, and no striking development can be expected much before the end of September. If by then the Lausanne agreement is on the way to ratification, and if the decisions taken at Ottawa are calculated not only to foster Imperial trade but to pave the way for a successful World Economic Conference, then an improvement can reasonably be expected. It is at least permissible to hope that the bottom of the depression has been reached, even if recovery is destined to prove slow and attended by many difficulties yet to be solved.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of July. In the remainder they relate to the month of June.

THE COAL TRADE.

Business this month has been very slow. In Northumberland prices are still on their minimum basis, and there are no signs of any early revival. Export demand is at a very low ebb, and the only bright feature is the bunker trade. In South Yorkshire business has reached the lowest point for many years, and notwithstanding the prevalence of short-time working, stocks remain heavy. Sales of house coal are at their usual summer level, and there has been no improvement in industrial demand. Cardiff reports a fair French demand for dry coals, and some difficulty is being experienced in securing supplies. All kinds of steam coal are readily obtainable at schedule prices. At Swansea there is a fairly active demand for anthracite, mainly from Canada. Business in Scotland is very limited.

IRON AND STEEL.

Demand has been very limited and business very quiet, with few signs of improvement. Continental producers have continued to reduce prices. It is noticeable, however, that less ground is being lost in Great Britain than on the Continent. Last month British pig iron production exceeded that of Germany, while recently British steel production has outstripped the French output. Imports have fallen to the lowest level touched since the occupation of the Ruhr. This is not so much due to the tariff as to the very limited home demand for steel and the after-effects of forestalling.

ENGINEERING.

The past month has shown no general improvement, and actually the situation in certain sections of the trade has become more depressed. The employment statistics, as at the end of June, show a very slight improvement, and export trade figures were generally well maintained compared with recent levels; but there is a regrettable continuing lack of new business, and even of inquiries. Imports of machinery for June amounted to 4,210 tons, which is slightly less than in May, but there is still a considerable importation of agricultural machinery, mainly tractors, and also of textile machinery. It is probable that these "abnormal" importations still persisting are, for the most part, due to the fulfilment of pre-tariff contracts. The annual reports of engineering companies, relating in general to the calendar year 1931, are now available in sufficient numbers to show that the intensification of the industrial and trading depression had a most damaging effect on the financial results of the industry as for that year; and the sequel in the present year must of necessity be still more calamitous.

June	148	122	218	135	192	156

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The sharp relapse of May has been continued into June, the decline being particularly severe in the heavy industries group. General engineering and textiles have not experienced the same relapse as in previous years. The corrected figure for June was 83.0. This compares with one of 89.0 both for May last and for June, 1931.

ELECTRICAL INDUSTRY.

The past month has been very disappointing. No orders of note have been received, and the export index in particular shows a very heavy decline. So far as the home market is concerned, the

British industry has not, relatively, suffered the same decline as either the American or German industry.

MOTOR INDUSTRY.

The general level of motor activity has, considering the general low level prevailing, more than held its own, not only in the home market, but in the export field. The latter, when compared with the comparable six months ending June, 1931, shows an increase of 6,294, or over 52 per cent. The total sales in the home market for the eight months ending May have only decreased by 6 per cent. Apart from tricycles, the motor-cycle sales show a decrease of about 12 per cent. for the eight months ending May, and the total cycles in use for the quarter ending May have decreased by 2.5 per cent. when compared with May, 1931.

THE COTTON TRADE.

No striking change has occurred during the past month. At times there has been an increased inquiry with rather more business, but spinners and manufacturers have complained that all orders were for small quantities, and the turnover has not been sufficient to improve their general position. Although fluctuations have occurred in raw material rates, there has been little change in their general level. Diverse reports are being received with regard to the progress of the new crop in the United States. The Government has estimated the acreage at 37,290,000 acres, or 9½ per cent. less than a year ago. Negotiations between the employers and the operatives in the weaving branch with regard to wages have been resumed. More individual firms have got their work-people to accept a reduction, pending a county agreement. In the cloth section a feature of interest has been the expansion of the inquiry for India, and in a variety of goods the turnover has been rather healthier, the bulk of the buying being for Karachi and the up-country markets. News from China has not been favourable, and only occasional transactions have been put through. There has been very little activity for most minor outlets, but an encouraging trade has been done for the West Coast of Africa, especially in printed and dyed goods. A fair amount of buying has taken place for the home trade, and there have been fairly good clearances in the retail and wholesale establishments. Quotations in American yarns have been rather steadier. Selling pressure has been rather less pronounced, but it has been hard work for spinners to improve their margins. A rather better turnover has taken place, chiefly in coarse and medium counts. Irregular operations have been reported in Egyptian spinnings, but in certain specialities rather more business has been done.

THE WOOL TEXTILE TRADES.

The July London wool sales proved relatively encouraging. Greater competition was in evidence and prices rose by 5 to 7½ per cent. for merinos, by 10 to 12½ per cent. for fine cross-breeds and by 15 to 20 per cent. for medium and coarse wools. The improvement in the lower grades is particularly welcome. This rise in prices led to a considerable amount of covering by home manufacturers, and they are now contenting themselves with taking delivery of tops already contracted for. Top prices have consequently eased a little during the past week. Demand for woollen and worsted cloth is at the moment limited, owing to the approach of the holidays.

THE JUTE TRADE.

The first forecast of the jute crop, issued in early July, points to a crop of 8,660,000 bales, against 5,560,000 bales last year. Stocks held by Indian mills were reduced by 2,000,000 bales during the year ended June 30th. Business at Dundee was definitely hotter at the beginning of July, but conditions have since become quieter, and buyers are again holding back. Still there is a more confident undertone noticeable in the market, and some spinners are engaged on their present restricted basis of production until the end of August. It is thought that prices are not likely to recede to the low levels recently touched.

RAYON.

There has been rather more activity in the rayon yarn market, but production has not yet been fully absorbed, and output has been considerably reduced. The summer trade in fabrics is now finished, and autumn business is slow in developing.

THE LINEN TRADE.

The quantity of unsold flax still available is only negligible and is steadily diminishing. Prices are firm. Official statistics now available from the flax-growing countries confirm the reduced sowings previously reported, but these do not include Soviet Russia. Private reports from that territory are contradictory, and therefore unreliable. Yarns have lately received more attention, and home spinners seem to be in a relatively better position than Continental producers. Further cloth business is reported. Exports are well maintained both to Empire and outside markets.

BOOTS AND SHOES.

Northampton manufacturers benefited from the fine weather prevalent during June and early July, and numerous orders were received. Unfortunately their size was smaller than usual, and retailers are still only buying with a view to their immediate requirements. Demand from Ireland is affected by political and tariff uncertainties, and in certain cases orders are being held back.

POTTERY.

Business is very quiet and no improvement is expected until after the holidays. Overseas trade, both import and export, shows a decline below last year.

THE CHEMICAL INDUSTRY.

A steady though rather small business was transacted in the home chemical market during June. The only price changes of importance were reductions in Rochelle salt, citric and tartaric acids and cream of tartar, and increased quotations for bromides. The overseas trade returns for June are encouraging. There was an increase of £264,538 in the value of chemicals, drugs, dyes and total colours exported, as compared with June, 1931, while the total exports for the first six months of this year are £201,078 greater than for the same period last year. Nearly all products showed an increase, that for sodium compounds being particularly large both in quantity and value. Imports of chemical products again

decreased, the only products for which the value was greater than June last year being natural indigo (of which there were no imports last year), acetic anhydride and potassium nitrate.

AGRICULTURE.

According to an official report, on appearances at the end of June, wheat, barley and oats were expected to yield rather under average crops. Prospects as regards early potatoes were moderate, but main crops, although rather backward, seemed fairly satisfactory. Root crops required moisture, but rain has since fallen. Yields of hops were expected to be considerably below average. Rapid progress had been made with haymaking, and yields of both seeds and meadow hay were estimated to be below average. Grass was generally fairly plentiful. Cattle and sheep benefited considerably from the drier and warmer conditions prevalent until recently, and milk yields were well maintained.

SHIPPING.

The normal midsummer slackness of cargo shipping has this year been more than usually pronounced, and the fresh high level of unemployed tonnage at the beginning of July illustrates the severity of the depression. The coal trade has been dull; grain traffic, especially from Canada, has fallen to a low ebb; and in the "key" Plate market there has been a growing tonnage surplus. The only redeeming feature has been a slight revival of chartering from Eastern, and notably Manchurian, ports.

BUILDING.

According to the Ministry of Labour's returns, employment showed a further slight seasonal improvement during June, offset to some extent by a decline in the painting, decorating and plumbing sections. The unemployment percentage for June 27th was 26.0, compared with 26.4 a month before, and 18.1 in June of last year. Returns furnished by 143 urban authorities (excluding the London County Council area) show that plans passed for new buildings in June comprised a total cost of £6,445,400, compared with £5,972,800 in May and £5,242,300 in June, 1931. Of the total for June, 1932, dwelling-houses accounted for £4,951,600; factories and workshops for £206,380; shops, offices, warehouses and business premises for £284,500; and other buildings and alterations and additions for £1,003,000.

RETAIL TRADE.

A London store reports that demand for fashion goods has shown a decided improvement during the past month. Business in utility goods remains rather slow.

a Excluding coal imports.

STATE OF TRADE ABROAD.

Once more it is difficult to find any signs of real improvement. Empire trade remains very quiet, while on the Continent the difficulties of Central Europe are becoming accentuated, and the new clearing arrangements for trade between certain countries appear to be breaking down. News from the United States is in reality no better.

BRITISH EMPIRE.

Australia.—Trade generally is dull and retail turnovers are about the same as last year. Adverse factors are the low prices ruling for primary products, continued severe unemployment and the heavy budget deficits. There has, however, been some improvement in confidence, this being the outcome of the recent elections, the stronger London market for wool and butter, and current indications of a large production of wool, wheat, butter, frozen lamb and mutton.

Canada.—This year's crop reports to the end of June showed a great improvement in condition as compared with a year ago. Prices, unfortunately, were deplorably low and have since shown no real improvement. Little change occurred in the general business situation. Retail trade was stimulated by the advent of warm weather, but wholesale trade remains below last year's level, and building operations are this year at a very low ebb. The only industries which are really busy are textiles and boot and shoe manufacture. There has only been a slight increase in automobile production.

India.—The monsoon has made good progress and is well distributed over the country. Sowing is therefore proceeding normally and standing crops are in fair condition. The Bombay raw cotton market has been steadier, and Indian mills have been able to sell cloth more readily, though still at unremunerative prices. Some apprehension, however, is felt at the heavy depreciation of the yen, as it is feared that it will stimulate Japanese competition to the serious detriment of local mills.

South Africa.—Business remained very quiet during June, and demand was centred on the cheaper classes of goods. Fair to good rains have lately fallen, and apart from losses among young lambs prospects for the winter are not unsatisfactory. The wool season has now ended. The carry-over has been provisionally estimated at 50,000 bales, which is not much above normal. The latest estimate of the maize crop gives a figure of 16,726,000 bags, an increase of 493,000 bags over the previous estimate.

EUROPE.

France.—The recent advance in cotton and wool prices stimulated a little temporary activity in the textile areas, but no real improvement has taken place, and several mills remain closed at Lille and Roubaix, while unemployment is very widespread. Sales of industrial coal have lately remained steady, and no real change has occurred in the steel trade. The trade returns for the first half of 1932 show that, compared with the first half of 1931, imports have fallen from Frs. 23.2 to 15.3 milliards, and exports from Frs. 16.2 to 10.1 milliards.

Belgium.—The coal industry has been dislocated by the strike which began early in July, and although an agreement has lately been reached providing for the stabilisation of wages on the present basis until November 1st, and establishing a system of allotting work in rotation, very few men have so far resumed work. The steel market was little affected by the strike, as demand was already almost completely lacking. The textile industries remain very depressed, and flax spinners have decided to work only three weeks out of four.

Germany.—Steel prices showed greater firmness during the Belgian coal strike, but the prospect of its early termination has led to renewed weakness. Pig iron and steel production declined in June as against May, owing to the completion of Russian orders. There was an unusually large decrease in unemployment during the second half of June, amounting to 93,000, against 46,000 last year. This was due to a belated seasonal improvement in agriculture and to a revival in certain of the textile trades.

Holland.—The new Customs convention with Belgium has been generally welcomed, but certain practical difficulties remain to be overcome, including Holland's most-favoured-nation treatment commitments with other countries. Money remains very easy, and many expect an early reduction in Bank rate. The report of the special Government Committee on National Economy has been issued. It proposes economies of Fl. 102 millions, which are designed as an initial step towards covering the budget deficit of Fl. 108 millions on ordinary services.

Scandinavia.—Norwegian imports for the first half of 1932 amounted to Kr. 336.5 millions, against Kr. 415.4 millions in the first half of 1931. Exports amounted to Kr. 289.5 millions, against Kr. 232.4 millions in September. During June there was a net increase of 34 in the number of vessels in commission. The dispute in the Swedish pulp industry continues, and no settlement is at present in sight. The timber trade is quiet, and Swedish exporters are feeling the effects of new French "contingent" import duties and a reduction in the French import quota. In early July Danish agriculture was seriously affected by the dry weather, which then had lasted for over two months. Butter prices were firmer, partly as a result of the better demand from England due to the new duties on Irish butter.

Switzerland.—Exports for June amounted to only Frs. 58.4 millions, as against Frs. 110.2 millions in June, 1931. This serious decline is attributed to the exchange and credit restrictions and difficulties of many Central European countries and to the appreciation of the franc against the currencies of countries where the gold standard is suspended. The clearing arrangements concluded with certain countries have on the whole proved disappointing. The Swiss Government is extending the import restrictions intro-

duced this year, and the importation of certain goods is forbidden except under licence.

Central Europe.—The difficulties of the Austrian Succession States have been further accentuated by the tariff war between Austria and Hungary which began on July 15th. Hungarian crop reports are also disappointing, as wheat has been damaged by rust, and so the prospects for an improvement in Hungary's transfer capacity are at present remote. The terms of the proposed international loan of 300 million schillings have met with keen opposition in the Austrian Parliament, and little fresh progress has been made over the Credit-Anstalt negotiations.

UNITED STATES OF AMERICA.

Apart from an improvement in the price of hogs which stimulated a more optimistic feeling at the end of June, no change in American business conditions has occurred. The average rate of operation in the iron and steel trade has been as low as 12 per cent., and the number of furnaces in blast was reduced during June from 53 to 46. Car-loadings have fallen to 2,455,628 for the latest five-week period, this being considerably below the level prevailing at the beginning of the year. The latest cotton acreage estimate shows a decrease in the area planted of about 9½ per cent. below last season. Heavy rains have fallen in the South, and this is expected to bring about heavy weevil emergence.

LATIN AMERICA.

In Argentina, the sowing of wheat, linseed and oats is proceeding well, and wheat sowing is nearing completion. Maize harvesting continues inland, but in the coastal districts the work has been hampered by recent rains. Export demand for grain is poor, but a slightly weaker tendency in the exchange during the past few days has resulted in an advance in grain prices in the Buenos Aires market. The Argentine import trade continues to be drastically restricted, and the export surplus of the Republic for the first five months of the current year has increased to 132,525,000 pesos (gold), as compared with 26,379,000 pesos in the corresponding period of 1931. Chilean trade continues depressed, but the political situation appears to have settled down, and it is hoped that there may be some revival of activity in the nitrate of soda industry as a result of the conversations now being conducted in London with the synthetic nitrogen producers. In Brazil, progress continues to be made with the elimination of surplus coffee stocks, the total quantity destroyed up to June 25th having been 7,978,386 bags. Further political disturbances have been reported in Peru, but it appears that these have been of a local character and that the Government has the situation in hand. Latest reports received from Guatemala City indicate that the last coffee crop had been under-estimated; indeed, exports may exceed a total of 1,000,000 quintals, as compared with the previously calculated crop of only 750,000 quintals.

THE FAR EAST.

The limit of the fiduciary note issue was extended on July 1st from Yen 127 to Yen 1,000 millions. The decision to make the increase led to a sharp fall in the exchange, which it is hoped will benefit export trade considerably. The raw silk market has become more cheerful as a result of the Government's decision regarding the purchase of old stocks, the depreciation of the yen and the expectation of a short crop of spring cocoons, but exports of raw silk are still restricted owing to the lack of demand from America. Export business in cotton yarn and cloth and in rayon has become more active.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover in most cases the period to the middle of August. In the remainder they relate to the month of July.

THE COAL TRADE.

Export business is very dull and depressed, and in South Wales it has been necessary to form a new association of steam and bituminous colliery selling in order to check under-selling. A rather better tone, however, became noticeable towards the end of August. Anthracite remains firm. Home coal sales are under the influence of the holidays, and although a certain amount of stocking is taking place in anticipation of the September 1st price increases, supplies are more than adequate to meet this demand. Industrial sales are adversely affected by holiday stoppages in numerous trades.

IRON AND STEEL.

Demand remains very limited, and the July production figures were disappointing, even though the decline was largely seasonal. By the end of July only 56 furnaces were in blast, this being the lowest number for many years, but it is believed that one or two of the furnaces out of action have only been damped down, and so may be re-opened shortly. The embargo upon new capital issues has aroused considerable criticism, and it is pointed out that the steel industry is largely dependent upon fresh capital expenditure. Continental prices remain competitive, notwithstanding the new tariff, and though these prices are now so low as inevitably to involve Continental producers in heavy loss, there is no sign of any reversal of their policy. The main trouble, however, is a complete absence of demand, but there is a general hope that business will improve after the conclusion of the holidays.

ENGINEERING.

The industry as a whole has maintained its ground well, and it is noticeable that unemployment is only a little worse than it was a year ago. At the moment activity is overshadowed by the holidays, but inquiries and orders continue to come forward, and there are definite hopes of an autumn revival. Manufacturers of power-house equipment, such as engines and boilers, and also cranes and lifting gear, are perhaps in the most favourable position, but makers of locomotives and railway equipment say that business is ripe for a revival. The machine tool trades are maintaining a moderate degree of activity, but marine engineering is still almost lifeless.

PRODUCTION OF ELECTRICITY.

INDEX OF GENERATION OF ELECTRICITY.*

July	148	122	218	135	196	157

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The corrected figure for July was 84.0. This compares with figures of 83.0 for June last and 88.0 for July of last year. The July index shows that production was very well maintained, and may even indicate a turning point in the depression. The increase in the marine transport figure is due to greater activity at Liverpool and Bristol.

ELECTRICAL INDUSTRY.

Practically no new export orders were received during the month, and so there has been a serious decline in foreign business. Home demand has been fairly well maintained.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

MOTOR INDUSTRY.

Sales of private cars during June showed an increase of 700 over June last year, while July exports showed an improvement of 500 vehicles. The position of commercial vehicles, including omnibuses and coaches, is not so good, as both June sales and July exports show a drop. Manufacturers have in many instances already issued their 1933 programmes. Sales of motor cycles are still below last year's level.

THE COTTON TRADE.

During the past month there have been two developments of considerable importance, a distinct advance in raw cotton prices and the breakdown of the wages negotiations in the weaving section. The higher rates for raw cotton have been almost entirely due to this being 11,306,000 bales, or nearly 1,000,000 bales less than had been expected. The report resulted in extensive buying, which brought about an advance of nearly 1d. per lb. The wages negotiations in the weaving branch broke down on the refusal of the employers to consider a claim from the trade unions for the reinstatement of discharged operatives, although at that point in the strike at Burnley has now been going on for nearly a month, and a county strike is threatened on for nearly a month. The spinning employers have given the trade unions one month's notice of a reduction in wages of 25 per cent. off list rates, which is equal to about 2s. 9d. in the pound off current wages. The labour situation, therefore, is in a more chaotic state than ever, and the uncertainty prices has stimulated cloth inquiry. A rather larger turnover has taken place for India in a variety of goods, mostly in light whites, prints and fancies. Rather more activity has also shown itself for East and West have attracted increased attention. Home trade has been rather disappointing. It has been impossible to arrange to state definite delivery terms. Quotations in American yarns have followed rather slowly, business being checked by the possibility of a general stoppage of looms. Rather more inquiry has been reported in fine yarns for India. Some producers of Egyptian spinings have sold rather more freely, but business has been improving their position.

THE WOOL TEXTILE TRADES.

Business in tops has been restricted by the holidays, and only small lots have changed hands. Prices remain firm, and the tone has been improved by the news of a revival in business on the Boston market and by more encouraging Continental reports. Merinos and fine cross-breeds remain the strongest, but holders of medium and low cross-breeds are beginning to display greater resistance. Noils are also a little stronger. The yarn market has been still, the outlook is viewed with greater confidence, and an improvement is expected within the next few weeks.

THE JUTE TRADE.

The rise in raw jute prices has awakened interest among buyers of jute cloth, but so far fresh business has been slow in materialising. Calcutta hessians, however, are dearer, and stocks were reduced during July from 161 to 151 million yards. Stocks of sackings increased from 112 to 123 million yards. Some business has been done at Dundee in jute yarns and prices are firmer.

RAYON.

Demand has been seasonally quiet during the past month, and there has been a considerable curtailment of production. Stocks are rather high, and in some types of yarns there is a certain amount of "weak selling." The general outlook for the autumn is good, but the cotton trade dispute may seriously handicap business.

THE LINEN TRADE.

The Russian Monopolies, both Soviet and Baltic, have disposed of existing supplies of flax and tow, most of which were bought up by spinners. Prices are likely to rise owing to the reduction in acreage and the uncertain outlook of the new crop in the different flax-growing regions. Yarns have been purchased in greater volume than is usual at this period, and there are indications of further activity. Cloth is quiet. Manufacturers are busy with the preparation of designs and lists for the new buying season, which opens next month.

BOOTS AND SHOES.

Business at Northampton has been very much restricted as a result of the holidays. Seasonal orders from retailers are this year proving unusually slow in coming forward.

POTTERY.

Trade remains very quiet. Exports to Australia showed some improvement in July, but those to other destinations were less than in the previous year. Imports show a substantial decline.

THE CHEMICAL INDUSTRY.

The tone of the chemical market was quiet but steady during the month of July. In the industrial chemicals section prices were well maintained. Trade in acetic acid, acetone and potassium permanganate was good, and there was a fair market, with keen competition, for formaldehyde. In the coal tar section pitch was in good demand, with supplies still scarce. The refined tar market was disappointing for the time of year. The pharmaceutical market was fairly quiet, and there was a further reduction in the price of cream of tartar. According to the Board of Trade returns for July the value of chemicals, drugs, dyes and colours exported (at

£1,445,804) showed a decline of £125,511 below the figures for July, 1931. There was a further decrease of £224,356 in imports compared with the same month last year.

AGRICULTURE.

According to an official report, corn crops were satisfactory except where damaged by rain. As regards anticipated yields, wheat should about equal the decennial mean, while oats should be slightly better, but barley slightly worse. Main crop potatoes were free from disease, and an average yield was expected. Root crops were moderate. Some hay still remained unsecured at the end of July. Quality was very good and yield about average. Grass was in abundance at the end of last month. Cattle and sheep were in good condition and milk yields normal.

SHIPPING.

Depressed conditions have continued to rule in all markets. Outward coal freights have sagged on the steady shrinkage of traffic, and homeward grain quotations from both North and South America have weakened further. The volume of unemployed tonnage at this season of the year is unparalleled, and the outlook for the autumn not encouraging.

BUILDING.

According to the Ministry of Labour's returns, there was a slight setback in employment during July, which was most marked with painters and slaters. In many districts short time was occasionally rendered necessary by bad weather. The unemployment percentage for July 25th was 27.6, compared with 26.0 at the end of June, and 18.4 a year before. Unemployment is particularly severe in Wales and Northern Ireland, and least serious in South-Eastern England. Returns furnished by 140 urban authorities (excluding the London County Council area) show that plans passed for new buildings in July comprised a total cost of £5,176,900, compared with £6,303,300 in June and £7,503,400 in July of last year. Of the total for July, 1932, dwelling-houses accounted for £3,375,000; factories and workshops for £410,000; shops, offices, warehouses and business premises for £313,800; and other buildings and alterations and additions for £1,078,100.

RETAIL TRADE.

A London store reports that business showed a considerable improvement early in August, but later in the month was affected to a slight extent by the very warm weather. Retail sales for the whole country show a decline in value since July last year of 6.3 per cent.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of September. In the remainder they relate to the month of August.

THE COAL TRADE.

The undertone is steadier, and there are thought to be prospects of an early improvement in home industrial demand. There is, however, no tangible evidence of this at present, and the Lancashire cotton strike has, indeed, had the contrary effect in certain districts. As regards export business, there is a slightly better volume of inquiry on the North-East Coast, and one or two forward quotations show a tendency to harden. Trade at Cardiff is a little more active, and the Irish railways are still taking most of their contract coal, though their Government intends them to substitute Continental fuel so soon as it has passed the necessary tests. Swansea reports the demand for anthracite to be well maintained. In the Midlands the demand for house coal has fallen away after the re-stocking prior to the rise in prices at the beginning of the month, but should gradually revive as the autumn progresses. No improvement in either home or export business is reported from Scotland.

IRON AND STEEL.

The August production returns, disappointing though they appear, reflect mainly the holiday inactivity and the completion of some large Russian orders. One additional furnace was blown in during the month, and three more during September, raising the total number in blast to 60. The recent increases in Continental steel prices amount to 3s. or 4s. per ton upon a gold basis, and, after scaling them up by the depreciation of sterling and the tariff of 33½ per cent., the total increase in the British market becomes one of 8s. 6d. to 7s. 6d. per ton. There are also prospects of further increases and even of a revival of the International Steel Cartel. This has improved the general tone of the British industry, and Middlesbrough and Scottish ironmasters report a slight improvement in sales of pig iron. Still, apart from this, no tangible revival in business has yet become noticeable.

ENGINEERING.

Once more conditions remain unchanged, and so far the hopes entertained a month ago of an impending revival have not yet been realised. Still it is felt that conditions have become no worse and that the industry is in a better position than it was earlier in the year to take advantage of a revival. At the moment, machine-tool makers are still complaining of foreign competition, notwithstanding the protection given them by the tariff. Makers of power equipment are doing a fair business, and locomotive and crane builders find the outlook more encouraging. Marine engineers have received some small Admiralty contracts, but otherwise they are as idle as ever. Textile machinists are fairly well placed.

PRODUCTION OF ELECTRICITY.

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24=100.)

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Owing to the holidays, the figures show a fairly general drop, this being most serious in the general engineering section. The corrected figure for August is 84.0, or the same as the preceding month. It compares with 90.3 for August last year.

ELECTRICAL INDUSTRY.

The home figure was raised by a contract for a 30,000-kw. set for Brighton electricity supply. Export business has again diminished.

MOTOR INDUSTRY

Conditions in the motor industry are still encouraging. Exports for August, when compared with 1931, show an increase of 700 ir private cars and 300 in commercial vehicles. Among exports of tyres, motor car outer covers show a good increase over last year, both for the month of August and the eight months' total. New registrations, however, show a slight decrease in all sections when compared with a year ago. In the motor cycle section business is still rather quiet and new registrations show a decline when compared with 1931.

THE COTTON TRADE.

Labour matters have dominated the industry during the past month. At the time of writing the strike in the weaving section has been going on for three weeks, but negotiations for a settlement are now taking place under the auspices of the Ministry of Labour. The notices of wage reductions for spinners have been postponed by the employers for a month, and negotiations with the trade unions are now taking place. The situation at the moment is rather critical, but there are hopes of a way being found out of the difficulties. Another development of importance has been the sharp decline in raw cotton prices of nearly 1½d. per lb. from the highest rates; this being largely due to the bearish official crop estimate. Conditions in the Manchester market have consequently not been favourable for active trade operations, but cloth inquiry for India has been considerable, and, as many buyers were prepared to grant a strike clause in contracts, a fair amount of buying has taken place in some of the up-country markets. News from China has been rather disturbing, and very little has been done in standard makes, but occasional sales have been reported for Egypt and the Near East, but advices from South America have improved somewhat with a little more activity in printing descriptions, and some makers have done rather better in fine goods for the Continent. Home trade buyers have acted with caution. Owing to the weaving stoppage, stocks have been in increased request, and have now been considerably reduced. Many spinning mills have been compelled to close down as a result of the weavers' strike, and sales of home counts have been limited, but producers have presented a stiffer front to buyers. Egyptian yarns have moved off rather more freely for the Continent.

THE WOOL TEXTILE TRADES.

Substantial advances over the previous close were recorded in wool prices on the opening of the Australian selling season early this month, while South African wool is also selling much better than in the disturbed conditions of a year ago. In consequence, there has been a general tendency for Yorkshire prices to improve throughout all the stages of production. There is also a better demand for yarn, both as regards new orders and also deliveries against old contracts. Reports from the worsted side of the industry are not so encouraging, as many manufacturers are unable to give full employment to their machinery. There is a belief that this is likely to be a woollen season.

THE JUTE TRADE.

The outturn for the 1932-33 season is now estimated at 5,844,600 bales, and, as world annual consumption is in the neighbourhood of 8,000,000 bales, this suggests that about 2,000,000 bales will have to be withdrawn from existing stocks. This has imparted great strength to the market, and raw jute prices rose by nearly £2 per ton early in September. Yarn also became very firm, and demand for cloth improved, with buyers showing greater interest. During the past fortnight, however, raw jute prices have reacted in sympathy with the general setback upon the commodity markets.

RAYON.

The turnover in rayon yarns has been restricted by the stoppage in the cotton trade, but there has been a large business with Yorkshire and a rapidly expanding demand from the Midlands, where Leicester and Nottingham have been buying cheap-quality mass-produced yarns on quite a large scale. The general outlook is fairly encouraging.

THE LINEN TRADE.

The past few weeks have been marked by progressive advances in all classes of flax fibre, with selling offers at a minimum, and fine spinning material most difficult to procure. Yarns have sold freely, in some cases at slightly higher rates, but prices remain below production costs based on current fibre quotations. Reports from Continental centres are of a similar nature. An encouraging volume of new cloth orders has been fixed for forward delivery both for home and overseas markets.

BOOTS AND SHOES.

Leather prices are advancing, and boot and shoe manufacturers are beginning to restock in anticipation of further increases. Business at Northampton is seasonally dull, but a few manufacturers have slightly improved their position.

POTTERY.

So far trade shows no permanent improvement, but Christmas orders are beginning to come to hand and are giving rise to some temporary activity. Employment is a little better.

THE CHEMICAL INDUSTRY.

Trade in chemical products during August was fairly satisfactory for the time of year. In the home market there was a moderate demand for most industrial chemicals, and business in pharmaceutical products was steady although rather quiet. Pitch continued the best item in the coal-tar products market. Sales of refined tar for road making were disappointing. Overseas trade showed an improvement as compared with August last year, exports of chemicals, drugs, dyes and colours recording an increase of £316,203. This was largely due to increased exports of ammonium sulphate, bleaching powder, coal-tar products, copper sulphate and sodium compounds. Items showing a decrease as compared with last year were sulphuric acid, glycerine, potassium chromate and bichromate, quinine and its salts, and dyes and dyestuffs. A further considerable fall was recorded for imports of chemicals, drugs, dyes and colours during

August. The only products for which imports showed a greater value than in August, 1931, were potassium compounds, quinine and its salts and cinchona bark.

AGRICULTURE.

According to an official report, good progress was made with the corn harvest during August. The yield per acre was forecast to be below the ten-year average for wheat, equal to it for barley, and above it for oats. Main crop potatoes are satisfactory, and there is no abnormal disease. Yield is estimated at 6½ tons per acre, or up to the ten-year average. Root crops made good progress, and hops greatly improved as a result of favourable weather. The hay harvest was completed during August in very favourable conditions. The yield was average. Grass was plentiful, and cattle and sheep maintained their conditions. Milk yields showed their usual seasonal decline.

SHIPPING.

September has witnessed a slight seasonal recovery in the cargo freight market. Outward coal business has remained very dull, but a more satisfactory feature has been a fairly active demand for grain tonnage from Montreal. The number of vessels available has been such as to check any upward tendency of rates from this quarter, but homeward quotations from the Plate have improved, and there has been a slight broadening of demand from Australia.

BUILDING.

According to the Ministry of Labour's returns, employment remained bad during August with the exception of an improvement in the London district, due partly to activity in the painting and decorating section. The unemployment percentage for August 22nd for the whole country was 27.3, compared with 27.6 on July 25th last and 19.1 in August last year. Returns furnished by 144 urban authorities (excluding the London County Council area) show that plans passed for new buildings in August comprised a total cost of £3,289,700, compared with £5,457,400 in July and £3,156,800 in August of last year. Of the total for August, 1932, dwelling-houses accounted for £2,439,500; factories and workshops for £232,900; shops, offices, warehouses and business premises for £159,900; and other buildings and alterations and additions for £457,400.

RETAIL TRADE.

A London store reports that trade during late August and early September was very difficult. Since then, however, there has been a distinct improvement in certain sections, especially in the better-class goods.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE OVERSEAS.

Sentiment has continued to improve in most countries and in certain of the Dominions, and also in several European countries trade has become a little more active. It is still premature, however, to say that a definite recovery is beginning.

BRITISH EMPIRE.

Australia.—Cabled reports show that the improvement in business continues. Rising prices and anticipations of heavy exports of staple commodities, together with an expansion in gold production, are tending to restore normal trading conditions. July imports were 50 per cent. above those for July, 1931, but even so there was a favourable trade balance of £30.0 sterling, excluding gold. Rural prospects are excellent in all States except Queensland.

Canada.—Business conditions showed little real change during August, but sentiment definitely improved, partly owing to the outcome of the Ottawa Conference. The western wheat crop is about 100,000,000 bushels above last year, and production costs are so low that, with improving markets, there should be a margin of profit. Industrial activity is only moderate, and building operations are severely restricted. Shipowners have had a better season owing to heavier grain movements and large coal imports from England.

India.—The rise in the United States and heavy Japanese purchases caused a sharp advance in Bombay raw cotton prices during August, accompanied by some speculative operations. Local cotton mills experienced a steady demand at firm to rising prices. The recent increase to 50 per cent. in the duties upon foreign goods is welcomed. Demand for Manchester goods is still irregular and affected by political troubles, but, provided that prices remain steady, a gradual widening of inquiry is expected. There was a good business during August in Japanese goods, but it was still too early to forecast the effects of the new duties. The crop outlook improved during August as a result of clear weather.

South Africa.—Some slight improvement in business was noticeable during August, including rather better traffic returns, more movement in wholesale trade and increased activity in the boot and shoe industries. Crop prospects are good in Western Cape Province, where fair rains have fallen, but elsewhere drought conditions prevail, and winter grain and fodder crops are likely to be small. The wool season has opened much better than it did a year ago.

EUROPE.

France.—Some seasonal improvement in both the house and industrial sections of the coal trade is noticeable, and demand for pig iron is also better. Little change is noticeable in the steel trade. Lille reports a definite revival in the cotton industry. August orders were the best for six months, and weavers are able to work longer hours, though still not back to full time. The revival has also spread to the Roubaix woollen industry. There has been a big turnover in tops at better prices, and spinners are also obtaining more business. The improvement, however, has not yet reached the weaving end of the industry.

Belgium.—The coal strike has at last been settled, but it will be some time before normal conditions are completely restored. The one fortunate consequence of the strike is that it has enabled stocks of coal to be reduced from over 4,000,000 to about 2,500,000 tons. The iron and steel market is definitely firmer, and the recent price advances are being well held. Several good orders have been booked recently. The demand for plate glass is also better, as more export orders have been received.

Germany.—Sentiment has improved during recent weeks, and the Government's new economic programme has had a favourable reception. At the same time, business has been under the influence of the holidays, for both coal production and car-loadings declined during August, though they have since shown a better tendency. Pig-iron and steel production has lately fallen away with the completion of the large Russian orders, but the engineering industry has lately received some fresh business. Imports for August were Mks. 332 millions, against Mks. 366 millions in July and Mks. 454 millions in August last year. Exports were Mks. 428 millions, against Mks. 431 millions in July and Mks. 803 millions in August last year. Unemployment fell during August from 5,392,000 to 5,225,000.

Holland.—There has been no noticeable change in business during the past month. Attempts to reduce wages in the shipping industry led to a seamen's strike, which has only been settled by a very temporary agreement, which expires on October 15th in the case of tramp steamers. Attempts are now being made to reduce wages in the building industry. Imports for the first eight months of 1932 were returned at Fl. 868 millions, and exports at Fl. 547 millions. The corresponding 1931 returns were Fl. 1,301 and Fl. 899 millions. Unemployment has increased slightly, the latest estimate being one of 350,000, or 4.5 per cent. of the total population.

Denmark.—Most of the restrictions upon foreign exchange dealings were removed at the beginning of September, but simultaneously drastic reductions were made in the quantities of goods for which the Exchange Centralisation Office are prepared to grant import licences. Prices of dairy produce and bacon have again improved, and production has once more become profitable.

Sweden.—Recent harvest reports are very favourable, and the country's wheat requirements are fully covered. Timber sales have improved during the month, except in the white wood market, which is depressed by Russian offerings.

Switzerland.—August export returns were slightly better than those of July, the improvement being from Frs. 59 to Frs. 60 millions. It was chiefly due to better trade in textiles and dyestuffs.

Imports also showed an increase of Frs. 2 millions to Frs. 134 millions. A general improvement in tone is noticeable.

Austria.—Although the situation remains extremely difficult, industry has recently undergone a slight improvement. In the iron industry a furnace which had recently been blown out is now to be restarted, while exports of bicycles and motors have lately expanded considerably. The tourist season has been excellent, and has brought in a revenue of about 300 million schillings. Possibly, as a result of the rise in stock prices, several of the luxury industries also report a better demand.

UNITED STATES OF AMERICA.

In spite of the recent spectacular increases in numerous commodity and stock prices, there has only been a very limited expansion in activity, and the reaction in prices which followed the Maine election showed how unstable markets had become. Steel production improved in early September to 15 per cent. of capacity, against 14 per cent. in August, and there was a slight seasonal expansion in car-loadings. The textile industries were also a little more active, and coal output increased, but, up to the end of August, the automobile industry had failed to gain ground. The improvement in prices has undoubtedly eased the financial position of many sections of the community, but so far it has not led to any assured expansion in the volume of trade.

LATIN AMERICA.

The Argentine cereal crop outlook appears satisfactory. Business conditions generally in the Republic are unchanged, exports being maintained, whilst imports are severely curtailed, owing to the exchange restrictions. Statements recently issued by the Argentine Minister of Finance reiterate the Government's firm intention to maintain the external debt service, and it appears possible that special shipments of gold may take place in this connection, thus affording relief to the exchange position. Chilean trade conditions measures designed to stimulate industry and thus diminish unemployment have not yet had time to take effect. The Brazilian situation remains unchanged, and no peaceful method of settlement has so far emerged in the Sao Paulo revolt against the Federal Government. Political difficulties also continue to affect adversely business in other Latin American countries, but it is to be noted that the recent assistance. In Peru quotations for the chief export products of cotton and sugar have risen appreciably, thus enhancing the value of agricultural and other property.

THE FAR EAST.

Japanese exports for August amounted to Y. 136 millions, against Y. 110 millions in July. Imports increased from Y. 68 to Y. 73 millions. The depreciation of the yen has imparted greater activity to the leading produce markets, so much so that dealings in raw silk had to be suspended for three days at the end of August to allow settlements to be arranged and orderly marketing resumed after an outbreak of excited dealings. Industrial conditions have improved, and the cotton, rayon and cement industries have all decided to mitigate the present curtailment of production.

News from the United States may be summarised as consisting of a record of numerous small improvements. Each one, taken by itself, appears insignificant, but in the aggregate they do point to a limited amount of progress. No pronounced movement can be expected, however, until after the Presidential Election with its attendant uncertainty is over.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover, in most cases, the period to the middle of October. In the remainder they relate to the month of September.

THE COAL TRADE.

Export demand has lately become stronger. South Wales reports a fair demand for anthracite and dry steam coals, largely because shipments to Canada are being accelerated while the St. Lawrence still remains open. New contract business is very disappointing. On the North-East Coast Northumberland collieries are very well supplied with orders, and prices have advanced. Fresh business has lately been received from Scandinavia. Demand for Durham coal has also improved, but is still very irregular. At Hull orders for prompt shipments are also coming forward more freely. In general, too much emphasis must not be laid upon this improvement in export trade, as competition from Germany and Poland remains very keen. Home business is not very encouraging. The winter house coal trade is slow in developing, and demand for industrial fuel is no better than a month ago. Manchester, however, reported an improvement following the settlement of the cotton strike.

IRON AND STEEL.

Business remains unchanged in volume, and the September production returns did little more than register the normal improvement after the holiday month. The number of furnaces in blast increased by two during September to 59 at the end of the month. Fortunately Continental prices continue to advance, and Belgian prices for steel bars were on October 19th 52s. 6d. (gold), against 43s. in July, 47s. 6d. in August and 48s. 6d. in September. The total advance is appreciable, and when allowance is made for the depreciation of sterling, freight and duty, there is now practically no difference between Continental and home prices for bars delivered in the Midlands. British prices have remained unchanged, and it is recognised that, with the tariff in force, any advance would be impolitic. The decision to maintain the tariff for two years is welcomed. It was never expected that any further increases in duties would be recommended, but the stabilisation of the present rates should discourage Continental producers from undercutting home prices in order to keep a hold of the British market for the short period for which it had been hoped the duties would remain in force.

ENGINEERING.

The expected improvement in business has failed to take place, and it now appears that no revival can be expected this year. This disappointment has caused a slight setback in confidence, accentuated by a falling-off in the volume of new orders. All sections of the industry have shared in this recession. In the marine and agricultural engineering sections the depression remains acute, and makers of boilers and prime movers have lost ground. The machine-tool and textile machinery sections are inactive and disappointing, and the September machinery exports were the worst since 1919, being only 20,000 tons, compared with pre-war figures of 50,000 to 60,000 tons, and one of 40,000 tons for three years ago. Employment remained very bad during September.

PRODUCTION OF ELECTRICITY.

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24=100.)

September	161	136	212	131	220	167

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The corrected figure for September is 86.5, compared with 84.0 for August and 89.0 for September last year. The rise of 2.5 points since August is the first appreciable increase in the corrected figure for quite a long time, and shows that there was more than a seasonal improvement between August and September.

ELECTRICAL INDUSTRY.

The rise of four points in the home index represents the influx of a number of orders for reconstruction and repair work. Few con-

tracts for new plant have so far been placed. The export market is still falling.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of the orders.

MOTOR INDUSTRY

During September motor manufacturers were actively engaged. August sales of private cars show the remarkable increase of 45 per cent. when compared with August, 1931, and it is fairly certain that September will also prove to be a good month. Commercial vehicle sales, however, show a small decrease, although during the quarter ending August the total goods vehicles in use had increased by over 8,000. Exports of both private cars and commercial vehicles show a large increase, the nine months' figures being over 50 per cent. higher than that of 1931. The motor cycle industry showed increased signs of activity in sales during August, having an increase of 4 per cent. Export business, however, showed a decrease when compared with the first nine months of 1931.

THE COTTON TRADE.

Although trade has been unsettled by the weavers' strike, followed by the threatened stoppage in the spinning branch of the industry, inquiry has been on a considerable scale, and more trade has been done than might have been expected. Thus, now that the labour troubles have been settled, the outlook is more hopeful. Fluctuations have occurred in raw material rates, but on balance there is not much change in values compared with a month ago. The new American crop will be about 11,500,000 bales, and, with the carry-over from last season of 13,000,000 bales, ample supplies during the next twelve months are assured. The general demand for piece-goods has shown some improvement. Dealers in India have taken much more interest in Manchester prices, and an increased turnover has taken place in light bleaching descriptions, especially for Karachi. Many more offers have been met with in dhooties for Calcutta, but only occasional sales have taken place. Fancies of various kinds have moved off more freely for the several outlets of India. There has not been any general activity for China, but during the last ten days rather more transactions have been put through in bleached shirtings and printed and dyed goods, whilst rather more support has been forthcoming from Hong Kong and the Straits Settlements. Near Eastern outlets have been disappointing, but printing and finishing cloths have moved off fairly well for South America and the Continent. Steady buying has been reported in home trade fabrics. Engagements of manufacturers remain very irregular, but some makers are fully sold for three months ahead. The tone of the yarn market has been rather firmer, and so long as there was the possibility of a strike, home users asked spinners to expedite deliveries against old contracts. A fair amount of new business has also been done in American and Egyptian counts. Export trade has been at a rather low ebb.

THE WOOL TEXTILE TRADES.

Although prices have been well tested during the past month and have, in fact, receded a little below the high points touched at the opening of the season, it is clear that markets remain strong and supplies of raw wool are being well absorbed. Foreign buyers are obviously in need of wool, and both Australian and South African wool should be well cleared, at least for the first half of the season. Bradford reports a steady demand for fine cross-bred tops, and below the spot price. Spinners have received good orders from hosiery and underwear manufacturers, and particulars are coming forward well. Yarn prices are well held, and concessions are no longer being made in the hope of attracting fresh business. There is only a moderate demand for piece-goods.

THE JUTE TRADE.

Business at Dundee remains very quiet, and raw material prices are easier. Even the decline during September in Calcutta stocks of hessians and sackings has failed to strengthen markets. Apart from a demand for fine yarns by Brazilian importers, who were anxious to obtain delivery before the expiry of the Brazilian tariff concessions on November 20th, business in yarn has been very limited, and spinners have bought raw material very sparingly. Orders for jute cloth are also very small and prices are not being seriously tested.

RAYON.

Following the settlement of the Lancashire weaving dispute there has been a considerable improvement in the demand for rayon weaving yarns and the general outlook is fairly good. The strongest demand, however, is from the hosiery and underwear trades, and the bulk business is in cheap viscose yarns which are wound direct from the spinning cakes to hosiery cones by the latest process. Overseas business in yarns and fabrics is moderately good for the time of the year.

THE LINEN TRADE.

Flax sales continue to be made on suppliers' terms, not only as to price, but also as to assortment, shipping dates, etc. The downward tendency of sterling is telling against British purchasers, who have operated only on a restricted scale compared with Continental consumers. So far spinners have failed to secure corresponding advances for yarns, and are, therefore, not disposed to sell ahead except at improved rates. Cloth manufacturers find themselves similarly placed, and it is certain that buyers generally will have to face up to the realities of higher values.

BOOTS AND SHOES.

Demand for leather remains quiet, but prices are slightly harder. The boot and shoe trades are very quiet, and this year's Shoe and Leather Fair have had very indefinite results.

POTTERY.

Production has improved under the influence of the Christmas trade, but it is believed that the expansion is more than seasonal and represents a slight but genuine recovery. As a result greater confidence is apparent in the Potteries. There is a better demand for the higher-class wares both from the home and Australian markets.

THE CHEMICAL INDUSTRY.

Home chemical markets were moderately busy during September, most sections showing an improvement as compared with the summer months. More interest was shown in industrial chemicals, particularly in acetic acid and acetone. Pitch continued a good item in the coal-tar products market, but demand for other items in this section was limited. Sales of pharmaceutical chemicals were not altogether satisfactory, as, although manufacturers received a steady flow of orders, these were only for small quantities. Exports of chemicals, drugs, dyes and colours for September were rather disappointing, the Board of Trade returns showing a decrease of £104,636 as compared with September, 1931. The total for the first nine months of this year, however, has risen to nearly £300,000 above that of last

year. The only products for which exports showed appreciable increases last month were bleaching powder, crude glycerine, zinc oxide, quinine and its salts, and dyes and dyestuffs. The value of chemical products imported during September showed a considerable drop as compared with the same month of last year, and the decrease since the beginning of this year now amounts to over £2,000,000.

AGRICULTURE.

According to an official report, corn harvested before the end of August was mainly secured under favourable circumstances. Grain harvested later, however, was badly weathered and gathered in damp condition. Estimated yields per acre are nearly 17 cwt. for wheat, and 15.5 cwt. for barley and oats. The main potato crop is yielding well, and condition and quality are good. Disease is not unusually prevalent. The yield per acre is forecast at 6½ tons. Yield and sugar content of sugar beet are expected to be about average. Cattle and sheep have done well, but in some cases fat stock has been marketed in an unfinished condition. Milk yields have decreased slightly.

SHIPPING.

Apart from a slight seasonal expansion in grain traffic, business remains at a low ebb. Freight rates are still on an unremunerative basis, and the volume of unemployed tonnage shows little diminution.

BUILDING.

