THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXIX.

BEING FROM JULY TO DECEMBER 1934, INCLUSIVE

LONDON:

PUBLISHED AT THE ECONOMIST OFFICE,
8 BOUVERIE STREET, FLEET STREET, LONDON, E.C.4.

GERMANY

FLYING rumours, barely veiled references in the foreign press to plots and intrigues, and travellers' reports that even in Germany itself criticism of the regime and of the Leader were being openly voiced, have suggested during the past two months that "the Third Empire" would shortly be the scene of important internal change. But even its bitterest critic could hardly have been prepared for the "blood-letting" that astounded the world and Germany last week-end. It is notorious that in civil wars (and the seizure of power by the Nazis in the spring of 1933 might almost be so described) ruthlessness degenerating into savagery is more prone to show itself than in more "organised" warfare. But that an established Government—apparently more firmly in the saddle than any in the world and with all the armed forces of the State completely under its control—should find it necessary or expedient to arrest and execute a large number of persons, most of whom were leading personalities among its own supporters, came as a staggering revelation. For the civilised world finds itself suddenly in the presence of a method of Government which—with the possible exception of the French revolution—finds no parallel in modern history and is most aptly to be compared with the more degenerate days of the Roman Empire.

Whether the meeting of the Squadron Leaders of the Brown Army called for Saturday last was for the purpose of registering a declaration that it would not agree to its disbandment or reorganisation after its month's leave, or was called for a more sinister purpose; whether there is truth in the story that von Schleicher was plotting with Roehm or not; what stage the disaffection among the forces of the right had reached—these are all unanswered questions to which a final reply may never be given. Nor for practical purposes is an answer essential; for it is evident that the occasion was seized by the Hitler-Goering-Goebbels triumvirate to execute a *coup de main* intended to consolidate their supremacy and confound all their enemies. But the severity of this pogrom—which perhaps went further than one, at all events, of its authors intended—was out of all proportion to any possible danger. The foreign observer could understand the arrest and even the execution of one or two leaders if that were necessary to establish authority over a discontented "private army," or to nip a treason-

able intrigue in the bud. In the light of the state of corruption and morals now officially revealed among the Nazi leaders, little sympathy would have been wasted on the victims. But for the rest, were there not the concentration camps? It is the exploitation of a political opportunity to massacre all possible rivals of whatever shade of opinion that has so shocked the world.

The death-roll at the time of writing is officially given as fifty-three, but we may reasonably assume that the true total much exceeds this acknowledged figure. The triumvirate have not published, and apparently may flinch from publishing, their complete list, so that at the present we only know about twenty names for certain. The majority of the victims so far known are prominent S.A. leaders—Roehm, Heines, Ernst and the rest—but we already know of others who belonged to quite different walks in life. Most horrible is the killing of General von Schleicher and his wife. Another victim is Herr Klausener, a Catholic official in the Ministry of Communications who had not been engaged in party politics, but was the head of the German Society for Catholic Action and was supposed to have taken a leading part in the recent negotiations over the application of the Concordat. Another victim, again, is Herr von Papen's *chef de cabinet*, Herr von Bose. But in their treatment of von Papen, the triumvirate will, no doubt, vaunt their humanity; for while Oriental despots used to gouge out a dangerous rival's eyes and cut out his tongue in order to place him *hors de combat*, Herr von Papen has been deprived of his political sensory organs vicariously, *in corpore vili*. It may be that, if and when the full list comes to light, the non-Nazi victims will prove to have been hardly less numerous than the Nazis.

It is early yet to speak of the results in Germany itself. For the moment Herr Hitler's hands are strengthened by the impossibility of resistance. But what of the longer view? Though Herr von Papen—who seems to be able to ride every storm like a cork—is relieved and even remains, at the President's behest, a member of the Cabinet, the Conservative elements in the nation can hardly regard these events with complacency and see in them an occasion for joining forces with Herr Hitler, except on their own terms. Can the Leader rely on the Reichswehr

—many of whose leaders have shown themselves to hold surprisingly liberal ideas? Though the regular Army was no doubt glad enough to take a hand in the suppression of the Brown Army, it is hardly possible that Hitler can count on more than friendly neutrality. But the outstanding fact is that, whatever the attitude that may be taken by other sections of the nation, the solid mass of the Nazi Party, by whose support Herr Hitler rose to power, has been shattered. The ruthlessness of this week-end *coup* should not be a shock to the Nazis, for, after all, their comrades have perished by those same barbaric methods which the Party has glorified and on which it has based its fortunes. On the other hand, the rank and file of the Party will certainly be shocked through and through by the abrupt, bewildering and brutal change in the picture of their universe which Herr Hitler has now thrust upon them. For a dozen years ending on June 29th the Brown Shirts had been encouraged, by every artifice of reiterated suggestion and propaganda, to regard themselves and their comrades and officers as heroes and martyrs, whose efforts and sufferings had at last brought Germany her perfect national unity. Now, without warning, this same great army of naïve and enthusiastic young men is being told that their officers were vicious scoundrels, their millennium a fool's paradise, their hard-won national unity a cloak for conspiracy and treason. Can the rank and file of the Brownshirts adjust themselves to this immense change in their position, prospects and outlook?

Two reflections suggest themselves in this connection. The first is that, for the past eighteen months, these hundreds of thousands of young men of the lower middle and upper working classes have tasted the sweets of political power for the first time in German history. They have sent the Marxists and the Conservatives rolling in the dust while they themselves have been lording it in the saddle. Has the Führer any magic which can erase this memory from his followers' minds? And, so long as the memory lasts, can a tame submission be expected of them? The second factor is economic. Whatever may be the immediate economic prospects of the rest of Europe and of the world, the immediate prospects for Germany, by general consent, are dark. And it is difficult to believe that, when Germany is on the verge of suffering from another sharp and painful turn of the economic screw, it will be possible, with impunity, for the existing regime to drive another large social class into opposition—and this the very class which Herr Hitler himself has awakened to consciousness, and aroused to militancy, as the driving force for his own rise to power. Hard times are just the times in which a camouflaged unemployment relief organisation like the S.A. is apt to be created by clever politicians; and by the same token these are precisely not the times in which it is possible, short of disbanding an organisation of this kind, to cut down its numbers and scale down its emoluments. This is not possible, that is to say, without asking for trouble.

How Herr Hitler will handle this internal problem remains to be seen. To many it would seem that a certain consequence will be to drive many into the ranks of Communism.

But what of the international situation? It would seem that her immediate neighbours take the view that the internal troubles of Germany mean that the German menace is definitely less threatening. This is to the good; but it is by no means all that should be said, for it remains true that a distraught Germany is good neither economically nor politically for the peace and prosperity of Europe. Those desirable ends can only be attained if in the central plain of the European continent there is a contented and prosperous people.

On these and other consequences of the week-end drama it is perhaps too early to speak. But there is another moral in which there can be no shadow of doubt. In every state—if the well-being of the people is to be safeguarded—the question must always arise, *Quis custodiet ipsos custodes?* Democracy has its answer in devices for expressing the will of the people. In dictatorship, whether military or demagogic, the abuse of power based on force can only be overcome by force. This week's events are a solemn warning to the democracies of the world of the perils that await those who abandon the vital safeguards of constitutionalism.

SHIPPING

FROM the time when the iron ship began to drive the wooden ship off the high seas in the middle of the nineteenth century and our merchant marine repelled the challenge of American shipping, British ships dominated the carrying trade of the world until the outbreak of the Great War. In the past decade that supremacy has been challenged by many countries, who have sought by direct subsidy, by restrictive conditions in coastwise trade and in the use of ports, or in other ways, to create for themselves a merchant fleet of their own.

Even to-day 53 per cent. of the tonnage passing through the Suez Canal—one of the great ocean toll gates of the world—flies the British flag, and though our merchant fleet has dropped to less than 30 per cent. of the world's total tonnage, Mr Runciman recently stated that British ships were carrying 90 per cent. of inter-Imperial trade, 60 per cent. of the trade between the Empire and foreign countries, and 25 per cent. of exclusively foreign trade. This latter figure has recently been criticised as being too high, though the critics have produced no alternative figures on a tonnage or cargo basis (the number of ships is, of course, not a sound criterion); but even if this last proportion is now falling somewhat it is undoubtedly still true that we have the lion's share of the world's carrying trade. As regards the goods which come to Britain 95 per cent. of the merchandise from Empire countries comes by British ships, while 54 per cent. of foreign goods are brought by our own ships, and three-fifths of the balance by those of the country which sends the goods. Only 13½ per cent. of our imports, measured in value, was carried in vessels not under the British flag or that of the country from which the goods were consigned. When we consider this maritime supremacy in the light of our history and our overseas development it is of profound significance that the President of the Board of Trade should this week have been constrained to lay before the House of Commons suggestions for Government assistance to shipping.

The cause of the trouble was put by Mr Runciman in a nutshell when he pointed out that, while seaborne trade has fallen in volume since 1929 by one-third and is less than it was before the war, the merchant shipping of the world has increased by about 50 per cent. since 1914. The inevitable result has been a heavy slump in freight markets; freight rates stand at about three-quarters of the 1913 figure; whereas running costs are greatly increased. The effect upon the balance sheets of shipping companies has been disastrous. "Very few British shipping companies are covering their running expenses and fewer still are able to make the necessary provision for replacing their ships as they become out of date." In this situation the nations have pursued a policy which has become painfully familiar in every other branch of economic activity, and have proceeded to make matters worse by increasing subsidies and accentuating cut-throat competition. Such is the problem to which the President of the Board of Trade addressed himself.

In the case of liner companies, Mr Runciman pointed out that to some extent they are able by means of their "conference" arrangements to protect themselves against the worst effects of this rate-cutting process; and his statement implies that the Government do not propose to do anything to help the liners unless special measures may have to be taken in particular trades. Tanker tonnage is also a matter on which no action is to be taken for the present, seeing that the business is in the hands of a few big trading companies and an international plan has been inaugurated to adjust supply to demand. The Government's immediate concern is, therefore, with the ordinary tramp steamer. The suggestion, put up by the shipowners themselves, of a flat rate subsidy for all cargo-carrying ships with a smaller subsidy for laid-up ships is turned down; but the Government propose to grant a subsidy "for defensive purposes" up to a total of £2,000,000. This offer, however, is conditional on the shipowners formulating a scheme satisfactory to the Government which will:—

- (i) prevent, so far as possible, the subsidy from being dissipated by the domestic competition of British ships carrying tramp cargoes; and

- (ii) ensure that it is effectively directed to securing the greater employment of British tramp shipping at the expense of foreign subsidised shipping.

This entails a real measure of organisation of tramp shipping. Such a subsidy would be given for one year only, and within that period be subject to withdrawal if the circumstances which led to its introduction were altered. It would also be a condition that the shipowners, through their international organisations and in any other ways open to them, press upon the shipowners in other maritime countries the framing of proposals tending to adjust the supply of tonnage in the world to the demand, and thus to raise freight rates once more to a remunerative level.

The Government on their part will continue their efforts, in co-operation with the Dominions and India, to secure international action to place shipping generally on an economic footing.

This decision came as rather a surprise, for it had been thought that the Government intended to limit their help to the "scrap and build" plan which has been so much discussed recently, under which financial assistance would be given to shipowners to build one new up-to-date, and presumably economic running, ship in return for the scrapping of three old vessels. The President of the Board of Trade evidently still thinks that this is the right thing to do, and he indicated that the Government would be still prepared to co-operate on that basis; but it has been made quite clear that shipowners themselves are not in favour of this plan, though it may well be that second or third thoughts may in the end lead them to the conclusions that efficiency and economical running are the essential conditions of the survival of this vital industry.

The rejection of the shipowners' subsidy plan shows that Mr Runciman, at all events, is fully alive to the difficulties and dangers of an all-round flat-rate subsidy to British tramp shipping. Such a plan would be a challenge to all other countries, inviting those who are already subsidising to increase their subsidies, and to those who are not already doing so to embark on a similar course. It would, moreover, be very difficult to withdraw from a plan which would ensure that the whole of the shipping of the world would be subsidised at the expense of some taxpayer; and as Great Britain is so deeply engaged in this business our Exchequer would in the end be more heavily drawn upon than any other. At the same time, it is obvious that a selective subsidy is full of difficulties. Clearly, competition of our own shipowners among themselves is a major factor in the present condition of the freight market; and it would seem that Mr Runciman's first condition is a demand for the cartelisation of one of the most competitive trades in the world. Those who have any idea of the diversity and wide ramifications of the tramp shipping business, with its thousands of units wandering round the world seeking cargo which even in normal times is constantly varying in amount and direction, will realise the task which the Government have set before the shipowners if the latter are to eliminate competition among themselves. This difficulty alone fully explains Mr Baldwin's statement that there is no likelihood of the matter being ripe for legislation before the autumn. The working out of a selective principle is at least as complicated. The possibility of a subsidy is to be held as a threat over the heads of those who are unfairly competing, but how is this to work where both subsidised and unsubsidised ships are competing for cargoes in the same market—for example, from South America? Mr Runciman's statement is in fact not a plan, but a statement of principle; and much work will have to be done before it can become an effective scheme.

On its underlying idea, however, there will be fairly general agreement: namely, that the economic weight of this country should be used to get rid of the vicious system which is steadily threatening the survival of international commerce altogether. Whether Mr Runciman's plan is the most practical way of achieving this result is another matter, and it may well be that other proposals to secure the same end may in fact have to be called in aid. We have ourselves, for example, repeatedly emphasised the arguments in favour of refusing the liberty of British ports to subsidised ships. The alternative version to this plan is the imposition of countervailing duties on goods im-

ported into this country in such ships. Such a method may prove, in the end, the most effective way of bringing about more equitable conditions; but it must never be forgotten that all such steps have their own dangers and difficulties. Under more normal circumstances it could be argued that if other countries are prepared to pay for the privilege of carrying our goods, that is a contribution to the wealth of this country which we should be foolish to refuse. But if "gifts" of this kind are persisted in long enough to bring about the dislocation of a vital economic activity, all our resources must be used to bring about the restoration of normal conditions.

It is, however, idle to imagine that we can deal with the problem of shipping as a separate, independent matter; and we come back to the principle which is being increasingly stressed by such shipowners as Sir Alan Anderson, who is constantly pressing upon the Government the view that this country's whole commercial policy must be so designed as to bring together those nations who are prepared to trade with one another in accordance with certain agreed principles of competition and fair trading. We are strong enough commercially to gather round us a large group who would be prepared to adhere as between themselves to "the rules of the game," but if need be to resist with their own weapons the actions of those whose policy is destructive of the international economic system. Unless such a plan is formulated and courageously pursued any subsidy for British shipping will be not merely a *pis aller*, but will saddle upon the Exchequer a burden which, like the old man of the sea, will be extremely hard to shake off. Indeed, it may even add to the confusion of the world's commerce.

A MATTER OF HOPS

YET another agricultural marketing scheme has been completed in this country. This time it is the turn of hops; and although the value of the annual production of hops is slight, although hops are almost entirely used for brewing, and although their price hardly affects the price of beer, the present scheme is deserving of attention for the principles upon which it is based. As long ago as 1917, in consequence of the large increase in the acreage under hops in this country during the war, the Hops (Restriction) Order compelled hop-growers, without compensation, to restrict acreage by one-half. Control continued until 1920, when the Ministry of Food (Continuance) Act renewed control for five years and prohibited imports of hops except under licence from the Hop Controller. This lasted until 1925. The Finance Act, 1925, then imposed for four years a duty of £4 per cwt. on imported hops. English brewers were safeguarded by a duty of 10d. per standard barrel on imported beer. The 1929 Finance Act prolonged these duties for a further four years, before the end of which the new Hops Marketing scheme of 1932 under the Agricultural Marketing Act, 1931, was completed and entered into.

Last week, the Report of the Provisional Committee appointed in April to consider the amendments to the 1932 hops scheme now before Parliament was published (Cmd. 4628). The Committee have drawn up an Agreement covering production and sale of English hops for the five seasons (the "year" dates from August 16th) beginning with the 1934 crop; and this has been approved not only by the Brewers' Society and the Hops Marketing Board, but also by general meetings of all brewers and hop growers called by their organisations. This Agreement, published with the Report, covers the whole period 1934-39; and provides that each individual brewer shall guarantee to purchase from the Board at least two-thirds of his estimated total requirements of English hops each year in that period; and that the sum of these contracts shall amount to at least two-thirds of the estimated total demand for English hops. Imports of hops are never to exceed 15 per cent. of the total market demand for all hops; and in the five years as a whole, imports are not to exceed 15 per cent. of the total demand in the period. The average price of English hops in each of the five years of the scheme is fixed at £9 per cwt., including commissions and expenses.

of the Board; and the Permanent Joint Committee can only adjust this price if "wages" are altered by 15 per cent. or more, though whose are the "wages" is not stated. The hops Board is to add a levy of 10s. per cwt. to the price of all the hops it sells, the proceeds of which are to form the "levy fund," controlled by the Permanent Joint Committee.

The Permanent Joint Committee is to be composed of four members representing the brewers, four representing hop-growers, and three "impartial members." The three latter are to estimate in April of each year the demand for English hops by deducting from the estimated total demand for hops "the total quantity of imported hops for which provision is made" (our italics); and a date is to be fixed before which sales of current year's hops can only take place in fulfilment of the firm contracts guaranteed by brewers, and after which trading can be "free." A date is also to be fixed, on which the unsold balance of the estimated total market demand for English hops is to be determined; and the levy fund is to pay "the actual value of that unsold balance" to the Hops Marketing Board; but a stock of hops held by the Board is then to be vested in the Committee to the value of the sum paid out by the levy fund, and the Committee is to dispose of that amount of hops in its own discretion. The maximum liability of the levy fund is fixed at 33½ per cent. of the estimated total demand for English hops; and the fund is to accumulate to this amount, after which contributions are to be reduced or discontinued. If the Fund cannot meet its liabilities in any year, it can obtain advances (from the Exchequer?) on the security either of hops held on its account, or of the levy from future sales; and any balance in the Fund at the end of the quinquennium is to be at the disposal of the Brewers' Society.

The principles of this scheme are as disturbing as those of all the other protective-restrictive agricultural schemes with which we are becoming painfully familiar. Like the Wheat Act, the hops scheme will guarantee producers a minimum price for "a term of years absolute"; this price cannot, in effect, be varied—except upwards—for none can suppose wages will fall 15 per cent.; and even so the levy on sales under the brewers' guaranteed contracts is to make good the deficiency realised in the ensuing "free sales"—which are therefore not free at all; and the levy fund is to foot the bill for any unsold balance at the end of each season. But how and where is the Permanent Committee to dispose of the surplus which then becomes vested in it, and at what loss? As Mr C. S. Orwin pointed out in a letter to *The Times* of June 27th on the entire amended Hops Scheme, the scheme does not even do what the wartime control did—restrict production. It will probably increase it. But whereas the Wheat Act provided that over-production should lower the total of "deficiency payments" made to registered growers, the hops scheme does not even do that. Mr Orwin quite rightly emphasises the implications:—

If this principle be conceded to hop growers, it cannot be refused to producers of food products, and herein lies the danger. The new agricultural policy is still in its infancy, and those who wish it well will make a fatal mistake if they arouse even a suspicion that it stands for the creation of monopolies for producers, vested interests in land, and organised stagnation in the farming industry.

The amendments to the Hops Marketing Scheme, 1932, coupled with the present Report and Agreement, do little to reassure us that monopolies and vested interests are not in fact organising stagnation in British agriculture.

THE HALF-YEAR'S PRICES

THE dominating influence on sterling and international prices during the first half of 1934 has been the devaluation of the dollar to 60 per cent. of its former gold parity at the end of January. As sequels, if not consequences, of this devaluation the following principal movements have occurred: dollar prices have risen; sterling has appreciated slightly against the dollar, but not sufficiently to prevent it depreciating, also slightly, against the franc; sterling prices

have risen; and gold prices have fallen. The experience of the past six months shows how very effectively the under-valuation of a currency's exchange tends to assist the depreciating country and depress those countries whose exchange is over-valued.

Dollar prices of primary commodities rose from 124.8 (September 18, 1931 = 100) on January 31st to 133.9 on June 20th, with a minor peak in March and a slight recession in April; while the Irving Fisher index continued its impressively steady rise, with some slight vacillation in April, to a high record for the depression on June 13th. Sterling followed the downward course of the dollar, maintaining, however, a decorous distance. The price of gold in sterling, which measures inversely the depreciation of sterling against the gold currencies, rose from 150.7 (September 18, 1931 = 100) on January 31st to 162.3 on June 20th. In terms of the dollar, however, sterling appreciated from 4.97-5.01 on January 31st to 5.05-5.06½ on June 28th, after touching a high point of about 5.17 in April. There have of course been many special and speculative factors affecting the exchanges, and these have lately been tending to depreciate the pound against both the dollar and the franc. But it is probable that the over-valuation of the pound against the dollar has been tending to disappear in the last month or two, since dollar prices have been rising faster than sterling prices and the exchange value of sterling has been falling.

Meanwhile the rise in the gold price of sterling has undoubtedly enhanced the under-valuation of sterling against the franc. Indeed, the close correspondence between movements in the gold price of sterling, sterling prices, and gold prices has been the most remarkable feature of the price history of the last six months, as the accompanying diagram shows. The gold price of sterling rose from 150.1 (September 18, 1931 = 100) on January 31st to 161.7 on February 14th, fell to 158.7 on April 11th and rose to 162.3 on June 20th. The *Economist* complete index of wholesale prices rose from 105.9 on January 31st to 109.3 on February 14th, fell to 108.2 on April 25th, and has subsequently maintained roughly the same level. French wholesale prices (Statistique Générale, September, 1931 = 100) fell from 88.1 on January 31st to 85.6 on March 14th, recovered to 86.1 on April 11th, fell again steeply to 82.2 on June 13th. The Italian index (Milan Chamber of Commerce) also fell steadily over the period, with a slight recovery in May. The extent of the deflation imposed on the gold countries by the renewed depreciation of the dollar and the pound is only too evident. Germany alone of the gold countries, by inflating and ignoring her gold losses, has escaped this deflation.

The dispersion of the rise in sterling prices has been fairly general. In the following table we give the annual movements from 1924 onwards in our complete Index Number, and in its component series, on the basis of the average of wholesale prices in 1913:—

Average 1913=100

Date	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index
Average, 1924	159.9	169.9	210.6	145.2	113.5	159.3
" 1927	139.9	159.3	153.9	121.6	124.6	137.6
" 1928	145.0	149.4	161.7	111.9	119.3	135.1
" 1929	135.6	136.8	141.9	116.2	112.7	127.2
" 1930	113.4	122.9	99.1	101.6	101.5	106.8
" 1931	96.1	104.1	77.0	88.9	85.3	89.3
" 1932	95.4	99.6	75.7	88.6	77.1	86.1
" 1933	90.1	83.5	77.6	93.9	81.7	86.8
End December, 1932..	88.3	95.6	74.8	89.9	77.1	84.1
End June, 1933	90.5	92.4	83.1	98.5	84.9	89.5
End December, 1933..	90.2	90.2	82.1	94.1	84.8	87.9
End June, 1934	95.7	83.4	81.5	93.6	86.1	89.7

Only two of the component indices, textiles and minerals, show a fall, and the fall in each case is slight. Each of the components has also shown a tendency, most pronounced in the case of textiles and miscellaneous commodities, to touch a high point towards the end of February and a subsequent falling off. The complete index, however, now stands nearly at the highest point it has reached since 1930.

Movements in particular prices are shown in detail in the following table of percentage changes in the prices of 58 commodities between January 31st and June 20, 1934.

PRICE CHANGES BETWEEN JANUARY 31, 1934, AND JUNE 20, 1934

Increases	Per cent.	Decreases	Per cent.
(a) 50 per cent. and more—	+58	(a) Under 20 per cent.—	—1
(b) 20-49 per cent.—	+38	Timber, Swedish	—3
Flax	+38	Spelter	—3
Cocoa	+26	Sugar cane	—3
Linseed oil	+25	Beef, English	—4
Mutton, English	+25	Lead	—4
Cotton, American	+23	Tea	—4
Wheat, English	+23	Petrol	—6
Cheese, Canadian	+21	Jute	—8
Total number	7	Wool, Australian	—10
(c) Under 20 per cent.—	+17	Portland cement	—12
Coffee	+17	Tallow	—13
Oats	+15	Coal, Sheffield house	—13
Bacon, Danish	+14	Iron bars	—13
Wheat, foreign	+12	Beef, Argentine	—14
Flour	+12	Wool, English	—15
Mutton, New Zealand	+12	Butter, Danish	—15
Cotton yarn	+9	Leather	—17
Hides	+9	Silk	—19
Pig iron	+9	Total number	18
Coconut oil	+6	(b) 20 per cent. and more—	—20
Rice	+6	Wool tops	—22
Cotton, Egyptian	+5	Barley	—22

Maize	+1		
Total number	17		
Grand total of increases ..	25		

Exchanged—
Coal, Welsh, Admiralty.
Coal, Durham gas.
Copper.
Creosote.
Fuel oil.

The heavy increase in the price of rubber is, of course, due to the successful negotiation of a new restriction agreement. The rises in wheat, flour, oats and cotton are mainly due to the drought in the Northern Hemisphere. Government restriction in America has also had a strengthening effect on cotton prices, though this has been to some extent

offset by a consequent increase in production elsewhere. The rise in bacon and mutton is partly the result of the Government's successful efforts to limit foreign and Dominion supplies; while the fall in beef reflects the enormous increase in Dominion imports into this country in the last six months. Mutton has also, of course, been affected by the normal seasonal increase of demand as well as by a more long-term change of taste which is also helping to depress beef prices. The rise in coffee and cocoa is due to smaller crops, and part of the rise in linseed oil to the prospect of a moderate crop in the Argentine. Another factor assisting coffee prices has been the wholesale destruction of stocks carried out in the last two years.

Wool prices have weakened, partly as a natural reaction after last year's restocking boom and partly as a result of a reduction in German and French imports. The fall in raw silk reflects the depressing effect of dollar depreciation on Japanese silk production as well as the continued competition of rayon throughout the world (see article in the *Economist*, June 23rd). The fall in coal prices is seasonal; the fall in jute is the effect of a good crop; while increased imports from the Dominions have effectively lowered Danish butter prices.

The influence of steadily increasing demand throughout the period can be most easily seen in the moderate but substantial rises in the sterling prices of raw materials such as hides, pig iron and linseed oil. This increase in demand, mostly internal, but also in part external, is the most satisfactory feature of the price history of the last six months; and there is little reason why it should fall off in the immediate future provided that there is no abatement of the existing monetary abundance (surveyed in our article on *The Money Market Half-Year* this week), nor any substantial rise in the exchange value of sterling.

WHOLESALE PRICE AND CURRENCY INDICES

(September 1931 = 100)

THE BALTIC STATES

(BY A CORRESPONDENT)

A SURVEY of economic conditions in the three Baltic States is opportune, not only because the British Government's recent restrictions on agricultural imports from these countries has hit them hard, but for the more cogent reasons that Estonia, Latvia and Lithuania are in normal times good customers of Great Britain, and that new commercial agreements have just been, or are even now in process of being, concluded between this country and the three Baltic States.

Estonia.—The general economic improvement seems to have reached Estonia in the middle of last year. Employment at the end of 1933 was about 9 per cent. higher than a year earlier. The foreign trade returns show an increase in the value of imports during the last quarter of 1933 compared with 1932 of 44.7 per cent., and of exports 38 per cent., the year showing a favourable trade balance of 6.5 million kroner (about £360,000). The State revenue declined in the first quarter of 1933 by 13.7 per cent., but the two following quarters showed a rise compared with the corresponding quarters of the preceding year of 7 per cent. The central bank's proportion of reserves to current liabilities at the end of March, 1934, was 54.6 per cent., compared with 44.6 per cent. a year earlier and 45.8 per cent. two years earlier.

There appears to have been an increase in repayments by farmers against Government advances and loans, which argues improvement in a position which is of paramount importance in every Baltic State. Much of this improvement is due to the depreciation of the kroner by 35 per cent., which took place in the second half of June last year.

As already pointed out, there has been an increase in foreign trade since 1932, and it should be noted that the United Kingdom duly benefited from this owing to greater facilities for obtaining currency to pay for imports from Britain. Imports from Great Britain rose from 13.8 per cent. of the whole in 1932 to 18 per cent. in 1933, whereas those from Germany fell from 32 per cent. to 22.5 per cent. Germany's share in Estonia's exports for the same periods fell from 26 per cent. to 21 per cent., and that of Britain rose from 36.7 per cent. to 37.1 per cent.

Undue optimism over the trade position in the immediate future would be unwarranted. A factor which has exercised an unfavourable effect during the last few months has been the unsatisfactory yield of flax. The farmers, however, emboldened by the greater confidence which undoubtedly exists, have increased their acreage for the 1934 campaign. Given reasonably good weather and a continuation of the rise which has taken place in world prices, there is a possibility of marked improvement in trade generally after the coming harvest. Supplies of foreign exchange should then increase and be available for increased purchases abroad. This should augur well for the Anglo-Estonian Trade Agreement, settled in London on April 20th last, which confers special privileges on British traders.

Latvia.—There are certain reasons why Latvia has felt the economic blizzard with particular acuteness. She is economically and politically more advanced than the other two States, and her economy is therefore built on more complicated foundations. Riga has always been rather a burden on the country. In more normal times Riga formed to a great extent the business centre for all three States. As trade restrictions in Latvia grew, in order to keep an even trade balance and protect the currency, it became much more difficult, if not impossible, for merchants in other States to go on doing business through Riga, and the latter became more of a burden than ever. Again, a severe blow to industry and the transit trade of the country resulted from the expiry of the commercial treaty with the Soviet Union in November, 1932, and the failure to come to terms for a new one. The Soviet Union was the largest buyer of manufactured goods in 1929 to 1932, taking about 40 per cent. of the total manufactured exports. Moreover, when this Russian business began on a large scale expensive extensions to plant were undertaken, and the outlay incurred has now proved unproductive, as no foreign market can replace the Soviet Union.

In these circumstances it was natural that unemployment should increase in 1932. At the end of 1933 some improvement had set in in consequence of measures taken to restrict imports. But the Budget for the fourth year in succession shows a deficit, in spite of high taxes and drastic method of collection. A revenue of 140.7 million Lats was budgeted for in 1933-34 against 207.7 millions in 1928-29. Subventions to the export of agricultural products are a heavy charge on the Budget.

Foreign trade collapsed in an astonishing manner after 1930. Imports for that year reached a value of almost 300 million Lats; in 1931 they were 176 millions and in 1932 85 millions, while the respective export figures were about 250 millions, 164 millions and 97 millions. In 1933 imports totalled 91 million Lats and exports only reached 81 millions, leaving an adverse trade balance of 10 millions. It is, therefore, not surprising that there has been a serious outflow of gold and foreign exchange. The gold backing of the Lat is jealously maintained and exchange control exists in Latvia to an extreme degree. But exports and the supplies of foreign currency have increased in April, following upon the opening of river navigation, and some improvement may be looked for later in the year. The present high value of the Lat in relation to the £ sterling is a serious obstacle to the important export of plywood. This forms a strong argument in favour of devaluation of the Lat. "Kerb" dealings in foreign currency reach very large dimensions, and the "kerb" rate of the £ is some 20 per cent. higher than the official rate.

The United Kingdom takes the lion's share of exports from Latvia. In the matter of imports into Latvia, though the returns for 1933 show an increase in the case of the United Kingdom of 70 per cent. compared with 1932, Germany still occupied the first position, leading by some 10 per cent. Her share fell by some 25 per cent. from 1932 to 1933. Both import and currency permits are granted with much greater facility for trade with the United Kingdom, but the clearing system in force between Latvia and Germany would seem to confer an advantage on that country.

The lot of the Latvian farmer improved in 1933 owing to minimum prices of grain which were introduced by law. Buyers were therefore found for agricultural machinery and other goods which had lain in stock for some time. This seems to offer some prospect of an increase in exports in the near future. There is scope for considerable expansion of her purchases of British goods, especially now that final agreement on the terms of the commercial treaty with Great Britain has been reached.

Lithuania.—In the case of this country there are and have been no restrictions on dealings in foreign exchange or payments abroad. Moreover, the local currency has remained stable, and there is no sign of any intention to go off gold, though since the Lit was based on the U.S. dollar the depreciation of the latter was undoubtedly a shock. The backing of bank notes issued by the Bank of Lithuania (the central bank) in gold and foreign currency amounted at April 15th last to about 83 per cent. This is not far short of the usual figure, but at the end of 1929 and 1931 it reached over 100 per cent. Foreign currency then participated to the extent of about 70 per cent. of the total which was mainly due to large remittances received from Lithuanian emigrants in the United States. These are estimated to have amounted to some 3 million dollars per annum. At present they only form about one-fifth or one-sixth of the previous amount.

Lithuania is dependent on agriculture to a greater extent even than Latvia, and she has suffered severely from the depression. But the modest standards of her rural population have enabled her to weather the storm comparatively well. The trough of the depression seems to have been reached in 1933, and there are again signs of an upward trend in recent months. Commodity prices stood at 49 at the end of 1933 against 52 a year earlier (1924 = 100). Slight rise in the price of agricultural and animal products was counterbalanced by a setback in manufactures and raw materials, so the agricultural and manufacturing blades of the price "scissors" drew closer together.

The State revenue in 1933 amounted to 250 million Lit or 6 per cent. less than in 1932. Expenditure kept just below this figure, being in its turn 10 per cent. below the

of 1932. Exports and imports show a further fall in 1933, but the returns for the first quarter of 1934 show an increase in exports of about 10 per cent. compared with the previous year, whereas imports remained the same.

Animal products, chiefly bacon, occupy the first place in Lithuanian exports. Germany and the United Kingdom do the largest business with Lithuania. Germany's share of Lithuanian exports fell from 39 per cent. of the total in 1932, to 33 per cent. in 1933, and the United Kingdom's share rose from 41 per cent. to 45 per cent. Germany easily heads the list of exporters to Lithuania, but her share fell from 40 per cent. in 1932 to 30 per cent. in the following year. Britain's share rose from 10.8 per cent. in 1932 to 17 per cent. in 1933. Import licences have been introduced by the Lithuanian Government for coal, cotton yarn,

woollen goods, cement, iron, steel, sheet iron, fertilisers, etc., in order to create more favourable trade balances with a number of countries, among which are Sweden and Denmark.

In conclusion, Germany is in a particularly strong position as regards supplying the needs of this country, owing to her proximity and the way she has studied Lithuanian requirements.

Conditions in the Baltic States therefore appear greatly improved in comparison with 1932 and 1933. Whether this improvement will continue, and whether it can be turned to the advantage of the British exporter and investor, depends on this country's willingness to take the imports for the production of which these States are so well suited, and for which they have borrowed capital abroad.

NOTES OF THE WEEK

The Cabinet Reshuffle.—Sir Henry Betterton's appointment as chairman of the new Unemployment Assistance Board has been followed by a reshuffle of minor Ministerial appointments. Mr Oliver Stanley, who has proved an able and energetic Minister of Transport, succeeds Sir Henry Betterton as Minister of Labour. Mr Hore-Belisha, hitherto Financial Secretary to the Treasury, goes to the Ministry of Transport. Normally the position of Financial Secretary to the Treasury is regarded as the last rung of the ladder below Cabinet rank. But Mr Hore-Belisha's entry into the Cabinet would have upset the lore of nicely calculated less or more Simonites, Conservatives and MacDonaldites which the Prime Minister is at pains to preserve. Sir Henry Betterton's appointment to this exceptionally important new post will be fairly generally welcomed. Though not a statesman of brilliant originality or imagination, he has shown himself at the Ministry of Labour to be a competent and steadfast administrator. Mr Herbert Morrison has criticised the appointment on the ground that it is improper for a Cabinet Minister to be given a high-salaried post which, with its salary, has been created by the Cabinet of which he himself is a member. Such a practice, in our opinion, would certainly be unfortunate if it became common; and we trust that the present appointment will not be regarded as a precedent. No one would suggest, however, that efficiency has been subordinated to political considerations in the appointment of Sir Henry Betterton to an extremely responsible and arduous task.

Lord Snowden's Verdict.—Lord Snowden had some very hard things to say about the Prime Minister in the Debate on the Land Taxes in the House of Lords on Tuesday. He also disclosed some remarkably illuminating facts about the early days of the National Government. Within a month of the General Election, Lord Snowden related, Mr Chamberlain, yielding to Party pressure, made up his mind to suspend the taxes. He spoke to Lord Snowden about it, but Lord Snowden, "disgusted with an intended breach of pledge," declined even to discuss it. Later Mr Chamberlain decided, not on immediate repeal, but on the suspension of valuation. In resisting the proposal in the Cabinet, Lord Snowden informs us, he had no support whatever from his ex-Labour colleagues. Instead, the Prime Minister merely implored him not to resign, with the words "Do not desert me now." Lord Snowden consented, feeling that he "had a special responsibility to see that the specific purpose for which the Government had been formed was carried out." A few days later Mr Chamberlain announced the suspension of valuation. The Conservative rank and file, still unsatisfied, moved a clause for the repeal of the taxes. Lord Hailsham opposed this on the ground that the proposal would impose upon the ex-Labour members of the Cabinet "a public humiliation which it would be unreasonable to demand." This statement Lord Snowden described as "dishonest" on the ground that

the suspension was an effective way of killing the whole scheme of land valuation and taxation. Yet this scheme, if carried out, would have cheapened land and powerfully contributed to the solution of the housing problem. However, the tax has now been repealed outright. The only explanation, Lord Snowden said, which he could offer of this action was that "the Cabinet had found the Prime Minister so amenable an instrument of Tory policy that they had come to the conclusion that there was no humiliation to which he would not submit if they would allow him still to be Prime Minister." The general record of the National Government was summed up by Lord Snowden as follows:—

They had dishonoured all the conditions of the formation of the National Government; they had dishonoured every pledge which was given at the last General Election. . . . Before joining the Government he demanded, and received, specific undertakings that the National Government was being formed for one purpose only, and that, when that purpose had been secured, the parties would resolve themselves into their former positions, and that during the lifetime of this Administration there would be no party legislation and at the General Election which was to have followed there would be no party arrangements. He had joined the National Government on these conditions. He had been betrayed.

Lord Snowden's language is embittered; and it is clear from the rest of the debate that the House deprecated so merciless an attack on a political opponent who was not in the circumstances able to reply. It is probable, however, that Lord Snowden's verdict on the repeal of the Land Tax will prove to be the verdict of history.

* * *

Labour and War.—On June 28th a special conference, at which the General Council of the Trades Union Congress, the National Executive of the Labour Party, and the Executive of the Parliamentary Labour Party were all represented, was held in London to lay down the policy of the Trade Union and Labour movements in the event of a war in which we might be involved. Hitherto, the Labour movement has handled this question in a way that has been unrealistic, and, indeed, irresponsible. On the one hand, it has committed itself to resolutions pledging it to take no part in war in any circumstances, and to resist any attempt, on the Government's part, to go to war by bringing into play the *ultima ratio* of a general strike. On the other hand, it has committed itself to the support of a collective system under which a country may be required to carry out operations of war against an aggressor in defence of the common security of all countries. A statement was drawn up last week which is to be laid before the Trades Union Congress and the National Conference of the Labour Party this year; and, if this statement is adopted, Labour will have definitely opted for the collective system, with the possible use of force which this involves, and will have discarded absolute pacifism, with which the collective system is irreconcilable. The state

ment lays down three points of Labour policy: first, the undertaking not to resort to war should be expounded and clarified in a non-aggression treaty, backed by a definition of aggression, and ultimately by a revision of the Covenant; secondly, machinery should be provided, and undertaken, for the final settlement of all disputes by pacific means, including facilities for peaceful changes in the *status quo*; and, thirdly, national armed forces should be replaced by an international police force under the authority of the League—a beginning to be made in the air. The report faces the question of the relation between loyalty to one's local national state and loyalty to the great society of which these states are fractions; and it tabulates three duties of citizenship: the duty to insist upon one's own Government settling all its disputes by peaceful means; the duty to support one's own Government in honouring its obligations to take action against an aggressor; and the duty to resist one's own Government if it becomes an aggressor itself. In the latter event, however, the report does not demand an automatic general strike, but is content with an existing standing order of the T.U.C., which requires a special congress to be called in the event of a danger of war arising. The older strategy of a general strike presupposed that general strikes would take place simultaneously in other belligerent countries; but this supposition can no longer be treated as practical politics now that the trade union organisation has been destroyed in Italy, Germany and Austria—not to speak of Japan. In dropping the general strike strategy now the Labour movement is undoubtedly acting wisely.

The First Quarter's Revenue.—The Exchequer returns for the first quarter of the current financial year (see page 12) make quite satisfactory reading. The first quarter of the financial year always discloses a substantial deficit, for income-tax receipts "start slow" and work to their climax in the last quarter. Ordinary Exchequer receipts in the first quarter of the year 1934-35 amounted to £128,158,824 and ordinary expenditure to £177,876,697, leaving a current deficit of £49,717,873, which is £1,988,108 more than the deficit at this time last year. The increase in the deficit is due to a decline in revenue of £1,399,870 and an increase in expenditure of £588,238, as compared with the figures in the first quarter of 1933-34. In the revenue figures there are increases, as against last year, in the yield of motor duties, Post Office net receipts, Customs, stamp and death duties—the increase in the latter category being over £5½ millions, perhaps due in part to delayed settlement of the large Ellerman estate. On the other hand, there is a fall in income-tax yield of £1,673,000 and in surtax yield of £560,000. The revenue from this tax was estimated by Mr Chamberlain to increase by £11 millions this year, mainly because last year showed a loss of a quarter of the tax in the payments made on July 1, 1933, since three-quarters had been paid in January, 1933, in the 1932-33 financial year. In 1934-35, on the other hand, we revert to the normal half-yearly payments in equal instalments; but little or none of this increase over last year's yield can have showed itself yet. Moreover, income tax was reduced to 4s. 6d. in the £1 in the last Budget. This will not affect incomes from salaries, etc., until January; but other forms of income are affected now; and though the drop in income-tax yield this quarter is of the order of 10 per cent. of the yield in the first quarter of 1933-34, while the standard rate has been reduced by the same percentage, this is only a coincidence. In other revenue items, there is a large and unexplained drop in miscellaneous receipts, from £11,942,928 in the corresponding quarter of 1933-34 to £3,914,028 this quarter—probably due to a single and abnormally large receipt under this head last year. The drop in surtax yield (of £560,000) is mainly owing to its assessment on incomes of the less prosperous year 1932-33. Though the yield of Customs duties is already £3 millions up, as against Mr Chamberlain's estimate of a total increase of £4 millions in these receipts over the whole year, the yield of Excise this quarter is down by £1.6 millions—due perhaps to delayed effects of the Chancellor's beer-duty concessions in the 1933-34 Budget. On the expenditure side, the supply services took

an additional £494,000; defence forces spent £350,000 more than last year, while civil expenditure increased by £136,000. Interest and management of the national debt absorbed about £2 millions more than in the corresponding period of 1933-34, no doubt partly due to the cost of the 3 per cent. Funding Loan issue in April. If we except the issue in June of last year of £200 millions of Treasury bills to the Exchange Equalisation Account, the floating debt increased in the first quarter of 1933-34 by £38.6 millions, whereas last quarter it increased by only £31.7 millions. It is not possible to judge from the figures of the first quarter of the year whether or not the final outcome of the Budget will be in accordance with the forecast of the Chancellor of the Exchequer. All that can be said is that so far there is no outstanding divergence.

Anglo-French Trade Agreement.—The terms of the Anglo-French trade agreement—which is, of course, merely a temporary convention pending the negotiation of a new treaty—were issued too late last week to permit of comment. They are very much what was expected from the earlier announcement (see the *Economist* of June 23rd, page 1369). Each country accords to the other most-favoured-nation treatment with certain specified exceptions. Great Britain removes the 20 per cent. surtax on French goods imposed in February in exchange for the restoration by France of the British quota to 100 per cent. of the United Kingdom's proportional share in each trade concerned. Guarantees have also been given by the French Government as to the quantities of many of the more important classes of U.K. goods to be admitted. Thus, for example, with respect to coal the French Government undertake not to reduce the existing quota—49.5 per cent. of the normal total quota, which is 58.5 per cent. of the average French imports during the period 1928-30. In addition, the agreement provides for certain supplementary allocations for the ports and coasting trade of Brittany. This coal guarantee is linked up with an arrangement arrived at between British mineowners and French coalowners concerning the exchange of a tonnage of coal against a tonnage of pit wood in the proportion of 3 to 2. The British Government has agreed not to raise the duties on French brandies and sparkling wines and certain flowers and vegetables, the duties on which are slightly reduced. At the same time the general duties on raw silk and artificial silk yarns are reduced by 50 per cent.—a concession which seems to be inspired not only by French requirements, but also by the British silk and artificial silk textile industries, as explained in the report issued in May by the Import Duties Advisory Committee. It is calculated that this concession will cost the British Treasury between two and a-half and three millions of revenue in a full year. Taken as a whole, the agreement is good—as far as it goes: at any rate it restores the *status quo ante bellum* and so removes the last remaining obstacles to the negotiation of a fresh treaty; but it can hardly be claimed as a miraculous achievement for the policy of "freer trade through tariffs" preached by Mr Runciman.

The German Debt Truce.—The negotiations which have been going on in London between the representatives of the German Government and our own Treasury experts ended in an agreement dated July 1st, which was signed on Wednesday, and which is to remain in force for six months. By the terms of this agreement (Cmd. 4640) the British Government undertakes not to exercise in respect of Germany the powers given to it by the Debts Clearing Offices and Import Restrictions Act; so that the "clearing" with Germany is shelved for at least six months—which is all to the good of both parties. On their side, the German Government undertake to provide sterling funds for the purchase on the respective maturity dates, or as soon as they are thereafter tendered, of all coupons of both the Dawes and Young Loans maturing between July 1, 1934, and December 31, 1934, relating to bonds which are shown to have been in the beneficial ownership of British holders on June 15, 1934—the date of the mora-

torium. The purchase price is to be 100 per cent. of the nominal amount due, and payment will be effected at the offices of the Bank of England. "British holders" means (a) as regards sterling issues, (1) persons ordinarily resident or ordinarily carrying on business in the United Kingdom. (2) British subjects wherever resident, (3) corporations incorporated by or under the laws of the United Kingdom or of any other territory under British sovereignty, protection or mandate, and (4) persons under British protection and ordinarily resident or ordinarily carrying on business in the United Kingdom or any other of the above territories; (b) as regards other issues, all individuals of any nationality ordinarily resident or ordinarily carrying on business in the United Kingdom, and all corporations incorporated under its laws. For the other medium- and long-term loans the terms of the Reichsbank's offer of May 29th are to apply to all payments due on investments which are shown to have been in the beneficial ownership of British holders on June 15th (see *Economist* of June 2nd, page 1186). But in respect of non-Reich loans, if Germany treats residents in any other creditor country more favourably than she treats British holders, the latter may claim corresponding treatment of the investments owned by them on June 15th. Further, the German Government is prepared, "without delay," to negotiate an exchange agreement with Britain, for commercial payments, similar to those in force between Germany and other countries; though this is subject to provisos that the stability of the mark shall be maintained, and that British colonies shall only benefit by such an exchange agreement if countervailing benefits are accorded to Germany, as in the case of the Netherlands. The British Government has reserved its attitude over this second proviso. Sir Frederick Leith-Ross, in a letter to Dr. Berger, of the German delegation, raises the "further urgent question" of complaints of non-payment for goods delivered to Germany; and he trusts that the German Government will be able within a few days to rectify "this unfortunate situation." On the face of it the present agreement is most satisfactory for the British Dawes and Young Loans holders. But the agreement could hardly be anything else than a tide-over settlement. What will happen to Germany's commercial and non-Reich debts is still unsure; and so is the future of the Reich loans after December 31st. Why such an agreement could not have been reached earlier, and so have obviated the threats and recriminations of the last few weeks, is hard to understand; for the Germans have now clearly accorded us a very large measure of preferential treatment.

The Commons and Monetary Policy.—Wednesday's debate on monetary policy proved inconclusive. There was a strong general feeling among Members that our monetary and banking system needed overhauling, but few constructive suggestions were put forward beyond that of the appointment of another committee of inquiry. Mr Chamberlain had little difficulty in dealing with his critics. The report of the Macmillan Commission (whose suggestions for reform have not yet been implemented) was still relatively fresh, and he argued, with some justice, that another investigation at this stage would only have an unsettling influence and could lead to no conclusive result. The Government's monetary policy was still the same as had been announced at Ottawa in 1932, and Mr Chamberlain adduced in support of it the revival in trade and recovery in commodity prices which has since taken place. Up to a point we are in agreement with the Chancellor. No useful purpose could be served at present by a further inquiry, nor can we take any permanent decision upon monetary questions so long as international economic affairs remain in their present chaotic condition. At the same time, the Government cannot entirely escape charges of complacency and of an inclination to drift, for it certainly ought to be formulating our long-range monetary policy in readiness for the time when more settled world conditions are restored. Mr Chamberlain gave the House no indication that this important work was being done, and all that is available at present is the Ottawa declaration, which embodies a purely short-range policy, and some very vague recommendations of the World Economic Conference. Now that the dollar has been stabilised, and possible world

monetary vacillations have been reduced in number, it is high time the British Government made up its mind what it means to do in various eventualities, and what are the general principles and conditions on which it proposed ultimately to stabilise sterling. In certain respects the international situation has become clearer since Ottawa, and it is time we gave the world a more definite lead.

New Warships.—On Saturday, June 30th, while events on which we comment elsewhere were taking place in Berlin and Munich, the Chief of the German Naval Staff was launching the third of the 10,000-ton German "pocket battleships" at Wilhelmshaven, and the Chamber of Deputies in Paris was approving a French naval programme for 1934, which included the laying down of a second 26,000-ton French battleship of the *Dunkerque* class. All this is well within the framework of existing international treaties. The Germans, for instance, are entitled to build three more "pocket battleships" if they choose, without violating the Versailles Treaty; and, in answering an *Admiral von Spee* (as the third "pocket ship" is called) with another *Dunkerque*, the French are only just beginning to use up the capital-ship tonnage allotted to them under their Washington Treaty quota. Within the same quota, the Italians are equally entitled to build the two 35,000-ton battleships which they have recently put in hand; and the French are now pluming themselves on their moderation in refraining from naval competition with Italy and Germany simultaneously—though they are careful to add, *sotto voce*, that they cannot really delay replying to the Italian challenge for longer than six months after the first of the two projected Italian keels has actually been laid down. Thus the Governments of a bankrupt Europe gleefully pile naval upon military and aerial competition—as though they were anxious to demonstrate that the possessing classes are capable of pauperising themselves as expeditiously as the Communists, if they were in power, could do the operation for them. In face of these Continental developments, how modest our own British Admirals are in concentrating their attention on those twenty additional light cruisers which are so effective in making mischief of Anglo-American relations! While they were about it they might have asked the taxpayer to fit them out with a brand new battle fleet to meet the French-Italo-German menace: *quod est absurdum*, seeing that this "imperative necessity of national defence" (as it would then be called) would simply break the taxpayers' back.

The League Loans.—The second report of the London League Loans Committee, which was published on Tuesday, provides a grain of comfort in a financially distressed and distressing world. Estonia and Danzig—those bright exceptions to the all-but universal rule of default—continue to meet their payments in full, while Austria, thanks to the receipt of

last year's international loan, has made up for her past delinquencies. Thus, about half of the total loans issued by the League are receiving full interest—which in these times is not so bad. Hungary has been able to transfer 50 per cent., as against 25 per cent. a year ago; Bulgaria has increased her transfers from 25 to 32½ per cent: only Greece has proved disappointing. The report comments very adversely on the action of the Greek Government and the International Financial Commission in holding up the payment to the League bondholders on account of the dispute over the French loans. It was announced, however, later in the week that the Greek Government had ordered payments on the revised schedule agreed last year to be made on all loans except those in dispute. The report also contains some interesting statements on the Committee's policy. It has resisted all attempts on the part of debtor countries to make definitive settlements, i.e. to scale down permanently interest rates or capital sums, and has confined itself to short-term agreements. It has also insisted on maintaining the principle that debtor Governments should make full payments in their own currencies, even if the "blocked" sums paid in are immediately re-borrowed. In the case of Bulgaria, it has consented to an arrangement by which the bondholder, against surrender of his coupons, may receive an immediate cash payment of 10 per cent. in respect of arrears—in final settlement—a plan which inevitably diminishes the foreign exchange available for meeting the current service. The Committee, while pressing the special claim of the League loans, has refrained from claiming any exchange priority over current trade debts, and its policy has never been to press any of the debtors to pay more than they reasonably can, or to claim more than their fair share for the League loans. It has also wisely refused to allow itself to be entangled in the gold clause controversy. There can be no doubt that the establishment of this Committee, which is an unofficial body representing several nationalities, with Sir Austen Chamberlain as Chairman, has performed a useful service by reminding debtor Governments of their obligations at a time when too many people have been prone to regard creditors as usurers. Moreover, in keeping alive the prestige of the League loans, it has done a service to debtor and creditor alike, by preserving in being the machinery by which the wheels of international lending, so essential to the prosperity of the world, can be restarted.

Deflation in Belgium.—The fall in gold prices in the last few months has already led to new salary and wage reductions in France, Italy and Holland. Now it is Belgium's turn. The Belgian Government has presented to the Chamber a Bill asking Parliament for special powers. These powers, it is stated, are required for the following purpose:—

The Government intend to bring about a reduction of public burdens so that they can proceed to taxation reliefs. The converging point of all efforts will be the reduction of costs of production to enable industry to compete in foreign markets. In order to stimulate economic activity, the Government propose to exercise direct or indirect action on fiscal and financial charges, wages, and general costs.

So the ruthless steam-hammer of deflation continues to grind down recovery in the gold countries, with the effects on the volume of unemployment described in a succeeding Note. It is no doubt true that deflation has been forced on the gold countries by the renewed decline of gold prices in the last few months; and anybody who has wondered at the sudden and ferocious wage-cutting competition which has swept the gold bloc this year will find the answer in the curve of gold (franc) prices in the chart on page 5. Nevertheless, there is a certain class flavour about the recent deflationary legislation in France and Belgium.* In both cases wage and salary cuts are to be accompanied by decreases in direct taxation. The principal mitigation of the class nature of these measures, in Belgium as in France, is the adoption of a public works programme. Such a combination of policies—wage cuts designed to lower prices and public works expenditure calculated to raise them—was attacked by M. Paul Reynaud in the French Chamber

this week as palpably inconsistent and absurd. The inconsistency, however, is more apparent than real. Australia's experience has shown that a concurrent deflation of wage costs and inflation of spending may very easily be the shortest road to recovery. And it is almost certainly the adoption of public works programmes that has enabled Germany and Italy to escape the increase in unemployment which France and Poland have suffered in the past six months.

Sterling and International Prices.—The past fortnight has witnessed a slight reaction in commodity prices. The *Economist* complete British index has fallen by 0.4 per cent., and there has also been a decline of 0.2 per cent. in the sterling prices of primary products. The fall is very general, and there were few wide movements in specific commodities. American primary products have also reacted by 0.4 per cent., but the complete Irving Fisher American index number is unchanged. This is the first check to its advance since April. French wholesale prices continue to decline, and they have now fallen since the New Year by 6.9 per cent. This contrasts with advances of 1.7 per cent. in sterling prices and 8.3 per cent. in dollar prices, and illustrates very graphically the deflationary pressure to which the leading member of the gold bloc is now subject. There has been a further fractional advance in German prices, which have now risen by 1.4 per cent. since the New Year.

Details of the group indices comprising the complete *Economist* index number are given below:—

	"ECONOMIST" INDEX			
	(1927 = 100)			
	Sept. 18, 1931	June 6, 1934	June 20, 1934	July 4, 1934
Cereals and meat	64.5	68.8	68.1	67.8
Other foods	62.2	58.8	59.2	58.7
Textiles	43.7	52.7	53.0	52.9
Minerals	67.4	77.7	76.7	76.6
Miscellaneous	65.8	69.2	69.5	69.2
Complete index	60.4	65.4	65.3	65.1
1913 = 100	83.1	90.0	89.9	89.5
1924 = 100	52.2	56.5	56.4	56.2

In the cereals and meat group, Canadian wheat, English barley, potatoes, Argentine beef and Danish bacon are all cheaper since a fortnight ago. There were advances in English wheat and oats, and in rice and English beef and mutton. Among other foodstuffs, tea, butter and cheese all declined. Sugar prices were irregular. Cotton prices were steady, but there were further reactions in English wool and wool tops. Flax and jute advanced. In the minerals group, house coal and tar are slightly dearer, but

there was a sharp fall in copper. Among miscellaneous materials, hides and linseed oil, which previously had undergone sharp advances, have now reacted, but rubber continues to rise. There was a moderate decline in creosote.

World Unemployment.—Unemployment is steadily decreasing throughout the world. The statistics of unemployment by countries published in the June number of the *International Labour Review* prove conclusively that the recovery, which dates from the time of America's departure from the gold standard, has been a genuine upward movement, and not a mere see-saw process in which the gold countries have lost as much as the depreciated countries have gained. Actually the depreciated countries have regained substantially, while the gold countries have remained, as a whole, stagnant. Of the nineteen principal countries for which statistics are available only two—France and Poland—had more unemployment in March, 1934, than March, 1933. Of the countries with depreciated currencies—Great Britain, the United States, Denmark, Austria, Czechoslovakia, Canada, New Zealand, Norway, Sweden, Finland, Latvia and Palestine—all have less unemployment. The figure quoted for the United States is the American Federation of Labour estimate which shows a fall from 13,689,000 to 10,905,000. There was a particularly marked fall in Czechoslovakia, from 878,000 in March, 1933, to 789,000 in March, 1934, over 50 per cent. of which fall came after February, 1934, when the crown was devalued. Of the gold countries, France and Poland suffered heavy increases: France, according to the official figures, from 314,000 to 346,000, and Poland from 280,000 to 388,297. Italy, Switzerland, and Holland showed a very slight decrease; in the case of Italy from 1,082,000 to 1,057,000. Germany, alone of the gold countries, shows a large decrease, but this, as is well known, must be attributed to abnormal factors. In general, the gold countries have failed to enjoy the recovery which has been common to the whole of the rest of the world.

Silk Duties.—On July 19th 1932 the Chancellor of the Exchequer requested the Import Duties Advisory Committee to submit recommendations on the subject of the silk and rayon duties. Since the existing duties were originally imposed for purely revenue purposes they could only be altered in the Budget; but under the Finance Act of June, 1933, they were brought formally within the scope of the Import Duties Advisory Committee and thus became subject to variation by Treasury Order. The scope of the Committee's recommendations was, however, severely limited, for the Chancellor indicated that in any revision of the duties which might result from the Committee's investigations he would wish to secure not less revenue from silk and artificial silk than was yielded by the current duties. The recommendations of the Import Duties Advisory Committee, together with the new schedule of silk duties which came into force on July 2nd, were published in a White Paper (Cmd. 4633) at the end of last week. In their original recommendations submitted on May 16th, the Committee pointed out that the Customs duty on raw silk and the Excise duty on artificial silk yarn impose a considerable burden on the home industries and hinder their development. Moreover, since the articles produced by these industries have ceased to be a luxury, the Committee expressed the view that the duties should be abolished as soon as circumstances permitted. But taking into account the revenue requirement and the general policy of protection the Committee "felt justified in proposing duties which in general involve an increase in the element of protection." But in view of the trade negotiations with France (see an earlier Note) the Chancellor of the Exchequer found himself unable to accept the recommendations of the Committee, which provided "for an increase in the element of protection." He pointed out in a letter to the Import Duties Advisory Committee that after much anxious thought he had come to the conclusion that he would be justified in running the risk of unbalancing the Budget this year to the extent involved in the reduction

both of the Customs duty on raw silk and the Excise duty on artificial silk by 50 per cent. provided this concession resulted in a satisfactory conclusion of the trade negotiations with foreign countries. After a further exchange of letters, the Import Duties Advisory Committee, submitted new recommendations on June 25th which, after the signing of the Anglo-French trade agreement on June 27th, were translated into the Silk Duties No. 1 Order of June 28th and became effective on July 2nd. The general level of protection contemplated by the Committee under their original recommendations is, however, retained. The reduction of the Customs duty on raw silk and the Excise duty on artificial silk by 50 per cent. is to be welcomed, but, as is shown in a Company Note, the trade has been temporarily disorganised owing to the fact that British manufacturers have large stocks of materials on which duty has been paid at the old rates, while consumers are naturally anxious to obtain the benefit of the reductions immediately.

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights rose by 0.4 per cent. during June, following a rise of only 0.1 per cent. in May. The current figure of 83.8 compares with 81.9 in June last year and 83.3 in June, 1932. Details of the index number are as follows:—

(1898-1913 = 100)

	Average, 1913	June, 1933	April, 1934	May, 1934	June, 1934
European waters	110.0	86.4	85.2	85.2	86.7
North America	113.1	71.9	80.8	78.7	76.5
South America	123.4	77.4	77.2	78.2	80.5
India	106.3	86.5	90.1	89.8	88.0
Far East and Pacific	117.4	85.3	83.9	83.2	86.3
Australia	127.9	81.0	82.8	85.4	84.6
Total	116.3	81.9	83.3	83.4	83.8

There has been a fair inquiry for tonnage for outward coal shipments, but homeward cargoes have been difficult to secure, and owners are trying to raise outward rates to help cover the complete trip. This explains the divergent trend of outward and homeward Mediterranean rates. North American trade is dull, but the River Plate market has again strengthened. Movements of the various sections of our index number are shown in detail below:—

	Index No.	Inc. or Dec. Points	Index No.	Inc. or Dec. Points
Home Trade	79.5	+1.4	South America—	
Bay—outwards	97.2	+1.8	Outwards	65.9
Bay—homewards	91.9	...	Homewards	+3.6
Mediterranean—			India—outwards	75.8
Outwards	86.6	+6.9	India—homewards	+1.4
Homewards	85.4	-3.4	Far East, etc.	100.2
North America	76.5	-2.2	Australia	-5.0
				86.3
				+3.1
				-0.8

Expressed as a percentage of the average for 1913, the total figure of our index number for June is 72.0, compared with 71.7 for May and 70.4 a year ago.

OVERSEAS CORRESPONDENCE

UNITED STATES

THE fiscal year 1934, which closes on June 30th, will show a deficit of approximately \$4,000 millions and a public debt of about \$27,000 millions, an increase of \$4,500 millions for the year. The regular Budget, however, will balance, and may show a minute surplus; total receipts and regular expenditures being about \$3,000 millions. This balance was reached by an increase of over \$1,000 millions in revenues and a reduction of over \$700 millions in Budget expenditures as compared with the previous fiscal year. Of the revenues, the greatest single increase (almost \$200 millions) came from the liquor taxes, previously almost nonexistent. In spite of this satisfactory showing for liquor revenues, it is believed that between half and three-quarters of the distilled liquor sold in this country is still "boot-leg."

The \$4,000 millions of "emergency" expenditures for the entire fiscal year is hardly more than half the President's January estimate of \$7,300 millions. The principal difference arose from over-estimates of the R.F.C. expenditures, the President forecasting almost \$4,000 millions for that item alone, compared with actual outlays of \$1,500 millions. Public works expenditures were set at almost \$1,700 millions, against actual outlays of \$1,000 millions. The C.W.A., for which \$900 millions was appropriated in February, actually spent but one-third of that sum.

Of the \$4,000 millions of "emergency" expenditures for the entire fiscal year, the greater part took the form of direct relief. The main items can be put in round numbers about as follows:—

Agricultural relief..... \$900 millions, exclusive of \$300 millions
obtained from processing taxes.

Urban relief (mostly C.W.A.)	\$1,400 millions
R.F.C.	\$800 millions

The principal item in the remainder is the Public Works Administration, with about \$1,000 millions. These items are only approximations, as the Treasury's system of reporting its expenditures, as well as the Congressional method of appropriation, makes exact itemisation extremely difficult.

As the fiscal year ends, the general tenor of official utterances shows an increasing realisation that certain social and industrial phenomena that have been termed "emergency" and "temporary" are of a more lasting nature, and that improvised expedients, while they afford relief to distressed individuals, are extremely costly, and contribute little to permanent recovery.

Although the current data suggested a small decline in activity during May, the business indices of the Federal Reserve board showed a slight rise for the month, as compared with April. This was directly due to the expansion of steel operations in anticipation of a strike in that industry. The following table shows the movement of major items in recent months:—

	(1923-25 = 100. Adjusted for seasonal)					
	May, 1933	Jan., 1934	Feb., 1934	Mar., 1934	April, 1934	May, 1934
Industrial production (total)	78	78	81	85	86	87
Manufactures	78	77	80	82	85	86
(of which, Steel)	49	56	64	67	77	85
Minerals	78	88	91	100	90	89
Constructn. contracts (total)	16	49	44	33	32	26
Residential	11	12	12	11	12	12
All other	20	80	70	51	49	38
Factory employment	63	72	75	77	82*	82
Factory payrolls	43	53	59	65	67	67
Freight car loadings.....	56	64	64	66	62	64
Department store sales ...	67	69	71	77	77	77

* Index revised.

With the removal of the threat of a strike, steel operations this week dropped abruptly to 45 per cent. of capacity from 56 per cent. a week ago. This decline was not unexpected, for it has been recognised that steel output since early April was materially in excess of current requirements. The most perplexing item in the index above is the index of department store sales. Department store prices are fully 25 per cent. above a year ago, and it is often stated that, in spite of the substitution of inferior qualities, the actual volume of sales is below that of a year ago. The low level of the department store sales index is also in contrast with the activity of the production of consumers' goods in general.

The drought has, for the moment at least, dropped from discussion. The rains in June came too late for wheat and other small grains; but they were helpful to maize and to the pastures. On the other hand, June weather was not very satisfactory to the cotton crop, as in Texas and Oklahoma the drought persisted, and in other and moister parts of the Belt there are reports of weevil infestation.

Since May, 1933, the Treasury has published a monthly statement of the paper currency, tabulating the amount of each form and denomination in the hands of the public; that is, outside the Treasury and the reserve banks. The following table shows the changes for the year. It will be noted that, while the aggregate has declined, the denominations actually in use have increased.* This suggests that a dishoarding movement of considerable magnitude is slowly in progress, and is likely to continue for some time and, in the aggregate, to run into large sums.

Denomination	May 31, 1933	May 31, 1934	
\$1	356	396	+ 40
2	32	33	+ 1
5	660	719	+ 59
10	1,150	1,225	+ 75
20	1,349	1,288	- 61
50	404	341	- 63
100	686	579	-107
500	153	116	- 37
1,000	288	228	- 60
5,000	12	7	- 5
10,000	10	9	- 1
	<u>5,100</u>	<u>4,941</u>	<u>-159</u>

There have also been marked changes in the proportions of the various forms of paper currency:—

	May 31, 1933	May 31, 1934	
United States notes	268	280	+ 12
Treasury notes of 1890	1	1	...
Federal Reserve notes	3,168	3,038	- 130
Federal Reserve bank notes.....	98	151	+ 53
National Bank notes	923	910	- 13
Gold certificates	280	159	- 121
Silver certificates	362	402	+ 40

The figure of Federal Reserve Bank notes is widely different from that of the Reserve Bank statement, which on May 30, 1934, showed \$60 millions in circulation, compared with \$96 millions on May 31, 1933. Six Federal reserve banks of the twelve report none outstanding. The gold certificates of the tabulation above are, of course, the "old" gold certificates, all of which are lost or hoarded, as none have circulated for months. The gold certificates shown in currency reserve bank statements do not circulate and are not legal tender; they are merely non-interest bearing obligations of the Treasury, irredeemable, but convertible into gold at the discretion of the Secretary of the

In past and present the eventful history of Wall Street is witness to the strength and integrity of the Chemical Bank.

Office of the London Representative:
6 BISHOPSGATE, E.C.2

Treasury. The increase of silver certificates in the year is rather misleading; the total outstanding on May 31, 1933, was \$483 millions, with \$362 millions in circulation; on May 31, 1934, \$498 millions, with \$402 millions in circulation. The increased issue in the year was \$15 millions, but the figure should rise rapidly in the near future. It is believed that recently the Treasury has purchased in the market about 100 million ounces of silver, and it is required to issue silver certificates to the amount of the cost of the metal.

NEW YORK, June 26.

FRANCE

EFFECTS OF GERMAN CRISIS

THIS week's sanguinary events in Germany are not likely to exert any appreciable influence on French foreign policy. They are widely regarded as an argument in favour of the policy of caution recently followed in relation to Germany. Those who have lately been reproached for not negotiating with Berlin consider that they are justified by the convulsions now seen to be shaking the Nazi regime from within.

In face of these convulsions it has been decided not to put into operation as from July 1st the clearing arrangement which had been prepared as a reply to the German debt moratorium. This decision is analogous to that taken by Great Britain. The French delegation in Berlin has found its negotiations rendered difficult by the political crisis. In any case the service of the Young Loan up to September 15th is covered by the payment made by Germany into the Bank for International Settlements on June 15th.

A PLEA FOR DEVALUATION

The debate in the Chamber this week on fiscal reform gave M. Paul Reynaud, an ex-Minister of Finance, the opportunity of making a general speech on the question of devaluation. The speech was the more remarkable because M. Reynaud is one of the principal associates of M. Tardieu, Minister in the Doumergue Cabinet; though M. Reynaud was, of course, only speaking for himself. M. Reynaud gave the impression that he was in favour of devaluation. He posed the following dilemma: either prices must be deflated or else the currency must be devalued. He then insisted on the difficulties of deflation. He divided the world into two groups: the group which is getting better economically (including Great Britain, the United States and Japan); and the group which is getting worse (France, Italy, Holland, Belgium and Switzerland). He observed that the countries which were getting worse were precisely those which constituted the gold bloc, while those which had depreciated their currencies were one and all recovering. Finally, M. Reynaud attacked the "contradictions" in the French Government's policy, which tried at once to deflate prices and to maintain an artificial price level, buttressed by quotas and a public works programme.

M. Germain-Martin, Minister of Finance, in reply to M. Reynaud, affirmed once again the determination of the Government to maintain the present gold parity of the franc. He recalled that the franc had already, in 1928,

been so drastically devalued that recipients of fixed incomes had reproached the Government with a breach of faith. M. Germain-Martin also declared that no one knew what would be the effect of devaluation on the price level, but that it would certainly be followed by a raising of tariffs against French goods. Further, the more monetary disorder existed in the world, the more did the Government consider it necessary for France to remain faithful to her gold parity, since some monetary stability was necessary to facilitate the re-establishment of a world monetary system.

The Chamber approved M. Germain-Martin's speech and voted the fiscal reform scheme by 357 votes to 191.

THE DEFICIT IN 1933

Important details about the deficit for the financial year 1933 have now been announced. Allowing for the supplementary estimates of May 15th, the deficit will be about 7,000 million francs:—

	Frs.
Revenue	43,635,309,968
Expenditure	50,467,406,269
Deficit	6,832,096,301

The original deficit for 1933 was only 4,841 million francs.

The Budget should benefit in the course of the financial year from economies estimated at 1,216 millions, secured in the following way: Administrative reform, 100 millions; reductions in salaries of Government servants, civil and military, 266 millions; miscellaneous reductions in credits not affecting the public debt, or the salaries of individuals, or military expenditure, 520 millions; the rounding off of certain other payments, 80 millions; and the appropriation of part of the profits of the Loterie Nationale in the interests of war pensions, 250 millions.

The original Budget deficit should have been reduced to 3,625 million francs. But the economies only provided 442 million francs instead of 1,216 millions. Furthermore, important deficiencies, amounting to more than 2,000 million francs, resulted from the reduced yield of certain taxes:—

	Million Frs.
Indirect taxes and monopolies	-1,767
Direct and consolidated taxes	- 469
State revenues and domains	+ 47
Various receipts	+ 179
Total deficiency	-2,010

Thirdly, the credits provided for had to be increased by 423 millions. The provisional deficit has therefore reached 6,832 millions, as shown below:—

	Million Frs.
Original deficit	3,625
Deficit on economies	774
Deficit on tax yields	2,010
Increased expenditure	423
Total deficit	6,832

This deficit may be slightly reduced, thanks to certain extinguished credits and a surplus of receipts from the Loterie Nationale.

PARIS, July 4.

GERMANY

THE CRISIS AND PUBLIC OPINION

It is proclaimed by Herr Hitler that National-Socialism is no mere arid policy but a *Weltanschauung* or Philosophy of Life. Of philosophers, the author of *Murder Considered as One of the Fine Arts* affirmed, with instances from history, that all were murdered or narrowly escaped murder. It seems that the prospect of being slain by some of their still living enemies is now in the Nazis' mind, for the first important legislative act following the recent massacre is a decree declaring that massacre to be legal. Although at present the Public Prosecutor would naturally not seek to fix the punishable guilt for the week-end's events (being engaged, as he is, in bringing Communists to the block for street rioting some years back), it is realised that Governments change; and some later Prosecutor might seek to enforce against Saturday's executioners the ordinary criminal law.

Meanwhile the German people, though not addicted to a dangerous curiosity about the ways of their rulers, are puzzling their brains over the origins and consequences of

the massacre. The Man in the Street—just now a safer sanctuary than the bedroom or the bathroom—asks questions. He does not believe a word of the story of a plot against Hitler. He does believe that there were anti-Hitler intrigues, but he is not convinced that plotters so immediately dangerous that the safety of the State required their extinction on the spot were living far apart, were starting on their holidays, or were engaged in debaucheries. The real intrigues were of all sorts: "reactionary" intrigues for an authoritarian orderly Junkerism in which many Germans see the only hope of salvation; "radical" intrigues in the fear that the Third Reich, having provided blood, money and debauchery to its ne'er-do-wells, was sinking into inertia; and personal intrigues by Party men to whom—as the Government's communications admit—their quota of blood, money and debauchery was insufficient.

But these intrigues are ancient history, and do not explain the massacre. Some see the unwilling source in the king-maker Papen, whose personal insignificance has made him a more potent force than Hitler; Papen's speech, it is reasoned, convinced the Brown House that the patience of the German nation under the violence and corruption of the Third Reich was approaching its end; and that a well-advertised "cleansing" of the Party, that is, the destruction of "disloyal" bosses in no way worse than their executioners, was one way to appease the disgusted nation. Others hold that the affair was arranged between Herr Hitler and the *Generalität*—the Reichswehr higher officers. The *Generalität* wanted a respectable military dictatorship; the first blow was to be dealt at the "private armies," and Herr Hitler, feeling his political feet wobbling beneath him, concurred. That was the way of Kerensky with the army commander Korniloff in September, 1917. But no one believes that the respectable *Generalität* knew of the massacre plan which, prepared "in all secrecy," say the Government newspapers proudly, was the only undisputed "plot."

The "cleansing" (*Säuberung*) of the Party, in connection with the last two accusations, is the absurdest farce of all. A week back no one of the executioners would have admitted that the Party needed "cleansing"; its transcendental virtue, in contrast with the infamies of "Manchester-Liberals" and "Marxists," was daily on Herr Hitler's lips. Had an outsider protested against Nazi outrage or exposed Nazi corruption he would have fared much as did Frau von Schleicher. When, a year back, emigrants and others imputed to the Nazi magnates crime, corruption, moral perversity and insanity, there was a wild Nazi outcry against "paid calumny," and the wives or children of the calumniators went into concentration camps. Yet every German knew, what Herr Hitler now admits, that the charges were substantially true. Indeed, among the week-end victims were particular intimates of Herr Hitler, who had raised him to power and had been raised by him to affluence. Before the Nazis took office the pervert practices of one victim were exposed by letters in the Press, which the exposed man himself did not dare to repudiate. The squandering on banquets of the "voluntary" subscriptions taken by pressure and menaces from the half-starving population were shamelessly public and long known to all.

THE FUTURE OF HITLERISM

It seems that the massacres are for the moment over; indeed, the "Leader" has decreed that persons who in future do what his own Government has done are to be brought to justice. What will happen to Hitler and Hitlerism is, however, in doubt. Some hold that the helpless Chancellor, whose effectiveness ceased last year, when speech-making had to give way to governing, must go; and many citizens in no wise fond of "reaction" would prefer to have the "Generalität" on top. Others hold that Hitlerism will be forced into "moderation." Although the "immoderation" pursued so far originated with Herr Hitler himself, and may be found proclaimed in his confession of faith, *Mein Kampf*, it is possible that "moderation" may, indeed, come. Should Hitler remain, fear may bring alleviations which reason could never induce.

The lot of the German nation in this confusion is painful. It is true, as is said abroad, that Asia, in the traditional sense of violence, corruption and licence, has advanced to Berlin and Munich. But that is an inexplicable accident of

Crowns, Fmk, Zlotys.
We deal in all foreign exchanges and specialize in those of Northern Europe.

history. The lectures of the foreign Press on the specific, barbarous German "mentality" are no better founded than they were during the war. The masses of the German nation, the peasant farmers, and the industrial workmen, are extraordinarily kind, intelligent, humane, honest and friendly; and no one who descends—or, rather, ascends—to them from the Wilhelmstrasse fails to feel relief. To their future seems apposite the reply of the statesman Li Hung Chang, when asked by Count Waldersee after the Boxer revolt how it was possible that 400 million industrious and hardy Chinese could tolerate the military arrogance of a handful of intruding Europeans. "The Tartars," was the answer, "conquered us in the year . . . and in the year . . . and in the year . . . But cast your eyes around you, please, and tell me: where are the Tartars now?"

BERLIN, July 4.

AUSTRIA

THE TRADE BALANCE IN MAY

FOREIGN trade in May shows a slowing down of the recent increase. Exports were valued at 67.3 million schillings in May, or 4.3 millions less than in April. Imports increased by 2.5 millions to 98.6 million schillings. On the whole, however, the balance of trade so far this year is still much more active than last year (when it was in turn more active than 1932):—

	1933	January to May 1934	1933	1934
	Weight in tons	Value in millions of Schillings	Weight in tons	Value in millions of Schillings
IMPORTS				
Live animals	40,031	35,970	41.4	31.9
Foodstuffs and beverages...	505,328	518,752	112.7	100.9
Mineral fuels	1,116,302	1,086,207	43.8	38.8
Other raw materials and semi-finished goods	428,489	439,986	112.1	152.2
Finished goods	50,747	47,205	133.4	147.2

Total	728,389	968,413	293.2	349.3

The snag is that the trade balance is being progressively burdened by the rise in the international price of raw materials. Various raw materials which must be imported, for instance, cotton, wool, jute, rubber and different metals, have risen considerably in price, so that an increase of import volume of not quite 3 per cent. has been accompanied by an increase of import value by nearly 40 per cent. On the other hand, exports of Austrian raw materials (timber and magnesite) have not risen in price; export volume has increased by 37 per cent., while value

increased by only about 35 per cent. This disparity, which is entirely beyond the control of Austria, may be further aggravated within the next few months.

The drought has not been so severe in Austria as in other Danubian countries; but the harvest will be a long way short of last year's, especially in rye and barley. This will mean an increase in import requirements. From the above figures for the first five months it will be seen that the volume of imports has so far risen by 3 per cent., while the cost is about 10 per cent. less. But in the coming season Austria will have to import more grain, and will probably have to pay higher prices for it. Hungarian wheat comes first into consideration; and in the past few months imports of it have risen by about 25 per cent. Increased home prices are not to be expected, as Austrian prices, on account of tariff protection, are somewhat higher than those ruling on the world market. It is consequently necessary to make a reduction in the duty, in order to ensure simultaneously that the farmers receive a fair price and that bread and flour prices are prevented from soaring.

INDUSTRIAL MERGERS AND LIQUIDATIONS

An internal industrial revival would be extraordinarily helpful at this moment. In many branches of industry where home sales were previously larger than export sales, export sales are now higher than home sales because the domestic market has shrunk. In timber, paper, steel and various rolled goods, exports amount at present to 70 to 80 per cent. of total output. In the electrical industry a shift of this kind has recently taken place. Of the total output, valued at about 70 million schillings per year, 40 millions' worth are already being exported and only 30 millions being consumed at home.

It is not surprising, therefore, that in industrial and banking circles the idea of amalgamations is coming more and more into the foreground. The complete fusion of the Austro Daimler works and the Steyr arms factory has already been carried out, the Daimler works in Wiener Neustadt having been closed down or transferred to Steyr. The same thing is happening in the wagon industry. The wagon works at Graz will be laid off and the Simmering wagon works, near Vienna, will be the only one left. In the locomotive industry a merger has already been carried through with four works, which are now under a single management. In the electrical industry, too, preliminary negotiations for a fusion have been taking place in recent weeks. Fusion in this industry, however, involves negotiations with foreign interests, and raises political questions. The engineering industry is being merged to a great extent as a result of the fusion between the Wiener Bankverein and the Credit-Anstalt.

The path of amalgamation is generally chosen when the liquidation of a company is inevitable. The wave of insolvencies, which reached its height at the beginning of the year 1932, now seems to be on the ebb. In May, 1934, there were only 160 court settlements, against 450 to 480 at the beginning of 1932. Bankruptcies have also fallen from 100 per month in the year 1933 to about 50 in the first half of this year.

VIENNA, July 4.

FINLAND

INCREASING REVENUE AND FOREIGN TRADE

The finance accounts for 1933, recently published, indicate that last year's tendency towards recovery extended its influence to public finances:—

	(000,000 Marks)		
	1931	1932	1933
Current revenue	2,742.1	2,438.2	2,872.6
Capital revenue	65.3	486.9	427.9
Total	2,807.4	2,925.1	3,300.5
Utilised out of cash balance of previous years	270.5	42.1	...
Deficit	...	34.8	...
Grand total	3,077.9	3,001.7	3,300.5

Expenditure	1931	1932	1933
Current expenditure	2,420.8	2,484.6	2,543.6
Capital expenditure	657.1	517.1	703.6
Total	3,077.9	3,001.7	3,247.2
Surplus	...	...	53.3
Grand total	3,077.9	3,001.7	3,300.5

The revenue was increased in 1933 mostly by receipts from Customs duties and the State railways and forests, but the yield from other sources of revenue also rose. Capital revenue includes new loans, mainly for the relief of unemployment, to an amount of 200 million marks. Although the Treasury paid the stipulated redemption on its loans regularly, the public debt increased slightly. The funded debt grew last year by 163 million marks to 3,100 millions; while the short-term loans were reduced simultaneously by 127.2 million marks to 407.7 millions. During the first four months of the present year the revenue has continued to increase considerably.

Foreign trade has been steadily expanding. During January-May the quantities imported were about 46 per cent. larger than during the same time last year and larger than in any years since 1929. The increase in the volume of exports was only 16 per cent., it is true, but this volume was nevertheless larger than in any previous year. In value the increase was less pronounced, as the following figures (in millions of marks) show:—

	Imports		Exports	
	May	Jan.-May	May	Jan.-May
1931	329.0	1,262.8	359.5	1,290.0
1932	310.7	1,039.8	326.0	1,416.7
1933	379.5	1,297.4	318.2	1,357.7
1934	496.3	1,743.1	440.7	1,606.8

About 60 per cent. of the increase in imports was in raw materials for manufacture and 12 per cent. in machinery and means of transport. Altogether the import of goods for productive purposes rose from 55 to 59 per cent. of the total, while imports of articles of consumption were reduced from 45 to 41 per cent.

Imports during the first few months of the current year were as a rule slightly heavier than exports. Altogether the import surplus amounted to 136.3 million marks in comparison with an export surplus of 60.3 millions last year. As deliveries of sawn timber show great seasonal fluctuations, and the actual exporting season only starts in June this import surplus is by no means indicative of the balance of trade for the whole year. It is expected that, in spite of the great increase in imports, exports will exceed import in value for the whole year.

The continuous relaxation of the money market, which has lasted in Finland since December, 1932, was interrupted this spring by a slight tendency towards a tightening of the market. This tendency is seasonal and does not alter the fact that the position is incomparably easier than in the preceding years, as the following figures show:—

	(000,000's Marks)		
	May 31, 1932	May 31, 1933	May 31, 1934
Reserve of foreign currency of the Bank of Finland (excluding the foreign credit)	454.4	565.2	984.9
Note reserve	613.5	622.2	701.2
Re-discounted bills	147.1	44.1	...

In April and May and in the first week in June, however, the tendency was in the opposite direction. The reserve of foreign currency of the Bank of Finland was reduced in April by 23 million marks, in May by 46 million and in the first week in June by 33 millions. The reserve fell off in April by 122 million marks and in May by 33 millions, but increased again in the first week in June by 24 millions. These changes are closely connected with the demand for foreign currency created by the fact that the Industrial Mortgage Bank redeemed all the bonds belonging to its dollar loan and that the Municipal Mo-

gage Bank repaid its short-term foreign indebtedness. The increase of deposits in the banks and other credit institutions during the completed months of this year has been over 70 per cent. larger than during the same period last year, but is still less than during the actual period of good trade conditions.

HELSINKI, June 18.

GREECE

INCREASED AGRICULTURAL PRODUCTION

AGRICULTURAL production, favoured by weather conditions, promises to be excellent again this year, the estimates for all crops being higher than last year's. The constant increase in the output of cereals is welcomed here as bringing Greece nearer to "self-sufficiency." Production of tobacco, currants, olive oil, wines and cotton is expected also to be satisfactory this year. As regards tobacco and currants, however, which constitute the principal articles of export, world market conditions are not bright, particularly for currants.

Industrial output and foreign trade show no improvement as compared with last year. The index number of industrial production for the first quarter of this year shows a falling-off of 5.9 per cent. in comparison with the corresponding quarter of 1933, which shows that, at present, industrial output has reached a saturation point—though the gradual and unjustified rise of the prices of home-manufactured articles to the level of foreign prices may also partly account for this decline of production, the people preferring foreign-made articles on equal terms. On the other hand, foreign trade returns for April show, as compared with April, 1933, a falling-off in value but an increase in volume both of imports and exports, the passive balance of trade having increased owing principally to a decline in the value of exports. The restrictions on imports have been again extended up to the end of the year. A small increase in the number of Greek steamers laid up was shown at the end of April—115 vessels of 232,922 gross tons.

FOREIGN DEBT AGREEMENT

At long last an agreement with the French bondholders has been reached on the basis of the agreement concluded in London with the British bondholders, except for the service of the Monastir-Salonica Railway bonds on which an arbitration court will have to pronounce. Accordingly the British and French Ministers in Athens have informed the Government that instructions will soon be given to the International Financial Commission to authorise the Bank of Greece to make the transfer of the funds required to pay 27½ per cent. and 35 per cent. respectively of the interest due for the years 1933 and 1934. Payments will be made in currency. Concerning the loans raised in London by the National Mortgage Bank of Greece, which are held mostly by British investors, the Government, though not obliged to subject them to the stipulations of the London Agreement, have none the less instructed the Mortgage Bank to pay only 35 per cent. in sterling for 1934, the balance of 65 per cent. to be placed to the credit of the bondholders in a "blocked" account in drachmas, with the Bank of Greece. Though the same procedure was adopted in 1933, the difference now is that by requiring the bonds to be presented to the bankers for obtaining payment of the coupons, the authorities preclude a repetition of the practice adopted last year, by which the coupons were being sent to Athens and, after payment had been obtained in drachmas, the proceeds were subsequently remitted in sterling to London through the "black" market.

It is thought that the above course has been adopted by the authorities as a means of compelling the holders of the Mortgage bonds to agree to a reduction of the rate of interest, now fixed at 7 per cent. This reduction is desired in order to permit a corresponding reduction of the interest charged in Greece on mortgage loans, a reduction for which great pressure is being exercised upon the Government by the organised mortgage debtors. It is understood that the

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

issuing bankers in London have agreed in principle to recommend to the bondholders a moderate reduction of the rate of interest. But a wrong impression seems to have been produced in certain quarters here as to the extent of such a reduction. Consequently, some people, including M. Venizelos, have been led to believe, quite unjustifiably, that a reduction from 7 per cent. to 4 per cent. was at present possible.

BRITISH PROTEST

The question of the payment of overdue commercial debts to British firms and of the difficulties placed in the way of British exports by imports restrictions and the quota system, was the object of two interviews held last week by the British Minister in Athens, first with the Greek Minister of National Economy and afterwards with the Foreign Minister. It was stated that the British Minister protested against the damage done to British trade, especially on information he had that various merchants who had applied for permission to import goods from the United Kingdom had been advised by the authorities to purchase these goods instead in Germany. M. Maximos, the Foreign Minister, explained to the British Minister that Greece was obliged to buy goods in countries where she had "blocked" creditor balances accrued from exports, but that in any case Greek purchases of British goods were larger than Greek exports to the United Kingdom. And he assured the British Minister that the authorities desired sincerely to see Anglo-Greek trade expand. The report that in the course of his conversations the British Minister hinted at the possibility of retaliatory measures being taken by the British Government which might render difficult the importation to England of Greek currants—the second in importance of Greek articles of export—seems to be unfounded. It is not believed here that the British Government would ever resort to such a measure.

ATHENS, June 26.

LETTER TO THE EDITOR

THE HOUSING PROBLEM

TO THE EDITOR OF THE ECONOMIST

SIR,—In your June 30th number in an article on Housing, the statement is used that the housing requirements are increasing at the rate of 150,000 families per annum.

I know that "families" has a statistical significance, and that the number of families is increasing in relation to the population, but the figure quoted seems to me a little high.—Yours faithfully,

J. H. GUY.

The Grange,
Beaconsfield, Bucks.
July 2, 1934.

[The estimate to which Mr Guy refers is derived from the Report of the Council for Research on Housing Construction, with which our article was concerned, and it is based on the increase of families during the last decade. Our own estimate, given in an article entitled "The Demand for Houses" in the *Economist* of March 31st was a total increase of 668,000 families in England and Wales between 1931 and 1941—an average annual increase of about 67,000 families.—Ed., *Econ.*]

MONEY AND BANKING

THE MONEY MARKET HALF-YEAR

FROM the narrow aspect of day-to-day business, the past half-year has been an extremely dull and uneventful period. The stagnation of international trade continues to be reflected in a dearth of commercial bills, while the Government has continued its policy of refunding the National Debt, and so has made further inroads into the supply of Treasury bills. Nor have bill-brokers been ready sellers of three months' Treasury bills to the clearing banks, for the minimum rates offered by the latter in joint agreement have as a rule been above the weekly tender rates, and so bill-brokers would have been unable to sell except at a loss. In consequence business between the money market and the clearing banks has been largely limited to the shorter-dated Treasury bills, while the banks have had to tender themselves whenever they wanted Treasury bills for the full three months. It is arguable that it would be better practice for the banks to leave the duty of tendering to bill-brokers, who would then provide the banks with bills of the exact dates they needed; but this has not been the practice since the war.

An examination of the recent trend of money and discount rates show why this post-war procedure persists. During the past half-year the weekly tender rate for Treasury bills averaged between $\frac{3}{8}$ and $\frac{1}{2}$ per cent. Broadly speaking, the clearing banks kept their minimum buying rate for hot Treasury bills at 1 per cent. until March 16th, and then dropped it to $\frac{1}{8}$ per cent. Thus bill-brokers could not tender for Treasuries and re-sell them at once to the banks, except at a loss. On the other hand, the average rate charged for loans by houses other than the clearing banks was as a rule no higher than $\frac{1}{2}$ per cent., and while clearing bank money still cost 1 per cent. the average cost of loans from all sources was probably little more than $\frac{3}{8}$ per cent. Hence it paid them better to hold their Treasury bills for a time rather than to sell them at once to the clearing banks. (It should, however, be added that bill-brokers and discount houses are now accustomed to invest part of their borrowings in Treasury bonds and other Government securities possessing a considerably higher yield than that of Treasury bills, and thus improve their average income.)

On the other hand, the clearing banks have consistently quoted lower minimum rates for one month's and two months' Treasury bills. For example, at the end of May, when the tender rate was $\frac{3}{8}$ per cent., they quoted $\frac{1}{8}$ per cent. for July Treasuries, $\frac{1}{4}$ per cent. for August, and $\frac{1}{8}$ per cent. for the hot bills maturing at the beginning of September. With money costing about $\frac{3}{8}$ per cent. it paid a bill-broker to sell his July bills, but it did not pay him to sell his hot bills: This was the general relation of rates during the whole of the six months, and for this reason business between the clearing banks and the discount market was largely confined to the shorter-dated bills. Incidentally, the banks are hardly consistent when they quoted higher rates to the market for three months' Treasury bills and at the same time are willing to pay lower rates at the weekly tender. It is not entirely the market's fault that business has been driven out of its pre-war path. It cannot, however, be definitely said that all the clearing banks are now accustomed to apply for bills at the weekly tender.

These were the superficial features of the money market during these six months, but to understand them it is necessary to examine the broad forces at work. These were two in number, namely, changes in the supply of bills and changes in the supply of money.

In the absence of any improvement in the number of commercial bills coming to London for acceptance and discount, the supply of bills was conditioned entirely by fluctuations in the Treasury bill issue. In the *Economist* of March 10th, an analysis was published dividing the Treasury bill issue into bills issued through the weekly

tender and bills issued to Public Departments. This analysis is extended in the following table:—

Date	Treasury Bills		Ways and Means Advances	
	(a) Tender	(b) Tap	(a) Public Depts.	(b) Bank of England
	£ mill.	£ mill.	£ mill.	£ mill.
1933—June 30....	578.9	391.3	26.3	18.5
Dec. 30....	597.0	341.7	35.2	...
1934—Jan. 27....	547.0	346.0	32.7	...
Feb. 24....	505.7	344.0	23.6	...
Mar. 31....	456.6	343.2	44.9	...
Apr. 28....	482.6	360.6	35.5	...
May 26....	492.9	371.3	14.1	...
June 30....	487.1	361.2	28.4	...

The salient feature in the table is that owing to the autumn and April debt funding operations of the Government, the supply of Treasury bills issued by tender has been reduced by £91.8 millions during the past year, while there has also been a reduction of £30.1 millions in "tap" bills. In particular, by the end of June £134 millions had been paid up on the April Funding Loan issue, whereas only £116 millions were required for the April Treasury bond repayments. Thus £18 millions has already become available since March for the reduction of the floating debt, and a further £13 millions will be provided by the payment of the remainder of the final call, due this week. As the revenue deficit to date only amounts to £49.7 millions, the Funding Loan payments have made an appreciable inroad into the increase in the floating debt which otherwise would have taken place, and in fact the tender issues of Treasury bills have only increased by £30.5 millions since March 31st, whereas an increase of £50 millions might have been expected. Generally speaking, the effect of the debt operations of the past quarter will be a permanent reduction of £31 millions in the floating debt, and very probably in the supply of Treasury bills available to the banks and the money market. This is superimposed upon the previous reductions that occurred in the floating debt prior to March 31st, and so adds to the shortage of bills in the money market. The problem experienced by the banks and the money market of finding employment for their funds has to that extent been rendered more acute; and it is no nearer solution.

Against the growing shortage of bills there are signs of a contraction in the amount of money. It is well known that, following the strengthening of the franc, foreign balances have been withdrawn from London. Recent American gold and silver purchases must also have depleted American balances in London. Apart from this, there has been a slight but general contraction in credit during the past year, for bankers' deposits at the Bank of England have been reduced by £8.8 millions. As a result of these changes, there is less outside money available to the discount market than was the case a year ago, with the result that although bill-brokers must be holding less bills, clearing bank call and short loans rose from £92.3 millions in May, 1933, to £127.1 millions in May last. The money market has also become more susceptible to passing influences. The abnormal American gold purchases of last February caused a temporary shortage of funds sufficient to call for open-market purchases of bills by the Bank. At the end of the current half-year the market found itself in the Bank, whereas on June 30, 1932 and 1933, no borrowing at the Bank proved necessary. Finally the clearing banks have been able to maintain their buying rate for hot Treasury bills at $\frac{1}{8}$ per cent., whereas a year ago, when admittedly no agreed rate was in force, the rate had sagged to $\frac{1}{16}$ per cent. All this evidence points to some contraction in the supply of money.

Nevertheless, the money market still has to solve its problem of making good the reduction in the supply of Treasury bills. To a large extent it is a victim of outside circumstances. An increase in the number of commercial bills coming to London is contingent upon a revival in international trade, and here it is an open question

whether the growth of exchange clearing systems may not affect the extent to which international trade is financed by bills on London. There is as yet no sign of any return to the inland bill as a means of financing home trade, and the conservatism of manufacturers and merchants will prove very difficult to overcome. The most that can be said is that the margin between current money and discount rates is rather less unremunerative to bill-brokers than it was a year ago. Even so, business remains very restricted and the outlook is far from clear.

FINANCIAL NOTES

The Money Market.—As was foreshadowed a week ago the money market did not overcome the turn of the half-year without resort to the Bank of England, and about £11 millions was borrowed, mostly on Friday and Saturday of last week. On Monday the clearing banks released the funds they had called for balance-sheet purposes, but the final 3 per cent. Funding Loan call amounting to £20 millions fell due on that day, and so money remained relatively scarce. By Wednesday and Thursday, however, the $\frac{1}{2}$ per cent. Conversion Loan dividend money had reached the market, and as the Bank was not due to be repaid until the end of the week, conditions became very easy and money was reported to be nearly unlendable.

SHORT LOAN AND DISCOUNT RATES

	June 14, 1934	June 21, 1934	June 28, 1934	July 5, 1934
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	1	1	1	1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$
(b) Others	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$
3 months' bank bills	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$

The discount market remains very inactive. Last week's Treasury bills went at 16s. 11.64d. per cent. against 16s. 8.61d. per cent. the week before. The clearing banks continue to quote $\frac{1}{8}$ per cent. for September and October Treasuries, $\frac{1}{4}$ per cent. for August bills, and $\frac{1}{8}$ per cent. for July bills. There are no sellers of hot Treasury bills at over $\frac{3}{8}$ per cent., but the banks have secured a few July and August bills. Standstill bills are a shade firmer, but there is no quotable change in the minimum rate, which remains at $\frac{1}{16}$ per cent.

The Bank Return.—This week's Bank return shows several wide changes, but they are all of a normal character. End-of-the-month currency requirements explain a further increase of £4.1 millions in the circulation and an equivalent decrease in the reserve.

BANK OF ENGLAND

	July 5, 1933	Dec. 27, 1933	Mar. 28, 1934	June 27, 1934	July 4, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	189.7	190.7	191.1	191.5	191.5
Note circulation	378.8	392.0	378.8	381.7	385.8
Banking Department:—					
Reserve	78.2	59.7	73.4	70.5	66.4
Public deposits	16.2	22.2	17.5	17.6	26.7
Bankers' deposits	92.3	101.2	94.5	96.3	94.9
Government securities ...	75.7	88.0	77.1	81.0	82.8
Discounts and advances ..	16.4	16.8	5.6	6.1	17.1
Proportion	45.5%	37.3%	49.2%	46.8%	41.7%

The increase of £11.0 millions in discounts and advances reflects market borrowings over the turn of the half-year. Very little money was borrowed on June 27th or repaid before July 4th, so that the returns are a fair representation of the market's needs. Public deposits have risen by £9.3 millions as a result of the Funding Loan final call, offset to a limited extent by the Conversion Loan dividend payments. Bankers' deposits have fallen by £1.4 millions. Here the increase in the note circulation and the Funding Loan call have offset the market borrowings at the Bank

which usually cause bankers' deposits to expand. The fall in the Proportion is due to the rise in public deposits and the contraction in the Reserve. Both are movements of a temporary character.

The Foreign Exchanges.—The London market remains very dull. There has been a fair demand for francs, and the British control has intervened fairly frequently. Hardly any of the demand for francs can be traced to commercial business. Some of it may be connected with tourist expenditure, but the bulk of it probably still represents the repatriation of French balances. It is not known how the British control is financing its purchases of francs; but, as the Banque de France continues to gain gold, the British Exchange Equalisation Account may be realising part of its gold. Dollars have been an idle market. The seasonal commercial demand for dollars has not yet begun, and there is a complete lack of the normal summer demand for European currencies by American tourists. The official reichsmark rate has been very unsteady as a result of recent events, but there is little net change. Registered marks, which are a better indication of general sentiment than the official rate, have also been steady at 34 per cent. discount.

New York Money and Banking.—Money rates are unchanged, but there was a decline in brokers' loans from \$1,040 millions on June 20th to \$1,017 millions on June 27th. Thus the recent expansion has now been checked. At the week-end Mr Morgenthau, the Secretary to the Treasury, announced the terms of a "gentleman's agreement," whereby the Treasury will co-operate with the Federal Reserve system in making direct loans to industry, each authority to lend an equal amount. June bond offerings totalled \$267 millions, against only \$100 millions in May. State and municipal issues accounted for \$108 millions of the June total, and Federal Land Bank bonds comprised another \$131 millions. In order to check world speculation, the United States Treasury has imposed an embargo upon silver exports. Exceptions are fabricated silver, metals containing silver in relatively small amounts, and foreign silver coins. Licences will also be granted for shipments of silver in fulfilment of obligations incurred prior to the embargo; for the exportation of silver belonging to a foreign Government or central bank or the Bank for International Settlements; for the prompt re-export of imported silver; or for any other purpose approved by the President and not inconsistent with the objects of the Silver Purchase Act. To add to the confusion, there are to-day current three separate prices of silver. There is first the Treasury maximum price of 50 cents per ounce for silver in American hands on May 1st. Secondly, there is the Treasury price of 64 $\frac{1}{2}$ cents per ounce for newly mined domestic silver. Thirdly, there is the free New York market price, which is now 46 $\frac{1}{2}$ cents per ounce.

American Banks' Condition.—Rather unexpectedly the Comptroller of Currency at Washington has required all National Banks and State Banks which are members of the Federal Reserve system to render a return of their condition on June 30th. A similar request was addressed to non-member banks by the chairman of the Federal Deposit Insurance Corporation. As these returns are made public, it is generally assumed that these requests signify that complete confidence is now felt in the American banking system, and that the exact measure of its regained strength could usefully be revealed to the public. The accounts of the Chase National Bank have already been made available. They show that during the year ended June 30, 1934, deposits have risen from \$1,408 to \$1,513 millions, cash from \$357 to \$413 millions, and U.S. Government securities from \$208 to \$417 millions. Loans and discounts have fallen from \$780 to \$622 millions. The increase in cash to 27.2 per cent. of deposits, and the doubling of the bank's holdings of "Governments," is typical of the present ultra-liquid condition of the American banks, and, as with us, their main problem is to find satisfactory employment for their surplus resources.

THE STOCK EXCHANGE

NEW RAND MINING COMPANIES

THE abandonment of the gold standard by South Africa at the end of 1932 was a spark which has kindled a great blaze of activity in prospecting for the precious metal within the Union. In this the student of economics will find nothing surprising. The sudden revolution in the fortunes of the existing gold producers naturally stimulated an ardent desire to discover and open up new areas which might share in the new-found prosperity. What is perhaps more remarkable is that enterprise was not shown until it was called forth by the "gold premium."

For many years the Witwatersrand field had been supplying some 50 per cent. of the world's output of gold, and the regular string of mines ranged along the Central Rand bore witness to the consistency of the reef where it approached the surface. Yet for years no attempt was made to discover whether the formation had its western extremity at Randfontein or whether it continued in the direction of Klerksdorp. At the other extremity of the field, East Geduld and Daggafontein were being explored, but other properties adjacent to highly payable producers were left dormant. Conditions in the Rand gold-mining industry, before the abandonment of the gold standard, were not in fact sufficiently favourable to attract any considerable amount of capital for fresh enterprise. Randfontein, for example, earned no return for its shareholders from 1926 to 1930. Modder East, too, was something of a disappointment, the formation on the property being distinctly poorer than on the New Modderfontein, with the result that the prospects of the farms to the north and east of it were not regarded too favourably. In the boom period which ended in 1929, humdrum conditions in the gold-mining industry tempted the mining finance houses to employ their available funds in other fields whose prosperity was more spectacular. During the subsequent depression they were too deeply involved in providing for the depreciation of these outside investments to have either the will or the resources for fresh ventures.

These explanations are necessary, if only to answer those cautious investors who complain that it is only now, when the market in gold shares is rapidly rising, that the public are being invited to subscribe for new propositions. Actually the fundamental conditions of gold mining in South Africa have changed, and it is in consequence of the change that fresh capital is now forthcoming. It is important that the supply should be plentiful, for, to bring a deep-level mine to the stage of production, a large expenditure is necessary. East Geduld, for example, whose technical management is above reproach, has already spent over £1,600,000.

Since the beginning of 1933 some two hundred companies have been formed in South Africa to explore for gold. Some of these are prospecting as far away from the Rand as the Orange Free State, while others are seeking to prove the existence of a distinct gold-bearing formation fifteen or twenty miles distant from that at present worked. Such enterprises are attractive rather to the speculator than the investor. The latter will probably confine his attention to such new propositions as are backed by the leading groups, and are thus assured of adequate finance.

The centre of interest at the present time is in the Far East Rand. The generally accepted geological theory is that the gold-bearing reef of the Witwatersrand takes the form of a basin, occupying a wide space between Johannesburg and the Vaal River. The northern side of the basin, on which are situated the mines of the Central Rand, dips so steeply into the ground that some of the older properties, on which development has been pushed far south, away from the outcrop, are already approaching the limit of depth at which mining can be profitably carried on. At its north-eastern corner, however, the formation has been contorted into a sort of bulge, in which a subsidiary basin occurs. In this lie the mines of the Far East Rand. The floor of this subsidiary basin is at a comparatively shallow depth; and east of a line drawn from the Sub Nigel to the

Van Ryn Deep, along which the two basins merge into one another, the formation is nowhere too deep for profitable working.

The formation on the Far East Rand, however, lacks something of the regularity encountered in the older mines in the vicinity of Johannesburg. It has been suggested that in the former area the gold-bearing deposit was laid on the floor of an ocean or lake which had been corrugated by the action of waves. In the troughs the gold was deposited in abundance; between them so thin a layer was laid that to-day these narrow parts of the reef are unpayable. In any case, if a mine on the Far East Rand is to be worked profitably it must contain these "shoots," representing the troughs in the old ocean bed. In general they have been found in greater or less strength throughout the area, and orientated approximately north-west and south-east.

If, therefore, a reference to the map shows that an undeveloped property lies to the north-west or the south-east of a proved mine, in which the run of the "shoots" points towards the virgin ground, the property may be considered to have excellent prospects of proving a payable mine. It was on this reasoning that the East Geduld was opened up with the object of proving the continuation of the Geduld "shoots" into the adjoining property. More recently, Grootvlei has been floated to work the deposits on their further extension, East Daggafontein the area further still to the south, and Vogelstruisbult that to the south-east of Springs and Daggafontein. All these properties may be considered to have excellent prospects.

Of recent months, however, further developments have been held back in anticipation of a new mining law in the Union. Hitherto the owner of a farm has had the right to select an area, representing 20 per cent. of the total, over which the mining rights were his. If he wished to work any additional parts of the farm he had to lease them from the Government. Under the new law the proportion of the farm which the owner is entitled to choose for his own, and which is known as the "mynpacht," is to be increased to 25 per cent., and various other reforms are included with the intention of encouraging new gold-mining enterprise.

This law came into force on July 1st, and in the near future a succession of companies are likely to be floated with the object of taking up the mining rights of farms under the new system. One of the most interesting will doubtless be that formed to exploit the farm Vlakfontein 8. This farm, at present the property of Lace Proprietary Mines, will be acquired by a group headed by the Consolidated Gold Fields company. The glamour surrounding this farm arises from the fact that it represents the "deep level" of the Sub Nigel, at present the richest gold mine in the world. The famous "shoots" of the Far East Rand are more marked in the Sub Nigel mine than anywhere else, and they point north-west directly towards Vlakfontein. Development has not yet reached the boundary of the Sub Nigel, but it is significant that values seem to be improving as development proceeds northwards. It is not to be wondered at, therefore, that investors are eagerly awaiting an opportunity to participate in the ownership of the farm which represents the continuation of the system.

Further to the east, adjoining East Daggafontein, is farm Rietfontein 11, now owned by Rietfontein Gold Mines, Ltd., and under the control of the "Corner House." The property is divided by a fault, but to the west thereof the Geduld "shoots" may be found more or less undisturbed, while in the eastern section the formation should be correlated more with that on Modderfontein East. Some doubt exists as to the position of the sub-outcrop in this area, although it is usually believed to traverse Rietfontein. Recent activity on the farms Vischkuil 12 and Bloemendal 276 further to the east, however, suggests alternative theories of the limits and behaviour of the formation in this neighbourhood. North of Rietfontein lies Palmietkuilen,

which is owned by African and European, and is also likely to be the subject of a forthcoming flotation.

In the not distant future East Rand Consolidated, Ltd., is expected to float a company to open up its farm Spaarwater 154. This property adjoins the Sub Nigel, but its position is not similar to that of the Vlakfontein 8. The latter should contain the continuation of the Sub Nigel "shoots," while Spaarwater lies to one side of them. If Spaarwater, therefore, is to develop into a payable mine a new series of "shoots" will have to be proved, lying parallel to those in the Sub Nigel. This does not imply that such parallel "shoots" will not be discovered, but merely that Spaarwater will not contain the continuation of any at present worked.

Sandwiched in between the new Witpoort section of Brakpan and the West Springs mine is the area owned by South African Land Exploration Company, Ltd., now controlled by the Anglo-American group. This part of the Far East Rand, comprising the south-west corner of West Springs, the South African Lands property, the Witpoort section of Brakpan and the Apex section of New Kleinfontein has recently been the focus of great interest. The district is almost certainly affected by the mysterious Boksburg "gap," but it is now suspected that it may also contain the extension of the Sub Nigel "shoots." The South African Lands area will doubtless be intensively explored in the near future, but whether a reshuffling of boundaries in this area will precede the raising of fresh capital, with or without the formation of a new company, remains to be seen. In this connection the recent formation of the Van Dyk Consolidated Mines by Union Corporation is worthy of note. The new company will absorb the mynpacht of 973 claims of Van Dyk Proprietary Mines, and will acquire from the Union Government two leases over adjoining ground, as well as certain other claims.

So much for the Far East Rand. At the other end of the field, West Witwatersrand Areas, Ltd., is about to float its first subsidiary. The new company will take over the farms Ventersport and Gembokfontein at the north-eastern extremity of the parent company's territory. Here again entirely new ground is being broken, and the prospectus will be eagerly scanned for any information that may have been gleaned through the researches made in recent months.

Further to the south-west still a company will shortly be floated to develop the old Machavie mine, which was worked from 1913 to 1918. This property is controlled by New Central Witwatersrand Areas, Ltd., a subsidiary of African and European. At present the Machavie Gold Mining Company is being reorganised with a capital of £800,000 in 5s. shares, and shareholders in New Central Witwatersrand Areas, Ltd., will have the right to subscribe at par for 145 of these shares for each 100 held in the parent company. The prospects for the successful reopening of this mine seem favourable.

With the example of East Geduld and Daggafontein before them, investors will not be slow to realise the large capital accretions which may be secured by taking a participation in the early stages in a company which develops a successful mine on the Rand. If disappointment is to be avoided, however, there are one or two points which must be borne in mind. In the first place, it takes five or six

	No. of Claims Owned	No. of Shares Issued	Market Price July 4 1934	Market Valuation	Market Valuation per Claim
Producing Companies:—					
Springs Mines	3,568	1,500,000	7	10,500,000	2,945
East Geduld	2,641	1,600,000	3½	13,700,000	5,185

years to bring a deep-level mining property to the stage of production, so that a good deal of patience will have to be exercised. Secondly, the capitalisation of the company and the price at which shares are offered to the public must be carefully weighed. The table above, showing the market valuation of companies owning producing and undeveloped properties on the Far East Rand, may be of assistance in this connection.

INVESTMENT NOTES

German Bonds and the Debt Agreement.—The market in German bonds on Thursday vigorously celebrated the signing of the Anglo-German Transfer Agreement and the complete victory which it implies, for six months at least, for the British Government's point of view. The "Dawes" and "Young" Loans, the current coupons on British holdings of which are to be "purchased" by the German Government at 100 per cent. of their nominal value, rose about four points. British holdings of the non-Reich issues continue to be subject to the Reichsbank's offer of May 29th (to satisfy the current coupons in 3 per cent. funding scrip, or, alternatively, to purchase the coupons for 40 per cent. of their nominal value six months after their due date and provided that Germany's financial position permits) and they secure no direct benefits from the Agreement except the right to share any more favourable treatment accorded to holders who are nationals of any other country. The recovery in these bonds was, therefore, much more restrained. We give below the prices of the two Reich loans, the two Potash loans, and the Berlin City loan on May 30 (the day succeeding the break-up of the Berlin debt conference and the issue of the Reichsbank's offer), on June 15th (the day after the moratorium announcement), on July 4th (the day of the signing of the transfer agreement), and on July 5th; also the highest and lowest prices of the year:—

	1934	May 30	June 15	July 4	July 5
"Dawes" 7 per cent.	95½	58	75½	62½	63
"Young" 5½ per cent.	69	40½	54½	43½	45½
Potash 7 per cent.	93½	71	80	73	71
Potash 6½ per cent.	90	66½	75½	71	67½
City of Berlin 5 per cent.	52½	33½	36½	39½	36

It will be seen that the two Potash issues still command relatively the highest prices. These two loans are secured on the gross proceeds from the sale of potash exported from Germany, and their position is not directly affected either

by the moratorium or the debt transfer agreement. There has, however, been some discussion in the market as to whether clearing agreements between Germany and other countries, in which German potash is sold, might not affect the remittance of the proceeds to London, and some competent judges consider the Dawes Loan now to be a better security than the Potash Loans.

★ ★ ★
Dominion Stocks and Trustee Status.—Under the Colonial Stock Act of 1900 the Treasury has the power to lay down conditions with which Dominion and Colonial Governments must comply if they wish to secure trustee status for their loans. One of these conditions is that the British Government should have the power of vetoing any legislative proposal of a Dominion or Colony involving any departure from the original terms of contract governing one of its trustee stocks; and this "power of disallowance" must be expressly recognised by the borrowing Government. The Government of the Union of South Africa has for some months been negotiating with the home Government with a view to securing its agreement to the modification of this condition so far as concerns South Africa. In harmony with the recent trend of Imperial relations, the South African Government proposes to repeal the section of the South Africa Act, 1909, which reserves this "power of disallowance" to the British Government, and Mr Chamberlain announced in the House of Commons on Wednesday that a completely amicable agreement had been reached on the point. The South African Government is to repeal the clause, but it has undertaken instead that it will not submit for the Royal Assent any legislation which appears to the Home Government to affect any of the provisions affecting its stocks except after agreement with the Home Government. The action of the South African Government may be taken therefore as a harmless gesture of independence. No holder of Dominion trustee stocks need lose a moment's sleep over the matter.

★ ★ ★
Shipping Shares and the Subsidy.—The "Shipping" section of the Stock Exchange official list of quotations contains a brave array of stocks and shares, but when it comes to picking out those in which there is anything remotely resembling a free market, only the merest handful survive; whilst companies owning tramp ships whose shares are actively dealt in in London, with the one prominent exception of Furness Withy, hardly exist. Such active shares as there are, however, enjoyed an almost spectacular rise at the end of last week and beginning of this under the influence of pleasant anticipations of the benefits which Mr Runciman's subsidy statement, promised for Tuesday, was to confer on British shipping. We illustrate the movement, together with the subsequent relapse, registering disappointment with the statement, in a table which includes also the shares of two concerns engaged in the shipbuilding industry:—

Company	Shares		Quotations, 1934				
	Denomination	Total Issue	Jan 3	June 25	July 3	July 5	
Cairn Line	10s. ord.	1,200,000	5 3	4 6	4 9	4 4	4 4
Cunard	£1 ord.	5,570,241	8 0	5 6	5 9	5 4	5 4
Furness Withy	£1 ord.	6,000,000	19 0	15 9	18 0	16 9	16 9
Peninsular and Oriental	£1 def. units	4,592,518	20 0	17 0	18 6	18 0	18 0
Harland and Wolff	£1 6% pref.	4,000,000	3 9	4 3	4 3	4 3	4 3
Swan, Hunter, etc.	£1 ord.	1,711,064	17 3	15 0	16 3	16 6	16 6

The participation of the shipbuilding shares in the movement was due partly to expectations that the subsidy plan would be on the "scrap and build" principle—that is, would offer assistance to shipowners willing to scrap old ships and replace them by a smaller number of new ones. In the event this scheme has for the present at least been discarded as impracticable, and the Government assistance is confined to a "defensive subsidy" not exceeding £2,000,000 for one year only. It will be seen that the fall in values which followed the statement approximates roughly to half the previous rise in the case of Furness Withy and P. & O., but Swan, Hunter has held its improvement.

Half-year Rail Traffic.—The market's weekly arithmetical exercises have afforded little real indication of the trend of rail receipts during the half-year, owing to the variable incidence of Easter and Whitsun, and, on the passenger side, to the introduction of "penny a mile" fares in May last year. The following table for the four "group" lines shows that the improvement comes mainly from merchandise, although mineral traffic has shown a smaller but gratifying increase. Passenger revenues, however, are only £233,000 higher than for the first six months of 1933:—

(\$'000)					
Four "Group" Lines	Passenger	Merchandise	Coal and Coke	Total Goods	All Traffic
Twenty-six weeks, 1934	29,781	25,866	15,535	41,401	71,182
Twenty-six weeks, 1933	29,548	23,557	14,545	38,102	67,650
Twenty-six weeks 1934 compared with 1933 —					
Amount	+ 233	+ 2,309	+ 990	+ 3,299	+ 3,532
Per cent.	+ 0.8	+ 9.8	+ 6.8	+ 8.7	+ 5.2
Twenty-six weeks 1933 compared with 1932 —					
Amount	— 420	— 1,417	— 918	— 2,335	— 2,755
Per cent.	— 1.3	— 5.7	— 5.8	— 5.8	— 3.9

Analysis of the traffic "pluses" for each company by quarters throws light on the considerable fall of passenger revenues in the second quarter as compared with 1933, reflecting to some extent the immediate popularity of cheap facilities last year. This leaves the Great Western with a shortfall on passenger receipts for the half-year, while on the Southern a small total deficit results in the second quarter owing to the close dependence of this system on passenger revenue. Merchandise comparisons with the second quarter of 1933 are affected by the rapid recovery which occurred last year, and the check which has recently been apparent in this class. Coal and coke receipts, however, have been well maintained, though the recent trend is rather sharply downwards:—

	Great Western	London Midland and Scottish	London and North Eastern	Southern	Four Companies
1934 compared with 1933					
Passenger traffic—					
First quarter	+ 86	+ 285	+ 131	+ 186	+ 688
Second quarter	- 117	- 163	- 73	- 102	- 455
Total for half-year	- 31	+ 122	+ 58	+ 84	+ 233
Merchandise traffic—					
First quarter	+ 229	+ 571	+ 549	+ 39	+ 1,388
Second quarter	+ 158	+ 442	+ 280	+ 41	+ 921
Total for half-year	+ 387	+ 1,013	+ 829	+ 80	+ 2,309
Coal and Coke—					
First quarter	+ 43	+ 158	+ 271	+ 24	+ 496
Second quarter	Nil	+ 129	+ 321	+ 44	+ 494
Total for half-year	+ 43	+ 287	+ 592	+ 68	+ 990
All traffic—					
First quarter	+ 358	+ 1,014	+ 951	+ 249	+ 2,572
Second quarter	+ 41	+ 408	+ 528	- 17	+ 960
Total for half-year	+ 399	+ 1,422	+ 1,479	+ 232	+ 3,532

Although it is dangerous to argue from the trend of the last few weeks, it would seem that passenger receipts have renewed their advance, while merchandise traffics gains have been less impressive. This "swing" between classes will be of great importance to stockholders, who must await the half-yearly statements to observe the net effect upon profits of the increase of £3,532,000 in total receipts. The market has given close attention to the recent wage discussions between company and union representatives, and to this week's outspoken statements at the Union Conference, and current quotations of ordinary and marginal preference stocks, compared with the high levels of February, indicate a justifiably cautious view.

★ ★ ★
Oversubscription and the "Stag."—Responsible quarters in the City are expressing concern at the re-emergence, after many months of enforced idleness, of organised "stag" operations. Cases have arisen recently of the wholesale withdrawal of blocks of applications for new issues, filed by individual firms, owing to some slight change in market conditions after the closing of the lists. Accounts have been given, with every appearance of truth, of the ingenious operation of

PRELIMINARY NOTICE.

Griffiths Hughes Proprietaries Limited

(Incorporated under the Companies Act, 1929)

which is acquiring all the issued Share Capital of

E. GRIFFITHS HUGHES LIMITED

(Manufacturing Chemists)

Manufacturers of Kruschen Salts, Radox Bath Salts, Karswood and other preparations including Wex Grape Saline, Chardox, Karsote, Veldew, Baxen and Radioliser.

SHARE CAPITAL - £2,500,000

Divided into

1,000,000 5½ per cent. Cumulative Preference Shares of £1 each

and

1,500,000 Ordinary Shares of £1 each.

There are no Mortgages, Debentures or other Loan Capital outstanding.

The Subscription List will open on Tuesday next, July 10th,

for an

ISSUE OF

1,000,000 5½ PER CENT. CUMULATIVE PREFERENCE SHARES OF £1 EACH
 AT 20s. 6d. PER SHARE.

Preferential consideration in allotment will be given to Applications from the Customers of E. Griffiths Hughes Limited if made on the special pink form provided for the purpose.

DIRECTORS:

SIR BERTRAM HYDE JONES, K.B.E. (Director of English and Scottish Investors Limited) (Chairman).
 HARRY MARLAND, J.P. (Chairman and Managing Director of E. Griffiths Hughes Limited).
 ALFRED MARLAND (Deputy Managing Director of E. Griffiths Hughes Limited).
 WILLIAM FENWICK WRIGLEY, F.C.A. (Director of E. Griffiths Hughes, Limited).
 WILLIAM LITHGOW COULTER (Works Manager of E. Griffiths Hughes Limited).

The Prospectus will show (inter alia) that:—

- (1) The business of the Operating Company was established many years ago and with its Subsidiary Companies is the sole owner and manufacturer of the following proprietary lines: For Human Use: Kruschen Salts, Radox Bath Salts, Wex Grape Saline, Chardox, Karsote, Veldew, Baxen; and for Veterinary and Agricultural use: Karswood Poultry Spice, Karswood Poultry Meal, Karswood Dog Powders, Karswood Pig Powders, Radioliser (for lawns and plants).
- (2) Messrs. Deloitte, Plender, Griffiths & Co., of 5, London Wall Buildings, London, E.C.2, and Messrs. J. B. Boyd, Wrigley & Co., of 55, Brown Street, Manchester, 2, have reported that (after eliminating inter-company Dividends, Royalties and Interest), the profits of E. Griffiths Hughes Limited and the net aggregate results of its Subsidiary Companies arrived at on the basis hereinafter mentioned, were as follows:—

Financial Years ended in year to 31st March.	E. Griffiths Hughes, Ltd.		Subsidiary Companies.		Combined Net Profits.
	Profits.	Less Losses.	Profits.	Less Losses.	
1930.....	£191,187	...	£448	...	£190,739
1931.....	275,370	...	1,315	...	274,055
1932.....	479,956	£46,216	...	...	526,172
1933.....	437,884	32,080	...	...	469,964
1934.....	447,346	4,024	...	...	451,370

These profits are arrived at after charging all expenses, including advertising, depreciation of Fixed Assets (based upon the valuation at 31st March, 1934), and management remuneration at the rates payable in future, and after making such other adjustments as are, in the opinion of the above Auditors, appropriate, but before charging Income Tax.

- (3) Mr. Harry Marland and his brother, Mr. Alfred Marland, have entered into agreements to act as Managing Director and Deputy Managing Director of the Company respectively for a period of seven years from the 1st April, 1934, and the other Directors will remain in their present capacities.

Prospectuses, on the terms of which only applications will be considered, and Forms of Application can be obtained from the:—

BANKERS:

NATIONAL PROVINCIAL BANK LIMITED, Head Office, 15, Bishopsgate, London, E.C.2, and Branches.

BROKERS:

CAZENOVE AKROYDS & GREENWOOD & CO., 10, Old Broad Street, London, E.C.2.

W. A. ARNOLD & SONS, Haworth's Buildings, Cross Street, Manchester, 2.

REGISTERED OFFICE OF THE COMPANY:

Peru Street, Adelphi, Salford, Manchester,

and from the

TRANSFER OFFICE:

10 & 12, Copthall Avenue, London, E.C.2.

"staggering clubs" conducted under cover of fictitious names (although it is even reported that real dummy applicants are available at a suitable fee), since the renunciation of allotment letters provides in most cases no difficulties regarding signatures. This practice has little to commend it, for irresponsible "staggering" performs no service in evening out price fluctuations and preserving a wide market as do *bona fide* speculative dealings. The operation is rather in the nature of a call option which costs the speculator nothing, and can be withdrawn unless virtual certainty is assured. The announcement of over-subscription, accordingly, may not always relieve underwriters from taking up a considerable part of their commitments. While it would be difficult, and certainly undesirable on wider grounds, to attempt any reservation of new issue allotments to applicants genuinely intending to hold, it is possible by careful determination of the issue price and insistence upon the largest possible payment on application and allotment (and by expediting allotment), to minimise the "stag's" activities. The perpetuation of the highly speculative issue boom of 1928 was due, to no small extent, to the readiness of the "stag" to subscribe indiscriminately on the chance of an immediate premium, and it would be regrettable if the partial revival in the market for new industrial capital were to be prejudiced by a recrudescence of feverish short-term speculation in meretricious issues. From the grossest excesses of that period, fortunately, the market and the investing public can look to the Stock Exchange Committee for ample protection.

New Issues in June.—Activity in the capital market last month reflected a considerable number of fairly small issues^{*} rather than any operations of major importance. Our usual table of issues, excluding conversion operations, shows that United Kingdom non-Government and British Possessions requirements were considerably lower than in May.

Monthly Average	(000's omitted)			
	United Kingdom	British Possessions	Foreign Countries	Total
1930	14,220	5,121	2,975	22,316
1931	4,542	3,209	761	8,512
1932	13,589	2,129	24	15,742
1933	17,520	2,429	449	20,398
Monthly Total	Govt.	Other		
April, 1933	31,288	1,616	Nil	33,869
April, 1934	42,050	6,960	496	49,506
May, 1933	19,001	8,037	5,547	32,585
May, 1934	Dr. 450	10,518	9,546	19,688
June, 1933	3,150	11,355	783	15,288
June, 1934	Dr. 150	3,857	3,683	7,480

Demand for industrial capital still makes little headway, although Stewarts and Lloyds (completing the Corby financing), Boots Pure Drug and British Aluminium (partly in respect of re-financing for the group) figure among the month's borrowers. Eight South African and other gold mining issues appeared, carrying various degrees of speculative risk. Of these the Central Mining preference issue was most important.

Industrial Profits in June.—We received 201 company reports last month, showing an aggregate rise in profits of 20.44 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports Published in	No. of Companies	Rise or Fall in Profits*	Reports Published in	No. of Companies	Rise or Fall in Profits*
1933—			1933—

* After payment of debenture interest.

The reports of the month disclose net profits of £21,037,239, as compared with £17,457,474 in the preceding year. Three

groups have been largely responsible for the month's increase. Twenty-five iron, coal and steel companies earned net profits of £2,651,853, compared with £1,570,665 for the previous financial year; 31 tea companies, with profits of £822,093, against £68,872, reflected the ample benefit received from restriction; and 59 miscellaneous companies showed satisfactory improvement, from £3,754,639 to £4,456,260 for the latest year. We give a short table of outstanding individual results below:—

	Net Profits for Financial Years ending in		Change %
	1933	1934	
Anglo-Persian Oil	2,379,677	2,643,979	+ 11.1
Associated Newspapers	751,958	809,626	+ 7.7
Boots Pure Drug	701,453	744,866	+ 6.2
Coats, J. and P.	2,259,110	2,574,594	+ 14.0
Cory, Wm., and Son	607,494	594,439	- 2.1
Edmundson's Electricity	342,796	420,970	+ 22.8
General Electric	836,457	803,452	- 4.0
Lyons, J., and Company	972,390	1,008,342	+ 3.6
Shell "Transport"	2,661,457	2,748,035	+ 3.4
Total, nine companies	11,512,792	12,348,303	+ 7.4

Although these companies account for nearly 59 per cent. of the total profits, the major part of the month's increase has been contributed by smaller companies in the groups mentioned above.

Actuaries' Investment Index.—The computations of the Actuaries' Index show very clearly the inability of markets to make any further advance, and at the same time, the absence of any pressure of liquidation. This hesitant stability finds due reflection in the index for 144 ordinary shares which again show no sensible movement. The figure is calculated at 70.9 for Tuesday last, 70.8 a week ago, and 71.1 a fortnight ago (December 31, 1928 = 100). The percentage yield figures are 3.70, 3.70 and 3.68, respectively. Movements of certain group indices are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	June 19, 1934	June 26, 1934	July 3, 1934	June 19, 1934	June 26, 1934	July 3, 1934
	1934	1934	1934	1934	1934	1934
Higher this week:						
Electric Light & Power (14)	126.9	127.3	129.4	3.93	3.92	3.86
Iron and Steel (6)	51.5	50.8	51.7	1.27	1.30	1.25
Electric Supplies (8)	91.7	91.9	93.1	4.61	4.60	4.54
Stores and Catering (15)	79.1	79.7	79.3	4.15	4.18	4.16
Lower this week:						
Building Materials (4)	83.1	82.4	82.0	4.07	4.10	4.12
Cotton (6)	48.2	47.6	46.9	2.27	2.28	2.28
Miscellaneous (50)	62.8	62.5	62.1	3.92	3.94	3.97

Electric light shares have returned to investment favour in conformity with the trend in the gilt-edged market, and electrical equipment shares are being revalued on the improved prospects suggested by recent accounts and speeches. The absence of speculative interest in leading industrial favourites is clearly shown by the gentle fall in the miscellaneous group index.

COMPANY NOTES

Printing and Publishing Shares.—So far as the investor is concerned, publishing shares relate primarily to those concerns which publish periodicals and not those which publish books. There are a number of moderate-sized public companies engaged in book publishing (as, for example, Methuen, Collins, Hutchinson and Cassell); but public interest in them is limited to preference shares or debentures. Among publishers of periodicals, on the other hand, there are such large and active companies as Amalgamated Press, George Newnes (with its subsidiary, C. Arthur Pearson) and Benn Brothers. Odhams Press, with its *Daily Herald* enterprise, now ranks, perhaps, more as a newspaper company, and was so treated in a recent review of newspaper share prospects (see the *Economist*, June 2, page 1200). Though the printing business is strictly distinct

from publishing, printing companies are usually grouped with the publishers—a classification which is not entirely arbitrary. In the first place, the two businesses are very often run together by one concern; and in the second place, both depend broadly on the same factors for their prosperity. Both are the handmaids of the *selling* side of business enterprise, the one offering "space" for press advertisements and the other printing the non-press advertising matter. Thus, when business is concentrating on sales and expansion, the publishers and printers prosper, but when it is insisting upon retrenchment of costs they suffer. As may be seen from the accompanying table of profits, the printing companies have felt the benefit of recovery more quickly than the publishers. For the Argus Press and

* Less tax.

Hazell, Watson and Viney, 1933 was easily the best year since 1929, while for Waterlows it was definitely a year of recovery—the company's interim for 1933-34 being raised to 3½ per cent. against 2½ per cent. For the publishing companies, on the other hand, the year only checked the rate of decline, but did not reverse the trend. Possibly that was due to the expenses of new publications which some of the companies inaugurated as part of a recovery expansion programme. But, in any case, recent chairmen's speeches have recorded better conditions and prospects—for example, those of Lord Camrose (Amalgamated Press) and Lord Riddell (Newnes) both delivered in June. It may be inferred that both printing and publishing profits are sensitive to changes in business sentiment, and that if recovery is maintained sufficiently to reward sales effort with encouraging results, both printing and publishing will benefit materially. In recent weeks there have been signs of a check to the rapid expansion of advertising. But at this stage the investor will not be able to determine whether that portends a relapse or only a pause in recovery. The Stock Exchange valuation of printing and publishing shares allows more conservatively for this uncertainty than is the case for some other groups. Yields of from 6½ per cent. to 6½ per cent. are offered on the shares of Amalgamated Press, Benn Brothers and Argus Press Holdings; and both Newnes and Hazell Watson yield comfortably over 5 per cent.

Bank and Discount House Interims.—It is unlikely that there has been any material difference in the earning capacity of either banks or discount houses between the half-year just ended and the first half of last year; and it is not surprising, therefore, that the interim dividend declarations available as we go to press are in each case at the same rates as in July, 1933. The monetary history of the half-year is related in the article on page 18, and it is only necessary here to refer to certain features which are intimately related to earning power. At first sight the most significant point—which affects both banks and discount houses—is that the average three months' bill rate at 198. 2d. per cent. is almost 50 per cent. higher than the average of 13s. 4d. for the first half of 1933. Actually,

Deferred Assurances for Children with valuable options

The SPECIAL SCHEME of this Institution enables a parent or guardian to secure an attractive provision for the future of a Child at very low cost.

An Annual Premium of £10 secures for a child age 1 next birthday an Assurance of £1,596, to come into force at age 21.

Write for booklet entitled "The Children."

FUNDS EXCEED £23,500,000

however, this rise has not been of great advantage either to the banks or the bill market. In the case of the banks it has been largely offset by the marked contraction in the bill portfolios. For the discount market part of the apparent benefit has been negated by a rise in the average rate paid for "outside" money, while, in addition, the action of the banks in raising their buying rates for bills has in consequence reduced the market's opportunities for profitable rediscounting. Nevertheless, the discount market has probably suffered no loss on "running" bills as it did in the first half of 1933, and this fact may approximately compensate it for lower profits on the turnover both of bills and of Government "shorts," the supply of which has been much curtailed by conversions. The banks have had a somewhat smaller average volume of deposits at their command than for last year—the average for the London Clearing Banks for the five months January to May was £1,865 millions in 1934, against £1,948 millions in 1933—but as improving trade has led to some transfer from deposit to current account, there may be little loss of profit on this score. Advances have averaged slightly lower (£749 millions for the five months, compared with £767 millions), so that interest receipts must have shown some decline, though, in view of the very substantial improvement in trade, this has probably been outweighed by a shrinkage in the amount of "bad and doubtful" items calling for reservations out of profits. Investments show a higher average level (£548 millions, compared with £505 millions in January to May, 1933), but although the average rate of return on them must have been less, compensation in the form of further appreciation of capital value is to be expected. We add a list of the dividends so far declared with the quotations of the shares concerned ruling now and a year ago and the yields currently obtainable:—

* Based on dividend for 1933. † Not available.

As the prospect of increased distributions is not measurably better than a year ago the rise in share values must be wholly attributed to the general considerations affecting fixed interest securities.

British Ropes.—This ten-year-old merger of firms engaged in the wire and hemp rope and allied industries has enjoyed its full share of the benefits which protection offers to the protected industries, and it is now able to put forward the promised scheme of capital reorganisation. The issued capital consists of 1,257,320 6½ per cent. £1 cumulative preference shares, on which the dividend is 7½ years in arrear, and 1,906,633 £1 ordinary shares, the last dividend on which was 5 per cent. for the year to August, 1925. The scheme involves the reduction of the ordinary capital to £317,772 10s. by the writing down of each ordinary share to 3s. 4d. The shares, so reduced, are to be split each into one share of 2s. 6d. and one of 10d. The present ordinary shareholders are to surrender the 10d. shares, which are then to be consolidated into 2s. 6d. shares and issued to the preference shareholders in satisfaction of their dividend arrears and in compensation for the modification of their cumulative rights. The proposal affecting these is that each present 6½ per cent. preference share should be divided into one 10s. 6 per cent. cumulative preference share and one 10s. 7 per cent. non-cumulative preferred ordinary share. The effect is that the preference holders will, subject to the sufficiency of profits, receive the same dividend as before, but that only 3 per cent. out of the 6½ per cent. will be cumulative. Their participation in the equity will be 25 per cent., which seems to be fair compensation for their sacrifices, though the net arrears of dividend represent over 7s. in the £. The accounts for the six months register a further considerable recovery in earnings, as the following summary shows:—

	Year to Aug. 31, 1932	Year to Aug. 31, 1933	Half-year to Feb. 28, 1934
Trading profit	101,751	121,859	101,890
Debt interest and premium reserve	56,928	50,550	35,131
Bank interest	2,400	11,837	3,374
Directors' fees	2,400	2,400	1,305
Net profit (before depreciation)...	42,423	57,072	62,079

The directors estimate that £25,000 would be a fair allocation for depreciation out of the last half-year's profits. That would leave about £37,000 available for dividends or, say, £50,000 (equivalent to £100,000 per annum) if the amount of £12,788 provided out of the half-year's profits towards the premium on redemption of the 6 per cent. debenture stock, which is repayable at 105 on November 5, 1935, be written back. This stock will be repaid out of the proceeds of the issue of £850,000 4½ per cent. first mortgage debenture stock now being made at 99—an operation which will yield a small saving. The preference and preferred ordinary dividends will absorb £81,725, so that on the basis of a net annual profit of £100,000 they would be comfortably covered, with a margin out of which a dividend of, say, 5 per cent. on the reduced ordinary capital could be paid.

The Rayon Excise Cut.—The reduction in the import duty on raw silk and in the Excise duty on rayon yarn (upon which we comment on page 11) has now been conceded as a subsidiary, but essential, part of the new Anglo-French trade agreement signed on June 27th. The Excise on rayon yarn is reduced to 6d. (against 1s.), and on waste and staple fibre to 3d. (against 6d.). In all, the cost of these and the associated concessions on real silk is estimated at between £2,300,000 and £3,000,000 a year. The vigorous rise in rayon yarn consumption during the present year should be materially assisted by this relief, which, under the lead of Courtaulds, Limited, has been passed on at once to the industry's customers. In its immediate effects, however, the cut of 6d. per lb. in all rayon yarns has spread something like consternation throughout the merchanting section of the trade. The merchants and weavers are handling a very large volume of duty-paid rayon goods at this time of year, and are faced with a dead loss equivalent to the duty payments on their stocks. This loss is estimated at from 10 per cent. to 15 per cent. on standard cloths, but its incidence will depend upon the proportion of stocks held for home and export trade, since full drawback will be recoverable in the latter case. A meeting of the Rayon Section of the Manchester Chamber of Commerce held on Monday resolved to make representations to the

Government; but what precise course will be urged is not yet clear. It is understood that the three largest weaving concerns, supported by the Cotton Spinners' and Manufacturers' Association, intend to hold merchants to the original prices in cases where full duty has already been paid on the yarn, although cases are being reported of manufacturers' customers threatening not to accept delivery of goods against previous orders unless they receive the full benefit of the reduction in Excise, regardless of whether the manufacturer has the cloth made or the yarn in stock. By reasonable allowances on both sides the difficulties of the transition period will be greatly eased; but it seems inevitable that some considerable losses will be suffered on unsold stocks of yarn and cloth. In the long run, however, the lower level of prices should stimulate turnover sufficiently to compensate the initial loss. The market, however, has shown no willingness to discount a rapid increase in yarn producers' profits, and most of the leading shares have been undecided during this week.

Patons and Baldwins.—The accounts of this International wool yarn company make, on the whole, more satisfactory reading than the preliminary profits announcement, with its reduction of dividend from 12½ to 10 per cent., may have suggested. The profit figure, which is struck this year "after making provision for the recent fall in wool values" as well as for debenture interest, which costs some £2,850 more, shows little change at £514,907. Reference to the balance sheet discloses depreciation on buildings and plant amounting to £179,568 during the year compared with £100,620 for 1932-33, an increase which accounts largely for the reduction in ordinary earnings from £342,999 to £255,497:—

† Free of income tax.

The balance sheet shows a sharp increase in the stock valuation from £2,036,435 to £2,637,977, and after allowance for an increase of £322,000 in creditors' and taxation reserve, net current assets amount to £1,976,000, against £1,638,000 at April last year. In view of the reduction in raw wool prices, which is of the order of 20 per cent. during the first six months of this year, and of the growing Japanese exports in Eastern and Australian markets, shareholders will await the chairman's review of world conditions with keen interest. The £1 ordinary shares were marked down by fully 7s. on the preliminary announcement, and are now quoted at 55s. to yield £3 15s. 7d. per cent., tax free. In view of the uncertainties of the current financial year, the shares appear adequately valued.

Wiggins and Company (Hammersmith) Reconstruction.—The unfortunate experience of this company in its relations with the "Red Triangle" cement group entailed a capital reduction in 1930 and left its finances in an enfeebled condition to reap advantage from last year's improvement in the building trade. The directors have closed certain unremunerative units, and to judge from the profits for the year to March 31st last (£18,906, compared with £8,567 for the previous year) there are indications of an improvement in the outlook. The realisation and revaluation of the assets, however, has disclosed a discrepancy between book and current values of £149,375 of which £138,773 has been transferred to suspense account pending the reorganisation of the capital structure.

On this computation tangible net assets amount, roundly, to £243,000, and there is a deficiency of £57,000 on the preference capital, while the whole of the ordinary and deferred capital, amounting to £92,000, has been lost. The scheme proposes a reduction of the issued capital from £392,500 to £243,125, to be effected by cancelling 1s. 4d. on each 4s. preference share, 1s. on each of the 2s. ordinary shares, and 2½d. on each deferred share of 3d. Although the directors preface the scheme with the opinion that it represents a fair apportionment of the sacrifice between various classes, it is doubtful if preference shareholders, who are also to suffer cancellation of dividend arrears from June, 1931, and to forgo cumulative rights, will regard a capital premium of 30 per cent. in the event of liquidation, and unconditional voting rights, as adequate compensation. Following the proposed reorganisation, the preference capital will be reduced to £200,000 and the ordinary to £43,125, the former being cut by one-third, and the latter by £49,375. The *pro forma* reduction of the equity issues is a matter of no real significance since it leaves the equity unaffected, but the shares will be covered fully by productive assets, entirely with the assistance of the preference shareholders' sacrifice. In these circumstances, preference shareholders may not unreasonably claim a share in the equity of the company, for it is clear that the effective burden of the scheme is placed entirely upon their shoulders.

Other Company Results.—We have received reports from fifty-six other companies, the usual summary of which will be found on page 35 of this issue. The week continues the satisfactory trend of improvement. The list includes twenty-three rubber and tea plantation companies, all of which have improved their earnings position during the year. Among rubber companies revenues have increased sufficiently to justify small dividends in four cases, while prominent tea results include Anglo-Ceylon (£46,472, against £1,352), Assam Frontier (£31,709, against Dr. £36,150), and Jorehaut (£93,956, against Dr. £466). Cellulose Acetate Silk reports net profit of £97,175, compared with £38,041, and the carry-forward is £56,010, against Dr. £31,165 brought in. In the investment trust section Atlas Electric and General has earned net profits of £142,929, compared with £159,848 for the previous year, but Second Consolidated Trust, reporting to June 15th, shows profits of £22,212, against £12,158. Among miscellaneous companies Amalgamated Dental shows a fall in earnings from £131,923 to £120,500, but E. K. Cole profits have shown a large recovery from Dr. £22,600 to £128,670, and 20 per cent. is paid on the ordinary shares. Three companies in the Beechams Pills group have issued reports this week. Profits of Veno Drug have increased from £85,634 to £91,436, and 73 per cent. is paid on the deferred ordinary shares, against 60 per cent. Pritchard and Constance profits have also increased from £19,238 to £30,934, and 65 per cent. (against 35 per cent.) is paid on the deferred shares. Yeast-Vite profits, however, have fallen from £58,363 to £48,878. The full report of International Tea shows an increase in net profits from £614,729 to £645,860, and Lovell and Christmas, in the same group, have earned £139,708 for the year to mid-June, as against £75,258 for the previous period. The first report of Hawker Aircraft reveals total profits of £154,117, which exceeds the prospectus statements of last year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Imperial Bank of Persia, P. and O. Banking Corporation, W. T. Henley's Telegraph Works, Trust Company of London and Scotland, Powell Duffryn Steam Coal, Nigel Van Ryn Reefs, Hovis, Ohlsson's Cape Breweries, Great Boulder Proprietary Gold Mines, and Scribbans and Company. The chairmen of both the Powell Duffryn Steam Coal Company and Henley's Telegraph Works Company had something to say on the extremely valuable accessory of a progressive manufacturing concern—the research department. Mr Hann at the Powell

Duffryn meeting said that their research staff were constantly studying the ever-changing needs of the market in regard to both coal and its by-products. And he pointed out that since 1928 Powell Duffryn had developed from a purely mining concern into an organisation with world-wide interests. Sir Montague Hughman told the Henley's shareholders that as the result of patient research the past year had seen the development of several new and improved products which had already proved highly successful. At the Imperial Bank of Persia Sir Hugh Barnes told a tale of steady progress in Persia "due mainly to the constant supervision exercised by H.I.M. The Shah." Foreign exchange remains a free market, and there has been some relaxation of import restrictions. But in Persia and Iraq, as elsewhere, Japanese competition has been working increasingly to the detriment of the Manchester trade. Mr Preston had a less favourable account to give of Far Eastern conditions at the P. and O. Banking Corporation meeting. In China, particularly, where the full blast of the economic blizzard was not felt until some time after it had fallen on other countries, there had been acute depression and stagnation of external trade last year. Mr Dence, the Hovis chairman, complained as in previous years of the unfair competition with which millers were faced from subsidised or dumped foreign flour, and protested against attempts artificially to limit the supply of wheat, the millers' raw material. Mr Philip Hill gave the Scribbans shareholders the news that the company was establishing a subsidiary in the Irish Free State.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
July 10	July 12

MARKETS this week have been unable to shake off the recent feeling of heaviness. No major influences were at work to justify a further advance, but, at the same time, the preservation of a sound technical position and the maintenance of trade activity at home have prevented any recourse to selling. So long as recent purchases find an ultimate home in investors' safes, the changes of serious reaction are small, but the deflation of speculative interest has led to quiet conditions of trading such as are usually reserved for August.

Gilt-edged stocks made no decided movement until mid-week, when War Loan moved slightly higher. Old Consols and Local Loans, however, which followed a recessionary trend early in the week, showed little inclination to follow the lead, but 3 per cent. Conversion and Funding Fours reached high levels on Thursday. India Loans became firmer in sympathy with gilt-edged, and Australian stocks were in continued demand on the report of a General Election in September.

In the foreign bond market, German bonds, after being marked down on the tragic events of the week-end, improved on Wednesday in correct anticipation of the agreement on the "Young" and "Dawes" service (discussed on pages 8 and 21). Quotations improved by 3 points on Thursday, the "Young" rising to 49 and the "Dawes" to 67. Among South American issues, Sar Paulo Coffee bonds were dull owing to delayed coupon payments, and Brazilian issues generally were of little interest. Argentine issues moved between narrow limits. Japanese issues were weaker on the resignation of the Cabinet, but Chinese bonds were little changed.

MORTGAGE FUNDS

Messrs. Way and Waller are Surveyors for several Trust Funds and mortgages can be arranged without delay. No preliminary fees.

Dullness permeated the Home Rail market owing to apprehension regarding the wages developments and talk of strike action, but the traffics for the last week of the half-year (analysed on page 22) put the market in a less nervous mood. The outstanding feature was the sharp demand for London Transport "C" stock, which gained 4½ points on Wednesday, partly on a more favourable estimation of the dividend prospects, which led to an improved demand in a market short of stock. Foreign rail stocks were almost at a standstill.

Dealers in the industrial market complained that the week-end events in Germany were responsible for Monday's hesitation, but the fact that business showed no power of recovery in later days suggested causes nearer home. Wall Street dullness and fine weather notwithstanding, the market has more reason to hesitate until the level of economic activity shows movement in one direction or the other. Conditions in the electric supply market were steadier than of late, and equipment shares continued in fair request. Iron, coal and steel shares enjoyed some support, although price movements were small. Wm. Cory declined in conformity with this week's offer for sale of the P. and O. holding. Aviation and motor shares were quiet, and quotations where changed moved irregularly. Among rayon shares, Courtaulds alone were of definite interest, and fluctuated considerably on estimation of the interim dividend and the effect of the Excise cut (discussed on page 26). In the stores section, attention was directed principally to Marks and Spencer, and Woolworth. Brewery shares followed the general trend, and distillery issues declined under profit-taking sales. Tobacco shares were undecided, and showed narrow movements. Shipping shares enjoyed good support pending the subsidy statement, but reacted later on disappointment with its terms. Although some favourite counters in the miscellaneous section, such as Dunlop and Turner and Newall, made some recovery after an uninteresting opening, the group as a whole showed irregular small movements.

Business in the oil market continued small, and Continental interest was almost negligible. Rubber shares responded actively to the achievement of the magic figure of 7d. for the commodity, demand being concentrated principally upon sound issues for investment purposes. Tea shares were fairly steady, but some selling of leading issues caused slight irregularity in mid-week dealings.

In the mining markets, Kaffir shares wavered, but showed a steadier tendency as the week progressed. The Eastern Rand group returned to favour after showing an easier tendency. Randfontein enjoyed some early support, but on the whole the market showed no great response to the very favourable June returns. Quiet conditions prevailed in the West African market, although Gold Coast Selection was firmer on Thursday. Copper shares sagged on the low level of the metal, but tin shares, after three quiet days, were somewhat better later.

FOREIGN STOCK EXCHANGES

NEW YORK

Wall Street continues utterly lifeless. The announcement of the constitution of the Stock Exchange Control Commission did nothing to help, for though Mr Pecora is not chairman and is only to be a member for a year, the market has no reason to suppose it will get a better deal from the actual chairman, Mr Joseph Kennedy, *ci-devant* pool operator, a poacher turned gamekeeper. General business news is not discouraging, and the National City Bank, in its latest monthly review, remarks that the seasonal recession of industry is no more than moderate and that general business prospects are quite good, notwithstanding the continued absence of recovery in the capital goods industries. Nevertheless, the tendency of industrials has been downwards, while rails have been adversely affected by the new Pensions Bill which the President has just signed. This is estimated to place an immediate burden of more than \$60 millions on the companies, with the prospect of an increase in the future if this sum proves insufficient to retire all employees over sixty-five years of age. As a slight consolation the R.F.C. has announced that it will not press for the repayment of maturing loans to the companies, but this is not regarded as adequate compensation for the pension liability.

PARIS

There was heavy selling of Rentes on Tuesday, due to the effect upon an overbought market of rumours that the Government was to seek powers before the prorogation of Parliament to issue a fresh loan at its discretion; and the weakness communicated itself to other sections. The rumours were subsequently denied, and a partial recovery followed.

BERLIN

Owing to the intervention of Saturday, when the Bourse was closed, and of Sunday, the dramatic events of the "Second Revolution" had no panic effect on this week's share market. With the exception of potash issues, which continued their advance, Monday's quotations were very weak, high-priced stocks registering losses of two to five points. Tuesday opened with a further weakening, accompanied by a reaction in potash shares, but the close was somewhat firmer. Last week potash, lignite, steel, and paper and pulp stocks advanced, and among banks Deutsche-Disconto had a substantial rise. The fixed-interest market this week was quiet, but on Tuesday some selling of industrial and buying of State loans occurred.

AMSTERDAM

The market has been slightly depressed this week, partly owing to the disturbances in Germany. Rubbers, however, have rallied in the last day or two in response to the higher price of the commodity. A.K.U., Philips Lamps, and Unilever have all dropped appreciably, but Royal Dutch are little changed.

CAPITAL ISSUES

The week's issues comprise a varied selection of sound industrial and more speculative gold mining issues, the former predominating with a total of approximately £7½ millions, which is much the largest industrial requirement for any recent week. The most interesting and the largest of the industrial issues is the offer at 73s. 6d. per share of 1,500,000 £1 ordinary shares of Wm. Cory and Son, Limited, the coal contractors and steamship owners. These shares represent the bulk of the P. and O. Steam Navigation Company's holding, which is selling the shares to provide funds for shipbuilding now in progress and contemplation. The price at which the offer is made compares with a quoted price, ruling before the announcement, of 77s. 6d.

The issuing house in Baring Brothers, who paid £5,287,500 for the issue, i.e. 70s. 6d. per share, or 3s. below the price of issue, out of which margin it is paying 1s. 3d. per share underwriting and overriding commission, brokerage and advertising expenses. The company has a splendid record of good management and steady profits. For the past three years dividends of 15 per cent. have been paid giving a yield at the sale price of £4 1s. 6d. per cent. A second coal issue is that of 1,000,000 5 per cent £1 preferred ordinary shares in *Powell Duffryn Steam Coal Company*, offered at 20s. 9d. Profits of the company and its subsidiaries for the financial year 1933-34 are computed at £395,000. In view of the profits record in the last three years, and the conversion rights attaching thereto, the shares afford a useful opportunity for participating in the further recovery of the industry, although the difficulties affecting the South Wales section must not be lost sight of. The debenture stock issue of *British Ropes*, viz., £850,000 4½ per cent. stock at 99, is an important element in the reconstruction scheme discussed in a Note on page 26. In view of the much improved profit position shown in the report the stock may be classed as a sound industrial debenture, although perhaps below the top rank. *Trust Houses* issue of £650,000 3½ per cent. debenture stock at £93½ is intended to pay off existing mortgages. The principal is covered more than 3½ times by assets, and the service more than four times by the average adjusted profits for the last five years. The stock is a secure industrial debenture, perhaps fully priced, but carrying the advantage of a moderate capital appreciation on redemption. Of the gold-mining issues, *Kenton Gold Areas* is the largest, and represents the first important financing for the newly-discovered Kakamega fields. It has the advantage of the backing and technical management of the Tanganyika Concessions group, and investors can therefore count on at least a fair run for their money. The prospectus of *Klerksdorp Consolidated Goldfields* is not particularly informative. Applicants must rely largely on the sound reputation of the sponsors. The property is situated on the Western Extension of the Rand, which is the focus of many hopes. *Bushtick Mines* (1934) has acquired a property in the Bulawayo district of Southern Rhodesia which has twice been

You can be sure
of
Shell

opened and closed down. The prospectus information is lacking in detail and the shares must be placed in a very speculative class. Statements "for information" have been issued by *Criterion Restaurants* (£300,000 4 per cent. debenture stock), *John Dale Metal Containers, Wests and Moultons, Limited*, and *Kenya Consolidated Goldfields*. It is understood that the Stock Exchange Committee have deferred consideration of permission to deal in 1,250,000 2s. shares of *Lower Ancobra (Gold Coast) Area* pending publication of the first accounts.

PUBLIC OFFERS

British Ropes, Ltd.—Issue of £850,000 4½ per cent. first mortgage debenture stock at £99 per cent. The company was formed in 1924 to amalgamate a group of rope manufacturers, and production is now concentrated in 14 factories. It is proposed to reorganise the company by writing £1,795,108 off intangible and tangible assets. Tangible assets as at February 28, 1934, are stated at £2,732,552, and after deducting current liabilities and 6 per cent. debenture stock, the net assets, including proceeds of present issue, are £2,423,604. The stock will be redeemable between July 1, 1935, and July 1, 1974, by drawings at par, or on three months' notice at £102½ from July 2, 1944, to July 2, 1954, and at £101 to July 2, 1964. The stock will be secured, subject to existing £744,775 6 per cent. stock, repayable November 5, 1934, at £105 per cent., by specific mortgage and floating charges.

Bushtick Mines (1934), Ltd.—Issue of 400,000 shares of 10s. each at par. The company has been registered in Southern Rhodesia to acquire 427 gold claims approximately 880 acres in extent for consideration of £250,000 to be satisfied by allotment of 500,000 shares. The property was worked from 1906 to 1914 and from 1918 to 1920, 94,911 ounces of gold being recovered, ore value being 15s. 10d. per ton at 85s. The principal section of the mine is full of water, and ore developments have been calculated at 184,442 tons averaging 4.69 dwts. on the basis of the mine plans. Cost of re-equipment and development programme is estimated at £153,200.

Kentan Gold Areas, Ltd.—Issue of 2,000,000 shares of 10s. each at par. The company has been formed to acquire (a) 97 per cent. of the issued capital of East African Concessions, Ltd., which holds part interests in seven prospecting licences, claims and options in Kakamega, and (b) exclusive prospecting licence to August 31, 1934, renewable for four years, over 1,450 square miles in North Kavirondo, Kenya; (c) option to purchase prospecting licences over 220 square miles in Tanganyika; (d) option to purchase 80 per cent. interest in prospecting licence over five square miles in Uganda. The purchase consideration payable in cash is £440,000, the vendors having applied for 1,110,000 shares of the issue at par. The properties are in various stages of development. The Kakamega area includes Kiminque reef, which is being developed to 500-foot level, and preliminary tests indicate total value of 15 dwts. per ton, working costs being estimated at about 30s. £505,000 will be available for working capital after purchase consideration and preliminary expenses.

Klerksdorp Consolidated Goldfields, Ltd.—Issue of 1,000,000 ordinary shares of 5s. each at par. The company has acquired freehold land mining and prospecting rights over 27,000 morgen in Transvaal Province. It is estimated that 16,000,000 tons of payable ore will be available on these properties, which are thought to contain the Main Reef formations, and sampling indicates an average grade of 6 dwts. Costs are estimated at 14s. per ton, and on initial output of 15,000 tons of 6-dwt. grade and 95 per cent. extraction, profits are estimated at £220,272 per annum, with gold at 135s. per ounce. Capital expenditure is estimated at £195,800. The properties have been acquired for consideration of £250,000, to be satisfied by allotment of 1,000,000 shares. Subscribers will be granted options, exercisable on various terms before July 1, 1936, to take up ten shares for every fifty allotted shares, and 800,000 shares are also under option on similar terms.

The Powell Duffryn Steam Coal Company, Ltd.—Issue of 1,000,000 5 per cent. preferred ordinary shares of £1 each at 20s. 9d. per share. The company was formed in 1864, and owns 26 collieries, with capacity of 10,000,000 tons per annum, coke ovens and by-product plants, etc. Profits, before tax and amortisation and after eliminating inter-company dividends, have been: 1931–32, £256,717; 1932–33, £333,447; and for fifteen months of the parent group and financial years ended in 1933–34 for other companies, £465,090. The annual rate for the group for 1933–34 is stated at £395,000. The proceeds of the issue will be applied to redemption, at £102½, of £800,000 5½ per cent. debenture stock of Great Western Colliery Company (which is guaranteed by the company) and for general purposes. The shares will be convertible into ordinary stock within four weeks of the annual general meetings in 1935 and 1936.

BY OFFER FOR SALE

Trust Houses, Ltd.—Offer of £650,000 3½ per cent. debenture stock at £93½ per cent. The company was formed in 1903 and owns 210 hotels, inns and restaurants in London and Great Britain. Proceeds of the issue are required to repay existing mortgages amounting to £573,571. Net assets, including proceeds, are stated at £2,471,042, and profits, before debenture interest for years to March 31st have been: 1932, £144,805; 1933, £128,559; 1934, £145,954. The stock is redeemable at par by operation of sinking fund between July 1, 1936, and July 1, 1964, or after July 1, 1944, on three months' notice. Messrs. Lazard Bros. and Company, Ltd., have agreed to purchase the issue for £90 per cent.

Wm. Cory and Son, Ltd.—Offer for sale of 1,500,000 ordinary shares of £1 each at 73s. 6d. per share. The company was formed in 1896 to acquire the coal contractors' business established 100 years previously. The Peninsular and Oriental Steam Navigation Company having held a large block of ordinary shares for some years has sold 1,500,000 such shares to Baring Brothers and Company, Ltd., for consideration of £5,287,500 to provide funds for shipbuilding. Profits after taxation and debenture interest for years ended March 31st have been: 1932, £512,148; 1933, £546,994; 1934, £552,039; and net assets at March 31, 1934, were £6,174,422. Applications must be for not less than 25 shares.

BY STOCK EXCHANGE INTRODUCTION

The Criterion Restaurants, Ltd.—Particulars of issue of £300,000 4 per cent. mortgage debenture stock. The company was incorporated in 1919 and owns premises under Crown lease expiring in 2002, of theatre, restaurant and office properties at Piccadilly Circus, yielding profit rental of approximately £13,000. The issue, proceeds of which will be utilised for redemption of £85,525 7 per cent. debentures and mortgage of £200,000, will be redeemed at £102½ per cent. from 1935 to 1977 by cumulative sinking fund of 1 per cent., or at £105 per cent. on six months' notice. Profits, before tax and debenture interest, but after capital redemption policies have been for years to March 31st: 1932, £38,296; 1933, £41,848; 1934, £36,708.

John Dale Metal Containers, Ltd.—Issued share capital, 75,000 5½ per cent. cumulative preference shares of £1 each and 300,000 ordinary shares of 5s. each. The company has been incorporated to acquire a container manufacturing business established twenty years ago. The consideration payable is £140,000 as to £65,000 in cash and as to balance by allotment of 300,000 ordinary shares. Net assets acquired amount to £143,664. Profits for years to December 31 have been: 1931, £12,735; 1932, £16,440; 1933, £17,537. The company will receive benefit of profits from January 1, 1934. Messrs. Nathan and Rosselli have agreed to subscribe for 75,000 preference shares at par.

Wests and Moultons, Ltd.—Particulars of issued capital, 450,000 shares of 5s. each, fully paid. The company has been formed to acquire general drapery businesses of Wests (Ilford), Ltd., and Barkers (Romford), Ltd. Net assets on basis of latest balance sheets are £108,814 and are acquired at par by issue of 435,256 shares of 5s. each. Working capital is stated at £17,335, including proceeds of issue of 14,744 shares of 5s. each at par. Profits of the companies acquired, before depreciation, taxation, and interest have been: 1931–32, £21,356; 1932–33, £20,221; 1933–34, £22,968.

Kenya Consolidated Goldfields, Ltd. (Incorporated in Kenya).—Issued capital, 580,000 shares of 5s. each, fully paid. The company holds exclusive prospecting licence over an area equivalent to 470 gold reef claims known as the Ace, is registered owner of 1,056 claims, has contracted to purchase 169 claims including the Lolgorien Mine, and has option to purchase 153 claims. The properties lie in the Kakamega and Gori River areas. A two-compartment shaft is being sunk on the Guy Fawkes claims in the former area, and the Magor claims in the Gori River area have given values of 22.2 dwts. over 30 inches stopping width. 240,000 shares have been issued for cash at par, and 340,000 shares are to be issued in respect of purchase considerations, credited as fully paid.

ISSUES TO SHAREHOLDERS ONLY

The London and Rhodesian Mining and Land Company, Ltd.—The directors have decided to offer the whole of the available unissued shares to all shareholders on the register at July 7, 1934, at par, i.e., 5s. per share, payable as to 2s. 6d. on application and as to the balance of 2s. 6d. on or before August 7, 1934. The number of available unissued shares is 538,462, and these will be offered, in the first place, as of right in the proportion of one new share for every seven shares registered in the name of shareholders on the above date, fractions ignored. This will absorb 494,505 shares, leaving a balance of 43,957 for which shareholders may also apply. The new shares will rank *pari passu* with the present issued shares and will, therefore, participate in all dividends declared after this date. The books will be closed from July 9th to July 16th, both days inclusive, for preparation of the application forms, with renunciation forms attached, which will be in shareholders' hands on July 17th. The closing date for such application will be Tuesday, July 31, 1934. Full instructions regarding the new issue will be given to the shareholders when the application forms are sent out. The whole of the issue, namely, 538,462 shares, has been underwritten by the African Investment Trust, Ltd., for a cash commission of 4 per cent., and an overriding commission of 1 per cent. on the nominal amount of the said shares.

PRIVATE PLACING

British Celanese.—A line of £200,000 new 5½ per cent. mortgage debenture stock has been placed privately outside the market by British Celanese. This represents the balance of the company's authorised amount of this stock, which is £3,000,000. An issue of £2,800,000 of this stock was made in February last, when holders of 7½ per cent. convertible second mortgage bonds of the company were invited to convert into the new issue.

CONVERSIONS AND REPAYMENTS

Evans (D. H.) and Company.—It is announced by D. H. Evans and Company, Ltd., that the company will on January 1, 1935, redeem the whole of the £150,000 4½ per cent. debenture stock then outstanding at £105 per cent.

Wardle and Davenport.—The directors have intimated their intention to redeem 4½ per cent. first mortgage debenture stock on January 1st next at 105 per cent., plus accrued interest.

BY TENDER

Watford and St. Albans Gas Company.—Offer by tender of £50,000 4 per cent. redeemable debenture stock, 1963, at a minimum price of £104 per £100 stock and £113,564 5 per cent. preference stock at a minimum price of £123 10s. per £100 stock. Tenders are invited not later than Monday, July 16th, for the above issues. Forms may be obtained from Secretary, Gas Works, Watford; Lloyds Bank, Watford; and Angel H. Hart and Company, Pinners Hall, E.C.2.

FORTHCOMING ISSUES

City of London Real Property Company.—An issue of £600,000 3½ per cent. stock at 98 will be made shortly. The proceeds will be utilised to pay off existing mortgages, and the company will effect a substantial saving in interest.

Griffiths Hughes Proprietaries.—Lists will be opened on July 10th for an issue of 1,000,000 5½ per cent. cumulative preference shares of £1 at 20s. 6d. per share. The prospectus will show that the net profits of E. Griffiths Hughes, Ltd., and its subsidiary companies, for the year ended March, 1934, were £451,370, and that the average annual net profits of the company and its subsidiary companies for the last five years were £382,460. 1,500,000 £1 ordinary shares will be marketed about a week after the preference issue.

South-Eastern Gas Corporation.—An extraordinary meeting of the South-Eastern Gas Corporation will be held on July 18th to consider a proposal to increase the capital to £2,500,000 by the creation of 500,000 £1 shares. Of these 250,000 will be ordinary shares and 250,000 redeemable 4½ per cent. cumulative preference shares. The latter will carry the same rights and privileges as the existing 1,000,000 preference shares.

RESULTS OF ISSUES

Great Western Gold Mining.—It is understood that the underwriters have had to take up about 20 per cent. of the 190,000 5s. shares in the Great Western Gold Mining Company, which were offered for sale at 7s. per share on June 27th.

Bushtick Mines (1934).—The list of applications in connection with the issue of 400,000 shares of 10s. each at par, in Bushtick Mines (1934) was closed at 9.25 a.m. July 3rd.

Trust Houses.—Lazard Brothers and Company announces that the list of applications for the offer for sale at 93½ of £650,000 3½ per cent. debenture stock of Trust Houses was closed at 9.20 a.m. July 23rd.

Kentan Gold Areas, Ltd.—The list for the issue of 2,000,000 shares of 10s. each was closed at 9.15 a.m. July 3rd, the amount having been very heavily over-subscribed.

Wm. Cory and Son, Ltd.—Lists of applications for the "offer for sale" at 73s. 6d. each of 1,500,000 shares of £1 each of Wm. Cory and Son, Ltd., were closed at 9.30 a.m. July 5th. It is announced that the amount was fully applied for.

Klerksdorp Consolidated Goldfields.—It is announced that the issue of 1,000,000 ordinary 5s. shares at par by Klerksdorp Consolidated Goldfields, Ltd., was heavily over-subscribed and the lists were closed at 9.2 a.m. July 5th, or two minutes after they had opened.

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

COMPANY MEETINGS, &c.

THE P. & O. BANKING CORPORATION, LIMITED

SUCCESSFUL YEAR'S TRADING

DIVIDEND MAINTAINED

MR W. E. PRESTON'S SPEECH

The fourteenth ordinary general meeting of the P. & O. Banking Corporation, Limited, was held on the 30th ultimo at 122, Leadenhall Street, London, E.C., Mr W. E. Preston (the chairman) presiding.

The secretary (Mr C. Selbie) read the notice convening the meeting and the auditors' report, and the report and accounts were taken as read.

Before turning to the year's operations the chairman referred to the loss which the board had suffered by the death of Sir Alexander Wright, who had been associated with the bank since the days of its foundation. A man of great personal charm, he had brought to the bank's affairs a very wide, practical and sympathetic interest. Further, Mr Colin Campbell having found that the onerous duties of his chairmanship of the National Provincial Bank made it difficult to continue, as he had during the past seven years, his close personal attention to the affairs of their bank, had reluctantly tendered his resignation, and had been succeeded by Sir Henry Macnaghten.

The result of the year's transactions, after making all necessary provisions, was a net profit of £112,383, slightly in excess of last year's figure. They had made in this year's accounts a transfer to the contingency fund more than ample for the care of accounts which they had had to nurse during these times of depression, and the provision which they now held in contingency exceeded the amount required for bad and doubtful accounts.

After paying a dividend at the same rate as last year, the year's results would leave a carry-forward £8,000 in excess of the amount brought in, a very commendable achievement, for which the board's and the shareholders' thanks would, he was sure, be readily accorded to the management at home and abroad.

CONDITION OF EASTERN TRADE

Efforts to lift prices from the low level to which they had fallen in the world-wide economic crisis had only been partially successful: in the case of tea, rubber and tin, there had been some improvement, which had been reflected in the fortunes of firms and companies connected with those commodities. It was, however, on the purchasing power of the Western world that the revival depended of that great export trade which was the life blood of the banks engaged in Eastern banking. Only in the Straits and that portion of the Indian trade connected with the export of tea did they find an improvement.

In China, where the full blast of the economic blizzard was not felt until some considerable time after it had fallen on other countries, an acute depression had set in, and stagnancy in the commerce between China and the rest of the world had been a marked feature of the year. Silver, of which there were large unwanted stocks in the world, continued in poor demand; and they must wait until the world requirements of the white metal broadened out and established a solid basis for an upward movement in its price.

Continued contraction in the demand for leading exports of the East was reflected to some extent in their figures. They had fortunately been able to maintain their advances at a slightly higher level and their holding of bills at £2,134,364 showed very little change on the previous year's figures.

In the exports of gold, the leading feature in India's interchange of commodities with the rest of the world, the bank had taken a good share.

INVESTMENT HOLDINGS INCREASED

Their holdings of securities, increased by the narrowing of outlets for employment of their funds, stood at £6,218,406, some £823,000 higher than in the previous year. Following their usual policy, over 83 per cent. of these investments were short-dated so that the bank might be free to place at the disposal of commerce the funds temporarily employed in that form of investment.

He had again to record a year's satisfactory trading on the part of their affiliate, the Allahabad Bank, which had consolidated the improvement to which he had referred in his speech last year.

The report and accounts were unanimously adopted; a dividend of 5 per cent., less income tax, was declared; and the retiring directors, Mr F. A. Johnston, Mr A. d'A. Willis and Sir Henry

Pelham Wentworth Macnaghten, were re-elected, as were the auditors, Messrs Peat, Marwick, Mitchell and Company.

A hearty vote of thanks, proposed by Mr E. T. Hargraves and seconded by Mr W. H. Ogston, was accorded to the chairman, directors and staff, and, after a response by the chairman, the proceedings terminated.

NIGEL VAN RYN REEFS, LIMITED

GREATLY IMPROVED POSITION

The annual general meeting of Nigel Van Ryn Reefs, Limited, was held on the 29th instant, at Winchester House, E.C.

Mr W. A. Wills (the chairman), who presided, explained that they were obliged under the Companies Act to hold a general meeting before June 30th, but it was proposed to adjourn the meeting until a financial statement had been received from Johannesburg, which it was hoped to submit to the shareholders before the middle of August.

The company's position that day was that the issued and fully paid capital was £100,000, the cash in hand was over £100,000 and there were no liabilities except for current office expenditure, licences on the Nigel claims and development expenses in connection with the Lamplough lease, while the whole of the company's properties, including development to date, the indebtedness due at the time of the reorganisation, expenses of reorganisation and all administrative costs to date, amounting to £34,000, had been written off from share premium account.

On the assets side of the balance sheet they would have practically nothing but cash or cash assets balancing a capital account issued and fully paid, a small premium reserve account and a balance of profit of about £8,000 which they had already realised—a remarkably clean balance sheet.

As to the company's properties, their 257 claims on the Far East Rand adjoined those belonging to the Nigel Company. They were negotiating in Johannesburg for the disposal of those claims or shares; the ground being too small for operating as a mine *per se*.

THE LAMPLOUGH LEASE INTEREST

The company's major mining interest consisted of a one-half interest in the Lamplough lease No. 6222 Maryborough. At the extra-ordinary general meeting in February last he mentioned that they had an interest in an option to acquire about 10 miles of this deep lead ground in Australia. Mr F. G. Bryant, who was considered one of the leading authorities in Australia on the deep leads, had been asked to make a check report, and, as far as he could interpret Mr Bryant's cable just to hand, the total profits to be won from the lease should be over £1,000,000 sterling, of which, in round figures, the proportion accruing to this company by virtue of its shares in the Lamplough company—still to be formed—should be about £400,000. None of those figures were to be taken as final, but on two points they were justified in taking an optimistic attitude. One was that there was no taxation of gold-mining in the State of Victoria and the other was that apparently they might hope to receive four times the whole capital of their company from that one interest alone.

Jointly with the Gold Corporation, the board had some time ago sent out their engineer, Mr L. C. Stuckey, to confer with Sir Herbert Gepp, the local director in Australia, to see if he could get them the offer of genuine gold properties. Sir Herbert Gepp and Mr Stuckey had just, by cable, jointly made a recommendation and he thought their acceptance of the business offered was practically certain. The amount of money required was very moderate, the venture had decided prospects and the property was already paying its way.

The chairman concluded by formally moving the adjournment of the meeting.

Capt. Burgess Watson asked what were the prospects of a dividend and whether there was any necessity to keep such a very large cash balance unused.

The chairman replied that the question of a dividend would be left to the shareholders at the formal annual meeting. With regard to the cash, older shareholders would perhaps agree with him that after nearly two years with rising gold-share markets it was advisable to walk very delicately as really reliable gold shares were not exactly given away gratuitously. He thought that their best policy was one of watchful waiting until a really safe opportunity turned up, such apparently as the offer of a participation in the Bendigo mine. The board had complete confidence in the knowledge and judgment of both Sir Herbert Gepp and Mr Stuckey.

Dr Cullen seconded the resolution, and it was carried *nem con*. The proceedings terminated with a vote of thanks to the chairman.

IMPERIAL BANK OF PERSIA

STEADY PROGRESS AND DEVELOPMENT

The forty-fifth ordinary general meeting of the Imperial Bank of Persia was held, on the 3rd instant, at Southern House, Cannon Street, London, E.C.

Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (the chairman of the bank), said:—Gentlemen, though the past year has, on the whole, been uneventful, there is evidence of steady progress and development in every branch of the administration, due mainly to the constant supervision exercised by H.I.M. The Shah. Foreign exchange, to which I alluded last year, remains a free market, to the benefit of merchants and the country generally. The Persian Government has also found it possible to relax, in some degree, the restrictions on imports, and this has helped to improve trade in the south. On the other hand, in the north the disagreement between the Persian and the Soviet Governments, to which I referred last year, has not yet been completely composed, and we are told that trade with Russia continues restricted. Japan, however, has now entered the Persian and Iraq markets with her manufactured cotton and other goods, to the detriment of Manchester trade. In return Japan has taken raw products, chiefly cotton, from Persia, and developments are watched with some anxiety by manufacturers in this country.

In drawing your attention last year to developments taking place in the country, I referred to the erection of factories in several towns. We hear that the woollen mills in Isfahan have been able to supply not only the bulk of Army requirements, but the local markets; in fact, the mills are so well and profitably established that the plant is being increased from the company's own resources. A cotton spinning and weaving factory in the same town expects to commence operations next month, and from another mill a satisfactory quality of cotton thread is being produced.

In Shiraz a Persian company is just completing the erection of a spinning mill, equipped with the latest and most up-to-date machinery made in this country, and a successful future is predicted for it, the management being in capable and energetic hands. Two sugar factories, under the control of the Persian Government, are already in operation, and two more are contemplated in the near future.

RAILWAY CONSTRUCTION

Under the auspices of the Swedo-Danish Company, which supervises the construction, considerable progress has been made with the railways. Last year the northern line had been completed to Shahi, and the southern to Salehabad. During the year 50 kilometres have been completed in the north, and the same number in the south, so that there are now 148 kilometres open to traffic in the north and 300 kilometres in the south. Contracts have been granted for the further construction of 120 kilometres in the north and 65 in the south, most of them in very difficult country, especially in the south, where the line must pass through the gorges of the Luristan Mountains. It is calculated that the northern line should be completed to Teheran by March, 1937, and the southern line about two years later. Persia will then possess through railway communication via Teheran from the Persian Gulf to the Caspian.

Our chief manager recently made a short tour through Mazandaran, and he writes with enthusiasm of the transformation which H.I.M. The Shah has effected in that hitherto rather remote and backward province. The towns on the Caspian shore have been much improved, and a health resort, with an excellent hotel, has been established at Sakhtessar, where there are sulphur baths. All this is evidence of a strong and progressive Government.

Turning to the profit and loss account, it will be seen that, after making ample provision for income tax, bad and doubtful debts and other contingencies, we are able to show a profit of £77,168, which is some £8,633 less than last year. The reduction may be taken as reflecting the lower earning power of money, the increased competition between banks in the East for any business offering, and the general depression in trade.

This year we are only placing £10,000 to reserve fund, which brings it up to £720,000. We now propose to pay the same final dividend and bonus as last year, namely, 7s. per share and a bonus of 2s. per share, both free of income tax. This, with the interim dividend of 4s. per share, makes a return for the year of 13s. per share, free of tax, and leaves us with £49,057 12s. 11d. to carry forward to the new account.

With the reserve already in excess of the amount of your capital, there is not the same need to add to it as largely as in the past; so we are, in our opinion, justified in maintaining the dividend unchanged. (Hear, hear.)

The report and accounts were unanimously adopted.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED

POPULARITY OF NEW LINES

The 55th ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 29th ultimo, at the Great Eastern Hotel, London, E.C. Sir Montague Hughman (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said:—The balance of the trading account is £279,000, as compared with £300,000 in the previous year. After debiting the directors' remuneration, auditors' fees, debenture interest, and depreciation, the net profit is £210,000, compared with £228,000 last year. You may remember, however, that last year we included in our trading profit the sum of £23,000, which we transferred from our contingent reserve. We have made no similar transfer this year, so the actual results are a little better than those of last year. (Applause.)

The turnover is rather less than that of the previous year, but this reduction is more than accounted for by the decrease in the contract work of the company. We have in the past had some very important orders for the "Grid" system, which are now coming to an end, and there is much less of the "Grid" work in the accounts now before us. We have been able to maintain our position and to earn a little more net profit than we did last year, and this has been accounted for by what I will call our "bread and butter" business. It has been a difficult year, with competition and, in some cases, a further decline in the prices of commodities, which have tended to make our percentage of profits lower.

FOREIGN BUSINESS

Whilst our business abroad has shown a decided increase, competition is extremely keen for these markets, and, unfortunately, the level of prices is still low. I am glad to say, however, that the proportion of our total business which has been obtained from overseas now more nearly approaches the proportion which we used to obtain before the depression which so seriously affected overseas markets during the past few years.

I would like to refer to our engineering department, which was started nearly thirty years ago. This department has been managed by Mr W. H. Nichols, who has been with the company for over forty years, and deals with the manufacture of electrical distribution equipment. This is one of the important departments of our business, and to-day, in spite of competition on all sides, we are able to claim that Henley's hold the premier position among manufacturers of distribution equipment. The products of our engineering department can be found in almost every country in the world, and it is generally recognised in the trade that in quality and technical excellence we are unsurpassed.

In my statement last year I referred to the technical progress of the company. I would remind you that fifteen years ago we established research laboratories which have been fully developed and kept to the highest standard of efficiency. Our customers buy intelligently with a very complete knowledge of their requirements. We are engaged in the manufacture of a highly scientific product, and the importance of the technical side of the business is fundamental. Competition in quality grows more severe year by year, and the conditions laid down in specifications become continually more and more exacting. As the result of patient research, the past year has seen the development of several new and improved products which have already met with remarkable success.

Among these may be mentioned our "Superite" cables for the wiring of buildings, and "Supertuff" trailing cables, both of which possess interesting advantages for the particular conditions under which they are called upon to operate in service.

Mr W. F. Bishop, in seconding the resolution, said:—The past year has been one more of hard, steady work than spectacular achievement. The increase in the volume of our general trade at home, referred to by the chairman, is, I believe, to some extent due to the increased facilities now available in the form of bulk supplies from the "Grid."

The chairman has referred to the increase last year in our business abroad. This improvement is being maintained, and I think justifies our action in maintaining our selling organisations abroad in a high state of efficiency during the slump. Prospects look a little better, and during the last few weeks we have secured two fairly large contracts—one for 33,000-volt cable for Australia, and the other for 66,000-volt transmission line in India, which makes it seem almost like old times.

The report and accounts were unanimously agreed to, and the final dividend of 2s. 6d. per share, less income tax, and bonus of 2s. per share was approved.

THE POWELL DUFFRYN STEAM COAL COMPANY

POSITION SUBSTANTIALLY IMPROVED

The adjourned annual general meeting of The Powell Duffryn Steam Coal Company, Limited, was held, on the 4th instant, at Southern House, Cannon Street, London, E.C.

Mr Edmund L. Hann (chairman and managing director of the company), after referring to the change in the terminal date of the company's financial year from December 31st to March 31st, explained the board's proposals in regard to the issue at 20s. 9d. per share of 1,000,000 5 per cent. preferred ordinary shares of £1 each. The proceeds of issue would be allocated as to £820,000 to redeem the £800,000 5½ per cent. debenture stock of the Great Western Colliery Company, a wholly-owned subsidiary, which was guaranteed as to principal and interest by Powell Duffryn, and the balance of about £180,000 remaining after payment of the expenses of issue would be available for the general purposes of the company. The effect of this transaction on the company's finances would be that instead of an annual service amounting to £52,000 for interest and sinking fund on the Great Western Colliery debenture stock, there would be substituted a preferred ordinary dividend of £50,000. The dividend on the preferred ordinary shares was amply covered, and the shares would in addition carry with them the valuable right to convert into Powell Duffryn ordinary shares.

The Chairman then referred to the refinancing of the company's debenture and note debts in 1932 and to the issue in 1934 of 4½ per cent. debenture stock to replace the 5½ per cent., and said that the two operations had resulted in an economy in debenture service of £84,000 per annum.

There was also a marked improvement in the liquid position of the company, cash at bank and in hand amounting to £113,747, compared with an overdraft of £353,116 the previous year.

The profit and loss account disclosed trading profits for the fifteen months of over £600,000, an improvement of rather more than £200,000 compared with the year 1932.

The Chairman said that the company's research department was constantly studying the ever-changing needs of the market in regard to both coals and by-products. It was not to be expected that quick results could always be obtained, but there were lines of investigation on which they were engaged which appeared to offer prospects of important results for the benefit of the company.

There had been a welcome change in the coke position, and the company's ovens had been working at full capacity almost throughout the last fifteen months. The sales of by-products also continued to be satisfactory, and particularly those of the company's proprietary by-products, "Synthatar," "Synthacold," the cold dressing for making and repairing carriage drives, garden paths, etc., "Synthaprufe," the liquid waterproofing and jointing material, "Presotim," the wood preservative, and "Presomet," the bituminous black paint.

Mr Hann also commented briefly on certain P.D. coal specialities. "PhurnoD" was becoming daily more popular, and notwithstanding an increased production, the demand for this special domestic boiler fuel had become so heavy that the board had authorised further capital expenditure to provide additional plant in order to meet the present demand and anticipate extending trade. There was a growing demand from small industries, such as laundries, for the company's special coal, "Virticol," for vertical boilers. "Virticol" could now be supplied in the form of large coal, cobbles, nuts and small. It was exhibited at the British Industries Fair and at the Laundry Trades' Exhibition this year, and the interest created there was reflected in increased sales.

The standard bunker coals of the company, and in particular the special bunker coal produced at Penallta Colliery, continued to maintain their high reputation with shipowners.

Since the last meeting there had also been a welcome improvement in the iron and steel trades, but this, whilst benefiting the coke ovens, had only had a slight effect upon the general coal production. Unfortunately the export market upon which South Wales depends so much had shown further restrictions. Adverse exchange rates, financial instability, trade balances and the artificial measures taken by several foreign countries to protect their local coalfields, had all contributed to this position.

With regard to Powell Duffryn, its activities had since 1928 been extensively broadened, and an organisation with world-wide interests had developed from what was formerly a purely mining concern. The earning capacity of the company during a period of intense depression would give a measure of its possibilities in times of prosperity which Mr Hann was confident must ultimately return to the British coal industry.

The report and accounts were unanimously adopted.

TRUST COMPANY OF LONDON AND SCOTLAND, LIMITED

The fifth ordinary general meeting of the Trust Company of London and Scotland, Limited, was held, on the 29th ultimo, at 25-31 Moorgate, London, E.C. Mr Alfred Shepherd (chairman of the company) presided.

The Secretary (Mr Harold Vennils) having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said:—The revenue account balance is £25,687. It has to be kept in view, however, that this figure has been arrived at after deducting only 1½ per cent. interim dividend paid this year, against 2½ per cent. last year in respect of the preference stock.

It is not, I regret, possible to say that there is much, if any, general improvement in world conditions since our last meeting, but it is satisfactory to note that important industries in our own country have improved to a marked degree, many of our large industrial concerns showing greatly increased profits. Of the total investments of the trust nearly 58 per cent. are in Great Britain and the Dominions, including India, Ceylon and the Malay States, those in the United States of America nearly 12 per cent., and the amounts in other countries relatively small.

The American securities are, of course, dollar investments, and in this connection it is only right that I should mention that while we have only 12 per cent. of our funds invested in the United States we have further dollar holdings in foreign Government and other bonds representing a further 8 per cent. of our invested funds. Adding these investments to those in the United States, we have thus a total of almost 20 per cent. of our investments subject to the uncertain fluctuations of the United States dollar.

The only other points to which I would like to refer are the valuation of our assets, and the revenue, as compared with the figures in the previous accounts.

This is now our fifth annual meeting since the incorporation of the company, and it might be of interest to you that I should draw your attention to the figures with reference to the valuation of our investments at the end of each financial year. They are as follows:—

The valuation showed the following depreciations:—1930, 9.00 per cent.; 1931, 35.11 per cent.; 1932, 53.95 per cent.; 1933, 42.23 per cent.; 1934, 32.48 per cent.

From these figures it will be seen that the depreciation of 1932 mounted up to the formidable percentage of 53 per cent. In 1933 this depreciation had dropped to 42 per cent., and in the present year it has dropped to 32 per cent., a satisfactory and gratifying decrease.

Our revenue still falls, but less than in the earlier years of our existence. The total interests and underwriting commissions amount to £37,498, as against £39,553 for the previous year, the difference being £2,055, and it would appear that the fall in revenue is slowing up. Although we have made an estimate of revenue for the present year, in these times it is difficult to arrive any estimate which can be relied upon. It is not possible for me to say that during the year there may not be still some fall in revenue, but I hope that the reduction, if any, will be less than that experienced in the year under review.

After payment of debenture and other interest, the revenue for the year falls short of the dividend on the cumulative preference stock by some £3,600. Your directors carefully considered whether it was advisable in the general interests of the company to make up this deficiency out of the amount carried forward. In view, however, of the uncertainties prevailing in various directions, they came to the conclusion that it was advisable, at least this year, to restrict the payment of the preference dividend to 4 per cent. That dividend, however, is cumulative, and the directors hope that at no distant date the earnings will improve to an extent which will enable the trust to pay the full dividend on the preference stock and wipe out the arrear created on this occasion. I trust that the stockholders will approve of the directors' action in this respect.

Mr B. W. Bloomer seconded the resolution, and, there being no questions, it was submitted to the meeting and carried unanimously.

The proceedings terminated with a cordial vote of thanks to the chairman and his colleagues.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

GREAT BOULDER PROPRIETARY GOLD MINES
INCREASED PROFITS AND DIVIDENDS

The fortieth annual general meeting of the Great Boulder Proprietary Gold Mines, Limited, was held, on the 29th ultimo, at River Plate House, London, E.C.

Mr John Waddington, J.P. (the chairman), said that the accounts for the year 1933 showed a net profit of £82,108, compared with £70,949 for 1932, an increase of £11,159. That increase in profits had resulted in the directors being able to declare dividends for the year of 37½ per cent., as against 25 per cent. for the preceding year. It must be borne in mind that the old mill, which had been working since 1899, must now be regarded as obsolete and worn out, and the cost of operating it was very much higher than the estimated cost of treatment by the new mill would be when it was run in. The engineers estimated that the saving on the costs alone with the new mill would be about £48,000 per annum, on the basis of treating 144,000 tons per year.

In the mine development work had disclosed the existence of new ore bodies, which had added considerably to the ore reserves in sight, estimated at December 31, 1932, at 204,792 tons, and increased to 278,008 tons at December 31, 1933. During the year 106,897 tons of ore had been treated at the mill, being a slight increase over the preceding year. Mining developments during the year had thus accounted for 180,113 tons. The estimated probable ore reserves amounted to 269,628 tons.

The best method of retreating the dumps had required much study and research. A considerable amount of sampling and testing had been done during the year in the company's laboratory and at the Kalgoolie School of Mines. Those dumps were very large, the old No. 1 dump being conservatively estimated to contain 1,900,000 tons, of an average value of 1.65 dwts., while the new dump, accumulated since 1921, was estimated to contain over 1,000,000 tons, of an average value of 1.035 dwts. A special plant would be required for the purpose of that retreatment, but no exact estimate of the cost could be given at present. With gold at its present price a large profit should accrue after making allowance for all working expenses and redemption of the cost of the plant.

The Southern Cross flotation under the auspices of the Great Boulder Company had proved successful, being over-subscribed 10½ times.

The report and accounts were unanimously adopted.

HOVIS, LIMITED

ANOTHER SUCCESSFUL YEAR

The thirty-sixth ordinary general meeting of Hovis, Limited, was held, on the 4th instant, at Caxton Hall, London.

Mr A. H. Dence (the chairman) first dealt with the balance sheet, and said that the reserve fund, with the allocation now suggested, would amount to £400,000, and in due course they hoped it would equal the authorised share capital of £550,000. The net profit on trading available for distribution was £20,000 more than for the previous year—a very pleasing result. He again wished to stress the great value the directors placed on the various sidelines of the company's business which contributed largely to the good results. Trading conditions in the milling industry had not been too easy during the past twelve months. In past speeches he had frequently referred to the unfair competition to which all millers in this country were subjected through the importation of dumped and subsidised flour at prices with which the home miller could not possibly compete. The National Association of Millers, of which he was president for the past year, had persisted in a patient campaign against this injustice, but hitherto without success.

During the past twelve months the International Wheat Conference had been endeavouring to reach some form of agreement whereby either the production of wheat would be restricted, or the price fixed at levels to give a more adequate return to the grower. Millers were naturally very materially concerned with the price they had to pay for wheat, which was the raw material of their industry, and viewed with grave alarm any attempt to impose artificial limits or barriers, which could only react to the disadvantage of the consumer in this country and perhaps in the long run make the last state of the producer worse than the first.

It was exceedingly pleasing to him to recall that, since he had been chairman of the company, this was the third occasion on which the board had been able to recommend with the utmost confidence a bonus distribution of shares to the ordinary shareholders. This was a very remarkable achievement, and one which very few companies to-day could claim to have equalled.

The report and accounts were unanimously adopted.

A resolution was also passed approving the capitalisation of reserves and the distribution of bonus shares.

OHLSSON'S CAPE BREWERIES, LIMITED

DIVIDEND INCREASED

The forty-fifth annual general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 5th instant, at 6, Bloomsbury Square, London, W.C.

Mr W. D. Buxton (the chairman) said that the accounts indicated that, although the year with which they dealt had not had the very considerable advantage of the conversion into sterling of the South African currency which had enhanced the profits of the previous year, the difference had been more than made up by increased sales and by the improvement in general conditions of trade. For the first half of the year little improvement had been shown, but for the latter half the increased sales as well as the consequent improvement in general conditions had enabled them to show, for the full year, an increase on the profits dealt with a year ago, and the improvement had been nearly general throughout the various branches of the company's business, which had continued for the current financial year as far as it had gone.

Particularly in the Transvaal the increased price of gold had warranted a considerable expansion of the mining industry. That had reacted upon the building trade and various other branches of commerce, and generally, one might say, upon the trade of the Dominion. The board had therefore felt justified in asking the shareholders to support a resolution to divide an additional 1 per cent. as dividend upon the ordinary shares for the year. It should be borne in mind that the dividends had suffered tax at only one-half the standard rate in force at the time of payment, and consequently the net amount received by ordinary shareholders in respect of the past trading period was equivalent to a dividend of 10½ per cent., less income tax at the full standard rate.

They had added to the asset "Land, Breweries, Houses, etc.," £19,341, which comprised expenditure on permanent improvements to certain of their licensed properties as well as on the erection of a new hotel in the Springs township of Johannesburg, which would be completed by the end of the current month and which would, he thought, make a substantial contribution to their future profits. The final dividend proposed on the ordinary shares was 6 per cent., making 9 per cent. for the year.

Finally he could give the shareholders the usual assurance as to the soundness of their business and the excellent quality of their beers, and the directors were fully satisfied with the work during the year of their general manager, Mr Robert Swan, and his staff. The report and accounts were unanimously adopted.

SCRIBBANS AND COMPANY, LIMITED

POLICY OF STEADY EXPANSION

The seventh annual general meeting of Scribbans and Company, Limited, was held, on the 5th instant, at the Hotel Metropole, London, W.C.

Mr Philip E. Hill (the chairman) said:—Ladies and gentlemen, the profits for the year of £226,162 13s. 3d. are some £3,500 in excess of those of the previous year, equivalent to nearly 12 per cent. on our capital. At our last meeting I was aware that we had a very strenuous time in front of us. Some of our competitors had gone in for further price-cutting, coupled with an expansive advertising programme, and, with this in mind, I was very diffident in talking of the future of the business, but I am glad to-day to tell you that we have emerged from the struggle with increased profits and a generally improved position.

For seven years we have pursued a policy of steady expansion, coupled with a conservative distribution of profits, with the result that to-day we stand possessed of a very much improved equipment in the shape of factories and plant, and it is the intention of the board to pursue this policy.

As you are aware, practically the whole of our output is sold to the grocery and provision trade, and you will no doubt have seen that the accounts of some of the companies engaged in this business, published in the earlier part of the year, show diminished profits, but those recently announced show better figures. I am convinced that such a vital portion of the country's trade as the grocery and provision business must ultimately share in the general improvement, and not until then can we hope to secure for ourselves the share of profits to which our products and organisation undoubtedly entitle us, but I feel confident that they will ultimately be obtained.

As stated at our last meeting, the assets in our balance sheet are more than conservatively valued. We are about to form a limited liability company in the Irish Free State to carry on our Irish business, which, I am pleased to say, continues to show satisfactory expansion.

As you will have seen from the notices accompanying the report and accounts, we have convened the necessary meetings to convert the existing deferred shares of rs. each into deferred shares of 5s. each, as the board are satisfied that a 5s. share is much more popular with the investing public.

The report and accounts were unanimously adopted.

At subsequent meetings the necessary resolutions were passed to give effect to the proposals to consolidate the rs. deferred shares into shares of the denomination of 5s.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended June 30, 1934, amounted to £8,500,500, against ordinary expenditure of £11,652,700. After allowing for an increase in Exchequer Balances of £181,115 the operations for the week, as shown below, increased the National Debt by £3,333,000 to approximately £8,074 millions.*

(000's omitted)

Public Department Advances	+ 2,850	Treasury Bills	- 4,155
5% Funding Loan	+ 2,600	N. Atlantic Shipping Issues	- 25

GOLD

Messrs Samuel Montagu and Company write on July 4, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,460,163 on the 27th ultimo, showing no change as compared with the previous Wednesday. In the open market about £1,200,000 of gold was disposed of during the week. There has been no special feature, but there was a fair general demand for the moderate amounts available and prices have ruled at, or slightly above, dollar parity.

Quotations during the week:—

The s.s. "Rawalpindi," which sailed from Bombay on the 30th ultimo, carries gold to the value of about £95,000, of which £649,000 is consigned to London and £346,000 to New York.

SILVER

Although prices have shown fluctuations, a further advance has been seen during the past week. The report that the United States Government had placed an embargo on the export of silver, except under licence, was followed on the 29th ultimo by heavy buying by speculators and the Indian Bazaars; prices rose sharply and the quotations on that day, 21 1/2d. for cash and 21 1/4d. for two months, were the highest since November, 1931.

Some reaction followed, buyers showing more hesitation at the higher level, whilst China was inclined to sell and there was also some profit-taking sales. America has been a moderate seller.

It is possible that prices may continue to fluctuate, but the undertone of the market seems, perhaps, rather less firm at the moment.

Quotations during the week:—

COMPANY NEWS

TRANSVAAL JUNE, 1934, OUTPUTS, &c.

Note.—Value of gold calculated at £6 17s. per ounce in

REPORTS AND NOTICES

Colonel Charles F. Hitchins, D.S.O., M.I.Mech.E., M.I.N.A., of Hitchins, Jervis and Partners, Consulting Engineers, Westminster, has been appointed to the board of the Pearson and Knowles Coal and Iron Company, Limited, to represent the interests of the 5 per cent. income debenture stockholders.

BANKS

BARCLAYS BANK LIMITED.—Mr Edgar Bertram Hibberd, Principal of the Intelligence Department, Head Office, has been appointed Treasurer of the Bank, in succession to Mr Percy Charles Harte.

MIDLAND BANK EXECUTOR AND TRUSTEE COMPANY.—We understand that Mr M. M. Wilde, who became manager of the Midland Bank Executor and Trustee Company, Ltd., upon its formation by the Midland Bank in 1909 and later was appointed general manager, has retired on pension. His successor as general manager is Mr G. E. Baldry, heretofore the joint general manager of the company.

CENTRAL HANOVER BANK AND TRUST COMPANY, NEW YORK.—The statement at June 30, 1934, shows assets totalling \$777,914,674, comprising cash and due from banks, \$132,686,735; United States Government securities, \$334,647,666; State and municipal securities, \$28,071,571; real estate mortgages, \$4,834,530; other securities, \$24,716,455; stock in Federal Reserve Bank, \$2,580,000; loans and bills purchased, \$214,212,422; banking houses, \$18,896,735; other real estate, \$1,607,085; interest accrued, \$1,547,261; customers' liability account of acceptances, \$14,114,209. On the liabilities side appears capital, \$21,000,000; surplus, \$60,000,000; undivided profits, \$1,312,478; capital notes, \$5,000,000; reserve for taxes, interest accrued, etc., \$5,066,579; dividend payable July 2, 1934, \$1,575,000; acceptances, \$15,328,714; deposits, \$668,631,902—total, \$777,914,674.

BANK OF AMERICA.—Earnings of the Bank of America N.T. & S.A. and Bank of America (California) for the first six months of 1934 amounted to \$5,214,000, covering dividend requirements for the entire year by a margin of more than \$1,000,000, and continuing the up-trend in profits with a 17 per cent. gain over earnings for the first half of 1933. After payment of two quarterly dividends aggregating \$1,800,000, an amount of \$1,542,000 was appropriated for reserves and \$1,872,000 was added to undivided profits during the past six months, increasing this account to \$17,048,000 on June 30th. Earnings were at the annual rate of \$10,400,000 or 2½ times the annual dividend rate of \$4,100,000 established when the directors increased the quarterly disbursement in June. The combined statement of condition of the Bank of America N.T. & S.A. and Bank of America (California) as of June 30, 1934, shows total deposits of \$926,004,000, representing an increase of \$158,590,000 since June 30, 1933. Total resources amount to \$1,091,377,000, with total cash of \$101,448,000 and \$438,234,000 invested in United States Government, State, County and Municipal bonds and other securities. The market value of these securities, the report shows, is higher than the amount at which they are carried on the books of the bank.

MISCELLANEOUS

ABBEY ROAD BUILDING SOCIETY.—Mr W. Carlyle Stamp, M.A., A.C.A., has been elected a member of the board of management of the Abbey Road Building Society.

DORMAN LONG MORATORIUM.—Meetings of 4 and 5½ per cent. debenture stockholders of Dorman, Long and Company are to be held in London on July 12th to approve an extension of the existing arrangements until November 30, 1934, and to authorise the Stockholders' Committee to grant further extension, if necessary, until not later than January 31, 1935, without again consulting the stockholders. The special committee set up to investigate the position has unanimously agreed upon a plan of reconstruction. The board has, in principle, accepted the plan, but as the approval of the Court cannot be obtained until after the Long Vacation, the further extension of the moratorium now sought cannot be avoided. The committee states, in its interim report, that the more favourable conditions of the company's business, referred to in February, have been fully maintained. The terms of the extension are to the same effect as those sanctioned on the last occasion, and the board intend to continue the punctual payment of interest upon the 4 per cent. stock as it falls due. The company's bankers have agreed that during the extension of the arrangement, there shall be no repayment of sums now owing.

HUNGARY LEAGUE LOAN.—The League Loans Committee has been in communication with the Hungarian Government regarding the future service of the 1924 League of Nations Loan, and now announces that the Hungarian Government again expressly recognises the special position and claims of this loan; and it confidently hopes, and will use its best endeavours, to carry out the following arrangements for its service during the period August 2, 1934, to August 1, 1935, inclusive:—The Government will transfer to the trustees in foreign exchange 50 per cent. of the interest service. It will continue to provide in its Budget in pengos the equivalent of the full service of the loan, including interest and sinking fund, and to deposit these amounts as at present in an account at the National Bank of Hungary. The Hungarian Government, in view of the exceptional harvest results of last year, further offers to any bondholder who is willing to surrender on or after October 1, 1934, the part-paid coupons due in February and/or August, 1934, a cash payment in foreign exchange of 10 per cent. of the unpaid portion of these coupons. A notice will be issued in due course with regard to the arrangements for this payment. In the circumstances, the Committee consider that bondholders would be well advised to acquiesce in the present proposals of the Hungarian Government.

PRICE BROTHERS' REORGANISATION.—The scheme of arrangement of Price Brothers and Company (in bankruptcy), newsprint manufacturers, of Quebec, was defeated at a meeting of preferred shareholders last week by 53 per cent. to 47 per cent. (\$2,900,000 against, \$2,600,000 for). The proposals had been approved by the bondholders, creditors and common shareholders. The plan was sponsored jointly by the Bowater and Duke-Price, Rothermere, Beaverbrook groups. A further offer is understood to have been submitted by the Royal Securities Corporation and Hearst interests, providing for a newsprint contract for 5,000 tons monthly for the balance of the current year and 25,000 tons in 1935 and 1936, plus a considerable excess tonnage. In 1936 160,000 additional tons of newsprint would be taken and in 1938 the complete tonnage of the mills. Creditors would receive 5 per cent. certificates on liquidated claims, to be limited to \$2,500,000 (£500,000). No dividends would be payable to shareholders until these certificates had been retired. Preferred shareholders would receive 3 per cent. dividends until 1938, when the former rate of 6½ per cent. would be restored. Common shareholders would be asked to surrender 50 per cent. of outstanding shares to be allotted to underwriters as a consideration for the contracts.

SEVERN VALLEY GAS CORPORATION DEVELOPMENT (OFFER TO GLOUCESTER GAS LIGHT COMPANY).—Severn Valley Gas Corporation, Ltd., has made an offer to purchase the 5 per cent. maximum consolidated ordinary stock of the Gloucester Gas Light Company. Holders of £100 5 per cent. maximum consolidated ordinary stock of the Gloucester Gas Light Company, are offered either:—(1) £120 in cash; or (2) 112 Severn Valley Gas Corporation, Ltd., 4½ per cent. cumulative preference shares of £1 each credited as fully paid; or (3) 50 Severn Valley Gas Corporation, Ltd., 4½ per cent. cumulative preference shares of £1 each, together with 60 Severn Valley Gas Corporation, Ltd., ordinary shares of £1 each, both classes credited as fully paid. Mr F. H. James, managing director of Imperial Continental Gas Association, has joined the board of directors of Severn Valley Gas Corporation, to represent the interests of that association which has acquired a substantial proportion of the deferred shares of the corporation. The chairman of the corporation is Major Julian Day, of Dawnay, Day and Company, who is also a director of South-Eastern Gas Corporation.

STEEL COMPANY OF SCOTLAND.—It is reported that a sufficient number of acceptances of the offer made by Sir James Lithgow, Bt., for the shares of the Steel Company of Scotland have now been received. The £10 ordinary shares will change hands, it is understood, at £13 10s. per share.

THE BWANA M'KUBWA COPPER MINING COMPANY, LTD.—An offer to the members of the Bwana M'Kubwa Copper Mining Company, Ltd., for the purchase of their shares has been received by that company and will be communicated to such members within the next 18 days. Notice is accordingly given that the Register of Members will be closed on Friday, July 13, 1934, until Saturday, August 11, 1934, both days inclusive, to facilitate the posting of such circular and its consideration by the members.

WHITE STAR LINE.—The operation of the Aberdeen Commonwealth Line Fleet for the period January 1 to March 8, 1933, shows a working surplus of £24,378, after charging all voyage expenses, management commission, etc., but without making any provision for depreciation. After crediting sundry interest and dividends, and charging interest paid or accrued, and general expenses, there is a debit balance of £12,118, which, together with the loss of £631,688 brought forward from 1932, and £36,101 for interest accrued in past years and not previously charged, has been carried to deficiency account, making that account, £2,167,714. £1,487,807 was lost on the sale of the Aberdeen Commonwealth Line vessels and sundry assets in connection therewith. The proportion of an interim dividend which accrued to the company in respect of its holding of "B" ordinary shares of Shaw, Savill and Albion Company, Ltd., has been applied to the reduction of the debt due to that company. The auditors report that it is doubtful whether the shares in the Oceanic Steam Navigation Company appearing on the balance sheet at £7,000,000 have any intrinsic value.

OIL OUTPUTS

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended June 9th: Venezuela, 17,400 barrels; Trinidad, 25,409 barrels; total, 42,809 barrels. Production for May: Venezuela, 87,573 barrels; Trinidad, 102,019 barrels; total, 189,592 barrels. Deliveries for May: Venezuela, 93,168 barrels; Trinidad, 89,343 barrels; total, 182,511 barrels. Production for the week ended June 16th: Venezuela, 18,661 barrels; Trinidad, 25,391 barrels; total, 44,052 barrels. Production for the week ended June 30th: Venezuela, 17,615 barrels; Trinidad, 30,485 barrels; total, 48,100 barrels.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during May was 13,106 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 983 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of May amounted to 102,288 barrels, or approximately 14,613 tons.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

An examination of price movements during the week ended Wednesday last reveals no definite tendency in the quotations for industrial raw materials. As we pointed out a week ago, the weakness of some of the principal commodity markets is mainly due to the seasonal decline in industrial activity noticeable in a number of important consuming countries. Price recessions recorded in the past week were, however, only slight and did not extend to all the materials subject to daily fluctuations in price.

Quotations for coke, iron ore, and iron and steel scrap remained firm, for, although there has been a seasonal decline in new orders for iron and steel products, activity in

this branch of activity remains at a high level. Among non-ferrous metals, copper and lead are lower on the week. The persistent weakness of copper prices, which reached a new low level for the current year, is partly due to United States selling pressure. Wednesday's quotations for spelter and tin were slightly higher than a week ago. The set-back in the prices of linseed and linseed oil is due

tained. The opening of the fourth series of Colonial wool sales in London last Tuesday caused disappointment, for prices were from 15 per cent. to 20 per cent. lower than those ruling at the close of the May series. On the other hand, raw jute quotations were marked up on unfavourable crop reports from India.

Wheat prices declined a little, but as crop estimates fore-shadow a smaller crop in the Northern hemisphere (excluding China and the U.S.S.R.), a setback in prices to the low level ruling earlier in the year appears improbable. The market in sugar has been slightly firmer and the improvement in tea prices was maintained.

The tendency of commodity prices in the United States has been downwards. Moody's index of the dollar prices of staple commodities declined from 140.1 (December 31, 1931 = 100) on June 27th to 138.8 on July 3rd. Among individual commodities, wheat, coffee, cocoa, cotton, copper and lead are all cheaper on the week.

COAL

SHEFFIELD.—Output at the South Yorkshire pits is low, and numbers of colliers have lately registered as unemployed. Concessions are being offered to stimulate purchases of house coal, which have fallen to a low level. Nominal quotations for this class of fuel are from 20s. to 21s. 6d. at pits for best ordinary qualities. Export trade in best steams has weakened further, but prices are maintained at 16s. to 16s. 6d. f.o.b. A considerable tonnage of small coal is being delivered to industrial plants, and business in blast furnace coke is as active as ever.

NEWCASTLE-ON-TYNE.—All sections of the North East coal market are quiet. Exports are certainly better under the Scandinavian trading agreements, but the sharp seasonal decline in the English coasting market is felt by most collieries.

Northumberland sized coals continue firm, but most other grades, particularly screened steam, are weak.

In Durham, unscreened gas coal and bunkers are offering freely, and idleness is now prevalent among most groups of collieries. There are the usual periodical inquiries, one of which is for 30,000 tons of Durham gas coals for the Genoa Gasworks, August-September shipment.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 13s. 6d.; smalls, 11s.; Howards, Bentinck, Newbiggin, screened, 13s.; smalls, 11s.; Tyne Prime, large, 12s. 9d.; smalls, 11s.; Hartley Main, large, 13s.; smalls, 11s. **DURHAM.**—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 12s. Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District Gas coke, 20s. 3d.

GLASGOW.—Business is slowing down in view of the holidays, which begin about the end of next week. Nuts are scarce in all areas for shipment before the holidays. Large coals are mostly obtainable, but are also not too plentiful. There has been a fairly good forward inquiry circulating, and some of the collieries have booked business for several months ahead.

Current export prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, 14s. 3d. to 14s. 6d.; navigation second, 12s. 9d. to 13s. 3d.; Hartley, 14s. 6d.; steam, 12s. 6d.; trebles, 13s. to 13s. 6d.; doubles, 12s. to 12s. 6d.; singles, 12s. 6d.; pearls, 10s. 6d.; dross, 9s. 9d. **FIFE.**—Best unscreened navigation, 12s. 9d. to 13s.; unscreened navigation, 12s. 3d.; first-class steam, 13s. 9d. to 14s.; third-class steam, 12s.; trebles, 13s. 6d. to 16s.; doubles, 12s. 6d. to 13s.; singles, 12s. 6d. to 13s.; pearls, 10s. 3d. **LOTHIANS.**—Prime steam, 12s. 6d. to 13s.; secondary steam, 11s. 9d.; unscreened navigation, 12s. 6d.; trebles, 13s. 6d. to 14s. 6d.; doubles, 12s. 6d. to 13s.; singles, 12s. 3d. to 12s. 6d.; pearls, 10s. 6d. **AYRSHIRE.**—Best unscreened navigation, 13s. 6d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 6d.; pearls, 11s. 6d. to 12s.; dross, 10s., all per ton f.o.b. Ayr or Troon.

CARDIFF.—The Cardiff coal market remains inactive. Collieries are largely dependent on their contract commitments, but these are not heavy enough to absorb production in the steam and bituminous districts. Work is irregular at many collieries. The position is relatively better in the anthracite trade, where the tips were fully employed this week. Supplies of most grades of coal are in excess of demand. Prices, which are ruling in most cases at the scheduled figures, are unchanged. The Customs returns show that exports from South Wales ports in June were larger than in any other month this year since January, and totalled 1,335,188 tons, compared with 1,241,873 tons in May, and 1,256,620 tons in the corresponding month last year.

The dispute between the colliery owners and workers over the terms of a new wage agreement is being considered this week in London by the Coal Mines Industrial Board. The representatives of the colliery owners have declined the invitation of the board to attend the proceedings.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams, 13s. 6d. to 14s.; coking

smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; best anthracite large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 10s. 6d. to 11s.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. to 25s.

IRON AND STEEL

MIDDLESBROUGH.—There is still a lull in actual transactions on this market, although it is understood that during the past few days a few parcels of pig iron have changed hands for home consumption. Local foundries continue busy and are taking good deliveries of iron, but shipments to Scotland are easing off on account of the holidays in that area. The price for No. 3 Cleveland foundry pig iron is maintained at 67s. 6d. per ton delivered locally. East Coast hematite pig iron, whilst not in such strong demand as recently, is being absorbed by orders already on the books, and good deliveries continue to be made to the Midlands.

Export trade of both foundry and hematite pig iron is very small, and for both qualities price concessions have to be made to enable business to be done.

Shipments of pig iron from the Tees during June amounted to 12,776 tons compared with 15,271 tons during May.

Best Bilbao rubio ore is quoted by sellers at 17s. per ton c.i.f. Middlesbrough, whilst good blast furnace coke is firm at 20s. per ton delivered works.

At the end of June there were 27 blast furnaces operating in this area, of which 4 are producing Cleveland foundry iron, 10 hematite iron, and 13 basic iron, ferro-manganese, etc. Shipments of all classes of iron and steel from the Tees during the six months ended June 30, 1934, were practically 270,000 tons, an increase of 70,000 tons as compared with the first six months of 1933.

The steel trade continues fairly active, a satisfactory feature being the quantities of manufactured steel which are now being exported to Finland, Russia, and South Africa. The sheet trade is very quiet.

Heavy steel melting scrap is quieter, and works are now only offering 50s. per ton, as a maximum, delivered.

SHEFFIELD.—Seasonal quietude in ordinary lines of iron and steel is now rather pronounced and not much revival is expected until the beginning of autumn. There is still a fair amount of activity at a good many of the works with a brisk demand for forgings and castings for special purposes. Trade in rust and heat-resisting steels is still progressive. Certain descriptions of armament work are being produced in increased quantities. Prices of crude steel are believed to be stabilised for a lengthy period, but re-rollers are endeavouring to secure higher rates for their products. Depression is acute in shipbuilding steel and railway stock for export.

The outlook for overseas trade is improving in Empire and Scandinavian markets. A local firm has just shipped to the South African Iron and Steel Corporation a complete modern mill for rolling steel sheets. This purchase will make South Africa relatively independent of imported sheets, of which that country has been a large buyer and consumer in the past.

Makers of hand tools and implements are experiencing a spell of very active trade in both the home and export markets. The turnover of this branch now approximates that of 1929, which was the peak year of the local steel industry. Imports of tools have also shown an expanding tendency since the beginning of the year. Denmark is buying more British tools than at any time. Cutlery makers are fairly satisfied with their position, which is much better than a year ago. Exports tend upward. While local manufacturers do not expect the results of the second half of the year to equal those of the first, they have no reason to fear any serious falling-off in business.

GLASGOW.—There is practically no change in the situation in the West of Scotland this week. At the works there is some increased activity as is usual at this season, makers being anxious to get work completed before closing down for the holidays which commence next week. Steelmakers have still a large amount of work on their books to carry forward till after the holiday period, although the amount of new work placed during the present week has not reached last week's level.

At the tube plants regular employment is general. Sheet makers are still only able to keep plants part time operating, but the home demand continues highly satisfactory and this week there has been some improvement in the tonnage booked for export in the thinner gauges. Locomotive engineers and other engineering concerns are very busy at present and in some cases holidays will be somewhat curtailed this year on that account. The wrought iron trade continues very dull. Clyde ship repairers have had a busy week.

CARDIFF.—Further progress was made in Paris last week with the negotiations for an international tinplate agreement, and it is anticipated that they will be brought to a successful conclusion by the adjourned conferences in London this week.

On the Swansea Metal Exchange on Tuesday prices were firm at from 17s. 3d. to 17s. 6d. per basis box and inquiries were a little more active. Shipments last week totalled 105,471 boxes compared with 93,550 boxes the previous week, and 94,927 boxes at the corresponding period last year. Stocks have been heavily reduced by the exceptionally large exports during the past fortnight, and at the end of last week they totalled only 96,887 boxes as against 166,394 boxes a year ago. Galvanised sheets are unchanged at £11 5s. to £11 15s. per ton and Welsh steel bars at £5 per ton. Japanese competition in the sheet trade is becoming more acute and that country's exports in the first four months of the year were 21,290 tons compared with 11,379 tons in the same period of 1933.

OTHER METALS

The quotation for copper (standard cash) in London declined to £30 7s. 6d. per ton on Wednesday, a new low level for the current year. Moreover, it seems, that even lower prices will become a reality in the near future. The American situation is becoming more and more dangerous for the European market. The New York export quotation recorded a further decline during the past week, and United States shipments to Europe are increasing. As the market on this side of the Atlantic cannot absorb larger quantities, the increased American supply must inevitably press on prices. The influx of American copper to Europe is the more dangerous, as it is going mainly into the countries which are the best customers of Northern Rhodesia and the Belgian Congo. Until now, African producers remained very reserved as far as American competition is concerned. If, however, American exports continue to increase, a severe competitive struggle may ensue.

The tin situation shows little change on the week. The monthly statistics, published on Monday, were a little better than expected. According to A. Strauss and Company, visible supplies decreased

by 299 tons, but the decline would have been larger, if considerable quantities of tin had not been shipped from Arnhem. It is probable that the development of the statistical situation will be unfavourable during the next few months, for, while supplies are expanding as a result of the recent increase of quotas, consumption may show a seasonal decline. Under the circumstances, the trend of tin prices may be downwards in the next weeks, and it will be interesting to observe how far the operation of the buffer pool will be able to influence quotations, should it desire to do so.

There has been no development of importance in the markets for spelter and lead. The tendency of both markets is relatively weak, but the statistical position seems to be improving again. The stocks of the zinc cartel countries declined in the first half of June by 1,280 metric tons, although production increased considerably. On the New York Commodity Exchange trading in lead and spelter futures was inaugurated on Monday, July 2nd, but it is not very probable that this trading will become important in the near future. The United States have a leading place in the world's spelter and lead production, but the large producing concerns are against the

ment of an important market in New York, as they fear tained. It could destroy the dictatorship over domestic prices which sales & exercised by the large producers. This policy of the large producers (which is partly identical with the large copper price) explains why the late New York Metal Exchange never hoped any importance and was amalgamated last year with some other small commodity exchanges to form the New York Commodity Exchange Incorporated.

The trend of wolfram prices has recently changed its direction, and is since a few days again declining. In view of the enormous rise in prices during recent months, a reaction was to be expected. It is not expected that the decline will go very far, for the Chinese monopoly has the situation still in its hands. But the monopoly appears to have realised that it will have better possibilities to sell its metal at a lower price.

TIN.—Sales on the London Metal Exchange: 350 tons on Monday, against 255 tons last week; 670 tons on Tuesday, against 425 tons last week; 475 tons on Wednesday, against 375 tons last week. The New York quotation on Tuesday was 51.30 cents per lb., against 51.00 cents a week ago and 51.85 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 5s. to £228 10s., compared with £225 7s. 6d. to £225 10s. last week. Stocks in London and Liverpool at the end of last week were 3,642 tons, a decrease of 612 tons on the week.

COPPER.—Sales on the London Metal Exchange: 500 tons on Monday, against 2,125 tons last week; 1,000 tons on Tuesday, against 1,300 tons last week; 2,300 tons on Wednesday, against 800 tons last week. Domestic spot was quoted at 7.60 cents per lb. in New York on Tuesday, against 8.37½ cents a week ago and 8.37½ cents a month ago. Wednesday's official closing price for standard cash in London was £30 7s. 6d. to £30 10s., compared with £31 8s. 9d. to £31 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 25,496 tons, show an increase of 468 tons, and stocks of rough copper, at 7,273 tons, a decrease of 1 ton on the week.

LEAD.—Sales on the London Metal Exchange: 450 tons on Monday, against 500 tons last week; 1,500 tons on Tuesday, against 600 tons last week; 450 tons on Wednesday, against 500 tons last week. The New York quotation on Tuesday was 3.75 cents per lb., against 3.85 cents a week ago and 4.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 15s. for shipment during the current month, compared with £11 12s. 6d. last week.

SPELTER.—Sales on the London Metal Exchange: 200 tons on Monday, against 525 tons last week; 450 tons on Tuesday, against 650 tons last week; 375 tons on Wednesday, against 425 tons last week. Tuesday's quotation in East St. Louis was 4.33 cents per lb., against 4.20 cents the week before, and 4.25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 17s. 6d. for shipment during the current month, against £13 12s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs., as against £11 7s. 6d. to £11 10s. per flask of 76 lbs. last week. Foreign antimony was quoted at £33 per ton, as against £33 per ton last week. Chinese wolfram was again quoted at 42s. to 44s. per unit, c.i.f. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester.—Compared with a week ago, raw cotton prices show very little change, although on one or two days there have been indications of a slightly easier movement. Events in Germany at the end of last week caused traders to hesitate, and prices were to some extent affected by reports of light rains in parts of the American cotton belt. According to the latest information, however, the drought in Texas continues, and the outlook for the crop is very uncertain. Next Monday the Washington Government will publish an estimate of the area under cultivation, and market opinion centres round 28,500,000 acres. Consumption of American cotton tends to decline, compared with a year ago, whilst there are indications of an increasing demand for outside growths.

Cloth manufacturers have experienced another disappointing week. Contracts for more than retail lots have been of rare occurrence. A fair amount of inquiry has been met with for India, but

offers have been on a very low basis. Trade with China has been practically at a standstill. A miscellaneous business has been done for several minor outlets. The home trade section has been much disturbed by the reduction in rayon yarn prices, and the depreciation in the value of stocks of made-up goods is a serious matter. Manufacturers' order lists are running down.

The yarn market has continued decidedly slow. Practically all spinners are losing ground. The output cannot be sold and margins are being narrowed.

WOOL.—Bradford.—There has been little change in the Bradford market during the past week, business continuing on a very restricted scale, with prices definitely easier. The news that the German ban is to be extended to the end of August, and the later report that this ban is not to be removed until further notice have contributed to a feeling of still greater hesitation in business transactions. But the main factor making for indecision has been the approach of the Colonial wool auctions in London, which opened on Tuesday of this week. So long has there been no indication of price levels either from the overseas or London markets that the majority of firms have been neither willing to sell nor to buy, but have preferred practically to suspend business until the result of the current series of London sales became known. It was, of course, generally expected that a serious decline from the 30d. clean basis established at the close of the May series of London sales for good 64's wools would be registered, as top prices in Bradford during the interval have sagged from 35d. to 30d. for a warp 64's, but it would be idle to deny that the decline of 15 to 20 per cent. in prices established at the London sales is far from satisfactory. It was hoped that, even if the German ban were not removed, German buyers would be allowed permits to buy moderate quantities in London, thus propping prices to some extent; but the first day's sale has shown that there is hardly any German support, while Belgium buyers have been inactive on account of the strike in the wool textile industry of that country. This poor Continental support has no doubt been one of the main causes of the low prices and the very heavy withdrawals. Unsatisfactory as the basis established may be, it is nevertheless welcome to Bradford in that it will at least bring an end to the indecision which has now persisted for so long with regard to prices.

GRAIN MARKETS

WHEAT.—The market in wheat showed a slightly easier tendency during the past week, but the decline in quotations, though marked in the United States, was very modest in this country. Continental and North American crop estimates are now becoming more definite, and there is little doubt that this year's harvest in the Northern Hemisphere (excluding China and the U.S.S.R.) will be smaller than a year ago. A setback in prices to the low level prevailing earlier in the year is therefore improbable.

According to Mr G. Broomhall, total shipments during the past week were 1,354,000 quarters, against 1,328,000 quarters in the preceding week. On Tuesday, "July" futures were quoted in Chicago at 87½ cents per bushel, against 92 cents the week before and 99½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 30s. per 496 lbs., against 30s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s. 6d., against 28s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 3d., against 28s. 3d.; Australian, ex ship, 25s. 6d., against 25s. 6d. a week ago.

FLOUR.—North American shipments were 115,000 sacks in the past week, as compared with 124,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 24s. 6d. per 280 lbs., against 25s. last week; delivered London, 23s. 6d., as compared with 24s. a week ago. Manitoba patents, ex store, 23s. 9d. to 25s. 3d., against 24s. to 25s. 6d. Australian, ex store, 17s. 6d. to 18s. 6d., against 17s. 6d. to 18s. 6d.

BARLEY.—"July" futures were 43½ cents per bushel in Winnipeg on Wednesday, against 44½ cents last week and 42½ cents a month ago. Quotations in London on Wednesday were: "English malting" f.o.r., per 448 lbs., 27s. to 30s., against 27s. to 30s. a week before.

OATS.—On Tuesday, "July" futures were quoted at 43 cents per bushel in Chicago, against 41½ cents a week ago, and 43½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 19s. 9d. per 320 lbs., against 19s. 9d. a week ago; "Chilean White," landed, 21s., against 21s. a week earlier.

MAIZE.—"July" futures were quoted on Tuesday at 57½ cents per bushel in Chicago, against 57½ cents a week ago and 55½ cents on the corresponding date last month. Quotations in London, Wednesday: "Plate," landed, 20s. 3d. per 480 lbs., compared with 20s. 6d. last week; "Plate," ex ship, 19s. 3d., as against 19s. 6d. "Plate," July, 19s. 3d., as against 19s. 9d. Yellow maize meal, ex wharf, was quoted £5 10s. to £5 12s. 6d. per ton, against £5 12s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to June 30.....	Cwts. 43,173	Cwts. 45,374	Cwts. 42,553	Cwts. 75,291
44 weeks to June 30.....	4,765,917	3,643,591	8,401,125	5,996,123
Average price of English wheat per cwt.	s. d. 6 2	s. d. 6 5	s. d. 6 5	s. d. 5 7

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
June 23, 1934.....	Cwts. 83,862	Cwts. 6,564	Cwts. 21,985	s. d. 5 6	s. d. 7 6	s. d. 6 3
June 30, 1934.....	75,291	4,780	25,650	5 7	6 6	6 5
June 23, 1930.....	81,889	9,405	9,569	8 6	7 5	6 6
June 27, 1931.....	53,319	4,106	13,922	6 1	6 5	6 9
July 2, 1932.....	45,374	3,522	6,734	6 5	6 10	7 10
July 1, 1933.....	42,553	9,877	10,135	6 5	6 19	5 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	July 5, 1933	Jan. 3, 1934	June 27, 1934	July 3, 1934
Winnipeg (No. 1 Manitoba).....	62½	46½	79½	65½	76	75½
Chicago (No. 2 Winter).....	55½	46½	96½	84½	92	87½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 93,706,000 bushels, shows a decrease of 1,479,000 bushels. Supplies a year ago stood at 92,758,000 bushels.

OTHER FOODS

SUGAR.—The market in raw sugar has been a little firmer. The spot price of raw sugar in New York on Tuesday was 3.18 cents per lb., as compared with 3.15 cents per lb. last week and 3.43 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 10½d. to 4s. 11½d., against 4s. 9½d. to 4s. 10d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Landed	Deliveries	Stocks
	1933 1934	1933 1934	1933 1934
London.....	586 890	2,078 4,076	48,012 33,969
Liverpool.....	... 714	14,156 14,611	176,346 172,756
Total tons ...	586 1,604	16,234 18,687	224,358 206,725
Last week	16,640 15,476	15,687 23,437	240,006 223,808

COFFEE.—The New York coffee market has again been dull, and prices have tended to sag. On Tuesday Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week and 10½ cents per lb. a month ago. At Tuesday's auctions in London only a small quantity was sold. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 576 bags; exported, 119 bags; stocks, 28,531 bags, against 29,182 bags a year ago. Central American, landed, 1,286 packages; delivered, for home consumption, 2,522 packages; exported, 896 packages; stocks, 116,987 packages, against 109,317 packages last year. Other kinds: Landed, 795 packages; delivered, for home consumption, 1,973 packages; exported, 572 packages; stocks, 111,902 packages, against 102,307 last year.

COCOA.—The "spot" quotation in New York on Tuesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, June-July, was 24s. 6d. per 50 kilos, c.i.f. Continent, as against 25s. 9d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 5,652 bags; delivered, for home consumption, 5,530 bags; exported, 1,008 bags; stocks, 267,723 bags, against 172,065 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 44,527 packages of Indian and 26,668 packages of Ceylon tea. Demand was again brisk at this week's auctions in London and the previous rise in prices was maintained. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.		Ceylon	Java	Sumatra	Nyasa-land	Total
	Northern India	Southern India					
June 29, 1933.....	d. 9.56	d. 9.69	d. 11.16	d. 6.03	d. 7.55	d. 8.30	d. 9.87
May 31, 1934.....	13.37	14.04	14.32	11.39	11.08	12.86	13.49
June 7, ".....	13.24	13.55	14.00	11.38	11.15	12.87	13.28
June 14, ".....	12.99	13.23	13.49	10.81	10.67	12.49	12.92
June 21, ".....	12.93	13.01	13.21	11.18	10.75	12.38	12.86
June 28, ".....	12.96	13.02	13.24	11.30	10.98	12.47	12.94

RICE.—The "spot" price was 7s. 4½d. per cwt. on Wednesday as compared with 7s. 4½d. per cwt. a week ago, while the forward quotation, at 6s. 9d. per cwt., remains unchanged. Movements in London during the past week were as follows: Landed, 117 tons; delivered, 90 tons; stocks, 848 tons, against 4,803 tons a year ago.

POTATOES.—At the London Borough Market old crop "King Edward" sold at 4s. 6d. to 5s. 6d. per cwt., as compared with 4s. 6d. to 5s. per cwt. last week. New-crop Jerseys were quoted at 12s. to 13s. per cwt., as compared with 13s. 6d. to 15s. per cwt. a week ago.

SPICES.—"Black Singapore" was quoted at 5d. per lb. on Wednesday, against 5d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 9 tons; delivered, 35 tons; stocks, 303 tons, against 326 tons a year ago. White, landed, 147 tons; delivered, 33 tons; stocks, 6,129 tons, against 921 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 8d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. per 8 lbs., against 3s. 6d. to 4s. 4d. a week ago. According to the withfield official market report, supplies during last week amounted to 8,833 tons, against 8,096 tons in the corresponding week of last year. Imported beef, principally Argentine, formed 86½ per cent. of the beef supplies, against 86½ per cent. a year ago. Imported mutton, mainly from New Zealand, formed 82½ per cent. of the total supply of mutton and lamb, against 80½ per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets continue very quiet, and business is on a restricted scale. Linseed is dominated by favourable reports of the new crops. Moreover, crushers' requirements are very moderate in view of the slowness of the demand for oilcake and the unremunerative price of oil. A week ago Plate for August-September shipment to Hull was sold at £10 10s. per ton; but £10 7s. 6d. is now the nominal price of all positions. Indian linseed has attracted but little interest, and is also lower. Calcutta to London, July-August, is offered at £11 15s. per ton, and Bombay at £12. Plate shipments are only moderate. The quantity afloat for Europe is 104,100 tons (including 19,700 tons from India) and for the United States 22,500 tons. World shipments to the end of June exceeded a million tons, or 42,000 tons more than to the same date last year, and future supplies are estimated at 700,000 tons, or 120,000 tons less than the quantity actually shipped in the remainder of 1933. A little trade has been done in Egyptian cottonseed to Hull, with afloat at £4 6s. 3d., and August £4 1½s. 3d. (paid).

Linseed oil is slow and lower. The current quotation for raw oil for July-August delivery is £21 5s., and September-December, the same, ex Hull mill. Cotton oil is neglected, and Egyptian crude, ex Hull, is offered at £12 10s., and common edible at £14 10s. prompt. Cakes are in good supply, and slightly easier.

HIDES AND LEATHER.—Although a moderate trade continues to be done in hides, leather and leather goods, in no direction is there any marked activity and the negotiation of business generally is difficult. Consumers of leather, in most instances, are interested only in the cheaper grades, and in view of the fact that prices of some types of raw material show an advancing tendency, it can be realised that the position of the producer is not a happy one at the moment.

At the sales of hides from home-slaughtered cattle held this week the figures realised for ox and heifers showed a further upward movement to the extent of from ¼d. to ½d. per lb.—two weights advancing by as much as ½d. per lb. Cow hides were also dearer to the extent of ¼d. per lb., with the exception of second warbled, and there was a distinctly firmer tone in the market for calfskins. Turnover of imported hides was not of any magnitude during the past fortnight, and for some descriptions the market is a little weaker. This, however, does not apply to Africans, prices for which are fully maintained, but for wet-salted and dry South American hides quotations show a fractional decline as a result of rather restricted buying. Australian hides also are slightly cheaper on averages in view of the small interest being taken in these sorts.

BARCLAYS BANK

LIMITED

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,080 Branches in England and Wales

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:
BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

For the cheaper lines of sole leather there has been rather more inquiry of late and some fairly satisfactory sales of light-weight dry hide bends have been negotiated. Heavier descriptions, however, together with most averages of English and wetsalted bends, are only selling to the extent of the immediate needs of manufacturers of footwear, and as these at the moment are by no means large, the market for this class of bottom stock is quiet. There has been some small improvement in the demand for offal, shoulders—both rough and pinned—and for pinned bellies. In the upper leather section inquiry is confined chiefly to the cheaper sorts of leather, and for these demand is moderate. Staple lines—box and willow calf and glacé kid—feature most in the business being done and there has also been some request for patent. More

interest is being taken in the market for reptiles, but the call for cheap coloured leathers for the production of summer footwear is not so noticeable as has been the case of late.

RUBBER.—The market in rubber has been a little more active, and prices recorded an appreciable rise on the week. In New York, Tuesday's spot price for rubber, at 14½ cents per lb., compares with 13½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., against 6½d. per lb. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7¾d. for October–December, 1934, as against 6½d. to 7d. a week ago. Stocks in London and Liverpool at the end of last week, at 99,872 tons, show an increase of 1,487 tons as compared with the preceding week.

Hess's sketch of the horrors of war, in the language of a Renn or Zweig or Remarque, as a preface to his repudiation of the "Germany of Pacifism" as contrasted with the present "Germany of Peace." But the upshot is clear. The Nazi triumvirate has been so badly shaken by recent events, and by the prospect of their eventual aftermath, that, in its foreign policy, it feels an imperious necessity to draw in its horns and to play the good neighbour.

How far is Herr Hitler prepared to go in this direction? To do him justice, he went quite a long way before the recent blood-bath, when he made his pact with Poland and gave his promise about Austria to Signor Mussolini—whatever that promise may amount to. In his present shaken condition he may be expected to go further still; and MM. Barthou and Litvinov evidently intend to put his international goodwill to the test by inviting him to become a party to an "Eastern Locarno." Since M. Barthou's arrival in London, the unofficial sketches of the Franco-Russian plan are taking clearer shape, and certain features of it may now be regarded as reasonably sure.

It seems certain, for example, that Great Britain is not to be asked to commit herself on the Continent more deeply than she is committed already by the Covenant of the League and by the Pact of Locarno. Indeed, any lingering hope of persuading her to go farther was extinguished by Mr Eden's public statement, on July 6th, that "we are not prepared to extend our Locarno commitments," and Mr Neville Chamberlain's statement next day that "we are not going to enter into any new alliance." M. Barthou, however (and this is the next feature in the Franco-Russian plan that is now emerging), does not propose to invite any Power, on the Continent or off it, to enter into a merely partisan alliance of the "haves" against the "have nots" or of the victors against the vanquished. The "Eastern Locarno" which he hopes to achieve is to resemble its prototype in being an arrangement in which the countries in both camps, in a given region, will participate on an equal footing. Just as the main part of the original Locarno Pact is a peace agreement between Germany on one side and France and Belgium on the other, with the United Kingdom and Italy as the guarantors, so the new "Eastern Locarno" is to be an amplification of the eastern annex to the original pact.

In that annex, which was an arrangement between Germany on the one side and Poland and Czechoslovakia on the other, the guarantor was France. And the revised and enlarged version of the "Eastern Locarno" is still to be under the French guarantee, while the non-German parties to it will be extended to include Roumania and Jugoslavia, possibly Greece and Turkey, and certainly Russia. In the third place, Russia is to become a co-guarantor, with the United Kingdom and Italy, of the original Western Locarno, in exchange for the enlargement of the French guarantee in the East to embrace Russia. Fourthly, the Eastern Locarno, like the original pact, is to be made within the framework of the League; and this means that it is conditional upon Russia's being able to gain admission to the League (with a permanent seat on the Council) and upon Germany's being willing to resume her membership. Lastly, the French hope to add a third regional pact, in the shape of a Mediterranean Locarno, to the other two. But this project is more remote, since France and Italy seem still as far as ever from arriving at a naval understanding; and the exploration of the idea at the London Naval Conference in 1930 showed the difficulty of obtaining the necessary guarantor, who in this case could only be the United Kingdom.

What are the chances that these far-ranging French projects will be carried out? At this stage, perhaps the most that can be said is that the prospects of a French success have been improved by the recent shattering events inside Germany. On the one hand, Italy will hesitate, even more than before, to commit herself to a partnership with a Germany whose future is now again so uncertain. On the other hand, Germany herself, as has been suggested already, will almost certainly be more strongly inclined than before to cultivate good relations with her neighbours, in order to keep her hands free for dealing with the internal troubles that are now coming, thick and fast, upon her. On the whole, we may say that the international situation in Europe has been improved by the urgent need felt by all nations for external peace.

THE ENGLISHMAN'S FOOD

THE long-term ideal of British agricultural policy should be the encouragement and rationalisation of all those branches of production which can compete on equal terms with foreign produce, and the free importation of all other commodities. At times of economic emergency like the present, however, a temporary crisis-policy may be defensible, if wisely conceived and executed. Such a crisis policy should aim, first, at an expansion of demand by general economic policy, and, secondly, at the maintenance by artificial means of those branches of agriculture which are reasonably likely to be economic when normal times return. And such artificial assistance should be given whenever possible at the expense of the rich rather than the poor, and in the form in which it can most easily be discontinued. Subsidies, that is to say, paid for out of direct taxation, should be preferred to restriction by tariff, quota or levy.

How does the present Government's policy, as defended by Mr Elliot in the House on Monday, stand this general test? In the first place, Mr Elliot showed no recognition whatever that the proper remedy for the present agrarian crisis lies in an expansion of demand. Few of his audience in the House appeared to appreciate that the fall in prices, which he lamented, was in most cases due to a shrinkage of demand rather than an increase in supply. More than once Mr Elliot has reiterated his belief that a prosperous agriculture will provide a new and important market for the products of our industry. But experience has shown that a prosperous export trade is needed to expand the purchasing power of the industrial workers and so to provide the only possible market for agricultural products.

A study of Mr Elliot's apologia in the House suggests that, in the protective schemes so far adopted, even where the principle has been least unsound, the wrong commodity has been chosen. The least objectionable of the schemes instituted under the Agricultural Marketing Acts are the Hops, Potatoes and Milk Schemes, all three of which aim at improved efficiency and better marketing. Since the price of hops is a very small part of the cost of beer, import restriction and the offer of a guaranteed price are no great evil in their case. But, even so, the scheme is being spoilt by the threat of a Statutory monopoly.

The Milk Scheme also has certain good features. The price of liquid milk has not been actually raised, though it has been prevented from falling; some provision has been made for free milk in the schools; and drastic import restriction of milk products to raise the manufacturing price has been, for the moment, abandoned. But it would have been much better if the subsidy given to support the manufacturing price had been provided for out of the proceeds of direct taxation and not of a future consumption tax; and it would have been better still if the subsidy had been used to increase the consumption of liquid milk by the children of the poorer classes. Mr Elliot put forward the extraordinary argument (which seemed to satisfy the House) that the subsidy to the manufacturing milk producer would inure "to the benefit of all the milk producers and, therefore, to the benefit of all the milk consumers." It meant, he added, "a lower price for milk to all the consumers of milk." But this is merely true, given the existing arrangement by which the Milk Pools fix the liquid price at a level too high to absorb the available supplies, and given the assumption that if the manufacturing price were allowed to fall, the Pools would raise the liquid price to reimburse the farmer. If, instead, the liquid price were allowed to fall, the consumer would benefit, over-production would be discouraged, and there would be no need for a subsidy.

For the pig scheme Mr Elliot deserves even less credit. The commodity was well chosen; ultimately it should be possible for the British farmer, by increased efficiency, to produce bacon of as high a quality and at as low a cost as the Danish farmer. But the method was wrong; reorganisation must take time. Yet Mr Elliot has restricted imports so hastily and so drastically as to eliminate a large part of the Danish supply long before British bacon of the same quality can take its place. The result is that an article of staple consumption has been made dearer in price and poorer in quality, while we are compelled to pay the Danish producer the same amount of money as two years ago for a smaller

volume of imports. No better example could be found of the folly of making a fetish of prices and ignoring production and consumption.

Imports of eggs have been restricted both by tariff and by ("voluntary") quota. Yet here, as Mr Elliot admits, the trouble has been caused by an increase in home production—from 1,500 millions a year in 1925-26 to 3,000 millions in 1932-33. This was partly due to an increase in the yield of eggs per hen. Such an increase, however, in productivity, like that in the yield of milk per cow, should clearly result in a fall in the price to the consumer, and not a rise. There is a very strong case, in fact, for the rationalisation of the whole egg industry, and we hope that the Addison Commission now inquiring into this problem will devise a scheme which will so reduce British costs as to enable the increased home production to be sold remuneratively without any import restriction. Mr Elliot made some dubious remarks in the House about the "disastrous" policy of "mechanising, rationalising and factoryising the production of eggs until in a few years we have nothing but troglodyte hens on wire netting never touching the ground." This does not imply, we trust, that Mr Elliot regards the provision of a cheap supply of this essential foodstuff as an object of no account.

Least defensible in principle of our present agricultural schemes is the wheat levy, and least defensible in practice is the beet-sugar subsidy. In the first case we are raising the price of the prime necessity of life in order to maintain a branch of British agriculture which all experts agree to be of minor importance; and we are doing it by a method which amounts, in effect, to the grant of Statutory powers to one group of persons to levy a tax on the whole of the rest of the community. The mitigating features of the wheat scheme are, first, that the "deficiency payments" are limited in amount and will disappear when (and if) prices rise to pre-crisis levels; and, secondly, that the proportion of subsidised wheat and the consequent rise in price are happily very small. In the notorious case of beet sugar we have an instance of the right temporary expedient, a subsidy out of the proceeds of ordinary taxation, not only applied to the wrong commodity, one which is never likely to be economically produced in this country, but continued year in and year out.

The Government's two latest schemes, for beef and sugar, both of which have been in the news this week, seem to combine more of the vices and fewer of the virtues of our present agricultural policy than any so far put into operation. The new sugar scheme is now being laid before Mr Wilfrid Greene's Committee of Inquiry by a group of persons calling themselves the United Kingdom Sugar Industry Committee, of which Lord Weir is chairman and Sir Leonard Lyle a leading member. This scheme provides for the maintenance of uneconomic sugar production in this country, the establishment of a Statutory manufacturing monopoly, and the imposition by that monopoly on the consumer of a levy over and above the monopoly price.

The beef scheme announced by Mr Elliot on Wednesday is in many respects similar. As the Argentine Government has so far declined to waive its rights under its Agreement with Great Britain, which has another two years to run, the Government cannot adopt a "levy with restriction of imports" scheme and has, therefore, for the moment, fallen back on a straight subsidy of £3 millions—which is to be repaid out of a future levy when the Government is able to establish one. Beef is certainly a more suitable commodity, at least for a temporary subsidy, than sugar, since British beef production was economic and competitive in pre-slump days; though it may be true that the subsequent shift of taste away from beef and the increase of production in the Dominions may have modified this position. But the "levy plus restriction" plan applied to beef is particularly bad, for the levy will fall on imported (i.e. low quality) beef in order to subsidise the home-produced high-quality article. The rich consumer of home-produced beef, that is to say, as well as the farmer, will be subsidised out of the pocket of the relatively poor consumer of imports; a peculiarly vicious example of "regressive" taxation.

Is it too much to hope that a really national and constructive agricultural policy may eventually be evolved by the preservation of the good in these schemes and the elimination of the bad? If import restriction, monopoly, un-

economic production, regressive taxation and permanent subsidies could be abandoned, and Mr Elliot's ample energies could be directed to the rationalisation and cheapening of production and marketing, the nation as a whole, and not merely farmer and landlord interests, would really begin to benefit. At present, alas, there seems little chance of any such conversion. It is true that, in discussing the trawling industry in the House on Monday, Mr Elliot spoke of "the process of healthy competition going on in the industry on the basis of a remunerative price level and not of adventitious credits or subsidies from this House"—a sentiment which might almost have been uttered by Mr Runciman, who, in a speech at a public luncheon this week, remarked that all countries would be richer if all subsidies were swept away. Mr Elliot also observed, at another point in his speech, that if Lancashire wished China to buy British textiles, Lancashire must buy Chinese eggs.

But these appear to have been eccentric flashes of common sense rather than the accepted principles of a coherent and comprehensive policy. Mr Elliot's great weakness is that he regards artificial assistance to agriculture, not as a temporary crisis expedient, but as part of a policy of permanent self-sufficiency. Yet this very week Germany, by the spectacle of potato queues, famine prices and ration tickets, is furnishing us with a grim picture of self-sufficiency in practice. If we are not to meet the same fate, we must never forget, first, that 100 per cent. of the British people are consumers of food and only 7 per cent. producers, as Sir Francis Acland pointed out on Monday; and, secondly, that there is no sure way of converting the increased productivity of the modern world to the benefit of the mass of the people as long as the prices of staple food-stuffs are deliberately prevented from falling.

A BRITISH INSURANCE TRIUMPH

An industry in which 22 companies have an aggregate turnover of over 100 million pounds sterling per annum, which has its centre in the United Kingdom but draws its business from all but a very few of the civilised countries of the world, which at the end of five years of crisis and prohibition and collapsing currencies looks back on fine annual trading profits rising at the peak to 2.4 per cent. of the turnover and dropping at the lowest point to 1.2 per cent. of the turnover—surely this must be some sheltered industry, fortunate beyond its fellows in working to a settled programme in which both revenue and outgoings are practically fixed before the year begins? On the contrary, it is an industry that enjoys no monopoly, that relies for its revenue on the goodwill of its customers, that is subject day in day out to the pressure of competition and makes its profits out of the hazards and uncertainties which the ordinary trader dare not carry for himself. That is the picture of the British insurance industry as outlined in our Insurance Supplement, and it is a picture of which Great Britain has good right to be proud, for no other country in the world can show anything to compare with it.

The premium income for 1933, which will be found in the very remarkable table of underwriting profit in our Supplement, is £102,240,852, and this enormous figure takes no account of the premiums contributed by the life departments, but is made up for the most part of fire, marine and miscellaneous insurance which in the order of their size may be stated, roughly, in the following scale:—

Miscellaneous	...	...	...	49.0
Fire	...	...	...	42.5
Marine	...	...	...	8.5
				100.0

Historically, the order would be exactly reversed, for marine is by far the oldest branch of the family, and the various classes of insurance classed together as "miscellaneous" are all, or almost all, youngsters whose birth, adolescence and maturity can be covered by the working lifetime of one man.

The truth is that, unobserved by the general public, the centre of gravity in insurance has within the last generation moved to such an extent as to alter and extend almost beyond recognition the service that insurance renders to the community. Fifty years ago insurance companies and underwriters (we are still leaving out of our reckoning the life departments) protected their clients when they were at odds with the risk of fire on land or at odds with fire, fog and tempest at sea. There, broadly speaking, the work of the insurance company began and ended. To-day, the company protects us against a thousand other risks; some, like workmen's compensation, created by Act of Parliament; some, like burglary, present sixty years ago but then uninsurable; some, like motor car and aviation, the product of new inventions; some, like third party, resulting from a new attitude in the Courts of Law and an ever increasing liability for torts and damages. The speed and complexity of modern life and the growth of social legislation have, between them, called for a much wider range of activity and an altogether new technique. That insurance managers and officials have been able within a single lifetime to adapt their methods and meet the needs of a new world so closely as to end each year with a tiny percentage of loss or profit and yet to increase continuously the reserves which are their policy-holders' guarantee of payment is in itself a very remarkable achievement. As the general fire hazard improves and fire rates fall, and as international trade drops to a level at which the marine underwriter sits idly at his desk dreaming of the glorious past, the insurance community may well rely for its premium income more and more on the energies of its accident and miscellaneous departments.

Within the last few years the greatest difficulties that managers have had to face in maintaining their incomes have been the fall in values and the decline of international trade; but on a longer view probably their most difficult problem has been the growth of economic nationalism and the perpetual setting up of new barriers designed to keep the premiums at home. Of all forms of protection this protection is perhaps the most unreasonable. The one object and justification of insurance is to lay the risk on the shoulders most capable of bearing it, and it is plain folly for a country to shut out the strongest and most experienced insurers by building fences at the frontier and by declaring that any disasters befalling its own nationals shall be borne by its own nationals and no one else.

Some Governments are candid enough to introduce their insurance legislation as protection open and undisguised, but most of them like to camouflage the protective motive by professing an affectionate anxiety for the welfare of the insured public, which must be safeguarded from dangerous and perhaps insolvent foreign insurers. To achieve this desirable end they establish a system of deposits and prohibit any insurer from accepting premiums within their frontiers unless he has deposited with the Government a fairly considerable sum invested usually in the country's national debt. As a protection to the policy holder, this deposit system is almost if not quite valueless, for the amount of liability accepted by an energetic insurance company must be out of proportion to the sums thus deposited and left in cold storage. To take £20,000 as deposit from a company that is writing a premium income of £500,000 a year and imagine that the deposit will be

adequate to meet the deficiency if the company fails or decamps is clearly childish, and if a big depositing company did so fail no sensible man would expect the sufferings of its assured to be materially relieved by the deposit that it leaves behind. On the other hand, these deposits, when exacted here, there and everywhere, do become a matter of grave consideration for insurance companies trading, as our British companies have for generations traded, on an international scale. Many years ago it was estimated that a company transacting fire and accident business in every country of the world would need to tie up in deposits no less than £500,000; and since that calculation was made the fences have been raised on so many frontiers that a corresponding figure for 1934 would be a good deal larger than half a million.

In spite of all the tricks and subterfuges of modern nationalism, British insurance throughout the world still remains a great international force, and if its achievement in adapting itself to modern social conditions is remarkable, this further achievement of leaping the economic barriers is more striking still. Here and there, as in Turkey, British insurers have decided to retire rather than submit to the Governments' demands, but the countries in which they are not ready to do business and do not in fact do business are very few in number, and the premium income of £102,000,000 which appears in this week's Supplement could come from nothing but a wide and efficient organisation working to the mutual advantage of insurers and insured. But that world-wide organisation has been made possible only by a double advantage enjoyed by British insurers: (1) the great wealth which enables them to meet simultaneously the demands of fifty different Governments and still leave unimpaired the liquidity of their resources, and (2) the skill and experience of the insurance managers and officials on which the reputation of British insurance ultimately rests and which to every industrial country is in one form or another indispensable.

A YEAR'S INDUSTRIAL PROFITS

THE reports of 642 joint-stock companies published in the quarter ending June 30th last complete one more year's figures in our chronicle of the industrial profits recorded in this country. The reports published in the first and second quarters of each calendar year generally include about three-quarters of the total of industrial profits in each year ending June 30th, since in the first half of each calendar year most of the industrial concerns publish the reports of their trading in the financial year ending either on the previous December 31st or on March 31st. On this occasion, the profits both of the 642 joint-stock concerns reporting last quarter and of the 1,960 joint-stock concerns who reported in the year ending June 30th last, show welcome and substantial increases from the corresponding totals a year ago. In the case of the 642 concerns who reported last quarter, the total of net profits (after payment of debenture interest, etc.) at £67.3 millions, shows a rise of £10.4 millions (18.2 per cent.) over the profits of the same concerns last year. And the total profits of the 1,960 companies who reported during the year ending June 30th last at £159.6 millions show an increase of £17.2 millions (12.1 per cent.) over their total profits in the previous year.

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, ETC.)

	No. of Companies	Reports published in		Increase (+) or Decrease (-)	% Change
		1932	1933		
Third quarter	307	£16,264,606	£15,394,560	- £870,046	- 5.3
Fourth quarter	464	£16,201,909	£21,116,780	+ £4,914,871	+ 30.3
		1933	1934		
First quarter	547	£52,922,902	£55,751,307	+ £2,828,405	+ 5.3
Second quarter	642	£56,970,575	£67,334,795	+ £10,364,220	+ 18.2
Total	1,960	£142,379,992	£159,597,442	+ £17,217,450	+ 12.1

While the increase in last quarter's profits compared with the second quarter of 1933 is the greatest increase, absolutely, for many years—exceeding by far the quarterly increases recorded for the "good years" of 1928 and 1929

—it should be remembered that the totals of profits are now reduced from their 1928 and 1929 levels by about 25 per cent. and that the present increases are by way of recovery from a very deep depression. The 1,742 concerns whose reports were analysed for the year 1928-29 showed net profits amounting to £197.3 millions, and 639 concerns reporting in the second quarter of 1929 showed a total of £78.1 millions. We have still far to travel before the 1,960 concerns reporting in the last year show commensurate results. Our history of the percentage movements of profits by quarters follows:—

	1928	1929	1930	1931	1932	1933	1934
First quarter	+15.2	+1.5	+1.9	-10.6	-14.3	-8.9	+5.3
Second quarter	+1.3	-0.7	+6.6	-19.4	-21.8	+3.3	+18.2
Third quarter	-9.7	-3.0	-6.4	-35.5	-28.6	+5.5	...
Fourth quarter	+3.1	+1.4	-18.1	-53.9	-2.9	+30.3	...
Year	+7.2	+0.0	-0.6	-22.5	-18.1	-0.5	...

Writing at this time last year (*Economist*, July 22, 1933, page 168), we anticipated that the figures reported in 1931 and 1932 would prove to reflect the trough of the depression. The absolute and percentage increases recorded during the past year, coupled with the movements of each quarter's profits over the last six years, confirm this anticipation.

In the next table we give our annual summary of the results recorded by various industrial groups in the last twelve months, together with those of the last quarter:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, ETC.)

Group	No. of Reports	Reports published in Quarter ended June 30th			No. of Reports	Reports published in Year ended June 30th		
		1934	Compared with 1933	+ or -		1933-1934	Compared with 1932-1933	+ or -
Breweries...	16	£2,733,798	+ £422,205	+18.3	97	£12,571,864	+ £510,588	+ 4.2

Telegraphs, etc.	8	1,707,432	+ 107,076	+ 6.9	11	1,878,697	+ 143,586	+ 7.1
Textiles	13	3,566,102	+ 812,545	+23.5	61	7,739,263	+ 2,674,457	+ 52.8
Tramways	11	1,026,051	+ 66,674	+ 6.9	26	1,411,512	+ 213,588	+ 17.8
Trust	60	2,418,309	+ 151,326	+ 6.9	196	7,640,829	+ 1,097,115	+ 12.6
Waterworks	5	208,578	+ 78,579	+ 27.3	25	1,162,537	+ 6,079	+ 0.6
Miscellaneous	180	31,299,963	+ 2,589,323	+ 9.0	625	70,825,264	+ 3,149,468	+ 4.6
Total	642	£67,334,795	+ £10,364,220	+18.2	1960	£159,597,442	+ £17,217,450	+ 12.1

It will be remarked that, on the whole year's showing, the most noteworthy recoveries have been made by iron, coal and steel concerns; motor, cycle and aviation undertakings; rubber and tea companies; and textiles and shipping concerns. The improvement in the profits of iron, coal and steel concerns is fairly evenly divided over the three component sections; Stewarts and Lloyds, Baldwins, United Steel, English Steel, Vickers, Allied Ironfounders, Ocean Coal and Wilsons, and Powell Duffryn all showed marked improvements, and an encouraging feature is the number of smaller units who contrived to show increased profits. In motors and cycles, the vastly improved showing is almost wholly due to the wiping-out of the debit balances shown in the 1932-33 results; this has been notably the case with the Ford, B.S.A., Vauxhall, Guy and Rover concerns, which account for the bulk of the increased profits in this group. The improvement in rubber and tea companies' results is probably a first taste of the two restriction schemes; and this is confirmed by the fact that most of the increased profits in both cases was reported by concerns whose results were published in the quarter which has just ended. In textiles, again, large

debit entries were wiped out and profits again shown by concerns engaged in cotton, wool, rayon and jute (e.g. British Enka, Fine Cotton Spinners, Jute Industries). Courtaulds showed an increase in net profits of over £1,000,000; most jute concerns did very much better; and Salts (Saltaire), J. and P. Coats and British Celanese increased their net profits. Again, in the shipping group, the R.M.S.P. virtually cleared off a debit balance of over £600,000; the Orient and P. and O. increased their net profits; while smaller undertakings, especially the coastal shippers, showed general improvement. In the large Miscellaneous group, United Molasses reduced a debit balance by over £1,000,000; concerns engaged in producing newspapers, paper, books, foodstuffs, chemicals, paint, building materials, rubber manufactures (e.g. Dunlops), showed increased profits; while the big tobacco and cinema undertakings, as a whole, did not fare as well as in recent years. The shops and stores group has proved disappointing, though it now shows a very small increase in profits as against a fall of over £1,000,000 at this time last year; but many sanguine observers of our domestic "boom" expected better of it. The same is true of hotels and restaurants, whose profits are still declining, though they have increased a little in the last quarter of 1933-34. The trust group shows the biggest reduction of the year; but as trust concerns derive their income from undertakings only after the latter have reported, one must always regard the trust results with due allowance for a "time-lag" of anything between six and eighteen months. Even here, improvement is visible in the results reported in the quarter just ended.

Our next table shows how the net profits were distributed:—

DISTRIBUTION OF PROFITS*

	Net Profits after payment of Debenture Interest	Ordinary Dividend	Preference Dividend	To Reserve, etc.
1933				
Third quarter	£15,394,560	£9,417,000	61.2	£5,357,063
Fourth quarter	£21,116,780	£13,577,825	64.3	£4,937,775
1934				
First quarter	£55,751,307	£33,144,423	59.4	£12,336,342
Second quarter	£67,334,795	£34,770,452	51.6	£18,698,052
Total	£159,597,442	£90,909,700	57.0	£41,328,232
				£25.9
				£27,358,510
				17.1

The tendency to reduce the proportion going to ordinary dividends and to increase that going to reserves, upon which we have recently commented in these articles, is clear, both from the last quarter's and from the whole year's figures. Indeed, the proportion put to reserve last year is the highest since 1929-30; and, as an absolute total, the figure of £27.4 millions (17.1 per cent.) put to reserve in 1933-34 compares with £12.1 millions in 1932-33 (8.8 per cent.), £7.6 millions in 1931-32 (5.6 per cent.), and £40 millions (20.3 per cent.) in 1928-29. Preference dividends absorb a little more (£41.3 against £39.4 millions in 1932-33; or 25.9 per cent. against 28.7 per cent.). Ordinary dividends absorb £90.9 millions (57 per cent.) against £85.6 millions (62.5 per cent.) in 1932-33, and against £118.9 millions (60.3 per cent.) in 1928-29. From the two tables on page 94, showing the allocations of net profits to each category of capital in the various industrial groups, it will be noted that only rubber concerns made a net draft on reserves last year, while in the last quarter only shipping concerns did so.

The next table shows the ratio of net profits and of reserve allocations to total ordinary and preference capital:—

PROFITS AND RESERVES

	No. of Companies	Total Ordinary and Preference Capital	Net Profits after Payment of Debenture Interest	Carried to Reserve, etc.
1933				
Third quarter	307	£296,128,953†	£15,394,560	5.2
Fourth quarter	464	£417,816,381†	£21,116,780	5.0†
1934				
First quarter	547	£697,704,983†	£55,751,307	7.9

Total	1,960	£2,384,942,246	£159,597,442	6.7
				27,358,510
				1.1

† Adjusted figures.

in the same capital, between his colleague, M. Piétri, the French Minister of Marine, and Sir Bolton Eyres-Monsell. These are part of a series of bilateral conversations which are being arranged in London, on the initiative of His Majesty's Government, as one step in the preparations for next year's naval conference. The series began with the Anglo-American conversations, which we have touched upon in a previous issue. These have been adjourned while M. Piétri is in London, but they are to be taken up again; and the new Ministry in Japan has just appointed a representative to visit London and enter upon discussions of the same kind. M. Piétri is reported to have raised the question here of inviting Germany to the conference; and, whether this report is true or not, the idea has much to commend it, if we are right in our belief that the German "pocket-battleships" have turned out to be serious factors to be reckoned with by the post-War principal naval Powers. The French Minister of Marine is also reported to have expressed the view that the two projected Italian thirty-five-thousand-ton capital ships are contrary to the spirit, if not to the letter, of the Washington Treaty. The French Ministry of Marine is said to agree with the British Admiralty in desiring to limit the maximum size of capital ships to 26,000 tons, whereas the Italians have arrayed themselves—at least on paper—on the side of the Americans. These European naval problems are of serious concern to us, because, as was once pointed out by Mr Ramsay MacDonald, the British Empire is in the unique position, among naval Powers, of belonging to two groups simultaneously: the Oceanic group, in which the other forces she must take into account are those of the United States and Japan; and the European group, in which her possible rivals are France and Italy, and now, perhaps, Germany as well. Considering the gravity of the outlook in the Pacific, it will be a great embarrassment for us if we become involved in European naval competition, particularly in the Mediterranean. But it is as true on sea as it is on land that one can never get something for nothing. If this country wishes to rule out the possibility of a Franco-Italian race in naval armaments, in which we shall be compelled to join, we can only secure what we want by undertaking some kind of guarantee on the lines of Locarno in the Mediterranean. As on the Continent, we have an inescapable choice, and we cannot put off making it much longer.

* * *

A Lull in the U.S.A.—Congress stands adjourned; the seasonal contraction in business has set in; Wall Street is dull; and the only features of interest in an otherwise stagnant situation have been the shock tactics in the Chicago wheat pit, owing to the official report that the wheat harvest this year will be the worst for 30 years, and the launching by Senator Borah of a savage attack on the N.R.A. and all its works. We comment on the wheat situation in a succeeding Note. Senator Borah's attack on the President's economic politics, or political economics, was delivered in a broadcast address on the evening of Independence Day. Senator Borah castigated both the N.R.A. and the A.A.A. for their inauguration of a rigid system of monopolies and regimentation, which could only spell disaster for the backbone of the American economy—the small business man. Senator Borah laid the gravamen of his charges upon the new bureaucracy which was springing up under the two Administrations.

It is simply that meddlesome, irritating, confusing, undermining, destructive thing called bureaucracy. It is that form of government which steals away man's rights in the name of public interest, and taxes him to death in the name of recovery. . . . It must be perfectly plain that the principal work of recovery depends upon the initiative of self-reliance, resourcefulness, and energy by the private citizen. . . . For fifty years monopolies and combines had been seizing upon all the sources of supply, all natural resources, all those things which people must have in their daily lives, and had practically fixed the price at which people should enjoy them.

Nevertheless, Senator Borah did not attempt to make political capital for the Republicans out of his attack; both political parties came under his lash for their passivity

and acquiescence "while small business is struggling for existence." This reads like the old plea for "rugged individualism," which did very little in the last fifty years for the American small man, except to give him an opportunity to join the ranks of the favoured few monopoly-millionaires. Nevertheless, on the evening of July 7th, Senator Lewis, the chairman of the Democratic Senatorial Campaign Committee, issued a statement in which he said that the President was anxious to relieve business from uncertainty both about the future and about Government interference.

He desires particularly to know where business feels that legislation lately passed is inappropriate to its welfare, and where some change in legislation would best serve the general uses of legitimate business.

and Senator Lewis stated that the President would not wait till after the Congressional elections to pass further legislation which he considered necessary for sound recovery. This is thought to foreshadow legislation limiting the bureaucratic powers of N.R.A. The announcement last Wednesday that General Johnson had recommended to the President that he, General Johnson, be relieved of his duties, as the direction of N.R.A. should no longer be a "one-man job," but should be transferred to a non-partisan board of experts, is in this connection significant. Apparently the New Deal is to be further modified. Meanwhile interest is mainly focussed on the problem of the Government's financing, and on the probable trend of the business tide in the autumn.

* * *

Dr. Goebbels and Lies.—The acute sensitiveness of the Nazi leaders to foreign criticism is one of the more remarkable features of the present regime in Germany. When General Göring released Dimitroff last spring, he announced that his chief motive for detaining him in prison for two months after acquittal was a desire to prove his own indifference to the demands of the foreign Press! Now Dr. Goebbels has devoted the whole of his first full-dress broadcast since the events of June 30th to a denunciation of foreign newspaper "lies." In the course of this oration Dr. Goebbels spoke of "foreign correspondents in Germany who inflame the peoples against each other," of "hysterical and pathological outbursts of fury and hatred," of "evil revolver-journalism" and of "professional lie-manufacturers poisoning world opinion." Dr. Goebbels's anger at his inability to censor any but German newspapers is evidently reaching exasperation point. Indeed, in view of the language he uses, we can well believe the report that the principal Nazi chiefs have been suffering from acute nervous tension in the last few weeks. It is natural, in any case, that the atmosphere of rumour, suspicion and hysteria that they themselves have created should be beginning to drive their own wits astray. And Dr. Goebbels's personal peace of mind cannot have been enhanced by the fact that he is widely believed to have been associated with the late Captain Röhm in opposing the disbandment of the Brown Shirts. Among the newspapers singled out for special denunciation by Dr. Goebbels were the *Daily Herald*, the *Morning Post*, the *Daily Telegraph*, the *Manchester Guardian*, the *Daily Mail*, the *Paris Œuvre*, *Matin*, *République*, *Intransigent*, *Paris-Soir*, *Information* and *Figaro*. A wonderful unanimity of "liars"! So wonderful, indeed, that some of the principal London and Paris newspapers omitted from this list may well feel mortified by the omission—though since the whole staff of Dr. Goebbels's Propaganda Ministry must already be working overtime reading, translating and filing all the newspapers of the world, the omissions are perfectly understandable. Having completed his black list of foreign "lie-manufacturers," Dr. Goebbels proceeded, with a rich irony of which even he was perhaps not entirely unconscious, to a glowing eulogy of the "dignified, noble and decent" conduct of the German Press under his direction, of its "praiseworthy discipline and solidarity," and of the "unexampled candour" with which the events of June 30th had been reported to the German people. Unexampled candour! Yet Dr. Goebbels himself, speaking a week after these events had taken place, refrained even from informing the expectant German people of the names of those who had been shot.

A Cabinet Re-shuffle in Austria.—The tale of violent repression in the German Nazi ranks at first reassured both Austrians and foreign observers of Austria's plight. It was thought that after Herr Hitler's conversation with Signor Mussolini and after the execution of Chief-of-Staff Röhm and the purge of the Bavarian S.A., the propaganda directed from Munich against the Austrian Government would subside. Actually, it has not done so. And on Tuesday the Austrian Cabinet was re-shuffled in such a way that the Heimwehr predominance is further strengthened. Prince Schönburg-Hartenstein, the veteran War Minister, leaves the Cabinet "for family reasons"; so does the Mayor of Vienna, a Minister without portfolio; Dr. Ender, the Landbund Minister for redrafting the Constitution, is dropped; so also the two Landbund State Secretaries; Dr. Schuschnigg, the leader of the Catholic *Sturmscharen*, who hitherto held the Education and Justice portfolios, gives up the Justice portfolio to Herr Waldeneck, the leader of the Styrian Heimwehr. Major Fey is no longer Minister of Public Security, but becomes "General State Commissar for extraordinary security measures to combat attempts against the State"; and Chancellor Dollfuss again emulates Signor Mussolini's ministerial pluralism by assuming the rôles of Chancellor, Foreign Minister, Minister of War, Minister of Public Security, and Minister of Agriculture. These moves concentrate power in the hands of Chancellor Dollfuss and of the Heimwehr; but whether the embittered workers of Vienna and the politically doubtful peasants in the country as a whole will eschew the Nazis and cleave to Dr. Dollfuss's new Government, depends entirely on how the new Government handles the still critical Austrian situation, and the still sceptical working population. Viewing the recent "disciplinary action" in the German Nazi ranks, however, the workers and peasants of Austria may well decide that "Holdfast is the only dog."

* * *

The Riots in Amsterdam.—Last week the world was startled by an outbreak of violence in a country and a city which are normally among the most orderly, peaceable, contented and prosperous in the world. The Communist rioting in Amsterdam began on the night of the 5th and went on fiercely for four days. The police had to be reinforced by troops, and seven people in all have lost their lives, while more than fifty have been injured. There have been lesser disturbances in Hilversum, Groningen and Rotterdam; and the latter city is still showing signs of restlessness this week. In Holland, such events are a portent; and their social and political significance is as great as that of much larger casualty lists in regions further East. When we seek for the cause of this Dutch explosion we find it in the direction which was indicated in the despatch from our correspondent in Holland which we published the week before last. It is the consequence of the Dutch Government's desperate attempts to keep the country on the gold standard. With dwindling exports and a falling public revenue, the Dutch

have sought to balance their budget by cuts which have been as ruthless as those which Dr. Brüning, in a similar situation, was constrained to make in Germany, and which Herr Hitler may now have to carry further. The Dutch authorities have been drastically cutting official salaries and unemployment benefit. Last year some thousands of former recipients of benefit were struck off the roll, and those who remained on it saw their benefit reduced again last week. This latest cut seems to have produced a widespread explosion of anger among the population of the poorer quarters of Amsterdam; and the Communists and Revolutionary Socialists gave this spontaneous feeling an ugly vent in "direct action." Violence has now been repressed by violence, but this is only a temporary cure. The moral is not that Holland is ripe for Communism, but that in an established community you cannot manipulate wages and prices beyond a certain point without endangering social tranquillity; and that if the maintenance of a given financial policy involves the overstepping of that point, the course of wisdom is to readjust the policy rather than to imperil the State.

* * *

The New Ministry in Japan.—The fall of Admiral Saito's Ministry, which followed the exposure of financial misconduct on the part of one of its members, has been followed in its turn by the formation of a new Government under the prime-ministership of Admiral Okada. The choice of another admiral—which was made by the Emperor on July 4th after consultation with the surviving elder statesman, Prince Saionji—shows the seriousness with which the Japanese are taking the forthcoming naval conference of 1935. At the same time, Admiral Okada is said not to have been numbered among the most violent opponents, in Japan, of the London naval treaty of 1930; and he is a statesman of the same school as Admiral Saito; so that we probably have not to expect any striking change in Japanese foreign policy in consequence of a change of Ministry, which has, after all, been the result of purely internal events. The new Ministry was formally installed last Sunday. It includes two members of the Seiyukai Party—or, rather, ex-members, since they have been expelled from the party for having persisted in accepting their appointments in spite of the decision of their party leader, Mr Suzuki, that the new Government should not receive the party's support. This decision was apparently taken after Mr Suzuki had got his way with the new Government on the question of leaving out Mr Takahashi, the late Minister of Finance, on account of his official responsibility in regard to the financial scandals over which the late Government fell. It appears that the reason for Mr Suzuki's non-co-operation is a personal one—the fact being that Admiral Okada is not so polished a political negotiator as his predecessor. But whether a Japanese Government, nowadays, enjoys or does not enjoy the support of this party or that is little more than an academic question. For the generals and admirals manifestly have the will and the power to rule

Japan *de facto* in the present chapter of Japanese history. The most that a civilian Minister of Finance, in such a Cabinet, can hope to do is to pare down the huge naval and military estimates, without being able to exercise any serious influence over the policy which those estimates reflect.

* * *

The Pendulum in Spain.—The latest phase of the Spanish Revolution has been a backward swing of the pendulum, which is a normal occurrence in all revolutions, but is also not without its own special dangers. The first danger is that the forces of the moderate Right may be so elated at the discovery that they are not "down and out" after all, that they may push their counter-offensive further than is wise. The second danger is that the moderate Left, disillusioned and exasperated at finding itself no longer the unchallenged master of the field, may be tempted to resort to acts of violence. Taken together, these two dangers involve a possibility of civil war. Yet we may venture to expect that Spain will not be overtaken by this calamity, seeing how many times already she has escaped from apparently imminent disaster during the three years and more that have now passed since the Revolution began. In the country as a whole, the public is manifestly reacting, just now, rather strongly in favour of certain elements, at any rate, in the old order—as was shown, for example, by the enthusiasm with which the traditional Easter celebrations were resumed this spring. But this does not mean that the classes and the institutions which battered on the old order would be safe in assuming that they can now comfortably clamber back into the saddle. Meanwhile, the general movement towards the Right in other parts of the Peninsula has been traversed by a Leftward movement in Catalonia; and this disharmony in the momentary political tendencies of the whole and the part has made the strain upon Catalan-Castilian relations really dangerous for the first time since the fall of the Monarchy. The enactment by the Catalan Parliament at Barcelona of a land-law which has been disallowed by the Tribunal of Constitutional Guarantees at Madrid, and has then been re-enacted at Barcelona, raises the constitutional issue in an acute precise form. The situation is complicated by the fact that the Esquerra (the Catalan Party of the Left) is now dominant in the Parliament at Barcelona, while in the Catalan representation in the Cortes at Madrid the Lliga (the Catalan party of the Right) is still in a majority. This has been leading Barcelona to put a spoke in the wheel of All-Spanish parliamentary politics—a manoeuvre which is naturally resented by the Castilians, who can hardly tolerate a Catalan domination in Madrid. All the same, we believe that two factors—the formidable difficulty of keeping order in Barcelona and the urgent necessity for preserving the Castilian market for Catalan manufactures—will restrain the Catalans, even of the Left, from very extreme courses.