According to the Ministry of Labour's returns, employment registered a further slight decline in all districts during September, which was partly of a seasonal character. The unemployment percentage for September 26th was 28.7, compared with 27.3 at the end of August and 21.0 the year before. Returns from 145 local authorities (excluding the London County Council area) show that plans passed for new buildings in September comprised a total cost of £5,478,500, compared with £3,294,600 in August and £5,481,000 in September, 1931. Of this total dwelling-houses accounted for £3,884,100; factories and workshops for £309,400; shops, offices, warehouses and business premises for £619,000; and other buildings and alterations and additions for £666,000.

RETAIL TRADE.

A London store reports that the improvement that occurred towards the end of September has since been maintained, and that recent results have been extremely gratifying. The Incorporated Association of Retail Distributors reports that sales over the whole country during September were only 3.6 per cent. below those of September, 1931. This is the smallest decrease recorded since April.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, NOVEMBER 26, 1932.

No. 114.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations (published by George Allen & Unwin, Ltd., London, 1s. 6d. net), supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

So far as this country is concerned, October witnessed a further moderate improvement in business activity, and there is some evidence that this has continued into the current month. Among indications of an improvement come the slight increase from £74.8 millions to £78.9 millions in bankers' acceptances, the check to the contraction in bank advances and the rise in provincial bank clearings from £95.2 millions to £105.9 millions. The unemployment returns are less definite, for while there was a slight improvement in September and October in the

meat prices due to the new regulations restricting imports. Admittedly these restrictions may for the moment add to the purchasing power of the rural areas, and to that extent may stimulate trade; but it is patent that a price increase due to the restriction of trade is no adequate foundation upon which to base hopes of a maintenance of business activity. To pursue the point no farther, the effect of the restrictions upon the cost of living and so upon general purchasing power must obviously be taken into account. The other factor is that,

though this country is relatively well placed, in that it is escaping the worst effects of the deflation of gold prices abroad, the downward course of prices in the "on-gold" countries is having, from the international point of view, a depressing effect. Since the end of September the depreciation of sterling and the limited fall of sterling prices have been accompanied by a bigger fall in gold prices. This is most noticeable in the case of certain commodities such as wheat; but taking the *Economist* gold and sterling index numbers of primary products, the fall in the gold index between September 21st and November 16th is 7.5 per cent., while the sterling index has only fallen by 3.7 per cent. Coincident with the fall in gold prices, reports from foreign centres have assumed a less hopeful tone. In the United States it is now being suggested that the peak of the autumn revival had been reached by the middle of October, and the latest business indica-

tors point to a slight recession since that date. In France the weakness of sterling has had an unsettling effect, and commodity prices are less steady. In Roubaix, in particular, October activity was not up to that of the two previous months. Swiss export trade for October fell short of the seasonal improvement which should have occurred. Even Empire trade bears some evidence of this, for Canada has been hard hit by the collapse of wheat prices, which will inevitably diminish still further the purchasing power of the Prairie Provinces.

In short, the autumn fall in sterling is for the moment helping British business at the expense of that of other countries. To the extent that we can depend upon our own market and upon other markets linked to sterling, the recent improvement in trade may persist for a time. Ultimately, however, our own trade is dependent upon purchasing power all over the world, and until the foundations for economic reconstruction are laid by international co-operation we cannot hope to make much real or lasting progress in this country.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover in most cases the period to the middle of November. In the remainder they relate to the month of October.

THE COAL TRADE.

Some revival in export demand is noticeable, both in South Wales and on the North-East Coast, but it is pointed out that the recent strength of the markets is to some extent due to restriction of output by the collieries either voluntarily or under the quota. Still, Northumberland producers are well booked forward, and Durham pits have lately been able to improve their position. In South Wales, there is a good demand for smalls and sized coals, but stocks of large coal are very heavy and difficult to clear. Few new contracts are coming forward. As regards inland demand, house coal sales are much below normal for the time of year, but there is a slight improvement in sales of industrial coal, and electricity undertakings are purchasing more freely. Scotland reports an acute shortage of coal for export, which is only partly due to the operations of the quota, and a strong market for both large and small coal.

IRON AND STEEL.

The October production and export figures were better than those for the preceding month, but there was an increase in imports from 127,000 to 160,000 tons. This last, however, is believed to be due to forestalling in anticipation of an increase in the tariff, which it was thought would be recommended towards the end of the month. Such a recommendation was not made, and these imports have now to be absorbed. Further increases in Continental prices took place during October, from £2 14s. 6d. to £3 1s. per ton for steel billets, from £2 16s. to £3 4s. for sheet bars, and from £3 8s. to £4 9s. per ton for merchant bars. All these prices are in sterling, f.o.b. Antwerp, and freight and the 334 customs duty must be added to make them comparable with British prices. In actual fact, some kinds of British steel are now cheaper, even on the sea-coast. Thus, allowing 7s. 6d. for freight, the South Wales prices of foreign sheet bars (including duty) comes to a few pence over £4 15s. per ton, which is the current price for British sheet bars in the same area.

ENGINEERING.

Little change has occurred during the past month, but employment is slightly better. The industry has now had time to consider the Ottawa agreements, and is confirmed in its original view that they are of little immediate benefit, and that everything depends upon how they are interpreted by the Dominions. In some respects, the general tone of the industry is pessimistic. In some respects, and the absence of any prospect of a reduction in taxation is having a depressing influence. Again, though some improvement in business is noticeable, it is very limited and also regarded as spasmodic. Locomotive and rolling stock builders are now a little more active, and agricultural engineers should shortly be receiving their next year's orders. Shipbuilding and marine engineering remain depressed, but the new destroyer contracts recently placed should give rise to a certain number of orders for equipment. Makers of prime movers are doing fairly well, but there is no improvement in the machine-tool or textile machinery sections.

PRODUCTION OF ELECTRICITY.

October	193	160	283	158	258	199

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The corrected figure for October is 88.0, compared with 86.5 for September and 91.8 for October last year. It will be seen that there has been a further general increase in the production and consumption of electricity, but that this was largely of a seasonal character.

ELECTRICAL INDUSTRY.

The rise of one point in the index number of export orders is particularly encouraging, as it comes at the end of a long period of decline. The home index number is disappointing, and it is reported that there is a noticeable absence of repair and reconstruction orders.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

* Copyright of the British Electrical and Allied Manufacturers' Association.

The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of the orders.

MOTOR INDUSTRY.

During the past month the motor industry has maintained its high level of activity. Registrations for private cars were 63.4 per cent. above those for September, 1931, and the twelve months figures also show an increase. Exports of private cars for October have risen from 1,756 in 1931 to 3,958 for this year, and commercial vehicles from 410 to 657. Imports are correspondingly decreasing, the total of private cars and commercial vehicles for October, 1932, being 151, against 520 in October, 1931. The motor cycle section is fairly quiet, but shows a rise in registrations of 646 when compared with September, 1931.

THE COTTON TRADE.

Since the conclusion of the week's strike on November 7th the tone of the Manchester market has steadily improved. Inquiry in yarn and piece goods has broadened and there has been more disposition to arrange contracts. The revised American crop estimate of the Government of 11,947,000 bales was larger than expected, but the fall in prices which followed has since been recovered. Manufacturers of piece goods have met with a larger demand. Much difficulty has been experienced in arranging terms of fresh contracts, but there have been indications of supplies being more urgently wanted in several outlets abroad. A definite improvement has shown itself in the demand for India. An increased turnover has taken place in a variety of goods for the several outlets, and rather healthier reports have been received with regard to clearances. News from China has been bad and trade has been at a low ebb. Fancies, however, have been in request for Java and the Straits Settlements. Some exporters to Egypt and the Near East have displayed more interest in prices, but the turnover for these outlets has been unimportant. Some falling off has occurred in sales for South America, but a certain amount of business has been available, chiefly for the Argentine. Steady buying has again been reported for the several outlets of Africa. The improvement in demand for the Continent has continued, and some encouraging orders have been placed for Scandinavia. Buyers for the Dominions have been more active, especially for Australia. In the yarn market, the spinners' strike came as a surprise to the trade, and owing to the sudden cessation of output a brisk demand was experienced and cloth manufacturers pressed for deliveries. In the circumstances spinners have sold more freely, and have raised their prices and improved their margin.

THE WOOL TEXTILE TRADES.

This season's wool clip is being well absorbed both in Australia and South Africa, and in particular it is estimated that one-quarter of the merino clip has already been sold. The seventh series of London sales opened on November 22nd, and prices were well maintained in comparison with the preceding sales. Bradford combers are well employed, and are receiving more export orders. Inquiries for merino and fine cross-bred tops are coming forward more readily, and it is becoming difficult to obtain delivery of tops before the end of the year. Yarn prices are firmer, and there is a very good demand for knitting and hosiery yarns. There is rather more activity in the dress goods trade.

THE JUTE TRADE.

By the end of October Calcutta stocks of hessians and sackings had been reduced to 91.5 and 72.8 million yards respectively, compared with 159.6 and 78.9 million yards a year ago. Even so business at Dundee remains slow and current purchases of cloth are only just sufficient to keep prices steady. Plenty of inquiries are coming forward, but buyers are afraid to do more than fill their immediate requirements.

RAYON.

Though the actual turnover in rayon yarns is only moderately good, machinery activity would appear to indicate that there was confidence that considerable increase in consumption was likely in the near future. Demand in the weaving section is steadily improving, but the improvement in the demand for hosiery yarns which began in September has now subsided.

THE LINEN TRADE.

In view of the high sterling cost of imported flax, buyers have confined themselves to actual requirements. Sellers are very firm, offering only in restricted quantities and declining to consider any concession. A considerable volume of new business in yarns has been refused by spinners who find themselves compelled to hold for higher rates against increased production costs. The outlook for cloth is encouraging and a feature is the big amount of inquiry from American centres.

BOOTS AND SHOES.

Leather prices are steadier, and inquiries are firmer in both the leather and boot and shoe trades. Orders, however, are still of very limited dimensions.

POTTERY.

Earthenware manufacturers remain fairly busy, but Christmas trade is approaching its end, and the better demand for higher-class ware which was noticeable a month ago has now fallen away.

THE CHEMICAL INDUSTRY.

Conditions in the chemical industry showed no material change during October. Business was fairly active, industrial chemicals enjoying the best markets. Greater interest was shown in wood distillation products and in coal tar products. Business in pharmaceutical chemicals was limited, this section continuing the least satisfactory of the industry. The Board of Trade returns for exports during October again showed a decline as compared with the normal seasonal cessation of painting and decorating. The unemployment percentage for October 24th was 29.8, compared with 28.8 for September 25th, and 24.7 for the end of October, 1931. Returns from 143 local authorities (excluding the London County Council area) show that plans passed for new buildings in October comprised a total cost of £6,317,900, compared with £5,457,400 in September and £4,732,400 in October, 1931. Of the total for October last, dwelling-houses accounted for £4,760,200; factories and workshops for £166,100; shops, offices, warehouses and business premises for £343,900; and other buildings and alterations and additions for £1,047,700.

AGRICULTURE.

According to an official report, the potato crop has been harvested under good conditions, but potatoes lifted towards the end of October were wet and dirty. The tubers are up to the average in quality and size, and disease is not very prevalent. Yield is estimated at about 6.3 tons per acre. Turnips and swedes may yield 13 tons per acre, mangolds about 18.2 tons per acre, and washed and topped sugar-beet roots 8 tons per acre. Fair progress had been made with autumn cultivation and sowing, but in some parts work was less forward than usual. Winter keep has not been heavily drawn upon, and supplies are expected to be sufficient. Cattle and sheep are looking well, and milk yields have been maintained.

SHIPPING.

Trade has been adversely affected by the instability of grain prices, and homeward quotations in almost every section have been weak. Outward coal business shows little change.

BUILDING.

According to the Ministry of Labour's returns, a further slight decline in employment occurred during October, mainly due to the normal seasonal cessation of painting and decorating. The unemployment percentage for October 24th was 29.8, compared with 28.8 for September 25th, and 24.7 for the end of October, 1931. Returns from 143 local authorities (excluding the London County Council area) show that plans passed for new buildings in October comprised a total cost of £6,317,900, compared with £5,457,400 in September and £4,732,400 in October, 1931. Of the total for October last, dwelling-houses accounted for £4,760,200; factories and workshops for £166,100; shops, offices, warehouses and business premises for £343,900; and other buildings and alterations and additions for £1,047,700.

RETAIL TRADE.

According to a London store, November began very well, but recent weeks have witnessed a slight decline in activity. The returns of retail trade for the country as a whole, published in the *Board of Trade Journal*, show that the value of sales for October last was 3.3 per cent. below that of October, 1931. In interpreting this decline it must be remembered that trade in October, 1931, was affected by the general election. Boot and shoe sales showed an increase of 2.7 per cent., but there was a large decrease of 12.1 per cent. in sales of piece-goods.

a Excluding coal imports.

STATE OF TRADE OVERSEAS.

The general impression left by the following reports is that, when allowance is made for the seasonal factor, the recent improvement in trade has been very limited. There are some indications that it had already reached its turning-point by the middle of October.

BRITISH EMPIRE.

Australia.—Seasonal prospects are excellent except in the pastoral areas of Queensland. Trade continues to improve. Unemployment is diminishing, and September exports were double those for August, while imports for the third quarter of the year were 50 per cent. above those for the third quarter of 1931. The main retarding factor was the weakness in overseas prices for wheat, butter and frozen meat.

Canada.—The recent upturn in business has been largely arrested by the October collapse of wheat prices. Unemployment only registered a very slight improvement, while car loadings and electric power production registered less than normal seasonal gains. Railway traffic returns are better as the result of heavy grain movements, and there has been a moderate expansion in retail trade. The lumber industry has improved slightly, but newsprint remains very depressed.

India.—Bombay raw cotton prices fell during early October in sympathy with the downward world trend, but have since recovered owing to the depreciation of sterling. Good Japanese buying took place whenever prices weakened. The piece-goods market was quiet. Calcutta jute prices fell steadily during October, but tea prices hardened on the possibility of the adoption of the restriction scheme.

South Africa.—Business remained steady during October. Clothing and boot and shoe factories are well employed, and retail trade shows signs of the usual Christmas and summer expansion. Wool prices have eased slightly, but clearances have been rapid and overseas demand good. Agricultural prospects have been improved by good rains in areas where they were badly needed. The diamond industry is more active. Sales during October equalled those for the past two years, and prices have risen by 30 per cent. from the low point touched in June.

EUROPE.

France.—Some improvement is noticeable in the coal trade, and there is a better export demand for iron and steel. The Lille textile trades report that the September improvement has hardly been maintained, and demand for flax, hemp and jute is less active, with business more difficult to arrange. Roubaix dealings in tops and noils fell below the August and September level, but there is a keen demand for hosiery yarns.

Belgium.—The coal industry is improving, and current output is passing into consumption, so that stocks are not being increased. In the iron and steel industries new business is less active than in previous weeks, when large orders were booked, but prices remain firm and many manufacturers are now well supplied with work.

Germany.—The business outlook was slightly more favourable early in November, but the resignation of the Government has had an unsettling effect. Unemployment remained unchanged during October at 5,109,000, but steel production improved from 15,100 tons in September to 20,100 tons in October, while coal production rose from 242,000 tons for the week ended October 8th to 283,000 tons for the week ended November 5th. Car loadings also improved, the returns for these two weeks being 102,800 and 115,200. A slight expansion is reported in the wool textile industry, while the foreign trade returns show moderate improvements in both imports and exports.

Holland.—Business is slightly better, but it is now estimated that the improvement during the third quarter of the year was no more than seasonal. Still, unemployment is a little less serious, and more movement is noticeable in the port of Amsterdam, where there has been a reduction in laid-up tonnage and an increase in entries.

Scandinavia.—Interest is being taken in the impending commercial negotiations with Great Britain, and industrial representatives in favour of a liberal commercial policy. The Danish Government has accepted the British Government's desire to limit bacon shipments for two months, but has made certain reservations as to the future, on the ground that stocks cannot be reduced at once. Sweden reports some revival in export industries, and a better balance between production and sales of sulphite and mechanical wood pulp.

Switzerland.—It is now clear that the autumn improvement in trade has not come up to expectations. The hotel and transport industries are severely affected by the depression, and the Government is considering means of assistance. The watch-making, embroidery, paper and machinery industries, and certain of the textile trades, are also severely affected. The October export returns were disappointing, this being attributed to the depreciation of sterling, the British tariff, the impoverishment of Germany, and to exchange restrictions elsewhere.

Central Europe.—In Austria the seasonal decline in employment has been less marked than a year ago, but this may be due to the recent increase in the number of unrecorded unemployed. Indus-

trial employment in August is now estimated at only 50 per cent. of the August, 1929, figure, and there has been no improvement since. Commercial turnover has fallen to the lowest point since the termination of inflation in 1922. Czechoslovakia reports a moderate improvement since midsummer, but there are signs of its approaching termination. Export industries remain very depressed, and so are the iron and steel and engineering trades. The harvest was above the average, but prices are very low.

UNITED STATES OF AMERICA.

The collapse of wheat prices and the publication of poor third-quarter earning statements depressed business sentiment at the end of October, and it then looked as if the limited autumn improvement had reached its peak in the middle of that month. This view is confirmed by recent slight recessions in current business indicators, such as car loadings and steel production, the last-named having fallen to 17 per cent. of capacity in early November against a top figure of 20 per cent. in October. Commodity prices have also fallen by a point during the past five weeks, and stock and bond prices are lower.

LATIN AMERICA.

In Argentina the harvesting period for the main cereal crops is now drawing near, and it appears that the state of the crops is excellent, apart from the damage which has been caused by locusts, which is largely confined to the linseed areas. Business in the new crop grain will commence next month; this should materially increase the supply of export drafts and relieve the pressure recently in evidence in the exchange market. Following the Presidential elections on October 30th last, when Señor Don Alessandri was the successful candidate, Chile appears to have again settled down to a Constitutional regime. The new Administration is giving close consideration to the question of consolidating the national finances and resuscitating the nitrate industry. Fundamentally, conditions in Brazil are being restored, and, whilst some time may elapse before shipments of coffee through the port of Santos take place on a normal scale, the National Coffee Council has announced that there will be no modification in the plans for the defence of coffee. A revival of trade in Latin America continues to be prejudiced by the low level of commodity prices and the continuance of foreign exchange restrictions. The effect of the latter upon import trade is becoming increasingly serious, and, in Chile, complete removal of the exchange restrictions has already been mooted.

THE FAR EAST.

Japanese imports and exports showed some improvement in October over the preceding month. The raw silk market is firm, and reports from the cotton and rayon industries are more encouraging. The fall in the exchange is officially explained by speculation in Shanghai and by the covering of import commitments. It has proved of benefit to shipping business.

The Economist
MONTHLY SUPPLEMENT.

New Series.

SATURDAY, DECEMBER 31, 1932.

No. 115.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations (published by George Allen & Unwin, Ltd., London, 1s. 6d. net), supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

THE Christmas holidays and New Year stock-taking in many industries always make it difficult to assess the real state of trade at this time of year, but there is evidence that business conditions in Great Britain continue to make very slow progress. There has been a definite improvement in both the home and export sections of the coal trade, so much so that in some areas the quota allocations have proved insufficient. November steel production registered an improvement, and it is clear that British steel-makers can now successfully compete in the home market with Continental producers. There is a slight improvement in engineering, and the motor trade has been very active. The textile industries are holding their ground. Cotton manufacturers describe the outlook as brighter, and wool prices remained firm at the recent London sales. Finally, Christmas trade seems to have been good, especially in the London area.

The unemployment returns for the end of November, on the whole, bear out this general impression. The slight increase in the total figure is almost entirely seasonal, as it is largely confined to building, public works contracting, the distributive trades, and transport, hotel and boarding-house services; but there was also some decline in employment in the clothing, lace, jute and electrical apparatus industries, and this cannot be called seasonal. On the other hand, employment improved in the cotton industry, in textile bleaching, dyeing and finishing, in most of the metal trades, and in the motor vehicle and glass industries.

More general indicators are mainly neutral in character. There was a further decline in railway traffic receipts, while provincial bank clearings reacted from £105.9 for October to £102.5 millions for November. The improvement in bank acceptances continued, but bank advances were reduced by another ten millions. The overseas trade returns revealed a very slight improvement between October and November, the most encouraging feature being an increase from £11.9 to £13.7 millions in raw material imports. This increase was confined largely to cotton and wool.

Sterling commodity prices, after a moderate improvement during the first fortnight of November, have had a slight downward trend, which ended in a fairly severe fall during the week immediately preceding Christmas. Too much importance should not be attached to this last movement, as it may merely mark the beginning of the holiday period with its temporary decline in activity in the whole-

sale commodity markets. It is noticeable that the fall in the London-New York exchange to a record low level at the end of November had practically no effect upon the course of sterling prices.

News from abroad is hardly as encouraging as that from at home. The end-of-the-year recession is again in evidence, but in certain countries it first became apparent as long ago as the middle of November, which makes it difficult not to believe that more than a temporary setback of this character has occurred. This seems particularly true of the United States and Germany.

Against the experience of these countries must be set signs of improvement in France, Switzerland and elsewhere. The French textile industries, which lost ground between September and October, experienced an appreciable recovery during November. Switzerland also reports some revival in the watchmaking industry and in certain of the textile trades. There are even signs of some progress in Austria. Some relaxation of the exchange restrictions has proved practicable, production is a little better, and the new commercial treaty with Hungary is expected to foster trade. The position of Hungary herself is much more doubtful.

Empire news is in some respects more hopeful, with the exception of Canada, which is feeling the effects of the low price of wheat and is also sharing in the American business recession. The slow improvement in Australian trade continues, and the chief complaint is now of the low prices she receives for her exports. South African trade showed some revival before Christmas, with wool and maize moving off well. The effects upon business of this week's events have yet to be determined. Indian crop reports are good, and Bombay sales of Manchester goods have been a little better. Japanese competition, however, remains severe, and reports from Japan herself claim that the depreciation of the yen is stimulating export trade.

Thus the year closes with the hopes so freely entertained last August as yet unfulfilled. In England there has perhaps been some improvement, though it is arguable that it might be more correct to say that no further deterioration has taken place. Abroad, conditions on the whole are very little better, except in certain parts of the Empire. The decline in the sterling exchange and the renewed fall of gold prices form a clear link between the course of world trade and that of current political events. It is equally clear that so long as the world's major problems remain unsolved, no more than transient and spasmodic recoveries in business can be expected.

HOME INDUSTRIES AND TRADE.

The following reports on British industry cover in most cases the period to the middle of December. In the remainder they relate to the month of November.

THE COAL TRADE.

Demand improved in the middle of December in anticipation of the Christmas holidays. House coal stocks are being cleared and orders are coming forward more freely. Industrial fuel is moving less rapidly into consumption, but some pits have been working more steadily, though supplies are still in excess of current demand. Export trade is better, apart from some interruption to Cardiff shipments by bad weather. Business on the North-East Coast is better than it has been for a long time. Some kinds of Northumbrian coal are sold forward right into March, and tonnage is being stemmed into January. Export demand has also improved at Hull, and more forward inquiries are being received. In Scotland, current production has been almost entirely absorbed, and supplies were very difficult to obtain at the end of December.

IRON AND STEEL.

Business has become a little quieter with the approach of the end of the year, and there has also been some slight recession in Continental prices since a month ago. The general undertone, however, is much more hopeful. November steel production showed a fair improvement over the previous months, and imports fell to the lowest level for a single month since 1922. Exports were well maintained, and orders have recently been received from home steel users which formerly would have gone abroad. A hardening of the price of scrap is also significant. The outlook is naturally contingent upon the general international situation, but there is every prospect of an increase in Continental prices early in the New Year, and apart from this there is some ground for expecting a slow improvement in the British industry.

ENGINEERING.

Current business and employment are a little better, and there is some improvement in tone. One or two good orders have lately been received. As regards the different sections of the industry, makers of power equipment and engines are busier, while locomotive builders have had the benefit of the contracts placed recently by the Chinese Railway Purchasing Commission. There is no improvement in the machine-tool and textile machinery trades, but there are signs of some seasonal recovery in agricultural engineering.

PRODUCTION OF ELECTRICITY.

INDEX OF GENERATION OF ELECTRICITY.*

October	193	160	283	158	258	199
November	212	172	316	167	276	216

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The corrected figure for November is 86.0, compared with 88.0 for October and 92.2 for November, 1931. It will be seen that, notwithstanding the appreciable increases in the uncorrected figures, there has not been the usual seasonal expansion in power consumption.

MOTOR INDUSTRY.

Motor manufacturers maintained a high level of activity during early December. Private car registrations for October were 33 per cent. higher than for the same period last year, while exports for last month show an increase of nearly 50 per cent. over 1931. Imports also, for the first time this year, show an increase. Commercial vehicles had a corresponding increase in exports and a decrease from 154 to 13 in imports. New registrations of these vehicles, however, decreased by 16.8 per cent. on October, 1931. As heavy vehicles are proportionately the most seriously affected, it may be due to the reactions of the Salter Report. Motor-cycle registrations still show a slight increase.

ELECTRICAL INDUSTRY.

The latest figure records a sharp fall in home orders received, and it appears that municipal authorities have been reducing their expenditure upon electrical equipment through motives of economy. The export index shows a further small improvement.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

(1920=100.)

The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of the orders.

THE COTTON TRADE.

At the beginning of December conditions in the Lancashire cotton trade were improving, but demand soon experienced a setback owing to the unsettled conditions as a result of the American debt question. During this period of uncertainty it was significant that there was an easier movement in raw cotton prices in Liverpool at a time when sterling was declining. General prospects for spinners and manufacturers, however, are rather brighter. The American Government has estimated a further increase in the crop for this season and, including the carry-over, supplies will be about 25,750,000 bales, or equal to world requirements for two years. In the circumstances there is very little likelihood of any important rise in prices. A considerable inquiry has been experienced in piece-goods for abroad. Rather more business has been offering for India in light whites, prints and fancies, whilst some producers of dhooties have secured more contracts. There has not been any development in the offtake for China, and most of the contracts for Java, but printed and dyed goods have been in steady demand for the Straits Settlements. A fair miscellaneous business has been done for Egypt and the near East, chiefly in bleaching descriptions. Manufacturers have met with useful support from South America, West Africa and the Continent. Home demand has been comparatively quiet, but some local houses with connections in the Dominions have been rather busier. Spinners of American yarns have had to fight to maintain their position, but throughout the market there has been considerable resistance against low offers, and the turnover has kept up fairly well. A little more activity has also shown itself in Egyptian yarns. On the other hand export trade in yarns remains disappointing.

THE WOOL TEXTILE TRADES.

Demand for raw wool remains very firm, so much so that it was found possible to extend the recent London sales. In both Australia and South Africa wool is moving off freely, and such uncertainty as exists is confined to the lower grades. Business in tops has been quiet, but current prices are below replacement costs, and so top-makers are not disposed to make any concessions. Spinners are less active and demand for yarns is irregular, but quotations are maintained. Business in piece-goods is very slow.

THE JUTE TRADE.

Business was quiet immediately before Christmas, but prices were well maintained. It is expected that the New Year holidays will be lengthened to a fortnight. Demand for yarns was lacking, and business in cloths confined to small lots for immediate delivery. Linoleum hessians were quiet, but there was a better demand for sackings.

RAYON.

For the time of the year demand for rayon yarns, fabrics and knit-goods is fairly satisfactory. Yarn producers are still maintaining production at a high level, presumably in anticipation of an increase in demand after the turn of the year. Most types of yarns can be readily obtained from stock. Weaving yarns are in better request than hosiery yarns, this being the reverse of the position ruling a short time ago.

THE LINEN TRADE.

Large sales of flax have taken place at advanced gold prices, the bulk being purchased for Continental account. United Kingdom importers are penalised by the adverse sterling exchange. Higher limits have been conceded for yarns, with buyers more anxious to operate than producers, some of whom have now withdrawn from the market for the time being. A feature of recent weeks is the quantity of home spun yarns secured by Continental buyers. Cloth exports are well maintained, but the volume of new contracts is more confined than was anticipated in view of the all-round rise in manufacturing costs.

BOOTS AND SHOES.

The Bristol heavy boot trade is slightly more active than a year ago, and spring trade inquiries are coming forward. The weather, however, has been too mild for any substantial improvement to have occurred. Northampton trade has become rather less active, and buyers are believed to be holding back until after the New Year.

POTTERY.

Business is very quiet, and by the middle of December many factories had already closed down for Christmas. Demand is centred mainly upon the cheaper wares.

THE CHEMICAL INDUSTRY.

A moderate volume of business was transacted during November. There were a number of price increases for imported products, but other quotations were steady. There was less demand for industrial chemicals, but sales of acetic acid, acetone and formaldehyde continued on a good scale. In the coal tar products section the best items were pitch, carbolic acid and refined tar. There was only a small business in pharmaceutical chemicals. There was a decrease in the value of chemicals, drugs, dyes and colours exported during November as compared with the same month of last year, although this was not so great as that recorded for October. This fall was chiefly due to decreased exports of tartaric acid, ammonium sulphate, copper sulphate, glycerine and potassium compounds. Considerable increases over last year were shown by sulphuric acid, bleaching powder, coal-tar products and sodium compounds. There was a large fall in imports of chemical products as compared with November, 1931, bringing the total decrease for this year to nearly £4,000,000. The only products showing an increase during the month were nickel oxide and potassium nitrate.

AGRICULTURE.

According to an official report, work on the land is well forward except in the North-West. Autumn-sown corn has germinated satisfactorily, and appears strong and healthy. Potato production is now estimated at 3,308,000 tons, or 854,000 tons more than last year. The average size and quality of the tubers is fair, and little disease has as yet been reported. The output of mangolds is estimated at 4,336,000 tons, that of turnips and swedes at 7,535,000 tons, and that of washed and topped sugar beet roots at just over 2,000,000 tons. Cattle and sheep are in fair condition and milk yields up to average. Winter keep should be sufficient, unless conditions become adverse.

SHIPPING.

Business during December has shown little change. There has been a continued fair demand for Argentine and Australian grain, and rates have been steady on most routes.

BUILDING.

According to the Ministry of Labour's returns, employment showed a further general decline in November, the seasonal falling-off in painting and decorating being again the main cause. The unemployment percentage for November 21st was 31.0, compared with 29.8 in October and with 27.0 in November, 1931. Returns from 144 local authorities (excluding the London County Council) show that plans passed for new buildings in November comprised a total cost of £6,296,100, compared with £6,489,200 in October and £4,049,200 in November last year. Of the total for November, 1932, dwelling-houses accounted for £4,352,900; factories and workshops for £273,300; shops, offices, warehouses and business premises for £293,600; and other buildings and alterations and additions for £876,300.

RETAIL TRADE.

Christmas trade has on the whole been good, and in the middle of December a leading London store reported the results to have been very pleasing. The returns for the whole country, as published in the "Board of Trade Journal," show that the value of sales for November was only 1.9 per cent. below that of November, 1931, but it should be remembered that retail trade was bad a year ago, so that the small size of the subsequent decline loses part of its significance. London sales showed an improvement over November, 1931, but moderately heavy declines were recorded in Scotland and the North of England.

a Excluding coal imports.

d Revised figures.

STATE OF TRADE OVERSEAS.

Conditions overseas were irregular during November. In France, Switzerland and certain parts of the Empire there were signs of an improvement, but in Germany and the United States a recession took place. It is clear that at the best progress is proving very slow.

BRITISH EMPIRE.

Australia.—Wheat crop estimates are somewhat lighter, except in New South Wales, but a larger harvest is now certain. Butter production is heavy, and there are prospects of an extended export season. Wool sales to date total over 1,000,000 bales, but current prices are below production costs. Trade generally continues to improve slowly, but export prices are far too low to permit of any rapid recovery.

Canada.—The advent of colder weather has imparted some seasonal activity to certain trades, notably the clothing and boot and shoe trades, but business generally has undergone a slight setback. Car-loadings registered a sharp fall at the end of November, and the building and lumber industries remain dull. The fall in wheat prices to a new low record has inevitably impaired purchasing power. Gold production is developing, and with the premium of gold over the current exchange is providing a new and important source of income to the Dominion.

India.—Weather conditions were favourable during November and standing crops were in good condition. Cotton prices remained fairly steady, mainly under the influence of good Japanese buying. The new crop promises well. Bombay sales of Manchester goods have been rather better, and a slight improvement in sales of Indian piece-goods is also noticeable, but Japanese competition remains very severe.

South Africa.—Wool and maize clearances have been good, and trade consequently shows some improvement. Maize exports to December 3rd amounted to 3,163,000 bags, compared with 2,196,000 bags for the corresponding period in 1931. Local wool markets have been firm, with active buying by French, German and British interests. Large deliveries have been made to the ports during the month. Citrus fruit exports to the end of November amount to 111,077 tons, against a corresponding figure of 100,545 tons for last year. After some initial weakness the hide market has become firm. Rain has been fairly general in the summer rainfall area, but considerable damage has been caused in some districts by storms.

EUROPE.

France.—Coal production has improved, owing to the better off-take by the sugar beet and textile industries. In the iron and steel trades competition in the export markets remains very keen, but home trade is firmer. There is some slight improvement in the Lille textile industries, and all sections of the Roubaix wool trades are decidedly busier.

Belgium.—The house coal trade is active, but the iron and steel industries have lost ground, and business in "semis" with Great Britain is now very difficult to arrange. Only 33 blast furnaces are in operation out of a total of 62. Antwerp produce markets are inactive, and confidence is lacking.

Germany.—The slight improvement in trade noticeable in early November has not been maintained. Unemployment stood at 5,385,000 on November 30th, against 5,109,000 on October 31st, while comparing the weeks ended November 5th and December 3rd car loadings have fallen from 115,200 tons to 105,300 tons and coal production from 283,000 tons to 269,600 tons. The improvement in orders received by the textile industries has also come to an end. On the other hand, pig-iron production rose from 10,700 tons in October to 12,400 tons in November, and steel production from 20,100 tons to 22,700 tons. Employment generally is better in the industrial than in the agricultural areas.

Holland.—Apart from some improvement in the electric bulb and wireless industries, where employment is better, there has been a further general recession in industrial activity. This is mainly reflected in increased short time working, and so the amount of total unemployment is unchanged. The financial position remains sound, and plans are under consideration for the conversion of part of the National Debt now on a 5 per cent. basis and for the consolidation of a portion of the Floating Debt.

Scandinavia.—Norway reports that the entire whale oil production for the 1932-33 season has now been sold at a price of £13 a ton. The tankers' pool, constituted at Oslo last summer, is to come into operation at the New Year, and already embraces the major part of the Norwegian tanker fleet now competing for clean cargoes. Norwegian, Swedish and Danish kraft paper manufacturers have formed a joint association for the purpose of fixing prices. Swedish timber sales have recently been active, but prices are weak. Danish butter prices are unchanged, notwithstanding the heavy pressure of Australian and New Zealand butter in the British market.

Switzerland.—Some improvement is noticeable in the watch trade and certain of the textile industries. Employment is better, and exports of watches have increased. Hotel-keepers are displaying considerable anxiety as to the coming winter season, and in many cases prices are quoted in foreign currency at much reduced rates.

Central Europe.—The new Austro-Hungarian Commercial Treaty has come into force, and there is every indication that this will bring about a general improvement in trade. Austrian exchange restrictions are slowly being relaxed, and more general use is being made of private clearings at the actual as opposed to the official exchange rate. Recent Austrian trade and production statistics have registered improvements, and unemployment has not increased so rapidly as it did a year ago.

UNITED STATES OF AMERICA.

There are general indications of a definite set-back in business since the end of October, and while a common explanation is that it only represents the normal end-of-the-year recession, there is some evidence that the movement has gone farther than that. Commodity prices are lower, and there have been big set-backs in steel production, car-loadings and export trade. On the other hand, there is some improvement in coal production, electric power consumption and in the number of building permits granted, but retail sales and bank clearings for November registered declines below the previous month.

LATIN AMERICA.

With the approach of the grain-exporting season, Argentine trade conditions should shortly show some improvement, as relief will be afforded to the exchange market by the increased supply of foreign currency drafts. It appears that the total value of Argentine exports this year will be somewhat smaller than in 1931, but that the visible export surplus will exceed 200,000,000 pesos (gold). An encouraging factor has been an improvement in the aggregate value of Argentine imports during recent months. In Brazil, energetic measures are contemplated to deal with the coffee situation, more especially in view of the "bumper" crop anticipated next year. Increased confidence has been observable in several directions in Chile following the election to the Presidency of Don Arturo Alessandri, but the economic situation is still difficult, and a large budgetary deficit has accumulated. The situation in both Peru and Colombia is to some extent complicated by the unsettled boundary dispute between the two countries, which tends to restrict business. Trade in the Central American Republics generally continues quiet.

THE FAR EAST.

While Japanese export trade with China is restricted by the boycott, the depreciation of the yen has stimulated sales to other markets, such as India, the South Seas, Africa and Europe. This, together with the continuance of cheap money rates, has improved the position of the leading Japanese industries, and the future is now viewed with greater confidence.

INSURANCES OF EVERY KIND

FIRE DEPARTMENT. COMPREHENSIVE POLICIES are issued for Buildings or Contents of Dwelling Houses.

LIFE DEPARTMENT. The "ALLIANCE" FAMILY PROTECTION POLICY gives Lump Sum and Instalment Benefits in one contract.

MOTOR INSURANCE. The Company's MOTOR POLICIES are framed on broad and generous lines and comprise all the most modern developments of Motor Insurance.

For full information apply to the Head Office or to any of the Offices or Agents of the Company.

A. LEVINE, General Manager.

WHAT WILL BE YOUR INCOME WHEN YOU RETIRE?

You will wish to live as comfortably as you did during your working days. But no man expects to receive a pension equal to his salary. Would it not be wise therefore to secure an income sufficient to make up the difference between salary and pension?

For a yearly outlay well within the means of middle-class people you can ensure a

GUARANTEED INCOME OF, SAY, £100, £200 or £300 A YEAR WHEN YOU RETIRE

Should you die before the income becomes payable a substantial sum, with guaranteed Bonus additions, would be available for your dependants.

IF YOU WOULD LIKE A
GUARANTEED INCOME
WHEN YOU RETIRE,

GENERAL RESULTS OF THE YEAR.

Any attempt to review the results of the insurance industry must, of necessity, commence with their contemplation on broad and general lines. As might be anticipated, the extremely complicated and technical manner in which the accounts are normally presented by the companies themselves renders it essential, if a true appreciation of these results is to be vouchsafed to the lay mind, that before passing to detailed analyses of the different branches of the business, some general reference should be made to the results taken as a whole. Consequently, as in previous years, we shall in this introductory survey present the financial results of all classes of insurance business as reflected in the figures of 22 of the most important companies. These figures have been extracted on a uniform basis in order that comparison between the results of the offices may be facilitated.

The table appended sets out the 1931 results under three main classifications:—

- (1) The Underwriting Profits.
- (2) The Dividend Position.
- (3) The Reserve Position.

(1) *The Underwriting Profits.*

The first five columns of the table are concerned with the presentation of the underwriting results. The figures

do not necessarily agree with those in the accounts published by the companies themselves, since, in a number of cases, the reserve for unexpired risk departs from the basis, 40 per cent. of the premiums, which has the sanction of the majority of offices, and which, to ensure uniformity, has been adopted throughout our table. It is not possible in the case of the marine department to use a uniform method, and consequently the method of the company concerned has been followed in each case. The net trading surplus shown in column (2) represents the total underwriting profits, excluding life assurance, annuity and sinking fund business, after deducting the various items relating more to the business as a whole, and charged, therefore, against the profit and loss account.

Column (4) indicates the amount of the contribution to the net trading surplus derived from the operations of the life departments. Life profits, as is well known, are only revealed as the result of an actuarial valuation, and in the majority of cases such valuations take place at quinquennial intervals, although of later years a movement has taken place in the direction of triennial, and even annual investigations. It follows, therefore, that where the company in question has a life department, the absence of any allocation merely indicates that no valuation was due to be made in 1931. Mention should, however, be made of the position of certain companies

Company.	Underwriting Profits.					Dividend Position.			Reserve Position.	
	Total Premium Income (excluding Life, Annuity, and Sinking Fund).	Net Trading Surplus after deducting all items charged direct to Profit and Loss Account (excluding Life, Annuity, and Sinking Fund).	Ratio of Net Trading Surplus to Premiums.	Contribution to Net Trading Surplus from Life, Annuity, and Sinking Fund.	Total Net Trading Surplus.	Net Interest Earnings after deducting Debenture Interest and Preference Dividends.	Cost of Dividend on Ordinary Shares.	Proportion of Dividend met by Interest Earnings.	Funds (excluding Life, Annuity, and Sinking Fund), including General Reserve Funds, but excluding outstanding liabilities and share capital.	Ratio—Funds to Premium Income.

who set aside the shareholders' portion of the profits at the quinquennial valuation, and in each ensuing year credit one-fifth of such surplus to profit and loss. The Prudential, incidentally, is in a special position, since the life profits belong entirely to the "A" shareholders, and the table is concerned only with the "B" shareholders, whose interest is confined to the remaining departments, and who have no rights to any share in the surplus of the life departments.

(2) The Dividend Position.

Columns (6), (7) and (8) reveal the extent to which dividends have been met out of interest earnings. As will be seen, during 1931, 88 per cent., or, excluding the Pearl, whose activities are mainly confined to the life department, 93 per cent. of the total dividends of all companies were paid out of the interest from the investment of the reserves. By the adoption of this customary policy of confining dividends' distribution to interest earnings, a large proportion of trading profits is available to augment reserves. This long-established practice has been amply justified by the manner in which it has assisted the companies to maintain their position during the recent economic crisis, despite unprecedented depreciation of security values.

(3) The Reserve Position.

The two final columns (9) and (10) reveal the strength of the companies, and show the total reserve funds both in amount and as a percentage of the premium income for the past year. Such reserves, over and above the

usual reserve of 40 per cent. of the premium income for unexpired risk, are essential in an industry which with its world-wide ramifications is peculiarly subject to the catastrophe and conflagration hazard. It is interesting to note that, despite the depreciation with which the companies were faced at the close of last year, the aggregate reserves on December 31st last amounted to no less than 125 per cent. of the premium income. It is, however, necessary to point out that the comparison is affected by the fact that in certain cases depreciation has been met by an increase in investment reserve funds, and also by the almost universal practice of taking no credit for the enhanced value of American and other assets, which are still valued on the basis of par of exchange, as in previous years.

In accordance with our usual practice, we append a table showing, for purposes of comparison, the aggregate figure of the twenty-two offices for each of the past five years, as compiled for previous issues of the Supplement. It will be noted that the premium income again shows a slight decline, and that there is little change in the rate of profit, which is practically the same as in 1930. Interest earnings have necessarily dropped, and this has been reflected in the dividend payments.

These general results, although showing some deterioration as compared with earlier years, may yet be considered eminently satisfactory in view of the adverse conditions under which the offices have been working during the past year, and serve once again to emphasise the immensely strong position of the British insurance industry.

Year.	Total Premium Income (Excl. Life and Sinking Fund).	Underwriting Profits.		Dividend Position.			Reserve Position.	
		Net Trading Surplus (Excl. Life and Sinking Fund).		Total Net Interest Earnings.	Cost of Ordinary Share Dividend.	Proportion of Dividend Met Out of Interest Earnings. LIFE ASSURANCE.

INTRODUCTION.

A GREAT many years ago a certain wise thinker of his time said "the good things which belong to prosperity are to be wished, but the good things that belong to adversity are to be admired." This is outstandingly true of our British life assurance institutions: in this time of chaos and disintegration they have remained firm as rocks amid the quicksands of politics and profits. It is, in fact, the testing time for all institutions, and it is not for nothing that most of the large life offices have registered a century and more of quiet and steady progress and of accumulation of resources. Investors, rich and poor alike, find to-day on reckoning their investments that alone among their assets their life policies are now worth more than two or three years ago. This unique quality of exemption from depreciation has, of course, been greatly emphasised in the present depression, and has not unnaturally resulted in an accretion of business from persons desirous of protecting their remaining assets, or of restoring losses suffered in other directions. Another factor which has greatly assisted in countering the effects of the slump on new business is the popularisation of policies at specially low rates of premium. Among these may be mentioned the new "income" policy, which, in addition to a sum assured payable at death in the ordinary way, provides a substantial income of 10 per cent. or 12 per cent. of the sum assured, commencing on death, and payable for the remainder of the first 20 years of the policy's life. Not all the devoted work of the new business organisations has prevented some falling off in new business in 1931; though,

as will be seen by reference to a later column, quite a number of companies managed to record increases.

By way of illustrating the magnitude of their operations, it is interesting to refer to the summary of the returns made by the life offices to the Board of Trade for the year 1930. At the end of that year the figures show that (excluding industrial assurance policies) there were over five million policies in force, representing sums assured and existing bonuses of nearly £1,600 millions. The total premium income was £72 millions, and interest income £33½ millions, while the accumulated funds totalled £785 millions. From the same source it is possible to gauge progress since the war as measured by the sums assured under new policies issued each year:—

Year.	Net Sums Assured under New Policies issued.	Increase or Decrease compared with preceding year.
1919	£ 131,000,000	+79
1920	147,000,000	+12
1921	109,000,000	-26
1922	106,000,000	-3
1923	112,000,000	+5
1924	124,000,000	+11
1925	130,000,000	+5
1926	129,000,000	-1
1927	148,000,000	+15
1928	160,000,000	+8
1929	162,000,000	+1
1930	166,000,000	+2

The expansion between 1926 and 1930 is noteworthy.

NEW BUSINESS.

The foregoing table shows the trend of new business up to 1930, and the table which follows shows the figures for 1931 (contrasted with those for 1930), both individually and in total, for a number of representative offices.

* Figures relate to period November 21, 1929, to December 31, 1930.

The 49 British offices represented in the foregoing table show in the aggregate new business of £147,000,000 for 1931 compared with £153,000,000 in 1930—a decline of 4 per cent. In a year during which gold prices fell some 12½ per cent. and trade was in the extremity of depression, this relatively large total of new business is a very creditable achievement. Indeed, it will be observed that one group—the proprietary offices—recorded an increase of 8 per cent., due, it is true, to the disproportionately increased new business transacted by the Sun Life—the largest, in the group—and, but for the large falling off in the Pearl's business, the Industrial-cum-Ordinary offices would also have shown an aggregate increase.

The Dominion offices have fared relatively far worse than the home companies, though the figures are not really comparable, since only in the case of the National Mutual of Australasia and the Sun Life of Canada does the British business represent more than a small proportion of the total business. The two Australian offices have had to contend with the serious depression of Australian securities, in which the bulk of their funds are invested, while the Sun Life of Canada has suffered from enormous depreciation on the high proportion of the company's assets invested in American common stocks.

EXPENSE RATIOS.

The course of expenses in relation to premium income during the last three years may be studied from the table which follows, to which a column has been added to show the ratios in 1913, the last pre-war year. The figures published by the offices show the ratios which expenses and

commission combined bear to the premium income, but in our table the ratios have been adjusted in order to eliminate the disturbing effect of single premiums. The figures are of use in discussing broad tendencies, but are a very imperfect measure of relative efficiency in different offices; for the crude ratios are materially affected by different rates of growth in new business, the heavy initial expense of which is written off in the first year, and to a lesser extent also by the respective scale of premiums charged and the type of business transacted.

Taking the figures as a whole, it will be seen that expenses show a rising tendency in each of the past two years, and the absolute level of the ratios is now some 10 per cent. higher than in pre-war times. But 1931 has been subject to a special influence not hitherto present, namely, reductions in premium income caused by a marked increase in the volume of policies surrendered, or lapsed, owing to financial stringency; and it may confidently be stated that the real level of expenses in 1931 was certainly no higher, if it was not actually less than before.

The extreme divergence of expense ratios among the Dominion offices may be noted. The Australian offices have always succeeded in working at a very low level of expenses. The ratio in the case of the Canadian offices is nearly double that of the Australian companies. The extremely high level of the Sun Life of Canada's expenses is very marked, so much so, indeed, that the absolute total of expenses actually exceeds the whole of the company's interest income.

EXPENSE RATIOS (Adjusted for Single Premiums by deducting 4% of their Amount from the Expenses).

MORTALITY.

There is an almost complete absence of published information as to the nature and extent of the profit realised from mortality. The standard by which mortality profit is commonly measured is the experience of life offices during the 30 years 1883-93, and is, therefore, completely out of date. It is, of course, common knowledge that each succeeding generation has witnessed a lower rate of mortality than its immediate predecessor, and that the improvement since 1878—the middle date of the experience referred to—has been substantial. As an indication of the change that has taken place we may compare the experience deduced from the Census returns of the general population, as follows:—

RATE OF MORTALITY EXPERIENCED BY GENERAL POPULATION (MALES).