* * *

A Gesture from New Zealand.—New Zealand has shown herself much more willing than either Australia or Canada to carry out the spirit of the Ottawa Agreements—which is not surprising, perhaps, considering that we take over 80 per cent of New Zealand's total exports. It is announced this week that an important series of reductions is to be made in the tariff on British manufactured goods. The goods affected include iron and steel manufactures, chemicals, gramophones, food products, cement, furniture, hosiery, boots, millinery and leather manufactures. In some cases the duty is abolished entirely, and in others it is reduced by 50 per cent., 33 per cent., 25 per cent., or 15 per cent. The preference on British motor cars has also been increased. In an article in the *Economist* of June 23rd we showed that there was still room for an appreciable increase in New Zealand's imports from Great Britain. An examination of the figures there given suggests that the present tariff concessions are genuine—after our experience with Canada some scepticism must be pardoned. This impression is confirmed by the statement of New Zealand Labour spokesmen this week that the new duties would throw local secondary industries "to the wolves" and create further unemployment.

ment. New Zealand's gesture, in fact, appears to be a sincere effort to assist the expansion of Empire trade. It is as unfortunate, therefore, as it is ironical, that at this very moment the British Government should be threatening the New Zealand farmers with a compulsory restriction of their imports into this country.

* * *

Employment in June.—The Ministry of Labour's estimate of insured persons in employment in Great Britain on June 25th, at 10,163,000, shows a decline of 24,000 as compared with May 14th, but an increase of 419,000 on June, 1933. The number of unemployed persons on the registers of employment exchanges rose from 2,090,381 on May 14th to 2,092,586 on June 25th, but shows a fall of 345,522 as compared with the corresponding month a year ago. Of persons normally in regular employment, the number wholly unemployed declined sharply from 1,658,677 on May 14th to 1,563,432 on June 25th, but the number temporarily stopped rose from 341,028 to 447,320 during the same period. The number of unemployed persons normally in casual employment decreased from 90,676 to 81,834. The following table shows the changes in the total number of unemployed on the registers in various administrative divisions:—

Decreases		Increases	
Scotland	20,243	North-East	30,551
South-East	13,209	Midlands	25,356
South-West	13,168	Wales	9,275
London	10,862		
North-West	5,495		

Examination of changes in the number employed by various industries shows that the upward movement in the curve of unemployment is due to a very marked seasonal decline in employment in the coal trade. This decline may be ascribed in a large measure to the warm weather and the consequent fall in the demand for house coal. But, despite this recession, employment in June was still better than a year ago. If the increase in unemployment in the coal trade between May and June had been the same as in 1933 (when it was 11,098) the total number unemployed in Great Britain would have shown a further decline of 51,613, instead of a rise of 2,205. The next table shows the most important changes in the number of unemployed insured workers in various industries on June 25, 1934, as compared with May and the corresponding month a year ago:—

Comparison with May 14, 1934

	Increase (+)	Decrease (—)
Coal mining	+ 64,916	
Woollen and worsted	+ 12,380	
Tailoring	+ 8,612	
Motor vehicles, cycles and aircraft	+ 3,299	
Boots, shoes, slippers, clogs	+ 3,171	
Cotton	+ 3,082	
Pottery, earthenware, etc.	+ 1,945	
Distributive trades	— 11,182	
Engineering	— 8,922	
Dock and harbour service	— 7,533	
Hotel and boarding house service	— 7,500	
Shipping service	— 3,707	
Road transport other than tramway and omnibus service	— 2,747	
Iron and steel manufacture	— 2,416	
Shipbuilding and ship repairing	— 1,974	
Printing, publishing and bookbinding	— 1,801	
Electric cables, apparatus, lamps, etc.	— 1,502	

Comparison with June 26, 1933

Engineering	— 70,037
Building	— 36,274
Metal goods manufacture	— 32,737
Coal mining	— 26,469
Iron and steel manufacture	— 25,866
Shipbuilding and ship repairing	— 22,216
Distributive trades	— 20,265
Cotton	— 17,731
Motor vehicles, cycles and aircraft	— 16,353
Woollen and worsted	+ 16,197

A substantial number of industries recorded further progress between May and June. The steady downward movement in unemployment in the iron and steel and engineering industries is particularly encouraging. The number of unemployed in engineering alone shows a decrease of 70,037 on June, 1933. On the other hand, the rapid deterioration of the wool textile industry, discussed in the *Economist*

of June 9th, is discouraging. The wool trade is one of the very few branches of activity to show an increase in unemployment as compared with June, 1933. The cotton trade, which a year ago recorded a decrease in unemployment between May and June, also recorded an increase this year. On the other hand, the increase in unemployment in the tailoring and motor-car trades can be ascribed largely to seasonal influences.

* * *

Wheat in the United States.—Following a decline from 102½ cents per bushel on May 31st to 87 cents per bushel at the beginning of July, the price of No. 2 wheat (nearest future) in the Chicago wheat pit has begun to rise steeply on the publication of the official crop estimates on July 10th. The yield of this year's winter wheat crop is estimated by the United States Department of Agriculture at 394 million bushels, as compared with an actual yield of 351 million bushels a year ago and one of 476 million bushels in 1932. The spring crop is expected to yield 89 million bushels, against 176 million bushels in 1933 and 268 million bushels in 1932. At 483 million bushels the total United States wheat harvest this year will therefore be 44 million bushels below the abnormally low figure of last year and 264 million bushels below that for 1932. As the normal annual wheat requirements of the United States are in the neighbourhood of 650 million bushels, she will not only be unable to export appreciable quantities, but will have to use up a large proportion of her stocks. According to the Food Research Institute of Stanford University, California, wheat stocks at the end of the current season (June 30) amounted to about 260 million bushels. Given a crop of 483 million bushels this year, total supplies for the season ended June, 1935, will be only about 743 million bushels, as compared with 916 million bushels in 1933-34 and 1,126 million bushels in 1932-33. The present year marks, therefore, the end of a long period of excessive supplies in the United States, and the sharp rise of prices in Chicago from 87½ cents per bushel (July future) on July 10th to 92½ cents per bushel on July 11th is therefore scarcely surprising. In fact, it is more than probable that the advance will continue to well over one dollar per bushel. Although there was a similar sharp, but only temporary, rise to nearly 120 cents per bushel a year ago, present circumstances favour the maintenance of a higher level of prices. While reports that the United States will have to import wheat during the next season are exaggerated, her supplies exceed requirements by only a modest margin. As the present import duty on wheat in the United States is 42 cents per bushel, a further increase in quotations above world prices is quite probable despite the fact that current quotations are already 25 cents per bushel higher than in Argentina. As the United States will for all practical purposes disappear from the export market, and since internal prices bear little relation to world prices, the former predominant influence of Chicago on other wheat markets will be further diminished. Moreover, the high level of internal wheat prices will provide a strong stimulus to an increase in acreage, and although there are as yet no indications that the United States Government intends to give up its intention of a further reduction in acreage next year, it may well be forced to do so under the influence of political pressure.

* * *

British Shipbuilding.—The latest returns issued by *Lloyd's Register* reveal a further substantial expansion in the activity of the British shipbuilding industry. Gross tonnage of mercantile vessels under construction at the end of June was 587,142, as against 481,440 at the end of March, and 287,502 a year ago. But although tonnage under construction at the end of June was higher than at any time since the end of March, 1931, it was only 40 per cent. of the quarterly average of 1929. The improvement in British shipbuilding during the past quarter was much more pronounced than abroad, for tonnage under construction in other countries at the end of June, at 629,198, shows an increase of only 31,000 tons as compared with the end of March. Consequently, the British proportion of the

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK

LIMITED

Head Office: 41 LOTHBURY, LONDON, E.C.2

tonnage under construction in the world as a whole rose from 39.2 at the end of June, 1933, to 44.6 in March, and 48.3 in June, 1934. The increased tonnage under construction is, however, mainly for British shipping concerns. Of the total tonnage under construction at the end of June, only 15 per cent. was intended for registration abroad or for sale, as compared with 21 per cent. at the end of March and 19 per cent. a year ago. Another interesting feature revealed in *Lloyd's Register* is the advance of the oil engine in overseas countries. Of the total tonnage under construction in this country at the end of June only 48 per cent. were motor ships, as compared with 66 per cent. abroad. Gross tonnage launched in this country during the second quarter of 1934 was 35,954, against 34,839 in the previous quarter and 11,036 during the corresponding quarter a year ago. Launchings abroad rose from 51,263 gross tons in January-March to 113,438 gross tons in the past quarter. Unfortunately, tonnage commenced in this country during April-June, at 146,653, recorded a reduction of 56,359 on the previous quarter. The decline in tonnage commenced abroad from 258,048 to 125,912 was even more pronounced. Of the total tonnage under construction abroad at the end of June, Japan accounted for 137,280, France for 104,500, Germany for 91,145, Denmark for 66,650, and Holland for 54,765.

* * *

Coal Mining Results.—The quarterly statistical summary, issued by the Mines Department, reveals a further improvement in the coal-mining industry during the first quarter of 1934. Production in that quarter was bigger, and profits per ton were higher, than in any quarter since January-March, 1930:—

Period	Tonnage Dis-posable (Mill.)	Costs per Ton		Proceeds per Ton	Profit per Ton	Output per Man-shift	Earnings per Man-shift
		Wages	Total net				
1930		s. d.	s. d.	s. d.	s. d.	Cwts.	s. d.
1st quarter...	60.0	9 2	13 4	14 5	1 1	21.84	9 3
2nd " "	51.8	9 5	14 1	13 11	— 0 2	21.32	9 8
3rd " "	50.1	9 5	13 11	13 9	— 0 2	21.34	9 4
4th " "	52.6	9 3	13 7½	14 1½	0 6	21.84	9 4
1931							
1st quarter...	52.2	9 2	13 6	14 3	0 9	21.78	9 2
2nd " "	47.5	9 3½	13 11	13 10	— 0 1	21.44	9 2
3rd " "	45.3	9 4½	14 0	13 10	— 0 2	21.35	9 2½
4th " "	50.9	9 1½	13 6	14 1	0 7	21.86	9 2
1932							
1st quarter...	49.6	9 1	13 6½	14 0½	0 6½	21.88	9 2
2nd " "	46.1	9 1½	13 10	13 8	— 0 2	21.78	9 2
3rd " "	40.9	9 3½	14 2½	13 7½	— 0 7½	21.50	9 2
4th " "	48.9	8 9½	13 2½	13 1½	0 9	22.62	9 2½
1933							
1st quarter...	49.9	8 9	13 1½	13 1½	0 9½	22.67	9 1½
2nd " "	42.8	8 11½	13 9½	13 4½	— 0 4½	22.07	9 1½
3rd " "	42.7	8 11½	13 8½	13 3½	— 0 5	22.05	9 1½
4th " "	50.9	8 6½	12 9½	13 6½	+ 0 9	23.00	9 1½
1934							
1st quarter...	53.1	6 5½	12 7½	13 7½	+ 1 0½	23.32	9 1½

The commercially disposable tonnage raised during the first quarter of 1934 exceeded that of the corresponding period in 1933 by 3.2 million tons. The rise in output reflects the increase in home industrial demand, as exports (including coal shipped for the use of steamers) in January-March, 1934, were slightly lower than during the corresponding period a year ago. Total proceeds in the first quarter of 1934 were £36,202,666, against £33,995,510 in the previous quarter and £34,685,641 in the corresponding quarter a year ago. Net costs of production amounted to £33,476,885, as compared with £32,132,021 in the last quarter of 1933 and £32,672,471 in January-March, 1933. Proceeds therefore exceeded net costs by £2,725,781, as compared with £1,863,489 in October-December and £2,013,170 in

January-March, 1933. All districts were able to record a profit, but the profit margins per ton were very unequal for the various districts. Thus the profit per ton was only 0.0rd. in Durham and 1.06d. in South Wales and Monmouth, as compared with one of 2s. 7.49d. in the district comprising parts of South Derbyshire, Leicestershire, Cannock Chase and Warwickshire. The most striking feature revealed in the statistical summary of the Mines Department is the steady increase in the output per man-shift and the consequent decline in the wages cost per ton. This increase in efficiency is encouraging, and it is to be hoped that the process of rationalisation will be speeded up in other directions, for a substantial reduction in costs is the only way out of the difficulties of this industry.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

MORE LABOUR TROUBLES

WITH the adjournment of Congress, security markets have become more apathetic than before. On the whole, business news is rated as disappointing. With the passing of the strike threat, steel operations have fallen sharply, and this has been accompanied by a partial reduction in steel prices. Retail trade, at least in the New York area, has been rather discouraging. Meanwhile, labour troubles continue to fill the newspapers. The great waterfront strike on the Pacific Coast has virtually tied up all the ports north of Los Angeles for weeks; a mediation board has been appointed under the provisions of the recently enacted Wagner Law, and it is expected that the protracted contest will soon be settled.

An important labour dispute has arisen in Tennessee which may test the authority of N.R.A. The details are obscure, as the accounts given to the Press by the employers and by the N.R.A. officials differ widely, but in substance the controversy is clear. A hosiery mill in Harriman, Tennessee, employing about 650 hands, developed a dispute with a minority of its employees who were affiliated to the Federation of Labour. This minority went on strike, and their places having been filled, they were refused reinstatement. The N.R.A. thereupon took away from the mill its Blue Eagle, which automatically placed it under boycott from any consumer receiving Federal aid funds. It appears that the mill was working on orders placed by the relief agencies of the State of Pennsylvania; and, with these orders cancelled, the mill was obliged to close. The mill is the sole industry of the locality, and local sentiment and the indignant employees have supported the owners.

The case was investigated by agents of the Department of Justice, who reported that the mill had violated no law or code provision. The N.R.A. has refused to accept this finding, and the mill remains closed. The case is likely to be carried into the courts, and it has already become something of a *cause célèbre*. The removal of the Blue Eagle is a real penalty upon an offending factory, for with the ramifications of Federal enterprise and relief, there is scarcely a concern that can afford the risk of a Federal boycott. The Ford Company, although it adheres to the automobile code, still persists in refusing to accept a Blue Eagle; and this excludes it from an important market. As yet, however, open conflict between Ford and N.R.A. has been avoided.

MODIFICATIONS IN N.R.A.

N.R.A. itself is undergoing important modifications. Some forty industries, classified as service industries, have now been released from their codes, having discovered that all efforts to comply with them proved futile. Even more important is the weakening of the cartel price-fixing systems. In part, the initiative for these changes appears to be coming from the Consumer Advisory Board within N.R.A. itself; in part it is due to consumer resistance to

the price schedules fixed by the cartels. It is, of course, impossible to forecast how far these modifications will be carried, for essentially the National Recovery Act is a flexible measure. Extreme critics of N.R.A. assert that it is "breaking down"; actually it would appear rather that certain features of N.R.A. as initially developed have proved to be unworkable, or have encountered strong public opposition, and that these features are gradually and empirically being modified or eliminated.

The famous Section 7 (a) regarding collective bargaining is still a source of dispute, although the Wagner Law may be helpful in adjusting such difficulties, which are sometimes not quarrels between employer and employee, but between rival organisations of employees, the section usually, but not always, being invoked by the minority organisation. The other major point of controversy under N.R.A. has been associated with monopoly practice and price controls. The immediate task of N.R.A., and the one to which it is addressing itself at present, seems to be the definition of the mutual rights of employer and employee under Section 7 (a); and a reconciliation of the monopolistic tendencies in the code with both the law and public opinion as laid down in the anti-trust Acts. Essentially these are problems of administration, only to be solved by experience over a period of time.

NEW YORK, July 1.

FRANCE

M. BARTHOUS TRIP AND THE GERMAN CRISIS

PARLIAMENT went into recess on July 6th, and the announcement of the end of the session was applauded in the Chamber. Such applause is rare. It shows how since February 6th Parliament has been, as it were, inhibited. It has never taken the initiative, but has left to the Doumergue Government complete freedom of action in both foreign and domestic policy.

M. Barthou's trip to London has been followed with close interest here, though French opinion is not expecting any far-reaching changes in British (or French) foreign policy. In any case, it was the British Prime Minister who invited M. Barthou to London. Nevertheless, the recent German disturbances have naturally given the London conversations a new importance, and it is held in France that the German crisis has "legitimised" the diplomatic position of France on the European chessboard. The *coup de main* at Munich has certainly strengthened the authority of the Doumergue Cabinet.

The day after the Chamber's departure the Government promulgated a series of decree-laws, some referring to the Fiscal Reform project and others to the public works scheme for relieving unemployment. The Fiscal Reform decrees provide for the simplification, reduction and abolition of various taxes. The suppression of the "luxury tax" chiefly affects the automobile, jewellery, scent, and tourist

CHEMICAL BANK

6 BISHOPSGATE, E.C.2

industries. The Government has decided to reduce from 17 per cent. to 12 per cent. the rate of tax on registered securities. It wishes to make registered securities more popular in France, since they are less susceptible to fiscal fraud than bearer securities.

The situation of the Treasury has considerably improved in the last few weeks, and deposits in the "Caisse d'Epargne" have increased. In June these deposits exceeded withdrawals by 90,992,358 francs. During the same month the sum spent by the public "caisses" in buying rentes on the Bourse amounted to 28,681,634 francs, made up as follows:—

	Fr.
Caisses d'épargne ordinaires.....	14,681,305
Caisse Nationale d'Epargne	13,637,299
Caisse des Dépôts et Consignations	363,030
Total.....	28,681,634

The Metropolitan Company has issued to the public a 5 per cent. loan of 35 million francs, guaranteed by the City of Paris, at a price of 890 for 1,000-franc bonds.

THE CAMPAIGN AGAINST UNEMPLOYMENT

Compared with a year ago, unemployment is still increasing. On June 30th the number of officially registered unemployed was 310,934, or 58,659 more than a year ago. Unemployment in the last three years has moved as follows:

	1932	1933	1934
January	248,154	316,259	332,926
February	303,422	330,874	350,830
March	303,218	319,240	345,783
April	299,766	309,572	334,519
May	285,576	283,068	323,427
June.....	263,162	263,892	310,934

M. Marquet, the Minister of Labour, estimates at nearly 1,000 million francs the sum which will be spent on unemployment this year. For the public works programme the State will use a part of the funds accumulated by the Social Insurance Funds. Besides this, the railways have been authorised to raise 2,725 million francs in addition to the sums already approved. The railway expenditure is to include 1,300 millions for signalling improvements and 1,300 millions for electrification. The Government has given an assurance to the French coal-mining industry that only those lines which use foreign coal will be electrified.

According to the statistics of the Central Coalmining Committee, French mines produced 3,959,355 tons of coal and lignite in the 24 working days of May, compared with 3,970,155 tons in 24 working days in April, and 3,948,722 tons in 26 working days in May, 1933. Production per working day was 164,973 tons in May, 165,423 tons in April and 151,874 tons in May, 1933. The number of registered workers fell from 249,682 at the end of May, 1933, to 240,406 at the end of April, 1934, and 238,200 at the end of May.

The Suez Canal Company announces that in the first half of the year receipts were 433,460,000 francs, compared with

416,810,000 francs in the first half of 1933. The following are the monthly receipts:—

	1933 Fr.	1934 Fr.
January	71,400,000	78,230,000
February	64,620,000	66,780,000
March	76,220,000	77,000,000
First quarter.....	212,240,000	222,010,000
April	72,620,000	76,370,000
May	69,880,000	73,020,000
June.....	62,070,000	62,060,000
Second quarter	204,570,000	211,450,000
First six months	416,810,000	433,460,000

The increase in receipts in the first quarter of 1934, compared with 1933, was about 4 per cent. It has been smaller in the second quarter owing to a reduction of tolls on April 1st, but has remained a little over 3 per cent.

PARIS, July 11.

GERMANY

WHO SHALL CLEANSE THE CLEANSERS?

THE Nazi Party has now been cleansed, and those who remember "the priest who slew the slayer and shall himself be slain" are asking to-day in Germany: "Who shall cleanse the cleansers?" The answer so far is The Reichstag, which has been summoned (auspiciously for Friday, July 13th) "to hear a governmental declaration." The declaration will not improve on the plea of the Propaganda Minister, Dr. Goebbels, on July 10th, that "In Germany June 30th passed without friction (*reibungslos*). The Reichstag session will also pass without friction, for potential friction-makers, having lost their lives, have necessarily lost their votes. Also, "dissatisfaction," judicially a mere matter of five years' imprisonment (a court judgment of the past week) is now officially proclaimed a capital offence, imposable by "special" courts. General Göring, as he says, "extended the Action" to include certain dissatisfied (*unzufriedene*) persons, who died to make a Nordic holiday for Voltaire's Dr. Pangloss.

A dissatisfied Reichstag, even if spared the menace of a second "Action," could hardly disentangle the confusion of Governmental statements so far made. This confusion arises from the vast variety, and varying measure, of the alleged offences of the killed persons. The list of dead, officially "admitted" to include some 60, but still, in the rhetoric of the Leader's deputy, Herr Hess, only "one dozen," all "traitors," embraces Nazis, anti-Nazis, non-politicians, plotters, mere intriguers—whereat definition begins to wear thin—"reactionaries," an odd Catholic or two, and outlaws like that ex-Prime Minister of Bavaria, against whom the Leader had old grudges. There are also unclassifiables. Finally (in addition to some shot by mistake) many mere "dissatisfied" persons were compelled to give satisfaction. Why the ultra-dissatisfied Von Papen escaped is a matter of conjecture.

As it is hard to bring this miscellany of summarily eliminated wickedness under a single *raison d'état*, the Nazi jurists have intervened. Herr Hitler, they affirm, has, as founder of the Brown Army, a right to kill any member of that Army; by extension he has a right to kill anyone not in the Army. With flourishes about Justinian, Charlemagne, and "the essentially non-Germanic Roman Law," this argument has been made convincing. It is added by Nazis that precipitate killing in panic or cruelty cannot be imputed; the "Action" was prepared in praiseworthy cold blood. Dr. Goebbels eulogises his Leader's composed spirit of "mercilessness," and—perhaps because relations with General Göring are none of the best—gives the Chancellor the chief credit. Dr. Goebbels is the only prominent Nazi with sufficient refinement of mind to elaborate irony or to launch a *double entendre*; and his story, while giving the Leader all the praise conceivable, contains certain anti-Hitler ambiguities which might be cited in Dr. Goebbels's defence if a day of reckoning ever comes. Dr. Goebbels, that is, affirms that the Leader "long ago" knew of the corruption and moral perversity of the friend

(Incorporated in Canada in 1895 as a Limited Company.)

to whom he had entrusted the "moral regeneration" of 2,500,000 German youths; yet the Leader only remonstrated—until the foibles of corruption and debauchery were aggravated by the crime of disaffection.

THE END OF HITLERISM

The Hitler Administration, it seems, is likely to remain in office, maintaining itself by further terrorism and inspired by its master-passion, fear, for some time to come—provided that the soldiers do not put it out, which they could do in half an hour. But *Hitlerism* appears to be dead and done with. This is not because of the disgust of the population. Such disgust is ascribed to the wickedness of "the eternally discontented" (to quote General Göring), and as long as rifles let loose bullets "without friction," it will not be publicly expressed. The disappearance of Hitlerism as such is a consequence rather of the disappearance of the Brown Army. Of Hitlerism, the Brown Army was the outward and visible sign. Hitlerism, as Herr Hitler establishes in his book *Mein Kampf*, was a matter of "The Street," and to the Brown Army "The Street" belonged. With the end of the Army processions, the twenty-yards long banners, the street-corner loud-speakers, and the shouting of militant war-songs, this effective and demonstrative Hitlerism has ended; and outwardly to-day Germany is less Nazi than it was during the pre-Nazi administration. No further killing of traitors will restore the Brown Army's prestige. That Army was killed by the Party's inordinate craze for size, by the lack of homogeneity inevitable in organisations that place numbers first. A genius could not permanently control a peace force of 2,500,000, and Nazis are certainly not geniuses.

Nor could the espionage of Brown Army man upon Brown Army man, or the terror of the Secret Political Police, prevent disintegration. The S.A. force decayed not because it was morally rotten but because it was not consistently morally rotten. In its original state, recruited from hooligans and corner-boys, it was homogeneous and efficient. Later, but before Hitler attained office, it was adulterated with multitudes of honest if deluded enthusiasts; finally Herr Hitler, now Chancellor, forced into it fresh multitudes of unwilling young men of decent upbringing, good morals, and high education and intelligence. Therewith the Stamboul legend that "the good Janissaries corrupted the bad" was transferred to Munich and Berlin. The Brown Army of June, 1934, was no more a Hitlerite Army than the army of Great Britain is Conservative or Liberal; it was a conscript force representing the nation, good, bad and indifferent, and therefore without any particular moral or immoral bond.

The much smaller S.S. Army, still intact, may prove a more reliable Hitlerite instrument against "plotters" and "the dissatisfied"; but as a military force it is contemptible, and could be swept out of existence by one battalion of the Reichswehr. The prevailing feeling, and indeed the prevailing hope, is that this will happen soon. But Germans, least of all military men, are not enterprising revolu-

tionaries; and the present anarchical condition, in which the life of no man who arouses Governmental suspicion, resentment, or greed, is safe, may even yet continue for a time.

BERLIN, July 10.

JAPAN

IMPORTS AND EXPORTS STILL EXPANDING

THE course of foreign trade continues to be altogether satisfactory, the figures for both imports and exports for the month of May being the largest for many years. The trade returns for May show that, in comparison with May, 1933, imports, at 219,894,000 yen, increased by 39.3 million yen, or 21.8 per cent.; and exports, at 191,866,000 yen, by 29 million yen, or 17.9 per cent. The trend was generally the same as in the previous month. Imports of raw cotton, raw wool, oil-cake, crude rubber and beans show a substantial increase, whereas iron and steel alone reveal a marked decrease. On the export side, cotton piece-goods, rayon manufactures and machinery have done considerably better, while raw silk recorded a heavy decline. The visible passive balance for May was 28,028,000 yen as against 17,768,000 yen for the corresponding month last year. For the first five months of the year the excess of imports over exports was 137,366,000 yen against 212,147,000 yen.

Company reports for the past six months, so far published, disclose decidedly favourable results in general, and dividend increases and resummptions have been more numerous. A number of textile firms, mining companies, steelworks, shipping companies and rubber plantations earned increased profits and paid larger dividends, whereas oil companies decreased their dividends, being hard hit by Russian competition. The Mitsubishi Mining Company increased its dividend by 2 per cent. to 12 per cent. Nippon Yusen Kaisha paid a 3 per cent. dividend for the first time for several years. But the Japan Oil Company was forced to reduce its dividend from 5 to 3 per cent.

Agriculture, however, is suffering acutely from the disastrously low price of cocoons. Spring cocoons, which are now arriving at the markets, are quoted at far below three yen per kamme, or nearly half the prices of a year ago. A heavy carry-over of raw silk from the silk year just closed remains a depressing influence on silk prices and recovery in cocoon prices cannot yet be expected. The National Federation of Cocoon Raisers' Guilds and other similar bodies are making representations to the Government, demanding immediate action to relieve the distress caused by low prices. It is doubtful whether any effective remedial scheme can be improvised, for artificial relief measures would be liable to defeat themselves, as they have always done in the past.

CREDIT EXPANDED TO RECORD LEVEL

The Bank of Japan's wholesale index number for May showed a drop of 0.4 per cent. on the month. The deposits of the Tokyo clearing banks for last week totalled 2,420 million yen, a record for all time. The rising tendency in security prices has been reversed, principally owing to political uncertainty. The aggregate value of all shares listed at the Tokyo Stock Exchange on June 1st recorded a fall of 88.9 million yen, or 1.45 per cent., compared with a month ago.

According to the statistics lately published by the Home Office, the number of trade disputes involving stoppages of work in 1933 was 610, in which 49,400 workpeople were directly involved, and the aggregate time lost was approximately 384,000 working days. As compared with 1932, the number of disputes decreased by 283, the fall in the number of workers involved being 5,000, and the drop in time lost being 234,000 working days. The 1933 figures are the smallest recorded since 1926. Of 610 disputes, 392, involving 33,900 workpeople, or 64.2 per cent., arose from demands for advances in wages and other wage questions, while there were only two disputes on questions of trade union principles, involving 43 workpeople. Stoppages in the textile industries and transport accounted for over two-fifths of all the workpeople involved; in mining there were very few disputes and none of any magnitude.

The Bureau of Statistics provisionally estimates the Japanese national income in 1930 at 10,635,785,000 yen, or 837 yen per family and 165 yen (about £8 10s.) per head of the population. As compared with the inquiry for 1925, this is a decrease of 2,746.5 million yen, which is obviously largely a matter of prices. National income by individual items is as follows:—

	(000's omitted) ●	Yen	Percentage
Agriculture		1,883,195	18
Fishing		189,548	2
Mining		249,534	2
Manufacturing		3,483,011	33
Commerce and finance.....		2,706,079	25
Transport		841,316	8
Public services, professions, etc.		1,346,702	12
Overseas investments and business		<i>Dr. 63,600</i>	...
Total		10,635,785	100

Of this total, 10,275.6 million yen, or 97 per cent., represents the income of individuals and private corporations, while the remaining 360 million yen, or 3 per cent., represents the income of State and municipal enterprises.

TOKYO, June 13.

CANADA

LIBERAL VICTORIES AND GENERAL ELECTION PROSPECTS

THE Liberals are in a mood of high elation and confidence over the Party's victories in the Provincial elections in Ontario and Saskatchewan, and in the dying hours of the session they intend to move a vote of no confidence in the Bennett Ministry and challenge it to go to the country. The Government will resist and defeat this resolution; but while the average Conservative member dreads nothing so much as a general election, it is still possible that one may be held before the end of the autumn.

The present session has produced a richer crop of important legislation than any recent predecessor; some of it, like the Marketing Act, has been the subject of bitter controversy, and the Commons have refused to accept an amendment by the Senate exempting wheat from the operation of this Act. The Central Bank Bill also received its third reading in the House on June 27th by 97 to 50 after a stiff fight over the principle of Government ownership, which was supported by the solid forces of the Liberal and C.C.F. Parties. The Government also resisted amendments which proposed that four out of the seven directors should be appointed by the Cabinet, that the choice of the Governor of the Bank should be restricted to Canadian nationals instead of to "British subjects," as the Act reads, and that the notes of the Bank of Canada should not be bi-lingual. There has been persistent propaganda against the importation of a non-Canadian as the first Governor of the Bank, but Mr Bennett cited during the discussion in Parliament the declaration of Canadian bankers that there was no banker in Canada with the necessary experience in central banking, and that the Government must have its hands free to secure a Governor with the necessary qualifications from outside the Dominion. The Central Bank Bill has now gone to the Senate, where it has been attacked both by extreme Conservatives and extreme Radicals, but it is likely to go through without any serious amendment. Parliament has also passed important measures re-modelling both the Companies and the Insurance Acts.

CURRENCY INFLATION TO FINANCE PUBLIC WORKS

The Government has secured the authority of Parliament for a mild experiment in currency inflation by a Bill amending the Dominion Notes Act. Under the existing legislation the Finance Department was empowered to issue Dominion notes up to \$50 millions, with a 25 per cent. gold cover, and additional notes on a 100 per cent. basis. There were also some special note issues made during the war years without cover, and advances to the banks under the Finance Act, which brought the total Dominion note circulation on May 31, 1934, to \$171,110,949, backed by \$69,166,949 gold.

The new measure authorises the issue of notes up to \$120 millions, with 25 per cent. gold cover, and additional

MONTREAL & TORONTO

notes on a 100 per cent. basis. Mr Bennett estimates that when the new Act becomes effective the total note issue will be approximately \$223,981,952, which means that it will be inflated by nearly \$53 millions. On the basis of the standard price of gold, the cover would then be about 31 per cent., but if the Government exercised its power to revalue its gold holdings at the current price of about \$35 per ounce, the cover of the inflated issue would be roughly 51 per cent. Mr Bennett indicated that part of the proceeds of the inflation would be employed to finance the special public works programme for the relief of unemployment; and a few days later a Bill was introduced embodying this programme, which includes a variety of public buildings allocated throughout the Dominion and estimated to require an expenditure of roughly \$40 millions.

CROPS SAVED BY RAIN

The latest crop survey of the Bureau of Statistics states that crop prospects throughout Canada are showing the effect of variable weather conditions, but that there is clear evidence of a substantial improvement since early June. In Ontario, Manitoba and Saskatchewan, where the early drought was most severe, its effects have not been overcome and poor yields are inevitable; in Ontario the winter wheat crop will be far below the average, and the hay crop will be light. Apart from the Southern areas of Saskatchewan and Manitoba, the rainfall in the Prairie Provinces during June has been satisfactory, and in Alberta and the Northern district of the two other Provinces the grain crops are growing well, but warmer weather is needed to hasten their growth. The June rains have had a most beneficial effect upon the prairie pastures, which, after being burnt brown, are green again, and a critical feed situation has been averted. In Quebec there has been rather too much moisture, and the crops are late. In the Maritime Provinces weather conditions have been favourable, and the crops are promising well, while in British Columbia they are also up to the average, but needing rain.

The sudden improvement in crop prospects has averted the recession in general business which was feared, and the gradual industrial and commercial expansion is continuing. The carloading figure for the week ending June 16th, at 44,482 cars, showed a gain of 1,549 cars over the previous week's figure and of 3,911 cars over the figure for the parallel week of 1933; the total carloadings up to June were 1,003,372, compared with 825,564 in the corresponding period of 1933. According to the Bureau of Statistics, the number of workers on the payrolls of reporting employers increased from 856,548 on May 1st to 899,286 on June 1st, the greatest increase reported in any month since June, 1930. The employment index on June 1st was 96.6, as compared with 92.0 on May 1st and 80.7 on June 1, 1933. The aggregate value of the cheques cashed in the 33 clearing centres of Canada in May was \$3,129 millions, compared with \$2,650 millions in May, 1933, a gain of 18 per cent., which was spread all over the five main economic areas. The Bureau of Statistics wholesale price index for the week ending June 8th was 71.7, compared with 70.7 on May 25th.

OTTAWA, July 1.

MONEY AND BANKING

SIX MONTHS' FOREIGN EXCHANGE MOVEMENTS

THE past half-year has again been a very eventful period. Early in the year the dollar held the centre of the stage, for during January legislation was passed revaluing it at not more than 60 per cent. of its former gold parity, and administrative action was taken fixing the new value at 59.06 per cent. of parity, equivalent to a gold price of \$35 per ounce. Simultaneously the Treasury was empowered to take over from the Federal Reserve Banks their entire gold reserves in exchange for gold certificates. The gold so taken over was at once revalued to conform to the new parity, and out of the resulting profit of about \$3,000 millions which accrued to the Treasury, \$2,000 millions was allocated to a new Stabilisation Fund, to be used for the purchase and sale of gold, silver, foreign exchange or securities, as seemed fit. The Treasury also engaged to buy and sell gold at \$35 per ounce "until further notice."

The first result of these changes was to establish a new parity of 6.63½ cents against the French franc. At the end of January, when these changes took effect, the franc was quoted at only 6.39 cents, or well below the new gold point. In consequence there was an enormous influx of gold into the United States, which lasted for five weeks, by which time the franc had appreciated to its new parity. These gold movements exercised a deflationary influence upon all the gold *bloc* currencies and aroused fresh fears as to the ability of these countries to remain on gold in face of the intensified under-valuation of the dollar. As a result there were further withdrawals of funds from these countries, which were expressed in shipments of gold to London superimposed upon the main drain of gold to New York. By the time these movements had ended, New York had acquired \$101.3 millions and London £41.4 millions of new gold. The gold *bloc* central banks had lost £64.5 millions, of which £36.6 millions came out of the Banque de France, £16.7 millions out of the Netherlands Bank and £10.1 millions out of the Swiss National Bank.

Since the end of the big gold rush the American Treasury has continued to buy gold in small quantities, and only once did the Paris exchange show signs of falling to the point where France could recover gold. On this occasion the American Treasury promptly announced that in case of need it was prepared to permit gold withdrawals, and this statement removed all doubts of the reality of America's return to gold and caused the dollar to appreciate.

There is no doubt that initially the revaluation of the dollar had a disruptive effect. It intensified the under-valuation of the dollar, especially in terms of gold currencies, and so increased the general pressure on the gold *bloc*. Since January, however, the pressure has been gradually relieved both by a slow but steady rise in American internal prices and by a fall in prices in France, Belgium and Switzerland. Further relief came from the more or less successful balancing of the French budget, and from the general restoration of confidence in French finances. Money which previously had fled from Paris has since returned, the Banque de France has more than recovered the gold lost in February, and the French Bank rate, which was raised to 3 per cent. on February 8th, was reduced again to 2½ per cent. on May 31st.

Taking the past six months as a whole, the Banque de France lost Frs. 3.2 milliards of gold up to March 2nd, and has since recovered Frs. 5.6 milliards. It has thus gained Frs. 2.4 milliards on balance. The Netherlands Bank lost Fl. 130 millions up to March 2nd and has since recovered Fl. 54 millions. The Swiss National Bank lost Frs. 190 millions of gold and devisen up to March 2nd and has lost a further Frs. 180 millions since. Belgium and Italy have also lost gold steadily over the whole period, their respective losses amounting to 80 million belgas and 800 million lire.

The French recovery of the past three months had an

immediate effect upon sterling, for it led to heavy transfers of French balances from London to Paris. The dollar has also been gaining in strength against the pound, partly because of recent American profit-taking on the London Stock Exchange and also because of more general factors such as the increase in British raw material imports and the absence this year of American tourist expenditure in Europe. In consequence, since the end of 1933 the pound has fallen from Frs. 83½ to Frs. 76½, while since April it has also fallen from \$5.18½ to \$5.05. These movements, which are largely due to transfers of funds, are such as can be properly offset by official control operations in London, and during the past three months the Exchange Equalisation Account has been a steady seller of francs. It is very possible that these operations have been financed by sales of gold to the Banque de France, and while part of the French Central Bank's gold recoveries no doubt represent the emergence of gold from private hands, part of them no doubt consist of purchases of British gold. So far as can be deduced, the British control's operations, though fairly frequent, may have been moderate in their total magnitude. There is no overt sign of any large increase in the Exchange Equalisation Account's holdings of Treasury bills, such as would be required to counterbalance heavy sales of gold or *devisen*, for "inside" or "tap" allotments of Treasury bills show little change since March 31st. Such allotments, however, are affected by many influences besides the operations of the Exchange Equalisation Account, and no certainty can be placed upon deductions of this kind. There is no doubt that foreign funds have lately been withdrawn from the London money market, and to some extent their withdrawal has perforce been offset by official purchases of sterling.

Another matter of importance during the past six months has been the deterioration in the German exchange position. This was discussed exhaustively in the *Economist* of June 23rd and June 30th, and there is no need to cover the ground again. In brief, during the six months under review, the Reichsbank's gold reserves fell from Rm. 386 to Rm. 12 millions, and its gold cover from 10.9 to 2.3 per cent. The official reichsmark exchange in London has appreciated from Rm. 13.67 to Rm. 13.05 during the past six months, but this movement represents the depreciation of sterling against the gold currencies, and the Paris cross-rate has risen from Rm. 16.36 to Rm. 17.08 per Frs. 100. Registered marks have also depreciated from 20 per cent. to 34 per cent., a movement which speaks eloquently of the deterioration of confidence in Germany.

The real question at the moment is to what extent the events of the past half-year have improved the prospects of world currency stabilisation within a measurable space of time. In many respects they have been favourable. The return of the United States to gold is not entirely definitive, for the dollar can still legally be revalued between 50 and 60 per cent. of its former parity. Nevertheless, there are signs that its purchasing power is moving into closer conformation with its present parity of 59.06 per cent., and this arouses hopes that no further alteration in its parity will be made. The main doubt arises from the recent legislation basing the dollar partly upon silver and empowering the Administration to make heavy purchases of silver. If these powers are utilised to their full, their exercise will force up the world price of silver and involve China in serious economic difficulties. Fortunately the Administration appears disposed to proceed with caution and to pay due heed to the warnings against an artificial rise in silver prices uttered on behalf of the Eastern Exchange Banks and the Central Bank of China. Apart from this danger, the United States have moved in the direction of stabilisation, but the discussions at Basle must have made it clear that stabilisation is still remote.

Some progress has also been made in the direction of necessary currency revaluation. The Argentine peso has been devalued and linked to sterling. The Czech crown has been devalued by 18.6 per cent., while the official rate for the Austrian schilling has been assimilated to the effective market rate—which has meant a devaluation of 22 per cent. The position of the Empire and foreign currencies linked to sterling is discussed in a Financial Note. Here there is evidence of a fair degree of equilibrium.

All these developments render easier the ultimate stabilisation of sterling and the return of the pound to gold, and the conditions of the gold standard of the future have also received exhaustive and very valuable consideration in documents summarised in the latest annual report of the Bank for International Settlements. Even so, we must agree with the statement made by Mr Chamberlain in the House of Commons last week, when he said that the British Government's monetary policy was working out according to plan, and that there were still many international problems to be solved before we could countenance a return to gold. With this conclusion we agree; but at the same time the events of the past six months have brought the possibility of stabilisation so much nearer that it is time to give serious attention to the steps that could be taken to ensure the continuance of the comparative stability we have recently enjoyed and a gradual evolution towards a more permanent system.

FINANCIAL NOTES

The Money Market.—Although the money market had to repay about £11 millions to the Bank of England on Friday and Saturday, money has remained very abundant, and on Saturday money was said to be almost unlendable. The Bank return shows that during the past week the Government has paid out a fair amount of money, while this week Treasury bill maturities were £6.0 millions in excess of payments, so that the tender issue was reduced from £482.1 to £476.1 millions. Hence the money required to repay the Bank was made good by this release of Government funds and by the reduction in the Treasury bill tender issue. The clearing banks' minimum rate for short loans remains at 1 per cent., and other lenders have been quoting ½ per cent.

SHORT LOAN AND DISCOUNT RATES

	June 21, 1934	June 28, 1934	July 5, 1934	July 12, 1934
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate ...	½	½	½	½
Short loan rate:—				
Clearing banks	1	1	1	1
Others	½	½	½	½
Discount rates:—				
Treasury bills:—				
(a) Clearing banks	½	½	½	½
(b) Others	½	½	½	½
3 months' bank bills	½	½	½	½

Discount rates have also weakened. On July 9th the clearing banks reduced their buying rates for September and October Treasury bills from ½ to ¾ per cent., and their rate for August Treasuries from ¾ to ½ per cent. They have secured a fair number of August bills at the latter rate. Other buyers were offering ¾ per cent. for July Treasuries and ½ per cent. for later dates. Three months' bank bills are quoted at ¾ per cent. and standstill bills at 1 per cent. upwards.

The Foreign Exchanges.—The London market has remained extremely dull and inactive. The New York spot rate has remained very steady at about \$5.03½, and there is no evidence yet of any seasonal commercial buying of dollars. The Paris rate has also been steady at Frs. 76½, and the British control has only had to intervene once this week. This suggests that the former pressure upon sterling has now become much weaker. Some comment has been aroused this week by allegations that German importers are defaulting on their trade bills. The real position is that in certain instances British exporters have been shipping

against bills which are in reality only promissory notes. These notes can be discounted in marks at the Reichsbank, and until recently the Reichsbank has released foreign exchange against them solely upon the merits of each transaction. More lately, however, the Reichsbank has only been releasing foreign exchange each day up to the amount received by it on the previous day, and in consequence some of these notes are not being met in sterling immediately upon presentation. It is, however, a question of delay rather than default, and in no case is a London bankers' acceptance not being met.

The Bank Return.—The return of currency withdrawn for use at the end of the month accounts for the small decrease in the note circulation, and the reserve has risen by the same amount. The repayment of the money borrowed by the market over the turn of the half-year is reflected in the big drop in discounts and advances.

	BANK OF ENGLAND				
	July 12, 1933	Dec. 27, 1933	June 27, 1934	July 4, 1934	July 11, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	189.7	190.7	191.5	191.5	191.5
Note circulation	378.5	392.0	381.7	385.8	384.6
Banking Department:—					
Reserve	72.5	59.7	70.5	66.4	67.6
Public deposits	16.8	22.2	17.6	26.7	17.4
Bankers' deposits	96.0	101.2	96.3	94.9	97.3
Government securities ...	87.1	88.0	81.0	82.8	82.6
Discounts and advances ..	15.1	16.8	6.1	17.1	7.8
Proportion	42.8%	37.3%	46.8%	41.7%	44.7%

The decline in public deposits may arise from discrepancies in Treasury bill payments and maturities, but last week's figure was swollen by the receipt of the final Funding Loan call, while this week the net tender issue of Treasury bills has been reduced by £6.0 millions. It is possible that the proceeds of the Funding Loan call have been applied to the reduction of the floating debt, and that this operation has been timed to coincide with the market's repayments to the Bank, thereby preventing them from depleting the supply of money.

New York Money and Banking.—New York money rates are unchanged. The official call rate is 1 per cent., with outside money available at ½ per cent. Prime commercial paper is quoted at ¾ per cent. 90-day bankers' acceptances are quoted at ½ per cent. and six months' acceptances at ¾ per cent. The Federal Reserve Board announced at the week-end that it was prepared to consider applications for membership in the Federal Reserve system from trust companies, even if they are virtually doing no banking business. This represents a reversal of the Board's previous policy. The R.F.C. reports that banks and trust companies, which have been the 'largest class of borrowers, had repaid up to June 30th \$1,008 millions out of the total sum of \$1,606 millions borrowed by them since the establishment of the R.F.C. The latest quarterly statement of the nineteen members of the New York Clearing House shows that, following an increase of \$490 millions in their holdings of Government securities during the first quarter of the year, there was an expansion during the second quarter of \$211 millions. Their holdings have now reached the record figure of \$3,003 millions, equivalent to 11 per cent. of the National Debt and to 34 per cent. of their deposits. The latest statement of the National City Bank gives deposits at \$1,226 millions on June 30th, compared with \$1,135 millions a year ago. Cash has risen from \$334 to \$358 millions, and Government securities from \$252 to \$305 millions. Loans, discounts and bankers' acceptances have fallen from \$560 to \$490 millions. All these banking results bear evidence of the huge amount of excess credit now in existence.

Mr Harrison's Visit.—When Mr Harrison, the Governor of the New York Reserve Bank, decided to visit Basle, Paris and London, he must have realised that his

trip would arouse widespread misgivings in the United States, and Senator Thomas's cabled warning that Mr Harrison must not meddle with matters that belong to Congress is the inevitable manifestation of these misgivings. In actual fact Mr Harrison has come to Europe with the sole object of gaining information. He had no authority to commit the United States to any definite action nor did he seek to do so. He is not a member of the Board of the Bank for International Settlements and did not attend the Board's formal meeting. If it were possible for Mr Harrison to join the Board of the B.I.S. and to attend its meetings regularly, the American public would come to recognise his attendance at Basle as a normal matter of routine. Unfortunately geographical considerations alone render this impracticable, but it would be helpful if he could find time to visit Europe once or even twice a year. The real lesson of his visit and the comment which it evoked is that the American nation and its representatives in Congress are still very sensitive on monetary policy, and in particular are nervous of any suggestion that the Administration may enter into international agreements which will circumscribe its internal economic policy. This fact alone rules out any possibility of American participation in international monetary stabilisation for some time to come, for President Roosevelt cannot co-operate until he is assured of the unanimous backing of the nation. The Administration also requires assurance upon such matters as the future of the gold *bloc*, the German mark and the currencies in the sterling area. There is some ground for hoping that no further alteration will be made in the value of the dollar, unless radical monetary changes occur elsewhere. At the moment, the American Administration, like the British Government, are not under present conditions prepared to take any long-term and final decision.

"Sterling" Exchanges and Prices.—So much interest is taken in the relative purchasing power of the pound, the franc and the dollar that fluctuations in exchanges and prices inside the sterling area are usually lost sight of. Yet the sterling area now covers so large and important a part of the world that the value of sterling in terms of other countries inside the area is of considerable importance. Broadly speaking, the following changes have occurred between September, 1931, and May, 1934:—

Country	Internal Prices %	Value of currency against the pound %
United Kingdom	+ 8.2	...
Australia	+ 5.8	+ 4.0
India	- 2.2	No change
South Africa	+ 6.0	No change
Denmark	+17.3	-19.0
Norway	+16.2	- 8.8
Sweden	+ 4.6	- 6.5

A general inspection of the table suggests that, assuming that prices in the sterling area were in equilibrium in 1931 and after taking account of the subsequent changes the pound is over-valued by nearly 15 per cent. against the Danish krona, and by about 10 per cent. against the rupee and the Swedish krona. A year ago, soon after South Africa went off gold, sterling was over-valued by nearly 15 per cent. against the South African pound, but since then the Dominion's internal price level has risen by about 10 per cent. As regards Scandinavia, soon after those countries went off gold their currencies were allowed to depreciate against sterling, and it appears that the depreciation was rather greater than was required to conform to the rise in their internal prices. The fall in Indian prices and the consequent under-valuation of the rupee is not so surprising as might appear, when the nature of India's staple products is borne in mind. It seems, however, that the exchange stability of the rupee must have largely depended upon India's gold exports.

The Franco-German Negotiations.—The success of the negotiations between the British and German representatives in connection with the German moratorium has obscured the fact that similar negotiations are taking place elsewhere. No definite decision has yet been announced in Paris, but it is understood that the French and German representatives have agreed upon a bilateral clearing scheme to embrace all payments in both directions. The negotiations were facilitated by the fact that on balance Germany is a substantial creditor of France. This made it unnecessary to earmark part of the proceeds of German imports into France in favour of French holders of the Dawes and Young Loans, or to lay down any conditions as to priority between bondholders and exporters. For the same reason, the French were able to abandon their original idea that advance payments against the service of the Dawes and Young Loans should be made monthly. Such a clearing agreement is probably the best solution the French could find, but one unfortunate consequence of the need for separate negotiations between Germany and her creditors is that the functions of the Bank for International Settlements as agent for the Dawes and Young Loans are being short-circuited. Another and wider consequence is that Germany's trade and finance are being divided up into a number of water-tight compartments.

National Bank of New Zealand.—The accounts of this bank for the past three years suggest that it has been to some extent the victim of two circumstances beyond its control. The first is the depreciation of the New Zealand and Australian pounds to 80 per cent. of parity against sterling. As the accounts of the bank are kept in sterling, it has been necessary to make an equivalent allowance for the depreciation of the excess of all New Zealand and Australian assets over its liabilities in those areas. For the past three years a small allocation has been made from net profits, while this year the bank is apparently trying to consolidate the whole position by transferring half its general reserve fund to a special currency reserve. This new item appears in the accounts, which are summarised below:—

	1932	1933	1934
Liabilities:—	£'000	£'000	£'000
Capital	2,000	2,000	2,000
Reserve fund	2,000	2,000	1,000
Currency reserve	...	...	1,000
Note circulation	961	1,019	1,111
Deposits	12,314	13,768	15,596
Bills payable, contingencies, etc.	1,081	1,287	1,313
Assets:—			
Cash and call money	2,270	2,621	1,426
Investments:—			
(a) British Government securities	1,304	1,219	979
(b) New Zealand Government securities ..	1,194	1,002	1,429
(c) Australian Government securities....	114	119	98
New Zealand Treasury bills and special loan to New Zealand Government	692	2,584	6,503
Bills receivable	1,470	1,523	1,552
Bills discounted	403	374	323
Advances	10,187	9,856	8,925
Gross profits	600	544	528
Expenses	422	428	393
Allocation to exchange and contingency a/c.	50	40	40
Dividend	7%	4%	4%

The other difficulty arises from the heavy borrowings of the New Zealand Government. As was pointed out in the *Economist* of June 16th, the trading banks (including the National Bank of New Zealand) have acquired large London balances, and these have been taken over by the New Zealand Government in exchange for Treasury bills. This explains the slight weakening in the bank's cash position shown in the accounts. This anomalous position is now to be rectified, for the new Reserve Bank is to take over the trading banks' Treasury bills and other special loans to the Government in exchange for its own notes. This will restore the bank's cash position, as well as easing matters in other ways. The next accounts of the bank are, therefore, likely to show changes in the direction of greater liquidity. Meanwhile net profits are slightly higher, but by an amount insufficient to permit of any increase in the dividend.

THE STOCK EXCHANGE

FIXED TRUSTS

THE fixed trust movement in England has been of recent and rapid growth. Although the first trust was launched as lately as in 1931, it is estimated that probably £10 millions to £12 millions has already been applied to purchases of sub-units of the various fixed trusts. While the movement secured a foothold largely through its own distinctive characteristics, the disappointments which many investors in ordinary investment trusts had suffered undoubtedly assisted the subsequent rapid growth. With the change of outlook for management trust revenues it may be opportune to review some broad features of the fixed trust "boom."

Management trusts experienced a period of great prosperity during the preceding quinquennium; the small investor thought he had found in them complete refuge from the consequences of depression, coupled with excellent prospects of capital appreciation and increased dividends. To experience a market depreciation of 50 to 75 per cent. on his own highly geared equity stock, when the general market value of securities had fallen by, say, 25 per cent. during the subsequent depression, was an effective—if only slightly comprehended—blow to his confidence. This fall was accompanied in many cases by a total disappearance of his dividends, but by little reduction of the trust's management expenses.

The ground was thus ready for the introduction of a device like the fixed trust, which at first glance seemed to offer what the management trust lacked. The fixed trust had the added advantage of making its appearance in the middle of a depression (admittedly also the right time for starting an ordinary management investment trust) and appealed to an investor who had had no opportunity of seeing its behaviour throughout all the phases of a trade cycle. Such an investor was attracted by such considerations as the following:—

(1) The novelty, and the fact that the names of many of the securities in the trust were almost household words.

(2) Publication of the list of investments. Being fixed in advance, this told the investor exactly what he was buying.

(3) The advertisements, which for the first time brought an investment in Stock Exchange securities constantly before the public. This advertising was not confined to one single day like a prospectus.

(4) Marketability. The investor believed that he had got a security which could be freely bought and sold at any time. This was not always the case with some of the stocks of ordinary management investment trusts.

(5) Only one class of sub-unit was issued. The value of a sub-unit moved with the market as a whole, and was not therefore liable to such violent fluctuations as a highly geared equity share. This point was probably not generally realised by the small investor, who only appreciated the effect produced.

The fixed trust movement was greatly helped by the fact that investment was mainly confined to leading ordinary shares bought in the later stages of a depression. Very different would have been its history if the investment had been made a few years earlier, in the then market leaders. Up to now market conditions have continued favourable. There has been a steady increase in capital values and dividends among the shares favoured by the trusts. Nevertheless, some cracks have already begun to appear in the original fixed trust structure, and the result has been a marked tendency towards greater management powers. This is probably all to the good, but the question naturally follows, whether those who are to exercise these new powers are fully equipped for the task. There is, clearly, the widest difference between the selection of an arbitrary panel of securities, to be held through fair and foul, and the constant attention to market conditions which is required of the

management of an investment trust. With a few exceptions, those connected with the fixed trust movement can lay no claim to experience of investment trust management. The skill with which the new-found powers of fixed trusts will be exercised in the future therefore still remains to be tested.

Although there are several instances to the contrary, the majority of fixed trust holdings are confined to one individual type of share—British industrial equities. That this class happened to be one of the first to recover was a direct consequence of a predominantly domestic economic revival, which shows no sign of recession, but which has, for the time being at least, failed to register further advance. To this extent the recovery possibilities of British equities are limited, and if a change to another class should become necessary, the capacity of the management to effect the "switch" without undue disturbance would assume the highest importance.

The type of share eligible to be included in a fixed trust is distinctly limited, for not only must there be a considerable number of shares in issue of that individual class, but also a free market in the shares selected. It frequently happens that there may be £1,000,000 of stock outstanding, but no real market because the stock is "tightly" held. A fixed trust, however, must be able at all times to buy and sell its underlying securities freely, and so far most of the trusts have observed this essential condition. The influence which they exercise on the market in an individual security is commonly overrated, for in nearly every case it is probably no more important than the joint purchases by a group of management investment trusts of some individual security.

If the fixed trusts in existence to-day each sold their full quota of units, or, in cases where no limit is fixed, each sold £2,000,000 of sub-units, then the holding of all these fixed trusts combined, in each of the different securities comprised in their lists, would rarely exceed 5 per cent. of the outstanding shares. A noticeable exception is Schweppes deferred, where the total holding would amount to some 18 per cent. of the shares in issue. In this case and, possibly, that of Rolls-Royce, the impact of fixed trust operations on a somewhat restricted market may have its dangers. Broadly, however, the fixed trusts formed to date are not nearly so important or so dangerous a factor as some of their opponents would make out, and, owing to the nature of their holdings, there would probably be no special difficulty in selling the underlying securities (to correspond with sales of the sub-units to the trust) in a period of depression.

A far greater danger would appear to exist in the possibility of the disappearance of the market for the sub-units themselves. These sub-units are not quoted on any Stock Exchange, and even if a sale is effected through a bank or stockbroker, the only actual market in them is with the company managing the fixed trust. In two cases at least the management company is under no specific obligation to quote a price for sub-units and buy them back from holders, unless it happens to be convenient. On a falling market, therefore, the holder of sub-units might find himself unable to realise his investment. In other cases—and here would appear to be the greatest risk—there is no guarantee that the management company will continue in being for the full period of the trust. Should the management company go into liquidation, the normal market in sub-units would automatically disappear. A holder of a substantial number of sub-units, say, 2,000, 4,000 or 5,000, can usually, under the terms of the trust deed, exchange his sub-units for the underlying securities. He is quite safe—but it is the smaller holder who would be at the mercy of anyone prepared to make a bid; such a purchaser would attempt to consolidate several holdings, and then withdraw and sell the underlying securities at a profit.

The managing company receives the whole of its fee in advance for the full period of the trust, in most cases twenty

years. This fee ranges between 5 per cent. and 7½ per cent. actual for most of the trusts (although specialised trusts such as the Foreign Bond and Insurance Share trusts make a further percentage charge for management), and is included in the price charged for the sub-units. Exceptionally, one of the gold share fixed trusts is limited to ten years and charges 10 per cent. actual. Of the fee received, at least half is immediately disbursed by the management company in commissions to brokers, advertising and other initial outlays; so that the amount which is retained to cover the 20-year life of the trust, and the eventual profit, is not large. No further fees can be charged or deductions from income made. It is difficult to see, therefore, how a trust which only charges 5 per cent. actual on the cost price of the underlying securities is to make a profit, if full reserves are made for expenses over the twenty years.

In nearly every case the trustee has insisted on a full reserve being made in advance for his fees during the twenty years. There is no reason why the trustee should be wanting in his duties, but has a corresponding and adequate reserve been made for the running expenses of the management company? There is no indication so far that this is being done, except in one or two special cases. With few exceptions, all of the management companies have been specially started for the purpose and are unattached to any

other existing office or organisation. They have their own boards of directors and separate offices. They have, in some cases, an authorised and issued capital of £15,000 to £30,000, not necessarily all subscribed in cash, as part may have been issued to promoters in return for services rendered. Such a capital can only be adequate to operate a separate company managing a fixed trust for twenty years, with, perhaps, £2,000,000 of sub-units outstanding, if further substantial reserves are made from the original fee charged. If big dividends are paid by the management company at the start, together with other heavy annual expenditure, there is a grave risk that subsequent financial weakness may develop when all sub-units have been sold and revenue from loading charges falls to a minimum. Great responsibility, therefore, rests upon the managing companies to protect in the fullest possible way the market in sub-units of their trusts.

With these considerations in mind, what are the prospects for the future development of the movement? It is clear that the principle of the non-gearing unit, based on the break-up value of the total assets, is a valuable feature worthy of preservation. On the other hand, the history of the fixed trust movement in the brief space of three years shows how far the claims put forward for the inspired selection of a panel of securities, bought and sold in

* And managers' and trustees' remuneration at rate of ¼ths of 1 per cent. of average mid-monthly value of securities. † Approximately. ‡ And charge of ¼ of 1 per cent. on mean market value of portfolio.

mechanical ratios, has been abandoned. The suggestion may be advanced that some reconciliation of the implacably hostile views of the management and fixed trust sponsors would be of general advantage to the small investor. The effects of "gearing" have impressed him with one of the main weaknesses of the investment trust movement, but he also needs the fullest assurance that any general advance of the management-cum-fixed trust movement is accompanied by first-class management ability and adequate resources.

INVESTMENT NOTES

Gilt-Edged Rise Resumed.—In our recent review of the Stock Exchange half-year (the *Economist* of June 30th, page 1440) we spoke of the effects upon the stock markets of the uncertainty then prevailing as to the trend of industry and trade, and we suggested that for some weeks to come—until it became clearer whether the halt in trade recovery was merely seasonal or whether it was more than that—gilt-edged might be a firmer market than industrial equities. The course of the market in the past week has proved the truth of the prophecy with rather unexpected decisiveness. Actually the end of the period of hesitancy can now be fixed at June 20th, for from that day onwards the gilt-edged market has been consistently firm, and this week the firmness has developed into real buoyancy. We exhibit the movement below, showing the prices of a number of the longer-dated stocks on June 20th and July 11th, and also the lowest prices for the year, with the yields at those prices and at the present prices respectively:—

	Price, June 30, 1934	Price, July 11, 1934	Lowest Price (Jan. 1 to July 11), 1934	Yield at lowest Price, 1934 (%)	Yield, July 11, 1934 (%)
2½% Consols	77½x	80½	73½	£ s. d. 3 7 9	£ s. d. 3 2 3
4% Consols, red. at par on or after Feb., 1957	112½	112½	109½	3 8 3(c)	3 5 0(c)
3% Conversion, 1948-53	101	101½	97½	3 3 0	2 18 3
3½% Conversion, red. after 1961	102½	104½	101½	3 8 0(s)	3 5 0(s)
3% Funding, 1938-69 ..	98½	98½	97½	3 2 3	3 1 9
4% Funding, 1960-90 ...	113½	115½	111½	3 7 1	3 3 6
4% Victory Bonds	111½	113½	109½	3 13 2	3 11 3
3½% War Loan, red. after 1952	102½	104½	101	3 8 6†	3 4 0†
3% Local Loans	90½x	92½	86½	3 9 0	3 4 8

(a) Accrued interest and income tax is allowed for in this yield but not on the lowest prices for 1934. (b) Allowing for redemption. (c) On basis of redemption at par in 1961. (d) On basis of redemption at par in 1957. † On basis of redemption at par in 1952.

Nearly all these stocks have this week "broken through" to new high-record prices—either absolutely or if allowance be made for accrued interest. "Old" Consols have risen 2½ points in the three weeks since June 20th: another 3 points rise would bring them to the level of 83½, at which their yield would be down to 3 per cent., and it could really be said that British Government credit had been established on a 3 per cent. basis. However, a further advance of 3 points on the top of the recent big rise is a considerable task which may not be achieved yet awhile.

Argentine Railway Year.—The Argentine Railway year ended on June 30th, unhonoured and unsung, but not unwept, for, from the point of view of the British stockholders, it is by far the worst experienced for a very long time past. We give the gross traffic figures of the four leading companies for the year, though they are chiefly remarkable for the completely misleading picture which they give of the true position:—

	Gross Receipts for 52 weeks to June 30	Increase or Decrease over 1932-33
B.A. and Pacific	5,836,000	+109,000
B.A. Great Southern	10,517,000	-42,000
B.A. Western	3,547,000	+9,000
Central Argentine	8,950,000	-376,000

Investors General Fixed Trust Certificates Yield

£4 - 14 - 3

per cent. gross

excluding a further amount of approximately

£1 - 4 - 0 per cent.

consisting of capital bonuses received, which may not recur.

The yield of £4 14s. 3d. per cent. is based on actual dividends and annual bonuses paid during the past 12 months by the Companies whose shares the Trust holds.

These figures are obtained by converting the receipts calculated in gold pesos into pounds at the old parity of 47.6d. The present actual rate at which the railways are able to remit is equivalent to about 31.3d. to the gold peso (of which 44 are equal to 100 paper pesos, the money actually current), whereas a year ago the ruling rate was about 41½d. The figures are therefore almost meaningless as an indication of the dividend-paying capacity of the companies. The theoretically more accurate method is henceforth to be adopted of converting the paper pesos at the actual average rate of the week, but in practice this will not help much, because the railways do not remit their gross receipts, but

only that unknown proportion of them which is required for the purchase of foreign material and for the payment of interest. Pending the dividend announcements due two months hence, all that it is safe to say about the results is that, though the Buenos Ayres Western may come near earning its full preference dividends, neither the Buenos Ayres Great Southern nor, still less, the Central Argentine, can do so, while the Buenos Ayres and Pacific will earn little, if any, of its debenture interest. The outlook for the future is hardly more encouraging than the present results. There is some internal recovery in the Argentine, but the crops are short, and when the present spate of wheat shipments is over traffics may flag. Moreover, for nearly half the past year the companies were still able to remit at the old exchange level of 41d. per gold peso, or thereabouts, whereas now there seems little prospect of any substantial improvement in the exchange. Nothing, therefore, but the consent of the Argentine Government to a revision of rates and fares will really help the stockholders.

* * *

Sinners Who Repent.—In the long-drawn-out test match between defaulting foreign Governments and creditors organisations two minor but very acceptable successes for the latter may be recorded. One relates to the redemption offer which the Bank of the State of San Paulo a fortnight ago addressed to the holders of its 6 per cent. sterling bonds. The proposal, which was criticised in the *Economist* of June 30 (page 1442), was to apply £100,000 resulting from the sale of certain foreign assets of the Bank to the purchase of bonds for cancellation; the bonds were to be selected by tender and holders were warned that the Bank would reject tenders which were "not in general conformity with the ruling prices of other comparable Brazilian securities" affected by the Brazilian Government's four-year debt plan. As the Bank is only paying 20 per cent. of the current interest, strong protests were naturally aroused by the attempt to buy back bonds at the low price level to which default had depressed them. In response to these protests the offer has now been withdrawn, but unfortunately the withdrawal does not seem likely to be of any benefit to the shareholders. The present position is obscure, but apparently it is now open to the Brazilian Government to require the Bank to surrender the exchange which was to be applied to the redemption of the bonds and to employ it in repurchasing any of the bonds included under the four-year plan—for that plan itself contains the objectionable provision that surplus exchange available after paying interest at the reduced rates laid down in the plan may be applied to purchase of bonds. It is clear, in fact, that the real complaint is rather against the Brazilian Government and the terms of the four-year plan than against the Bank of the State of San Paulo. But as a matter of principle it is unquestionably satisfactory that an effective protest has at last been made by bondholders' representatives against this vicious practice. The other foreign loans development of the week is the decision of the Greek Government at last to implement the agreement of November, 1933, in regard to the partial payment of coupons on the 7 per cent. Refugee Loan of 1924 and the 6 per cent. Stabilisation and Refugee Loan, 1928. This act of repentance is so belated that joy must be correspondingly subdued.

* * *

Rubber at Sevenpence.—The market has celebrated, though with due restraint, the achievement of the lower limit of the "reasonable" price range which was mentioned in authoritative quarters at the time of the restriction announcement. For some two months the commodity had failed to maintain its pre-restriction firmness, while the share market needed time to recover from the adventurous speculation which immediately preceded and followed the formulation of the scheme. It is somewhat difficult to account for the stronger tendency in the spot market, although some market observers regard it as an inevitable consequence of covering forward sales contracts, which have recently been placed on a considerable scale. The share market, however, would appear to be budgeting for

a substantial increase in the spot price by the end of the year, presumably on the assumption that the Dutch authorities will exert considerable influence to achieve the higher price level in view of their gold cost basis. The investor in good British companies must therefore face the possibility of some readjustment of individual quota allocations at the end of the first six months' working of the scheme. On the other hand, estates with considerable areas of maturing rubber will be entitled to additional poundage. Two factors are casting a shadow, as yet dimly perceptible, on the scheme. Official denial has been given to reports that regulation of Dutch native production is meeting with difficulties, but it is stated that native exports may be reduced to the basic quota unless an increase in price takes place. The close control of native export is a political problem whose implications have yet to be fully revealed. A more important factor is the trend of American demand. During the first five months of this year consumption averaged 43,300 long tons, compared with 33,800 long tons during 1933. This increase results from the rapid revival in the automobile industry, which has been maintained in June, but demand for crude rubber is now showing a seasonal decline. Further, the American reclaimed supply is likely to be considerably increased at any price over 7½d. per lb., and the experience of 1927 to 1929, when consumption of this product approached one-third of world consumption of crude, is a sharp reminder of the consequences of inadequate consideration of consumers' interests. The following table shows the extent of this year's rise, and current prices and yields:—

Company.	Id. per lb. on last full crop = %	Quotations, Jan.-June, 1934			Yield on last Div. (%)
		on Ord.	High	Low Present	
Bajoe Kidoel (£1)	3.8	s. d. s. d. s. d.	41 3	28 4½	37 6 4 0 0

† Subject to debenture interest.

Quotations have not fully recovered the recent fall, but still adequately discount favours to come.

* * *

Actuaries' Investment Index.—Since the first week in June, industrial share quotations, as measured by the Actuaries' Index of 144 ordinary shares, have shown no significant movement as a whole. The index figure for all classes, calculated on Tuesday's prices, is 70.9, identical with a week ago, the figure for June 26th being 70.8 (December 31, 1928 = 100). The corresponding yield figures are 3.72, 3.70 and 3.70 per cent., respectively. This week's significant changes are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	June 26, 1934	July 3, 1934	July 10, 1934	June 26, 1934	July 3, 1934	July 10, 1934
Higher this week:						
Banks & Discount Co.'s (12)	110.1	110.4	110.9	4.26	4.25	4.23
Insurance (24)	108.2	108.5	108.9	3.87	3.86	3.85
Electric Supplies (8)	91.9	93.1	93.7	4.60	4.54	4.52
Home Rails (4)	77.3	77.2	83.4	1.50	1.51	1.43
Lower this week:						
Building Materials (4)	82.4	82.0	81.5	4.10	4.12	4.15
Coal (6)	94.1	93.9	93.0	3.21	3.20	3.86
Cotton (6)	47.6	46.9	46.0	2.28	2.28	2.27

Home rails have sharply appreciated on a more favourable view of the wages position, and in anticipation of the half-yearly statements. Bank and insurance shares have attracted investment support following the maintained interim dividends and the firm conditions in the gilt-edged market. On the other hand, the long rise in building material issues has been checked, and speculative interest in leading miscellaneous issues is still dormant.

COMPANY NOTES

Proprietary Foodstuff Shares.—The manufacturers of proprietary foodstuffs include a wide range of businesses bordering, on the one side, on the pharmaceutical chemists and stretching over mineral waters, sauces, meat extracts, cheese, salt, suets, etc. They enjoy two important elements of stability in their market: first, they sell their products (through the retailer) in very small units to the housewife, who is the steadiest purchaser in the whole consuming market; and, secondly, once having established themselves, they can only be assailed by an expensive advertising and selling campaign on the part of a potential rival. These advantages are, however, counterbalanced to some extent by corresponding burdens and risks. Thus, once the all-important asset of goodwill has been established by advertising and long contact with the public, considerable sacrifices must be made to maintain it. Service must be given in small and relatively unattractive markets as well as in the easiest centres; price stability must be maintained so far as possible, subject only to the necessity for reductions if price competition becomes serious; above all, quality must be maintained. Consequently, when general purchasing power is falling, the prime necessity of maintaining established goodwill may prove expensive; and, as a side issue,

the need for holding adequate stocks and assuring an uninterrupted supply may involve unprofitable commitments in periods of falling prices. It follows, therefore, that a distinct cyclical movement is to be expected in the profits of proprietary foodstuff manufacturers, but that the regularity of the movement in recovery as well as in depression is distinctly probable owing to the basic stability of the "housewife" market. The relatively low yields offered on representative shares of this class indicates that the investor appreciates this fact. There are, however, risks for individual companies. Their market may become

crowded—as seems to have happened with Virol. Seasons may be favourable or unfavourable for such businesses as mineral water manufacture. Successful competition may lead to substitution of other products. The onset of such risks should, however, be slow enough to give warning of what is happening (by the course of annual profits) before the loss becomes serious. Holders of shares in this group should, therefore, be prepared to act on such warnings rather than hold on in the hopes of recovery. A more remote risk is that the spread of the chain store selling its own proprietary brands may narrow the market for nationally advertised brands produced by concerns unconnected with the retail trade. There have already been some signs of this; but it is unlikely that the risk will become serious.

United Dominions Trust.—This well-known finance company, in which the Bank of England became interested four years ago, continues its steady progress. Since its establishment as a public company in 1925 the Trust has only once had to admit to a fall in profits. That was in respect of the year to June 30, 1932, and, naturally, no excuses are needed for a moderate fall in earnings in that unhappy period. This time the usual satisfactory rate of expansion is shown to have been well maintained. Net profit is up from £79,941 to £105,887, and after making a first appropriation of £5,000 to staff pension fund and placing £60,000 against £40,000 to General Reserve, the usual dividends of 15 per cent. on the "A" shares, which are held by the public, and 5 per cent. on the "B" shares, held in special quarters, are comfortably covered. The company's main business consists in financing on the instalment principle. In the year just ended the number of transactions financed was the largest yet recorded; and this remark applies equally to the amount of credit outstanding at the end of the year, which was £3,405,000, compared with £2,811,000. There is a similar expansion in the business of the principal subsidiary, United Dominions Trust (Electric), Ltd., which finances the hire-purchase of electrical equipment. Included with the accounts of the parent company is the balance-sheet of that very recently formed subsidiary, Credit for Industry, Ltd. This concern had loans against security amounting to £77,000 outstanding at June 30th. But it is, of course, too early yet to form a practical judgment on that much-debated question of whether there is really a demand which the banks cannot meet for "intermediate" (as to both term and amount) credit for industry.

Distillers' Company.—The indications of a considerable expansion of earnings which accompanied the announcement of the increased final dividend (upon which we commented in a Company Note on page 1446 of the issue of June 30th) are amply confirmed by the full report. As, however, profits are struck after providing an unspecified amount for contingencies, precise comparison with earlier years is impossible. Disclosed trading profits and dividends for the year ended May 15th amount to £2,219,157, compared with £1,850,796 for the previous year, and after setting aside £100,000 for Provident Fund, the percentage earned upon the ordinary stock, which receives 20 per cent., comes out at 23.7. Comparative results for the past three years are shown below:—

	Years to May 15		
	1932	1933	1934
Profit (after taxation and contingencies)	1,837,471	1,850,796	2,219,157

† After providing £45,000 premium on mortgage debenture stock redemption.

The balance sheet shows a considerable increase in liquidity, for net current assets now amount approximately to £2,031,000, compared with £1,106,000 at the end of the previous year. Reference is made in the report to the sale of the Distillers' Corporation—Seagrams, Limited, Canada, holding, but the company is evidently consolidating its position in the American market by acquiring 377,000 shares in National Distillers' Products Corporation of Virginia, which in turn will acquire a 40 per cent. interest in the newly formed Distillers' Company of Delaware. Although the company is thus well equipped to profit from a revival in private consumption of spirits which should follow the general expansion in purchasing power, and the repeal of prohibition, it is probable that the new uses

for the company's industrial solvents will form increasing proportions of total sales in the future. Whereas total industrial consumption was 969,000 proof gallons in 1928, last year's total was no less than 11,746,000 proof gallons. The £1 ordinary stock units are quoted at 90s. 6d. and yield £4 8s. 6d. per cent.

Booth's Distilleries.—In common with the experience of Distillers, the fortunes of this old-established business showed a distinct improvement during the year to March 31st last. Total profits at £349,458 were over 32 per cent. higher than in the previous year. Owing partly to the relief from debenture redemption provision following the conversion operation in July, 1933, earnings for ordinary shares have advanced sharply from £8,340 to £45,704, representing 14.4 per cent. on the increased ordinary capital.

† After writing off £8,500 goodwill of subsidiary, and £13,000 debenture premium and issue expenses.

The report refers to a substantial improvement in home and export markets, which is evidenced by the expansion in the "turnover" items in the balance sheet. Debtors, stocks, creditors and bank overdraft and loans on stock show considerable increases, and net current assets amount to £642,000. During the year the company has acquired a larger interest in the whisky business, and investments in subsidiary companies now total £368,048, against £131,980. With the arrangements for the American trade "running very smoothly" it would seem reasonable to budget for a further, though possibly moderate, increase in earnings; but, in view of the capital structure—ordinary capital contributes 26 per cent. of the total debenture, loan, and share capital—a fairly wide percentage variation in ordinary share earnings is to be expected. The £1 ordinary shares yield £4 16s. per cent. at the present quotation of 25s. xd.

Richard Thomas and Company.—This leading Welsh tinplate combine shows much improved results for the year to March 31st, though its prospects still remain rather obscure. Gross profits, including investment income, are £474,743, against £288,130, and net profits (after allowing for the interests of outside shareholders) are £263,063, against £104,737. The one year's arrears of preference dividend paid since the close of the year take £202,822, so that there is a margin of profit to spare. The liquid position of the group, however—last year's commendable innovation of including a consolidated balance-sheet in the report is repeated—still leaves much to be desired, and until this can be improved distribution of available profits must be carried out with restraint.

	Six Months to March 31

Carried forward	222,133	333,573†	596,636

† After crediting extraneous profits.

The report is silent on the trading experience of the year and on future prospects. The position of the tinplate industry, in which the company is chiefly engaged, remains, however, difficult. As we noted in our issue of May 26, 1934 (page 1152), there has been a sharp further fall in exports of tinned plates this year, which cannot but be a serious matter to an industry which formerly relied on the export market for the disposal of fully 70 per cent. of its output. The further decline in exports is due to revived American competition, which has more than offset the success of the British industry in the Canadian market. Prospects of the achievement of an international arrangement on prices and markets are said to be more hopeful. But a keenly competitive export market and a highly tariffed raw material are handicaps which clearly suggest that the proper attitude of mind for Richard Thomas shareholders is one of hope rather than expectation.

Johannesburg Consolidated Investment.—The distribution for the past year of this well-known Kaffir finance house, writes our mining correspondent, is fully up to expectation, while the profits are larger than were generally looked for. At £1,347,000 the earnings show an increase of £522,700 upon the total for 1932-33. The directors state that a substantial sum was made on dealings in stocks and shares; they accordingly transfer to reserve a sum of £450,000, increasing the fund to £1,950,000. In addition, an allocation of £100,000 is made as the nucleus of a staff pension fund. Of the profit of £824,270 shown in respect of 1932-33, £473,640 represented the restoration of amounts previously set aside for depreciation. No less than £700,000 was then transferred to reserve, and after payment of a dividend of 3s. per share (as against 1s. 6d. for each of the two preceding periods), a balance of £161,070 remained to be carried forward. Allowing for the dividend included in the price, the yield on "Johnnies" is 6 per cent. This is more than that given by other shares of the same kind.

Rhodesian Anglo-American.—The sharp fall in this company's profits is explained by the fact that towards the end of 1932 it exchanged its Rhokana debentures for shares in that company. No dividend has as yet been paid on the latter.

	Years to March 31		
	1932	1933	1934

Reserve account	50,956	...	...
Carried forward	77,570	154,560	202,608

During the year the company repurchased the whole of the £4,321,000 of its American debentures at a profit of £70,737 and has since redeemed its 7½ per cent. sterling debentures amounting to £612,080. Against this it has issued £750,000 5 per cent. debentures, interest on which will require only £37,500 per annum. Receipt of this fresh finance will rectify the excess of current liabilities shown in the balance sheet. In previous years the report has mentioned other Rhodesian interests, but this year reference is only made to holdings in Rhokana direct, and through Bwana M'Kubwa. Possibly, therefore, the outside interests have been sold to defray part of the expense of debenture redemption. Particular interest is lent to the report by the offer to purchase the remaining shares of the subsidiary, Bwana M'Kubwa Copper. The company at present owns about 7,570,000 shares out of a total of 12,639,697 in issue. Purchase of the remainder will involve the issue of 1,690,000 of the parent company's reserve shares. The sole asset of the Bwana M'Kubwa company consists of about 500,000 shares in Rhokana, and the liquidation of the former will simplify the finances of the group. Rhokana may pay a small dividend for the year to

OFFER OF CONVERSION

TO HOLDERS OF

5 per cent. First Mortgage Gold Bonds due 1st August, 1934

OF

THE NEW BRUNSWICK RAILWAY COMPANY

INTO

4 per cent. Perpetual Consolidated Debenture Stock

Interest payable 1st January and 1st July

Payment in Sterling of Interest on this Stock is the unconditional obligation of the Canadian Pacific Railway Company for the term of 990 years from the 1st July, 1890.

The New Brunswick Railway Company has outstanding £600,000 5 per cent. First Mortgage Gold Bonds, which mature on the 1st August, 1934, and which will be paid on that date, at their sterling face value, together with accrued interest, at the Agency of the Company in London on surrender of the Bonds.

The Company, however, offers to holders of such Bonds the right to convert their holdings into 4 per cent. Perpetual Consolidated Debenture Stock of the Company at the rate of £119 Stock for every £100 Bonds.

Holders who accept the offer will be entitled to receive the half-year's interest due 1st August, 1934, on the Bonds surrendered for conversion.

The Company has outstanding £904,539 4 per cent. Perpetual Consolidated Debenture Stock and for the purposes of this offer this amount will be increased by the issue of a further amount of £750,000 Stock. This further amount of Stock will carry interest from the 1st August, 1934, but, subject thereto, will, as from the date of issue, rank in all respects *pari passu* with the outstanding Stock.

By virtue of the provisions of the Act authorising its issue the Perpetual Consolidated Debenture Stock constitutes, after repayment of the above-mentioned £600,000 Bonds, a first charge upon the whole of the undertaking, railway, works, rolling stock and all other railway property and effects of the Company (except lands not used for the purpose of operating the railway) subject only to:—

(a) Statutory working expenses and liabilities incidental to the operation of the railway, and

(b) Rentals in respect of certain leased lines of railway amounting in the aggregate to \$36,780 per annum.

The Company's railway has been leased to the Canadian Pacific Railway Company for a term of 990 years from the 1st July, 1890, and forms part of that Company's system. Under the provisions of the Lease the Canadian Pacific Railway Company has undertaken the obligation to pay to the holders interest on the Company's Perpetual Consolidated Debenture Stock for the time being outstanding during the said term.

The Stock is registered and transferable in London on the Company's Register in amounts of £1 and multiples thereof.

Holders of Bonds who convert will be entitled to receive on the 25th July, 1934, in full satisfaction of each £100 Bond surrendered for conversion, Provisional Scrip Certificates to Bearer for £119 Perpetual Consolidated Debenture Stock carrying interest at the rate of 4 per cent. per annum from the 1st August, 1934.

Provisional Scrip Certificates to Bearer will be issued in respect of the Stock, in denominations of £1,000, £100 and £10, to which will be attached a coupon for £1 13s. 4d. per £100 nominal, representing five months' interest at the rate of 4 per cent. per annum to the 1st January, 1935. On surrender on and after 1st January, 1935, of fully-paid Provisional Scrip Certificates the Company will register the holders thereof or their nominees as holders of the corresponding amount of Stock carrying interest from the 1st January, 1935, and will issue Stock Certificates therefor.

Holders of Bonds who wish to accept the above offer must lodge their acceptances on the appropriate forms either with Baring Brothers and Company, Ltd., 8 Bishopsgate, London, E.C.2, or with The New Brunswick Railway Company at its offices at St. John, New Brunswick, at the latest by 4 p.m. on the 24th July, 1934. Forms of acceptance must be accompanied by the relative Bonds, for cancellation. The coupon due 1st August, 1934, should be detached for encashment in the usual way. The appropriate forms, together with copies of this conversion offer, may be obtained on application to Baring Brothers and Company, Ltd., in London, or to The New Brunswick Railway Company in St. John, New Brunswick.

The Company will pay to Bankers and Stockbrokers brokerage at the rate of 5s. for every £100 Bond comprised in acceptances bearing their stamp.

The Stock now outstanding is officially quoted on the Stock Exchange, London, and application will be made for permission to deal in and in due course for an official quotation of the further Stock issued in connection with this offer.

The Company has undertaken that no part of any surplus cash arising from the issue of the £750,000 Stock, after providing for redemption of Bonds not converted and expenses of issue, will be remitted either directly or indirectly to any country outside the British Empire.

11th July, 1934.

June 30th last, but no substantial return can be expected from Rhodesian Anglo-American until mines are in full production. In the meantime the 10s. shares at 13s. 6d. seem a reasonable option on such improvement in view of the technical excellence of the properties in which the company is interested.

* * *

Other Company Results.—Our usual summary of profit and loss accounts will be found on page 86. It includes results of 41 companies not discussed on earlier pages. The Union Bank of Australia report shows net profits of £203,509 for the year to February 28th, compared with £209,559 for the previous year. In the Breweries section, Parker's Burslem and Tamplin and Sons (Brighton) show satisfactory improvement in earnings at £51,414 and £58,726 respectively, and the dividends are increased from 5 per cent. and 7½ per cent. to 10 per cent. South African Breweries earned £298,667 for the year to March, against £350,975, and the dividend of 15 per cent., tax free, although maintained, is short-earned by about £11,000. Rickett, Cockerell and Company, the coal factors, report profits of £49,940, compared with £51,869 for the year to March, 1933. Further rubber reports, mainly to March 31st, generally reveal small improvements, but more impressive recoveries are shown by East Asiatic (£23,951, against £4,853, and 3 per cent. against nil) and Anglo-Dutch of Java, which has reduced the 1932 loss of £146,175 to £737, leaving a credit balance of £84,338 carried forward. Eight tea company reports for the year to December 31st last show marked recoveries due to export restriction, and in seven cases dividend payments have been resumed or increased. Prominent results include Badulipar (£23,436 against Dr. £1,608); Upper Assam (£34,775 against Dr. £6,161), and Buxa Doars (£24,773 against £4,498). Among investment trusts, Trustees Corporation, whose income is derived partly from City office property, reports net profits of £82,899, compared with £86,542 for the year. The list of miscellaneous companies include Central Sugar (£64,757 against £56,287), Yorkshire Sugar £42,630 against £11,151 and Aron Electricity Meter (£31,142 against £5,506). In a statement announcing the acquisition of Associated British Cinemas and British Instructional Films (Proprietors), Associated British Picture Corporation states that, subject to final audit, combined profits of the parent company and five subsidiaries for the year to March 31st last would be not less than £570,000, subject to interest charges (approximately £160,000) and depreciation. Courtaulds, Limited, announces an interim dividend of 1½ per cent., tax free, payable August 11th to shareholders registered July 12th. This is the same payment as a year ago.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—International Tea Company's Stores, H. E. Proprietary, Straits Plantations, Amalgamated Dental, Beechams Pills, and Southern Cross Gold Development. At the International Tea meeting Mr Guy Collier again dwelt on the "orgy of price cutting" with which retail food distribution was afflicted. He said that if this orgy continued it must inevitably lead to a reduction in wages, which he personally contemplated with horror. At the statutory meeting of Southern Cross Gold Development, Mr Claude de Bernales said that he believed that "few mines had a more hopeful future or better prospects of success" than those in which the company was interested. Mr Russell Polden told Amalgamated Dental shareholders of the introduction of a new type of dental X-ray apparatus which was now in use in every country of the world. Mr Eric Macfadyen gave shareholders of Straits Plantations, Limited, much interesting information about copra, saying that the disorganisation characteristic of so many markets to-day existed in an extreme degree in that for copra. Mr F. H. Hamilton dealt in detail with the manifold interests of H.E. Proprietary, Limited, in South Africa, Canada, Australia and New Zealand; he dwelt especially on the "advancing tide of development" on the Far Eastern Rand. Mr Philip Hill gave the shareholders of Beechams Pills, Limited, news of the latest lines to be placed on the market by that vigorous purveyor of patent medicines.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS	
TICKET July 24	ACCOUNT July 26

THE new account has opened more favourably, and markets, under the lead of the strength of the gilt-edged section, have shown appreciable quickening of tempo. Monday's trading, in fact, was cheerful enough to suggest that progress had begun towards the restoration of the April and May "highs," but subsequent days showed that quiet firmness was to remain the keynote. This week's high records among gilt-edged evidence the market's expectation of yet lower interest rates; and the large speculative resources which are roving from market to market in search of short profits have found some chances in the home rail and rubber markets. General business remains rather small, however.

The gilt-edged market enjoyed active conditions. Conversion issues were well to the fore, but War Loan enjoyed the most prominent rise. Old Consols and Local Loans improved sharply on Monday, but advanced more steadily on later days. Quotations for India stocks remained unaffected on Monday, but moved in company with the Funds thereafter. Dominion issues also became active after a quiet opening, although quotations showed a fairly mild response. Home Corporation stocks were more active than during recent weeks.

The Foreign Bond market was almost uniformly cheerless. Heavy selling of German bonds developed, quotations of the "Young" and "Dawes" loans being no better than 45½ and 59½ at Wednesday's close. Potash issues were marked down on apprehensions regarding German exports of the commodity. Among Far Eastern issues, Japanese bonds, after opening with a dull tone, showed some recovery in mid-week, and Chinese loans also found support. Argentine issues were very firm, but Brazilian bonds were extremely flat, and Chileans featureless.

Traffic and dividend hopes led to good support for the preference issues, while among equity stocks, Southern and Great Western were in demand. The traffic figures abruptly reversed a further display of strength on Wednesday, but part of the day's rise in the preference issues was held.

The market raised no interest in Argentine stocks, and a sagging tendency was reinforced by the publication of traffic figures calculated at current exchange rates. Brazilian issues were little changed.

The Industrial market was cheerful, and in places bright, but business showed only limited expansion. A small business was transacted in Electricity Supply shares, but equipment shares were in demand on reports of "Grid" orders. Business in Iron, Coal and Steel shares was steady, but price movements were irregular, although Allied Iron-founders made further advance. Aviation shares revived on reports of increased air forces, and motor issues, in particular Leyland, were well supported. Interest in Store shares was centred on Marks and Spencer, and some Provision shares such as International Tea were firmer. Apart from J. & P. Coats, textile shares were rather neglected, and Courtaulds were slightly weaker. Brewery shares were somewhat irregular, and business did not assume drought dimensions. Tobacco shares, which showed early firmness, tended to decline on Wednesday. Leading industrial issues such as Dunlop and Imperial Chemical enjoyed more active conditions as the week progressed, and most brick issues made further progress. British Oxygen suffered from profit-taking sales.

Business in the oil market showed only hesitant recovery, but the market was firm with few price changes.

The Rubber market, sure of its sevenpence, enjoyed active conditions, but speculation had obviously given place largely to sound investment buying. Large orders were sometimes difficult to negotiate, and prices showed restrained improvement. The Tea share market was quieter, and small irregular price changes were recorded.

Preliminary Notice.

Application will be made to the respective Committees of the Stock Exchange, London, and the Stock Exchange, Johannesburg, for permission to deal in the Shares of the Company.

NEW ROBINSON GOLD MINING COMPANY, LIMITED.

SHARE CAPITAL - £400,000

Divided into

800,000 Shares of 10s. each.

The Subscription List will open on Tuesday, July 17th.

FOR AN ISSUE OF
600,000 Shares of 10s. each at 11/3d. per Share.

Firm applications have been received from sub-Underwriters and others for 365,000 of the above shares, which will be allotted in full.

The Prospectus (which will be advertised on Monday, July 16th) will show, *inter alia*, that:—

1. The Company has been formed to acquire the Gold Mining properties situate on the Farm TURFFONTEIN, No. 21 District, Johannesburg, which properties formerly constituted and were developed and worked by the well-known ROBINSON GOLD MINING COMPANY, LIMITED, which Company, after a long and successful existence dating from 1887, was liquidated in 1926, and the assets distributed amongst its shareholders.

2. The properties are situate to the west and approximately one mile from the centre of Johannesburg and immediately adjacent to the properties of Crown Mines, Limited, whilst to the south lies the Robinson Deep Mine.

3. The Robinson Gold Mining Company, Limited, chiefly concentrated upon the two rich Reefs, Main Reef Leader and South Reef, whilst the Main Reef (owing to its lower value) was comparatively little mined. The Company will primarily concern itself with the Main Reef.

Based on the recent comprehensive Report (included in the Prospectus) by Mr. B. E. Pollard, of Johannesburg, Consulting Engineer of New Kleinfontein Company, Limited, it is estimated that there is available in the Main Reef two million tons of Ore of a recovery value equivalent to 5 dwts. per ton.

4. It is proposed to immediately equip the mine for an output of 120,000 tons per annum, and with Gold at 135s. per fine oz. an estimated annual working profit of £97,500 should be realised.

DIRECTORS:

ARTHUR GORDON OWEN, late General Manager, Transvaal Estates and Development Co., Ltd.; Past President, Land Owners' Association (Chairman).

GEORGE STEWART, late Joint Manager, African and European Investment Co., Ltd.

ALFRED CECIL TURNER, Member of the Johannesburg Local Committee of African City Properties Trust, Ltd.; Director, Rand Provident Building Society.

LONDON COMMITTEE:

SIR ARCHIBALD MITCHELSON, Bart. (Chairman, Genatosan, Ltd.; Director, Kamunting Tin Dredging, Ltd.; Pangnga River Tin Concessions, Ltd., etc.).

R. ELLERTON BINNS, B.Sc., M.I.M.M. (Partner of McCarthy and Binns, Consulting Engineers).

Copies of the Prospectus and Forms of Application will be available on Saturday, July 14 from:

BANKERS:

BARCLAYS BANK, LIMITED,

54, Lombard Street, London, E.C.3, and Branches.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS),

Circus Place, London Wall, London, E.C.2.

BROKERS:

PRYOR AND LINGNER,

Broad Street Avenue, Blomfield Street, London, E.C.2, and Stock Exchange.

The fairly large open position in Kaffir shares led to a rather quiet tone in the market this week, although the increasing stream of new issues attracted due interest. Thus Venterspost, Klerksdorp, and Klip Nigel were distinctly active, and some of the Far Eastern Rand group, after a chastened opening, found modest support. Little movement was recorded among finance issues, although "Johnnies" results (discussed on page 77) were favourably received. West African issues continued depressed, owing to speculators' sales and a disappointing Bibiani cable. Tin shares were slightly harder, Kramat Pulai showing a fresh advance on the results. Copper shares were quiet on the lower price for the metal.

FOREIGN STOCK EXCHANGES

NEW YORK

Wall Street this week has established a new record for inactivity, for Monday's turnover of 320,000 shares was the lowest recorded for just over ten years past. Industrials have, however, shown a slightly improving price tendency, for the business news is not unsatisfactory. Though car loadings are declining, steel activity now appears to be increasing, and the June figures for motor car sales and for retail trade are both good. An exception to the general tendency of industrials is the amusement group, which have fallen back sharply following the recent decline in theatre attendances said to be due to the religious boycott of sex films. On Wednesday there were some signs of a real flare up in Wall Street following the frantic outburst of activity in the Chicago grain market, where reports that the years-cent grain prices rocketing up to the full allowable limits. A year ago Wall Street would unquestionably have refused to be outdone by Chicago, but continued chastisement of hesitation Wall Street thought better of it and subsided into inactivity again.

PARIS

The market has been under the influence of a recrudescence of the reports, denied last week, of an impending Government issue, and Rentes have been a dull market. The actual announcement on Wednesday of the immediate issue of a Frs. 3,000,000,000 4 per cent. loan in bonds of Frs. 1,000 offered at Frs. 950 and redeemable in fifty years at Frs. 1,400 led to bear covering and a sharp recovery of the market.

BERLIN

After an initial decline, the share market last week recovered, but closed somewhat below the level of the preceding week. Potash issues and public utilities were in demand, while Reichsbank, and, late in the week, some of the commercial banks were firm. The new week opened dull but fairly firm, with a continued demand for public utilities, and certain specialties, including Berlin-Karlsruhe, Schultheiss Brewery, and Tietz (now Westdeutsche Kaufhof). Tuesday's market was active, and advances predominated, heavy industrials, such as Harpener and Hoersch, improving, but potash shares reacted. After dullness last week, home bonds were this week somewhat

higher and most dollar bonds, certificated and converted, also improved.

AMSTERDAM

The market has remained very quiet and the turnover has fallen still further. Prices have, however, shown on the whole a firmer tendency. Philips' Lamps, notably, improved several points on the more favourable export figures, and tobacco and sugar shares have also shown good advances. There has been little change in Unilever. The market was closed on Wednesday for the funeral of the Prince Consort.

CAPITAL ISSUES

THERE has been some abatement in new issue activity during the week so far as prospectus offers are concerned, though "placings" in the market continue on a considerable scale. The week's prospectuses number only three, of which two relate to conversions of existing debenture issues. The largest issue is that of 1,000,000 5 1/2 per cent. cumulative preference shares of £1 each (offered at 20s. 6d.) in *Griffiths Hughes Proprietaries, Limited*, which is acquiring the whole issued capital of *E. Griffiths Hughes, Limited*, manufacturers of "Kruschen Salts" and other preparations. The preference shares rank in front of £1,500,000 ordinary shares; there are no debentures and none may be created without the sanction of the preference shareholders. The prospectus gives the net assets of the trading company at £410,000 and shows "five years' net profits averaging £377,000. The dividend on the preference shares is therefore very amply covered, but as is common with concerns of this kind whose business is essentially based on goodwill the capital security afforded by the physical assets is not impressive. *The Carlton Main Colliery Company* is offering £810,000 4 1/2 per cent. debenture stock at £102 1/2 in order to provide for the repayment of the same amount of 6 per cent. secured debentures which have been called for redemption on October 1st at £105 per cent. The company has extensive interests in the South Yorkshire coalfield, and has a consistent record of satisfactory profits. The stock is a reliable industrial debenture. *The New Brunswick Railway Company* is offering holders of £600,000 5 per cent. first mortgage gold bonds, due August 1st, conversion into 4 per cent. perpetual consolidated debenture stock at rate of £119 stock for £100 bonds. The maturing bonds are gold bonds, but are to be paid at their sterling face value; the conversion offer, however, assures to holders who take advantage of it virtually the same amount of interest in sterling. The new stock ranks with £904,533 existing stock, and interest is unconditionally guaranteed by Canadian Pacific Railway for 990 years from 1890. Statements "for information only" have been published by *W. J. Brookes and Sons, Metropolitan Ground Rents, Limited* (issue of £650,000 4 per cent. first mortgage debenture stock at £99 per cent.), *Klip Nigel Estate and Gold Mining Company, Smart Brothers* (£600,000 4 1/2 per cent. first mortgage debenture stock), *Tarkwa Gold Mines, George Stark and Sons (1934), Leonora Corporation, and Second Anglo-Celtic Trust* (£100,000 4 per cent. first debenture stock). It is understood that facilities for dealing in *Bushstick Mines, Kenya Consolidated Goldfields* and *Tarkwa Gold Mines* recent issues have been temporarily withheld pending the fulfilment of certain technical requirements. With regard to Kenya Consolidated Goldfields, this company has a concession of 937 square miles in the Takamega district of Kenya Colony and owns or has options to take over other valuable properties. Permission to deal has been deferred for about six weeks, while the necessary restrictions are being passed to make the Articles of Association conform with the English law.

ASSURED INCOMES

People to-day, quite rightly, are thinking of assurance in terms of income. The suggestions referred to here are in keeping with this trend of thought.

Income for Present Needs

A Canada Life Annuity brings stability of income to those past middle age. By this means capital producing a meagre 3 1/2 per cent. can be made to yield from 7-20 per cent. per annum, according to age, with perfect safety.

Income on Retirement

For those who desire security of income in the future when the time for retirement comes, there is the Canada Life Endowment Policy. A moderate premium paid when earnings are highest ensures provision for a satisfactory income in the later years.

Income for Dependents

Of special interest to the young married man is the Canada Life "Assured Income" Policy which makes security of income certain for his dependents, at the minimum cost.

Income for Education

The man with a growing family can ensure his children's education by a Canada Life Educational Policy.

Particulars of these policies will be sent on application to J. R. Wandless, F.I.A., Manager.

(Established 1847—incorporated in Canada as a Limited Liability Co.)

2 St. James's Square, London, S.W.1

ISSUES OF THE WEEK

By Prospectus or Offer for Sale

Total recorded, January 1 to July 7, 1934, excluding conversions, £105,048,246.
Total recorded, January 1 to July 7, 1934, including conversions, £272,487,065.

National Savings Certificates.
Net receipts, week ended July 7, 1934, Dr. £150,000.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

PUBLIC OFFERS

Carlton Main Colliery Company, Ltd.—Issue of £810,900 4½ per cent. debenture stock at £102½ per cent. The issue will provide sums to repay an equal amount of 6 per cent. stock now called for redemption at £105 per cent., holders of which may convert up to July 14, 1934, at par. The stock will be redeemed by drawings to March 31, 1944, at £103 per cent., thereafter to March 31, 1949, at £101½ per cent., and thereafter at par, or on three months' notice on similar terms. Profits for years to March 31st after depreciation have been: 1932, £130,873; 1933, £155,092; 1934, £165,469. Net assets including proceeds of the present issue are stated at £3,978,226. The stock is secured by first floating charge on the undertaking.

Griffiths Hughes Proprietaries, Ltd.—Issue of 1,000,000 5½ per cent. cumulative preference shares of £1 each at 20s. 6d. per share. The company has been formed to acquire the whole of the issued capital of E. Griffiths Hughes, Ltd., amounting to £172,350, for consideration of £1,000,000 in cash and allotment of 1,499,993 ordinary shares of £1 each, credited fully-paid. The net assets of the company acquired are stated at £410,140, and profits of the company and its subsidiaries, after adjustments but before income tax, for years ended to March 31st have been: 1932, £526,172; 1933, £469,964; 1934, £451,370. Messrs Cazenove, Akroyds and Greenwood and Company have purchased 500,000 ordinary shares of £1 from vendors, and underwrite the present offer in consideration thereof.

BY STOCK EXCHANGE INTRODUCTION

W. J. Brookes and Sons, Ltd.—Issued capital, 150,000 6 per cent. cumulative preference shares of £1 each and 600,000 ordinary shares of 5s. each. The company was incorporated in 1922 to acquire a bakery and confectionery business of similar name, and was converted into a public company in June. Net assets, excluding goodwill, as at February 24, 1934, are stated at £240,031, and profits, before depreciation and directors' remuneration for years to end-February have been: 1932, £49,713; 1933, £40,405; 1934, £32,180. £100,000 from reserve has been capitalised, and 100,000 preference shares have been issued in respect thereof to shareholders. Standard Industrial Trust has agreed to purchase the total preference share issue and 150,000 ordinary shares for the sum of £182,000.

Klip Nigel Estate and Gold Mining Company, Ltd. (incorporated in Union of South Africa).—Issued capital, 1,920,000 shares of 5s. each. The company was incorporated in February, 1934, and has acquired prospecting contracts and freehold interests in farms in the Heidelberg district, covering 33,473 acres. The areas contain the outcrop of the Nigel reef, and have been acquired, together with prospecting rights thereon, for £185,000, payable as to £35,000 in cash, and as to £150,000 by allotment of 600,000 shares of 5s. each. The company also refunds £7,784 expended by vendors on the properties; 1,320,000 shares have been issued for cash, and after deduction of cash consideration and preliminary expenses, available working capital is £265,893.

Metropolitan Ground Rents, Ltd.—Particulars of issue of £650,000 4 per cent. first mortgage debenture stock at £99 per cent. The company has been formed to acquire the properties known as Kensington Estate, covering 78 acres, near Earl's Court. The property is to be maintained as a ground-rent estate, total revenue of £42,661 consisting of £22,611 ground rents and £16,550 rack rents, and net revenue available for interest is stated at £32,061. The estate is valued at £1,040,767 and is acquired, subject to certain charges, not exceeding £846,000, to be discharged by the issue and subscription of £250,000 10-year notes, by allotment of 250,000

ordinary shares of £1 each. The stock will be redeemed up to 1959 at £102 per cent. and up to 1974 at par, with company's option at various rates on three months' notice. Morgan, Grenfell and Company have guaranteed subscription of the issue for a commission of 2 per cent.

Smart Bros., Ltd.—Particulars of issue of £600,000 4½ per cent. first mortgage debenture stock. The issue is a first charge on freehold and leasehold (other than rack-rent) properties not exceeding 14 years' term, and will be redeemed by sinking fund between November 30, 1937, and November 30, 1963, at par, or from November 1, 1944, to November 1, 1949, at £105 per cent. and thereafter at £102½ per cent. at three months' notice. The company may issue further stock, but not in excess of 50 per cent. of the aggregate amount of freehold and leasehold properties, amounts outstanding in respect of hire-purchase contracts, and market value of investments. The proceeds of the issue will be applied to repayment of advances, of £350,000 at 6 per cent., and for general development.

Second Anglo-Celtic Trust, Ltd.—Issue of £100,000 4 per cent. first debenture stock, part of an authorised issue limited in first instance to £150,000. The stock will be redeemed at par on July 15, 1969, or at any time after July 15, 1959, at company's option. Interest payable January 15th and July 15th each year. The stock will be registered and transferable in multiples of £1. The £100,000 stock fully paid is being placed for cash at 99 plus accrued interest by Rowe and Pitman and Joseph Sebag and Company, who will receive jointly a commission of ½ per cent.

Tarkwa Gold Mines, Ltd.—Particulars of issue of 400,000 shares of 4s. each. The company was formed to acquire from Tarkwa Banket West the Edua Priem and Idua Priem gold-mining concessions, covering 1,519 acres, which were partly developed in 1910-12. The purchase price was £200,000, satisfied by allotment of 800,000 shares of 5s. It is intended to develop the mine and to erect plant, working capital of £93,500 being available for these objects. The above issue was underwritten by the vendors in consideration of option to subscribe for 400,000 shares at par for one year.

Leonora Corporation, Ltd.—Issued capital, 3,000,007 shares of 1s. each. The company was incorporated in February, 1934, to acquire investments and other assets (or the cash representing the proceeds of sale of part thereof) from the Sons of Gwalia, Ltd., and to carry on business as a mining finance company. The Leonora Company owns 42,000 shares of 1s. each in the Tanami Syndicate, the issued capital of which is 376,548 shares of 1s. each, fully paid. The purchase consideration for investments and assets was £87,500 in cash. No part of the purchase price is payable in respect of goodwill. After payment of purchase consideration and preliminary expenses, £20,000 will be available for working capital. Messrs Ian Anderson and Nairn have bought 1,000,000 shares of the company at par.

Stark (George) and Sons (1934), Ltd.—Company incorporated in Scotland on July 9, 1934, to acquire the business of George Stark and Sons, Ltd., Glasgow, coated and gummed paper and pasteboard manufacturers. Share capital issued, £50,000 in 6½ per cent. cumulative preference shares £1 and £30,000 in ordinary shares of 10s. each. There are no mortgages or debentures. Standard Industrial Trust, Ltd., have agreed to purchase the whole of the 6½ per cent. preference shares at par. Total net assets (excluding goodwill) are £86,103. No part of the purchase consideration of £75,000 is attributable to goodwill. Profits are shown as follows for years ended February 28th: 1930, £14,879; 1931, £12,273; 1932, £13,531; 1933, £14,968; 1934, £16,093; three months ended May 31, 1934, £3,577. Dividend on the preference share capital will absorb £3,250.

ISSUES TO SHAREHOLDERS ONLY

Ariston Development.—Ariston Gold Mines (1929), Ltd., is offering the 354,026 2s. 6d. shares at present unissued to shareholders at 7s. 6d. per share, in the proportion of one new share for each 15 held.

British Tabulating Machine.—Offer of 100,000 6 per cent. cumulative preference £1 shares at 20s. 6d. per share to shareholders registered on June 28th, in the proportion of one preference share for each share.

Daggafontein Mines.—Offer to shareholders to subscribe for reserve shares at £5 per share in the proportion of six new shares for every 100 shares now held, fractions being disregarded.

Hall and Company.—The directors have decided to issue 12,375 ordinary £1 shares at par to shareholders registered on June 18th in the proportion of one new share for every ten shares held.

PRIVATE OFFERS

South-Eastern Gas Corporation, Ltd.—It is announced that the corporation has made an offer to purchase the whole of the issued ordinary stock of the Hastings and St. Leonards Gas Company. The offer is conditional upon acceptance by holders of at least 55 per cent. of the nominal value of the stocks, and closes on July 20th.

OFFER TO SHAREHOLDERS IN WEST WITWATERSRAND AREAS, LIMITED

Venterspost Gold Mining Company, Ltd.—Offer of 2,000,000 shares of 10s. each at par, in proportion of two shares for each share held on June 30, 1934. The company will acquire title and mineral rights over 2,862 claims in the Gembokfontein and Venterspost 27 areas, and negotiations are proceeding for acquisition of 470 further claims. The territory has been investigated by geological and geophysical methods, and it is thought that the Main Reef series extends throughout the area. It is proposed to sink two vertical shafts at once. The purchase consideration is £400,000, payable in cash, but the vendors will take up 800,000 shares. Approximately £958,500 will be available for working capital and acquisition of further claims.

CONVERSIONS AND REPAYMENTS

Chichester Corporation 3 per Cent. Redeemable Stock.—The principal will be repaid at par on and after March 1, 1935.

New Brunswick Railway Company.—Offer of £600,000 4 per cent. perpetual consolidated debenture stock to holders of 5 per cent. gold bonds due August 1, 1934, at rate of £119 stock for £100 bonds. The stock will constitute first charge on the undertaking, subject to statutory working expenses and rentals of certain leased lines. Payment of interest in sterling is unconditionally guaranteed by Canadian Pacific Railway during the term of 990 years from July 1, 1890, for which the company's railway has been leased.

Wheal Reeth Tin.—Meetings of the shareholders of Wheal Reeth Tin are being called for July 27th to consider a proposal to convert each £1 preference share into twenty 1s. ordinary shares and to cancel the dividend at the rate of 6½ per cent. which has accrued as and from January 1st last. They will rank for any dividend, after conversion. Adoption of this plan will make the capital £90,000 in 1,800,000 ordinary shares of 1s.

FORTHCOMING ISSUES

New Robinson Gold Mining Company.—Arrangements have been completed in connection with the formation of the New Robinson Gold Mining Company, Ltd., which has been registered with a capital of £400,000, and will acquire the gold-mining properties formerly belonging to the Robinson Gold Mining Company, Ltd. An issue of 600,000 shares, 10s. each at 11s. 3d. per share, will be made on July 17th. A preliminary notice will be found on page 79. Prospectus will be out on July 16th.

Spaarwater Gold Mining Company, Ltd.—It is expected that this company will be formed within the next few weeks. It will have a capital of £2,000,000 in shares of 5s. each and will work portions of Spaarwater and Maraisdrift, and certain claim areas which at present form part of Sub Nigel, Ltd.

The Stanton Iron Works Company, Ltd.—A meeting of the Stanton Iron Works Company, Ltd., has been convened for July 16th to approve the issue of the unissued capital of the company as 6 per cent. cumulative preference shares.

Van Dyk Proprietary.—Shareholders registered July 7th and holders of share warrants to bearer will have the right to subscribe at par for one 10s. share of the new company for each share now held. The issue of forms of subscription will be made about end-July.

Austin Reed, Ltd.—Austin Reed proposes to create 200,000 redeemable preference shares of £1 each, carrying a fixed cumulative preferential dividend of 5 per cent.

New Zealand Government 3½ per Cent. Stock, 1955-60.—An immediate issue is to be made by Government of New Zealand for the purpose of refunding New Zealand Government 4 per cent. inscribed stock, 1933-43, of which £3,989,100 is outstanding. The cash lists will open and close on July 16th, and the conversion lists will remain open until July 30th.

Welsh Associated Collieries.—Welsh Associated Collieries is to make an offer for sale of £1,500,000 4½ per Cent. First Mortgage Debentures at par, 500,000 5½ per Cent. Preference Shares of £1 each at 21s.

RESULTS OF ISSUES

British Ropes.—Higginson and Company announces that the lists in connection with the issue of £850,000 4½ per cent. first mortgage debenture stock were closed on the morning of July 10th, and that the issue was over-subscribed.

Griffiths Hughes Proprietaries, Ltd.—The subscription list in connection with the issue of 1,000,000 5½ per cent. cumulative preference shares of £1 each at 20s. 6d. per share was closed at 9.5 a.m. July 10th, the issue having been over-subscribed.

Kentan Gold Areas, Ltd.—Owing to very heavy over-subscription, all applications from the public for less than 100 shares and from the Tanganyika group of shareholders for less than 50 shares, have been eliminated. After giving consideration to applications for under 250 shares in the case of the Tanganyika group of shareholders and for under 500 in the case of the public, the former received approximately 6½ per cent. and the latter about 3 per cent.

Powell Duffryn Steam Coal Company.—Issue of 5 per cent. preferred ordinary shares closed at 9.5 a.m. July 6th, owing to heavy over-subscription. Permission to deal has been granted.

Henlys, Ltd.—Issue of 200,000 1s. ordinary shares over-subscribed.

OIL OUTPUTS

ANGLO-EQUADORIAN OILFIELDS, LTD.—The production for June is cabled as 16,924 tons.

ANGLO-PERSIAN OIL COMPANY, LTD.—Production in Persia for the month of June amounted to 628,000 tons, making a total of 3,709,000 tons for the first six months of 1934.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil for the month of June as 26,230 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended July 7: Venezuela, 16,879 barrels; Trinidad, 30,216 barrels; total, 47,095 barrels. Production for June: Venezuela, 77,353 barrels; Trinidad, 115,637 barrels; total, 192,990 barrels. Deliveries for June: Venezuela, 73,418 barrels; Trinidad, 145,368 barrels; total, 218,786 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production June: Dacia, 3,639 tons; Perimeter X, 6,513 tons; Starnaphta, 382 tons.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during June was 13,370 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,003 barrels.

COMPANY MEETINGS, &c.

H.E. PROPRIETARY, LIMITED

INCREASED PROFIT AND DIVIDENDS

Presiding at the annual general meeting of H.E. Proprietary, Limited, held, on the 11th instant, at Winchester House, London, Mr F. H. Hamilton (chairman), in moving the adoption of the report and accounts, said that the directors' report reflected a period of greater activity than had been experienced for several years past and the shareholders would no doubt regard the net profit of £54,065, as compared with £29,752 for the previous year, as satisfactory. The directors recommended a dividend for the year of 10 per cent., less tax, leaving £31,318 to be carried forward. They also announced the payment of a dividend of 10 per cent. on account of the current year's profits, both payments being made simultaneously on July 14th.

Their subsidiary, the South African H.E. Proprietary, owned the freehold of the northern section of the Farm Klippoortje on the Far Eastern Rand, which adjoined Spaarwater and Maraisdrift. Last year he pointed out that the advancing tide of development in the Far Eastern Rand had all but reached Klippoortje. Provisional arrangements had now been made which if carried into effect would involve the merging of Klippoortje with adjoining ground and the formation of a company with a large working capital. A further holding of the South African company referred to in the directors' report was the freehold Farm Frankfort in the Lydenburg district. The old H.E. Proprietary spent a considerable amount of money many years ago on that property, and developed about 100,000 tons of 7 dwt. ore. At that time the proposition did not seem particularly attractive. To-day, of course, the position had changed, not only because certain metallurgical difficulties due to a small copper content were now relatively unimportant, but because 7 dwts. expressed in currency, which formerly represented 29s., now represented approximately 49s. The claim interests of the South African H.E. Proprietary, Limited, on the Murchison Range had been merged into a combine formed under the aegis of the Anglo-Transvaal Consolidated Investment Company, Limited, and the Johannesburg Consolidated Investment Company, Limited.

The direct holding of the company included a substantial interest in Luipaards Vlei Estate and Gold Mining Company, Limited, which paid a dividend of 33½ per cent. in January last, the production of the mine having passed their immediate objective of 40,000 tons per month, their working profits averaging now over £20,000 per month. A very encouraging feature was provided by the development results reported for the last three quarters, which showed an improvement in values exceeding those recorded for the previous year. The property had been increased by recent acquisitions and now extended to 2,000 claims, including the Tudor area, which was entirely undeveloped and constituted a mine in itself. The issued capital of the company was only £274,298 and it was obvious to-day that it was necessary to envisage an ultimate output largely in excess of the present figure.

During the past year their Canadian holdings in Huronian Belt, Vipond, and Keeley, were merged into one company, the Anglo-Huronian, Limited. The holdings in that company, which had an issued capital of 1,252,005 shares of no par value, were considerable, and at the date of its incorporation last October the cash and liquid assets amounted to \$4,660,000 Canadian, apart from their mining interests. Since then the position had substantially improved, and it was expected the company would very shortly enter the dividend stage.

Their Australian interests included the Wiluna, the Associated Gold Mines of Western Australia, the Gold Fields Australian Development Company, and the Golden Horse Shoe. The progress of the Wiluna mine during the year under review had been marked. During the year the Wiluna Corporation and its subsidiary liquidated all indebtedness, and the Corporation declared an interim dividend of 10 per cent. The Gold Fields Australian Development Company was a development company with which the Consolidated Goldfields of South Africa was closely associated. The H.E. Company had also interests in the Blackwater Mines and the Consolidated Goldfields of New Zealand. Dividends of 2s. 6d. per share, tax free, and 33½ per cent. were paid by the Blackwater and Goldfields of New Zealand respectively.

In conclusion, the chairman said they were justified in regarding the position of the company with solid satisfaction. Their main interests were healthy and progressive, the financial position was exceptionally strong and liquid, the past six months had been the most profitable the company or its predecessor had known, and the prospects of business in the near future were favourable.

The report and accounts being seconded by Mr L. Ehrlich and unanimously adopted, a vote of thanks to the chairman and directors concluded the proceedings.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED

ANOTHER SUCCESSFUL YEAR

HIGHEST QUALITY AT CHEAPEST PRICES

The thirty-ninth annual general meeting of the International Tea Company's Stores, Limited, was held, on the 10th instant, at Winchester House, Old Broad Street, London, E.C., Mr Guy Collier, chairman and joint managing director, presiding.

The secretary (Mr F. Wilson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: You will, perhaps, remember that in my speech last year I dwelt at some length on two important factors that had a great bearing on the figures submitted to you last July, viz.: the fall in commodity prices, and price competition in the food trade, and I ventured on a mild prophecy that commodities in our trade had touched bottom, and that the tendency was rather towards better prices, and, secondly, that the foolish competition in retail price cutting was abating somewhat, and that the prospects of reasonable profits were quite hopeful.

MARKETS MORE STABILISED

In my first forecast I was perfectly right. Markets have in the main become much more stabilised, and we have been comparatively free from that persistent drop week after week and month after month that had such an adverse effect on our balance sheet last year. In regard to my second forecast, I am sorry to say I have been entirely wrong.

I am sure you will agree that the policy pursued has proved successful, because in what has been undoubtedly a very lean and competitive year the profits have been increased by £30,132. It is true we have not yet reached the "peak" figures of 1932, but we have made a step in the right direction, and if the signs of returning prosperity to the industries of the United Kingdom, which became noticeable during 1933 and seem to be continuing through 1934, are not merely a "flash in the pan," but are real signs of recovery in the basic industries and a real revival of our export trade, the foundation of this company is now so strong, and its ramifications so far-reaching, that a recovery to the "peak" figures of 1932 is quite within the bounds of possibility.

YEAR'S PROFIT

You will see from the profit and loss account that the profit for the year is £824,015. To this we have to add £130,189 brought forward from the last account, making a total of £954,205. After charging directors' and audit fees, pensions, providing for National Health and Unemployment Insurance depreciating fixtures and fittings by £75,000, placing £100,000 to the reserve account, and restoring £25,000 to the dividend equalisation reserve, providing for the preference dividend and the interim dividend of 12 per cent. already paid on the ordinary shares, the balance is £404,353. The directors, out of this sum, recommend the payment of a final dividend of 18 per cent. on the ordinary shares, making 30 per cent. for the year, with a provision of £50,000 to be made for income tax liability, and that the balance of £106,964 be carried forward to the next account.

The reserve account now stands at £847,564, and the dividend equalisation reserve amounts to £200,000. The fact that we have been able to put back to the dividend equalisation reserve the sum of £25,000, which we drew from it last year, is one of the most gratifying features of this year's balance sheet.

MR COLIN COOPER'S STATEMENT

Mr Colin Cooper (vice-chairman and joint managing director) referred to the proposed new issue of capital to be dealt with at the subsequent meeting, and said that the cash balance of £229,969 disclosed in the balance sheet was not available for further expansion, but was employed in the day-to-day financing of the present business. Although the company had no bank loan, it had no large deposit, and capital was continually required for the steady expansion of the business. It would not be wise for any concern to put itself in the position of being too heavily indebted to a bank, for some radical change in money-market conditions might occur. At the present moment the financial position for raising money was extremely good, and it was only prudent to take advantage of current conditions to put the business in an independent position for the next two or three years.

The report and accounts were unanimously adopted, and the proposed increase of the capital by the creation of 700,000 additional ordinary shares of 5s. each was unanimously approved.

STRAITS PLANTATIONS, LIMITED

STEADY ADVANCE IN CROPS

The thirty-fifth ordinary general meeting of the Straits Plantations, Limited, was held, on the 9th instant, at the registered office, 1-4 Great Tower Street, London, Mr Eric Macfadyen (the chairman) presiding.

The Chairman, in the course of his speech, said the upward trend of their crops, which had been so marked for some time continued during the past year.

The last four years had all been good years for the ripening of the nuts. One had to remember that the crop they were producing was a fruit crop, and was dependent to a considerable extent on the weather. Substantial variations of crop between one year and another were normal. The steadiness of their advance had, in the main, been due to younger areas reaching maturity at the time—a factor which had obscured such seasonal variations.

During these years there had been an uninterrupted fall in costs, which were now lower than they had ever been before. In this respect they might find they had about touched bottom. Under the influence of the improved outlook for rubber—the chief money crop of Malaya—some reaction from the present low level of wages was to be looked for. Average net prices in recent years (except for a slight recovery in 1933) had shown a continuous decline. Fortunately the company's financial position was strong and the directors could pay the dividend now recommended without reducing the carry-forward by more than approximately £1,000. The estates had been kept in first-class order, including all immature areas, and they had continued to find funds for a good deal of cultivation and manuring. The immediate outlook for copra could only be described as obscure, the disorganisation characteristic in so many markets to-day existing in an extreme degree in that for copra. He feared that they could not yet count upon the elimination of extraneous factors so far as their own commodity was concerned. Meanwhile they were engaged in producing the best of all vegetable oil products, and when they looked beyond the immediate future they had good grounds for confidence. No better copra than theirs came to market; they produced at as low a cost as any. The world had always wanted copra and in the long run must pay a fair price for it.

The report was unanimously adopted.

THE AMALGAMATED DENTAL COMPANY, LIMITED

(Formerly Claudius Ash, Sons and Company, Limited, and De Trey and Company, Limited)

WORLD-WIDE ACTIVITIES

The twenty-ninth annual general meeting of the Amalgamated Dental Company, Limited, was held, on the 9th instant, at the Holborn Restaurant, London, W.C.

Mr E. Russell Polden (the chairman) said that their business was of a world-wide character, and therefore its trading activities were susceptible in an important degree to the uncertainty of exchanges and controlled finance, the imposition of increased duties and quotas and the restriction of imports. All of those factors had played their part against their trading activities, and the result to the company had been that those circumstances had contributed towards a material restriction of business in several countries.

It was encouraging to report that during the year they had experienced a sensible trade revival at home which was well maintained so far in the current year. The home factories were dealing with steadily increasing output, and the number of hands employed was the largest for several years. Their products were distributed through the retail dental trade houses to the members of the dental profession, and it would be appreciated that improvement in business generally throughout the country had a direct and favourable result on the business in dental commodities.

Evidence of the progressive nature of the field in which they were engaged was in the fact that during the year several new commodities, of importance had been introduced to the market. A notable example was "Salvex," a new dental conservation product, produced in the laboratories at Zurich, which had been enthusiastically received by the dental profession in every country in which they traded. In conjunction with the Ritter Dental Manufacturing Company, they had completed the introduction of a new type of dental X-ray apparatus, and that new machine was now in use in every country of the world. It represented an entirely new departure in dental X-ray apparatus design, embodying perfect control, a remarkable adaptability to the conditions to be recorded, and an absolute factor of safety under all conditions. It was encouraging to note that neither depression nor crisis deterred the advance of dental science.

The report was unanimously adopted.

BEECHAMS PILLS, LIMITED

A SATISFACTORY YEAR

SUCCESSFUL NEW LINES

The sixth ordinary general meeting of Beechams Pills, Limited, was held, on the 12th instant, at the Hotel Metropole, Northumberland Avenue, London, W.C.

Mr Philip E. Hill (the chairman) said: Ladies and gentlemen, the profits for the year are £264,343 8s. 4d., as compared with £248,030 18s. 8d. for the previous year, an increase of some £16,000 odd, after providing for the loss incurred in our American and Canadian businesses, which we hope will not recur. Beechams and its subsidiaries are now selling their products in nearly every part of the world, and satisfactory profits have been shown everywhere, with the exception of the United States of America and Canada. Our sales for the first three months of this financial year show a substantial increase over the corresponding period of last year.

FAVOURABLE RECEPTION OF NEW LINES

We have placed several new lines on the market which have had an exceptionally favourable reception, but two of them, which are seasonal remedies, have not had as large a sale as was anticipated, owing to the mildness of the winter. Our advertising allocations during the year have been increased, and we continue to be one of the largest contributors to the Government in Patent Medicine Duty—and these payments make very serious inroads on the profits available for distribution. Reviewing the year as a whole, it can only be regarded as satisfactory, and the future, in my opinion, definitely points to an expansion of sales and increased profits, in anticipation of which we are extending and reconstructing our factory at St. Helens.

CONVERSION OF DEFERRED SHARES

You are asked to pass a resolution to-day to convert our 1s. deferred shares into shares of 5s. each, the directors being satisfied that the conversion will be a popular one with the investing public. On the motion of the Chairman, seconded by Mr Louis Nicholas, the report and accounts were unanimously adopted.

At subsequent meetings the necessary resolutions were passed to give effect to the proposals to consolidate the 1s. deferred shares into shares of the denomination of 5s.

The proceedings terminated with a cordial vote of thanks to the chairman, directors and staffs of the company and the associated companies.

SOUTHERN CROSS GOLD DEVELOPMENT COMPANY

PROSPECTS OF FRASERS LODGE

The statutory meeting of Southern Cross Gold Development, Limited, was held, on the 6th instant, in London.

Mr John Waddington, J.P. (the chairman), said that the company had started with a net sum in cash of £114,150, and on or before September 30, 1935, option shares totalling a further £120,000 could be exercised. They were, therefore, amply protected financially to carry out properly and efficiently the policy of the board and the development plans outlined. As their mining interests were in Western Australia, and as any advances to mining companies in which they were shareholders and which they might care to make as a holding company would be made in that country and in Australian currency, the board had thought it advisable to place £100,000 sterling of their capital on fixed deposit for two years with the National Bank of Australasia, Perth, Western Australia. By so doing they were able, due to the difference in the value of Australian and British currency, to receive the benefit of a 25 per cent. bank rate of exchange.

The development work, which was to be started immediately the machinery already ordered was in position, was to unwater the present main shaft on Frasers Lease, recondition the workings, and, by driving and cross-cutting, prove the extent and value of the main and known to exist parallel ore bodies. Two large diamond drills capable of testing the ground at a depth of over 2,000 ft. and three prospector drills with a 250 ft. capacity had been ordered, and had already been shipped from Canada. Based on the reports received on the property from Government and independent mining engineers alike, there was every reason to have confidence in the Frasers line of lode.

Mr Claude de Bernales said that he believed that few mines had a more hopeful future or better prospects of success than those in which the company was paramourly interested. The record of Frasers lode of 379,787 tons of ore crushed for a return of 193,244 fine ounces of gold was an excellent one, and when

one considered the report informed them that that tonnage had been obtained from above the 200 ft. level, it told its own story as to the size and consistency in gold content of the ore body. Diamond drill holes had been put down under Government supervision, and had proved the existence of the main lode with payable values and width to a vertical depth of at least 730 ft. The lode was expected to be 13 ft. to 14 ft. wide, carrying 9 dwts. to 10 dwts. of gold. The main lode was a large, well-defined ore channel, definitely proved by outcrops and workings to persist for over a mile in length. Running parallel with the main lode were several other lodes, as yet practically unexplored or tested.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 7, 1934, amounted to £14,122,400, against ordinary expenditure of £22,823,800. After allowing for an increase in Exchequer Balances of £36,990 the operations for the week, as shown below, increased the National Debt by £8,738,000 to approximately £8,083 millions.*

(000's omitted)			
8% Funding Loan	£ 15,050	Public Department Advances ..	2,250
Land Sett. Act repayments..	7	Treasury Bills	3,659
		N. Atlantic Shipping Issues ..	25

SILVER

There have been further sales on China account and re-sales by speculators; America sold moderately on occasion, and towards the end of the week there was some re-selling by the Indian Bazaars. Although speculators and India continued to give support, buyers have been less inclined to press, consequently prices showed a tendency to ease. Nevertheless, the market has a fairly steady appearance at the moment, and the undertone appears good.

REPORTS AND NOTICES

GOVERNMENT, &c.

THE NATIONAL FUND (Accumulative for the eventual redemption of the National Debt).—Statement of position at March 31, 1934.—Amount as constituted November 10, 1927, £499,878 4s. 11d.; since contributed by 65 donors, £13,839 9s. 1d.; amount with accumulations at March 31, 1934, as certified by the auditors, Messrs Deloitte, Plender, Griffiths and Company, £720,802 2s. 10d. Donations to the fund may be sent to the trustees, Messrs Baring Brothers and Company, Ltd., 8 Bishopsgate, London, E.C.2. It is important that donors should specify in writing their desire that the amount of their contributions be applied to the National Fund.

BANKS

MARTINS BANK, LTD.—The directors of Martins Bank, Ltd., announce that Mr E. B. Orme, J.P., a deputy chairman of the bank since 1929, has been appointed chairman in succession to the late Mr Alex. Allan Paton, C.B. They also announce that Mr Richard D. Holt, J.P., LL.D., has been appointed a deputy chairman.

MISCELLANEOUS

LAZARD BROTHERS AND COMPANY, LTD.—Lazard Brothers and Company, Ltd., were informed by cable by the Banco do Estado de São Paulo on July 11th that as the result of protests lodged in Brazil by the Associations representing the British Insurance and Trust Companies and of diplomatic action on the part of the British Government, the Banco do Estado has determined in agreement with the Brazilian Federal authorities to give up its intention to purchase its guaranteed sterling mortgage bonds. No action will therefore be taken with regard to tenders lodged with Lazard Brothers and Company, Ltd., in response to the circular dated June 26, 1934.

LIMA LIGHT, POWER AND TRAMWAYS COMPANY (EMPRESAS ELECTRICAS ASOCIADAS).—Notice has been given that a meeting of the holders of the 6 per cent. first mortgage debentures will be held on July 19, 1934, to consider a proposal to transfer certain

GOLD

Messrs Samuel Montagu and Company write on July 11, 1934, as follows :—

The Bank of England gold reserve against notes amounted to £191,461,382 on the 4th instant, as compared with £191,460,163 on the previous Wednesday. During the week the Bank announced the purchase of £62,443 in bar gold. In the open market business has been quiet; the amount available during the week was about £1,500,000, and this was absorbed by general demand.

Quotations during the week :—

† Free of income tax.

ENGLISH CHINA CLAYS, LTD.—The directors announce the payment of arrears of dividend on the cumulative preference shares of the company at the rate of 7 per cent. per annum for the three months ended September 30, 1932, to be paid on August 1, 1934, to preference shareholders registered on July 25, 1934.

MONTREAL LIGHT, HEAT AND POWER CONSOLIDATED.—Municipal and General Securities Company, Ltd., the London fiduciary agents of Montreal Light, Heat and Power consolidated, have been advised by cable that a dividend of \$0.38 has been declared on the common shares of the company for the quarter ending June 30, 1934, payable on July 31, 1934, to shareholders of record on June 30, 1934.

TAYLORS (CASH CHEMISTS) TRUST, LTD.—The accounts of this company have in previous years been made up to March 31st, the annual meeting being held in July, but as the financial years of the company's main subsidiaries end on September 30th, the directors have determined to make up the accounts of this company to that date, and the same will be available towards the end of October or the commencement of November, 1934. The results of the company up to March 31, 1934, show an improvement on the results up to March 31, 1933.

THIRD BRITISH FIXED TRUST.—FIRST DISTRIBUTION ON SUB-UNITS.—Municipal and General Securities Company, Ltd., announces the first distribution by the Third British Fixed Trust of 5-40d. per Sub-Unit, free of tax, payable August 15th, on presentation of Coupon No. 1 at the City office of the Trustee, Lloyds Bank Limited, 72 Lombard Street, E.C.4, in respect of dividends received since the formation of the trust on December 31st last to July 7th; an earned balance of .08d. per sub-unit is carried forward.

WILLIAMS DEACON'S BANK LIMITED.—The directors of Williams Deacon's Bank Limited have declared an interim dividend for the half-year ended June 30th at the rate of 12½ per cent. per annum, less income tax, upon the "A" shares and upon the "B" shares.

NATIONAL GAS AND OIL ENGINE COMPANY, LTD.—The directors have carefully considered the question of a payment of an interim dividend on the company's preference shares, and although trading conditions are definitely better, it has been decided to defer the matter until the end of the financial year.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE event of the week was a sharp rise in prices in the wheat pit of Chicago, following publication of the official crop estimate. It is estimated that this year's United States wheat harvest will only yield 483 million bushels, against 527 million bushels a year ago and 744 million bushels in 1932. As the official forecast was lower than expected in market circles, prices recorded a sharp rise. Moreover, as we show in a Note of the Week, the improvement in prices is likely to be maintained. Quotations in Winnipeg and other wheat markets rose in sympathy with the advance in the United States. Among other foodstuffs subject to international arbitrage, raw sugar was marked down a few points, but cocoa shows little change on the week. The market in tea has shown an easier tendency. Quotations for meat at Smithfield Market are scarcely changed on the week. The price of new potatoes at Borough Market continued to decline as a result of a steady increase in supplies.

Among textile raw materials, cotton prices recorded a further jump, following publication of the official estimate of the acreage under this textile fibre in the United States. The estimate was somewhat lower than expected. Moreover, as the weather has been far from favourable to the crop, it is anticipated that production will not exceed the 10 million bales limit by an appreciable margin. The improvement in jute prices has been maintained, but quotations for wool are as low as ever.

Of the four leading non-ferrous metals, only lead and tin were dearer than a week ago. Copper has again been marked down under the pressure of increasing supplies from the United States and low cost African producers. The upward movement in rubber prices continued during the past week, and the markets for linseed and linseed oil were a little firmer.

The sharp rise in the price of all cereals was chiefly responsible for an advance, from 138.8 (December 31, 1931 = 100) on July 3rd to 141.1 on July 11th, in Moody's index of the dollar prices of staple commodities.

COAL

SHEFFIELD.—The South Yorkshire coal market has deteriorated since the beginning of the month. Deliveries of house coal have fallen to a very low ebb. Export trade in best steams is slow and difficult to obtain. In spite of the reduction of output, supplies are ample. Unemployment among coal miners is increasing. Business in blast-furnace coke remains good, and supplies of coking smalls are on the short side. Coke is quoted at from 14s. 6d. to 15s. 6d. at ovens; best steams, 16s. to 16s. 3d. f.o.b.; and best house at 20s. and 21s. at pits.

NEWCASTLE-ON-TYNE.—Whilst it is difficult to find any movement in the North-East coal market at present, deliveries under old contracts are taking place, and shipment figures continue to be satisfactory compared with twelve months ago. Northumberland steam collieries are working fairly regularly, but unless prompt screened trade increases, there is a prospect of idleness.

All classes of Durham unscreened coal are offered freely at minimum prices. Coke continues to be the best feature of the market, there being a steady export trade and a strong inland demand.

Current f.o.b. prices for export: **NORTHUMBERLAND.**—D.C.B. screened, 13s. 6d.; smalls, 11s.; Hoyards, Bentinck, Newbiggin, screened, 13s.; smalls, 11s.; Tyne prime large, 12s. 9d.; smalls,

11s.; Hartley Main large, 13s.; smalls, 11s. **DURHAM.**—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 12s.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 20s.; Newcastle and district gas coke, 20s. 3d.

GLASGOW.—The past week witnessed quieter conditions in the Scottish coal market. As a result, prices have been put to little further test, but generally no change is indicated. In Fifeshire first steams have been available at cut prices for prompt shipment, and doubles in this area have been more plentiful, but these appear to be only temporary weak spots as requirements over the holidays have already been well provided for.

Shipment prices f.o.b. district ports: **LANARKSHIRE.**—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 3d.—14s. 6d.; navigation, unscreened, 12s. 9d.—13s. 3d. Hartley, 14s. 6d.; steam, 12s. 6d.; trebles, 13s.—13s. 6d.; doubles, 12s.—12s. 6d.; singles, 12s. 6d.; pearls, 10s. 6d.; dross, 9s. 9d. **FIFE.**—Best unscreened navigation, 12s. 9d.—13s.; unscreened navigation, 12s. 3d.; first-class steam, 13s. 3d.—13s. 6d.; third-class steam, 12s.; trebles, 13s. 6d.—16s.; doubles, 12s. 6d.—13s.; singles, 12s. 6d.—13s.; pearls, 10s. 6d. **LOTHIANS.**—Prime steam, 12s. 6d.—13s.; secondary steam, 12s.; unscreened navigation, 12s. 6d.; trebles, 13s. 6d.—14s. 6d.; doubles, 12s. 6d.—13s.; singles, 12s. 3d.—12s. 6d.; pearls, 10s. 6d. **AYRSHIRE.**—Best unscreened navigation, 13s. 6d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 6d.; pearls, 11s. 6d.—12s.; dross, 10s.