Age.	Experience, 1871-1880.	1921 Census.	Column (3) divided by Column (2).
(1)	(2)	(3)	(4)
30	0.009	0.004	.43
40	0.014	0.007	.50
50	0.020	0.012	.60
60	0.035	0.026	.75
70	0.070	0.060	.86
80	0.145	0.140	.96
90	0.283	0.268	.95

Thus it appears that the rate of mortality among the general population during the past 50 years has been at least halved up to age 50, and at older ages has been appreciably reduced. This comparison, it may be repeated, has reference to the general population, and the same rate of improvement can hardly be expected in a select body such as lives assured, but it is known that the new experience now being compiled by the Institute and the Faculty of Actuaries shows a remarkable improvement.

In concluding this brief reference, it may be useful to convey a warning to abstain from hasty conclusions based on a perusal of statements which appear in many companies' reports in some such form as "the mortality experience has again been favourable, and the actual death claims have been well within the amount expected according to the table of mortality employed in the valuation." Since the table of mortality employed in the valuation is, as we have seen, 50 years out of date, it would be an odd thing if the actual deaths were not considerably fewer than those expected. But, in any case, the difference between "actual" and "expected" death claims takes no account of the duration of the policies becoming claims, or of the amount of the reserves accumulated out of past premiums, and it is quite possible for two offices to show the same difference between "actual" and "expected" claims, and yet to experience widely different mortality profits, if in the one case the claims had occurred mostly in respect of recently effected policies and in the other case had fallen on policies of long duration. In fact, comparisons between "actual" and "expected" deaths are almost worthless to the actuary, and misleading to the uninitiated, and might well be omitted by common consent.

INTEREST EARNINGS.

Any attempt to assess the profit-earning capacity of a life office will necessarily concentrate on the rate of interest earned as being by far the most important factor involved. Interest profit arises if and when the rate earned exceeds the rate assumed in the calculation of the scale of premiums charged, and is disclosed as a result of the periodical valuation of liabilities. In making this valuation, however, a conventional rate of interest of 3 per cent. is usually taken, and so for purposes of bonus distribution the interest profit is represented by the excess of the actual rate earned over the 3 per cent. assumed. Now the actual rate earned differs in a number of ways from the corresponding figure familiar to a private investor in connection with his own securities. In the first

place, it is, of course, derived from aggregate interest income from a heterogeneous collection of all kinds of Stock Exchange securities, of mortgages, of properties, of reversionary investments, and lastly of uninvested balances. Again, the resulting yield is naturally affected by the book values of the assets; and when, as in the past year or two, large amounts are written off to bring the book value down to the level of market values, this tends to raise the total yield. And, lastly, it has to be borne in mind that, since life offices pay income tax on interest income less expenses, the effective rate of income tax suffered is something less than the standard rate and works out at about 3s. 9d. in the £ with the present rate of tax.

The appended table shows the net rate of interest earned in each of the last three years, and also the corresponding figure for 1913:—

NET RATE OF INTEREST.—Life and Annuity Funds (including Reversions).

* Adjusted figures. Reversionary Securities are assumed to earn 6 per cent. net.

Glancing first at the figures for 1913 and 1931 respectively it will be seen that, whereas the margin over 3 per cent. in 1913 was £1 1s. 8d. per cent., in 1931 it had grown to £1 12s. 2d. per cent., an increase of over 50 per cent. Since expenses are, as we have seen, somewhat higher and rates of mortality, though lighter, are not reduced in anything like corresponding measure, the comparison illustrates the importance of the interest factor in the economics of life assurance.

As compared with 1930 there has been in the aggregate a reduction of 2s. 4d. per cent., a difference fully accounted for by the increase in income tax from 4s. 6d. to 5s. But two other factors have been at work last year, each working in the opposite direction. Firstly, the substantial sums written off for depreciation have operated to increase the rate, and, secondly, the series of defaults and the attenuation of dividends have tended to reduce it, and it would seem that these two factors have cancelled out. But the indications point to an intensification of the second factor this year, and this, combined with the low yield basis recently reached by British Government securities, is causing some concern to managements in view of the importance of interest earnings in relation to bonuses.

LIFE OFFICE INVESTMENTS.

The year 1931 was the third year in succession during which the life offices had had to face severe depreciation in their securities. And in many ways 1931 was the most anxious year of all, for it witnessed not only the departure of sterling from gold, but also the general demoralisation of the Stock Exchanges of the world to such an extent that prices in many cases were divorced from all reality, and dealings were attended with extreme difficulty, if indeed they were possible at all. It is a sufficient commentary on the topsy-turvy conditions of 1931 to recall the fact that a life office with the whole of its assets in British Government securities would have suffered more heavily from depreciation than if those assets had been invested, for instance, in industrial debenture stocks. According to the Actuaries' Investment Index, British Government securities fell in 1931 from 104.6 to 92.9, and home corporation securities from 103.6 to 93.4. In the same period industrial debenture stocks fell from 98.1 to 89.4, and industrial preference stocks and shares from 91.2 to 77.2. Dominion securities fell heavily without exception, while the depreciation on certain foreign bonds in that one year was colossal. Lastly, ordinary stocks and shares fell from 63.3 to 49.3. In face of these figures, the actual percentages written off last year by the various offices are extremely small, for in most cases there has existed for many years large hidden reserves in the book value of the assets, and these have acted as a sort of buffer. In any case, of course, only some 60 per cent. of the total assets of life offices are engaged in Stock Exchange securities, and a table is appended showing in some detail the exact classification of the assets of the principal companies in the groups:—

Office.	Mortgages, including Loans on Policies.	British Government Securities.	Indian, Colonial and Foreign Government Securities.	British Municipal and County Securities. As might be expected, the table reveals the extreme variation in the investment practice and policy of different offices. Apart from mortgages, which represent on the average nearly 30 per cent. of the total assets, the largest single item is British Government securities, and there was a pronounced tendency during 1931 for the investment of spare cash resources in this item, which rose from 16.9 per cent. to 18 per cent., partly at the expense of mortgages, which fell from 29.3 per cent. to 28.8 per cent. Another noticeable tendency last year was a reduction in the amounts invested in Dominion and Foreign Government securities, which fell as a whole from 10.6 per cent. to 10 per cent. A study of the investment situation in relation to the depreciation of 1931 has become almost academic in view of the tremendous volte-

face which has occurred, particularly in the market for British Government securities. In this item, which, as will be seen, accounts for 18 per cent. of the total assets, there has been an appreciation since the end of last year of no less than 35 per cent. Home corporation stocks, Dominion securities and Industrial Debentures have all in their different degrees participated in this recovery, and the aggregate recovery must now amount to a substantial proportion of the losses of last year.

LIFE OFFICE VALUATIONS.

The present is a testing time for methods of valuation as for everything else. As is generally known, the Assurance Companies' Act, 1909, provides that a life office shall make a valuation of its liabilities at least once in every five years, and the method that has been universally adopted for generations is that which is technically known as the net premium method. In accordance with this method it is the custom to assume an artificially low rate of interest—usually 3 per cent., and sometimes less—and to take credit for conventional premiums which have no relation to those actually payable. The combined effect of these artificial assumptions is to produce reserves very much larger than are required to meet the liability for the sums assured and existing bonuses. The excess is retained in the reserves as a concealed provision for future bonuses. The public, while only dimly understanding the implications of this system of valuation, has become so accustomed to its use that it has come to be regarded as a standard of strength from which, in the circumstances, it is difficult for an individual office to depart.

In fact it has taken a world crisis to shake this over-complacent belief in the net premium valuation system and to dislodge it from the niche which it has occupied for so long. A year ago the Old Equitable set the lead in publicly abandoning the method in favour of a more realistic system of valuation, technically described as the "bonus reserve" method, and this lead has now been followed by two other important companies, the Legal and General and the London Life. The principle of the

THE NATIONAL MUTUAL LIFE ASSOCIATION OF AUSTRALASIA LTD.

Established 1869.

TRIENNIAL 1928-1931.

New Assurances Issued - - - £25,182,889
Revenue for period - - - £14,679,734
Payments to Policyholders - - - £7,970,491

The investigation shows a surplus of £4,160,428—the highest ever earned by the Association in any Triennium. Of the Surplus, £429,451 has been placed to Investment Fluctuation Reserve, making the total of this Reserve £800,000; £153,145 is carried forward and £3,577,833 has been divided amongst Policyholders.

BONUS RESULTS FOR YEAR 1931.

Whole Life Policies (Table I.)—BONUSES commence at £2 : 4 : 0 per cent. for first year and increase with age of Policies to £4 : 0 : 0 per cent. per annum.
Endowment Assurances (Table IV. 60)—BONUSES commence at £1 : 18 : 0 per cent. for the first year and increase to £3 : 0 : 0 per cent. per annum.

Funds £34,558,433. Assurances in Force, £84,000,000.

Head Office for Great Britain and Ireland:

5, CHEAPSIDE, LONDON, E.C.2

"Bonus reserve" method is to base the forecasts of interest, mortality and expenses on a close approximation to the rates actually experienced, and to obtain the reserves for the sums assured and existing bonuses on this basis. The reserves so obtained are then augmented by a sum sufficient to provide for future bonuses on the business in force. As there is always some margin between the assumed rates of mortality, etc., and those actually experienced by the office, the rate of future bonus provided for is usually and properly fixed somewhat below the current rate, and the difference is made up out of profits accruing each year. It is this specific provision for future bonuses—which are not, of course, in any way guaranteed—which gives the new system its name and special significance.

Thus the necessity of meeting unprecedented depreciation of securities has paved the way to a great advance in technique, and out of evil has come good.

Among the offices in the Industrial-cum-Ordinary group, all of which value and distribute bonuses annually, some have met the situation by a relaxation of the stringency of the net premium basis, while one—the Wesleyan and General—has adopted the expedient of valuing the assets on the somewhat higher prices prevailing on January 31st last. As to bonuses, there has been a general all-round reduction in the group, amounting in most cases to a cut of 10s. per cent.

The world crisis has passed from the industrial to the financial stage, and has reached the default stage, so that on top of heavy depreciation the offices have to face dwindling interest income. The immediate outlook for bonuses cannot, therefore, but be obscure, and in putting forward future results of new policies there has been a decided tendency for offices to base their calculations not on the high rates—the extravagant rates, as some would say—declared recently, but on the average rates paid over a lengthy period of years. Even so, it is easy to demonstrate that, allowing for the unique income-tax advantage, with-profits policies are splendid risk-free investments in this world of change.

A PENSION FOR LIFE

Mr. X was a young business man in the early thirties, who had not made an outstanding success of his career, nor a failure. He was just an average member of the British nation. A little uneasiness as to the future was always at the back of his mind until he heard about the Wesleyan and General method of providing a Pension for Life. He knew at once that he had hit upon the best means of securing a comfortable and happy retirement in the autumn of life, and now by paying the equivalent of about 10/- a week he is sure of an income of £3 a week at age 65 for the rest of his life.

„ Written off cost of British Legal	75,000	...
„ Carried forward	141,983	66,326
	606,983	730,404

The Britannic, in common with the other important Industrial Offices, has reduced its normal rate of bonus in the Ordinary Branch by 10s. per cent. to 32s. per cent. on the sums assured.

In the Industrial Branch a small share of the surplus is given to the policyholders, and in 1931 the sum of £60,000 has been allocated to increase the sums assured under certain policies becoming claims by death or maturity during the ensuing year.

It will be seen that the Company has been able to set aside out of normal trading profits no less a sum than £678,000 for the purpose of meeting depreciations in investments. Although the carry-forward in both branches has been substantially reduced, the Company has not in any way relaxed the stringency of the basis of the actuarial valuation.

<i>London Life Association.</i>		
	1930.	1931.

„ Carried forward	52,645	375,887
	787,842	2,109,513

The London Life has followed the lead of its sister Institution, the old "Equitable," and has altered its basis of valuation from the net premium system to the bonus reserve system. In the new basis interest has been assumed at 4 per cent., combined with a modern mortality table, and an allowance for expense which may be presumed to conform to the actual expenses. In addition, a specific reserve has been made for future bonuses on existing policies, the rate assumed in the case of the London Life reversionary bonus fund being 30s. per cent. per annum compound.

The profits of the Association belong exclusively to the with-profits policyholders, of which there are two classes.

In the reduction of premiums fund profits are allotted in the form of a reduction, after the first seven years, from the full rates payable. The existing rates of reduction have been increased as a result of the 1931 valuation by 2 per cent., as in the previous year. They now range from 140 per cent. in the oldest series to 46 per cent. in the current series. In the Reversionary bonus fund the bonus has been reduced from 40s. per cent. to 35s. per cent. on the sum assured and existing bonuses.

National Mutual Life Assurance Society.

The National Mutual has naturally suffered heavily from the depreciation in Stock Exchange securities, for at some 75 per cent. of its total assets are so invested. At the Annual Meeting in March, however, the Chairman was able to announce that the portion of the depreciation not met out of the carry-forward and the ordinary surplus of the year had already been recovered—since when there has been a further recovery.

The Society has decided to postpone its Annual Valuation—its own innovation which was introduced so recently as 1924—and to protect the interests of the policyholders whose policies become claims in 1932 by payment of interim bonuses at the full ordinary rate last declared, i.e., 45s. per cent. per annum.

Pearl Assurance Company, Limited.

	1,325,963	3,512,079

In order to deal with the situation brought about by large depreciation on Stock Exchange securities during the year, the Pearl has found it necessary to relax somewhat the basis of actuarial valuation, both in the Ordinary Branch and in the Industrial Branch. The rate of interest employed has been increased in both cases by $\frac{1}{4}$ per cent., and a different table of mortality has been used. Although the surplus brought out by the revised basis after increasing the investment reserves was sufficient to permit of bonuses on the normal scale to be declared, the rate of reversionary bonus in the Ordinary Branch was reduced from 46s. per cent. to 36s. per cent. on the sums assured, and the allocation under the profit-sharing scheme to the Industrial Branch policyholders was also on a reduced scale.

In the Ordinary Branch the reversionary bonus for 1931 is at the rate of 36s. per cent. for Whole Life Assurances and 30s. per cent. for Endowment Assurances, compared with 52s. per cent. and 46s. per cent. respectively in 1930. The sum of £950,000 set aside in suspense in the Contingency fund is stated to be more than equivalent in value to the reduction in the rate of bonus. If and when the general situation shows sufficient improvement, the reduction in the bonus now allotted will be made good to the surviving policyholders, and the interests of policyholders whose policies become claims in the meantime will be protected by the addition of interim bonuses at the full normal rates. The distribution of bonus in the Industrial Branch has been dealt with on the same lines as that in the Ordinary Branch. Thus, policyholders whose policies were effected on or after January 1, 1923, will

receive an ordinary reversionary bonus at the rate of 22s. per cent. as compared with the full normal rate of 34s. per cent., but the difference will be made up in the case of policies which become claims during 1932. For pre-1923 policies the rate varies with the duration in force, and the bonus is payable only in the event of a claim arising within a period of sixteen years.

The existence of the large reserve funds of the Prudential, and their steady accumulation in the past, has been fully justified, since by their aid the Company has been able to provide for all the depreciation it has suffered without further disturbance, and without encroachment on ordinary trading profits.

The Refuge has followed the precedent set by the other large Industrial Assurance Companies, and has reduced the reversionary bonus in the Ordinary Branch from 44s. per cent. to 34s. per cent. on the sums assured. Policyholders in the Industrial Branch shared in the surplus for the first time in 1928. The allocation for 1931 is practically up to the level of that for 1930, and the amount is on this occasion to be utilised for the payment of a bonus in respect of claims arising during the current year under certain classes of policies.

These results have been achieved in spite of depreciation, although at the cost of some relaxation in the stringency of the basis of the actuarial valuation. In the Industrial Branch a somewhat smaller provision has been made for expenses and profits, while in the Ordinary Branch Endowment Assurance policies have been valued at a rate of interest of 3½ per cent. instead of 3 per cent., as in the 1930 valuation.

The Standard has achieved the considerable feat of maintaining unchanged its full rate of reversionary bonus for 1931, and it has done this in spite of depreciation, which, on assets of £22 millions, must have amounted to a very large sum. This valuation is the fifth to be made under the present system of annual valuations and distributions of bonus. Previously the Company had valued

quinquennially until 1920, and then triennially. The change to annual valuations was inaugurated with an increase in the reversionary bonus from 40s. per cent. simple to 42s. per cent. compound, and this rate of bonus has been maintained this year.

rates have necessitated a considerable draft on the surplus brought forward from the previous valuation.

In the Industrial Branch the carry-forward has been maintained on the same level as before, but the amount available for the policyholders, to be utilised, as before, for the purpose of reducing the premium-paying period, is reduced to negligible proportions.

The Society demonstrated yet another method of dealing with the exceptional depreciation in Stock Exchange securities. While the actuarial reserves have been maintained on the same basis as formerly, the assets were valued not on the prices on December 31st, but on the basis of the somewhat higher values ruling on January 30th last.

Triennial Valuations.

Atlas Assurance Company, Limited.

Under normal circumstances a triennial declaration of bonuses would have been made at the close of 1931. The Directors, however, decided to postpone the valuation and distribution. In the meantime, in order to obviate any hardship to policyholders caused by the postponement, provision has been made for the payment of interim bonuses at the full rate last declared, i.e., 48s. per cent. calculated on the sum assured and existing bonuses in respect of every premium paid which fell due in the years 1929 to 1931 inclusive, but not the year 1932.

Quinquennial Valuations.

To Bonuses to with-profits policyholders ..	190,202	200,724
„ Shareholders from—		
With-profits section	21,133	22,302
Without-profits section and annuity fund	90,000	83,000
„ Carried forward—		
With-profits section	7,052	5,994
Without-profits section and annuity fund	75,621	53,654
	384,008	365,674

The valuation has been made on the same net premium basis as before, but the investment losses have made a considerable hole in the trading surplus, which otherwise would have been ample to support a much higher bonus than before. The bonus actually declared for the five years is at the rate of 28s. per cent. per annum on the sum assured, compared with 35s. per cent. per annum in the preceding five years, and even this declaration has entailed a reduction in the carry-forward.

The figures in the foregoing analysis have been separated into those relating to the with-profits section and the without-profits section (including the Annuity fund), since the shareholders are entitled to 5 per cent. of the profits from the former section as well as to the whole of the surplus from the without-profits section.

Legal and General Assurance Society.

„ Carry forward	46,157	119,882
	1,784,570	2,175,187

The problem of providing for depreciation, though serious enough, was not acute in the case of the Legal and General, as only a small proportion of the total assets are invested in Stock Exchange securities. The Society in its latest valuation adopted the new method known as a "bonus reserve" valuation, and thus came into line with the "Equitable" and the "London Life." In the case of the Legal and General the "bonus reserve" method of valuation happens to be peculiarly appropriate, for the transaction of new with-profits business ceased in 1919, and the rights of then existing with-profits policyholders were limited to a maximum reversionary bonus of 38s. per cent.

The rate of interest assumed in the valuation is 4 per cent., and a modern mortality table has been used, the provision for future bonuses being made at the full maximum rate of 38s. per cent.

The change in the valuation basis resulted in a release of reserve amounting to £595,000, enabling the allocation to Profit or Loss to be increased to £800,000. From the balance at credit of this account, the sum of £750,000 has been transferred to Investment Reserve Fund, and £100,000 to General Reserve.

Sun Life Assurance Society.

„ Investment reserve fund	—	600,000
„ Carried forward	297,306	3,033,740
	2,501,961	4,618,765

The 1931 valuation has been made on a less stringent basis than formerly, since a portion of the business has been valued at 4 per cent. instead of 3 per cent. The Chairman stated at the Annual Meeting that the sum released by this relaxation of the reserve amounts to £150,000. In face of these figures, and of the depreciation still unprovided for, the Society has wisely postponed a general distribution of surplus for one year. The sum of £693,000 now allocated to bonuses represents interim bonuses paid on claims during the last five years, together with the cost of one year's bonus at the normal rate in respect of 1927, and the distribution at the end of 1932 will, therefore, be in respect of a full quinquennial period. Hardship to the older policyholders as a result of this course will be avoided by the decision to pay interim bonuses for the current year, on claims at the normal rates, and on surrenders at three-quarters of the normal rates. After allowing for the cost of the year's bonus distribution now made, and for the uncovered depreciation, the carry-forward is reduced to approximately £1½ millions (approximately equal to the cost of three years' bonuses). Broadly speaking, therefore, the depreciation of 1931 has absorbed all previously existing hidden reserves, has forced a relaxation of the basis of actuarial reserves, and, in addition, has completely swallowed up one year's bonus.

INSURANCE BUSINESS OF
EVERY KIND TRANSACTED.

FIRE INSURANCE.

So far as their underwriting results are concerned—and this applies equally to miscellaneous forms of insurance—the composite companies are entitled to feel thankful that the outcome of the year has not been a great deal worse. Since some 50 per cent. of their premiums are derived from North America and probably a further 25 per cent. from other parts of the world outside the United Kingdom, they are peculiarly susceptible to world-wide influences. Falling prices and restricted trade have been naturally reflected in their premium income, though many companies report that home business has been well maintained and that conditions in the United States have accounted for the bulk of the aggregate decline. Nevertheless, it is an achievement in the circumstances to be able to point to a total profit—see the detailed table appended—of 5 per cent. of premiums of over £48 millions. The fall in profits as compared with 1930 is no more than 14 per cent. in the aggregate.

A comparison of the aggregate results of the year 1931 with those of previous years is shown by the supplementary table, which gives the figures in respect of each of the past six years. It will be seen that some compensation for the continued fall in premium income is derived, as in 1930, from the release from reserves of 40 per cent. of the

reduction in premiums. Despite this reduction, however, the percentage absorbed in commission and expenses have risen slightly. In 1931 commission and expenses together accounted for 46 per cent. of the premium income, a proportion which appears to be steadily increasing from year to year and cannot be deemed satisfactory or creditable to the offices concerned.

In the United Kingdom the total fire losses show a welcome decrease of approximately £1,000,000—the total wastage figure having dropped to £8,000,000. In the United States the loss experienced was still heavy, although a slight reduction was recorded as compared with the previous year.

Elsewhere abroad this welcome feature was absent, and, apart from Canada, heavy losses were experienced in many parts of the globe.

Turning to the results of the individual offices, once again the Alliance, whose activities are mainly confined to its high-class home connection, records the largest percentage of profit, having improved slightly on the high ratio of 1930. The General Accident and the London and Lancashire have maintained their satisfactory figures of the preceding year, while four offices, the Century, London Assurance, Scottish Union and National, and the Motor Union, record a loss as against only one office, the Century, in 1930.

MARINE INSURANCE.

It is the practice of those companies whose transactions are confined in the main to marine insurance to present their accounts in a form which discloses each year the results of the underwriting of the previous year. Each underwriting account is left open for two years, the account being closed by transfers to suspense account and to profit and loss. Consequently, in the case of these offices the 1931 reports exhibit the outcome of the year 1930, and it is satisfactory to note that the representative companies shown in the table below all show an improvement compared with the results of earlier years.

The figures relating to the marine department of a number of composite offices are also set out in detail. Unfortunately, it is the usual practice of such offices to issue the marine account in the same form as for fire and accident business, and consequently the claims are entirely unrelated to the premium income. It follows, therefore, that the figures can only be judged over a period of years, and in the summary below the percentage of claims and expenses to premium income are given over a period of six years.

Despite the difficulties of the past year, there is little doubt that marine insurance as a whole has shown better results than for some time past. Naturally, there has been some reduction in premium income, but the effect of the gradual increases in the rates for hull insurance, together with the improvement in recent years in the selection of risks, appears to be responsible for the satisfactory results which the marine underwriters have recently obtained. Mention should be made, however, of the relatively light casualty list of recent years, due, no doubt, to some extent to the ever-growing total of idle tonnage; but despite this factor there has been without doubt a decided improvement in the results of recent underwriting. This improvement will do much to enhance the prestige of the London market, which, despite the difficulties of the past few years, has maintained its position as the leading market in the world for this type of risk.

MISCELLANEOUS INSURANCE.

Accident and miscellaneous insurance account for a premium income of over £50,000,000, and of this amount "casualty" business in the United States is responsible for nearly 50 per cent. In the attached table the individual results of the leading offices are shown—all classes of accident business being included. In one important respect the year 1931 was notable as it was the first year to see the operation of the Road Traffic Act, 1930. Motor insurance consequently showed a tendency to increase, but while the premium income revealed some expansion, claims, and more particularly third-party claims, were rather heavier than in recent years. Compulsory insurance was, as anticipated, brought into operation smoothly and effectively.

During the year a development took place as regards aviation insurance when a new company, the British Aviation Insurance Company, was formed with the backing of a number of the leading offices and a group of Lloyd's underwriters. The formation of the company is, without doubt, a welcome advance towards the insurance at reasonable rates of premium, of the risks inherent in aviation at the present stage. With such substantial backing the company should be in a position to offer facilities which will supply a long-felt want.

Personal accident insurance has never made a wide appeal in this country, and the premium income is consequently small. Employers' liability within the United Kingdom is regulated by the terms of the agreement between the Home Office and the Accident Offices Association providing for annual adjustments in rates so as to stabilise the claims ratio at 62½ per cent. The rate of profit is fairly constant at around 10 per cent.

Turning to the individual results, the Atlas lead the way with the handsome profit of 11.4 per cent. of the premium income, followed closely by the North British and Mercantile and the Alliance—each of which record figures of over 10 per cent. No fewer than six offices, however, were unable to show a margin of profit, as against two in the preceding year. In the aggregate, as will be seen from the summary of results, the percentage of profit differed only slightly from that of 1930, the total premium income showing a slight diminution, as might be expected despite the increase in motor insurance.

AMERICAN INSURANCE BUSINESS.

In view of the high proportion of the premium income of the British fire offices which is derived from their activities in the United States, it is desirable that particular attention should be paid to the results of American business. Accordingly the aggregate results are shown in the attached table, which gives for the past six years the total net premium income and the underwriting profit of the principal British companies or groups of companies which operate in the United States. The amounts have, for convenience, been converted from dollars to sterling at par of exchange, and the underwriting profit has been re-calculated on the usual method adopted in this country of allowing a reserve for unexpired risk of 40 per cent. of the premium:—

AMERICAN FIRE INSURANCE.

Year	Net Premiums Written.	Underwriting Profit.	Percentage (2) of (1).
	(1)	(2)	(3)
1926	£ 33,601,253	£ 752,354	2.2
1927	31,710,646	2,110,373	6.7
1928	31,417,664	3,540,633	8.1
1929	31,224,583	2,236,280	7.1
1930	27,945,315	624,882	2.2
1931	25,814,406	— 40,521	— .2

The decline in premium income since 1927 is believed to be to some extent part of a deliberate policy of excluding unremunerative risks, but increasing competition on the part of the American offices has no doubt played its part. In 1930 the profit was reduced to the meagre return of 2.2 per cent. only on a premium income of nearly £28,000,000. In 1931 the premium income decreased by over £2,000,000, and was accompanied by a loss in the aggregate of 0.2 per cent.

AMERICAN CASUALTY BUSINESS.

Once again the activities of the British companies in the United States, taken as a whole, resulted in a loss, and, as will be seen from the following table, which gives the figures of the past few years, the results of the companies' operations have for some years proved disappointing.

AMERICAN CASUALTY INSURANCE.

Year.	Net Premiums Written.	Underwriting Profit.	Profit as percentage of Premiums.
	£	£	
1926	25,939,085	— 206,014	— .8

AMPLE SECURITY FOR POLICYHOLDERS.

1931 the losses involved have been reduced to something under 1 per cent., and it is understood that as before automobile insurance is mainly responsible for the unfortunate results. In this connection it is of interest to note that rates of premium for this type of risk have during the past year been increased.

Possibly the most interesting feature of the table is the steady decrease in premium income in the past two years, the net premiums written in 1931 being less than six years previously. No doubt this is, to some extent, due to a rather stricter supervision and to the exclusion of unsatisfactory risks.

The Progress of Industry

may now be followed from month to month in the new statistical service compiled jointly by the *Economist* and Moody's-Economist Services Ltd.

This service provides a more complete file of current industrial, commodity and general statistics for the United Kingdom and the chief foreign countries than has ever been attempted before. Supplementary leaves published monthly (or more frequently), as the statistics become available, keep the service fully up to date throughout the year.

THE BRITISH BANKING POSITION.

THE first half of 1932 has witnessed one of the most far-reaching reversals in the earning powers of the British banking system that have ever occurred. The year opened with Bank rate at 6 per cent., and with gilt-edged securities only in the early stages of their recovery from their heavy depreciation. It closed with Bank rate at 2 per cent., and with the launching of a conversion scheme that is successfully placing British Government credit upon a $3\frac{1}{2}$ per cent. basis.

These wide changes have naturally brought to the forefront the questions of the rates both paid and earned by British banks, and also of their general earning capacity. During recent weeks the banks have incurred largely unmerited criticism upon two grounds. The first is the low rate of $\frac{1}{2}$ per cent. paid by the banks upon their London deposits; and this has been accentuated in the public mind by the contrast between the prevailing London rate and the country rate of about $2\frac{1}{2}$ per cent. The second is the failure of the banks to bring their rate on advances down to the full extent of the reduction in Bank rate; and this is equally accentuated in the public mind by the erroneous belief that the banks are still enforcing their alleged minimum advance rate of 5 per cent.

Now a bank has to meet its expenses and earn its profits out of the margin between its earnings and its deposit interest, and in assessing its earnings we must take into account all its assets and not merely its advances. Similarly we must remember that its deposits consist not only of time deposits, whether London or country, but also of its current accounts or demand deposits and its "other accounts," these last consisting mainly of internal funds or "inner reserves" upon which interest is earned but not paid. Hence the issue is by no means as clear as the antithesis between the London deposit rate and the advance rate suggests.

The following table shows the various rates payable by or receivable by the banks, and so serves to place the question in a truer perspective. For example, it shows not only the relatively high rate on advances, but the very low rates now obtainable upon call money and bills. The various figures do not claim to be exact, and they are not exhaustive, for the banks have other sources of income besides interest earned on their principal assets. Three dates are given. The first is July, 1928, when Bank rate was $4\frac{1}{2}$ per cent. The second is January, 1932, the beginning of this year, when rates were abnormally high. The third is July, 1932, six months later, when rates were unprecedentedly low:—

	July, 1928.	Jan., 1932.	July, 1932.
Bank rate	$4\frac{1}{2}$	6	2
Rates Payable.			
(a) Current accounts	Nil	Nil	Nil
(b) London deposits	$2\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$
(c) Country deposits	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$
(d) Other accounts	Nil	Nil	Nil
Estimated average	$1\frac{1}{2}$	$1\frac{1}{2}$	$0\frac{6}{8}$
Rates Receivable.			
Cash	Nil	Nil	Nil
Call money	$3\frac{1}{2}$	5	1
Discounts	4	$5\frac{1}{2}$	$3\frac{1}{2}$
Investments	$4\frac{1}{2}$	$4\frac{1}{2}$	$3\frac{1}{2}$
Advances	$5\frac{1}{2}$	7	$4\frac{1}{2}$
Estimated average	$4\frac{4}{8}$	$5\frac{5}{8}$	$3\frac{0}{8}$
Estimated margin	$3\frac{3}{8}$	$4\frac{0}{8}$	$2\frac{4}{8}$

These calculations are admittedly very approximate, but we have ground for believing that they are fairly correct. In arriving at the average rate payable, we have made a rough allowance for the proportion of total deposits consisting of "other accounts," and have assumed that half the remainder consists of current accounts, one-quarter of London time deposits, and one-quarter of country time deposits. In support of this estimate we cite the percentage of current accounts to total deposits published each month by Lloyds

Bank, which has been consistently in the neighbourhood of 45 per cent.

The average rate receivable is calculated by applying the rate earned on the different items, such as call money, discounts, investments and advances, to the size of each item as shown in the clearing bank average statements for each of the three months. The rates earned on call money and discounts are readily ascertainable from the current reports of money and discount rates. The rate on investments is based upon the actual yield, which obviously depends upon the date and price at which the banks bought their securities, and here we would point out that the drop in War Loan interest due to conversion has not yet taken effect. The average rate paid on advances is obviously a matter of guesswork, especially as the rate varies according to the class of loan, the size of the loan and the credit of the customer, the general rule being that the larger is the loan, the finer is the rate. Still, contrary to the prevailing belief that the minimum rate of 5 per cent. is still in force as regards the majority of loans, we are prepared to hazard the guess that our estimate of an average of $4\frac{1}{2}$ per cent. over the whole field is not too low.

The estimated margin, representing the net rate earned by the banks after payment of deposit interest, is the difference between our estimates of average rates payable and receivable. Now if, as an illustration, this marginal rate be applied to the total of the clearing banks' deposits, which were £1,786 millions in July, 1928, £1,714 millions in January, 1932, and £1,804 millions in July last, it is possible to form a very rough idea of the banks' net receipts after payment of deposit interest. The actual result of these calculations is receipts at the rate of £59 millions per annum for July, 1928, at £68 millions per annum for the rates current in January, 1932, and at only £43 millions per annum for those current last July. It is clear that the fluctuations in money rates which have occurred this year are a vital matter to the banks, for the shrinkage in their margin means a loss of income equal to their net profits. It is thus easy to see why it is impracticable to reduce advance rates still further, or to raise London deposit rates.

In actual fact the public has little ground for complaint upon either score. The minimum advance rate of 5 per cent. has already been abandoned in a large number of cases, including small as well as large borrowers, and the rate of $4\frac{1}{2}$ per cent. now frequently in force only means a charge to the customer of £450 upon an average overdraft of £10,000. If this charge of £450 be compared with the probable annual turnover of such a customer, it will be clear that it is a very small part of his total annual costs. This means that except in the case of businesses where the margin of profit is extremely narrow, the effect of bank advance rates upon trade is largely psychological.

Again, the discrepancy between London and country deposit rates is more apparent than real, for the London depositor makes up in days of high money rates what he loses during a period of cheap money; and with Bank rate at $4\frac{1}{2}$ per cent. there is nothing in it either way. Still, inasmuch as we look to a 3 per cent. Bank rate as being a normal rate for the future, we agree that the London depositor is likely to be relatively in a worse position unless the banks can see their way to reduce the margin between Bank rate and London deposit rate. It must be remembered, however, that there is no such thing as a fixed country deposit rate, for it varies from district to district, and so it is difficult to generalise at all. In any case, the banks are now offering lower rates upon new deposits.

If the banks are now penalised by very low money rates, they have gained considerably in several other respects. First and foremost they have recovered the

deposits lost in the crisis of just over a year ago, for the July average of £1,804 millions is above the average of 1929-30. Next, the appreciation of gilt-edged securities has added considerably to their inner reserves, and has in fact more than made up for the drafts on published reserves necessitated by the depreciation of last autumn. Finally, they must have made good profits

on bills bought early in the year at high rates and held into the period of low rates. Still, whatever their fortunes, the main point is that the British banking system has deservedly maintained the confidence of the public, and if current earnings are for the moment upon a diminished scale, the banks have at least recouped their capital losses of the autumn of last year.

BANK SHARES.

A STRIKING recovery has been witnessed in the market for British bank shares this year. The annual reports, published in January last, showing that bad and doubtful debts had been provided for and investment depreciation charged against reserves, served to restore confidence in the financial strength of the British banking system. The comparatively small reductions in dividends presented bank shares in an attractive light as high-yielding investments; thus buyers gradually returned to the market. By the end of June the leading shares were back nearly to the level of June 30, 1931. The market again went ahead on the announcement of the conversion scheme for 5 per cent. War Loan. In view of the attack on the long-term interest rate which the Conversion scheme implied, ordinary shares of an investment type became sought after for their dividend yields. The market in bank shares, if we may judge from the relative advances, attracted more attention than the market in industrial ordinary shares. The following table, based on the Actuaries' Investment Index, shows how the prices of eleven bank and discount company ordinary shares have advanced since the end of last year, and how the yields have correspondingly diminished. For comparison, the prices and yields of 131 industrial ordinary shares are also given:—

	Price Index. (Dec. 31, 1928=100.)						
	Dec. 31, 1929.	Dec. 30, 1930.	June 30, 1931.	Sept. 23, 1931.	Dec. 31, 1931.	June 30, 1932.	Sept. 20, 1932.
Bank and Discount Company shares	90.2	96.8	89.1	72.7	68.2	82.3	94.5
Industrial shares	81.9	64.3	55.8	49.4	49.3	44.8	57.9
Average Yields (per cent.).							
Bank and Discount Company shares	5.78	5.38	5.83	6.91	7.43	5.71	4.99
Industrial shares	6.81	7.21	6.63	7.66	6.94	5.92	4.60

It will be seen from this table that whereas bank shares have advanced relatively more than industrial ordinary shares, the yields obtainable on the former are still more attractive than those obtainable on the latter. The fact that a year ago an average yield of nearly 7 per cent. was being obtained on the shares of the leading British banks and discount houses was a sign of the prevailing financial crisis. That an average yield of under 5 per cent. is now obtainable is proof that the financial crisis has long since been past and that confidence in the future has been restored.

There is no disposition in the market to anticipate increased dividends this year from the "Big Five" joint-stock banks. It is appreciated that reserve funds which were tapped last year for the purpose of providing for depreciation will have to be made good before dividends are increased, if the banks are to pursue their usual conservative policy. Moreover, trading conditions, as everyone knows, have remained unsatisfactory. The demand of industry for banking accommodation has in fact diminished, as the decline in the advances shows, while the fall in interest rates has now led to narrower profit margins, although bills bought at high rates at the beginning of the year, when Bank rate was 6 per cent., must have shown good profits on maturity. If trading conditions have been unsatisfactory, the banks have, however, benefited from the appreciation on their gilt-edged investments, which has more than made good the depreciation suffered at the end of last year.

As regards the Dominion and Colonial banks, conditions, as we show subsequently, have varied considerably. Interim dividends have been reduced by the Australasian banks this year. For the year to March, 1932, the National Bank of New Zealand has paid 7 per cent., as against 10 per cent., while the National Bank of Australasia has paid 6 per cent. as against 8½ per cent. For the year ending February 28, 1932, the Union Bank of Australia has paid 4 per cent. as against 7 per cent., while the English, Scottish and Australian Bank has declared an interim of 3 per cent. free of tax, as against 4 per cent. tax free in respect of the year ending June, 1932. As a result of the abnormal monetary situation in South Africa, the Standard Bank of South Africa, for the year ending March, 1932, has reduced its distribution to 11 per cent., as against 14 per cent. plus 1 per cent. bonus. While the Eastern banks (National Bank of India and Eastern Bank) have maintained their interim dividends this year, the South American banks have fared badly. The Bank of London and South America has passed its interim dividend this year, while the difficulties of the Anglo-South American Bank are well known. It is satisfactory that Barclays (Dominions, Colonial and Overseas) Bank has maintained its interim dividend this year. The table at the foot of this article gives the present market prices and dividend yields of the leading British and Colonial banks:—

AMERICAN BANKING.

(BY A CORRESPONDENT.)

AMERICAN banking developments, during the year 1931-1932, will probably always be regarded as possessing an unusual, and singularly striking, character, both in themselves and as a reflection of the successive phases of the economic depression in the United States. They include: (1) the largest growth in bank failures, among both national and State-chartered institutions, ever known in American history within a corresponding period—prolific as American banking has been in failures; (2) the adoption of remarkable measures of State aid and interference, best exemplified in the Reconstruction Finance Corporation of 1932, whose mission was fundamentally financial, and which has ended by devoting its major activities to the assistance of banks; (3) the adoption by Congress of legislation embodying most serious changes in the underlying principles of the Federal Reserve system, designed for the purpose of preventing suspension of gold payments—though probably not needed for that object; (4) the adoption of a policy of confessed inflation by Federal Reserve banks and, in pursuit of it, the accumulation of the largest holding of Government securities ever taken on by the Reserve system—not excepting the holdings which grew out of the world war; and (5) in the face of these changes, the liquidation of a substantial part of the excessive portfolios of the commercial banks of the country as reflected in a reduction, between mid-1931 and a corresponding date in 1932, of loans and discounts by \$3,507,000,000, of advances on securities by \$1,929,000,000 and of other loans by \$1,578,000,000, while corporation holdings are down by \$437,000,000. The implications and results of these far-reaching changes have been enormous; and are only just beginning to make themselves evident in unmistakable fashion.

In order to follow the changes thus occurring, it is well to glance briefly at the statistical position; first, of the member banks which report their condition each week to the Federal Reserve Board and, second, of the Federal Reserve banks themselves. The member bank statement for the week ending August 24 is as follows:—

	Aug. 24, 1932.	Compared with Aug. 26, 1931.
Loans and investments—Total	18,499,000,000	— 3,531,000,000
Loans—Total	10,828,000,000	— 3,507,000,000
On securities	4,548,000,000	— 1,929,000,000
All others	6,280,000,000	— 1,578,000,000
Investments—Total	7,671,000,000	— 24,000,000
United States Government securities	4,491,000,000	+ 413,000,000
Other securities	3,180,000,000	— 437,000,000
Reserve with Federal Reserve banks	1,698,000,000	— 89,000,000
Cash in vault	206,000,000	— 41,000,000
Net demand deposits	10,862,000,000	— 2,333,000,000
Time deposits	5,635,000,000	— 1,382,000,000
Government deposits	223,000,000	+ 181,000,000
Due from banks	1,266,000,000	— 56,000,000
Due to banks	2,717,000,000	— 335,000,000
Borrowings from Federal Reserve Bank	150,000,000	+ 56,000,000

Here the outstanding feature of the position is furnished by the three items: loans and discounts, loans on securities, and investments. Loans are reduced, on a year ago, by well toward four billions of dollars; loans on securities alone by nearly two billions; while investments, although showing far less decline, the really have undergone a shift nearly as significant. The latter point can be understood by noting that, whereas the total investments have fallen less than \$75,000,000, the decline in securities, other than Government issues, has been near half a billion dollars, the relatively small total shrinkage being due to the purchase of a great quantity of Government bonds to take the place of the corporation issues disposed of. It is worthy of note, moreover, that the fall in loans and discounts is paralleled by a decline in deposits, which amounts to about \$4,000,000,000, some three-fifths being in demand deposits, and two-fifths in time deposits. These are remarkable changes, and can be understood only by

reference to the far-reaching changes that the general economic structure of the nation has undergone during the period.

The announcement of Great Britain's departure from, or suspension of, the gold standard gave a severe shock to confidence in the United States, and the subsequent liquidation of the foreign balances carried by central banks (and to some extent by commercial banks) accompanied by the shipment of gold in two great movements, one during the autumn, the other during the following spring of 1932, largely destroyed the remaining vestige of belief in the future. Economic conditions were already bad, but the manifestations of fear in the most exaggerated form, by leaders of business and finance, carried national conditions to a depressed point that had never been foreshadowed; and resulted in almost frenzied liquidation of bank assets. Owing to the extensive shrinkage of values that had already taken place, as the natural reaction from an excessive valuation level, prices of even the best bonds were already low, and stocks in many instances at receivership levels. The consequence was to accelerate a movement toward bank failure that had already gained terrific momentum; and before the close of the year about 2,300 banks of all classes had closed their doors, most of them permanently, although a proportion have since been reopened. Since the opening of the year 1932 the movement has been slower; but at times has none the less been severe, as, for instance, in early 1932, when total failures for the first half-year numbered 808, according to official figures, with deposits of \$524,000,000. The resources of all banks placed in the hands of receivers since the beginning of the panic are estimated as high as

the National Bank Act of the U.S.A.)

\$3,000,000,000. It was, therefore, inevitable that large amounts of securities and paper, held by the various institutions, should be pressed upon the market, actively, for sale.

In these circumstances it might be expected that Federal Reserve banks would be hard pressed by their members for assistance in extending to them rediscount accommodation. This has not happened, owing to the fact that banks on the point of failing have not been largely possessed of paper eligible for rediscount. Thus it will be observed that the total increase of rediscount accommodation for the reporting member banks during the year 1931-1932, for which figures are above cited, was only \$56,000,000. Owing to the fact that the reserve system has never been willing to allow itself to enter the field for paper in competition with the commercial banks, it has not been, or has not believed itself to be, in a position to buy commercial obligations in the open market, and has resorted instead to the expedient of buying heavily of Government obligations and bankers' acceptances in open market on the theory that the credit so "released" would percolate to those who needed it, and would thus be made available where needed. The theory thus accepted has been stimulated in application by the fact that the Government itself stood so much in need of accommodation. Heavy buying of Government obligations has kept up the price of these issues and permitted the Treasury to sell new issues at will. The following statement reflects the comparative position of the Reserve banks and reveals the tremendous losses of gold during the year, amounting to nearly \$732,000,000, as well as the immense accumulations of Government securities amounting to near \$1,125,000,000 during the twelvemonth:—

The study of American banking conditions during the period in question will not be complete without a sketch of the remarkable changes of the year made in

In view of discussions that have recently taken place regarding the monetary situation of countries which are off the gold standard or which might be concerned in any effort to form a group of countries with currencies linked to sterling, the remaining articles of this supplement cover the banking situation firstly of the different members of the British Empire and secondly of certain Scandinavian and South American countries.

THE AUSTRALASIAN BANKING YEAR.

ONCE more both the Australian and New Zealand banks have had a very difficult year. The low level of the prices of primary products has had a serious effect upon agriculture, and so upon general business, with the result that enterprise has been checked, the demand for fresh bank loans has been restricted, and the banks have had to exercise great patience and grant special consideration including frequent postponement or remission of interest in respect of their outstanding

banking legislation. Congress, in adopting the Reconstruction Finance Act at the opening of the year, authorised it to issue \$1,500,000,000 in debentures; these to be the same in standing as Government securities (though not eligible at reserve banks), but the Treasury was authorised to buy the debentures *en bloc* (as it has done), and to get the funds by borrowing as it saw fit—which means borrowing at Reserve banks. The corporation has itself made loans to over 2,000 banking institutions on non-eligible collateral, the total advances being probably about \$300,000,000. Secondly, Congress in February adopted a change in the Federal Reserve Act which permitted Reserve banks to substitute Government bonds for gold held behind reserve notes (though not impairing the requirement of 40 per cent. in gold as a reserve backing), while it also allowed Reserve banks to lend to member banks upon "miscellaneous collateral" consisting of practically any short or long obligations they chose to accept. Thirdly, Congress adopted a change in the conditions of national bank note issue, whereby it rendered available to banks about \$1,000,000,000 of additional United States bonds permitting an issue of an equivalent amount of currency thereon, at the will of the banks themselves. Fourthly, Congress, just at the close of the session, directed Reserve banks "in exigent cases" to make loans direct to individuals and corporations, instead of going through the member banks as had hitherto been the case. Thus far, only a small amount of loans has thus been made, but the departure from the older theory of the Federal Reserve Act must obviously be considered essential. These changes will, in time, profoundly alter the whole structure of reserve banking, and some indications of their influence are already to be perceived.

The present position of the banking system as a whole is anomalous and is not fully revealed by the figures or statements. Some of the banks, acting under the influence of fear on the part of their managers or directors, have liquidated their holdings, and called in their loans until they are nearly 100 per cent. "liquid," their assets in such cases consisting almost exclusively of Government bonds and cash. Others have greatly limited the classes of paper they are willing to discount, thereby cutting off not a small proportion of their customers and practically killing various sorts of trade, at least for the immediate present. This situation prevails, particularly, in the foreign trade. Still others, chiefly country banks, have been disposed, with the consent of their depositors, simply to suspend payment temporarily, so that there are considerable tracts of country in which there is only a limited specie payment or cash settlement at banks, withdrawals being limited to a given figure in any one payment. Over considerable tracts of country, moreover, there are no banking opportunities whatever owing to the closing of the local institutions. Due to the reduction of asset values, it may be said that there would probably be almost no actual bank capital were the institutions really obliged to liquidate or to revalue their capital assets at prevailing worth. How long it will take to correct this situation, and what changes will be necessary in the form and structure of American banking, remains to be seen.

net earnings of the banks, while in New Zealand the banks have felt obliged to make similar cuts which equally have affected their profits.

Beginning with Australia, the quarterly average returns of the banks, excluding the Commonwealth Bank, show that between June 30, 1931 and 1932, deposits increased from £259.9 to £277.1 millions. Discounts and advances contracted from £241.3 to £229.3 millions, but Government and Municipal securities expanded from £21.5 to £43.7 millions. The fall in discounts and advances is directly attributable to the decline in the volume of business, to the prevailing lack of enterprise, and in particular to the contraction in Australia's import trade. On the other hand, the banks, in implementation of the undertakings given by them in furtherance of the Premiers' Plan, have had to render further assistance to the Commonwealth and State Governments, mainly by taking up Treasury bills, and there is ground for believing that they have

to such heavy Australian offerings of sterling that the banks began to find some difficulty in meeting it. To ease this threatened *impasse*, the Commonwealth Bank on December 2nd offered to buy London exchange, at rates fixed by itself, without restriction so far as the public were concerned, but under certain conditions as regards sales by the commercial banks. At the same time it fixed the rate at £125 Australian per £100 English, against the previous rate of £130, and this rate has since remained in force.

At the same time, the banks have had to recognise that the exchange rate on London is liable to alteration without notice, and that an appreciation of the Australian pound will automatically reduce the value of their sterling assets. To provide against this, several of the banks have created in their books a special exchange adjustment reserve, which has been established by a transfer from their general reserve funds. In effect, this means that they have had to provide for

gone as far in this direction as they ought to go. It must be recalled that much of the recent Treasury deficits arise from the failure of the late New South Wales Government to effect the economies provided for in the Premiers' Plan, and with the dismissal of this Government from office this particular leak should be largely stopped. On the other hand, the position of the State Budgets is not free from anxiety, while Mr Lyons himself admitted in his Budget speech a few weeks ago that during the past financial year the Commonwealth and States had to issue £19.2 millions of Treasury bills, not only to cover deficits, but also loan expenditure, presumably upon public works designed to relieve unemployment. There is no news as yet of the funding of any of these bills, and so the banks must be prepared to meet further Government demands of this character.

The suspension of the gold standard by Great Britain threw new responsibilities upon the banks. The initial consequence was a reversal of the former transfer of Australian funds to London, and this gave rise

the possibility of a loss on exchange. Another bank has also thought it necessary to allocate part of the year's profits to an internal reserve for the depreciation of Government stocks.

In these circumstances a serious reduction of profits was inevitable, and the table above, in spite of the considerable time-lag in the publication of some of the accounts, shows a reduction of 37 per cent. from £4,961,017 to £3,116,929 in the total profits of the Australian and New Zealand banks represented in London. In addition to bad trade, the fall in discounts and advances, and the need for nursing customers in difficulties, Australian bank profits have also been affected by the cut of one per cent. in the rates on fixed deposits and bank advances, and by the reduction in the yield from Commonwealth loans and Treasury bills. One bank whose net profits have fallen from £132,000 to £72,000, ascribes this entire decline to those causes.

In New Zealand, too, the banks have suffered from low prices and bad trade, and the need for giving every possible consideration to customers in diffi-

culties. New Zealand interest rates also have been reduced, and the rate on bank advances was lowered from 7 to 6½ per cent. last November, and from 6½ to 6 per cent. at the end of August. Reductions in fixed deposit rates have proved only a partial compensation, for they still range from 3 per cent. for money at three months to 4 per cent. for money at two years' notice. The New Zealand banks, too, have had to render special assistance to their Government, and also to face an exchange problem which has recently been a subject of acute controversy, not only among the general public, but also among the banks themselves. In brief, pending the successful flotation in London of the New Zealand Government loan last April, the banks had to assist the Treasury in its London financing. This meant that London funds had to be assured to the banks, and to give them this assurance an exchange pool was set up, and exports were licensed in such a way as to ensure that their proceeds were paid into the pool. By this means, the exchange rate on London was pegged at £110 New Zealand per £100 sterling, and the banks' needs on behalf of the Government had prior claim upon the pool.

CANADIAN BANKING.

WHILE in common with banks in other countries the Canadian banks have had an anxious and difficult year, they have escaped many of the banking troubles experienced elsewhere, and in short have shown that the Canadian banking system, consisting as it does of a few big institutions each owning a network of branches covering the whole Dominion, was well equipped to withstand the stream of the present crisis. Indeed, the contrast between the Canadian branch-banking system and the neighbouring American system of a huge number of small independent unit banks has been rendered all the more striking during recent years by the large number of American banking failures and the complete immunity of Canada from any such disaster.

The chief event of the year was the suspension of the gold standard in Great Britain. This gave rise to considerable foreign exchange disturbance and to the withdrawal of funds from foreign centres. Canada was not immune from such withdrawals, and as a result heavy pressure ensued upon the Canadian dollar, which rapidly fell to a discount in New York. This forced the Government to prohibit the export of gold from Canada except under licence, and so during the past year the Canadian dollar, though at a premium on sterling, has stood at a discount in New York. The depreciation was at its worst in December, 1931, when the New York dollar was quoted at a premium of 24½ per cent. An improvement followed, in sympathy with that of sterling, until in April, 1932, the premium was only 10½ per cent., and after a setback to 15½ per cent. in May, the rate has improved once more to 11½ premium at the end of September.

The following table summarises the Canadian banking position at the end of every quarter for the year ended June 30th last. It is a composite of the balance

The pegging of the rate aroused considerable opposition from primary producers who were looking to a depreciation of the currency to compensate them for the world fall in the prices of their products, and this point of view was supported by one of the banks. The Government and the remaining banks, however, took the opposite view, holding that a depreciation of the New Zealand pound would add to the cost of the external debt, weaken New Zealand's credit, and raise the cost of living, and so production costs generally. Subsequent events appear to justify this attitude, for New Zealand credit stands high, and with the raising of last April's sterling loan the pressure upon her currency has become relaxed.

This survey necessarily concludes immediately before the recent rise in the prices of the leading primary products. If it is maintained, it will, undoubtedly, assist producers in both Dominions, and so should both stimulate the demand for fresh bank advances and enable the banks to liquidate some of their outstanding loans. At the moment, therefore, there is some ground for hoping that the Australian banks have a better year before them.

Considering liabilities first, it will be seen that foreign bank balances and private deposits with Canadian banks fell away sharply during the latter half of 1931, this movement representing the withdrawals alluded to above. There was also a big decline in the item "Bills payable and letters of credit," due to the contraction in Canada's external trade caused by the world depression and exchange uncertainties. Canadian-owned deposits have fallen from \$2,051 to \$1,862 millions, which in the prevailing circumstances of bad trade and price depression is a very moderate decline. Again, the successful flotation of the National Service Loan of \$150 millions, carried

out at the close of 1931, undoubtedly absorbed money hitherto lodged upon savings account at the banks, while business losses and unemployment during the past year must also have depleted savings deposits. The note circulation shows a very moderate decline. This is a perfectly normal movement, and indeed the absence of any expansion in the note circulation shows that public confidence in the banks has been fully maintained.

Loans generally have undergone a very moderate contraction of \$48.3 millions, and in this connection the Canadian Bank of Commerce published last May a very interesting table, contrasting its loan position in February, 1932, with that of November, 1929, when the trade depression was just beginning. This is reproduced below, figures being given in millions of dollars :—

	Nov., 1929.	Feb., 1932.	Change.
	\$ mn.	\$ mn.	%
Loans to :—	43.0	55.0	+ 28.0
Governments and municipalities	24.0	22.0	— 8.3
Public utilities, insurance, trust and finance companies	32.0	26.0	— 18.7
Farmers and ranchers	78.0	37.0	— 52.6
Grain, flour, meats, &c.	41.0	30.0	— 26.8
Manufactures and mining	29.0	17.0	— 51.4
Stores, wholesalers and retailers	13.0	9.0	— 30.8
Lumber, pulp and paper	14.0	10.0	— 28.6
Building and contracting	55.0	33.0	— 40.0
Call loans, loans on securities, &c.	63.0	42.0	— 33.3
Sundry dealers, traders and individual customers	21.0	10.0	— 52.4
Discounts and sterling and foreign bills of exchange	413.0	291.0	— 29.6

In commenting upon this table, the bank states that the decline in the total corresponds closely to the decline in business activity, but the expansion in loans to Governments and municipalities illustrates the support the banks have had to give in this direction. The contraction in advances to farmers and ranchers

shows that repayments have been kept up satisfactorily even in the past few difficult years. The heavy fall in loans to the building, contracting and lumber trades is due to the decline in building activity, while the reduction of loans against securities follows the drastic liquidation and depreciation of these years. The varying contractions in the remaining items reflect not only the smaller volume of trade but also the fall in prices and the reduction of inventories carried by merchants and manufacturers.

There has been a moderate contraction in cash and bank balances, but their ratio to deposits was 14.9 per cent. last June, against 14.3 per cent. the year before, so that the banks have gained in strength and liquidity. The decline in bank balances and loans abroad reflects the falling-off in international trade and the interruption of foreign financial connections by exchange instability. Securities evince moderate fluctuations, but the decline in their deposits has forced the banks to call in part of their short loans.

The main impression left by the year ended June last is that if the Canadian banks are doing less business than before, they have maintained their liquidity. It is also true to say that the depreciation of the Canadian dollar against gold has saved Canada from much of the final decline in gold prices since a year ago, and to that extent has given greater stability to her economic life. It is true that this depreciation has increased the cost of the service of public and private loans previously raised in New York, and has also forced her to rely this year upon herself for further supplies of capital. Still, as several Canadian bankers have recently pointed out, the depreciation has been of some assistance to her exporters and has also provided an additional inducement to American manufacturers to establish themselves in Canada. On balance, however, Canada looks forward to an eventual restoration of parity with the American dollar, but banking opinion would agree that that objective is not yet in sight.

INDIAN BANKING.

(BY A CORRESPONDENT.)

ALTHOUGH hindrances to international trade have multiplied and the political outlook remains obscure, the year has not lacked compensations in India. There have been, notably, the many beneficial reactions of the large (and continuing) shipments of gold, on the one hand, and, on the other hand, the substantial recovery in India's credit which has been of peculiar importance at a juncture when so large a percentage of banking funds, owing to the contraction of trade, is invested in gilt-edged securities.

The effect of world influences on Indian trade can be readily summarised. Indian produce, as pointed out by the Controller of Currency in his Report for 1931-32, shared in the fall in commodity prices, and this was reflected in the balance of trade. Exports of Indian merchandise, excluding the precious metals, fell from 2,20 to 1,56 crores, or by 29 per cent., and imports from 1,64 to 1,26 crores, or by 23 per cent. In the four

as well as in London, on a basis which only a year ago would have appeared incredible.

Addressing the Legislative Assembly on September 5th, the Viceroy indicated the measure of recovery achieved. "Since April," Lord Willingdon was able to boast, "we have floated three loans, one in sterling, two in rupees, of a total amount of 58 crores, the last of which was over-subscribed in about four hours, though it gave a return of only 5½ per cent., as compared with 6½ per cent. for the loan issued at about this time last year. We have also been able to reduce our floating debt in the form of Treasury bills from 84½ crores at the end of August, 1931, to 24½ crores at the end of August, 1932, and to reduce the price we pay for our short-term accommodation from about 7½ per cent. to 3½ per cent. The rise in the price of our sterling securities has been even more remarkable. Our 3½ per cent. India stock, which is our standard loan, has appreciated by practically 50 per cent. in the last

months, April to July, 1932, as compared with the corresponding period of 1931, exports of Indian merchandise decreased by a further 12½ crores, or 25 per cent., while imports, totalling 48 crores, increased by 2 crores, or 3 per cent. Happily the steep decline in merchandise exports was offset by the abnormal shipments of gold, of which the net export in 1931-32 was 57,97 lakhs, "this being the first year on record in which there was export on such a large scale." In the four months April-July this year there were further gold shipments exceeding 18 crores, and total shipments of gold from India since September, 1931, are now calculated at approximately £68 millions sterling. Upon Indian trade and finance the effects of these unprecedented shipments of gold have been extremely advantageous. A favourable balance of payments has been secured, exchange has been strengthened, ample funds have been made available for the Secretary of State, and at a time when defaults have been lamentably frequent throughout the world, not only has India been able to meet all her financial obligations, but her credit has been substantially enhanced, and the Government of India is now able to borrow, in India

twelve months. This improvement of our credit is, of course, largely due to measures taken by the National Government in England, culminating in the largest and most successful financial operation of all time, the conversion of £2,000,000 of War Loan from a 5 per cent. to a 3½ per cent. basis. That naturally had the effect of reducing the price of money here, but it would have been unavailing but for the increased confidence of investors both in England and India in the future of this country, a confidence which I fully share."

Writing a year ago, we recalled that the impairment of India's general financial situation "was such as to necessitate in the summer of 1931 the announcement by the British Government that, should need arise, they were prepared to apply to the British Parliament for authority to give financial support under suitable conditions to the Government of India in order to maintain the credit of the country pending the settlement of the constitutional problem and the formulation of provisions for the future maintenance of India's credit." In view of the peculiar financial and political relations between the two countries, it is legitimate to claim that the fulfilment of this pledge could hardly

have taken a more practical or effective form than the vast conversion operation which, as the Viceroy has indicated, has reacted so advantageously on India's credit, and, incidentally, has yielded such large gains to all holders, individual and institutional, of Indian securities, in India itself as well as in Great Britain.

Banking and commercial conditions were summarised by the Report of the Imperial Bank of India in its report for the half-year ending June 30th, in which it was pointed out that: "The half-year opened with Bank rate at 8 per cent., which was reduced to 7 per cent. on January 14th. A reduction to 6 per cent. was effected on February 25th, and on April 28th the rate was further reduced to 5 per cent., at which figure it remained until the close of the half-year. The rate was reduced to 4 per cent. on July 7, 1932. The average for the half-year was 6.022, against 6.735 for the corresponding term of 1931. The economic depression is still acute, commodity prices remain low and trade is comparatively stagnant. All of India's staple products, cotton, jute, wheat, rice, etc., are at levels that show no profit to the producer. Our great secondary industries, cotton and jute mills, and iron and steel, are also badly hit by the prevailing depression. The local political horizon remains obscure; but some measure of economic unity has been achieved at Lausanne, and, with the elimination of reparations, trade recovery is looked for, resulting in some general betterment in world conditions. The export of gold continues on a reduced scale, and exchange has remained stable in consequence. There is increased confidence in the rupee, and considerable sales of Indian sterling securities have resulted in the proceeds being invested in rupee gilt-edged stocks. Government securities have heavily appreciated during the period under review, and the book value of our investments is below that at prevailing market rates."

Supplementing this review at the shareholders' annual meeting on August 15th, the chairman of the Imperial Bank of India observed: "As sterling prices did not rise proportionately with gold, it became profitable to export gold and receive payment in sterling or able to export gold and receive payment in sterling or rupees. Holders of gold in India were not slow to realise this, and, since September last (1931), approximately 80 crores of gold have left India, and at a large profit to the sellers. The export of gold is tantamount to the export of goods, and has greatly benefited rupee exchange, enabling the Government to obtain their sterling requirements at very favourable rates. It is a matter of great satisfaction that of all agricultural countries India's currency has perhaps remained the most stable, and her credit and financial position has been, in fact, considerably enhanced. Whereas last year India was borrowing in London on a 6 per cent. basis for short-term money, her credit is now, and for a long term, on a 4½ per cent. basis. Similarly rupee borrowings for a medium term a year ago were on a 6½ per cent. basis—now her latest loan offer and security show little better than a 5 per cent. return. Our greatest reduction is, however, in our floating debt borrowings; money on the security of six months Treasury bills has been freely loaned to Government at 3½ per cent. Notwithstanding India's comparatively satisfactory financial position from Government's standpoint, there can be little relief to individuals until a trade substantially improves, and there is either a heavy reduction in the price of gold or a sharp rise in the price of commodities. Our staple crops, rice, jute, tea, cotton and wheat, have all fallen in price by about 50 per cent., and at present rates give no profit to the producer. On the other hand, taxation has increased. The International Conversations at Lausanne have interested the business world. Although the results achieved are important steps in the right direction, it is felt that the whole-hearted co-operation of the U.S.A. must be secured before the foundation-stone of real confidence can be said to be well and truly laid."

The concluding sentences in this analysis merit not only endorsement but emphasis. The financial position of India has been strengthened by recent events, but needs to be supplemented and supported by those long-

overdue international measures which, by restoring commodity prices to levels leaving a reasonable profit to producers, are essential in order to place her economic activities on a sound basis. Shipments of gold, however useful as an emergency measure, can at best function only as a temporary substitute for those considerable exports of merchandise on which India normally relies to enable her to purchase essential imports,

to finance equally essential "services," and to meet sterling obligations. For such reasons India looks to the World Economic Conference, even more than to the measures recently formulated to develop inter-Imperial trade, to take steps enabling her to resume her normal commerce, not only with the rest of the Empire, but with the world at large.

IRISH FREE STATE BANKING.

(BY A CORRESPONDENT.)

THE last twelve months have been an anxious and trying period for Irish bankers. The departure of sterling from gold in September automatically brought the gold standard to an end in the Free State, which was destined to pass through a critical time in the next few months. The passing of the Public Safety Act in the autumn of last year indicated the existence of a politically dangerous situation. A few months later a general election resulted in a change of Government. It is too early yet to attempt to pass judgment on the record of the new administration; but it is possible to state that its policy has not been calculated to appeal to banks or their shareholders. The budget increased the taxation on banks, and the so-called "economic war" with Great Britain has made it hard for many farmers and traders to discharge their indebtedness. Nobody can foresee how long the present struggle will continue or what its outcome will be; but it is certain that, if some settlement is not soon reached, the credit situation in

monetary authorities in the Free State were deeply concerned at the development of the crisis in September. After mature consideration it was decided that the parity with sterling should be retained, at least for the present. The Currency Commission, in its annual report, states: "The Commission, on a full review of the situation, considered it improbable that the value of sterling would become impaired to a degree that would disqualify it for retention at least during the near future as a suitable basis for an exchange standard, and the facts since the date of suspension continue to bear out this view. The domestic values of the pound sterling and the Free State pound as indicated by the trend of prices since the date of suspension provide evidence of the absence of any such unhealthy inflation as is to be apprehended as a consequence of resort to inconvertibility." Nothing is known of the new Government's intentions in regard to currency and banking. The Free State delegates at Ottawa were parties to the somewhat

† 16 months.

Irish agriculture will become very difficult. The Irish banks are, of course, very strong, and are amply competent to survive any reasonable strain to which they may be subjected; nevertheless, the coming winter is regarded by bankers in the Free State with a certain anxiety.

The severance of the link between gold and sterling necessarily divorced the currency of the Free State from gold. Not only is the Irish pound linked to the pound sterling in value, but, in addition, the note issue is backed by sterling securities. Needless to say, the

non-committal resolution on monetary policy, and it may be taken as settled that no immediate break with sterling is contemplated. It would not be surprising if steps were taken later towards the achievement of a greater degree of independence in central banking control than exists at present. There is no reason, however, to think that action in this direction will be undertaken without the fullest inquiry. The joint stock banks have passed through a period of difficulty, both profits and dividends being reduced. In one respect the Irish banks avoided the worst effects

* Irish Free State.

of the economic blizzard. They possessed practically no assets in any of the European countries where banking failures took place, and thus escaped losses which they would have incurred if they had been more deeply engaged in financing international transactions. Moreover, the large proportion of their assets which they hold in the form of investments must have proved a source of profit since the recent rise in security values. On the other hand, agricultural prices have fallen steeply in the last year. The depression in prices overtook livestock and livestock products rather late, and its full force is only now being experienced. This fall in prices narrows the field for profitable advances to the bank's farming customers, and may have rendered difficult the repayment of some of their outstanding loans. The abnormally cheap money that prevailed in the first half of the present year has reduced bank earnings, and the downward trend of long interest rates threatens to reduce income from investments.

In addition to the natural conditions which operated to diminish the banks' profits, new taxation was im-

posed in the budget which bears heavily on the banks. The Corporation profits tax was for the first time extended to the profits of all the Irish banks, and the income tax was increased to five shillings in the pound. In addition, the duty on the consolidated bank note issue was raised from 1½ to 3 per cent., and was made payable whether the notes were in circulation or not. This duty at its present rate deprives the banks of any profit on their note issue, and it is thought in some quarters that the consolidated bank note issue may be abolished in the near future. The Currency Commission last year made its first statutory revision of this issue; the maximum of six million pounds was not changed, but changes were made in the quotas of several of the participating banks.

During the year one of the two surviving private banks in Dublin discontinued its banking business.

The profit realised by the Currency Commission for the year 1931-32 amounted to £269,395, and the total payments made by the Commission to the Exchequer in that year amounted to £220,499.

SOUTH AFRICAN BANKING.

(BY A CORRESPONDENT.)

UNTIL the latter part of 1931 the banker in South Africa had for some months been feeling that his business had been making unusual demands on his perspicacity, his energy and his enterprise. During the past year he would gladly have exchanged his later experiences for those of which he formerly complained. The South African banking and exchange position is ordinarily very simple, but the appearance of a wide and fluctuating difference between the English and South African pounds, coupled with an unprecedented depression of trade, rendered exchange operations extremely intricate and risky, while falling deposits and loss of liquidity combined to produce conditions the reverse of pleasant for the banker. He has found himself the target of a good deal of criticism from a public to whom a pound is a pound, whether English or South African.

The outstanding circumstance of the year was, of course, the decision of the South African Government to retain the gold standard. From all available public and private information, that decision of the Government remains unshaken. Whatever its ultimate results may be, the immediate effect was a heavy loss to holders of sterling balances, of whom the banks were naturally among the most important. The Reserve Bank lost approximately £1.5 millions on September 21st, although its loss was actually realised only as and when its investments were sold. From September 21st until November the "trading" banks obtained their sterling requirements from the Reserve Bank. These sterling requirements were on an abnormal scale; from September 28th to October 17th some £3.5 millions per week was called for, whilst

another £3.5 millions was called for in the following fortnight. There has, however, been a very severe reduction in imports, so that the "favourable" balance of trade is exceptionally heavy. As it turned out, the Reserve Bank lost less by its sales of sterling in October than would have been the case some weeks later. On November 13th the Reserve Bank (followed by the "trading" banks) raised its rate for advances from 5 per cent. to 6 per cent., and only the very low rates obtainable overseas prevented the rate from being raised further. It has remained unchanged since that date. Ultimately an exchange pool was formed, the original arrangement being that Barclays (D.C.O.) and the Standard Bank should contribute £5 millions between them and the Treasury a further £5 millions. Owing to an easing of the exchange position the Reserve Bank took the place of the Treasury in this pool. One cannot help wondering whether the South African Government would have pursued the same course had its advisers foreseen in October last the strength of sterling, its growing international importance, and the continued heavy fall in gold prices.

On November 18, 1931—instead of its normal date in January—Parliament was called together and proceeded to discuss the Finance Emergency Regulations Bill. This conferred on the Government substantially the same powers in relation to the exchanges as were conferred on the British Government in the Gold Standard (Amendment) Act. It also enabled the South African Reserve Bank to be sure of its monopoly of the product of the gold mines, and to lower its ratio of gold reserves to note and deposit liabilities without incurring the penalties provided for in its principal Acts. A provision of some practical importance to the

tion. Gold-mining pays for roughly half our imports in normal times, and the industry submitted to the Low Grade Ore Commission evidence to show that that fraction is a fair general indication of the importance of gold-mining to the economy of the country. Not even the world's principal gold producer can survive unshaken such severe blows to its general trade.

As to the course of general trade, the figures of bank-note circulation give indications of the position. The following figures are from statements of the South African Reserve Bank:—

Notes in circulation, March 31, 1929, £9,604,807.
" " " 1930, £8,980,567.
" " " 1931, £8,366,821.
" " " 1932, £8,422,038.
" " August 19, 1932, £8,316,877.

Normally the ratio of cash reserves to liabilities to the public is slightly above the ordinary 40 per cent. At present it is about 55 per cent. Coupled with the figures for note circulation may be considered those for total bank clearings, as returned by the Bankers' Clearing House:—

12 months ended June, 1930 ...	£ mill.
" " " 1931 ...	505.1
6 months ended Dec., 1931 ...	474.0
" " " 1932 ...	281.1
12 " " June, 1932 ...	198.9
" " " June, 1932 ...	430.0

Thus, the returns for the twelve months ended June, 1931, were £81 millions below those for the preceding twelve months, and those for the twelve months ended June, 1932, lower again by £44 millions. In the past year the clearances were £32.2 millions lower in the second six months than in the first.

"trading" banks was one which required them to furnish to the Department of Finance certain particulars in regard to their exchange transactions.

The general banking position of the Union has, of course, suffered along with and in proportion to general trade. Compared with other territories, South Africa has the enormous advantage that its major industry of gold-mining has not only lost nothing but has, in certain respects, profited by the depression. On the other hand, its remaining trade has had to contend with currency difficulties in addition to the general world posi-

From these facts it is clear that the banker has conducted his business under a variety of difficulties—some of them general, and some local. A not unimportant aspect of the latter arises from the fact that a number of people in South Africa attach weight to the fact that the principal banks are "foreign institutions." The writer has heard this term used—only partly humorously—by a responsible and highly placed Government official. In ordinary times not so much talk arises on points of the sort, but when ordinary banking procedure and prudence compel the banker to

study his clients and their business in a somewhat critical spirit, the criticism is apt to be returned. In South Africa there is an unfortunate tendency for all discussion to take a political or racial turn, so that a good deal has been made of the fact that our two principal banks, although maintaining covered positions as between assets and liabilities in the Union, invest their capital and reserves overseas. This is supposed to render them unsympathetic to the farmer, tradesman or manufacturer in difficulties. In point of fact, the Governor of the Reserve Bank denied in his speech on July 6th that there had been any curtailment of total credit, and attributed the impression of

"tight money" more to psychological reasons than to anything else. Although no estimate seems to have been published, there can be no doubt that the velocity of circulation has been somewhat severely reduced. The trading banks did not wish, especially at the end of last year, to extend their credits, but the Reserve Bank, after inviting applications from disappointed seekers of new credit, did not find much of the offered business up to standard—so one must assume that good business was accepted as usual by the other banks.

Quite recently there have been indications of slight improvements in trade, and it is to be hoped that the worst of our difficulties are now over.

BANKING IN THE CROWN COLONIES.

WHEN the depressed state of trade and the low prices of the staple products of the Crown Colonies are taken into account, it can be claimed that banks operating in these territories have not had too unfavourable a year. Thus the Bank of British West Africa was able, through better trading results and the exercise of drastic economies, to increase its profits from £24,568 for the year ended March 31, 1931, to £59,625 for the year ended March 31, 1932. The latest results for Barclays Bank (Dominion, Colonial and Overseas) have yet to appear, and in any case the bank's accounts are heavily weighted by its large business activities in South Africa, where it has to allow for the depreciation of sterling against the South African pound; but there is no reason to suppose that its results in the Crown Colonies have been less satisfactory. Banking in Malaya is largely in the hands of the great Eastern exchange banks, and here again it is difficult to disentangle their fortunes in Malaya from those in their other fields of activity; but the maintenance of their general strength shows that they have been easily able to cope with the problems in Malaya arising out of the heavy fall in tin, rubber and other prices.

The relative success of the Colonial banks is largely due to the conditions under which they do business, and

as they vary from territory to territory, it is necessary to consider each area by itself. Beginning with the British West Indies, the principal crop is sugar, with which must be coupled cocoa in Trinidad and Grenada and bananas in Jamaica. Banking business in the West Indies consists partly of financing the growth of the crops by means of crop advances secured through the medium of special legislation, and partly of financing the movement of the crops through the normal mechanism of bills of exchange. The essential need from the bankers' point of view is that each year's crop should be successfully cleared, so that the loans against it can be liquidated before borrowing against the following year's crop begins.

On the whole, this need has been fulfilled, even under last year's difficult conditions. Two factors have assisted the West Indian sugar growers. The first is the rigid connection of the West Indian dollar with sterling at a fixed parity of \$4.80 to the pound. This has enabled West Indian exporters to sell at sterling prices and so to escape last year's fall in gold prices, in which have been involved many of their competitors. The second is the preference granted by Canada and the United Kingdom to West Indian sugar. The result is that the sugar crop has been successfully cleared,

and the banks have been able to turn over their money normally. In general, the banks have noticed little change between last year and the year before, and in fact such change as has occurred has been for the better. Money rates are also unchanged.

Coming now to the British West African territories, the essential point is that production, except of minerals, is almost entirely in the hands of natives. Thus loans against growing crops are usually impracticable, but an important part of bank business consists of financing the movement of crops after they have been harvested, and in keeping the accounts of European merchants and officials. This means that the banks' business is of a very liquid character, especially as the banks very naturally take care not to finance produce until they are assured that it will find a market.

West African currency is also linked to sterling through the West African Currency Board, and so while prices are very low they have remained relatively stable during the past year, and the consequences of their low level have also been mitigated by good crops. The fall in prices has been felt severely by the native grower, who on the whole has stood it very well. Merchants have naturally had to be content with diminished margins and until the last year a falling market, while officials have had to accept numerous reductions of salaries and a certain number of dismissals. Still, it is easy to see why banking business, with its immunity from losses on crop loans, has proceeded upon an even keel, and why the greater stability of prices arising out of the depreciation of sterling against gold has enabled the banks to improve their position.

The situation in British East Africa is, perhaps, less

satisfactory. The main crops for export are cotton from Uganda and coffee and sisal from Kenya and Tanganyika. The Uganda cotton crop is almost entirely in the hands of natives, who made striking progress prior to the slump. Although East African currency is linked to sterling through the East African Currency Board, prices generally have been very low, though there has been some improvement lately in the case of sisal.

Kenya is largely given to British colonisation, and farmers and settlers have suffered from a succession of bad seasons and locust visitations, and the financial position is not so liquid as is desirable.

In Tanganyika, production is very largely in the hands of large plantation companies and settlers of various European nationalities. Native production, particularly of coffee, is encouraged and has been successful. More favourable conditions are necessary before any marked improvement in business generally can be anticipated.

Malaya and the Straits Settlements also have the benefit of a currency rigidly linked to sterling, and so here, too, they have escaped the full force of last year's fall in prices. Even so, prices of tin and rubber have until lately stood at inordinately low levels, and although tin production is now under control, and rubber plantation costs have been drastically reduced in comparison with those ruling a few years ago, the present position is not free from difficulty. Still, the banking of these territories is mainly conducted by the big Eastern banks, who possess ample reserves of strength spread over a very wide field. The result is that the economic difficulties of this area have not been reflected in any weakness of the banks which serve it.

DANISH BANKING.

(BY A CORRESPONDENT.)

AMONG the European countries Denmark was one of the first to follow England in the suspension of the gold standard. The conditions, however, which carried the two countries off gold were widely different. In England the heavy withdrawals of foreign funds were the decisive factor; in Denmark, on the other hand, the situation was similar to that of several of the British Dominions. Owing to the dependence of the country on the English export market the fall of the pound threatened a severe intensification of its agricultural crisis, and the development of an adverse trade balance whatever monetary policy the country pursued; for the currency in which the bulk of Danish exports was paid had declined in value compared with the currencies in which the greater parts of its imports had to be paid for. Thus maintenance of the gold standard would have forced the farmers to bear the first brunt of the change in conditions, whereas a depreciation of the Danish krone that kept the sterling rate near its old parity would give the agricultural population about the same money income and demand for domestic industrial products as before, leaving the necessary reduction in the level of real incomes to take place gradually and indirectly by way of a relative enhancement of import prices.

Thus it was only natural that Denmark joined sterling, especially as a reduction of the costs of production was no easier to carry through in Denmark than in England. But Denmark did not follow England in the more fundamental sense of trying to adjust the external value of its currency to the existing internal level of prices and incomes, a course which might have resulted in the krone falling below sterling, and thus have given rise to English charges of "exchange dumping." It was decided to peg the sterling rate in the neighbourhood of its old parity, and so the country was faced again with the traditional gold standard problem of maintaining a fixed rate of exchange, the only difference being that it was the price of the paper pound instead of that of the gold currencies which should be maintained.

Incidentally, it may be remarked that an attempt to adjust the price and cost structure through deprecia-

tion might have met with greater success in Denmark than it seems to have done in England. For while England is an important exporter of capital goods, the demand for which falls off very heavily in times of depression, Denmark exports mostly consumers' goods for which there is a much steadier demand.

There is another special feature in the Danish situation which does not seem to have been sufficiently realised abroad. For the last two generations Denmark has been a debtor country, and as such it had become accustomed to maintain its currency partly by means of foreign borrowing. When the supply of foreign exchange from this source was cut off, the country was forced to embark on some sort of regulation of its balance of payments, if a stable sterling rate was to be maintained.

At the outset the Nationalbank raised its rate of discount to 6 per cent., and announced a rationing of its credit, but the manner in which this was carried through was so rigorous and inflexible that within a few days the liquidity of one of the largest Copenhagen banks was threatened. In this situation the Minister of Commerce, with whom the Act suspending gold payments had placed the ultimate responsibility for the country's monetary policy, declared that a more liberal credit policy would be pursued, and to a certain extent this promise was fulfilled in the succeeding months.

As a consequence of this credit expansion the exchange reserves of the central bank rapidly diminished, and from the middle of November resort was had to direct restriction of the demand for foreign currency. The more limited measures which were first adopted soon proved insufficient, and since the end of January an all-embracing import licence system has been in effect. Exporters were compelled to place their foreign exchange at the immediate disposal of certain authorised banks at the rates quoted by the central bank, and then the total quantity of imports were restricted to what could thus be paid for, with a certain preference for raw materials. To judge this system, which automatically led to a diversion of Danish purchases towards the countries which were most willing to buy in Denmark; it is necessary to consider not only

the ever-increasing difficulties with which Danish exporters have had to struggle in different foreign markets, but also the fact that Denmark, unlike most other countries, has had very little recourse to tariff increases during the crisis.

Owing to a growing discontent among the farmers, who claimed that they did not get the proper price for their sterling bills, the compulsory delivery of foreign exchange was discontinued towards the end of August, and all banks were again allowed to deal in foreign exchange. It goes without saying, however, that the rates of exchange must remain "artificial" as long as the import licence system is in operation. To avoid immediate difficulties the Nationalbank had obtained a foreign credit, and besides the rates of foreign exchange were raised by 5.6 per cent. to check possible speculative attacks on the krone.

The aim of Danish monetary policy in the last twelve months has been to stave off as much as possible the evil effects of the world depression. Though directly concerned only with the maintenance of a relatively stable sterling rate, this policy has resulted also in a practically unchanged internal price level. But, as the following table shows, not till the last couple of months have the expectations that the dislocation of domestic and export prices should be corrected through a rise of the latter been to some extent fulfilled:—

(1913 = 100.)			
	Import Goods.	Export Goods.	Domestic Goods.
1931—September	106	94	119
October	111	96	121
November	116	97	123
December	119	95	127
1932—January	119	84	126
February	118	89	128
March	121	78	126
April	118	74	123
May	117	72	122
June	117	72	121
July	118	79	123
August	120	84	124

With the dominating importance of agriculture, the heavy losses sustained through this catastrophic fall of prices spread their paralysing effects to all other branches of production which felt the shrinkage of the buying power of the farming population, and so the banks, intimately connected as they are through branch offices all over the country both with agriculture and industry, saw the position of most of their debtors considerably weakened.

In the endeavour to ward off the consequences of the depression the rate of discount was gradually reduced to 4 per cent., but the discount rate has not been

in close touch with trend of the long-term capital market which is seen in the following index of bond prices:—

(July, 1914 = 100.)			
1931—January	98.3	1932—March	84.4
September	94.6	April	82.2
October	89.5	May	80.0
November	86.5	June	81.3
December	84.3	July	83.6
1932—January	81.4	August	85.2
February	82.8		

The losses on bond holdings entailed upon Danish banks by this decline amounted to almost 41 million kroner in 1931.

The combined pressure of falling commodity and bond prices has led to an increasing illiquidity in the position of the commercial banks during the past year. That it has not been possible to reduce loans and discounts by the same amount with which the deposits have fallen off is reflected in the following figures:—

(Mill. kroner.)		
	Total Loans and Discounts.	Total Deposits.
1930—December	1,822	2,080
1931—September	1,823	1,994
December	1,813	1,930
1932—August	1,642	1,798

It may be added that owing both to the profitability of direct bond purchases and to the spending of past savings, the usual steady and continuous upward movement in the deposits of the savings banks has been reversed in the last twelve months, their total amount declining from 2,198 million kroner in August, 1931, to 2,136 million kroner in August, 1932. Similarly the growth of unemployment and the general depression of business has reduced the note circulation from 331 million kroner in August, 1931, to 308 million kroner in August, 1932, thus enabling the Nationalbank to strengthen its exchange reserve by selling gold to a total amount of 33 million kroner. But though the total amount of credit extended by the central bank has declined, its efforts to assist the commercial banks in their difficulties have resulted in a moderate increase in its bond holdings.

In the last two months, however, the improvement in both commodity and bond prices has to a certain extent relieved the banking situation and economic conditions in general. With regard to the future, a return to more normal business in the case of Denmark is dependent mainly on two conditions: a further improvement in the prices of the agricultural products which the country exports, and its renewed access to the international capital market.

NORWEGIAN BANKING.

(BY A CORRESPONDENT.)

IN Norway the disastrous policy of deflation caused a quite extraordinary decline in prices. The official wholesale index shows 260 for June, 1925, when the sharp upward movement of our krone was inaugurated, 150 for August, 1929, and 120 for August, 1931. Naturally, the adaptation to the new level of values was a hard process to go through for the banks. Even the best securities depreciated, and firms of the most established reputation had to ask for an adjustment of their liabilities. Consequently, on August 20, 1931, the president of the board of the great metropolitan bank, Den Norske Creditbank, had to inform the director of the Bank of Norway that it would be impossible for his company, after having covered the losses then manifest, to carry on business without some extraordinary support. Negotiations for that purpose were opened somewhat later. However, learning that also the leading bank of the West, Bergens Privatbank, had arrived in a similar condition, the Bank of Norway refused to engage itself. Accordingly, on December 14th, the two great banks had to ask the Government to bring into effect Section 27 of the Bank Act, granting them a letter of respite for three months. During this time of waiting new negotiations for an action of

support were carried on. It was generally felt that great public interests were involved in the maintenance of the two big banks, and on February 16th the Storting, with 102 votes against 46, carried a Governmental proposal stating the desirability of support from the Bank of Norway to take the form of deposits. On March 15th the two banks again resumed their regular activities.

This incident did not lead to any panic at all, but, on the contrary, the public met the situation with admirable calmness. After the reopening of the two banks some deposits were withdrawn, but it did not prove necessary for the bank of issue to deposit heavy sums, and the new inflation that had been feared in some quarters and hoped for in others failed to materialise.

Still, it was not only the big commercial banks of the towns which suffered through deflation, for the small savings banks in the country were also entangled in difficulties. Firstly, the heavy fall in the prices of real estates had reduced even first-class mortgages to illusory values. Secondly, the local corporations, owing to the fall in their revenues, in many cases failed to meet the liabilities of the communal debt service.

In order to support the savings banks exposed to the effects of this combined crisis a new law was issued on June 29, 1932. Section 1 reads thus: "A guarantee fund for savings banks shall be established with the purpose of giving a guarantee for loans or deposits given as a means of support to savings banks faced with difficulties in meeting their daily obligations, but estimated to be capable of surviving. The fund shall be raised to an amount of 30 million kroner, 10 millions being procured by guarantee bonds from the State and 20 millions paid in through yearly contributions from the savings banks themselves." The fund started its activities in July. The general opinion was that it would be exposed to an immediate drain, but I am informed from a very good source that the fund up to this day has received only a small number of applications; the mere fact of its being in existence seems to have had a reassuring effect.

This has only been possible because the year 1932 in itself has been a rather calm and quiet time for the Norwegian banks. The departure from the gold standard put an end to the downward movement of prices, and Norway was saved from the final decline of prices in the gold standard countries. While the official wholesale index for August, 1931, stood at 120, it has risen to 123 for August, 1932. During 1932 the balance of trade has been nearly equalised, the excess of imports being lower than any time since the war. A cautious economic policy has been carried on both by the State and by private enterprises, and this has made it possible to keep up production and trade better than in most other countries. Practically no heavy losses have been suffered during the first nine months of this year.

It should particularly be mentioned that Norwegian banks and Norwegian subjects were quite unaffected by the tragic collapse of the Kreuger concern; a certain

suspicion inspired by the too rapid expansion of that vast undertaking had always prevailed in this country and was now justified, though in a most unexpected way.

However beneficial the giving up of the gold standard has proved to be, it nevertheless brought the banks face to face with new problems. In October last year a strong agitation for a State centralisation of the exchange market was begun by some of those officials who during the war were imbued by a religious belief in State control. Fortunately, economic opinion, the big organisations in production and trade, and the Government in power alike rejected the idea. The banks, acting under a sense of due responsibility, took up the task of carrying out a common exchange policy, trying to equalise the market in order to avoid too great variations in the demand for foreign means of payment. On October 6, 1931, a special bank committee was appointed for the purpose; and since November 9th it has been fully organised. Lacking any official power it has, on the whole, been obliged to work through appeals to the loyalty of the private banks and their clients.

The deflationary tendency of activities has continued all the last year. Private bank deposits have sunk from 952.1 million kroner in August, 1931, to 817.5 millions in 1932, and advances simultaneously from 983.6 to 964.5 millions. For the saving banks, the corresponding figures show a decline in deposits from 1,763.4 to 1,710.7 millions, but a small rise in loans from 698.0 to 715.3 millions. It is a remarkable fact that the contraction has not been greater in a year of dangerous international crisis, and many symptoms could be adduced in favour of the sentence pronounced some weeks ago by our business periodical, *Ökonomisk Revue*, that our commercial banks are now well prepared to meet the claims of the prosperity period we all hope for.

BANKING IN SOUTH AMERICA.

(BY A CORRESPONDENT.)

WITH the continued widespread trade depression, the low level of primary commodity prices, and the recurrence of politico-economic difficulties in many directions, the banking industry in South America has carried on operations during the past year under circumstances of great difficulty. The most serious obstacle to the normal flow of international trade and the conduct of finance has been the application of foreign exchange regulations, in regard to which there is, as yet, no sign of relaxation. Naturally, the exchange difficulties of the various South American countries were enhanced by the suspension of the gold standard for sterling in September of last year, and the tendency then became for practically all the South American currencies to be linked to the United States dollar by means of "pegging" of the exchange rates by the various Foreign Exchange Control Commissions, the official rates for sterling being permitted to fluctuate sympathetically with the value of sterling in New York. Further, foreign exchange rates have been subject to complicated artificial influences arising from the application of the control already mentioned, whilst in some of the Republics there exists an "unofficial" exchange market, where the values of local currencies are substantially lower than those indicated by the "official" rates. As this question of currency values is naturally of paramount importance from the point of view of banking interests, a few brief particulars of the present situation in this respect in the principal countries are given below.

The Argentine gold peso has a normal gold parity of 47.58d. Official rates were eventually stabilised on New York at end-November, 1931, on the basis of 171.00 pesos per 100 United States dollars for telegraphic transfers, and this level has since been uninterruptedly maintained. Official control of exchange

was established on October 10, 1931, sales and purchases of exchange being placed under the control of an Exchange Commission to which the banks must apply for permits when such are required. The tendency has been for the Commission gradually to restrict the number of cases for which permits are not required, and, from June 4, 1932, all sales of exchange without permit were prohibited with the exception of documentary bills up to 5,000 paper pesos, and avancements under authorised letters of credit to any amount. It is hoped that an improvement in the exchange position will eventuate when the active export season commences in the late autumn. Exchange control has been less severe than in other South American countries, but, combined with the measures for the control of foreign exchange, there has been instituted control over exports. Argentina has still an ample gold reserve, part of which could still be shipped to maintain foreign debt service, or to support exchange, without reducing the note cover below the legal ratio.

In Chile, the gold parity value of the currency is based on 40 pesos to the £ sterling. Following the suspension of the gold standard for sterling, the official policy was evidently to endeavour to maintain stability in relation to the United States dollar. On April 20, 1932, however, a new Monetary Law became effective, suspending the gold convertibility of the note issue. A new rate of approximately 16.50 Chilean pesos per United States sight dollar was established, thus rendering approximately 60 Chilean pesos equivalent to £1 sterling. Exchange, however, is dealt in unofficially at substantially higher figures. Government control of exchange was established in Chile on July 30, 1931, and has been administered with increasing severity. Permits of the Exchange Control Commission are required for all foreign exchange operations, and only

the Banco Central may sell exchange. In addition to the exchange regulations, a control is also exercised over exports and imports of merchandise.

With regard to Peruvian currency, the parity of the gold sol was fixed under the Monetary Law of February 10, 1930, at the equivalent of 40 United States cents, but, on April 18, 1931, this equivalent was reduced to 28 cents, or 17.38 soles to the £ sterling. Peru suspended the operation of the gold standard on May 14, 1932, and exchange rates have since fluctuated around the level of about 17.00 soles to the £ sterling. No official control of exchange operations has been instituted in Peru, and, whilst a development of this character is possible, it is hoped that such may be avoided by the recent improvement in values of the country's chief export products, namely, cotton and sugar.

The parity of the Brazilian milreis has been fixed at varying levels at different dates, but the Republic having become practically denuded of gold reserves, the paper currency is inconvertible. Foreign exchange is closely controlled by the Banco do Brasil, which institution has the monopoly of the exchange business, it being obligatory for all export bills to be sold to the Bank. The policy adopted by the Brazilian authorities during the past twelve months has been definitely in the direction of bringing about appreciation of the milreis, and, since end-October, 1931, an improvement has occurred in the official sterling equivalent from under 4d. per milreis to around 5½d. per milreis. At the moment, however, the whole economic balance of Brazil has been upset by the suspension of coffee shipments through the port of Santos, as a result of the revolutionary outbreak in the State of São Paulo.

On the Latin-American Continent, credit conditions generally are particularly dependent upon prosperity in the commodity markets. The greater part of Government revenue is derived from Customs duties, and, consequently, the severe contraction of trade, and particularly of imports, which has occurred during the past few years, has rendered essential the drastic curtailment of public expenditure proportionately to the reduced yield of taxation. At the same time, the necessity has arisen of instituting relief work and other measures to deal with rising unemployment. In consequence, there has inevitably been a tendency towards inflation.

Owing to her comparatively strong position economically, Argentina has been enabled to maintain uninterruptedly the service of her external obligations. The contraction of further loans abroad has not been practicable, but in May last the Government obtained the sanction of Congress to a law for the internal flotation of a "Patriotic" Loan for a total of 500 million pesos (paper), to be issued in series of 100 million pesos each for the purpose of amortising floating debt, liquidating Government advances from the Banco de la Nación, and providing for the payment of other miscellaneous State indebtedness. The bonds of the loan are rediscountable up to 85 per cent. of their nominal value at the Caja de Conversión, whilst the law authorising the loan reduced the ultimate legal minimum metallic reserves to be held against the note circulation from 40 to 36 per cent.

The "Patriotic" Loan has apparently been well received, and its subscription should prove effective in consolidating part of the unwieldy mass of Government floating debt, and in relieving the stringency of credit. Meanwhile, the great shrinkage in local trade is evidenced by the sharp decline in the clearing movement both in Buenos Aires and the Provinces, the aggregate figure for the first six months of 1932 having been 15,592 million pesos (paper), as compared with 19,864 million pesos in the corresponding period of 1931 and 21,909 million pesos in January-June, 1930. The total deposits of the banks established in Buenos Aires declined from 3,994,491,000 pesos (paper) in January, 1931, to 3,678,984,000 pesos in June, 1932,

whilst, over the same period, the aggregate of discounts and advances was reduced from 3,461,843,000 pesos to 3,343,739,000 pesos, cash reserves increasing from 706,139,000 to 810,676,000 pesos.

Both commercially and economically Chile has encountered extremely adverse conditions during the past twelve months, owing to the obscurity of the position of the nitrate industry and the lack of demand for copper and other of the Republic's export products, and the consequent unrest has found expression in disturbed political conditions. The banking industry in Chile has naturally suffered, especially owing to the pressure in the foreign exchange market due to the lack of export drafts and the very depressed state of commerce. It is now evident that scarcely any relief to the demand for foreign exchange was afforded by the suspension of the external debt service in July last year. The economic difficulties of the country have been greatly enhanced by political uncertainties, whilst imports have shrunk in an astounding manner.

In September of last year a law was passed reducing the minimum legal gold reserve of the Banco Central de Chile to 35 per cent. for two years and making it permissible for the Government, municipalities, State railways, and other State institutions to borrow up to 80 per cent. of the capital and reserves of the Bank. The previous law specified a ratio of 50 per cent. of the note circulation and deposits combined, and limited advances to the Government, municipalities, etc., to 20 per cent. of the paid-up capital and reserves, with the option of an increase to 30 per cent. under certain conditions for a period not longer than six months.