CARDIFF.—The shipping position at the South Wales docks was slightly more favourable this week, and exports of coal will probably show an increase over those of last week, when they totalled 370,180 tons, compared with 362,020 tons in the corresponding period last year. No new contracts have been arranged, but collieries have been able to dispose of their quota outputs with less difficulty, and fewer stoppages have been reported. Export trade has been improving slowly, and shipments in June at 1,335,188 tons were 78,568 tons more than in the corresponding month last year. In the iron and steel industry the working of mills has been adversely affected by the hot weather, and demand for industrial coals has consequently been a shade easier. Prices are unaltered and are ruling generally at the scheduled quotations. There is a fair inquiry for coke, and the recent improvement in pitwood prices has been fairly well maintained. The demand for patent fuel continues inactive.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 25s.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 10s. 6d. to 11s.; special foundry coke, 32s. 6d. to 40s.; patent fuel, 20s. to 21s.; pitwood, ex ship, 24s. to 25s.

IRON AND STEEL

MIDDLESBROUGH.—The holidays in the different areas are beginning to have their effect on the local iron market, and very little new business is being done. The holidays in Scotland, which commence at the end of this week, will have the effect of temporarily reducing deliveries of foundry iron from this district. Meantime, stocks of pig iron in this area are small, and are not expected to increase to any extent, although there is a little more Cleveland iron available for the market. The price is maintained on the basis of 67s. 6d. per ton for No. 3 foundry iron delivered locally.

East Coast hematite continues very steady, makers having good contracts on their books against which current deliveries are being made in this area and to Sheffield and the Midlands. The price for East Coast hematite No. 1 quality for home use is based on 68s. per ton delivered at Middlesbrough.

Makers of both foundry and hematite pig iron have been endeavouring to find outlets abroad, and, although they are willing to make concessions in price, very few inquiries are coming to hand, and competition from foreign producers is strong.

Shipments of all classes of pig iron from the Tees from July 1st to July 10th amounted to 5,680 tons, as compared with 3,530 tons to June 10th.

Little business is passing in foreign ore as most works are covered for their requirements over the next two to three months, but in one or two cases inquiries are being made for ore for forward delivery. Best Bilbao rubio ore is maintained by sellers at 17s. per ton c.i.f. Tees, and good blast furnace coke is steady at 20s. per ton delivered at the furnaces here.

In the steel departments, constructional steel is active, whilst rail mills have booked further substantial orders for export. Shipbuilding departments remain quiet, and the sheet trade is very slack, particularly for export. Fair quantities of semi-manufactured steel continue to be produced locally, but this material is still being imported.

Heavy steel melting scrap is more difficult to dispose of, and 50s. per ton delivered at the works could probably be shaded.

SHEFFIELD.—Reports from local steel makers are encouraging. The half-year started quietly, but orders are now coming in much more freely. Nearly all the rolling mills and forges, which serve the local finished trades, are running full time and are booking fresh business regularly. The automobile, cycle and electrical branches are taking large deliveries of Sheffield steel and tools. Depressed sections of industry are those supplying steel to the shipyards and makers of railway rolling stock. Producers of crude steels anticipate that the requirements of their customers will henceforward be less than during the first half of the year. Prices of such materials are not likely to rise, but increased charges for rolling and forging steel are probable.

Makers of iron castings for building construction are busy. The call for special steels is fairly satisfactory. The excessively hot weather has resulted in lessened output of steel plants, and deliveries of some classes of materials were irregular this week. The tool and cutlery branches are active and there is a steady sale for sterling silver goods. Electro-plating plants, however, are extremely quiet.

GLASGOW.—There has been continued activity at the steel plants during the present week. Notwithstanding holiday influences, the tonnage booked is fairly heavy, and the slight improvement in demand for structural material is maintained. Tube makers are also on the whole well employed, and have a considerable amount of work still on hand. Sheet makers are finding the export business very dull, but home demand both for black and galvanised sheets keeps growing, and mills have been fully employed this week.

Works are closing down—some on Thursday night and others on Friday noon—for the annual Fair Holidays. Work will be resumed on July 24th. At one or two of the shipbuilding yards the re-start will not be made till the end of the month. A number of sheet metal workers and one of the large locomotive works in the Glasgow area will resume at the middle of next week, owing to pressure of work.

The outlook is brighter than it has been at this season for a number of years past, as many of the works will open with a good deal of work on hand and prospects of regular employment for some time.

CARDIFF.—On the Swansea Metal Exchange on Tuesday it was reported that the negotiations for an international tinplate agreement were proceeding satisfactorily. Quotations for tinplates are unchanged at from 17s. 3d. to 17s. 6d. per basis box, at £11 5s. to £11 15s. per ton for galvanised sheets and at £5 per ton delivered for steel bars. Shipments of tinplates at Swansea last week dropped back to 63,863 boxes, compared with 105,471 boxes the previous week, and stocks consequently increased from 96,887 boxes to 116,464 boxes.

OTHER METALS

Metal markets had another dull week. The most interesting development was the decline of the copper price (standard cash) below £30 per ton. This decline was predicted some weeks ago. The reasons which were given for this unfavourable development in earlier weeks remain unchanged. The market continues to experience the adverse effects of the German restriction of purchases, the American exports and the increasing output from low cost countries (Canada, Northern Rhodesia, Belgian Congo). In Germany a new order has been published, permitting non-ferrous metal manufacturers to use during the third quarter the same quantity of metal as in the first quarter. But as the first quarter is always the worst of the whole year, these allotments in fact represent a new sharp restriction of German consumption. In the United States no less than 95 per cent. of the copper consumers have formally agreed to use only blue eagle copper. The publication of this figure led at once to a decline to a new low record of the New York copper export price, and indicates unfavourable prospects for the European copper market. Moreover, production in low cost countries is increasing. At the annual meeting of the Union Minière du Haut Katanga (Belgian-Congo), which was held in the middle of the week, it was recorded that current production was at the rate of 100,000 metric tons per annum, against 65,000 tons in 1933, and will be further increased in the near future. It is quite probable that the competitors of the Union Minière will decide to keep in step with production in the Congo. All these developments are of such a strong influence on the copper market, that in spite of the low prices ruling at present (low compared with the prices of the past, but not so low in relation to costs of production) further declines would be no surprise.

Tin is at present the only metal to show an upward tendency in price. Yet, activity in the motor car industry of the United States is declining, and output of tin plate was reduced to 50 per cent. of capacity. Not long ago the tin plate mills were working at 85 per cent. of capacity. As a result, American purchases are disappointing. Moreover, production of tin is increasing. But as the position of the groups behind restriction is very strong, the movement of prices

depends largely on their policy. Under the circumstances it is very difficult to forecast the trend of prices in the near future.

Lead and spelter were very dull during the whole week. The silver market has been less active. American purchases are not very large. Under these circumstances it does not seem that silver prices will rise appreciably in the near future. All the more so, as speculators are realising their gains very soon after a spurt. On the other hand, there is also not much probability of a sharp decline as the tone of the market remains bullish. As soon as prices begin to decline, large purchasing orders usually come on the market and change the direction of prices.

TIN.—Sales on the London Metal Exchange: 120 tons on Monday, against 350 tons last week; 300 tons on Tuesday, against 670 tons last week; 385 tons on Wednesday, against 475 tons last week. The New York quotation on Wednesday was 51.87½ cents per lb., against 51.30 cents a week ago and 51.125 cents a month ago. Wednesday's official closing quotation in London for standard cash was £230 15s. to £231, compared with £228 5s. to £228 10s. last week. Stocks in London and Liverpool at the end of last week were 3,506 tons, a decrease of 136 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,800 tons on Monday, against 2,125 tons last week; 3,150 tons on Tuesday, against 1,000 tons last week; 1,500 tons on Wednesday, against 2,300 tons last week. Domestic spot was quoted at 7.20 cents per lb. in New York on Wednesday, against 7.60 cents a week ago and 8.37½ cents a month ago. Wednesday's official closing price for standard cash in London was £29 13s. 9d. to £29 15s., compared with £30 7s. 6d. to £30 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 25,699 tons, show an increase of 203 tons, and stocks of rough copper, at 7,273 tons, remain unchanged.

LEAD.—Sales on the London Metal Exchange: 500 tons on Monday, against 450 tons last week; 350 tons on Tuesday, against 1,500 tons last week; 450 tons on Wednesday, against 450 tons last week. The New York quotation on Wednesday was 3.75 cents per lb., against 3.75 cents a week ago and 4.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 17s. 6d. for shipment during the current month, compared with £10 15s. a week ago.

SPELTER.—Sales on the London Metal Exchange: 250 tons on Monday, against 200 tons last week; 1,000 tons on Tuesday, against 450 tons last week; 450 tons on Wednesday, against 375 tons last week. Wednesday's quotation in East St. Louis was 4.35 cents per lb., against 4.35 cents the week before, and 4.25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 8s. 9d., for shipment during the current month, against £13 17s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 7s. 6d. to £11 10s. per flask of 76 lbs., as against £11 10s. to £11 12s. 6d. per flask of 76 lbs. last week. Foreign antimony was quoted at £34 10s. to £35 10s. per ton, as against £33 per ton last week. Chinese wolfram was quoted at 40s. to 41s. per unit, c.i.f., as against 42s. to 44s. per unit, c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. The past week witnessed a further upward movement in raw cotton prices, a bullish factor being the acreage estimate of the United States Government, which was smaller than expected. It is feared that owing to the limited area under cultivation and unfavourable weather conditions, the ultimate outturn may be disappointing. On the other hand, trade interests do not appear to be disposed to follow the rising prices very readily, and to some extent current quotations are distrusted.

COTTON PRICES

In some quarters of the cloth market there has been rather more inquiry, and numerous buyers were anxious to keep in touch with prices, but no general business has been done, the turnover consisting of retail lots. With regard to India, a certain amount of attention has been centred on dhooties, mulls and jaconets for Calcutta, with occasional sales, whilst mulls have been wanted for Karachi, with a miscellaneous business in printed and dyed goods for the up-country markets. Prospects for China trade do not improve, and transactions have been few and far between. Necessary buying has taken place in bleachers for Egypt, and printing and finishing styles for South America, South Africa, and the Continent, but individual contracts have not been at all important. Fresh buying for the home trade has been restricted, but goods are now moving more freely throughout the country. Yarn quotations have been

put up in sympathy with the rise in the raw material, but buyers have been slow in following. Some moderate lots have been booked in medium American counts. Complaints from Egyptian spinners are very pronounced.

AMERICAN COTTON CROP.—At the beginning of this week the Department of Agriculture of the United States Government estimated the area under cotton for the season 1934-35 at 28,024,000 acres, against 40,852,000 acres a year ago. Last season, however, under a Government scheme nearly 11,000,000 acres were "ploughed in," the amount harvested being 29,978,000 acres. The forecast of the Government was below expectations, as market operators anticipated that the area would not be less than 29,000,000 acres. The statement, therefore, was considered bullish, and prices have advanced about ½d. per lb. On the average yield per acre for the last ten years this acreage estimate indicates a crop of about 10,100,000 bales. It must be remembered that under the Bankhead Act 10,000,000 bales will be tax-free, but any surplus above that total will have to bear a tax of 50 per cent. of the price of cotton when sold. Recent weather reports from the American belt have not been at all favourable. In trade circles, however, there is some hesitancy in following the higher prices and the weekly statistics indicate very clearly that there is a declining tendency in the consumption of American cotton throughout the world, whilst on the other hand buyers are securing to an increasing extent cotton grown in other countries.

JUTE.—Dundee. Though business at the moment is quieter all round, there has, nevertheless, been a very good trade done in both yarns and cloth, with the result that spinners and manufacturers are fairly comfortably placed with orders for delivery over the next two months at least. They have also been able to obtain slightly higher prices, and, with a very good inquiry still being made, the outlook is much more promising. Sellers of raw jute are very reluctant to reduce their prices, and the level meantime ruling is much the same as it has been for some time past, with some slight fluctuations in between. The publication of the forecast on July 3rd, indicating an acreage of 2,491,500 acres for the season just commenced, compared with a revised area for last season of 2,517,000 acres, caused an advance in prices, but the higher level was not maintained. Evidently the propaganda for the curtailment of the sowings of jute is of little use, and it is being urged in Calcutta that some other method should be adopted to encourage the growers to reduce the acreage.

Old crop Daisee-2/3 has ruled round about £14 to £14 10s. per ton, and four's at from £13 7s. 6d., July-August, while new crop is lowest at £14 12s. 6d., for assortment and £13 15s. for four's, October-November. Tossa-2/3 is quoted at £14 12s. 6d. for old crop and £15 for new, and good First Marks are at £17, good Lightnings at £15 15s., and Hearts at £15, August-September.

Prices of Calcutta goods are being fairly well maintained as the result of a moderate business taking place. For 10 oz. 40 in. 19s. 3d. is quoted for July-September, 19s. for October-December, and 18s. 9d. for January-March, with 8 oz. at 15s. 2d., 15s. and 14s. 9d., respectively. Liverpool twills are offered at 49s. 8d. and "B" twills at 44s. 3d., July to March.

Buyers of yarns are not keen to pay 1s. 8½d. for common 8 lb. cops or 1s. 9½d. for 8 lb. spools, but these are the very lowest rates which spinners will now accept, and they are not economical terms by any means considering the comparatively high values still being asked for the raw material. Twist is steady at from 3½d. to 3¾d. for 3-ply 8 lb., and sacking yarns continue at 2½d. for 24 lb. weft and 3d. for 8 lb. chains. Rove and fine yarns are unchanged, and carpet descriptions are steady.

Good inquiries continue to come in for jute cloth, but buyers are now pausing after their recent activity. Prices are firm, and now lowest at 2½d. for 10½ oz. 40 in. hessians and 1½d. for 8 oz., but if delivery is required before the end of August, ½d. more has to be paid in each case. Linoleum hessians and heavy goods are quiet.

GRAIN MARKETS

WHEAT.—The publication of the official estimate of the United States wheat crop, discussed in a Note of the Week, brought about a sharp rise in prices.

According to Mr G. Broomhall, total shipments during the past week were 1,027,000 quarters, against 1,354,000 quarters in the preceding week. On Wednesday, "July" futures were quoted in Chicago at 92½ cents per bushel, against 87½ cents the week before and 96 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 30s. 9d. per 496 lbs., against 30s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 3d., against 28s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 28s. 9d., against 28s. 3d.; Australian, ex ship, 25s. 3d. to 25s. 6d., against 25s. 6d. a week ago.

FLOUR.—North American shipments were 69,000 sacks in the past week, as compared with 115,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 23s. 9d. to 25s. 3d., against 23s. 9d. to 25s. 3d. Australian, ex store, 17s. 6d. to 18s. 6d., against 17s. 6d. to 18s. 6d.

BARLEY.—"July" futures were 45½ cents per bushel in Winnipeg on Wednesday, against 43½ cents last week and 43½ cents a month ago. Quotations in London on Wednesday were: "English malting" f.o.r., per 448 lbs., 27s. to 30s., against 27s. to 30s. a week before.

OATS.—On Wednesday, "July" futures were quoted at 45½ cents per bushel in Chicago, against 43 cents a week ago, and 44 cents last month. Quotations in London, Wednesday: "River Plate," landed, 19s. 9d. per 320 lbs., against 19s. 9d. a week ago; "Chilean White," landed, 21s., against 21s. a week earlier.

MAIZE.—"July" futures were quoted on Wednesday at 60½ cents per bushel in Chicago, against 57½ cents a week ago and 57½ cents on the corresponding date last month. Quotations in London, Wednesday: "Plate," landed, 20s. 6d. per 480 lbs., compared with 20s. 3d. last week; "Plate," ex ship, 19s. 6d., as against 19s. 3d. "Plate," July, 19s. 6d., as against 19s. 3d. Yellow maize meal, ex wharf, was quoted £5 10s. to £5 12s. 6d. per ton, against £5 10s. to £5 12s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to July 7	Cwts. 27,686	Cwts. 27,376	Cwts. 27,971	Cwts. 64,080
45 weeks to July 7	4,793,603	3,670,907	8,429,096	6,060,203
Average price of English wheat per cwt.	s. d. 6 1	s. d. 6 6	s. d. 6 6	s. d. 5 6

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
June 30, 1934	Cwts. 75,291	Cwts. 4,780	Cwts. 25,630	s. d. 5 7	s. d. 6 6	s. d. 6 5
July 7, 1934	64,080	5,504	23,178	5 6	6 11	6 6
July 5, 1930	50,579	7,537	6,272	8 5	6 11	6 5
July 4, 1931	43,173	6,720	9,992	6 2	5 11	6 8
July 9, 1932	27,376	1,305	7,149	6 6	6 8	8 0
July 8, 1933	22,971	6,771	9,297	6 6	6 8	5 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	July 12, 1933	Jan. 3, 1934	July 3, 1934	July 11, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	89½	65½	75½	83
Chicago (No. 2 Winter)	55½	46½	106½	84½	87½	92½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 96,080,000 bushels, shows an increase of 2,374,000 bushels. Supplies a year ago stood at 103,033,000 bushels.

OTHER FOODS

SUGAR.—Last week's improvement in the market for raw sugar has not been maintained. The spot price of raw sugar in New York on Tuesday was 3.18 cents per lb., as compared with 3.18 cents per lb. last week and 3.00 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 9½d. to 4s. 9½d., against 4s. 10½d. to 4s. 11½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	1933	1934	1933	1934
London	1,039	1	4,288	1,839
Liverpool	12,739	1,710	18,153	14,253
Total tons ...	13,778	1,711	22,441	16,092
Last week	586	1,604	16,234	18,687
			224,358	206,725

COFFEE.—The New York coffee market was dull. On Wednesday Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 10½ cents per lb. a month ago. At Tuesday's auctions in London prices were steady, but the volume of sales was again small. Last week's movements of coffee in London were as follows: Brazilian, landed, 746 bags; delivered, for home consumption, 9 bags; exported, 1 bag; stocks, 29,267 bags, against 29,146 bags a year ago. Central American, landed, 2,672 packages; delivered, for home consumption, 2,110 packages; exported, 473 packages; stocks, 117,076 packages, against 105,199 packages last year. Other kinds: Landed, 332 packages; delivered, for home consumption, 2,083 packages; exported, 757 packages; stocks, 109,394 packages, against 100,022 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, June-July, was 24s. 3d. per 50 kilos, c.i.f. Continent, as against 24s. 6d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 3,832 bags; delivered, for home consumption, 6,281 bags; exported, 2,865 bags; stocks, 262,409 bags, against 173,561 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 16,762 packages of Indian and 35,598 packages of Ceylon tea. Although demand at the tea auctions in London has been quite brisk, the tendency of prices was a little easier. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

RICE.—The "spot" price was 7s. 4½d. per cwt. on Wednesday as compared with 7s. 4½d. per cwt. a week ago, while the forward quotation, at 6s. 10½d. per cwt. shows a rise of 1½d. on the week. Movements in London during the past week were as follows: Landed, 203 tons; delivered, 85 tons; stocks, 938 tons, against 5,201 tons a year ago.

POTATOES.—At the London Borough Market old crop "King Edward" sold at 4s. to 4s. 6d. per cwt., as compared with 4s. 6d. to 5s. 6d. per cwt. last week. English, Duke of York and Sharp's Express were quoted at 6s. 6d. to 7s. 6d. per cwt., as compared with 8s. 6d. to 9s. 6d. per cwt. a week ago.

SPICES.—"Black Singapore" was quoted at 5d. per lb. on Wednesday, against 5d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 53 tons; stocks, 250 tons, against 336 tons a year ago. White, landed, 73 tons; delivered, 20 tons; stocks, 6,181 tons, against 920 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. to 3s. 6d. per 8 lbs., as compared with 3s. to 3s. 6d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. 4d. per 8 lbs., against 3s. 6d. to 4s. 4d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 8,777 tons, against 7,985 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87 per cent. of the beef supplies, against 85.3 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 86 per cent. of the total supply of mutton and lamb, against 83.4 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Markets are a little steadier, and rather more business is reported. Under the influence of favourable crop reports and a restrained demand, linseed has rallied and closed steadier. Plate for September-October shipment to Hull was sold at £10 per ton. Since then, prices have improved, and £10 7s. 6d. is now wanted for all positions to August. Indian linseed also is steadier. Calcutta afloat for London was sold at as low as £11 10s., but £11 17s. 6d. is asked for July-August. Bombay is nominally £12 2s. 6d. Plate shipments last week were small. The quantity now afloat for Europe is 99,200 tons (including 17,700 tons from India) or 5,000 tons less on the week; and for the United States 24,400 tons. Cotton seed is very quiet, and few buyers are about. Black Egyptian afloat and July loading may be had at £4 10s.

A continued fall in linseed oil brought in buyers, and for forward delivery 7s. 6d. to 10s. per ton above the lowest has been conceded. Raw oil, ex Hull mill, for July-August delivery and forward, including January-April, is now quoted £20 15s. per ton naked. Cotton oil is dull and featureless. Crude Egyptian, ex Hull, is offered freely at £12, and common edible £14 per ton. Palm kernel oil is dearer, but other kinds are without quotable change. Oilcakes are easier, and demand is below normal for the time of year.

RUBBER.—Rubber quotations recorded a further rise during the past week. Comment on the market situation will be found in a note in the Stock Exchange section. In New York, Wednesday's spot price for rubber, at 14½ cents per lb., compares with 14½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., against 7½d. per lb. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for October-December, 1934, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 102,573 tons, show an increase of 2,701 tons as compared with the preceding week.

TIMBER.—Imports of building and joinery woods between January and May totalled 1,185,515 loads of 50 cubic feet, against 744,430 loads and 627,390 loads, respectively, for the corresponding periods of the past two years. Larger imports were required this year to meet the increase in demand for, and to replenish stocks of, battens, scantlings and boards, especially for house-building work. Stocks of deal sizes (i.e. 2 in. and up thick by 9 ins. and up wide) are not yet very large.

Canadian shipments especially have been of large volume. The five months' receipts from the Dominion amounted to 381,943 loads, against 94,657 loads to the end of May last year.

Although spot demand has been good recently, supplies were so large that shippers had to reduce prices a little. But increased activity in the building and other industries is exercising a

strengthening influence on the timber market. European and Canadian producers are concentrating on this market more than usual because it is the only one showing any appreciable improvement. Planed and dressed floorings also have been imported in larger quantities this year. In this case also more has come from Canada.

There has been a better call for teak during recent weeks; Douglas fir and American pitchpine logs have been moving more quickly into consumption, and stocks of these and other ship-building timbers are much lighter this year.

In the hardwood section of the trade fancy woods generally continue to be lightly stocked, because the call is limited, but stocks of the common varieties, and especially of oak from the

United States, are heavy. With N.R.A. code regulations in the United States, and with ample stocks here, imports should ease off for a while, especially as shipments to this country have been heavier than a year ago, but one cannot be sure of such a decline of imports. The United Kingdom is not importing as much American sawn mahogany as formerly, as British Empire countries are sawing more and are shipping direct. Dock stocks of mahogany planks and boards are lighter than in June, 1933.

Imports of railway sleepers increased in May; there were larger receipts of pitwood. Under the Anglo-French trading agreement France should get back at least some of her pitwood trade with this country. Imports of veneers, panels, and plywood recorded an increase in May.

duties, tariff rates are tending to become of minor importance as the cause of trade limitation. Indications in the opposite direction are slight, but some efforts have been made to broaden the basis of commercial negotiations, one of which is the attempt of France to reach a general understanding with other members of the gold bloc.

If action has been almost entirely in the wrong direction, what hope can we glean from the state of opinion? As regards the monetary problem, it is true to say that the belief in artificial depreciation as a means of conjuring away the depression has become very much discredited during the past year. This means that there is a more favourable atmosphere for discussing plans for a gradual approach to stabilisation if economic catastrophe does not meanwhile intervene.

As far as commercial policy is concerned, the best that can be said is that there are some faint signs of the recognition of the destructive effect of the isolationist policies which all countries are pursuing. Thus, it is becoming obvious to thinking people in the gold bloc countries that their policy of deflation is in direct contradiction to a policy of restricting imports—which keeps up prices. England is also still pursuing a policy of contradictions and cannot be said to have any clear objective. This is the more to be regretted, since, in spite of our many agricultural schemes, we are still the most important market for the world, and if we wished to do so could use our influence to secure the lowering of barriers. The most interesting developments, however, as in the case of monetary policy, are those which are taking place across the Atlantic. In the United States, Mr Wallace has made a great impression with his writings, which have invited the country to decide between an isolationist and an international trading policy, and though it would be untrue to suggest that there is any substantial nation-wide modification of protectionist sentiment, the most important fact for the immediate future is that the President has been given power to negotiate commercial agreements and to modify the tariff by as much as 50 per cent.

How will he use these powers? Some indication may be gleaned from the interesting attitude adopted by the United States at the recent Monte Video Conference. At this Conference, as in European discussions, stress was laid on the possibility of agreements between defined groups of countries. The resolutions advocate the general maintenance of the most-favoured-nation clause, but admit two important exceptions. The first would permit special agreements between contiguous or neighbouring countries; the second, which is of far more importance, is the suggestion that collective conventions between a number of countries, designed to create larger and more important markets, should be permitted. This is the low-tariff group idea in an American setting. If the President could persuade the American people that this was her contribution towards the solution of the problem of world trade, and would accept the principle that similar arrangements made in Europe or elsewhere would not be opposed by America on most-favoured-nation grounds, we should be on the way towards the formation of groups within which there would be a hope of a real trade expansion.

How far this movement could go would very largely depend on the attitude of Great Britain. We have not yet made commercial treaties with the chief countries of the world, and our policy is still in the main undefined. Are we going to use our great influence for the lowering of barriers, or are we going to sacrifice the opportunity for the sake of a few special interests? The answer to this question is vital, but we do not know to which member of the Cabinet to look for the answer. It is, however, a key question, for until it is answered there is clearly no possibility of stabilisation—still less of a world agreement on economic policy. Nothing much can be done until the nations make up their minds towards what goal they intend to move; but if some of them have really reached the conclusion that they cannot hope to prosper by persisting in a policy of self-sufficiency, monetary and price conditions are unquestionably becoming more propitious for, at all events, a provisional stabilisation accompanied by a progressive relaxation of trade restrictions between the countries concerned. It is to be hoped that the statesmen will not hesitate too long before taking this first step to reverse the deplorable and destructive trend of recent years.

A NEW LOCARNO

SELDOM has any debate in the House of Commons shown greater unanimity than the debate on foreign affairs on Friday, July 13th. After many months of Governmental uncertainty and Opposition criticism, there emerged from that debate not only a clear statement of Government policy on the European situation, but also, as Sir Austen Chamberlain said, "a more hopeful vista"—and this with regard to both the hitherto conflicting theses of European statesmen, security and disarmament.

The debate was opened by Sir Herbert Samuel, who asked the Government: What was the attitude of the Government to the possibility of a Russian application for admission to the League? What had been the results of Sir John Simon's conversations with M. Barthou? What was the present situation of the Disarmament Conference and the Government's attitude towards it? Major Attlee said that the Labour Party recognised the rôle in security which these pacts could play; he hoped the Government would give their cordial approval to the pacts, provided they really were based on mutuality, and that they would co-operate in pressing Germany and Poland to participate in the Eastern Pact, as well as agreeing to Russia becoming a co-guarantor of the 1925 (Western) Locarno Pacts.

Sir John Simon, in a speech in his best and clearest vein, laid a good many ghosts and fears. The Eastern Pact was to include Russia, the Baltic States, Poland, Germany and Czechoslovakia; it was to be a pact of mutual assistance; but a condition of its conclusion was that Russia should give a guarantee to France as well as to Germany under the original 1925 Locarno Pact, thus bringing Russia in as a guarantor for the Western Locarno as well. "Also, reciprocally, there would be, as I understand," Sir John Simon added, "an assurance offered by France in respect of the boundaries of Russia and also the boundaries of Germany on Germany's Eastern side." Sir John went on to endorse most emphatically Major Attlee's contention that such a pact must not be selective, in the sense of a combination of Powers which might be directed against another; and he announced that M. Barthou "accepted this proposition without any qualification at all." The "genuinely reciprocal character" of the arrangement was evident in that Russia offered the same guarantees to Germany as to France, and France offered the same guarantees to Germany as to Russia. Sir John then categorically affirmed that we in this country "were not extending our own commitments in any way whatever. . . . That is quite clearly and definitely understood."

Turning next to Russia, Sir John laid all Opposition fears to rest in these words: "If Russia is going to become a party to this new arrangement in Eastern Europe, then it is absolutely essential that Russia should come within the League of Nations. That is the view taken by the French Government. It is the view, I believe, taken by the Russian Government; and, in the course of the last few days, I have made it entirely plain to M. Barthou that it is the view taken by His Majesty's Government."

By far the most important feature of Sir John's speech, however, came next:—

If there is going to be brought about by this new Russo-French initiative a new pact of mutual guarantee in which Germany is going to be included, it would appear to His Majesty's Government extremely necessary to realise that the conclusion of such a pact and Germany's participation in this system of reciprocal guarantees that would be given—which, mark you, would operate for the security of Germany as well as of her neighbours—would afford the best ground for the resumption of negotiations and for the conclusion of a Convention such as would provide for a reasonable application of the principle of German equality of rights under a regime of security for all nations. . . .

We ought not to allow this occasion which has emerged, principally through the consideration of problems of security, to pass without endeavouring to take advantage of it for the purpose of promoting the objects for which the Disarmament Conference was called. And I am very happy to be able to tell the House that as a result of the conversations which took place between His Majesty's Government and the representatives of the French Government during

Monday and Tuesday of this week, the French Government agree with His Majesty's Government in holding that view, and have authorised me to make that communication as being a communication of their view to the German Government, which I have already done.

Germany will, of course, recall that in the original Locarno Agreement there is also a clause pledging the parties to press forward Disarmament. But the signature came first and the disarmament has never materialised. No one can therefore blame Germany if she insists that the two negotiations should march together. Sir John Simon realised this clearly when he insisted that the present occasion cannot simply be confined to the structure of security, but that we must press the formula of December, 1932 (equality of rights).

His conclusion was that on this basis "an Eastern Pact of Mutual Guarantee based on the strictest principles of reciprocity and concerned with the genuine purpose of strengthening the foundations of the peace in Europe . . . by creating a further basis for reciprocal guarantees, is well deserving of the support of the British Government and of the British people." And, as confirmation of the British attitude, Sir John announced that Signor Mussolini had that day informed him that Italy had agreed on a similar attitude to that adopted by this country.

The grounds on which the British Government supports an Eastern pact uphold and strengthen the collective system, unlatch the door once again for Germany's return to the League and make it possible to pick up the threads of the armament negotiations which lapsed so miserably in March and April last. To that extent, the situation revives some hopes of a disarmament convention, equality of treatment for Germany, the rehabilitation of the League, and a security system of far wider scope than had once been envisaged.

It is now for Germany to declare her attitude to the "communication" of the French and British Governments. This communication is neither an ultimatum nor a threat, but an invitation to take part in restoring peace and order to Europe. The documents are not presented to Germany to sign on the dotted line, but as a draft which should form the basis of negotiation. Obviously it is appropriate for her to make clear her terms regarding armaments at the same time and as a condition of her agreement.

Since the German Note of April 16th much water, and some blood, has flowed under the bridges in Germany. True, France and Britain cannot rely on a fair-minded, well-advised public opinion in Germany to ensure peace; for under the Nazi regime the German people are not only deprived of a free Press, but are fed upon propaganda which passes for "information." Nevertheless, the vast majority of German citizens do not want war, while the political and economic prospects before the Nazi Government are not such as to induce even the most fire-eating of her leaders to view war, within any reasonable period, with anything but profound misgivings. What may well prove a "winter of discontent" is coming on; Germany's trade position is little short of disastrous; and Germany herself, largely by Nazi *braggadocios*, has become politically isolated. A more moderate tone in the Government-controlled Press suggests that Germany's answer to Sir John Simon's declaration may not be entirely negative.

And if Germany speaks fair words, should we and the French presume that there is treason in her heart? That way madness lies. For not only should France feel justified morally in taking Germany at her word now. She would, if she did so, immensely strengthen her own position; for the according of a measure of rearmament—which will come, any way, if it is not already there—to Germany at this juncture would strengthen Europe's determination to ensure peace at the same time as it gave the possibility, denied ever since Versailles, for Germany and her neighbours to live on a footing of self-respect and equality.

The net result of the debate last week, as we have already said, was to disclose a striking measure of unanimity in the House. When Mr Winston Churchill lauds the League as "the great instrument upon which all forces resolved to maintain peace should centre"; when he even envisages the creation of some international force, "particularly in aviation," to give the League sanctions; when spokesmen of all parties recognise the need for security through a collective system, and the interests of this country in maintaining

it, so clear a demonstration of this country's attitude is one which should surely influence the countries of Europe which value the friendship of Great Britain. Mr Baldwin stated in the House on Thursday that the Government had decided that they cannot further postpone an increase in our Air Forces and are preparing for an increase of 41 squadrons. But our policy still remains one of limitation, and the programme will presumably be modified if this policy prevails. Is it too much to hope that, after so striking a unanimity of opinion for the collective system, the Government will redouble its efforts to secure a Disarmament Convention within the improved framework of the collective system and not surrender to the cynical assumption that disarmament "is a dream and a folly of expectation"?

STINTING EDUCATION

THE annual Report of the Board of Education,* which was published last week too late to permit us to comment on it, makes, as usual, interesting and informative reading—not less so because its appearance has coincided so closely with the Labour Party's eighth policy Report,† which deals with the same subject from a rather different point of view. Indeed, each document in some measure helps to interpret the other. Reading between the lines of the official report it is not difficult to discover its real meaning—namely, that the Board is busily and conscientiously engaged in making the best of a bad job. It is living, in fact, as best it can within the financial limits prescribed by the 1931 economy campaign—much of which, especially as regards education, was in our opinion sadly misdirected. The reduction in the amount of money spent by the National Government on education is certainly in strange contrast to its financial lavishness in other directions. While so many other forms of expenditure have remained uncurbed, to say the least of it, education has (as usual) been treated as the Cinderella.

A comparison between the education vote of the Budgets of 1931-32 and 1934-35 is not without interest. In the former year the education estimate stood at £58,400,000; by the latter it had been reduced to £51,300,000. Now, of this general reduction in expenditure, the decrease in teachers' salaries is, of course, perfectly defensible. No sensible person will quarrel very seriously with economy "cuts" of this kind imposed in a time of crisis. But it is far otherwise with the deliberate cutting down of capital expenditure and the obstruction of plans of development put forward by the more progressive authorities (cf. Circular 1413), which has unquestionably been a feature of the National Government's administration during the past two and a-half years.

The exact results of this mistaken parsimony cannot as yet be estimated with any exactitude, but they are to a

* "Education in 1933." Being the Report of the Board of Education and the Statistics of Public Education for England and Wales. London: H.M. Stationery Office, 1934. Cmd. 4631. 3s. 6d.

† "Labour and Education."

certain extent reflected in the *absence* of development, e.g. of nursery schools, of which the year 1933 saw an addition of only one to the total recognised number of 57. According to the Labour Party's pamphlet, "A considerable number of authorities had before September, 1931, prepared plans for establishing additional nursery schools, but all of these (if not actually in process of being carried out) were subsequently vetoed by the Board." There can be no doubt—in fact the Report virtually admits it by implication—that the reorganisation of schools on the lines of the Hadow Report has been retarded by the ban imposed on capital expenditure, which amounted to less than £2,000,000 for the nine months ended December, 1933. Nevertheless, it is satisfactory to note that some progress continues to be made, and that by now at least 50 per cent. of the pupils aged 11 and over are being taught in reorganised schools.

But there is one feature revealed by the Report which is certainly a sinister retrogression—namely the net increase of 310 in the number of classes containing more than 50 pupils in elementary schools. This unhappy lapse is to be "attributed in the main to the remissness of one large authority" and it is at any rate satisfactory that the Board has addressed a strong remonstrance to the authority in question and has insisted on a speedy reduction in its number of over-large classes. But the appearance of a similar phenomenon in secondary schools, where the classes over the normal limit of 30 have also increased by over 400, is not reassuring; and the complacency of the Report in this matter is a little difficult to understand. "This increase," so the official apologia runs, "is mainly due to the higher number of admissions during recent years. The Board realised that, to meet this influx, special arrangements would be necessary which might involve a temporary increase in the size of classes. It may, however, be noted that the average number of pupils per class in all secondary schools on October 1, 1933, was . . . only 0.3 larger than a year before." In view of this state of affairs it does not seem possible to justify the further reduction in the provision for the training of teachers through the cutting down of total approved numbers in training colleges for 1934-35 by 8 per cent. as compared with the previous year. This reduction is, of course, inspired by the deliberate refusal of the Government to contemplate any measure raising the school age—a refusal defended in the House of Lords in no convincing manner by Lord Halifax ultimately on grounds of economy because it would involve an additional expenditure of something like £8,000,000 a year. Yet on the very same day Major Elliot was calmly asking in the House of Commons for £3,000,000 on account for only a six months' subsidy to the domestic beef producer!

Both on social and economic grounds the raising of the school age has long been overdue. Had the National Government, instead of cutting down the sums devoted to education, immediately devised a programme for raising the school age to 15 some of the expenditure which it must now incur on the provision of training centres for unemployed youths might have been avoided, and the problem of juvenile unemployment might at least have been brought much nearer to a solution. As it is, the cutting down of capital expenditure since 1931 has substantially delayed the process, which was already beginning; and only one local authority, namely Chesterfield, used its powers in 1933 to raise the school age to 15, thereby raising the total number of education authorities who have taken this step to six. Moreover, the decision of the Government to cut down the training of teachers must also retard the speed with which a future administration will be able to complete this much-needed reform, which cannot, of course, be accomplished by a stroke of the pen. The real difficulty in the way of raising the school age is not financial at all: it is ultimately the religious issue which wrecked the Trevelyan Bill, owing to the impossible burden which would be placed on the voluntary schools. That, however, is an issue which must sooner or later be faced squarely, and a National Government might have been expected to regard itself as peculiarly qualified for undertaking this delicate task.

Another aspect of the Government's educational policy which stands out clearly in the report is the attempt to make secondary education as nearly as possible self-supporting, by raising school fees, where they are non-existent or negligible in amount, and substituting a means

test for free places (Circular 1421). In the abstract, no doubt, such a policy could be defended, but, as we have all along maintained, it is in practice open to very serious objections. So long as secondary education is voluntary the imposition of a means test and the raising of fees must act as deterrents, especially in these days of industrial depression, and though the actual figures do not as yet show any decline in the numbers, it is impossible not to suspect, from the low figure at which the means test begins to operate, that a deterring factor, which will reveal itself as the years go by, has been at work. And the amount of ill-will that it has engendered in Labour circles is plainly apparent on almost every page of that party's Policy Report—a document which incidentally loses some of its effectiveness owing to the very strong spirit of class-consciousness by which it is inspired. As might be expected, the Labour educational programme is nothing if not radical—immediate raising of the school age to 15 and as soon as possible to 16, a speeding up of the Hadow reorganisation and the abolition of all fees for secondary education in grant-aided schools in order to ensure "complete educational equality" and the "final abolition of the system under which the quality of the education offered children has depended on the income or the social position of their parents."

It goes without saying that no financial estimate of the cost of these somewhat ideological proposals is given, but if they are to be taken *au pied de la lettre* they would certainly involve a formidable charge on the Exchequer. Nor is it easy to see exactly why persons who can well afford to pay for the secondary education of their children should be presented with this benefit at the cost of the Exchequer and the housing accommodation (rates) of the nation. If the school age (compulsory) be once raised to 16—itself a considerably expensive step—and enough free (not *special*) places in secondary schools are provided for children of the requisite ability to profit by a high-school training, the really important defects in our educational system will have been remedied—without indulging in any superfluous extravagances. Yet, however much we may regard the last-mentioned objective of the Labour programme as impracticable on financial grounds, there will be widespread agreement with the first two, namely, the raising of the school age and the completion of the Hadow programme—even if these objectives entail an additional burden to the taxpayer. For there is no outlay or investment which in the long run will repay itself more handsomely. And those who do not grudge the millions spent on armaments, but are all too willing at the same time to economise on education, should bear in mind that by doing so they are cutting down the chief defences of a free country far below the safety-level.

THE HALF-YEAR'S OVERSEAS TRADE

FORTUNATELY the task of reviewing the half-year's overseas trade is a little more agreeable than it has been in recent years. Both imports and exports during each of the past six months showed an appreciable rise in value as compared with the corresponding periods of a year ago. As was to be expected during the early stages of a trade revival in an industrialised country, imports tended to increase faster than exports, as it takes several months, on the average, to convert raw materials into manufactured goods. Actually imports gained relatively on exports until March, but since April the tendency has been reversed and the gap between our sales abroad and our purchases from foreign countries has tended to become narrower.

The figures for June, though slightly lower than those for the previous month owing to seasonal influences, again show a substantial increase in our foreign trade as compared with a year ago. The June trade returns are especially encouraging, for our index of the volume of exports of British manufactures (adjusted for seasonal variations) rose from 70 (1924 = 100) in May to 78 in June. A year ago the figure stood at 68. The figure for the volume of our imports of raw materials points to increased industrial activity in this country, since it shows a figure

of 135, as compared with 109 in May (a rise of no less than 24 per cent.) and 113 in June a year ago. The tables below give the June figures and the cumulative figures for the first six months of the year with comparative statistics for the two preceding years:—

MONTH OF JUNE (000's omitted)					
	1934	Increase or Decrease as compared with			
		June, 1933		June, 1932	
Imports	£ 61,173	+ 7,386	+ 13.7	+ 3,228	+ 5.6
British exports	32,120	+ 3,654	+ 12.8	+ 2,408	+ 8.1
Re-exports	4,316	— 951	— 18.1	+ 141	+ 3.4
Total exports	36,436	+ 2,703	+ 8.0	+ 2,549	+ 7.5
Excess of imports over total exports	24,737	+ 4,683	+ 23.4	+ 679	+ 2.8

FIRST HALF-YEAR (000's omitted)					
	1934	Increase or Decrease as compared with			
		January–June, 1933		January–June, 1932	
Imports	£ 362,198	+ 41,862	+ 13.0	+ 1,340	+ 0.4
British exports	189,704	+ 14,414	+ 8.2	+ 2,670	+ 1.4
Re-exports	29,016	+ 3,814	+ 15.0	— 314	— 1.1
Total exports	218,720	+ 18,228	+ 9.1	+ 2,357	+ 1.1
Excess of imports over total exports	143,478	+ 23,634	+ 19.8	— 1,017	— 0.7

Thus during the first half of 1934 the value of imports and of British exports recorded an advance of 13.0 per cent. and 8.2 per cent., respectively, as compared with the January-June period of 1933, and, as a result of the increase in imports relatively to exports until March, the excess of imports over total exports increased by 19.8 per cent.

The next table analyses the figures according to the principal categories:—

RETAINED IMPORTS AND BRITISH EXPORTS BY CLASSES (£'s million)						
	Retained Imports First Half-year			British Exports First Half-year		
	1932	1933	1934	1932	1933	1934
Food, drink and tobacco	176.9	158.5	160.8	15.6	12.8	14.6
Raw materials and articles mainly unmanufactured	75.4	69.9	91.8	21.8	22.0	24.1
Articles wholly or mainly manufactured	75.1	65.2	78.8	143.4	134.9	145.7

As far as retained imports are concerned, the value of our purchases from overseas of food, drink and tobacco is scarcely changed, mainly as a result of the deliberate limitation of trade in these commodities by our agricultural policy. The value of imports of raw materials and articles mainly unmanufactured, on the other hand, rose by 31 per cent., while the value of imports classified by the Board of Trade under the category of wholly or mainly manufactured goods also showed the considerable increase of 21 per cent. It must, however, be remembered that a large proportion of commodities included in the latter category are material for further processes of manufacture in this country. This applies, for example, to imports of non-ferrous metals and manufactures thereof, the value of which rose by 51½ per cent. from £6,683,652 in 1933 to £10,129,894 in 1934. These imports of non-ferrous metals accounted for no less than 12 per cent. of the total imports classified as articles wholly or mainly manufactured. Similar considerations apply to most items in this category, for there are few imports that are in a form ready for final consumption. Industrial plant, for example, is an item which always rises when recovery is taking place. In the present return the value of machinery imports has risen from £4,112,697 in 1933 to £5,542,320 in 1934, but on the present occasion a part of the increase is due to an intensification of competition from the United States in items such as typewriters, etc., following the depreciation of the dollar. Imports of iron and steel materials also

rose sharply from £2,820,590 to £4,728,885, a large proportion of which is raw material for finishing industries. This category is, in fact, one of the most sensitive indices of internal prosperity. As in other categories the figures, though rising, are still far below normal.

The quantities of our foreign purchases of some of the leading foods and raw materials are set out in the next table:—

RETAINED IMPORTS				
		First Half-year		
		1932	1933	1934
Wheat	cwts.	50,698,927	56,511,872	50,095,894
Beef	cwts.	8,670,551	8,833,622	6,211,351
Sugar	cwts.	23,822,079	20,334,976	20,555,022
Iron ore and scrap	tons	1,049,249	1,326,262	2,331,101
Wood and timber, Soft:—				
Other than planed or dressed	loads	1,295,563	1,245,647	2,003,660
Planed or dressed	loads	243,543	278,243	409,214
Raw cotton	centals	6,147,622	5,860,301	6,478,467
Sheep and lambs' wool	thousand lbs.	425,251	412,888	375,915
Raw silk	thousand lbs.	2,314	2,496	3,859
Flax, hemp and jute	tons	145,867	148,578	180,378
Crude petroleum	thousand galls.	174,144	192,645	250,358
Hides, wet and dry	cwts.	617,400	604,766	581,555
Wood pulp	tons	885,103	902,390	1,073,855
Rubber	centals	493,105	1,064,211	1,604,570
Pig lead	tons	55,856	63,843	102,357
Unwrought copper	tons	127,880	136,958	151,029
Tin—Ore and concentrates	tons	29,532	14,481	17,780
Blocks, Ingots, Bars, Slabs	tons	1,264	920	3,521
Iron and steel manufactures	tons	965,143	468,715	708,709

* Total Imports.

The decrease in our imports of wheat is directly due to the wheat subsidy, which stimulated wheat cultivation in this country. The sharp rise in our foreign purchases of iron ore and scrap reflects the improvement in the activity of the iron and steel industry. The boom in dwelling-house building is reflected in a substantial increase in our imports of wood and timber. The improvement in the figures for cotton, silk, flax, hemp and jute is due to a better demand for the commodities manufactured from these textile fibres. Again the increase in the figures for rubber was due to the expansion in the activity of the British motor-car industry. The recession in the activity of the British wool textile industry since the beginning of the year is reflected in a decrease in our imports of raw wool. Similarly the failure of the British boot and shoe industry to make headway is shown in a reduction in our import of hides.

On the export side an increase in our foreign sales of wool (raw and waste) and woollen rags, from £2,130,665 in the first half of 1933 to £3,389,079 in 1934, is chiefly responsible for the rise in the value of exports of articles classified under raw materials and articles mainly unmanufactured. The increase in the value of British exports of articles wholly or mainly manufactured, from £134,943,191 in 1933 to £145,695,942 in 1934, was fairly well spread. The volume figures of some of our leading exports are shown below:—

BRITISH EXPORTS				
Item and Measure.		First Half-year		
		1932	1933	1934
Coal	tons	19,823,231	18,959,449	19,447,840
Pig iron and ferro-alloys	tons	76,262	49,488	64,394
Railway material	tons	48,408	60,452	74,733
Total iron and steel	tons	952,538	904,227	1,037,599
Textile machinery	tons	33,413	27,020	40,967
Total machinery	tons	167,456	128,278	157,249
Cotton yarns	thous. lbs.	80,448	66,142	68,642
Cotton piece-goods	thous. sq. yds.	1,147,949	1,083,107	969,291
Wool tops	thous. lbs.	19,933	22,024	22,694
Worsted yarns	thous. lbs.	15,103	14,882	17,764
Woollen tissues	thous. sq. yds.	26,295	27,860	32,607
Worsted tissues	thous. sq. yds.	14,529	15,034	17,075
Linen piece-goods	thous. sq. yds.	37,494	39,037	44,522
Leather boots and shoes	dozen pairs	331,246	254,111	216,520
Leather	cwts.	78,609	103,074	102,121
Paper and cardboard	cwts.	1,960,041	1,792,428	1,814,974
Locomotives	tons	2,119	5,352	1,317
Motor cars and chassis	number	18,266	27,011	30,522

It will be seen that, of the 18 commodities shown separately, only exports of cotton piece goods, leather boots and shoes, leather and locomotives fell between 1933 and 1934. The improvement in our foreign sales of machinery and motor-cars is particularly encouraging.

In general there is no doubt that our overseas trade is slightly on the up-grade. Nevertheless, the present volume

of trade gives little ground for satisfaction, for it is still substantially below the pre-depression level. Although a further improvement may be expected if world economic recovery continues, the pace and extent of an expansion in foreign trade must remain severely limited as long as trade is restricted by artificial barriers. In particular, our present policy of restricting imports of agricultural commodities is bound to react unfavourably on our export industries.

A PLAN FOR COTTON

(BY A CORRESPONDENT)

WHILE Lancashire—or, rather, the spinning section of the cotton trade—is trying to make up its mind over the latest scheme for reorganisation, an admirable Report* has appeared on the industry as a whole, compiled by members of an organisation best known to the public under its initials P.E.P. This document, though it contains very little that is actually new, is much the most detailed and thorough analysis of the conditions at present obtaining in the cotton trade. With the description of the depression and its principal causes the public, after so many inquiries, official and unofficial, must by this time be tolerably familiar—the frenzied finance, uneconomic competition, rigid wages, the return to gold, the growth of the Indian industry behind its tariff barrier and the rise of the Japanese industry and its expansion under the stimulus of a devalued currency. Nor do the remedies suggested in the Report differ very markedly from those that have frequently been put forward in other quarters, except perhaps for the greater emphasis laid on marketing. Nevertheless, the impressive assembly of facts and the sober and reassuring conclusions drawn from them make the report particularly valuable—especially at the present moment when, in spite of tentative efforts at reorganisation, counsels are still divided, and preoccupation with individual or sectional interests still prevents Lancashire's problem from being envisaged in its true proportion.

So far as the spinning section is concerned, the Report recognises clearly enough that the two main problems are concentration into big amalgamations and the elimination of superfluous plant. A scheme for reducing surplus capacity was put forward by the Joint Committee of the cotton trade organisation some years ago, but it proved impracticable owing to lack of agreement. Another scheme with somewhat similar objects is at present being drafted, but it remains to be seen whether it will meet with a better fate. The problem of surplus capacity is, of course, far more serious in the American than in the Egyptian section, since the latter has only felt the real brunt of depression since 1929. Hitherto the international competition in the finer yarns and cloths has been comparatively slight, and it may well be that a revival of trade to the pre-crisis level would restore this section of the trade to a condition of reasonable prosperity. But, as the Report points out, infiltration from the more depressed American section must be prevented. Amalgamations are most vitally needed in the American section, the ideal constitution of which would be a handful of large units. A number of large combines are already in existence in the Egyptian section, but their record does not appear recently to have been particularly brilliant; nevertheless, the Report is inclined here also to recommend further concentration. The difficulties of maintaining any satisfactory cartel system on the basis of a large number of units is carefully pointed out and the possible need for compulsory control is also emphasised. The latest plans for reorganising the spinning section have been formulated on a voluntary basis, but it is still far from certain whether an adequate degree of support for a voluntary association will be forthcoming.

With respect to the manufacturing section of the industry the Report recognises that a different type of organisation is desirable. Here large combines have only limited scope, because weaving is so diversified that large

units are in many cases neither practicable nor desirable. There will always be room for the small firm specialising along lines of its own, the chief need of this branch of the industry being flexibility. Nevertheless, in the "bread and butter" trade larger aggregations than those existing at present are desirable. The size of the average unit is uneconomically small, and the amalgamation of looms on plain cloth is therefore recommended. Moreover, attention is drawn to the fact that the old arrangement of well defined areas for different kinds of cloth has been destroyed during the last ten years. The manufacturers of the poorer types of cloth have been encroaching on the better-class trade in order to "fill in" and vice versa. It is desirable, therefore, to effect a re-separation of geographical areas of the different types of production. The organisation of this section should be as follows. Manufacturers of low-quality cloth should be organised in distinct combines, while those weaving fancy or high-class cloths should be left more or less as they are. The formation of vertical spinning and weaving units is not recommended, for the very good reason that it is difficult, if not impossible, to create a "spin-weaving" concern which is properly balanced. Nevertheless, it is noted that existing vertical concerns have, on the whole, done better than the average single process units—largely, it is pointed out, because these have tended to have marketing organisations of their own—chiefly, however, for the home trade.

The Report naturally lays the greatest stress on marketing—which, as is well known, is something of a panacea in P.E.P. circles. The "indent" system is justly criticised, and it is pointed out that the United Kingdom is probably the only country which has not got standard cloths—a pardonable exaggeration. There can be no doubt that our marketing methods, at any rate in the cheaper lines, have been very much behind those, for instance, of the Japanese—especially in China and India. Indeed, the report comes to the rather surprising conclusion—not altogether unwarranted—that it is only in marketing that Lancashire has anything to learn from Japan. Unquestionably the existence of stocks of bulk lines on the spot and the direct contact between the Japanese shipper and his customer have been important factors in securing success. There is a crying need, too, for a much closer link between producer and merchant. So far the attempts to secure this have signally failed, partly owing to their own inadequacy, but also owing to the opposition of the merchanting section of the industry. The Report recommends accordingly the formation of two marketing corporations—one for yarn and one for piece-goods. The latter presents, of course, far greater difficulties; it could be organised either as a new organisation emanating from the producing end—in which case the growth would be slow and the area of its operations necessarily limited—or else as a combination of existing merchants and producers with merchanting organisations of their own. Neither of these ways at the moment seems to promise very much hope, and in the long run the former may prove quite as practicable as the latter. If once the producing sections of spinning and weaving were to be organised on a sound basis they would be in a position to seek the co-operation of the finishers in forcing an improvement in marketing methods, either by creating a separate organisation of their own, or by bringing pressure to bear on existing marketing institutions—but in the present state of disorganisation such a development still seems a long way off. Finally, in order to cement the organisation of the industry as a whole, the report recommends the creation of an Industry Council representing all sections of the trade. Though vertical combination is not recommended, financial interlocking between sections somewhat on the analogy of the German Interessengemeinschaft is proposed as a method of ensuring that no single sectional interest shall prevail over those of the trade as a whole—a suggestion which is not without merit. The first task is to restore some degree of prosperity and unity to the spinning section—especially to the American branch of it—and until that is accomplished the sound basis for further building is lacking. The problem here is twofold: to eliminate surplus capacity and to effect a concentration into large units. Whether these two things can be accomplished

* Report on the British Cotton Industry—Industries Group P.E.P. (Political and Economic Planning).

separately, or whether they must be undertaken simultaneously, only the event can show. A double scheme for eliminating redundant plant and effecting amalgamations under the aegis of a voluntary association with powers to control production by means of a quota system is at present being considered by the spinning section, but at the moment there is still a good deal of uncertainty as to how much support it will obtain. Yet it must be obvious to everybody outside Lancashire that some arrangement of this kind is vitally needed. For more than a decade

the industry has been allowed to languish in default of any clear or coherent leadership. But the time is surely coming when public opinion will cease to tolerate the impotence of mismanagement in the sacred name of individualism. Unless the trade can undertake its own reconstruction, it will have ultimately to be reorganised from without—a step which no sensible person contemplates with equanimity. There is therefore every reason to hope that at long last Lancashire has begun to recognise the uses of adversity.

NOTES OF THE WEEK

Herr Hitler's Apologia.—The one thing about the events in Germany between June 29th and July 1st which was manifest from the beginning was that they would take a great deal of explaining. But when Herr Hitler, after keeping his countrymen and the rest of us waiting for a fortnight, did at last make a statement on the subject on Friday, July 13th, he astonished the world by a lamentable failure to explain anything at all. The first part of his speech was in a well-worn vein: denigration of the Weimar regime and laudation of the speaker's own achievements—especially in the economic field! The men of Weimar were denounced as the inveterate revolutionaries, in contrast to the genuine Nazis who had come into power by constitutional means and were constitutionally addicted to law and order! And then, by a rather obvious sleight of hand, the Chancellor made his transition to the proper subject of his speech by suggesting that the members of his own organisation, whose lives he took the other day, were a section of those "pathological foes of the State," the revolutionaries of 1918, who had insinuated themselves into the S.A. When he came to current events the only hard facts that he revealed were that the lives of 74 persons had been officially taken; but there is no reason to assume that the death-roll, as we now have it, is even approximately complete. All that we know is that the Government have now finally decided not to publish a list of names, but to "treat the matter as closed." Apart from the account of his appeals to Captain Roehm to change his mode of life and to break with his undesirable associates, Herr Hitler produced no evidence whatever to establish the guilt either of his own S.A. henchmen or of General von Schleicher. He simply dwelt upon those immoralities, both sexual and financial, in the private life of Captain Roehm and his associates, which had long been common knowledge; and then inveighed against the suggestion that there ought to have been a legal trial, or that the precise guilt or innocence of his victims was a relevant question. "For the 24 hours of June 30th," Herr Hitler shouted, "I was the Supreme Court of the German nation in my own person." Politically, by far the most significant thing in his speech was that he singled out, as the most heinous point in the alleged Roehm-Schleicher programme, the reported proposal to put the Reichswehr, together with the S.S. and S.A., under Captain Roehm's single command. In this connection Herr Hitler spoke as if his own principal mission was to keep the Reichswehr immune from being "bossed" by politicians. To the outsider, that is rather a surprising self-portrait of the artist, if we think in terms of the past; yet it may very well be Herr Hitler's rôle for the future.

Marxist Unity in France.—The Doumergue Government has been more remarkable so far for a tendency towards class legislation than for any resolution in suppressing unconstitutional bodies or unravelling the Stavisky scandal. It is natural, therefore, that the working class parties, with the terrible examples of Germany and Austria before them, should be organising for a united defence of their political and economic rights. The alliance between the Socialist and Communist Parties was cemented this week. By a large majority the national council of the Socialist Party decided on Monday to form a common front with the Communists for immediate joint action against the threat of Fascism and

war. A committee has been appointed to complete and sign an agreement on these lines. Joint demonstrations are to be organised; there is to be no mutual recrimination or violence; assistance is to be given by each party to the other in case of Fascist attacks; and strikes are to be invoked only by the competent trade union organisation. It is extremely refreshing to see that the working class parties in France are showing more common sense than their unfortunate comrades in Germany were able to muster. This week's demonstration of united Left-wing strength should not be lost on M. Doumergue's Government. That Government, it is devoutly to be hoped, will draw the moral that mere class legislation can neither bring peace in France nor preserve democracy.

San Francisco.—The inauguration of the N.R.A. Codes in the United States, by President Roosevelt's New Deal, was hailed by American labour as the beginning of recognition for organised labour unions and for collective bargaining. Trade Unionism in America had till then been mainly a matter of crafts and of localities; and when the codes were put into force, labour leaders hoped for much stronger influence in the conduct of industry. Actually, their hopes have been frustrated; for the N.R.A. has not championed organised labour as a whole against the employers. In such circumstances, American labour has gradually been disillusioned over both the President and the N.R.A. This disillusionment declared itself two months ago in unmistakable fashion by a strike of longshoremen along the Pacific Coast over the right, claimed by the employers, to recruit what labour they pleased at the employment exchanges. The dockers claimed that employment should be by rota, under their own officials, to avoid discrimination. Each side agreed to arbitrate under a special Mediation Board, but on terms with which the other could not agree. Last Monday the trouble assumed grave proportions in a general strike in San Francisco and Oakland. Essential supplies were permitted to reach the city, but supplies of petrol and fruit were impounded or turned away; and all the public services came to a standstill on Monday. A state of emergency was proclaimed by the police, who came into violent conflict with strikers and opened fire on them. The strikers' council is apparently trying to prevent disorder by unruly elements, but looting and incendiarism have taken place. The Californian authorities have called out the National Guardsmen—the volunteer militia—and the naval and military forces are being held in readiness to intervene; so that bloodshed is, to say the least, possible. Meanwhile, the sympathetic strikers have suffered; and the Strike Committee of the Central Labour Council advised the dockers on Wednesday to accept arbitration by the Federal Mediation Board. The social situation in America to-day is reminiscent of the relations between employers and employed in this country in the 'eighties of last century. Then, in Britain, as now in America, the struggle centred on the right of casual and unskilled labourers to organise and to bargain collectively. The successful London dock strike for "the dockers' tanner," in 1889 inaugurated a long period of organisation of unskilled labour; and in 1920 the Industrial Court could even

declare that "the system of casualisation must, if possible, be torn up by the roots." Perhaps last year's Wagner Act, which affirmed the Federal Government's policy of public employment exchanges, will prove a basis upon which successful mediation in the present dispute in America can take place. If not, it would seem that American industrial and social relations in future are to be marred by violent recurrences of the San Francisco variety.

* * *

Housing the Workers.—Gradually and grudgingly the Government gives way to the public demand for a genuine housing policy. Two years ago the Wheatley subsidy was abolished, and the Government professed to believe that unaided private enterprise would provide the necessary houses. A year later, in face of the obvious failure of this policy, a slum-clearance plan was initiated. Then, a few months ago, Sir Hilton Young announced that some restoration of the subsidy would be conceded. And this week, in the House of Lords, Lord Halifax admitted that overcrowding is as serious a problem as slum-clearance, and that unaided private enterprise cannot possibly provide houses to let at 10s. a week or under. The Government has therefore decided to carry out a survey of overcrowding; and legislation will be introduced in the autumn defining standards of housing accommodation, making it compulsory for local authorities to build a sufficiency of houses, and offering financial assistance to enable them to do so. At last, we note with gratitude, the Government has accepted the principle that it is a national duty to use public funds to ensure the proper housing of the workers. But there is still one hurdle left for Sir Hilton Young to clear. Lord Halifax refused to accept the general demand made in the House of Lords for a national housing authority. He argued, quite rightly, that it would be a mistake to supersede, excuse, or interfere with the local authorities, many of whom (as at Leeds) are experienced, active and capable in discharging their housing responsibilities. But Lord Halifax should realise that the advocates of a central housing authority are *not* proposing the supervision of the efficient local authorities. It is merely proposed that the central authority should co-ordinate housing activities, should arrange for cheap finance and raw materials, and should supersede inefficient or incapable local authorities. The Government, Lord Halifax announced, is willing to admit the necessity of a general co-ordinating body by appointing an Advisory Council. But it still denies that any substantial advantages in cheap finance and raw materials could be secured by a central executive body. Here, in our opinion, it is wrong. How soon will Sir Hilton Young take this last hurdle, and so give the country the bold, adequate and national housing policy that public opinion demands?

* * *

Labour Housing Policy.—Thanks to the Government's sluggishness, it has been left to the Labour Party both to make a scientific estimate of the number of houses required and to introduce the idea of a central housing authority into practical politics. Labour policy, as explained in a very interesting and well-documented report just published, follows the main lines of the report of a year ago. Houses are to be built, where possible, by the local authorities acting under the supervision of the Minister of Health. There should also be a central authority, however, to take over housing programmes from unwilling or incompetent local authorities. This central body (which has changed its name since a year ago from the "Central Housing Council" to the "National Housing Commission"), would assist the Minister to co-ordinate town-planning, slum-clearance, re-conditioning, building and all housing activities. The Labour Party's present estimate of the number of houses required is based on the same factors which we took into account in computing the "Demand for Houses" in our issue of March 31st: the present extent of overcrowding, the probable increase in families, and the rate of obsolescence. In this way the Labour Party reaches an estimate of the necessary rate of house-building which tallies with

our own: 5,000,000 to 6,000,000 houses in 20 years, or 250,000 to 300,000 a year. The report is naturally, and rightly, concerned above all with the provision of houses to let at rents of from 5s. to 10s. a week. This cannot be done, the report declares, by unsubsidised private enterprise even at present costs. The National Government's abolition of the Wheatley subsidy therefore stands condemned; and the Labour Party would consequently restore it, together with the principle of differential rents, whenever it is impossible to produce low-rented houses in any other way. The report is a little vague about the way in which Labour would finance the programme; but it fully recognises the contribution that centralised finance and bulk buying can make to the cheapening of costs. Indeed, the idea of a national housing authority has now been endorsed by Lord Amulree's influential committee, by the Town Planning and Garden Cities Association, by the detailed memorandum prepared by Mr F. H. Rees and Mr Nicholson, and finally by the Labour Party. Outside the Cabinet, opinion seems to be almost unanimous.

* * *

Mr Elliot in Deep Water.—Mr Elliot got more than usually out of his depth in his efforts to defend the beef subsidy in the House on Monday. First, in attempting to suggest that the present low price of beef was mainly due to increased imports, Mr Elliot gave the *percentage* figures for Empire imports, and added that the absolute figure of home production fell between 1930 and 1932. Both Sir Herbert Samuel and Lord Winterton asked Mr Elliot to give the absolute figures, but he refused. If he had not refused he would have had to admit that the fall in prices was not due to an increase in imports at all, but to a shrinkage of demand. The figures are as follows:—

Total Imports of Beef (cwt.)		
1930		1933
12,814,000		12,046,000

Quite clearly it is not an increase in supply which has caused the fall in prices. Mr Elliot next proceeded to elaborate one of the most extraordinary economic arguments which we have heard for a long time. It did not matter, he said, if the nation jeopardised its income from foreign investments in order to maintain the beef farmer, because the "return" from British agriculture was greater than the "return" from our foreign investments. Mr Elliot admitted that this statement seemed so "extraordinary and unlikely" that he had "checked it again and again." But when he came to give the figures—£150,000,000 from foreign investments and £180,000,000 from agriculture in 1933—it transpired that he was comparing our income in interest on foreign capital with our gross agricultural production! Mr Grenfell pointed out that this was to compare two entirely different things. Mr Elliot replied that he "could not get the comparison on any other basis." Mr Horobin asked him if he really thought that the yield on £1,000,000,000 invested in agriculture was greater than the yield on £3,500,000,000 invested abroad. Mr Elliot replied that he was unwilling to indulge in "statistics-chopping"; and, when Mr Horobin repeated his question, he took refuge in the following statesmanlike dictum:—

It is surely clear that investments in foreign countries, as to which we must take the net returns, cannot stand on the same footing in regard to these matters as our investment here, which has so many ancillary factors, the value of which cannot be estimated.

Quite apart from this confusion, however, Mr Elliot did not state whether his figure of gross agricultural production allowed for subsidies, de-rating, etc. Nor did he point out that our income from investments was at an exceptionally low level in 1933; that it had been reduced to that low point by our own protectionist policy, which he supports; and that before 1930 it had risen to over £250,000,000 a year. In any case, the comparison is ludicrous. Our income from foreign investments is a net income additional to what we make at home. If our standard of living is to be maintained, we must consume both the products of our own labour and the product of our past saving. In 1929 beef production in England was pros-

perous; we received about £250,000,000 in income from foreign investments; and unemployment was half its present figure. If Mr Elliot would reflect on that, he might perhaps find his moorings.

* * *

The Anglo-Norwegian Fisheries Dispute.—On July 11th Mr Eden received at the Foreign Office a deputation from the Hull Trawler Officers' Guild to ask H.M. Government for protection against interference by the Norwegian authorities with the activities of British trawlers outside the three-mile limit off the Norwegian coast. Mr Eden received the deputation sympathetically; announced the Government's readiness to afford naval protection in any case up to a limit mentioned in an Anglo-Norwegian agreement of November 1st; and promised that the possibility would be considered of sending a British warship to the fishing grounds at an early date. This last announcement sounds rather startling; but the truth is that the trawlers' deputation to the Foreign Office the other day is only one incident in a long story, in which the trawlers and the Government would appear to have rather a strong case. In fact, we have been finding the Norwegians as difficult to deal with over these North Sea fisheries as the Danes have found them in the matter of the sovereignty over East Greenland. To begin with, the Norwegians claim a four-mile limit for their territorial waters instead of the three-mile limit which is accepted by this country and by most other countries in the world, though not by all. In the second place, the Norwegians claim to draw their four-mile-limit line from point to point, on the basis of the extreme projecting points of their coast; and, in the case of a coast which is so irregular as that of Norway, this of course adds considerably to the waters which are claimed as territorial. In these two points alone, there would be sufficient matter for an international dispute; but the situation has been aggravated by the fact that, so far, the Norwegian Government has failed to define, on the chart, the limits of its territorial waters according to its own construction of its claims. H.M. Government asked the Norwegian Government to define this limit at a conference which was held as far back as 1924; in 1925 a line was duly drawn by Norwegian hydrographers; and, since then, British trawlers have been instructed to keep outside this line, pending a settlement. The Norwegian hydrographers' line, however, has not yet been ratified by the Norwegian Parliament; and, meanwhile, British trawlers fishing outside this line have been rounded up by Norwegian gunboats, taken into Norwegian fishing ports, and condemned by juries drawn from the people commercially interested in the Norwegian fishing industry. H.M. Government would seem to be justified in claiming that it is now high time for a diplomatic settlement, if the issue is to be settled by diplomatic means. If not, the case ought to be put to arbitration or else taken before the Permanent International Court at The Hague.

* * *

The "New York Times" takes Us to Task.—In an article entitled "Trade is Triangular" the *New York Times* accuses us of harbouring the heresy that trade between any two individual countries ought to be rigidly balanced. We must plead "Not Guilty" to this charge. We entirely agree with the *New York Times's* attack on the reactionary and ridiculous conception of "balanced trade." It is true, as the *New York Times* points out, that, in distinguishing between the German debt to us and our own war debt to the United States, we observed that Germany's trade balance with Great Britain was active, while the British trade balance with the United States was passive. But this statement must not be taken to imply an acceptance of the "balanced trade" fallacy. It was merely intended to show that Great Britain had done its best to make debt payments easy by buying German as well as other goods, while the United States had not done its part by buying British goods. The figures were also relevant to the possibility of an exchange clearing. In general, however, we have great pleasure in applauding the enlightened sentiments of the *New York Times*:—

Great Britain's ability to pay her debt to the United States does not depend upon the direct trade between

the two countries, but upon Great Britain's total balance of payments, including "visible" and "invisible" items, with the entire outside world. Similarly, Germany's ability to pay her debt to Great Britain does not depend upon the direct trade between the two nations but upon Germany's entire trade balance.

The *New York Times* does not add, we notice, that the United States' ability to receive her debt from Great Britain does not depend upon the direct trade between the two countries, but upon the United States's total balance of payments with the entire world. If it had, it would have been constrained to note that in 1933, according to the Department of Commerce, the United States had a total *active* balance of payments of \$193 millions; while Great Britain had a *passive* balance of £4,000,000. We will not quarrel, however, about so trifling an issue. For the *New York Times* is indubitably on the side of the angels. It has shed a welcome ray of light on a world of economic chaos and darkness. May it long continue to do so.

* * *

French Export Credits.—The report of the French Export Credit Committee is another proof that State-aided exports add little to the total volume of trade unless the State is prepared to shoulder risks which no private concern or bank would run. As in England, the proportion of exports under the export credits scheme in France to the total of French exports is small; and traders are often unwilling to carry through a deal in spite of the State guarantee. Although the Government is entitled to guarantee up to 60 per cent. of the contracts, the usual figure is about 50 per cent., and even less in the case of particularly doubtful risks. The guarantee may be obtained for exports to States with which the Republic has a commercial treaty (with the exception of Manchukuo), Soviet Russia now being included. The exports must be of national importance; and minimum and maximum periods of credit are fixed. Between 1929 and 1933 the State has guaranteed 180 projects involving Frs. 4,974 millions, of which, however, only 58 contracts, amounting to Frs. 818 millions have been executed. The liability of the State in respect of approved contracts amounted to 51.4 per cent., but for the contracts actually carried out the State guarantee does not exceed an average of 48.5 per cent. It is clear that in France, as in this country, export credit schemes and tariff and quota policies are largely irreconcilable—like the views of Peter Gynt, who traded idols with the natives in order to increase his efforts to convert them!

* * *

Sterling and International Prices.—The past fortnight has witnessed an increase in both British and American prices. The complete British index number has risen by 1.7 per cent. to the highest point this year, and primary products have risen by 1.3 per cent., and have also reached their highest point for the year. The complete index number has been affected to some extent by a sharp seasonal rise in potatoes, due to the substitution of the new for the old crop, but the primary index has not been affected. In the United States primary products have risen by 2.5 per cent., again to a new high record for the year, but the Irving Fisher general index number is practically unchanged. On the Continent, gold *bloc* prices, as represented by the French and Italian index numbers, continue

to fall, but there has been a further rise in German prices. This adds to the over-valuation of the mark in terms of other currencies.

Details of the group indices comprising the complete Economist index number are given below:—

"ECONOMIST" INDEX

(1927 = 100)

	Sept. 18, 1931	June 20, 1934	July 4, 1934	July 18, 1934
Cereals and meat	64.5	68.1	67.8	73.0
Other foods	62.2	59.2	58.7	58.0
Textiles	43.7	53.0	52.9	53.3
Minerals	67.4	76.7	76.6	76.6
Miscellaneous	65.8	69.5	69.2	69.4
Complete index	60.4	65.3	65.1	66.2
1913 = 100	83.1	89.9	89.5	91.0
1924 = 100	52.2	56.4	56.2	57.2

In the cereals and meat group, wheat, barley, maize and rice are all dearer, while potatoes have nearly doubled in price. Mutton is cheaper, but there was an advance in Argentine beef. Most items in the other foods group are slightly cheaper than a fortnight ago. In the textiles group, cotton and flax are dearer, but silk has fallen and there has been a further decline in wool. Among metals, tinplates, house coal, lead and tin all advanced, but copper and spelter cheapened. In the miscellaneous group, hides were dearer, but there was a very slight reaction in rubber.

* * *

Consolidating the Tin Control Scheme.—After the meeting of the International Tin Committee at The Hague last week it was announced that French Indo-China, the Belgian Congo and Ruanda-Urundi, Portugal and Cornwall had become members of the international control scheme. As expected, the Tin Committee had to offer these countries favourable terms in order to induce them to adhere to the scheme. The terms under which the twelve concerns now operating in the Belgian Congo and Ruanda-Urundi were brought into the cartel provide for a quota of 4,500 tons of metal in 1934, 6,000 tons in 1935 and 7,000 tons in 1936. How dearly the adherence of the Congo was purchased is shown by the fact that production was only 2,225 tons in 1933, 683 tons in 1932 and 141 tons in 1931. The quotas allotted to French Indo-China are: 1,700 tons of metal in 1934, 2,500 tons in 1935, and 3,000 tons in 1936. It was agreed that in case of an increase in the quotas of the original members above 65 per cent. of the standard tonnages the quotas allotted to French Indo-China and the Belgian Congo would be raised by 25 tons for each 1 per cent. of the percentage over 65 per cent., so that, with the quota at 100 per cent., an additional 875 tons would be allowed. Portugal's quota was fixed at 650 tons of metal per annum for the years 1934-36, and the three important producers of Cornwall (East Pool and Agar, Geevor, and South Crofty) are permitted to produce 1,700 tons of metal per annum during this period. According to the statement issued by the International Tin Committee,

the flat rates for Portugal and Spain will remain in force so long as the quotas of the signatory countries do not exceed 65 per cent. of the standard tonnages under the control agreement. The standard tonnages for these two countries have been agreed at 800 tons and 2,615 tons respectively. A proportionate increase will be made in the flat rates if the quotas of the original members exceed 65 per cent. While the International Tin Committee has thus been able to stop some of the gaps in the restriction scheme at some cost to themselves, it is to be hoped that excessive strain on the loyalty of its constituents through a high-price policy, which might result in the end in the complete collapse of the scheme, will be avoided by those in control of the cartel in their own interest.

* * *

A Tinplate Agreement.—At a trade meeting at Swansea Exchange last Tuesday it was announced that an international tinplate agreement had at last been signed by the representatives of Great Britain, France, Germany and the United States. The object of this agreement, which failed to materialise from the negotiations of the first two months of this year, is to raise the price of tinplate by regulation of the market. To this end a minimum price of 18s. per standard ton was laid down. The present price is 17s. 3d., but it was only raised to this level from 16s. 6d. at the beginning of May in anticipation of the agreement. It is easy enough to understand the efforts of the tinplate producers to raise prices, as both their raw materials (tin and steel) have risen considerably in price during the past eighteen months, while tinplate has remained depressed. Nevertheless this raising of prices by an international agreement is difficult to achieve. Until a few months ago it was generally thought that no substitute could be found for tinplate in the production of boxes for canned foods. Quite recently, however, this has been falsified. Substitutes are being increasingly introduced. The use of glass, which originally seemed to offer considerable possibilities, has not recently been very much developed; boxes of aluminium, on the other hand, are continually gaining ground. During the past few months the competitive strength of aluminium boxes in opposition to tin boxes has not been very apparent, because very little fish preserving (for which the aluminium boxes are particularly suitable) is done at this time of the year. The fish-packing season only really begins in August and September. But producers of aluminium boxes already have high hopes, based on recent business developments, and these hopes will probably be all the more justified as a result of the rise in the price of tinplate. In fact, until now the only obstacle to a rapid growth of the use of aluminium boxes has been the question of price. They are slightly dearer than tinplate boxes. This small price disadvantage was to a large extent compensated by the easy stamping of the aluminium (saving of labels), its lightness (saving of freight charges) and the fact that old tins could easily be used as scrap. A small rise in the price of tinplate may entirely reverse the position of advantage. It is, therefore, to the interest of tinplate producers that the present agreement should be used with great discretion. The Welsh tinplate industry, in particular, which is more concerned than any other national tinplate industry in the world with export, should see to it that the bow is not stretched beyond the breaking point.

* * *

Iron and Steel Production in June.—The figures for June issued by the British Iron and Steel Federation show that production of pig iron and steel is proceeding on an even keel. After increasing by 5 per cent. in April and 3 per cent. in May, production of pig iron in June, at 514,900 tons, showed an increase of only one per cent.; although steel production has not again reached the peak of March (834,500 tons), the rate of production has been well maintained when allowance is made for holidays, the varying lengths of months, and so on. Imports of iron and steel in June show a rather surprising decline to 98,000 tons—the lowest figure of the year. Exports, on the other hand, rose to 204,100 tons, the highest figure since October, 1930. The following table compares pro-

duction of pig iron and steel and imports and exports in each of the first six months of 1933 and 1934:—

UNITED KINGDOM PRODUCTION, IMPORTS AND EXPORTS OF IRON AND STEEL, FIRST SIX MONTHS 1933 AND 1934
(In thousands of Tons)

	Production				Imports of both		Exports of both	
	Pig Iron		Steel		1933	1934	1933	1934
	1933	1934	1933	1934				
Jan.	286.6	441.3	444.4	711.0	69.5	119.8	148.7	163.7
Feb.	270.8	414.4	482.7	707.5	78.0	123.3	135.6	142.0
March ...	332.2	503.6	577.7	834.5	97.0	121.6	155.0	171.5
April	324.7	496.3	509.6	716.8	70.9	125.3	132.8	165.2
May	339.9	527.9	599.6	780.0	84.9	122.2	178.6	190.6
June	343.6	514.9	568.8	757.5	69.0	98.0	153.8	204.1
Total	1,899.8	2,898.4	3,182.8	4,507.3	469.3	710.2	904.5	1,037.1

Production of pig iron in the first half of this year was 52 per cent. in excess of the corresponding period of last year and the output of steel showed an increase of 41 per cent. Imports rose by 51 per cent. and exports by 15 per cent. between the two periods. Of the sales abroad in the first half of this year, exports to foreign countries amounted to 467,000 tons, an increase of 10,000 tons over the corresponding period last year, and exports to the Empire to 570,000 tons, an increase of 122,000 tons, or 27 per cent., over last year. The increases were most marked in exports to South Africa, Canada, New Zealand, Egypt, Palestine and the Irish Free State. Among foreign countries the increases were most marked in exports to Russia, Denmark, the Netherlands and Norway, with whom trade agreements have been concluded. There was a substantial decline in exports to China, Japan, Brazil and Portugal.

OVERSEAS CORRESPONDENCE

UNITED STATES

THE SAN FRANCISCO STRIKE

THE waterfront strike on the Pacific Coast has now persisted upwards of two months. Originally a longshoremen's strike, it has now added other craft unions, and an effort is being made to convert it into a local general strike. Approximately 25,000 men are out, and shipping has been paralysed from north of Los Angeles to the Canadian border. Violence has increased as the strike drags on, and in California the National Guard has been called out to reinforce the police. The Federal Government has attempted to act as conciliator, both under old and new legislation, but so far its efforts have been in vain. The past half-year has been distinguished for labour troubles, many of them marked by fatal riots—Minneapolis, Toledo, Cleveland and now San Francisco, to mention only those which have been noted in the Press.

Business statistics do not lend themselves to clear interpretation. Steel output, which two weeks ago was 56 per cent. of capacity, last week (which included the July 4th holiday) was only 21 per cent., and in certain districts is down to 10 per cent. It was generally recognised that as a result both of the price policy of the steel cartel and of the strike threat, a good part of the second quarter production was anticipatory, but the depth of the succeeding slump has exceeded expectation. The estimated steel capacity of the country, by the way, has been increased by more than 10 per cent. since 1929. Textile activity has been sharply reduced. On the other hand, motor production has held up far better than was expected, and electric power consumption figures have been excellent. Car loadings have also been more than favourable; but this is

Transvaal Output in June.—The output of gold by the mines of the Transvaal during June amounted to 868,129 ounces of fine gold at a value for purposes of declaration of £6 17s. per ounce, as compared with 808,418 ounces in May at £6 15s. and 918,633 ounces in June last year at £6. Statistics of outputs and profits of the individual mines were fully set out in our issue of July 7, 1934, page 45. In the following table we show the monthly output since the beginning of 1928:—

Month of	1928	1929	1930	1931	1932	1933	1934
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

Total ...	10,358,596	10,414,066	10,719,760	10,874,145	11,553,564	11,017,485	5,240,485

The following table shows the number of natives employed at the mines during the past nine months:—

	Oct., 1933	Nov., 1933	Dec., 1933	Jan., 1934	Feb., 1934	Mar., 1934	April, 1934	May, 1934	June, 1934
Gold mines	231,799	233,657	235,739	239,871	242,594	242,577	243,059	243,579	244,857
Coal mines	11,662	11,744	11,686	11,861	12,120	12,434	12,452	12,481	12,800
Total ...	243,461	245,401	247,425	251,732	254,714	255,011	255,511	256,060	257,657

The number of natives employed at the coal and diamond mines continues steadily to increase.

in part attributed to the early wheat movement because of the intense heat. Statistically, one of the most distinct effects of N.R.A. has been to make manufacturing output more irregular and sporadic, with fitful bursts of great activity followed by complete or nearly complete shut-downs. The attitude of the Government towards the price cartels is more obscure than ever. Federal agencies objected so strongly to the cartel prices that a ruling authorised bidders on Government contracts to cut prices as much as 15 per cent. below the cartel schedule; but the wording was so ambiguous as to leave quite uncertain whether or not comparable terms would be offered to private buyers.

THE INCREASE IN BANK DEPOSITS

Statistically speaking, the most striking fact of the first half of 1934 has been the increase in bank deposits.

The following table shows the changes in the items of the Reporting Member Banks in the period:—

	Reporting Member Bank Items	
	(\$000,000)	
	Dec. 27, 1933	June 27, 1934
Total loans and investments	16,666	17,737
Loans on securities	3,628	3,529
All other loans	4,774	4,485
U.S. securities	5,267	6,665
Other securities	2,997	3,058
Reserves with F.R. Banks	1,914	2,901
Net demand deposits	10,866	12,504
Time deposits	4,339	4,501
Government deposits	825	1,357

In short, the tendencies of recent years have continued, viz., a contraction of loans and an expansion of investments, with the difference that in the past month the net

CHEMICAL BANK

&
TRUST COMPANY

NEW YORK
FOUNDED 1824

The Chemical Bank has tradition, achievement and experience, the result of 110 years uninterrupted service.

Office of the London Representative:
6 BISHOPSGATE, E.C.4

result has been a substantial expansion in both total loans and investments and total deposits.

To illustrate the change of five years the following table shows the changes since June 26, 1929. In this connection one should remember that the current tabulation covers only 91 cities, while in 1929 101 cities were included:—

Reporting Member Banks (\$000,000)	June 26, 1929	June 27, 1934
	1929	1934
Total loans and investments.....	22,407	17,737
Loans on securities	7,539	3,529
Other loans	9,139	4,485
U.S. securities	2,895	6,665
Other securities.....	2,834	3,058
Reserves with F.R. banks	1,670	2,901
Net demand deposits	13,018	12,504
Time deposits	6,763	4,501
Government deposits	260	1,357
Borrowings from F.R. banks	715	5

It will be noted that in 1929 the principal function of these banks was the lending of money. Their loans were \$16,600 millions, against investments of under \$6,000 millions, although even then the proportion of investments to loans was so high that the banks were often somewhat disparagingly referred to as "investment trusts." At present the loans total almost exactly \$8,000 millions, or less than half their 1929 sum, while the investments, at \$9,600 millions considerably exceed the loans; and the proportion of U.S. Securities to total loans and investments, which was below one-seventh in 1929 is now one-third. In 1929 the holdings of U.S. Securities were approximately equal to the holdings of other securities; now they are more than twice as high.

The changes in the items of the Reserve Bank over the past six months are also significant:—

Reserve Bank Items (\$000,000)	Dec. 27, 1933	June 27, 1934
	1933	1934
Bills discounted	111	27
Bills bought	111	5
U.S. securities	2,432	2,430
Gold reserves	3,569	4,782*
Monetary gold stock	4,323	7,846
Money in circulation	5,824	5,301
Member bank balances	2,675	3,837

* Gold certificates and due from U.S. Treasury.

It is particularly significant that almost the entire assets of the Reserve Banks now consist of one type or another of Government paper. These banks possess no gold whatsoever; for although the "gold certificates" may be converted into gold at the discretion of the Secretary of the Treasury, they are actually and legally no more than non-interest-bearing obligations of the United States. Of millions and the discounts of commercial paper \$20 millions, a total of \$25 millions. It is hardly an exaggeration to say that our entire monetary structure is now based upon public debt; and to a great and increasing extent our

credit structure is likewise based upon the public debt; and one might add that the principal function of our entire banking system, Reserve Banks and commercial banks, in recent months has been the financing of the Treasury deficit.

Some 14 New York Clearing Banks have this week seized the earliest possible opportunity to extricate themselves from their contracts with the Reconstruction Finance Corporation. Because certain banks were in actual or putative need of capital, which was available from the R.F.C., all the New York Clearing Banks were induced to sell stock or notes to the R.F.C., ostensibly to encourage the others. The customary form was the exchange of a 4 per cent. capital note for a 1½ per cent. R.F.C. debenture—a rather expensive gesture. Incidentally, the first bank failure under the guarantee scheme has occurred—a small State bank, not a member of the Reserve system; the depositors were promptly paid off.

PUBLIC OPINION AND THE NEW DEAL

The political campaign has been launched and promises to be more hotly contested than was expected a short time ago. The Republican party is still too disorganised to formulate anything resembling a platform; but Senator Borah (who himself is not a candidate this autumn) has initiated a sort of free lance campaign with a general broadside at the New Deal, and specifically the N.R.A. This week two by-elections for State Senators in New York State, one in Mr Roosevelt's own county, were fought out on the New Deal issue. They resulted in overwhelming victories for the anti-Administration candidates; but too much significance should not be attached to such casual manifestations of local sentiment.

Two factors, however, may be borne in mind in following the political developments of the coming months. As is well known, the Middle West is deeply religious; and numerous reports mention the wide belief that the Great Drought is divine retribution for the curtailment programme of the A.A.A. As, however, some 3,000,000 farmers are in receipt of A.A.A. curtailment funds, it is questionable if their religious sentiments outweigh cash in hand. Second, the rising cost of living is beginning to arouse some resentment in urban areas, where it is usually and not incorrectly attributed to N.R.A. On the evidence to date it appears that the monopolistic tendencies and price-cartelising tendencies of N.R.A. have aroused deep popular resentment; but, as Senator Borah and others have pointed out, the political alignments are not distinct. The alternative to monopoly is the enforcement of the anti-trust legislation; the Republican Party did not enforce the anti-trust laws when it was in office, nor does the Party organisation promise their enforcement now; while the Democrats suspended their enforcement through the N.R.A.

New York, July 7.

FRANCE

REDUCING INTEREST RATES

At the end of last week the Treasury announced the issue of a loan the details of which appeared in the *Journal Officiel* of July 12th. This issue provides for a double funding operation. The Treasury has to repay on October 25th some 5,979 million francs of ten-year 5 per cent. "Clémentel" bonds. Holders of these bonds have been authorised to exchange them for the new bonds at any time between now and the end of October. The Treasury will also receive applications to a total of 3,000 million francs. Thanks to these 3,000 millions, which will ease the Treasury's position, it will be possible to repay about 2,000 millions of short-term Treasury bonds and so to reduce from 12,000 to 10,000 millions the total of short-term Treasury bonds in circulation. The last Finance Act provided that this reduction to 10,000 millions should take place by September 30th.

The new bonds bear 4 per cent. interest and are issued at a price of 95. They will be repayable at 140 in 15 years

at the most. The redemption yield will thus be 5.1 per cent. This yield is less than that on the loan issued in January, which cost the Treasury 5.7 per cent.

The tendency towards a lower rate of interest is apparent in the short-term as well as the long-term market, as the following table shows:—

	End of March %	Beginning of July %
Bank rate.....	3	2½
Market rate	2½	1½
One-month loans against National Defence Bonds	3½	1½
Three-month loans against National Defence Bonds	4½	2½
Discount Rate on National Defence three- month Bonds	3½	1½
Discount Rate on three-month Treasury Bonds.....	3½	1½
Sight Money rate	2½	1½

This great cheapening of short-term money has not been induced by any increase in the discount operations of the Bank of France. The bill portfolio of the Bank, which exceeded 6,000 millions in March, was not more than 4,000 millions in the middle of June. But between March 2nd and July 6th the gold holdings of the Bank rose from 73,928 millions to 79,653 millions. Part of this increase was due to a return of the gold which left the Bank during the political troubles in January and February. But the French market has also received gold released from the British Exchange Equalisation Account and from the National Banks of Switzerland, Germany and Italy.

This cheapening of money made possible a rise in most rentes and fixed-interest securities on the Paris market, as is shown by the following table of the Statistique Générale de France:—

	March	April	May	June
Irredeemable 3% rentes	75.8	86.2	89.2	89.2
Redeemable 3% rentes	84.6	90.4	92.5	93.5
4½% 1932 rentes	75.3	80.9	83.0	85.4
3% Foncière 1883	67.0	70.2	74.0	78.3
4% Foncière, 1913	87.2	92.2	91.8	91.2
3% Railways.....	77.6	83.1	91.3	92.0
4% Railways.....	68.7	73.9	79.7	78.5
3% Industrial securities	76.3	79.8	80.9	80.9
4% Industrial securities	79.4	80.5	80.3	81.0
Index of fixed-interest securi- ties	76.9	81.9	84.7	85.6

ORDINARY SHARES STILL FALLING

But while fixed-interest securities have strengthened, ordinary shares have weakened. The following table gives a general view of the Paris Bourse during the first half of 1934 (1913=100):—

	Average		1934		
	1932	1933	Jan.	March	June
Total French securities	245	232	215	198	204
Banks	190	186	176	166	162
Insurance	610	598	559	547	583
Midland mines	162	149	133	125	118
Northern mines	230	220	195	171	173
Miscellaneous mining in- dustries	158	146	126	110	109
Iron and steel	85	75	63	54	55
Engineering	254	237	216	193	189
Shipbuilding	33	38	42	42	48
Building materials	308	197	134	129	136
Chemical products	200	208	203	183	189
Textile industries	234	217	200	180	163
Main line railways	94	81	74	73	83
Other railways	121	112	105	105	108
Shipping	102	84	69	61	65
Gas	484	543	529	495	521
Electric power.....	457	452	420	391	374
Food and drink	456	491	512	477	470
Department stores	175	146	128	113	115
Miscellaneous industries	248	256	252	237	238
Miscellaneous trades.....	170	135	109	96	120
Colonial companies.....	202	186	181	168	176
French companies abroad ..	126	134	133	117	129
Foreign securities	204	218	217	201	191

It will be seen from the above that ordinary shares have weakened slightly in spite of cheaper money. It is true that there has been some recovery since March, but the figures for June are still very much below those of January. This reduction in the price of ordinary shares at a time of falling interest rates is contrary to current experience in Great Britain and may appear paradoxical. The explanation is to be found in the slight setback noticeable in

industry itself, as shown in the following indices of industrial activity (1913 = 100), these being the latest available:—

	Jan.	Feb.	March	April	May
General index	106	105	104	103	101
Mechanical	103	101	100	100	99
Iron and steel	79	79	79	79	80
Textiles	76	76	72	69	66
Mines	106	105	103	103	103
Building adjusted figures)...	86	87	88	87	84
Leather (" ").....	107	105	103	101	99
Paper (" ").....	130	138	147	154	158
Rubber (" ").....	959	965	983	974	940
Motors (" ").....	451	453	470	465	456

In the motor industry 15,014 automobiles and 2,046 lorries have been put on the road, compared with 13,544 and 2,266 in April, 1934, and 15,847 and 2,684 in May, 1933. The figures for the cotton industry are as follows:—

	Feb.	March	April	May
Mills (average per spindle)	Kg.	Kg.	Kg.	Kg.
Production.....	1,740	1,841	1,552	1,593
Deliveries	1,661	1,847	1,520	1,608
Stocks.....	2,577	2,615	2,626	2,634
Unfulfilled orders	6,418	5,618	5,373	5,126
Weaving (average per loom)	(100 metres piece)	(100 metres piece)	(100 metres piece)	(100 metres piece)
Production.....	5.19	5.65	5.18	5.00
Deliveries	4.64	5.03	4.43	4.43
Stocks.....	7.88	8.24	8.88	9.62
Unfulfilled orders	17.60	15.44	14.51	12.75

The figures of bankruptcies are equally unsatisfactory, as shown in the following table for the first six months of 1933 and 1934:—

	1933		1934	
	Bankruptcies and Judicial Liquidations	Bankruptcies and Judicial Liquidations	Bankruptcies and Judicial Liquidations	Bankruptcies and Judicial Liquidations
January	794	1,193	780	1,258
February	773	1,198	755	1,171
March	913	1,370	1,113	1,578
April	738	1,146	731	1,077
May	834	1,274	950	1,300
June.....	752	1,034	1,036	1,414

The month of June was particularly bad, bankruptcies increasing by 284 (almost 40 per cent.) as compared with June, 1933, and bankruptcies and judicial liquidations together by 380 (36 per cent.).

PARIS, July 18.

GERMANY

FOOD QUESTION BECOMING ACUTE

THE food question threatens to become acute. The first sign was a temporary potato famine, with rationing. This was a direct consequence of the official policy of rationing imports, an indirect consequence of the Nazi theory (applied also in industry) that there is an unchanging "natural" demand for particular commodities which can always be supplied at "reasonable" prices and with "reasonable" profit by determining the unchanging "natural" supply. In particular this theory has been applied to cereals. The reports concerning cereals, and all other crops, get worse day by day. The cereals index for July 1st shows serious deterioration as compared with the already very unfavourable index for June 1st. Through this deterioration all crops have been brought down to between "middling" and "bad," and the meadow crops are only just a fraction better than bad. The spring sowings, for which there was hope a month ago, suffered most. The estimated yield, in double-centners per hectare, are (on basis of the July index): winter rye, 16.3, against 19.4 (realised) in 1933; spring rye, 12.2, against 14.1; winter wheat (nearly the whole crop), 18.2, against 24.3; spring wheat, 16.8, against 23.4; winter

barley, 21.1, against 26.3; oats, 15.7, against 21.8. Most of these yields are below the average of 1924-33, although for many years after the war yields were extremely low. The stocks of vegetable foods are considerable; and no doubt foreign exchange will be found for import if necessary.

The public, however, is nervous; and there are also signs of official nervousness, probably derived from the circumstance that more than one long over-due revolution (e.g., Russia in March, 1917) was precipitated by food shortage. In consequence the whole system of regulation has been radically changed. Whereas until now the compulsory prices of wheat and rye were minimum prices, protecting only the farmer, henceforth they are also maximum prices; and pricing has been extended to barley and oats. Prices for the mills and traders' profit margins (including those for fodder) will be fixed. The milling percentage for rye has been raised to 75. On top of these measures a system of compulsory delivery, borrowed from the Moscow Communists, has been introduced. Farmers are obliged to deliver by specified dates, beginning with the new crop year, fixed percentages of the cereals which they delivered in the old crop year. As the crop this year is to be 22-23 per cent. smaller than last year (official estimate), farmers are to be compensated with higher prices, the advance for rye averaging 6 marks a ton, wheat 10 marks. This, it is officially stated, involves a certain sacrifice for the farmers. The whole question is regulated by a Decree for Organisation of Cereals Supply. Violations of the prescriptions, including the delivery obligation, are to be severely punished, in serious cases by penal servitude. It is worth noticing that in a time of threatened national calamity a Government which claims to have the whole nation behind it does not first (as was done even during the war) appeal to patriotism, but resorts to Soviet methods of coercion.

THE FOREIGN TRADE CRISIS

The credit situation during the past fortnight has developed normally, but money has been tighter than in June. The Reichsbank's return for July 15th shows practically no further repayment of June month-end credits, and even shows an increase in rediscounts. The reserves account has been practically stable since June 23rd.

The impounding of pledged revenues by the Trustees of the Dawes Loan has made a great stir. It is already announced that the Government has taken measures to make this action void, but up to the time of writing it is not stated what these measures are. The Reichsbank, which is the German organ concerned, may be expected to work with the Government. It is unofficially reported that Switzerland has refused to grant a general reduction in interest on her loans to Germany. And it is officially announced that no discrimination will be made against the United States, though no formal agreement in this sense has yet been concluded. No agreement has been reached with Holland and Switzerland either.

The Reichsbank will in future refuse to treat as free marks available for payment for "additional export" any of its bank notes, or any German coins, which have been sent into Germany from abroad. This is a new step towards repudiation of the national currency. A mark that is not "free," and cannot be used for the purposes for which it was issued, is worthless. The agitation against foreign countries' tariff policies as responsible for the transfer default continues; but the official *Reichssteuerblatt* declares that Germans are themselves deliberately checking export and threatens them with severe consequences. This complaint—or admission—is based on a circular of the Minister of Economy of June 7th. It is a duty, affirms this circular, to export even when export involves "a certain sacrifice." In a further circular of June 18th the Reich Board for Exchange Control threatens with withdrawal of the exchange ration those traders or manufacturers whose export, owing to their own fault, has fallen off. It is doubtful whether these official complaints are justified, for in general German manufacturers, in order to maintain their production volume, are ready to bear considerable sacrifices for the sake of export.

The wholesale prices index for July 11th was 98.8 against 98.1 on July 4th. The agricultural commodities group rose

in the week by 1.7 per cent. to 97.6, livestock by nearly 3 per cent. The index has of late risen rapidly. The cost-of-living index for June was 121.5, as against 120.3 in May. Since April the foodstuffs group has risen nearly 2 per cent., clothing also considerably; and as wages have not changed (having fallen about 1 per cent. since the Nazi Government took office) the pinch is being severely felt by the working classes. The open exposure of widespread corruption in the Nazi Party, the existence of which was long ago known, has led to a suspension of the burdensome levies on the population for party and alleged charitable purposes. The workman, however, will now be compelled to support the Labour Front, which has supplanted the Trades Unions. For Labour Front funds, out of earnings of £9 a month gold he must subscribe 7 per cent. This measure is highly unpopular, the more so because publicity and trustworthy control of the fund are lacking.

The industrial situation is little changed. The number of unemployed in June declined by only 47,000, which indicates that the spring and summer seasonal improvement is slackening earlier than usual. The foreign trade return for June is:—

	May	June	Jan.-June
	(Millions of Marks)		
Imports:—			
Livestock	2.3	2.5	18.6
Foodstuffs	75.8	84.1	494.3
Raw materials	240.0	226.2	1,426.4
Manufactures	61.4	64.3	363.2
Total	379.5	377.1	2,302.5
Exports:—			
Livestock	0.3	0.3	2.5
Foodstuffs	11.0	11.8	71.1
Raw materials	61.0	59.6	407.4
Manufactures	265.0	267.1	1,605.2
Total	337.3	338.8	2,086.2

It will be seen that the passive balance is steadily growing.

BERLIN, July 17.

ITALY

ITALIAN OPINION AND THE GERMAN EXECUTIONS

SINCE Parliament went into recess, political interest has been centred on the meeting at Venice between Signor Mussolini and Herr Hitler. The Press have emphasised the beneficial results of personal acquaintance and of a mitigation in the violence of Nazi propaganda in Austria. News of the recent executions in Germany was unexpected and received here with bewilderment. No comments are as yet forthcoming. The newspapers have simply printed long reports from their Berlin correspondents.

The *Official Gazette* has published the decrees creating the 22 corporations which are henceforth to regulate Italy's economic life. Some of these corporations, such as that for textiles, apply to the whole economic process from agricultural production, through industrial manufacture, to retail sale. Others, such as those for the building, metallurgical and engineering industries, are limited to industry and commerce. A third group—professions and arts, internal communications, sea and air, hotels and tourist traffic, credit and social insurance, public entertainments—are sectional and specialised. Before October 28, 1934, the Corporations will actually come into existence. Nominations by employers' and employees' associations and other bodies will take account of big, medium-sized and small firms, so as to keep an even balance between them. The big confederations of employers' and employees' associations are not to be dissolved; but the centre of gravity of our economic administration will be transferred from them to their component federations, which will be more or less reconstructed so that two employers' and employees' confederations will correspond to every Corporation. The confederations will remain as a connecting central link. There is much anxiety, not so much in the labour world as in the employing classes,

about the working of the Corporations. Many employers fear interferences in sales, competition, prices and extensions of plants.

A Departmental Committee continues to be busy examining and reporting on the question of new ventures and extensions of plant. A firm intending to start or extend an industrial enterprise in the regulated field must answer the following questions:—What goods do you intend to produce? What capital is to be invested? What machinery, national or foreign, steam or water power, is to be used? What engines, yearly electric power, yearly hours of labour, and raw material are to be used? Are they to be Italian or foreign? An estimate of employees, directors, clerks, accountants, engineers, chemists and other technicians, working men, males and females, national and foreign, has to be given; and the length and nature of the productive process, the capacity of the intended new plant or extension and the proposed market for the goods have to be stated.

As an instance of the field of action which the Corporations are likely to occupy we may quote a lively discussion between the *Lavoro Fascista*, a daily organ of the industrial employees' confederation; and the sugar consortium. The sugar producers were accused of keeping prices much too high, 6.30 lire per kilogram retail, of which 4 lire is Excise tax and 2.30 the total cost of beet production, sugar production and refining and retailing. The outcome of the discussion was that the interested parties saw their way to reduce by 0.50 lire per kilogram the price of sugar used for marmalade, of which the consumption is extremely limited, owing to the high price of sugar.

MORE BUDGET CUTS

At the last session of the Cabinet Budget estimates for 1934-35 were reduced by a further 396 million lire. Together with the previous reductions of 900 millions for debt conversion, 410 millions for reductions of public employees' salaries, and allowing for the 55 million lire increase in the yield of bachelor's tax, the reduction in the estimated deficit for 1934-35 stands at about 1,760 million lire. For the first eleven months of the current financial year (July, 1933, to May, 1934) the deficit is 6,803.1 million lire, of which 3,059.7 millions are due to the anticipated interest payment for three years to December 31, 1936, and other expenses incidental to the conversion of 61,000 millions of consols from 5 per cent. to 3½ per cent. The total internal debt during the same eleven months increased by 5,000 million lire from 97,215 million to 102,224 million lire. As usual, the increase of debt, 5,009 millions, is less than the total deficit, 6,803 millions, because the deficit is a book-keeping figure, while the debt is a cash transaction.

Pessimists are disquieted by the reduction of the total gold and gold exchange reserves from 7,398.6 million lire on January 20th to 6,502.7 millions on June 30th. On June 30, 1933, the total reserve was 7,087.8 millions, so that the decrease appears to be less than 600 millions, a not excessive amount in a year of dwindling trade. In the first five months of the year foreign trade was as follows:—

	Imports	Exports	Import
		(Million lire)	Surplus
1933 ..	3,121.0	2,491.3	629.7
1934 ..	3,265.3	2,116.6	1,148.7

The balance of payments was eased by other items. Foreign tourists' expenditure appears to be better: 810,876 foreigners entered Italy in the first four months of 1934, compared with 616,919 in the corresponding period of 1933; and the percentage occupied of total beds in reporting hotels was 40.42 per cent. in the first four months of 1934, compared with 38.87 in the same months of 1933.

The most probable cause of the rising import surplus is the level of costs and prices. According to Professor Bachi's index, the price level of goods produced and consumed in Italy stood in May, 1934, at 272 (1913 = 100), the price level of imports at 302.2, and of goods exported at 205.7. It seems that we pay relatively more for goods which we are bound to import and that we sell our exports at a relatively low price. The differences are not so marked in the Corporative Economic Council of Milan index, which stands at 269 for goods produced and consumed at home, 293.2 for imported goods, and 216.2 for exported goods.

In a world of high tariffs, quotas and restrictions, a country which exports fine and varied agricultural and industrial goods as against raw materials and heavy imports is bound to suffer. Equilibrium can, of course, be reached only by reducing costs; but it appears from the above figures that the most rigid costs are imported materials. The scaling down of Customs tariffs is therefore the first condition of a return to equilibrium.

TURIN, July 16.

POLAND

GROWING ANTI-SEMITIC MOVEMENT

THE reconstruction of the Cabinet on May 15th, which brought Professor Leon Kozłowski from the Under-Secretaryship for Finance to the Premiership, was followed by the assassination of General Bronisław Pieracki, the Minister of the Interior, on June 15th and by further Cabinet changes which were announced on June 28th. The Ministries directly affected by the changes which have been made are: Agriculture, Finance, Industry and Commerce, Interior and Social Welfare. Extensive changes have been made in the Ministry of the Interior as the result of General Pieracki's assassination and the failure so far to arrest the murderer. The motive for the crime was apparently political, and suspicion has fallen mainly on the recently-formed Polish Nazi Party, which is violently anti-Semitic, and on the Ukrainians. The Government, on June 18th, promulgated a Concentration Camp Decree, and the first intention clearly was to place political suspects and agitators in concentration camps. Wiser counsels, however, appear to have prevailed, and, until it is definitely known who committed the crime, and what are the political associations of the assassin, it is not likely that the Government will make extensive use of the concentration camps. The Nationalist movement has developed great strength during recent months, economic difficulties having re-acted along racial rather than class lines.

The Cabinet changes announced on May 15th and June 28th indicate that important developments may be expected in agrarian reform and industrial organisation. The position of the small farmer after four years of declining agricultural prices is especially grave, and it is evident that the Government is about to tackle the problem fundamentally and vigorously. The agricultural situation has unfortunately been made even more acute by adverse crop prospects. The long drought in the spring affected the principal grains, and experts estimate that the wheat, rye and barley crops this year will be 25 per cent. below last year. Last year's crops, however, were above the average, and there is an ample carry-over, so that the possibility of having to import grain before the 1935 harvest can be ruled out. If prices rise substantially, the peasants, notwithstanding the short crop, will probably still further curtail their own consumption in order to secure the benefit of the higher prices, so that the final effect on the exchange situation may be helpful rather than adverse. Meanwhile the Government has announced that it will continue to enforce the crop year beginning August 1st, the policies of Customs protection, export premiums, organised exports, grain and fertiliser credits, and price-supporting activities, the employment of which during the past two years have saved the farmers from complete ruin.

FURTHER INCREASE IN GOLD RESERVE

The gold bullion holdings of the Bank of Poland, which increased from their low point of 472.3 million zlotys on May 31, 1933, to 475.6 millions at December 31st, rose further to 489 millions on June 20, 1934. This increase is due to dishoarding of gold coins, and, with the growing confidence of the public in the Government's ability—and intention—to maintain the present gold value of the zloty, the movement seems likely to continue. It may even be accelerated, if confidence can be placed in private estimates that the total of gold coins in circulation (or hoarded) in Poland exceeds 400 million zlotys. On the other hand, the foreign exchange reserve of the Bank of

Poland, which declined from 136.7 million to 88.3 million zlotys during 1933, had fallen to 43 millions by June 20th. Unless a fair amount of grain is exported in the autumn the foreign exchange reserve may be used up before the end of the year, in which case some form of exchange restriction might be instituted. The Bank of Poland, which is trying to ease the credit situation in order to assist a revival in trade, could not afford to part with gold freely.

The Budget returns for the first two months of the fiscal year are as follows:—

	(Thousands of Zlotys)			
	1933		1934	
	April	May	April	May
Expenditure	175,444	166,310	170,465	172,226
Revenue	159,848	141,777	170,465	172,226

The actual deficit in the first two months of the present year amounted to about 40 million zlotys, but it was provided out of the balance still available from the National Loan of last October. The published returns, therefore, which show the Budget as balanced, are illusory, but they are not less hopeful than the estimates passed by Parliament.

The foreign trade returns for the first five months of 1934 show merchandise exports valued at 391.4 million zlotys and imports at 326.7 millions—an active balance of 64.7 millions. The comparative figures for 1933 were: exports, 357.5; imports, 309.3; active balance, 48.2 million zlotys. The trade figures by principal countries for the first four months were as follows:—

	(In millions of Zlotys)			
	January-April		Exports to	
	1933	1934	1933	1934
Great Britain	52.2	56.8	22.8	26.5
Germany	49.7	56.4	51.3	29.4
France	18.6	14.4	16.8	16.0
Soviet Russia	15.0	16.0	4.5	5.1
United States	2.6	7.3	29.7	41.9

The alteration in the trade balance with Germany is a consequence of the political *rapprochement*. It is hardly to be expected, however, that Germany will continue to accept a passive balance with Poland as large as the one shown above.

WARSAW, July 15.

IRISH FREE STATE

GROWING PASSIVE TRADE BALANCE

The Minister for Industry and Commerce stated at a meeting recently that he "had heard representatives of 70 Governments at Geneva discussing economic conditions, and had returned convinced that in this country, despite the world depression, the fall in the price of primary products, the economic war, the destruction of confidence and freezing of capital in consequence of the depression; business activity, industrial intercourse, social services and the general standard of living were better than those of other countries." This complacency is unfortunately not shared by the general public, many of whom, particularly the farmers, are feeling the pinch acutely. A good deal of apparent prosperity is being generated by the expenditure of large amounts of borrowed money on housing and other public works, but the purchasing power of the community as a whole is being slowly reduced by the paralysis of the agricultural export trade. Indeed, the external trade situation is beginning to cause anxiety among thoughtful observers.

The following figures of foreign trade refer to the twelve months ending in May, 1933 and 1934, respectively:—

	Twelve Months ending May	1933	1934
Exports	£	21,483,400	18,738,459
Imports	£	36,593,376	37,115,748
Balance	£	15,109,976	18,377,289

The increase in the passive balance of trade is very disquieting, especially as the tendency is in the direction of a continuing increase, and the question must be asked whether the total balance of payments has not already become unfavourable. The invisible imports and exports of the Free State have been officially estimated more than once, but the published estimates are admittedly imperfect. The latest figures, which refer to 1933, show an income from abroad of about £15 millions and remittances abroad from the Free State of about £5,000,000. The active balance on invisible account is therefore about £10 millions, and is not nearly sufficient to offset the unfavourable trade balance. If the figures are correct, the Free State must be living seriously beyond its income. With an unbalanced Budget and a passive external balance, the country appears to be in the position in which Sir Otto Niemeyer found Australia in 1931, "in a condition of budgetary disequilibrium and exchange disequilibrium."

THE BANKS' STERLING RESERVES

There exists in the "divided balance sheet" of the Irish banks a very sensitive index of the net flow of funds in and out of the country. The net sterling reserves of the banks continued to increase until the first quarter of 1933, when they took a downward turn, which has continued unchecked until the present time, the decline in these reserves between the first quarters of 1933 and 1934 being about £10 millions, a figure which appears to corroborate the conclusions drawn from the examination of the visible and invisible payments. On the other hand, the best-informed bankers in Dublin are of opinion that no drain is taking place, and refuse to regard the situation with any anxiety. The explanation of this apparent contradiction probably lies in the fact that the financial connections between Great Britain and the Free State are so close that many transactions between the two countries are not reflected in the statistics of the Irish banks. Moreover, the dividing line between the internal and external liabilities and assets of the banks is in some respects artificial, and may lead to possible misinterpretation of the "divided balance sheet."

It is impossible to avoid the conclusion that the long-run trend of the external trade situation is unsatisfactory, and that, even if trouble is averted to-day, it will not be averted for long, unless, of course, a settlement is reached with Great Britain and the export trade revived. Owing to the nature of the machinery by which the Free State currency is tied to sterling, a condition of external disequilibrium cannot produce a depreciated exchange, so that a salutary danger signal is absent. The banks possess very large sterling assets, sufficient to support a passive balance for many years, provided that the confidence of their depositors remains unshaken. Confidence is still maintained, but any unwise or precipitate step in the spheres of monetary or financial policy might produce the most serious consequences. The Irish banks are in a peculiarly sensitive position owing to the large proportion of their deposits which represent their customers' savings, which could be withdrawn without the slightest inconvenience to the depositor. Another danger spot is the capacity of the richer classes to move their residence to Great Britain or Northern Ireland. Any large-scale exodus of capitalists would weaken the country's present strong creditor status and would cause a serious deficit to appear in the external balance of payments. These two facts, the sensitiveness of bank deposits and the mobility of the capitalist class, act as brakes on unwise monetary and financial experiments.

DUBLIN, July 17.

HONGKONG

A NEW 3½ PER CENT. PUBLIC LOAN

The Hongkong Government has obtained authority to float a loan of \$25 millions, of which \$14 millions will be issued during the course of the current month. This loan will bear interest at 3½ per cent. and will be issued at 99, redemption being by annual drawings spread over the next

LETTER TO THE EDITOR

THE ENGLISHMAN'S FOOD

TO THE EDITOR OF THE ECONOMIST

SIR,—In your July 14th number you publish a very interesting article about "The Englishman's Food," where you write that the long-term ideal of British agricultural policy should be the encouragement and rationalisation of all those branches of production which can compete on equal terms with foreign produce, and the free importation of all other commodities. As a Swedish newspaper correspondent, who has been working for a British-Northern Low Tariff Union, I find that ideal perfectly sound, but I miss in your article any reference to foreign subsidised food exports to Great Britain.

British farmers are not on equal terms with Dominion and foreign farmers if imports of foodstuffs to England are subsidised from abroad. I am ashamed to say that the Swedish Socialist Government is giving a subsidy to butter exports, paid by a levy on the poor in the form of a tax on milk. By means of the forced exports the internal butter price in Sweden is kept at almost double the level of the price in England. In order to prevent the poor from going over to a margarine diet, the margarine price is raised by a heavy tax. In addition to this, Swedish exports to Great Britain are forced up to an artificial level, at a loss to our national economy, and we may have to pay dearly for that, when trade negotiations start again in 1936.

You have, Sir, recently criticised in justly strong language the shipping subsidies of certain foreign countries. You could do a great service to the soundness of international trade by letting your correspondents in the Dominions and foreign countries give a detailed account of the open and concealed export subsidies, which are given by many overseas governments.—Yours faithfully,

GUSTAF SJÖSTEEN,
London Correspondent of
the Göteborgs Handelsoch
Sjöfartstidning, Sweden.

78 Fordwych Road,
London, N.W.2.
July 16, 1934.

25 years. Of the portion about to be issued \$9 millions has already been taken up, leaving \$5 millions for offer to the public. The proceeds of the loan will be used to pay off the outstanding sterling loan of £1,485,000 of 3½ per cent. inscribed stock 1918-43. The sinking fund of the latter is expected to yield £998,000, and, taking into account sterling securities forming the sinking fund of two local loans, there will be over £1½ millions available for redemption purposes, leaving the balance of £226,733 to be found from the proceeds of the new loan. When the sterling loan is paid off the total indebtedness of the Colony will be \$18,838,000, or about 60 per cent. of the current year's revenue. Hongkong is thus in the fortunate position of being able to take full advantage of the abnormal conditions prevailing in the London money and stock markets by ridding itself of a fluctuating liability and substituting a loan in the currency of its revenue. Until quite recently no one would have dreamed of Hongkong being able to finance its public works on a 3½ per cent. basis.

The announcement in the House of Commons of the setting up of a quota system for Japanese goods imported into British Crown Colonies was accompanied by the information that Hongkong would not be affected by the scheme. The local Government had applied for exemption without any general consultation of business interests, but they were right in their interpretation of commercial opinion. Those with a stake in the Colony are too well aware that any undermining of its free trade status would be fatal to the *enterbôt* trade, which is the *raison d'être* of Hongkong. Apart from a preference in favour of Empire brandy, a somewhat empty gesture, discrimination in regard to imports does not exist so far as this Colony is concerned. Unfortunately the same cannot be said of imports into Canton, and as time goes on provincial taxes continue to multiply at the expense of foreign goods without affecting imports from other parts of China. It is, moreover, generally believed that Japanese goods, while paying the regular Customs tariff, evade local imposts, but it is of course difficult to substantiate this. The fact remains, however, that Japanese manufactures are very prominent in the markets of South China, whereas many lines of British and American goods, particularly provisions, can only reach consumers through irregular channels.

PROTECTIONISM AND BRITISH IMPORTS

Of recent months the Provincial Governments of both Kwangtung and Kwangsi have been much occupied in setting up Provincial monopolies. Kerosene oil, sugar and certain other commodities are being experimented with, and foreign suppliers have been very seriously hit. The laudable desire to encourage agriculture has led to the imposition of an agricultural monopoly tax, the incidence of which applies even to such articles as chocolate, condensed milk and meat extract. Another tax which is imposed on certain articles is the Sun Yat Sen University tax. Following the bad example of the West, China has become a highly protected country, but Canton has gone further by hedging its purely local industries inside a secondary barrier of surtaxes over and above the tariffs of the Customs service. Canton will before long have a fully equipped textile factory, a sugar refinery, and a steel rolling mill functioning under official auspices.

The piece goods market of Hongkong, which until the last few years was one of the main contributions to the trade of the Colony, has shrunk to a mere shadow. After weeks of fruitless negotiation a limited business in Bradford woollen goods has at last been booked. Dealers' original offers have shown some improvement, but the business has only become possible by a sharp drop in home prices. It is extremely unlikely that more than a fraction of the goods will go into the interior in a regular manner, as the revised Customs tariff bears very heavily on woollen cloth. Here again the way is being prepared for Japanese competition, and, judging by the samples of woollens recently turned out by Japanese manufacturers, it can only be a matter of a year or two before Bradford will find itself in the same position as Lancashire in the Chinese market.

HONGKONG, June 20.

Statistical Year-Book of the League of Nations

1933-34

Cloth - 12/6 Wrappers - 10/- 299 pp.

Complete and authoritative official statistics for the countries of the world on all economic, financial and social activities.

Vital statistics (area and population of the world, population by age groups, occupational groups, movement of population).

Production (agricultural products, minerals, metals, chemicals, electricity, etc.; indices of world production of crude foodstuffs and industrial raw materials and index-numbers of industrial activity).

International trade and balances of payments.

Transport (shipping, railways, motor vehicles).

Public finance (budget accounts, public debt).

Monetary and banking statistics (note circulation; gold reserves; discount rates; bank deposits; prices of shares; yield of bonds; exchange rates, wages, etc.). Prices (index-numbers of wholesale and retail prices; price quotations in gold francs).

Conversion coefficients for weights, measures and currencies.

Brought up to the end of 1933 or early 1934, these statistics have been reduced whenever desirable to a common measure.

MONEY AND BANKING

THE HALF-YEAR'S BANKING RESULTS

THE issue by the leading joint-stock banks of their statements of accounts for June 30th renders it possible to examine changes in the structure of British banking over the past twelve months. For this purpose the following tables have been prepared, giving the position of the "big five" and also of the three chief Lancashire banks. The first table includes the banks' deposit and acceptance liabilities and also their cash and balances with other banks and cheques in course of collection. The second table gives their chief earning assets.

DEPOSITS, ACCEPTANCES AND CASH ON JUNE 30TH

	Deposits		Acceptances and Engagements		Cash		Balances and Cheques	
	1933	1934	1933	1934	1933	1934	1933	1934

Grand total	97.3	139.8	328.9	217.5	535.6	536.0	759.7	743.2

The salient features of the accounts are a fairly big fall in deposits, some reduction in cash, and a heavy contraction in the banks' bill portfolios. Acceptances show very little change, but it is not easy to interpret this item, as some of the banks confine it rigidly to acceptances, while others include in it outstanding forward exchange contracts. A unification of procedure would here be helpful. Balances (with other banks) and cheques (in course of collection) are appreciably higher than a year ago. As this item consists largely of cheques actually in the process of being cleared at the time the banks' accounts are made up, there is a strong inference that money is circulating more freely than a year ago. This is confirmed by the increase in both the total note circulation and in the number of notes in the hands of the public. The Bank of England estimates this last increase at £7.1 millions, measuring from May, 1933, to May, 1934, equivalent to an increase of 1.8 per cent.

Money at call and short notice is definitely higher than a year ago. To some extent this increase reflects greater Stock Exchange activity, for all loans to brokers and jobbers for less than a month come under this heading. The withdrawal of foreign balances from London during recent months has also reduced the supplies of "outside" money and has forced the discount market to borrow more from the clearing banks. The increase in this item does not, therefore, imply that bill-brokers are doing more business or have become in need of additional funds.

The decline in advances is comparatively moderate, and since the New Year there has been an increase. For the "big five" alone the relevant figures are £702.8 millions

for June 30, 1933; £660.0 millions for December 30, 1933; and £685.1 millions for June 30, 1934. Taking the trade and industry of the country as a whole, there is no doubt that there has been a general increase in bank borrowings, especially on the part of the smaller firms. The fact that in recent months the total of advances has tended to recede is due to the slight recession of Stock Exchange activity. Even so, the increase in call and short loans suggests that Stock Exchange activity is greater than a year ago. The expansion in industrial and commercial borrowing may be even greater than the banks' accounts suggest, for the banks are now having to contend with abnormal competition from all kinds of lenders. Still, the trade revival has not yet proceeded beyond the point where many large undertakings are able to finance themselves out of their accumulated resources, and so bank advances are still far below their pre-depression level.

We come now to deposits, cash, discounts and investments—four items which can usefully be considered together. Here the governing factor has been the heavy redemption of Treasury bills, amounting to £122 millions during the past year. About one-quarter of these bills has been redeemed out of the Budget surplus, but the remaining three-quarters have been replaced by long-term securities, such as the autumn issue of 2½ per cent. Conversion Loan and the spring issue of 3 per cent. Funding Loan. A large part of the redeemed Treasury bills were held by the joint-stock banks. Most of the Budget surplus and the recent issues of long-term securities occasioned the transfer of money from the general public, who are customers of the joint-stock banks, to the Government.

Now when the Government takes money from the general public and uses it to repay either the Bank of England or the joint-stock banks, the net result must (in the absence of any off-setting action by the banking system) be a contraction in deposits at the joint-stock banks. To a large extent recent facts bear out this elementary theory, for the reduction of £101 millions in the deposits of the eight banks included in the tables is comparable with the net redemption of £122 millions of Treasury bills which occurred during the past year. This is probably the main explanation of the year's fall in deposits. It does not, however, explain the contraction in bank cash. Bank cash consists, firstly, of the banks' own deposits at the Bank of England. A moment's consideration shows that bankers' deposits can only be affected by Government operations if these last result in either an increase of public deposits (i.e. the Government's deposits) at the Bank or in a net redemption of Government securities held by the Bank. There was a probably fortuitous increase of £3.5 millions in public deposits at the Bank during the year ended June 30, 1934, but there was no decrease in Government securities, but, on the contrary, an increase of £5.6 millions. Thus the Government's operations cannot have had much effect upon bankers' deposits at the Bank. In actual fact, bankers' deposits fell by £8.8 millions, whereas bank cash as a whole fell by £29.7 millions. There is here an obvious discrepancy. One explanation is that the Bank of England's return only relates to the Wednesday immediately preceding June 30th. Another explanation, of a highly commendable nature, is that there is reason to believe that this year some of the joint-stock banks did not "make up" their cash to the extent traditionally practised. Four of the "big five" banks have shown this year a cash ratio of just under 10 per cent. This abandoning by some of the banks of their former practice of "window-dressing" is greatly to be welcomed.

Another encouraging explanation of the fall; both in the total of bank cash and in bankers' deposits, is the rise of £6.6 millions in the note circulation. This suggests that the public are drawing their money out of the banks for use in the purchase of commodities and the payment of wages, and so is further confirming evidence of the general trade revival. This movement also helps to explain the fall in

deposits at the joint-stock banks. Finally the eight banks included in the table only comprise an important part of the British banking system, whereas bankers' deposits at the Bank relate to all British banks. This is another explanation of the discrepancy.

Discounts have fallen by £111 millions, this figure again being comparable with the £122 millions redemption of Treasury bills. On the other hand investments are practically unchanged. During the past year the banks must have felt that they held as many Government securities as was advisable in proportion to their deposits, and that if they increased their holdings they might be exposing themselves too much to the vicissitudes of the gilt-edged market. The recent rises in gilt-edged prices must have strengthened them in this view. The result is that they left it to the public to take up the past year's issue of securities, even though this decision occasioned a heavy contraction in the public's deposits with them.

This is the broad explanation of the main changes in the banks' accounts. Whether they are deflationary in the sense of involving a restriction of the amount of available credit is a question which cannot be discussed in a few lines. Still there is no evidence of any shortage of money or credit, and it is common ground that the banks are only too eager to find credit-worthy borrowers. A bank cannot be expected to buy securities beyond a reasonable limit, or to force loans upon customers who are either unsound or not in need of accommodation, and were a single bank to act independently, it would not so much create deposits for itself as lose cash. Thus, while the Government's redemption of Treasury bills has apparently involved a reduction of deposits, the banks can fairly reply that all it has done is to give them an opportunity of ridding the country of unwanted money, which might otherwise have been used in excessive speculation. It is well within the powers of the banking system to restore the credit that has disappeared as soon as a legitimate demand for new credit arises.

FINANCIAL NOTES

The Money Market.—Conditions remain very dull. Money has been quite comfortable with outside lenders charging ¾ per cent., but the clearing banks have met with an intermittent demand for funds at 1 per cent., and one or two outside lenders have occasionally secured ¾ per cent. Bill-brokers have also been selling some July Treasury bills to the clearing banks at 1½ per cent. as a cheaper alternative to borrowing at 1 per cent.

SHORT LOAN AND DISCOUNT RATES

	June 28, 1934	July 5, 1934	July 12, 1934	July 19, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short Loan rate:—				
Clearing banks	1	1	1	1
Others	2-2½	2	2	2
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	1½	1½	2	2
(b) Others.....	2½-1½	2½	1½	2½
Three months' bank bills	1½	2½	2	2½

On July 23rd, the clearing banks had again to recognise the weakness of the discount market, and they lowered their buying rate for September bills from ¾ to 1½ per cent. They still quote ¾ per cent. for October bills and 1½ per cent. for August. Last week's tender rate averaged only 15s. 7.72d. per cent., or practically 3½ per cent., against 16s. 4.14d., or just over 1½ per cent. for the week before, and for the second week in succession the top three millions was cut off the original offer. Outside buyers of Treasury bills conformed to this decline in the tender rate, for the outside rate is now only ¾ per cent. The cumulative total of Treasury bills issued by tender has been reduced since June 16th from £498.7 to £470.1 millions, which is contrary to the usual upward trend. The satisfactory influx of revenue and the final Funding Loan call are responsible

for this contraction, and unless autumn trade-brings with it a substantial increase in the demand for banking accommodation, it is difficult to see how discount rates can improve.

* * *

The Bank Return.—This week's Bank return again records normal movements. There has been a small contraction in the note circulation, which is quite usual in the middle of the month, and the Reserve has risen to the same extent. The holiday expansion in the note circulation should shortly begin.

BANK OF ENGLAND

	July 19, 1933	Dec. 27, 1933	July 4, 1934	July 11, 1934	July 18, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	189.7	190.7	191.5	191.5	191.6
Note circulation.....	377.4	392.0	385.8	384.6	383.9
Banking Department:—					
Reserve	73.6	59.7	66.4	67.6	68.3
Public deposits.....	19.1	22.2	26.7	17.4	20.6
Bankers' deposits	94.2	101.2	94.9	97.3	96.9
Government securities ..	89.6	88.0	82.8	82.6	83.2
Discounts and advances	11.2	16.8	17.1	7.8	7.5

Proportion 43.1% 37.3% 41.7% 44.7% 44.5%

In the banking department, the mid-month excise duty payments explain the rise of £3.2 millions in public deposits. Government securities show no appreciable change, but there has been an increase of £1.6 millions in other securities. Bankers' deposits are slightly lower as a result of the revenue payments mentioned above. The fact that they are under £100 millions is regarded by some authorities as suggesting that, should the autumn bring with it an increased demand for bank advances, conditions in the money market might become distinctly stiffer. Still, the contraction in the Treasury bill issue must to some extent modify these views.

* * *

The Foreign Exchanges.—The London market remains very quiet. On one occasion early in the week the British control was reported to be giving sterling some slight assistance, but on Thursday spot francs were inclined to weaken. It is possible that too much stress has been laid on the recent easing of the French financial situation, for all available evidence shows that the general economic pressure upon the gold bloc countries remains acute. Dollars remain a steady but very inactive market, but the forward rate has now strengthened practically to par. There is still no commercial buying of dollars. On Thursday afternoon the official Berlin rate improved sharply from Rm. 13.10 to Rm. 12.92. It is not easy to account for this movement, but the Reichsbank's stringent rationing of foreign exchange tends to make the market very narrow and sensitive. It is reported that the Reichsbank is inundated with demands for foreign exchange, and that it is giving no undertaking either to meet applications in full or to give any consideration to special cases. Registered marks are steady at 34½ per cent. discount, but the whole German exchange position is so very artificial that quoted rates have come to possess little significance.

* * *

New York Money and Banking.—Money remains very easy, and New York money and discount rates are unchanged. During the week ended July 11th, brokers' loans were reduced from \$1,069 millions to \$1,059 millions. The market price of silver has remained very steady at 46½ cents per ounce. At the end of last week it was reported that the U.S.S.R. intended to repay immediately the loan of \$4.5 millions granted last year by the R.F.C. for the purpose of financing Russian purchases of American cotton. The general debt negotiations between the Russian and American Governments have now reached the point where the U.S.S.R. is offering \$130 millions in exchange for a long-term credit of a larger amount, and the position is described as one of temporary stale-mate. The R.F.C. has refused the offer of \$70 millions of New York City bonds, and it is expected that these bonds will be offered in two

separate and smaller issues. The Federal Deposit Insurance Corporation has announced that 188 banks with deposits totalling \$5,525 millions withdrew from the Corporation on June 30th. 167 of these were mutual savings banks operating mainly in New York State, and only 21 commercial banks with deposits of \$25 millions have withdrawn.

* * *

June Clearing Bank Returns.—The half-yearly statements of accounts of most of the clearing banks have already been discussed in a leading article, so that an examination of the June averages can be confined to a comparison with the preceding month. The main movements are a decrease in cash and a rise in both deposits and all the earning assets of the banks. The increase in balances with other banks and cheques in course of collection suggest that there has been a more rapid circulation of money.

(£ millions)

	June, 1933	Mar., 1934	April, 1934	May, 1934	June, 1934
Capital and reserves.....	123.3	123.4	123.4	123.4	123.4
Acceptances, etc.	97.4	112.6	112.2	109.9	109.0
Deposits (including undi- vided profits, etc.).....	1,939.0	1,792.7	1,814.5	1,820.1	1,832.2
Total liabilities	2,159.7	2,028.7	2,050.1	2,053.4	2,064.6
Cash	210.0	215.9	218.9	214.8	196.0
Cheques, balances and items in transit	50.4	46.9	52.0	48.4	54.1
Money at call	96.9	116.6	128.7	127.1	137.0
Discounts	349.8	200.3	209.8	220.7	225.8
Investments	526.0	529.6	516.3	524.1	531.7
Loans and advances.....	760.8	738.0	743.5	739.6	742.1
Investments in affiliated banks.....	24.3	24.6	24.6	24.6	24.6
Cover for acceptances, pre- mises, etc.	141.5	156.8	156.3	154.1	153.3
Total assets	2,159.7	2,028.7	2,050.1	2,053.4	2,064.6

The increase in discounts coincides with a temporary expansion from £491 millions in May to £495 millions in June in the total of tender issues of Treasury bills. Since the end of June the payment of the Funding Loan call has reduced the total to £470 millions, so that a decline in the bank's discounts and possibly in their deposits may be anticipated for the current month. Call money and investments are both higher than in May, and this may be connected with the revival of activity in the gilt-edged market. The recovery in advances, though slight, is very welcome, for it suggests that there is no serious summer recession in trade.

* * *

Impounding the Reich Revenues.—According to its terms of issue the service of the Dawes Loan was secured partly upon the Customs duties and certain other revenues of the German Reich, and these moneys were paid regularly into a special account at the Reichsbank. Hitherto this has been a pure formality, for so long as the sums due for the service of the Dawes Loan were regularly paid to the B.I.S., in the various currencies required for the service of the debt, the trustees automatically released these revenues to the Reich. The proclamation of the moratorium, however, has altered the position, and the trustees have consequently served notice on the German Government that they proposed to exercise their right to dispose of this revenue, amounting to Rm. 2,400 millions a year or to twenty times the annual service of the Dawes and Young Loans, and that they would not release the sum of Rm. 4,300,000 already standing to the credit of the special account. In reply the Reichsbank has reminded the trustees that it is only the transfer of the service of the Reich loans which is suspended and that the amount due is being paid by the Reich into special accounts. It has also pointed out that half the payments due next October have already been lodged at the B.I.S., and that special agreements have either been reached or are being negotiated with various creditor countries. The German Government has characterised the trustees' action as spiteful, and has stated that it is going to dispose of the revenues in dispute "as it pleases." The trustees are only fulfilling their duties, and as they have to act for all the

bond-holders alike, they can hardly have regard to the special temporary settlements now being patched up between the German and certain foreign Governments. Their action really points to the need of a final general settlement in which both the trustees and the B.I.S., as paying agents of the Dawes and Young Loans, should play a leading part. In view of the settlements which are now being reached, the trustees might be well advised to hold their rights in abeyance, but it is not a bad thing that the German Government should have been brought face to face with some of the consequences of its unilateral action in including the Dawes and Young Loans in the moratorium.

* * *

Foreign Loans and the Sterling Area.—On Thursday afternoon Mr Chamberlain announced in the House of Commons that the embargo upon foreign loans would be modified to the extent that within certain limits loans would be permitted to be floated in London on behalf of borrowers in the sterling area. Two classes of loan are envisaged. The first consists of loans the proceeds of which are to be used for stabilising the currency of the country concerned against sterling. In this case the effect of the loan would be to strengthen that country's sterling reserves, and no immediate burden would be thrown upon the exchanges. The mere fact, however, that the country's currency needed strengthening implies that a certain drain of funds from London may follow. Alternatively a loan may be approved if it is one which will be of direct benefit to British exports. In this case there would be no load upon the exchanges, while British industry would benefit. Mr Chamberlain attempted no definition of the sterling area, which is a very loose term, and presumably each application to the Treasury for leave to raise a loan would be treated on its merits. This partial relaxation of the embargo is very welcome, and it is to be hoped that conditions will soon permit of its complete withdrawal. In fact, were it to be withdrawn at once no serious drain of funds from London need be feared, for, as Mr Chamberlain himself admitted, comparatively few foreign loans would appeal to the British investor.