The new Monetary Law, passed in April, 1932, vested the right to conduct exchange operations and to export gold solely in the Banco Central de Chile, working in conjunction with the Exchange Control Commission. Certain clauses of the Decree Law of August 21, 1925, creating the Banco Central, were suspended by the new law, thus in effect rendering the notes of the Banco Central de Chile inconvertible. Further, a Decree Law of July 8th last provided for the revaluation of the gold reserves of the Banco Central de Chile, authorising the calculation of such reserves at rates of exchange to be fixed by the Bank, 40 gold pesos being taken arbitrarily as equivalent to the £ for the calculation of the reserves in sterling. This Decree had the immediate effect of raising the proportion of the reserve to the note circulation and deposits combined from 27.93 per cent. shown in the return of the Central Institution dated July 8th, to 54.45 per cent. in the following week. The main provisions of the Decree include an authorisation to the Banco Central de Chile to discount or rediscount pagarés (bills) up to an aggregate of 50 million pesos for the Caja de Crédito Agrario, 40 million pesos for the Instituto de Crédito Industrial, 30 million pesos for the Caja de Crédito Minero, 20 million pesos for the Caja de Colonización Agrícola, and 50 million pesos for a new commercial and banking institution to be created, styled the Instituto de Comercio Exterior. The purpose of this—in effect—inflationary measure is to foster Chilean trade and industry in various directions with a view to relieving the serious unemployment now prevalent in the country.

The depression of trade in Peru has continued throughout the past year without relief except that afforded by the very recent recovery in prices of raw cotton and sugar. A development in the banking sphere was the establishment a year ago of a new agrarian bank, styled the Banco Agrícola del Perú, with a nominal capital of 20 million soles, this institution having functioned satisfactorily and having provided considerable assistance for the cotton growers by the granting of credit facilities. Notwithstanding that the currency had previously been devalued on two occasions, namely, in February, 1930, and April, 1931, the profound difficulties of the Peruvian economic situation necessitated the suspension of the gold standard on May 14th last.

MIDLAND BANK

LIMITED

"The Service of the Midland Bank"

The first customer of the Midland Bank could never have foreseen the breadth and variety of the facilities available to his countless successors. It is the aim of the booklet bearing the above title to describe some of the services which the Bank now offers to actual and potential customers.

A copy of the booklet is obtainable at any of the 2,100 branches of the Bank

CONQUISTADORES!

It is a far cry since the adventurous
days of the Spanish Conquistadores
and their pioneer expeditions to the
ancient American civilisations.To-day, a great and growing
volume of overseas trade is trans-
acted annually by the Republics of
the New World, and unrivalled facili-
ties for every description of modern
banking business are afforded byTHE ANGLO-SOUTH
AMERICAN BANK LTD

LATEST BALANCE SHEETS OF FOREIGN BANKS HAVING LONDON OFFICES AND OF BRITISH BANKS TRADING ABROAD.

ANGLO-INTERNATIONAL BANK, LIMITED.

The directors state that the profit for the year ended December 31, 1931, after charging losses on investments realised, but before making provision for doubtful debts and depreciation of investments still held, amounted to £82,470; to which has been added the balance brought forward from the previous year's accounts, £23,702, making a total of £106,172. From this sum there has been appropriated, as set out in the profit and loss account, an amount of £100,000, leaving a balance to be carried forward of £6,172.

BALANCE SHEET—December 31, 1931.

LIABILITIES.	£	ASSETS.	£
Share capital issued, 1,960,000 shares of £1 each, fully paid	1,960,000	Cash with bankers in London and cash in hand	164,888
Reserve account	50,000	Money at call	200,000
Current, deposit and other accounts—including reserve for depreciation of investments	1,202,473	Balances with bankers abroad—Available, £32,210; subject to exchange restrictions, £6,336	88,546

THE ANGLO-FRENCH BANKING CORPORATION, LIMITED.

The report for 1931 shows that the current trading profit for the year, after making full provision for all expenses, rebate of discount and commission and directors' fees (the management committee receives no remuneration for 1931), but before making provision for bad and doubtful debts, amounts to £72,672. Out of this amount there has been set aside: Provision for bad and doubtful debts, £48,518; for taxation, £5,500—£54,018, leaving a net trading profit of £18,654. To this must be added the balance brought forward from last account, £2,578, making a total of £21,232. From this fall to be deducted: Loss incurred in the realisation of British Government and kindred securities, £148,545; depreciation written off miscellaneous securities, £42,235; loss incurred in re-purchase of dollars sold against maturing assets in reichsmarks covered by gold

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

The report of the directors states that the net profit, to June 30, 1931, amounts to £461,383, which, together with £207,150 brought forward, makes a total of £668,533, of which £174,613 was absorbed by the interim dividend on the "A" and "B" shares paid on April 27th last, leaving an available balance of £493,920. After careful consideration of the situation at June 30th last and also of subsequent events, the directors have transferred from the reserve fund to a special reserve for depreciation of capital employed abroad and other possible losses a sum of £2,275,000, which they believe to be sufficient to cover such losses and to leave intact the balance of £1,000,000

remaining to the credit of the reserve fund. The directors accordingly recommend that £84,490 be applied to the payment of a final dividend of 2s. per "A" share, and of 4-8d. per "B" share, both less income tax, making a total distribution for the year of 6 per cent.; £30,000 be added to the staff pension fund; £26,360 be placed to legal reserves in Chile, Colombia and Ecuador; £100,000 be transferred to investment reserve account; £100,000 be transferred to contingency account, and that the balance of £153,070 be carried forward.

BALANCE SHEET—June 30, 1931.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

The report for the year ended September 30, 1931, state that in view of the prevailing situation the directors have augmented the contingency reserve by a transfer from the published reserve of £1,500,000 to provide for depreciation in capital employed abroad, all bad and doubtful debts, and possible future contingencies. The profit for the year, after deducting all expenses and charges other than bad and doubtful debts, which have been provided for out of contingency reserve, amounts to £331,898, to which has to be added £181,445 brought forward from last year, making a total of £513,346. The interim dividend of 3 per cent, paid in June last, amounted to £106,200. From the unappropriated balance, viz., £407,143, the directors recommend the following distribution: To final dividend of 2 per cent. payable December 21, 1931, making 5 per cent. for the year, subject to income tax, £70,800; to contingency reserve, £150,000; to profit and loss carried forward, £186,343.

After providing for depreciation of investments and doubtful debts, in London, the accounts for 1931 show a balance of £1,792. Further provision, however, is necessary to cover doubtful debts in Roumania and the reduced gold value of sterling reserves for lei accounts. £20,000 has therefore been transferred from reserve account to contingency account. The accounts from Bucarest have been converted into sterling at the rate current on December 31st last.

THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

The report for the financial year ended December 31st last shows that the gross profits, after allowing for rebate on current bills and drafts, for interest on deposits, and after making provision for bad and doubtful debts other than provided for out of contingencies account, amount to £230,982; this, with the balance of £118,760 brought forward from the previous year, makes £349,742. After deducting all charges at the head office and branches, including directors' remuneration, Government taxes in Brazil, &c., amounting to £150,825, there remains £198,917 available. A dividend of 6s. per share, amounting to £30,000, was paid in September last. In view of the present world-wide abnormal conditions, the directors propose to transfer the sum of £50,000 to contingencies account and to carry forward the sum of £118,917.

BALANCE SHEET—December 31, 1931.

HAMBROS BANK, LIMITED.

According to the report of the directors for the year ending March 31, 1932, after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £291,188. Deducting the directors' remuneration of £14,681, and adding the balance brought forward from last year of £93,938, there remains an available total of £370,445. After setting aside £125,000 to contingency reserve account and allowing the sum of £48,750 for interim dividend on the £10 shares and £9,000 for interim dividend on the "A" shares paid on October 28, 1931, the directors now recommend the payment of a further dividend of 11½ per cent., less income tax, on the £10 shares, and a further dividend of 3 per cent., less income tax, on the "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £92,445 be carried forward. An appropriation sufficient to meet the depreciation on investments at March 31, 1932, has been made from the contingency fund, and the directors have decided to

augment this fund by a transfer of £50,000 from reserve. The contingency fund, which will then stand at a higher figure than that of last year, will, in their opinion, be fully sufficient to deal with any eventual loss which might arise out of German, Austrian and other Continental engagements.

COMPLETE BANKING SERVICE

which has to be added £42,893 brought forward from last account, making a total of £131,087. The directors recommended payment of a final dividend of 7s. per share and a bonus of 2s. per share, making, with the interim dividend of 4s. per share, a total for the year of 13s., free of income tax. It was also proposed to add £20,000 to reserve, which is thereby increased to £890,000 and to carry forward £46,087.

THE LONDON AND EASTERN TRADE BANK,
LIMITED.

The directors' report for the year ended June 30, 1931, states that after making provision for bad and doubtful debts, income tax, expenses of management and all other charges, and including £19,637 brought forward, there remains to the credit of profit and loss account a balance of £35,200. The directors consider it prudent to conserve the bank's resources, and therefore recommend the placing of £25,000 to reserve for contingencies and the carrying forward of £10,200.

Lodgments may be made for the credit of customers' accounts at any Branch of the Bank, or at any of the Offices of its Agents in Great Britain, and, by arrangement, similar facilities are available for the encashment of cheques. Customers may obtain Advances upon negotiable securities and approved Bills are discounted.

Deposit Accounts.—Sums of money from £10 upwards are received from the public and interest allowed at the current rate as published from time to time. **Small Savings Accounts** of one shilling and upwards are also opened, on which interest is allowed and **Home Safes** are available free of charge. Explanatory leaflets may be had on application.

Collections and Remittances.—The collection of Bills, Dividends, Coupons, Annuities, Pensions, &c., is undertaken. Open credits are arranged and telegraphic remittances effected.

Foreign and Colonial Business.—Drafts are issued on the Bank's Agents and Correspondents throughout the world. World-Wide Circular Letters of Credit and Circular Notes are also issued. Cable Transfers are effected, Documentary Credits established, approved Foreign Currency purchased, and every description of Foreign and Colonial Business transacted.

Income Tax Repayment Claims, Returns for Assessment, &c., prepared on behalf of Shareholders and Customers. Particulars may be obtained at all Branches or applications may be made direct to the Head Offices of the Bank. No charge is made for preliminary advice.

Executor and Trustee.—The Bank is prepared to act as Executor and Trustee of Wills, Trustee of Settlements, Trustee for Debenture Holders, &c. Particulars and terms may be obtained at all Branches or by direct application to the Head Offices of the Bank. No charge is made for preliminary advice.

THE AGENCY OF COUNTRY, COLONIAL AND FOREIGN BANKS IS UNDERTAKEN

MODERN BANKING

THE comprehensive services at the disposal of the customers of Williams Deacon's Bank extend far beyond the old conception of Banking. To meet the demands of modern trading, the Bank's Intelligence and Commercial Services have developed an organization to meet every reasonable demand. Trading information and enquiries as to financial status, both at home and abroad, are but a part of this valuable service. The Bank also acts as Executor and Trustee. SWISS BANK CORPORATION.

The report states that, after deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1931, amounts to £504,341. The board propose to allocate to pension fund £20,000; to pay a dividend of 5 per cent. on the paid-up capital (according to Article 36 of the articles of association), £320,000—£340,000, leaving a balance of £164,341. After deduction of the statutory participation of directors, £16,434, the remainder, £147,907, together with the amount carried forward from last year, £41,017, viz., in all, £188,924, is at the disposal of the general meeting. The board propose to pay a further dividend of 2 per cent. (making in all 7 per cent. for the year 1931), which will absorb £128,000, and to carry forward £60,924.

THE YOKOHAMA SPECIE BANK, LIMITED.

The report for the half-year ending December 31, 1931, states that the net profit of the bank for the past half-year, after providing for all bad and doubtful debts, rebate on bills, &c., shows Yen 10,977,876, inclusive of Yen 5,637,930 brought forward from last account. The directors propose that Yen 1,100,000 be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb Yen 5,000,000. The balance Yen 4,877,876, will be carried forward to the credit of next account.

PART I.—THE BRITISH CONCESSIONS.

BRITISH TRADE WITH THE EMPIRE.

Before analysing the concessions made by Great Britain to the Dominions, it will be convenient to give a brief picture of Imperial trade. The following table shows, over a series of years, the proportion of Britain's total imports and exports which were purchased from or sold to countries of the Empire. The trade with the Dominions (other than the Irish Free State) and India is shown separately:—

BRITISH IMPORTS.						
Year.	Total. £'000.	From Foreign Countries.		From Whole Empire.*		Dominions (excluding Irish Free State), India and Rhodesia.
		Amount. £'000.	%	Amount. £'000.	%	
1913 ...	706,735	577,219	75.0	191,516	25.0	150,779
1921 ...	1,085,500	781,641	72.1	303,859	27.9	244,649
1925 ...	1,320,715	891,579	67.5	429,136	32.5	302,591
1927 ...	1,218,341	851,680	70.0	366,661	30.0	245,888
1928 ...	1,220,765	861,923	70.6	358,842	29.4	240,590
1929 ...	1,043,975	739,945	70.8	304,030	29.2	204,576
1930 ...	862,174	614,511	71.2	247,663	28.8	169,531
1931 ...						

BRITISH EXPORTS.						
Year.	Total. £'000.	To Foreign Countries.		To Whole Empire.*		Dominions (excluding Irish Free State), India and Rhodesia.
		Amount. £'000.	%	Amount. £'000.	%	
1913 ...	525,253	329,942	62.8	195,311	37.2	163,277
1921 ...	703,399	423,667	60.2	279,732	39.8	220,125
1925 ...	773,380	438,266	56.6	335,114	43.4	230,055
1927 ...	709,081	332,431	46.9	376,650	53.1	224,741
1928 ...	729,349	404,898	55.5	324,451	44.5	224,741

1930 ...	389,163	218,557	56.2	170,606	43.8	103,483
1931 ...						

* Irish Free State Trade included from 1925 onwards.

The table shows that whereas since 1927 the Dominions have very nearly maintained their position in the British market, our trade has fared worse in the Dominions than in foreign countries since that date.

Dominion and Foreign Markets.

As regards our trade with foreign countries no single generalisation can safely be made, for in the early part of the last decade a number of countries outside Europe were enjoying a certain measure of prosperity at a time when Europe was suffering severely from the after-effects of the war. From 1925 to 1930 Europe was recovering. The handicap of violently depreciating currencies had been overcome; the more drastic forms of trade restrictions and prohibitions had been modified; and from 1927 onwards—under a regime of commercial treaties, and as a result of the efforts of the League of Nations—the rise of tariffs, which had taken the place of direct administrative restrictions and had shown signs of growing, was definitely checked. Some of the most important countries outside Europe, however, continued to maintain tariffs substantially higher than those of the larger European countries, while the tariffs of the Dominions, following the example of the United States, continued to rise, a sharp stimulus to this movement being given by the American tariff of the spring of 1930. This general tendency is reflected in the export figures, which show a fall in the proportion going to the Dominions between 1927 and 1930, the rise in the foreign proportion being entirely attributable to increased sales to Europe. The figures for 1931, of course, show that the slump of that year was not only severe but also universal.

In general the figures show that we sold much less to the Dominions than they sold to us; but this is, of course, the normal condition of a creditor country which must either lend back the proceeds of its overseas investments, or accept them in the form of an import surplus. It is, however, to be noted that the free entry of Dominion goods into Great Britain enabled them to do better in the British market than British exporters were able to do in the Dominions markets, in spite of the fact that in most of them there was a preference accorded to British goods. This comparative situation may be illustrated by the following table, which compares the pro-

portion of the total exports of the Dominions that found their way to the home market with the proportion of Dominion imports which were supplied by Great Britain in 1931:—

Country.	Proportion of Total Exports sold to Great Britain.		Proportion of Total Imports purchased from Great Britain.	
	%		%	
Canada	28.3*		17.4	
Australia	49.8		39.4	
New Zealand	87.7		49.4	
India	27.9		35.4	
South Africa	43.4		43.3	

* This figure would be larger if Canadian exports via the United States could be included.

The South African figures would show a much larger percentage under the heading of exports if coin and bullion had been included. Of the larger British countries, India alone shows a ratio of British imports to total imports which is greater than the ratio which her exports to Britain bear to her total export trade; and paradoxically enough India is a British country which has not a general system of preference for British goods.

The concessions made this year to the Dominions fall into two parts:—(i) the preference granted under the various duties that have been imposed since November last, and (ii) the special concessions agreed at Ottawa.

Pre-Ottawa Concessions.

Import Duties Act, etc.—The concession of free entry for Empire produce under the Import Duties Act and Horticultural Products Act gave the Dominions a preference varying from 10 per cent. to 33 per cent. over a range of commodities covering one half of British trade. The value of this preference to the various Dominions turns, of course, upon the extent to which they supply the kind of goods on which these new taxes have been imposed. Some idea of its relative importance to the various parts of the Empire can be formed from the following table analysing the imports from the Dominions in 1930 according as to whether they fall into the categories of goods previously taxed, goods subject to the new duties and goods still remaining on the free list. This table, which is taken from a statement submitted by the British delegation at the Ottawa Conference, represents the situation prior to the Ottawa Agreements:—

RETAINED IMPORTS FROM THE DOMINIONS IN 1930.					
Country of Origin.	Total Retained Imports.	Proportionate Distribution of Retained Imports.			
		Goods already subject to Tax from all sources.	Goods subject to New Duties when Imported from Foreign Countries.	Goods still on Free List from all sources in August, 1932.	Total.
Canada	£'000	%	%	%	%
Australia	35,760	1.8	54.3	43.9	100
New Zealand	38,980	12.0	34.6	53.4	100
Union of South Africa	40,290	0.2	50.3	49.5	100
Irish Free State	11,850	13.3	39.0	47.7	100
Newfoundland	41,920	13.7	26.3	60.0	100
British India	2,032	...	13.1	86.9	100
Southern Rhodesia	40,070	36.8	42.8	20.6	100
Total Dominions—India and Southern Rhodesia	1,089	14.2	43.6	42.3	100
Total Other British Countries	212,000	13.0	41.0	46.0	100
Total, Foreign Countries	47,000	43.5	31.0	25.5	100
Total, Foreign Countries	698,000	17.0	53.0	30.0	100

Thus these new preferences covered more than half of the sales of Canada and New Zealand to the Mother Country, included from 30 to 50 per cent. in the case of Australia, South Africa, British India and Southern Rhodesia, and were lowest in the case of Newfoundland.

There has hardly been sufficient time for the full effect of these preferences to become apparent in the trade returns, for the figures from March to June (the only data available since the duties took effect) include imports shipped before March 1st,

are distorted by imports hurried through from foreign countries in January and March to forestall the tariff, are influenced by the fact that, whereas most of the Empire followed us off gold, foreign countries which remained on gold have been handicapped in selling to us by the fall in the £ and are in any case subject to many incalculable influences of the depression. All these qualifications must be borne in mind in comparing the following figures of Empire and other imports in these three months with those of previous years:—

BRITISH IMPORTS IN £ MILLION IN QUARTER MARCH—JUNE.

	Imports from Foreign Countries.		Imports from British Countries.	
	Total Imports.	Amount.	Amount.	%
1930	258.2	180.6	69.9	77.6
1931	208.0	144.6	63.4	30.5
1932	166.5	102.8	61.7	63.7

There is considerable evidence here of a better market for the Empire than for foreign countries, and there can be little doubt that it is in part due to a transfer of trade as a result of the new preferences.

BRITAIN'S UNDERTAKINGS AT OTTAWA.

The undertakings made by the British Government at Ottawa in agreement with the various Dominion Governments and the Government of India fall under five heads:—

- (1) Continuance of free entry for all Imperial products now admitted free of British duties.
- (2) Imposition of fresh duties on certain imports from foreign countries.
- (3) Maintenance of certain existing preferences, i.e., by not reducing the existing duties on foreign imports.
- (4) Quantitative regulation of certain meat imports.
- (5) Certain other undertakings, including notably an agreement with Canada to deal with imports of goods whose price is affected by foreign State action.

The agreements with the Dominions are to run for five years; that with India is terminable on six months' notice given by either party.

I. Free Entry for Dominion Goods.

Section 4 of the Import Duties Act, 1932, provided that neither the general *ad valorem* duty of 10 per cent. nor any additional duty imposed by Treasury Order under that Act should be chargeable on imports from the Empire until November 15, 1932. Great Britain now undertakes to prolong free entry for Empire imports as aforesaid for the period covered by the Ottawa Agreements, i.e., except in the case of India, five years. In the case of Australia, Canada, New Zealand, South Africa, Southern Rhodesia and Newfoundland it is provided that, as regards eggs, butter, poultry, cheese and other milk products, the free entry is to be continued only for three years certain. After the expiry of that period the British Government reserve themselves the right, if they consider it necessary in the interests of the United Kingdom producer, to review the basis of preference and either (a) to impose a preferential duty in the interests of the United Kingdom producer, or (b) to bring such serve the existing preferential margin, or (c) to bring such produce, in consultation with the Dominion Governments, within any system that may be put into operation for the quantitative regulation of supplies from all sources in the United Kingdom market.

The extent to which the Empire benefits by this undertaking can be judged from the following analysis, based on 1930 trade figures:—

Total British imports from the Empire	301
Taxed under Revenue Duties and pre-1931 Protective Duties	27
Total on the 1930 Free list	274
Total on 1932 Free list	244
Portion of preceding total secured by special provisions—	
Before Ottawa	109
After Ottawa	130

The difference between the 1930 and 1932 Empire Free Lists is accounted for by the reimposition of a revenue duty on tea in the last Budget. The Ottawa Agreements, however, give the Dominions and India exemption in respect of £21 millions more of their imports (on the 1930 trade basis) which would otherwise be liable to the widening scope of our duties on foreign goods such as wheat, etc.

II. Imposition of Fresh Duties on Foreign Goods.

By agreement with the Dominion and Indian Governments the British Government undertakes to pass legislation imposing on certain foreign imports duties which are either new or are in substitution for duties already imposed under the Import Duties Act, 1932. The following table shows in summary form the new or revised duties as agreed:—

TABLE I.—NEW OR REVISED DUTIES.

	Duties to be imposed by Great Britain by agreement with:—					
	Australia	New Zealand	Canada	South Africa	Southern Rhodesia	India.
Wheat, per quarter	2/-	...	2/-	...	...	2/-
Maize, flat white, %	15/-	15/-	15/-	15/-	15/-	...
Butter, per cwt.	15	15	15	15	15	...
Cheese, %	4/6	4/6	4/6	4/6	4/6	...
Raw apples and pears, per cwt.	3/6	...	3/6	3/6	3/6	...
Canned apples, % per cwt.	15	...	15	15	15	...
Other canned fruits, %	10/6	...	10/6	10/6	10/6	...
Dried fruits, now dutiable at 7s. per cwt.	1/-	1/-	1/-	1/-	1/-	...
Eggs in shell, not exceeding 14 lbs. per great hundred	1/6	1/6	1/6	1/6	1/6	...
Eggs in shell, over 14 lbs., but not exceeding 17 lbs. per great hundred	1/9	1/9	1/9	1/9	1/9	...
Eggs in shell, over 17 lbs. per great hundred	5/-	5/-	5/-	5/-	5/-	...
Sweetened condensed whole milk, % per cwt.	6/-	6/-	...	6/-	...	...
Unsweetened condensed whole milk, per cwt.	5/-	5/-	...	5/-	...	...
Milk powder and other preserved milk, not sweetened, per cwt.	7/-	7/-	...	7/-	...	...
Honey, per cwt.	2d.	...	2d.	2d.	2d.	...
Unwrought copper ingots, bars, blocks, slabs, cakes and rods, per lb.	3/6	...	3/6	3/6	3/6	...
Raw oranges (April 1st to November 30th), per cwt.	5/-	...	5/-	5/-	5/-	...
Raw grapefruit (April 1st to November 30th), per cwt.	14d.	...	14d.	...	...	...
Grapes, other than hothouse (February 1st to June 30th), per lb.	...	...	...	...	...	...
Raw peaches and nectarines (December 1st to March 31st), per cwt.	...	...	...	14/-	...	...
Raw plums (December 1st to March 31st), per cwt.	...	...	...	9/4	...	...
Castor, linseed, coconut, groundnut, rape and sesame oil, %	...	...	...	...	...	15
Magnesium chloride, per cwt.	...	...	...	...	...	10
Linseed, %	...	...	...	...	...	1d.
Rice, whole, per lb.	...	...	...	...	...	...

* In addition to duty in respect of sugar content.

In addition to the above, the British Government undertakes, by agreement with the Newfoundland Government, to impose a duty of 1s. 4d. per gallon on foreign cod liver oil and 14d. per lb. on foreign chilled or frozen salmon; and, as a general undertaking, to impose a specific duty of 2s. 6d. per cwt. on foreign bananas, and to extend the above "seasonal" duty on grape fruit to cover the whole year.

IMPORTS REMOVED FROM FREE LIST.

The commodities previously admitted free from all sources, but in whose case foreign imports are now to be dutiable, are wheat, copper and linseed. (Imports of flat white maize are negligible.) British imports of these commodities in 1930 were as follows:—

	(000's omitted.)		
	Foreign.	Empire.	Total.
Wheat in grain	24,566	18,498	43,064
Copper, unwrought	9,530	1,000	10,530
Linseed	2,380	1,314	3,694
Total	36,476	20,812	57,288

The specific duty of 2s. per quarter on foreign wheat represents an *ad valorem* duty of approximately 8 per cent. on ruling prices, and that on copper an *ad valorem* rate of about 55 per cent.

DUTIES RAISED.

The 15 per cent. duties on castor, linseed and other oils replace 10 per cent. duties. The new specific duties on other imports are in substitution for previously existing 10 per cent. duties, with the exception that there was previously a duty of 7s. per cwt. (now to be raised to 10s. 6d.) on dried fruit. The effect of the changes is in every case a considerable increase in the *ad valorem* rate when calculated on the basis of prices ruling in the first half of 1932. For example, the old *ad valorem* duty of 10 per cent. on butter, cheese, eggs and condensed milk is increased from 10 per cent. to about 15 per cent.; that on grapefruit from 10 per cent. to 20 per cent.; that on apples, oranges and plums from 10 per cent. to 22 per cent., 24 per cent. and 30 per cent. respectively; and that on rice from 10 per cent. to about 70 per cent.

In the following table we show the 1930 sources of British imports of the commodities affected by these increases in the

foreign duty. It will be seen that in many instances supplies from foreign sources greatly exceeded imports from the Empire, and that, in order to give this greater preferential margin to Empire products, we have raised our duties on foreign imports then totalling £69 millions:—

COMMODITIES ON WHICH INCREASED DUTIES ARE IMPOSED.
BRITISH IMPORTS, 1930.

(000's omitted.)

	From Foreign Countries.	From Empire Countries.	Total.
	£	£	£
Butter	26,555	20,315	46,870
Rice, whole	255	757	1,012
Cheese	1,831	10,772	12,603
Eggs in shell	12,827	3,550	16,377
Condensed milk	1,382	104	1,486
Milk powder, &c.	264	373	637
Honey	81	90	171
Chilled or frozen salmon*	250	512	762
Castor, linseed, &c., oils	3,888	311	4,199
Cod liver oil	110	6	116
Fruit:—			
Pears	1,066	657	1,723
Apples	2,856	4,696	7,552
Apples, canned	4,352	1,440	5,792
Other canned fruit†	6,357	3,191	9,548
Oranges	735	168	903
Grapefruit	1,372	470	1,842
Grapes	57	142	199
Peaches and nectarines	660	130	790
Plums	3,746	2,038	5,784
Dried fruits			
Total	68,644	49,722	118,366

* Figures include fresh salmon, which is not covered by the Ottawa Agreement.

† Figures relate to "fruit, tinned or bottled," but only "canned fruit" is to be subject to the Ottawa duty.

In the case of wheat and copper it is provided that the British Government may remove the duty on foreign imports "if at any time Empire producers . . . are unable or unwilling to offer these commodities on first sale in the United Kingdom at prices not exceeding the world price and in quantities sufficient to supply the requirements of United Kingdom consumers." It is to be remarked, however, that observance of this stipulation may be difficult to secure. In the case of wheat, owing to different grading, "the world price" is not easy to ascertain; and, in the case of copper, there is already no free market in the United States, while the proposed British tariff—at a rate obviously excluding foreign supplies—will make London no longer a free market. In the case of both commodities the Empire is a net exporter; and since the British preference is unlikely to satisfy the Dominion producers unless they secure higher prices for their produce as a result, the incentive to the raising of prices will be as strong as checks will be difficult to apply. In the case of copper any increase in the price would be a severe blow to Birmingham, and there is already evidence to show that the duty on linseed will have an adverse effect on our oil-crushing industry, whose competitors, notably in Holland, obtain their raw material duty-free.

HIGHER DUTIES AND PRICES.

With regard to the cases in which duties are increased, the new tariff on butter and eggs will be a serious burden on the poorer class of consumers unless, in the abnormal conditions of to-day, it has the effect—not without repercussions on our foreign customers' power to buy our exports—of driving down foreign selling prices. It is in any case unsafe to assume that Britain will always enjoy a "buyer's market." Even under existing conditions evidence is accumulating that the tariff on many articles of consumption is raising prices appreciably. For example, the National Federation of Fruit and Potato Trades Associations has estimated that, under existing duties, the quantity of imports has been reduced by amounts ranging from 9 to 89 per cent., with increases in import value of 9 to 58 per cent. The post-Ottawa tariff will intensify this tendency.

The case of cod liver oil merits an additional word. The proposed duty represents a rate roughly of 45 per cent. *ad valorem* on the cost of the oil, which we import in refined form almost entirely from Norway and in crude form from Iceland. The Newfoundland price is about 45 per cent. above the Norwegian price, and the Newfoundland production is normally consigned to the United States—the Newfoundland refineries being under American control. The new duty is calculated to deal a severe blow to the not unimportant British re-export trade in bottled oil and prepared emulsions.

III. Maintenance of Certain Existing Preferences.

By agreement with Australia, New Zealand, Canada and South Africa the British Government has undertaken at Ottawa to preserve for five years, except with the consent of the Dominion Governments concerned, the general *ad valorem* duty of 10 per cent. imposed by the Import Duties Act, 1932, on a considerable range of foreign imports. The commodities and the volume of trade affected (on the basis of the 1930 figures) are shown in the following table:—

COMMODITIES IN RESPECT OF WHICH 10 PER CENT. PREFERENCE IS TO CONTINUE, SHOWING AMOUNTS "PLEGGED."
TO THE DOMINION SPECIFIED.

BRITISH IMPORTS IN 1930.

(In Thousand £)

Item.	Imports from					Total Imports all Countries.

Total	5,036	1,248	4,365	1,512	27,440	101,773

(a) The agreement relates only to kinds imported in substantial quantities from Canada.

(b) Including bladders and sausage skins.

(c) Mainly from British India.

With regard to zinc and lead, the same stipulation as regards "world price" and "adequate supply" is made as in the case of wheat and copper. Other articles not included in the above table, but in respect of which the 10 per cent. preference is perpetuated are eucalyptus oil (Australia) and crayfish, fresh hake and oyster-shell grit (South Africa). It will be seen that, on the basis of the 1930 trade returns, the total imports in respect of which we are committed not to reduce the foreign import duty below 10 per cent. amount to about £101 millions, whereof only a quarter was derived from Dominion sources.

It is, moreover, to be observed that, though maintenance of 10 per cent. *ad valorem* duties on foreign imports is promised specifically by Great Britain on the foregoing list only, it is being argued in Canada that the British Government, having promised to prolong free entry under the 1932 Import Duties Act to Dominion produce, is thereby morally committed by implication to preserve the whole range of duties imposed by that Act on foreign imports.

IV. Meat Import Regulations.

The undertaking made by the United Kingdom Government with regard to the regulation of meat imports takes the form of a declaration in the following terms:—

- (1) The present wholesale prices of frozen meat are at a level which has resulted in grave depression in the livestock industries of the United Kingdom and the Dominions.
- (2) It is essential, therefore, to take whatever steps may appear necessary to raise the wholesale price of meat in the United Kingdom market to such a level as will maintain efficient production.
- (3) During the currency of the Ottawa agreements (i.e., five years) the British Government will arrange for

the regulation of importations of chilled beef, frozen beef, frozen mutton and lamb and (after receiving the report of the Commission on the reorganisation of the pig industry) bacon and ham.

- (4) The British Government's policy will be, first, to secure the development of home production, and, secondly, to give the Dominions an expanding share of British imports.

- (5) In the period January 1, 1933, to June 30, 1934, the maximum quantities of foreign meat to be allowed to be imported into the United Kingdom will be as shown below, expressed as percentages of the quantities imported in the corresponding quarters of the twelve months ended June 30, 1932:—

Meat.	1933.				1934.	
	Jan.-March.	April-June.	July-Sept.	Oct.-Dec.	Jan.-March.	April-June.
Chilled beef	100	100	100	100	100	100
Frozen beef (boned)	90	85	80	75	70	65
Frozen mutton and lamb	90	85	80	75	70	65

- (6) During the year 1933 the British Government will consider, in consultation with the Dominion Governments, the best means of "ensuring an improved price situation and the more orderly marketing of supplies."

- (7) Failing the adoption of an agreed permanent policy, the British Government undertakes that after June, 1934, until the expiry of the Ottawa agreements in 1937, it will arrange for the continuance, unless otherwise agreed between the Dominion Governments concerned, of the regulation of the imports of foreign meat at the rates in force in April-June, 1934. The British Government also undertakes that in any action affecting the import of meat into the United Kingdom which it may take on behalf of United Kingdom agriculture it will have regard to the policy set out in paragraph 4 above.

- (8) The British Government reserves the right, in the event of supplies of meat of any kind becoming inadequate to meet the requirements of United Kingdom consumers, to remove restrictions on foreign imports until supplies are again adequate.

In return for an undertaking by the Australian Government that it will limit the export of frozen meat and lamb to the United Kingdom in 1933 to an amount equivalent to shipments in the year ended June 30, 1932, and will use its best endeavours to ensure that frozen beef shipments in 1933 shall not be increased by more than 10 per cent. of the quantities exported for the twelve months ended June 30, 1932, the British Government undertakes that between January 1, 1933, and June 30, 1934, no restriction shall be placed upon the importation of meat from Australia.

In return for an undertaking by New Zealand to give a reliable estimate of shipments of mutton and lamb as early as possible in each export season (October 1st to December 30th), the British Government undertakes to apply no restriction upon the importation of any meat from New Zealand during the period January 1, 1933, to June 30, 1934.

With regard to pig products, the British Government undertakes that, in any forthcoming legislation for regulating imposts, provision shall be made for free entry of Canadian bacon ports, provision shall be made for a maximum of 2½ million cwt. and hams of good quality up to a maximum of 2½ million cwt. per annum, and for "a reasonable share" to be given to New Zealand of the "expansion made possible by the reduction of foreign imports."

RESTRICTION OF SUPPLIES.

Comment on the bacon and ham proposals may fitly await further details of the Government's proposals, though it may be remarked that in 1931 our imports of Canadian bacon and hams were only 22,000 cwt., or under one-tenth of the promised quota. We show below, however, the sources of our supplies of chilled and frozen beef and frozen mutton and lamb for 1931:—

	(Million Cwt.)			
	South America.	Australia.	New Zealand.	Others.
Chilled beef	9.3	Nil	0.4	0.3
Frozen beef	0.9	1.1	3.5	0.3
Frozen mutton and lamb	1.8	1.5	...	...

British consumption annually of beef is about 28 million cwt., of which in 1931 about 12 million cwt. were imported. The foregoing proposals show that by the middle of 1934 the Government propose to contract imports of foreign frozen beef

by about 400,000 cwt. Since chilled imports are to be stereotyped in 1933-34 at the (unusually low) 1931-32 level, while Australia is not to increase her shipments by more than 100,000 cwt., the resulting curtailment of supplies will be of the order of 300,000 cwt. In the case of frozen mutton and lamb the contraction of foreign supplies is to be over 700,000 cwt. out of a total consumption of about 12½ million cwt. The resulting effect on prices is likely to be appreciable in the case of beef and still more acute in the case of mutton and lamb, especially as 1931-32 shipments from New Zealand were abnormally swollen by killing of sheep owing to the low level of wool prices.

V. Other Undertakings.

The British Government undertakes to give the various Dominions certain additional trade advantages as noted below:—

Canada.

- (1) The conditions at present governing the importation into the United Kingdom of live cattle from Canada are to be modified on lines not yet disclosed.

- (2) The existing margin of preference over foreign tobacco is to be secured by British legislation for ten years.

South Africa.

- (1) The existing margin of preference over foreign tobacco is to be secured by British legislation for ten years.

- (2) South African wine not exceeding 27 degrees of proof spirit is to be given a margin of 2s. per gallon preference.

India.

- (1) Indian coffee is to be given a preferential margin of 9s. 4d. per cwt. in place of the existing rate of 3s. 4d. per cwt.; and the existing preferential margin on Indian tobacco is to be maintained for ten years.

- (2) The British Government will co-operate in any practicable scheme that may be agreed between the manufacturing, trading and producing interests in the United Kingdom and India for promoting the greater use of Indian cotton in the United Kingdom.

Southern Rhodesia.

- (1) The existing margin of preference over foreign tobacco is to be secured by British legislation for ten years.

- (2) Southern Rhodesian coffee is to be given a preferential margin of 9s. 4d. per cwt. in place of the existing rate of 3s. 4d. per cwt.

THE QUESTION OF RUSSIA.

In addition to the foregoing undertakings, the agreement between the British Government and Canada contains an article providing that, "if either Government is satisfied that any preferences hereby granted . . . are likely to be frustrated in whole or in part by reason of the creation or maintenance directly or indirectly of prices for such class of commodities through State action on the part of any foreign country, that Government declares that it will exercise the powers which it now has or will hereafter take to prohibit the entry from such foreign country directly or indirectly of such commodities into its country for such time as may be necessary to make effective and to maintain the preferences hereby granted by it."

The Secretary for the Dominions announced in Parliament on October 18th that as the foregoing agreement necessitates the British Government being in a position to discriminate by import prohibitions against any "frustrating" foreign country, the British Government on October 17th gave six months' notice of denunciation of the 1930 Commercial Agreement with the U.S.S.R., which assured Soviet trade the privilege of most-favoured-nation treatment.

THE NEW BRITISH TARIFF.

After the imposition of the new duties provided for in the Ottawa agreements, Great Britain will have a tariff of far-reaching scope and considerable height. In the large table on the following page we illustrate the situation by analysing our foreign imports in 1930 (1) under the taxation of that date; (2) under the pre-Ottawa tariff; and (3) under the tariff to be imposed as a consequence of Ottawa. It will be seen that, of our foreign imports in 1930, no less than 83 per cent. were admitted free of duty. As a result of the various duties imposed under the 1932 Import Duties Act (not including Additional Duty Order No. 7, published this week) the Free List before the application of the new Ottawa duties had shrunk to 30 per cent. After Ottawa the Free List will amount to only 25 per cent. Not only so, but the effect of the Ottawa agreements will be substantially to increase the incidence of the rates

BRITISH IMPORTS IN 1930 FROM FOREIGN COUNTRIES SHOWING EXTENT TO WHICH VARIOUS COUNTRIES ARE AFFECTED BY NEW BRITISH TARIFF.

(a) Under Import Duties Act, 1932, and under Import Duties Exemption Orders Nos. 1, 2 and 3.

(b) Adjusted, where possible, for Additional Import Duties Orders Nos. 1 to 6. The rate of specific duties has been based on average import values from January to August, 1932.

levied on imports subject to the new protective duties. This may be seen at a glance from the following summary:—

Protective Duties before Ottawa.			Protective Duties after Ottawa.		
Percentage of Foreign Imports taxed at			Percentage of Foreign Imports taxed at		
10%	11-20%	Over 20%	10%	11-20%	Over 20%
32.9	15.3	4.6	28.3	21.8	7.7

Reference to the large table will show, not only that Ottawa is resulting in a serious increase in the proportion of our total foreign imports subject to the higher ranges of duty, but that in the case of Denmark, Holland, Belgium, Sweden, Italy, Finland, Poland and Chile the alteration of incidence is extremely onerous to these important customers for our exports. It will be observed that nearly 58 per cent. of our imports (on the 1930 basis) will be covered, after Ottawa, by our new protective duties, and that in the case of imports from Europe the percentage rises as high as 70 per cent. Of our imports from Germany, no less than 85 per cent. will be taxed, and over 60 per cent. will be subject to duties exceeding 10 per cent. *ad valorem*. The situation of imports from Austria will be similar—a curious commentary on our pretensions to be desirous of assisting recovery in the hardest-hit areas of Europe.

OUR SHRINKING FREE LIST.

Even allowing for the fact that, under the Ottawa agreements Dominion imports (except in so far as they are affected by revenue and other pre-1931 duties) will continue to have free entry—as we show above, the Empire Free List will still be £244 millions on the 1930 trade basis—the progressive curtailment of the total British Free List has already become a sinister feature in the situation. Moreover, even the total that remains still “free” is to be subject to “quantitative” regulation. The following table summarises our total imports in 1930 from

PART II.—THE DOMINION CONCESSIONS.

Dominion Tariffs.

Before considering what the Dominions have conceded to British trade in return for the concessions analysed in Part I. it may be useful to take a brief view of the state of the tariff history of the Dominions. The facts and figures given below show that certain of them at all events are very definitely in the region of high protection. This condition has mainly developed since the war, and is, to a certain extent, no doubt a consequence of it, for the effect of the breaking of normal trading relations with Europe and the artificial demand for war requirements gave a sharp stimulus to the establishment of new industries and to the development of others which had made a modest beginning under the moderate protection of pre-war days. The Dominions, like other countries, sought to retain and to expand these new industrial activities by increased protection.

Writing as long ago as 1925, the Balfour Committee put on record the results of an investigation of the level of tariffs in relation to British trade, both in foreign countries and Empire countries, in 1924 as compared with the level in 1914. The figures showed the following results:—

Country.	Index Number expressing the Estimated <i>ad valorem</i> Incidence of the Tariff applied to British goods in:—	
	1914.	1924.
Empire Countries:—		
India	23	104
Australia	15	13
Canada	7	9
Union of South Africa	8	8
New Zealand	19	32
Foreign Countries:—		
U.S.A.	17	10
Germany	24	20
Argentina	21	12
France (and Algeria)	19	10
Japan	5	5
China	2	2
Netherlands	88	41
Brazil	10	8
Belgium	8	8
Egypt	18	15
Italy	42	37
Spain	23	12
Sweden		

Dominion and other sources, and shows the changes in the proportions free and taxed:—

BRITISH IMPORTS ANALYSED.
(Trade of 1930, excluding Live Animals and Parcels Post.)
(Million £)

	As actually Taxed in 1930.		Under Taxation of 1932 (Pre-Ottawa).		Under Taxation of 1932 (Post-Ottawa).	
	Amount.	%	Amount.	%	Amount.	%
Food, drink, and tobacco:—						
Free	400	38	235	23	211	20
Taxed	75	7	240	23	264	25
Materials and partly-manufactured goods:—						
Free	250	24	188	18	187	18
Taxed	Nil	0	62	6	63	6
Wholly or mainly manufactured goods:—						
Free	232	22	42	4	32	3
Taxed	75	7	265	25	275	26
Total	307	29	307	29	307	29
Total	1,032	100	1,032	100	1,032	100

It will be seen that, in 1930, out of total imports of £1,032 millions, only £150 millions were taxed, leaving £882 millions free. Even before the Ottawa agreements, as a result of the present Parliament's protective legislation, the taxed proportion had risen to £567 millions, leaving £465 millions free. After Ottawa the total Free List will amount to only £433 millions, whereas taxed imports will amount to £602 millions. That is to say, the post-Ottawa Free List will amount to only 41 per cent. of our imports, as compared with a proportion of 67 per cent. free in the 1930 tariff of such a highly-protected country as the United States.

Commenting on these figures the Committee observed that:—“The Board of Trade calculation brings out the remarkable fact that the main increases of tariff rates on British exports have been within the British Empire, where the average *ad valorem* incidence has decreased by one-fifth. . . . As will be seen, however, the disadvantage to British trade of the increased tariffs in overseas parts of the Empire has in several cases, but not in all, been offset by a concurrent increase in the preference accorded to British goods.”

“Broadly speaking, in 1914 the preference tariffs of the Dominions were, on an average, lower than their general tariffs by about 4 per cent. *ad valorem*. In the case of Australia and New Zealand, the increases of preference are no less than 8 per cent. and 8½ per cent. *ad valorem*. In the case of Canada the increase is 2½ per cent., while the level of preference of South Africa has remained practically unchanged.”

This conclusion was based upon the following comparative analysis:—

	1914.		1924.	
	<i>Ad valorem</i> level of duties on British Goods.	Extent of Preference over Foreign Goods.	<i>Ad valorem</i> level of duties on British Goods.	Extent of Preference over Foreign Goods.
	Per cent.	<i>Ad valorem</i> Per cent.	Per cent.	<i>Ad valorem</i> Per cent.
Australia	6½	3½	9½	11½
Canada	15½	5½ or 6½	13½	5 or 8½†
Union of South Africa	7½	2½	9	2½
New Zealand	8½	3½	8½	12

AUSTRALIA.

Tariff History.

Until the Federation of the six Australian Colonies in 1900 each was responsible for its own tariff. In Victoria alone was the tariff constructed upon a deliberately protective basis. The Colony of New South Wales in particular was regarded as being definitely Free Trade in sentiment and practice.

The first Commonwealth tariff of 1902 was framed primarily with a view to the production of a revenue of £7½ millions, and for this purpose duties, of which the average rate was 18 per cent., were imposed. About one-quarter of the imported merchandise was admitted free, but the duties on the remaining imports necessarily had a considerable protective effect.

While the first Commonwealth tariff represented a compromise between the Protective and Free Trade policies, that of 1908, which introduced the principle of preference for the United Kingdom, was deliberately protectionist. In 1914 the Labour Government again extended the scope and raised the height of the duties, while adding something to their preferential effect. Thus before the war the Australian Commonwealth was already committed to what, in the light of post-war events, might be described as a policy of moderate protection together with preference for British goods.

POST-WAR CUSTOMS INCREASES.

Australian post-war tariff history falls into three chapters. The first covers the period 1920 to 1929. In these years there was a rapid advance to extreme protectionism, conceived without regard to and in violation of the basic economic circumstances of the country. The war itself gave the first powerful stimulus to this movement. Cut off from the normal sources of supply, there grew up in the various industrial centres of the Commonwealth a number of subsidiary industries for the production of goods usually obtained abroad. The Greene Tariff of 1921, with which the process of post-war tariff-wall building began, was deliberately framed "to protect industries born during the war." At the same time, it was held to be desirable to aim at the further diversification and extension of Australian manufactures. A new feature of the Greene Tariff was the introduction of an intermediate schedule for the purpose of meeting those who might be willing to grant special terms to Australian exports.

The Pratten Tariff of 1925 represents the next milestone on the road to extreme protection. The tariff rates on 53 items were raised. Among the chief objects of the revision was the extension of the Australian textile and engineering trades and certain sections of the Yorkshire woollen industry have special cause to remember the additional imposts levied in this year. It is of interest to notice that the increased duties under the Pratten Tariff were justified partly on the ground of wage reductions abroad. The war-born industries were flagging, and, under the inflexible wage system of Australia, relief could not be obtained from lower labour cost. The tariff was invoked as the remedy, and the tariff-wage spiral was already working. The Tariff Board, in their report for 1927, drew attention to the danger. "The Board is profoundly convinced," says the report, "that if Australian industry is to be maintained and safeguarded, it is absolutely essential that the leaders of industrial unions should recognise the serious menace of rising costs of production." Unemployment was already serious, and the general economic position was described by the Board as "critical."

The warning was unheeded, and the second Pratten Tariff of 1928 carried the tariff wall still higher. In the case of 23 items the duties both for British and foreign goods were increased. In the case of 49 others the duties on foreign goods were raised, while those on British were unchanged. In regard to this increased element of preference it was said that "the Government's sincere desire is that in the aggregate British trade shall be increased at the expense of foreign trade."

THE 1929 CRISIS.

The second, or crisis, chapter of the history includes the years from 1929 to 1932. During the years 1922 to 1928 there had been a very great increase of capital borrowing both by the States and the Commonwealth. Overseas indebtedness had increased by £122 millions. The tangible form of this borrowing was an increase of import, resisted by the Australian industries as representing foreign competition from which they needed protection. The result of the protection was an increase of commodity prices, a consequent advance of money wages, a general raising of production costs, which impeded the export trade and made it impossible to maintain a trade balance in harmony with the requirements of the gold standard. Thus, the growth of high protection after the war was the first step towards the development of a fundamentally inconsistent and unstable economic situation which could only end in a crisis. As the members of the British Economic Mission reported in January, 1929, "successive increases in the tariff which affect

prices and the cost of living, following upon, or being followed by, successive advances in the cost of labour have involved Australia in a vicious circle of ever-ascending costs and prices."

The following table, showing the relation between dutiable and free imports into Australia over a series of years, brings out clearly the destructive influence exercised by the tariff upon the volume of trade.

	Imports in £ million.				
	1913.	1920-21.	1924-25.	1926-27.	1929-30.
Dutiable	44.6	60.4	96.7	104.9	76.7
Free	33.5	38.4	49.5	59.1	52.4

The result of the high protection after 1925 brought about a sharp decline of imports of dutiable goods with consequent damage to the public revenue. The gross duty collected in 1926-27 was £32 millions. In 1929-30 it was £31 millions.

In their report published in June, 1929, the Committee of Australian experts, appointed to examine "the effect of tariff policy on national prosperity and the principles which should govern tariff policy," declared that "the extreme applications of the tariff have undoubtedly been a cause of net loss. Further extensions may involve a more than proportionately increased loss." "As the tariff grows, the costs overtake the benefits." "The total burden of the tariff has probably reached the economic limits."

THE PROTECTIONIST CLIMAX.

The climax of Australian protectionism was, despite these warnings, yet to come. Mr Scullin decided to fight the oncoming industrial depression and the financial crisis with further drastic applications of protective policy. The McForde Tariff of June, 1930, increased, in many instances drastically, the duties on 114 items of the schedule. But this was not all. To make up for the decline in Customs revenue, a surcharge of 50 per cent. upon the ordinary duty was imposed in April, 1930, on most items of the luxury class and on many commodities competing with Australian industries. Further, a primage duty, also levied in order to increase the falling Customs revenue, at the rate of 2½ per cent., was imposed in July, 1930, on practically all imports except such as were needed by primary industries. This primage was increased to 4 per cent. in November and to 10 per cent. in the following July. Finally, the import of a number of commodities was prohibited altogether, except under license, in order to correct the adverse balance of trade and to help the exchange value of the Australian pound.

AUSTRALIA'S IMPORT TRADE.

	1925-26.	1930-31.
Imports from—		
United Kingdom ...	65.8	23.3
Total Empire	85.6	32.1
Foreign countries...	66.0	27.0
Total imports	151.6	59.1

Making due allowance for the loss of Australian purchasing power through the 1929 agrarian crisis, these figures illustrate the extreme restrictive effect of the final post-war tariff.

Owing to the frequent changes in tariff classification it is difficult to trace, step by step, the growth of the Australian tariff as a whole during the post-war years. The trend can be seen, however, very clearly if a few representative cases be taken. The following table gives the necessary data:—

Commodity.	1921.		1929.		1931.	
	British Preference.	General Tariff.	British Preference.	General Tariff.	British Preference.	General Tariff.
Woollen piece-goods...	30% + 1s.	45% + 1s.	35% + 1s.	45% + 1s.	35% + 1s.	50% + 1s.
Cotton piece-goods (main classes)	Free	15%	Free	15%	5%	25%
Galvanised and corrugated sheets, per ton	20s.	30s.	40s.	80s.	110s.	150s.
Wool stockings	35%	50%	50%	65%	50%	65%
Machinery, n.e.c.	27½%	40%	45%	60%	55%	75%

It will be seen that the treatment of different classes of goods has been different according as they were considered to compete, or not, with Australian industries. Throughout, the duties on cotton piece-goods have been low, and the same is true of tinplates. Woollen piece-goods, on the other hand, have been penalised to the extent, when account is taken of primage and surcharge, of something like 100 per cent. Machinery, "not elsewhere included," is a good representative instance. It shows the marked increase of duties imposed upon goods, both British and foreign, with a widening measure of preference, down to 1931.

The Ottawa Undertakings.

At the Ottawa Conference the Australian Government undertook to make certain increases in the preferential margin accorded to British imports. This undertaking has been implemented by the application to the existing tariff of the following formula providing that:—

When the duty on U.K. goods is—	The minimum margin of preference will be—
Free to 19% <i>ad valorem</i> .	15% <i>ad valorem</i> .
19% to 29% <i>ad valorem</i> .	17½% <i>ad valorem</i> .
Over 29% <i>ad valorem</i> .	20% <i>ad valorem</i> .

The 20 per cent. margin of preference is not to be applied so as to result in a rate of duty exceeding 75 per cent. *ad valorem* on foreign imports.

The formula is not to apply to goods not commercially produced in the United Kingdom, nor to goods in respect of which it may be agreed that the application is unnecessary. Nor is it to apply to a specified list of goods in whose case the existing preference, or a new preference indicated below in brackets, is to operate. These are, chiefly:—

Velvets.	Plate glass.
High-grade carbon steels, &c.	Certain medicines.
Iron and steel tubes or pipes (12½%).	Playing cards (3s. per dozen packs).
Linotype and printing machines (20%).	Vacuum cleaners (20%).
Traction engines (12½%).	Explosives.

Subject to the above, existing preferential margins in favour of Britain are to be maintained, but they may be reduced as shown below on the following list of goods:—

Goods.	Maximum Reduction <i>ad valorem</i> .
Silk piece goods	2½%
Lace, embroidery, trimmings.....	5
Clothes	5
Cutlery	5
Glassware and lamps	5
Fancy goods	5

It has been semi-officially estimated that in 1930-31 the volume of Australia's import trade affected by the foregoing formula for the granting of increased preferential margins amounted to £15 millions, of which £8 millions represented imports from Great Britain. Examination, however, of the new Australian tariff schedule issued on October 14th shows that, except in a negligible minority of cases, the result of the application of the formula has simply been to raise the general tariff. The new schedules also provide for the re-imposition of a primage duty of 10 per cent. *ad valorem* on imports of galvanised sheets.

FUTURE PROMISES.

Further undertakings by the Australian Government at Ottawa were:—

- (1) To give tariff protection only to industries which are reasonably assured of sound opportunities of success.
- (2) To keep protective duties to a level which will give United Kingdom producers full opportunity of reasonable competition on the basis of the relative costs of economical and efficient production, provided that special consideration may be given to the case of industries not fully established.
- (3) To revise existing duties, on review by the Tariff Board, in accordance with the principles laid down in (2).
- (4) Not to impose or increase duties in excess of recommendation of the Tariff Board.
- (5) To allow United Kingdom producers audience before the Tariff Board in respect of matters arising under (3) and (4).
- (6) To repeal as soon as practicable the proclamation of May, 1932, prohibiting certain imports.
- (7) To remove as soon as practicable the surcharges imposed on May 24, 1932.
- (8) To reduce or remove the primage duty as soon as the finances of Australia will allow.

Our observations on promises (1-5) will be found on page 17.

WHAT AUSTRALIA HAS DONE.

The foregoing summary of the Australian undertakings makes it clear that the promise of any reductions in the height of the Commonwealth tariff wall lies wholly in the future and is conditional on the findings of the Tariff Board. Indeed, at the Conference the Australian delegation made it clear that as they had given a pledge during the last Australian election not to reduce duties except on the Tariff Board's recommendation to reduce duties except on the Tariff Board's recommendation, they could not enter into any specific undertaking to reduce the duties on British goods. Mr Bruce, however, claimed at Ottawa that, subject to the necessity of correcting Australia's balance of payments, the present Australian Government was "proceeding vigorously to bring the tariff

back to a normal protective level." On August 31st import prohibitions were removed from twenty-three items of imports, including, notably, wireless sets, aluminium ware, tiles, sanitary earthenware, cast iron pipes, iron and steel beams, channels and girders and matches. From September 2nd surtax, amounting to 50 per cent. of the ordinary duty, was removed in the case of sixteen items, of which the most important were knitted piece goods, except wool, apparel, leather manufactures and boots and shoes. On the same date a considerable list of items, consisting mostly of machinery and other products required by farmers and sheep raisers were exempted from primage duty.

These partial removals of the abnormal restrictions, imposed by Australia with the intention of excluding imports in the interests of the Australian exchange, were in themselves a welcome step, but it is difficult to derive much encouragement for the future from the interim findings of the Tariff Board which the Government adopted with effect also from September 2, 1932. The Tariff Board having reviewed a brief list of items in the existing Customs tariff, new rates became operative as shown below in the most important items:—

	Old Rates.		New Rates.	
	British Preference.	General Tariff.	British Preference.	General Tariff.
Woollen piece goods	45%	60%	45%	60%
Apparel	45%	60%	45%	60%
Towels	50%	75%	40%	60%
Steel plates and sheets, galvanised and/or corrugated	110s.	150s.	90s.	130s.
Wool tops	91.	91.	61.	1s.
Matches, n.e.c.	20%	20%	20%	20%
Cotton piece goods resembling wool for clothing manufacture	45%	60%	30%	50%
Crude oil engines, 100 h.p. or less	55%	75%	45%	60%
Crude oil engines over 100 h.p.	55%	75%	45%	60%
Machinery, n.e.c.	55%	75%	45%	60%
Sheet glass, plain, clear	45%	60%	40%	60%

* Plus surtax of 50 per cent.

† Surtax removed.

The foregoing revision still left rates in the British preferential tariff in many cases virtually prohibitive; and it may be added that the application of the Ottawa formula has resulted in increasing a number of the duties under the general tariff in this list, for example, the foreign duty on woollen piece goods now becomes 55 per cent.

CANADA.

Tariff History.

The basis of the present highly protective Canadian tariff was originally laid down in the Canadian Customs Tariff Act of 1907, and subsequent Acts have been amendments of that Act. There are three rates of tariff: (1) The British preferential tariff, the lowest scale, which applies to goods imported from the United Kingdom and most parts of the Empire, provided that not less than half the value of the goods (or one-third in the case of cotton manufactures) is of British origin; (2) the Intermediate tariff, which applies to imports from a few British countries and from twenty-two foreign countries; and (3) the General tariff, which applies to imports from other countries, including the United States of America. Imports from the United Kingdom of which less than 50 per cent. is of British origin pay the intermediate tariff if a sufficient proportion of their value originates in a most-favoured-nation country; otherwise they pay the general tariff.

Since the war the march to high Protection has been increasingly rapid. In every year there have been one or more Tariff Amendment Acts (usually as part of the Budget), all of which have included increases of tariffs. The most striking change, however, came in 1930. In that year the Dunning Act, named after the Finance Minister, the Hon. C. A. Dunning, was introduced by the Liberal Government as its contribution towards furthering Imperial reciprocity and good relations at the then impending Imperial Conference. The Act, as passed, was the most important and extensive Tariff Act passed since 1907. It provided for 270 decreases in the British preferential tariff (including, however, some which were of little practical importance, though others were of real value to British trade), and eleven increases; and in order to increase world trade it also made 98 decreases in the intermediate tariff and 35 increases; and in the general tariff there were 46 decreases and 54 increases—a total of 514 tariff changes.

Then came the General Election, and the present Government came into power under Mr Bennett. Without delay, numerous revisions of the tariff were introduced in September, 1930, mainly in an upward direction; and the powers of the Minister of Customs were widely extended, and the dumping provisions were strengthened. In June, 1931, a still more ex-

tensive tariff revision took place, with numerous increases of duties on both British and foreign goods. The Report for 1931 of H.M. Senior Trade Commissioner in Canada states: "The avowed policy of the present Government is to afford Canadian manufacturers a full measure of protection. The upward revision of the tariff has naturally restricted the Canadian business of the United Kingdom, and in certain instances trade is now difficult or impossible."

THE 1931 TARIFF.

The Canadian tariff, as it stood after the 1931 revision, contained a list of considerably over 1,000 items and sub-items, covering approximately one-third of Canada's imports.

CANADA'S IMPORT TRADE. (In millions of dollars.)			
From—	1925.	1931.	
United Kingdom	151.1	109.5	
Other British countries	43.9	42.5	
Total, British Empire	195.0	152.0	
Foreign countries	601.9	476.1	
Total	796.9	628.1	

Between 1925 and 1930 the revenue collected on imports rose from \$120.2 millions to \$199.0 millions.

The following table gives some examples of the way in which duties have risen in recent years:—

Article.	British Preferential Tariff.		General Tariff.	
	1924.	1931.	1924.	1931.
Iron and steel manufactures, not otherwise specified	20	15	30	35
Cotton fabrics, not coloured	15	17½	25	25
and in addition, per lb.	22½	3 cents.	32½	4 cents.
Cotton fabrics, coloured	22½	3 cents.	32½	4 cents.
and in addition, per lb.	27½	30	35	40
Woolen fabrics, clothing, &c., not otherwise specified	17½	25 cents.	35	35 cents.
and in addition, per lb.	25	30 cents.	35	40 cents.
Artificial silk fabrics	22½	25	35	45
and in addition, per doz. pairs	22½	30	35	45
Socks and stockings of all kinds	22½	30	35	45
and in addition, per doz. pairs	22½	30	35	45
Gloves of all kinds	22½	30	35	45
Jewellery	22½	30	35	45

The British preferential tariff is, with certain exceptions, subject to a discount of 10 per cent. on the stated rates where these exceed 15 per cent. That is to say, if the rate is nominally 20 per cent., the actual rate is 18 per cent. The tariff is, however, payable on the value of the article translated into dollars at the rate of 4.86 to the pound, and not at the actual rate of about 3.70 dollars to the pound. In many cases this provision alone neutralises the British preference in comparison with countries which are on the gold standard.

ADDITIONAL CHARGES.

In addition to the ordinary tariffs, imports into Canada are chargeable with three other taxes. The first of these is the Sales Tax, now at the rate of 6 per cent., which is not essentially protective, since it is also payable on home products. The second is the Special Excise Tax, amounting to 3 per cent., which, despite its name, is payable only on imports. These two taxes, making a charge of 9 per cent., are levied upon the value of the imports plus the tariff which has been paid. Thus, if \$100 of imports are subject to a tariff of 30 per cent., these taxes will amount to 9 per cent. of \$130, or \$11.70.

The third of the special taxes is the Dumping Duty. Until recently, this duty had scarcely any effect upon United Kingdom trade, because it was most unusual for traders in this country to sell their goods in Canada at a price below that charged here. But, owing to the fact that the Canadian Government fix arbitrary and different values for the exchange of pounds into dollars when calculating prices in the United Kingdom and in Canada, this duty has become a heavy charge upon British imports into Canada. Under the ordinary regulations concerning this duty if an imported article is offered for sale in Canada at a price less than its "fair market value" in the country of origin, a duty equal to the difference between these prices is payable. At the present time (i.e., the period October 16th to 31, 1932) the value of the pound is declared fixed at \$3.82 for the purpose of calculating the selling price of British goods in Canada; but for the purpose of determining "fair market value" in the United Kingdom the pound is at present fixed at \$4.40. Hence, at the rates now in operation, if the price of an article in pounds is identical here and in Canada, it is still necessary to pay a dumping duty amounting to 58 cents for every pound of the value.

This duty in particular has met with much opposition from Canadian importers of British goods, and even before Ottawa expectations had arisen that it would be reduced. These expectations themselves at the present time are an additional barrier to British trade, because they lead importers to delay

buying stocks from the United Kingdom pending a reduction, with the consequence that, when orders have to be executed at short notice, they frequently go to the United States.

The Ottawa Undertakings.

At the Ottawa Conference the Canadian Government gave, in the first place, certain general undertakings, namely:—

(1) To protect by tariffs against United Kingdom products only those industries which are reasonably assured of sound opportunities for success.

(2) During the currency of the agreement (1932-37) to base the Canadian tariff on "the principle that protective duties shall not exceed such a level as will give the U.K. producers full opportunity of reasonable competition on the basis of the relative cost of economical and efficient production," provided that special consideration shall be given to industries "not fully developed."

(3) To constitute forthwith the Tariff Board provided for in the Act of 1931, and to alter the tariff in accordance with its report, to give effect to principles of (2).

(4) Not to increase existing duties without inquiry by Tariff Board and to give United Kingdom producers a hearing at such inquiry.

(5) To ensure a minimum of uncertainty, delay and friction in connection with tariff and provide machinery for prompt and impartial settlement of disputes.

(6) To abolish surcharges on United Kingdom imports as soon as possible and to consider ultimate abolition of exchange dumping duty on United Kingdom products.

In addition to these general undertakings, whose implementation is a matter for the future, and depends on the recommendations of a Tariff Board instructed to act on the vicious principle of "compensatory tariffs"—our observations on this point will be found on page 17—the Canadian Government promised specifically to carry out forthwith a revision of a portion of the existing tariff. The results of this revision are now available; and, as they constitute the most important immediate fruits of Ottawa they merit examination in some detail.

THE NEW SCHEDULES.

The new schedules relate to 215 items (including parts of items) in the Canadian tariff, or, say, one-seventh of the whole. In 132 cases the duties on United Kingdom goods are to be reduced; and in the remaining 83 cases increased margins of preference in favour of United Kingdom goods are secured by raising the general tariff. In 79 cases United Kingdom goods are to be placed on the Free List in the preferential tariff.

In 1931-32 Canada's imports were:—

	\$ million.
From Great Britain	106.4
From other countries	472.1
Total	578.5

It is estimated, semi-officially, that, on the basis of the above figures, the British preferential tariff will be:—

	Total Imports.	British Share.
	\$ Mill.	\$ Mill.
Reduced to zero in the case of	31.2	8.3
Lowered in the case of	58.9	37.4
And the foreign tariff will be raised in the case of	35.1	8.8
Total trade affected by new schedules	125.2	54.5

A mere statement, however, of the case in these terms conveys little indication of the real advantage obtained by British exporters. For that purpose it is necessary to know the extent to which (a) the placing of British goods on the Free List means a large reduction of pre-existing duties; and (b) how large is the widening of the preferential margin in cases where the foreign tariff is raised. Finally, it is essential to ascertain (a) whether the British preferential duties after revision are still such as greatly to restrict Anglo-Canadian trade, and (b) whether the changes represent in the aggregate a diminution or increase in the general tariff level.

A STATISTICAL ANALYSIS.

A precise estimate on these lines is obviously impossible, though something can be learned from a study of the typical changes which we give in a later table; but we have endeavoured to throw some light on the matter by an analysis of the new schedules. Of the 215 items shown therein, we have succeeded in roughly correlating 150 items with the Canadian Trade Returns for 1931. These items accounted last year for \$89,675,000 of total imports into Canada, of which \$26,400,000 were from the United Kingdom and \$50,900,000 from the United States.

As a result of the Ottawa Conference British imports covered by 37 items (out of over 150) have been added to the free list, making 91 items duty free in all. These 37 items accounted in 1931 for \$23,882,000 of imports, of which \$6,514,000 were

from the United Kingdom. It is significant that among the new additions there are eleven out of thirty-seven items where imports from the United Kingdom in 1931 were non-existent or negligible (i.e., less than 5 per cent.).

The extent to which the new free list represents tariff concessions can, to some extent, be gauged from the table below. It will be seen that of total imports from the United Kingdom of approximately \$64 millions in 1931, now to be admitted free, more than \$4½ millions were taxed at under 10 per cent. prior to Ottawa:—

NEW FREE LIST ITEMS.*			
Previous British preferential tariff was—	No. of Items.	1931.	
		Total.	U.K.
5% or less	6	6,145.5	1,374.9
5%–10%	6	5,376.9	3,411.0
10%–15%	15	7,714.8	819.4
More than 15%	7	1,589.4	648.4

* Three items omitted; specific duties unclassifiable.

The next table elucidates to some extent the amount of additional preference now conceded. Out of our 150 items sampled, 117 items are classified according to their increase in "preference margin." (Thirty-three items are omitted, since the presence of a "specific duty" makes the calculation of the "preference margin" unduly complicated.) It will be seen that of United Kingdom imports totalling \$14,400,000, nearly \$8½ millions receive an increased "preference margin" of 10 per cent. or under, while only \$1,945,000 are given an additional margin of more than 15 per cent.

INCREASE IN PREFERENCE MARGIN. 1931 Imports in \$'000.				
Increase in Preference Margin.	No. of Items.*	Total.	From U.K.	From U.S.A.
5% or less	30	14,659.4	5,570.9	7,155.6
5%–10%	39	19,353.2	2,814.0	13,515.5
10%–15%	22	8,163.7	4,061.4	3,601.1
15%–20%	18	11,899.2	1,318.8	9,373.2
Over 20%	8	3,596.8	626.3	2,500.3

* Thirty-three items not included.

The position of the "general" or "foreign" tariff, in so far as the new schedules are concerned, is shown below. The largest quantity of total trade and also of United States trade covered by the schedules falls in the categories for tariffs ranging from 10 per cent. to 20 per cent., but \$12 millions of United States imports in 1931 now fall in the 20-30 per cent. tariff class, and \$2.2 millions in the 30 per cent. and over class.

FUTURE FOREIGN DUTIES.

1931 Imports in \$'000.				
Rates.	Items.	Total.	From U.K.	From U.S.A.
10% or less	27	13,335.8	2,298.0	8,717.4
10%–20%	38	20,652.0	6,073.4	12,456.9
20%–30%	36	15,481.1	2,285.0	12,118.8
Over 30%	16	8,203.4	3,735.0	2,852.2

We have again had to exclude from the above 33 items covered by specific duties. These items are classified below (a) into cases where only the specific duty is shown; (b) into cases where, in addition to a specific duty, the *ad valorem* duty is 20 per cent. to 30 per cent.; and (c) into cases where, in addition to a specific duty, the *ad valorem* duty is over 30 per cent. The high duty on United States imports is here brought out even more clearly, since an additional \$6,608,000 fall into the highest class.

	Items.	Total.	U.K.	U.S.A.
(a) Specific duty only shown	14	8,951.1	1,243.4	6,412.8
(b) Specific duty plus 20%–30% <i>ad valorem</i>	8	5,779.9	3,392.1	1,829.8
(c) Specific duty plus over 30%	11	17,272.1	7,373.2	6,607.5

The extent to which tariffs are still maintained against British goods, even in the revised section of the tariff, is set out on page 12. Imports, valued in 1931 at \$1,415,000, will still have a duty charged against them of 5 per cent. to 10 per cent., while \$1,252,000 of goods are to be charged at rates varying from 10 per cent. onwards.

FUTURE BRITISH DUTIES.

Rates.	No. of Items.	1931 Imports in \$'000.	U.K.
Free	97	51,816	12,462
5% or less	3	941	313
5%-10%	12	6,553	1,415
10%-15%	12	3,013	747
15%-20%	6	1,636	340
Over 20%	2	521	165

To complete the story it is necessary to add that twenty-four items, having a specific as well as an *ad valorem* duty, appear separately below. The feature is that no less than \$7,528,000 worth of British goods (on the 1931 basis) will be charged with duties of 20 per cent. and over under the new regime, in addition to their specific duties.

TWENTY-FOUR ITEMS NOT INCLUDED ANALYSED BELOW.

Items.	Total.	U.K.

Specific, plus 20% and over <i>ad val.</i>	9	16,218
		\$'000.
		7,528

In brief, so far as our statistical analysis can elucidate the post-Ottawa revision of the Canadian tariff, the features which emerge are:—

- (1) That the bulk of the new British Free List "concessions" represent classes of goods in which previously high protection for domestic manufacture was judged to be unnecessary.
- (2) That in many instances the increased preferential margin is unlikely to bring much benefit to Britain.
- (3) That even in the small part of the vast complete Canadian tariff now revised, half the imports will still be subject to almost prohibitive duties. Making a rough estimate where only a specific duty is listed, we arrive at the conclusion from our analysis that out of the \$90 millions of imports covered by our sample inquiry, \$43½ millions (British \$9½ millions, foreign \$34 millions) will still be charged with duties of more than 20 per cent., in addition to primage and exchange dumping duties and sales tax.

HIGH PROTECTION MAINTAINED.

Such are the conclusions which result from a sample statistical analysis of the tariff changes which we have been able to make. In order to illustrate further the effect of the revision we print on page 11 a table showing, for a large list of the more important commodities involved, the previous and proposed rates, together with the total imports from the chief sources of the commodity concerned. A full study of the complete schedule confirms the conclusions (a) that the reduction of tariff duties for the advantage of British manufacturers is exceedingly small, and (b) that in so far as an attempt is made to divert purchases from foreign countries to the British market, the effect is to raise still further the already inordinately high general tariff. In a few instances there is evidence of a real desire to abate the restrictions on British imports, notable cases being cutlery, plate-glass, certain fine chemicals, and linen goods. In the last-named case a new schedule providing for free British entry is to be drawn up as a result of the admitted failure of the Canadian industry to survive in spite of 20 to 25 per cent. protection. In the case of the iron and steel industry, broadly speaking, articles subject to international cartel arrangements are unaffected by the changes; duties remain prohibitive in classes where the Canadian manufacturer can supply the market; in the remaining cases, as a result of an agreement that the British and Canadian heavy industry should aim at a quasi-monopoly of the Canadian market, an advantage is given to Britain simply at the expense of the United States. The height of the textile tariff is lowered in the case of British goods by only a negligible amount, and is still largely prohibitive. It is further to be observed that in many cases the intermediate tariff has been brought up to the general tariff level, thus impeding the possibility of negotiating successful treaties between Canada and foreign countries.

Finally, we would once more emphasise, the portion of the tariff revised is only a fraction of the whole. Even after the present revision, the tariff is in the vast majority of instances appreciably higher in the case of British goods and enormously higher in the case of foreign imports than the tariff which Mr Bennett inherited in 1930; and the agreement, be it once more noted, provides for no immediate or certain reduction in the primage and exchange dumping duties or in the sales tax, which together represent a serious increase on the actual tariff. For example, it is calculated that British wool-overcoating will still be charged in all with an 82 per cent. duty, as compared with an 87 per cent. duty before Ottawa. Well might Mr Bennett declare at the closing session of the Conference that the Canadian Government had succeeded "in manifesting the principle that protection as we see it in this country can be used as an instrument of national policy."

INDIA.

Tariff History.

Until 1917 the Government of India had rigidly conformed to the letter of the Free Trade Law laid down for it by specific resolutions of Parliament. Fiscal policy was regarded as strictly outside the purview of the Indian Legislative Council. Indian opinion, on the other hand, was enthusiastically protectionist, holding a tariff to be essential for the development of much desired industries. The Montagu-Chelmsford Report stressed the importance of bringing fiscal policy more into accord with Indian opinion, and from that point, although without formal sanction from Parliament, a modification in the attitude of the Government of India on the tariff question became apparent. When, in 1917, the import duty on cotton piece goods was raised to 7½ per cent., while the countervailing Excise duty was left at 3½ per cent., the whole of India marked the significance of the omission.

This tendency was confirmed when the Joint Select Committee in 1919 recommended that a Convention should be allowed to grow up to the effect that, when the Government of India and its Legislature were in agreement on fiscal matters, Parliament should intervene only to safeguard the international obligations of the Empire. In virtue of this Convention India has since enjoyed virtual fiscal autonomy.

The war imposed upon India the need to find new sources of revenue. Popular sentiment enabled the Government to achieve its object and to attain popularity by raising the Customs duties. For many years a low general tariff of 5 per cent. had been in force. Between 1916 and 1922 it was raised gradually to 15 per cent. Upon certain "producers' goods" a lower rate of 10 per cent. was charged, but a large range of "luxuries" paid 30 per cent. A special feature of the tariff during this period was the levy of export duties on tea, jute and raw hides. In the latter case the aim was definitely protective, in order to encourage the tanning industry.

THE GROWTH OF PROTECTION.

The recommendations of the Fiscal Commission of 1922 mark the beginning of a new chapter in India's fiscal history. Thenceforward "discriminating protection" became the accepted policy. A Tariff Board was set up as the expert agent for the purpose of discrimination. The Commission approved the principle of Imperial Preference, provided it did not interfere with the due protection of Indian industries and that it did not restrict India's fiscal autonomy. It should be emphasised, however, that public opinion had been steadily opposed to any preferential arrangement.

The first important application of "discriminating protection" after 1922 was embodied in the Steel Industry Protection Act of 1924. The principle therein adopted was to give a degree of protection measured by the difference between the import price and the price which would secure the Indian manufacturer a reasonable profit. A combination of *ad valorem* duties, varying from 15 to 25 per cent., with specific duties at from Rs. 14 to Rs. 40 per ton, were imposed. In addition, bounties of from Rs. 20 to Rs. 32 per ton were granted for the production of rails and fish plates. These duties were imposed, in the first instance, for three years. They were continued, with modifications, by the Steel Protection Act of 1927.

The steel industry affords the outstanding case of high protection in India, but special protection, less pronounced, although similar in intention, is now extended to a number of industries, including cotton, heavy chemicals, matches, paper, salt and sugar. The terms of the Cotton Textile Protection Act of 1930 deserves special notice. It raised the general tariff of cotton piece goods from 15 to 20 per cent., or 3½ annas per pound, whichever was highest. For the first time, as the result of special representations from the Secretary of State, a preference of 5 per cent. was extended to cotton piece goods manufactured in Great Britain.

The tendency of the Indian tariff in recent years, under the combined influence of the need for increased revenue and the prevailing protectionist sentiment, has been to increase the rates charged upon almost all articles imported into the country. Following the general scheme adopted after 1922, the tariff in force under the Act of April, 1932, is based on three main schedules. A number of producers' goods, such as dyes and machinery, are charged 10 per cent. The main body of imports, including most articles of food, pay 25 per cent. A large assortment of articles of lesser necessity pay 50 per cent. The existing rates on cotton piece goods are 25 per cent., or 4½ annas per pound, whichever is highest, on British goods and 31½ per cent., or 4½ annas, on non-British goods. Taken together with the special protective duties on iron and steel and the other articles selected for "discriminating protection," notably cotton textiles, the tariff represents a very high level of revenue taxation, together with a large measure of protection.

The Ottawa Undertakings.

Under the Ottawa agreement the Indian Government has undertaken to give a 7½ per cent. preference on motor-cars, omnibuses and accumulators and to give a 10 per cent. preference on a long list of manufactured goods, including certain classes of apparel, building materials, chemicals, earthenware, furniture, hardware, instruments, leather, aluminium and copper manufactures, oils and paints, paper and cardboard, rubber manufactures, soap, toys and woollen piece goods. It is estimated that in the year ended March 31, 1931, the total volume of Indian imports affected by this increase of preferences amounted to £32 millions, whereof £12.7 millions represented imports from the United Kingdom. These preferences may be given either by an increase of duty on foreign goods or by a reduction of duty on United Kingdom goods, or by a combination of both methods. Since the new 10 per cent. preference is to be extended broadly to goods now subject to revenue duties, it will presumably be necessary in many, if not the majority of cases to raise the foreign duty, if the requirements of the Budget are to be met. The Government of India has further undertaken that there shall be an extension of the 10 per cent. preference to a shorter list of British goods, including mainly certain cotton and artificial silk piece-goods, subject to the recommendation of the Tariff Board as to the protective duties which should be placed on those goods against United Kingdom imports.

A further undertaking of the Indian Government is that, in consideration of the continuance of free entry of Indian iron and steel into the United Kingdom, the duties on galvanised sheet in the Indian tariff (now amounting to Rs. 83.12) shall be adjusted, on the basis of present selling prices, as follows: Sheet made in the United Kingdom from Indian sheet bar, Rs. 30 per ton, for United Kingdom sheet Rs. 53, foreign sheet Rs. 83. In the event of further reductions of foreign sheet imported into India, the Government of India without inquiry by the Tariff Board will take prompt and effective action to impose additional duties of an amount sufficient to make clear the intention of the Government of India to maintain prices. This arrangement is to remain in force until action is taken by the Government of India following the next statutory inquiry into the Indian iron and steel industry.

It is important to notice that the agreement with India contains no provision, as in the case of Australia and Canada, whereby the Tariff Board in considering future modifications of the tariff shall be governed by the principle of "reasonable competition," etc., for British goods.

The India Agreement is subject to termination on six months' notice from either side.

NEWFOUNDLAND.

Newfoundland has throughout its history depended mainly upon a Customs tariff for its revenue. Its population numbers only 270,000, and the principal occupation of the people lies in the fishing and allied industries. Thus for the most part their incomes are small and variable; and those who are in receipt of salaries are proportionately fewer than in most other countries, consisting, indeed, almost entirely of the civil servants, and a small number of merchants and professional men. All Newfoundland Governments have therefore regarded Customs duties as the only practicable source of substantial revenue, and normally at least three-quarters of the total revenue is produced by these duties.

The revenue from Customs duties, and the total revenue from all sources including Customs, ten years ago and in the last two years are shown below:—

	1920-21	1929-30.	1930-31.
	\$	\$	\$
Customs revenue.....	6,026,000	8,834,000	7,465,000
Total revenue	8,438,000	11,579,000	9,655,000

It follows that variations in the tariff have been dictated by the necessities of revenue rather than by considerations of protection. There are few people engaged in industries that could be protected, and tariff controversy has played a very small part in Newfoundland politics. Occasionally demands have arisen for the reduction of duties on primary necessities, such as sugar; and when revenue permitted, some of the tariffs have been lowered, though in recent years the general tendency has been towards an increase.

Hitherto, for the reason that the tariff is regarded as being for revenue rather than protection, no Imperial preference has been granted; and although the Ottawa agreement provides for a preference of 10 per cent. on 61 classes of goods, it also makes provision for a reduction of this preference if it results in a loss of revenue.

NEW ZEALAND.

Tariff History.

The New Zealand tariff was already on the upward grade when the exigencies of war finance gave a very marked flip to this rising tendency. Increases were made in 1915 in the duties on spirits, gas and oil engines, electric motors, transformers and lamps, and motor cars; and in 1917 a number of further increases were made in the tariff and remained in force until the general revision of 1921. The war was also responsible for the introduction of a primage duty of 1 per cent., levied on all but a small number of specified articles. It was increased, for most goods, to 2 per cent. in 1929; but was removed in 1930 when a surtax (see below) was imposed on dutiable goods. In July, 1931, however, a primage duty of 3 per cent. was reimposed on almost all imports, British and foreign, otherwise free of Customs duty.

The tariff underwent a general post-war revision in 1921, when the general tariff, applicable to foreign goods, was in most instances raised to 35 per cent., while the rate most commonly applicable to British goods remained at 20 per cent. An intermediate tariff for trade treaty purposes was introduced but abandoned again in 1927. Provision was also made for the imposition of special dumping duties on goods sold to New Zealand importers under conditions which might injuriously affect manufacturers in New Zealand or in any other part of the British Empire. Additional duties on goods from countries with a depreciated rate of exchange was also provided for, but no such duties have been imposed since 1925.

The protective purpose of the post-war tariff was greatly strengthened by the 1927 revision, but the British preferential margin was, in general, increased from 15 to 20 per cent. A provision of the 1921 tariff allowing machinery, tools, etc., which are needed for New Zealand industry, and cannot be economically manufactured in New Zealand, to enter free if of British origin, was extended; and in certain conditions made to include foreign goods. Certain classes of household textile piece goods, linoleum, and table china and earthenware were placed on the free list if of British origin.

THE PRESENT TARIFF.

In 1930, the general tariff was increased, as to most items, by 5 per cent. *ad valorem*. The primage duty imposed during the war on all imports was replaced by a surtax on dutiable imports of one-twentieth of the duty otherwise payable in certain specified cases, and nine-fortieths of such duty in all other cases, except wheat and flour. During 1931 there were increases in the general and preferential duties on a large number of goods, and reductions in a few others; these changes did not alter the British preferential margin.

The effect of these developments is illustrated by the following typical items, which are among the most important of Great Britain's exports to New Zealand:—

RATES OF DUTY ON IMPORTS INTO NEW ZEALAND.

	1921.		1927.		1931.	
	British Preferential.	General.	British Preferential.	General.	British Preferential.	General.
Iron and steel rods, bolts, bars, angles, &c.....	Free	20	Free	20	Free	20
Iron sheets.....	Free	20	Free	20	Free	20
Electrical machinery.....	Free	10	Free	20	Free	25
Motor vehicles.....	10*	25†	10	35	10	40
			+ body duty of 15%	+ body duty of 15%	+ body duty of 14½%	+ body duty of 16½%
Woollen piece goods... ready-made clothing... leather manufactures... n.e.d.....	20	35	25	45	25	55
Silk or rayon piece-goods.....	10	15	10	15	10	25
China-ware, &c.....	20	35	20	40	20	45
Hardware, n.e.d.....	20	35	20	40	20	45

* Plus a specific duty ranging from £5 to £15.

† Plus a specific duty ranging from £7 10s. to £22 10s.

There has thus been a very substantial increase, during the last ten years, in the height of the New Zealand tariff wall, and, though there has been a concomitant increase in the British preference, the tariff—supplemented by the 1930 surtax—has acted as a growing impediment to imports both from Britain and, still more, from foreign countries.

NEW ZEALAND'S IMPORT TRADE.

(£ millions.)

Imports from—	1927.	1929.	1930.	1931.
United Kingdom	21.5	22.6	20.3	12.2
Total British countries.....	30.7	33.1	29.6	17.4
Total foreign countries	14.1	15.7	13.4	7.4
Total imports	44.8	48.8	43.0	24.8

It is, however, of interest to notice in passing a slight but significant difference in the wording of the agreements regarding the role to be played by the Tariff Boards. Thus Australia undertakes that "no new protective duty shall be imposed and no existing duty shall be increased on United Kingdom goods to an amount in excess of the recommendation of the Tariff Tribunal." Canada undertakes that "no existing duty shall be increased on United Kingdom goods except after an inquiry and the receipt of a report from the Tariff Board, and in accordance with the facts so found by that body." In the latter case the Board is a fact finding body and discretion is obtained for the Canadian Parliament. In the former there is an undertaking, which follows the precedent of the British Import Duties Act, that Parliament will not impose duties in excess of the recommendations of the Tribunal.

INTRODUCTION.

THE Report of the League Commission of Enquiry into the events in Manchuria was signed in Peiping (Pekin) on September 4, 1932, and published at Geneva on October 2nd under the title of “ Appeal by the Chinese Government. Report of the Commission of Enquiry.” This Commission was set up by the League of Nations as a result of the discussions that took place in the Council following on the appeal made to that body on September 21, 1931, by the Chinese Government. The Chinese delegate made the appeal, on behalf of his Government, under Article 11 of the League Covenant,* and during the discussions expressed the view that “ the best method that may be devised by the Council for securing the prompt and complete withdrawal of the Japanese troops and police (from Manchuria) and the full re-establishment of the *status quo ante* is the sending of a neutral commission to Manchuria.” No definite action in this regard was decided upon during the Council sessions in October and November, 1931, but on November 21 the Japanese representative proposed that a commission of enquiry should be sent to the scene of the trouble, and on December 10th a resolution was adopted unanimously which included provision for the appointment and despatch to Manchuria of a commission of five members, “ to study on the spot and to report to the Council on any circumstance which, affecting international relations, threatens to disturb peace between China and Japan, or the good understanding between them upon which peace depends.”

The Governments of China and Japan were each to have the right to nominate one assessor to assist the Commission, and the resolution added, “ it is understood that, should the two parties initiate any negotiations, these would not fall within the scope of the terms of reference of the Commission, nor would it be within the competence of the Commission to interfere with the military arrangements of either Party.”

In introducing the resolution the President of the Council, M. Briand, made a declaration in which he pointed out that one of the principal objects of its adoption was “ to facilitate the final solution of existing causes of dispute between the two countries.” In pursuance of this the Commission was to be set up, and as to its terms of reference he then made the following statement:—

“ Subject to its purely advisory character, the terms of reference of the Commission are wide. In principle, no question which it feels called upon to study will be excluded, provided that the question relates to any circumstances which, affecting

international relations, threaten to disturb peace between China and Japan. . . . Each of the two Governments will have the right to request the Commission to consider any question the examination of which it particularly desires. The Commission will have full discretion to determine the questions upon which it will report to the Council. . . .”

In conclusion, M. Briand drew attention to the fact that the provision under which the Commission was not empowered to interfere with the military arrangements of either Party did not limit in any way its faculty of investigation.

Both the Chinese and Japanese delegations made reservations when accepting the resolution, but the former only was of importance. The Chinese delegate wished it to be placed on record that “ China must and does fully reserve any and all rights, remedies and juridical positions to which she is or may be entitled under and by virtue of all the provisions of the Covenant, under all the existing treaties to which China is a party, and under the accepted principles of international law and practice.” A number of other observations were made, such as that China in no way receded from the position she had always taken up with respect to the maintenance of military forces in the railway zone in Manchuria, and the statement concluded with a final reservation that—

“ China would regard any attempt by Japan to bring about complications of a political character affecting China's territorial or administrative integrity (such as promoting so-called independence movements or utilising disorderly elements for such purposes) as an obvious violation of the undertaking to avoid any further aggravation of the situation.”†

The members of the Commission were subsequently selected by the President of the Council, and, after the approval of the two parties had been obtained, the membership was finally approved by the Council on January 14, 1932, as follows:—

H. E. Count Aldrovandi (Italian), General Henri Claudel (French), the Right Hon. the Earl of Lytton (British), Major-General Frank McCoy (American), and H. E. Dr. Heinrich Schnee (German).

At the first meeting of the Commission, on January 21st, Lord Lytton was unanimously elected Chairman, and subsequently the Governments of China and Japan appointed as their respective Assessors H. E. Dr. Wellington Koo and H. E. Mr. Isaburo Yoshida.

The European members sailed from Le Havre and Plymouth on February 3rd, and were joined by General McCoy in New York on February 9th. The Commission

† This undertaking had been given by both the Chinese and Japanese Governments by the Resolution passed by the Council on September 30, 1931.

* Article 11 declares that any war or threat of war is a matter of concern to the whole League, which “ shall take any action that may be deemed wise and effectual to safeguard the peace of nations.”

proceeded to Japan first, reaching Tokyo at the end of February.

Meanwhile, however, the developments in Manchuria had caused the Chinese Government, on January 29th, to submit a further appeal to the League under Articles 10, 11 and 15 of the Covenant. But since no further instructions were received from the Council the Commission continued to interpret its mandate according to the Resolution of December 10th. The programme of its work was, therefore, determined by the following conception of its mission:—

(1) An examination of the issues between China and Japan which were referred to the Council, including their causes, development and status at the time of the inquiry;

(2) A consideration of a possible solution of the Sino-Japanese dispute which would reconcile the fundamental interests of the two countries.

Before reaching Manchuria contact was accordingly established with the Governments of Japan and China and with representatives of various shades of opinion, in order to ascertain the nature of the interests of the two countries. The Commission reached Tokyo on February 29th, where it was received in audience by His Majesty the Emperor. Conferences were also held with the Prime Minister and other Ministers, as well as with many representatives of private interests. After visits to Osaka and Kobe the Commission left for Shanghai, arriving there on March 14th, and remaining for two weeks. It then proceeded to Nanking, where it was received by the President of the National Government, and where interviews were held with the President of the Executive Yuan, the Foreign Minister and other officials and military commanders. Hankow was also visited, and on April 9th the Commission arrived in Peiping, where several conferences were held with Marshal Chang Hsueh-liang.

On proceeding to Manchuria, the Commission divided into two groups, some of the party travelling to Mukden by rail and the remainder by sea via Dairen. The whole party remained in the country about six weeks, visiting Mukden, Changchun, Harbin, Kirin, Port Arthur, Anshan, Fushun and Chinchow, while some of the members also visited Tsitsihar, which they reached by air owing to the unsettled conditions on that section of the railway.

Numerous conferences were held with the Japanese military and consular authorities, and at Changchun the

Commission met the "Chief Executive" of Manchukuo, the former Emperor Hsuan Tung, now known by his personal name of Henry Pu Yi. Delegations were also received from the local population, and, in addition to the public meetings, the members of the Commission were able to arrange interviews with a great number of individuals, both Chinese and foreign.

The Commission returned to Peiping on June 5th, where further conferences were held with Chinese Ministers, and on June 28th it left for Tokyo, via Korea. Here again conferences were held with the leading Ministers of the new Government, which had succeeded to power since the Commission's previous visit, and the members then left again for Peiping to begin the drafting of their Report.

In the course of its travels, the Commission was presented with a great quantity of printed pamphlets, petitions, appeals and letters. In Manchuria alone 1,550 letters in Chinese and 400 in Russian were received, without mentioning those written in English, French or Japanese.

Aims of the Commission.

The Commission's conception of its mission, which determined the programme of its work and itinerary, has equally guided the plan of its Report. To quote the latter's words:—

"First we have tried to provide an historical background by describing the rights and interests of the two countries in Manchuria, which provide the fundamental causes of the dispute; the more recent specific issues which immediately preceded the actual outbreak were then examined, and the course of events since September 18, 1931, described. Throughout this review of the issues we have insisted less on the responsibility for past actions than on the necessity of finding means to avoid their repetition in the future.

"Finally, the Report concludes with some reflections and considerations which we have desired to submit to the Council upon the various issues with which it is confronted, and with some suggestions on the lines on which it seemed to us possible to effect a durable solution of the conflict and the re-establishment of a good understanding between China and Japan."

CHAPTER I.

OUTLINE OF RECENT DEVELOPMENTS IN CHINA.

The Report points out that a knowledge of antecedent conditions is necessary to a complete understanding of the conflict which began with the events of September, 1931, and the Commission, therefore, found it necessary to extend its study of the issues beyond the limits of Manchuria itself and to consider in their widest aspect all the factors which determine present Sino-Japanese relations. Situated as it is between the territories of Japan and Russia, Manchuria has become politically a centre of conflict, and wars between all three countries have been fought upon its soil. The country is, in fact, the meeting-ground of conflicting needs and policies, which themselves require investigation before the concrete facts of the present conflict can be fully appreciated, so the Report begins by reviewing these essential factors *seriatim*.

It points out, first, that the dominating factor in China is the modernisation of the nation itself which is slowly taking place.

"China to-day is a nation in evolution, showing evidence of transition in all aspects of its national life. Political upheavals, civil wars, social and economic unrest, with the resulting weakness of the Central Government, have been the characteristics of China since the revolution of 1911. Those conditions have adversely affected all the nations with which China has been brought into contact and, until remedied, will continue a menace to world peace and a contributory cause of world economic depression."

A brief summary is then given of the stages in the recent history of China by which the present conditions have been reached. The first event was the ending of the period of isolation with the opening of certain ports to foreign trade in 1842. But this was done reluctantly; China was unwilling to follow the example of Japan and learn from the West. On the contrary, she wished to preserve her culture and exclude foreign influence. Her reluctance to receive foreigners and her attitude towards those who were in the country were bound to have serious consequences. They concentrated the attention of her rulers on resistance to foreign influence and prevented her from profiting by the experience of more modern conditions in the foreign settlements. As a result, the constructive reform necessary to enable the country to cope with the new conditions was almost completely neglected.

This is brought out clearly in the account given of the territorial losses incurred from the conflicts with foreign Powers, the Boxer rising, and the fall in 1911 of the Manchu dynasty. Reference is made to the differences between the political tendencies in the North and in the South. Military dictatorships flourished in the North, but the people of South China have always been averse to autocracy and official interference from outside. Matters came to a head with the revolt of the Kuomintang, a Nationalist Party under Sun Yat Sen, against Yuan

Shi-kai in 1913. The succeeding years were characterised by two attempts to establish monarchical rule, many changes of Presidents and Cabinets, continuous shifting of allegiance among military leaders, and many declarations of temporary independence of one or more provinces and, in the words of the Report, "during these years China was ravaged by warring factions; and the ever-present bandits grew into veritable armies by the enlistment of ruined farmers, desperate inhabitants of famine-stricken districts, or unpaid soldiers."

In Canton, however, the Kuomintang Government succeeded in maintaining itself from 1917 onwards, though not always functioning in much more than name. In 1923 Sun Yat Sen reorganised it, with a definite programme, strict party discipline, and systematic propaganda on the Russian model. An efficient army was also created with the help of Russian officers, and "thus equipped, the Kuomintang was soon ready to establish contact with the people at large. . . . This preliminary conquest of the people's mind was, after the death of Dr. Sun in 1925, followed up by the successful Northern Expedition of the Kuomintang army, which, by the end of 1928, succeeded in producing a nominal unity for the first time in many years, and a measure of actual unity which lasted for a time. The first, or military, phase of Dr. Sun's programme had thus been brought to a successful end. The second period of political tutelage . . . could begin. It was to be devoted to the education of the people in the art of self-government and to the reconstruction of the country."