* * *

Standard Bank of South Africa.—The balance-sheet of the Standard Bank for March 31st last confirms in striking fashion the increase in South Africa's liquidity, as revealed in the Reserve Bank's latest report summarised in the *Economist* of June 30th. Cash has risen to very nearly three times its figure of March 31, 1932, while during these two years discounts and advances have been reduced from £36 millions to £26 millions. These movements mean that as a result of the repatriation of funds which followed South Africa's suspension of the gold standard at the end of 1932, both the commercial banks and the general public alike have more money at their disposal, and the public has been using this money to pay off outstanding loans. The salient features of the Standard Bank's accounts are summarised below:—

	Year ended March 31		
	1932	1933	1934
Liabilities:—	£'000	£'000	£'000
Capital	2,500	2,500	2,500
Reserve fund	2,500	2,500	2,500
Deposits	52,151	52,960	55,163
Bills for collection	9,512	7,381	7,282
Assets:—			
Cash	5,871	11,842	17,081
Call money	3,550	3,600	2,600
Investments	7,143	8,880	9,826
Bills purchased.....	2,870	3,352	3,971
Discounts and advances	35,952	28,371	25,249
Net profits	457	429	433
Dividend	11%	10%	10%

Notwithstanding the year's fall in discounts and advances, and the rise in the cash rate from 22.4 per cent. in 1933 to 31 per cent. for this year, net profits show a slight improvement. As South African money rates remain very low, it appears that the bank is being very carefully and economically managed, as otherwise a fall in profits would have been inevitable. The improvement, however, was not sufficient to permit of any increase in the dividend.

THE STOCK EXCHANGE

CANADIAN PACIFIC RAILWAY PROSPECTS

EARLY this year, when investors were well disposed towards railway stocks in general, Canadian Pacific ordinary (\$25) touched 18½, and the 4 per cent. preference stock (£100) 66. To-day's prices are 13½ and 51 respectively. The fall has been due, in part, to the subsequent reactionary tendency of all railway stocks, and, in part, to disappointment with the company's gross traffic receipts in recent weeks, though their total of \$61,982,000, for the first twenty-eight weeks of this year, shows an increase of \$6,666,000 over the corresponding figure for 1933.

The prospects of this historic trans-continental railway system concern nearly 49,000 British investors, who have seen the earnings on their ordinary stock shrink, during the last five years, from 15 per cent. to less than nothing, while preference dividends, formerly covered many times over, have ceased to be earned and paid. British investors outside Canada hold 48.05 per cent. of the company's ordinary stock and no less than 97.83 per cent. of its preference stock. Altogether, nearly two-thirds of the ordinary and preference capital is held in the British Empire outside Canada, under one-fifth in the United States, and only about one-eighth in Canada. The system, while thus substantially British-owned, has from the outset been strictly Canadian-controlled. In any estimate of its future prospects it is necessary to take account not only of trade and economic factors, but of Canadian political possibilities, for the Canadian Government is the owner of the only other major railway system in the country, and the relations between the two lines have been a serious problem in Canadian life for the last decade.

Since 1928, the "peak" year for the C.P.R., this problem has assumed a critical phase. Acute economic depression overtook the Canadian Pacific when it was rapidly increasing its capital expenditure. Ordinary stockholders have subsequently been called on to bear the brunt not only of declining revenue, but of enhanced prior charges. The financial story of the last few years is epitomised in the following table, which contrasts the position in the last three years with that of 1928, the best year in the history of the system:—

	(000's omitted)			
	1928	1931	1932	1933
Funded debt*.....	349,154	475,375	488,209	513,450
4% preference stock	105,015	137,257	137,257	137,257
Ordinary stock	299,353	335,000	335,000	335,000
Total Capital (including Funded Debt)	753,522	947,632	960,466	985,707
Railway net operating revenue	51,694	25,683	20,090	20,862
Other "income"†	12,678	10,952	4,537	6,222
Total income	64,372	36,635	24,627	27,085
Fixed charges	15,309	22,050	23,620	24,389
Pensions	750	750	750	1,439
Preference dividends	4,067	5,411	2,745‡	Nil
Total Pre-Ordinary Allocations	20,126	28,211	27,115(a)	25,828(a)
Balance for ordinary	44,246	8,424	Dr5,233§	Dr4,233§
Earned for ordinary	14.8%	2.5%	Nil	Nil
Paid on ordinary	10%	5%	Nil	Nil

* Including short-term notes and equipment obligations.
† From steamships, investments, hotels, telegraphs, etc.
‡ Half-year's dividend only.
§ After allowing for full preference dividend requirements.
(a) \$29,860,000 for 1932 and \$31,318,000 for 1933, if full preference dividends had been paid.

During the last five years the total funded debt of the C.P.R. has increased by \$164 millions and the total capital (including funded debt) by \$232 millions, or by 31 per cent. In 1928 the total requirements falling in

front of the ordinary shareholders were \$20,126,000. In 1933 they were \$31,318,000, i.e. half as much again. Over the same period, however, total income fell from \$64,372,000 to \$27,085,000 (after a somewhat generous computation, for 1933, of income from non-railway sources, which was shown, *inter alia*, before allowing for depreciation on steamships). The outcome of these changes was that the system, which covered its preference dividend with \$44,246,000 to spare in 1928, was \$4,233,000 short of earning its preference dividend (requiring \$5,490,000) in 1933. The slenderness of the margin of cover for fixed charges makes this year's modest recovery in receipts particularly opportune.

The growth of capital and funded debt has been associated partly with an enhancement of the system's proverbially high standard of physical efficiency, and partly with the development of certain ancillary services, especially large hotels, which have proved disappointing revenue-earners under economic depression. The company's capital policy, however, cannot be completely dissociated from certain features in the history of its rival, the Canadian National system. Between 1923—when the Canadian National Railways were formally unified under the presidency of Sir Henry Thornton—and 1931, vast amounts of public money were expended on them, partly for economic ends, such as the improvement of equipment and the consummation of the formal union of the component lines, and partly for more debatable objectives, such as the competitive paralleling of services with the C.P.R. and the satisfaction of vociferous local demands for extended facilities and expenditure. This expansionist regime collapsed in the late summer of 1931. A few months later a Royal Commission was appointed to examine the whole question of the future relationship of the two railway systems. Its report condemned the competitive extravagances of both (which it traced in part to political pressure on the management of the Canadian National) and proposed first, that responsibility for the National Railways should be vested in three trustees, holding office for a term of years and removable only on cause shown; and secondly, that the two lines should co-operate in a policy of economy—voluntary where possible, but to be imposed by arbitration tribunals in the event of dispute. The Commission, however, refused to recommend the complete amalgamation of the systems, on "monopoly" grounds, and condemned proposals to lease the Canadian National to the Canadian Pacific, temporarily or permanently, as impracticable. The report formed the basis of a Government Bill which became law on July 1, 1933. The new phase of the Canadian railway problem is thus an experiment in the merits of the Commission's recommendations.

The trustees for the Canadian National Railways assumed office last December. So far, the policy of co-operation appears, unfortunately, to have borne little fruit. In early June the chairman of the trustees, Mr C. P. Fullerton, specified various measures of co-operation already in effect, productive of savings of about \$1,250,000 a year, and mentioned projects for the abandonment of about 2,100 miles of paralleling lines of the Canadian National and of 1,150 miles of unremunerative lines of the Canadian Pacific—subject to ultimate approval by the Board of Railway Commissioners. At the moment, while some important passenger services—e.g. Toronto-Ottawa, Toronto-Montreal and Montreal-Quebec—have been pooled, competitive trains are still running on others—e.g. Montreal-Ottawa—while rival transcontinental trains still leave Montreal daily within five minutes of each other, traverse the Rockies through passes two hundred miles

apart, and are timed to arrive at Vancouver with only a ten-minute interval. Mr. Fullerton has stressed the difficulties of traffic co-ordination. Mr. Beatty, the President of the Canadian Pacific, for his part, has been at pains publicly to insist on the limited scope of practicable economies from co-operation which falls short of amalgamation.

Some of the difficulties of the position, by general agreement, are "political." In view of the results of the recent Provincial elections, the Bennett Government, faced with the possibility of a catastrophic expulsion from power within the next twelve months, after the Dominion elections, may be loath to encourage unpopular reforms such as the abandonment of uneconomic lines, which may involve a further loss of electoral support—the voting strength of the workers on the two railways alone, irrespective of dependants, being something like 100,000. Already a Bill for the amalgamation of the telegraph and express services of the two systems has been withdrawn under Parliamentary pressure.

Political considerations also appear only too likely to stand in the way of another fundamental measure—the reduction of freight rates, which necessitates, in turn, a lowering of operating expenses. Of these, direct labour costs are much the most important, constituting more than 60 per cent. of the gross expenditures of the two systems. Since 1929, wholesale prices in Canada have fallen by approximately 25 per cent., while freight rates have remained unchanged. Though rates of pay have been generally reduced by 15 per cent., under an agreement which comes up for revision in November, there may be reason to argue that a still further reduction—say to the neighbourhood of 20 per cent., might be made, in harmony with the cost of living, and that the benefits should be immediately passed on to Canadian trade by comprehensive freight rate concessions. But what Government, near the end of its term of office, would care to precipitate a bitter sectional controversy this autumn? The position is particularly complicated in the Western Provinces, where grain rates have been fixed by special statute at a level which the railway companies have long contended to be entirely unremunerative.

While, therefore, some quiet progress may be made with measures of railway co-operation in the next twelve months, the Canadian National trustees can scarcely hope for active support from the Dominion Government, and may find Mr. Beatty a lukewarm colleague, for the C.P.R. President has already voiced the opinion of his Board that the only practicable solution of the problem is the complete unification of management of the two systems under a private, non-political board. If, in fact, the two railways, having been admonished of the danger of running races, are to be tacitly permitted the more hazardous rivalry of "last across," it would seem that stockholders in the C.P.R. must look mainly to a revival in Canadian business activity for any substantial amelioration of their position in the near future. The omens are not entirely unfavourable. This year's net railway receipts of the C.P.R. for the first five months (when the system normally obtains about 25 per cent. of its total traffic) have been \$3,486,000 higher than in 1933. On this basis the railway may be earning about 3 per cent., or rather more, on its preference stock. The June gross figures have not quite maintained this good showing. Everything turns, however, on the results of the heavy period of autumn traffic, for the company normally collects over 50 per cent. of its receipts in the last four months of the year. Estimates of a short wheat crop have recently been favourably revised, and the latest figure puts the possible 1934-35 yield at about 330 million bushels, against an average of 356 millions for the last four years. Under the World Wheat Agreement, however, Canada's maximum export is limited to 200 million bushels for the current wheat year. Whether this will be raised to the 270 million bushels which Canada is anxious to export in 1934-35, remains to be seen.

These facts suggest that while the omens may be not unfavourable to a continuance of moderate recovery in the position of the C.P.R. on the near view, a spectacular revival is not indicated. Having regard to the uncertainty which still obscures the outlook for the Canadian railways as a whole, investors may infer that present quotations for C.P.R. stocks—certainly for the ordinary stock—are not unduly low.

INVESTMENT NOTES

Chronique de Défaut.—This week's "Default Chronicle" has three entries. In the first place, Germany's settlement with Great Britain in the matter of the "Dawes" and "Young" loans has been followed by a Franco-German agreement on an exchange clearing, with a guaranteed minimum favourable trade balance to Germany. Simultaneously, by way of an anti-climax, the trustees of the "Dawes" Loan have announced their intention to impound the Reich revenues specifically earmarked as security. This action is apparently neither courageous nor vexatious, but inevitable and formal. The trustees, faced with new arrangements which certainly violate the letter of the Trust Deed, have followed the authorised procedure. As the German Government, however, appears both able and willing to short-circuit the whole matter, by instructing the receiving officers to discontinue payment to the trustees and to pay the revenues direct to itself, the decision seems likely only to add one more irregularity to an already lengthy list. From Latvia comes more encouraging news for bondholders, for the City of Riga has agreed to recognise its 4½ per cent. loan, of which £1,281,800 is outstanding of an original issue of £1,322,700 made in 1914, and has been in total default since October, 1917. Although the agreement involves the reduction of outstanding principal by 40 per cent., a cut in interest on the balance to 4 per cent., and the postponement of final redemption from 1954 to 1984, it is likely to secure acceptance. The bonds, which have been as low as 11½ this year, are now quoted 26-30. The settlement is in the nature of a "gentlemen's agreement," in part (though unofficial) consideration for the Anglo-Latvian trade treaty recently concluded. Finally, the eternal "gold clause" question is raised by the offer to repay the maturing £600,000 5 per cent. First Mortgage gold bonds of the New Brunswick Railway, on August 1st next, at their nominal value in sterling instead of in gold. The "gold clause" in the bond is virtually as plainly worded as it was in Feist's case, but whether the House of Lords' decision in that case applies here is uncertain, since the trustee, in 1884, was American, and the trustees were an American company, although the loan was issued in London. The New Brunswick lines were leased to the Canadian Pacific Railway in 1890, but the latter's guarantee extends only to interest, not to principal. It is possible that an action may lie not in the English but in the Canadian courts. Holders are offered voluntary conversion into 4 per cent. perpetual consolidated debenture stock, at the rate of £119 for every £100 bond. This offer, *prima facie*, is not unreasonable. The chairman of the Grand Trunk Senior Stocks Company, however, has taken occasion to point out that the terms of the offer have a certain similarity to those which the Grand Trunk preferential bondholders accepted in 1873. They were subsequently overridden by an order of the Canadian Government. New Brunswick bondholders who contemplate conversion will give varying weight to the analogy, but it would be regrettable if the latter were allowed to draw a red herring across the main question, which is whether the terms of the "gold clause," in the present instance, bring the New Brunswick bonds within the scope of recent clearly worded legal decisions on this side.

Australian Gold Developments.—Although the recent excited buying of West African gold shares has abated, partly for technical reasons, but largely on account of more sober estimates of the prospects of a field which requires considerable further development, speculative interest still flits about the mining markets. Among a number of potential directions, some sections of the market are canvassing the possibility that increased interest may be taken in Western Australian issues. The survival of the industry has been due, to no small extent, to the paternal assistance of the Government during unfavourable years. Now that present indications suggest a permanently enhanced price

for gold, established producers on the Rand are attracting a solid investment demand from institutional investors in search of high income and stability of earning power. Some diversion of speculative interest to Australian producers is, therefore, not surprising. Established mines, such as Great Boulder and Lake View and Star, have undertaken further development at depth, and the success of the more recent Wiluna has indicated that possibilities are not limited to the "Golden Mile." The industry is taking its due share in the present activity in gold-mining issues, and an issue in respect of the Great Boulder subsidiary is expected next week. The following table gives details of eight issues which have been made during the last sixteen months either for new developments or for further requirements of existing companies:—

	Date of Issue	No. of Shares issued	Issue Price	Amount of Issue	Price July 18, 1934	Market valuation of Issue
Anglo-Australian Gold Development	Feb., '33	520,000	s. d.	£	s. d.	£
Commonwealth Mining	May, '34	1,800,000	5 0	130,000	10 0	260,000
Great Boulder Prop.	July, '33	583,333	5 0*	145,833	11 3	328,100

Although speculative attention has been directed to both classes, the appreciation of share values has not assumed the boom dimensions seen in the West African market three months ago. Speculative investors may reasonably regard the hazards of Australian ventures as no more considerable than those of the "Jungle." The development of partially proved territories, under conditions of improved technique and transport, when entrusted to capable management, may conceivably be attended with success. By this token, such newcomers as Anglo-Australian Gold Development, North Kalgurl United, and Southern Cross have attracted considerable speculative interest since their flotation. Investors will recognise, however, that promise is distinct from achievement, and the emergence of a top-heavy speculative position based on inflated hopes will be deprecated by all who regard healthy development as being in the long-run interests of investors and producers alike.

"Kaffir" Flotations—and a "Breeze."—"Kaffir" financing is showing the expected increase to which we referred in our leading article of July 7th last, page 20. We set out in the following table particulars of a number of recent issues and the course of subsequent dealings:—

Company and nature of Offer	Shares issued to Public or Shareholders	Issued Price	Opening Quotation	Quotation July 18, 1934
To Public				
Central Mining	1,000,000 5 per cent. cum. pref. shares £1.	22s. 6d.	23/-	24/-
Klerksdorp	1,000,000 shares of 5s.	Par	5/9	5/6
To Shareholders				
Dagafontein	99,000 shares £1	5/-	31/3 pm.	32/6 pm.
Venterspost	2,000,000 shares of 10s.	Par	4/6 pm.	4-4 pm.
By Introduction				
Klip Nigel	1,920,000 shares of 5s.	...	13/3	14/3

London activity in gold mining issues has been restrained in comparison with the hectic scenes in Johannesburg, where the entire population has indulged in unparalleled speculation, and is reported to have technical details of every new venture by rote. On this side, however, public appetite for promising new ventures on the East and West Rand is undoubtedly keen. Reports are to hand from Johannesburg of considerable dissatisfaction among East Rand Consolidated shareholders on rumours of their meagre participation in the impending Spaarwater flotation. They claim, with some show of reason, that they are prepared to supply all the necessary finance, and regard the vendors of the properties as having no preferential rights other than as shareholders. They have voiced a good deal of criticism of the recently announced increase of capital by Rhodesian Corporation, although the circular

SAFEGUARDING

OVER 1000 wise people every year adopt the "Safeguard" plan.

Each one knows that capital provision for dependants does not solve the problem of adequate protection. That is why they have guaranteed an INCOME as well so that their beneficiaries will have no worry about the investment of funds... Just a receipt to sign for the monthly income.

Learn how this essential protection can be secured, without large outlay, by posting the enquiry form below.

POST NOW

To: W. A. WORKMAN, General Manager, Legal and General Assurance Society Ltd., Head Office: 10 Fleet Street, London, E.C.4.

Dear Sir,
Please send me particulars of the Safeguard plan mentioned above
Yours faithfully,

Name

Address

Age next birthday..... Ee.

in connection with the offer referred to much new business in pending issues, including East Rand Consolidated subsidiaries. The mining community is anxious that a settlement agreeable to both sides should be reached, without recourse to the threatened appeal to the Government, owing to the unsettling effect of the dispute on the mining market as a whole, which is due to benefit from the re-investment of impending dividend distributions. Some quarters are apprehensive that future subsidiary flotations may also be less generous to shareholders, though, in fact, three promising ventures have been announced—Venterspost, Van Dyk Proprietary, and the new Machavie Mine subsidiary of New Central Witwatersrand Areas—on terms which have provoked no dissent.

Union Cold Storage Judgment.—On Thursday, July 19th, Mr. Justice Eve gave judgment in the Union Cold Storage case, in which Mr. George Edward Hughes claimed, on behalf of himself and other stockholders, a declaration that resolutions and agreements reducing the interest on the company's preference stock were invalid. The circumstances leading up to the passing of the resolutions were fully dealt with in the *Economist* of November 25, December 2 and 9, 1933. Mr. Justice Eve found (1) that the directors and officers of the company had acted throughout in good faith; (2) that the Court was not concerned with the merits of the arrangement; (3) that there was no ground for holding that the latter did not come within Article 65 of the company's Articles; (4) that the offer was clearly stated in the circulars; but that (5) the votes of the stockholders had been cast on a wholly inadequate disclosure of material facts—particularly as regards certain leases of properties by members of the Vestey family to the company. On the last-mentioned ground, therefore, the plaintiffs were awarded their declarations and injunction, with costs. The judgment was thus

obtained on a matter of disclosure, and certainly does not establish the principle that under no conditions can preference dividend rates be reduced by a company whose earnings are sufficient to maintain them.

* * *

Actuaries' Investment Index.—Summer holidays are throwing their shadow over a quiet Stock Exchange. Industrial share values have shown a very slight falling tendency this week. The Actuaries' Index for 144 shares (December 31, 1928=100) stood at 70.4 on July 17th, as compared with 70.9 a week earlier and 71.1 a month earlier. The corresponding yield figures were 3.71, 3.72 and 3.68 per cent. respectively. This week's significant changes are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	June 19, 1934	July 10, 1934	July 17, 1934	June 19, 1934	July 10, 1934	July 17, 1934
Higher this Week:—						
Banks and Discount Co.'s (12).....	110.2	110.9	111.7	4.26	4.23	4.20
Insurance Co.'s (24).....	107.9	108.9	109.6	3.88	3.85	3.83
Electric Supplies (8).....	91.7	93.7	94.2	4.61	4.52	4.50
Lower this Week:—						
Home Rails (4).....	78.2	83.4	80.1	1.49	1.43	1.48
Coal (6).....	93.3	93.0	91.9	3.23	3.86	3.92
Shipping (3).....	15.6	16.2	15.5	0.84	0.41	Nil
Miscellaneous (50).....	62.8	61.9	61.6	3.92	3.96	3.97

"Money" securities—including bank and insurance company shares—have made the best showing this week. Demand for electrical equipment shares has been stimulated by indications of increased home and export business. Home rails, however, have lost more than half last week's gain. Tentative speculative buying of shipping shares, on the Government's subsidy proposals, has similarly proved short-lived.

COMPANY NOTES

Flour Milling Companies.—As the direct heir of one of the most ancient industries, applying the first and essential treatment to the basic foodstuff of mankind, the modern milling industry may expect a very fair stability of physical turnover. That, unfortunately, is not synonymous with stability of profits. In the process of modernisation, the milling industry has changed its economic position fundamentally from the assured, if limited, solidity typical of the old-time miller, who worked largely on commission. The granaries and flour lofts which he has left behind him show

Profits in £000.

* As in the prospectus of November, 1933.

that he milled partly for his own account, buying the grain and selling the flour. A large proportion of his work (and storage accommodation), however, was for customers who paid him only for his milling of their grain. When the growth of population required large imports of wheat, the milling industry began to move towards the ports. With the growth of output capacity which modern milling processes have made possible, the millers began not only to work almost exclusively on their own account, but also to carry increasingly large stocks in course of process and distribution. This, in turn, required advertising of branded products, with the

further growth in stock necessary to assure supplies. Inevitably, therefore, the modern miller must carry a considerable open position in a commodity subject to wide and sudden price movements. The effect has been seen in the past accounts of leading milling concerns. The process of integration, which is yearly concentrating the industry in the hands of the leading concerns, has done much to offset this market risk, by stabilising prices and permitting a carefully balanced system of purchases and sales, but it has not eliminated its dangers. Thus the shares even of the largest concerns to-day must be classed as moderately speculative, though the strong finances of the leading concerns limit the risk to fluctuation in profits, which must presumably average out over a period, and can be partially smoothed out from internal reserves. For the moment the sales of what the millers claim to be "dumped" foreign flour are causing some disturbance. A remote potential risk may be the possibility of the milling industry's being nationalised—since a certain school of thought regard it as well suited to public ownership. The vigorous improvement of the industry, particularly in its organisation, which is still continuing, offers the hope of increasing profits. On the other hand, normal "recovery" factors may not operate very strongly, since physical turnover is relatively stable in any case. The element of "time lag" should benefit a processor's profits in times of rising prices, but there is no certainty that this will be the case in flour-milling. The fact that Ranks, Limited, one of the two leading concerns, was only incorporated as a public company last November, and that it absorbed another leading business, Associated London Flour Millers, earlier in 1933, closely limits the number of large companies whose profit history can be studied in the accompanying table.

* * *

Furness Withy.—It may be inferred that the directors of this, the parent company of the strongest shipping group in the world, are disappointed with the results achieved in the year to April 30th last. A year ago, the report expressed a hope that "an improvement . . . would not be much longer delayed," but the latest profit balance is almost identical with that of 1932-33, and the ordinary dividend has been passed for the first time since 1893. The board may be commended for their decision not to draw further on reserves for unearned dividend payments, in view (to quote the present report) of "the continuing uncertainty of the outlook, as well as the absence of any revival in international trade"—not to mention the possibility of profitable acquisitions of other shipping properties in the future. The accounts are presented in a form which makes the measurement of net current earning power peculiarly difficult. The "profit" includes an unspecified transfer from reserves, whose dimensions have in the past been disclosed, or hinted at, by the chairman at the annual meeting. As these transfers cannot in any way be regarded as "earnings," we have deducted them from the published figures in the table which follows. In default of any official information, we have assumed that the current year's transfer was of the same dimensions as in the two preceding years:—

	Years to April 30,

* According to chairman's speeches at annual meetings. † "About the same as a year ago." ‡ Presumed. Report states: "The profit is approximately the same as for the previous year." \$ Before transfers from reserves of amounts indicated, or suggested, above. (a) On £4,000,000 ordinary capital. (b) On £6,000,000 ordinary capital. (c) After transfers from reserve.

While complimenting the directors on earning a substantial profit under contemporary conditions of international trade strangulation, shareholders may feel that the present moment is peculiarly opportune for a policy of fuller disclosure. The published profits certainly fail to afford an adequate measure of fluctuations in the earning power of the group. Some subsidiary companies have made losses which, with one exception, have been set against profits previously carried forward. The auditors' report on five subsidiary companies contains the qualification "subject to the value of investments." Undoubtedly the figure of £5,211,682, at which investments in subsidiary companies are carried in the books of the parent concern, holds a substantial "inner reserve," even under present conditions. The company's strength, however, would be more rather than less widely appreciated if the directors could bring themselves to publish regular consolidated profit-and-loss accounts and balance sheets. Meanwhile, the chairman will doubtless take occasion next Wednesday to discuss prospects in the North Atlantic and Argentine trades, the results obtained from last year's acquisition of a substantial interest in the New Zealand and Australian trade through Shaw, Savill and Albion, and last, but not least, the possibility of further acquisitions when revival comes in sight. The £1 ordinary shares of Furness Withy, which touched 20s. earlier this year, have fallen from 16s. to 15s. 3d. on the passing of the dividend.

* * *

Courtaulds Dividend.—Though Courtaulds shares declined after the interim dividend announcement last week-end, the board's decision merely to maintain last year's payment of 1½ per cent., tax free, caused little surprise in trade circles. The reduction in the excise duty is calculated to stimulate future consumption, but has had an unsettling effect on current business, and Courtaulds necessarily hold appreciable stocks of yarn which has paid the

full excise duty. The price reduction of last January and the company's output extension programme have scarcely yet had time to produce important results from a profit-earning standpoint. The trade as a whole suffered from the occurrence of cold weather in the crucial few weeks immediately after Easter, when buying should have been at its best. Overseas events, also, have been somewhat discouraging. The American Viscose Company has been working under capacity, while conditions on the Continent, though slightly improved, are far from settled. Ample time remains, however, for trade recovery in various directions before the end of the year. Meanwhile, Courtaulds continues its policy of steadily improving the competitive position of rayon in relation to other textile fibres, and the long-term tendency of consumption is likely to remain upward.

* * *

Eastwoods Flettons and Cement.—Increases of approximately 100 per cent. and 50 per cent. in the trading profits of Eastwoods Cement and Eastwoods Flettons for the year to March 31st are satisfactory pointers, not only for the parent company, whose accounts are expected in September, but also for brick and cement manufacturers as a whole. The reports of the companies refer to increased demand for cement and Flettons, and it is stated that co-operation between cement manufacturers has already improved prices and marketing conditions generally. The Cement Company pays 7½ per cent. against 3 per cent., and Eastwoods Flettons pays 12½ per cent. (against 10 per cent.) on the preferred ordinary, and 1s. 4d. per share against 6d. on the deferred shares. The two balance sheets show all the signs of increased trading activity. The agreement in the cement industry referred to, which governs sales in the South of England, became effective at the end of April (see the *Economist* dated April 28th, page 935), and it is now unofficially stated that an agreement covering the whole country has been reached, with the intention of

PRELIMINARY NOTICE.

CHRISTOPHER STANLEY GARDNER, Managing Director. } Patents Limited

240,000 Ordinary shares to be allotted to Vendors fully paid, but no application for permission to deal in these shares will be made until profits available for distribution equal not less than 10 per cent. on the Ordinary Share Capital of the Company.

THE PROSPECTUS SHOWS:

- (1) Company acquires the "Burtol" System of Dry Cleaning together with Eight established businesses operating same.
- (2) 270 installations have already been sold. Directors intend that 80 Establishments to be owned by the Company shall be in operation by the end of the first financial year.
- (3) Certificate by Messrs. Peat, Marwick, Mitchell & Co., Chartered Accountants, as to profits of Vendor's business and the eight "Burtol" establishments.
- (4) Profits for the first financial year estimated at not less than £35,000, and for the second financial year, not less than £61,000.
- (5) The eight establishments show a total profit at the rate of £9,456 per annum, and the Company is also entitled to Vendor's profits from 9th September, 1933, and benefit of orders estimated by Vendors to produce a further net profit of £10,000.
- (6) The Directorate comprises several well-known men of proved commercial ability.
- (7) The "Burtol" system is thoroughly established in public favour and has revolutionised the Dry Cleaning Industry.

Copies of the Prospectus are obtainable from:

LLOYDS BANK LIMITED, City Office, 72, Lombard Street, London, E.C.3, and 16, St. James's Street, London, S.W.1, and all Branches.

From the Brokers:—IAN ANDERSON & NAIRN, 28, Throgmorton Street, London, E.C.2, and Stock Exchange.
And from the Issuing House: STANDARD INDUSTRIAL TRUST LIMITED, 2, BROAD STREET PLACE, LONDON, E.C.2.

effecting an increase of 20 per cent. in prices. The regulation of sales and production by quotas, it is stated, has required considerable threshing out, but a successful conclusion is presumed to be near at hand. As to producers' profits, there seems no reason why efficient plants, coping with the present demand for building, should require a substantial rise in selling prices. The fate of past attempts at co-ordination of production is a warning against prices which are prejudicial to the consumer, but attractive to new and efficient undertakings. For the current year, in any case, the increase in prices will probably have less effect upon profits than increased output. The price current of best standard Portland cement on July 13th was 38s. per ton, according to *The Builder*, compared with 46s. per ton on April 27th. This latter quotation, however, was purely nominal, whereas the current quotation has some semblance to actual prices paid. It is possible, however, for large contractors to obtain price concessions, and they are covered, in many cases, by substantial forward contracts. Yields of just over 4 per cent. on Associated, British and Tunnel Cement shares suggest that the shares are reasonably valued.

* * *

Twin "Eagles."—After our recent criticism of the uninformative nature of the Royal Dutch-Shell accounts, it is gratifying to find two of the group's operating companies, Mexican Eagle and Canadian Eagle, presenting full and frank statements of their affairs. Both show great financial strength, but the former is suffering severely from the outbreak of economic nationalism which has infected Mexico. First, the dispute over the Amatlan titles drags on, and the company's defence is "impeded by certain influences which it has been difficult to counteract." Secondly, restrictive taxation and regulations have been imposed on the petroleum industry, and a "national" oil company threatens to become a serious competitor. Thirdly, a strike of refinery and field employees has ended in a Presidential award giving pensions, shorter hours and more holidays to the workers. Costs of production have thus been materially increased, and it may even be necessary to restrict operations. The company, however, has expanded its turnover and has proved a substantial reserve of oil in its fields south of the Tuxpam River, so that only the deterioration in the political situation is preventing the company from enjoying real prosperity. The following table shows the remarkable increase in the trading profits (in Mexican pesos) in 1933:—

(In Mexican Pesos)		
	1932	1933
Trading profits	2,058,129	17,064,834
Differences in exchange	243,457	10,991,856
Net profits	1,814,672	6,072,978
Preference dividends	985,758	1,108,281
Transfer to legal reserve	90,733	810,446
Transfer to special reserve	...	5,532,744
Dividend on participating pref.....	272,000	...
Carry forward	1,378,493	...

In 1933 the peso depreciated from 10.5 to the £ to 17.76. It is proposed to present future accounts in sterling. The balance sheet of Mexican Eagle shows immense strength, the surplus of current assets over current liabilities being about 64 million pesos. Unfortunately the payment of the first preference dividend this year has been postponed pending the settlement of the Amatlan lawsuit. In view of the mutual guarantees, this involves a similar postponement on the part of the Canadian Eagle. The latter already presents its accounts in sterling, in which its revenue accrues. Its chief interest is the ownership of the entire share and loan capital of Eagle Oil and Shipping, from which it draws the bulk of its income. This company purchases the export surplus of Mexican Eagle and part of the output of Venezuelan Oil Concessions, which is refined by the Arend Petroleum Company. It also controls (jointly with Royal Dutch and Anglo-Persian) Shell-Mex and B.P., and owns a half share in Anglo-Mexican, which markets Shell products in South America, and an interest in London and National Property, which owns Shell-Mex House in London. The

trading results of Canadian Eagle for the past two years are as follows:—

	1932	1933
Net profits	896,393	376,627
Preference dividends	580,339	175,898
To general reserve	...	183,553
Carry forward	292,721	83,686

The balance sheet discloses a surplus of current assets over current liabilities of over £2,000,000. The first preference shares of both companies are quoted at around par, the market being maintained by the fact that the companies are bound to redeem a proportion of their preference shares each year by purchases in the market.

* * *

Tanganyika Concessions.—The report of Tanganyika Concessions for 1933 confirms the conservative views we expressed in a recent analysis of the position (see the *Economist* of May 12 and 26, 1934, pages 1038 and 1153). The accounts show a total debit balance of £160,749 (including £125,442 advanced to the African Railway Finance Company under guarantee), which is carried forward. In 1932 a credit balance of £272,297 was secured and carried to reserve. The disappointing course of the copper market last year was undoubtedly the main factor in a disappointing result, and in this direction contemporary prospects are more helpful. The Union Minière, in which Tanganyika Concessions has an important interest, has now reduced its costs below the prevailing market price for copper, and has increased its production from 66,596 tons to 100,000 tons per annum. This development, in turn, should benefit the Benguela Railway, in whose fortunes the Tanganyika Company has so heavy a stake. Last year's advances to African Railway Finance represented payments under guarantee of interest and redemption charges on loans for the completion and equipment of the Benguela Railway. The auditors refer to a shortage of £800,000 in the assets of African Railway Finance. This, however, is mainly a family matter, resulting from the valuation of the Tanganyika "B" preference shares, issued to finance the Benguela Railway. The directors, however, express confidence in a continued increase of Benguela traffics, sufficient to give a return on the documents which the company holds. This view would not appear unreasonable.

* * *

Kramat Pulai.—Shareholders have every reason for satisfaction with the course of events. For last year the company paid a total of 10 per cent., including the 5 per cent. recommended within the past few days. On account of 1934 an interim dividend of 3½ per cent. has lately been followed by two of 10 per cent. The bulk of the company's revenue has been provided by sales of scheelite ore (or wolfram). Towards the end of 1933 this product met with an increasing demand at better prices. At one time during the past six months the price was run up to the almost unprecedented level of about 47s. 6d. per unit, but a reaction to under 40s. subsequently occurred. As the result of certain deliveries being made in advance of contracts, the June profit amounted to £15,000, the surplus for May having been £6,000 and for April £4,000. At the meeting held on Monday a proposal for the splitting of the £1 shares into four shares of 5s. each was approved. The chairman expressed satisfaction with the working of tin restriction, but also emphasised the room for increased consumption and output. The current year's total production of scheelite had been sold, and on the assumption of unchanged mine production and grade, he predicted total dividends of 60 to 70 per cent. for the current year. The 5s. shares are quoted at 20s. 6d., and yield £2 8s. 9d. per cent. on the basis of last year's dividend of 10 per cent.

* * *

Other Company Results.—The trading results of 54 other companies will be found in our usual summary table on page 144. Half-yearly reports from three Irish banks show a small fall in earnings for Munster and Leinster (£58,892 against £72,224) and increases for National Bank

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
July 24

ACCOUNT
July 26

WITHOUT ignoring the San Francisco strike, Wall Street's stagnation and Germany's inquietude, investors may find the dominant cause of this week's dull markets in the sun and the calendar. Monetary pressure is sufficient to prevent any lapsing of prices, but the atmosphere of the "House" is slightly soporific, and preparation for the holiday month tends to take the form of a closing of commitments.

Despite the idle conditions which ruled in the Gilt-edged market at the beginning of the week, prices remained firm and subsequent demand, though sporadic, was sufficient to prevent any reactionary tendency from going far. Brokers were again disposed to put their clients into virtually irredeemable stocks, rather than into low-interest issues at par or higher, with a future redemption clause against the holder. India loans were steady on small dealings, and a fair business, at firm quotations, was done in Dominion bonds. The leading feature of the foreign market was the strength of Chinese issues, particularly the railway bonds, on the thesis that future financial assistance to China would pre-suppose a settlement with present bond-holders. Japanese loans, however, were easier. German bonds responded to moderate support, but the undertone of the market was not convincing. Brazilian funding issues were in speculative demand early in the week, but subsequently reacted.

Home railway stocks had their customary week's "cycle," with a sagging tendency at the outset, a slight crescendo before the publication of the traffic figures, and a perceptible loss of market interest thereafter. Passenger revenue is being satisfactorily maintained, but in the absence of more considerable increases, over 1933, in general traffic receipts, the downward curve of the trend line of quotations for equity and marginal preference stocks is unlikely to be arrested. The Argentine railway group remains completely out of favour.

The industrial markets remained relatively steady, but almost featureless, with dealings on a further reduced scale. High temperatures and dividend anticipations sustained the prices of brewery shares, but the leading tobacco issues developed an easier tendency. Richard Thomas preference were firm in a quiet iron and steel share market, the news of the international tinplate agreement stimulating interest on the eve of the chairman's speech. Motor shares continue to decline, Rolls-Royce being particularly dull, but aircraft shares as a whole had a slightly harder tendency. Only a small business was done in textiles, though Patons & Baldwins hardened a little in anticipation of the chairman's speech at the annual meeting—which, as it happened, was not over-optimistic. Selling occurred of Courtaulds on the absence of an increase in the interim dividend. The position of this company is discussed on page 125. Among departmental store shares, Marks & Spencer suffered from profit-taking, and Woolworth lacked support.

Shipping shares remained dull, Furness, Withy being offered on the passing of the ordinary dividend for the

(£111,547 against £106,825) and Provincial Bank of Ireland (£36,367 against £32,953). In the financial and land section, City of London Brewery and Investment Trust reports net profits of £246,428 for eighteen months to June 30th, while Australian Estates, reflecting improvement in pastoral conditions, shows earnings of £66,798 (against £5,046 for 1932) from which one year's preference arrears have been paid. In the steel and engineering section, the Armstrong Whitworth Securities result brings little comfort to shareholders. The loss for 1933 is £531,214, against £246,856, and a debit of £871,501 is carried forward. The directors refer to some improvement in the outlook since the end of the year. W. and T. Avery, the weighing machine makers, report increased profit at £102,925. Further small rubber companies show improvement, Bertam Consolidated earning net profits of £21,061 (against £1,007) for the year to March, and paying 7 per cent. against nil. Among shops and stores, W. Barratt and Company, the shoe manufacturers, report net profit of £105,773 compared with £86,850 for the year to June, 1933. This is a reassuring improvement after the mildly satisfactory showing of other boot firms for 1933, although increased advertising expenditure may have benefited the company's business, in part, at the expense of other popular brands. Of six investment trust reports, four show further slight falls in revenue, while two, Palmerston and Second Clydesdale, are slightly better. The former pays 6 per cent. for the year to June, against 5 per cent. for the previous year. In the miscellaneous section, net earnings of Falk Stadelmann show considerable improvement at £88,492 against £58,566, and the ordinary dividend is increased from 5 to 7½ per cent. Exchange difficulties have beset Brazilian Warrant Agency and Cambuhy Coffee and Cotton, and the reports are accompanied by a proposed scheme of reorganisation and merging of the two companies.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of New Zealand, United Dominions Trust, Trustees Corporation, Rhodesian Anglo-American, Consolidated Tin Smelters, East Asiatic Rubber Estates, Estates Control, Rhodesian Corporation, East Rand Consolidated, Armstrong Whitworth securities, and South African Breweries. Sir Austin Harris informed shareholders of the National Bank of New Zealand that notwithstanding some economic recovery, banking conditions had again proved difficult. He declared that exchange policy should continue to be aligned to that of Australia, although in the present situation a rate of 125 appeared anomalous. Sir George A. Touche emphasised the consolidation of the Trustees Corporation's holdings in Dominion securities, and the rapid recovery in the portfolio valuation. Mr J. Gibson Jarvie's speech at the United Dominions Trust meeting dwelt mainly on the new subsidiary, Credit For Industry, Limited, which, he declared, had been inundated with applications for loans. Sir Edmund Davis reviewed the circumstances of the Rhodesian Anglo-American offer to Bwana M'Kubwa members for an exchange of shares. Major-General Guy P. Dawney, after a survey of a very difficult year, declared that Armstrong Whitworth position and prospects were engaging the earnest consideration of the board. Mr. R. J. Hose, at the Consolidated Tin Smelters' meeting, expressed satisfaction with the results under restriction, and looked for a revival of demand in the autumn. Captain Hugh P. Jamieson informed East Rand Consolidated shareholders that their proportionate participation in the new Spaarwater flotation could not be announced until the Mining Leases Board had approved the scheme. As chairman of Rhodesian Corporation, he declared that the company must secure every possible participation in the Spaarwater and other flotations. Mr John Stroyan outlined the advantages of the depreciated exchange to South African Breweries shareholders, and looked for rapid progress in the Union. At the Estates Control meeting, Lord Luke emphasised the difficulties of stock-raising and estate companies, which were largely caused by uncertain price fluctuations. Lord Hutchison of Montrose discussed the improved outlook for East Asiatic Rubber Estates, and hoped that all—not excluding the Eastern staff—would benefit.

first time for over forty years. Eastwoods Flettons and Eastwoods Cement were in demand on the excellent reports, which are discussed on page 125. The reported agreement between Chilean nitrate and European synthetic producers induced a demand for Cosach bonds. Manchester Ship Canal preference were firm on the increased half-year's traffic receipts. Bank shares were slightly irregular, but mainly held their ground, and insurance shares remained steady.

Speculators again gave oil shares a wide berth. The reception of the twin "Eagle" reports, however, was relatively favourable, the market's attention being concentrated on the increased profit figures rather than on the uncertain operating position on which the directors' reports laid stress. The buying movement in rubber shares completely subsided. The public, on the whole, was still a cautious buyer, but professional interest was damped by the uncertain tendency of the commodity in Mincing Lane. Tea shares failed to maintain a promising start, but scattered liquidation was fairly easily absorbed.

Kaffirs quickly became convalescent after a dull opening. The mid-week revival of interest was due to several factors, including demand from Johannesburg, selective home investment, and the publication of satisfactory quarterly results, especially those of Union Corporation companies. It was hoped that the question arising out of the dissatisfaction of East Rand Consolidated shareholders with their subscription rights in Spaarwater (to which we refer on page 123) would be amicably settled. A hesitant tendency, approaching heaviness at times, was evident in the West African market, though firmer conditions occurred in mid-week. Rhodesian shares were slightly better, the greatly improved position shown by Goldfields Rhodesian causing favourable comment. Kramat Pulai were in demand in a generally dull tin share market. Tanganyika Concessions were easier on the report, which is summarised on page 126.

FOREIGN STOCK EXCHANGES

NEW YORK

WITH San Francisco brought to a standstill, and strikes and rumours of strikes spread over the Continent, the Stock Exchange (whose domestic troubles are still sufficient to engage its full attention) had good reason for precautionary

marking down of prices on Monday. Except for certain issues directly affected by the strike, declines were fractional, but on the next day some selling pressure caused general falls of up to two points, automobile and sugar shares being particularly affected. Reports of improvement in the strike situation put a little spirit into the market on Wednesday, but, as in recent weeks, the stock markets were slow to reflect improved business in the Chicago wheat pit. Railway and public utility stocks were offered on revised earnings prospects, the cover for bond interest being regarded in many cases as disappointingly small. The Control Commission has enlisted assistance from accountants and economists for drafting "listing" application requirements, which, it is feared, will prove too stringent for many foreign Governments and companies. Company news has been out of the public eye this week, but the Iron and Steel Institute reports operations at 28.8 per cent. of capacity, an increase of 1.3 per cent. on the week. The General Electric Company earned profits of \$8,175,000 for the half-year to June (28 cents per share), against \$4,666,000 (16 cents) for the first half of 1933. Some stirrings of activity are apparent in the new capital market, an offer of New York City bonds this week being regarded as a forerunner of a number of rail and utility issues.

* Two-hour Session.

PARIS

Assurance of success for the new Government issue was not sufficient to inspire markets with any definite purpose, and prices on the whole were depressed, and in some cases considerably lower. Rentes were weaker on M.

Doumergue's speech. On the Coullisse, gold shares were steady against the trend. As in other centres, Royal Dutch showed improvement in mid-week. Fears of a political rupture caused a sharp setback in Rentes on Thursday.

	July 11, 1934	July 16, 1934	July 18, 1934		July 11, 1934	July 16, 1934	July 18, 1934

BERLIN

The share market last week was somewhat more active. Wednesday witnessed a sharp general rise, and on the week the average price of high-priced stocks advanced about 1 per cent. Public utilities and certain specialties, in particular Berlin-Karlsruhe, were in demand. On Monday and Tuesday of this week the undertone was firm, but prices as a whole changed little. Public utilities were again bought; but recent favourites, such as steel, paper and rayon shares, were neglected. A marked increase has taken place in the number of minor industrial companies with daily quotations. The home bond market has changed little, and there have been successive recoveries and declines in dollar bonds, with a slight weakening this week of converted issues. The official shares index (average of 1924-26 = 100) for June was 76.16, against 73.27 for May; and the home bonds index 90.08 against 90.65.

	July 11, 1934	July 16, 1934	July 18, 1934		July 11, 1934	July 16, 1934	July 18, 1934

AMSTERDAM

The Bourse has ruled depressed to quiet during this week, and turnover has been small. The rubber section was the focus of interest, but the market showed considerable irregularity and wavered somewhat on Tuesday. Royal Dutch made a late recovery on Wednesday after two weak sessions, and industrials, in particular Unilever and Philips' Lamps, followed a similar course. German bonds were weak, but home bonds continued firm.

	July 11, 1934	July 16, 1934	July 18, 1934		July 11, 1934	July 16, 1934	July 18, 1934

CAPITAL ISSUES

THE doyen of this week's London borrowers was the *New Zealand Government*, with a conversion from 4 per cent. to 3½ per cent., on terms giving the Dominion full advantage of current interest rates. As the redemption dates of other loans lie some distance ahead, scope for further operations is more restricted than in the case of Australia. Of the week's two "offers for sale," the *Welsh Associated Collieries* 4½ per cent. debenture stock is adequately covered by recent profits (after deducting directors' estimated depreciation charge) and by revalued assets, and the preference shares are reasonably priced, but underwriters were left with a considerable portion of this issue. *Sir Isaac Pitman and Sons* preference shares are well covered, despite recent stock losses, but the redemption provisions seem likely to be speedily effective. Dealings in *Griffiths Hughes* £1 ordinary shares opened around 40s. Some 500,000 shares, incidentally, were purchased at par by the London brokers. Even after the expense of underwriting the preference shares and paying all preliminary and vendors' costs, the brokers would appear to be amply compensated. It is understood that the Stock Exchange Committee has not allowed dealing in *Rietfontein Central*.

BY OFFER FOR SALE

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

at 21s. 6d. per share. Incorporated 1896, and converted to public company on July 2, 1934, reserves of £181,800 being capitalised, of which £174,900 forms part of present issue. Assets after revaluation at March 31, £380,337, and combined profits for years to March 31: 1932, £56,385; 1933, £27,806; 1934, £35,220. In any year when over 6 per cent. paid on deferred ordinary shares, not less than 2,500 and not more than 10,000 shares are redeemable at 2s. 6d. per share premium, payable out of profits. Lists closed 12.30, July 19.

ISSUES TO SHAREHOLDERS ONLY

Ariston Gold Mines (1929).—354,026 2s. 6d. shares offered to shareholders registered July 17th at 7s. 6d. per share, in the proportion of 1 new share for every 15 shares held.

Henrietta Rubber Estate, Ltd.—Issue of 550,000 6 per cent. cumulative convertible preference shares of 2s. each at par. The shares are offered to shareholders registered July 14, 1934, in proportion of 40 preference shares for every 7 £1 shares held, fractions ignored. Applications must be received by July 27th, or September 20th for shareholders in the East.

International Tea Company's Stores.—549,752 ordinary 5s. shares are offered to ordinary shareholders registered July 7th at 20s. per share, in the proportion of 1 new ordinary share for every 10 ordinary shares held, fractions being disregarded.

London Brick.—The Board is to issue 200,000 ordinary shares.

Orient Trust.—100,000 £1 shares offered at 21s. per share, in the proportion of 1 new share for every 4 shares held.

CONVERSIONS AND REPAYMENTS

New Zealand Government.—Issue of £3,989,100 3½ per cent. inscribed stock, 1955-60, at par. Proceeds required for repayment of outstanding 4 per cent. stock, 1933-43, on October 15th, holders of which are offered conversion. Ordinary revenue account for year to March 31, 1934, showed deficit of £709,000; favourable visible balance of trade for same period, £19,907,000. Gross debt, March 31, 1934, £302,792,000; net increase of £20,169,000. Productive assets, £265,000,000; indirectly productive, £40,000,000. Stock redeemable at par by October 15, 1960, by cumulative sinking fund of ½ per cent., or after October 15, 1955, on three months' notice.

The Duchess Property Company, Ltd.—Directors of the company and of Mayfair and General Property Trust, Ltd., propose a conversion scheme involving repayment of 6½ per cent. debenture stock of the company. Stockholders are asked to agree to the trust deed being modified to permit repayment of the whole of the stock in cash, at £104 per cent. on or after October 1, 1934, on seven days' notice. Mayfair and General Property Trust, Ltd., propose to issue £200,000 5 per cent. first mortgage stock repayable by July 1, 1969, at £102 10s. per cent., and stockholders of Duchess Property Company will be offered conversion into the new stock.

New Brunswick Railway (5 per cent. bonds).—The latest date for conversion of holdings into 4 per cent. debenture stock is July 24th. Bonds must be lodged with Baring Brothers & Co., 8 Bishopsgate, E.C.2.

Trinidad Government 4 per cent. Loan (1917-42) and 3 per cent. Loan (1922-44).—The above loans will be repaid on January 15, 1935.

United Molasses Company.—It is intended to redeem £350,000 6 per cent. income debenture stock. The stock will be selected by drawing on July 24th, and notice will be given on or before July 31st to holders of drawn stock.

FORTHCOMING ISSUES

Airspeed (1934), Ltd.—The prospectus for an issue at par of 400,000 5s. preferred ordinary shares will be published on July 23rd. The lists will open July 24th.

Murchison Gold.—An issue will be made next week.

New Robinson Gold.—Subscription list will open July 24th.

South-Eastern Gas Corporation, Ltd.—A resolution increasing the capital to £2,500,000 by creation of 250,000 £1 ordinary shares and 250,000 £1 redeemable 4½ per cent. cumulative preference shares was passed unanimously on July 17th.

Burtol Cleaners, Ltd.—An issue of 760,000 ordinary shares of 5s. each will be made on Tuesday, July 24, at par. The prospectus will show estimated profits for the first financial year of not less than £35,000 and for the second year not less than £61,000. The consideration of £100,000 is to be satisfied as to £40,000 in cash, and as to balance by issue of 240,000 ordinary shares, for which permission to deal will not be sought until available profits are equivalent to 10 per cent. on the ordinary capital in issue.

RESULTS OF ISSUES

Allsopp Brewery Investments.—Holders of £520,275 of the £895,238 6 per cent. debenture stock of Allsopp Brewery Investments effected conversion into 4 per cent. debenture stock. Stock not converted will be repaid on January 1st next at 102.

Carlton Main Colliery.—Cash applications for 4½ per cent. debenture stock closed July 13th.

City of London Real Property.—Issue of debenture stock heavily over-subscribed.

Durban Roodepoort Deep, Ltd.—Shareholders of this company and the New Steyn Estate Gold Mines, Ltd. (in liquidation), have applied for 676,654 shares of the 690,000 new shares of 10s. each at £1 10s. per share.

New Zealand 3½ per cent. Loan.—Cash lists closed 3.30 p.m. July 16th.

Sewern Valley Gas Corporation.—It is announced that this company's offer to the stockholders of Gloucester Gas Light Company has been accepted by a very large majority.

Welsh Associated Collieries.—Lists for issues of debenture stock and preference shares closed at 10.45 a.m., July 18th.

CALLS DUE JULY 23 TO JULY 28, 1934

The grand total of calls falling due in July, 1934, is £38,114,125, which compares with £8,108,501 which fell due in July, 1933. The following calls fall due from July 23, 1934, to July 28, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid
Stock 2/-	Henekeys. (£100,000 4½% Deb. at par).....	£50%	July 23	All
10/-	Henrietta Rubber. (550,000 6% Pref., at par).....	3d. p.s.	July 27	3d. p.s.
2/-	Hepworth and Grandage. (Issue of 100,000 Ord., at 11/-).....	2/6 p.s.	July 23	7/6 p.s. +1/- p.s.
£1	Lower Ancobra (Gold Coast) Areas. (1,250,000 Ord., at par).....	1/- p.s.	July 27	All

COMPANY MEETINGS, &c.

NATIONAL BANK OF NEW ZEALAND, LIMITED

SIR AUSTIN HARRIS'S REVIEW

The sixty-second ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 17th instant, at 17, Moorgate, London.

Sir Austin E. Harris, K.B.E. (the chairman), said that he was sure everybody would join with the board in welcoming Sir James Grose at that meeting.

Despite some improvement in prices and a better tone in the financial and budgetary position in New Zealand, the year had again been very difficult from the banking point of view. The difficulty of earning profits in a time of greatly diminished trade had been till now somewhat mitigated by the fact that they had been able to lend large sums to the Government on Treasury bills, but that channel for the employment of their funds would be closed to them when the Reserve Bank opened on August 1st. In spite of adverse conditions, however, the result of the year's working was satisfactory.

The gross profit, after making full provision for bad and doubtful debts, was £528,000, as compared with £544,000 a year ago, but against that their expenses showed a decrease of £35,000, so that their net profit was £135,000, as compared with £116,000 last year. They proposed to pay a final dividend at the rate of 4 per cent. per annum for the half-year.

As to the exchange position, the favourable trade balance and the accumulation of London funds would not in themselves seem to justify the present depreciated rate of 125, but on the other hand a reduction in the New Zealand rate appeared unlikely so long as Australia maintained her present rate. One of the principal events in the New Zealand banking world during the year under review had been the final formation of the Reserve Bank. With regard to the Reserve Bank, he would only say that the trading banks of the Dominion had proved a bulwark to the country through good times and bad, and there could be no doubt that the development of the Dominion had been attributable in a great measure to the services rendered by them. It was not, therefore, in any way due to the failure of the trading banks that the Reserve Bank was being established, but rather that the development of the international banking situation had indicated a need for establishing central banks for the purpose of effecting international co-operation.

Taking the sterling equivalent and excluding specie, the trade figures for the year ended March 31st last were exports £36,834,000, and imports £20,908,000, giving an excess of exports of £15,926,000, compared with last year's figure of £10,628,000. Imports had decreased by £1,147,000, and exports had increased by £4,157,000. Of the total exports, dairy produce had accounted for 36.7 per cent., wool for 25.2 per cent., and frozen meat for 22 per cent. The actual increases in recorded values were dairy produce £594,000, wool £5,189,000, and meat £1,012,000.

In his last Budget the Minister of Finance estimated that at the end of the financial year there would be a deficit of £2,000,000; but he had now been able to announce that that deficit had been reduced to £709,000. The preliminary figures showed that the revenue had exceeded his estimate by nearly £1,200,000, and expenditure was slightly less than anticipated. It was a matter of gratification that, through the past very difficult years, steps had been taken, without regard to popularity, to make immense sacrifices, with the result that the Budgets of 1932, 1933 and 1934 had turned out better than the most sanguine could have expected.

It must be recognised that in spite of the chaos created by world conditions New Zealand had striven manfully to meet her difficulties, though it could not be expected that there would be any return to complete normality until some of the world problems of the price levels and trade restrictions were solved. The immediate prospects of banking were none too favourable. They were going through a lean time in New Zealand, and bankers there were facing the same troubles that they had experienced in London—the great difficulty of the employment of their super-abundant funds, but, so far as they were directly concerned, without the opportunities for profitable investment in short-term securities. He was confident that New Zealand conditions would quickly respond to any favourable turn in world affairs, and that with their large liquid resources they would be in a position to take full advantage when the time came.

Sir James Grose (general manager) said that, taking the Dominion as a whole, he felt it might be said that some confidence was beginning to appear, and, though the lean times were not yet passed, yet a gradual, if slow, improvement might be expected.

The report was unanimously adopted.

UNITED DOMINIONS TRUST, LIMITED

CONTINUED PROGRESS

The twelfth annual general meeting of United Dominions Trust, Limited, was held, on the 19th instant, at the registered offices of the company, Regis House, King William Street, London, E.C.

Mr J. Gibson Jarvie, the chairman and managing director, who presided and moved the adoption of the report and accounts, said that the year's figures again constituted a record, the profits being substantially higher than in any previous year. In recommending that dividends should be paid at the same rate as last year, the directors had remained true to the conservative policy which was so largely responsible for the proud position which the company now occupied. With the transfer of £60,000, the reserve now stood at £325,000.

The new subsidiary, Credit For Industry, Limited, had been formed and designed to meet a specific criticism of the banking system made by the Macmillan Committee by furnishing a new kind of financial service which the committee had declared to be necessary. The company would provide capital of a medium term character to the smaller industrial and commercial concerns whose needs were not large enough to justify the expense of an issue through the usual channels. It was still true that the smaller businesses were the backbone of the country, providing the breeding ground of the energy and ambition which eventually built big businesses.

INUNDATED WITH APPLICATIONS.

The new company had been inundated with applications for loans which had been carefully sifted, and those which had satisfied the principles laid down had been accepted. As was to be expected, many applications had had to be refused, but in a number of cases assistance had been rendered without actually providing money. The new company had been launched with the full support of the City. No loan would be too small for them to consider, but it was not their intention to lend more than £50,000 in any one case, as facilities already existed for capital needs above that figure, while in considering applications, they would bear in mind not only the security available, but also the purpose of the loan. They would not advance money simply to replace another lender, or to cover purchases abroad, but primarily and essentially for the development of British industries.

The parent company was, of course, represented on the board of the new company, but they had two new directors—Capt. Constantine Benson, D.S.O., a director of Robert Benson and Company, Limited, and of Lloyd's Bank, and also Mr C. Bruce Gardner, whose association with the Bank of England was well known; also, as it was their intention to pay special attention to industrial areas, they had agreed to co-operate with the Scottish National Development Council, and would establish a Scottish board. This local board would consist of some very strong names to be announced shortly.

A LOGICAL STEP

The formation of Credit For Industry, Limited, was a logical step in the development of the parent company. United Dominions Trust functioned along specialised lines, extending credit to manufacturers and merchants in order that they in turn might extend suitable medium and long-term credit to their customers. United Dominions Trust (Electric), Limited, specialised in financing everything electrical, from the wiring of small premises to the installation of the biggest type of electrical equipment over periods to suit purchasers. Two new branches had been established at Cardiff and Bristol, making twelve provincial branches; further branches would be established as conditions demanded.

Credit used intelligently could do more to restore prosperity to this country than most people had realised. It was now almost generally admitted that the basic problem facing the world in the post-war years was the distribution of the world's production, and credit, properly used, could do much towards providing a solution. That the business was essentially sound was proved by their own experience of a loss ratio of a mere fraction of 1 per cent., while during the 15 years since its beginning the company, with its electric subsidiary, had financed the movement of British merchandise to a value in excess of £45,000,000. All that indicated the important part their companies had played in the very difficult post-war years, and that they could do much more was undoubted. He was not suggesting there should be an orgy of spending, but he claimed that the spending which took place under the company's various plans was of definite benefit to the country. Whatever might ultimately eventuate from the present chaotic world conditions, if we would but consolidate our domestic position while the opportunity was ours, the country would be in a better state to take its place when the time came.

The report and accounts were unanimously adopted.

ARMSTRONG WHITWORTH SECURITIES

DEPRESSION IN HEAVY ENGINEERING
DIESEL TRACTION DEVELOPMENTS

At the annual meeting of Armstrong Whitworth Securities Company, held in London, on the 19th instant, Major-General Guy P. Dawnay, the chairman, said that with the exception of Craven Bros. (Manchester), in machine tools the main engineering business of the other Armstrong operating companies and commercial shipbuilding had shown no improvement during the year.

After dealing with the accounts, which showed that the company had sustained a loss of £36,694 for the year, while provision of £494,519 had to be added for losses of operating companies, the chairman went on to deal with the operating companies.

Delayed Revival in Heavy Engineering.—There was practically no demand for steam locomotives, boilers and marine engines in 1932 and 1933, the value of work obtainable in the latter year being less than 10 per cent. of the output for which the company was organised in 1929. The result was that provision of over £250,000 for loss had to be made.

Work for the marine engine department was negligible and prices unprofitable. Steady progress had been made in certain heavy engineering products previously made abroad, and prospects were encouraging. Sales of pneumatic tools had steadily increased, and current business showed great promise.

Diesel Traction Developments.—With regard to the Diesel traction department, the company's name was recognised as one of the leaders in this field, the development of which had steadily advanced. Railway authorities, the chairman believed, realised that it has passed the experimental stage, as evidenced by the results of trial units. The London and North Eastern Railway Company had taken two more railcars after eighteen months' trials of the "Tyne-side Venturer." Gratifying reports had been received regarding the 450 h.p. train delivered to the San Paulo Railway and of the 1,700 h.p. units to the Buenos Ayres Great Southern Railway.

The vice-chairman of the company, who visited South America this year, reported increasing interest in Diesel traction. The volume of orders, however, had been slow in materialising, owing to depressed trade and traffics and exchange difficulties. Serious inquiries were, however, being received. Indian Railways were also seriously interested. The company had obtained an order for two 1,300 b.h.p. Diesel electric locomotives for the Karachi-Lahore mail service. This was important, as it was hoped to establish a universal unit to suit the needs of all Indian Railways where favourable conditions exist. The company had orders for railcars for Madras and Southern Mahratta Railway and a Diesel locomotive for Ceylon, whilst the Kalka Simla Railway and the Great Indian Peninsula Railway had a rail coach each.

With its experience and equipment, the company was in a premier position to obtain an increase of business when traffics improved with better world conditions.

Dearth of Shipbuilding.—The shipyard berths had remained empty. The transfer of the Tyne Iron Yard to National Shipbuilders Security, Ltd., had been delayed by the Newcastle Council's objection to the condition of sterilisation for forty years. The company's other two yards were also on lease. It was found advisable to open them and impracticable to dispose of them. The board's policy of liquidating certain deferred shipbuilding debts by foreclosure and sale of ships had resulted in a realised loss which mainly accounted for having to make provision of over £200,000.

Chilled Rolls.—The Close Works of the Ironfounders Company were primarily designed for locomotives and marine engine castings, and provision of nearly £24,000 for loss in 1933 had to be made owing to lack of such work. Business in refined iron had been 20 per cent. greater than 1932. The results this year to date were much better than last, particularly due to the new manufacture of chilled rolls, which are well received by leading rolling mills.

Prosperity in Machine Tools.—Craven Bros. (Manchester) reported a net profit for the year of £56,500 after providing £10,000 for depreciation, retaining a balance of nearly £41,000 at credit of profit and loss account, out of which the Securities Company had received a 15 per cent. dividend. Cravens had made a marked recovery. Their order book was full and now very satisfactorily widespread.

The year 1933 had been the most difficult yet, the chairman stated, and although 1934 showed substantial increases in turnover at Scotswood, the present position and future possibilities were exercising the earnest consideration of the board. With trade and markets changing so drastically measures for husbanding resources were constantly under review.

The report and accounts were adopted.

RHODESIAN ANGLO-AMERICAN, LIMITED

OUTLOOK FOR THE COPPER MARKET

The fifth ordinary general meeting of this Company was held, on the 16th instant, at Winchester House, London. Sir Edmund Davis, J.P., the deputy chairman, presided.

The Chairman, in the course of his speech, said: You will have gathered by the note in the balance sheet that we created and issued on June 30, 1934, £750,000 of 5 per cent. twenty-year sterling debentures. The result of these different operations was a saving of interest—basing the calculation of the American section of the old debentures on the par value of the dollar—of £82,500 per annum.

On the other side of the balance sheet we have our investments at cost, less reserve for depreciation, including £1,126,222 for our shares in the subsidiary company—namely, the Bwana M'Kubwa Copper Mining Company, Limited. These investments, as a whole, show a slight increase of £16,185 when compared with the figure under the same heading at March 31, 1933, but the market price of our investments at the date of our balance sheet, as shown in the note, showed an appreciation of £1,811,327.

Turning to the profit and loss account, in the present instance the total credits amount to £69,360, and include £28,732 of interest earned in an earlier period, but actually received during the year now under review. The debits, details of which are set out, amount to £82,937, the balance being a loss of £13,576. This is almost entirely due to the very large sum invested in Rhokana Corporation debentures being no longer interest-bearing, as in December, 1932, we converted the debentures into shares in the said corporation. The balance referred to we have brought in on the debit side of the appropriation account, and after charging income tax, £9,040, and bringing in to credit the profit on purchase of our own debentures, there remains £202,680 unappropriated profit, which has been carried to the balance sheet.

The two important events in the history of our company during our financial year and to date have been:—

(1) The repayment of our very large debenture debt and the creation and issue of £750,000 of debentures at a much lower rate of interest, which transactions have resulted in a saving of £82,500 per annum, and

(2) The offer to the members of the Bwana M'Kubwa Copper Mining Company, Limited, of an exchange of three shares in our company for every ten of their shares, and so far as the fractions are concerned a payment of 4s. 3d. per share in cash.

Previous to making the offer to the general body of members in the Bwana M'Kubwa Company, who number over 6,400, we negotiated with several of the large holders and obtained their approval for the exchange on the terms mentioned of 885,907 shares, and since then these acceptances have been increased by an additional 169,690 shares.

What must be of interest to Bwana M'Kubwa members is that at the present moment Rhodesian Anglo-American, Limited, has a 44 per cent. interest in Rhokana Corporation's issued capital of 2,442,291 shares, whereas, if the whole of the members of the Bwana M'Kubwa Company accept the offer we have made its interest in Rhokana Corporation will consist of its direct holding of 800,310 shares and the 500,000 shares now held by the Bwana M'Kubwa Company, the total being equivalent to 58.24 per cent. of the issued capital of Rhokana Corporation.

The members of the Bwana M'Kubwa Company, through the exchange into our shares on the basis of the offer, which gives them the larger interest in Rhokana Corporation already referred to, will also secure an interest in substantial holdings in the British South Africa Company, the Loangwa Concessions (Northern Rhodesia), Limited, and the Rhodesia Broken Hill Development Company, Limited.

In the course of the negotiations which have taken place between the boards of the two companies we came to the conclusion that some inducement should be offered to the Bwana M'Kubwa Company's members. At the date the offer was made the relative values, based on market quotations of the assets of the two companies, amounted to 2.7 of our shares for every 10 Bwanas, whereas we have offered three of our shares for every 10 Bwanas.

In our report we have set out particulars relating to the production of blister copper by Rhokana Corporation for the six months ended December 31, 1933, which amounted to 28,874 long tons, all of which had been sold, and we have referred to the latest published figures of cost of the said company, which, excluding depreciation and debenture interest, were a little over £21 per long ton of blister copper sold in European markets. We are now able to add to this information and give you the production for the six months ended June 30, 1934, which amounted to 33,306 long tons, the whole of which has also been sold.

The report and accounts were unanimously adopted.

RHODESIAN CORPORATION, LIMITED

INCREASE OF CAPITAL APPROVED

An extraordinary general meeting of Rhodesian Corporation, Limited, was held, on the 16th instant, at River Plate House, London, to consider a resolution increasing the capital of the company to £2,000,000 by the creation of 3,600,000 new shares of 5s. each.

Captain Hugh B. Jameson (chairman of the company) presided. The Secretary (Mr H. J. Holt) having read the notice convening the meeting,

The Chairman said: Ladies and gentleman,—The only business before the meeting is the submission of a resolution to increase the capital to £2,000,000 by the creation of 3,600,000 shares of 5s. each. Of these, we propose to offer immediately to our shareholders 1,466,666 at 7s. 6d. per share, the remainder being kept in reserve for future eventualities.

The company has had a very successful year of working, but there is still much more to be done. As we told you in our circular, much good business is offering, and we consider the company should be in a position to take the fullest advantage of it. The cash provided by this present issue should enable us to do so. The issue of these shares offers a substantial bonus to the shareholders, and those not desirous of taking up the shares can sell their right to do so. These shares will rank for dividend with those already existing. This company, as you know, acquired through the sale of the farm Maraisdrift a large holding in the East Rand Consolidated, Limited. This latter company is about to float its first subsidiary company—Spaarwater Gold Mining Company, Limited—and we must secure for this company every possible participation. The same applies to further flotations by the East Rand Consolidated, Limited, and others.

While good business is to be had, we feel we must participate to the fullest possible extent and endeavour to consolidate in every way the position of our company.

I will now move: "That the capital of the company be increased from £1,100,000 divided into 4,400,000 shares of 5s. each to £2,000,000 divided into 8,000,000 shares of 5s. each, and that such increase will be effected by the creation of 3,600,000 new shares of 5s. each ranking *pari passu* in all respects with the existing shares in the capital of the company."

Mr A. Burt seconded the resolution, and, the Chairman having replied to questions, it was duly carried.

The meeting ended with a hearty vote of thanks to the Chairman and directors.

EAST ASIATIC RUBBER ESTATES, LIMITED

EXTREMELY SOUND POSITION

The eleventh annual ordinary general meeting of the East Asiatic Rubber Estates, Limited, was held, on the 17th instant, at 2-4 Idol Lane, London, E.C.

Lord Hutchison of Montrose, K.C.M.G., C.B., D.S.O., chairman of the company, said that in view of the improved condition of affairs consequent upon the introduction of international regulations for rubber exports, the directors recommended a dividend for the year of 3 per cent. per annum, less tax, and they trusted that they might be able to recommend a larger distribution to the shareholders next year. The financial position of the company still remained extremely sound. The reserve fund, £75,000, together with the credit balance at profit and loss account, totalled £134,463, and those were not merely paper assets, but were represented by liquid cash and British Government securities. They had invested in British Government securities £58,000, which had been taken in the accounts at cost, namely, £56,453, the market value of which to-day was approximately £59,000. They also had at the date of the balance-sheet £58,753 on deposit at bank and in cash, making a total of £116,753, which was a sound and strong position, following, as it did, four years of unparalleled depression.

Referring to the new rubber control scheme, the chairman said that it was much better than the old Stevenson scheme; it aimed at bringing rubber production into line with world consumption, and, therefore, if consumption could absorb 100 per cent. of production, the elasticity of the scheme allowed for the necessary production. Further, it had reasonable continuity.

The success of the industry depended largely on consumption, but also on efficiency, and the board had given the latter factor great attention. He was glad to think that the outlook in their industry was more promising, and hoped all engaged in it might benefit—not forgetting their staff and employees in the East.

The report and accounts were unanimously adopted.

CONSOLIDATED TIN SMELTERS, LIMITED

THE INCIDENCE OF RESTRICTION

The fifth ordinary general meeting of Consolidated Tin Smelters, Limited, was held on July 19th at Princes House, 93 Gresham Street, London, E.C.

Mr R. J. Hose (chairman of the company) said: The net revenue amounted to £170,977, which, together with the balance brought forward from last year's accounts—£95,700—gives a disposable balance of £266,677. After providing for the full year's preference dividend and writing off £25,000 from the value of shares in subsidiary companies there remains an available balance of £174,453. If you agree to adopt the directors' recommendation to pay a dividend of 5 per cent., less tax, on the ordinary shares, there will remain to be carried forward to the current year's accounts £97,012, a sum slightly in excess of that brought in.

I think you will agree with me that the results of the year's work are satisfactory, particularly if it is realised that owing to the incidence of the International Tin Restriction Scheme, and the consequent shortage of ore supplies, our smelting plants in Liverpool and the Straits Settlements have, during the year, been working at less than 50 per cent. of capacity.

While restriction of output may impose some degree of hardship on a few individual producers, there can, I think, be no doubt that it has been of very material benefit to the industry as a whole. Statistics show that as a result of the scheme the world's visible supplies of tin, which at the commencement of the restriction scheme—March 1, 1931—stood at 51,886 tons and subsequently rose to 60,537 tons by the end of April, 1932, were reduced to 20,066 tons by June 30th of this year, while the price of tin per ton, which at March 1, 1931, stood at about £124 per ton and afterwards fell to about £100 per ton, now stands in the region of £230.

The demand for tin has quietened down somewhat in recent weeks, but this is a normal feature at this season of the year, and barring any serious labour troubles in America, I see no reason for thinking it is more than temporary. In these days of sudden changes it seems imprudent to prophesy. I shall, however, be disappointed if in the autumn we do not witness an improvement in the consumptive demand for tin. You will realise, of course, that this is a matter which we can neither control nor influence.

The report was unanimously adopted.

ESTATES CONTROL, LIMITED

CATTLE PRICE PROBLEM

Presiding at the thirtieth annual general meeting of Estates Control, Limited, held on the 18th instant, Lord Luke said that the balance sheet provided no important change worth drawing attention to. The first three items under investments and sundry investments, etc., at £738,000, were just over £5,000 up on the year.

In the profit and loss account, the profit at £48,021 was an improvement on the previous year, in spite of the reduction of £5,464 in dividends, interest, etc., £4,900 of this drop being due to reduced receipts from estate companies.

As a large shareholder in land and cattle companies of Argentina and Australia the company was naturally much interested in the world cattle supplies question, which was causing so much discussion and heartburning just now.

The Southern Hemisphere had, of course, no ground for complaint against this country, which had for many years imported about half its beef requirements from abroad. Any feeling of injustice harboured by cattle owners south of the Equator must be against those European and North American markets that had been absolutely closed to them.

As regards this country, he had always been in favour of a duty rather than a quota; in fact, he suggested one in 1928. With a quota they would never know by how much the price of beef had been raised, but with a tariff they would know pretty well how they stood.

The main problem about cattle raising was that it was the price three or four years ahead that they desired to know, and with the variations in values that were taking place in the world to-day it was not possible to form any definite idea of values so far ahead. But one thing they could be pretty sure of was this: that with the losses being made in the cattle business all over the world many farmers would drop out of the race, and unless there was more likelihood of higher prices in, say, 1938, the cattle would simply not be raised.

Fortunately the company held lucrative investments in concerns altogether unconnected with land and cattle, and that accounted for the prosperous appearance of the balance sheet.

The report was unanimously adopted.

THE TRUSTEES CORPORATION, LIMITED RECOVERY IN CAPITAL VALUES

The ordinary general meeting of the Trustees Corporation, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London.

Sir George A. Touche, Bart. (the chairman), after expressing regret at the absence through illness of Mr. Gilbert Taylor, the managing director, said that the feature of the year to May 31st last was the increasing and almost universal disrepute into which foreign investments had continued to fall.

Interest and dividends from investments, after deduction of income tax, amounted to £109,127, a fall of a little more than 1½ per cent. That compared with a fall of 13.8 per cent. in the total earnings of 75 investment trusts which had published their reports during the first four months of the current year. Sixty-four per cent. of the book value of the corporation's holdings was represented by investments in Great Britain and British Dominions and Dependencies. In the previous year and in the year under review the percentages of the total revenue derived from that category of investments were 72 per cent. and 76½ per cent. respectively. Moreover, those investments represented nearly 78 per cent. of their total valuation at May 13th last.

At the end of their fiscal year in 1933 they had had to report a depreciation on the amount at which the investments stood in the balance sheet, that depreciation being then covered by the reserve fund with a substantial margin. Recovery on capital account had been speedy and considerable during the last 12 months. At May 31, 1934, they were able to state that according to a valuation of the quoted securities based on market quotations and on an estimate of the value of unquoted securities, the aggregate amount at which the investments stood in the balance sheet was more than represented.

The result from the house department must be considered not unsatisfactory. Revenue from Winchester House and the Liverpool Safe Deposit, at £19,793, showed a reduction of £1,390. Winchester House remained very popular as a recognised City centre for meetings.

The directors recommended a final dividend on the ordinary stock at the rate of 11 per cent. per annum, making a total of 7½ per cent. for the year.

The report and accounts were unanimously adopted.

SOUTH AFRICAN BREWERIES, LIMITED A SUCCESSFUL YEAR

The twenty-ninth ordinary general meeting of The South African Breweries, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, E.C.

Mr. John Stroyan, J.P., D.L. (the chairman), presided.

The Secretary (Mr. William Lance) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said that it was his privilege for the 19th year in succession to preside at the annual meeting of this important and successful company. During those years the company had expanded and prospered greatly, and its outlook had never been clearer, or its prospects brighter, than they were to-day. Of the last three rather trying years, the company had found the one under review the most satisfactory, for, although their profits were somewhat less, they had been earned entirely in trading, whereas from the time when Great Britain abandoned the gold standard until South Africa followed her, they had been getting large profits on exchange; but the operation of that exchange had been killing South Africa's exports, with the exception of gold, and steadily impoverishing the country. It was with feelings of deep relief that the directors had learned of the ultimate decision of the Union Government to leave gold. South Africa had benefited much from that decision, and so had the business of the company.

After full consideration the board had decided to recommend the transfer from the unnecessarily heavy carry-forward to credit of a dividend protection account of £150,000 for use should necessity arise. In view of the prospects for the new year and the outlook generally, he could see no likelihood of their having to apply for assistance to the new fund at an early date, and in view of the brighter prospects for the immediate future of South Africa, the use of that sum would be valuable in an expanding business.

The Union of South Africa's financial position was one of great strength, and he felt that the day of rapid progress and of big things was at hand out there, and that a really great and virile people would have its opportunity. With the recent death of racialism, a new South Africa had been born, and in combination of the two great white races South Africa would take her stand, and her influence would be felt for good in the councils of the world.

The report was unanimously adopted.

EAST RAND CONSOLIDATED, LIMITED THE SPAARWATER FLUTATION

The ordinary general meeting of this company was held on the 16th instant, at River Plate House, London.

Captain Hugh B. Jameson (the chairman) said that to-day their cash resources amounted to approximately £687,000. In addition, they had £135,000 invested in first-class securities. At the last annual meeting the company's properties had consisted of the freehold and mineral rights of Tulipvale, of 758 acres, and the mineral rights over the eastern portion of farm Klippoorstje, approximately 1,659 acres. The reorganisation of the capital had been duly carried through, and the acquisition of further properties had been completed. He thought they were fortunate in owning either the freehold or the mineral rights of what he thought he might describe as a compact block of ground favourably situated in the Far East Rand.

An immense amount of working capital would be required to develop the areas, and the work would be done by means of subsidiary companies. The first of these, the Spaarwater Gold Mining Company, Limited, would, so soon as details had been agreed with the Mining Leases Board in South Africa, be registered with a capital of £2,000,000 in shares of 5s. each.

It was the intention of the directors, who were responsible for the flotation of the Spaarwater Company, to arrange that shareholders of this company should be given the opportunity of subscribing at par for a proportion of the working capital; but, until the scheme had been approved by the Mining Leases Board, he could not say what that proportion would be. Shareholders would also be given the right to participate in the other subsidiary companies which would be formed.

It would, no doubt, interest them to learn that in view of satisfactory reef exposures on their farm Poortje, their consulting engineer, Mr. J. L. Van Eyssen, was recommending an extended programme of development, including the sinking of two vertical shafts to intersect the reef at a depth of approximately 600 ft. They had been doing a considerable amount of prospecting work on the surface of Maraisdrift and Poortje, and their consulting engineer was sufficiently impressed by the development, especially as regards length of strike, that he sent them the recommendation to sink the two shafts which he had referred to. He looked forward with confidence to the future.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 14, 1934, amounted to £12,931,000, against ordinary expenditure of £6,411,000. After allowing for a decrease in Exchequer Balances of £129,786 the operations for the week, as shown below, decreased the National Debt by £6,505,000 to approximately £8,077 millions.*

(000's omitted)			
3% Funding Loan	+ 200	Public Department Advances	- 2,550
		Treasury Bills	- 3,830
		N. Atlantic Shipping Issues	- 25
		National Savings Certificates	- 50
		P. & O. Teleg. Capital Expenditure	- 250
	+ 200		- 6,705

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

REPORTS AND NOTICES

BANKS

MARTINS BANK LIMITED.—The directors announce that Mr
Edward B. Orme has been elected to a seat on the London board
of the bank.

RAILWAYS

MEXICO TRAMWAYS COMPANY.—Bondholders of Mexico Tram-
ways Company are reminded of the arrangement which their com-
mittees have negotiated with the company and which will be sub-
mitted to bondholders on July 16th next for their confirmation. In
view of the importance of this arrangement, bondholders are
recommended to obtain a copy of the joint report of the com-
mittees, and if they are in agreement with the committees' sug-
gestions, to make arrangements without delay for the deposit of their
bonds in order to obtain voting certificates.

INSURANCE

**ROYAL INSURANCE COMPANY, LTD., AND THE LIVERPOOL AND
LONDON AND GLOBE INSURANCE COMPANY, LTD.**—At meetings of
the Board of the Royal Insurance Company, Ltd., and of the board
of the Liverpool and London and Globe Insurance Company, Ltd.,
Mr Arthur E. Pattinson was elected chairman in succession to the
late Mr A. Allan Paton, C.B. Mr Pattinson was appointed a
director of the "Royal" in 1917 and a deputy-chairman in 1927.
He became a director of the "Liverpool and London and Globe"
in 1928 and has been a deputy-chairman of that company since 1929.

FIRTH-VICKERS STAINLESS STEELS, LTD.—Thos. Firth and John Brown, Ltd., and The English Steel Corporation, Ltd., announce that a preliminary agreement has been entered into for the formation of a new company to acquire as from October 1, 1934, their respective businesses as producers of stainless and Staybrite steels. This agreement will require the consent of the debenture stock holders of Messrs Thos. Firth and John Brown, Ltd. The new company will be called "Firth-Vickers Stainless Steels, Limited" and Messrs Thos. Firth and John Brown, Ltd., and Messrs The English Steel Corporation, Ltd., will each hold one-half of the subscribed capital. This arrangement is confined to stainless and Staybrite steels, and will not affect the other activities of the parent companies.

MELSO, LTD.—The directors are advised by the company's brokers that the fact that both classes of stock have, since the conversion, been quoted on the Stock Exchange at a price per £100 of stock, has tended to discourage dealings to such an extent that the market for the stocks has become practically non-existent. Notwithstanding every effort being made, the Stock Exchange authorities will not agree to quotation of the stocks for £1 units of this company, in consequence of the comparatively small amount of the aggregate stock of each class. The directors have, therefore, decided to recommend a reconversion of the preference stock into fully-paid preference shares of £1 each, and the ordinary stock into fully-paid ordinary shares of 5s. each. The proposal will be considered at an extraordinary general meeting to be held on July 27th.

OIL OUTPUTS

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended July 14th: Venezuela, 18,725 barrels; Trinidad, 29,089 barrels; total, 47,814 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of June amounted to 96,346 barrels, or approximately 13,764 tons.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Company for June is cabled as 22,858 tons.

PHENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group of companies for June was 70,766 tons.

STEUA ROMANA (BRITISH), LTD.—Production for the Steaua Romana Company, Bucharest, for the month of June was 107,159 metric tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended June 2, 1934, was 155,000 barrels. Production for the week ended June 9, 1934, was 163,000 barrels. Production for the week ended June 16, 1934, was 322,000 barrels. Production for the week ended June 23, 1934, was 330,000 barrels. Production for the week ended June 30, 1934, was 318,000 barrels. Production for the week ended July 7, 1934, was 319,000 barrels.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended June 9, 1934, was: Bolivar district, 658,880 barrels; Maracaibo district, 32,285 barrels; total, 697,165 barrels. Production for the week ended June 16, 1934, was: Bolivar district, 669,511 barrels; Maracaibo district, 38,338 barrels; total, 707,849 barrels. Production for the week ended June 23, 1934, was: Bolivar district, 674,765 barrels; Maracaibo district, 37,548 barrels; total, 712,313 barrels. Production for the week ended July 7, 1934, was: Bolivar district, 678,681 barrels; Maracaibo district, 37,322 barrels; total, 716,003 barrels. Production for the week ended July 14, 1934, was: Bolivar district, 667,905 barrels; Maracaibo district, 37,559 barrels; total, 705,464 barrels.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

CONTINUED reports of reduced crops in the United States and Canada have again influenced the wheat market during the past week, and quotations show a further substantial advance. The upward movement has been shared by the majority of other cereals, but quotations for coffee, cocoa and tea have tended to decline. Supplies of new potatoes are increasing, and prices have fallen this week.

Fairly favourable reports have been received regarding the iron and steel industry, and there appears to be a prospect of an improving demand in the steel and engineering trades. Exports of Sheffield products showed some improvement in June, but progress is regarded as being somewhat slow. In the tinplate industry an international agreement has been reached for the periodical determination of export prices and for the division of overseas markets by means of a quota scheme. The minimum price of tinplates has risen from 17s. 3d. to 18s. per basis box, and hopes are entertained that orders in the next few weeks may be of considerable dimensions. Prices of non-ferrous metals are generally lower on the week. Although, contrary to anticipations, the output of spelter showed a decline during June, an improvement in the price of this commodity appears unlikely in the near future. Coal continues to meet a quiet trade owing to the holiday period, and orders for export are not easy to obtain.

The price of raw cotton was advanced this week, following reports of crop deterioration in the U.S.A., but buyers of cotton cloth are reluctant to raise their offers. Trade for wool is depressed, with prices showing a downward tendency; stocks in the producing areas are large and buyers appear to be hesitant.

Moody's index of the dollar prices of staple commodities (December 31, 1931=100) advanced from 141.1 on July 11th to 144.7 on July 18th, the rise in grain prices and in cotton being chiefly responsible for the increase.

COAL

SHEFFIELD.—Depression is general in the South Yorkshire coal market. Export trade in best steams is not easy to obtain, and prompt business is rendered difficult by the small output quota. This may be increased temporarily. Prices are firm at 16s. to 16s. 6d. f.o.b. Tonnage of fuel going to industrial works continues at a fairly high level. Trade in house coal is extremely flat, the amount of business passing being less than in previous summers. Producers are seeking to tempt purchasers by means of cut prices. Nominal prices of best house coal are from 20s. to 22s. at pits. Blast furnace is a strong feature, with no surplus of small coal. This fuel is worth from 13s. to 14s. at ovens.

NEWCASTLE-ON-TYNE.—Increases in shipment figures were recorded at most ports on the North-East last week, which seems to indicate that bookings for delivery this summer must have been substantial, as new business for prompt shipment is completely absent. There is a good inquiry for Northumberland steam grades for shipment from the autumn, and there are good bookings for winter trade. All classes of Durhams are quiet and meet with little inquiry. Foundry and furnace coke continues to be a good market, the shipment trade being satisfactory, and the demand from inland sources remains at a high level.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 13s. 6d.; smalls, 11s.; Howards, Bentinck, Newbiggin, screened, 13s.; smalls, 11s.; Tyne Prime large, 12s. 9d.; smalls, 11s.; Hartley Main, large, 13s.; smalls, 11s. DURHAM.—Lambton, 11s.; South Hetton, screened steam, 15s. 2d.; smalls, 12s.; Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and district gas coke, 20s. 3d.

GLASGOW.—Owing to the holidays the Scottish market has been quiet, with little new business arranged. The Lanarkshire and Fifeshire collieries have been on holiday this week, and next week the Lothian collieries will be at a standstill. Most qualities of coal are firm. Although the market is not being fully tested at present, the indications are that once business is back to normal prices will be at least up to the levels ruling before the stoppage.

Export prices f.o.b. district ports:—LANARKSHIRE.—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 3d. to 14s. 6d.; navigation, unscreened, 12s. 9d. to 13s.; Hartley, 14s. 6d.; steam, 12s. to 12s. 6d.; trebles, 13s. to 13s. 6d.; doubles, 12s. to 12s. 6d.; singles, 12s. 6d.; pearls, 10s. 6d.; dross, 9s. 9d. FIRE.—Best unscreened navigation, 12s. 9d. to 13s.; unscreened navigation, 12s. 3d.; first-class steam, 13s. to 13s. 3d.; third-class steam, 12s.; trebles, 13s. 6d. to 15s.; doubles, 12s. 6d. to 13s.; singles, 12s. 6d. to 13s.; pearls, 10s. 6d. LOTHIANS.—Prime steam, 12s. to 12s. 6d.; secondary steam, 11s. 9d.; unscreened navigation, 12s. 6d.; trebles, 13s. 6d. to 14s. 6d.; doubles, 12s. to 12s. 6d.; singles, 12s. 3d.; pearls, 10s. 6d. AYRSHIRE.—Unscreened navigation, 13s. 6d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s. 6d.; pearls, 11s. 6d. to 12s.; dross, 10s.

CARDIFF.—The position on the Cardiff coal market is practically unchanged. Shipments at the South Wales ports last week totalled 265,775 tons, compared with 370,180 tons the previous week and 356,219 tons in the corresponding week last year. During the present week more than a third of the available berths at the six ports under the control of the Great Western Railway Company have been idle, and the question of permanently closing down a number of the loading berths is again receiving the attention of the dock authorities. There are a few contract inquiries in the market, but none of any importance, although news is awaited concerning the tenders offered some weeks ago for the supply of 200,000 tons of small coals for a South American electricity contract. Prices are unaltered and are generally ruling at the scheduled minimum figures. There has been no further development in connection with the dispute between the colliery owners and the workmen over the terms of a new wage agreement.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18

GLASGOW.—Quiet conditions rule in the West of Scotland this week as holidays are being observed not only in Glasgow but at the steel-making and other plants in the various Lanarkshire towns and in the surrounding districts. At the shipyards work is entirely suspended and in only a few of the manufacturing workshops will work be in progress during the present week. In most industries a re-start will be made next week, and in the heavier trades the amount of work on hand is quite considerable, there being prospects of regular employment for some time to come.

CARDIFF.—On the Swansea Metal Exchange on Tuesday Sir William Firth, the Chairman of the Tinplate Manufacturers' Association, communicated the terms of the international agreement reached in Paris over the week-end for the regulation of the export prices of tinplates and the division of the principal overseas markets. The scheme provides for the periodical determination of c.i.f. prices and also of quotas for the principal markets. The immediate effect of the agreement in South Wales has been the raising of the minimum price for tinplates from 17s. 3d. per basis box to 18s. It is understood that a large volume of business has been held back pending the conclusion of the international negotiations, and that considerable orders are expected to be placed locally during the next few weeks. Galvanised sheets are unaltered in price at from £11 5s. to £11 15s. per ton and steel bars at £5 per ton delivered. There was a further drop in exports of tinplates from Swansea last week, the official total being only 62,948 boxes compared with 83,863 boxes the previous week. The result has been an increase in warehouse stocks from 116,464 to 133,944 boxes.

OTHER METALS

The tendency in the metal markets showed no change in the week ended last Wednesday. Tin was again supported by the "usual group," but trade for other metals weakened further.

The price of copper reached a new low level on Tuesday (£29 3s. 9d. per ton standard cash) and, as is natural, this decline caused a slight reaction. The trend still seems to be downward, all the factors tending to depress prices being still present. The usual unofficial statistics, which have just been published, reveal a decline in world stocks of copper during June, amounting to 36,000 short tons, practically, the entire reduction being in American stocks. This figure relates to stocks in the hands of producers, and the decrease appears to be mainly due to larger shipments of copper to Europe. Hence the reduction will afford no stimulus to the market. Scrap copper production in the United States during June, according to the same source, amounted to 34 million lbs., as compared with a primary production of only 31 million lbs. This is another indication of the recent increase in the importance of scrap copper and of its significance in estimating the market situation.

The tendency in the tin market was practically unchanged, the only interesting development being the establishment of the tinplate agreement, which we discuss in a Note of the Week.

No new factors of importance affected the position of the lead market this week and it seems probable that price fluctuations in the near future will be confined within narrow limits. During the past week, both the American and the cartel spelter statistics have been published and reveal a favourable development. Production is declining, the output of spelter in the United States amounting to 25,143 short tons in June, or 5,849 tons less than in the previous month and 7,811 tons below the level for January, 1934. Production in other areas also declined in June, according to the cartel statistics, and totalled 19,556 metric tons—a reduction of 2,667 metric tons on the month. Deliveries in the world as a whole being maintained, stocks in the United States declined by 5,043 metric tons during June and in the rest of the world by 4,061 metric tons.

At a meeting held in Ostend on Monday last, the life of the international zinc cartel was prolonged until the end of the current year. Details had not been published on Thursday, but it was learned in well-informed circles in London that production quotas were raised by 10 per cent. to 60 per cent. of capacity. But since production was already up to about 60 per cent. of the Ostend basis (companies paying the fixed fines for excess production) it does not seem likely that this revision of the quota will lead to any sharp increase in output. In spite of satisfactory reports, the spelter market has been weak, although it is difficult to assign any special reason for this. The publication of the Report of the Zinc Corporation for 1933 revealed once again that the current low price of spelter is closely connected with declining costs of production. This Corporation was able to reduce its working costs in 1933 by no less than 1s. 9d. per ton of ore worked, which is equivalent to a saving of £31,800 (Australian currency) on the whole tonnage milled by the company. The mining profits of the latter increased from £37,412 in 1932 to £63,819 in 1933.

TIN.—Sales on the London Metal Exchange: 530 tons on Monday, against 120 tons last week; 285 tons on Tuesday, against 300 tons last week; 340 tons on Wednesday, against 385 tons last week. The New York quotation on Wednesday was 51.90 cents per lb., against 51.87½ cents a week ago and 50.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £230 10s. to £230 12s. 6d., compared with £230 15s. to £231 last week. Stocks in London and Liverpool at the end of last week were 3,493 tons, a decrease of 13 tons on the week.

COPPER.—Sales on the London Metal Exchange: 2,000 tons on Monday, against 1,800 tons last week; 3,600 tons on Tuesday, against 3,150 tons last week; 1,900 tons on Wednesday, against 1,500 tons last week. Domestic spot was quoted at 7.20 cents per lb. in New York on Wednesday, against 7.20 cents a week ago and 8.37½ cents a month ago. Wednesday's official closing price for standard cash in London was £29 10s. to £29 12s. 6d.,

compared with £29 13s. 9d. to £29 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 25,790 tons, show an increase of 91 tons, and stocks of rough copper, at 7,261 tons, show a decrease of 12 tons.

LEAD.—Sales on the London Metal Exchange: 650 tons on Monday, against 500 tons last week; 450 tons on Tuesday, against 350 tons last week; 700 tons on Wednesday, against 450 tons last week. The New York quotation on Wednesday was 3.75 cents per lb., against 3.75 cents a week ago and 4.00 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 18s. 9d. for shipment during the current month, compared with £10 17s. 6d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 600 tons on Monday, against 250 tons last week; 550 tons on Tuesday, against 1,000 tons last week; 550 tons on Wednesday, against 450 tons last week. Wednesday's quotation in East St. Louis was 4.30 cents per lb., against 4.35 cents the week before, and 4.20 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 7s. 6d., for shipment during the current month, against £13 8s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs., as against £11 7s. 6d. to £11 10s. per flask of 76 lbs. last week. Foreign antimony was quoted at £35 to £35 10s. per ton, as against £34 10s. to £35 10s. per ton last week. Chinese wolfram was quoted at 40s. to 42s. per unit, c.i.f., as against 40s. to 41s. per unit, c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. —Raw cotton prices have continued to advance on further reports of crop deterioration in the United States. The drought in the Western section of the belt has not been relieved and, owing to excessive moisture in the East, there is more danger of the plants being damaged by the boll weevil. A fresh high level of values has been established for the season. There has not been much evidence of traders following the upward movement and there is a disposition in some quarters to wait for the Government bureau report at the beginning of August, in order to see if the unsatisfactory private advices are confirmed.

COTTON PRICES

In the cloth market there has been rather more inquiry. Most buyers, however, have been reluctant to raise their offers and a substantial part of the demand has been at uneconomic rates. With regard to India, very little business has been done for Calcutta, but increased activity has shown itself in bleaching cloths for Karachi and in printed and dyed goods for the up-country markets. Trade for China has been practically at a standstill. Miscellaneous orders have been obtained, chiefly in printing and finishing styles, for South America, West Africa and the Dominions, but buying for the Continent has been at a low ebb. Some manufacturers have secured a few more contracts for the home trade and rather improved clearances are now taking place. Spinners of yarn have experienced an increased inquiry and possibly a little more business has been done in small lots, but margins have tended to become narrower. Most of the demand in the American section has run on medium counts. Egyptian spinners have not met with much success in securing orders, and export demand remains poor.

WOOL.—Bradford. —The fourth series of Colonial sales has now been concluded, and although competition was somewhat better at the close this was largely due to a slight covering movement on the part of users, in preparation for the longest vacation of the year. Interest now centres in consuming areas, and it is regrettable that conditions are far from satisfactory. There is a marked spirit of hesitation, topmakers, spinners and manufacturers being reluctant to buy beyond their barest needs. Declining values have caused a severe setback in all sections of the trade and have made buyers hesitant with regard to the future. There is also a fairly large carry-over in all wool-producing areas of the Southern Hemisphere. Conditions are no worse in manufacturing centres in the West Riding, although there is now much idle machinery. Active preparations are being made for showing for next Spring, but it is generally expected that wholesale fabric buyers will not begin to place orders or to anticipate their future requirements until September. In the meantime, there has been a revision downwards in the price of all cloths, and it is to be hoped that the decline will be such that merino fabrics will once more become popular. Already manufacturers are offering new cloths, as well as old standard

serges, at rates definitely below those of last January. Wholesale fabric buyers are anticipating a fairly large trade.

The German situation does not show much, if any, improvement, and German representatives who have been in Bradford this week are not too confident regarding the future. Prices are fairly steady, with 64's tops in Bradford selling at from 27d. to 29d.; 50's are at 15d., 46's 10½d., and 40's 9½d.

GRAIN MARKETS

WHEAT.—The wheat market is under the influence of continued reports of reduced crops in the United States and Europe, and crop damage in Canada from drought, frost and vermin. The combined crop of winter and spring wheat in the United States is estimated to be far below home needs, the publication of the official estimate being followed by a sharp rise in prices. The market in this country has been firm, higher prices being asked for all varieties, with Canadian leading the advance.

According to Mr G. Broomhall, total shipments during the past week were 1,233,000 quarters, against 1,027,000 quarters in the preceding week. On Wednesday, "July" futures were quoted in Chicago at 98½ cts. per bushel, against 92½ cts. the week before and 92½ cts. a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 6d. per 496 lbs.,

on the corresponding date last month. Quotations in London, Wednesday: "Plate," landed, 21s. 6d. per 480 lbs., compared with 20s. 6d. last week; "Plate," ex ship, 20s. 6d., as against 19s. 6d. "Plate," July, 20s. 6d., as against 19s. 6d. Yellow maize meal, ex wharf, was quoted £5 15s. to £5 17s. 6d. per ton, against £5 10s. to £5 12s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to July 14	Cwts. 31,037	Cwts. 27,452	Cwts. 27,081	Cwts. 59,590
46 weeks to July 14	4,824,640	3,698,359	3,456,177	6,119,793
Average price of English wheat per cwt.	s. d. 6 4	s. d. 6 5	s. d. 6 8	s. d. 5 6

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 7, 1934	Cwts. 64,080	Cwts. 5,504	Cwts. 23,178	s. d. 5 6	s. d. 6 11	s. d. 6 6
July 14, 1934	59,590	6,874	11,671	5 6	7 3	6 4

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	July 19, 1933	Jan. 3, 1934	July 11, 1934	July 18, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	87½	65½	83	85½
Chicago (No. 2 Winter)	55½	46½	105	84½	92½	98½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 98,457,000 bushels, shows an increase of 2,377,000 bushels. Supplies a year ago stood at 105,431,000 bushels.

OTHER FOODS

SUGAR.—American raw sugar prices have shown a further slight decline, but British refined has been in fair demand this week and quotations have been steady. The spot price of raw sugar in New York on Tuesday was 3-17 cents per lb., as compared with 3-18 cents per lb. last week and 3-13 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 9d. to 4s. 9½d., against 4s. 9½d. to 4s. 9½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	254	1,444	10,534	2,880	34,483	30,695
Liverpool	10,343	6,232	17,127	13,716	164,148	156,229
Total tons	10,597	7,676	27,661	16,596	198,631	186,924
Last week	13,778	1,711	22,441	16,092	215,695	195,844

COFFEE.—Spot prices of coffee on the New York Coffee Exchange are scarcely changed on the week, but future quotations showed a slight rise. On Wednesday Rio No. 7 (cash) was quoted at 9 cents per lb., as compared with 9½ cents per lb. last week, and 10 cents per lb. a month ago. The London coffee market has been quiet, but prices remained steady despite the small turnover. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 43 bags; exported, 1 bag; stocks, 29,223 bags, against 29,109 bags a year ago. Central American, landed, 791 packages; delivered, for home consumption, 3,111 packages; exported, 367 packages; stocks, 114,389 packages, against 101,503 packages last year. Other kinds: Landed, 994 packages; delivered, for home consumption, 1,888 packages; exported, 355 packages; stocks, 108,145 packages, against 98,148 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, June-July, was 21s. 9d. per 50 kilos, c.i.f. Continent, as against 24s. 3d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 4,634 bags; delivered, for home consumption, 3,682 bags; exported, 803 bags; stocks, 262,558 bags, against 175,612 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 16,027 packages of Indian and 37,426 packages of Ceylon

tea. The easier tendency of prices, noticeable a week ago, gave way to a downward movement on Monday and Tuesday. On Wednesday the market was steadier. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land
July 13, 1933	d. 9-91	d. 9-77	d. 11-83	d. 7-87	d. 8-59	d. 10-17
June 14, 1934	12-99	13-23	13-49	10-81	10-67	12-49
June 21, 1934	12-93	13-01	13-21	11-18	10-75	12-38
June 28, 1934	12-95	13-02	13-24	11-30	10-98	12-47
July 5, 1934	12-01	12-85	13-28	11-13	11-06	12-47
July 12, 1934	13-02	12-74	12-93	10-79	10-61	12-36

RICE.—The "spot" price was 7s. 9d. per cwt. on Wednesday as compared with 7s. 4½d. per cwt. a week ago, while the forward quotation, at 7s. 3d. per cwt., shows a rise of 4½d. on the week. Movements in London during the past week were as follows: Landed, 110 tons; delivered, 42 tons; stocks, 1,026 tons, against 5,504 tons a year ago.

POTATOES.—At the London Borough Market new crop "King Edward" sold at 9s. per cwt., as compared with 10s. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 4½d. per lb. on Wednesday, against 5d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 22 tons; stocks, 228 tons, against 322 tons a year ago. White, landed, 39 tons; delivered, 33 tons; stocks, 6,182 tons, against 983 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 2d. to 3s. 8d. per 8 lbs., as compared with 3s. to 3s. 6d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 6d. to 4s. 4d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 7,715 tons, against 8,698 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87.2 per cent. of the beef supplies, against 85.4 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 82.7 per cent. of the total supply of mutton and lamb, against 83 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OIL AND OILSEEDS.—Very quiet conditions rule in most sections. Supplies all round are good and crushers' requirements small in view of the slow sale of the products. Trade for linseed continues to have an easy tone and it is noteworthy that available supplies for export from Argentina are now approximately equal to actual shipments in the second half of last year and that new crop is already being offered for January and February shipment at a discount. Rather less is expected from India, but world supplies are only 60,000 tons less than shipments in July-December last year. Plate is now offered at £10 10s. per ton for positions to September, and Calcutta at £12 per ton. The quantity now afloat for Europe is 88,400 tons (including 21,900 tons from India), or 10,800 tons less on the week. The total afloat for the United States is 25,500 tons, against 47,000 tons a year ago. Cottonseed is firmer in price but trade is slow. Old crop Egyptian, July loading, is offered at £4 12s. 6d. and new crop, September-October, at £4 16s. 3d. Some support is forthcoming from anticipations of reduced yield of the United States crop.

Vegetable oil meet only a quiet demand. Linseed oil is in more request for late delivery and is steadier in price. Raw oil ex Hull mill for July-August delivery is quoted at about £21 5s. per ton naked, with January-April about the same figure. Cotton oil meets a quiet trade and Egyptian crude ex Hull can be obtained at £12 prompt. Oilcakes are in slightly better demand.

HIDES AND LEATHER.—There has been no improvement in trading conditions in regard to hides, leather and leather goods, during the past fortnight. If anything, the position in some directions has become less promising, and the opinion is expressed that, from now until the break for the August holiday in the shoe industry, there will be a gradual falling off in the demand for leather. This, no doubt, will be the case should the present dry weather continue, but in the event of a lengthy downpour of rain the chance of an increase in the demand for sole leather is more than a probability, as a large percentage of the footwear now in use would be found to be quite unsuitable to withstand the wet.

Although prices for cattle hides remained fairly steady at the Manchester sales this week, several weights in both clear and warbled ox and heifers were ½d. per lb. cheaper at the auctions held at Leeds. Cows and bulls were unchanged at both markets, but the position of calfskins was less satisfactory. The imported hide market has been rather more active at the lower prices ruling, business having been done in wetsalted Argentine ox at 4d. per lb. and in Montevideo ox at 4½d. Dry South American hides meet only a moderate sale, with B.A. Americans quoted at 5½d., while the reduced figures asked for Africans have not stimulated turnover. In the latter, drysalted Capes are offered at 5½d. and 4½d. per lb. for firsts and seconds, ½d. per lb. less being asked for drysalted. A little more interest has been taken in Australian hides.

Inquiry for leather has again been confined in the main to immediate needs, the best business in bottom stock being concerned with medium weight English and wetsalted bends. Light dry hide

bends have been taken in limited quantities, but medium and heavy weights in this type have continued to meet a poor trade. Demand for pinned offal has been slightly larger, but sales of rough shoulders and bellies have been limited. Producers and distributors of upper leathers have found business quiet. Inquiry has been made for future delivery of glacé kid and willow calf, but the actual sales made have not been large. A small business has been done in patent and reptiles, but current requirements are usually concerned with limited quantities of the cheap types of leather for the completion of orders on hand for summer shoes.

RUBBER.—Following a fairly brisk spell, the market this week has been inactive and a further decline in prices has been recorded.

WHOLESALE COMMODITY PRICES

Kölnische Zeitung

the most important newspaper of
WEST-GERMANY

which was first printed 129 years ago. It progressed with the development of trade and industry in the Rhine and Ruhr district. The strong position it established in its early existence, is maintained to-day. It is the authority in Western Germany in all matters relating to politics and economics. Leading politicians, business executives and directors are permanent readers of the Kölnische Zeitung—strong evidence for the reliability of its reports. It is for this reason that subscribers to the Kölnische Zeitung are found in all parts of the world.

UNHAPPY AUSTRIA

YET another storm has broken over unhappy Austria, and for the second time within six months Vienna has been the scene of civil war. If on this occasion the casualty list is small, the death roll is of even greater significance than in February, for it includes the name of Chancellor Dollfuss himself.

The events of the past few hours seem more like a gangster film than the sober record of contemporary history. On Wednesday morning the drama began with the seizure of the Austrian Broadcasting station by a band of Nazis who compelled the announcer to inform the world that the Dollfuss Cabinet had fallen and that the Nazi sympathiser, Dr. Rintelen, had become Austrian Chancellor. The small group of desperadoes who carried out this coup were subsequently overcome and the broadcasting station recaptured. Meanwhile, Dr. Dollfuss had been assassinated in his own Chancellery by a force of some 150 Nazis who, after providing themselves with regular army uniforms from one of the Vienna barracks, overpowered the Chancellery guards, occupied the building, and held the three remaining members of the Cabinet meeting—Dr. Dollfuss, Major Fey and Herr Karwinsky—as hostages. The Nazis' aim was to overthrow the Dollfuss regime, to set up a pro-German-Nazi Government under Herr Rintelen, the Austrian Minister to Rome, who was in Vienna on leave, and who has been known for ten years past to have been in sympathy with the Nazis in his native province of Styria; and so to effect a *de facto*, if not *de jure*, union with Nazi Germany through a partly or wholly Nazi Austrian Government.

But, although there must certainly have been treachery in high places in Austria for the Nazi *putsch* to have been possible and unthwarted—notably in the army, police and Heimwehr—the plot has so far succeeded only in its fell purpose of extirpating Dr. Dollfuss. For Herr Schuschnigg, the Minister for Education, was entrusted by President Miklas with the task of carrying on the Government, in the absence of Prince Starhemberg, the Vice-Chancellor, in Italy. And Herr Schuschnigg, despite Major Fey's and Herr Karwinsky's unenviable position as hostages, finally gave the Nazis twenty minutes to evacuate the Chancellery,

promising them free passage to Germany. This they agreed to after some temporisation, and the two remaining hostages were released—not, however, before the unhappy Chancellor had been allowed to bleed to death from his wounds, unattended by either a doctor or a priest. Dr. Rintelen was arrested, but promptly shot himself; and at midnight on Wednesday Herr Schuschnigg and Major Fey, in broadcast addresses, acquainted Austria and the world with the tragic sequence of events.

At the time of writing martial law prevails throughout Austria, but it appears that what was intended as a deliberate attempt to seize power has failed, and it may well be that the tragic events, following as they do so closely on the bloodshed of a month ago in Germany, will strengthen the determination of the Austrian people to maintain the National front which Dr. Dollfuss strove so hard to establish.

The task will be an extremely difficult one. For at best Austria's corporate unity is a very frail thing and will not easily survive the rifts which have been torn in it by the events of the past twelve months. In past years there were a few who shared Dr. Seipel's dream that post-war Austria, emasculated and defenceless, might well have a great contribution to make towards the salvation of Europe, by the example of her Government and the special characteristics of her people. The distinguishing trait of the true Austrian is toleration, and Dr. Seipel conceived that an island set in the very centre of Europe where trade was comparatively free and the people harboured no expansionist ambition might gradually spread the influence of its culture just as captive Greece in ancient times spread its influence through the Roman Empire. This dream has gone, and far from being a cause of healing, Austria has become the cockpit of Central Europe with powerful neighbours quarrelling over her "vile body."

Nothing but a very strong sense of necessity is likely to heal the internal troubles of the Austrian people, and the task will not be rendered easier by the removal of the one man, who, though forced to adopt methods of terrorism, was most anxious both from policy and from inclination to heal the wounds that had been caused by his

clash with the Socialists. One advantage, which those on whom responsibility now rests will have, is that all Germany's neighbours will wish to isolate these events and prevent them becoming a new cause of international conflict. For the events both of February and of this week Germany must bear a heavy responsibility. Signor Mussolini is justified in his complaint last week that the Nazi propaganda which has been permitted from Germany, even if it has not been definitely stimulated from highest quarters, has overstepped the mark of what is internationally permissible, and that he must hold Germany responsible. It would, however, seem that even the German Government realises the danger of becoming embroiled with other countries on account of the Austrian crisis. The German Ambassador in Vienna has been recalled because he acted without authority in intervening between the rebels and the Government troops in the affair of Wednesday, while the German frontier is to be closed to the fleeing Nazis, who will therefore be interned in Austria.

Such, in bare outline, is the course of events which was intended to open a new chapter in Central European history; and for the moment the only comment that can be made is to commiserate with Austria in the loss of the man who seemed most likely to supply what she needs more than anything else, namely, leadership inspired by understanding. Dollfuss was not by nature designed to be a Dictator. He was not one of those who grasped the sceptre of power by the force of his own dominating personality. A man of the people, trained as a civil servant and an administrator, he belongs rather to the class of those who have greatness thrust upon them. While it may be taken as certain that he would never have assumed his dictatorial position if it had not been for the march of events in neighbouring countries, his quality showed itself in the fact that when the times demanded an unhesitating exercise of authority, he did not shrink from assuming responsibility. If the liberal world condemned him severely for the vendetta that was carried out against the Vienna Socialists in February, it must be admitted that he was between the upper and the nether millstones.

To accept the open collaboration of the Socialists was, on the admission of Otto Bauer himself, an impossibility for Dollfuss in the spring of 1933 when Hitler was seizing power in Germany. To have done so at Christmas, 1933, would have risked driving a large number of Heimwehr sympathisers and others of a moderate point of view over to the Nazis. If Dollfuss had been a greater man, he might have maintained the precarious position, balanced between rival forces, in which he found himself at the beginning of this year—if not indefinitely, at least until external pressure had become relaxed. He failed to accomplish that feat of political dexterity and in failing sowed the seeds of hatred which in spite of his best efforts he was subsequently unable to uproot. Now that he has perished with his task unfinished, his countrymen and many others who have watched his short and dramatic career on the European stage will pay tribute to a man who wrestled valiantly with overwhelming circumstances, who served his country according to his lights without desire for mere personal advantage, and who was murdered at his post.

LABOUR'S PLAN OF ACTION

In certain conditions the issue of a "Programme of Action" by an important political party might be fraught with grave consequences for the nation—for such a choice of policy might well play a leading part in deciding the battle ground of future political controversy, and might ultimately determine the future evolution of the country. It cannot, however, be said that the situation in Great Britain has been either changed or clarified by the document issued by the Labour Party last Wednesday. The reason is that the programme—which bears every sign of compromise—is so vaguely phrased and incompletely thought out as to make it possible for almost all shades of opinion within the party to continue in the pursuit of their pet hobbies.

Many of the statements of the Party's general aims will command wide support. It is, after all, common form that the objective of economic policy is the raising of the stan-

dard of living. All parties—in name at all events—pay lip service to democracy; and though some might read a sinister meaning into the phrase that "a free and prosperous society of equals" is the objective, the reader will quickly be disillusioned if he thinks that Labour policy is designed to secure an economically equalitarian state.

A smaller, but nevertheless substantial, section of the public will accept many of the more specific items of the programme. It is, for example, very widely held that the Government has handled the international situation in so hesitating a way, and made up its mind on great issues so tardily, that this lack of decision is chiefly to blame for the undoubted fact that it has failed in its major objectives; and that better results would have been achieved in this field by a more homogeneous Government with a more specific peace programme. Again, in regard to many matters of social reform—housing and the institution of public works, water supply, land drainage, afforestation—there is little difference of opinion in principle, but only one of energy in application. But as soon as we come to proposals for economic and political reorganisation, more important differences of opinion appear.

In its support of a Socialist reconstruction the Manifesto is quite uncompromising in form. In its view "there is no half-way house between a society based on private ownership in the primary means of production, with the profit of the few as the measure of success, and a society where public ownership of those means enables the resources of the nation to be deliberately planned for attaining the maximum of general well-being." The foundation step of this economic reorganisation is public ownership of key industries and services. "Banking and credit, transport, electricity, water, iron and steel, coal, gas, agriculture, textiles, shipping, shipbuilding, engineering—in all these the time has come for drastic reorganisation, and for the most part nothing short of immediate public ownership and control will be effective." This is not quite public ownership of all the means of production, distribution and exchange; but it is very like the State Socialism of pre-war days for a number of industries, covering a very wide field and chosen not for their suitability for public management, but for the very much less convincing reason that they are all very big and important.

A moment's thought, however, will show the difficulties involved if the State is to own, as well as control, the engineering, shipping and textile industries. Some form of State intervention is obviously possible in these as well as in other industries. Factory Acts, regulations regarding shipping, the use of the tariff, subsidies, the law regarding monopolies, the intervention of Trade Boards, State membership of composite cartels, N.R.A. codes in America, are all ways in which the State can and does intervene to influence the operation, the evolution or the structure of industries, without destroying the stimulus of private profit or denying the advantages of competition. Indeed, in modern times there is scarcely an industry which does not operate within limits defined for it by the decision of the community. But this is a very different thing from State operation. Several of our textile trades are mainly dependent upon their exports, while these and our engineering and iron and steel trades are engaged in producing not only in bulk but also a great variety of miscellaneous products. State operation of highly competitive industries or industries largely engaged in export business is not possible without going the whole length of a complete foreign trade monopoly and an almost complete and detailed "plan" for the internal production of the country. All this is, of course, quite outside the field of practical achievement, and it is to be presumed that the Labour Party is thinking of something very much less extreme than this; but if so we can only guess at the form of increased public control that the Party have in mind. We are not told how the Party proposes to give effect to ownership and control. We are, however, told in general terms that provision must be made to "safeguard the interests of the employees" and that the Labour Party believes "that the employees in a Socialised industry have a right, which should be acknowledged by law, to an effective share in the control and direction of the industry."

The Manifesto in this section seeks to combine sweeping generalisations with reasonableness, for, after explaining that compensation will be paid to existing owners, it states

that its method of dealing with the whole problem "will depend on the actual economic situation when it acquires power." It is not therefore surprising that the only industries with which the report deals in detail are those which have already been the subject of more than usual intervention by the State. In particular, considerable space is devoted to the cases of agriculture, transport and banking. In all three of these the Labour Party is prepared to go the whole hog. Of the three, transport is clearly the one which is most nearly ripe for State operation. In the case of agriculture, the Manifesto refers to State ownership of all land, together with measures to ensure adequate farming, including apparently in some cases direct public farming. The policy may perhaps shortly be described as a combination of the Liberal agricultural policy plans for improving the character of farming, Elliotism in control of the price levels, and Henry George's land nationalisation.

Pride of place, however, is given to banking and credit. There is a case for more specific recognition of the fact that the Bank of England is in effect, if not in name, a public institution; and we see no grave disadvantages, and some advantages, in more formal recognition of this fact, in the placing of a Government representative on the Board, and even, possibly, the approval of the appointment of the Governor by the Chancellor of the Exchequer. But if, according to the Labour Party, the Governor is to be responsible to a Minister of Cabinet rank, who in turn will be responsible to the House of Commons for banking and credit policy, while leaving day-to-day business in the hands of the Governor and his staff, and if this means that the Bank is to be a public department with every change of Bank rate subject to revision by the Cabinet or to questions in Parliament, it involves bringing politics into the business of credit and currency control in a way that has proved disastrous wherever it has been tried. Again, the joint-stock banks are to be merged into a single corporation run by a directorate appointed by the Government. For this scheme there is almost nothing to be said. If there is one complaint which may reasonably be brought against the joint-stock banks to-day it is lack of elasticity. We shall not regain commercial prosperity by tying up our banking system still more tightly with red tape.

As regards the suggestion for a National Investment Board, there is a case for some organ of government which can influence the direction of the flow of capital into investment. But here again the Manifesto conceives of the State's interference not as an influence on development, but as a dictatorship which will ultimately direct the whole activities of the nation in accordance with a national plan. It is on this point that many who sympathise with the idea that industrial and commercial activity must be dominated, more than in the past, by the conception of service to the public, part company with the Labour Party. And if our Labour leaders will only look round the world they will see that they are out of the main current of twentieth-century developments. "Planning," in the sense in which they have used the phrase, may be possible in a comparatively undeveloped country such as Russia, but elsewhere, and notably in the United States under President Roosevelt, they will find that the tendency is to try to reach what they have rejected as a possible half-way house, namely, a reformed capitalism utilising the immense driving force, elasticity and experimentalism of private enterprise, while at the same time limiting it within the requirements of the public interest. In saying, therefore, that the continued existence of the Liberal Party is a tragic anachronism and a standing dis-service to the causes of democracy, freedom and peace for which it "used to stand," the Labour Party is guilty of an arrogant assurance which is justified neither by the success of its past administration, nor by the wisdom of its Utopian proposals.

Whatever views, however, may be taken on these and many other subjects dealt with in the Manifesto, it has one outstanding merit when it comes to discuss political organisation, which shows that the Party is still within the British tradition, and that is the unequivocal declaration "that its whole faith reposes in the achievement of change by the process of consent." If the Labour Party will adhere to that main principle, we have sufficient confidence in the democracy of this country to believe that in the long run it will not stray far from the courses dictated by common sense.

A REPRIEVE FOR FRANCE

It is a matter for general relief and congratulation that the Cabinet crisis in France, which was precipitated by Monsieur Tardieu's action on the Wednesday of last week (July 18th), has been settled, this Tuesday, the 24th, by Monsieur Doumergue. If Monsieur Doumergue had failed, in face of this blow at the party truce, to hold his Cabinet together, it is almost certain that the consequences would have extended far beyond the fall of the present French Coalition Government. Monsieur Doumergue's failure would have been the signal for a fresh outbreak of political disorder in France; and serious internal disorder in France at this moment would inevitably have profound effects—and wholly pernicious effects—upon the international situation in Europe. Monsieur Tardieu's thrust and Monsieur Doumergue's parry are thus matters of close concern to all of us. In a most difficult crisis, which has been wantonly and unexpectedly brought upon him, Monsieur Doumergue has scored a notable success; but the success amounts to no more than this, that he has maintained the reprieve for the Parliamentary system in France which he originally obtained when he took office. The reprieve still holds; but it will run out when the next General Election is held in October; and meanwhile, the French National Government, though it still stands, has received a severe shock. This is rather serious, because it seems likely to accentuate the negativeness of the Doumergue Administration; and this negativeness is a terrible weakness and danger in a Government which has to give satisfaction to an electorate that is impatient for fundamental political and social reforms.

The political outlook in France can hardly be apprehended without some study of the general political background, as well as of the actual "incident" which brought on last week's crisis.

The crisis—to deal with that first—arose out of an unmeasured and undocumented personal attack on the former Socialist-Radical Prime Minister, Monsieur Chautemps, which was delivered by Monsieur Tardieu on the 18th of this month in giving evidence before the Stavisky Committee. Monsieur Tardieu alleged that a name—looking something like Monsieur Tardieu's own—which has been found on the counterfoil of a cheque of Stavisky's for 300,000 francs, was a forgery which had been committed by a police inspector called Bonny at the instance of Monsieur Chautemps, when the latter was Minister of the Interior. He added the allegation that Monsieur Chautemps had afterwards dismissed Bonny in order to cover his own tracks. Monsieur Tardieu's defence of his action is that he was giving evidence, under compulsion, on a point involving his own good name, and that in these circumstances his attack on Monsieur Chautemps cannot properly be regarded as a political act.

The answer is that, as a matter of fact, the counterfoil in question has not been taken as an indication of Monsieur Tardieu's guilt; that his so-called "evidence"

against Monsieur Chautemps was a bare assertion which he entirely failed to support by testimony; and that a politician of Monsieur Tardieu's experience must have known perfectly well that, in thus insulting so prominent and respected a leader of the Socialist-Radical Party he was making further collaboration impossible.

It seems to be a fair inference that, in attacking Monsieur Chautemps before the Stavisky Committee, Monsieur Tardieu was deliberately aiming at a break-up of the Doumergue Government, which could hardly have survived the resignation of either himself or his friends on the one side or of the Socialist-Radical colleagues of Monsieur Doumergue on the other. This manoeuvre has been foiled by Monsieur Doumergue's success, this Tuesday, in compelling Monsieur Tardieu to remain in the Government under a public stigma of censure which has been sufficiently strong to induce the Socialist-Radical Ministers to remain in the Government likewise. Yet, because Monsieur Tardieu and his friends have been foiled this once, it must not be assumed that they will not try again; which makes it important to know what they are working for.

Monsieur Tardieu's manoeuvre becomes comprehensible when it is seen as one move in a sustained campaign against the Socialist-Radicals which he has been waging in alliance with the anti-parliamentarians of the extreme Right, like Monsieur Henriot and Monsieur de Kerillis. The propaganda of this group has been doing its utmost to confound the Socialist-Radicals with the Socialists and Communists, under the common epithet of "freemasons," as a corrupt and subversive party with which the bourgeois parties to the right of them ought to break off all relations. This, of course, is directly contrary to the policy of Monsieur Doumergue and President Lebrun and the—happily—very large body of sane and responsible public opinion in France which thinks and feels with them. In this policy, the maintenance of co-operation between the Socialist-Radicals and the Right is a cardinal point, because it is only on this basis that a French Government can now hold office with the constitutional mandate of support from a majority in the Chamber representing a majority of the electorate. If the Right were to push the Socialist-Radicals aside and attempt to govern France without them, they would be forced very quickly—in effect, if not in form—to abandon the constitutional parliamentary basis and set up something like a Fascist dictatorship.

This may be what Monsieur Tardieu and his friends are ultimately aiming at; and they may calculate that, in the *Croix de Feu* and the *Ligue des Jeunes Patriotes* and the other semi-Fascist organisations which showed their capacity for violent "direct action" last February, they possess a strong enough following to carry their project through. At any rate, the prospect of some kind of Fascist revolution in France has become sufficiently serious to have caused the Communists and the Socialists to make common cause against it. On the 16th of this month, two days before Monsieur Tardieu launched his attack on Monsieur Chautemps, this common front was established. Anti-Fascism is certainly the mainspring of this united Left front in France; but incidentally the establishment of this Marxian common front will have, like the Tardieu campaign, the effect of weakening the Socialist-Radicals. Presumably it precludes any renewal of the electoral agreement between the Socialists and the Socialist-Radicals which, at the last general election, brought both parties great gains and made it possible for the Socialist-Radicals to take office. The next time the Socialists make a cartel, it will have to be with the Communists; and the Socialist-Radicals will be left in the lurch.

It will be seen that there is an intimate connection between the fortunes of the Socialist-Radical Party and the prospects of parliamentary government in France. If the present parliamentary coalition between the Socialist-Radicals and the Right is maintained, then, on sufferance and for a season, parliamentary government can be carried on. On the other hand, if the Socialist-Radicals are squeezed out or paralysed, then the future political and social regime in France will probably be decided by a head-on conflict between an anti-democratic Marxian faction and an anti-democratic Fascist faction in the country. Whether this disastrous *dénouement* can be averted will largely

depend upon how the Socialist-Radicals fare. They are undoubtedly being weakened in a number of ways: by the widening of the gulf that separates them from their possible allies, both on the Left and on the Right; by the implication of a number of their leaders in the Stavisky scandal; and by the widespread popular disgust with traditional "machine politics," which the Stavisky scandal has brought to a head. On the other hand, the Socialist-Radical Party organisation is reported to have kept its hold over the constituencies, particularly in its traditional strongholds. In October, we shall know. Meanwhile, let us be thankful that Monsieur Doumergue has won this three months' grace.

OUR AGRICULTURAL POLICY—I

So many experiments have recently been tried and so many forms of Government intervention adopted in the endeavour to rescue British agriculture that the public conception of our agricultural policy is in danger of becoming confused and consequently uncritical. It may therefore serve a useful purpose to set out the main stages of its development and the chief types of schemes which it comprises.

THE origin of our new agricultural policy is to be found in the fall in world agricultural prices brought about by the crisis and the consequent shrinkage in general consumers' purchasing power. Certain staple commodities, such as wheat, began to fall in price before the actual break-up of the general economic boom in the autumn of 1929. But after 1929 the prices of these staples continued to fall, and the prices of all other agricultural commodities began to fall with them. The following table shows the progress of the fall in prices, as it affected British agriculture (Ministry of Agriculture's Index of Agricultural Prices: 1911-13 = 100):—

	Cereals	Livestock products	Fruits and Vegetables
1925-29	142	152	172
1930	106	147	121
1931	86	127	134
1932	87	114	175
1933*	82	115	143

* Provisional.

The fall in the prices of cereals and of fruits and vegetables, it will be noted, was severest in the first two years of the depression (1929-1931), while the fall in livestock prices did not become pronounced till 1931.

In general, this fall in British prices was due to a shrinkage in consumers' sterling incomes rather than to an increase in supplies, imported or home-produced. Total imports of wheat and wheat flour (in terms of wheat) were* 126,896,000 cwt. in 1929-31, 117,493,000 cwt. in 1932, and 126,074,000 cwt. in 1933. †Home production fell from 27,600,000 cwt. in 1922-31 to 23,291,000 cwt. in 1932. Yet prices dropped. †Beef imports fell from 12,866,000 cwt. in 1929-31 to 12,175,000 cwt. in 1932, and home production of beef and veal fell from an average of 12,249,000 cwt. for 1923-24 to 1930-31 to 11,532,000 cwt. in 1931-32. Imports of mutton and lamb, bacon and butter, on the other hand, increased slightly up to 1932. Broadly speaking, however, we may say that the natural consequence of the crisis, before the Government intervened, was for a smaller volume of consumers' sterling income to buy about the same physical volume of food products at lower prices per unit. The consumer, in fact, was being saved by falling prices from the effect of a falling money income, but the farmer was losing.

At this point the Government decided to step in and assist the farmer at the consumers' expense by restricting the hitherto unreduced supply to the reduced monetary demand. In carrying out this policy, three main methods, with numerous minor variations, have been pursued: (1) the tariff; (2) the quota ("quantitative regulation"); and (3) the processing tax or levy. Some measure of reorganisation of production and marketing has also been carried out in certain cases.

The weapon first used was the tariff, and the commodities selected were those which had already in 1931 borne the brunt of the price fall: fruit and vegetables. Duties

were originally imposed by the Horticultural Products (Abnormal Importations) Act of November, 1931. This Act was superseded in February, 1932, by the Import Duties Act, which imposed a flat rate duty of 10 per cent. on all foreign imports, including eggs, butter, fruit and vegetables, the following commodities being on the free list: wheat in grain, maize in grain, wool, and meat (not meat extracts). By subsequent orders of the Import Duties Advisory Committee additional duties were imposed on certain preserved fruits, canned vegetables, condensed milk, potatoes, fresh fruit, fresh vegetables, fresh flowers, poultry, oats in grain, pearled barley and certain other commodities. Later, by the Irish Free State (Special Duties) Act of July, 1932, heavy duties were placed on imports from the Free State of cattle, sheep, pigs; beef, mutton, bacon and pork; and butter, eggs, cream and poultry. Certain further duties, including a duty on foreign wheat and additional duties of eggs, butter and cheese, were later imposed under the Ottawa Agreements, which were passed into law in November, 1932.

In the spring of 1932, not very long before the Ottawa Conference, the Government turned to wheat, which had fallen to an extremely low price. For a variety of reasons, political as well as economic, a heavy tariff was not imposed; though there is a small duty on all foreign wheat imports and a 10 per cent. *ad valorem* duty on foreign flour imports. The wheat scheme proper, as introduced by the Wheat Act of 1932, and generally known as the "Wheat Subsidy" or "Wheat Quota," is really a complicated processing tax scheme. An adjustable levy is imposed on every sack of flour imported or milled sufficient to provide a fund from which British registered wheat growers can receive payments to bridge the gap between the free market price at the farm of their wheat and a standard price of 45s. a quarter. The amount of wheat on which the "deficiency payment" may be claimed is limited to an "anticipated supply" of home-grown wheat fixed by the Wheat Commission, which administers the scheme, at the beginning of each season. The miller recovers the cost of the levy out of the price of bread to the consumer. In effect, therefore, the consumer pays the miller, the miller pays the Fund, and the Fund pays the farmer.

Ottawa saw the introduction of the import quota into our agricultural policy. Dominion products were guaranteed continued free and unregulated entry, except that preferential duties or "quantitative regulation" might be imposed on eggs, poultry, butter, cheese and other milk products after three years, and on meat after June, 1934. At the same time powers were given, by the Ottawa Act, to the Board of Trade to regulate by order, after consultation with the Ministry of Agriculture, imports of frozen mutton and lamb, and frozen and chilled beef. The grant of these powers in effect sets up an Import Board. An agreed schedule for the progressive limitation of foreign meat imports was also arranged. Chilled beef imports were to be stabilised at their 1931-32 level, while imports of frozen beef and frozen mutton and lamb were to be reduced by

5 per cent. a quarter from January-March, 1933, to April-June, 1934. These reductions have been carried out voluntarily by agreement with the countries concerned. At the same time, the Dominions, by a "gentlemen's agreement" which was not kept, promised to limit their meat imports into this country. This mainly affected mutton and lamb imports from Australia and New Zealand, which were to be stabilised at their 1931-32 level, or slightly increased. These various restrictions were to come into effect in January, 1933. Actually, however, owing to the lowness of prices in the autumn of 1932, a voluntary emergency restriction of imports was arranged with Australia, New Zealand and the South American States. These emergency restrictions, in so far as they affected chilled beef, were continued at varying rates during 1933.

The quota policy was carried further by the series of Trade Agreements with foreign countries concluded in 1933. By the Agreement with Denmark, which runs for three years from June 20, 1933, Great Britain guaranteed duty-free entry into this country for Danish bacon and hams, and a certain maximum rate of duty for butter, cream and eggs. Imports of Danish butter, cream, bacon, hams and eggs were not to be subject to quota regulation "except in so far as may be necessary to secure the effective operation of a scheme or schemes for the regulation of the marketing of domestic supplies of these products." In any case, Denmark was guaranteed a minimum quota of 62 per cent. of total foreign imports of bacon and ham, a minimum quota for butter of 2,300,000 cwt., and a minimum quota for eggs of 5½ million great hundreds (with certain minor provisions); the Agreements with Norway, Sweden and Finland gave guarantees in general similar to that with Denmark. The Argentine Agreement contained the following provisions:—

- (1) It was the intention of the British Government that no new or increased duties or charges should be imposed on Argentine meat, bacon, hams, wheat, linseed or maize;
- (2) no quota regulation should be imposed on imports into the United Kingdom of wheat, maize or linseed;
- (3) no restriction would be imposed on imports from Argentina of chilled beef in any quarter of the year below the imports in the corresponding quarter of the year ended June 30, 1932, unless it appeared necessary so as to secure a remunerative level of prices in the United Kingdom market;
- (4) if Argentine imports of chilled beef were reduced by more than 10 per cent. below imports in the base year, a similar restriction would be imposed on Dominion imports;
- (5) no further restriction on frozen beef, mutton and lamb imports would be imposed beyond those under the Ottawa Agreements, without a similar restriction of Empire imports.

In the spring of 1933, after the Ottawa Agreements, but before the conclusion of most of the Trade Agreements, the Government introduced the Agricultural Marketing Act. The Government had learned by experience that the ever-changing conditions of an international market are unresponsive to flat-rate tariffs and quotas, and that if every home producer is to be assured of a remunerative price in all conditions, continuous quota manipulation will be

necessary. Already by the Labour Government's Agricultural Marketing Act of 1931 powers had been given to enable a majority of producers in a trade to regulate the marketing of their product by methods which would be binding on the minority. Only the hops producers had taken advantage of this scheme.

By the National Government's Act powers were given to the Ministry of Agriculture and the Board of Trade to regulate home and foreign supplies respectively, provided that a marketing scheme was in operation or preparation. The method by which such schemes are elaborated under the Act is roughly this: A scheme may be submitted to the Minister either by a representative body of producers or by a Commission set up by the Minister. The Minister may then lay it before Parliament, and, if Parliament approves it, he may make an order naming the date on which it shall come into force. Boards representative of the producers are then set up; and import restriction and marketing organisation proceed side by side. Every scheme must provide for the registration of any producer who applies to be registered, and a poll of the registered producers must be taken at which there must be a two-thirds majority in favour of the scheme. The setting up of schemes under this Act is the spear-head of the Government's policy.

Finally, the expedient of a straight subsidy from the Treasury to the producer has been adopted for some time in the case of sugar-beet, and has lately been adopted in the case of beef. We propose to describe these schemes and to survey the operations under the Marketing Act in the next article in this series.

MERCHANT FLEETS OF THE WORLD

DURING the past twelve months international trade has struggled to lift itself out of the depths of its depression, but whenever it has begun to rise its enemies have thrust it down again into the pit. The slight increase in our index of freight rates and in the volume of carrying capacity employed has so far brought little relief to the world's shipping industry. As we showed in an article in the *Economist* of July 7th, the plight of British shipping, aggravated by the widespread practice of foreign countries of placing artificial obstacles in the way of open competition for carrying freight, is as serious as ever. Although there has been a measure of readjustment of the world's carrying capacity to the shrunken volume of international trade, a substantial proportion of available shipping tonnage remains unemployed. As the following chart indicates, 1933 witnessed a further reduction, most marked in overseas countries, in the gross tonnage of new launchings. On the other hand, the excess of available shipping was a little relieved by the fact that tonnage lost and broken up continued to rise steeply (especially abroad) to a level considerably above the tonnage of new vessels put in commission.

GROSS TONNAGE LAUNCHED AND LOST AND BROKEN UP IN BRITISH ISLES AND ABROAD

It is therefore of interest to examine changes in the size and composition of the world's merchant fleet as recorded in the 1934 edition of *Lloyd's Register Book* published this week.

The world's total gross tonnage, exclusive of vessels of less than 100 tons and of barges and sailing ships, declined from 66,628,000 in June, 1933, to 64,358,000 in June, 1934. The reduction of 2,270,000 gross tons, though substantial, was not big enough to bring the supply of carrying space once more into equilibrium with demand. The tonnage of vessels launched showed a further decline from 727,000 gross tons in 1932 to 489,000 gross tons in 1933, which was the lowest figure in any year of the present century. The gross tonnage lost and broken up rose from 1,696,000 in 1933 to the high figure of 2,733,000 in 1934. The distribution of the world's steam and motor tonnage in 1929, 1933 and 1934 is shown in the table below:—

WORLD'S STEAM AND MOTOR TONNAGE
(In thousands of gross tons)

Country	June, 1929	June, 1933	June, 1934
Great Britain and Ireland	20,046	18,592	17,630
United States (Sea)	11,036	10,088	9,795
Japan	4,187	4,258	4,073
Norway	3,218	4,078	3,980
Germany	4,058	3,888	3,680
France	3,303	3,470	3,260
Italy	3,215	3,093	2,875
Holland	2,932	2,759	2,612
Sweden	1,480	1,658	1,597
Greece	1,267	1,417	1,507
World	66,407	66,628	64,358

It will be seen that with the exception of Greece, the carrying capacity of all the principal countries fell as compared with 1933, and only Norway, Sweden and Greece show substantially bigger tonnages than in 1929. The decline was again most pronounced in the case of the British Isles, whose proportion of the world's total capacity fell from 30.2 per cent. in 1929 to 27.9 per cent. in 1933 and 27.4 per cent. in 1934.

But not the whole of this tonnage is available for general cargo and passenger purposes. The tonnage of steam and motor trawlers and other fishing vessels in June, 1934, was 977,388, as compared with 955,489 a year ago. A still larger proportion of the world's tonnage consists of vessels specially fitted for the purpose of carrying bulk oil. World tanker tonnage, excluding vessels of under 1,000 tons gross, recorded a further slight decline in the past twelve months:—

TANKERS OF 1,000 TONS AND UPWARDS
(In thousands of gross tons)

Country	1929	1933	1934
British Isles	2,350	2,269	2,212
United States	2,510	2,502	2,480
Norway	1,450	1,508	1,507
World	8,550	8,757	8,668

Eliminating tankers, lake vessels, ships of less than 4,000 tons gross, and tonnage over 25 years old, there remains in 1934 a world tonnage of 30,653,000 gross (against 31,549,000 in 1933) of large, efficient ocean-going vessels, available for general cargo and passenger purposes. An analysis of this figure by nationalities is given below:—

LARGE OCEAN-GOING TONNAGE
(In thousands of gross tons)

Country	June, 1933 Tonnage	Percentage of World Total	June, 1934 Tonnage	Percentage of World Total
Great Britain and Ireland	11,900	37.7	11,256	36.7
United States	5,627	17.8	5,421	17.7
Germany	2,232	7.1	2,215	7.2
Japan	2,079	6.6	2,094	6.8
France	1,909	6.05	1,850	6.0
Italy	1,801	5.7	1,712	5.6
Holland	1,642	5.2	1,551	5.1
Norway	997	3.2	1,005	3.3
World	31,549	100	30,653	100

This analysis reveals the relatively high efficiency of the British merchant marine, for, although its proportion of world tonnage declined from 30.2 per cent. in 1929 to

27.4 per cent. in 1934, it still includes 36.7 per cent. of the more efficient ocean-going tonnage available for general cargo and passenger purposes. Of the tonnage owned in Great Britain and Ireland, 10.6 per cent. is less than five years old. The countries possessing the largest proportion of shipping that falls within the category of "less than five years old" are Norway (25.3 per cent.), Denmark (17.4 per cent.), Holland (15.8 per cent.), France (14.7 per cent.), Spain (12.8 per cent.), and Japan (12.7 per cent.). The United States sea-going tonnage contains only 5.6 per cent. in this age group. Further, of the tonnage registered in Great Britain and Ireland, 80.3 per cent. is under 20 years old and 63.5 per cent. is under 15 years old, as compared with 68.6 per cent. and 48.7 per cent., respectively, in overseas countries. Big liners of 15,000 tons and upwards represent only 5.6 per cent. of total tonnage, but nearly 50 per cent. of this capacity is owned in Great Britain and Ireland. Another interesting feature revealed in the statistical tables of *Lloyd's Register Book* is the gradual change in the type of machinery

used for propulsion. The tonnage driven by reciprocating engines declined from 47,177,000 in 1933 to 44,700,000 in 1934, and that propelled by turbine engines from 9,221,000 to 9,024,000. On the other hand, the capacity of motor ships rose from 9,914,000 gross tons in 1933 to 10,315,000 gross tons in 1934. The British proportion of tonnage driven by reciprocating engines, turbine engines and internal combustion engines in 1934 was 27.0 per cent., 31.8 per cent., and 26.2 per cent., respectively.

The reduction of 3.7 per cent. in the world's carrying capacity between 1929 and 1934 has done little to bring about a readjustment between supply and demand, for the volume of world trade is still 25 per cent. below the level of 1929. A substantial measure of recovery in the profit-earning power of the shipping industry is unlikely at the present level of international trade; but the relative position of the industry in this country could be strengthened appreciably by an increase in its efficiency on the lines of the "scrap and build" plan discussed in the *Economist* of July 7th.

NOTES OF THE WEEK

Fair Words on Air Re-armament.—Since Mr Baldwin's announcement in the House of Commons on July 19th that the Government had decided to increase the Air Force by 41 squadrons over the next five years, three further pronouncements on the subject have been made by Ministers: by Mr Baldwin himself and by Lord Hailsham, at public meetings over the week-end, and by Lord Londonderry on Monday in the House of Lords, in reply to a vote of censure moved by Lord Ponsonby. In the House of Commons the question is to be debated—again, on a Labour vote of censure—next Monday, and this will be the important debate. Meanwhile, we may notice the line which the Government spokesmen are taking. Foreign Powers, they plead, will be deterred from attacking this country; we, on the other hand, shall acquire the means of fulfilling our international obligations; and at the same time, since we are a sated Power which is recognised to have no further imperialistic ambitions, an increase of armaments on our part will not increase other nations' fears for their own security, and will therefore not lead to an air armaments race. The prominence given to this line of argument by all three Government speakers is interesting as a tribute to the strength of the public opinion in this country in favour of a determined policy of disarmament and peace. The Government's apology would carry more conviction if this public had not been seriously disturbed by the knowledge that the upper hand, in the counsels of the Government, has been won by people who do not believe in the probability of the suppression of aerial warfare by international agreement. In plain terms, Lord Londonderry's will has prevailed over Mr. Baldwin's. Meanwhile, Lord Londonderry, while claiming that our new plans are merely a belated following of the lead given by other countries, admits that if we do not achieve parity by the present step we may have to face still further increases and in fact find that our completed five-year scheme is not the goal but merely the starting-point. Moreover, while labouring to remove the conception that defence in air warfare is entirely useless, he clearly pointed out its difficulties. "Defence was our shield, but the shield without the spear was a wholly unsatisfactory defence." If your fighting planes cannot stop the enemy's bombers, your bombers can be sure of getting past the enemy's fighting planes and of then inflicting on him all that he is inflicting on you. Hence his demand for an Air Force of "deterrent" dimensions. Mr Baldwin bore this out on Sunday in the same speech in which he deprecated "panicking." He advised manufacturers, in this "beginning of an air age," to put their plant in Ayrshire "rather than in the neighbourhood of London, which was always bound to be the most perilous part of the country from that point of view." On this showing, the Trustees of the British Museum would be well advised to acquire a new site on the Mull of Kintyre.

Thunder on the Right.—Public curiosity about the relations between Lord Rothermere and Sir Oswald Mosley has naturally been keen during the last six months. The voice of thunder in which Lord Rothermere originally announced his allegiance to British Fascism in January faded gradually away to a low but audible mutter. At one point Lord Rothermere stated personally that his support of Sir Oswald was not a "crusade" but "definitely an incident." Yet the mutter never quite died away into silence. Suddenly, last week, an exchange of letters—one from Sir Oswald to Lord Rothermere and a second from Lord Rothermere in reply—appeared in the *Daily Mail*. These letters, it was stated, were "the result of informal conversations" between the two correspondents "extending over months." In the first letter Sir Oswald's chief concern was to defend four points in his policy: (1) the institution of the Corporate State; (2) the supersession of Parliament by a "dictatorship of the will of the people"; (3) the ostracism of Jews from the movement; and (4) the preservation of the creed and the word "Fascism." Lord Rothermere, in reply, stated that he "never thought that a movement calling itself 'Fascist' could be successful in this country." (It will be recalled that Sir Oswald's supporters have been consistently described as "Black-shirts" in the *Daily Mail*.) Next Lord Rothermere stated that he "could never support any movement with an anti-Semitic basis, any movement which had dictatorship as one of its objects, or any movement which will substitute a corporate State for the Parliamentary institutions of this country. Towards our Parliamentary institutions Lord Rothermere now seems more friendly than he was in January. We may therefore conclude that anti-Semite propaganda and the use of the word "Fascism" are the crucial points at issue. To the man in the street these would not appear to be fundamental. Why did Sir Oswald Mosley insist upon them? And why did Lord Rothermere refuse to accept them? The first question is perhaps harder to answer than the second. Nevertheless, Lord Rothermere finds himself in complete agreement with Sir Oswald—as opposed to Mr Baldwin—on the questions of India, re-armament, and "the grim struggle which lies close ahead between Conservatism and Socialism in Great Britain." It would consequently be unwise to assume that the bond between Lord Rothermere and Sir Oswald Mosley has been permanently cut. We would not be greatly surprised if the thunder were to break out again—for a time.

The San Francisco Strike.—The general strike at San Francisco ended last Thursday, when the labour unions' Strategy Committee voted to end all "sympathy" strikes immediately. Only the longshoremen are now on strike.

The decision to call off the general strike was taken when the President's Mediation Board promised that the maritime unions as well as the longshoremen would get full consideration in the proposed arbitration. The Governor of California and, it appears, certain local judges attribute the strike to Communist agitators. The Central Strike Committee, on the other hand, states that the employers "have endeavoured to use their own new huge unified power (N.R.A.) to destroy the labour organisation." Both these explanations, our New York correspondent writes, ignore the real issue: the fundamental problem of the "closed" versus the "open" shop. By the open-shop system the employers recruit what labour they please; in the closed shop only union labour—often recruited by rota from the union list—may be employed. The principle of collective bargaining, long established in Great Britain, is in fact involved. San Francisco and Portland are closed-shop cities; Los Angeles and Seattle (after its unsuccessful general strike of 1919) have been open-shop cities. The present contest is bitterest in San Francisco and Portland, less bitter in Seattle, and absent in Los Angeles. On one side, it represents the determination of the unions to keep San Francisco and Portland closed-shop cities, and on the part of the employers in these cities an effort to break the control of the unions. Such a conflict, our correspondent writes, although it may nominally centre on some simple controversy apparently readily capable of mediation (in this instance, the "hiring-halls"), is actually not susceptible of compromise. On any solution, in our correspondent's opinion, one side or the other definitely wins. It is clear that President Roosevelt's determination to establish the principle of collective bargaining in the United States is about to be severely tested.

A Test of Manchukuo.—In their calculated process of establishing a Far-Eastern Monroe Doctrine by stages, the Japanese have just taken another little step forward. They have raised an objection to the exercise of certain foreign treaty rights in a piece of Chinese territory which is claimed by the Japanese to be part of the domain of the so-called sovereign independent State of Manchukuo. Under the "Boxer Protocol" of September 7, 1901, the Chinese Government accorded to eleven Powers the right to occupy militarily a number of points on Chinese territory, the occupation of which would safeguard the maintenance of open communications between the Legation Quarter in Peking and the sea. One of these points is Shanhaikwan—a town on the inner face of the Great Wall, covering the narrow passage where the Wall descends from the mountains to the coast. For the last 33 years the British Legation Guard at Peking (which is mostly stationed at Tientsin) has taken advantage of these treaty rights at Shanhaikwan in order to go into summer camp there. The town itself is just outside the area which the Japanese claim for Manchukuo, since the south-western limit of this area is the outer face of the Great Wall. The British troops, however, are entitled to do their summer training along the line of the Peking-Mukden Railway: a line built with British capital, which crosses the Great Wall at Shanhaikwan, and which runs half outside and half inside the area claimed as Manchukuo territory. It is a district situated on the Manchukuo side of the Wall that has been the actual summer exercising ground of these British troops for the last 33 years. Since the United Kingdom—like every other State in the world except Japan and Salvador—has declined to give diplomatic recognition to the Japanese puppet State of Manchukuo, British rights to send British troops to the Manchurian side of the Great Wall naturally continue to be governed, in the British view, by the Protocol of 1901 (to which, incidentally, Japan, as well as the United Kingdom, is a party, and in virtue of which Japan, as well as the United Kingdom, keeps troops in Tientsin and Peking). Accordingly, the British commander at Tientsin has declined to acquaint the Japanese authorities with his intention of carrying out British military exercises this summer, as usual, on the Manchurian side of the Wall. The Japanese, for their part, are claiming to exclude all foreign troops from this area, on the pretext that it has ceased to be Chinese

territory, and that, as part of the domain of Manchukuo, it is territory which Japan, in virtue of her treaty with Manchukuo, is bound to preserve against foreign aggression. The situation is disturbing, for the Japanese undoubtedly possess the physical force to debar us from exercising our treaty rights, acquired from China, in this area; and, if we acquiesce, we permit the Japanese to establish a precedent which, in their own good time, they may go on to apply inside the Wall as well as outside it.

Australia's Recovery Budget.—The extent of recovery already achieved in the country where the depression started is once more illustrated by the news of Australia's Budget. A surplus of £1,302,000, instead of an estimated deficit of £1,176,000, was announced by Mr Lyons, the Prime Minister, on Tuesday. This cheerful result was achieved in spite of tax concessions amounting to £9,000,000 made last year. These concessions are to be continued, and extended. Old-age and war pensions are to be made more generous, and there is to be a 5 per cent. rise in the salaries of public servants. Mr Lyons said the Commonwealth Bank held £30,125,000 of Commonwealth short-term debt in London and was taking up the balance of £3,500,000 by September 30th at a reduction of $\frac{1}{2}$ per cent. in interest. Unemployment, he added, had been almost halved, and the export surplus had increased last year from £26 millions to £38 millions. Such is the gratifying situation of a country which, almost alone in the world, took its economists' advice (or most of it) at the onset of depression! Unqualified optimism about Australia's prospects would be foolish, however, as the letter from our Australian correspondent on page 167 shows. The aggregate deficit for the State Budgets for the year 1934-35 will be £5,880,000, which will be financed by the Commonwealth Bank by means of Treasury Bills. It must also be remembered that the price of wool has recently fallen, and that both Germany and Italy are placing further restrictions on wool imports. The possibility of a change of Government at the Commonwealth elections in the autumn is also disturbing the Australian outlook. A victory for Labour would be the end of the Premiers' Plan, which has proved so successful since 1930.

Another Trade Agreement.—The best that can be said for the present Government's series of quota-bargains is that they at least tend to prevent British trade from falling even lower than its present deplorable level. The Agreement with Latvia, signed last week, follows the pattern of the Agreements with Denmark, Sweden and Norway. This country undertakes "not to regulate the quantity of imports into this country of bacon and hams, butter, cheese, eggs and poultry, the produce of Latvia, except in so far as such regulation may be necessary to secure the effective operation of a scheme or schemes for the regulation of the marketing of domestic supplies of these or related products." This means that Latvia is to be given a fair share, with Denmark, Norway and Sweden, of the foreign imports of these products which present or future "Marketing Boards" may see fit to allow. Latvia, in return, undertakes to import not less than 10,000 metric tons of herrings in the year July, 1934—July, 1935, and 12,500 metric tons in the following year. Imports of British coal into Latvia must also be maintained at 70 per cent. of Latvia's total coal imports. Such are the modest results of quotas and quantitative strait-jackets within which our trade is now struggling to keep alive. For the moment, we must be thankful for small mercies; and until this country decides to make a push for agreements of far wider scope we can hope for nothing better.

Co-operative Trading Progress.—Our Co-operative correspondent writes:—By recommending the discontinuance of the practice of issuing half-yearly balance sheets, and presenting the accounts for the full twelve months, the directors of the Co-operative Wholesale Society are breaking with one of the earliest traditions of the movement and with

their own procedure from the beginning in 1864. This is testimony to the growth of the institution, which has found that two stocktakings cause inconvenience to customers, while branches of business affected by seasonal factors are not appropriately covered by half-yearly periods. Moreover, the present liability to income-tax suggests the convenience for assessment purposes of making up the accounts on an annual basis. Hence the proposal to be made at the delegate meetings at the ends of this month. Quarterly meetings will continue to review progress, but the annual meeting in April, when the accounts will be presented, will tend to make this yearly gathering the real Business Assembly, especially as the annual Congress has developed so much on political lines since the Chancellor of the Exchequer decided to tax the co-operators. Originally the distributive societies published quarterly accounts; growth in recent years made half-yearly balance sheets the rule; and the Royal Arsenal Society at Woolwich has just adopted the plan of an annual balance sheet. Now that the C.W.S. is recommending such a procedure, the method will become general throughout the movement within a few years. The accounts for the first three months of the year, now available, indicate an improvement in trade throughout the country. The turnover was £21,402,459, a weekly average of £1,646,343, representing an increase of 9 per cent., although the average level of the grocery prices was $1\frac{1}{2}$ per cent. below the corresponding period of last year. From the productive works the supplies were £6,071,142 for the quarter, a weekly average of £467,011. Now that the distributive societies are receiving an additional dividend on their purchases of C.W.S. products the output from the Society's works is likely to be increased during the present year. This view finds encouragement in the increased trade of 52 per cent. in the cabinet and bedding factories and of 50 per cent. in the woollen mills. During the quarter under review the deposits and withdrawals from the C.W.S. Bank totalled £145,260,612, a weekly average increase of nearly 3 per cent. The southern area continues its rapid development, the sales from the London branch being at the rate of £612,730 per week, as compared with £757,942 at the Manchester headquarters and £174,846 at the Newcastle branch. Export business is expanding, and totalled £461,977 last quarter, a weekly increase of £8,585. The July meetings will be asked to sanction donations of 3,552 guineas to various hospitals and institutions in the places where the C.W.S. has factories or departments, and a special grant of £500 to the Tolpuddle Labourers' Centenary Celebrations.

Holidays.—Now that schools are breaking up and holiday time is here, it is relevant to ask how many ordinary workers can in fact afford to take holidays. Almost throughout industry the normal public holidays are allowed with full pay. The Ministry of Labour, however, in an interesting analysis in the *June Gazette* of the general and district "holiday-with-pay" agreements existing between manual workers and their employers, estimates that they only touch about $1\frac{1}{2}$ million workers. The usual holiday is six days, generally with a qualifying period of service of twelve months, and sometimes with *pro rata* increases for longer service. Payment is usually made to piece workers on the basis of average earnings over some preceding period, and to time-workers at full rates. In a few cases provision is made for saving by the worker, either, as in the London typefounders' and Manchester textile packers' arrangements, by payment to the worker throughout the year for something less than the full time worked—48 out of 50 or 49 $\frac{1}{2}$ hours per week—or by equal weekly contributions from both workers and employers. But all these agreements only cover a minute proportion of the workers engaged in industry. Some individual firms make arrangements with their employees, and several employers' associations, particularly in the clothing trade, have specifically recommended to their members that they should provide holidays with pay. The industries at the moment covered by agreements are mainly public utility and Government concerns, road and rail transport, chemical, paper, printing and allied industries and various miscellaneous consumers' trades, including most co-operative employees. In addition many non-manual workers,

Foreign exchange dealers

Messrs. Marmolin, Rydberg, Holmberg, and Markland, of the SKANDINAVISKA KREDITAKTIEBOLAGET, Stockholm, offer you a complete foreign exchange service. Call Stockholm 0101

clerks, shop assistants, etc., have some sort of arrangement with their employers. Nevertheless, the large bulk of miners, textile and metal workers come under no general or district agreements. In a large number of firms throughout the country there are individual arrangements for financing and organising holidays which do not come within the preceding statistics; but there is reason to fear that there are still some employers who do not realise how important it is for the maintenance of the health and moral of their regular employees that they should have a complete and adequate break at least once a year. In the lower grades of labour this may require a financial concession either in addition to wages or in the form of holiday pay, for in many cases it is impossible for the unskilled worker to save from normal earnings more than enough to cover ordinary contingencies such as illness, etc. But in the long run the cost to industry would be more than covered by increased efficiency. After all, a holiday is as much an investment for the amortisation of what the late Professor Alfred Marshall called one's "personal capital" as it is a relief from drudgery and an expenditure of savings.

World Industrial Production.—The following chart shows the quarterly movement of world industrial production since 1929. The sources of the figures are as follows: United Kingdom, Board of Trade; U.S.A., Federal Reserve Board; France, Statistique Générale; Germany, Japan and World, Institut für Konjunkturforschung. The figures for the second quarter of 1934 refer to the average of April and May only. The methods of compilation of the figures are not by any means identical, and they only show changes in the production of the most important branches of mining and manufacture in each country.

INDUSTRIAL PRODUCTION, 1929-1934
(1928 = 100)

It will be seen that in all countries except France and America production has recovered to the 1930 level, the average world figure being 93 (1928 = 100) in the second quarter of 1934 as compared with about 70 in the middle of 1932. Japan has experienced a meteoric rise ever since the depreciation of the yen at the end of 1931, from 105 to 140 at the beginning of the year. Great Britain has also just passed the 1928 level, although the rate of recovery since the third quarter of 1932 has not been so high as in America and Germany, which did not have their decline arrested in the middle of 1931 and therefore fell to low levels of 55 and 60, respectively, in 1932, as against Great Britain's 79. The expansion of business activity in Germany, which has been continuous since the end of 1932, has been accelerated this spring. The U.S.A. index, after a severe decline from July to November of last year, had by May recovered to well above the level of a year earlier. The index for France, on the other hand, has been falling steadily since June, 1933, and was in May lower than a year ago.

Gold and Deflation.—Our recent suggestion that the gold countries are partly responsible for the continued fall in gold prices has met with disfavour in Switzerland. The *Neue Zürcher Zeitung* sharply disagrees. We have always admitted that the depreciation of the pound, the dollar and the yen has tended to depress gold prices (though it had the opposite effect in the spring of 1933). But we argued in a recent article on "Gold and Deflation" that the present depression in the gold countries and recovery in the "off-gold" countries is not due to the exchange factor alone. It is also due, in our view, to the fact that the gold countries have been impelled by the fear of gold losses to keep a tight hold on Budget expenditure, money rates and exchange controls, while the emancipated countries, by relaxing this hold, have been enabled to increase spending and so raise prices and lower interest charges. The *Neue Zürcher Zeitung*, taking Great Britain and Switzerland alone into account, denies these statements. It points out that public expenditure has been reduced in Great Britain but not in Switzerland. But if the N.Z.Z. had cast its gaze on the United States, Scandinavia, South Africa, Australia and New Zealand, on the one hand, and France, Italy, Holland and Belgium on the other, it would have observed that the gold countries are frantically engaged in cutting public expenditure, while in the "off-gold" countries Budgets have only been balanced, if at all, as a result of the recovery which has followed from devaluation. The N.Z.Z. denies that the internal as well as the export trades of the gold countries are depressed. But would it deny that the recovery in the "off-gold" countries is in general far greater in the internal than the export trades? Again, the N.Z.Z. denies that the fear of gold losses has "made for" (as we wrote) dear money in the gold countries. Would it argue, however, that any of the gold countries except Switzerland have experienced as intense and continuous a cheap money period as Great Britain and the United States in the last two years? Neither France, Italy, Belgium nor Holland can boast of a 2 per cent. bank rate maintained for two years. Finally, the N.Z.Z. questions whether there has been any rise in prices, apart from the automatic effects of exchange depreciation, in the emancipated countries. It instances the *Economist* complete sterling index, which is heavily weighted with internationally priced raw materials, and has only risen by about 8.0 per cent. since September, 1931. But this index, just because it is so weighted, cannot measure a rise in the British producers' selling prices in relation to his costs. The best evidence that such a rise has taken place is the increase in employment by over 1,000,000 in this country in the last 18 months. And the rise in the United States Bureau of Labour and Irving Fisher indices (which include manufactured-goods prices) has been far greater than that in the *Economist* complete index. The N.Z.Z. also argues, not only that money is very cheap in Switzerland and public expenditure high, but that a rise in prices would not be advantageous, since the prices which have fallen most are the wholesale prices of the raw materials of industry. Retail prices, it claims,

remain high. But if all this is true, and the whole truth, about all the gold countries, why is there any internal depression in those countries at all?

Retail Sales in June.—The improvement in retail distribution continued in June. According to an article in this week's *Board of Trade Journal*, the value of retail sales in June was 2.0 per cent. higher than in the corresponding month a year ago, and the number of persons employed in the concerns reporting increased by 3.0 per cent. The following index numbers of changes in the value of sales make no allowance for the normal spurt in demand before Christmas and for other seasonal influences:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN* (Average Daily Sales in 1933 = 100)			
Period	Food	Merchandise	Total
1932	102	99	101
1933	100	100	100
1933—January	95	99	97
February	98	78	88
March	99	89	94
April	103	105	104
May	96	104	100
June	102	100	101
July	94	105	99
August	95	75	86
September	97	88	93
October	99	105	102
November	102	105	104
December	118	146	131
1934—January	98	104	101
February	101	80	91
March	104	95	99
April	102	100	101
May	103	113	108
June	103	103	103

As compared with June, 1933, the value of retail sales of food and perishable articles in the past month showed an increase of 1.2 per cent., and sales of other merchandise rose by 3.0 per cent. The improvement was again well distributed. Suburban London led with an increase of 3.8 per cent. in total sales. The percentage increase in other districts was:—Wales and North of England, 2.0 per cent.; Scotland, 1.8 per cent.; South of England, 1.7 per cent.; and London (Central and West End), 1.0 per cent. With the exception of piece-goods and sports and travel articles, the value of sales of all classes of merchandise was higher than a year ago. There was an increase of 9.3 per cent. in sales of furnishing departments. The figure for men's and boys' wear shows an increase of 4.5 per cent., and that for women's wear one of 2.1 per cent. The value of stocks of foodstuffs and perishables at the end of June was 4.2 per cent. higher than a year ago, and stocks of other merchandise rose by 2.2 per cent. The summer sales in London have been successful; and there are no signs of any immediate recession in retail buying.

Lancashire and India.—Our Manchester correspondent writes:—Following the overwhelming support given to the policy of the Manchester Chamber of Commerce and of the leading textile organisations with regard to Lancashire and India, when a mass meeting of members of the Chamber on Monday unanimously supported the Chamber's attitude, it is interesting to learn that the Lancashire Indian Cotton Committee has been discussing the possibility of the Government offering a bounty on all Indian cotton consumed in the United Kingdom. The work of this Committee is already bearing fruit, for a large increase has taken place in the imports of Indian cotton. The latest statistics available show that shipments to Great Britain for the current season amount to 360,039 bales, as compared with 214,000 bales last season and 137,000 bales two years ago. A bounty would certainly prove of great help to the Lancashire cotton industry, and it would encourage the mills to use increasing quantities of the Indian staple. Lancashire trade leaders believe in encouraging further the spirit of goodwill which now prevails between the textile interests of both countries, and everything is being done to promote the greater use of Indian cotton. Lancashire realises it is better to follow this policy than to be tempted into supporting the political aims of Mr Winston Churchill, and a

small number of his adherents in Manchester are apparently trying to make the Lancashire cotton industry the catspaw of their political campaign against the White Paper proposals.

Idle Shipping.—The quarterly return of the Chamber of Shipping shows that there has been a further reduction since April 1st in the amount of shipping laid up in the ports of the United Kingdom. The following table gives the number of ships and net tonnage laid up at each quarter during the past two years:—

	No.	Net tons (000's)		No.	Net tons (000's)
July 1, 1932.....	853	2,196	Oct. 1, 1933	612	1,589
Oct. 1, 1932	871	2,182	Jan. 1, 1934	482	1,239
Jan. 1, 1933	760	1,971	April 1, 1934	453	1,079
April 1, 1933	760	1,864	July 1, 1934	421	1,042
July 1, 1933	793	1,958			

The reduction in the number of idle ships by 32 during the quarter is unfortunately more than accounted for by the sale of 42 British ships to foreign traders and to ship-breakers reported in the Press between April and June, so that it is no indication of an increased demand for British shipping. The total of 421 is still well above that for the beginning of 1930 (358), the last normal figure before the full tide of the shipping depression, and it includes 190 vessels of 532,698 net tons, which have been laid up for a year or more. The reduction in idle shipping as compared with a year ago amounted to 916,309 net tons (46.8 per cent.), and as compared with April 1, 1934, to 36,743 net tons (3.4 per cent.). The largest decrease during the quarter took place in Newcastle, where there are now 95 vessels of 194,417 net tons laid up as compared with 109 of 245,693 in April and 148 of 300,961 a year ago. Other substantial decreases were recorded in Swansea, River Fal, Glasgow, Grangemouth and Hull. The main increases took place in London (Docks), Tollesbury, Liverpool, Dartmouth and Bideford. The total figures of idle tonnage given above exclude British shipping laid up in foreign ports, but include five foreign vessels of 13,912 net tons laid up in British ports, so that British tonnage in United Kingdom ports amounted to 1,028,366 net tons or 2½ million deadweight tons. It is interesting to note that 68 per cent. of the total tonnage laid up consists of vessels of between 2,000 and 8,000 tons, tramps, and only 8 per cent. of ships of more than 15,000 tons, the liner class, but that the relative position of the former class has improved since July, 1933.

Equity and Law Life—A Correction.—We regret that in our Insurance Supplement of July 14th, owing to a change in the company's method of compiling their accounts, an error was made in the presentation of the net interest earnings of this company. Prior to 1933 the Equity and Law entered in the revenue account the gross amount of annuities paid, and this is in accordance with the practice of almost every office. The income tax deducted from the annuity payments and retained by the society was reflected in the amount of tax shown on the other side of the revenue account, as a deduction from the gross interest income. Due possibly to the phenomenal expansion of its annuity business in the last four years, when the gross annuity payments were £18,000, £25,000, £39,000 and £155,000 respectively, this society in 1933 adopted the unusual practice of showing the tax retained as a specific deduction from the gross annuities paid, and the tax amounted to nearly £33,000. In reviewing the annual accounts for 1933 in our usual Insurance Notes (see *Economist*, March 31, 1934) we pointed out that, contrary to the general experience of offices, the net rate of interest earned on the entire funds, excluding reversions, had increased, being £4 2s. 6d. per cent. in 1933 against £4 2s. per cent. in 1932, and explained that this striking result arose from the great expansion in the annuity business, as the interest on that part of the funds pertaining to annuities was virtually exempt from income tax. Inadvertently, in preparing the table of interest yields for our Supplement on July 14th this unusual feature was overlooked, with the result that the net rate of interest on the life and annuity funds was given for the Equity and Law as £3 15s. 4d. per cent. instead of £4 1s. 2d. per cent.

Great Britain's Fish Supply.—The second quarter of the year was not altogether disappointing to the fishing industry of the United Kingdom, for a slight decrease in the weight of the landings by British-owned fishing vessels was accompanied by a substantial increase in the aggregate value realised. Including landings by foreign-owned vessels, and imports, the total value of the supply of wet fish in the quarter approached £4½ millions, as against about £4 millions in the corresponding period of last year. The following table, relating to wet fish only, is summarised from the returns of the Ministry of Agriculture and Fisheries and the Board of Trade:—

April-June	Weight in Cwts.		Value	
	1933	1934	1933	1934
British caught:—				
England and Wales	3,337,847	3,312,597	2,416,392	2,645,895
Scotland	1,147,785	1,075,320	756,296	735,842
Shellfish	...	...	94,526	100,443
Foreign landings.....	4,485,632	4,387,917	3,267,214	3,482,180
Imports	286,882	260,202	177,875	147,078
	393,071	292,728	564,327	600,026

It will be noted that the landings by British-owned vessels at the ports of England and Wales during the quarter were slightly less than in the April-June period of 1933, and that this was accompanied by an increase in the aggregate value. Thus the average realised was just under 16s. per cwt., as compared with 14s. 2½d. per cwt. Landings by foreign-owned vessels direct from the sea, and imports from abroad, were less, but in the case of the latter the aggregate value was higher. At the same time Great Britain exported fresh fish to the value of £147,078, as compared with £177,875 in the corresponding quarter last year; and "cured or salted" (including herrings) valued at £260,851, as against £247,505. As usual, the imports were mainly of canned fish (salmon, sardines, lobsters, crabs, etc.), and these had a declared value of £852,118, as compared with only £402,986 in the April-June quarter of 1933. The returns for the completed six months show that the landings by British-owned fishing vessels in both England and Wales and Scotland were slightly heavier than in the corresponding half of last year, and that there was an increase of over £766,000 in the aggregate first-hand value. The landings by foreign-owned vessels were smaller, as were also imports from abroad, and the aggregate value of the two classes less by £56,000. Imports of canned fish in the six months had a value of £1,865,400, as compared with £1,275,850, there being substantial increases in salmon. Several new fishing vessels of the larger type are under construction for the remoter deep-sea fisheries, chiefly to the order of Hull owners, including the first to have turbine engines. Generally the outlook is one of confidence, except perhaps in the herring fisheries, which continue to suffer greatly from the loss of foreign markets.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE FUTURE OF N.R.A.

As N.R.A. enters its second year it is clearly in process of radical reorganisation. By Statute it would expire in June, 1935; hence its abolition or continuation must concern the next session of Congress. In its present form it is satisfactory to no one, and the problem of the Administration is to effect such modifications before Congress reconvenes in January as to ensure its continuance.

The first question is that of organisation. The task of administering the conflicting features of this loosely-drawn Act was entrusted to General Hugh Johnson, and his authority as Administrator, under the President, has been dictatorial. It is understood that this authority is now to be vested in a Commission of five members, although it is stated that General Johnson will continue as Administrator. Second, 476 industrial codes are now in operation and 262 codes are pending; of these latter about half will probably not develop into individual codes. For industries without individual codes a Blanket Code has been prepared, not unlike the simple charter proposed a year ago under the name of the President's Re-employment Agreement. It is apparently permissible for an industry dissatisfied with its individual code to accept the Blanket Code. Essentially the Blanket Code provides for maximum hours and minimum wages, collective bargaining, the prohibition of child labour and the publication of price schedules. The hour and wage provisions are not specified in the code form, as they will be determined by the several industries, but the implication is that 40 hours is considered a normal week.

But this reorganisation of the mechanism of N.R.A. does not meet the basic controversy, which centres on the monopoly and price-fixing tendencies of the codes in major industries. These tendencies have been adversely criticised, notably in the report of the Darrow Committee. The Darrow Committee was roundly rebuked by N.R.A. officials and was dismissed, without thanks, by Presidential order; but its thesis has been taken up by Senator Borah and seconded by Senator Lewis (Democrat). The conflict between the Anti-Trust Laws and the National Recovery Act has become a contest between the Federal Trade Commission and the N.R.A., with the political odds rather strongly favouring the Trade Commission. Actually, except in monopolistic or quasi-monopolistic situations, the cartel price system has recently been breaking.

In an effort to enforce the codes, N.R.A. has resorted to the boycott. Any person engaged in projects in any way involving Federal funds is required to file a "certificate of compliance" to the effect that he is fully living up to his code; in addition, he must file supplementary "certificates of compliance" authenticating all products which he secures from others. Apparently this means, for example, that although the Ford factory maintains working conditions as good as or better than those prescribed in the automobile code, the Government cannot purchase Ford cars for its own use, since Mr Ford has never signed the code; and further that no contractor engaged on a public project could use a Ford car in such operations, since he would lack the supplementary "certificate of compliance."

A "MAJOR AGRICULTURAL PHENOMENON"

The official crop report issued July 9th was again below expectations. The total wheat crop is given as 483 million bushels, as compared with 527 millions last year, which was rated as a crop failure. Estimates of other small grains were equally adverse; for although the drought appears to have been broken in June, the light rains came too late to save them. The maize crop, retarded by the drought, has received enough rain to come forward; generally speaking, however, the rainfall in the corn belt is deficient, and mid-summer is a critical period. Probably the crop will be below average, but the hog curtailment programme has been so successful in reducing the number of pigs that on present

indications no shortage of corn is apprehended. In short, although the extreme drought was broken in June, it is quite clear that the crop failure of 1934 is a major agricultural phenomenon, following the partial crop failure of 1933.

Although east of the Mississippi the cotton belt has been too wet, and west of the river too dry, it appears at present that the cotton crop will come very close to expectations. The ginning quota under the Bankhead Act is approximately 10,500,000 bales, and the prospect is for a crop of something under 10,000,000 bales.

Business news indicates a very sharp recession in recent weeks. Steel operations fell to 23 per cent. of capacity in the first week of July, which included the July 4th holiday, and are currently somewhat below 30 per cent., compared with nearly 60 per cent. in the middle of June. Retail trade, at least in the New York area, is regarded as disappointing; on the other hand, purely seasonal business, such as trade at summer resorts, is said to be doing well. Attendance at cinemas has been rather sharply affected by the campaign initiated by several allied religious organisations which are directing a boycott against "objectionable" films.

The appointment of the Commission which is to administer the Stock Exchange Control Act (alphabetically termed the S.E.C.) threw no particular light upon the type of policy to be expected. Several members of the New York Stock Exchange have recently opened branch offices in London.

ABRUPT DECLINE IN PRODUCTION

The abrupt decline in production since the end of June is shown in the index of the *New York Times*:—

	PRODUCTION INDEX (100 = estimated normal)			
	July 8, 1933	June 23, 1934	June 30, 1934	July 7, 1934
Combined index	98.7	85.5	83.8	76.9
Freight carloadings	65.7	64.3	65.6	63.2
Steel mill industry	82.2	79.6	62.8	40.4
Electric power production	98.1	99.5	99.7	99.6
Automobile production	53.8	68.3	82.2	39.3
Lumber production	72.9	57.5	55.6	54.7
Cotton cloth production	...	...	78.6	49.1

The week of July 7th was broken by the holiday, and in the following week there was some recovery. Steel operations are now just under 30 per cent. of capacity, but no upturn in steel is expected in the near future. The comparison with last year is especially unfavourable, but just a year ago the boom was culminating. The housing programme, from which much is officially expected, is getting off to a slow start. The lumber cartel has made a small reduction in soft-wood prices, but the building crafts have so far steadfastly refused to make concessions. Statistically it can be demonstrated that any excess of housing which may have existed in 1929 has been absorbed by the growth in population; but with building costs virtually at 1929 levels and average individual incomes far below, the deadlock seems still unbroken.

In the closing days of the last Congress a railway pension Bill was hastily passed, almost without discussion. It was generally assumed that the President would veto it, partly because the Bill was considered of dubious constitutionality, and partly because it was manifestly onerous if not ruinous to many railroads. The Bill was, however, signed. The effects of this act are irregular in their incidence. Most railroads had pension schemes already in effect; on certain roads the previously existing scheme more than meets the terms of the new law; on others, adjustment to the new conditions will be easy; but on the third category the new conditions clearly threaten receivership. Railroad earnings in the first half of 1934 have generally been running above those of the first half of 1933; but the margin has been narrowing rapidly and it seems unlikely that the last half of 1934 will be better than the last half of 1933. Net income will be reduced by the 2½ per cent. wage increase dating from July 1st; while the rise in raw material prices under the N.R.A. codes is making itself felt in expenditures.

It is understood that the railroads intended to ask for a horizontal increase of 10 per cent. in freight rates, and that the constitutionality of the Pension Act will be contested in the courts.

The public utility companies have also been seriously affected by the rise in raw material prices. The companies present the rather anomalous picture of an industry whose output is currently almost at record levels (being actually above 1929 and approximately at the best figure of early 1930), but whose shares are quoted almost at the lowest figures of 1932. In addition to higher material costs, many utility rates have been lowered by the State regulatory commissions, while labour costs have been somewhat increased by N.R.A. They have also been a rather shining target for local taxation.

The repeal of prohibition has upset a good many calculations, including those of the revenue to be derived from it. It was usually assumed that the appetite of the American public for spirituous liquors had increased during prohibition. The actual consumption for all 1934, based on first half-year figures, is computed at 65 million gallons, or three quarts per capita for the 89 million persons living in "wet" areas. In pre-war years it was about six quarts per capita. Alternative deductions seem possible—either that the consuming habits of the American people were profoundly changed by the experiment with prohibition, or that a great part of the liquor currently consumed is illicit and untaxed. The taxes are so high as to make bootlegging still quite a profitable industry, and the latter alternative is the more probable.

New York, July 20.

FRANCE

THE CHAUMETPS-TARDIEU QUARREL

The quarrel between M. Tardieu and M. Chaumetps broke out just at the moment when the departure of Parliament ought to have assisted the tranquillising of the country. M. Tardieu, who is Minister of State in the present Cabinet, had been named as witness, by his own request, before the Parliamentary Committee which has been inquiring for five months into the Stavisky scandals; but he was not content to present his own personal defence; he also pronounced an attack on M. Chaumetps, the former Prime Minister and present head of the Radical-Socialist Party. The Radical-Socialists declared immediately that M. Tardieu had broken the political truce, and demanded either that M. Tardieu should leave the Cabinet or that the Radical-Socialist Ministers should resign. The conflict at once became acute and seriously affected public opinion. The price of Public funds immediately fell several points on the Stock Exchange, and the franc was weaker. The maintenance of the "Union Nationale" is undoubtedly the first condition of the preservation of confidence. President Doumergue, who was on holiday at Tournefeuille, returned immediately to Paris, and persuaded the two Ministers to retain their posts. A *communiqué* was then issued announcing that the political truce had been renewed.

The Cabinet remains as it was. The Socialist-Radicals, however, have decided to maintain the truce till the month of October only, when their Congress will meet. It is observed in some circles that the same political factors which have imposed the present alliance will still determine the situation. But it is evident that the truce can only be maintained by the continued prestige of M. Doumergue, and it seems that the maintenance of his prestige depends on his giving the country the reforms which it demands in return for its support.

FOREIGN TRADE STILL DECLINING

For the first six months of 1934 the total of French foreign trade amounted to 21,414 million francs, compared with 24,074 million francs in the corresponding period of 1933:

Totals	8,965,611,000	8,799,793,000	-165,818,000

The import surplus fell sharply. For the first six months of 1934 it was 3,814.5 millions against 6,142.5 millions in the corresponding period of 1933. This fall is the result of a decrease in imports. Exports fell by 166 million francs (hardly 2 per cent.) and imports by 2,494 million francs (more than 16 per cent.).

The depression in worsted exports resulted in the closing on July 23rd until further orders of the whole plants of Roubaix and Tourcoing. This decision involves 15,000 workers. It is stated that stocks at the end of June had increased by 770,000 kilograms, which means an increase of 3,000,000 kilograms since the beginning of the year, and brings the actual figure of worsted stocks to 22 million kilograms for the North of France. Normally the stocks stand at about 10 million kilograms. Since March, Germany has closed her frontiers to worsted imports. Commercial negotiations in Berlin have been proceeding since early July, and the French producers are waiting anxiously for the results.

Paris, July 25.

GERMANY

ALL-EMBRACING POWERS FOR ECONOMIC MINISTER

For the remainder of the summer, during which the Reich Cabinet will not hold regular sessions, economic regulation will be put through by simple decision of the Reich Minister of Economy, acting alone, or, where other departments are involved, in agreement with the Minister concerned. The new empowering law enacts that the Minister of Economy

will "take all measures that he considers necessary for furthering national business or for preventing or removing economic evils." According to the text of the empowering law the Minister of Economy is not even required to issue ordinances; he can summarily do what he likes; and it is specially prescribed that his measures may violate existing law.

This empowering law constitutes a remarkable advance in quick legislation. Originally such laws (the whole of Nazi legislation derives from a general empowering law) were designed in order to overcome the evil of dilatory Parliamentary procedure. Laws were to come out as decrees or ordinances. The disadvantage of this system was that the public was not prepared by discussion or warning for legislative changes, some of which constituted radical interference with national activity. A decree, for instance, may prevent a manufacturer completing works in which he has already invested capital. This defect of the empowering system was aggravated by the authorisation of Ministers to issue regulations for execution (*Ausführung*) of the decreed laws, which in effect often allowed them to alter laws in principle. They were also empowered to decree exceptions to the laws.

The new empowering law affecting the Minister of Economy goes further; for within his own domain, or jointly with another Minister, he can do anything he likes; instead of legislating or amending existing laws without notice, he is authorised to break the laws. This system of "empowering" goes much further than it ever went in times of acute crisis or national peril, when a Minister was at least required to regulate by ordinances that were valid for a fixed term. In general the practice of "empowering" proves to be very different from the theory. Instead of necessary legislation being facilitated, there issues a ceaseless flood of enactments, an abuse of which Bismarck, even in the days of slow Parliamentary legislation, complained; and the result is, as the new empowering law demonstrates, that there is no law whatever. The unsettling effect upon business is visible every day.

The ration of exchange for imports in August has been cut down to 5 per cent., and the ration of utilisation of foreign acceptance credits to 10 per cent. This formal rationing has very little influence on the quantity of imports that may be paid for. Manufactured goods have been brought under the law of March 2nd authorising control of raw and semi-manufactured materials. According to the international trade-classification, rolling-mill products, yarns, and some other commodities, which are really half-manufactured, are listed as manufactured. This amendment to the control law may affect the import of British yarns, which declined substantially after the tariff increase of 1933.

CONTROLLING COTTON AND RUBBER

A control board has also been founded for industrial fats in connection with the foreign exchange situation. The official control over rubber has been sharpened; and a compulsory cartel for the motor-car tyre industry has been created with the customary prohibition against the opening of new works. In order to limit the consumption of textile raw materials and to prevent production for stock in excess of the current demand, a 36-hour week has been decreed for the earlier stage of manufacture; price advances other than those caused by rises in the world price of raw materials are forbidden; and the opening of new or expansion of existing mills is also forbidden.

The Reich has issued a law guaranteeing the service of the funding issues of the foreign loans Konversionskasse, on the basis of the Reichsbank's offer to bondholders made at the last conference in Berlin. It is reported that the debt negotiations with Sweden are being retarded by a difference over the transfer status of the Kreuger loan, in which the equivocal terms "priority" and "absolute transfer right" play the old disturbing rôle. In reality, it seems, all loans enjoy an absolute transfer right in that when they were concluded it was assumed that Article 22 of the Bank Law of 1924 compelling the Reichsbank to sell gold or foreign exchange would come into force. The article did come into force as a condition of the Young Loan. This article, which by itself creates an "absolute right of

transfer," has never been rescinded; it has merely been evaded since July, 1931, by legislation depriving holders of reichsmarks of their legal right to claim conversion.

On the action of the Dawes Loan Trustees in impounding the pledged revenues no further official comment has appeared. The German claim that the pledging of revenues was designed merely in order to ensure collection of the mark equivalent, which is not in question, is hardly valid. The resolution of the Transfer Committee of October 31, 1924, one of the documentary guarantees of the Loan, states quite definitely that the trustees are entitled themselves to remit these funds "in the currencies of each separate tranche, without regard to any possible effect on the foreign exchange market."

Money has been somewhat tighter, and month-end requirements affected the market somewhat earlier than usual. The demand from agriculture has been considerable. Reich Treasury bonds have nevertheless been easily sold. The Reich ordinary Budget account for the first two months, April and May, of the financial year shows a revenue of Rm. 1,251 millions, whereof Rm. 982 millions are from taxation, and Rm. 155 millions from liquidation of Reich property (sale of Railway Company preference stock, etc.); expenditure is shown at Rm. 1,065 millions; and the surplus at Rm. 186 millions, against which must be set a deficit of Rm. 1,000,000 on extraordinary account. The deficits taken over from preceding years total Rm. 1,796 millions. Receipts from excise taxes are coming in more satisfactorily.

FURTHER RISE IN FOOD PRICES

The wholesale prices index for July 18th was 99.1, as against 98.8 on July 11th. There are new sharp rises of 1.3 and 1.1 points respectively in the vegetable foods and fodder groups. Official warnings against price advances continue to appear. The first compulsory association (*Verband*) under the business "roof-organisation," the new leader of which is Count von der Goltz, has been imposed on the metal-ware industry of Wupperthal-Elberfeld, which is thereby recognised as the sole representative of the whole branch. Retail turnover in May was 11 per cent. higher than in May, 1933.

The Konjunkturinstitut points out that additional retail sales last year absorbed only about half the additional production of consumption goods; the remainder went to increase stocks. The change in relative activity in the consumption-goods and production-goods branches is shown by the fact that the latter turned out 35 per cent. of all industrial production in 1933, as against 24 per cent. in 1932. Steel production in June was 1,003,200 tons. This was the first time since the depression that the figure of 1,000,000 tons was passed. The quarterly report of the Vereinigte Stahlwerke for April-June shows an increase in production, as compared with the preceding quarter, of 26 per cent. in pig iron and 16 per cent. in steel. On the recent conclusion of the international tin-plate agreement the comment is made that Great Britain has a new incentive to enter the International Steel Cartel. It is added, however, that the internal organisation of the British steel industry has not yet progressed sufficiently to justify accession.

Crop reports continue to be unsatisfactory. The heavy local rainfalls have mostly been belated. Under the new price-regulations, designed to compensate farmers for the reduced volume of their crops, wheat is to cost initially, according to district, Rm. 184-204 per metric ton, rising to Rm. 197-217 at the end of the crop year; and rye, Rm. 144-164, rising to Rm. 160-177.

BERLIN, July 25.

AUSTRIA

BUSINESS RECOVERY SLACKENING

THE business recovery has slowed down somewhat. The latest statistics for output and turnover are lower than those of previous months, except in the iron industry, though they are nearly all much above the corresponding figures for last year. The output index for April was 81, compared with 82 for March and 74 for April, 1933.

Cotton weaving mills were working at 83 per cent. of capacity in April, compared with 82 in March and 54 in April of last year. In April there was a decrease of output, compared with the previous month, in wood pulp from 882 to 729 wagon-loads (770 in April, 1933), in cellulose from 1,967 to 1,863 (1,793), in paper from 1,868 to 1,466 (1,620), in pasteboard from 295 to 291 (215). The index of crude iron output, however, has risen, compared with April, from 38 to 45 (42 in May, 1933), crude steel from 57 to 72 (52), and rolled goods from 61 to 77 (50). Nevertheless, orders in hand in the iron industry have fallen from 50 per cent. to 48 per cent.

Consumption both of consumers' goods and producers' goods is slackening chiefly because the power of absorption of the home market is still narrowly limited. Consumption of clothes, shoes and foodstuffs, etc., is lower than last year.

Certain other figures, however, are favourable:—

	June, 1933	May, 1934	June, 1934
Index of deliveries for consumption:—			
Hard coal.....	44.5	40.8	50.3
Electric current.....	102.7	114.4	110.1
Crude steel.....	28.9	45.2	49.7
Sugar.....	80.2	83.7	100.3
Cattle.....	68.6	50.3	63.6
Goods wagons loaded.....	106,184	117,552	125,713
" per working day.....	4,617	5,111	5,029
Insolvencies (weekly average).....	63.5	40	44.2

The unemployment returns are not cheerful. The figures are certainly more favourable than those for last year, if the numbers of unemployed on the dole are compared. But the number of unemployed applying for work in Vienna at the end of June was 187,597, against 181,769 in May and 177,493 in June last year.

Owing to the German tax on tourists going to Austria tourist traffic is still poor. Nevertheless, there were 19,000 foreign visitors in Vienna in May, compared with 24,000 in May last year, when the German tax had not yet been imposed. A decline of exports had lately been observable. The statistics for June, however, are again very favourable, as exports at 73 million schillings are higher by 4.7 million schillings than in May and by 8.6 millions higher than in June, 1933.

The import surplus for the first half-year was 154 million schillings, which is 22 per cent. lower than last year. But it should not be forgotten that in 1931 the import surplus was still 434 million schillings, which is nearly three times as high. This reduction of the import surplus was accompanied by an extension of business, as the total turnover (imports plus exports) rose in the first half-year from 880 to 974 million schillings.

The Trade Agreement with Italy, which came into force on July 15th and which accords one-sided preferential Customs duties for numerous Austrian articles, has now been officially published. The value of these preference duties, which in most cases are confined to modest quotas, lies in the fact that Austrian industry is to be enabled to enter the Italian market with a certain advantage in regard to such articles as have so far seldom been delivered by Austria to Italy. The limitations on the quotas are certainly the main reason why other States have raised no objection to the arrangement on the score of most-favoured-nation treaties with Italy. Moreover, the Agreement accords with the recommendations of the Stresa Conference, which have been approved by the European powers. An important increase of imports from Italy has been noticeable in recent months.

CHEAPER MONEY AND CONVERSIONS

The Austrian National Bank has reduced its discount rate from 5 to 4½ per cent. and so brought it to the lowest level reached since the war; even before the war a Bank rate of 4½ per cent. was regarded as low in Vienna. For advances against Austrian State bonds 5 per cent. is now being charged instead of 5½, and for other securities 5½ per cent. instead of 6. Corresponding reductions have been made in the rates charged by other banks. Interest on overdrafts is now ½ per cent. less, but as a reduction of ½ per cent. in interest payable on time deposits, which constitute the bulk of deposits in Austria, seems inadvisable, the rate has been reduced from 3½ to 3 per cent.

The rate on three to six months' loans has been reduced by ½ per cent.

The National Bank was enabled to reduce its rate by the improved state of the bill portfolio. At the time of the political disturbances in February the total of bills rose to about 296 million schillings, and on the closing day of the first quarter it stood at 307.7 million schillings. Since that date it has been almost steadily declining, and on the last day of the half-year, after a very modest call in the last week of June, bills stood at 253.7 million schillings. As a natural consequence of the cheapening of money at home efforts directed towards the conversion of the League of Nations Loan of 1923/43 are being made with increased energy and have already gained a partial success.

The Government has terminated the State guarantee for the commitments of the Austrian Credit Anstalt. This is undoubtedly a proof of the consolidation of financial conditions in Austria. The deposits according to the latest balance sheet of the Credit Anstalt totalled, it is true, only 39 million schillings, against more than 300 million schillings before the outbreak of the crisis. In the meanwhile, however, this item has increased considerably, partly from natural augmentation and partly because the fusion with the Wiener Bank Verein was enacted several weeks ago and the deposits at that institute, namely 42.8 million schillings according to the latest balance sheet, were taken over. Savings deposits, too, show favourable development. At the end of June deposits of 2,086 million schillings were reported, against 2,099 millions the previous month; but this was due not to withdrawals, but to the fact that the liquidation of the Social-Democratic Labour Bank has been taken in hand and the deposits at that institute struck out of the statistics.

The conversions carried out in recent months of several loans of the Austrian Federal countries all closed with great success. The above-mentioned low-deposit rates were of great assistance. Nevertheless, savings deposits are on the increase, deposits at the savings banks showing the following movement:—

	Total (In millions of schillings)	Vienna alone
January.....	2,095	759
February.....	2,030	704
March.....	2,058	718
April.....	2,075	732
May.....	2,099	748

In June a slight decline set in, as mentioned above, due to withdrawals for holiday purposes.

VIENNA, July 25.

DENMARK

THE AGRICULTURAL CRISIS

THE agricultural crisis, caused by the prevalent heavy mortgaging of farms and the fall in prices, is still continuing. The Commission of Inquiry into Agricultural Debts reported recently that hardly any reduction of agricultural debts had taken place during the years 1930-33, but during the same period the value of land and buildings and especially of live-stock decreased considerably. In 1933 agricultural mortgage debts amounted to 3,700 million kroner and other debts to 450 million kroner. More than two-fifths of all

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital and Reserves: D. Gulden 5,378,542

Chairman: Dr. Roman Górecki.

Vice-Chairman: Sir William Grenfell Max-Müller,
G.B.E., K.C.M.G.

Joint Managers: Wacław Kondorski and Philip
Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports
from and to Poland, including Danzig.

INQUIRIES SOLICITED.

farms were indebted in excess of their actual value, and one-fourth of the farms were indebted from 70 to 100 per cent. of their value. It is estimated that, with present market prices, interest can only be earned on seven-tenths of the capital invested in farms. Bills giving effect to the Report (providing for additional inducement to convert agricultural bonds to a lower interest yield, further reduction of banks' deposit rates, and ways and means to finance assistance to farmers) have been introduced into the Rigsdag.

The question of emigration as a means of reducing unemployment has been occupying the Government's attention. Before the war the normal emigration from Denmark was about 35,000 persons in five years, most of whom went to the United States. For the last five years, however, owing to foreign restrictions on immigration, there have remained about 20,000 would-be emigrants in this country. Certain measures to assist them have been under consideration, and the Minister of Social Affairs, accompanied by several experts, is going to make a tour of certain South American Republics to further a scheme of State-organised immigration into definite settlements.

Endeavours to find new markets for Danish agricultural produce have made progress in some directions, but not in others. After the prohibition of livestock exports to Germany, a certain market was worked up in 1933 in Belgium and the Netherlands. But agricultural interests in those countries soon induced their respective Governments to restrict this trade. The same thing happened in Italy and Morocco. Exports of cheese, however, have grown from 4,300 tons in 1931 to about 10,000 tons in 1933, but 85 per cent. of these went to Germany; and import restrictions have now been imposed in that country.

The monthly statement of the National Bank as at June 30th reveals a further net increase of 10.4 million kroner in debts to foreign banks. The main cause of the increase is the semi-annual interest payments on foreign funded debt. Further, the well-known desire of certain important agricultural interests for a further devaluation of the krone induces importers to settle their commitments as quickly as possible. The bond holdings of the National Bank have been reduced by about 8.5 million kroner, but the advances to the Crisis Fund Institution have gone up by a similar amount. It may be concluded from this that the Bank's holdings of agricultural bonds have decreased by about the same amount as the Crisis Fund Institution's holdings have increased.

INCREASED SHIPPING IN DANISH PORTS

The proposed subsidies to British shipping are being followed with much interest here. Danish shipowners have always been strongly opposed to any Government interference or artificial support to the freest of all trades, and only recently the Shipowners' Association turned down certain Governmental overtures. The shipping position in Denmark is better than for several years. The traffic in Danish ports during the first quarter of 1934 was about 4 per cent. higher than for the corresponding period of last year.

	Goods imported	Goods exported	Coastal Goods Traffic
	Tons	Tons	Tons
First quarter of 1934	2,446,850	449,518	541,697
First quarter of 1933	2,332,827	430,398	446,664

The May freight index is 96.6 (January-March, 1925 = 100).

The healthy position of industry may be inferred from the further decrease of unemployment, although this decrease is somewhat slowing down. On July 13th the number of unemployed was 72,329, compared with 86,792 for the corresponding date of last year.

The Stock Exchange has been lethargic for several weeks pending the results of the Summer Rigsdag session, and prices have moved within narrow limits. The bond index for June is 100.6, as compared with 100.2 for May, and the corresponding share indices are 97.3 and 98.7. Easy conditions are ruling in the money market.

COPENHAGEN, July 25.

BULGARIA

BUDGET AND BANKING CHANGES

THE principal economic measures of the new Government will be the drawing up of a new Budget, the establishment of an alcohol monopoly, and the consolidation of the Bulgarian banks. The new Budget, which came into force on July 1st, and is valid for the remaining nine months of the current financial year, provides for considerable economies through the reorganisation of State services and the reduction of redundant staffs. Estimated receipts, as well as estimated expenditure, have been reduced from 5,650 million leva to 5,330 million leva. In this way the deficit on the past Budget, amounting to some 300 million leva, will disappear. The present reforms permit not only a true balance of current receipts and expenditure, but a progressive reorganisation of the State services and such further economies as may be thought necessary. The alcohol monopoly is expected to yield a new revenue, which will allow the repayment of some floating Government debts.

In virtue of a Governmental decree, steps have been taken for the reorganisation of the Bulgarian joint-stock banks. A few of the present larger Bulgarian banks, such as the Union of Bulgarian Banks, the International Bank of Bulgaria, and some other smaller, but admittedly sound, provincial banks, will amalgamate in order to form a large new banking concern under the name of Crédit Bulgare. The State participates in the capital of the new bank up to 50 million leva. Governmental control of and rights in the new bank are to be exercised by the National Bank of Bulgaria through a delegate on the managing committee. The initial capital of the new undertaking is fixed at 125 million leva, but it may subsequently be raised to 250 million leva, as the greater part of the sound provincial banks are expected to amalgamate gradually with the new bank.

The new cereal crop, with the exception of maize, is estimated at 25 per cent. less than last year's. Pending the exact results of the crop, the Government has placed an embargo on the export of cereals. It is expected that wheat production will be sufficient for local needs; and there may be a surplus of maize for export. A small quantity of last year's wheat may also be available for export. Fresh fruit and vegetables have yielded a very good crop, and exports will certainly be in excess of last year's levels.

Bulgarian foreign trade in the first five months of 1934 has been as follows:—

	First five months of	
	1933	1934
	(Million leva)	
Imports	1,089	858
Exports	1,156	1,046
Export surplus	67	188

The decline in the export figure is due to difficulties in exporting raw tobacco, exports of which have fallen by 270 million leva. The main cause is the delay in concluding the negotiations for the barter transaction, which provides for the export of leaf tobacco worth about 1,000 million leva, against the importation of manufactured goods.

SOFIA, July 20.

BRAZIL

FREEING EXCHANGE OPERATIONS

CONTINUING its policy of freeing exchange operations as much as circumstances will allow and of giving all possible facilities to exporters to dispose freely of their proceeds in foreign exchange, the Government issued a decree on June 20th (extended later) allowing the free sale in the open market of exchange bills drawn against exports of all products classified in official statistics as "various." This decree is expected to call forth about £200,000 of additional free exchange per month for the market. On the other hand, it seems that the amount of "frozen" capital here was not as great as was anticipated in the

foreign press; and, in any case, there is not much demand for free exchange. The export products for which bills still have to be sold to the Bank of Brazil include: cacao, coffee, cotton, hides and skins, lumber, manganese, meat, oilcakes and seeds, rice, rubber, sugar, tobacco and wool.

In accordance with Articles 4 and 5 of Decree 21,113 of March 2, 1932, the Government agreed to deposit with the Bank of Brazil the part of the funds, destined for the service of the foreign debt, that could not be transferred owing to the lack of exchange. Under Article 6 of the same decree, 600,000 contos, out of this "blocked" total of 971,000 contos, have been re-invested in Brazil—300,000 contos in Departamento Nacional do Café bonds; 200,000 contos in the retirement of Federal Treasury bills due this year; and 100,000 contos in the formation of the new Banco de Crédito Rural.

A Federal decree has just been issued laying down regulations for the establishment of new banks to assist in the financing of national industry. Such banks must have a minimum capital of 10,000 contos, and must be located in capitals of States where stock exchanges have been in operation for more than three years past.

The State of Minas Geraes is planning an issue of 600,000 contos of 5 per cent. bonds to consolidate and replace existing obligations.

BUSINESS REVIVING

A general revival in local trade seems under way. The third cement plant in the country is now being erected in the North (at Parahyba). The International Cement Company's plant at Niteroi, which started work only a year or so ago, is now working at full capacity. Quite a number of public works, municipal and federal, are being undertaken, e.g. sewer construction under Federal decree in suburbs of Rio de Janeiro, not hitherto served; and the drainage of the lowlands between Rio and the hills. The State of Sao Paulo, where most of Brazil's cotton mills are located, which formerly imported all their cotton, exported last May 22,500 tons of cotton, and 13,000 tons in June; while between 45,000 and 50,000 tons of this season's crop are estimated to have been already placed for export.

By a law of December 30, 1903, a 2 per cent. (gold) tax was imposed on imports at several ports, in order to pay for dock and port works and improvements. This tax has now been replaced by an additional 10 per cent. *ad valorem* (paper money) duty on all imports affected by the new Customs tariff which entered into force last month; but the proceeds of the new tax are to be earmarked for the same purposes as the former (gold) tax.

RIO DE JANEIRO, July 10.

AUSTRALIA

THE COMMONWEALTH LOAN TO STATES

[The Budget surplus announced this week is discussed in a Note on page 158.]

THE Budget and borrowing arrangements of the Commonwealth and the six States have just been discussed at a Premiers' Conference in Melbourne, with the result that £2,000,000 is to be granted to the States out of the Commonwealth surplus. The aggregate deficits of the six States for the 1934-35 financial year are to be limited to £5,880,000, subject to certain adjustments; and the net loan programmes of Commonwealth and States will be fixed at £22,643,000. During the discussions it has been evident that most of the Governments desire to enlarge their expenditure, both ordinary and that against loans. In this desire they have been encouraged by the success of the 3½ per cent. loan of £12 millions issued by the Commonwealth locally at 98½ which was over-subscribed in three days. The deficits of £5,880,000 are to be financed by the Commonwealth Bank

by means of Treasury bills, subject, it is announced, to the funding of an equivalent amount of Treasury bills as heretofore. A larger total was at first desired, but the Commonwealth Bank has resisted pressure on this point, for which it is being severely criticised by the Labour Party.

The estimate of deficits for 1934-35 mean that the object of balanced Budgets by 1934, according to the "Premiers' Plan," has not been achieved, and both this and the large expenditure of loan money is still disliked in business circles. Provision is made for sinking funds exceeding £8,000,000 on account of the Commonwealth and States for 1934-35, but while this helps to support the market for Government securities, aggregate debts are steadily growing, the interest on fresh borrowings being a set-off against the savings effected by conversions. In defence of the deficits it is argued that the balancing of budgets to be achieved in 1934 by the operation of the Premiers' Plan was to be contingent on prices recovering. There is some substance in this argument; though if the balancing of Budgets is to be postponed until prices reach the 1928 level they are likely to remain unbalanced for a long time.

LABOUR AND THE BANKS

The political outlook has become unsettled, especially owing to the return of Tasmania to Labour at the State elections just held, following a similar movement in Queensland some time ago. The Tasmanian result has encouraged the Labour Party in the hope of returning to office in the Commonwealth elections this autumn with a programme of bank nationalisation and a conversion of external loans to lower rates of interest. Disagreements between the Country and the United Australian Party on the Government side also point in the same direction.

The weather is extremely dry, and the Australian wheat area is expected to be quite 15 per cent. below last year's, while the seeding process is being delayed, recent rainfall being too light to be of much service.

LETTERS TO THE EDITOR

THE ANGLO-NORWEGIAN FISHING DISPUTE

TO THE EDITOR OF THE ECONOMIST

SIR,—Referring to the comment in "Notes of the Week" in last week's *Economist* on the Anglo-Norwegian Fisheries Dispute, I think it is unfair to make a comparison between the three-mile fishing limit for say England and that for Norway. To anybody who has a working knowledge of the actual conditions under which British trawlers fish off the Bear Island, Greenlandic, Icelandic, Murmansk and Norwegian coasts—and there are few having that knowledge who are disinterested parties—the problem recently raised must appear impossible of settlement by the usual diplomatic channels. The population living on the West, and especially North-West coasts of Norway, depends for its livelihood entirely on fishing.

Since the War the Norwegians have grown very uneasy as increasing numbers of British trawlers with new methods of catching fish, have monopolised these grounds. Where, before, fish spawned in their thousands and grew to maturity as far as ten miles from the coast, now the finest and greatest majority of fish are to be found close to the shore in the three-mile limit. When fish are scarce and market prices are high, it is a great temptation to any trawler skipper to trawl within the limits. Quite a number of skippers make a regular practice of it. The risk of a penalty is no real deterrent, as the market value of the fish to be found in the limit is so high as to make the gamble worth while.

Norway is afraid that the three-mile limit is not sufficient to protect the fisheries off her coasts from gradual extinction, and in some fjords admittedly she imposes an arbitrary limit of her own which exceeds the recognised boundary line. She declares that she herself has always upheld a limit of four miles along her coast.

In this connection the *Anglo-Norwegian Trade Journal* for June makes two statements which ought to be considered:—

(1) In 1900 whaling operations off the Norwegian coast were prohibited by the Government as it was declared that this new type of fishing ruined the catches of demersal fish on which the coastal population of Norway had depended for 1,000 years.

(2) The *Journal* asserts that the three-mile limit has no validity before International Law. In support of this statement is quoted the dissent of the Lord Chancellor of England in 1895 when the Moray Fisheries Acts were introduced, from the notion that Great Britain had ever recognised the international validity of the three-mile limit. An ex-Lord Chancellor is said to have declared that the limit was based on *ultima vis armorum*, which was the range of a gun, at one time estimated to be three miles. In connection with the Moray Fisheries Acts of 1895, a Bill was passed to prohibit trawling within 13 miles from the coast. The original Bill suggested a 70-mile limit from Rattray Head to Duncansby Head, but this was modified.

It should not be forgotten that as recently as May 17th of this year the Illegal Trawling (Scotland) Act came into force. The penalties have been increased by this Act. The continued complaints by the Scottish Coastal population against the steam trawler, which not only poached within the limits, but destroyed their nets in the process, had a great deal to do with the introduction of the Bill.

With regard to the present Anglo-Norwegian dispute, Mr Eden's rather startling announcement—to quote the *Economist*—"that in any event an early visit of a British warship to the fishing grounds would be considered," is unsatisfactory. A committee, comprising men like Dr. E. Travis Jenkins of Fleetwood, and Professor Hardy of Hull, who have studied the vitally important problem whether modern trawling methods are gradually exhausting the world's fisheries, should be set up and their opinion accepted.—I am,

Yours faithfully,

TRAWLAMATEUR.

STABLE PRICES OR NEUTRAL MONEY?

TO THE EDITOR OF THE ECONOMIST

SIR,—In to-day's issue of your monthly Book Supplement the writer of the article on "Stable Prices or Neutral Money?" raises objections against the "Austrian" thesis that capital created with the help of inflationary credit will regularly be destroyed when the credit expansion comes to an end. The authors of the three books reviewed in the article and apparently also the writer of the article himself base their views on this point mainly on the very condensed and somewhat insufficient exposition of this doctrine in my "Prices and Production." May I, therefore, be allowed to point out that I

have considerably elaborated this exposition and added some qualifications in an article which appeared in *Econometrica* for April, 1934? I venture to enclose an off-print of this article and remain,

Yours, etc.,

F. A. HAYEK.

15 Turner Close,
Hampstead, N.W.11.
July 21, 1934.

[We are very grateful to Professor Hayek for sending us the above-mentioned article, and we agree that his doctrine (particularly on the points discussed in our Book Supplement) is much more clearly expounded in this article than it was in "Prices and Production."

We suggested in our Book Supplement that "forced saving" and "over-investment" need not make capital destruction necessary after the boom. Professor Hayek, in his new article, argues that new investment can only be maintained if the entire new process of production, in all its stages, has been completed. No one would probably disagree with this statement; an incomplete structure of real capital must either be finished or pulled down. Next, Professor Hayek allows that if sufficient voluntary saving is maintained—in spite of some falling off—to complete the new capital, no capital destruction need ensue. The saving may or may not be sufficient.

The most important assumption, however, which Professor Hayek now explicitly admits to underlie his whole analysis is this: that all the factors of production are fully employed from the moment when forced saving begins until the breaking of the boom. This assumption, which is certainly legitimate in the world of pure equilibrium theory, explains the complete divergence between Professor Hayek's belief that an increase in the demand for consumers' goods leads to a decrease in the demand for capital goods, and the otherwise generally accepted belief that it leads to an increase. At the very beginning of the depression, it is commonly argued, consumers' demand is falling off; and if it increased, there would be a derivative increase in the demand for capital. This is certainly true, if there are unemployed factors of production in existence. At the beginning of depression, in Professor Hayek's view, consumers' demand is actually unsatisfied and increasing, but it cannot give rise to a desired increase in the production of capital goods because all the factors of production are employed.

The demands for consumers' goods and the demand for capital goods, in fact, are only competitive if all the factors of production are employed. Otherwise the second demand is derived from the first. This issue (which is fully discussed in Mr E. F. M. Dublin's "Purchasing Power and Trade Depression") is evidently fundamental to the question whether Professor Hayek's analysis is relevant at all to the trade cycle as it appears in the real world. We would only point out—for what it is worth—that the percentage of workers wholly unemployed, in addition to those temporarily stopped, in 1929 was as follows: 8.2 in Great Britain, 13.2 in Germany, and 12.0 in the United States (trade unionists only).

Finally, Professor Hayek concedes that the idea of "neutral" money may have no significance for practical policy owing to "the existence of long-term contracts in fixed sums of money, the rigidity of prices, and such-like institutional factors."—Ed. *Econ.*]

How Shall I Insure? By F. G. Culmer. (London) Pitman and Sons, Ltd. 84 pages. 2s. 6d.

Vers l'union Balkanique. By A. P. Papanastassiou. Bulletin. Nos. 1-2-3, 1934. (Paris) Publication de la Conciliation Internationale.

A volume of essays, under the auspices of the European centre of the Carnegie Foundation, on the Balkan Conferences of 1930-33, preparatory to the Balkan Pact of February, 1934.

The New Internationalism. By Clark Foreman. (London) Allen and Unwin. 154 pages. 5s. net.

Disarmament and Equal Rights. Edited by R. Schmidt and Adolf Grabowsky. (Berlin) Carl Heymanns Verlag. 284 pages.

This is a most comprehensive treatment, in English, of the disarmament problem from the German point of view. It contains all the important speeches and documents between Herr Hitler's Reichstag speech of May, 1933, and the French disarmament Note of March 19, 1934.

MONEY AND BANKING

FINANCING AMERICA'S RECOVERY

ONCE again a critical period has been reached in the economic progress of the United States. "Recovery" is once more in the balance, and bewildered observers on both sides of the Atlantic are concerned as to the outcome. Much progress has been accomplished during the sixteen months of Mr Roosevelt's Presidency. What he had to deal with at the fateful moment of his inauguration was not merely an economic problem, the reversal of a panicky deflation. He had to restore the morale of the country, to reconstruct a system after complete collapse. In actual fact, the remedies which were advocated by representatives of the most powerful individualist class now clamouring for "freedom"—e.g. the time-honoured system of clearing certificates—would not only have failed to restore confidence but would probably have had so disintegrating an effect that a restoration of any ordered economic life would have become impossible for a long period.

The end of the American financial year offers an occasion for surveying the other side of the balance sheet—the cost of the progress made. The Government debt, exclusive of the Government guaranteed bond issues of certain Emergency Authorities for the purpose of liquifying and buttressing the urban and farm mortgage situation, amounted at the end of the fiscal year 1934 to \$27,053 millions. It rose to this record in four consecutive years from \$16,185 millions, whereas the previous post-war record in 1919 had been \$25,482 millions. Moreover, this rise took place despite the Government's inability or unwillingness to spend the deficit envisaged by last January's Budget of over \$7,000 millions. Some of this debt is represented by more or less valuable assets, which may at one time or other be repaid. Outstanding in this class is the Government-financed Reconstruction Finance Corporation, whose loans and capital assets amounted on May 31st to no less than \$2,448 millions out of a total expenditure of \$3,832 millions. In any case the amount is colossal, and at first glance gives some justification for the anxieties of orthodox bankers and economists, who point to the danger of ultimate uncontrolled inflation. But from a theoretical standpoint these fears seem superficial. The national income of America in the worst year of depression amounted to about \$40,000 millions and may now be flowing at a rate of about \$50,000 millions to \$60,000 millions a year. Even if the 1929 record of more than \$83,000 millions is never reached again, the debt burden does not seem unbearable. The English public debt in post-war years, for instance, was never less than 1½ times the national income, and during the depression it rose to twice that amount. No doubt State and Local Government debt plays a much greater rôle in America than in this country, having increased from \$9,800 millions in 1922 to \$19,300 millions early in 1933, out of which State debts were only about \$2,000 millions. But it must not be forgotten that the United States are a Federation, and that recent legislation facilitates the scaling down of municipalities' debts, which therefore cannot threaten the stability of the currency as they would in a more centralised State. But even if we sum the total public debt, not separating Federal from non-Federal debt, it does not reach the total of one year's national income.

It is not the theoretical, but rather the actual financial aspect of the American Government's attempt to lift the country out of the great depression which gives rise to apprehension. In view of the extremely serious plight of the United States last year, when drastic and doubtful measures had to be taken to foster psychological, speculative revival in order to avoid a complete economic and social collapse, no one familiar with the political scene in America can quarrel with the contention that a slump in the volume of Government expenditure had to be prevented. Under present conditions such flagging in public spending activity would necessarily lead to a

general shrinkage of business, and consequently to agitation in favour of more extreme palliatives.

The Government spending programme, however, was unquestionably a failure, in that it did not succeed in creating an expansion of private spending and investment. It may be argued that the peak deficits of December and January last, though their social importance cannot be over-estimated, did not contribute so much to the better-founded recovery in the spring as the revival of certain replacement demands, e.g. that for automobiles. Clearly, certain "new incomes" were created by public expenditure. It is questionable, however, if we can count all these incomes as purely additional. Can we assume that the Government spending had no adverse influence on private spending and investment such as to stultify the method itself, or, after a certain point, to make it really dangerous? By reducing private expenditure and investment it probably made Government spending, the short-run emergency measure, into a long-run institution.

The reasons for this result are not difficult to trace. It was due (a) to the unbalanced increase of prices, especially of capital goods, which discouraged consumption and investment; and to N.R.A. cartelisation. But (b) it was due to the continuous disturbance of confidence on account of the long drawn out wrangles about the Securities Act revision and the Stock Exchange Bill. And (c) it was due to the vacillating monetary policy of the Government, who in the first period relied on the fallacy of exchange depreciation as a means of active inflation, and even in 1934 did not keep to their intended expenditure programme, thereby reducing the "shock" effect, which was the only justification for emergency measures.

In so far as Government spending tended both to maintain the new monopoly price level and to increase costs (the P.W.A. paying very much more than the average wage in private industry) it tended to increase rather than mitigate the same disequilibria which constituted the obstacles to a resumption of private economic activity. The extreme cartelisation and consequent price rise has materially reduced, if not annihilated, the benefits expected by labour. The attitude of labour, therefore, is menacing and is more and more turning away from the question of wages and hours to the problem of the Unions' political strength. At the same time price readjustments seem to be inevitable on account of consumers' and investors' resistance, and cartelisation begins to show signs of weakening. Thus, in deference to these developments, a drastic revision of N.R.A.—abolishing price fixing and limiting N.R.A. to important industries—seems inevitable.

At the same time it is to be hoped that the Government will realise that mere spending is not an answer to their problems. The increase of the public debt has necessitated the pursuit of a continuous easy-money policy by the Government in order to avoid an increase in the cost of its financing. Member bank reserve balances, which at one time sank below the \$2,000 millions mark, reached the level of \$3,837 millions at the end of June. Excess reserves amounted to over \$1,800 millions, which means that about \$18,000 millions of deposits can be created without recourse to Central Bank credit—an amount which is larger than the expansion which was required to finance the great inflation of 1920. The Treasury, however, is still in possession of probably more than \$2,000 millions of gold, against which no gold certificates have been issued; and when these are issued they will swell member bank balances and increase the potentiality for inflation. More than half of the Government deficit, moreover, was financed by bank purchases of Government obligations. The holdings of all member banks totalled \$8,667 millions at the last date available (March, 1934), which constituted the most important item of their total loans and investments of \$26,549 millions. The possibility of a sweeping inflationary development is not, therefore, excluded.

President Roosevelt's record of handling difficult political issues is the main hope that a major monetary disorder will be avoided. Time is pressing. Every month which passes, without lessening dependence of business activity upon Government spending, increases the volume of Central Bank credit necessary to offset the depressing effects of the mounting debt and the consequent growing unwillingness to invest in Government securities. And this increases the risk that an eventual expansion will become a runaway speculative boom instead of a more balanced and comprehensive improvement. A statement of the Administration's plans, tending to restore confidence, instead of a review of past achievements, would now be most opportune.

FINANCIAL NOTES

The Money Market.—Money remains very easy, and outside lenders have continued to receive $\frac{1}{2}$ per cent. It is true that credit was not quite so abundant on Thursday, but this was due solely to the calling that usually takes place on that day and was unconnected with outside events. The assassination of Dr. Dollfuss has in fact left the money market entirely unmoved, and in one or two cases where lenders tried to secure higher rates they met with no success.

	July 5, 1934	July 12, 1934	July 19, 1934	July 26, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{1}{8}$	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$
(b) Others.....	$\frac{1}{8}$	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$
Three months' bank bills	$\frac{1}{8}$	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$

Discount rates became a shade firmer on Wednesday morning, but they still remain weak, and the clearing banks have reduced their rates for August and September bills from $\frac{1}{8}$ to $\frac{7}{8}$ per cent. They have secured a few bills at the latter rate. This week the total of Treasury bills issued by tender has been reduced from £470.1 to £461.3 millions, representing a contraction of £37.4 millions during the past six weeks.

The Bank Return.—The note circulation remains unchanged, but next week the holiday expansion is due to begin. Meanwhile the circulation is now practically the same as it was a year ago.

	July 26, 1933	Dec. 27, 1933	July 11, 1934	July 18, 1934	July 25, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.2	190.7	191.5	191.6	191.6

Discounts and advances	11.2	16.8	7.8	7.5	7.5

Proportion 42.0% 37.3% 44.7% 44.5% 44.9%

The only changes of note are a contraction of £9.7 million in public deposits and an increase of £7.7 millions in bankers' deposits. Last week public deposits were swollen by Excise duty payments, while this week the net repayment of Treasury bills noted above and probably discrepancies in the dates of Treasury bill payments and maturities have caused them to fall to a more normal level. This money has naturally passed into bankers' deposits.

The Foreign Exchanges.—Notwithstanding the Austrian outbreak the London foreign exchange market remains very quiet. Registered marks have weakened from $34\frac{1}{2}$ to $36\frac{1}{2}$ per cent. discount, but at the moment there is less selling pressure than was in evidence a short time ago. On Thursday morning there was a slight tendency to offer

sterling and Continental currencies and to bid for dollars, but there was little actual business, and the general trend may easily have been the result of the setback in wheat and cotton prices, which may be bringing out seasonal buying and covering of the exchange by European importers. Compared with a week ago, francs have strengthened again as a result of the settlement of the differences in the French Government, and the British Control has had to sell francs at Frs. 76 $\frac{1}{2}$ once or twice in the early part of the week.

New York Money and Banking.—Money rates are unchanged. Brokers' loans were reduced during the week ended July 18th from \$1,059 millions to \$1,031 millions. New York City has arranged for two banking groups to offer on its behalf the issue of \$70 millions of bonds, which was previously refused by the R.F.C., while a few days later the R.F.C. itself declared its readiness to take up \$100 millions of New York City bonds issued for the financing of public works. The Treasury has offered \$100 millions of 3 per cent. 1944-49 Federal Farm Mortgage Corporation bonds, which are fully guaranteed by the Government. The proceeds will be used to repay to the Treasury previous advances made by the R.F.C. This is the first time that the Treasury has acted as fiscal agent for another Government agency. The Treasury has issued a new silver regulation laying down that the transfer of an interest in bullion is subject to the 50 per cent. profits tax in all cases where a net profit is realised, even though the transferor simultaneously acquires another equivalent interest in silver bullion for the same or a different delivery date. This regulation is retrospective to June 19th, and its effect will be to check speculation.

New Zealand Exchange.—With commendable promptness the New Zealand Reserve Bank has preceded its opening with an official statement to the effect that no alteration in the exchange rate on London is intended to be made for a long period. As from August 1st, when the Reserve Bank opens for business, it will sell spot sterling in London in exchange for its own notes at a rate of £125 (New Zealand) for £100 sterling; and will buy gold or spot sterling at a rate of £124 (New Zealand) for £100 sterling. The difference between these rates reflects the Reserve Bank's "turn." Unless any material alteration in general conditions develops, the Reserve Bank will maintain these rates for a long time, and to assist in achieving this measure of stability it is prepared to enter into forward exchange contracts with the trading banks. Otherwise it does not intend to compete for foreign exchange business, though it is prepared to fulfil its statutory obligations if it is requested to do so. The trading banks will be free to fix their own buying and selling rates for London funds, but as the Reserve Bank is a free buyer and seller, its own rates will obviously govern the market. It is known that a speculative position has developed in anticipation of an appreciation of the New Zealand pound, and that funds due in respect of imports into New Zealand are being held in New Zealand currency in the hope that an appreciation would occur. The Reserve Bank's clarification of the position is thus extremely timely.

Standard Bank of South Africa.—The Earl of Athlone, the chairman of the Standard Bank, was able to give his shareholders, at this week's annual meeting, a fairly encouraging account of South African conditions. The drought broke as long ago as last November, and grazing is now abundant and crop prospects good. Gold mining prospers, and the revenue from the excess profits taxation is providing the chief source for financing the Government's reconstruction schemes. Reports from other parts of Africa where the bank operates are, on the whole, becoming more favourable. The Earl of Athlone said comparatively little about the banking position, on the ground that his predecessor had dealt with the return of funds to South Africa at last year's meeting. The banks, however, are still experiencing difficulty in finding employment for their surplus funds, and shareholders were reminded that this difficulty bears on the results of the year's working. This is the common experience of banks in many parts of the world.

THE STOCK EXCHANGE

GOLD IN WEST AFRICA

WEST AFRICA, which in the last few months has been intermittently concerned in a London mining share boom, is one of the oldest of the world's known gold fields. Few countries, even among those known to the Ancient World, have so long a record of persistent primitive production. Though the earlier output was mainly obtained from alluvial and shallow workings, serious mining operations are known to have been carried on at least as early as the fifteenth century, when the precious metal was first exported. European mining goes back for a century, but it was only in the late 'nineties that systematic capitalistic efforts to overcome the natural difficulties of the territory eventuated in the formation of the Ashanti Goldfields Corporation.

The latter's conspicuous success has inspired an inevitable train of imitators, but it is only the recent removal of certain very definite disadvantages which has made West Africa "front page news." Transportation problems, in an area of 92,000 square miles of jungle, have been mitigated, if not overcome, by the provision of 500 miles of Government railways and 6,400 miles of roads fit for motor traffic. Some millions of pounds have been expended on the provision, at Takoradi, of a harbour large enough to accommodate nine vessels with laden draft of 25 to 27 feet. The transmission both of mining machinery and power to relatively remote districts has been greatly facilitated. Advancing knowledge of medi-

cine has rendered the area, with its hot and humid tropical climate, appreciably less unhealthy for European engineers and assistants. Finally, and perhaps most important, the rise in the price of gold from 85s. to nearly 138s. per ounce, since the devaluation of the pound, with a concurrent reduction in working costs, has reduced the extreme limit of payability from something in the neighbourhood of 6 dwt. to something under 3 $\frac{1}{2}$ dwt. per ton of ore.

Thus, the most recent "jungle boom" has at least a more favourable economic environment than its unfortunate predecessors, which produced mainly disappointment and fruitless capital expenditure. Nevertheless, as a field for speculative investment, West Africa has all or nearly all the disadvantages which are inseparable from "new" gold-bearing areas (in the modern sense), however bright their ultimate prospects. As compared with the Witwatersrand, which has half a century of intensive development behind it, West Africa suffers, for the time being, from a certain insufficiency of exact knowledge and assured capital resources. Both factors have an intimate bearing on the problem of the investor, and both tend to discount the significance of contemporary share movements.

Systematic geological survey, in the last twenty years, has suggested that some 20,000 square miles of the Gold Coast (i.e. two-fifths of the combined area of the Gold

MAP OF THE WEST AFRICAN GOLD AREAS

Coast proper and of Ashanti) are underlain by rock of pre-Cambrian age. The bulk of the world's gold output has hitherto been obtained from rocks of this description. Generally speaking, however, the extremely numerous remains of native surface workings disclose only low values. While the existence of richer ore at depth may be presumed, it can be proved only by systematic boring, shaft sinking and underground development. Apart from a host of isolated "prospects," there are apparently three major gold-bearing formations, of which only a few small sections have so far been tested at depth. The Tarkwa Banket reef, running about 100 miles in a north-easterly direction, is paralleled about 12 miles north-west by the Prestea. To the north, a quartz formation of very considerable extent has the famous Obuasi mine of the Ashanti Corporation approximately in its centre, while about 50 miles further north-west the Bibiani mine is opening up payable ore. The relative positions of these formations may be perceived by reference to the accompanying sketch map.

The Tarkwa field closely resembles the banket reef formation of the Rand, with its characteristics of comparatively regular gold deposition and pronounced continuity of reef, laterally and in depth. Payable values, similarly, occur in "shoots" (whose characteristics, on the Rand, were explained in the *Economist* of July 7th last, page 20). As these, however, are apparently neither as numerous nor as extensive as on the Rand, mining must necessarily be more selective. Though the beds extend for 100 miles, serious operations have hitherto been confined to a part of the southern portion of 15 miles. Here, the Taquah and Abosso Company, whose chairman is at the head of Ashanti Goldfields, is operating mines originally developed some years ago. The company paid a dividend for its last financial year of 37½ per cent. on an issued capital of £240,000. Another developed mine, the Abbotiakoon, is operated under the technical direction of the American Smelting and Refining Company. Here, also, are the properties of Gold Coast Banket Areas, and its subsidiary, South Banket Areas, which appear favourably situated. The mill now being erected at the Fanti mine of the Gold Coast Banket Areas may be in production by the end of this year.

On the Prestea belt, the principal mine, the old Prestea, is owned and operated by Arison Gold Mines. Geologically, and in regard to its deposits, this belt is broadly similar to the Obuasi field, further north, from which the mines of the Ashanti Corporation have obtained high-grade ore for many years past. Practically the whole of the area covering the strike of the quartz reefs between the two last-named fields is owned by the Gold Coast Selection Trust, which has an experienced mining organisation and considerable cash resources. Generally, however, it is in the northern area that least is known and most surmised. In the North Ashanti district a banket formation may exist, similar to the Taquah field, and possibly of larger area. The Bibiani has disclosed satisfactory, though possibly somewhat irregular, values, and the Konongo properties may lie at the end of still another gold belt or, alternatively, on a continuation of the belt of which the Obuasi mines are a part.

This summary suggests, incidentally, that the developed mines of the entire area can be counted on the fingers of two hands. Most of the shares which have gone to high premiums since their issue, in the last few months, are those of companies owning more or less promising "prospects," whose development, if and when payable deposits are proved, will require the sinking of much larger amounts of capital than the majority of companies possess, or are likely to be able to obtain on favourable terms so long as they remain in "isolated" units or inter-shareholding groups. Generally, the market capitalisation of West African shares suggests that, in the case of recently-formed companies, the market is tending to assume what it remains for experience to prove, as may be gathered from the table at the head of the next column.

It will be seen that the nominal paid-up capitalisation of eighteen West African companies which have not yet paid a dividend amounts to little more than £4½ millions, but is valued in the market at an average premium of nearly 280 per cent. The future of some of these new companies may well be promising. Successful development of

any "new" mining territory necessarily involves the active enlistment of the speculative investor, who may be ready to adventure his money for a fortune—or a total loss. The assurance of his support, however, is a different matter from the encouragement of share gambling. At the present stage, for example, the granting of options and option certificates, giving certain parties a future call on shares on favourable terms, may be an inevitable adjunct of a financial technique designed to ensure the provision of further capital. In some cases, however, these instruments have degenerated into mere gambling counters, or levers for the manipulation of the market.

In short, the successful development of the West African field pre-supposes the diversion of increased, and increasing, resources to the mines. More thorough exploitation of the "promises" of geological exploration is a paramount necessity, but a continuous prospecting programme requires a long purse as well as a stout heart. The specialised and wealthy mining finance house, whose existence has been found indispensable on the Rand, is likely alone to possess the financial and technical resources indispensable to success. Up to the present, however, while established finance companies have shown a certain interest in West Africa, they have been reluctant to commit themselves to the acquisition of any large or irrevocable stake. In the interests both of potential investors and of the field itself, the backing of these companies must be regarded as a *sine qua non* to further applications to the public, and it may be hoped that the recent taking over of the management of the Konongo by Consolidated Gold Fields will be a signal for further moves in this direction.

INVESTMENT NOTES

Gilt-edged Prospects.—The strength of Gilt-edged stocks continues unabated. During the past month some of the below-par British Government stocks had risen two points before Thursday's moderate reaction.

Stock (and Redemption Dates)	Lowest, 1934	June 25, 1934	July 25, 1934	Change During Past Month
Consols 2½%	73½	78	80½	+2½

Funding 4% (1960-90)	111½	113½	115½	+1½
Conversion 5% (1944-60)	115½	117½	119	+1½
Conversion 3% (1948-53)	97½	101½	102½	+1
Conversion 2½% (1944-49)	92½	96	97	+1

So far, the market has confounded all prophets of serious reaction. The "two-and-a-half per cent. school," however, are still outnumbered by those who assume that reaction must come, sooner or later, among whom is Mr N. F. Hall, of University College, London (who contributed to the *Economist's* Supplement of May 5th, on the Exchange Equalisation Account). Mr Hall declares that the early months of 1935 will be a critical period, for the British Treasury, having (presumably) funded £150 millions of 2 per cent. Treasury bonds, 1935-38, callable next April, will have no further direct interest in the maintenance of "control." So far, the Government's declared policy of raising commodity prices by monetary measures has been largely nugatory, owing, Mr. Hall believes, to the prevention of international capital movements. But as the revaluation of the Bank of England's gold stock at the current market price for the metal would raise it to the neighbourhood of £315 millions, a substantial recovery in international financing need not be accompanied by contraction of credit in London. Once international capital movements are resumed, Mr Hall believes, increased money supplies will become effective, commodity prices will rise, the supply of ordinary securities will increase, and the banks will reduce their investments and increase their advances. While, therefore, present gilt-edged values—particularly for "shorts"—may be maintained and possibly improved in the immediate future, anticipation of the train of events described above may put a brake on any significant rise, and ultimately (say, from the spring of 1935 onwards), produce a fall calculated to bring 2½ per cent. Consols eventually to approximately a 4 per cent. basis. Some investors may consider that Mr Hall's analysis gives optimistic force to the revivalist influence of renewed international capital movement, and glosses over the existence of decidedly effective machinery for strait-jacketing international trade, which has been built up during the depression. Incidentally, a historical parallel with the 'nineties of last century, on the lines suggested in our leading article of April 21, 1934 (page 880), suggests that British Government security values should reach the highest point in their "time-table" about half-way through this year, and, after remaining near the top for about twelve months, should slowly recede in the latter part of 1935. But Mr Hall rejects the applicability, in this instance, of the historical method.

Preference Shareholders' Rights.—The Preference shareholder, uneasily placed between the ordinary shareholder and the debenture holder, lacking the votes of the one and the specific security of the other, has recently had ample opportunity to try his strength against those who would diminish his rights. On the whole, he may have been surprised by the extent of his own success. It is true that the Court's decision in the Union Cold Storage case (whose outcome we described last week, page 123) has upset a scheme under which ordinary shareholders would have bought out certain preference rights, in perpetuity, for a mere ten years' purchase. This judgment, however, was given simply on the ground of faulty presentation, and as holders of more than half the capital concerned failed to vote on the original proposals, it will always be a matter of speculation whether better "staff work" by those responsible would have secured them their objective. The interests of preference shareholders have been more decisively vindicated by the success of efforts to induce the directors of Wiggins and Company (Hammersmith) to withdraw a reconstruction scheme which (as we showed in our issue of July 7th last, page 26) would have involved merely a *pro forma* reduction in the equity capital, and imposed on preference shareholders a permanent diminution of income and total loss of dividend arrears. The inequity of this type of "reconstruction" finance is glaring. The Shareholders' Protection Association deserves every support in its opposition to a similar proposal, by the directors of George West (Weatherproofs), involving the cancellation of preference dividend arrears, the reduction of preference dividend rights from 7½ per cent. cumulative to 5 per cent. non-cumulative, and a merely nominal writing-

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £15,000,000

down of the ordinary shares from 1s. to 2d. The opposition's case will be strengthened by the action of the boards of two important British companies. Shareholders in British Ropes have this week endorsed a scheme under which, in compensation for the loss of dividend arrears and of cumulative rights as regards 3½ per cent. of a 6½ per cent. annual dividend, preference shares receive a 25 per cent. participation in the equity. The tentative proposals of Richard Thomas, outlined by the chairman at the annual meeting on July 20th, go even further, for they confirm the preference shareholders' rights to their cumulative tax-free annual dividend of 6½ per cent., and offer them two-thirds of the equity in return for cancellation of seven years' arrears of dividend. These proposals, which mark a considerable advance on those suggested a year ago, appear equitable. Their acceptance, from the shareholders' viewpoint, is largely a matter of expediency. If preference holders believe that the company will be sufficiently successful to earn and pay reasonable ordinary dividends in the future, they may regard their proposed share in the equity (and voting control) as valuable consideration. If their views on future earning power are more conservative, they may reflect that an issue of funding certificates would secure them the right to full repayment of arrears before ordinary shareholders received dividends. In the former case, however, the company would probably be in a position to raise further capital, if necessary, by an issue ranking *after* the preference shares, while in the latter event new money would doubtless be unobtainable except by the creation of a senior security.

Is "Placing" Economic?—Recent dealings in Griffiths Hughes ordinary shares have occasioned discussion on the general advantages of the "placing" method of marketing new capital issues. The company was formed with a capital of £1,000,000 5½ per cent. £1 preference shares, publicly issued at 20s. 6d., and £1,500,000 in ordinary shares, issued as part consideration. The chemists' business acquired had a strong earnings record, averaging £382,460 per annum, but the net assets of the operating company amounted to only £410,140. The earnings cover ensured ready subscription of the preference issue, which had been underwritten by a Stock Exchange firm in part consideration for the right to purchase 500,000 ordinary shares at par. These shares were duly "placed," at various prices, apparently, up to 37s. 6d. The "Supplementary List" of July 19th contained the unusual notice that dealings below that figure had been expunged by order of the Committee, as being in respect of placings effected before the granting of facilities. The current quotations of the preference and ordinary shares are respectively 22s. and 39s., so that the market values the goodwill of the business at no less than £3,615,000. On this high figure we offer no comment. Investors in general may be more concerned over the

apparent existence of "frictions" in one section of the capital market, which permit a total eventual appreciation of over 60 per cent. on a "placed" price of, say, 24s. including formation expenses and underwriting. The determination of the price of a public offer is usually closely related to market conditions, owing to underwriting and finance house competition. Why should similar competition necessarily be less effective between vendors, who place part of their share consideration, and market firms? This question is important for capital-seeking companies. In the present instance, if the vendors had taken full consideration in cash and the ordinary shares had been offered publicly at, say, 37s. 6d., the resulting share premiums reserve would have mitigated a certain top-heaviness in the balance sheet position. In certain other recent cases, a somewhat wide margin has been established between a "placed" price and the market price. For example, G. H. Heath and Company, last April, placed 100,000 £1 ordinary shares at par, in which public dealing began at 46s. 3d. The ordinary shares of Ideal Building and Land Development, placed on similar terms, opened at 50s. The initial formation of a market, especially in small issues, involves indubitable risks, which merit adequate remuneration. Investors, however, may urge that the benefits of high premiums should, as far as possible, be made available for the companies concerned, and that vendors who not infrequently retain an appreciable part of their consideration in the form of ordinary shares, should not normally regard a subsequent "rake off" as a significant part of their total remuneration.

* * *

Wall Street's Malaise.—The American stock markets remain thoroughly debilitated. Six weeks ago expectation was general that the rising of Congress, which had been sitting on the chest of the market for so many months, would be the signal for renewed activity. These hopes were dashed, however, by the appointment of the Control Commission personnel. The market, rightly or wrongly, took the view that one year of Mr Pecora, whose activities in the Senate banking inquiry were known and feared, would outweigh any favours that Mr Joseph P. Kennedy, himself a well-known ex-pool operator, might have urged his committee to bestow on harassed Wall Street. Confident anticipations of the autumn revival put markets in a better mood temporarily, but the news from the drought-stricken wheat and cotton areas, and widespread strike troubles, caused a prompt reaction in sentiment. The autumnal Congress elections are being regarded with close attention, in view of the President's declaration, on the eve of his holiday, that the public must now be allowed to form its opinion of the new legislation. The President is still his own party's greatest asset, but it would need all his undoubted political sagacity to estimate whether Republican anger with the Administration's handling of the strikes is of greater electoral importance than the obvious discontent of the working rank and file on the issue of the company unions and N.R.A. Clause 7 (a). The outlook for American recovery is still distinctly clouded, and much will depend on whether the autumn business upswing exerts its full influence. Government financial "priming," which may otherwise be called into operation, is an unsatisfactory substitute for the increased monetary circulation resulting from investment in capital goods. The abrupt fall in steel production during the past two months is largely seasonal, and may well show some improvement from September, but recovery would undoubtedly be greatly stimulated by an increased building activity. Finance for residential mortgage business is readily available, but high construction costs will constitute a considerable obstacle to a nation-wide campaign under the Housing Act. Meanwhile, Wall Street members are showing less interest in dull markets as the summer heat waves occur. The course of the market has disappointed anticipations, widely expressed on this side earlier in the year, that funds transferred to New York would partake in an impending revival. Nevertheless, autumn revival in America, coupled with assurances of non-interference by the Administration and a temperate policy of the Control, might well serve as a prelude to a cautious advance during the winter months.

Railway Dividends.—The great expectations aroused by the home railway traffic figures of the early part of the year have been chastened by the less favourable tendency of recent returns, in which comparison has been made with improving totals in 1933, and by the ominously uncertain attitude of organised railway labour to the wages question. The market, on the whole, expected the railway boards to be conservative in declaring interim dividends, and in this respect, at least, the market has not been disappointed. The London Midland and Scottish statement, on Thursday, showed that net revenue had increased during the half-year to June 30th by £1,000,000, of which £950,000 came from railway operations and £50,000 from ancillary services, etc. By comparison with the half-year to June, 1929—the last year which the L.M.S. recognises as "normal"—net receipts showed a drop of £2,900,000. Although revenue would, apparently, have more than covered a full half-year's dividend on the 4 per cent. preference and 5 per cent. redeemable preference stocks, the board, very wisely, has limited its payments to 1½ per cent. and 1¼ per cent. respectively. The Southern Railway has decided to pay no dividend at all for the half-year on its preferred ordinary stock. Gross passenger receipts increased by £125,000 and goods train receipts by £155,000, while expenditure rose by £190,000. As net receipts from ancillary services broke approximately even, net revenue was thus £90,000 up. The market registered its disappointment with the decision by putting down the price of the preferred ordinary stock from 78 to 74, after 71. Investors, however, should not overlook the extent to which "policy" has determined this week's decisions, for both the L.M.S. and the Southern have deliberately under-distributed their earnings. The Great Western and London and North-Eastern statements were unavailable as we went to press.

* * *

Actuaries' Investment Index.—Industrial share values continue slowly to recede, the Actuaries' price index for 144 shares (December 31, 1928 = 100), being 70.1 this week, against 70.4 last week and 70.8 a month ago. The corresponding yield figures are 3.73, 3.71 and 3.70 per cent. With few exceptions, fluctuations in individual groups of shares have been of small compass, as the following table suggests:—

Group and No. of Securities	Prices (Dec. 31, 1928=100)			Yields (%)		
	June 26, 1934	July 17, 1934	July 24, 1934	June 26, 1934	July 17, 1934	July 24, 1934
<i>Higher this Week:</i>						
Building Materials (4)	82.4	81.7	82.7	4.10	4.13	4.08
Insurance Companies (24) ...	108.2	109.6	110.0	3.87	3.83	3.81
Iron and Steel (6)	50.8	51.5	51.9	1.30	1.24	1.21
Breweries & Distilleries (16)	110.3	109.3	110.3	3.87	3.91	3.91
<i>Lower this Week:</i>						
Home Rails (4)	77.3	80.1	78.7	1.50	1.48	1.49
Investment Trusts (15)	52.3	50.8	50.4	3.70	3.76	3.79
Oil (5)	63.0	62.6	61.0	4.70	4.69	4.81

Insurance shares continue their gradual but steady advance, which has raised the index price from 99.4 to 110.0 since the beginning of this year. Building material shares remain popular, owing to new "record" production figures from the building trade. Home rails, on the eve of the interim dividend announcements, had lost nearly all the ground gained in a single week, between July 3rd and 10th. On the whole investment interest, in a quiet pre-holiday market, remains centred on gilt-edged rather than industrial securities.

COMPANY NOTES

Canning Companies.—British Canning is passing through a difficult stage, which is rarely avoided in the early career of a promising new industry. In its present form canning is barely ten years old in this country. It was founded largely by the combined efforts of the South Wales tinplate manufacturers and the Ministry of Agriculture. Grading and a national mark were early adopted by the traders. Initial difficulties over cooking and supplies were

PRELIMINARY NOTICE.

GOLD EXPLORATION & FINANCE COMPANY OF AUSTRALIA, LTD.

SHARE CAPITAL (Authorised) £2,000,000 divided into 4,000,000 Shares of 10/- each

The Subscription List will open on Monday next for an Issue at par of 1,800,000 Shares of 10/- each

DIRECTORS:

JOHN ALEXANDER AGNEW, Esq., of 49 Moorgate, E.C.2, Chairman of New Consolidated Gold Fields, Limited.

ALFRED JEAFFRESON BRETT, Esq., of 1 London Wall Buildings, E.C.2, Director of The Central Mining and Investment Corporation, Limited.

PERCY EDWARD MARMION, Esq., of 95 Gresham Street, E.C.2, Director of Imperial Smelting Corporation, Limited.

CYRUS THOMAS POTT, Esq., of 95 Gresham Street, E.C.2, Director of Union Corporation, Limited.

WILLIAM SYDNEY ROBINSON, Esq., of 360 Collins Street, Melbourne, Director of The Zinc Corporation Limited.

The Company has been formed with the objects of carrying out on its own account and financing others engaged in the exploration, development and finance of gold mining companies, and of acquiring certain gold mining interests in Australia held by AUSTRAL TRUST, LIMITED, NEW CONSOLIDATED GOLD FIELDS, LIMITED, THE CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED, UNION CORPORATION, LIMITED, THE ZINC CORPORATION, LIMITED, and IMPERIAL SMELTING CORPORATION, LIMITED.

The Prospectus shows, inter alia, that:

- (1) Controlling interests are being acquired in Western Mining Corporation, Limited, which is now engaged in exploratory work on areas totalling some 85,000 square miles in Western Australia; and in Bendigo Mines, Limited, which owns leases or lease applications extending to about 2,300 acres in the famous Bendigo Goldfields.
- (2) Leases or options on leases or applications therefor, covering in all a total area of about 670 acres situated in the Kalgoorlie Goldfield.
- (3) A majority interest is also being acquired in Gold Mines of Australia, Limited, which holds extensive interests in the Deep Leads, as well as other important mining interests in Victoria, New South Wales and Queensland.
- (4) The present Australian market value of the quoted shares being acquired is considerably in excess of the cash consideration of £375,000 which the Vendors are to receive from the Company.
- (5) The whole issue has been underwritten by the Vendors free of commission, and the Vendors are taking firm for themselves or their nominees 900,000 shares of the present issue.
- (6) There are no promotion profits.

Prospectuses and Application Forms are now available from—

LLOYDS BANK, LIMITED, 72 Lombard Street, London, E.C.3, and Branches; and **ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED**, 5 Gracechurch Street, London, E.C.3; and

overcome. As English fruits and vegetables were of high quality and excellent flavour for canning, demand expanded rapidly. From 7,840,000 cans in 1927, the estimated output of canned fruit and vegetables rose to 95,000,000 in 1932. This progress attracted a flow of new entrants to the industry, many of whom were little fitted to compete by skill or experience. The inevitable result was an excessive output, which has necessitated a sharp reduction in prices at the end of the selling season to avoid carrying over stocks into the new canning year, since canned fruits are liable to deterioration after 15 to 18 months. On top of these domestic difficulties, the depreciation of the dollar has greatly intensified the competition of Californian canned fruits. Experience shows that while the British housewife gives a certain preference to British fruits, it is not sufficient to overcome any marked price differential. As may be seen from the accompanying table, the results of canning companies published recently reflect these difficult conditions. During the winter it seemed likely that, under

stress of competition and low prices, a price and production agreement might be established, but owing to lack of support from at least two leading canners the project was abandoned. Possibly the leading companies would prefer the weak sellers to be eliminated before stabilising conditions of business. There appears to be no reason why the industry should not again make good profits once the present difficulties have been surmounted. The latter have already served a useful purpose by dispelling the idea that canning offers easy profits, which led to overcrowding in the industry two years ago. Moreover, the canning code under N.R.A., and the voluntary agreement for restricting the peach pack and the Hawaiian pineapple pack are expected to strengthen the external position. For the more distant future the home market appears to hold substantial possibilities. The British consumption of canned foods per head is still small by comparison with the American or Canadian. Modern domestic tendencies favour prepared foods, and the demand for canned goods has already shown itself elastically sensitive to reductions in price. The possibilities of a good export demand from British residents overseas for English canned fruit, vegetables, fish and meats are also believed to be considerable. Investors, however, should bear in mind that the difficulties of the industry have not yet been overcome, and that development may, for a time, be slow.

Distillers Meeting.—Mr William H. Ross gave a hopeful review of the prospects of the Distillers' Company at the meeting on July 20th. It is clear that, in the near future, a further increase in output must come chiefly from the industrial alcohol branch of the business. Last year, though the American market showed moderate improvement following the repeal of Prohibition, home demand for

potable spirits contracted further, being only one-third (by volume) of the 1914 turnover. For the present, the company's policy is deliberately to foster the market in solvents by accepting a modest profit margin. The American market is limited, not only by hesitating trade recovery, but also by the determination of transatlantic Governments to foster a native distilling industry. The latter factor has influenced the company's decision to acquire a holding in National Distillers, which has provided a direct interest in the production of American liquor. The sale of its own Scotch whiskies in Canada and the United States being unaffected, the company thus retains its valuable goodwill in the market for high quality whiskies in America, while the American stills, now in course of erection, should compete favourably with existing producers. For the immediate future, therefore, higher profits will be a function of sustained domestic revival and a return of American prosperity. If, however, the decline in the consumption of spirits should prove a secular social phenomenon, or favourable fiscal opportunities be elusive, the company has a second string, by way of industrial alcohol, whose profit potentialities have as yet been only partially tested.

Anglo-Spanish Construction Company.—Shareholders in the Central Mining and Investment Corporation, which controls the Anglo-Spanish Construction Company, will view with satisfaction the announcement made by Sir John Simon, in the House of Commons on Monday, that His Majesty's Government intends to press the matter of the company's claims to over £1,500,000 for the financing of the construction of the Santander-Mediterranean Railway Company. The Anglo-Spanish Construction Company was registered ten years ago and agreed to construct and equip a broad-gauge railway of about 415 kilometres from Ontaneda to Calatayud, for which payment was to be made by the Spanish Government in 5 per cent. tax-free bonds. The Spanish Government has recently made no effort to meet the company's claims for constructional work, or for repayments of amounts paid in taxes which, the company contends, have been improperly levied. The Government would appear to have originally based its action on the report of a "Commission of Responsibilities" which reviewed the acts of the Dictatorship after the inauguration of the Republic. Spanish press reports suggested that this Commission questioned the origins of the concession. The Santander-Mediterranean Company, however, made a detailed reply, denying the charges, and the validity of its claim for constructional work has subsequently been upheld by the Supreme Tribunal. The delay in effecting a satisfactory settlement is necessarily damaging to the Anglo-Spanish Construction Company, which has a net balance of £2,841,203 of advances to the Santander-Mediterranean Company. The chairmen of other British companies have found reason to complain of the difficulty of operating in Spain (e.g. Sir Auckland Geddes at the last Rio Tinto meeting). It may be hoped that the present Spanish Government will be sensible of the inadvisability, in its own interest, of prolonging a situation calculated to foster the impression that its territory is not the most suitable of fields for British financial and commercial enterprise.

Rhokana Profits.—Almost alone among important primary commodities, copper refuses obstinately to show any price recovery. The London quotation has fallen this week to £28 17s. 6d. per ton. The preliminary statement of Rhokana Corporation, announcing estimated net profit of £390,000 for the year to June 30th, is, in the circumstances, eminently satisfactory. The previous year's result, similarly calculated after depreciation and development, but before debenture interest, was £207,985. This improvement, however, masks a substantial inner reserve, for stocks of metal have been written down to cost, whereas previous valuations were made at realised prices. As stocks on this basis amounted to £320,907 at June last year, the hidden reserve resulting from the new practice may be of the order of

£100,000. The total production of blister copper for the year was 62,180 long tons, against 48,579 tons for 1932-33. The electrolytic refinery at N'Kana will be in operation shortly, and, according to the chairman's speech at the last meeting, great savings are expected in refining costs. Whether any substantial rise in copper prices is likely in coming months would appear to depend on the prospects of American and German demand for the metal. The former market, which in normal years took up to half the total world consumption, has shown a moderate recovery during the first five months of the year, although it has not kept pace with the improvement in world consumption. Over the long period a price of, say, £30 per ton may be difficult to maintain in view of the increased capacity of low-cost Rhodesian producers. As we stated in a leading article on Rhodesian copper mines in our issue of May 12th (page 1033), these companies appear to have more to gain by a moderate rise in prices under free conditions than by holding consumers to ransom. Their cautious selling policy, however, will ensure that expanded production will not be pressed on the market, and will, presumably, be consolidated by further reductions in operating costs.

Other Company Results.—The stream of company reports is now showing the usual seasonal contraction, our summary table on page 184 including the results of only 34 companies. The Hibernian Bank has earned £47,986 net profits for the half-year to June, compared with £43,313, while the Queensland National Bank reports a decline for the year from £75,539 to £67,411. In the Finance and Law section, the report of Covent Garden Properties shows a reduction of net earnings from £138,739 to £127,991, owing to a fall in rentals which has been experienced by many property companies in recent months. Among iron and steel companies, Beyer Peacock have shown little improvement, the loss for 1933 amounting to £43,879, compared with £47,735 for 1932. Bengal Iron, however, have reduced their loss from £12,637 to £2,742 for the year to March 31st. Further rubber reports continue to make a favourable showing, the week's reports including Craigielea (£10,165 against Dr. £395), Merlimau Pegoh (£32,188 against Dr. £5,411), and Port Dickson Lukut (£7,193 against £3,002). Dhamai Tea has earned net profits of £17,294 for 1933, and the deferred dividend is increased from 5 to 20 per cent. In the Investment Trust section, British Steamship shows a fall in net revenue from £88,120 to £78,416. The miscellaneous section shows signs of unspectacular improvement on the whole. Cropper and Company report a net profit of £31,872 against £22,146, while McDougall's Trust and Montague L. Meyer, for which comparisons are not available, reveal net profits of £102,848 and £53,851, respectively. Millars' Timber and Trading has reduced the 1932 loss of £85,231 to £36,714. Steady earning power is shown by Tilbury Contracting (£114,787 against £118,351), Hutchinson and Company (Publishers), Manchester Dock and Warehouse Extension, and Manchester Ship Canal Warehouse.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—The Standard Bank of South Africa, Provincial Bank of Ireland, Brazilian Warrant Agency and Finance, Egyptian Delta Light Railways, Anglo-Spanish Construction, City of San Paulo Improvements and Freehold Land, Zinc Corporation, Distillers Company, Furness Withy and Company, Victoria Falls and Transvaal Power, Richard Thomas and Company, Anglo-Dutch Plantations of Java, Selected Land and Property, Ideal Land and Building, British Ropes, and Tanganyika Concessions. The speeches at the Standard Bank of South Africa and Distillers Company meetings are discussed in notes on pages 170 and 176. Lord Essendon expressed his regret to Furness Withy ordinary shareholders that the dividend had been passed for the first time in forty years. He referred to difficult conditions in the Pacific trade, and to the intensity of foreign subsidised competition, and declared that the new beef policy would have adverse effects on the

PRELIMINARY NOTICE

IDEAL BOILERS & RADIATORS

LIMITED

Issue of 750,000 Five per Cent.
Redeemable Cumulative Preference
Shares of £1 each at 20/6d. per share

The SUBSCRIPTION LIST for the above ISSUE will
OPEN on TUESDAY, the 31st day of JULY, 1934

The Prospectus will show (inter alia) that:—

1. The Company is acquiring from the National Radiator Company, Limited, manufacturers of the well-known Ideal Boilers, Radiators and other heating accessories, the successful business established in 1894.
2. Part of the proceeds of the issue will be used for establishing an additional factory to develop new extensions of the business.
3. The nett profits of the business for the respective financial periods have been as set out hereunder:—

Year ended 31st December,	Year ended 31st December,
1924 £185,772	1929 £213,171
1925 £187,689	1930 £211,740
1926 £196,853	1931 £205,691
1927 £210,296	1932 £157,329
1928 £255,496	1933 £196,576
Half-Year ended 30th June, 1934, £115,358.	

4. The amount required to pay the annual dividend on the £1,000,000 Preference Shares is £50,000.

Prospectuses and Application Forms are now
available from

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

BERLIN

After July 17th the share market took an upward turn, the main feature being heavy dealings in the minor industrial stocks ("Cash List"), in some of which the demand exceeded the supply. Active industrials also rose sharply, but irregularly, the chief demand being for machineries, with Berlin-Karlsruhe and Orenstein und Koppel leading. Later steels gained considerably, Mannesmann and Klockner showing the greatest advances. Electric-cable stocks were bought on accounts of increased manufacturing activity. The home bonds market was undecided and dull. Certificated dollar bonds this week were steady or firm, but converted issues were weaker.

AMSTERDAM

The market continues to exhibit a weak tone. Unilever has led this week's movement to lower levels, owing to the introduction of an excise duty on vegetable oils, and on Wednesday the shares fell to a low record of 59½ compared with 67½ at the end of the previous week. Rubber shares, under the lead of Amsterdam Rubber, were reactionary, while sugar, tobacco and industrial issues were unable to resist the weak trend of the market.

CANADA

Stock markets are experiencing their usual summer dullness owing to holidays. Business in Toronto has been much brisker than in Montreal on account of the popularity of the mining stocks. Market movements, however, have been irregular, and the price trend has been downward. Interest has recently been concentrated on Canadian Industrial Alcohol "A" stock. Difficulties concerning the new stock issue led to a suspension of dealings, while rumours that the selling arrangement with the American National Distillers Company had been cancelled caused heavy selling of the old stock. Other brewery and distillery stocks have been weaker. Power stocks have been poor, while adverse Western crop reports have had a bearish influence upon implement stocks like Massey-Harris. After showing a downward trend during the latter half of June, the bond market has recovered considerably during the first half of July, and the whole gilt-edged market is now firm. The *Financial Post's* average price of 7 gilt-edged bonds on July 10th was \$109.89 as compared with \$108.84 on June 29th. Western provincial bonds have moved up two points in this period on improved revenue prospects. The mining market has been reasonably active; the seasoned gold stocks have been firm and the silver stocks have improved. There is, however, a good deal of rather shady wildcat speculation in new mining issues which pools try to boost upward. The Bureau of Statistics' Investors' index for all stocks on June 28th was 93.0 as compared with 96.3, 95.7 and 93.1 on June 21st, 14th and 7th respectively.

CAPITAL ISSUES

This week's prospectuses will appeal mainly to the speculatively minded, rather than the conservative investor. Two further gold issues for reopening old properties have appeared—*New Robinson Gold Mining* and *Murchison Gold Development*. The former will work the lower grade main reef of the famous Robinson mine, and, if the apparently cautious technical expectations are realised, should have speculative possibilities. The second is a Great Boulder subsidiary, and will therefore be assured of competent technical management. The short cabled reports and extracts, however, give a minimum of information, and the consulting engineers state that they have not examined the mines personally. The preferred ordinary shares of *Airspeed (1934)* must be regarded as essentially speculative, since the vendor company has only recently completed development work. The liaison with Swan, Hunter and Wigham Richardson, however, should assure financial support, which is essential in this highly competitive field. *Burtol Cleaners* acquire a relatively undeveloped business for £100,000, of which £59,934 is in respect of goodwill. Individual units have been acquired at from 4 to 10 years' purchase for goodwill, on the latest profit figures, and prospects clearly depend on the achievement of the directors' estimate of profits. The only "introduction" is *Allied Industrial Services*, whose profits have shown considerable growth during the last four years.

Publishers:—ST. CLEMENTS PRESS, Kingsway, LONDON

(Continued on page 184)

Zinc Corporation, and Austral Trust. 1,800,000 shares will be issued at par on July 30, of which vendors have applied for 900,000 shares. Issue has been underwritten by vendors free of commission, and present Australian quotations of shares acquired are considerably in excess of cash consideration of £375,000, which includes no promotion profits.

Ideal Boilers and Radiators, Ltd.—An issue of 750,000 5 per cent. redeemable cumulative preference shares of £1 will be made on July 31 at 20s. 6d. per share. The prospectus will show net profits for 1932 and 1933 of £157,329 and £196,576 respectively, and for half-year to June 30, £115,358. Part of proceeds will be used for factory extensions.

Oceana Development Company.—The directors propose to increase the capital to £150,000 by the creation of 100,000 shares of 5s. It is proposed to offer to shareholders the right to subscribe for one new share for every five held on bonus terms to be announced.

Watende Mines (Kenya).—Subscription list will be open on July 31st for an issue at par of 460,000 shares of 5s.

RESULTS OF ISSUES

Airspeed (1934).—Lists for the issue of preferred ordinary shares closed at 9.25 a.m. July 25th. The issue was heavily oversubscribed.

Burtol Cleaners.—Allotment letters in connection with the issue of ordinary shares 5s. at par were posted July 25th. It is understood that a substantial proportion of the issue was left with the underwriters.

Murchison Gold Development Company.—Subscription lists for the issue of 800,000 shares of 5s. each at par were closed at 9.5 a.m. July 26th.

New Robinson Gold.—The list was closed at 10.15 a.m. July 24th.

REPORTS AND NOTICES

BANKS

CHEMICAL BANK AND TRUST COMPANY, NEW YORK.—The statement of assets and liabilities dated June 30, 1934, shows that total assets amounted to \$490,276,726.78. United States Government securities amounted to \$143,640,078.73. Cash and due from banks stood at \$90,685,006.23. Loans and discounts amount to \$81,163,447.70. State and municipal bonds stand at \$35,116,134.07. With regard to liabilities, deposits amount to \$386,207,544.60. Capital stock stands at \$20,000,000.00. Surplus amounts to \$40,000,000.00 and undivided profits to \$8,945,281.42.

MISCELLANEOUS

ALPHA CEMENT, LTD.—The share capital of the Thames Portland Cement Company, Ltd., has been acquired by Alpha Cement, Ltd. Arrangements are being made to increase production and by the construction of a new jetty the company will be able to ship cement to all the coastal ports of England.

BRITISH ROPES, LTD.—At special meetings of the preference and ordinary shareholders, held on July 24th, the capital reorganisation scheme was approved.

CABLES AND WIRELESS LTD. (INDEX NUMBERS).—The June, 1934, Index Number is 70.1 the same as for June, 1933, but compares with 73.1 for May, 1934.

COLTNESS IRON COMPANY, LTD.—It is proposed to reduce the capital from £1,287,500 to £1,090,625, the reduction to be effected by cancelling the uncalled capital of 5s. per share on £1 ordinary shares, and reducing the 787,500 ordinary shares from £1 to 15s. nominal.—Meetings, August 10, 1934, at Glasgow.

COPESTAKE, CRAMPTON AND CO., LTD.—Special resolutions have been passed for the reduction of the capital from £800,000 to £600,000, by returning 2s. 6d. on each £1 share, by writing off a further 2s. 6d. per share, and the consolidation of the new shares into shares of £1 each, were duly passed by the necessary majority.

COMPANY MEETINGS, &c.

THE STANDARD BANK OF SOUTH AFRICA LIMITED

OPENING OF A NEW ERA FOR THE UNION OF SOUTH AFRICA

GOLD MINING THE MAINSPRING OF REVIVING ACTIVITY

COMPREHENSIVE REVIEW BY THE EARL OF ATHLONE

The one hundred and twenty-first ordinary meeting of shareholders of the Standard Bank of South Africa, Limited, was held at Southern House, London, E.C., on July 25, 1934. The Rt. Hon. The Earl of Athlone, K.G., in the chair.

The Secretary (Mr T. D. Williams) having read the notice convening the meeting, the Chairman authenticated the correctness of the register of transfers by impressing thereupon the seal of the company.

The directors' report and accounts were taken as read, and the Secretary read the report of the auditors.

The Chairman then addressed the meeting as follows:—Ladies and Gentlemen,—Before proceeding with the business of the meeting I must refer to the death last week of Mr William Smart, who had been a director of this bank for nearly 20 years.

Mr Smart was appointed to the bank's staff in 1875 and immediately proceeded to South Africa.

As you know the bank was established in 1862, so that he was associated with it from its early years, and right up to his death he was devoted to its interests. He served the bank with distinction in many important posts during his long residence in South Africa. In 1900 he was appointed to the management of London Office, and in 1915 he joined the board.

Possessed of a strong personality and a high sense of duty, his wide experience made him an invaluable colleague, and he will be much missed not only by the directors but by the staff, in whose welfare he took the warmest interest.

It gives me great pleasure to preside at our meeting to-day, for it affords me an opportunity of expressing my admiration of the courage and faith of the people of South Africa during years of adversity and of paying a warm tribute to the statesmanship which has welded the nation into a powerful entity able to present a united front to the difficulties and problems which continue to perplex a disturbed and distressed world.

Perhaps I may also be permitted to make reference to the recent visit to Africa of H.R.H. Prince George, which was followed with close interest in this country. The enthusiastic welcome he received throughout the Union, the Rhodesias, and in the territories of the Belgian and Portuguese Governments was very gratifying. I know that it was especially pleasing to His Royal Highness that his tour coincided with an improvement in the general outlook.

It may be said with confidence that 1933 marked the opening of a new era for the Union of South Africa. The improvement in business conditions may be attributed both to political and economic influences, the chief of which are the restoration of confidence as a result of the formation of the Coalition Government; a definite upward movement in world prices of certain of South Africa's staple farm products; the stimulus to gold mining, including the opening up and development of new areas due to the premium accruing on gold; and the advantages of a stabilised rate of exchange between Union currency and sterling.

These and other factors combined have successfully dispelled the feelings of nervousness previously in evidence, and the march of events during the year may well be regarded as an indication that in South Africa a definite step has been taken on the road to recovery.

The improved conditions are reflected in the national accounts which, after the liquidation of a deficit of nearly £2,000,000 brought forward from the previous year, revealed a net surplus of over £4,500,000, while further welcome features were a substantial remission of taxation in many directions and measures for the rehabilitation of the farming community and the alleviation of unemployment.

Unfortunately the hopes entertained for a successful outcome of the World Economic Conference were not fulfilled and the temporary abandonment of the main objects for which it was

assembled again delayed the reorganisation of international trade, upon the expansion of which South Africa so largely depends for the marketing of its primary products. The problems of disarmament, war debts, tariffs and general trade restrictions are still unsolved, and though the difficulties confronting individual countries are now better understood the position remains clouded with uncertainty.

In directing your attention to the accounts now before you I will briefly refer to the principal changes in the figures.

You will observe that deposits, current and other accounts exceed £55,000,000, an increase of approximately £2,200,000 as compared with the figures appearing in our last balance sheet.

On the assets side cash in hand and at call and short notice amounts to £19,600,000, an increase of over £4,000,000, while investments at just under £10,000,000 show an increase of £1,000,000. Bills of exchange are £600,000 higher. Bills discounted and advances to customers at £25,200,000 reflect a reduction of £3,000,000, but this is mainly in connection with accounts outside the Union.

My predecessor last year referred to the rapid increase in the bank's resources brought about by the flow of funds to South Africa, and he also drew attention to the difficulty experienced in finding employment for these funds in our ordinary commercial business.

These factors still obtained in the period now under review, and you will bear them in mind when considering the result of the year's working.

The balance of profit for the year, after making an appropriation to contingencies account, is £433,180, which, with the amount of £154,400 brought forward, leaves for disposal the sum of £587,580. The interim dividend paid in January absorbed £125,000, and, after appropriating £75,000 to writing down bank premises, there is available a balance of £387,580, which your directors recommend be disposed of by adding £100,000 to the pension fund and by the payment of a final dividend of 5s. per share, making a total distribution of 10 per cent. for the year, and carrying forward the sum of £162,580, an increase of £8,180 on last year's figure.

In connection with the allocation to pension fund, I may say, in response to a letter received from a shareholder, that while the sum so set aside appears high in relation to profits your directors are satisfied, after taking expert advice, that the appropriation is the lowest that can be made.

Climatic conditions generally in South Africa were bad throughout the greater part of the year, the country being ravaged by a drought of almost unprecedented duration and severity, and the farming section, which had already borne the brunt of the depression, was further hit by poor crops and heavy stock losses, with the result that the position became critical, necessitating emergency relief measures by the State. In November the drought was broken by heavy, widespread rains, followed in many areas by damaging floods and hailstorms. The veld once again made a remarkable recovery; grazing is now abundant, crop prospects are good, and the outlook may be considered generally favourable.

The gold mining industry of the Transvaal, which in years of adversity has been the one strong pillar of the country, is now the mainspring of its reviving activity, and, through the taxation of excess profits, it provides the chief source for financing the Government's schemes of economic reconstruction. A largely increased supply of native labour was available during 1933, and to this may be attributed the substantial increase of 1,982,760 tons in the ore milled as compared with the previous year's figure. Although the gold recovered therefrom was less in weight by 536,069 fine ounces the

declared value was greater by over £18,500,000 and reached the record total of approximately £67,600,000.

Numerous schemes are in hand for the resuscitation of old mining ventures, extended development of operating mines, and the opening up of new areas, while it is estimated that the ore reserves of existing mines have been increased by about 57 per cent. Indications of gold in payable quantities are reported to have been obtained for many miles beyond the previous extremities of both the East and West Rand, but the actual extent thereof can only be determined as development continues. The capital expenditure involved in carrying out the various programmes in hand and in contemplation is estimated to run into several million pounds.

The value of the external trade of the Union for 1933, inclusive of an estimated premium of £20,643,000 on gold exported, showed the large increase of £41,269,000 over the figures for 1932, exports having risen by £24,764,000 and imports by £16,505,000. Of the exports, apart from gold, wool reflected a satisfactory rise in value of £2,270,000.

Imports showed increases under every heading, the largest being textiles, £5,134,000; metal manufactures and machinery, £3,877,000; raw materials and articles mainly unmanufactured, £1,709,000; vehicles and parts, £1,485,000; and it is interesting to record that in each of these important classes 1933 has actually, or nearly, made good the shrinkage of 1932.

In Southern Rhodesia the value of the mineral production was approximately £5,000,000, constituting a record in the annals of the Colony. Gold mining is still the mainstay of the territory, but the base mineral industry recovered strongly during the year. Deposits of base minerals are considered practically unlimited and are expected to play an important part in the economic development of the country.

The future progress of Northern Rhodesia is dependent upon the growth of the copper mining industry, in which a vigorous development policy is being pursued. The low cost of production is an important factor, and prospects are favourable.

The trade of Nyasaland rests upon the products of the soil, the chief of which is tobacco. As a result of a poor tobacco season trade has been dull, but an improved outlook in the main industries of the territory gives promise of an early revival.

South-West Africa is practically dependent upon farming, and last year is described as the worst ever experienced by the farming community in that area. Although the serious effects of the drought will be felt for some time to come the recent abundant rainfall and the rapid recovery of the veld have gone far towards the restoration of confidence for the future.

Statistics show that the fall in trade in East African territories has not only been checked, but that there is an upward movement. Exports from Kenya, Uganda, and Tanganyika increased in value from £8,442,804 to £10,033,174, while imports at £6,845,409 showed a small increase on the previous year's total.

A considerable amount of exploration work in connection with minerals is in progress, attention being mainly centred on gold.

Mr Gilliat, whose appointment to the board was confirmed at our last meeting, has lost no time in acquiring by personal investigation a closer knowledge of conditions affecting our business, and his observations during an exhaustive tour he has made of South and East Africa will be of much assistance to the board.

Some particulars in regard to the chief industries of South and East Africa will be available to shareholders in the printed report of the proceedings of the meeting, and I need not occupy your time by reading them now.

I will conclude by moving the first resolution, viz.:—
“That the report and balance sheet to March 31st, 1934, now presented, be adopted.”

Mr William Reiersen Arbuthnot, to second it.
Mr William Reiersen Arbuthnot: I have much pleasure in seconding that resolution.

The Chairman: Has anyone any remark to make on the report? (A pause.) As there are, apparently, no remarks, I will now put the resolution to the meeting.

Mr Murray: Before you do that, Mr Chairman, I should like to ask whether the £100,000 placed to the officers' pension fund is likely to be permanent at that figure, and for how long a period, if you can tell me?

The Chairman: I am unable to add anything to the remarks

I have already made regarding the pension fund, but I am sure you will agree that proper provision should be made for officers retiring from the active service of the bank. I will now put the resolution to the meeting.

The resolution was carried unanimously.

DECLARATION OF DIVIDEND

The Chairman: I will now make a formal declaration of dividend by reading the following to the meeting:—

“As empowered by the Articles of Association, on behalf of the board, I now declare a dividend for the six months ended March 31, 1934, of 5s. per share payable in British currency on 500,000 shares, as a final dividend for the 12 months ended on that date (making, with the interim dividend, a total distribution at the rate of 10 per cent. per annum), subject to income tax, to be paid to those shareholders whose names appeared on the Register on the 4th day of July, and to become payable on the 28th instant.”

Mr R. E. Dickinson: Gentlemen, I beg to propose:—
“That Stanley Christopherson, Esq., the Rt. Hon. the Earl of Athlone, K.G., and William Reiersen Arbuthnot, Esq., be re-elected directors of the company.”

Mr Horace Peel: I have much pleasure in seconding the resolution.

The motion was put to the meeting by Mr Dickinson and unanimously adopted.

The Chairman: Thank you very much, ladies and gentlemen, on behalf of my colleagues and myself.

Mr Joseph Nissim: My Lord Chairman, my Lords, Ladies and Gentlemen,—I beg to propose the usual resolution in regard to the auditors:—

“That A. T. Turquand-Young, Esq., F.C.A., Roderick M. Peat, Esq., F.C.A., and Sir Nicholas E. Waterhouse, K.B.E., F.C.A., be reappointed auditors of the company for the ensuing year at a remuneration of 400 guineas each.”

I shall only permit myself to make one observation. The auditors definitely represent three of the best-known firms of chartered accountants in the City of London, and I feel sure that, on their collective skill and up-to-date experience, the bank, with its ten thousand shareholders, may confidently rely. (Hear, hear.)

Mr C. N. Daniels: I shall have very much pleasure in seconding that resolution.

SERVICES OF THE STAFF

The Chairman: Ladies and gentlemen, I have now much pleasure in proposing the following resolution:—

“That the thanks of the meeting be given to the general managers, the London manager, and other officers for their valuable services.”

During my residence in South Africa and in the course of my return journey to England through Central and East Africa, I came into contact with many of our officers and was impressed by the high standard of efficiency which prevailed.

Latterly in London I have been in the position to observe the good work done by the staff here, and a few months ago, when passing through New York, I was able to meet members of our Institution in that city.

Since our last meeting we have re-established our own agency in Hamburg.

To Mr King, our general manager in South Africa, and his colleagues—we are pleased to see Mr Frost, one of our deputy general managers, with us to-day—to Mr Lowndes, our London manager, Mr Williams, the bank's secretary, and to the staff in all the spheres I have referred to, you will, I am sure, wish me to extend our warm thanks for their services. (Applause.)

Mr B. A. Glanville: My Lord Chairman, my Lords and Gentlemen, it gives me great pleasure to second the resolution which has been proposed by the Chairman. I think everything in connection with the officers and staff of this bank can be summed up in one word, and that is “courtesy.” The chairman has spoken of their ability, and we all know their ability from a banking point of view, and the results are seen in the report which has been put before us. I have had twenty-three years' experience as a shareholder and as a friend of the bank, and have visited the principal offices both in South Africa and here in London, and I say that from the general managers and the London manager down to the messengers “courtesy” is the word which describes what one receives, and therefore I have much pleasure in seconding the resolution.

The resolution was cordially approved.

Lt.-Col. Sir John Chancellor, G.C.M.G., G.C.V.O., D.S.O.: My Lords, ladies and gentlemen, it is my privilege to propose a vote of thanks to the chairman and directors. We have all listened

with very great pleasure to the report of a successful year's working of the bank, and it is very gratifying to hear of the return of prosperity to South Africa, in which I include my old friend, Southern Rhodesia. It is also very gratifying to think that the return of prosperity is likely to be permanent, thanks to the increase in the price of gold, which I think most economists believe is going to last for some considerable time. It was only a few days ago that I was talking to a man of some eminence in the City, who expressed the opinion that South Africa was at the present time the most prosperous and economically the most stable country in the world. Everyone who loves South Africa—and that means everyone who has ever been there—will rejoice to hear that. (Hear, hear.)

It is a special pleasure to me to propose a vote of thanks to Lord Athlone for his conduct in the chair. During the five years in which I was Governor of Southern Rhodesia I had the pleasure of being associated with him, because he, in some measure, controlled my activities as Governor of Southern Rhodesia, for, in addition to being Governor-General and High Commissioner of South Africa, he was also High Commissioner of Southern Rhodesia in respect of certain native affairs. I always valued the great privilege of my association with him in that work.

You all know very well what great services Lord Athlone rendered to South Africa. (Hear, hear.) Those services cannot be measured and will never be forgotten. When I talk of his great services I do not mean merely the wise counsel and ready support that he was always prepared to give to his Ministers, but I refer also to those imponderabilia which are difficult to define but of which we who came in contact with him are all so very much aware, and it is owing to those imponderabilia that Lord Athlone and H.R.H. Princess Alice earned the affection and respect of everybody in South Africa. (Applause.)

It is especially appropriate, I am sure you will all agree, that Lord Athlone should be in the chair to-day. Since his return to England he has been most extraordinarily energetic in the number of activities and public services which he has undertaken, but, knowing as I do his affection for and interest in South Africa and South Africans, I do not think there is any one of his many and varied activities, probably, which gives him more pleasure and greater interest than his work for the Standard Bank of South Africa. (Applause.)