The Nanking Government.

A Central Government was established in Nanking in 1927, but its authority was soon challenged from within. In fact, it out and weakened by dissensions within. In fact, it repeatedly had to fight for its very existence, if not against revolting generals with personal armies then against the menace of Communism. Powerful war lords concluded alliances among themselves and marched their forces against Nanking. Though they never succeeded in their object, they remained, even after defeat, potential forces to be reckoned with. Moreover, they never took the position that war against the Central Government was an act of rebellion. "It was in their eyes," the Commission remarks, "simply a struggle for supremacy between their faction and another one which happened to reside in the national capital and to be recognised as the Central Government by foreign Powers." And the Report concludes this part of the historical outline with the following words:—

"From this summary description it appears that disruptive forces in China are still powerful. The cause of this lack of cohesion is the tendency of the mass of the people to think in terms of family and locality, rather than in terms of the nation, except in periods of acute tension between their own country and foreign Powers. Although there are, nowadays, a number of leaders who have risen above particularist sentiments, it is evident that a national outlook must be attained by a far greater number of citizens before real national unity can result."

The Commission next turns its attention to the argument which, as it states, "constantly reappears in the polemics of the present controversy," that China is "not an organised State," or "is in a condition of complete chaos and incredible anarchy," and that her condition should disqualify her from membership of the League of Nations.

"In this connection," remarks the Report, "it may be useful to remember that an altogether different attitude was taken at the time of the Washington Conference by all the participating Powers. Yet, even at that time, China had two completely separate Governments, one at Peking and one at Canton, and was disturbed by large bandit forces which frequently interfered with communications in the interior, while preparations were being made for a civil war involving all China. As a result of this war, which was preceded by an ultimatum sent to the Central Government on January 13, 1922, when the Washington Conference was still in session, the Central Government was overthrown in May, and the independence of Manchuria from the Government installed at Peking in its place was declared in July by Marshal Chang Tso-lin. Thus, there existed no fewer

than three Governments professing to be independent, not to mention the virtually autonomous status of a number of provinces or parts of provinces. Although, at present, the Central Government's authority is still weak in a number of provinces, the central authority is not, at least openly, repudiated, and there is reason to hope that, if the Central Government as such can be maintained, provincial administration, military forces and finance will acquire an increasingly national character."

The efforts of the present Government towards reconstruction are outlined and attention is called to the fact that these have been seriously handicapped by the increase in domestic indebtedness caused by the recurrent civil wars. Some of the characteristics of present-day nationalism are also not calculated to help the country to work out its problems. The influence of the Kuomintang has introduced into the national sentiment "an additional and abnormal tinge of bitterness against all foreign influences, and has expanded its aims so as to include the liberation of all Asiatic people still subject to 'imperialistic oppression.' . . . Chinese nationalism to-day is also permeated by memories of former greatness, which it desires to revive. It demands the return of leased territories, of administrative and other not purely commercial rights exercised by a foreign agency in railway areas, of administrative rights in concessions and settlements, and of extra-territorial rights which imply that foreigners are not amenable to Chinese laws, law courts and taxation. Public opinion is strongly opposed to the continuance of these rights, which are regarded as a national humiliation."

The attitude of foreign Powers to these desires has been sympathetic, and at the Washington Conference they were admitted to be acceptable in principle, and the Commission points out that, having started upon the road of international co-operation for the purpose of solving her difficulties (as was done at Washington) China might have made more substantial progress in the ten years that have since elapsed had she continued to follow that road. "She has only been hampered by the virulence of the anti-foreign propaganda which has been pursued. In two particulars has this been carried so far as to contribute to the creation of the atmosphere in which the present conflict arose—namely, the use made of the economic boycott and the introduction of anti-foreign propaganda into the schools." A perusal of the school text-books, says the Report, leaves the impression on the mind of a reader that their authors have sought to kindle patriotism with the flame of hatred and to build up manliness upon a sense of injury. One result is that the students have been induced to engage in political activities which sometimes have culminated in attacks on the persons of Ministers and other authorities, and in attempts to overthrow the Government.

The Communist Factor.

The Commission recognises, however, the difficulty of the problem of maintaining law and order, and enumerates as the chief obstacles the lack of means of communication, the prevalence of banditry, the existence of numerous armies owing personal allegiance only to the local commanders, and finally, the hold which Communism has now secured on large parts of the country. The origin of the Communist movement is outlined, and it is shown that it was officially tolerated by the Government for three or four years after the formal admission of Communists into the Kuomintang Party in 1924. At one moment, in fact, the Nationalist Revolution was almost on the point of being transformed into a Communist Revolution.

This was in 1927, but when the National Government had established itself firmly in Nanking in April of that year the leaders decided that Communism had become too serious a menace to be tolerated any longer. Communist members were accordingly excluded from the Kuomintang, and the Soviet advisers ordered to leave the country. Communist risings occurred in various parts of the country, however, and the Central Government was never strong enough or sufficiently united to obtain anything more than temporary successes against them. In the period 1928-1931 extensive areas of Kiangsi and Fukien were sovietised, and the efforts of the Nanking authorities, acting through Chiang Kai-shek as Commander-in-Chief,

to inflict a final defeat on the main Red armies were rendered nugatory by the recrudescence of civil war in the North and the events of September 1931 in Manchuria.

The Communist zones of influence are now understood to cover a large part of China south of the Yangtze and parts of the provinces of Hupeh, Anhwei and Kiangsu north of that river. The methods employed by the Communists are dealt with at some length in the Report, and the special character of Communism in China is described, because the conditions brought about by its existence in so large a part of the country have a marked effect on the relations between China and Japan. To quote the Report:

"So far as Japan is China's nearest neighbour and largest customer, she has suffered more than any other Power from the lawless conditions described in this chapter. Over two-thirds of the foreign residents in China are Japanese, and the number of Koreans in Manchuria is estimated at about 800,000. She has more nationals, therefore, than any other Power, who would suffer if they were made amenable to Chinese law, justice and taxation under present conditions."

CHAPTER II.

MANCHURIA'S RELATIONS WITH CHINA AND RUSSIA.

This chapter consists of a description of Manchuria and an outline of the relations of that country with the rest of China and with Russia. The importance of the rôle played by it in the solution of the surplus population problems of both China and Japan is emphasised, and it is pointed out that "without Japan's activity Manchuria could not have attracted and absorbed such a large population. Without the influx of Chinese farmers and labourers, Manchuria could not have developed so rapidly, providing Japan thereby with a market and with supplies of food, fertilisers, and raw materials." Manchuria has long been a coveted region, first on account of its strategic advantages, and subsequently owing to its agricultural and mineral resources. Strategic considerations have remained paramount, but the extensive economic interests resulting from the active part taken by Russia and Japan in the development of the country have "found an ever-increasing insistence in the foreign policy of these two countries." Meanwhile, however, the future possession of the land was settled by the immigration of millions of Chinese farmers who took root in the soil, so that "Manchuria is now unalterably Chinese." Of a population of about 30 millions, 28 millions are said to be Chinese or assimilated Manchus. The 280,000 Japanese residents are mainly concentrated in the railway area and the Kwantung Leased Territory, and are mostly engaged in industry or business of some kind. Finally, the area of the country is equal to that of France and Germany together, and of this, so far, only between 12 and 13 per cent. has been brought under cultivation. The production of the more valuable crops has doubled in 15 years, and the mining industry, already very important, may be expected to develop rapidly if economic conditions improve, since the mountainous regions are rich in minerals, especially coal and iron.

The Reign of Chang Tso-lin.

The Report next gives an outline of the early history, ending in the fall of the Manchu Dynasty, and of the events which succeeded this upheaval. An interesting sketch is given of the career of Chang Tso-lin, who severed his allegiance to the Central Government at Peking, twice invaded China, and at one time was virtual ruler of the whole country as far south as Shanghai. The Commission points out, however, that—

"The independence declared by Marshal Chang Tso-lin at different times never meant that he or the people of Manchuria wished to be separated from China. His armies did not invade China as if it were a foreign country, but merely as participants in the civil war. Like the war lords of any other province, Marshal alternately supported, attacked or declared his territory independent of the Central Government, but never in such a way as to involve the partition of China into separate States. On the contrary, most Chinese civil wars were directly or in-

To close this chapter the Commission draws attention to the interest of foreign Powers in the problems of Chinese reconstruction, and it is suggested that international co-operation offers the best hope of their solution. "The realisation of China's national aspirations," it is pointed out, "depends on her ability to discharge the functions of a modern Government in the sphere of domestic affairs," and the acceptance of foreign assistance offers the best means for her to acquire this ability. The present extreme case of international friction having forced China to seek the intervention of the League of Nations should, if a satisfactory settlement can be effected, convince her of the advantages of the policy of international co-operation, and in the Commission's view, "such a policy would make it easier for foreign Powers to give what support the Central Government may seek, and to help in the removal as rapidly and as effectively as possible of any causes of friction which may endanger her peaceful relations with the rest of the world."

directly connected with some ambitious scheme to unify the country under a really strong Government. Through all its wars and periods of 'independence,' therefore, Manchuria remained an integral part of China."

In the last years of his life Chang Tso-lin showed increasing unwillingness to allow Japan to profit by the privileges she derived from various treaties and agreements, and he also made repeated assaults on the position of the Chinese Eastern Railway. When, in 1928, he was succeeded by his son, Chang Hsueh-liang, the action of the latter in declaring allegiance to the Central Government in Nanking led to an intensification of the feeling against Japan and, in fact, against all foreign influence. Anti-Japanese agitation was officially encouraged and associations were formed to conduct propaganda for the recovery of lost sovereign rights, "the abolition of unequal treaties and the wickedness of imperialism." Pressure was brought to bear on Chinese property owners to raise the rents of Japanese and Korean tenants or to refuse the renewal of rent contracts. Korean settlers were subjected to systematic persecution, and various orders and instructions of an anti-Japanese nature were issued. Party propagandists from China came North in increasing numbers, and in April, 1931, a five days' conference under the auspices of the People's Foreign Policy Association was held in Mukden, with over 300 delegates from various parts of Manchuria in attendance. The possibility of liquidating the Japanese position in Manchuria was discussed, the recovery of the South Manchuria Railway being included in the resolutions adopted.

Relations with Nanking.

As far as the administration of the country was concerned, the union with China proper affected the position of Chang Hsueh-liang hardly at all since, "as regards domestic affairs, the Manchurian authorities had retained all the power they wanted, and they had no objection to following administrative rules and methods adopted by the Central Government so long as the essentials of power were not affected." Manchuria was preserved as a separate administrative unit, and without this concession the Manchurian authorities realised that, as before, their power derived much more from their armies than from Nanking.

"This fact," says the Report, "explains the maintenance of large standing armies numbering about 250,000 men, and of the huge arsenal on which more than \$200 millions (silver) are reported to have been spent. Military expenses are estimated to have amounted to 80 per cent. of the total expenditure. The remainder was not sufficient to provide for the costs of administration, police, justice and education. . . . As all power rested in the hands of a few military men, office could be owned

only through them. Nepotism, corruption and maladministration continued to be unavoidable consequences of this state of affairs. The Commission found grave complaints concerning this maladministration to be widely current."

The Report then gives some particulars of the expedients resorted to by Chang Hsueh-liang to raise revenue, such as the depreciation of the irredeemable provincial currencies, and the control of the market in beans. The "official bean-buying" operations had, by 1930, assumed monopolistic proportions, enabling the authorities to exact high prices from the buyers, particularly the Japanese. Officials likewise engaged freely in all sorts of private enterprise, and used their position to gather wealth for themselves and their favourites.

In spite of this, however, during the administrations of Chang Tso-lin and Chang Hsueh-liang the Chinese population and Chinese interests played a much greater part than formerly in the development of the economic resources of the country. The extensive settlement of Chinese immigrants helped to develop the commercial relations between Manchuria and the rest of China, and it was during this period that Chinese railways were built independently of Japanese capital. Chinese banks were established in the leading towns and Chinese interests were engaged in many departments of industry. Thus,

"During the period preceding the conflict between Manchuria and Japan both the political and economic ties between Manchuria and the rest of China were gradually strengthened. This growing inter-dependence contributed to induce Chinese leaders, both in Manchuria and in Nanking, to pursue an increasingly nationalist policy directed against the interests and rights acquired by Russia or Japan."

The Interests of Russia.

How these Russian rights were acquired is described briefly but lucidly in an account of the events following the Sino-Japanese war of 1894-95 and of the developments in connection with the construction of the Chinese Eastern Railway. It is shown how Russia's intervention in the relations between China and Japan was instrumental in hardening the attitude of Japan, from the time when the latter country discovered that, by a secret treaty in 1896, the Chinese Government had undertaken to allow Russia to construct a railway across Manchuria and, two years later, to continue this railway to Port Arthur and Dairen and to lease the Liaotung Peninsula which Japan had been compelled to hand back to China.

Not only did Japan thus see the fruits of her victory in the war of 1894-95 taken from her, only to be given to her powerful rival, but she saw that rival extend her influence over the whole of Manchuria so that, after the Boxer rising of 1900, which was made the pretext for intervention, Russian troops occupied all the important strategic points in Manchuria, and in 1902 appeared at the mouth of the Yalu River. This meant that she had designs on Korea, and it was to preserve the independence of that country (or, more properly, to prevent its seizure by Russia) that Japan had fought China in 1894. Negotiations with Russia convinced Japan that the policy pursued by the former would continue to be a menace to her interests, if not to her very existence, and, feeling more secure owing to the conclusion of the alliance with Great Britain, she accordingly declared war. Her victory in 1905 gave her the opportunity of securing a footing afresh in South Manchuria, and this she took by compelling Russia to transfer to her the leased territory and all rights connected with it, and the railway between Port Arthur and Changchun (the junction with the Chinese Eastern Railway). Both Japan and Russia agreed to restore to the administration

of China all portions of Manchuria occupied by their respective troops, with the exception of the leased territory. And both reserved the right to maintain (under certain specified conditions) guards to protect their respective railway lines, the number of such guards not to exceed 15 per kilometre.

The Chinese Eastern Railway.

The next phase in the relations with Russia in Manchuria was characterised by the attempt of the Chinese to deprive the Russians of the rights and interests they enjoyed in the administration of the Chinese Eastern Railway and, in fact, to liquidate the Russian sphere in Northern Manchuria. During the five years after the Bolshevik revolution China revoked all the privileges granted to Russia in 1896; the Russian armed forces in the railway area were disarmed and replaced by Chinese soldiers, the extra-territorial status of Russians was abolished, the courts were forcibly entered and closed, and Russians were made amenable to Chinese laws, justice and taxation. In 1919 and 1920 the Soviet Government made declarations of policy which implied a complete relinquishment of the rights the Tsar's Government had acquired in China, and in accordance with this policy it agreed, in 1924, to a regularisation of the existing position by a new treaty. By the terms of this the Chinese Eastern Railway became a purely commercial concern, under joint management, in which China also acquired a financial interest, but the agreement did not inaugurate a period of friendly relations between the Soviet Government and the administration of Chang Tso-lin. On the contrary, the Chinese adopted a definitely aggressive policy which culminated, after several incidents and at least one ultimatum from the U.S.S.R., in the attempt to seize the railway in 1929. The attack started with a raid on the Soviet Consulates at various places by the Chinese police, who made many arrests and claimed to have found evidence proving that a Communist revolution was being plotted by employees of the Soviet and of the Chinese Eastern Railway. Many Soviet organisations and enterprises were forcibly closed down, and finally the Soviet manager of the railway was requested to hand over the management to a Chinese appointee. After many Soviet citizens had been arrested the Government in Moscow decided to take action. Raids by Soviet troops across the Manchurian border began and developed into a military invasion in November, 1929. After having suffered defeat and severe loss of prestige, the Manchurian authorities were forced to accept the demands of the U.S.S.R. In December a Protocol was signed whereby the status quo was re-established.

Effects of Soviet Policy.

In closing this chapter the Commission draws attention to the fact that the liberal policy of the Soviet Government towards China gave a strong impetus to that country's nationalistic aspirations, and the Chinese began to count upon its support in their struggle for the recovery of sovereign rights.

"This development," says the Report, "revived all the old anxieties and suspicions of Japan towards her Russian neighbour . . . the possibility of a danger from across the North Manchurian border again became a matter of concern to Japan. The likelihood of an alliance between the Communist doctrines in the North and the anti-Japanese propaganda of the Kuomintang in the South made the desire to impose between the two a Manchuria which should be free from both increasingly felt in Japan. Japanese misgivings have been still further increased in the last few years by the predominant influence acquired by the U.S.S.R. in Outer Mongolia and the growth of Communism in China."

CHAPTER III.

MANCHURIAN ISSUES BETWEEN JAPAN AND CHINA.

The Commission examined with especial care the issues between China and Japan with respect to Manchuria prior to the events of September, 1931. The conclusion from this examination is that, so exceptional were the rights acquired by Japan that a conflict between the two countries was a natural result. By the Treaty of 1905 Japan acquired the Kwantung Leased Territory and the

South Manchuria Railway; by an agreement in 1906 the latter railway was empowered to take over the line from Mukden to Antung, on the Korean frontier, and in 1915, as a result of the "Twenty-One Demands," the lease of the Kwantung Territory and the concessions for both the railways were extended to 99 years. Furthermore, the railways subjects in South Manchuria acquired the right

to travel and reside, to engage in business, and to lease land necessary for trade, industry and agriculture. Japan also obtained rights of priority for railway and certain other loans in South Manchuria and Eastern Inner Mongolia, and preferential rights regarding the appointment of advisers in South Manchuria. At the Washington Conference, however, Japan relinquished her rights regarding the loans and the advisers. Her position at the time the recent trouble began is summed up in the following words:

"These treaties and other agreements gave to Japan an important and unusual position in Manchuria. She governed the Leased Territory with practically full rights of sovereignty. Through the South Manchuria Railway she administered the railway areas, including several towns and large sections of such populous cities as Mukden and Changchun, and in these areas she controlled the police, taxation, education and public utilities. She maintained armed forces in many parts of the country: the Kwantung army in the Leased Territory, railway guards in the railway areas, and Consular police throughout the various districts. . . . There is probably nowhere in the world an exact parallel to this situation, no example of a country enjoying in the territory of a neighbouring State such extensive economic and administrative privileges. . . ."

The Report then refers to the attitude towards Manchuria of both the Chinese and the Japanese nations, to show that there is a conflict between their fundamental interests in that country. The Chinese, for example, regard it as their first line of defence, a sort of buffer against the adjoining territories of Russia and Japan, while the facility with which China proper can be invaded from Manchuria has been demonstrated to them from historical experience. They also regard it as important for economic reasons; for decades they have called it the "granary of China," and more recently have looked to it as a region furnishing seasonal employment to Chinese farmers and labourers from neighbouring provinces. They deny the statement that the Japanese are principally responsible for the economic development of the country, and point to their own colonisation enterprises, especially since 1925, to their railway development, and other enterprises, in refutation of these claims.

Manchuria's Strategic Importance.

To the Japanese, Manchuria is the scene of their war against Russia, a life-and-death struggle fought in self-defence against the menace of Russian occupation of Korea and of the whole Manchurian coast, and the country is often described as the "life-line" of Japan. But, as the Commission points out,

"Japanese interest in Manchuria, however, began ten years before that war. The war with China, in 1894-95, principally over Korea, was largely fought at Port Arthur and on the plains of Manchuria; and the Treaty of Peace signed at Shimonoseki ceded to Japan in full sovereignty the Liaotung Peninsula. To the Japanese, the fact that Russia, France and Germany forced them to renounce this cession does not affect their conviction that Japan obtained this part of Manchuria as the result of a successful war, and thereby acquired a moral right to it which still exists. . . . Patriotic sentiment, the paramount need for military defence, and the exceptional treaty rights all combine to create the claim to a 'special position' in Manchuria. The Japanese conception of this special position is not limited to what is legally defined in treaties and agreements either with China or with other States. Feelings and historical association, which are the heritage of the Russo-Japanese War, and pride in the achievements of Japanese enterprise in Manchuria for the last quarter-century, are an indefinable but real part of the Japanese claim to a 'special position.' It is only natural, therefore, that the Japanese use of this expression in diplomatic language should be obscure, and that other States should have found it difficult, if not impossible, to recognise it by international instruments."

By the Nine-Power Treaty of 1922 the signatories not only undertook to respect the sovereignty and territorial integrity of China, but promised to refrain from taking advantage of conditions in that country to seek special rights and privileges there, but Japan has never admitted that these privileges depend for their validity upon any international agreement. Viscount Ishii voiced the sentiments of all Japanese when he stated, in his Memoirs, that "Even if the Lansing-Ishii agreement* is abolished, Japan's special interests unshakably exist there. The

* By this agreement, arrived at in 1917, the U.S. Government recognised that Japan had "special interests" in China.

special interests which Japan possesses in China neither were created by an international agreement, nor can they become the objects of abolition."

Aims of Japanese Policy.

The Commission next gives an outline of Japan's policy towards Manchuria during the past twenty-five years, showing that the successive Governments in Tokyo have had the same general aims, but have differed as to the manner in which those aims should be pursued. But there was one cardinal feature common to all the policies followed, and this was the tendency to regard Manchuria as distinct from China proper. Reference is then made to the alternation of a so-called "friendship policy" and a "positive policy" adopted by the Japanese Cabinets since 1922 and generally identified with the names of Baron Shidehara and General Baron Tanaka respectively, and the Report states that:—

"The Japanese Government has generally pursued a firmer policy in Manchuria than elsewhere in China, in order to preserve and develop those vested interests which are peculiar to that region. . . . the Washington Conference, although it had a marked effect on the situation in the rest of China, made little actual change in Manchuria. The Nine-Power Treaty . . . has had but qualified application to Manchuria in view of the character and extent of Japan's vested interests there, although textually the Treaty is applicable to that region. . . . it did not materially diminish the claims based on these vested interests. . . ."

Japan's relations with Chang Tso-lin were, on the whole, "reasonably satisfactory from her point of view" until, in 1928, the latter's adventures in China proper involved Manchuria in the war between the Peking and Nanking Governments. Japan was determined that the fighting should not extend to Manchuria, and when it seemed possible that the Nationalist armies might carry the war north of the Great Wall the Japanese Government sent a communication to the leading Chinese Generals warning them that should disturbances develop further and the situation become so menacing as to threaten the peace of Manchuria, Japan "may possibly be constrained to take appropriate effective steps for the maintenance of peace and order in Manchuria."

Japan's relations with Chang Hsueh-liang were increasingly strained from the outset. She wished Manchuria to remain separate from the newly-established National Government at Nanking, but when the latter's flag was hoisted at Mukden in December, 1928, she made no attempt to interfere.

The Japanese-owned Railways.

Manchurian international politics are largely railway politics, and the Report next deals with the disputes which have arisen in connection with the South Manchuria Railway and the building of parallel lines. Railway construction began with the Russian-financed Chinese Eastern Railway which, after the Russo-Japanese war, was replaced in the South by a Japanese-controlled system, the South Manchuria Railway, thus making inevitable future rivalry between China and Japan. The South Manchuria Railway is, in fact, a Japanese Government enterprise, and its political character has led to a number of complications in connection with the part it plays in the country's economic life. The policy of the Railway Company has always been to finance the construction of only such Chinese lines as would be connected with its own system, and thus, by means of through-traffic agreements, to divert the major part of the freight to the South Manchuria system for seaboard export at Dairen in the Leased Territory. The very existence of such a foreign-controlled institution as the railway was looked upon with disfavour by the Chinese, who, as they became alive to the importance of railway development, sought to open up new territory with their own lines independently of Japanese assistance or of the Japanese system. Hence arose the dispute over "parallel lines" which led to much bitterness of feeling, and the Commission accordingly took special pains to obtain information on the essential facts. They satisfied themselves that the undertaking by the Chinese not to construct "parallel lines," consistently maintained by the Japanese, was not contained in any Treaty between the two countries, but was based entirely

on a note made in the minutes of the eleventh day of the Peking Conference, on December 4, 1905, reading—

"The Chinese Government engages, for the purpose of protecting the interests of the South Manchuria Railway, not to construct, prior to the recovery by it of the said railway, any main line in the neighbourhood of and parallel to that railway, or any branch line which might be prejudicial to the interests of the above-mentioned railway."

The "Parallel Lines" Issue.

The real question at issue, therefore, is "whether this entry in the Conference minutes is a binding commitment on the part of China, having the force of a formal agreement, and without limitations as to the period or circumstances of its application." This is a matter, say the stances of its application. This is a matter, say the Commission, for judgment by an impartial judicial tribunal and, meanwhile, the Report notes that the Chinese and Japanese translations of the entry in the minutes leave no doubt that the passage referred to was a declaration or statement of intention on the part of the Chinese plenipotentiaries. This is not disputed by the Chinese, but there are serious differences of view as to the interpretation to be placed on the statement. Japan has claimed that the words used precluded China from building any railway which, in the opinion of the South Manchuria Railway, was in competition with its system. The Chinese contend that the only commitment was a statement of intention not to build lines with the deliberate object of impairing the commercial value and usefulness of the Japanese line. There has never been a definition as to what would constitute a parallel railway, although the Chinese desired one; it may be noted, however, that in 1926 the Japanese Government protested against the construction of the Tabushan-Tungliao Railway as a "competitive parallel line," pointing out that the distance between the proposed railway and the South Manchuria Railway would be "no more than 70 miles on the average." The same difficulty exists as to the definition of a main line, and no agreement on the subject has ever been arrived at.

The Japanese Loans.

A second group of railway issues were those which arose from the agreement by which Japan advanced funds for the construction of certain Chinese Government lines in Manchuria. The Japanese complain that about 150 million yen has been expended in loans to enable the Chinese to build the Kirin-Changchun, Kirin-Tunhua and other railways and that none of this money has been repaid. In defence of their attitude, the Chinese maintain that these were not normal financial transactions, but that the loans were made largely by the South Manchuria Railway in order to monopolise railway construction in South Manchuria. As a matter of fact, as long as these new Chinese lines functioned as feeders to the South Manchuria system, the Japanese made no special efforts to force repayment of the loans, but when certain of these lines were connected with a new Chinese railway system running more or less parallel to the Japanese line and diverting traffic from Dairen to Chinese ports, the non-payment of the loans at once became a subject of complaint. And yet another consideration is introduced by the fact that many of these loans were made for political reasons, being advanced to the military Government of the "Anfu clique" without any restriction as to the purpose for which they might be used. These were the so-called "Nishihara loans," which have always been suspect with the Chinese people, but which, in spite of this, have never been repudiated by the Chinese Government.

Disputes arose over the construction of a number of lines, and that in connection with the Tunhua-Kwainai railway may be referred to as offering a good illustration of the conflict between Chinese and Japanese interests which was involved. The line from Changchun runs eastward as far as Tunhua, and the Japanese wished it to be continued to the Korean border, where it would connect with a Japanese railway running to a nearby Korean port. In this way it would afford an outlet through Japanese

* These loans were made by Japanese banks in 1917-20 for reconstruction purposes, but were used by the military clique in power in Peking to prosecute the campaign against the South.

territory for the produce of a large area of central and northern Manchuria, and at the same time would open up a region rich in timber and mineral resources. The Japanese claim that China, by an agreement signed on September 4, 1909, had promised to build this line "upon consultation with the Government of Japan," against a definite consideration. And in 1918 the Chinese Government and the Japanese banks signed a preliminary agreement for a loan for the construction of the line, the banks actually advancing 10 millions to the Chinese Government for the purpose. But this was one of the Nishihara loans, and this, in the Chinese view, affected the validity of the agreement. Then followed a series of complications which can best be described in the Commission's own words, and are worth quoting as an example of the difficulties to be contended with in forming a judgment as to the merits of the Chinese or the Japanese case.

"It was alleged that formal, definitive contracts for the construction of this line were signed in Peking in May, 1928, but there was much uncertainty regarding their validity. Such contracts were doubtless signed, under very irregular circumstances, on May 13th-15th by a representative of the Ministry of Communications of the Government at Peking, then under Marshal Chang Tso-lin. But the Chinese contend that the Marshal, who was then hard-pressed by the Nationalist armies and was about to evacuate Peking, gave his consent that this official should sign, under 'a duress of compulsion,' due to threats of the Japanese that, if he should not sanction the contracts, his retreat to Mukden would be endangered. Whether Marshal Chang Tso-lin himself also signed these contracts has been a matter of dispute. After the death of the Marshal, the North-Eastern Political Council at Mukden and Marshal Chang Hsueh-liang both refused to approve the contracts on the ground that they were faulty in form and negotiated under duress and had never been ratified by the Peking Cabinet or the North-Eastern Political Council."

The controversies which arose in connection with through-traffic arrangements on the lines which connected with the Chinese system south of the Great Wall were equally serious, because they, too, involved questions of national policy as well as of commercial rivalry. The Chinese have built a number of railways west of the South Manchuria Railway with the object of bringing the produce of North Manchuria down to Chinese ports. In particular, during the two years preceding the incident of September 1931, they attempted to operate these lines as a great Chinese railway system and made efforts to route all freight, if possible, exclusively over the Chinese-operated lines, with a seaboard exit at the Chinese port of Yingkow (Newchwang) and potentially at Hulutao. As a result, the Chinese made through-traffic arrangements for all parts of their railway system and refused in important sections to make similar traffic arrangements between their lines and the South Manchuria system. The Japanese claimed that this discrimination deprived the latter of much freight from North Manchuria which would normally pass over at least a part of its system and would find an outlet at Dairen. At the same time a bitter war in rates sprang up, and incidentally, each side accused the other of giving secret rebates in favour of their own nationals. These issues were highly technical and involved and the Commission found it difficult to determine the justice of the charges which each side was making. Viewing the many railroad issues as a whole, it is evident, they state, that a number of them were quite capable of settlement by ordinary arbitral or judicial process, but that others were due to intense rivalry between China and Japan which resulted from a deep-seated conflict in national policies.

The Twenty-one Demands.

The Report next deals with the Twenty-one Demands of 1915, and the subsequent Treaties and Notes by which Japan acquired,

(1) The extension of the term of the lease of the Kwantung Leased Territory to 99 years.

(2) The prolongation of the period of Japanese possession of the South Manchurian Railway and the Antung-Mukden Railway to 99 years.

(3) The grant to Japanese subjects of the right to lease land in the interior of South Manchuria, i.e., outside those areas opened by treaty to foreign residence and trade.

(4) The grant to Japanese subjects of the right to travel, reside and conduct business in the interior of South Manchuria and to participate in joint Sino-Japanese agricultural enterprises in Eastern Inner Mongolia.

At the Paris Conference in 1919 China demanded the abrogation of the Treaties of 1915 on the ground that they had been signed "under coercion of a Japanese ultimatum threatening war," and at the Washington Conference the Chinese delegates claimed that they lacked "fundamental validity," because they had been concluded under duress and had been consistently condemned by public opinion in China. The Japanese, on their side, complained of repeated violations of their treaty rights and contended that the Treaties and Notes of 1915 were duly signed and ratified. Associated with these Treaties was the agitation for the recovery of the South Manchuria Railway, or for stripping that institution of its political character in order to reduce it to a purely economic enterprise, but no concrete plan for achieving this end seems to have been proposed by the Chinese. Technically, the railway company is organised under Japanese law as a private joint-stock enterprise; actually it is a Japanese Government agency, the Government controlling a majority of its shares. Moreover, the company has always been charged with broad political administrative functions, including police, taxation and education. The result was that numerous issues arose in regard to the administrative rights of the Japanese within the railway area, especially as to the acquisition of land, the levying of taxes and the maintenance of railway guards.

Disputed Railway Rights.

The right of the railway company to maintain practically complete municipal Governments in the railway area rested legally on a clause in the original Russo-Chinese Agreement of 1896, which gave the railway company "absolute and exclusive right of administration of its lands." Both the Russian and the Japanese Governments interpreted this provision as granting political control of the railway area, but the Chinese have always denied that it was intended to grant such broad administrative rights as control of police and taxation. Frequent controversies resulted on questions of the right to acquire land, which the Chinese contended the Japanese used in order to obtain additional territory, and the right to levy taxes. But the most serious cause of friction was the issue as to the railway guards. Japan based her right to maintain them on the provision in the 1896 Agreement, mentioned above, and on a subsequent agreement which formed an annex to the Treaty of 1905. Russia had maintained the guards and when she transferred her rights to Japan, in 1905, the two countries, as between themselves, reserved the right to maintain the guards "not to exceed fifteen men per kilometre" on their respective railways. But in the subsequent Treaty of Peking between Japan and China the Chinese Government did not give its assent to this particular provision of the Treaty of Portsmouth. China and Japan, however, did include the following provision in Article II. of the Additional Agreement of December 22, 1905, which is an Annex to the Peking Treaty:—

"In view of the earnest desire expressed by the Imperial Chinese Government to have the Japanese and Russian troops and railway guards in Manchuria withdrawn as soon as possible, and in order to meet this desire, the Imperial Japanese Government, in the event of Russia's agreeing to the withdrawal of her railway guards, or in case other proper measures are agreed to between China and Russia, consents to take similar steps accordingly. When tranquillity shall have been re-established in Manchuria and China shall have become herself capable of affording full protection to the lives and property of foreigners, Japan will withdraw her railway guards simultaneously with Russia."

Russia withdrew her guards many years ago, and, by the Agreements of 1924, relinquished her right to keep them. But Japan has consistently held that tranquillity has not been established and that China is not capable of affording protection to foreigners. Recently, in fact, she has appeared inclined to defend her use of these guards less upon treaty rights than upon the grounds of "absolute necessity under the existing state of affairs in Manchuria." China, on the other hand, has all along claimed that the Chinese authorities were able to give adequate protec-

tion to the South Manchuria Railway, as they were doing for the other railways in Manchuria, provided the Japanese guards would permit them to do so. Nor has the Government ever admitted that the stipulation in the Treaty of Peking conferred a legal right on Japan; it was merely declaratory of a *de facto* situation of a provisional character.

Other Causes of Friction.

Similar difficulties arose over the Consular police. The Japanese claimed that the right to maintain them was a corollary to the right of extra-territoriality; that it was merely an extension of the judicial functions of the Consular courts, these police being necessary to protect and discipline Japanese subjects. And, as a practical matter, they apparently believed that their presence in Manchuria was a necessity under the conditions which prevailed there.

The Chinese Government have frequently protested that the stationing of these police, especially in centres like Harbin and Tsitsihar, outside the railway area, was a violation of China's sovereignty and without treaty basis. As the Report concludes, "Whether justified or not, the presence of Consular police led in a number of cases to serious conflicts between members of their force and those of the local Chinese authorities."

The right of the Japanese to reside, travel and conduct commercial enterprises in interior places in South Manchuria was objectionable to the Chinese because in no other part of China were foreigners as a class permitted to reside and to engage in business outside the Treaty Ports. The fact that restrictions were placed upon the residence and business activities of Japanese subjects in the interior of South Manchuria, and that orders were issued by various Chinese officials prohibiting Japanese from residing outside the Treaty Ports or from renewing leases of buildings, was not contested in the documents furnished to the Commission by the Chinese Assessor. "Official pressure, sometimes supported by severe police measures, was exerted upon the Japanese to force them to withdraw from many cities and towns in South Manchuria and Eastern Inner Mongolia, and upon Chinese property owners to prevent them from renting houses to Japanese."

The Chinese Attitude.

The Chinese justified their actions on the ground that they regarded the Treaties of 1915 as without "fundamental validity," and for the same reason they justified the strict regulations made against the purchase of land by the Japanese, their ownership of it in freehold, or their acquisition of a lien through mortgage. A clause in the Treaty of 1915 stated that "Japanese subjects in South Manchuria may, by negotiation, lease land necessary for erecting suitable buildings for trade and manufacture or for prosecuting agricultural enterprises." An exchange of Notes at the time of the Treaty defined the expression "lease by negotiation" to imply, according to the Chinese version, "a long-term lease of not more than thirty years and also the possibility of its unconditional renewal," but the Japanese version simply provided for "leases for a long term up to thirty years and unconditionally renewable." Disputes naturally arose over the question whether the Japanese land leases were, at the sole option of the Japanese, "unconditionally renewable." As regards the legal aspect, the Report says:—

"In making strict regulations against the purchase of land rights, since the Treaty granted only the privilege of leasing land. The Japanese, however, complained that it was not in conformity with the spirit of the Treaty to forbid mortgages upon land. Chinese officials, however, did not accept the validity of the Treaty and consequently put every obstacle in the way of Japanese leasing land, by orders, provincial and punishable under the criminal laws; by imposition of special fees and taxes payable in advance; and by instructions to local officials prohibiting them, under threat of punishment, from approving such transfers to Japanese."

Many attempts to settle these differences by negotiation were made, but without success. This was due to the fact that the controversy arose out of the fundamental conflict between rival State policies, and, as the Commission

remarks, the allegations and counter-statements as to violation of agreements were less consequential in themselves than the underlying objectives of each policy.

The Korean Problem.

The Korean problem is given a section to itself in this chapter. It is a complicated one, because, as in the other major issues, the agreements governing the status of the Koreans are variously interpreted by the two parties. An additional difficulty is introduced by the fact that in the Chientao district, near the Korean frontier, the 400,000 Korean residents outnumber the Chinese by three to one. The Japanese claimed that the Koreans were entitled, as Japanese subjects, to the privileges of land-leasing acquired by Japan by the Treaties of 1915; they also refused to recognise the naturalisation of Koreans as Chinese sub-jects. The use of Japanese consular police to protect the Koreans was resented by the Chinese and led to innumerable clashes between Chinese and Japanese police, and by 1927 these incidents led the Chinese to pursue a policy of restricting the free residence in Manchuria of Koreans of a belief that these settlers had become "a vanguard of Japanese penetration and absorption" of Manchuria.

Actually, there exist no Sino-Japanese agreements which specifically grant or deny the right of Koreans to settle, reside and conduct occupations outside the Treaty Ports, or to lease or otherwise acquire land in Manchuria, except in the Chientao district. Probably, however, over 400,000 Koreans do live in Manchuria outside Chientao, the vast majority being tenant-farmers growing rice under rental contracts, on a crop-division basis with the Chinese landlords.

The Chientao Agreement.

The Chinese deny that the Koreans have the right to purchase or lease land outside Chientao, on the ground that the only Sino-Japanese agreement on the point is the Chientao Agreement of 1909, providing that "the residence of Korean subjects, as heretofore, on agricultural lands lying north of the River Tumen" should be permitted by China. This Agreement, they contend, is in itself a self-contained instrument "purporting to settle, by mutual concessions, local issues then pending between China and Japan in that area." Both countries continued to observe the Agreement after the annexation of Korea by Japan in 1910, and China contended that the Treaty of 1915 could not alter its stipulations, especially as the new Treaty contained a clause specifying that "all existing treaties between China and Japan relating to Manchuria shall, except as otherwise provided for by this Treaty, remain in force."

The Japanese position is that, inasmuch as the Koreans became Japanese subjects by virtue of the annexation of their country, the provisions of the Treaty of 1915 concerning South Manchuria apply equally to the Koreans. The Japanese Government maintained that the Chientao Agreement was superseded by those provisions of the 1915 Agreement in conflict therewith, and that the Chinese agreements in conflict therewith, and that the Chinese contention that the Chientao Agreement is a self-contained instrument is untenable, since the right secured by the Koreans in Chientao was actually in consequence of Japan's agreement to recognise that region as a part of Chinese territory.

A conflict also arose over the problem of dual nationality. A considerable number of Koreans have become naturalised as Chinese, but the Japanese nationality laws have never permitted Koreans to lose their Japanese nationality. The Chinese feared that the Koreans might, by temporarily acquiring Chinese nationality, become potential instruments of a Japanese policy of acquiring agricultural lands, and orders were issued by the Kirin Provincial Government in 1930 to the effect that "when a naturalised Korean purchases land, investigation must be made in order to discover whether he wants to purchase it as a means of residing as a permanently naturalised citizen or on behalf of some Japanese."

An equally serious cause of conflict between the two countries arising from the Korean problem has been the alleged Chinese oppression of the Koreans. The Japanese assert that about the end of 1927 a movement for persecuting Korean immigrants in Manchuria broke out, under

Chinese official instigation, and numerous translations of orders issued by the authorities, both central and local, were submitted to the Commission as evidence of a definite Chinese policy of oppressing the Koreans by forcing them to become naturalised, driving them from their rice-fields, compelling them to re-migrate, subjecting them to arbitrary levies and exorbitant taxation, and inflicting upon them many brutalities. To quote the Report,

"The fact that the Manchurian authorities did issue orders discriminatory against non-naturalised Koreans is not denied by the Chinese, the number and character of these orders and instructions, especially since 1927, establishing beyond a doubt that the Chinese authorities in Manchuria generally regarded the Korean infiltration, in so far as it was accompanied by Japanese jurisdiction, as a menace which deserved to be opposed."

The Wanpaoshan Affair.

For this reason the Commission gave special attention to the Korean problem and obtained all the information possible regarding the Wanpaoshan Affair of July 1, 1931 and the anti-Chinese riots in Korea which broke out two days later. They found that the intrinsic importance of the former was greatly exaggerated; there were no casualties, and the incident was no more serious than several others involving clashes between Chinese and Japanese police which had occurred during the past few years. It was merely a dispute as to the right of some Korean farmers to dig irrigation canals to water a plot of land they had leased from a broker, who had himself leased the land from the Chinese owners under a stipulation that the contract should be null and void in case the District Magistrate refused to approve its terms. He sublet the land, however, without obtaining the magistrate's approval of his original contract, and the result was that when Chinese cultivators of the land nearby (traversed by the canal cut by the Koreans) protested to the Wanpaoshan authorities it was found that the lease was invalid. Attempts at arranging the matter failed, and as the Koreans continued to cut the canal, a party of 400 Chinese farmers drove the Koreans away. The Japanese consular police thereupon opened rifle fire to disperse the mob and protect the Koreans, but there were no casualties.

This was on July 1st, and the serious nature of the incident was only realised when it was seen to what extent it was capable of raising feelings of bitterness in Korea itself. Had the accounts of what occurred not been grossly exaggerated it is doubtful whether the reaction in that country would have taken a serious form, but so sensational were the reports in the Japanese and Korean press that violent attacks were made on Chinese in several towns, resulting in 127 Chinese being murdered and 393 wounded, while damage was done to property to a value of 2,500,000 yen. The Chinese claimed that the Japanese took no adequate steps to prevent the outrages and were slow in taking action to suppress them, while the Japanese contended that they were due to the spontaneous outburst of racial feeling. The Chinese Government protested in Tokyo, charging Japan with full responsibility for failing to suppress the riots, and, as regards Wanpaoshan, negotiations and exchanges of Notes went on for several weeks but only served to show the conflict of views as to the position and rights of the Koreans. When the September incident occurred at Mukden a complete solution of the question had not been reached.

Murder of Captain Nakamura.

The next problem to which the Commission turned its attention was that resulting from the death of Captain Nakamura, viewed by the Japanese as "the culminating incident of a long series of events which showed the utter disregard of the Chinese for Japanese rights and interests in Manchuria." The fact that he was killed by Chinese soldiers was established, but the usual conflict of views was met with as to the circumstances of his death and the degree of responsibility attaching to the Chinese. The contentions of the two parties may be quoted in the Commission's words:—

"The Japanese insisted that the killing of Captain Nakamura and his companions was unjustified and showed arrogant disrespect for the Japanese army and nation; they asserted that the Chinese authorities in Manchuria delayed to institute

official inquiries into the circumstances, were reluctant to assume responsibility for the occurrence, and were insincere in their claim that they were making every effort to ascertain the facts in the case.

"The Chinese declared, at first, that Captain Nakamura and his party were detained pending an examination of their permits which, according to custom, were required of foreigners travelling in the interior; that they had been treated well; and that Captain Nakamura was shot by a sentry while endeavouring to make his escape. Documents, including a Japanese military map and two diaries, they stated, were found on his person, which proved that he was either a military spy or an officer on special military mission."

Among the facts as to which the Commission were able to satisfy themselves were the following:—Captain Nakamura was on active service and was on a mission under the orders of the Japanese army. While passing through Harbin he represented himself as an agricultural expert. He was then warned that the region in which he intended to travel was a bandit-ridden area, and this fact was noted on his passport. He was arrested by Chinese soldiers and shot, his body being cremated to conceal the evidence of the crime.

On the Japanese officials informing the local Chinese authorities that they had definite evidence that Captain Nakamura had been killed by Chinese soldiers investigations were set on foot, and the Chinese sent two commissions to the scene of the affair. Chang Hsueh-liang, then in Peking, sent one of his Japanese military advisers to Tokyo to make it clear that he wished to settle the case amicably; he also sent a high official on a special mission to Tokyo to consult with Baron Shidehara, the

Foreign Minister, in order to ascertain what common ground might be found for a solution of various pending questions concerning 'Manchuria.' Meanwhile the Chinese authorities placed under arrest the commander of the troops responsible for Captain Nakamura's death, and it was generally understood that an amicable settlement of the case was in sight. The Chinese authorities admitted to Japanese consular officials in Mukden on September 18th that Chinese soldiers were responsible for the killing, so that diplomatic negotiations were apparently proceeding favourably up to the night of the Mukden incident itself.

The Commission's Comment.

The Commission comments on the feeling aroused in Japan as follows:—

"The Nakamura case, more than any other single incident, greatly aggravated the resentment of the Japanese and their agitation in favour of forceful means to effect a solution of outstanding Sino-Japanese difficulties in regard to Manchuria. . . . Captain Nakamura was an army officer on active service, a fact which was pointed to by the Japanese as a justification for strong and swift military action. Mass meetings were held in Manchuria and in Japan for the purpose of crystallising public sentiment in favour of such action. During the first two weeks of September the Japanese press repeatedly declared that the army had decided that 'the solution ought to be by force,' since there was no other alternative. . . . Time and again the opinion was expressed that the policy of leaving so many issues in Manchuria unsettled had caused the Chinese authorities to make light of Japan. Settlement of all pending issues, if necessary by force, became a popular slogan."

CHAPTER IV.

THE EVENTS OF SEPTEMBER 18 AND AFTERWARDS.

The Commission next turned its attention to the incident of September 18th and conducted an extensive inquiry into the events of that night. Evidence was taken from numerous officials and military officers of both parties, and statements were made by Chang Hsueh-liang and by General Honjo, the Japanese Commander-in-Chief in Manchuria. The Japanese version of the affair is given first. According to this a small patrol was proceeding along the railway track about 10 p.m. towards and quite close to Mukden when they heard an explosion behind them. Turning back they found that a portion of one of the rails had been blown out, creating a gap of 31 inches. On arrival at the spot the patrol was fired upon from the fields, but on its returning the fire the attacking body retreated northwards. Moving in pursuit, the patrol was soon fired upon by a large body of men, estimated at between 300 and 400. Fearing he would be surrounded the officer in command telephoned to battalion headquarters at Mukden for reinforcements. At this moment the train from Changchun approached, and when it reached the site of the explosion it was seen to sway and heel over to one side, but it recovered and passed on without stopping, reaching Mukden on time at 10.30 p.m.

The Attack on the Mukden Barracks.

Reinforcements arrived from Mukden and Fushun, and the Japanese forces then numbered about 500. The officer in command, believing, as he said, that "offence is the best defence," at once ordered an attack on the Chinese barracks at Peitaying, just north of Mukden, though he understood that the troops there numbered 10,000. The attack was vigorously contested by the Chinese, and there was fierce fighting for some hours. By 6 a.m. however, after a gate had been blown in by shells from a small cannon left in an outhouse immediately opposite to it by the Chinese, the entire barracks were captured at the cost of two Japanese killed and twenty-two wounded. The Japanese stated that they buried 320 Chinese, but only found about twenty wounded.

Meanwhile, Colonel Hirata had received news of the action of the patrol and of the intention of the officer commanding the reinforced troops to attack the barracks. He

approved this action, and decided himself to attack the walled city. This he began to do at midnight, and by 3.40 a.m. the city was in his hands, as little resistance was offered except by Chinese police in the streets, of whom 75 were killed. The arsenal and aerodrome were captured at 7.30 a.m.

The Chinese Version.