THANKS VOTED TO DIRECTORS

I have much pleasure in proposing the following resolution:—
“That the cordial thanks of the meeting be accorded to the directors for their attention to the affairs of the bank and to the chairman for his conduct in the chair.”

(Applause.)
Mr T. L. Gilmour: My Lord Chairman, my Lords and gentlemen,—A year ago the then chairman, Sir Roy Wilson, in responding on behalf of himself and his colleagues to a resolution worded precisely as the resolution which is now before us, said that he and the other directors regarded that resolution as something more than a perfunctory compliment, and I want, if I may, just to emphasise that aspect of this resolution. There is always a risk that when a resolution is submitted year after year it may come to be looked upon as something in the nature of a formality. Speaking, I think, on behalf of the 10,000 shareholders and upwards—as we are told—who are interested in this great bank, I may assure Lord Athlone and his colleagues that there is nothing perfunctory in the resolution which has been proposed and which, I am sure, will be carried to-day. (Hear, hear.)

We can divide this resolution into two portions. One is the portion which embraces the whole of the board, and, as year passes and year succeeds, I think the feeling of the shareholders must be one of increasing satisfaction that their affairs are in the hands of so competent a board of directors. (Hear, hear.) If I may be allowed, I should like to take this opportunity, speaking on behalf of the shareholders, I am sure, and certainly on my own behalf, to say with what regret I heard that since our last meeting, and obviously quite recently, we had lost the services of Mr William Smart, whose devotion to the bank requires no eulogy from me.

The circumstances of to-day are such as to make it more than ever important that our affairs should be controlled by men in whom we have the utmost confidence, and, so far as that part of the resolution is concerned, I am quite sure it will be unanimously passed. (Hear, hear.)

Nor will there be any less unanimity, certainly, in reference to the second part of the resolution. It has been, I think, to all the shareholders of the Standard Bank a matter of the greatest satisfaction that Lord Athlone has taken such an interest in the bank as to become one of our directors—(hear, hear)—and, as

this is the first occasion on which he has presided over our annual meeting, I think we ought to take the opportunity of saying to him how gratified we are that he should be with us to-day and how grateful we are to him for his conduct in the chair. (Hear, hear.) Sir John Chancellor has told you from personal experience in South Africa something of the esteem and affection in which Lord Athlone is held out there. We are benefiting not only by reason of that esteem and affection, but also by his intimate knowledge of South African affairs, and, in seconding this resolution, which I do with the greatest pleasure, I am sure that it will receive your unanimous support. I beg to second the resolution. (Applause.)

The resolution was put to the meeting by Sir John Chancellor and carried with acclamation.

The Chairman: Sir John Chancellor, Mr Gilmour, ladies and gentlemen,—My colleagues and I thank you very much for the cordial vote of thanks which you have accorded to us. To myself personally it is a very great pleasure to see here to-day Sir John Chancellor, who is an old colleague of mine in South Africa, and I thank both Sir John and Mr Gilmour for their very kind words in regard to myself—wholly undeserved, but, naturally, one always appreciates even the most flowery words said about oneself. I can assure you, ladies and gentlemen, that my colleagues and myself very much appreciate what has been said about us, and you may rely upon it that we shall continue to take every possible care of the interests of the shareholders of this bank. (Applause.)

The proceedings then terminated.

PARTICULARS IN REGARD TO THE CHIEF INDUSTRIES OF SOUTH AND EAST AFRICA FOR THE PERIOD UNDER REVIEW

MINERALS

The value of the mineral production of the Union for 1933, excluding the premium on gold, was £52,335,155, as compared with £54,234,839 in 1932. Including the gold premium the value was £73,131,073.

Operations in the diamond industry were further restricted and the large mines remained closed throughout the year. Exports of rough and uncut diamonds showed a fall in value from £1,176,204 to £991,540, but the value of cut and polished stones increased from £779,319 to £1,138,618.

Tin, platinum and asbestos mining showed some revival. In Southern Rhodesia the output of asbestos increased in value from £197,092 to £555,993.

FARMING INDUSTRIES

The maize yield in the Union, which in the previous year had totalled over 19,000,000 bags, fell to about 8,400,000 bags, or about two-thirds of the quantity required for internal consumption. Crop estimates indicate considerably greater production than was the case last year, a preliminary estimate being 19,417,000 bags. The condition of the crop generally is good. Wheat cultivation in the Union has increased considerably in recent years and an equilibrium between demand and production has been nearly attained.

Livestock

Owing to the drought, losses of livestock throughout the Union were extremely heavy. Hundreds of thousands of cattle are reported to have died, whilst among small stock the mortality is officially stated to have reached 7,000,000.

During the year attention has been given to the development of a regular export trade in beef. Considerable quantities have been shipped, and despite the depression of the overseas markets receipts have so far been satisfactory and there is every prospect of a lucrative trade being established when price levels return to normal. Much depends, however, upon efficient organisation with a view to ensuring continuity of supply and the maintenance of the quality demanded by the overseas consumer. In 1933 exports of fresh and frozen meat were valued at £270,472, as compared with £159,482 in 1932.

Wool

The 1932-33 wool season as a whole proved more favourable than either of its immediate predecessors. An abnormal carry-over and heavy clips were practically cleared. The great importance to the Union of the recovery in the wool industry is illustrated in the value of exports, which fell from £17,118,000 in 1927 to £5,700,000 in 1931 and rose to £8,831,000 in 1933.

The average export price from July to December, 1933, was 10½d. per lb., as compared with 4½d. per lb. for the corresponding period of 1932.

Wool markets in the Union are at present depressed, chiefly owing to the German embargo on imports and the disturbed political situation in Europe. Prices have again fallen and unsold stocks are high.

Mohair

The mohair market remained dull until towards the middle of the year when, following a revival in overseas demand, prices rose sharply. Although the number of Angora goats has been greatly reduced the industry is considered fundamentally sound and with a return to normal times should recover lost ground. Exports from the Union rose in value from £95,451 to £330,118, the average price improving from 3½d. to 5d. per lb.

Hides and Skins

Hides and skins have shared in the general improvement, and though erratic at times the market has been conducted on a more level basis. A considerable quantity of hides is now used in Union tanneries. Exports during 1933 were valued at £444,785, as against £252,701 in 1932. Prices for sheepskins fluctuated in sympathy with wool, and although offerings were greater than in recent years, stocks were readily absorbed. The value of exports of sheep and goat skins rose from £512,818 to £1,156,070.

Sugar

Last season's production of sugar in the Union amounted to 391,173 short tons, as against 358,905 in the previous season. Exports totalled 191,000 tons, of which 118,000 were shipped to Canada and 73,000 to the United Kingdom. The new crop is expected to reach, if not to exceed, last season's figure.

The output of sugar in East Africa is approximately 20,000 tons, of which about 14,000 tons are consumed in the country.

Fruit

Exports of deciduous fruit from the Union during 1933 were valued at £965,983, as against £645,306 in the previous year, while the value of exports of citrus fruit rose from £942,047 to £1,111,681. There was a considerable increase in the quantity of dried fruits exported, but owing to depressed prices the value of £317,520 showed only a small improvement.

Tobacco

The Union tobacco crop for the 1933-34 season, excluding the production in native locations and reserves, is estimated at 13,100,000 lbs., as compared with a yield last season of 9,300,000 lbs. The crop is reported to be of good quality.

In Southern Rhodesia the quantity produced, viz., 14,170,000 lbs., was approximately the same as in the preceding season.

Nyasaland exported last year 10,400,000 lbs., as against 15,100,000 in 1932.

Wattle Bark and Extract

The value of the exports of wattle bark and extract increased from £492,860 to £525,869.

Wine

Exports of wine from the Union in 1933 were valued at £164,100, as compared with £104,665 in 1932. Last year's shipments constituted a record for the industry.

Sisal

Sisal prices have been steadier and the value of exports from Tanganyika rose from £608,202 to £881,772, and in respect of Kenya from £186,574 to £249,868.

Cotton

In Uganda, where cotton is the principal crop, the season was a successful one, the value of the output rising from £1,584,172 to £2,682,210. The Tanganyika figures improved from £183,747 to £276,864.

Coffee

Coffee production in East Africa was adversely affected by dry conditions during the year. Exports from Kenya and Uganda declined from £1,436,877 to £1,041,835, and those from Tanganyika from £463,397 to £429,523.

THE LIVERPOOL & LONDON & GLOBE

INSURANCE COMPANY, LTD.

Head Office: 1, Dale Street, Liverpool, 2. | (Chief Office) 1, Cornhill, E.C.3. London:

Whaling and Fishing Industry

An improvement was shown in the value of exports of whale oil and fish from the Union, the figure increasing from £318,288 to £516,485.

Manufacturing Industries

The year 1933 witnessed a consistent and rapid expansion of industrial activity in the Union. Building programmes, which had been kept in abeyance during the depression, were again taken in hand, and many important fresh schemes have been undertaken.

The improvement reported in the clothing and footwear factories towards the end of 1932 continued steadily throughout 1933. Mining material trades, foundries and engineering shops have all benefited directly from the activity on the gold mines, and having regard to the prospect of considerable further development and ample capital available for sound enterprises, the outlook for the manufacturing industries of the Union is good.

EGYPTIAN DELTA LIGHT RAILWAYS, LIMITED

CURRENT YEAR'S PROSPECTS

The annual general meeting of the Egyptian Delta Light Railways, Limited, was held on the 20th instant, at Winchester House, London, E.C.

Sir Montagu Sharpe, K.C. (the chairman), said that at the time of the last meeting the company's position had shown some improvement. An exceptionally large cotton crop was then anticipated, and the price of cotton had risen. Although the cotton harvested was a record, the tendency towards improvement was not maintained during the year under review, largely, he believed, owing to the setback which occurred in cotton prices soon after the meeting.

There were now signs of a definite, though slow, improvement in conditions in Egypt, and the general economic situation was adjusting itself to conform with the lower prices of agricultural produce.

Another factor which disturbed the anticipated improvement was the more severe competition during the past year. There was a decrease in the number of passengers carried and in the goods tonnage lifted, but working expenses were again lower. The net earnings from all sources amounted to £12,151, and the directors recommended a dividend of 1 per cent. on the preference shares, £46,683 being carried forward.

With reference to the current year, the price of cotton had improved again during the last few months, and, provided this was maintained and a good crop was harvested, some increase in the company's receipts might reasonably be expected.

Reports received from Egypt estimated the cotton acreage under cultivation as being in the neighbourhood of 2,190,000 feddans this year, against the official figure of acreage planted last year of 1,804,000 feddans, with consequent expectations of a larger crop.

It was recently reported, however, that leaf worms had attacked the crops in the Delta, and, although they understood that energetic measures were now being taken by the Egyptian Government to deal with the trouble, it was not possible to obtain an opinion at this stage as to what effect it would have on the yield.

The receipts of the company to date show an increase of £1,172 as compared with the previous year.

The report and accounts were unanimously adopted.

BRAZILIAN WARRANT AGENCY & FINANCE COMPANY, LIMITED

CAPITAL REORGANISATION PROPOSALS

MR ARTHUR WHITWORTH ON COFFEE POSITION

The annual general meeting of this company was held, on the 24th instant, at Winchester House, Old Broad Street, London, E.C.

Mr Arthur Whitworth (chairman of the company) presided.

The Chairman, in the course of his speech, said:—The contingency reserve has been reduced by some £66,000 owing to our decision to clear from the asset side a fictitious asset which has appeared for some years past in the form of capital exchange account. This year we have closed our accounts at the official rate ruling at December 31st—namely, 4 7-256d. per milreis.

Last year you will remember that we did not close our books at the official rate, which then stood at 5½d., because it was purely a nominal rate, and, if we had taken it it would have given us a fictitious profit in exchange over and above the rate adopted at the end of 1931—namely, 4 35-64d.—which rate we continued to apply for the 1932 accounts. The event has shown the wisdom of our decision, because by applying the official rate of 4 7-256d. for the balance sheet before you the provision necessary for the fall in exchange has not been more than our profits can conveniently carry.

At the same time, having in view the writing down of our ordinary capital, as mentioned in the report, we thought we would take the opportunity of clearing from our assets the fictitious capital exchange account. We have done this by crediting the whole of the contingency reserve as it stood at December 31, 1932, to the appropriation account and debiting that account with the total amount required to write down our exchange to the official rate at the end of the year by an additional provision of, say, £30,000 out of profits. When, therefore, we come later on in the year to consider the provision to be made out of capital by writing down the value of the ordinary shares, we shall have to consider only the over-valuation to which the auditors refer, that is placed on our land and buildings, and on our interests in subsidiary companies and any further provision for a lower exchange that we may feel justified in making on the net currency floating assets in Brazil.

Our operating profits are better by nearly £5,000 than in 1932, due to our having had the advantage of a full year's trading instead of one interrupted as it was in 1932 by the civil war in Sao Paulo. We are thus able out of our available balance of £55,852 to recommend the payment of a final dividend of 3½ per cent. on the preference shares, which will take £17,500, leaving £38,352 to carry forward to the current year.

E. JOHNSTON AND COMPANY, LIMITED

Our principal subsidiary, E Johnston and Company, Limited, had a very active year, shipping from Santos over 750,000 bags of coffee. This was to some extent due to the dollar going off gold, which encouraged speculations in coffee as a commodity in the U.S.A. This company delivered exchange to the Bank of Brazil for the equivalent of £1,550,000, which was all controlled by the Bank of Brazil, and shows that our company played a substantial part in providing the foreign exchange required by Brazil for their Government and other financial obligations abroad.

The year 1933 was a most difficult one throughout owing to the continual fluctuations in the sterling, dollar and milreis exchanges, and was further complicated owing to the economic dispute between France and Brazil, which for a time prevented imports into France.

This has happily been settled, but a further complication of our Continental business has since arisen by the special action on the part of Italy in establishing a quota for coffee imports, which is seriously affecting our sales to that country. The position in Germany, though business was active in 1933, is now most difficult owing to their foreign exchange position. All these difficulties have thrown a great burden upon our departmental staff, and I am happy to confirm what I said last year, that we are fortunate in possessing a staff fully qualified and able to conduct this business in these chaotic times.

THE ROTHSCHILD REMITTANCE SCHEME

At our meeting last year I spoke hopefully of the improvement which might be expected to take place in the exchange position in Brazil through what has become known as the Rothschild Remittance Scheme. Our balance sheet shows the extent of our participation in it, and our report gives expression to our disappointment that we were not allotted a larger share. I do not suggest that we received any worse treatment than others, but I think it must be admitted that the total provision made for the accumulated arrears of exchange fell far below the expectations of the sponsors of the scheme.

Since that date I find a general impression among those not intimately acquainted with trade in Brazil that the exchange position has improved. It is true that the authorities have maintained a comparatively stable official rate and that the outside or "bootleg" market has had withdrawn from it the stigma of illegality, but this does not, I am afraid, mean that there is in any sense an open market. Permission has to be obtained from the Banco do Brasil to make use of the open market, and in considering the eligibility of applications the bank are exercising a close scrutiny as to the origin and destination of what is offered.

In reality, not only is it impossible to remit money at the official rate, but control over the open market is so close that the facilities which outwardly appear available are in truth negligible. I make these remarks in no spirit of criticism of the Brazil authorities in imposing regulations for the protection of the country's exchange position. The low level to which the price of coffee, upon which Brazil is so dependent for paying for her imports and meeting her foreign commitments, has dropped during the past few years has beyond doubt necessitated and justified the exercise of some such control. Otherwise the decline in the exchange value of the milreis might have been so great as to be disastrous to the interests of all foreign undertakings operating in Brazil. This and other prominent companies have under existing conditions generally speaking been able to meet their interest and dividends in prior charges and preference stocks, whereas these would have undoubtedly fallen into arrears if drastic provisions had had to be made for further exchange losses.

During the whole of 1933 the National Coffee Council of Brazil maintained its control and continued with the destruction of surplus stocks. The 1933-34 crop was estimated to be 29,880,000 bags for the whole of Brazil. The corresponding figure for the State of San Paulo was 20,500,000 bags. The 1934-35 crop for the whole of Brazil is estimated to be 14,102,000, i.e. less than half of its predecessor. The State of San Paulo crop for 1934-35 is estimated to be only 8,388,000 bags, a reduction of 60 per cent. These figures exclude any remainders of the previous crop retained on plantations, estimated at about 1,750,000 bags.

CAPITAL REDUCTION PLANS

I pass now to what is probably the most interesting part of our report to you—namely, our plans for the reduction of the capital of the company foreshadowed in the autumn and to our proposed acquisition of the preference shares of the Cambuhy Coffee and Cotton Estates, Limited, of which, as you know, this company owns the whole of the ordinary capital.

The general meeting of the Cambuhy Company was held in this room immediately prior to this meeting, and the accounts presented to that meeting showed that the arrears of dividend on the cumulative participating preference shares of that company were, at the end of 1933, £196,000, and that in addition the company owed us, its financial agents, £111,285 at the end of the year. Despite therefore the fact that there is a credit balance in the profit and loss account of that company of £35,877, no arrears of dividend can be paid, as there is no cash in London available to pay out, and it is impossible to remit any of the large milreis balances lying in Brazil with the financial agents, the sterling equivalent of which is, as shown in the balance sheet, £133,420.

It was in similar circumstances that I, as chairman of the company, asked for a committee of the preference shareholders to be appointed last November to confer with the board. The outcome of that committee's deliberations has been communicated to you, and though this meeting is not called to deal specifically with the proposals, we have thought it right that you should be fully acquainted with the position. All, therefore, that I propose to do to-day is to answer to the best of my ability any questions that may be put to me, because it is important that none of you should leave this room and ponder over these proposals in the interval before they will be formally presented to you in October labouring under any misapprehension as to their terms or as to the reasons which have prompted the boards of both companies and the committee of preference shareholders of the Cambuhy Company unanimously to recommend them for acceptance. The Chairman concluded by moving the adoption of the report and accounts.

Mr Alexander Macdonald seconded the resolution and, after the Chairman had replied to questions and comments by shareholders, it was carried, an amendment to postpone the payment of the preference dividend until the autumn being defeated on a show of hands.

Mr Hildred Carlisle, chairman of the committee of preference shareholders, then addressed the meeting at the request of the Chairman on the committee's proposals, which would form the subject of resolutions to be placed before meetings in the autumn.

The Chairman having replied to questions on the matter, the proceedings terminated with a vote of thanks to him and to the board, the secretary and the staff.

FURNESS, WITHY AND COMPANY, LIMITED

THE GOVERNMENT'S ASSISTANCE

LORD ESSENDON'S VIEWS

The forty-third annual general meeting of Furness, Withy and Company, Limited, was held on the 25th instant, at Furness House, Leadenhall Street, London, E.C.

The Lord Essendon, who presided, said that it was with great regret that they had made the decision not to recommend the payment of any dividend on the ordinary share capital, more particularly as this was the first occasion for more than forty years on which they had failed to pay an ordinary dividend, a record of which they had been most proud, and which consequently was broken with the greatest reluctance. At the same time, it was in the interests of the shareholders themselves that the company's resources should be conserved in view of the fact that the long-looked-for improvement in the shipping industry had not yet materialised and the outlook remained uncertain. Their past record was the best possible justification of the conservative policy they had always pursued, and of which shareholders had had the benefit, but obviously such benefits could not continue indefinitely in the face of continued severe depression.

The profit for the year was £378,164, compared with last year's figure of £379,674. With the amount brought forward from the previous year there was a total available balance of £523,362. The usual half-yearly dividends on the preference share capital had been paid, and they proposed to transfer £300,000 to depreciation, leaving £166,174 to be carried forward. Their subsidiary and associated companies had contributed substantially to their profits, and on the whole had emerged from a difficult year with reasonably satisfactory results.

THE PACIFIC TRADE

The Pacific trade to the United Kingdom had been disappointing. They had upwards of £2,000,000 capital employed in that trade in ships specially built for the service and partly owned by the company and partly by a subsidiary. They provided a regular service outwards and homewards throughout the year to and from London, Liverpool, Manchester and Glasgow to Los Angeles, San Francisco, Portland, Puget Sound ports and Vancouver, B.C. They were associated in that trade by agreement with the Royal Mail Lines and Holland-America Line, and together they were willing to provide all the facilities that were necessary to cater for the traffic which was available. The volume of traffic was restricted by the import tariff on fresh fruit, which in itself had resulted in part of their specially provided refrigerated space being left vacant. They had, however, also been subjected to competition which he could only describe as unwarranted and unfair. Continental lines which had had no part in originally developing the trade had established services primarily to certain Continental ports, but had used the United Kingdom trade as the foundation on which to build their services, and were thus reaping the fruits of our early work and filching our natural heritage, safeguarded by the knowledge that we were unlikely to attack them in their own ports as there was not sufficient traffic to justify our doing so.

ASSISTANCE TO TRAMP SHIPPING

It was common knowledge that a section of the shipping industry had been compelled to seek assistance from the Government in the same way as many other industries had had to seek protection. The President of the Board of Trade had announced the Government's intention to set aside a sum of £2,000,000 primarily for the assistance of the tramp section of the industry. The grant was for one year, and it was left to the industry to prepare a scheme of administration for the approval of the Government, subject to certain guiding principles, the chief of which were that the grant was not to be dissipated in competition between British ships, and that it was to be used as a defence fund against subsidised competition. It would be unwise for him to make any further comment on the subject, inasmuch as discussions were proceeding between the industry and the Government, which discussions must precede the passing of the necessary legislation. He could, however, state that the industry was appreciative of the help which was thus offered, and would do its utmost to comply with the conditions imposed.

FOREIGN SUBSIDISED COMPETITION

Cargo liners, and indeed passenger liners as well, were suffering from very intense foreign subsidised competition, and the protection derived from the existence of conferences in liner trades was by no means sufficient to enable the liners to continue indefinitely fighting for their maintenance. His Majesty's Government had also

announced a scheme for granting financial aid to modernise the Mercantile Fleet by scrapping old tonnage and building new, in the proportion of 3 tons of old shipping for one of new. The scheme was to take the form of loans advanced or guaranteed by the Treasury. He was ready to admit that those proposals might be of assistance to the shipbuilding and kindred trades, and might have some political value as well as stimulating employment, but he was afraid they would not be of much assistance to the shipping industry itself, and, in fact, might even aggravate the situation.

DIFFICULT CONDITIONS

Shareholders in shipping companies had very painful knowledge of the extremely difficult conditions under which they had laboured during the past few years, but the general public must find it most difficult to appreciate the many different angles to the problem. The competition of foreign vessels which were subsidised was easy to explain and understand, but they had had to contend with more insidious difficulties which had arisen out of the nationalistic policies of various governments, including their own, all of which had tended to reduce the volume, and the natural flow, of international traffic. They were pioneers in the transportation of chilled beef from the Argentine. Unfortunately, the Government had introduced a series of restrictive quotas, with the result that their shippers were compelled to restrict their output, and the ships were consequently unable to obtain the cargoes which they had hitherto carried. If the policy achieved its purpose of increasing the price of home-grown meat and it was merely a question of the farmer reaping advantages commensurate with the injury inflicted upon the shipping industry, then he imagined it would resolve itself into a matter of deciding whether the advantages outweighed the disadvantages. The position was, however, that, without doing any good whatever to the farmer, grave injury had been done to other industries, and the measure of the injury suffered by the shipping industry could be estimated from the fact that the restrictions imposed, and announced, would represent a loss of freight in the first two years of controlled imports of over £500,000 sterling. That was only part of the injury, as the restrictions had also involved loss of employment for officers, engineers, and seamen, and the export manufacturers had suffered from the reduced buying power of the Argentine.

THE NEW BEEF SUBSIDY

The Government's new beef subsidy policy did nothing to ease the situation so far as shipping was concerned. On the contrary, the position was aggravated by retention and possible extension of the restrictive quotas during the short-term subsidy period. The point that should be borne in mind was that the whole object of the Government's agricultural policy was to enable the farmer to secure higher prices for his product. In the process of achieving its object the Government was to spend £3,000,000 of the taxpayers' money, an amount which, in itself, was 50 per cent. more than the sum which was to be set aside to subsidise British tramp shipping—a subsidy in which the South American refrigerated ships would not participate. It was obvious that the Government's agricultural policy had admittedly not achieved the advantages which it was designed to achieve. The disadvantages, however, were being severely felt by the shipping industry.

After listening to his remarks, he was sure shareholders would not wonder at the statement in the report that the outlook for international trade remained uncertain. Possibly they were facing the darkest hour before the dawn.

Several shareholders congratulated the directors on the results achieved during a very difficult year.

In the course of his remarks, Sir John Latta said that one could not help feeling that even had the board been gifted with second sight they could hardly have anticipated the present position to greater advantage than they had done.

Referring to the nationalistic tendency with which he said the Government was becoming infected, he expressed the hope that they would take some notice of what had been said by the chairman in his speech in regard to the difficulties with which the shipping industry was faced arising out of such a policy.

Sir R. Burton Chadwick complimented the chairman on his courageous and powerful criticism of the Government in various directions, particularly in regard to the effect on the shipping industry of its agricultural policy.

The report and accounts were unanimously adopted.

The chairman, in responding to a vote of thanks, said that for the last four or five years he had never come to the office on any day and found anything favourable to the shipping industry. There was one indication which was more favourable. The drought was going to cause a shortage of crops in some parts of the world, and it was estimated that nearly 2,000,000 tons of extra wheat would have to be carried.

RICHARD THOMAS AND COMPANY, LIMITED

FINANCIAL POSITION MUCH IMPROVED

RECONSTRUCTION PROPOSALS OUTLINED

SIR WILLIAM FIRTH'S REVIEW

The eighty-fifth ordinary general meeting of Richard Thomas and Company, Limited, was held, on the 20th instant, at River Plate House, London, E.C.

Sir William Firth (chairman and managing director) said that, excluding debentures, their combined bank and loan indebtedness, which was £606,000 at the commencement of the year, had been reduced by the end of that year to £506,000, after paying for the whole of the ordinary and preference share capital of W. Gilbertson and Company, and adding that company's bank indebtedness to their own. On the previous day, after paying for the Cardonnell Works and stocks and the whole of the ordinary capital, 92.6 per cent. of the preference capital of the Melingriffith Company, and adding this company's bank indebtedness to theirs, and after paying one year's arrears of preference dividends, their total loan indebtedness to bankers, discount houses, and others, was £797,000, or, excluding the Redbourn mortgage for £500,000, a total of only £297,448.

STEEL AND TINPLATE CAPACITY

The three competitive businesses they had purchased had brought their steel capacity up to 1,000,000 tons per annum, and their tinplate and sheet capacity up to 470,000 tons and 230,000 tons per annum respectively, giving them ownership of approximately 8½ per cent. of the entire steel capacity of the country, 41½ per cent. and 12 per cent. respectively of the entire tinplate and sheet capacity of the country. World conditions indicated that it was doubtful if they would be able to operate their steel plant more than 65 per cent. of capacity, and their tinplate and sheet plant more than 60 per cent. and 45 per cent. respectively.

As the financial standing of the company had much improved during the year, the directors decided last May to pay one year's arrears of preference dividends, and, unless something unforeseen happened between now and March next, they expected to be in a position to pay a full year's preference dividend at the end of the present financial year, but they could not yet contemplate half-yearly payments.

RECONSTRUCTION PROPOSALS

With reference to any scheme for the reconstruction of the company, the board were as convinced as ever that the preference shareholders must not be asked to make a sacrifice. The improvement in the financial position of the company had been made possible by withholding dividends from the preference shareholders, and liquidation of the company's indebtedness to them was a binding obligation. The problem was to find an equitable way of liquidating that without injustice to any class of shareholder, and he was not of the opinion that writing down their capital would serve any useful purpose in that connection. He suggested that, instead of wasting money on valuing the company's property, they should assume the capital was intact and concentrate on finding an equitable method of dividing the available earnings between the preference and ordinary shareholders without encroaching upon the just rights of the preference shareholders, and he thought a way could be found with advantage to both classes if the ordinary shareholders would offer payment of the arrears of preference dividend in ordinary shares, transferring to the preference shareholders two out of every three ordinary shares held.

AN EQUITABLE SCHEME

As a test of whether his suggestion was equitable he, the chairman, had possessed himself of both classes of shares in exact ratio to the capital issued, namely, 100 preference shares to 90 ordinary, and he found that if his proposal was accepted his holding remained unchanged, as he would transfer two-thirds of his ordinary shares from his left hand, so to speak, to his right hand holding the preference shares.

Proceeding, the chairman gave illustrations as to how, in such an event, the scheme would benefit all classes of holders, whether preference, ordinary, or both classes, and an improvement in profits, which was not improbable, would substantially increase the benefit. The snag, he said, quite obviously was the uncertainty of receiving a dividend on the ordinary shares, but last year the company had earned a net profit of £420,000 before charging income-tax, and during the current year they hoped to

earn approximately the same amount; after paying the 6½ per cent. dividend income-tax free on the preference shares there would be left £158,294, as against the £139,528 required to pay 5 per cent. on the 2,790,560 ordinary shares. He invited both classes of shareholders carefully to examine his proposal, in which, he confidently thought, they would see an immediate and important advantage. From the company's point of view the improved market value of the ordinary shares would enable the board in time to issue additional shares for the purchase of additional competing businesses instead of being compelled, as at present, to issue debentures for the payment of new acquisitions.

AN INTERESTING NEW PROCESS

In the profit and loss account there was an amount of £25,711, representing extraordinary expenditure and capital losses written off, and including money spent during the past three years investigating a patent method of manufacturing iron by the electrolytic process. A test of the process had yielded highly satisfactory results, and the board had decided to form a separate company to continue the investigation on a commercial scale, but on terms which put a limit to the risk of their own company. If the process proved successful the new company would earn very substantial profits, but it was too early to say definitely that it would be a commercial success, though it looked extremely promising.

Shareholders would wish him to explain his attitude to the reorganisation scheme of the steel industry, and why he sought temporary Government intervention while many steel manufacturers were so loud in their praise of the scheme. The explanation was the very simple one that the steel industry was a wide description, covering manufacturers of all classes of steel products, and trade conditions in various sections were not comparable. To their company protection and the reorganisation scheme were a mixed blessing. They had been enabled to re-open the Redbourn Works, hitherto costing them £20,000 to £30,000 per annum to keep idle, which works, in the year under review, had contributed to the profits some £35,000, and next year would probably contribute some £100,000. That benefit, they gladly admitted, was directly due to protection, but, in Wales, the picture was very different.

CONTINENTAL COMPETITION IN TINPLATE

Continental steelmakers, no longer able to send such large quantities of steel into this country, had increased their output of tinplate, and during the past nine or twelve months had been selling tinplates in all parts of the world in competition with this company, in ever-increasing quantities, at prices that had yielded to their own company little or no profit, despite the fact that their quotations were in depreciated currency, while those of the Continent were on the gold standard. The tonnage which foreign competitors—in some cases subsidised—were taking away had caused this company to reduce operations by at least 10 per cent.—yet they were expected, because of protection, to reorganise.

INTERNATIONAL ASSOCIATION ADVOCATED

He asked what reorganisation meant; he understood it to mean centralisation of manufacture and the elimination of uneconomic competition, but others in the industry seemed to hold the view that all it meant was the formation of an association for the purpose of raising the selling price. He readily agreed that price associations, wisely run, were infinitely better than chaotic suicidal competition, but experience had taught him that in many sections of the industry there were individuals who worked for their own selfish ends rather than for the general good of the section of the industry in which they were engaged.

He would like to see the majority in an industry given the power to control the selfish minority. He understood the Government contemplated introducing an Enabling Bill with that object in view. Only by co-operation could they create prosperity in the world, and believing that to be true, internationally and domestically, he had for many months past been occupied in endeavouring to form an international association of tinplate manufacturers. He was glad to be able to report some substantial measure of success, but at the same time success was dependent upon absence of encroachment from newcomers to the industry.

The report and accounts were unanimously adopted.

THE DISTILLERS COMPANY, LIMITED

CHAIRMAN ON COMPANY'S PROSPERITY

MANAGING DIRECTOR DEALS WITH AMERICAN INTERESTS

The fifty-seventh annual general meeting of the Distillers Company, Limited, was held, on the 20th instant, in the North British Station Hotel, Edinburgh, when Mr William H. Ross (chairman of the company) presided.

The Chairman said:—My Lord, Ladies and Gentlemen,—I presume that I have your permission to hold the directors' report and statement of accounts as read. I think you will agree with me that the outstanding feature of the present report is the recommendation of the directors to restore the cut in the dividend, which was reduced two years ago to 17½ per cent. and has now been brought back to 20 per cent., the rate paid in each of the seven preceding years. This has been accomplished by an increase of profit, and not by any scaling down of the sums allocated to depreciation or placed to reserve. As a matter of fact, a special allocation has this year been made to the superannuation and provident fund to bring it more into line with the present obligations of this scheme. Further, it will be seen that the amount carried forward to next year has been increased by nearly £53,000.

THE INCREASED PROFITS

It would be easy for me to dogmatise as to the reasons for this improved result, but these, I think, may be summarised under the following heads:—

- (1) The improvement arising from the former conservative methods of dealing with the accounts.
- (2) Economies arising through rationalisation and development of our works nearest to our markets.
- (3) The advantages arising from the repeal of Prohibition in the U.S.A.
- (4) The improvement in the industrial spirit trade.

Little may be said as to the first two reasons assigned for the improvement. These must be apparent to all those who have followed our system of accounts in past years. As regards the third reason assigned, this is, perhaps, not such an important factor as some writers in the Press would have you suppose. I do not wish to understate the importance of the American market, but it is meantime limited on account of two reasons, namely, the obvious shortage of money on the "other side" to pay for their commitments, and the desire of the American Government to foster its own industry. We are thankful, however, for the moderate increase in business which has come to us during the past few months, and will strive to ensure a continuance of this on safe lines.

INDUSTRIAL SPIRITS

Perhaps the most productive increase in our business last year was in the domain of industrial spirits. I indicated last year that that was a branch of our business which was likely to increase. For the year ended March 31, 1933, the total trade of the country in industrial spirits for all purposes was 22,160,000 proof gallons, while for the year ended March 31, 1934, the trade had reached a total of 32,860,000 proof gallons, or an increase of over ten million proof gallons. Had such an increase been recorded on the potable side of our business, we would have looked for a much more substantial increase in our profits, but, as I pointed out in my last year's address, the margin of profit on industrial spirits is much smaller than that on spirits for beverage purposes on account of our endeavour to foster new business and add to the trade of this country. A considerable proportion of this new business arises from the manufacture at Hull of solvents by our own subsidiary company, the British Industrial Solvents, Limited, in which other interests are conjoined with our own. Another new outlet recently opened up is in the sale of a new motor fuel known as Cleveland Discol, which has been placed on the market by the Cleveland Petroleum Products Company of London. Although we have no interest in the profits of that concern, we have given them the right to use our trade mark "Discol" in return for the exclusive contract from them for the alcohol contained in the mixture. We hear nothing but good reports of the product, which we accordingly recommend to the motor-car users among our stockholders.

HOME CONSUMPTION STILL DECLINING

I have reserved any reference to our sales of Scotch whisky in the home markets until the last, as I wish to refer again to the abnormal taxation from which our trade is suffering. Last year I was hopeful that we had reached the bottom of our downward path, but the official figures of the consumption of British-made

spirits for beverage purposes in Great Britain and Northern Ireland in the year ended March 31, 1934, show a further drop of over 220,000 proof gallons as compared with the previous year.

We can derive a modicum of comfort from the fact that our distributing companies have more than maintained their proportion of the total trade. It is disturbing, however, to think that a trade which stood at over 26 million proof gallons in 1914 should now have shrunk to 8,601,223 proof gallons in 1933-34.

NO TAXATION RELIEF

It was with great disappointment that we learned the Chancellor of the Exchequer did not see his way to grant us the much-needed relief, for which we have been petitioning annually for the last fifteen years. It is somewhat consoling, however, that even five Scottish Members of Parliament saw fit to speak during the passage of the Finance Bill in favour of a reduction in the duty. Their claim was answered by the Chancellor, who admitted that the duty was too high and would warrant the granting of some relief at the first favourable opportunity. I think it well to provide the Chancellor, when he is of this mind, with additional reasons why this relief should not be further postponed. I think I have previously pointed out that the present duty works out at 25 to 30 times the original value of the article, but I wish to quote the corresponding duties charged in some of the more important English-speaking countries as compared with the present duty ruling in this country of 72s. 6d. per proof gallon.

In Australia and New Zealand the duty charged on imported spirits is 40s. per proof gallon, while spirits produced within the Commonwealth only pay 26s. per proof gallon. In Canada, imported whisky and gin pay 8 dollars, or, say, 32s. per proof gallon, while domestic spirits pay only 7 dollars, or, say, 28s. per proof gallon. In South Africa, the duty on imported spirits is 45s. per proof gallon. There is no local manufacture of whisky or gin, but the Cape brandy with which the imported spirits compete is only subject to a duty of 12s. 6d. per proof gallon. In the United States the import duty is 5 dollars per American proof gallon, but is subject to a further 2 dollars of internal tax, thus making in all 7 dollars, or, say, 28s. per American proof gallon, while domestic spirits only pay the internal duty of 2 dollars, or 8s. per American proof gallon.

From the above it would appear that America, which has just thrown off the shackles of Prohibition and has still an unbalanced Budget, is content to tax its own domestic spirit at a rate equal to 8s. per gallon, or about one-ninth of the rate exacted by our Government on our own domestic spirits.

ANALYSIS OF BALANCE SHEET

Coming now to an analysis of the balance sheet, you will find on the liabilities side the additional sums placed to reserve and superannuation funds, as referred to in the report, making these £3,250,000 and £400,000 respectively. The subsidiary and associate companies' current and loan accounts together show an increase of slightly over £500,000, and this sum represents the surplus cash of these companies.

Sundry creditors, reserves for taxation and contingencies, etc., is roundly £230,000 up at £1,799,367. During the year under review certain sales have taken place between subsidiary and/or associate companies, the profits on which your directors have thought it advisable to make provision for in the accounts of the parent company. This suspended profit, in addition to the provision made on sales of new whisky by the parent company to its subsidiaries, will, as explained in my address last year, come into the accounts as the goods involved go into consumption. These largely account for the increase referred to.

The capital of the company remains unaltered—and this also applies to the debenture debt.

Turning to the assets side, you will find that land and buildings have decreased by £80,000, and plant and utensils increased by about £10,000, and the total of these items makes the property account about £969,000, or £70,000 less than last year, notwithstanding that considerable additions were made, more particularly to plant. Sundry investments show an increase of over £840,000, which is principally due to an increase in our holding of British Government securities.

AUGMENTATION OF CASH RESOURCES

The only other items calling for comment are investments in subsidiary companies and cash. These investments, taking into

consideration the purchases and sales during the period, which including the sale of our holding in Distillers Corporation-Seagrams, Limited, Canada, show on balance a decrease of fully £450,000. This Canadian transaction, along with the liquidation of loans in connection therewith and the surplus moneys supplied by the home companies, largely accounts for the augmentation of our cash resources. Last year I said your directors were watching for an opportunity of investing some of our surplus funds, and, as stated in the report, an outlet is being found by our entry into the U.S.A.

Dealing now with the profit and loss account, the gross revenue, including registration fees, is £2,219,157 os. 11d., and after deducting therefrom the debits for charges, debenture interest and directors' fees, there remains a net profit of £2,140,621 15s. 2d., which compares with £1,724,127 17s. 6d., or an increase for the year of £416,493 17s. 8d.

APPRECIATION OF STAFF'S EFFORTS

Having now completed my review of the year's accounts, this is an opportune time for me to voice the appreciation of the directors of the untiring zeal and ability shown by the members of the staff, from the highest to the lowest, both at home and overseas, which has done so much to bring about the successful results of the past year. I am quite sure the stockholders will join in this expression of appreciation.

Ladies and gentlemen, in the report reference has been made to the retirement from the board of Mr Archibald Walker, and the directors have expressed their grateful thanks for his valuable work during the thirty-two years in which he was a member of our board. I cannot allow this occasion to pass without making personal reference to him as a colleague and friend. I had the privilege of being his senior as a director by two years, and during the whole of the period of our association his assistance and advice on matters affecting the interests of the company have been freely given. He leaves our board with the friendship and best wishes of every member, and with the hope that he will be long spared to enjoy a well-merited retirement. (Applause.)

CONFIDENCE IN THE FUTURE

And now, ladies and gentlemen, it only remains for me to express my confidence in the future of the company. It is true that there are rocks ahead in the international situation which give cause for uneasiness, but, against this, we have reason for thankfulness that this country has apparently weathered the storm, and is mastering its difficulties in a way which is the envy of most other countries.

In this improvement our own company cannot fail to participate, as our financial position was never stronger than it is to-day. For this reason I have very great pleasure in moving the adoption of the report, which recommends a final dividend on the preference stock of 3 per cent., less tax, making 6 per cent., less tax, for the year, also a final dividend on the ordinary stock of 12½ per cent., less tax, making, with the interim dividend of 7½ per cent., already paid, a dividend for the year of 20 per cent., less tax, and carrying forward to next year a balance of £316,339 6s. 1d.

MANAGING DIRECTOR'S REVIEW

Mr Thomas Herd, managing director, in seconding, said:—Mr Chairman, my Lord, ladies and gentlemen, in rising to second the motion for the adoption of the report and accounts put to you by the chairman, I would first of all associate myself with all that he has said as to the valuable services rendered to the company by Mr Archibald Walker over a long period of years. Mr Walker's technical knowledge of the distilling industry is unrivalled, and his considered advice will be sorely missed by his colleagues on the board. I join most sincerely in wishing for Mr Walker many years in which to enjoy his leisure.

DISPOSAL OF CANADIAN INTERESTS

As it is only on the occasion of the annual meeting that an opportunity presents itself of affording the stockholders an outline of the company's activities and policy, I would venture to trespass a little on your time with that end in view. Last year I had not the pleasure of being present at the annual meeting, as I was then in Canada in connection with the negotiations which eventually resulted in an agreement providing for the sale of the company's interest in the Distillers Corporation-Seagrams, Limited, which was engaged in the production and sale of spirituous liquors in that market. It is probably unnecessary for me to go into the considerations which decided your board to dispose of that interest, but it will be obvious to you that the then clearly impending repeal of prohibition in the United States rendered advisable a very

careful review of our position and policy in the North American continent. It might be well to explain that the disposal of the company's interest in Distillers Corporation-Seagrams, in no way prejudices our arrangements for the sale of our well-known brands of Scotch whisky in the Canadian market, these being in the very capable hands of our subsidiary company, the Distillers Company of Canada, Limited, which was specifically incorporated for the supervision of such sales.

THE NEW AMERICAN INVESTMENT

As stockholders can well imagine, the repeal of Prohibition in the United States is a matter which has called for our close attention, and no effort has been spared by my colleagues or myself in exploring every possible avenue to ensure that the company secures an adequate share of this re-legitimatised, if not altogether new, market. Along with several of my colleagues, I spent a considerable time in the United States during the early part of this year, and, after careful investigation, initiated negotiations which have resulted, as you would see from the report, in an agreement for the acquisition of 337,000 shares of no par value in the National Distillers Products Corporation at a price not to exceed 25 dollars a share. Here, again, it should be clearly understood that this is purely an investment in the production and sale of American liquor, and is not in any way concerned with the sale of our Scotch whiskies in the United States.

Your directors have decided to erect two gin-producing distilleries at Linden, in the State of New Jersey, and have obtained the necessary permit from the Federal Government through our subsidiary company, the Distillers Company, Limited, of Delaware. Our friends, the National Distillers Products Corporation, are interested with us in this venture, and have undertaken to purchase a 40 per cent. interest in the Distillers Company, Limited, of Delaware, for a sum of 5,000,000 dollars. At those distilleries, we will produce, among others, the world-famous Gordon, Burnett, Boord and Vickers gins, for which we confidently anticipate in the United States the same generous measure of popular favour which they now enjoy in other parts of the world.

Those distilling plants are already in process of erection, and we hope to be producing and marketing gin by the end of the present year. The chairman has referred to the shipments of Scotch whisky to the United States, and the difficulty of developing this side of the business under present conditions, partly by reason of the natural desire of the American Government to foster the domestic production of spirituous beverages. Your board are confident that, whatever the probably transient conditions of the immediate future may be, Scotch whisky will, by reason of its fine quality and unrivalled maturity, eventually establish a solid market for itself in the United States, despite the keen competition of American and other spirituous beverages. On the other hand, the obviously prudent course for your company was to secure a participation in that comparative security which it is believed to be the object of the Administration to set up in America for its producers. In this we may be taking a long view, but we believe it is a sound one.

It will be readily appreciated that the American Administration requires time to surmount the many difficulties and complications that have arisen, and which may be quite fairly described as the aftermath of Prohibition, but that they have the will to regularise the manufacture and sale of liquor and give all the competing interests a fair field is our firm belief. If I may speak in this respect on behalf of the Scotch whisky trade as a whole, I should like to take this opportunity of acknowledging the very valuable assistance rendered by the Board of Trade and other British Government authorities in London, Washington and New York, and of expressing our thanks for the readiness which they have invariably displayed to help wherever possible.

WHISKY PRODUCTION AND EMPLOYMENT

The chairman has referred to the disappointment of the whisky consumer and the trade that the Chancellor of the Exchequer has not seen his way to reduce the present unduly high rate of the Spirit Duty, although he admitted recently that the duty is unreasonably high. In view of this, it seems passing strange that the unfortunate distiller should find himself pressed to use Scotch barley in preference to the imported article, which may be, and generally is, cheaper and equally suitable for his purpose. Now, as I think has been amply evidenced time and again, the Scotch distillers yield to no one in their patriotism, and, accordingly, twelve months ago their association undertook to give a preference to home-grown barley wherever possible. This is a vital matter to the Scottish barley-grower, whose most important market for barley is the distilling trade, and much of whose land is best suited for the raising of this crop. The farmers realise to the full that, if the extinction of the whisky trade by high taxation is

proceeded with, they will be unable to cultivate profitably a very substantial portion of their land, with disastrous results to all classes of the community in districts where alternative employment is difficult to find.

Last season, as a result, partly, of a speculative demand for new malt whisky, created by the repeal of Prohibition in the United States, and, partly, of the almost complete suspension of distilling in the preceding season, a large number of Highland distilleries, including many of those belonging to your company, were enabled to resume distilling, with marked benefit to the farmers and the districts generally. The two facts above mentioned, however, can only be regarded as temporary, and cannot permanently offset the depressing effect upon production of the declining consumption due to the high spirit duty. In view of these circumstances, the farmers have again approached the Pot Still Malt Distillers' Association of Scotland to renew their undertaking in the forthcoming season to use Scotch barley in preference to foreign barley. This undertaking the distillers have readily given, although it must inevitably add to their cost of production, and they do this only with the view of supporting the Scotch farmers and those dependent upon them until the hoped-for reduction of the spirit duty by the Chancellor of the Exchequer will so far increase the consumption as to assure a permanently steady demand for Scotch barley.

THE COMMITTEE ON BARLEY

The Secretary for Scotland, at the end of last year, appointed a Committee to enquire into and report upon the supply of and demand for Scottish barley for use by Scottish distilleries, and to make recommendations regarding the steps to be taken by the growers and distillers to improve the quality and condition and methods of sale of barley, so as to facilitate its use by distilleries. This Committee has reported that they are of opinion that no material increase in the distilling of malt whisky for home consumption, and consequently in the demand for barley, can be looked for while the spirit duty remains at its present level. The trade awaits with interest, not to say expectation, what the Government now proposes to do in the interests of the farming community, which it professes to have so closely at heart.

SCOTCH WHISKY EXPORTS

The chairman has dealt in his speech with the home consumption of British beverage spirits, showing that this is still declining as a result of the high spirit duty. Happily, in the export branch, the shipments, so far as your company is concerned, have been more than maintained, without taking into consideration the increased business which the repeal of Prohibition in the United States has brought us. The increase in the shipments, after eliminating those to the U.S.A., is not large, but it is none the less welcome, in view of the many difficulties which beset our export trade under the existing conditions and the persistent decline in the home consumption. The exports of home-made spirits are still far below what they were just before the outbreak of war, when they amounted to over 10,000,000 proof gallons per annum. In 1933 they amounted to 4,848,000 proof gallons and in the first six months of the current year they amounted to 3,440,000 proof gallons, or at the rate of 6,880,000 proof gallons per annum, which, as you will see, still leaves a great deal of leeway to make up.

I sometimes wonder if the Government, when, in the interests of employment, it suggests that the Scotch whisky distillers should use home-grown barley in preference to foreign, appreciates that this proposal involves an increase in the cost of production of whisky intended for export as well as of whisky for home consumption. This export trade in British spirits has been of very substantial advantage to the country at a time when the maintenance of our international trade balance was so necessary, and it has been built up entirely by the unaided efforts of the industry itself. It seems rather illogical, if not unreasonable, therefore, that the distillers should be asked to concede part of the hardly-earned profit on those exports to provide the farmers and those dependent upon them with a living, which the Government itself has, deprived them of by over-taxation of that part of the distillers' product which is consumed at home.

IMPORTANCE OF LABORATORY RESEARCH

Other important branches of our trade are those in yeast and malt extract, the turnover in which has been fairly maintained in spite of severe competition at home and from the Continent. This is due in large measure to the very high standard of quality we are able to maintain through the zealous co-operation of our works department and research laboratories. The latter are situated at Great Burgh, near Epsom, and may be justly regarded as among the most efficient and best equipped in the country. Laboratory research is of necessity done very largely in the background, and,

consequently, its importance is rather apt to be overlooked by stockholders, but I can assure you that it finds its reflection in practically all branches of our business. As a result of the co-operation just referred to, the bakery trade is being supplied with a quality of yeast never before attained. The research department also keeps us in close touch with the latest developments in science relating to alcohol derivatives and those other aspects of the distilling and allied industries which are of paramount importance to the company.

NEW "GYPROC" FACTORY

For a number of years our subsidiary company, Honeywill and Stein, Limited, which is mainly engaged in general chemical and industrial development work, acted as agents for the sale in this country of a Canadian-produced plaster board called "Gyproc" and other products. These met with such a large degree of success that we were encouraged to enter into an agreement with Gypsum, Lime and Alabastine, Canada, Limited, to incorporate a new company to meet the growing demand for this material by manufacturing it in this country. We have accordingly taken a 60 per cent. interest in this new company, Gyproc Products, Limited, the remaining 40 per cent. being held by our Canadian friends. Production on a substantial scale has now begun at the new factory at Rochester, and, having great confidence in the superiority of our product, we look forward to a growing and profitable business.

In conclusion, I have much pleasure in associating myself with the chairman in his expression of thanks to the staff, both at home and overseas, for their continued loyal and assiduous efforts in the company's interests.

I now formally second the adoption of the report and accounts. (Applause.)

STOCKHOLDERS' QUESTIONS

The chairman having invited questions, Mr W. W. Radford asked if the National Distillers Corporation of America were acting as agents for the sale of the company's Scotch whisky in America. He could not make out from the speech whether they were going to deal with the company's exports or not. Secondly, they appeared to have put a good deal of money into the trade in America. Were they only manufacturing gin or were they going to manufacture American whisky? Thirdly, he noticed that the price of the shares of National Distillers Corporation of America seemed to be going steadily down. Might he take it that the board had full confidence in this American investment?

Mr Herd, replying, referred the questioner to his speech, in which he made it clear that the investment in National Distillers was purely an investment in the production and sale of American liquor. The company was meantime only to make gin in America. In answer to the third question, the price paid for National Distillers shares would not exceed 25 dollars per share, and they were fully protected as to the issue price.

The report was unanimously adopted.

SELECTED LAND AND PROPERTY COMPANY, LIMITED

IMPORTANT BUILDING AGREEMENT

The sixth ordinary general meeting of this company was held, on the 24th instant, at 126 Bishopsgate, London.

Mr Harold W. Batty, F.S.A.A., F.C.I.S. (the chairman), in moving the adoption of the report and accounts, said that shareholders would no doubt share the satisfaction of the directors that the accounts for the year to March 31, 1934, showed a considerable improvement in profit on the previous year. The agreement recently concluded with the building contractor was a matter of great importance to the shareholders. Not only had it beneficially affected the profits shown in the present accounts, but it would have a considerable effect on the profits of future years, as it provided for a considerable reduction in the contract price of future building. The consideration given by the company for those revised terms provided for the builder to have the option to take up at 12s. per share at any time to March 31, 1936, the whole of the 80,000 unissued ordinary shares. As it was computed that the total amount surrendered by the building contractor under the revised agreement was not less than £20,000, shareholders could form an idea as to the value the builder attached to the option.

There had been an increasing demand for business premises on satisfactory terms. The company owned practically the only land in the neighbourhood that was available for business premises, most of the remainder of the land being town-planned for residential purposes. The needs of the growing population were having their effect on the value of business property on the Redway

estate. He had stated last year that a considerable increment in value would be shown on the portion of the land set aside for business premises. That was borne out during the year by the sale of about 90 feet at a price three times that at which the land stood in the company's books. They also had inquiries for 80 feet at three and three-quarter times the cost price, and 50 feet at four times the cost price.

The business of building and selling houses showed a satisfactory improvement on last year. Sales so far this year had run to three times the figure of last year, and, if that continued throughout the year, quite satisfactory profits on their modest capitalisation would be secured, even without the sale of business sites. Had the altered scale of payments to the building contractor been in force throughout the past year, the gross profit would have been 40 per cent. higher, while if the sales had also been three times as much, he calculated that the net profit would have been not less than £15,000.

The report and accounts were unanimously adopted.

IDEAL BUILDING AND LAND DEVELOPMENT COMPANY, LIMITED

HIGHLY SATISFACTORY PROGRESS

The statutory meeting of the Ideal Building and Land Development Company Limited, was held, on the 24th instant, at 1 Broad Street Place, London, E.C.

Mr John S. E. Todd (the chairman) said that the company owned the estates mainly in the outer suburbs of London, and it was their intention gradually to encircle the whole of the outer Metropolis so that purchasers could enjoy the benefits of becoming one of the company's satisfied owner-occupiers, irrespective of neighbourhood requirements. New districts had been selected at Harrow, Ilford, Edmonton, Ewell, Bromley and Woolwich. The board considered that the company was rendering a very valuable service in the fight against any spread of dangerous communistic ideas. Citizens who through ownership of their own houses had something definite to lose by the unsettlement of existing constitutional conditions, were, in consequence of that stake, reluctant to listen to subversive propaganda.

Shareholders would have noticed that the Government had realised the tremendous shortage of good housing accommodation. This company's board were fully alive to the importance of watching political developments in this sphere, and would do everything in their power to see that in any Government schemes the company reaped the full advantage of their unique organisation, and their ability to handle the mass production of good houses capable of being let at economic rentals. As such a large proportion of their sales were from personal recommendations of satisfied owner-occupiers, he would ask all shareholders to bear in mind the desirability of each using his influence to promote further sales of the company's houses by drawing the attention of possible intending purchasers to the advantages to be gained by buying an Ideal House, built by Britain's Biggest Builders, as they described themselves.

Shareholders would doubtless like to know how the first half of the year compared with the first half of the preceding year. He could at least say that the number of houses sold compared not unfavourably with the preceding year, and prices had been more than maintained. The board therefore looked forward with every confidence, and in the expectation that at the close of the first financial year they would be able to present figures the net profit of which shareholders would consider very satisfactory. With Mr Shephard and Mr Meyer to guide the company's destinies, he personally had no fear for the future for some years ahead.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

A DIFFICULT YEAR

TAXATION IN THE FREE STATE

The half-yearly general meeting of the Provincial Bank of Ireland was held, on the 25th instant, at the chief Irish office of the bank, College Green, Dublin.

Mr R. Durant Trotter (chairman) presided, and the other directors present were Messrs Gabriel Brock, F.C.A.; John C. Denton Carlisle, J. Marmion Carroll, R. Ashurst Gradwell, H. S. Howard Guinness and Alexander B. Leslie-Melville. The secretary of the bank, Mr F. S. Forde, was in attendance.

The annual report, which was submitted, disclosed a profit for the half-year ending June 30th last of £69,703 14s. 9d. Out of this the directors declared a dividend for the half-year of 12½ per cent. per annum, less income tax.

In moving the adoption of the report, the Chairman said that their reserve fund now stood at £485,000. Notes in circulation kept at the high figure of £934,974, and showed an increase of over £20,000 on the figure of a year ago. Deposits, however, showed a substantial decline in the twelve months past, but in existing conditions it was a matter of difficulty to increase, or even maintain, the same amount of what were very largely savings of the community at large. That was the general experience of all the Irish banks. The past year had been a difficult one for farmers, graziers and shopkeepers generally.

However, advances to customers and bills discounted showed an increase of some £180,000 on the figures of this time last year, which indicated their readiness to provide facilities, where these could be profitably employed and judiciously allowed.

Their immediate realisable assets, including investments, stood at the figure of over 9½ millions, and showed the high percentage of 61 per cent. to meet their liabilities to the public. They believed that full provision had been made for all bad and doubtful debts. They distributed the same dividend as before, and while shareholders got the benefit of the reduction in income tax from 5s. to 4s. 6d., it, of course, cost the bank a little more. They were placing £10,000 to reserve and were carrying forward £33,547 as against £33,336 brought into the account.

INCREASED TAXATION

Continuing, the Chairman said:—"I have referred before to the difficulty we, as bankers, find in maintaining profits, due mainly to three factors, viz.: Increased taxation in the Free State, the incidence of an increasing scale of salaries under the award, which must continue to increase for the next few years, and the continued low rates in the money market.

"Of course we will get the benefit of the reduction in income tax, and in regard to salaries a new and somewhat reduced scale for future entrants has been agreed upon by all the Irish banks, which will in course of time be to our advantage.

"We are all satisfied that, even on this reduced scale, the positions the bank offers compare very favourably with other professions. I think this is evidenced by the number of applications we have received, and are still receiving, in respect of an examination we propose holding in September next to fill a comparatively few vacancies.

"There remains the difficulty in obtaining a satisfactory return on our money at call, etc. Rates in the money market continue low, and it is not an easy matter to say when any upward tendency is to come. The general opinion seems to be that cheap money is likely to remain for a considerable time.

"Statistics taken over a long period of years show that while a 3 per cent. rate has been more often in actual operation, the 2 per cent. rate has continued applicable for far longer periods at a time, and it is not easy to see what influence is likely to alter this position for some time to come.

"It is always a pleasure on such an occasion as this to be able to say a word about our staff. My colleagues on the board pay frequent visits to our branches, and as a result we are able to keep an eye on promising men, with a view to their more rapid promotion than in former times. Many excellent suggestions for improving efficiency have also been made by the staff on these occasions.

"In the present state of world unrest, banking, like so many other professions, is not free from anxiety and calls for the exercise of tact and ability on the part of our staff of all grades. To them our present strong position is largely due, and I feel sure you would wish to join the board in thanking them for their services."

Mr Leslie-Melville seconded the adoption of the report, and the motion was carried.

ZINC CORPORATION, LIMITED

INCREASED PROFIT AND DIVIDEND

SIR ROBERT HORNE ON DEVELOPMENTS

The twenty-third ordinary general meeting of the Zinc Corporation, Limited, was held, on the 24th instant, at River Plate House, London.

The Right Hon. Sir Robert Horne, M.P. (the chairman), in the course of his speech, said:—The gross value of the mine production in Australian currency of £933,511, compares with £908,517, the increase being due chiefly to the larger output from the mine, which, as recorded in the report, was 363,540 tons, compared with 350,100 tons in 1932. The expenditure at £814,390 is lower by £21,952, despite the larger tonnage of ore raised and treated. I note with equal pleasure the reduction in costs effected by the Broken Hill Associated Smelters, which has been reflected in a lower returning charge for smelting and refining.

The net profit for the year was £120,225, an increase of £25,387 on the preceding year. (Hear, hear.) The cumulative preference dividends were paid on the usual dates, and the total distribution out of the profits of the year 1933, by way of participating dividends on both classes of shares, was 1s. 3d. sterling per share, as compared with 9d. per share for the preceding year 1932. (Hear, hear.) The balance sheet discloses a gratifying improvement in the liquid position of the company, the surplus being £107,712, as compared with £1,425 in 1932.

MINE DEVELOPMENTS

Your two main assets are your mine at Broken Hill and your interest in the lead smelting and refining works at Port Pirie, which is entirely owned by our associates the North Broken Hill, Broken Hill South and ourselves. Market conditions precluded development for nearly four years, but in 1932 it was resumed and carried forward to the extent of a little over 1,000 feet. In 1933 the footage was doubled, and it is gratifying to know that this more intensive policy has been rewarded by results of a highly encouraging nature. (Applause.) The work on the No. 12 level has shown a continuous run of favourable ore of good width for a length of about 1,500 feet. This has had a marked effect on the maintenance of a satisfactory ore reserve, so much so that it is confidently expected that when No. 13 level is completed any lag in development will have been fully overtaken. (Hear, hear.) Mine costs show another welcome reduction for the past year, denoting a high degree of attainment. The smelter and refinery at Port Pirie are doing excellent work, and their metallurgical records deserve the highest praise. Our share interest is at present 185,000 shares of £1 each out of a total issue of 730,000 shares.

AUSTRALIAN GOLDMINES

At previous meetings I have emphasised to you how essential it was in your interests for us to do all in our power to extend the mining industry in Australia. I informed you that in association with the Imperial Smelting Corporation, Limited, the Central Mining and Investment Corporation, Limited, the Union Corporation, Limited, and New Consolidated Goldfields in London, together with the other Broken Hill companies in Australia and with certain important American interests we have been taking steps to promote the exploration and development of goldmining areas in Australia. Many of the projects embarked upon bear a most promising aspect, and the market value of the interests held by the Zinc Corporation is appreciably higher than the price paid for them. The time has now arrived to erect a central organisation which will take over on reasonable terms the interests which have been acquired. For this purpose there will shortly be issued the prospectus of a new company in which full details will be made available. In respect of the assistance given by the Zinc Corporation and the Imperial Smelting Corporation in the initiation of this work, it will be provided that preference will be given—up to 200,000 of the issued shares—to applications made by shareholders of the Imperial Smelting Corporation and of this company. No promotion profits will be charged, and the vendor interests will underwrite the whole of the issued capital without commission.

THE FUTURE

There are so many disturbing factors in the world to-day, both political and economic, that it would be unwise to prophesy. All we can say is that we have an excellent mine with an expert staff and industrious employees; that we have used this period of depression to tune up every branch of our service and to increase efficiency in every possible way; that our financial position is absolutely sound; and that if the price for our metal and its consumption are maintained at a reasonable level we shall prosper. The report and accounts were unanimously adopted.

THE VICTORIA FALLS AND TRANSVAAL POWER COMPANY, LIMITED

SATISFACTORY INCREASE IN SALES

FURTHER REDUCTION IN CHARGES

Mr Arthur E. Hadley, C.B.E. (the chairman and managing director), presiding, on the 26th instant, at the general meeting of shareholders held in London, said he had to present a satisfactory account of the company's business for the year 1933.

The net profit, after allowing for taxation and all other requirements, amounted to £360,959, the decrease, compared with the previous year, being occasioned by reduced prices charged for the year. The board had again paid the maximum dividend of 10 per cent. on the preference shares, a dividend of 15 per cent. on the ordinary shares and a bonus of 5 per cent. had been paid for the year out of the balance of exchange earned up to the end of 1932. A further sum of £50,000 was added to the reserve fund, bringing it to £800,000, and £285,437 was carried forward. A further £259,040 of the company's debentures had been drawn for redemption during the year.

NEW AGREEMENTS WITH CONSUMERS

At the last two annual general meetings the chairman had indicated that a modification of the company's charges was under consideration, and he mentioned that negotiations had now been completed between the mining industry and the company, which met with the approval of the consumers and were satisfactory to the company. The agreements for sale of power had been extended from 1942 to 1950, and provided that the charges varied up or down according to whether the results were greater or less than those for 1933. This arrangement, although involving a reduction in profits for the year 1933, added considerably to the stability of the business by providing supply on terms which were satisfactory to existing and prospective consumers. In the year 1933 the units sold showed a satisfactory increase over the previous year, such increase continuing during the current year.

As a result of the increasing demands for power from the mining groups, of which approximately 70,000 kw. had still to be met, large extensions of plant were decided upon, and it was considered necessary to erect a new power station. The difficult problem of finding a new site, where coal and water were available at reasonable costs, was successfully solved after prolonged investigations and negotiations, and arrangements were made for a site to be acquired in the Vereeniging district. A station, which would be known as the Klip Station, had been designed for an original capacity of 100,000 k.w., with an ultimate capacity of 350,000 k.w., and the main contracts for its construction had already been placed. Owing to mining activities outside the company's area of supply, negotiations were entered into with the Electricity Supply Commission of South Africa with a view to arriving at the best method of furnishing supply in these outside areas. The negotiations had resulted in a very satisfactory agreement between the Commission and the company. The principal provisions of the agreement were that the Commission would own the new Klip Station, which the company would operate, and take the entire output at cost price, including the Commission's capital charges and certain administration expenses. The Commission would obtain and cede to the company the licence for supplying the new areas, who would also operate all the Commission's transmission system in such areas. These arrangements would continue for so long as the company held the licence for the supply of electricity.

ENCOURAGING OUTLOOK

The power requirements demanded during the present year were being satisfactorily met and continued to increase, the additional units sold for the six months to the end of June showing an increase of about 10 per cent. over the same period last year. The directors therefore looked forward with confidence to a satisfactory year.

Regarding the new draft agreement for the use of the Victoria Falls, which had been approved by the Government of Northern Rhodesia, this had been referred by the Colonial Office to the Crown Agents for the Colonies. The Crown Agents and the company had come to an agreement upon all points, and the Crown Agents had forwarded their report to the Colonial Office.

Mr Hadley concluded by expressing on behalf of the board and the shareholders the continued confidence in the very marked ability of the staff and the board's appreciation of the enthusiasm shown from the highest to the lowest in the interests of the company.

The report and accounts were unanimously adopted, and the retiring directors, Sir Henry Birchenough, Bt., K.C.M.G., and Major W. A. Wills, were re-elected.

CITY OF SAN PAULO IMPROVEMENTS COMPANY, LIMITED

A PROGRESSIVE YEAR

The twenty-second ordinary general meeting of this company was held on the 26th instant, at the Institute of Chartered Accountants, Moorgate Place, London.

Mr Herbert Guedalla, F.C.A. (chairman), said that they had kept accrued debenture interest in a separate account, and the moratorium with regard to the debenture sinking fund ran until December 31, 1935. The company had obtained permission to remit £44,800 under the "Rothschild" scheme and £20,000 over a period of four months at the official rate of exchange; this had enabled them to pay the half year's debenture interest to August 31, 1932, and they would continue to reduce this liability as and when they could get remittances.

The assets and liabilities in Brazil had been taken at the fixed rate of 6d. per milreis. Exchange in Brazil was strictly controlled by the Government. The directors had carefully considered the whole exchange position and had come to the conclusion that the time had not arrived for dealing with this in the balance sheet. The valuation reserve account had increased to £537,660.

The profit and loss account started with a balance of £259,229. The board deducted £63,338 in respect of profit on sales on previous years which were cancelled during the year, also expenses of the Fontaine action, £2,747, and £2,353 loss for the year, leaving £190,789 to be carried forward. The surplus on trading amounted to £61,235, compared with £38,637 in the previous year.

Freehold land stood at £2,325,216, showing an addition of £36,108, being re-purchases and land returned in cancelled sales, less book value of land sold. Taking the milreis at 6d., sale prices showed an appreciation of about 35 per cent. over the 1925 valuation. The valuation reserve account was a very real reserve. It might not be unfair to compute that, if a new valuation were taken, with exchange at the official rate, the land would come out at the balance-sheet figure in sterling. Sales were slow during the first few months of the past year, but improved towards the end. The improvement had been more than maintained during the current year. The year under review had not been without difficulty, but conditions in Brazil showed distinct improvement.

The report and accounts were adopted.

BRITISH ROPES, LIMITED

The twelfth ordinary general meeting was held on Tuesday, July 24th, and was followed by special meetings of preference and ordinary shareholders and an extraordinary general meeting to consider

THE CAPITAL REORGANISATION SCHEME

In a general review of the company's position, Col. J. J. Gillespie (chairman) stated *inter alia* :—

1. **Distinct improvement has taken place in the Company's trade** not only as indicated at the last meeting in December, but since that date.

2. **Trade recovery has been most gratifying.** Improved outlook in shipping and fishing industries, aided by Government schemes of assistance, should further benefit the company. On the export side, also, the company's activities have shown distinct and encouraging improvement.

3. The company's financial year will be altered to end on December 31st, and the accounts will be presented in March. It is hoped that by then dividends will be resumed on the preference and the preferred ordinary shares.

4. Improved profit figures recently achieved justified the capital reorganisation scheme now presented and the hope for satisfactory dividends in future years on the reorganised capital.

5. The new issue of 4½ per cent. debenture stock, replacing the existing 6 per cent. issue due for repayment on November 5, 1935, will render the company's cash resources adequate for future requirements.

THE SPECIAL RESOLUTIONS GIVING EFFECT TO THE CAPITAL REORGANISATION SCHEME WERE CARRIED.

ANGLO-SPANISH CONSTRUCTION

AMOUNTS DUE FROM THE SPANISH GOVERNMENT

The ninth ordinary general meeting of the Anglo-Spanish Construction Company, Limited, was held, on the 25th instant, at 1 London Wall Buildings, London, E.C.

Mr David McAdam Eccles (the chairman), after first paying a high tribute to the late chairman, Sir Evelyn Wallers, K.B.E., who died in January last, said that as funds had become available, further repayments of 10 per cent. had been made on the outstanding debentures, which were now 40 per cent. repaid.

The delays and restrictions imposed by the Spanish Government had greatly increased the company's financial charges. During the year the authorised transfers of funds had been reduced from £10,000 to £5,000 per week. The most important item in the balance sheet was the company's shareholding in the Santander-Mediterranean Company, whose assets consisted of three main items: the exploitation, which showed steady improvement in 1933, and of which the receipts had exceeded the running expenses during the first six months of 1934; an exploitation deposit valued at some £315,000; and debts due by the Spanish Government in respect of clearly defined obligations, equivalent to over 60,000,000 pesetas, or £1,600,000 at the present rate of exchange.

It was clear that at some future date the railway would reach Santander, and the exploitation should then acquire a considerable value. The board was confident that the Government would eventually meet its obligations to the Spanish company; and, although it would still be necessary to exercise patience, the value of the assets should exceed the debenture liability by a large margin.

The debts due by the Spanish Government were all supported by judgments and orders given in the company's favour by the highest Courts of Appeal in Spain, and in order that their nature might be fully appreciated a statement of them had been prepared and would be circulated to all debenture holders and shareholders of the company.

Attention was drawn to the Foreign Secretary's reply to a question asked about the Spanish company's claims in the House of Commons on Monday last. Sir John Simon said that representations had been made on more than one occasion to the Spanish Government, and that his Majesty's Government intended to press the matter.

The report was unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED

THE RECENT GOLD DEVELOPMENTS

The ordinary general meeting of Tanganyika Concessions, Limited, was held, on the 26th instant, at River Plate House, London.

Sir Reginald Wingate, Bt. (the chairman) explained that Sir Robert Williams, the managing director, had undergone a serious operation, and, although now quite restored to health, had been advised not to undergo the strain of attending the meeting.

A statement of the company's affairs, prepared by Sir Robert, was read to the meeting by Mr G. C. Hutchinson, assistant managing director, and this stated that the Union Minière du Haut-Katanga had reduced its stock of copper and been forced by growing demands to increase its production substantially. The cost of producing copper had been reduced below the prevailing price. The Benguela Railway had operated at a small profit, its agricultural and other local traffic having increased, as well as its mineral traffic. Settlement along its line was increasing. Detailed information of the gold discoveries in Kenya Colony and Tanganyika Territory was given, the first subsidiary, Kimingini Gold Mining Company, was to erect a mill of 100 tons daily capacity immediately to work exceptionally rich ore. It was expected that this mill would soon be doubled in capacity.

The following summary of a cable just received from Africa was read at the meeting: In Comet Star No. 1 shaft, crosscut at 50 ft. Depth at 45 ft. from the shaft had cut reef with 7 dwts. over 47 inches width. In the same crosscut at 79 ft. from shaft had exposed the following values in a mineralised zone parallel to above: 21.4 dwts. gold over 36 inches width, 1 dwt. gold over 12 inches width of dyke and 11.6 dwts. gold over 48 inches width. The crosscut face was still in ore.

In Comet Star No. 2 shaft the crosscut had exposed 60 inches width assaying 3.5 dwts. gold per ton and was still in ore. In the Lone Cone No. 2 shaft the west drive from the crosscut had exposed

the following values: 30 feet length assaying 8.85 dwts. over 50 inches width; 45 feet length assaying 5.5 dwts. over 50 inches width and 55 feet length assaying 2.8 dwts. over 52 inches width. Some very good values had been exposed in trenches along 1,700 feet length of strike in new ore body 1,200 feet N.E. of Lone Cone No. 3 shaft. Sir Robert Williams expressed the belief that 1933 would prove the culmination of a series of very bad years.

The report was unanimously adopted.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED

IMPROVED RESULTS

The twenty-fourth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 20th instant, at Southern House, London.

Mr W. H. Dankes (deputy-chairman and managing director), who presided in the absence through illness of the chairman of the company, Col. Sir Robert Williams, Bt., said that although their published accounts still showed a small loss, the results for 1933 were a marked improvement on those for 1932, and actually the final result showed a profit because the large stock of tea unsold and valued at December 31st had since realised more than the valuation, the advantage of which would be reflected in the current year's accounts. The depreciated value of sterling had caused a loss to the company of £207,641 on exchange.

With regard to the revenue account, they had received from the local company a sum, taken at par of exchange, equivalent to £58,084, compared with a loss for the previous year of £107,074. It was satisfactory to note that gross profits on tea amounted to over 3½ million guilders and on rubber to over half a million guilders, while gross profits had also been made on quinine, sisal, tapioca and rice, losses being confined to coffee and kapok.

The acreage under tea amounted to 26,515, the whole of it being in production with the exception of some 500 acres. The main feature of interest last year was the institution of the scheme for the regulation of output brought about by the co-operation of British India, Ceylon and the Netherlands East Indies and carried out under Government control. The recovery in the fortunes of tea-producing companies was a testimony to the initial success which had attended the scheme, and they could claim for it that that had been brought about without placing any severe burden on the consumer.

Their rubber crop of 15,454,094 lbs. was considerably larger than that for 1932, though falling just short of the record crop obtained in 1931.

The directors fully realised the shareholders' claim to consideration as soon as possible, and they had in view various ways to facilitate the payment of a dividend for the current year. If the present improvement did continue the directors would be in a position to consider the payment of a small interim dividend in January next.

The report and accounts were carried unanimously.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 21, 1934, amounted to £15,227,000, against ordinary expenditure of £11,387,000. After allowing for an increase in Exchequer Balances of £95,325 the operations for the week, as shown below, decreased the National Debt by £3,744,000 to approximately £8,073 millions.*

(000's omitted)			
Public Department Advances	+ £50	Treasury Bills	- £144
National Savings Certificates	+ 50	N. Atlantic Shipping Issues	- 25
3% Funding Loan	+ 25		
	+ 425		- 4,169

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

GOLD

Messrs. Samuel Montagu and Company write on July 25, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,579,997 on the 18th instant, as compared with £191,523,825 on the previous Wednesday. Business in the open market has been on a moderate scale, the amount disposed of during the week being about £2,000,000. There has been no special feature and prices have ruled at, or slightly above dollar parity.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
July 19	137s. 10d.	12s. 3-93d.
" 20	137s. 10½d.	12s. 3-88d.
" 21	137s. 9½d.	12s. 3-97d.
" 23	137s. 10½d.	12s. 3-88d.
" 24	137s. 11d.	12s. 3-84d.
" 25	137s. 11½d.	12s. 3-79d.
Average	137s. 10-50d.	12s. 3-88d.

The s.s. "Mooltan" which sailed from Bombay on the 21st instant carries gold to the value of about £665,000, of which £534,000 is consigned to London and £131,000 to New York.

SILVER

The market continued to show an easier tendency, due largely to a lack of support. China has sold and there has been some liquidation of bull contracts, but buyers have shown hesitation in making fresh commitments. There was more resistance at the lower level where China was more inclined to buy and there was also a demand from the Indian bazaars, the latter being fairly consistent buyers. Although the decline in rates attracted a little inquiry from New York, this quarter has shown little interest and the market has generally been quiet, the tone at the moment appearing rather dull.

Quotations during the week:—

IN LONDON			IN NEW YORK		
Bar Silver per oz. std.	Cash	Two Months' delivery	Bar Silver per oz. std.	Cash	Cents per ounce
July 19	20 1/8d.	20 3/8d.	July 18	46 1/8	999 fine
" 20	20 1/8d.	20 3/8d.	" 19	46 1/8	...
" 21	20 1/8d.	20 3/8d.	" 20	46 1/8	...
" 23	20 1/8d.	20 3/8d.	" 21	Closed	...
" 24	20 1/8d.	20 3/8d.	" 23	46 1/8	...
" 25	20 1/8d.	20 3/8d.	" 24	46 1/8	...
Average	20-312d.	20-437d.			

The highest rate of exchange on New York recorded during the period from the 19th instant to the 25th instant was \$5-04½ and the lowest \$5-03½.

 FIRE LIFE ACCIDENT MARINE
 Edinburgh: 35 St. Andrew Square
 London: 5 Walbrook, E.C.4, and 4, St. James's Street, S.W.1

aised this week, in spite of a further increase in cold-store holdings. Bacon prices are lower, but quotations for meat re generally unchanged. Increased supplies of new potatoes met with a rather less active inquiry, and prices have fallen to a lower level. Coffee, sugar and tea show little change on the week, but New York quotations for cocoa have declined appreciably.

The market for coal—especially house coal—was again dull, although best steams, which are reported to be rather scarce, show a slight price rise this week. Demand for blast-furnace coke has been well maintained, and substantial sales ahead are reported. French import quotas for coal have been further reduced, but this is not expected to have any important repercussions in South Wales. Shipments of pig iron from the Tees showed a heavy decline during July, but the market is reported firm, and rather better business has been done in manufactured and semi-manufactured steels. Business is being resumed in Scotland, following the close of the holiday period, and prospects are considered to be definitely brighter than at this time last year. Sales of Sheffield products show little sign of reduction and plants are generally working almost to capacity, with export prospects showing an improvement. Following the agreement announced last week, tinplate prices in South Wales continued firm and more active business is reported. On the other hand, non-ferrous metals still meet a dull trade and copper prices touched a new low level last Tuesday. Quotations for tin moved upwards.

Last week's advance in the price of raw cotton has not been held, and wool prices were also marked down this week. Sales of cotton piece-goods have not been very satisfactory and export business is poor.

Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 142.2 on July 25th, against 144.7 on the previous Wednesday and 135.2 at the corresponding date of last year.

COAL

SHEFFIELD.—Extreme dullness characterises most branches of the coal trade, particularly house coal, stocks of which have accumulated. Merchants are being pressed to take greater tonnages at cut rates. Nominal quotations for best sorts are 20s. to 21s. at pits. Best steams are scarce and some difficulty is being experienced in keeping up deliveries for export, while prices have been advanced 6d. a ton lately. To-day's quotations are 16s. 6d. and 17s. f.o.b. Washed doubles and singles are also in short supply. Little new export business is coming forward. Good tonnages of fuel are going to industrial works and the output of blast-furnace coke is promptly absorbed. F.o.b. prices range from 16s. to 20s., but these do not satisfy producers.

NEWCASTLE-ON-TYNE.—The North-East coal market, as a whole, is quiet, but during the last few days the Northumberland screened steam position has shown a slight improvement, there being a good arrival of tonnage at Blyth, and also a slightly better inquiry for prompt shipment. Collieries continue to book trade for shipment from the autumn onwards. The Durham position in every section is quiet, and idle time is frequent, particularly among the best gas collieries. The demand for coke of all descriptions is maintained, there being substantial sales ahead to Scandinavia and a good demand from inland sources.

Current f.o.b. prices for export: **NORTHUMBERLAND.**—D.C.B. screened, 13s. 6d.; smalls, 10s. 6d.; Howards, Bentinck, Newbiggin, screened, 13s.; smalls, 10s.; Tyne Prime, large, 12s. 9d.; smalls, 10s. 6d.; Hartley Main, large, 13s.; smalls, 10s. 6d. **DURHAM.**—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—The market is only just getting back to normal after the holiday, and so far little new business has been arranged. The Lanarkshire and Fifeshire collieries resumed this week, and reports indicate that production is now back to normal, but the Lothians collieries have been on holiday. Prices generally remain firm, with first-class steam in Fife a strong feature.

Export prices are approximately as follows:—**LANARKSHIRE.**—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 3d. to 14s. 6d.; navigation, unscreened, 12s. 9d.; 13s. 3d.; Hartley, 14s. 6d., all per ton f.o.b. Glasgow; steam,

12s. 6d.; trebles, 13s. to 13s. 6d.; doubles, 12s. 6d.; singles, 12s. 6d. to 13s.; pearls, 11s. to 11s. 6d.; dross, 9s. 9d., all per ton f.o.b. Grangemouth. **FIFE.**—Best unscreened navigation, 12s. 9d. to 13s.; unscreened navigation, 12s. 3d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 14s. to 16s.; doubles, 12s. 6d. to 13s.; singles, 13s.; pearls, 10s., all per ton f.o.b. Burntisland or Methil. **LOTHIANS.**—Prime steam, 12s. 6d. to 13s.; secondary steam, 12s.; unscreened navigation, 12s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 12s. 3d. to 12s. 6d.; singles, 12s. 3d.; pearls, 10s. 9d. to 11s., all per ton f.o.b. Leith. **AYRSHIRE.**—Best unscreened navigation, 13s. 6d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d. to 14s.; doubles, 13s.; singles, 12s. 6d.; pearls, 11s. 6d. to 12s.; dross, 10s., all per ton f.o.b. Ayr or Troon.

CARDIFF.—There was no material change on the coal market this week. Dry large classes are able to realise prices slightly above the scheduled figures, but for practically all other grades quotations are at the minimum. Business continues inactive and on Sunday last the French Government announced a further 10 per cent. reduction in its coal import quota. The quota of 59.5 per cent., which has been in operation since December, 1933, represents approximately 1,454,000 tons monthly, and on this basis a 10 per cent. reduction is equal to 145,000 tons, or 80,000 tons in respect of Great Britain. During the first half of the current year, however, imports from Great Britain have been reduced in spite of an unchanged nominal quota, and in view of this fact, and of the recent deal by which a monthly quantity of 40,000 tons of Welsh coal is to be exchanged for 20,000 tons of French pitwood, it is anticipated that the effect of the reduction in the quota on the South Wales coalfield will be negligible. It was reported on the Cardiff Exchange on Tuesday that the Buenos Aires electricity works' contract for 140,000 tons had been placed with London exporters for South Wales coals.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; coking smalls, 13s. 6d. to 14s.; best small steams, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 10s. 6d. to 11s.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 25s. 6d. to 26s.

IRON AND STEEL

MIDDLESBROUGH.—Shipments of all classes of pig iron from the Tees from July 1st to July 23rd amounted to 5,879 tons as compared with 10,337 tons in the corresponding period of June. This reduction is chiefly accounted for by reduced shipments to Scotland, but the holidays in that area will terminate at the end of this week and a resumption of deliveries is expected immediately. This has not made any real alteration in the position. The market is firm, and makers are confident that buyers will shortly come into the market for their autumn requirements. For home use, quotations are based on the official price minimum of 67s. 6d. per ton for Cleveland No. 3, and for East Coast hematite the minimum is 68s. per ton for No. 1; in both cases the price includes delivery to local users with the usual differences to buyers further away.

Export trade in pig iron is small, and is confined to regular buyers of special brands. Foreign ore prices tend higher for forward delivery, but for early shipment sellers are asking 17s. per ton for best Bilbao rubio c.i.f. Tees. Blast furnace coke is quoted at 20s. per ton, delivered to furnaces, and coke makers are talking freely of higher prices for delivery later in the year. A little more business has been done in semi-manufactured steel and shipments of manufactured steel have recently been good. The sheet trade for export is very quiet, and the market for heavy steel melting scrap is easier.

SHEFFIELD.—Conditions in the local steel trade have undergone little change for a couple of months, but reports generally are favourable and there is no sign of a reduction in the high level of turnover. In all the important sections of the industry plants are employed nearly to capacity and orders are replaced by new business as they are delivered.

Slackness is only to be found in buying and selling of materials. Makers of special steels are not so busy as earlier in the year, but have little cause for dissatisfaction. The pressure for deliveries of rolling-mill products has eased and consumers' requirements are now being met with fair promptitude. All the basic open-hearth furnaces are fully employed in producing semi-manufactured material. The leading firm in the stainless steel branch is installing an additional electric furnace of large capacity. Prospects for the export trade are believed to be improving. Tool makers are busy for this time of the year, but very quiet conditions prevail in the market for cutlery and electro-plate.

GLASGOW.—The resumption of work is not yet quite general in the West of Scotland. A number of plants will not re-start until Monday of next week. Where operations have been resumed a good start was made and generally the accumulation of orders is very satisfactory and the prospects considerably brighter than at the same period last year.

Two important shipbuilding orders are announced this week, viz., two cargo steamers to be built, one by Messrs. Lithgows, Ltd., of Port Glasgow, and one by Messrs. Barclay, Curle and Company, Ltd., of Whiteinch, Glasgow. Orders have also been received for several smaller vessels by Clyde shipbuilders and there are a number of inquiries on the market at the moment. Marine and other engineering firms in this district have a good deal of work on hand and new business is coming in regularly. Steel makers are also experiencing a steady demand and have a fairly heavy tonnage on books to start on at the conclusion of the holiday period. The home trade in black and galvanised sheets continues to expand.

CARDIFF.—On the Swansea Metal Exchange on Tuesday it was reported unofficially that, under the international agreement provisionally arranged in Paris recently, the quota of the world export trade allotted to Great Britain is 55 per cent., the United States 22 per cent., Germany 16 per cent., and Italy and France the remaining 7 per cent. The British quota of 55 per cent. compares with 70 per cent. under the Anglo-American agreement of 1929-31, and with about 70 per cent. claimed by Great Britain last year, 8 per cent. by the United States, and nearly 20 per cent. by Germany. Tinplate prices are firm at 18s. per basis box and business is a little more active. Galvanised sheets are unchanged at from £11 5s. to £11 15s. per ton, and steel bars at £5 per ton delivered. There was an improvement last week in shipments of tinplates at Swansea, the total being 92,230 boxes, compared with 62,948 boxes the previous week, and 92,663 boxes a year ago.

OTHER METALS

The market tendency has been almost unchanged this week. The continuance of selling pressure from the U.S.A. and a poor demand in Germany, coupled with heavy production, has caused a downward trend in copper prices, which reached the new low level of £28 16s. 3d. per ton last Tuesday. If, as seems probable, the American copper industry is willing to grant the long-term credits which Germany is now trying to secure, the market may show some improvement; for such an agreement would considerably reduce the present export pressure in the United States.

The tin market was dull earlier this week, industrial demand being small and speculators inactive. However, the "group" continued to support the market. Aggregate purchases by the "group" during recent weeks are believed to total well over 5,000 tons, whilst Thursday's *Daily Telegraph* puts the figure as high as 7,000 tons; this affords some indication of the strength of the recent downward tendency on the market. On Wednesday, however, the publication of the buffer pool details and the rumour of a reduction of production quotas after the end of September, led to an upward movement, and at one point quotations showed an advance of £3 per ton over the previous day. Prices subsequently declined slightly, and it is not anticipated that this temporary improvement will be maintained.

The markets for lead and spelter showed no new features this week, and trade continues dull.

Developments during the past week appear to justify our recent forecast that tungsten producers would be willing to supply the market at lower prices than hitherto. Quotations have been reduced to 38s. per unit, and the peak level appears to have been passed, although the Chinese monopoly still has the market in its hands. The market in manganese is now becoming more interesting. For the first time for some years, Russian prices were slightly advanced a few months ago, which gave some advantage to her chief competitors. Increasing production, and heavy shipments of manganese from South Africa have been reported during the past few days, the principal purchasers being Great Britain and Canada. If competition from other countries should become severe, however, Russian prices are likely to be reduced once again, so that no radical change in world markets is to be looked for at present.

TIN.—Sales on the London Metal Exchange: 100 tons on Monday, against 530 tons last week; 640 tons on Tuesday, against 285 tons last week; 570 tons on Wednesday, against 430 tons last week. The New York quotation on Wednesday was 52.40 cents per lb., against 51.90 cents a week ago and 51.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £233 7s. 6d. to £233 10s., compared with £230 10s. to £230 12s. 6d. last week. Stocks in London and Liverpool at the end of last week were 3,606 tons, an increase of 113 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,150 tons on Monday, against 2,000 tons last week; 2,400 tons on Tuesday, against 3,600 tons last week; 950 tons on Wednesday, against 1,900 tons last week. Domestic spot was quoted at 7.02½ cents per lb. in New York on Wednesday, against 7.20 cents a week ago and 8.37½ cents a month ago. Wednesday's official closing price for standard cash in London was £28 17s. 6d. to £29, compared with £29 10s. to £29 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 28,444 tons, show an increase of 2,654 tons, and stocks of rough copper, at 7,162 tons, show a decrease of 99 tons.

LEAD.—Sales on the London Metal Exchange: 100 tons on Monday, against 650 tons last week; 700 tons on Tuesday, against 450 tons last week; 650 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 3.85 cents per lb., against 3.75 cents a week ago and 3.85 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 15s. for shipment during the current month, compared with £10 18s. 9d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 575 tons on Monday, against 600 tons last week; 650 tons on Tuesday, against 550 tons last week; 800 tons on Wednesday, against 550 tons last week. Wednesday's quotation in East St. Louis was 4.30 cents per lb., against 4.30 cents the week before, and 4.20 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 6s. 3d., for shipment during the current month, against £13 7s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver, at £11 10s. to £11 12s. 6d. per flask of 76 lbs., remains unchanged. Foreign antimony was quoted at £35 to £36 per ton, as against £35 to £35 10s. per ton last week. Chinese wolfram was quoted at 40s. to 41s. per unit, c.i.f., as against 40s. to 42s. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—**Manchester.**—The tone of the market has been more nervous, due to fluctuations in raw-cotton prices. American rates have been easier, chiefly owing to weakness on the New York Cotton Exchange, a poor dry goods outlook in America and the unsettled conditions on the Continent, especially in Germany. There has been a fair amount of inquiry for piece-goods, but only isolated sales have taken place. Merchants have reported that dealers abroad are sending offers which are fully 5 to 10 per cent. below current rates.

COTTON PRICES

	1934				Corresponding Date

Moderate transactions have taken place for India, chiefly in light bleaching styles and fancies, but there has been no support forthcoming from China. Buyers for Egypt, South America and the Continent have not been altogether idle, and some useful sales have taken place in rayon fabrics and mixture cloths for the Dominions and the home trade. The immediate prospects, however, are not cheerful, and although there has been a fair amount of price testing in the yarn section, the aggregate turnover has not been important. The feature of interest in the American section has been the revival of the price-fixing agreement amongst Royton spinners, which should finally put an end to the price cutting which has been in operation since the scheme broke down some weeks ago. Only a sorting up trade has been done in Egyptian yarns and export business is still affected by conditions on the Continent.

GRAIN MARKETS

WHEAT.—The market has continued very active this week and prices have been firm. Another week of high temperatures and small rainfall has caused further damage to crops in certain districts of Canada. Trading on the Liverpool futures market has been heavy. It is believed that much has been bought in expectation of a further price rise. Crop reports from European countries are variable.

According to Mr G. Broomhall, total shipments during the past week were 1,349,000 quarters, against 1,233,000 quarters in the preceding week. On Wednesday, "July" futures were quoted in Chicago at 98 cents per bushel, against 98½ cents the week before and 92 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 9d. per 496 lbs., against 33s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 32s., against 32s.; No. 3 Northern Manitoba, Vancouver, ex ship, 31s. 9d., against 31s. 9d.; Australian, ex ship, 27s. to 28s., against 26s. 9d. to 27s. a week ago.

FLOUR.—North American shipments were 103,000 sacks in the past week, as compared with 110,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 26s. 6d. per 280 lbs., against 25s. 6d. last week; delivered London, 25s. 6d., as compared with 24s. 6d. a week ago. Manitoba patents, ex store, 25s. 6d. to 27s., against 25s. 6d. to 27s.; Australian, ex store, 18s. to 19s., against 18s. to 19s.

BARLEY.—"July" futures were 47½ cents per bushel in Winnipeg on Wednesday, against 46½ cents last week and 44½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 27s. to 30s., against 27s. to 30s. a week before.

OATS.—On Wednesday, "July" futures were quoted at 44½ cents per bushel in Chicago, against 44½ cents a week ago, and 41½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 20s. 6d. per 320 lbs., against 20s. a week ago; "Chilean White," landed, 21s. to 22s., against 21s. a week earlier.

MAIZE.—"July" futures were quoted on Wednesday at 64½ cents per bushel in Chicago, against 61½ cents a week ago and 57½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 22s. per 480 lbs., compared with 21s. 6d. last week; "Plate," ex ship, 21s., as against 20s. 6d. "Plate," July, 21s., as against 20s. 6d. Yellow maize meal, ex wharf, was quoted £6 to £6 2s. 6d. per ton, against £5 15s. to £5 17s. 6d. per ton a week ago.

THE ENDOWMENT BONUS POLICY

Combines the advantages of

WHOLE LIFE and ENDOWMENT ASSURANCE

Issued by the

NATIONAL PROVIDENT INSTITUTION

48 GRACECHURCH STREET, LONDON, E.C.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to July 14	Cwts. 31,618	Cwts. 28,451	Cwts. 27,471	Cwts. 77,712
47 weeks to July 21	4,856,258	3,726,810	3,483,648	6,197,505
Average price of English wheat per cwt.	s. d. 6 5	s. d. 6 6	s. d. 6 8	s. d. 5 4

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 14, 1934	Cwts. 59,590	Cwts. 6,874	Cwts. 11,071	s. d. 5 6	s. d. 7 3	s. d. 6 4
July 21, 1934	77,712	8,253	12,087	5 4	7 7	6 4
July 19, 1930	64,237	3,141	6,287	8 3	6 4	6 1
July 18, 1931	31,037	1,764	6,163	6 4	5 7	6 11
July 23, 1932	28,451	2,031	4,487	6 6	8 8	7 10
July 22, 1933	27,471	4,003	10,089	6 8	6 7	5 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	July 26, 1933	Jan. 3, 1934	July 18, 1934	July 25, 1934
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	62½	46½	83½	65½	85½	84½
Chicago, (No. 2 Winter) —Cents per 60 lb.	55½	46½	96½	84½	98½	98

The visible supply of wheat in Canada, at 98,662,000 bushels, shows an increase of 205,000 bushels. Supplies a year ago stood at 104,122,000 bushels.

OTHER FOODS

SUGAR.—After a decline earlier in the week, spot quotations on the New York market advanced on Wednesday, and trade was firm at the close. The market for futures closed easy, prices being somewhat lower than of late. The spot price of raw sugar in New York on Wednesday was 3-20 cents per lb., as compared with 3-17 cents per lb. last week and 3-15 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 8½d. to 4s. 9½d., against 4s. 9d. to 4s. 9½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

Imports		Deliveries		Stocks		
	1933	1934	1933	1934	1933	1934
London	2,185	16	1,070	1,558	33,429	31,322
Liverpool.....	1,471	7,548	15,620	14,388	156,076	143,312
Total tons	3,656	7,564	16,690	15,946	189,505	174,634
Last week ...	7,676	10,597	27,661	16,596	198,631	186,924

COFFEE.—Trade has been rather quiet in New York, but was steady at the close, with prices mainly unchanged. On Wednesday Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9 cents per lb. last week, and 9½ cents per lb. a month ago. Trade in London has been quietly steady, with quotations showing little change on the week. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 1 bag; exported, 10 bags; stocks, 29,212 bags, against 28,926 bags a year ago. Central American, landed, 607 packages; delivered, for home consumption, 3,710 packages; exported, 450 packages; stocks, 110,836 packages, against 101,584 packages last year. Other kinds: landed, 668 packages; delivered, for home consumption, 1,502 packages; exported, 436 packages; stocks, 106,875 packages, against 95,385 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, July-August, was 21s. per 50 kilos, c.i.f. Continent, as against 21s. 9d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 1,468 bags; delivered, for home consumption, 3,967 bags; exported, 3,204 bags; stocks, 256,855 bags, against 172,698 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 12,717 packages of Indian and 36,847 packages of Ceylon tea. Quotations were irregular earlier in the week, but demand showed an improvement later, and prices generally became firmer in tendency. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land
July 20, 1933	d. 10-46	d. 10-36	d. 12-53	d. 8-59	d. 8-47	d. Nil
June 21, 1934	12-93	13-01	13-21	11-18	10-75	12-38
June 28, "	12-96	13-02	13-24	11-60	10-98	12-47
July 5, "	12-01	12-85	13-28	11-13	11-06	12-47
July 12, "	13-02	12-74	12-93	10-79	10-61	12-36
July 19, "	12-80	12-31	12-76	10-67	10-41	11-84

RICE.—The "spot" price was 8s. per cwt. on Wednesday as compared with 7s. 9d. per cwt. a week ago, while the forward quotation, at 7s. 5½d. per cwt., shows a rise of 2½d. on the week. Movements in London during the past week were as follows: Landed, 12 tons; delivered, 74 tons; stocks, 964 tons, against 5,810 tons a year ago.

POTATOES.—Trade has been rather less active, and, with arrivals on a liberal scale, prices have further declined this week. At the London Borough Market on Tuesday new crop "King Edward" sold at 7s. 6d. to 8s. 6d. per cwt., as compared with 9s. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 4½d. per lb. on Wednesday, against 4½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 22 tons; stocks, 216 tons, against 322 tons a year ago. White, landed, 116 tons; delivered, 39 tons; stocks, 6,259 tons, against 958 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 2d. to 3s. 8d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 8,023 tons, against 8,411 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.3 per cent. of the beef supplies, against 84.9 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 84.2 per cent. of the total supply of mutton and lamb, against 80.4 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OIL AND OLSEEDS.—Very quiet conditions rule in most sections. Demand for oilseed products is only small, although some slight improvement in oilseeds is reported, with rather firmer prices. Crushers' requirements, however, are easily satisfied and with a continuance of good supplies assured there is no disposition to buy for forward delivery. The market for linseed continues steady and prices are subject to only slight fluctuations, favourable crop reports, as a rule, being the dominant factor, offset by the firmness in wheat prices. Argentina has still an unsold balance equal to that of a year ago, but rather less is expected from India. Nevertheless, there would appear to be ample for current requirements, including extra needs of the United States. The current price of Plate for shipment to October is around £10 10s. per ton. Calcutta is firmly held and, to London, is quoted around £12. The quantity afloat for Europe, at 84,900 tons, is approximately the same as last week, while that for the United States has increased to 32,500 tons. Cottonseed meets a slow trade and old crop Egyptian is quoted up to £4 15s. per ton for August loading, while for new crop September, £4 17s. 6d. is asked.

Trade in vegetable oils does not expand. Trade for linseed oil is easier and raw oil for July delivery and to the end of the year is quoted £21 per ton, naked, ex Hull mill, and for January-April, £20 15s. Cotton oil meets a dull trade. Crude Egyptian ex Hull is offered at £12 and common edible at £14 per ton.

RUBBER.—A rather dull tone has been evident this week, but the position on the London Market remains sound. Such speculation as exists is mainly in the nature of investment buying by people with money, who are prepared to hold on for a considerable time. Most of the professional operators would welcome a decline in prices, to enable them to replenish their stocks. It is considered that a slight reduction would considerably stimulate buying. In New York, Wednesday's spot price for rubber, at 14½ cents per lb., compared with 14½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7d. per lb., the same as on the corresponding day last week. In forward positions, business has been done at 7½d. to 7¼d. for October-December, 1934, as against 7½d. to 7¼d. a week ago. Stocks in London and Liverpool at the end of last week, at 105,403 tons, show an increase of 1,354 tons as compared with the preceding week.

TIMBER.—Heavy imports of Canadian and European building and joinery woods last month and in the first half of the year left supplies on hand at the beginning of July considerably above those of a year ago. All branches of the building and joinery woods market are experiencing a larger turnover, but prices for the common varieties have not risen to trade expectations. In forward business also, shippers' prices have remained fairly firm, with weakness here and there; but the majority seem ready to wait until U.K. importers and merchants have cleared more of their stocks into consumption. Overseas shippers think that U.K. importers are holding off too long—and that it would be to their advantage if they came into the buying market more freely now, rather than wait until later on, when freight rates are likely to be higher. The softwood consuming trades are all in a more satisfactory position compared with a year ago. Housebuilding is still proceeding at high pressure, and the basic industries are doing better. Besides heavier receipts of sawn and planed woods, there are more softwood logs coming forward this year. Russian supplies are large, and there are fair shipments of American and Canadian logs. Deliveries from dock ponds have been much larger than a year ago, and dock stocks are moderate, consumption considered—especially stocks of American pitchpine, the price of which is very firm. Imports of pitwood are well in advance of those of the past two years. It is worth noting that shipments from France are lower than for the past two years, that the Dominions are not keeping up with their 1933 export to the U.K., and that receipts of Russian props are much larger. Teak is increasing in imports and demand, especially British Indian. The U.K. shipbuilding industry is busier with larger tonnage on the stocks, but has still a long way to go.

The common hardwoods for furniture and cabinet work are coming in fairly freely, but imports of the most popular of all—oak—declined last month on account of smaller supplies from the United States. As, however, spot stocks of U.S. oak are large, the smaller June imports came as a relief to holders. Purchases of oak from Poland are larger than usual, and are likely to increase. Meanwhile, the import of Canadian hardwoods is increasing, as well as British Empire mahogany logs and sawn wood, so that hardwood consumers are able to wait until N.R.A. code regulations and prices are adjusted more to their liking. The fancy woods are in limited

demand, and stocks are small. Plywood imports for the half year totalled just over five million cubic feet, as against 3.3 millions in the corresponding period of last year, but stocks at London docks are lighter than a year ago, deliveries having been exceptionally good. The outstanding feature of this branch of the trade is that Empire countries have not adopted manufacture for export seriously, from which it must be presumed that they do not yet see their way to compete with the foreign products on this market. This, however, is well worth consideration, for there is room for considerable expansion in the consumption of plywood, both in this country and abroad.

WHOLESALE COMMODITY PRICES

EXCLUSIVE ARTICLES OF INTEREST TO EVERY INVESTOR

Exclusive articles by highly qualified correspondents due to appear next week in
THE FINANCIAL NEWS

include:

MONDAY, 30th JULY—"SUGAR AND THE INTERNATIONAL CONFERENCE" by a Special Correspondent.—A vital meeting of the International Sugar Conference takes place in Brussels next week.

TUESDAY, 31st JULY—Minotaur on "JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY"—Our Special Mining Correspondent continues his series of articles on South African Mining Finance Houses.

WEDNESDAY, 1st AUGUST—Our Statistical Correspondent makes his monthly survey of "THE RECENT COURSE OF BUSINESS IN THE U.K."

THURSDAY, 2nd AUGUST—A. Strauss & Company contribute their special monthly authoritative survey of "THE TIN SITUATION." The position in Tin is reaching what many people regard as a critical phase.

FRIDAY, 3rd AUGUST—Continuing the series of articles on "The Story of Famous British Companies," this week's choice is "CABLES & WIRELESS."

THE FINANCIAL NEWS (TWO PENCE DAILY)

The first daily financial and commercial newspaper in the world—and still the best.

Place a standing order with your newsagent to-day.

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription 8s. 2d.

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unweildiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

"TWENTY YEARS AFTER"

TWENTY years ago to-day England's ultimatum to Germany expired, and we entered a war which shook Western civilisation to its foundations. To the great majority in this country that war was a calamitous necessity—the inevitable consequence not merely of our international obligations, but also of our determination to save all that was most worth saving in a world threatened with destruction by militarism and national jealousies. Alexandre Dumas made his Three Musketeers meet again "Twenty Years After", to find that their military ardour had in no wise cooled. A Rip van Winkle returning to the European capitals twenty years after 1914 would find that, in 1934, much the same military considerations and political complexes sway the counsels of Europe's rulers. Once again, fear stalks through the inner chambers of Western civilisation. The statesmen of Europe have one and all bowed the knee to this implacable Baal. Once again, all eyes are fixed with apprehension on the cockpit of Europe. And there is talk of another European war.

How, if at all, has the background of the European drama been changed in the last twenty years? What have the scene-shifters accomplished? What must be England's rôle in the acts of the play about to take place? These are questions which agitate not only Englishmen, but lovers of peace all over the world.

Clearly, the hope of substituting a scene of homely peace and plenty for that of battle, murder and sudden death has not been achieved. All, however, has not been lost. A war which was fought "to make the world safe for democracy" has, at least for the moment, bequeathed to us a Europe in which—apart from Scandinavia, the Low Countries, Switzerland, France, and this country—democracy lies beneath the heel of dictators. Yet, while "authoritarianism" denies direct control by the people of their governors, the people of Europe have, since 1914, not only a fuller awareness of their interest in peace, but also greater facilities for

making that interest vocal. Even the most dictatorial of the dictators finds that he has to pay attention both to the wishes of his own followers and to the great imponderable of world opinion. As examples, we may point to the damaged prestige of Japan and Germany. In the former case, the military dictators of foreign policy flouted the world's opinion; and although the League of Nations also suffered in prestige as a result, the extent to which Japan's unilateral action in Manchuria, overriding international obligations, has isolated her in the world's counsels is yet to be felt. So with Germany. Herr Hitler's Nazi Party vowed to make of Austria, an independent State safeguarded by international obligations, part of the Third Reich; and no effort of propaganda and of incited opposition to the late Chancellor Dollfuss's Government was spared by the German Nazis. Yet, in the face of last week's tragic events, Herr Hitler has bowed before the storm of public opinion in the world at large, and has had not only to disavow official Nazi aims, but also to deny any official connection between the events in Austria and the notorious Nazi activities of the last eighteen months.

So far as this power of opinion is effective, it is the product of the efforts made to realise in the League of Nations the lofty ideal of a comity of nations living under a rule of law. The love of national sovereignty, like that of individual freedom, dies hard. But the most passionate adherent of individual liberty, unless he be a resolute Anarchist, would admit that the guarantee for individual liberty is a common rule of law to restrain the "strong man armed" from working his will. The League was lamed from the first by vagueness and reservations on the matter of sanctions; and to-day the League stands in this vital regard at the crossroads. Yet, even if its power to enforce peace is as yet a very insecure shield, the League has changed diplomacy, and for the better. The statesmen of Europe have had, and still have, to justify their policies at

the bar of public opinion. Exchanges of views, which before 1919 were carried on within the framework of alliances, now take place within the League framework or with specific regard to the League as the instrument of world opinion.

If the statesmen have not produced an effective device for guaranteeing security since 1919, they have at least sketched a design for it; and it remains for all "good Europeans" to complete the structure. In that task, Great Britain has a responsibility commensurate with her traditions, her world-wide influence and her own selfish interests. An earnest of her intentions has just been given, in the declaration of sympathy by the Foreign Secretary with the aims of the proposed "Eastern Locarno" security pacts and guarantees adumbrated by the Foreign Ministers of France and Russia. Other clear pronouncements have been our participation in the declaration by Italy, France and this country last February, reaffirmed last week by Sir John Simon, that these Three Powers "take a common view as to the necessity of maintaining Austria's independence and integrity in accordance with the relevant treaties"; and the reaffirmations by various Cabinet Ministers that we "wholeheartedly stand by our (Western) Locarno undertakings." If we have decided to bring our air armaments into line with those borne by other European countries, we have also emphasised that we shall not relax our efforts to press for a comprehensive Disarmament Convention, and for a binding Air Armaments Convention. His Majesty's Government are even prepared to give up their reservation of air-bombing in remote regions for police purposes, if only a comprehensive Air Armaments Convention can be reached which will include control and supervision of military aircraft and of the use of civil aircraft for war purposes. France, to her credit, has gone even further, and proposed the utter abolition of air armaments; and in their Note of April 16th the German Government do not demand greater air armaments than a force of short-range machines (not bombers) equal to 30 per cent. of the combined air fleets of her neighbours or to 50 per cent. of the French air fleet, whichever is the less.

The year 1934 has, so far, heaped disaster after disaster upon the lovers of peace; but the moral force of the collective system has never enjoyed so much approbation as it now receives. Even in Germany, which quitted the League—precipitately we think—because in Germany's view it was not calculated to achieve her just claims, the Government, and certainly the people, are turning anxious eyes to their isolated frontiers and to the black prospect before a Europe sinking into complete anarchy. International Socialism—if "international" it now be—has been deeply moved by the emergence of the political thug's rule in Europe; and the Socialist parties of Scandinavia, Holland, and of this country itself have dropped their uncompromising resistance to war, substituting for it a willingness to engage in war "if waged in defence of the collective system" or "in fulfilment of League obligations." And Russia, once anathema to the Western Powers, has come out as an ardent defender, for her own purposes, of the collective system, and is desirous of entering the League. The dramatic revelation on June 30th that the Nazi State was not so very "totalitarian," and the apotheosis of political gangsterdom in Austria last week, provide fresh proofs that the collective system of security is the only guarantee of external and internal peace for the suffering and distraught nations of Europe. In the face of such considerations, and prompted by the realisation of our narrow link with the Continent in these days of winged death, no far-sighted Englishman can doubt where our true security lies.

That evils may come again in Europe, the same far-sighted Englishman will admit. He will, then, probably find himself, as a realist and much to his surprise, agreeing with Machiavelli that "we should never submit to an evil to prevent a war; in fact, we do not thereby avoid it but only defer it to our great injury." But he will also bend his energies to the practical realisation in Europe of that oft-neglected other maxim of Machiavelli, "There is a medium between a foolish security and an unreasonable distrust." In so doing, he will be working at once for the peace of Europe and for the security of England. That is the lesson of twenty years ago. Whether it has been taken to heart, the peoples of Europe and their governors must, in these recurring fateful days, decide.

OUR AGRICULTURAL POLICY.—II

IN the first article of this series we dealt with three methods of assistance to agriculture—viz. tariffs, quotas and processing taxes or levies. The fourth method of assistance that has been adopted is that of subsidy from the Exchequer.

The earliest, and hitherto the costliest, of these direct subsidies is that for beet-sugar granted in 1925. The subsidy was granted without limit of quantity and was to be sufficient to make the cultivation of sugar-beet remunerative. As a consequence, a number of beet-sugar factories have been erected in different parts of the country, and the acreage under sugar-beet has risen from virtually nil to 366,000 acres. Subsidy payments have amounted to almost £30 millions, and in addition the Exchequer has lost nearly another £10 millions by remitting half the excise duty. The total cost to February 13, 1934, was £39,631,000; the cost in 1933-34 was £6,250,000. The net market value of sugar produced from British beet was only £2,900,000 in 1933-34; the rate of subsidy in 1932 was exactly half the price paid to the growers (£7 4s. out of £14 8s. per ton), and has subsequently increased. There is thus no sign whatever of the industry becoming self-supporting.

The other subsidies have arisen out of the marketing schemes shortly to be described. The greatly increased supply of milk which has to be disposed of at the unremunerative "manufacturing" prices has led the Treasury to grant advances sufficient to guarantee a minimum "manufacturing" price of 5d. a gallon in summer and 6d. in winter for the two years beginning April 1, 1934. These advances—which are estimated to amount to about £1½ to £1¾ millions in the first year—are repayable after April 1, 1936, only if the manufacturing price is then higher than 6d. a gallon in summer and 7d. in winter, and in view of the uncertainty of this increase, the advances are properly classified as a subsidy. In addition grants of up to £1,750,000 have been promised to assist in campaigns for purer milk and for publicity.

The most recent subsidy is that for beef producers, which has been granted for six months at an estimated cost of £3,000,000. The declared policy of the Government is to restrict beef imports while also imposing an import levy for the assistance of the home producer. They are hampered in the execution of this policy, however, first by the Ottawa Agreements with Australia and New Zealand, which prevent any levy being imposed, without the consent of those Governments, before 1937; and secondly by the Argentine Agreement, which stipulates that any restriction of imports from the Argentine must be accompanied by restrictions of Empire imports. The subsidy is intended to prevent the collapse of the market while negotiations are continued in the attempt to surmount these difficulties.

It remains to consider *seriatim* the various schemes under the Agricultural Marketing Acts, which are the centre of the Government's policy. The first to be enacted was the Hops Scheme, which came into force in September, 1932. The industry is small and localised, and has only one customer, the brewing industry. These circumstances have enabled a very rigid organisation to be built up. The Hop Marketing Board has a monopoly of the sales of hops, and was able in 1933-34 to secure a price almost double that of the first year of its operation. As the scheme now stands, after the amendments approved last month, the Board is to estimate each year the total demand for hops and to allot quotas to individual producers on the basis of their average annual production in 1928-32 (thus establishing a monopoly for the existing producers). All hops must be sold to the Board. The brewers have agreed to a price of £9 per cwt. for the next five years, and have agreed to take from the Board at least two-thirds of their requirements. Any balance of production unsold is to be bought from the Board by a Permanent Joint Committee (appointed by the Board and the Brewers' Society) out of the proceeds of a levy of ros. per cwt. added to the price of all hops sold by the Board. This surplus is to be disposed of by the Committee. Imports are to be limited to 15 per cent. of the total requirements of the brewers. The scheme, especially as amended, has given rise to numerous protests, particularly on the score of the monopoly it creates.

The Potatoes Scheme came into effect in December, 1933. The Marketing Board in this scheme, unlike the others, is not a party to the sales of potatoes, but confines itself to the determination of prices and of the volume of sales. The potato crop is highly variable, and as the demand is inelastic and foreign competition small, prices in the past have fluctuated widely. Under the scheme acreage quotas are allotted to the individual producers and fines of up to £5 per acre can be exacted for excess planting. The yield per acre, however, varies considerably from year to year, and the Board regulates the volume of sales by fixing a minimum size, determined by "riddle," below which potatoes may not be sold. Of all the schemes, this is the least complicated in structure, but it is of a very drastic character. The period of its operation has been too short for any opinion on its value to be possible.

The two largest and most complicated of the marketing schemes already in force are those for bacon pigs and for milk. The salient fact of the pig-breeding industry is that the supply of pigs is highly variable both seasonally and also from year to year. This "pig cycle" is due in the main to the rapid maturity and prolific breeding of the pig. Low prices for foodstuffs and high prices for pig products (themselves probably the effects of under-production) quickly lead to a very rapid increase in the number of pigs bred, resulting in turn in scarcity prices for foodstuffs and unremunerative prices for pigs. The seasonal fluctuation is in part a matter of custom and in part related to the other operations of a mixed farm—for example, to the abundance of skimmed milk and whey in the summer months. A further difficulty is that pig-breeders supply two markets, that for bacon, where home supplies are only a small part of the total, and that for pork, where the home producer has a virtual monopoly. The majority of pigs bred in Great Britain have been of a type suitable for sale in either market, and consequently perfect for neither. The supply of pigs to the bacon curing factories is consequently erratic and poor in quality.

The Reorganisation Commission, which reported in October, 1932, decided that an attempt should be made to separate the bacon and pork markets and to expand the share of home production in the bacon market. This involved, on the one hand, higher prices and restriction of imports and, on the other, greater regularity of deliveries and better quality. The scheme, as it finally came into operation in September, 1933, was mainly based on the Commission's recommendations, although it omits some of them. Two Boards have been set up, a Pigs Marketing Board, representing the breeders, and a Bacon Marketing Board, representing the curers; each has a monopoly in its own field, and price negotiations are conducted between them. Breeders enter into contracts specifying their deliveries twelve months ahead, while a system of premiums encourages the production of good quality pigs. National consumption was taken as 10,000,000 cwt. per annum, and imports were to be restricted by quota to the amount not contracted for by domestic producers. For the preliminary contract period (November, 1933-February, 1934) the price was fixed at a standard figure, varying according to the grade of pig and also in accordance with changes in the prices of feeding stuffs. Attracted by this price, no less than 620,000 pigs were contracted for, a rate of production nearly double that of 1930. It was assumed that the estimates had been made on an optimistic basis, but actual deliveries were well up to the contracts. Consequently, imports had to be still further restricted, while the curers, finding themselves quite unable to sell this large quantity of bacon at the contract price, had to be assisted by a loan from the Treasury, which is now being repaid out of the proceeds of a levy on all sales during the present contract period. More recently, deliveries have been much below contract, deliveries in February, for instance, being only 98,146 out of 148,197 contracted. The explanation of these fluctuations is, of course, that the bacon and pork markets have not been separated, and that the deliveries of pigs to the Pigs Board are still influenced by the competition of the pork market. The contracts still show a very marked seasonal fluctuation, March being only 25 per cent. of October, but it seems likely that these fluctuations are to be still further accentuated by the effects of a relatively

fixed bacon price and a fluctuating pork price. In an attempt to meet these difficulties, the contract price in the second period, now current, varies not only with changes in the price of foodstuffs, but also in accordance with movements in the price of bacon and in the realisation value of pig offals. In this way the profits—and losses—of the curers are being "shared" with the producers.

The milk scheme was also faced with the problem of a fluctuating supply and a divided market. Liquid milk is virtually immune from foreign competition, but milk which is sold for manufacture meets the competition of imported cheese, butter and other products. The "manufactured" price has in recent years fallen so low that it is unremunerative to the producer. Moreover, before the inception of the scheme, there was a growing danger that milk sold for manufacture would find its way into the liquid market and undermine the liquid price. The Reorganisation Commission, which reported in January, 1933, proposed to meet this situation by enforcing a rigid separation between the two markets, while subsidising the manufactured price out of the liquid price. All milk was to be sold through a Producers' Board, the prices received for it, whether liquid or manufacturing, being pooled and distributed equally to producers. A national pool would unduly penalise those districts the bulk of whose production went to the liquid market, while separate district pools would fail to meet the growing claim of the more remote districts to share in the liquid markets of the populous centres. It was consequently decided to have eleven regions, each with its separate pool, but with a provision for a compensation levy on each gallon of milk sold for liquid consumption, the proceeds of the levy to be distributed to the districts in proportion to the volume of milk sold for manufacture. There were also to be premiums for clean milk, etc. Producer-retailers (i.e. those retailing their own milk) were to pay their share in the administrative expenses of the scheme, and also the compensation levy. These proposals were adopted in the scheme, which came into force in October, 1933. Further proposals of the Commission, however, were rejected; these included, in particular, a Dairymen's and Manufacturers' Board which, with the Producers' Board and three appointed persons, were to form a Joint Milk Council, among whose duties was to be the fixation of prices. In the scheme as adopted, prices are to be determined, in default of agreement, by arbitrators, but this provision lapses on October 9th next, after which date the Milk Marketing Board will presumably be in a position to dictate prices.

One effect of the scheme has been to encourage an increase in the production of milk. Since the Ottawa Agreements prevent any restriction of imports until November, 1935, the Board has been faced with the problem of a growing surplus of milk which has to be disposed of at unremunerative prices that are likely to weaken still further. To meet this situation the Treasury is making the advances referred to above. There have been loud complaints from producers

of the low prices paid under the scheme, but it appears to be working well, in a technical sense. Its difficulties are likely to arise partly from the dangers attaching to price-fixing by a Board subject to dismissal by vote of the producers and partly from the inherent absurdity of encouraging the growth of a surplus which has to be sold at a loss.

These four are the only marketing schemes actually in operation. Two more, for sugar and for sugar-beet, have reached the stage of public inquiry. Considerable surprise has been expressed that sugar, as distinct from sugar-beet, is considered to be an agricultural product. The two marketing schemes, taken together, appear to be a device by which, in return for a monopoly, and assisted by an import levy, the sugar refiners would take the burden of the sugar-beet subsidy off the shoulders of the Treasury and impose it on all sugar consumers. A Reorganisation Commission for Fat Stock has reported, recommending a marketing scheme, but the present indication is that it has been shelved in favour of the "processing-tax" method of approach. Another Reorganisation Commission for Eggs and Poultry is now sitting under the chairmanship of Dr. Addison, who, as Minister of Agriculture in the Labour Government, passed the first Agricultural Marketing Act in 1931; the report is expected shortly.

In a third article we propose to discuss the principles raised by, or the consequences of, these various schemes.

GANGSTER POLITICS IN EUROPE

IF Herr Hitler's desperate "clean-up" of the German Nazi Brownshirts on June 30th marked the zenith of Nazi arbitrary rule in Germany, the barbarous murder of Chancellor Dollfuss in Austria last week marked the apogee of Nazi methods—the limit of their remoteness from normal political conduct.

Ever since the phenomenal rise of the Nazi star in the elections of August, 1932, a tide of political murder, terrorism and savagery has engulfed the Continent. Apart from the chronicle of persecution in Germany, a Prime Minister of Roumania has been assassinated by members of an organisation inspired by Nazi methods and modelled on them. A Polish Minister of the Interior has suffered a similar fate at the hands of murderers nurtured in the same school. *Coups d'Etat* in all three Baltic States have been necessitated or frustrated by reason of similar organisations. Finally, last week's appalling events in Austria are the inevitable outcome of Nazi methods, which have not only been copied from the German Nazis themselves but have for nearly eighteen months been sedulously fostered by them. Despite Herr Hitler's reported assurances to Signor Mussolini at Venice in June, and despite his summary execution of seventy-four Nazi leaders in Germany at the end of that month, the agitation and incitement, directed mainly from Munich, against the late Austrian Chancellor's Government, was not abated. Only last week the Swiss Government decided to protest strongly to Berlin against the recently discovered munition-running from Germany into Austria through Swiss waters on the Lake of Constance—a discovery which establishes, more even than the discovery of the words "Reichswehr Weapon Office" on the remains of bombs exploded in Austria, the responsibility of German Nazi authorities for much of the unhappy episodes which have just reached their climax in Austria.

That the Dollfuss regime was not solidly founded on the popular will is probably true. Caught between Nazis, Socialists and Heimwehr Fascists, Dr. Dollfuss—and indeed anyone else—would have been attempting the impossible, and making his country over to warring factions as much as it now is, if he had tried to determine what the popular will of Austria was. That is the vicious dilemma with which fifteen years' of impotence in the face of economically nationalistic neighbours faced Austria. But that Dr. Dollfuss did not dare, in the circumstances, to hold free elections is no justification for the rule of murder and terrorism. If elections had been held they might have engendered open civil war between the factions; and they would certainly have given free play to just those Nazi methods of terroristic pressure against which the League of

Nations itself, in June, took steps to protect the inhabitants of the Saar during the plebiscite next January. So, invoking the plea of dictatorship in Austria, the malcontent Nazis fell to their political gangsterism in the hope that a combination of political instability and loss of tourist income would cause the Austrian State to fall into their lap, and so into the lap of Nazi Germany.

In the event, the level of political and social life in Central Europe has degenerated to a lower level than that of Florence under a mediæval prince. As *The Times* admirably summed up the situation last Friday:—

There has been nothing for centuries like the vogue of political assassination which threatens, if it goes any further, to submerge the civilisation of a continent. The ordinary decencies of public life, the conventions which raise human society above the life of animals, the bonds of family relationship—all these are being swept away by political desperadoes who respect no laws and recognise none of the common obligations of humanity, but who choose to consider that their own particular purpose may and should be achieved by any methods, however barbarous or inhuman. . . . The full story (of Dr. Dollfuss's assassination) is making the name of Nazi to stink in the nostrils of the world. A system which flourishes on such methods inspires loathing and disgust everywhere.

If such are to be the methods of the new *Machtpolitik* in Europe, and if that is the level of political conduct upon which the vexed questions of European security are to be debated in future, the immediate question arises: What can be done to save Europe from such a catastrophe?

Happily, last week's events in Austria have acted as a cold douche on the frenetic apostles of might. The immediate problem of Austria's future may not have been solved; but Signor Mussolini's telegram to President Miklas has left no doubts as to Italy's attitude; and the massing of Italian army corps on Austria's frontiers during the recent fighting between Nazis and Heimwehr is an earnest of that attitude. Moreover, the French Press is virtually unanimous in declaring that Austrian integrity must be upheld, and in urging that Italy and France, together with France's associates in Central Europe, should maintain a common policy with regard to Austria. This fortunate conjuncture of French and Italian views in a major issue may reassure those who think they see a European war developing from the long post-war friction between Italy and France's associate, Yugoslavia. Finally, Herr Hitler, with discretionary zeal, has hastened to disavow any official German connivance or connection with Austrian Nazi activities. He has recalled the German Minister to Vienna for "intervention" between the rebels and the Austrian authorities; he has arrested Herr Habicht, the official Nazi "Inspector-General for Austria," whose broadcast agitation against the Dollfuss regime did as much as anything to incite the Austrian Nazis to terrorism—but only after eighteen months of encouraging Herr Habicht; he has prevented the renegade Austrian Nazi Legion, which has long been bivouacked inside the German frontier, from joining their fellows in Austria; and he has refused asylum to fleeing Nazis who thought that Germany, the spiritual home of the Nazis, would take them to its bosom.

It remains to be seen, however, what transpires inside Austria. The sceptre of power, though nominally in the hands of Dr. Schuschnigg, in reality dangles between three or four men. Those who command the forces in Austria to-day control politics, as the captains of Legions did in the last days of the Roman Empire. Prince Starhemberg, the Vice-Chancellor, is Chief of the Heimwehr, which he created. He is young—only thirty-six—and impulsive; and it is reported that, when Chancellor Dollfuss made overtures to the Nazis in Berlin last Christmas, he found, to his surprise, that Prince Starhemberg had been there before him through the intermediary of Count Alberti, who, it is rumoured, was shot in the "clean-up" in Germany on June 30th. Thus, the relations between the Heimwehr High Command and the German Nazis are by no means clear. Then there is Major Fey, the Chief of the Vienna Heimwehr, who passed on the mantle of Vice-Chancellorship to Prince Starhemberg only three weeks ago. While he has been called "Austria's strong man," his following in the Heimwehr as opposed to that of its supreme chief is not clear either. Next comes Dr. Schuschnigg, lately Minister for Education, and now Chancellor—a Christian-Socialist, Catholic, Monarchist; favourable to the restoration of Otto

of Habsburg; and controlling the Ostmärkische Sturm-scharen, a militant Catholic youth organisation as numerous as the Heimwehr. But Dr. Schuschnigg is as near to the late Dr. Seipel's views, and to the views of the present Austrian Cardinal Innitzer, as anyone available. And it should not be forgotten that Austria is now once again a Holy Catholic, if corporate, State, under a new Constitution which derives its sanction "from Almighty God." Finally, there is the drafter of that Constitution himself—Dr. Ender of the peasant Landbund, and virtual head of the Province of Vorarlberg. Although Dr. Schuschnigg has taken nominal command of Austria's destinies, all these men are interdependent; interdependent, that is, as long as any one of them does not eventually compromise with the Nazis and with Berlin. This consideration lends significance to the Austrians' conditions for their *agrément* to Herr Hitler's nomination of Herr von Papen as Minister to Vienna.

Whatever transpires now in Austria, the situation throughout Europe was never more complicated or in greater need of statesmanlike vision. If the new Austrian Government admits the thin end of the Nazi wedge, then the *Anschluss* is, in fact if not in form, accomplished. And in that case it is only a matter of time before one of two things happens. Either Italy will be involved in war against a Nazi bloc which will slowly but surely engulf Hungary, with her revisionist claims, and surround Czechoslovakia. Or Italy will be driven to make common cause with Germany in Europe, as she has already been within an ace of doing, in order to safeguard—for a season—her Central European-Adriatic foreign policy and the South Tyrol which she gained from the last war. That means a re-alignment of political forces in Europe, now that Russia and France are linked, which opens up alarming prospects for the Continent. On the other hand, if the Archduke Otto returns as Emperor of Austria, we have Dr. Benesh's and M. Yev-titch's words for it that there will be bloodshed in Central Europe. Indeed, Dr. Benesh is reported to have said that Czechoslovakia would rather come to terms with an Austro-German Nazi Reich than see again the union of Austria and a revisionist Hungary under the hated Habsburgs. To this dilemma Italy's Central European policy has largely contributed. After espousing Hungary's revisionist claims, she has attempted to revive Austria and Hungary economically by the Protocols of last March. But the economic future of Austria and Hungary is bound up with that of the Succession States; and no durable solution can be achieved in Central Europe until Italy and France induce their satellites to be reasonable and to conclude political and economic agreements which will permit prosperity to return to Austria, Hungary and the Little Entente together.

In these circumstances the rôles of France and of England are all-important. On France rests the responsibility for restraining her Little Entente allies and of supporting Signor Mussolini in maintaining an independent Austria, if he can do so. On this country rests the responsibility for seeing that counsels of resolute moderation prevail, both on the German and on the Italo-French sides of Austria. Those who talk of this country's interest in being "isolated" from the Continent would do well to remember that in 1908 an Austrian Foreign Minister, Aehrenthal, fostered sedition in Bosnia-Herzegovina, and, in defiance of a Council of Great Powers, annexed it. Therewith he sowed the seeds of Serb irredentism which sprouted into the most calamitous war Europe has ever known. "The wheel has come full circle." The annexation of Austria herself, by whatever name it is called, can hardly fail to unleash an even worse cataclysm in Europe, from which no Great Power would be immune. France, Germany, Italy and this country are, in fact, even if against their will, the Consuls of Europe. "Let the Consuls see to the safety of the State."

THE GAS INDUSTRY TO-DAY

The Board of Trade Returns give the total energy output of the Gas Undertakings in Great Britain as 148,481,280,000 B.Th.U.'s. The Report of the Electricity Commissioners gives the total output of the Electrical Undertakings of Great Britain—excluding traction—as 47,790,041,086,408 B.Th.U.'s. Both these figures refer to

1932, the figures for 1933 not being yet available. The energy output of the Gas Undertakings of Great Britain in 1932 was, therefore, more than 3½ times as great as that of the Electrical Undertakings.

The Electrical Industry, however, is rapidly increasing in Great Britain, and raises far-reaching issues concerning the future of the gas industry. As developments in the electricity industry have somewhat overshadowed the steady progress of the older source of light, heat and power, we have invited Sir David Milne-Watson, LL.D., D.L., Chairman of the Gas Light and Coke Company, to contribute the following article on the situation and prospects of an industry on which he is specially qualified to speak.

HAPPY is the industry that has no history! The gas industry has a long and useful history; and from a psychological point of view this is a positive disadvantage. The casual observer is accustomed to associate long service, however useful, with declining efficiency, however gradual. In the gas industry's case this is a dangerous fallacy. Judged from a realist's standpoint, the gas industry to-day is as new as the radio industry. In the last few years the industry as a whole has installed new plant on an immense scale. It has adopted new methods of research. It has revolutionised its marketing policy. In short, it has little in common with the old gas industry, except an honourable tradition and a number of antiquated legal restrictions which are now being removed.

This rapid development can be illustrated most easily in the domestic sphere, which accounts for about 70 per cent. of the gas sold. Active research has brought the efficiency of domestic gas appliances to a high pitch, and as a result their consumption of gas has been much reduced. At the same time, the precise regulation of heat supply by tap control has been supplemented by the use of thermostats. Thermostatic control is to-day a standard feature of gas cookers. In the new types of water heater, the gas is lighted when the appliance is installed and is afterwards left alight under thermostatic control, which ensures that the gas consumed is precisely balanced against the amount of hot water used. In the case of gas-fired central heating, the temperature may be automatically regulated by a thermostat placed in one of the rooms.

Simultaneously new appliances have been introduced to meet new needs; the automatic gas refrigerator provides a ready example. The range of appliances has been steadily augmented to make possible a complete heat service for the home; for instance, all the operations of domestic laundry work can be accomplished by the gas washing machine, the gas iron, and the gas drying cabinet.

Most of the appliances which the gas industry puts out to-day embody new principles. Ten years ago the gas refrigerator, the panel fire and the automatically-controlled cooker were not on the market. They were all new products; and as such they raised new sales problems. These problems were met by a vigorous commercial policy. Improvements were effected in the design and finish of all appliances. Easy payment terms were arranged. At the

same time, the recruitment and training of sales staff was thoroughly reorganised.

Of the ten million consumers of gas, more than half receive their supplies from the prepayment meter. Many of these have been directly affected by recent housing schemes. The gas industry has played a remarkable part in promoting the better living conditions which are the aim of all housing policy. An overwhelming proportion of the new houses built under local schemes have been piped for gas and fitted with up-to-date labour-saving appliances. In Birmingham, for instance, the Corporation has completed the building of over 40,000 houses since 1919. All these have been piped for gas. In each "parlour" type of house points are provided for a gas cooker, a wash boiler, two gas fires in bedrooms and one in the parlour. In the majority of the "non-parlour" type of houses points have been provided for a gas cooker, wash boiler, and two bedroom gas fires.

In the industrial field, the main use of gas is for heat-processes requiring accurate control, reliability and convenience. Industrial consumers account for about one-fifth of the total sales of gas, and the proportion is steadily growing as industry is reorganised on modern lines. In Sheffield practically one-half of the sales of gas are to industrialists.

The non-technical mind sometimes confuses the meaning of the words "power" and "heat" as applied to industry. The following quotation from a report of the Fuel Research Board draws the distinction: "The sheet anchor of the gas industry in the future must necessarily be its possession of the cheapest known means of distributing potential heat energy in a convenient form. For lighting and power production the electricity supply of the future may seriously contest the field with the producers of gas, but for the supply of heat, gaseous fuel ought to remain supreme if its production and use are developed on sound lines."

This report was issued shortly after the war. Since that time the industrial uses of gas have been multiplied. Scientific research in the industrial laboratories of gas undertakings has contributed to the solution of many heat problems in industry. A degree of control of industrial gas appliances, unattainable by hand regulation, is now provided by automatic controllers for maintaining temperatures, oxidising and reducing atmospheres, and humidity. Thus conditions important to many industries may be varied by clock controllers to any predetermined cycle.

The work of the industrial laboratories established by individual gas undertakings has recently been co-ordinated in a national scheme. Ten industrial development centres are now in operation in various parts of the country, with a central office and information bureau in London. Their representatives regularly exchange information on the industrial problems which they are handling. By means of the centres, up-to-date technical information and skilled assistance is made available to the smaller gas undertakings which could not be expected to maintain an industrial laboratory out of their own resources.

It would be hard to overstate the importance of the gas industry in our national economy. In point of size, it is second only to the railways among public utilities. In point of efficiency, it is second to none.

The gas industry carbonises annually about eighteen million tons of coal, the getting of which keeps seventy thousand miners at work. The community receives 26 per cent. of the coal energy as gas, and over 80 per cent. of the energy when coke (which represents half the total heat value) and tar products are included. No other method of coal-treating handles our national asset with comparable efficiency. A comparison is inevitable. From the coal consumed for electrical generation, the public receive at most about 20 per cent. of the potential energy and there are no by-products like coke, tar, benzole and sulphate.

There are more than ten million gas consumers in the British Isles. This means that practically every family in an area of gas supply uses gas for at least one purpose. Three thousand branches of trade are known to use gas for an average of seven processes in each trade.

No statistics are available as to the saving of human energy effected by the substitution of gas for 18 million

tons of coal in the homes and workshops of the country; but no one who keeps abreast of social change can doubt that this substitution has been responsible for a silent revolution in the habits of the community, leading to more leisure and healthier and cleaner conditions of life. In this connection it will be remembered that the use of gas and gas coke is responsible, more than any other individual agency, for the gradual abatement of the smoke problem.

Nearly 115,000 are employed in the gas supply industry, apart from those engaged in ancillary trades. The relations between employers and employed are of the happiest nature. For many years most of the larger company undertakings have adopted co-partnership schemes whereby the employees receive a bonus, a considerable part of which is invested in the undertaking. To-day about 45,000 gas employees have an interest amounting to three million pounds in their undertakings. They have every inducement to further the common interest of consumers and shareholders, for they themselves belong to both classes. Works committees, composed of employers and employees, function in complete harmony to secure the best conditions for efficient and healthy work.

It is safe to say that the industry has never been better managed than it is to-day. Its officials, on both the technical and the commercial sides, are highly qualified men, and the standard of recruitment to the industry has been raised in recent years. Special systems of training have been organised within the industry itself. The supply undertakings willingly co-operate to support the central bodies which deal on a national scale with legal, technical, educational, and commercial problems affecting the industry. The tendency towards unification of administration over wide areas and to the amalgamation of undertakings should (in the case of well-conceived schemes executed under skilled and experienced management) yet further encourage and expedite the development of the industry.