The Chinese version differs from the above in nearly every particular. On the night in question all the soldiers of the 7th Brigade, numbering 10,000, were in the North Barracks. As instructions had recently been received from Chang Hsueh-liang that special care was to be taken to avoid any clash with the Japanese troops the sentries on duty were only armed with dummy rifles. The Japanese had been carrying out night manoeuvres round the barracks on the four preceding nights, and at 7 p.m. on the 18th they were at a village just outside Mukden. At 9 p.m. a Chinese officer reported that a train composed of three or four coaches, but without the usual type of locomotive, had stopped there. At 10 p.m. the sound of an explosion was heard, followed by rifle fire. Almost at once the Japanese attacked the barracks; at 11 p.m. a general attack on the south-west corner began, and at 11.30 the Japanese had effected an entry. Meanwhile, the Chief of Staff had reported by telephone to the Commanding Officer (then at his private house six or seven miles away), who had replied that no resistance was to be offered. Accordingly, the greater part of the Chinese troops left the barracks and succeeded in making their way to a village nearby, but the 620th Regiment offered some resistance. This they were compelled to do owing to finding themselves cut off, so that they had no option but to fight their way through. This they succeeded in doing, with some loss, by 7 a.m., rejoining their comrades, and the whole body then moved off towards Kirin. The Japanese residents there were so alarmed at the approach of Chinese troops that reinforcements were at once sent from Changchun and elsewhere. Consequently the Chinese turned back towards Mukden, and marching round the town by night, eventually reached the Peking railway, where they were able to secure seven trains which brought them to Shanhaikwan by October 4.

After interviewing a very large number of witnesses, including representative foreigners and others who visited the scene of the conflict, the Commission came to the following conclusions:—

"Tense feeling undoubtedly existed between the Japanese and Chinese military forces. The Japanese . . . had a carefully prepared plan to meet the case of possible hostilities between themselves and the Chinese. On the night of September 18th-19th this plan was put into operation with swiftness and precision. The Chinese, in accordance with the instructions referred to . . . had no plan of attacking the Japanese troops, or of endangering the lives or property of Japanese nationals at this particular time or place. They made no concerted or authorised attack on the Japanese forces, and were surprised by the Japanese attack and subsequent operations. An explosion undoubtedly occurred on or near the railroad between 10 and 10.30 p.m. on September 18th, but the damage, if any, to the railroad did not in fact prevent the punctual arrival of the south-bound train from Changchun, and was not in itself sufficient to justify military action. The military operations of the Japanese troops during this night . . . cannot be regarded as measures of legitimate self-defence. In saying this, the Commission does not exclude the hypothesis that the officers on the spot may have thought they were acting in self-defence."

Further Japanese Operations.

Resuming the narrative of the subsequent events, the Report notes that all the Japanese forces in Manchuria, and some of those in Korea, were brought into action almost simultaneously on the night of September 18th over the whole area of the South Manchuria Railway from Changchun to Port Arthur. The Chinese troops at Antung, Yingkow and other smaller towns were overcome and disarmed without resistance. Changchun was occupied on September 18th-19th, Kirin on September 21st and Hsinmin and Liaoyuan on September 22nd.

These movements completed the military operations which were then considered necessary, and the subsequent actions of the Japanese in bombing Chinchow, on October 8th, and of occupying Tsitsihar, which they did on November 19th, were part of a new campaign forced upon the Japanese, as they claimed, by the activities of disbanded soldiers and bandits, anti-Japanese demonstrations at Chientao, and other provocations. According to the Japanese account, the bombing of Chinchow was chiefly directed against the barracks and the buildings where the offices of the Civil Government of Liaoning Province had been established, but neutral observers reported that the barracks were in fact not touched at all, and a large number of bombs fell everywhere in the town, even on the hospital.

The Nonni Bridge Fighting.

As for the occupation of Tsitsihar, this followed on the Nonni Bridge fighting, the story of which is related in detail. The railway bridges appear to have been destroyed by Ma Chan-san in order to prevent the advance towards Tsitsihar of a rival General, who was aiming at seizing the Nonni Bridge. A detailed account of the fighting is given in the Report, including the operations subsequent to the occupation of Harbin on February 5th. Six months of fighting resulted in the occupied area being extended as far as Hailun in the north and the districts of Fangchung and Hailin in the east. The Japanese claim that during August the troops of Ma Chan-san were again effectively routed, and that they have strong evidence that the General himself was killed, but the Chinese assert that he is still alive. In August, also, action was taken against a district in Jehol Province owing to the disappearance on July 17th of an official attached to the Japanese Army Headquarters named Ishimoto, who, the Japanese allege, was kidnapped by Chinese "volunteers."

that day, after unsuccessful attempts to secure the withdrawal of the Chinese troops had been made by a mixed commission of Japanese officers and Chinese officers and civil officials. Reinforcements arrived for the Japanese, and after two days' fighting the Chinese front was rolled up and Tahsing station occupied.

Conflicting accounts were given to the Commission as to the reason for the operations which followed and ended in the occupation of Tsitsihar. The Japanese appear to have insisted upon Ma Chan-san's retirement from the area, with his troops, and on his failing to comply they attacked and caused him to retreat, first to Tsitsihar, and then to Hailun, where the offices of the Provincial Government were established. The Japanese justified their action by stating that the Chinese troops in the district numbered about 35,000, or double the strength of their own forces in Manchuria at that moment, and that, as the Chinese were showing an increasingly threatening attitude, they felt themselves unable to protect the Taonan-Anganchi Railway unless all Ma Chan-san's forces retired north of the Chinese Eastern Railway line.

In the same month disorders broke out at Tientsin, and the situation there caused the commander of the Kwantung Army to decide to send an expedition via Chinchow and Shanhaikwan to reinforce the small force at Tientsin. This expedition never reached Tientsin, as its presence was not needed, but it dropped bombs on Chinchow before returning to Hsinmin. The subsequent operations, which ended with the occupation of Chinchow on January 3rd, were ostensibly due to the necessity of dealing with the menace of banditry in that area, and it is admitted that the activities of irregular forces of all kinds increased when the Japanese expedition retired. To quote the Report, "Profiting by the winter season they (bandits) crossed the frozen Liao River at many points and raided the country round Mukden. The Japanese military authorities realised that, even to maintain their existing positions, reinforcements would be necessary, and with these reinforcements they hoped to be able to get rid of the menace of the Chinese concentration at Chinchow."

Occupation of Chinchow.

The Japanese accordingly began their advance, and, meeting with little resistance, seized Chinchow and continued the offensive down to Shanhaikwan, where they established a permanent contact with the Japanese garrison near the Great Wall. As the Report points out, the complete evacuation of Manchuria by the troops of Chang Hsueh-liang, practically without striking a blow, was not unconnected with the internal conditions in China, where the feuds between rival Generals were still going on.

The only other important military operations were in the Harbin area, and here again the fighting between rival Chinese leaders was the ostensible cause of Japanese intervention. Anxiety was felt for the 4,000 Japanese residents in or near Harbin and for the 1,600 Koreans in a Chinese suburb. A detailed account of the fighting is given in the Report, including the operations subsequent to the occupation of Harbin on February 5th. Six months of fighting resulted in the occupied area being extended as far as Hailun in the north and the districts of Fangchung and Hailin in the east. The Japanese claim that during August the troops of Ma Chan-san were again effectively routed, and that they have strong evidence that the General himself was killed, but the Chinese assert that he is still alive. In August, also, action was taken against a district in Jehol Province owing to the disappearance on July 17th of an official attached to the Japanese Army Headquarters named Ishimoto, who, the Japanese allege, was kidnapped by Chinese "volunteers."

This chapter concludes with an estimate of the strength of the forces of the various Chinese Generals in Manchuria and an outline of the part played by irregular forces and bandits in the opposition to the Japanese; and the Commission states that it has received a document from the Chinese Government charging Japanese agents with having instigated bandits to serve their political interests on many occasions during the last twenty or thirty years.

the spirit of resistance increased. As regards the incident at Nanking, this the Commission believe to have probably been caused by a misunderstanding; in any case, no casualties were reported, and the most important consequence of the affair was that it led to the temporary removal of the Chinese Government from Nanking to Lovang.

The stages in the formation of the new State of Manchukuo are outlined in some detail in the Report and the organisation of the present Administration is described. Here, for the first time, the Commission departs from its rule of placing on record the versions of past events given by the two sides and leaving these to speak for themselves, and sums up its narrative with a note of "conclusions" or "comments." The attack on Mukden created a panic among the Chinese population, and during the days following September 18th over 100,000 Chinese residents left by railway to Peking, while many also went into hiding. The police disappeared, and the municipal, district and provincial administrations completely broke down. The Japanese accordingly undertook the organisation of a local government and within three days normal civil administration was restored. On October 20th the reins of municipal government were handed back to a qualified Chinese body, with Dr. Chao Hsin-po, a lawyer who had studied in Japan, as Mayor. The next problem was to reorganise the provincial administration in each of the three Provinces of Liaoning, Kirin and Heilungkiang, and with the assistance of Japanese advisers this was done in an extraordinarily short time. In Heilungkiang, however, the fighting between the rival Chinese Generals and the fact that the attitude of Ma Chan-san was ambiguous for some time delayed a settlement, and it was not until January 25, 1932, that a Self-Government Guiding Committee was established at Tsitsihar. Over each Government the Japanese maintained a large measure of control.

The local self-governing administrations thus established were subsequently combined in a separate and independent "State." To understand the ease with which this was accomplished and the amount of evidence which it was possible to bring forward of Chinese support for it it is necessary to consider the peculiar feature of Chinese organised life which in some circumstances is a strength and in others a weakness. This is described as follows in the Report.

"The community obligations recognised by the Chinese are rather to the family, to a locality or to persons, than to the State. Patriotism as it is understood in the West is only beginning to be felt. Guilds, associations, leagues, armies, are all accustomed to follow certain individual leaders. If, therefore, the support of a particular leader can be secured by persuasion or coercion, the support of his adherents over the whole area of his influence follows as a matter of course."

The chief agency in bringing about independence was the Self-Government Guiding Board, which was stated to have been organised and in large part officered by Japanese—though its chief was a Chinese—and to have functioned as an organ of a department of the Kwangtung Army Headquarters. As early as January the Chief of the Board was already making plans for the new State which, it was reported, was to be established on February 10th, but the Harbin outbreak and the attitude of Ma Chan-shan led to delay. A Conference was held at Mukden on February 18th-17th, however, at which the new Governors of the three Provinces and two other officials decided that a new State should be established and that a North-Eastern Administrative Council should be organised to exercise

supreme authority over the Provinces. This Council was constituted on February 17th, and at once decided to adopt the republican system for the new State; to respect the autonomy of the constituting Provinces; to give the title of "Regent" to the Chief Executive; and to issue a Declaration of Independence. This Declaration was published the next day. It referred to the necessity for the establishment of a new State, and promised the people, now that relations with Nanking had been severed, the enjoyment of good government. At a subsequent meeting the Council decided to establish a Republic and to ask the ex-Emperor Hsuan-Tung to become the Chief Executive; also to make Changchun the capital and to style the new era of government "Tatung," or Great Harmony.

The next step was to get formal support for the plan from the districts and provinces, and with this object the Self-Government Guiding Board took a leading part in organising popular manifestations in many parts of the country. New "Acceleration Societies" sprang up, to hasten the foundation of the new State, and mass meetings and parades were held under their auspices. At Mukden, for example, a meeting was held on February 28th at which about 600 persons took part, including all the district officers of the Province, when a declaration was issued stating that it expressed the joy of the 16 million inhabitants of Fengtien (as Liaoning Province was rechristened) at the downfall of the old oppressive military caste and the dawn of a new era. Similar demonstrations were organised at Tsitsihar and other centres. The Self-Government

The Self-Government Guiding Board next convened an All-Manchuria Convention, which met at Mukden on February 29th. Here a resolution was passed designating the former Emperor as provisional President, and a committee was sent to Port Arthur to convey the invitation. This was accepted and Mr Pu-yi proceeded to Changchun where, on March 9th, the ceremony of inauguration was held. The next day the principal members of the Government were appointed and a telegram was sent to the foreign Powers on March 12th giving notice of the establishment of "Manchukuo."

The above is a short outline of developments which are narrated in some detail in the Report, which then refers to the part played by Japan in the following words:—

" The measures of civil administration taken by the Japanese military authorities between September 18th and the establishment of the 'Manchukuo Government,' notably the control of the banks, the administration of the public utility services and the management of the railways, indicated that, from the commencement of the operations, objects more permanent than the requirements of a temporary military occupation were being pursued. Immediately after the occupation of Mukden guards were placed in or in front of all Chinese banks, railway offices, the administrative offices and public utility services, the offices of the Mining Administration, and similar premises. Investigations were then conducted into the financial and general situation of these enterprises. When they were allowed to reopen, Japanese were appointed as advisers, experts, or secretaries to officials, usually with administrative powers. Many business enterprises were owned by the former administration of the

Three Eastern Provinces, as well as by the Provincial Administrations, and, as the previous Government was regarded as are enemy Governments in time of war, no bank, no mining, agriculture or industrial enterprise, no railway offices, no public utility—in fact, no single source of revenue in which they had been interested in either their public or private capacities—was left without supervision."

Japanese action in respect of the railways was particularly drastic. All the Chinese-owned lines north of the Great Wall were seized, together with their funds, exchanges were made in the tracks round Mukden to co-ordinate the various systems with the South Manchuria Railway, Japanese advisers were installed in various departments, and the freight rates instituted by the Chinese, discriminatory against the Japanese, were abolished.

Among the conclusions arrived at by the Commission the following are important. It is clear, says the Report, that the Independence Movement, which had never been heard of in Manchuria before September, 1931, was only made possible by the presence of the Japanese troops. It is also clear that the Japanese General Staff realised from the start, or at least in a short time, the use which could be made of such a movement. In consequence, they provided assistance and gave direction to the organisers. The evidence received from all sources satisfied the Commission that, while there were a number of factors contributing to the creation of Manchukuo, the two which in combination were most effective, and without which, they believed, the new State could not have been formed, were the presence of Japanese troops and the activities of Japanese officials, both civil and military.

The organisation of the new Government is described in detail in a special section of this chapter, as also its aims, financial policy, and attitude towards the Customs Administration. The head of the State is the Regent, and he has the authority to overrule the Legislative Council. He is assisted by a Privy Council. The functions of the Executive department are carried out, under his direction, by the Premier and Ministers of State, forming a Cabinet, and the Premier exercises a large measure of executive power. Japanese officials are prominent in each department of the Administration, either as advisers or as substantive holders of office. In the Central Government alone, not including those in local governments or in the War Office and the military forces, nearly 200 Japanese are Manchukuo officials. They control the Board of General Affairs and the Legislative and Advisory Bureaux, which in practice constitute a Premier's office, the General Affairs Department in the Ministries, the Self-Government Directing Committees in the Districts, and the Police Departments in the three Provinces. They are also found in large numbers in the Superbanks, railway offices and in such bodies as the Supervisory Council, which supervises the conduct of officials and audits their accounts.

The aims of the Government include reduction of taxation, and of military expenditure as a means to render this possible, the extension of education, the development of schemes for public welfare and the improvement of communications. The Government states that it will welcome foreign financial assistance in the development of the country, and that it will adhere to the principles of equal opportunity and of the Open Door. Reforms are contemplated in the Judiciary and in the Army, and a new Central Bank has already been opened, which intends to unify all the Manchurian currencies by officially prescribing as from July 1, 1932. It was not clear to the Commission, however, how the Central Bank could hope to accomplish its programme with the limited amount of capital at its disposal, especially as the Government was understood to be borrowing 20 million yuan from it to balance the current Budget.

The policy of the Government in respect of the Customs and the Salt Gabelle was the subject of detailed study by the Commission. Since the Customs funds collected in Manchuria had always been remitted to the Central Gov-

ernment, the Japanese military authorities did not interfere with the Customs Administration or with the remittance of funds to Shanghai. Interference with this revenue was first made by the Manchukuo Government, on the ground that their State was independent. In June the Dairen and Antung Customs Houses were taken over by force, but the Government has stated that, in view of the fact that various foreign loans and indemnities were based on the Customs revenues, it is prepared to pay its equitable proportion of the annual sums necessary to meet these obligations.

Supervision over the Salt Gabelle was insisted upon by the Japanese from the beginning on the ground that the greater part of the revenue from this source, though nominally national, had in fact been retained by Chang Hsueh-liang's Government. Income from this source, in 1930, had amounted to about \$25 millions silver, of which \$24 millions had been retained in Manchuria. Chang Hsueh-liang was much in arrears in his contributions to the Nanking Government, and these arrears have been remitted, since September, 1931, together with the monthly quotas fixed as due from Manchuria by an agreement reached between Chang Hsueh-liang and Nanking in April, 1930. But the surplus from the Salt revenue is now regarded as Manchurian, and not national, income and the new Government considers it is justified in retaining it for local purposes. The salt funds at Newchwang and Kirin were seized by the Provincial Government in October, 1931, and since then they have been withdrawn from time to time and expended by the local authorities, while the monthly quotas have been sent to Shanghai regularly. On April 15, 1932, the District Inspectorate at Newchwang was dissolved by force, and the work of the former Salt Inspectorate in the Three Eastern Provinces was thus completely taken over by the new Comptroller's office of Manchukuo. The new Government has stated, however, that it is prepared to continue to pay its equitable share of the sums required for the service of the foreign loans secured on the Salt revenue.

On all these facts regarding the new Government the Commission comments as follows:—

"The programme of this 'Government' contains a number of liberal reforms the application of which would be desirable, not only in Manchuria, but also in the rest of China; in fact many of these reforms figure equally in the programme of the Chinese Government. In their interviews with the Commission, the representatives of this 'Government' claimed that, with the help of the Japanese, they would be able to establish peace and order within a reasonable time, and would thereafter be able to maintain it permanently. They expressed the belief that they would be able to secure the support of the people in time by assuring them an honest and efficient administration, security from bandit raids, lower taxation as the result of reduced military expenditure, currency reform, improved communications and popular political representation.

"But, after making every allowance for the short time which has hitherto been at the disposal of the 'Manchukuo Government' for carrying out its policy, and after paying due regard to the steps already taken, there is no indication that this 'Government' will in fact be able to carry out many of its reforms. To mention but one example: there seem to be serious obstacles in the way of the realisation of their budgetary and currency reforms. A thorough programme of reforms, orderly conditions and economic prosperity could not be realised in the conditions of insecurity and disturbance which existed in 1932.

“As regards the ‘Government’ and the public services, although the titular heads of the Departments are Chinese residents in Manchuria, the main political and administrative power rests in the hands of Japanese officials and advisers. The political and administrative organisation of the ‘Government’ is such as to give to these officials and advisers opportunities, not merely of giving technical advice, but also of actually controlling and directing the administration. They are doubtless not under the orders of the Tokyo Government, and their policy has not always coincided with the official policy either of the Japanese Government or of the Headquarters of the Kwantung Army. But in the case of all important problems, these officials and advisers, some of whom were able to act more or less independently in the first days of the new organisation, have been constrained more and more to follow the direction of Japanese official authority. This authority, in fact, by reason of the occupation of the country by its troops,

by the dependence of the 'Manchukuo Government' on those troops for the maintenance of its authority both internally and externally, in consequence, too, of the more and more important rôle entrusted to the South Manchuria Railway Company in the management of the railways under the jurisdiction of the 'Manchukuo Government,' and finally by the presence of its consuls as liaison agents in the most important urban centres, possesses in every contingency the means of exercising an irresistible pressure. The liaison between the 'Manchukuo Government' and Japanese official authority is still further emphasised by the recent appointment of a special ambassador, not officially accredited, but resident in the capital of Manchuria, exercising in his capacity of Governor-General of the Kwantung Leased Territory a control over the South Manchuria Railway Company and concentrating in the same office the authority of a diplomatic representative, the head of the Consular Service, and Commander-in-Chief of the Army of Occupation."

The Attitude of the People.

The Commission took a great deal of trouble to ascertain the opinions of the inhabitants of Manchuria, of all classes, as to the new regime. They found very few people who were favourably disposed towards it, outside the ranks of those minorities who expected to profit from the change. These latter included the Mongols, who have always remained a race apart from the Chinese, the Manchus, the Koreans and the Russians. The Manchus, who originally enjoyed a privileged position, lost this after

the fall of the Dynasty in 1911, and their lot had not been a very happy one, in spite of the fact that they have been almost completely assimilated with the Chinese. The Koreans had never been treated well by the previous Government and the White Russians had been subjected to every kind of humiliation by the Chinese officials and police. The vast majority of the Chinese inhabitants, however, numbering about 28 millions out of a total of 30 millions, gave the Commission the impression of being definitely antagonistic to the new Government. Of 1,550 letters received by members of the Commission while they were in Manchuria, all except two were bitterly hostile to the new régime and to the Japanese. Chinese business men who were interviewed feared for their lives and property and frequently remarked, "We do not want to become like the Koreans." The professional classes alleged that they were spied upon and intimidated. The censorship of the Press and post is resented, as is also the prohibition of the entry into the country of newspapers published in China. The farmers were understood to fear an increase in the immigration of Koreans, whom they do not like and whose methods of agriculture are different from the Chinese. As regards the townspeople, in certain places they have suffered from the attitude of Japanese soldiers and police, and generally speaking the attitude of the town population is described as a mixture of passive acquiescence and hostility.

CHAPTER VII.

JAPAN'S ECONOMIC INTERESTS AND THE BOYCOTT.

In view of the important part played in the struggle between China and Japan by the boycott of Japanese goods, the Report contains a somewhat detailed study of the economic interests of Japan in China and, more particularly, in Manchuria. This shows that Japan's problem is largely one of population, the figure for which, per square mile of the total surface, is 437 persons per mile (as against 330 in Germany and 468 in the United Kingdom); while, if the arable land only is considered, the Japanese figure is the highest in the world. There are 2,774 persons to the square mile, England coming second with 2,170, and Belgium third with 1,709. In Japan the expansion limit of tillable land has been reached, as has also the limit of cultivation intensity, so that the soil cannot be expected to produce much more than it does to-day, nor can it provide much additional employment. At the same time the price of land is exceedingly high, and most of the peasant cultivators are deeply in debt.

Japan first turned to industrialisation to foster the growth of an urban population which would provide a home market for agricultural products and turn labour to the manufacture of goods for domestic and foreign use. This policy, to succeed, depended upon a large export trade, and for this the United States and China afforded the best opportunities. In 1930 the total value of the exports was nearly 1,500 million yen, of which 17.7 per cent., in value, went to China (excluding the Kwantung Leased Territory and Hong-Kong). Apart from this Japan has a large amount of capital invested in industry in China, as well as in railways, banking and other branches of financial activity. By 1929 the value of these investments, including those in Manchuria, was estimated to amount to 2,000 million yen. In the same year Japan was second in the carrying trade of China, and in 1932 the number of Japanese banks in that country is put at 30.

China is also largely dependent upon Japan, for in 1930 over 24 per cent. of her exports went to that country, and nearly 25 per cent. of her imports came from it. It is evident, then, that in its entirety Japan's dependence on China is greater than China's dependence on Japan. Hence Japan is the more vulnerable and has more to lose in case of disturbed relations.

The Report next turns its attention to the boycott, and recounts nine cases in which this weapon has been used against Japan on a national scale since 1908. The causes of these movements are described, and the part played by the Kuomintang in instigating them during the past six

or seven years. Originally the boycott was designed to prevent the purchase of the goods of the country against which it was directed, but as time went on the field of action was extended to a refusal to export Chinese goods to the country concerned or to sell or render services to its nationals. Finally, the avowed purpose of the more recent boycotts has become to sever completely all economic relations with the "enemy country." This development is chiefly due to the part played by the Kuomintang, which, since 1925, has increased its control with each successive boycott until to-day it is the real organising, driving and co-ordinating factor in the movement.

The methods employed in carrying this out are described in the Report; even currency notes, letters and telegram forms are stamped with anti-Japanese slogans, and the instigators see that the boycott is enforced by compelling all Chinese merchants to register all the Japanese goods they hold in stock. Powerful bodies such as the Shanghai Chamber of Commerce conduct propaganda through the Press against the trade in Japanese goods.

Japanese Resentment.

The Japanese feeling on the subject is well summed up by the Commission in the following words:—

"The knowledge that Japan is suffering injuries against which she cannot protect herself has exasperated Japanese public opinion. The merchants whom we interviewed at Osaka were inclined to exaggerate certain abuses of boycott methods as racketeering and blackmailing, and to under-estimate or even to deny completely the close relationship between Japan's recent policy towards China and the use of the boycott as a defensive weapon against that policy. On the contrary, instead of regarding the boycott as China's weapon of defence, these Japanese merchants insisted that it was an act of aggression against which the Japanese military measures were a retaliation. Anyway, there is no doubt that the boycott has been amongst the causes which have profoundly embittered the relations between China and Japan in recent years."

Three important issues are involved in the policy and methods of the boycott. First, whether the movement is spontaneous; second, whether the methods employed have always been legal; and third, the extent of the responsibility of the Chinese Government. The conclusion of the Commission is that the boycotts are both popular and organised; that, though they originate in and are supported by strong national sentiment, they are controlled and directed by organisations which can start or call them

off, and that they are enforced by methods which certainly amount to intimidation. The main controlling authority is the Kuomintang.

As to the second point, it was obvious to the Commission that illegal acts had been constantly committed, and that they had not been sufficiently suppressed by the authorities and the courts. Modern laws, which the Chinese Government has now adopted, are incompatible with the traditional methods of trade boycotts. The memorandum in which the Chinese Assessor defended his country's point of view in the matter to the Commission did not contest this statement, but argued that "the boycott is pursued, generally speaking, in a legitimate manner." The evidence at the disposal of the Commission did not bear out this contention.

The Chinese official attitude as regards the question of responsibility is that "the liberty of choice in making

purchases is a personal right which no Government can interfere with; while the Governments are responsible for the protection of lives and property, they are not required by any commonly recognised regulations and principles to prohibit and punish the exercise of an elemental right of every citizen."

As to this the Commission can only record its conviction as to the responsibility of the Kuomintang, but the question of the relations between that body and the Government is not one which it is called upon to consider. "The Kuomintang," says the Report, "may be the maker and the master of the Government, but to determine at what point the responsibility of the party ends and that of the Government begins is a complicated problem of constitutional law on which the Commission does not feel it proper to pronounce."

CHAPTER VIII.

ECONOMIC INTERESTS IN MANCHURIA.

From their examination of the commercial relations between the two countries the Commission arrived at the conclusion that the economic requirements of China and Japan, if not disturbed by political considerations, would lead to mutual understanding and co-operation, and not to conflict. In Manchuria also their economic interests are not irreconcilable; in fact, their reconciliation is necessary, states the Report, if the existing resources and future economic possibilities of Manchuria are to be developed to the fullest extent.

The Commission estimates the value of Japanese investments in the country at about 1,700 million yen, nearly all in railways, agriculture, mining and forestry. The main object of these is to enable Japan to develop in Manchuria the production of those raw materials which are indispensable to her national defence. Manchuria can supply her with coal, oil, iron and timber, and she depends on that country mainly for the soya bean and its derivatives, the use of which as foodstuff and forage may increase in the future. On the other side of the trade picture Manchuria provides a regular market for Japanese manufactured goods and a market which may well expand in the future. But, as the Report points out, Japan depends for the bulk of her commerce far less on Manchuria than she does on the United States, China proper and India.

As to China's interest in her North Eastern Provinces, the economic ties have increased in importance during the past few years, and the agricultural development of the

country is due almost entirely to the migration there of millions of Chinese settlers, but, on the whole, the principal ties between the two countries are racial and social rather than economic. The Chinese settlers in general maintain their connection with their original homes, and, in fact, as the Commission states, "the social and economic Chinese organisation in Manchuria is a transplanted society which has kept the customs, dialect and activities of its home." There is no doubt that the Chinese are the people best adapted for the colonisation of the country, and an artificial restriction of this migration by arbitrary measures would be as prejudicial to Manchuria as it would be to the over-populated Provinces from which the settlers come.

The Commission's conclusion from this review of the economic problems connected with Manchuria is that the all-important question at the present time is the establishment of an administration acceptable to the population and capable of supplying the last need—namely, the maintenance of law and order. No foreign Power could develop the country without the goodwill of the Chinese population—who form about 93 per cent. of the total—but neither will China ever be free from anxiety unless these North-Eastern Provinces cease to afford a battle-ground for the ambitions of neighbouring Powers. "It is as necessary, therefore, for China to satisfy the economic interests of China in this territory as for Japan to recognise the unalterably Chinese character of its population."

CHAPTER IX.

PRINCIPLES OF SETTLEMENT.

The issues are rendered more complicated, also, by the fact that a plea of justification is put forward by Japan for her virtual seizure of the country. The steps by which this was carried out are claimed to have been consistent with the obligations of the League Covenant and of the Nine-Power and the Kellogg Treaties. The administration which has been set up is justified on the ground that its establishment was the outcome of a spontaneous assertion of independence, and such a movement, it is claimed, is not prohibited by any international treaty or by any resolution of the League of Nations.

The Commission points out that it is not their function to argue the issue, but to provide sufficient material to enable the League to settle the dispute. They, therefore, conclude by offering to that body their suggestions for securing, consistently with justice and with peace, the permanent interest of both the countries concerned.

"It must be clear," they point out, "from everything we have already said, that a mere restoration of the *status quo ante* would be no solution. Since the present conflict arose out of the conditions prevailing before last September to

The Report now turns to the "Principles and Conditions of Settlement," and the events of the past are dismissed with the following reflections:—

"It must be apparent to every reader of the preceding chapters that the issues involved in this conflict are not as simple as they are often represented to be. They are, on the contrary, exceedingly complicated, and only an intimate knowledge of all the facts, as well as of their historical background, should entitle anyone to express a definite opinion upon them. This is not a case in which one country has declared war on another country without previously exhausting the opportunities for conciliation provided in the Covenant of the League of Nations. Neither is it a simple case of the violation of the frontier of one country by the armed forces of a neighbouring country, because in Manchuria there are many features without an exact parallel in other parts of the world."

To refer to only one of these features, Manchuria, though legally an integral part of China, has for some years had a sufficiently autonomous character to carry on direct negotiations with Japan on the matters which lay at the root of the conflict.

restore these conditions, would merely be to invite a repetition of the trouble. It would be to treat the whole question theoretically and to leave out of account the realities of the situation."

But the maintenance and recognition of the present régime would be equally unsatisfactory. It is opposed to the interests of China, and it disregards the wishes of the people of Manchuria. Past experience has shown, too, that those who control Manchuria have exercised a considerable influence on the affairs of the rest of China—at least of North China, and "to cut off these provinces from the rest of China, either legally or actually, would be to create for the future a serious irredentist problem which would endanger peace by keeping alive the hostility of China and rendering probable the continued boycott of Japanese goods."

Essentials for a Solution.

The Report points out that the orderly conditions necessary for the economic development of the country can only be securely guaranteed by an administration which is in conformity with the wishes of the population; while it is only in an atmosphere of external confidence and internal peace that the capital needed for the development of the country will be forthcoming.

Japan, however, is actuated, in her policy, quite as much by anxiety for her own security as by considerations of trade. It is in this connection that her statesmen sometimes speak of Manchuria as the "life-line of Japan." The Commission's comment on this aspect of the problem is that while acknowledging the interest of Japan in preventing the country being used as a base of operations against her, "it may still be questioned whether the military occupation of Manchuria for an indefinite period . . . is really the most effective way of insuring against this external danger; and whether, in the event of aggression having to be resisted in this way, the Japanese troops in Manchuria would not be seriously embarrassed if they were surrounded by a restive or rebellious population backed by a hostile China."

The Report then refers to the interests which other Powers have to defend in this Sino-Japanese conflict, and, after emphasising that the considerations which actuated them at Washington in 1922 are still valid, points out that it is quite as much in the interest of the Western nations now as it was then to assist the reconstruction of China, and to maintain her territorial integrity. Any disintegration of that country might lead to serious international rivalries, a consideration which leads to the reflection that any solution of the conflict which ignored the important interests of the U.S.S.R. in Manchuria would risk a future breach of the peace and would not be permanent.

The Ten Conditions.

The Commission then states its conclusions, in introducing which it remarks that "a satisfactory régime for the future might be evolved out of the present one without any violent change." Any solution, to be satisfactory, should conform to the following general principles:—

(1) COMPATIBILITY WITH THE INTERESTS OF BOTH CHINA AND JAPAN.

Both countries are members of the League, and each is entitled to claim the same consideration from the League. A solution from which both did not derive benefit would not be a gain to the cause of peace.

(2) CONSIDERATION FOR THE INTERESTS OF THE U.S.S.R.

To make peace between two of the neighbouring countries without regard to the interests of the third would be neither just nor wise nor in the interests of peace.

(3) CONFORMITY WITH EXISTING MULTILATERAL TREATIES.

Any solution should conform to the provisions of the Covenant of the League of Nations, the Pact of Paris, and the Nine-Power Treaty of Washington.

(4) RECOGNITION OF JAPAN'S INTERESTS IN MANCHURIA.

The rights and interests of Japan in Manchuria are facts which cannot be ignored, and any solution which fails to recognise them and to take into account also the historical associations of Japan with that country would not be satisfactory.

(5) THE ESTABLISHMENT OF NEW TREATY RELATIONS BETWEEN CHINA AND JAPAN.

A restatement of the respective rights, interests, and responsibilities of both countries in Manchuria in new treaties which shall be part of the settlement by agreement is desirable if future friction is to be avoided and mutual confidence and co-operation are to be restored.

(6) EFFECTIVE PROVISION FOR THE SETTLEMENT OF FUTURE DISPUTES.

As a corollary to the above it is necessary that provision should be made for facilitating prompt settlement of minor disputes as they arise.

(7) MANCHURIAN AUTONOMY.

The Government in Manchuria should be modified in such a way as to secure, consistently with the sovereignty and administrative integrity of China, a large measure of autonomy designed to meet the local conditions and special characteristics of the Three Provinces. The new civil régime must be so constituted and conducted as to satisfy the essential requirements of good government.

(8) INTERNAL ORDER AND SECURITY AGAINST EXTERNAL AGGRESSION.

The internal order of the country should be secured by an effective local gendarmerie force, and security against external aggression should be provided by the withdrawal of all armed forces other than gendarmerie and by the conclusion of a treaty of non-aggression between the countries interested.

(9) ENCOURAGEMENT OF AN ECONOMIC RAPPROCHEMENT BETWEEN CHINA AND JAPAN.

For this purpose a new commercial treaty between the two countries is desirable. Such a treaty should aim at placing on an equitable basis the commercial relations between the two countries and bringing them into conformity with their improved political relations.

(10) INTERNATIONAL CO-OPERATION IN CHINESE RECONSTRUCTION.

Since the present political instability in China is an obstacle to friendship with Japan and an anxiety to the rest of the world (as the maintenance of peace in the Far East is a matter of international concern), and since the conditions enumerated above cannot be fulfilled without a strong Central Government in China, the final requisite for a satisfactory solution is temporary international co-operation in the internal reconstruction of China, as suggested by the late Dr. Sun Yat-sen.

If the present situation could be modified in such a way as to satisfy these conditions and embody these ideas, China and Japan would have achieved a solution of their difficulties which might be made the starting-point of a new era of close understanding and political co-operation between them. If such a rapprochement is not secured, no solution, whatever its terms, can really be fruitful. Is it really impossible to contemplate a new relationship even in this hour of crisis? Young Japan is clamorous for strong measures in China and a policy of thoroughness in Manchuria. Those who make these demands are tired of the delays and pin-pricks of the pre-September period; they are impetuous and impatient to gain their end. But, even in Japan, appropriate means must be found for the attainment of every end. After making the acquaintance of some of the more ardent exponents of this "positive" policy, and those especially who, with undoubted idealism and great personal devotion, have constituted themselves the pioneers of a delicate undertaking in the "Manchukuo" régime, it is impossible not to realise that, at the heart of the problem for Japan, lies her anxiety concerning the political development of modern China, and the future to which it is tending. This anxiety has led to action with the object of controlling that development and steering its course in directions which will secure the economic interests of Japan and satisfy strategic requirements for the defence of her Empire.

Japanese opinion is nevertheless vaguely conscious that it is no longer practicable to have two separate policies, one for Manchuria and one for the rest of China. Even

with her Manchurian interests as a goal, therefore, Japan might recognise and welcome sympathetically the renaissance of Chinese national sentiment, might make friends with it, guide it in her direction, and offer it support, if only to ensure that it does not seek support elsewhere.

In China, too, as thoughtful men have come to recognise, the vital problem, the real national problem, for their country is the reconstruction and modernisation of the State; they cannot fail to realise that this policy of reconstruction and modernisation, already initiated with so much promise of success, necessitates for its fulfilment the

cultivation of friendly relations with all countries, and above all with that great nation which is their nearest neighbour. China needs, in political and economic matters, the co-operation of all the leading Powers, but especially valuable to her would be the friendly attitude of the Japanese Government and the economic co-operation of Japan in Manchuria. All the other claims of her newly awakened nationalism—legitimate and urgent though they may be—should be subordinated to this one dominating need for the effective internal reconstruction of the State.

CHAPTER X.

SUGGESTIONS TO THE LEAGUE.

The Report concludes with a number of suggestions intended as an illustration of one way in which the conditions just laid down might be met. In the first place, the Council of the League might invite the Governments of China and Japan to discuss a solution of their dispute on the lines of these conditions. If they accepted, the next step would be the summoning of an Advisory Conference, to make proposals for the constitution of a special regime for the administration of Manchuria and to be composed of representatives of both Governments and two delegations from the local population. (One to be selected in a manner prescribed by the Chinese Government and the other in a manner prescribed by the Japanese Government.)

Four Heads of Agreement.

Any points on which the Conference was unable to reach agreement would be submitted to the League Council. At the same time, the matters at issue between China and Japan relating to respective rights and interests should be discussed separately, and, if agreed, with the assistance of neutral observers.

The results of these discussions might then be embodied in four separate instruments:—

(1) A Declaration by the Chinese Government constituting a special administration for the three Eastern Provinces, in the terms recommended by the Advisory Conference;

(2) A Sino-Japanese Treaty dealing with Japanese interests, including those in Jehol (Eastern Inner Mongolia);

(3) A Sino-Japanese Treaty of Conciliation and Arbitration, Non-Aggression and Mutual Assistance;

(4) A Sino-Japanese Commercial Treaty.

These instruments are then considered *seriatim*:—

1. THE DECLARATION.

The final proposals of the Advisory Conference would be submitted to the Chinese Government, which would embody them in a Declaration, for transmission to the League of Nations and to the signatories of the Nine-Power Treaty of 1922. This Declaration would be stated to have for the Chinese Government the binding character of an international engagement. Among other functions it would distinguish between the powers of the Central Government of China in the Three Eastern Provinces and those of the autonomous local Government, and it is suggested that the powers to be reserved to the latter should be the following:—

(1) The control of general treaty and foreign relations not otherwise provided for; it being understood that the Central Government would not enter into any international engagements inconsistent with the terms of the Declaration.

(2) The control of the Customs, the Post Office, and the Salt Gabelle, and possibly of the administration of the stamp duty and the tobacco and wine taxes. The equitable division, between the Central Government and the Three Eastern Provinces, of the net income from these revenues would be determined by the Advisory Conference.

(3) The power of appointment, at least in the first instance, of the Chief Executive of the Government of

the Three Eastern Provinces in accordance with the procedure to be laid down in the Declaration. Vacancies would be filled in the same way, or by some system of selection in the Three Eastern Provinces, to be agreed upon by the Advisory Conference and inserted in the Declaration.

(4) The power of issuing to the Chief Executive the carrying out of the international engagements entered into by the Central Government of China in matters under the administration of the autonomous Government of the Three Eastern Provinces.

(5) Any additional powers agreed upon by the Conference.

All other powers would be vested in the autonomous Government of the Three Eastern Provinces.

Some practical system might be devised to secure an expression of the opinion of the people on the policy of the Government, possibly through the traditional agency of the Chambers of Commerce, Guilds and other civil organisations.

Some provision should also be made to safeguard the interests of White Russians and other minorities.

It is suggested that a special gendarmerie should be organised, with the collaboration of foreign instructors, which would be the only armed force within the Three Eastern Provinces. In view of this, its organisation, when completed, should be followed by the retirement from this territory of all other armed forces, including any special bodies of police or railways guards, whether Chinese or Japanese.

Foreign Advisers.

An adequate number of foreign advisers would be appointed by the Chief Executive of the autonomous Government, of whom a substantial proportion should be Japanese. The details would be worked out by the procedure described above and would be stated in the Declaration. Nationals of small States, as well as of the Great Powers, would be eligible.

The appointment of two foreigners of different nationalities to have supervision of (1) the constabulary and (2) the fiscal administration would be made by the Chief Executive from a panel submitted by the League Council. The powers of the advisers would be defined in the Declaration.

The Report continues:—

"The employment of foreign advisers and officials is in conformity with the policy of the founder of the Chinese Nationalist Party and with that of the present National Government. But it cannot be too strongly emphasised that the presence of the foreign advisers and officials here suggested, including those who, during the period of the organisation of the new régime, must exercise exceptionally wide powers, merely represents a form of international co-operation. They must be selected in a manner acceptable to the Chinese Government and one which is consistent with the sovereignty of China. When appointed, they must regard themselves as the servants of the Government employing them, as has always been the case in the past with the foreigners employed in the Customs and Postal administration or with the technical organisations of the League that have collaborated with China. . . .

... The point must also be stressed that the appointment of a relatively large number of Japanese advisers, in an atmosphere of Sino-Japanese co-operation, would enable such officials to contribute the training and knowledge specially suited to local conditions. The goal to be kept in view throughout the period of transition is the creation of a civil service composed of Chinese, who will ultimately make the employment of foreigners unnecessary.

II. THE SINO-JAPANESE TREATY DEALING WITH JAPANESE INTERESTS.

The treaty dealing with Japanese interests in the Three Eastern Provinces and with some Japanese interests in the Province of Jehol would have to deal principally with certain economic rights of Japanese nationals and with railway questions. The aims of this treaty should be:—

- (1) The free participation of Japan in the economic development of Manchuria, which would not carry with it a right to control the country either economically or politically;
- (2) The continuance in the Province of Jehol of such rights as Japan now enjoys there;
- (3) An extension to the whole of Manchuria of the right to settle and lease land, coupled with some modification of the principle of extra-territoriality;
- (4) An agreement regarding the operation of the railways.

Hitherto, the rights of settlement of Japanese nationals have been confined to South Manchuria, though no definite boundary line between North and South Manchuria has ever been fixed, and to Jehol. These rights have been exercised under conditions which China found unacceptable and this caused continued friction and conflicts. From evidence given before the Commission, we have reason to believe that China would be willing to extend to the whole of Manchuria the present limited right of settlement, provided it was not accompanied by extra-territorial status, the effect of which, it was claimed, would be to create a Japanese State in the heart of a Chinese territory.

It is obvious that the right of settlement and extra-territoriality are closely associated. It is, however, equally clear that the Japanese would not consent to abandon their extra-territorial status until the administration of justice and finance had reached a very much higher standard than has hitherto prevailed in Manchuria.

Rights of Settlement.

Two methods of compromise have suggested themselves. One is that the existing rights of settlement, accompanied by extra-territorial status, should be maintained, and that such rights should be extended both to Japanese and Koreans in North Manchuria and Jehol without extra-territorial status. The other is that the Japanese should be granted the right to settle anywhere in Manchuria and Jehol with extra-territorial status, and that the Koreans should have the same rights without extra-territorial status. It is obvious that the most satisfactory solution of the problem is to make the administration of these Provinces so efficient that extra-territorial status will no longer be desired. It is with this object that we recommend that at least two foreign advisers, one of whom should be of Japanese nationality, should be attached to the Supreme Court, and other advisers might with advantage be attached to other Courts. The opinions of these advisers might be made public in all cases in which the Courts were called upon to adjudicate on matters in which foreign nationals were involved. We also think that, in the period of reorganisation, some foreign supervision of the administration of finance is desirable.

A further safeguard would be provided by the establishment, under the treaty of conciliation, of an arbitration tribunal to deal with any complaints which the Chinese or Japanese Governments might bring in their own names or in those of their nationals.

Any extension of the rights of settlement in the case of Japanese would apply on the same conditions to the nationals of all other Powers which enjoy the benefits of a "most-favoured-nation" clause, provided that those

Powers whose nationals enjoy extra-territorial rights enter into a similar treaty with China.

Railways.

As regards railways, it has already been pointed out that there has been little or no co-operation in the past between the Chinese and Japanese railway builders and authorities directed to achieving a comprehensive and mutually beneficial railway plan. It is obvious that, if future friction is to be avoided, provisions must be made in the treaty for bringing to an end the competitive system of the past, and substituting a common understanding as regards freights on the various systems. In the opinion of the Commission there are two possible solutions, which could be considered either as alternatives or as stages to one final solution. The first is a working agreement between the Chinese and Japanese railway administrations, which would facilitate their co-operation. China and Japan might agree to manage their respective railway systems in Manchuria on the principle of co-operation, and a joint Sino-Japanese Railway Commission, with at least one foreign adviser, might exercise functions analogous to those of boards which exist in some other countries. A more thorough remedy would be provided by an amalgamation of the Chinese and Japanese railway interests. This, while safeguarding the interests of China, would place at the disposal of all the railways in Manchuria the benefit of the great technical experience of the South Manchuria Railway and could be evolved without difficulty from the system which has been applied to the railways of Manchuria in the last few months. It might even pave the way in the future to some wider international agreement which might include the Chinese Eastern Railway. Such a solution of the railway question would make the South Manchuria Railway a purely commercial enterprise, and the security provided by the special corps of gendarmerie, when once this body was fully organised, would enable the Railway Guards to be withdrawn, thus saving a considerable item of expense. If this is done, it would be well that special land regulations and a special municipal administration should previously be instituted in the railway area in order to safeguard the vested interests of the South Manchuria Railway and of Japanese nationals.

If a treaty on these lines could be agreed upon, a legal basis for Japanese rights in the Three Eastern Provinces and in Jehol would have been found which would be at least as beneficial to Japan as the present treaties and agreements, and one which would be more acceptable to China. China might then find no difficulty in recognising agreements as those of 1915, unless abrogated or modified by the new treaty. All minor rights claimed by Japan, the subject of agreement. In case of disagreement, resort should be made to the procedure outlined in the treaty of conciliation.

III. THE SINO-JAPANESE TREATY OF CONCILIATION.

This treaty would provide for a board of conciliation, whose functions would be to assist in the solution of any difficulties as they arise between the Governments of China and Japan. It would also establish an arbitration tribunal composed of persons with judicial experience and the necessary knowledge of the Far East. This tribunal would deal with any disputes between the Chinese and Japanese Governments regarding the interpretation of the declaration or of the new treaties, and with such other categories of disputes as might be specified in the treaty of conciliation.

Finally, in conformity with the provisions for non-aggression inserted in the treaty, the contracting parties should agree that Manchuria should gradually become a demilitarised area. With this object, it would be provided that, after the organisation of the gendarmerie had been effected, any violation of the demilitarised territory by either of the parties or by a third party would constitute an act of aggression entitling the other party, or both parties in the case of a third-party attack, to take whatever measures might be deemed advisable to defend the demilitarised territory without prejudice to the right of

the Council of the League to take action under the Covenant.

IV. THE SINO-JAPANESE COMMERCIAL TREATY.

The commercial treaty would naturally have as its object the establishment of conditions which would encourage as much as possible the exchange of goods between China and Japan, and should also contain an undertaking by the Chinese Government to take all measures within its power to forbid and repress organised boycott movements against Japanese trade, without prejudice to the individual rights of Chinese consumers.

At the moment of concluding our Report, we read in the Press two statements by the Foreign Ministers of China and Japan, from each of which we would extract one point of the utmost importance.

On August 28th, Mr. Lo Wen Kan declared at Nanking: "China is confident that any reasonable proposal for the settlement of the present situation will necessarily be compatible with the letter and spirit of the Covenant of the League of Nations and the anti-war Pact, and the Nine-Power Treaty, as well as with China's sovereign power, and will also effectively secure a durable peace in the Far East."

On August 30th, Count Uchida is reported to have declared at Tokyo:

"The Government considers the question of Sino-Japanese relations as more important than the question of Manchuria and Mongolia."

The Commissioners add a final reflection:— "We cannot close our report more appropriately than by reproducing here the thought underlying these two statements: as exactly does it correspond with the evidence we have collected, with our own study of the problem, and consequently with our own convictions, so confident and consequently with our own declarations, if are we that the policy indicated by these declarations, if a satisfactory solution of the Manchurian question in the best interests of the two great countries of the Far East and of humanity in general."