The welfare of the gas industry is intimately bound up with the prosperity of the nation. In the years of depression, while maintaining its volume of sales, it has reorganised itself for a great expansion. By means of painstaking research it has been able to tap new sources of business. All the signs point to a new period of intense and rapid development and of increased usefulness.

OUR CRIMINALS

A BANK was once defined as "any concern engaged in bona fide banking business." With equal clarity a crime may be defined as any offence punishable by the police and criminal courts, which does not involve a civil action. The definition includes all offences against local bye-laws, breaches of statutes of the realm and of Departmental Orders, delinquencies over licences, revenue, etcetera, and goes far to establish the truth—in this country at all events—of Cato's pronouncement that no one lives without once committing a "crime."

The recent publication by the Home Office of the criminal statistics of England and Wales in the year 1932* affords abundant evidence of the catholic nature of "crime" in this country. Out of a total of 567,170 persons found guilty of criminal offences of all kinds in England and Wales in 1932, 502,211 were guilty only of non-indictable offences. But of these, 265,673 were guilty of offences under the Highway Acts, a significant comment on the importance of the motor car in "crime"; 34,796 of offences against the revenue laws—mostly for failure to take out licences for a car or a dog—and 30,432 were guilty of Sunday trading. Only 64,959 persons were guilty of indictable offences, i.e. of the more serious crimes; and 43,124 of these criminals were dealt with by Courts of Summary Jurisdiction.

From a study of the non-indictable offences not included as Highway, Revenue or Sunday Trading offences, it is possible to trace the effect of a continuous "improvement in social habits and social conditions." For example, drunkenness as an offence is on the decline, the number of

offences having fallen from an average of 68,491 over the years 1925-29 to 58,609 in 1930, 46,846 in 1931, and only 33,858—or less than half the 1925-29 average—in 1932. This decline is doubtless due not only to an improvement in social habits, but also to the concurrence of economic depression with increased taxation on alcoholic beverages. Assaults averaged 29,000 in the earlier period, falling to 26,001 in 1930, 22,317 in 1931, and 19,299 in 1932. Even prosecutions for begging and for sleeping-out without visible means of subsistence declined by roughly 20 and 10 per cent. respectively. It should be noted, however, that these figures are of actual cases before the courts; the authorities may not have proved so strict in haling culprits before the law in the years of depression; but their lenience, if any, cannot have been of an order sufficient to vitiate the conclusion that, as a people, we are becoming more law-abiding; and this despite the recent considerable increase in the categories of "crimes" under the multifarious new statutes and Orders. Nevertheless, all these are mainly "technical" crimes.

Indictable offences formed only 14 per cent. of the total of crimes in 1932, but they are more indicative of criminal tendencies. Of the 64,959 persons found guilty in 1932 of indictable offences not less than 43 per cent. were under the age of 21 and 21 per cent. were under the age of 16. This is easily the most disturbing feature of the Report, though the increasing proportion of serious crimes committed by youthful criminals is a tendency observable in all Western countries. In this country, however, as in France and Germany, the proportion of our population under 21 is decreasing; and this makes the evidence of our criminal statistics the more disturbing. In the indictable offences group, female offenders accounted for 9 per cent. of those under 21 and for 12 per cent. of those over 21. Of all these offenders, 20 per cent., or 12,867 offenders, were dealt with by Juvenile Courts, which are empowered to try all indictable offences except homicide, committed by persons under 16 who elect to be tried by them; and 66 per cent. were tried by ordinary Courts of Summary Jurisdiction, leaving only 9 per cent. to Quarter Sessions and 5 per cent. to the Assizes. No less than 66 per cent. of the 52,092 offenders coming before the Adult Courts were dealt with by fines, recognizances or under Probation Orders; only 15 per cent. of the cases received sentences of imprisonment for more than three months; and only 1 per cent. received penal servitude.

In the different categories of crime committed by these 52,092 adult criminals, larceny accounts for 79 per cent. of the cases, and housebreaking and shopbreaking for a further 9 per cent.; sexual offences for 2 per cent.; and other offences against the person (mostly assaults) another 2 per cent. If we take the 12,867 children and young persons found guilty of indictable offences in Juvenile Courts, larceny accounts for 79 per cent. and housebreaking and shopbreaking 17 per cent., these two categories together forming 96 per cent. of all the juvenile cases; while sexual offences account for only 1 per cent.

The predominance of larceny and breaking-in offences among juvenile criminals is extraordinary. Of the grand total of 6,701 persons found guilty of house and shopbreaking, etc., 33 per cent. were under 16 and 55 per cent. under 21. As the Report points out, the opening of an unlocked door or an unfastened window constitutes breaking-in; and many young persons enter small houses temporarily unoccupied and take small sums of money—"often a few shillings from the gas meter." Larcenies also include minor offences, such as thefts of bicycles, bicycle lamps and pumps, thefts from automatic machines, etc. The category of offences against property continues to account for a greater proportion of crimes. This is hardly surprising when an economic depression is at its worst, and when so many people live at the bare subsistence level and even below it.

The figures of "crimes known to the police" are naturally very much higher than those of actual cases brought before the Courts. The proportion of crimes "cleared up" to the total of those known was a trifle over one-third in the period 1925-29; and it rose slightly in 1930 and in 1931; but in 1932, largely owing to the alteration in recording of crimes in the Metropolitan Police District, it declined once

more. In 1932, 5,180 offences against the person were known to the police, while in 1930 and 1931 the numbers were 5,669 and 5,283 respectively. In 1932 there were 1,046 cases of malicious wounding, against 1,174 in 1931 and 1,251 in 1930; and 1,590 cases were of indecent assault on females, against 1,668 in 1931 and 1,871 in 1930. In the latter group 745 persons were proved guilty, and of these 22 per cent. were persons under 16 dealt with by Juvenile Courts. There were 385 known cases of murder, attempts, threats and conspiracies to murder, manslaughter, infanticide and child destruction, against 377 in 1931 and 391 in 1930. The 141 manslaughter cases formed the largest item; of which 91 were connected with motor vehicles, and of these only 22 resulted in convictions. There were 78 murder cases, involving 93 victims; in 28 cases, involving 35 victims, the murderer or suspect committed suicide; and in 45 cases, involving 53 victims, 46 persons were arrested, the subsequent cases resulting in 8 persons being discharged and acquitted, 7 persons found insane on arraignment, 21 persons found guilty but insane, and 10 convicted and sentenced to death, of whom only 4 were actually executed. The number of suicides and attempted suicides continues to increase—of suicides, from 3,715 in 1921 to 4,909 in 1929 and to 5,657 (the record) in 1932; and of attempts, from 1,380 in 1921 to 3,094 in 1929 and to 3,299 (the record) in 1932. The figures of indictable offences and of persons convicted of them show that crimes against property are increasing considerably and are perpetrated to an alarming extent by youthful criminals; that sexual crimes and crimes of violence against the person are diminishing; that the number of murders is stable in an increasing population; that suicides are rapidly increasing; and that crimes of a "social" nature, e.g. drunkenness (always excepting the technical crimes arising from motoring, licence obligations, etc.), are on the wane.

It is interesting to note that 86 per cent. of persons found guilty of indictable offences were dealt with by the Courts of Summary Jurisdiction—i.e. Police Courts, Petty Sessions and Juvenile Courts, but no Quarter Sessions and the higher Courts—of which there are about a thousand in England and Wales. In these Courts there is no jury; magistrates decide both as to law and to fact; and though their decisions in most cases are subject to appeal, only 289 appeals to Quarter Sessions out of 545,335 convictions or orders for all offences, indictable and non-indictable, were lodged, of which 74 were quashed. Of the 43,124 persons found guilty of indictable offences in Summary Courts, 42 per cent. were dealt with under the Probation Act (8 per cent. dismissed after charge proved, 15 per cent. bound over without supervision, and 19 per cent. with supervision); 31 per cent. were fined; and 25 per cent. were sentenced to imprisonment without the option of a fine. Of the 12,867 children and young persons found guilty in Juvenile Courts (included in the summary jurisdiction totals), 85 per cent. were dealt with under the Probation Act—22 per cent. being dismissed after charge proved, 10 per cent. being bound over without supervision and 53 per cent. with supervision.

Finally, the Report for 1932 includes one study of great social value. The Commissioner of the Metropolitan Police in 1933 examined the records of persons over 16 first convicted of criminal offences in 1927 and again found guilty of such offences in the period 1927-32. The results proved both striking and disturbing. Of the males, 30.3 per cent. of those between 16 and 21 in 1927 were reconvicted, and 24.3 per cent. of those between 21 and 30. Of the females,

23.6 per cent. of those between 16 and 21 in 1927 were reconvicted, and 26.4 per cent. of those between 21 and 30. From a comparison of the percentages of reconvictions for each sex it would seem that the female of the adult criminal species is more deadly than the male!

The proportion of "reconvictions" is even higher in the case of persons "bound over" or whose charges were dismissed—the proportion being highest of all in the case of persons under 21. This prompts the uncomfortable reflection, reinforced by the figures quoted earlier showing the leniency of magistrates in Juvenile and Summary Courts, that our criminal youth is proving recalcitrant both to kindness and to severity. And this leads us to conclude that reforms are needed more in social conditions which engender criminal tendencies than in the ways of dealing with the young person once he, or she, has become a criminal.

The problem of crime in this country therefore appears to centre upon three main issues: the incentives to theft of property; the incentives to evade the growing number of revenue and administrative rules, laws and bye-laws; and the incentives to youth to commit crime, or the lack of resistance among the young to criminal tendencies. It is clear from the 1932 figures now published that the administration of justice in this country is neither inhuman nor vindictive, but rather sympathetic, at any rate towards the youthful or first offender. Many will ask, however, if "a still more excellent way" with beginners in crime is not now indicated, which will keep the enterprising young burglar from a-burgling. Such a reform, it would appear, needs to be of a broadly social nature. It would go far to allay those fears of a growing population of persistent criminals which the present figures tend to arouse.

NOTES OF THE WEEK

The Death of President Hindenburg.—Less than twenty years ago, in the days of the wooden statue and of the famous line of trenches, the name of Hindenburg symbolised "the enemy," and the Prussian militarism which the rest of the Western world had set out to destroy. In the last decade a turn of the wheel has given to the old Prussian soldier the opportunity of serving his country in quite a different sphere, and the world has come to look on him with kindlier eyes. During his eight years as President of Germany we have come to recognise in General von Hindenburg—now that his personality is no longer dimmed or distorted by wartime prejudices—a man of simple character, of a high-minded sense of public duty and of loyalty. While his best friends would not claim for him great distinction as a diplomatist or a high place in intellectual fields, his phlegm and character have been a great stabilising influence in the difficult times through which post-war Germany has passed. Though he may at times have been misled into serious errors of judgment—the most fateful of which was his breach with Dr. Brüning two years ago—his position at the head of the State has been a source of comfort to millions of Germans of sober and moderate opinion. The whole world expresses its sympathy to-day with the German people and pays tribute to a brave soldier and a great German. To the famous general succeeds the unknown corporal of the Great War; and clearly if the presidency is the proper office for the most outstanding figure of the nation there is no one to challenge Herr Hitler's claim to the succession. But in combining the offices of President and Chancellor, Herr Hitler is assuming for himself a position of sole and isolated authority which may flatter his ambitions but which he may live to regret. It was open to the "Leader"—by the appointment of a new Chancellor combined with a modification of the present constitutional position—to place himself above the rough and tumble, and by delegation of authority to free himself from being involved in the inevitable setbacks and discredits of day-to-day politics. The future of the Nazi movement in Germany is extremely obscure; its prestige is tarnished; and the economic difficulties that lie ahead of it are ominous and perplexing. By fusing the two offices, Herr Hitler has not strengthened his position or enhanced his prestige, but has, in effect, swept aside an institution which might prove to be (as last week's events in Austria illustrated in a different sphere) a valuable defence for national unity in time of crisis and difficulty. Of the future political repercussions in Germany of the passing of the octogenarian Field Marshal it is too soon to speak; for the moment it is sufficient to record not only that it marks the end of a long and honourable career, but also that it may usher in a new phase of Germany's rapid and incalculable internal evolution.

The Air Debate.—The chief characteristics of the debate in the House of Commons last Monday on the Government's programme for rearmament in the air were

the mildness of the party controversy over a question recognised on all sides as extremely grave, and the pointedness of the references made, from all parts of the House, to Germany. The edge was taken off the Opposition's criticism of the Government's plan by three points. In the first place, the Government's figures for total construction, total expenditure and length of period (five years) over which the increase is to be spread are obviously a compromise between the feelings of the Opposition that the moment is inopportune for starting to rearm at all, and the intemperate demands of representatives of the fighting Services and the "die-hards." In the second place, there was the Government's pledge that the programme can and will be cut down if at any moment the prospects for either an Air Armaments Convention or for a general reduction of armaments seriously improve. In the third place, there was Mr Baldwin's acceptance of the principle that the form of national defence for which not only these additional British air armaments, but all British armaments, are to be used, is the support of the system of collective security by the honouring of our British commitments. On this last point we do not doubt Mr Baldwin's own personal conviction and sincerity; but we are left wondering whether there is not still a majority in his party that believes in isolation as a foreign policy and in anarchic competition as the principle (if it can be so called) that is to govern our armaments. If it came to a struggle of wills, we are not sure that this element in the Conservative Party might not prevail. On the other hand, it is not impossible that the alarm at present tendencies in Germany, which seems the Government's real ground for embarking on rearmament in the air, may also secure that, if and when the programme is carried out, the additional force placed in our hands will be used in a constructive way; for it would be futile to suppose that we could stand aside from a conflict which we should have helped to bring on if we merely threw ourselves into an unregulated armaments race. The most striking sentence in the whole debate was Mr Baldwin's statement that our frontier has shifted from the cliffs of Dover to the Rhine. Did he mean simply that Great Britain is within range of attack by air from any Continental air bases within that distance of our coast? Or was he referring to Locarno? And, if so, was he saying, in effect, that if we were going to have an enemy in the air, that enemy was going to be Germany? Sir John Simon's remarks on the subject, on winding up the debate, point strongly to the last of these possible interpretations of Mr Baldwin's arresting but cryptic remark. So we come back to the fundamental question: For what purpose is this increased British air power going to be used? If as a contribution towards an invincible European air police, then the Government may succeed in making good their at first sight paradoxical claim that they are helping and not hindering the cause of peace. On the other hand, if we are giving the send-off to an unregulated competition in air armaments, then this is the prelude to that destruction

of Western civilisation which Mr Baldwin himself has repeatedly predicted as the outcome of another Great War. In the event, the Government's attitude to disarmament and to the collective security system from now on will be the test of their present avowed motives.

Parliament Adjourns.—After six months of Parliamentary session distinguished (apart from the usual budgetary proceedings) by much debate but little legislative achievement, the House of Commons adjourned on Tuesday for the summer recess, leaving two important Government measures in varying stages of incompletion to be polished off in the autumn, viz. the Betting Bill and the Sedition Bill. The first of these is, taken as a whole, a useful measure, though some of its provisions are highly debatable, and it has shown itself susceptible of improvement by amendments. But the last has nothing whatever to be said in its favour. Though some of its most vexatious features have already been removed in Committee—precisely those features, one may suspect, which inspired its origin—it still contains provisions of a sufficiently obnoxious character to be highly dangerous, and the Government would be well advised to take this opportunity of giving it a decent interment. No one, except a handful of reactionaries, really likes it, or is prepared to defend the principles on which it is based. These reactionary principles have aroused the keenest opposition, not merely from the more radical elements but even on the part of Conservative lawyers like Sir William Holdsworth. The supposed danger against which it is intended to guard seems to be little more than a bogey, and in any case the law as it stands provides any sensible Government with ample powers for dealing with seditious activities, whether in connection with the armed forces of the Crown or otherwise. The Government's prestige has already suffered considerably from the amendments it has been forced to concede. We hope, therefore, that it will have the good sense to abandon a piece of legislation which must exasperate everyone to whom the "liberty of the subject" is still precious.

Drought in England.—The Water Supply Emergency Conference called by the Ministry of Health reviewed the general position in the country on Tuesday, and the statement subsequently issued by the Ministry of Health paints a fairly reassuring picture. Of 221 larger undertakings which have reported, only 27 reveal present shortage, and all of them have measures in hand for dealing with the situation, 12 of them under the Emergency Water Shortage Act passed this year. Out of 721 smaller urban authorities, 677 report no serious shortage, present or prospective, while 34 report serious shortage, of which 29 have schemes for new supplies in hand, the remaining five being content to rely on economies in consumption. The situation of the rural district councils is distinctly less favourable. Out of 510 replies only 260 report no serious shortage, present or prospective, and 179 report serious shortage already existing in some part or other of their districts. Fortunately the position seems to be fairly well in hand; in 31 areas alternative supplies are already available and in 144 special action has been taken for arranging carriage, deepening wells, etc. There are, however, 74 areas which report that they may suffer shortage if enough rain does not fall by the end of September. Permanent schemes of improvement are in preparation in 38 urban and 180 rural areas, and 28 applications have been received (of which 17 have already been granted) for special emergency powers. The measures taken by the Government appear to have had some effect in improving the position, but it seems highly probable that the grant of £1,000,000 under the Rural Water Supplies Act is, as we expected, quite insufficient. Applications have already been received for schemes of permanent improvement which will, it is estimated, cost £2,299,000, and it is clear that a considerably larger sum will be required to place the rural water supply of the country on an efficient basis. This year's scare has served to impress upon the Government the urgency of a problem which has been too long and too complacently ignored.

Railway Labour Negotiations.—The parallel negotiations between the railway companies and the unions on conciliation machinery and the restoration of wage-cuts have taken a fresh turn, after the virtual deadlock on the wages question which was reached the week-end before last. Discussions on negotiating machinery, which had been suspended since the rejection by the unions in February of the companies' proposals, have now been resumed; and there seems to be good reason to hope that an agreement on this exceedingly important question will be reached. If that is so, it is clear that the negotiations on the wages question will be very much facilitated. There is good reason to suppose that neither side is inclined at present to force the issue to any desperate conclusion, and the reconstitution of the Wages Board should be a big step towards agreement. At the same time, it must be remembered that the companies are not likely to yield easily to the unions' demands, which can scarcely be justified on economic grounds. Railway revenues have not yet attained anything like the 1929 level (which was itself below the standard fixed under the Railways Act), though they have shown some recovery from the intense depression of 1932, when no less than £260 millions of railway capital went without dividend. Moreover, as the interim statements published by the companies show, the increase in gross receipts since last year has been absorbed to the extent of nearly half by an increase in labour and other costs. The case for an all-round restoration of cuts is therefore, to say the least of it, not established, whatever justification there may be for adjustments in certain special cases. Indeed, the railway shareholder, who has borne the brunt of the depression, may with justice urge some restoration of his dividends as a prior claim on the fruits of recovery.

The F.B.I. is Uneasy.—The business forecast of the Federation of British Industries for the third quarter of this year betrays a certain uneasiness about the prospects of this country's industrial recovery. The grounds for such uneasiness, when adduced by the F.B.I., merit careful attention. Indeed, the Federation, which was foremost among those organisations which demanded thoroughgoing protection for British industry, is beginning to see the limitations of that universal nostrum for all our ills. So much is clear from its own diagnosis:—

It is, however, becoming increasingly clear that so far from British trade being, as many still believe, at the beginning of a recovery, it is probably already back to normal, having regard to the limitations of the international situation. That situation shows few signs of improvement, and in some directions has deteriorated. Apart from the many outbreaks of social and political unrest, and the exacerbation of trade and exchange restrictions, the condition of certain of the countries still on an operative gold standard is giving cause for anxiety.

"Any further recovery," as far as this country is concerned, says the covering letter accompanying the F.B.I.'s Business Barometer, "must depend on improvement in the international situation, the signs of which are at present very problematical." We agree; and we would venture to refer those who share the F.B.I.'s anxiety to an article in the *Economist* of March 24th, entitled "The Limits of Recovery," which concluded with these words:—

Are we to direct our policy towards the restoration of an international regime, in which our industrial experience and geographical position will entitle us to a leading place, or are we to throw up the sponge and devote ourselves to making the best of our own limited natural resources? If we choose the former we may reasonably assume that we are at the beginning of a long period of expansion and economic development; but if the latter, we may as well reconcile ourselves to the fact that we are already nearing the limits of recovery.

It is reassuring to note that, on all hands, there is evidence of renewed concern among the business men, bankers and merchants of this country for the future of our international trade. Despite the meagre signs of recovery in this field which Mr Runciman was able to adduce in his defence of our Trade Agreements in the House on Friday of last week, an obstinate mass of over 2,000,000 unemployed persists, centred largely upon our heavy export industries. We, like

Mr Runciman, see no sign of any serious reduction of this still formidable figure, and in the absence of any plan for dealing with the situation that has created it, the F.B.I.'s concern is only too well founded.

* * *

Marshal Lyautey.—Marshal Lyautey was a soldier whose declared, and steadily practised, principle in warfare was "The enemy of to-day is the collaborator of to-morrow." When the Germans invaded France, the French Government ordered their Resident-General in Morocco to send the bulk of his forces back for the defence of the mother country and to retire to the Moroccan coast. He sent the troops, but refused to evacuate the territory in the interior of the protectorate which he had pacified in the course of four strenuous years; and his audacity was completely successful. Though his armed forces were still further depleted as the Great War moved towards its crisis in 1918, and though the people of Morocco were to some extent aroused against the French by German propaganda, the Armistice of November, 1918, actually saw the zone under effective French control in Morocco slightly extended in area as compared with its limits in August, 1914! The secret of Lyautey's miracle was that he offered the Moors foreign rule in a form which they did not feel was intolerable or humiliating. With extreme originality, he broke away from the previously prevalent French tradition of "assimilation"—a tradition which had turned Algeria into a bundle of French *départements* on the wrong side of the Mediterranean. In Morocco, under Lyautey's guidance, French rule took the form of working through native institutions and native authorities—a method which has, of course, been pursued, with similar results, by the greatest of our British colonial administrators in Africa. With this policy of respecting, and co-operating with, the Moors, Lyautey contrived to combine a rapid and vigorous process of material improvement and "modernisation": equipping Morocco with new harbours and railways, motor roads and cities. Fortunate in his latter days, he was able to save his work from being wrecked by the disasters of the Spaniards in their zone of Moroccan territory. After the fall of Abd-al-Karim, Lyautey was able to retire with his mind at rest; and he just lived to see his life-work completed by the surrender of the last "dissidents" in the Southern Atlas this summer. In the world as it has come to be, the modern Western "empire builder" has possibly become an anachronism; but history will remain to prove that Lyautey was a magnificent representative of a type which served its generation well.

* * *

Poland and the Baltic States.—At a time when everyone is waiting to see whether the Franco-Russian plan for an "Eastern Locarno" takes practical shape, much interest attaches to the visits which the Polish Foreign Minister, Colonel Beck, has just been paying to the capitals of Estonia and Latvia. Even more remarkable, in view of the bad relations between Poland and Lithuania since Poland seized Vilna, is the visit of a senior Polish diplomatist to the capital of Lithuania. From Polish accounts of Colonel Beck's mission, it would seem as though the Latvian and Estonian Governments were in a mood to follow the non-committal "wait-and-see" policy towards the Franco-Russian project, which was the Polish Government's own attitude at first. Meanwhile, however, the Estonian Foreign Minister, Mr Seljamaa, as well as the Lithuanian Foreign Minister, has travelled to Moscow, and last Sunday Mr Seljamaa, together with the Latvian Minister in Moscow, handed to M. Litvinov an identical Latvian-Estonian declaration announcing that the two Governments had favourably considered the idea of a regional pact for mutual assistance for Eastern Europe, with the participation of the U.S.S.R., Poland, Germany, Czechoslovakia and the four Baltic States—reserving a right to propose amendments and additions after seeing a draft text. Whatever Poland's real attitude may be, Colonel Beck was undoubtedly correct in drawing attention, as he did in his speeches at Tallinn and Riga, to the pronounced recent tendency towards a constructive policy of solidarity in Eastern Europe. The identical acceptance, in principle, of the Franco-Russian plan by Estonia and Latvia is one of the first-fruits of the treaty

setting up a common council for the conduct of their foreign affairs which they concluded in February, on the lines of the Statute of the Little Entente. Recent tendencies in Lithuania, too, are significant. In March an attempted coup at Kovno by the *ci-devant* dictator, Professor Valdemaras, miscarried; and, since the professor was the incarnation of implacable enmity towards Poland, his failure on this occasion has doubtless smoothed the way for the Lithuanian-Polish *détente* which seems happily to be in progress at this moment. On April 26th, Lithuania made overtures to Latvia and Estonia for entering the system of solidarity in foreign affairs which they had reached between themselves; and, since the Lithuanian feud with Poland has been really the sole obstacle to this, we may perhaps now look forward to seeing the formation of a tripartite Little Entente in the Baltic region. All this looks favourable for the policy of MM. Litvinov and Barthou—but it would be ungenerous on their part if they failed to acknowledge their debt to Herr Hitler. The *Führer* has done wonders in composing the quarrels between Germany's neighbours, and if he really intimidates Poland and Lithuania into reconciliation with one another, that will be his diplomatic *chef d'œuvre*—up to date.

* * *

Transport in Northern Ireland.—Sir Felix Pole, chairman of Associated Electrical Industries, Limited, and formerly general manager of the Great Western Railway, has presented a series of interesting recommendations to the Government of Northern Ireland for the future control of transport in that country, and the Minister of Home Affairs has accepted the general principles of the scheme. In the first place, it must be noted that the area of Northern Ireland is rather less than that of the county of Yorkshire, and the population not materially greater than the city of Birmingham. This comparatively small country is served by nine railway systems, the total route mileage in Northern Ireland being 754 miles; and, in addition, there are road facilities to the extent of 12,997 miles, as well as coastal transport. Large towns are non-existent with the exception of Belfast and Londonderry, both of which are situated on the seaboard. There are comparatively few villages, and owing to the system under which land is held the population is widely scattered, thus facilitating the development of road transport with consequent adverse effects on the railway position. In these circumstances, Sir Felix Pole proposes the establishment of a Road Transport Board to take over all road motor services, including those operated by the railway companies and the Belfast Corporation transport department, but excluding the road goods-vehicles owned by ancillary users. It is not intended that all road transport undertakings should be amalgamated as from some appointed day, but that in the first instance the larger concerns should be consolidated, power also being given to the Board to acquire the smaller operators to whatever extent may subsequently be deemed necessary. The railway companies and the Board should then be required to enter into an agreement for pooling their receipts, and this pool should be administered by a standing joint committee somewhat similar to that set up under the London Passenger Transport Act of 1933. There are numerous contingent recommendations, notably that the railways should be freed from all restrictive legislation, and in particular that the statutory enactment of a classification of goods and of maximum schedules of rates and charges should be abolished. Sir Felix Pole states that the solution which first occurred to him was to advise the creation of a Board with power to acquire all existing transport organisations by means of an issue of stock in exchange for the securities of the rail and road companies on the basis of a valuation. But the peculiar circumstances of Northern Ireland presented grave obstacles to the constitution of such an authority, largely because six of the nine railways operate partly in Northern Ireland and partly in the Free State, and railway amalgamation was therefore impracticable. As an alternative, the railway companies asked for powers to become sole providers of public transport in their respective areas, but Sir Felix wisely came to the conclusion that this would not be in the interests of the community. It is to be hoped that the co-ordination of rail and road on the lines suggested will

not lead to the undue restriction of road transport, particularly as the railways are to be authorised to invest in the capital of the Road Board. Careful supervision will obviously be necessary in administering the new system, for Sir Felix recognises that portions of railway may no longer be commercially justifiable. One safeguard against any monopolistic pressure in connection with goods traffic will be the ancillary user, who, as already mentioned, is untouched by the scheme.

* * *

Sterling and International Prices.—Commodity prices both here and abroad have remained subject to conflicting influences. On the one side there is the drought factor, which explains the recent increases in cereals and cotton prices. Against this the virtual disappearance of Germany as an importer of raw materials is a leading cause of the heavy and continued fall in wool prices and, during the past fortnight, in non-ferrous metal prices. On balance, sterling prices are slightly lower than a fortnight ago, though still higher than at the beginning of July. American prices, on the contrary, continue to advance, for during the past fortnight, the *Economist* primary products index number has risen by 2.0 per cent., while the general Irving Fisher index number had up to July 25th risen by 0.4 per cent. On the Continent the fall in French prices has for the moment been checked. German prices continue to rise.

* These figures refer to July 25th.

Details of the group indices comprising the complete *Economist* index number are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	July 4, 1934	July 18, 1934	Aug. 1, 1934
Cereals and meat	64.5	67.8	73.0	73.3
Other foods	62.2	58.7	58.0	58.3
Textiles	43.7	52.9	53.3	52.6
Minerals	67.4	76.6	76.6	75.0
Miscellaneous	65.8	69.2	69.4	69.9
Complete index	60.4	65.1	66.2	66.0
1913 = 100	83.1	89.5	91.0	90.8
1924 = 100	52.2	56.2	57.2	57.0

In the cereals and meat group most grain prices were higher, and rice continues to advance. Beef is dearer, but mutton and bacon have fallen. New potatoes are beginning to become cheaper. Among other foods, there was a decline in tea, and advances in cheese and refined sugar. Cotton prices were irregular, but there was a further heavy fall in wool. Jute is dearer. In the minerals group non-ferrous metals were all cheaper, while among miscellaneous materials, petroleum, linseed oil, tallow, rubber and sulphate of ammonia all advanced, but there was a reaction in hides.

Foreign Trade per capita.—The accompanying diagram shows graphically the value of foreign trade *per capita* in the five greatest trading nations in 1913 and in each of the five latest years. The white rectangles represent imports into the countries concerned, the black rectangles exports; the figures are in pounds and shillings.

Several facts of interest emerge from this diagram. The first is the long lead of the United Kingdom. In imports, the lead of the United Kingdom over the other countries was roughly the same in 1933 as in 1913. Comparing 1933 with 1929, however, imports have been restricted in greater proportion in the United Kingdom than in France, but in smaller proportion than in the other three countries. In exports, the United Kingdom did not quite retain its pre-war lead in the later years. The decline since 1929, however, has been less pronounced than in the other countries, except France. The fact that French trade has apparently held up better in the depression than the trade of the other countries illustrates the statistical danger of "converting" trade statistics from one currency to another. French trade, being valued in the undepreciated franc, will tend to have a higher value in sterling, and it cannot be assumed that the declines in total sterling value stand in all cases in the same relation to the declines in actual volume. These comparisons must consequently be received with caution. Perhaps the most surprising results of the diagram relate to Japanese trade, which is both small in volume and, apparently, not increasing. Such facts as these help to put the problem of Japanese competition in the proper perspective. The diagram may be supplemented by the following table, which shows the share of each country in the total export and import trade of the world in recent years:—

	Imports			Exports		
	1929	1931	1932	1929	1931	1932
United Kingdom	15.2	17.2	16.6	10.7	9.4	10.4
British Empire (including U.K.)	29.4	29.4	28.8	26.3	23.8	27.2
United States	12.2	10.0	8.9	15.6	12.6	11.0
Germany	9.0	7.7	8.0	9.7	12.1	9.9
France	6.4	7.9	9.0	6.0	6.3	6.2
Japan	2.8	2.8	3.0	2.9	2.9	3.1

These figures reinforce the conclusions drawn from the diagram. In particular they illustrate the comparatively small volume of Japanese trade. Among the movements of the two later years the recovery in Empire exports and the decline in German exports are particularly noticeable.

* * *

The Volume of Overseas Trade.—Last week's issue of the *Board of Trade Journal* contained the usual quarterly article on the volume of our overseas trade in the second quarter of 1934, after the elimination of price changes.

The figures do not reveal any very striking general movements, but there have been interesting changes in individual classes of foods. The following table gives some comparative figures over a series of years:—

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume
	Million £	1930 = 100	Million £	1930 = 100	Million £	1930 = 100	Million £	1930 = 100
1924	1,137	135.0	842	88.0	801	120.8	683	116.2
1930	957	100.0	957	100.0	571	100.0	571	100.0
1931	797	81.0	984	102.8	391	89.4	437	76.5
1932	632	75.3	857	90.3	365	83.3	438	76.9
1933	627	71.4	878	91.7	367	82.1	447	78.4
1931								
1st quarter	192.5	84.5	227.7	95.2	103.3	93.2	110.9	77.7

2nd "	164.2	72.4	227.0	94.9	95.0	82.6	115.0	80.6

Thus the volume of imports has declined further from the high level of the end of 1933, but this is to some extent a seasonal movement. In the food, drink and tobacco group, the volume of imports has remained almost constant throughout the depression and is now a little above the average level for 1930; but while dairy products and feeding stuffs show an increase of 7 and 30 per cent. respectively as compared with a year ago, imports of live animals fell by a further 10 per cent. to 51 per cent. of the 1930 level, owing to the restrictions on imports from the Irish Free State. As regards average values in the food group, the level last quarter was about 70 per cent. of the 1930 level and showed a continued fall in all categories, except meat, which con-

stitutes over one quarter of the whole group. This fall in import prices is in some measure due to the attempt to raise British agricultural prices by restriction of the market and the consequent competitive cutting of prices by producers whose other markets are for various reasons increasingly restricted. Average values of raw materials, on the other hand, show a slight tendency to rise even as compared with last quarter. The volume of imports of raw materials, which is a sure indication of industrial activity, and of the most important manufactured goods (non-ferrous metals, iron and steel products, machinery and chemical products) which are mostly raw materials for finishing industries, is greater than a year ago—except in the case of woollen and worsted yarns, which have fallen by 31 per cent. if the second quarters are compared, and by 9 per cent. if the first six months of each year are compared. It must be remembered, however, that the woollen industry experienced a revival before any other. The largest increases in imports were in iron ore and scrap (93 per cent.) and wood and timber (59 per cent.), due in the latter case largely to the building boom. In the case of exports there is a more marked tendency to a rise in average values, particularly in woollen and worsted yarns and manufactures and in coke and manufactured fuel, but also to some extent in iron and steel manufactures, cotton goods, vehicles, and in the whole class of raw materials. The volume of exports as a whole shows a slight fall compared with the first quarter of 1934, but it is well above the level of a year ago, and there has been welcome and continued expansion in our staple exports, coal, iron and steel manufactures, and machinery by 6, 16 and 24 per cent. respectively as compared with a year ago. Cotton goods alone show a small decline of 2 per cent. The first impact of the recovery in business activity was naturally reflected in increased imports; but it is now showing some small effect on the export side. A real revival, however, may easily be hampered by too high a level of prices. It should be noted that, while average import values stand at 72, as compared with 100 in 1930, export values are already at 82. The favourable effect of our devaluation of sterling in 1931 is thus apparent. We are, however, left with the query: when, and how, will the purchasing power of our clients abroad be increased? On the answer to this depends the future of our export trades.

FRANCE

AUSTRIAN DISORDERS

THE murder of Chancellor Dollfuss and the Austrian riots have had an unsettling effect again on the Paris Stock Exchange, which had already been disturbed previously by the Tardieu-Chautemps quarrel. In such circumstances stocks reacted nervously and the price of many public funds fell two points in one session. To the public, the Vienna disorders seem to prove conclusively that in spite of the recent meeting between Hitler and Mussolini at Venice, the Reich has not abandoned its plan of promoting the *Anschluss*. The murders of July 25th following those of June 30th at Munich and Berlin, show that German policy is entering definitely on an era of violence which may provoke serious complications in Europe if the peaceable countries content themselves with a policy of indolence and passivity. Finally, the nomination of Herr von Papen as Ambassador of the Reich in Vienna was not thought to indicate any relaxation of this policy, but was considered rather as an effort on Germany's part to obtain by diplomacy and if necessary by stratagem, what she could not obtain by the *Putsch* of July 25th.

The capital market, then, remains uneasy and business is inactive. Hoarding was never so prevalent, though the fact that it is mainly of paper money proves that confidence in the franc remains intact. Its persistence, however, is an obstacle to business activity and to the increase of fiscal receipts.

This being the case, M. Germain-Martin, Minister of Finance, launched an appeal for national confidence, in which he denounced the excess of pessimism which had grown up and summed up the work achieved in the last five months: the Budget has been almost balanced, the Treasury is liquid, owing to its short-term loan policy and is in a position to launch a long-term loan if necessary, fiscal reform is being put into operation. Lastly the 1935 Budget will not exceed 47,000 millions and will be reduced to this level by economies, while the current Budget attains a "ways and means" total alone of more than 50,000 millions.

FRANCO-GERMAN COMMERCIAL AGREEMENT

The Franco-German negotiations, which began on June 22nd, resulted on July 28th in an agreement which will come into force on August 1st. This arrangement includes:—

1. A treaty covering commercial and shipping relations.
2. An agreement regulating Franco-German trade relations.
3. An agreement providing for a commercial clearing.
4. An arrangement for the payment of the coupons on the French share of the Dawes and Young Loans for the period under moratorium from July 1st to December 31, 1934. This arrangement applies to:

- (a) The whole French share of the Dawes and Young Loans.

(b) The bonds of the Dawes Loan and the bonds of foreign tranches of the Young Loan which were on June 15, 1934, the property of French citizens or of corporate bodies residing in France.

The clearing agreement, which is the basis of the whole, will work as follows:—This agreement takes into account the present balance of Franco-German trade, which leaves a credit balance in favour of the Reich. For the first six months of 1934, for instance, German exports to France amounted to 1,227,348,000 francs, while French exports to Germany reached 918,755,000 francs only. The balance in favour of Germany is more than 300 million francs. The clearing agreement set up in the new Treaty provides that from August 1st the payment of the commercial debts between France and Germany will be made through the offices of the Reichsbank in Germany and in France at the Office Franco-Allemand as a department of the Chamber of Commerce of Paris. Every debtor who has to make payments in Reichsmarks to discharge commercial debts to France must deposit the sums at the Reichsbank as they fall due. Every debtor who has to make payments in French francs to discharge commercial debts to Germany, must deposit, when due, the sums he has to pay at the Office Franco-Allemand. Out of the total which will be paid at the Office Franco-Allemand by the importers of German goods, a fraction of 15.75 per cent. will be credited every day to an account opened for the Reichsbank in the books of the Office Franco-Allemand. In order to estimate the value of this fraction of 15.75 per cent., the negotiators have predicted that German exports to France will reach nearly Frs. 2,600 millions. The deduction of 15.75 per cent. will then realise about 400 millions. Out of these 400 millions, a sum of 144 millions will be used for the payment of the coupons of the Dawes bonds and the Young bonds (reimbursement excluded). Other sums will be reserved to pay certain other German debts (notably the interest on the Standstill credits), that is 50 millions. A balance of Frs. 200 millions will remain at the disposal of the Reichsbank.

The payment for French exports to Germany must be made with the remaining 84.25 per cent., after the deduction of the 15.75 per cent. If the active balance of Franco-German trade should fall below the level which the negotiators have chosen as a base, the amount of francs available may not be sufficient to pay the French exporters and arrears for German commercial debts may reappear. In such a case, both Governments will meet again to examine the situation. This agreement after all has been concluded for a period of five months only. Both Governments will enter on new negotiations on November 15th and decide, on December 1st at the latest, on the renewal of the present agreement.

The main point of these negotiations was for the French delegation to afford to the French exporters a guarantee of payment for their goods. On the other hand, a few mutual concessions on the quotas have been granted in order to develop Franco-German trade. These concessions concern mainly worsted, colonial woods, wood articles, slates, Thomas scoria, thread, etc. As regards Morocco and the mandatory countries the *status quo* is maintained.

It should be observed that as a consequence of the new agreement, the French importers have lost the advantage of paying for German goods with blocked marks. They must pay with Reichsmarks which will be sold to them "at the average daily rate on the Berlin market." German dumping is thus counteracted, but a check is placed at the same time on the selling in Germany of French goods.

PARIS, August 1.

GERMANY

THE PRESIDENT'S ILLNESS

THE illness of President Hindenburg, which first became publicly known on Tuesday, caused considerable alarm and led to a sharp decline in securities. For years past the President has taken little real initiative in political matters. In the dismissal from the Chancellorship of Dr. Brüning,

CHEMICAL BANK

& TRUST COMPANY

NEW YORK

FOUNDED 1824

Bankers, Trustees and Executors
with a heritage of sound principles.

Office of the London Representative:

6 BISHOPSGATE, E.C.2

the first event of the militarist-political reaction, he was believed to have acted on the advice of personal friends; and after that he merely endorsed governmental actions, at times, however, showing a personal aversion to the provocation of conflicts in the Church. According to present practice, the German nation is not allowed to show its interest in the question of a successor should the President not recover; discussion of that problem in the Press is forbidden, even to the extent of suspending an incautious newspaper. The loss of the President would probably cause no immediate change in the now serious internal political situation, unless, indeed, the Reichswehr is destined to prove the determining factor, in which case the personality of its titular chief might play a deciding rôle. But Germany's damaged reputation in the international world would suffer further from the disappearance of the only politically prominent citizen who has an established reputation for real achievements and whose character enjoys general respect.

FOREIGN EXCHANGE

For the fourth week in succession (return of July 23rd) the Reichsbank's total reserve is practically unchanged. The gold holding, in consequence of a purchase from Russia, has recovered to Rm. 75 millions, but the foreign exchange holding is down to Rm. 3 millions, the lowest so far. German gold exports in the first half of this year totalled Rm. 451 millions and imports Rm. 162 millions. The net loss of gold in the last five and a half years is Rm. 2,442 millions. Gross exports of gold (omitting imports) were to France Rm. 2,088 millions, to Holland Rm. 832 millions, to Great Britain Rm. 662 millions (imports from the latter being Rm. 681 millions) and to Switzerland Rm. 314 millions. Russian deliveries of gold, in part for payment of commercial debts, in part paid for with foreign exchange, totalled Rm. 757 millions. On the question of Germany's balance of foreign payments under the latest transfer moratorium, a Berlin bank estimates that exchange proceeds from shipping services and foreign investments—less Rm. 150 million register mark withdrawals—will amount to some Rm. 250 millions a year, which would more than suffice to cover transfer on the basis, for all countries, of the new British, Swiss and French agreements, and also to cover interest at Rm. 90 millions on the standstill credits. There would remain only the deficit in the balance of payments caused by the import surpluses, which in the first half-year totalled Rm. 217 millions. Export in the first half-year was at the rate of Rm. 4,200 millions a year, which is almost exactly the value of imports in 1933. Against this must be set a loss of foreign exchange arising from the additional export process. Although no official figure is available, it is affirmed that 40 per cent. of total exports is now being conducted under this process, and that the resulting exchange loss is Rm. 400 millions a year. If this estimate is correct, a decline of imports below the 1933 figure by Rm. 400 millions would produce equilibrium in the balance of foreign payments. But naturally it cannot be assumed, as the official organs assume, that an enforced cutting of imports by any such fixed sum would

yield a corresponding net saving in foreign exchange. It can be shown from concrete German examples that enforced restriction of imports automatically reduces exports.

NEW CLEARING AGREEMENTS

New clearing agreements have been concluded with Switzerland and France. The Swiss agreement prescribes that all payments on account of goods, tourist traffic, and investments shall be made through the respective central banks. The Reichsbank will be credited with the German active balance. This agreement is to hold good until June 30, 1939, with the right of denunciation before then in special circumstances. The French clearing agreement is supplementary to a new commercial treaty, based on that of 1927. Instead of one treaty there are a treaty of commerce and navigation and an "agreement concerning Franco-German trade," the object of the division being to prevent permanent mutual obligations being upset every time difficulties arise in regard to tariffs, quotas and payments. (See the preceding letter from our Paris correspondent.) Germany is, with France, as with Switzerland, assured a free surplus of foreign exchange after deduction for the service of the Dawes and Young loans. On both sides certain quota concessions are made.

CONTROL OF IMPORTS

The Cotton Control Board has decreed that from August 1st spinners of raw cotton or linters may consume not more than 70 per cent. of their average consumption in the first quarter of this year. This measure supplements last week's restriction of working hours in the spinning mills to 36 per week. Shares of textiles companies have consequently heavily depreciated on the Bourse.

The outlook for such industries as are dependent upon imported raw materials is becoming more unsatisfactory. It seems likely that the policy of depleting the Reichsbank's reserves in order to produce a plausible ground for repudiating the debt service, including here the unnecessary repayment in the spring of last year of the two international credits, may revenge itself in a way not foreseen by the Government and the Reichsbank. In the name of *Autarky*, the Government last year took special measures to impede the purchasing of English yarns. The cotton spinners are now faced with a British refusal to sell further yarns on credit. It is stated that German debts on this account already reach £500,000. The cotton spinners are incensed with the Government. They complain that last year when its measures against imports were taken, and in particular before the fatal debts default, they could have got liberal British credit, and they add, further, that out of the exchange yield of their textiles exports they could have met these credits. The trouble here, as in other industrial branches, is not inability of German borrowers to pay in foreign currencies. Nearly all the industries that have borrowed, whether on long or short term, including steel, shipping and textiles, could easily transfer interest and also capital, where so contracted, out of their own export receipts, if only they were allowed to do so. The real trouble is that the insolvent Reichsbank, in violation of the Bank Law, has assumed the right to expropriate foreign currency belonging to private undertakings. The position of foreign creditors and of German borrowers would be better if there were no Reichsbank at all.

CREDIT AND FINANCES

Money for the month-end settlements was in relatively great demand, bank acceptances were heavily sold, and the marketing of Reich short-term paper temporarily ceased. By the third week of July only 72 per cent. of the June month-end loans had been repaid, so that the Reichsbank again enters a new month carrying unrepaid credits. Money rates in July were steadily somewhat above those of June. It seems that this was not entirely seasonal, but was connected with industrial developments and with the State's credit-creation programme. The official Konjunkturinstitut accuses the banks of not financing the industrial revival sufficiently. In fact, the Reichsbank, in order to be able to take over from the commercial banks a large sum (estimated at Rm. 1,200 millions) of "work-creation bills," restricted its rediscounting of commercial bills; so that while deposits in the banks have fallen, their commercial bill

portfolios have increased. The banks reject the Institute's complaint. Total deposits in the five chief commercial banks in June were practically unchanged; if foreign withdrawals are allowed for, a slight increase in home deposits appears. Savings bank deposits have for two months been declining, after a rapid recovery from the depletion that followed the 1931 credit crisis. This decline is probably connected with the rise in the cost of living. The Bank für Deutsche Industrie-Obligationen is embarking on the financing of consumption, apparently through the Commercial Investment Trust A.G., taken over from Americans. This company, known as "Citag," was started in 1926 as a daughter concern of the Commercial Investment Trust Company of New York.

Reich tax revenue in June totalled Rm. 710 millions, against Rm. 604 millions in June 1933. The first quarter of the financial year brought in Rm. 1,885 millions, against Rm. 1,618 millions in the same quarter of 1933. After certain tax-law changes (affecting slaughtering, fats, motor cars and champagne) are allowed for, an actual increase of Rm. 213 millions is claimed. Measured absolutely, the quarter's yield is the highest since 1930, but taxation has since then been materially increased. Among official optimistic comments on the financial outlook is the estimate of State-Secretary Reinhardt, Nazi Party deputy in the Finance Ministry, that (deducting yields of the new slaughtering and fats taxes) revenue in the current financial year will exceed that of last year by Rm. 800 millions.

PRODUCTION RISING

The wholesale price index for July 25th is 99.3, as against 99.1 on July 18th. The prices of building materials, and, as in former weeks, of livestock have risen sharply. In the rules under which exceptions from the general prohibition against opening retail shops are permitted, the Reich Minister of Economy has practically introduced concessioning, on a test of personal qualifications and "reliability." Industry in June was occupied to 59.6 per cent. of capacity, as against 58.7 per cent. in May. The production goods branches rose from 57.9 to 59.2 per cent.; consumption goods from 59.7 to 60.1 per cent. The building, motor-car and food-products branches benefit most. The home pig-iron market is active. Export of heavy iron and steel in the first half-year was 66 per cent. higher than in the same half of 1933. The Steel Trust (Vereinigte Stahlwerke) reports for the business year ending March 31st a net profit of Rm. 8½ millions. The change in the date of the business year and the fusion with Gelsenkirchen make it impossible yet to determine the real extent of the improvement in the Trust's finances. Some of the other big steel companies seem to be about to resume dividend payments. Import of iron ore in the first half-year was 3,622,000 tons, as against 2,113,000 tons in the same half of 1933.

BERLIN, August 1.

HOLLAND

ACUTE GENERAL DEPRESSION

GENERAL depression is still dominant in Holland, according to the June issue of "De Nederlandsche Conjunctuur," the official publication of the Central Statistical Bureau. Such improvement as can be recorded is of slight importance. At the end of April 320,000 applicants for work were registered at the labour exchanges, of whom 310,000 were unemployed; a year before 312,000 of the 336,000 registered applicants were unemployed. Actually, January, February and March made a better showing this year than April. The few encouraging signs now discoverable are to be found mostly in non-industrial trades, such as transport, fishing and agriculture. Industrial statistics perhaps show a very slightly improved tendency, but in the last few months stagnation has set in and the situation continues extremely precarious. The financial results of recent industrial operations are in general very discouraging. There has accordingly been little improvement in the Stock Exchange prices of industrial securities.

Foreign trade continues to be very depressed, although, if anything, there has been a little improvement recently in the volume of imports and exports. In value, however, they show a slight decline. The figures for the last five years are summarised in the following table:—

First half yr.	Imports		Exports		Import Surplus	
	1,000 tons	mill. gldrs.	1,000 tons	mill. gldrs.	1,000 tons	mill. gldrs.
1930	15,698	1,277	8,049	880	7,649	397
1931	14,280	988	8,273	677	6,007	311
1932	11,737	677	6,857	418	4,880	259
1933	11,055	563	6,246	355	4,807	208
1934	11,205	538	6,581	339	4,624	199

The import surplus dropped from 108.6 millions (last year 102) in the first quarter of 1934 to 91 millions (105) in the second quarter, so that in the first half of the year the adverse balance of 199.45 million guilders was about 8 millions lower than in January-June, 1933.

The Government has now introduced into Parliament the long-awaited Bill empowering it to declare certain industrial agreements binding. The Bill aims at making it impossible for a minority in an industry to prevent a majority from coming to agreements which it considers to the benefit of the industry. In fact the Government wants to restrict open competition for the benefit of the majority of firms engaged in any industry. The proposed legislation also provides for authority to declare agreements invalid in certain cases, if they are considered contrary to the interests of the community.

WAGE AND UNEMPLOYMENT PAY CUTS

The threatened strike in the Dutch collieries was averted at the last moment. The employers' proposal of a wage cut of 10 per cent. was modified, in consultation with the Government, to a reduction of 5 per cent., but this too was declared unacceptable by the employees. The strike notices for July 1st, however, were withdrawn provisionally, and at last the final concession of the employers was submitted, viz. a wage cut of 3 per cent., coupled with some reductions in house rents and a lower price for the fuel supplied to the miners, while the hope was expressed that within two or three months the mines would again be working five days a week. Agreement was reached on this basis, an additional inducement being the fact that the Government now appears to be contemplating measures for the benefit of the Dutch collieries.

The State finances are still causing great concern. The revenue is steadily declining, and remains considerably below the estimates. The new sales tax in particular, as well as the dividend coupon tax, has proved a great disappointment. The Prime Minister, Dr. Colijn, declared recently that the Budget situation for 1935 is giving rise to great anxiety. In 1935, he stated, the national debt will again be up to the high level reached immediately after the war, when the financial capacity of the country was so much greater. But even though the public debt will have risen by 235 million guilders in a year and a half, and will have been increased by another 200 millions by the end of 1935, an increase in the burden of taxation cannot be considered. Seeing that the Budget for the Dutch Indies for 1935 will close with a deficit of 75 million guilders, despite the numerous economies and the benefits of conversion, a big deficit is also being mentioned in Parliamentary circles for the new Dutch Budget of this country. The railways show a loss of 30 million guilders, and the State floating debt has already risen to 800 million guilders. Fiscal burdens have reached their utmost limits.

Economies will have to be enforced, if the Budget is to be balanced and the gold standard maintained. But how? The reduction in unemployment benefits has led to discontent and serious disturbances, which have had to be suppressed by armed force. And there are numerous branches of industry which are pressing the Government for additional or new assistance. The only satisfactory financial sign is the still declining rate of interest prevailing on the capital market. Numerous conversion loans have already come on to the market, but now for the first time a 3½ per cent. loan has appeared. The Province of South Holland has just issued a 3½ per cent. loan of 1.8 million guilders at 98½ per cent., followed by the Province of North

Holland with a 3½ per cent. loan of 56.3 millions at 97½ per cent. In addition, a few 4 per cent. municipal loans have been already offered above par. But from January to the end of May issues aggregated only 79,259,000 guilders, against 175,277,000 guilders in the corresponding period of 1933.

The downward trend of interest rates enabled the State to undertake the big 4 per cent. conversion loan some time ago, and now it is the turn of a large conversion of the Dutch loan. The great liquidity of the capital market has, however, not been exploited so far for the purpose of consolidating the big floating debt of the State.

AMSTERDAM, July 25.

JUGOSLAVIA

A POLICY OF PACIFICATION

M. BARTHOUS' visit to Yugoslavia during his East European tour has revealed some interesting political implications. It is true that both popular affection and official friendship for France have shown themselves unshaken, yet, at the same time, neither of them gave vent to uncritical outbursts such as in Roumania. Yugoslavia, in short, seems to be rapidly emerging from political adolescence as a result of her recently initiated Balkan policy. She seems to realise increasingly that, while friendship with France may remain the dominant feature of her foreign policy, this in no way precludes her from supplementing it by a policy of her own. It is maintained, for instance, that Yugoslavia has hinted to France that she would be in no way averse to a Franco-Yugoslav-Italian pact which would supplement her policy of pacification with her neighbours. And in this connection the great *rapprochement* with Bulgaria is by no means devoid of significance. Only last week, at a gathering of the Yugoslav-Bulgarian League, where a great number of influential people from both countries were present, a former Bulgarian Minister exclaimed: "Nevertheless shall there be war between our two brotherly nations," and this was acclaimed with the most tumultuous enthusiasm.

No less significant is the attitude of collective expectancy Yugoslavia has assumed towards Germany since the recent signs of a coming internal collapse. Popular rumour, in fact, has it that, just as at the beginning of 1933 the advent of Hitler strengthened authoritarian feeling in the country, now there may be a reversion towards a more liberal internal regime in Yugoslavia. Events, of course, will show how far popular feeling is correct.

The trade figures for April and May are of more than usual interest. They read:—

	Exports		Imports	
	Tons	Mill. dinars	Tons	Mill. dinars
April, 1934.....	260,000	263.2	67,800	282.6
April, 1933.....	205,000	225	50,700	208.4
Increase in 1934.....	55,000	37.8	17,100	74.2
May, 1934	263,000	257	103,800	327.7
May, 1933	257,000	244.2	64,000	237.8
Increase in 1934.....	6,000	12.8	39,800	8.9
In percentages.....	2.49%	3.13%	62.37%	37.80%
Jan.-May, 1934....	1,276,000	1,350.9	360,700	1,428.1
Jan.-May, 1933....	1,052,000	1,181.9	269,900	1,045.3
Increase in 1934....	223,000	168.9	90,800	382.8
In percentages	21.27%	14.29%	33.64%	36.62%

A RISE IN AGRICULTURAL PRICES

The obvious feature is, of course, the improvement both in the quantity and value of imports as well as of exports. But the deeper significance of the figures lies in the relation of the percentage value of the two, which should be read in conjunction with the index of prices.

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)
Annual Income : £5,600,000
Funds : £23,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

Hitherto, throughout the crisis, agricultural and export goods have been falling more rapidly in value than industrial and imported goods. This has meant not only that the peasant had to buy his requirements dearer and dearer as measured by the goods he had to offer, but also that his impoverishment was beginning to cut at the root of the deflationary policy initiated by the Government. Nor were there any signs of a reversal of this tendency till the beginning of this year, since when the index of prices read (1926 = 100):—

	Agricultural	Industrial	Total	Export Goods	Import Goods
December, 1933	52.7	68.4	62.3	59.2	73.5
March, 1934	54.4	69.2	63.3	58.1	71.8
June, 1934	64.8	68.5	65.6	60.5	70.7

Agricultural goods have thus not only begun to fetch more on the internal market since March, but, if we are to judge by May figures, when the rise in value was for the first time greater than the rise in quantity, they are also beginning to fetch more in external trade. This should indeed become of decisive importance should the complementary decline in the price of imported goods, which was very pronounced in May, also continue at least till a time when a balance between the value of imported and exported goods can be struck.

This rise in agricultural prices was, of course, brought about chiefly by the unsatisfactory harvest expectations. Thus, the 1934 harvest estimate is 19,800,000 metric cwts. of wheat, as against 26,350,000 in 1933 and an average harvest for the period 1924-33 of 21,500,000 metric cwts. But other forces have also contributed. Not least has been the Government's realisation that industrial "autarky" is impossible for such a small area as Yugoslavia, and that industry cannot benefit from protection and rising prices when there is no purchasing power among the real masses, i.e. the agricultural population. Already a declaration has been made by the Minister of Trade and Commerce that Yugoslavia is prepared to change her foreign trade policy and grant commercial privileges to importing as well as to exporting countries. This is supplemented by a more liberal policy in the granting of foreign currency for imports. Instead of trying to unfreeze all frozen dinars, the Government is using most of the money from export trade for import purposes.

Industry at home has also begun to benefit from the increased purchasing power of the peasant, as indicated by the rapid drop of unemployment from the peak figures in February of 29,000 to 11,700. Its profitability is however less, and for the moment industry is trying to make up for it by greater exploitation of labour, which in a number of cases has roused public indignation.

BELGRADE, July 24.

CANADA

UNFAVOURABLE CROP CONDITIONS

THE latest Crop Report of the Bureau of Statistics (published on July 11th) is not very optimistic, and declares that the condition of field crops changed very little in June. The rains in the first half of June came too late to help winter-sown grain and hay in Eastern Canada, but they revived pastures and gave a chance for spring-sown grain, roots and potatoes to produce average yields. The Report states that in the West the improvement in crop conditions was "not nearly as great as might have been expected from the generous June rainfall and moderate temperatures." The crops in the greater part of Alberta are quite promising, but in a large area of Manitoba and Saskatchewan they had been too badly damaged by early drought to make any real response to the improvement in weather conditions. Moreover, since July began there have been severe crop losses from hailstorms in the prairie country. The prospects of the crops in British Columbia declined slightly during June, but are still almost up to the average. Expressed numerically in percentages of the long-term average yields, the condition of field crops for all Canada on June 30th, as compared with May 31, 1934, and June 30, 1933, was reported as follows.

Fall wheat, 45 (45, 90); spring wheat, 82 (79, 77); all wheat, 82 (78, 77); oats, 87 (85, 84); barley, 84 (83, 84); fall rye, 57 (59, 74); spring rye, 80 (75, 73); all rye, 63 (63, 74); peas, 95 (91, 93); beans, 82 (—, 86); buckwheat, 94 (—, 92); mixed grains, 89 (89, 88); flaxseed, 78 (—, 69); corn for husking, 76 (—, 89); potatoes, 96 (—, 95); turnips, etc., 89 (—, 91); hay and clover, 82 (83, 88); alfalfa, 72 (66, 94); fodder corn, 87 (—, 89); sugar beets, 74 (—, 94); pasture, 86 (81, 89).

A SLIGHT SETBACK IN BUSINESS

There was a slight setback in business conditions at the end of June and the Bureau of Statistics' index of the physical volume of business for the week ending June 30th was 93.1, as compared with 93.9 for the previous week, while it was only 3 per cent. above the figure for the corresponding week of 1933. But for the first six months of this year this index has averaged 92.2, as compared with 77.4 in the first half of 1933. The last detailed indices cover May and, with the comparative data for April, 1934, and May, 1933, added, they are as follows:—

	May, 1933	April, 1934	May, 1934
Physical volume of business	76.4	92.6	99.6
Industrial production	72.7	91.4	99.9
Mineral production	110.8	160.2	146.3
Forestry production	75.7	94.2	103.6
Construction	15.1	28.9	35.1
Electric power	138.9	176.7	188.5
Distribution	86.7	96.0	98.5
Agricultural marketings	95.4	56.9	130.6

The car-loading figure for the fortnight ending July 6th at 91,081 cars showed a gain of 15,965 cars over the figure for the corresponding period of 1933; and the aggregate for the half-year at 1,094,453 cars showed a gain of 21.6 per cent. Bank clearings for the first half-year at \$7,507 millions showed a gain of 16 per cent. The weakest spot in the economic situation is the dearth of new construction, and building permits issued for May in 61 leading cities, although higher by 31.0 per cent. than the April figure and by 42.4 per cent. than the figure for May, 1933, were only valued at \$2,942,096, which is less than one-eighth of the total for May, 1930, the last boom year. The Government's programme of public works should in due course stimulate the construction industries, but it is unlikely to come into full operation until next spring. Meanwhile, factory industry is reasonably prosperous, and most plants have sufficient orders in hand. The output of pig iron for the first five months of 1934 was 120,521 long tons, compared with 35,353 tons in the same period of 1933; and for steel the corresponding figures were 353,509 and 88,862 long tons. The forestry and mining industries are steadily expanding their production and affording more employment, but the price of newsprint is still too low to yield adequate profits.

FOREIGN TRADE STILL INCREASING

The foreign trade returns for May were encouraging and with the comparative data for a year ago are as follows:—

	May, 1933	May, 1934
Imports	\$ 32,926,630	\$ 52,886,861
Exports	\$ 45,576,337	\$ 57,899,511

Commodity prices show a tendency to rise, and the Bureau's wholesale price index for June (base 1926 = 100) was 72.1, compared with 71.1 in May. As many as 112 quotations were higher, 78 lower, and 378 unchanged. The index for June, 1933, was 67.5; and for the first half of 1934 the average level of the monthly index has been roughly 10 per cent. above the figure for the same period of 1933. Retail prices have not experienced a parallel upward movement, the June index being 78.4, as compared with 78.7 for May and 77.0 for June, 1933.

Federal revenues continue to show encouraging advances. During the first five months of 1934 the combined yields of customs duties and excise taxes totalled \$61,499,507, as compared with \$47,399,160 in the same period of 1933. It is expected that the Government some time during the autumn will float a domestic loan of about \$500 millions, chiefly for the purpose of meeting obligations which mature in the near future.

OTTAWA, July 12.

MONEY AND BANKING

TRADE UNDER EXCHANGE CLEARINGS

(BY A CORRESPONDENT)

DURING the past twelve months responsible opinion in this country has travelled far on the road towards international trade by exchange clearing. This new idea has even become embodied in a number of trade agreements, and at the time of writing a delegation is discussing in Berlin its usefulness for liquidating the German debts due to British creditors. All this is hailed as progress, particularly by those who wish to replace the former "chaotic" conditions of international trade by a system in which goods will flow in well-ordered quantities planned wisely in advance by some omniscient board of experts. But what is new to England has been in existence on the Continent for some years past. Since 1930 an elaborate system of international clearing agreements has sprung up in Central Europe for the alleged purpose of liquidating international indebtedness and the promotion and regulation of inter-State trade. In this development Czechoslovakia and Hungary have played a prominent rôle, the former rather unwillingly as a creditor and exporting country which has seen the major part of its foreign balances blocked by exchange restrictions, and the latter as one of the leading debtor countries of Central Europe which has found itself unable to meet the demands of its foreign creditors. The reports covering 1933 just published by the central banks of these two countries afford an excellent insight into the operation of clearing agreements and their influence upon exports and the liquidation of international debts.

Hungary may best be considered first. She is still officially on the gold standard, but since 1931 she has suspended the complete transfer of her public and private foreign indebtedness. To-day 50 per cent. of the sums due on the League Loan coupons is being transferred, but all other external debts are met in pengös deposited with the Foreign Creditors Fund. Owing to the action taken by a number of Hungarian creditor countries and by the leading consumers of Hungarian products, clearing agreements were resorted to some time ago. These agreements have gradually been extended and tightened up, so that they now entirely control trade with Czechoslovakia, Austria, Italy, Germany, the Balkans and several other countries.

Under these agreements the foreign exporter of goods into Hungary is credited with pengös at varying rates, and under certain conditions he can use these pengös for the purchase of Hungarian goods. Some of the creditor countries are entitled to intercept a certain proportion of the sums paid in their currencies for Hungarian exports and to use these sums for the reduction of Hungarian indebtedness. In all other cases, the foreign creditor can only obtain repayment in the form of pengö credits, which can only be used as payment for Hungarian "additional exports." As a new stimulus to exports the Hungarian Government has also recognised the "black bourse" so that Hungarian exporters may sell part of their foreign currency receipts to importers at market rates instead of transferring them to the National Bank at the official rate.

Compared with 1932, exports for 1933 rose from P. 334 to P. 395 millions, while imports fell from P. 328 to P. 314 millions. The export surplus thus increased from P. 6 to P. 81 millions. The foreign currency receipts of the National Bank only amounted to P. 218 millions, or 55.1 per cent. of the total value of the exports. There was some increase in exchange allotments to importers, and the funds available at the Bank for debt services and other purposes decreased from P. 57 millions in 1932 to P. 54 millions a year later. Judging from the fact that "other liabilities" in the accounts of the National Bank—the item embodying the Foreign Creditors Fund—showed no change during 1933, it would appear that the rate at which new maturities were accruing kept pace with that of actual repayments.

It is difficult to assess the cost of these schemes to the foreign creditors, but some indication of the loss incurred by

them in financing exports of Hungarian produce is shown by the wide margin between the price of wheat in Budapest and Liverpool. The cost of the various export bounties and minimum price schemes to the Hungarian State is also unknown, but the National Bank was compelled to grant the Government a special credit of P. 100 millions for the financing of the Government Agricultural Debts Settlement Scheme.

The credits granted to the State under this scheme will not only add to the State's indebtedness to the Bank but will further affect the liquidity of the bills and securities held by the Bank. The foreign Creditors' Fund has re-lent nearly the total of its deposits to the State and its undertakings, and the acceptances of these undertakings and of institutions guaranteed by the State form a large part of the total bill circulation of the country. It must be assumed, therefore, that although no change has taken place in the total volume of bills held by the National Bank (apart from the P. 127 millions of bills returned to the National Bank by the B.I.S. under the Debt Settlement Scheme), their liquidity has still further decreased.

On the liabilities side public and private deposits have increased from P. 85 millions to P. 103 millions over the year, and there is a new liability of P. 119.7 millions on the cash certificates under the settlement with the B.I.S. There was also a rise in the note circulation from P. 329.9 millions to P. 368.6 millions. Against a fall in the metal reserves of more than P. 18 millions over the year, there has been a rise of more than P. 30 millions in the total volume of credits.

Let us compare the position of Czechoslovakia. To-day the country's external trade is largely covered by bi-lateral trade pacts and agreements under which foreign exporters of goods to Czechoslovakia are credited with Czechoslovakian crowns at the National Bank. This procedure has enabled the Bank to collect a greater part of foreign currency resulting from exports in 1933 than in 1932, but it has not prevented a fall in the Bank's gold and foreign currency holdings, despite the replacement of the passive 1932 trade balance of Kc. 139 millions by an active balance of Kc. 21.1 millions in 1933. To avoid excessive gold losses it was even necessary for the National Bank to take over privately-owned foreign balances and securities. This reduced by 20 per cent. the net foreign credit balance of the commercial banks. While the total volume of credit granted by the National Bank had been reduced by the end of 1933, there was some evidence of a loss of liquidity. In part this must be attributed to short-term financing by the Government to cover the deficit and its assistance to agriculture, to the bond market and to the commercial banks.

Superficially the Czechoslovakian position is much less desperate than that of Hungary. Statistics, however, do not tell the whole story, and during 1933 Czechoslovakia has adopted most of the measures for the regulation of production, agricultural prices and wages which have placed other countries on the road to destruction. As a richer country the effects of these measures upon the balance sheet of the National Bank and the Commercial Bank will not become apparent for some time.

In Czechoslovakia statistics are published showing the development of trade with countries enjoying stable currency, with countries under foreign exchange restrictions, and countries with depreciating currencies. Compared with the fall of 70 per cent. in imports from all sources since 1929 and in total exports of 71 per cent., imports from stable currency countries fell by 64 per cent. and exports to them by 55 per cent. Imports from depreciated currency countries declined by 61 per cent. and exports to them by 71 per cent. For the trade with countries under foreign exchange and other forms of trade restrictions, the figures are 72.5 per cent. and 78.7 per cent. Similar information is not available for Hungary, but the Hungarian National

Bank reports that of the nominal export surplus of P. 81 millions, P. 44 millions was derived from the clearing agreement with Austria and P. 35 millions were the result of exports against pengö; in other words, of special exports against blocked accounts or under some special licence.

To sum up, experience of these clearing arrangements shows that there is no room for the repayment of old debts out of the debtor's accumulated savings, and so far as repayments are being made they are only possible at a sacrifice to the creditor. No benefit accrues to the central bank from any increase in the country's export surplus, and there is no hope of any benefit in the future. It is implicit in the practical working of clearing agreements that the quotas which they contain must be allotted for certain commodities, and since these quotas are fixed by political bargaining they do not go to the highest bidder, but to those sections of the body economic which are considered politically most important. International trade by clearing deprives foreign trade of one of its most important functions, namely, the maintenance of the competitive standards of a country. The indirect subsidy granted to industries and agriculture under the clearing delays internal adjustment and therefore weakens the economic structure of the country. It is not argued that all clearing agreements must necessarily be administered in the same way as has been the case in Czechoslovakia and Hungary, but it is very difficult to believe that their fundamental effects will be different elsewhere.

FINANCIAL NOTES

The Money Market.—Heavy applications from special quarters drove the Treasury bill tender rate down from 15s. 0.15d. to 13s. 9.92d. per cent. last week, and the market in consequence largely missed the tender. This means that there were few bills to be paid for this week, and so the market was very well supplied with funds. Short money has been freely available at $\frac{1}{2}$ per cent., which is a lower "outside" rate than has obtained for a long time. It is not known who took last week's Treasury bills, but it may be some central bank of a sterling area country which has to keep part of its reserves in sterling. This would account for the lowness of the rate, for sterling assets held as part of a central bank's reserves are in a sense equivalent to gold and so the yield upon them is of comparatively minor importance.

Treasury bills :—				
(a) Clearing banks.....	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$
(b) Others.....	$\frac{11}{16}$	$\frac{11}{16}$	$\frac{11}{16}$	$\frac{11}{16}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

The discount market is very inactive. There were no hot Treasury bills available in the market, and so the "outside" rate has been nominal. Last week's Treasury bills were quoted at $\frac{11}{16}$ per cent., but holders are reluctant to sell. The clearing banks are quoting $\frac{7}{8}$ per cent. for October and November Treasury bills and $\frac{1}{2}$ per cent. for earlier dates. On Thursday afternoon it was expected that Friday's Treasury bills would go at a higher rate than in the previous week, but much depends on whether further special tenders are made.

The Bank Return.—Holiday withdrawals of currency by the public have now begun, and as a result the note circulation has expanded by £5.4 millions, while the reserve has fallen by the same amount. Largely for the same reason, bankers' deposits have contracted by £8.3 millions, but this last movement is also due to the slight

increase of £1.0 millions in public deposits and a decline of £2.3 millions in Government securities.

	Aug. 2, 1933	Dec. 27, 1933	July 18, 1934	July 25 Aug. 1, 1934	Aug. 1, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold.....	190.2	190.7	191.6	191.6	191.6
Note circulation.....	382.2	392.0	383.9	383.9	389.3
Banking Department :—					
Reserve	69.3	59.7	68.3	68.2	62.8
Public deposits.....	21.5	22.2	20.6	10.9	11.9
Bankers' deposits	89.5	101.2	96.9	104.8	96.5
Government securities ...	90.0	88.0	83.2	83.5	81.2
Discounts and advances	11.2	16.8	7.5	7.5	8.9
Proportion	42.0%	37.3%	44.5%	44.9%	43.2%

Compared with a year ago, the note circulation has increased by the very moderate amount of £7.1 millions, while bankers' deposits have risen by £7.0 millions. In interpreting this last movement it must be remembered that exactly a year ago public deposits had been swollen at the expense of bankers' deposits by the Ellerman Estate Duty payment. This makes it difficult to obtain a normal comparison this week.

The Foreign Exchanges.—This week a certain amount of bidding for dollars against sterling has been noticeable, offset early each morning by sales of dollars against American gold purchases in the London bullion market. Some of this bidding may represent commercial buying, but it is more likely to be due to American repatriation of European balances. In consequence the dollar rate has been very firm, and as the dollar is now back on gold and linked to the gold currencies, francs have become firmer as well. To counteract this last movement the British control has been a fairly consistent seller of francs, but as it never operates in dollars, the franc has tended to depreciate against the dollar—simply because the British control is holding the franc down while allowing the dollar to ride free. By Thursday afternoon the New York-Paris cross rate was up to Frs. 15.19 per dollar, or nearly to the point where it pays to ship gold from Paris to New York. Other gold currencies have been offered slightly against forward purchases of gold. The Italian lira remains weak and continues to receive official support in Paris. At one time it was impossible to deal in forward lire, and the three months' rate was as wide as $1\frac{1}{2}$ lire discount—equivalent to nearly 12 per cent. per annum. Registered marks weakened slightly to $34\frac{1}{2}$ per cent. discount, on Thursday afternoon. American selling remains in evidence.

New York Money and Banking.—Money remains very easy, and New York rates are unchanged. Brokers' loans were returned at \$1,008 millions on July 25th, against \$1,031 millions in the week before. The National City Bank points out in its latest review that bank reserves have mounted to new high levels, and that demand for accommodation remains restricted. Gold imports for June are returned at \$70.3 millions, making the total for the half-year \$852.4 millions. Exports are negligible. Silver imports for June were only \$5.4 millions, and imports \$2.4 millions. Gold continues to arrive in the country, imports for the week ended July 25th being \$8.8 millions, of which \$4.5 millions came from England. The price of silver has stiffened during the past week from $45\frac{1}{2}$ to $46\frac{1}{2}$ cents per ounce. It is announced from Ottawa that the Canadian Government has successfully negotiated with the Chase National Bank and an associated New York banking group a one-year loan of \$50 millions bearing interest at only 2 per cent. This is believed to be a record low rate for Canadian financing. The proceeds will be used to redeem 4 per cent. Treasury notes falling due in New York in October, and the saving in interest amounts to \$1,000,000. During June the number of depositors at American mutual savings banks rose to 13,687,000, or a new high record. During the first six months of this year deposits have risen from \$9,594 to \$9,720 millions.

THE STOCK EXCHANGE

IRON AND STEEL GROUPS

THE decision of the Government to make absolute the British iron and steel industry's tariff *decree nisi* has come opportunely for investors at a moment when the industry has been staging the most remarkable revival in profits of any "depressed" trade. In recent articles the *Economist* has discussed the efforts of the Government and the Import Duties Advisory Committee to induce a wider measure of co-ordination among the industry's various producing units. Investors have an intimate interest in this question; for the level of future profits and dividends will be directly affected by the success or failure of efforts to raise the industry's average efficiency, from within or from without. The main outlines of the plan of campaign which secured the Government's indefinite extension of the import duties were set out in the *Economist* of May 26, 1934 (page 1135). Not all shareholders in iron and steel companies, however, may have a clear perception of the point from which the industry's reorganising endeavours are starting. Though the tendency towards grouping within the iron and steel trades, since the war, has not produced any single amalgamation of interests with an output capacity approaching that of the largest concerns of America or Germany, the spur of endemic depression, from the post-Armistice period onwards, has expedited the formation of a number of important groups with a complexity of financial ramifications. Through the courtesy of an important Stock Exchange firm, whose researches have been carried out over a period of many years, we have been enabled to compile the chart and tables on the next page, which show the identity and inter-connections of the parent and subsidiary companies in ten of these groups which, our readers will observe, extend in some instances beyond iron and steel proper into steel-consuming trades like engineering and electrical equipment manufacture.

The largest and most complex grouping of interests is in large measure associated with the reorganisation of Vickers from 1926, and of Sir W. G. Armstrong Whitworth in 1929. Vickers is now a holding company, its counterpart on the "Armstrong" side being Armstrong Whitworth Securities. Cammell Laird, whose direct interests are now mainly in shipbuilding, has two connections with the group—through the pooling of its wagon interests with those of Vickers in the Metropolitan-Cammell Carriage in 1929, and the transfer of its Sheffield and Penistone steel businesses in the same year to the English Steel Corporation, which also took over the Sheffield and Openshaw steel undertakings of Vickers-Armstrongs. The latter company, formed in 1927, acquired the armament and shipbuilding interests of Vickers and Sir W. G. Armstrong Whitworth. The Vickers and Armstrong interests have another meeting point in the Lancashire Steel Corporation, formed in 1930, to take over the iron and steel interests of Pearson and Knowles, Partington Steel and Wigan Coal and Iron, and the entire share capital of Rylands Brothers. The Corporation's field extends from pig iron through a wide range of steel products to wire manufacture, with an interest in the coal industry through Wigan Coal Corporation. Finally, Vickers has an interest in Associated Electrical Industries, formerly Metropolitan-Vickers Electrical Company, which in 1928 entered into an agreement with the International General Electric Inc. for the purchase of a controlling interest in the British Thomson-Houston and two smaller companies. The result of the reorganising efforts within this ramified and powerful "federation," which have been carried out over the last six years with considerable skill and foresight, has been, broadly, to effect the simultaneous segregation and consolidation of interests on "functional" lines. There are few important products in which steel is used which do not come within the purview of some company in the "group."

The companies which, for convenience, we have designated Group B on the chart, are less a group than three separate major concerns with important working interests.

The United Steel Companies was a post-Armistice amalgamation of a number of North-East of England and Lincolnshire steel interests which now, incidentally, produce approximately one-sixth of the British output of steel ingots. The capital has been reorganised since 1929, and the conditions attending a recent offer of the company's shares to the public, under the auspices of a powerful group, were set out in the *Economist* of May 19th last (page 1094).

The history of Stewarts and Lloyds, specialists in tube manufacture, and the implications of the company's epoch-making decision to erect a new plant for the large-scale production of basic Bessemer steel at Corby, Northampton, have also been fully dealt with in these pages (*vide* especially the *Economist* of March 4, 1933, page 470). Stewarts and Lloyds has, on the one hand, a "liaison" agreement with Tube Investments, a large and prosperous Midland concern, and on the other a working agreement (made in 1932) with United Steel, providing for co-operation in the avoidance of uneconomic duplication of plant and in sales policy and research. Stewarts and Lloyds has a point of contact with Group F (see below) through Colvilles, to which the company transferred its steel plate business in Scotland and in export markets from January last, under terms which insured to Stewarts and Lloyds, for a period of years, a supply of plates from the Clydebridge Works at Colville.

The Oxfordshire Ironstone Company, jointly controlled by Stewarts and Lloyds and Baldwins, affords a meeting place between Groups B and C. The latter grouping has resulted from the decision, in 1930, to form a separate private company, British (Guest Keen Baldwins), to take over the blast furnaces, steel works, rolling mills, etc., of Baldwins and Guest Keen and Nettlefolds in South Wales.

Groups D and E are mainly localised on the North-East Coast. Dorman Long (whose position was considered in the *Economist* of April 1, 1933, page 696) all but succeeded, a few months ago, in effecting a much-desired amalgamation with the two leading companies of Group E (the "Furness" group)—namely, South Durham Steel and Cargo Fleet Iron. The negotiations, however, broke down on a legal question, and are in much the state of suspension of Mahomet's coffin pending the clarification of Dorman Long's financial position.

Group F, similarly, is localised, mainly in Scotland, though its interests extend (through Thomas Firth and John Brown) as far south as Lincolnshire, while the dominant controlling concern, Harland and Wolff, which controls David Colville and Sons (which in turn holds joint control, with James Dunlop, of Colvilles Limited), has its seat in Belfast. Though the products of this group range from coal to stainless steels, it is heavily interested on the shipbuilding side.

The remaining groups are all localised. In Group G, Richard Thomas, with works in Lincolnshire and South Wales, has a large iron and steel capacity, and specialises in tinplate and sheet bars, billets, black plates and castings. Whitehead Iron and Steel, under a working agreement, takes steel from Richard Thomas's Redbourne Works. A Whitehead strip mill is being transferred to Redbourne, and will be operated by a separate company owned jointly by the two concerns, under the title Whitehead Thomas Bar and Strip Company. Staveley and Sheepbridge (Group H) are prosperous concerns, interested mainly in the coal, iron and by-product trades. Sheffield Steel Products (Group I) is a post-Armistice amalgamation of manufacturers of files, drills, cutlery, electro-plate, stampings, iron-mongers' supplies, etc. Allied Ironfounders (Group K) is a 1929 merger of companies, situated in various parts of the country, producing cast-iron goods, mainly for use in the building trades.

Outside these groups are important companies like Stanton, Consett, Hadfields, and Pease and Partners. In a subsequent article, we propose to examine the investment prospects of the leading companies.

BRITISH IRON AND STEEL GROUPS

- GROUP "A"**
- Vickers Ltd., controls—
 - Vickers (Aviation).
 - Vickers (Crayford).
 - Robert Bobby.
 - Electric Holdings.
 - Airship Guarantee Co.
 - Cooke, Troughton and Simms.
 - Manufacturers' Estate and Assets Co.
 - Vickers Train Lighting.
 - Ioco Rubber and Waterproof.
 - British Separators.
 - Supermarine Aviation (Vickers).
 - Isle of Walney Estates.
 - Walney Housing Co.
 - Vickers Commercial Steel.
- GROUP "B"**
- Sir W. G. Armstrong Whitworth (Shipbuilders).
 - Sir W. G. Armstrong Whitworth (Ironfounders).
 - Armstrong Construction.
 - Craven Bros. (Manchester).
 - Pearson and Knowles Coal and Iron.
 - 50 per cent. of Armstrong Saurer Commercial Vehicles.
 - Vickers and Armstrong Whitworth own Vickers Ammunition Works.
 - Variable Speed Gear.
 - Vickers (Ireland).
 - Whitehead Torpedo.
 - Placencia de las Armas.
 - Internal Combustion Locomotives.
 - Cammell Laird and Vickers Armstrongs control—
 - English Steel Corp., which controls—
 - Taylor Bros.
 - Industrial Steels.
 - Darlington Forge.
 - also associated with John Brown (Group F) in
 - Carnforth Hematite Iron.
 - Armstrong Whitworth and Vickers Armstrongs—
 - per Securities Management Trust have large shareholding in—
 - Lancashire Steel Corp., which controls—
 - Wigan Coal Corp.
 - Wigan Coal and Iron.
 - Rylands Bros.
 - Pearson and Knowles.
 - Partington Steel and Iron.
 - U.K. Ferro-Manganese.
 - Whitcross Co. (Warrington).
 - Pearson and Knowles Engineering.
 - William Robertson.
 - Cammell Laird have interests in—
 - English Electric, which controls
 - Willans and Robinson and interests in English Electric Co. of Canada,
 - and recently a large foreign contract was taken by
 - Metropolitan Vickers, which is associated with
 - Dorman Long (Group "D") in—
 - Dorman Long and Associates, China.
- GROUP "C"**
- United Steel Companies, Ltd., controls—
 - Harrington Iron and Coal Co., Ltd.
 - Moss Day Haematite Iron and Steel Co., Ltd.
 - Sir W. G. Armstrong Whitworth (Engineers).

- Workington Iron and Steel Co., Ltd.
- Appleby Iron Co., Ltd.
- Alhambra Collieries, Ltd.
- Backermere Mining Co., Ltd.
- Bierley Mining Co., Ltd.
- Frodingham Iron and Steel Co., Ltd.
- Moresby Coal Co., Ltd.
- Samuel Fox and Co., Ltd.
- United Coke and Chemicals Co., Ltd.
- The Rothervale Collieries.
- Daniel Doncaster and Sons, Ltd.
- N. Lincolnshire Iron Co., Ltd.
- Riseholme Colliery Coking and By-Product Co., Ltd.
- Cumberland Storing Co., Ltd.
- United Steel Coys, India, Ltd.
- Steel Peach and Tozer, Ltd.
- United Strip and Bar Mills.
- Stockbridge Rly. Co.
- Stockbridge Gas Co.
- Stewarts and Lloyds and United Steel Coys., agreement for close co-operation, June, 1932.
- Barrow Haematite Steel Co., Ltd., controls—
- Barrow Housing Co., Ltd.
- Ulcoats Mining Co., Ltd.
- and are interested in—
- Barnsley Main Collieries.
- Barrow Haematite Steel Co., Ltd., and United Steel Co., Ltd., bought goodwill L.M.S. Rly. Steel Works at Crewe, in 1932. Large proportion of L.M.S. Rly's steel requirements to be rolled by these companies for ten years.
- Stewarts and Lloyds transferred their steel plate business in Scotland and in export markets of the world from January, 1934, to Colvilles, Ltd. (Group "F"). The agreement ensures to Stewarts and Lloyds for a period of years a supply of plates from the Clydebridge works of Colvilles, Ltd.
- Stewarts and Lloyds, Ltd., owns—
- Stewarts and Lloyds (Australia), Ltd.
- Edwardsdale Tube Co., Ltd.
- Lloyds Ironstone Co., Ltd.
- N. Lincolnshire Iron Co., Ltd.
- Prothero Steel Tube Co., Ltd.
- John Russell and Co., Ltd.
- Scottish Tube Co., Ltd.
- N.C. Metal Co., Ltd.
- Stewarts and Lloyds S. Africa, Ltd.
- Victaulic Co., Ltd.
- Ernest N. Wright, Ltd.
- New large Bessemer plant and tube works, etc., at Corby, under construction at cost of £3,000,000.

- GROUP "D"**

who take, by contrast, a rosy view of Wall Street's potentialities, bases his case on the inflationary factors which have dismayed other commentators. Mr L. L. B. Angas, in the latest of his major prophecies ("The Coming American Boom," St. Clements Press, 5s.), is convinced that *in hoc signo* President Roosevelt has conquered depression, and prepared the way for a boom of anything up to four years' duration. According to Mr Angas, "strictly scientific investment principles" demand the purchase of common stocks of a country in the early stages of inflation, which has begun its second year of revival with cheap money, unstrained bank reserves and a not over-valued exchange. The market, he declares, has reacted from its recent high level by a normal amount for a normal period, and the Government, having declared its intention of raising prices, has unlimited power to carry it out. British readers of Mr Angas's book will agree that there is a good deal of inflationary material to the American Government's hand, and that any widespread loss of internal confidence in America's currency might well be calculated to project a slump in bonds and a "flight" into commodities and common stocks. These, however, are troubled waters for British investors to fish.

Course of Share Values.—Last month saw industrial share prices in retreat, but the movement in London was a well-defended rearguard action, while in America a sullen if dogged retirement threatened to become disorderly towards the end of the month. The Standard Statistics price indices, last week, actually broke new low ground for the year, but the liquidation induced by the Austrian tragedy, though heavy, was not, happily, of long duration. London's downward trend of the past two months has been in the nature of a recoil from high prices rather than an expression of distrust in the outlook. The view, rightly or wrongly, has gained currency that the recovery in British industrial activity, having lost its first impetus, will henceforth proceed along more sedate lines, and there has been a certain closing of market commitments

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS.

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

before the holiday month. The American investor's attitude, in regard both to industrial and Stock Exchange possibilities, has been much more distrustful. As will be seen by our customary monthly chart, British industrial share values are still appreciably above the levels of a year ago, while the trend of the American index has been absolutely stationary, or even slightly downward, since the "Rooseveltian revival" was checked in July, 1933. Current views

on the American outlook are summarised in the preceding Note. Meanwhile, British Gilt-edged stocks have attracted fresh interest on the mild recession in equities, as the following extracts from the Actuaries' Index show:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year Ago (July 25, 1933)	Month Ago (June 26, 1934)	Present (July 31, 1934)	Year Ago (July 25, 1933)	Month Ago (June 26, 1934)	Present (July 31, 1934)
Fixed Interest						
British Government (2) ..	121.2	129.0	129.9	3.55	3.34	3.32
Miscellaneous Industries, debenture (12) ..	117.0	121.8	121.0	4.57	4.13	4.15
Miscellaneous Industries, preference (42) ..	105.3	115.1	113.6	4.75	4.44	4.48
Ordinary						
Banks and Discount Companies (12) ..	98.8	110.1	111.9	4.75	4.26	4.19
Building Materials (4) ..	68.8	82.4	80.1	3.87	4.10	4.21
Electric Light and Power (14) ..	120.6	127.3	129.3	4.21	3.92	3.85
Oil (5) ..	64.1	63.0	59.6	3.79	4.70	4.93
Electric Supplies (8) ..	100.0	91.9	93.6	4.75	4.60	4.52
Home Rails (4) ..	68.2	77.3	69.7	2.10	1.50	1.57
Breweries and Distilleries (16) ..	84.0	110.3	110.2	5.04	3.87	3.93

The total Actuaries' Index of 144 industrial equities now stands at 69.3, as compared with 70.8 a month ago and 67.0 a year ago, the corresponding yield figures being 3.76, 3.70 and 3.69 per cent. respectively.

* * *

Home Railway Earnings.—The interim dividend statements have induced further selling of home railway stocks, for although all the four main lines have shown increased net earnings, as compared with the first half of 1933, all but one (the Great Western) have refrained from declaring proportionate interim dividends. The insistence of all four statements on the wages factor suggests a common objective. The half-year's showing may thus be summarised:—

FIRST HALF 1934, COMPARED 1933

	(000's omitted)			
	London Midland and Scottish	London and North Eastern	Great Western	Southern
Increase in gross receipts...	1,900	1,840	631½	280
Increase in costs	900	1,154	261	190
Percentage of increased receipts taken by higher costs	47.4	62.7	44.0	67.9
Amount of increase due to wages and salaries	600	450	*	†
Increase in total net revenue	1,000	686	370	90
* Increased expenditure "largely due to employment of additional staff to provide for growth of traffic."				
† Increase "mainly due to increased payments for salaries and wages."				
‡ Including interest. Increase in railway and ancillary receipts was £593,000.				

The percentage increases in expenditure on the L.M.S. and Great Western reflect the normal incidence of direct costs on a higher traffic movement. The L.N.E., however, follows an accounting policy under which maintenance charges vary more closely than on the other lines with the volume of current traffic. Actually, some 78 per cent. of the half-year's total railway expenditure increase came under the heading of maintenance. The Southern's high percentage, however, requires some other explanation which the directors have not seen fit to give. As a large proportion of increased railway outgoings, under any category, necessarily take the form of higher wage payments to someone or other, the "wage and salary" figures are significant, not in themselves, but for the light they throw on the directors' conservatism in the distribution of interim dividends. The following table shows how dividends compare

with earnings, for the half-year, and the indicated earnings yields on the "marginal" stocks, at current prices:—

Stock	Earnings required for Full Half-Year's Payment (% actual)	Earnings First Half of 1934 (% actual)	Interim Dividend declared, First Half of 1934 (% actual)	Highest Price of Stock, 1934	Price, Aug. 1, 1934	Yield per annum on Half-Year's Earnings Basis
L.M.S.						£ s. d.
4% 1st Pref.	2	Full	1½	86½	78½	5 2 0

* Company paid 3% (from reserves, etc.) for 1932 and 1933.

There is a strong presumption that the railways, which have always disclaimed concern with intermediate fluctuations in market values, have (with the exception of the generous Great Western) postponed consideration of "marginal" dividend possibilities till the end of the year to avoid prejudicing their case, directly or indirectly, against the higher wage demands of the trade unions, with which we deal on page 217. From now onwards, gross railway receipts will afford comparison with increasingly favourable returns of 1933. When every allowance is made, however, for the probability of relatively small net revenue increases in the second half of the year, it would appear that the market is valuing the senior preference stocks of the L.M.S. and L.N.E. on a less generous price basis, in relation to earnings, than the junior stocks of any of the four lines.

* * *

London Transport Results.—The provisional statement for the first financial year of the London Passenger Transport Board, to June 30, 1934, shows an estimated balance of revenue of £4,778,782, of which, after meeting various items, including interest on "A," "T.F.A.," "L.A.," and "B" stocks, some £708,738 is available for a 3 per cent. dividend on the "C" stock. The provisional figures for 1933-34 compare as follows with the *pro forma* estimates compiled before the passing of the Act:—

	<i>Pro Forma</i> Figures	Provisional 1933-34 Figures
Issued Capital	£	£
"C" Stock	24,339,027	23,624,607
Other Stocks	87,031,030	85,743,204
Estimated Net Revenue	5,798,602	4,778,782
Of which, available for "C"	1,620,020	708,738

The 1933-34 balance is struck after making provision for contingencies, for any sums which may become payable to the main-line railways under the pooling scheme, and for any Transport stock which may subsequently be issued by the Board (e.g. to Thomas Tilling). Though the Board may have been prudently generous in estimating eventual liabilities under these heads, there is no suggestion that the final revenue figures, so far as they affect stockholders, will differ materially from those now presented, or that "C" holders have much hope of a further dividend on account of 1933-34.

* * *

Fixed Trust "Reserves."—In a leading article on page 71 of our issue of July 14th, we suggested that potential buyers of fixed trust sub-units should inquire whether any adequate "reserve" had been made, out of the initial loading charge, for the running expenses of the management company during the life (usually twenty

Deferred Assurances for Children with valuable options

The SPECIAL SCHEME of this Institution enables a parent or guardian to secure an attractive provision for the future of a Child at very low cost.

An Annual Premium of £10 secures for a child age 1 next birthday an Assurance of £1,596, to come into force at age 21.

Write for booklet entitled "The Children."

HEAD OFFICE - - - - - 6 St. Andrew Square, EDINBURGH

FUNDS EXCEED £23,500,000

years) of the trust. We are informed by the Municipal and General Securities Company, Limited, who are managers of the "British" group of fixed trusts, that they have actually made provision under which approximately one-third of the total loading charge (after deducting brokers' commission, trustees' fees, etc.) is set aside in "a kind of reserve fund." The provisions are contained, not in the respective trust deeds, but in letters written by the company to the trustees, Lloyds Bank, Limited. We quote, *in extenso*, the relevant provisions in regard to the First British Fixed Trust, which, we are informed, apply equally to the "Second," "Third" and "Fourth" British Trusts.

This letter will confirm our agreements with you in respect of the First British Fixed Trust as to the matters not covered in the Trust Deed, dated April 22, 1931.

Reserve for Managers' Compensation:

We further confirm that we shall set aside with you 1½ per cent. of the price before "Accumulations" received upon the sale of the Sub-Units of the Trust, to constitute a fund for the semi-annual payment to the managers for their continuing services during the life of the Trust. This fund shall be administered as follows:—

- (1) At the end of each six months' period (to correspond with the Coupon dates of the Sub-Units) you shall pay from such fund to the managers for the time being for compensation for their services during such six months an amount equal to the sum arrived at by dividing the total fund remaining in this deposit by the number of semi-annual periods, including the period in question, required to complete the twenty years' maximum life of the Trust.
- (2) Any interest allowed by you upon the money deposited in this fund shall be payable semi-annually to the Municipal and General Securities Company, Limited.
- (3) Should the Trust terminate before the entire fund is so paid by you, any balance remaining, beyond the current payment due the managers, shall be returned to the Municipal and General Securities Company, Limited.

The effect is that the managers receive, each half-year, one-fortieth of 1½ per cent. of the price received for the sale of sub-units before "accumulations," and cannot anticipate these payments. If all the fixed trust managements had made similar arrangements (which, unfortunately, does not appear to be the case), sub-unit holders would at least have the assurance that, if the managing companies ceased to function, for any reason, before the end of the trust's life, some regular payments would, nevertheless, be available for the protection of their position. Even, however, if this method were more widely adopted, questions regarding the size of the "reserve" would doubtless arise. The four "British" trusts together, for example, have about £6,000,000 at stake. 1½ per cent. of this sum comes out at £75,000. Thus the "reserve," available for payments to the managers and "protection" of the sub-units, during any given six-monthly period, is £1,875. In this case, however, a single company is managing a group of trusts. In the case of groups with only a single trust (and, possibly, a small sale of sub-units), it may be asked whether a reserve of only a few hundred pounds, available at any given moment, would suffice to cover more than inevitable clerical and office expenses.

* * *

Total Value of "Listed" Securities.—We show on page 232 a table, based on information officially compiled and published, some time ago, in the *Stock Exchange Weekly Official Intelligence*, which may be of service to economic

students desirous of knowing the total par value of securities dealt in on the London Stock Exchange. The compilation is not quite complete, since it is based only on the "Official List," and excludes those securities which are "Not Officially Quoted," and appear in the so-called "Supplementary List." In some instances, notably rubber and mining companies, these "unofficial" securities are important. On the whole, however, the figures give a reasonably comprehensive idea of the total nominal amount of capital at stake in the various markets:—

	As at December 31, 1933	No. of Different Securities	Nominal Amount Outstanding
British Funds, etc.	53	6,526,137,220	
Banks and Discount Companies	94	232,455,625	
Breweries and Distilleries	404	187,963,697	
Canals and Docks	28	31,783,449	
Commercial, Industrial, etc.	1,450	1,215,651,637	
Corporation and County Stocks—British	342	172,141,988	
Corporation Stocks—Dominion, Indian and Colonial	219	105,644,165	
Corporation Stocks—Foreign	83	81,669,057	
Dominion, Provincial and Colonial Government securities	194	908,076,147	
Electric Lighting and Power	198	189,117,651	
Financial Trusts, Land and Property	275	178,290,635	
Foreign Stocks, Bonds, etc.	298	2,868,527,656	
Gas	105	96,604,842	
Indian Native Raj and Zemindary Loans	3	736,700	
Insurance	66	32,607,166	
Investment Trusts	423	240,184,007	
Iron, Coal and Steel	232	369,978,054	
Mines	55	76,118,030	
Nitrate	17	17,836,289	
Oil	33	148,266,362	
Public Boards—British	64	258,498,759	
Railways—British	66	1,125,351,322	
Indian	49	137,503,149	
Dominion and Colonial	95	263,297,043	
American	249	1,418,921,305	
Foreign	267	845,340,718	
Rubber	93	34,206,043	
Shipping	76	101,064,962	
Tea and Coffee	91	24,863,783	
Telegraphs and Telephones	38	447,194,622	
Trade Facilities Acts—Securities	18	35,358,069	
Tramways and Omnibus	113	78,971,018	
Water Works	72	25,593,744	
Total	5,863	18,475,954,914	
Shares of no par value		43,717,752	

The totals have been very stable over the last two years. At the end of December, 1931, some 5,927 securities were quoted, to a nominal amount of £18,458,136,202, while at the end of 1932 the corresponding totals were 5,959 securities, aggregating £18,371,459,742. The figures are the resultant of a ceaseless process of addition and attrition. In 1931 permission to deal was granted in securities to a nominal value of £258,874,960, in 1932 to a total of £782,589,141, and in 1933 to a total of £811,449,873. In addition, dealings were allowed in shares of no par value to a total of 6,920,630 in 1931, 1,724,666 in 1932, and 3,709,080 in 1933.

Port of London Authority.—London dock activity maintains its position, despite the low level to which international trade has shrunk, largely owing to London's highly organised marketing organisation for primary commodities. The balance transferred to the net revenue account of the P.L.A. for the year to March 31st last, was £1,452,653, against £1,326,716, while total net revenue amounted to £1,516,092, compared with £1,437,486 for 1932-33. Interest on the Port stocks required £1,411,711, against £1,432,524, but during eight months of the current year the conversion of the £13 millions 4 per cent. "B" stock to a 3½ per cent. basis will be fully effective, resulting in a saving of some £43,200. Capital expenditure now amounts to £39,907,552, against which there is a net balance

on capital redemption account of £3,531,986. The Authority has a general reserve of £1,000,000, represented by Government and railway stocks at less than market prices, while the insurance fund amounts to £600,036. Pending publication of the full accounts, details of total revenue and operating expenditure are not available, but the Authority has balanced its income and expenditure to a nicety, the amount carried forward being £395,422, against £397,180. The new 3½ per cent. registered stock is quoted at 101 to yield £3 9s. per cent.

Indefinite Tea Control?—Tea company shareholders will read with mixed feelings the first report of the International Tea Committee, covering the nine months from July 1, 1933, to March 31, 1934. The industry's earning power has improved appreciably during this period, and share values are 50 per cent. higher, on the average, than they were twelve months ago. The Committee has already raised the industry's export quota for 1934-35 from 85 to 87½ per cent. of standard, but a recent speech by its Chairman, Mr R. Graham, at the annual meeting of the Indian Tea Association (London), seems to indicate the belief, surely somewhat premature, that the industry will be unable to discard its body belt even after 1938. If this is indeed the Committee's view, the stress laid, in the Report, on the advisability of restricting extensions of planted areas and of securing the adhesion of companies outside the scheme is readily comprehensible. In the twelve months ended March 31, 1933, countries within the present scheme exported 86 per cent. and outside countries 14 per cent. of total world tea exports of 959 million pounds, while in the year to March 31, 1934, the respective proportions were 82 and 18 per cent. of total gross exports of 797 million pounds. Experience of other restriction schemes suggests that the power of an initially small minority increases with the duration of the control. The Committee is on less debatable ground in prosecuting the examination of ways and means of increasing the world's tea consumption. A propaganda "drive" is to be made, for instance, in the principal countries of Continental Europe, in co-operation with Dutch tea producers. Tea consumption has fallen off less than that of most other primary commodities during the depression, the world's absorption figure, maintained in the neighbourhood of 900 million pounds from 1929 to 1931, having declined only to 855 millions and 865 millions respectively in the years ended March 31, 1933 and 1934. The Report shows, however, that Great Britain and the Empire accounted for at least 72 per cent. of the total world consumption in 1933-34. Most of the industry's problems would automatically disappear if the rest of the world could be persuaded to follow Great Anna's example.

American Oil Situation.—The earnings of American oil companies this year have reflected the general improvement in the economic conditions of the oil industry. The Shell Union, for example, has reported second quarter's earnings of \$47,876,496, against \$38,149,501 for the comparable period of 1933, and after expenses, depreciation, etc., the net loss is reduced from \$4,865,838 to \$897,592. Several companies resumed dividend payments in the first quarter of the year. The total dividends paid by twenty-four representative oil companies in that quarter came to \$14,200,000, against nearly \$9,900,000 in the first quarter of 1933. The Standard Oil of California was conspicuous in reducing, and the Pan-American in passing, its dividend. It may be said that selling prices are now on a remunerative level, especially on the Pacific Coast, where the trade has been "cartelised." No further improvement, however, can be expected until the excess production of crude oil has been eliminated. The present daily average production for the whole of the American oilfields is still 62,500 barrels above the "allowable" fixed by the Administrator of the Oil Code. With the exception of Texas all the important States are producing in excess of their "allowables." This is not so dangerous a factor in the oil situation now that consumption is steadily increasing. In the first six months of the year gasoline consumption increased by about 10 per cent.

The figures of the U.S. Bureau of Mines for the first five months (the latest available) are as follows:—

UNITED STATES MOTOR FUEL. UNITED STATES BUREAU OF MINES (Thousand barrels)			
	January-May 1933	1934	Per cent. Increase or Decrease
Supply:—			
Production	159,680	169,336	+ 6
Imports	5	1	—
Total	159,685	169,337	+ 6
Demand:—			
Domestic consumption	142,224	155,868	+ 9.6
Exports	12,233	11,135	— 9
Total	154,457	167,003	+ 8
Stocks (end of month)	59,033	61,628	+ 4.4
Increase	5,228	2,334	
Day's supply	58	56	

An increase in consumption is, after all, a more satisfactory solution of the American oil problem than the artificial restriction of supply.

COMPANY NOTES

Patent Medicine Companies.—In several important respects the business of patent medicine manufacture differs from that of patent food. In the majority of cases a patent food does not claim to be more than a proprietary brand of some standard product—say, salt, suet or gruel—differing from the standard product in excellence and refinement, but not otherwise. In times of depressed purchasing power, therefore, the patent foodstuff is liable to suffer from the substitution of cheaper qualities. The patent medicine, on the other hand, claims to be unique. The "substitution risk" is thus sensibly diminished. Moreover, as the popular patent medicine is usually sold in small units at a low price, it may continue to be bought even when money is short. A trusted remedy for a pain or disease is not easily foregone.

* Broken periods equated to 12 months by simple proportion.
† Preferred ordinary shares converted and consolidated into ordinary shares.
Note.—Beechams Pills controls Veno Drug and Yeast-Vite. The capitalisation of all three companies is "high-gear."

The patent medicine manufacturer, once he has established his product, thus enjoys some of the elements of a monopoly, particularly in the matter of prices. His medicine may be little different from one of the cheapest of standard salts or drugs. The very fact, however, that the product has been popularised under a trade mark enables its manufacturer to fix the price at "what the traffic will bear," without close reference to his cost of manufacture. The profits of patent medicine manufacture may therefore be large and should show resistance to depression. The figures in the table above confirm both these conclusions.

To achieve this comfortable position, however, the manufacturer must build up his custom by an expensive and skilful advertising system, and must have a product which fulfils at least the more general claims made for it. The purely quack remedy can have only a fleeting success at best. For some established medicines there is a seasonal risk to take into account; for example, a mild winter may bring fewer coughs and colds than usual. For others, there is a fashion risk. Where are the preparations of yesteryear for promoting a pleasing roundness of the human figure or a glossy luxuriance of the beard? It would appear reasonable to conclude that patent medicines offer a potentially profitable and, subject to the capital gearing, a fairly stable form of investment, provided that they minister to a general weakness or complaint and not to a passing fashion. On any sign of a declining trend in profits, however, not explicable by general depression, the shares should be avoided. Such a trend would indicate a diminution of goodwill, which is inestimably the most important and expensive of the assets of such a business. In any case, the investor labours under the disadvantage of lack of knowledge regarding amounts spent on advertising, the goodwill creator, which is usually the heaviest item of expenditure. Reduced advertising may mask a falling tendency in profits, at the risk of making the fall irrecoverable.

Further Rubber Reports.—We set out, in the following table, the results of nine rubber companies whose reports have been published in recent weeks. Restriction (in prospect) and further operating economies have increased or restored the profitable production of rubber, the apparent contraction in Chersonese profits being due primarily to difficult conditions in the copra market. Rubber directors, it will be seen, have not been ungenerous to their shareholders, for in only three cases have the dividend payments been fully earned:—

Company and Date Accounts	Rubber Crop	Estate or Trading Profit	Earned for Ordinary	Paid on Ordinary	Price per Share Aug. 1, 1934	Yield (%)

The plantation industry is evidently budgeting on favours to come from restriction during this current year, and the higher prices which prevailed before the restriction scheme was formulated. The impact of rubber restriction, which takes effect in successive cuts of 10 per cent. in basic quotas in August, October and December, promises to be fairly mild. World stocks of crude rubber have risen steadily, despite an improvement in world consumption,

during the first five months of the year, from 306.4 million tons to 412.7 million tons. Moreover, since immature areas receive preferential treatment, a further expansion of consumption could no doubt be cushioned by tapping of trees as they mature. The indications, therefore, favour no rapid rise in the price of the commodity under existing arrangements, but, as we suggested on July 14th (page 74) there is some possibility that Dutch interests will press for the achievement of a higher price when the present allotments fall due for revision. There is, however, no indication that responsible British interests are dissatisfied with a price about three times the cost on efficient estates, although plantation expenses will no doubt show some increase as a result both of restriction and of restored profitability. Current quotations show that the market is exercising considerable discrimination, although conditions during the second half of the year will probably afford little justification for any considerable further rise.

Electrical Equipment Shares.—The market, having noted the cautious optimism of recent chairmen's speeches, has given leading equipment shares more attention during the past six weeks. The recent announcement that the Electricity Commissioners have approved contracts worth £5,000,000 for extension of selected stations follows a steady improvement in home orders for heavy equipment which set in from March. Reference to the B.E.A.M.A. index of new orders (see the July 28th *Economist* Monthly Trade Supplement, page 2) reveals that export business has been very satisfactory during the last seven months. Associated Electrical Industries, Ltd., has been awarded a £3,000,000 contract for electrification of Central Brazilian Railway, and has recently announced an increase of 65 per cent. in orders received at the end of June, compared with the first six months of 1933, export orders being 77 per cent. and home orders 43 per cent. higher than last year. This improvement is impressive, but from the investor's viewpoint it is subject to two qualifications. First, profits in the "heavy" section, particularly on home "grid" orders, have often been restricted by intense competition for contracts, although the conversations between leading manufacturers may alleviate this factor in the future. Secondly, the construction of large equipment requires from twelve to eighteen months, so that current orders will be mainly reflected in 1935-36 revenues. On the small equipment and accessories side the outlook is somewhat more promising. Units generated by authorised undertakers during the first half of the year showed an increase of 17.5 per cent. over the corresponding period of 1933. Normal growth has been assisted by the building boom, although intense competition still prevails in the very individualistic accessories branch. Where installations have been carried out by local supply undertakings, however, centralised purchasing by the parent groups has resulted in improved standards, which has been of benefit to the leading manufacturers. Moreover, there are signs that the "ring" lamp manufacturers are regaining a considerable proportion of their sales on considerations of quality. We show in the following table the record of earnings and share quotations for some leading producers:—

Company (and Date of Accounts)	Earnings for Ordinary (%)		Quotations			Yield, based on Last Dividend (%)
	Previous Year	Latest Year	High., 1934	Low., 1934	July 25, 1934	
Aron Electricity Meter (11)	30.3	26.8	58½	50½	52½	£ s. d. 3 16 2
Associated Electrical Ind. (11) (Dec. 31)	4.1	3.0	22½	15½	18½	3 4 9
high insulated Cables (11) (Dec. 31)	25.5	19.8	75½	67½	70½	4 4 9
modular Cable (11) (Dec. 31)	15.1	15.1	65½	56½	63½	4 14 0
account Parkinson (5/-)	36.6	34.9	27½	22½	25½	2 9 0½
£1,452,650 (11) (Dec. 31)	Nil	Nil	9½	5½	5½	Nil
1932-33. Ir (11) (Mar. 31)	16.2	13.9	46½	39½	45½	3 10 0
against £1,432 (11)	28.1	31.0	6½	5½	6½	4 18 0
year the convey (11)	3.6	6.6	24½	18½	22½	4 8 11
stock to a 3½ per cent.	7.0	3.9	22½	16½	17½	4 11 6
in a saving of 50						
amounts to £39,907, including capital bonus of 5 per cent.						

In view of the excess capacity which undoubtedly exists in the industry, and of the difficulty of eliminating "weak sellers" the level of quotations appears sufficiently high. Secondary "grid" transmission systems, wiring installations, and telephone equipment business should enable the shares of efficient producers to earn their keep, but a pronounced upswing in profits is not yet assured.

Guinness and Watney.—The reports of important brewery concerns, whose accounts are made up to June 30th last, reflect the benefits which the industry continues to derive from reduced taxation, increased beer strengths, greater national trade activity, enhanced spending power, and prolonged dry weather. The report of Arthur Guinness shows that the company has covered, with an ample margin, a 27 per cent. ordinary dividend, which, a year ago, was short-earned. Watney, Combe, Reid, the London brewers, disclose a net profit increase of £169,926 which, by reason of the company's high-grade capital structure, is sufficient to raise earnings on the deferred stock from under 22½ per cent. to over 28 per cent., and to enable a board, whose financial prudence is proverbial, to recommend an increase in dividends from 10 per cent. to 13 per cent. The results of the two companies are summarised below.

Years to June 30	1932	1933	1934
ARTHUR GUINNESS:—			
Net profit	1,605,979	1,468,903	1,745,174
Preference dividend (net)	89,906	90,000	91,500
Ordinary { Earned (net)	1,516,073	1,378,903	1,653,674
Paid (net)	1,629,844	1,518,750	1,548,750
Earned (%) (gross)	27.0	24.5	23.4
Paid (%) (gross)	29	27	27
Total carried forward	846,647	706,800	811,724
WATNEY, COMBE, REID:—			
Net Profit	1,204,961	1,098,076	1,268,002
Debiture interest	276,985	272,702	268,136
5% Preference dividend	84,247	84,247	84,247
4% Prefd. ord. dividend	127,416	127,416	127,416
Deferred { Earned	716,313	613,712	788,203
Paid	477,812	318,541	414,103
Earned (%)	25.0	22.4	28.1
Paid (%)	15	10	13
To reserve	300,000	300,000	350,000
Total carried forward	282,380	277,551	301,651

The trading profit of Arthur Guinness, after taxation, is £1,701,131, against £1,389,712 for 1933. Income from investments, however, continues to fall, having declined from £246,129 for 1932 to £232,567 for 1933 and £197,674 for 1934. The balance sheet position, as always, is a model of strength. The company holds marketable investments (mainly gilt-edged), valued below market price at £4,643,569, and cash to a total of £1,895,229, the excess of current assets (including stock-in-trade) over liabilities being no less than £7,165,575. The ordinary stock units, which are still slightly under the Irish political weather, are quoted at 111s., to yield 5 per cent. The trading profits of Watney have risen from £1,680,404 to £1,901,071. The company holds £1,661,089 of British Government securities, with a market value of £1,730,622. The market has not been slow to point out that earnings would have covered a higher rather than a lower dividend than was paid for 1932, and the board's decision to retain enhanced liquid resources will doubtless be explained at the meeting. The deferred ordinary stock units are quoted at £3, to yield £4 8s. 6d. per cent.

Other Company Results.—The approach of the close season for company balance-sheet publication is reflected in the shortness of the list of companies whose results are given in our "Summary of Company Profit and Loss Accounts" on page 252. Of the 25 companies, the most important are, the brewing concerns of Guinness and Watney, whose figures are discussed in the preceding Note. Five rubber

companies show aggregate profits of £12,059, against a loss of £5,669 in the previous year. Among textile concerns, Fras. Hinde and Hardy, the Norwich silk manufacturers, report a gratifying rise in net earnings from £17,360 to £30,478. Trust company earnings still have a downward trend. Edinburgh and Dundee Investment, for example, show net profits after debenture interest for the year to June 30th last, of £43,239, against £53,296 for the previous year, and pay only 6 per cent. against 8 per cent. Among miscellaneous companies, the results of Benn Brothers are almost identical with those of last year. The earnings trend of companies in other industries, from coal mining to the gramophone trade, shows only a very slight upward tendency.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Union Bank of Australia, Gold Options Syndicate, Gold Fields Rhodesian Development, Craigielea Rubber Plantations, Kalidjereok Rubber, Millars' Timber and Trading, Threlfall's Brewery, and Covent Garden Properties. The chairman of the Union Bank of Australia described the substantial improvement in Australia's economic position during the past year, but declared that the heavy discount in the currency, and that of New Zealand, continued to make exchange business difficult. The tone of the chairman's speech of the Gold Options Syndicate, naturally, was confident. The company's interests were enumerated and an increase of capital was announced, with a suggestion that the company might later apply for permission to deal on the Stock Exchange. The chairman of Gold Fields Rhodesian Development showed that the company's gold interests represented nearly 45 per cent. and its industrial share interests about 11 per cent. of its total assets. At the Craigielea Rubber Plantations meeting, the chairman described the results of a personal visit to the properties as entirely satisfactory, and declared that the company was looking forward with confidence to a remunerative return on its capital. The chairman of Kalidjereok Rubber, similarly, described prospects as materially better and estate conditions as favourable. At the Millars' Timber meeting, Dr James White expressed a hope that by the end of the year, when the company's profit was known, the directors would be able to frame a scheme of capital readjustment. Major C. M. Threlfall informed shareholders of Threlfall's Brewery that a steady and reassuring increase in sales was continuing, and the company had obtained its share of increased business. At the Covent Garden Properties meeting, the chairman declared that the fall in income from rents was largely attributable to temporary factors.

revival. India loans followed a similar course, but Dominion issues as a whole were steadier. Although underwriters of the New Zealand 3½ per Cent. Loan, 1955-60, were relieved of their commitments, the scrip opened at a discount.

Among foreign bonds, German continued their downward course, broken by a modest upward reaction on Thursday. The market generally professed inability to foretell the political implications of Hindenburg's death, though the assumption of the dual office, with control of the Reichswehr, by Hitler, was regarded as strengthening the stability of the Nazi regime. Brazilian bonds improved after a dull start, but Argentine stocks lost ground on the fall in the exchange. Chinese bonds were out of favour, but Japanese obtained moderate support.

After renewed heavy selling, home rails took an upward turn in mid-week for no better reason than a change of "sentiment." The week's traffic "pluses," which were appreciable on the L.M.S., satisfactory on the L.N.E.R., and negligible on the other two lines, were merely on all fours with the averages for earlier weeks since the turn of the half-year. London Transport "C" stock improved slightly before the announcement of a provisional dividend of 3 per cent., but the market looked in vain for evidence of a further dividend after future "adjustments." A slightly harder tendency in Argentine rails derived little encouragement from the week's traffic figures, which showed that improved peso takings were being more than nullified by the lower exchange rate.

Although the industrial markets shared in the better mid-week feeling, business generally remained quiet and irregular. The brewery dividends aroused, possibly, less enthusiasm than they deserved, for leading companies like Guinness and Watney (whose reports are considered on page 234), showed a marked increase in earning power. Transatlantic counters were undecided at first, but subsequently responded to more encouraging news from Wall Street. Iron and steel shares were steady, Staveley being in fair demand. In the motor group, Humber were firmer and Ford advanced on Wednesday, but other shares were easier. Rayon shares, after a dull start, showed fair strength under the lead of American Celanese. Patons and

THE WEEK IN THE MARKETS

ACCOUNT
August 16

THE markets, reversing last week's procedure, opened dull and became firmer with the progress of the week. Pre-holiday quietude was accentuated, initially, by the pessimism of Mr Baldwin's international political survey, on Monday, and by the news of President Hindenburg's grave condition, on Tuesday. Next day, however, with a characteristically swift change of mood (usually attributable to technical conditions), the market decided that the downward tendency in prices had been somewhat overdone. Without any marked increase in the volume of business, quotations became firmer for gilt-edged, international counters and gold shares.

British Government securities lost ground early in the week on a moderate amount of selling. The market, recently, has shown temporary sensitivity to all unfavourable political developments, combined with strong recuperative powers once the pressure has subsided. In the middle of the week Old Consols and Local Loans led a

of
Shell

Baldwins showed a recovery tendency and Woolcombers were firmer on the interim dividend announcement. J. and P. Coats, however, tended to lose further ground, and textile shares as a whole had an undecided appearance. The leading tobacco shares came back into partial favour, after a long period of neglect. Little interest was taken, however, in departmental store shares. The maintenance of interim dividends failed to stimulate buying in electric supply issues, and the firmer tendency of electrical equipment shares was checked. Bank shares showed little change, but insurance shares obtained slight investment support.

Speculative interest in oil shares showed no signs of revival. Paris and Amsterdam were sellers and New York gave no consistent support. Shell, exceptionally, benefited from a small London demand, but Royal Dutch were on offer from the Continent. Although the price of rubber had a harder tendency, early indications of a slight revival in demand for the shares were not borne out. The tone of the tea share market was less settled, though the stronger demand for Ceylon teas in Mincing Lane brought in buyers in the middle of the week.

The gold-mining market, as always, mirrored every change in general market sentiment. Opening dullish on Monday, prices became firm, on a sizeable speculative interest, on Wednesday and Thursday. Johannesburg started a search for "cheap" Kaffirs. West African shares recovered after a spell of weakness, and Western Australian shares were firm. The tin share market, however, remained depressed, fears being entertained of a fall in the price of the metal after the completion of "buffer pool" buying. Rhodesian copper shares were quiet and irregular.

FOREIGN STOCK EXCHANGES

NEW YORK

HEAVY selling in the latter part of last week, on the news from Austria, suggested that the stagnant and restricted trading of previous weeks had been underlain by a serious absence of confidence. The disappearance of the "war scare" headlines of the newspapers, however, came quickly enough to prevent a slump on the grand scale, and the markets settled down into their former condition of unenterprising quietude. Prices, indeed, began slowly to regain some of their lost ground, and by the middle of the week the tone was definitely stronger. Domestic news, from

various points, contributed to the improved tendency. Grain prices continued to advance. The significance of a slight drop in freight car loadings and in steel activity was discounted, while importance was attached to an increase in power output as compared with last year. A relatively satisfactory second quarter's statement by the U.S. Steel Corporation proved as encouraging to the markets as the General Motors figures had been discouraging, though some commentators were apt to overlook the effect of fears of labour troubles in expediting steel orders during part of the period. Food company shares were prominent in the recovery in view of the higher prices these companies were expected to realise as a result of the drought. Bonds returned to partial favour, after several days of steady recession. On the whole, however, the markets, with the rest of the country, are awaiting the return of the President, who may or may not give the "new lead" desired by a country whose faith in the virtue of bold expedients is ineradicable, but is certainly the one man capable of giving it.

* Two-hour Session.

PARIS

The markets opened irregular on Monday, and relapsed into general heaviness, mainly as a result of month-end liquidation. The undertone was not unsatisfactory, fears of European political complications having quickly subsided, but speculative interest was almost non-existent. Government stocks lost ground, and bank shares were easier, with short-lived rallies. Industrial shares attracted little atten-

tion, Thomson-Houston, in particular, showing weakness on Wednesday. Gold-mining shares, however, were in slightly increased demand in the middle of the week.

BERLIN

The share market suffered a sharp general reaction last week, falls of 4 to 6 points occurring among the higher-priced issues on the day after the Vienna outbreak. The week-end, however, witnessed a moderate recovery. Dealing in the "cash" stocks, which, early in the week had reached the highest volume of the year, fell off heavily. The heaviest losses were recorded in engineering shares, but potash, electrical and heavy industrial issues also lost considerable ground. This week opened with an undecided tendency, and on Tuesday the news of the President's illness caused a further decline. Expectations of devaluation of the reichsmark led to heavy buying of foreign currency securities, some of which were quoted as much as 100 per cent. over the equivalent prices in the countries of issue. On Wednesday the opening was firmer, but subsequent changes were again, for the most part, adverse.

AMSTERDAM

The Bourse opened weak, became slightly firmer, and relapsed again into dullness. The leading industrial shares remained out of favour, Philips Lamps in particular being offered, though Unilever were fairly steady. Royal Dutch dropped 3 points on Monday. Rubber shares improved slightly after a weak start. The news regarding President Hindenburg imposed a significant check on business. Almost the only section which showed any strength was the bond market, where quotations consistently improved.

	July 25, 1934	July 30, 1934	Aug. 1, 1934		July 25, 1934	July 30, 1934	Aug. 1, 1934

CAPITAL ISSUES

THOUGH a large number of borrowers have hastened to cover their requirements before the holiday season, the market's attitude has been slightly uncertain and irregular. New mining propositions appear to retain their speculative appeal, but issues of relatively high-grade stocks may be little less easy to place than a week or two ago. The most notable of the week's operations has been the offer of 3 per cent. stock to holders of 4 1/2 per cent. guaranteed debenture stock in *North Wales Power Company*. This is the first "Trade Facilities" stock to be converted under the terms outlined by the Chancellor in this year's Budget. The new stock has a "life" broadly corresponding to that of 3 per cent. Conversion Loan. Industrial issues to the public include the redeemable preference shares of *Ideal Boilers and Radiators*, which acquires an old-established business in the recovery stage after a somewhat marked setback during the depression. The preference shares are well covered, but the company's power to repay them at 23s., after 1940, may prevent any considerable future rise in their market quotation. *Allansons Stores* is a Birkenhead business, with fairly steady profits, but the margin for the preference shares is not generous, the company's capitalisation having taken the form of high denominational preference and low denominational ordinary shares. The *Mayfair and General Property Trust* prospectus sets a good example

by showing net revenue separately for each group of properties to be charged for the issue of first mortgage debenture stock. The profits of the company, however, have been falling somewhat rapidly in the last three years. Of the week's mining propositions, *Gold Exploration and Finance Company of Australia* is formed under most eminent auspices, and should be in a position to exploit all the opportunities Western Australia may offer. *Watende Mines (Kenya), Limited*, takes over a producing mine, and numerous claims, regarding some of which "individual assays would be misleading as visible gold is frequent." These shares will appeal to a specialist clientèle. *Marlu Gold Mining Areas* is an offshoot of three West African companies, which acquires concessions on the Prestea reef. The company's prospects should be read in the light of our article on "Gold in West Africa," in last week's *Economist*. Particulars of another speculative African gold issue, *Kassala (Sudan) Gold Mines*, have also been advertised for public information. The week's "placings" also include issues by a confectionery business, a South African colliery company, a multiple shop enterprise, and the cotton spinning concern, John Bright and Brothers. *Nestlé and Anglo-Swiss Condensed Milk Company* has

(Continued on page 240)

This is not an invitation to subscribe for the shares but is advertised for public information.

Application will be made in due course to the Committee of the Stock Exchange, London, for permission to deal in the Shares of the Company.

MARLU GOLD MINING AREAS LTD.

CAPITAL - - - - - £2,000,000
Divided into 8,000,000 Shares of 5/- each.

Offer for Subscription at par of 2,000,000 Shares of 5/- each.

As of right to Shareholders of :—	
Gold Coast Selection Trust Ltd. ...	1,600,000 Shares
Tarkwa Banket West Ltd. ...	200,000 "
Kwahu Mining Company (1925) Ltd. ...	200,000 "
	2,000,000 Shares

Applications must be received by the Bankers not later than Monday, the 13th August, 1934.

The Subscribers will be granted an Option available to the 31st July, 1936, to take up at 6/- per Share One further Share for every Four Shares allotted to them, and Option Certificates to Bearer in respect of such right will be issued after Allotment.

The Subscription of the whole of the 2,000,000 shares now offered has been underwritten in consideration of an option up to 31st July, 1936, to subscribe at 6/- per share for 1,500,000 shares of the Company.

4,000,000 shares of 5/- each will be allotted, credited as fully paid, to the Vendors to the Company, in full satisfaction of the purchase consideration.

CONSULTING ENGINEERS.

WEST AFRICAN GOLD CORPORATION LTD., 49, Moorgate, London, E.C.2.

SECRETARY AND REGISTERED OFFICE.

JOHN WILLIAM PRICE, Finsbury Pavement House, Moorgate, London, E.C.2.

The Company was incorporated for the purpose of acquiring from Gold Coast Selection Trust, Ltd. and Tarkwa Banket West, Ltd. and Kwahu Mining Co. (1925), Ltd., the undermentioned Gold Mining Concessions situated on the Prestea-Ashanti line of reef in the Gold Coast Colony, West Africa, together with certain equipment, plant and buildings.

The four Concessions which will be held under recently granted 99-year leases are as follows :—New Bogosu, 2,980 acres; New Assekukessi, 1,918; Boppo No. 1, 826.5; Boppo No. 2, 826.5. Total, 6,551 acres.

The Concessions comprise areas formerly known as Bogosu, Dumassie, Mansabaie and Bogosu North, now renamed New Bogosu, and Assekukessi, North, and South and Kukrokuro North and South, now renamed New Assekukessi together with Boppo No. 1 and Boppo No. 2 and embrace a length of approximately 6 1/2 miles of the Prestea-Ashanti Gold belt. The centre of the properties is roughly 10 miles north-east of Prestea station.

The areas have been selected by the Technical Staff of Gold Coast Selection Trust Limited, after an intensive examination which included topographic and geologic surveys, surface prospecting and underground development.

The properties have been favourably reported upon by Messrs. C. B. Brodigan, A.R.S.M., M.Inst.M.M., and R. A. Barry, Joint Consulting Engineers to West African Gold Corp. Ltd., and Major D. Gilchrist, M.C., M.Sc., and Mr. F. L. Thomas, General Manager and Assistant General Manager respectively of Gold Coast Selection Trust Ltd.

Note—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

PUBLIC OFFERS

Gold Exploration and Finance Company of Australia, Ltd.—Issue of 1,800,000 shares of 10s. each at par. Formed to acquire holdings, loans and options in the Australian gold-mining companies from Austral Trust, Central Mining, Imperial Smelting, New Consolidated Goldfields, Union Corporation and Zinc Corporation. Interests acquired are prospecting and developing companies in established fields, except for Western Mining, which is exploring an area of 85,000 square miles in Western Australia. Purchase consideration £375,000 in cash, vendors subscribing for 900,000 shares of above issue, of which further 200,000 will be offered preferentially; working capital, £525,000.

Ideal Boilers and Radiators, Ltd.—Issue of 750,000 5 per cent. redeemable £1 cumulative preference shares at 20s. 6d. Company acquires assets (with certain exceptions) of National Radiator Company, manufacturers of Ideal boilers, radiators, etc. Proceeds will repay bank advances and extend business. Profits shown for 10½ years separately, ranging between £313,171 for 1929 and £157,329 for 1932. For the half-year ended June 30, 1934, £115,358. Total net assets, £1,412,452. Purchase price, £970,000, satisfied by £21,000 cash, 250,000 preference shares, and 699,000 ordinary shares. Goodwill in purchase consideration, £257,548.

Allansons Stores, Ltd.—Acquires (from July 1, 1934) general drapery store business in Birkenhead, founded 1860. Issue at par of 50,000 £1 6 per cent. cumulative redeemable preference shares and 120,000 5s. ordinary shares, preference being redeemable at 22s. 6d. per share at company's option. Profits shown for six years, maximum £13,371 for 1928-29, latest £11,323 for 1933-34. Net assets acquired (exclusive of goodwill), £76,700. Purchase price £90,000 in cash, of which £13,300 attributable to goodwill.

Mayfair and General Property Trust, Ltd.—Issue of £200,000 5 per cent. first mortgage debenture stock at par, with final redemption August, 1969, to repay £86,774 mortgages, and make advance to redeem £78,420 debenture stock and £15,000

mortgage on the Duchess Property Company. Holders of 6½ per cent. Duchess Property debenture stock offered exchange into £104 new debenture or £100 new and £4 cash for every £100. Net value of properties, £426,567. Profits: 1930-31, £30,346; 1931-32, £26,008; 1932-33, £19,691.

Watende Mines (Kenya), Ltd.—Issue of 460,000 shares of 5s. each at par. Property situated in South Kavirondo area of Kenya Colony. During four months to March 31, 1934, output of Kihancha Mine was 912 ounces of fine gold from roughly 500 tons of ore. Preliminary expenses estimated at £10,000 and payable by company. Purchase consideration, payable to British East African Mining Syndicate, 440,000 fully paid 5s. shares.

BY STOCK EXCHANGE INTRODUCTION

Austin Reed, Ltd.—Issue of 200,000 5 per cent. "A" cumulative redeemable preference shares £1 each ranking after existing 8 per cent. cumulative preference shares. Redeemable at 22s. after August 30, 1944. Messrs. W. A. Simpson and Company have agreed to subscribe for whole issue at 20s. 4½d. per share, for broker's fee of 500 guineas.

Kassala (Sudan) Gold Mines, Ltd.—Share capital £50,000 in 2s. shares, of which 100,000 issued at 2s. 6d. cash, 300,000 credited as fully paid for purchase consideration and 100,000 held in reserve. Properties situated in Sudan. Purchase price for all properties (including plant, machinery and equipment) £30,000, no portion in cash. Preliminary expenses estimated at £1,500.

Marlu Gold Mining Areas, Ltd.—Offer at par of 2,000,000 5s. shares to shareholders of Gold Coast Selection Trust, Tarkwa Banket West and Kwahu Mining (1925), from which company acquires gold-mining concessions. Subscribers given option, to July 31, 1936, to take up, at 6s., one further share for every four allotted. Purchase price payable to vendors is £1,000,000, to be satisfied by the allotment of shares in the capital of the company. Preliminary expenses estimated at £20,000.

Springfield Collieries, Ltd.—Issue at par of £160,000 5 per cent. first mortgage debentures of £100. Principal and interest guaranteed by African and European Investment Company. Repayable August 1, 1970, with company's right to redeem on August 1, 1942, or after at 103. Incorporated March 12, 1934, in South Africa. Preliminary expenses estimated at £900. Messrs. E. S. Marcus and Company, of 5 and 6 Great Winchester Street, London, have agreed to purchase whole present issue at par, less cash commission of £2,000.

ISSUES TO SHAREHOLDERS ONLY

Van Dyk Proprietary Mines, Ltd.—With regard to the right of shareholders to subscribe for one 10s. share at par in the new company for each share held by them in this company, owing to unavoidable delay, the issue must be further postponed. It will be impossible to adhere to the date for closing the offer, viz., July 31st. Shareholders registered on July 7th will be notified in due course of the dates during which the offer will remain open.

PRIVATE PLACING

Caley (A. J.) and Son, Ltd.—Issue at par of 150,000 5 per cent. cumulative preference shares £1 unconditionally guaranteed for capital and dividend by John Mackintosh and Sons, Ltd. Incorporated 1898 and carries on chocolate and confectionery business. Proceeds of present issue will repay bank advances, with interest, of £135,000. Net profits of John Mackintosh, Ltd., shown for ten years, between £130,295 for 1923-24, and £12,426 for 1926-27, to £79,122 for 1932-33. John Mackintosh net assets, £522,733. Results of A. J. Caley for past three years: 1931-32 (loss), £20,290; 1932-33 (loss), £105,438; 1933-34 (profit), £14,972.

CONVERSIONS AND REPAYMENTS

North Wales Power Company, Ltd.—Offer of £1,468,100 £3 per cent. guaranteed debenture stock, 1946-1953, in exchange for holdings of North Wales Power Company, Ltd., £4 10s. per cent. guaranteed debenture stock, 1930-1953, to be repaid on November 1, 1934. A trustee security guaranteed as to principal and interest by His Majesty's Treasury. Repayable 1935 to 1953, by cumulative sinking fund by drawings so arranged that annual percentage payable during last fourteen years is larger than the annual percentage during first five years. Power reserved to the company to redeem at par on November 1, 1946, or on any half-yearly interest date thereafter. Company owns and operates three hydro-electric generating stations.

Bank Line, Ltd.—Holders of 5 per cent. guaranteed debentures are informed that the company will redeem the whole of the £1,264,000 outstanding stock on February 1st next at par.

Nestlé and Anglo-Swiss Condensed Milk Company.—An extraordinary meeting will be held at Cham, Switzerland, on

September 11th, to consider proposals for conversion of 2,000,000 8 per cent. cumulative preference shares of £1 each into ordinary (bearer) shares of Sw. Frs. 10 each. Preference shareholders will be offered the alternative of £2 in cash and one ordinary (bearer) share of Frs. (Swiss) 10 in exchange for every two preference shares. A holder who so desires may dispose of the ordinary shares of Frs. 10 each for £2 4s. per share offered by a group.

Austrian Government International Loan 1930 7 per cent. Sterling Bonds.—In carrying out the operation of the sinking fund for the year ended June 30, 1934, bonds amounting to £87,400 have been purchased and cancelled.

RESULTS OF ISSUES

Gold Exploration and Finance Company of Australia.—Issue of shares to the public, including applications from Australia and the United States, was subscribed 15 times.

Ideal Boilers and Radiators.—The subscription list for issue of preference shares at 20s. 6d. per share was closed at 9.10 a.m. on July 31st owing to heavy oversubscription.

Mayfair and General Property Trust.—Investment Registry announces that the list in connection with the issue of debenture stock at par for the Mayfair and General Property Trust was closed at 9.5 a.m., August 1st. The issue was oversubscribed.

Newfoundland Loan Conversion.—On July 31st Mr Chamberlain stated, in the House of Commons, that, as regards the offer last December to holders of Newfoundland stocks (see *The Economist* December 30, 1933, page 1290), that up to date non-trustee securities to the value of £15,133,310, or approximately 99 per cent., had been converted. In addition, holders of trustee securities to the value of £497,117 (out of £2,014,000) had converted into guaranteed stock.

New Zealand 3½ per cent. Stock.—Underwriters of the £3,989,100 of New Zealand Government 3½ per cent. stock of 1955-60 have been relieved of their commitments. Applicants up to £10,000 received a full allotment and those for larger amounts 96 per cent.

Watende Mines (Kenya).—The subscription list for shares of 5s. each at par was closed at 9.5 a.m., July 31st. The issue was oversubscribed.

COMPANY MEETINGS, &c.

GOLD OPTIONS SYNDICATE, LIMITED

SOUND POSITION AND GOOD OUTLOOK

DIVIDEND OF 35 PER CENT.

MR. W. A. WILLS ON CAPITAL INCREASE

The annual ordinary general meeting of the Gold Options Syndicate, Limited, was held on Tuesday, July 31, 1934, at Winchester House, Old Broad Street, London, E.C., Mr W. A. Wills (chairman and managing director of the company) presiding.

The Secretary (Mr S. Staveley Briggs, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Ladies and Gentlemen,—With regard to our capital, it stands at a moderate figure. At June 30th the issued capital was £41,770, and there were in reserve or under option 167,080 shares, representing £8,230, making our total capital £50,000. The profit for the fourteen months ending June 30th last amounted to £21,222 15s. Cash in hand at June 30th stood at the relatively satisfactory figure of £80,013 ros., being nearly twice the whole amount of the issued capital, and there were no liabilities except as regards (temporary) sundry creditors, which showed an excess of £8,699 over debtors. The amount under sundry debtors is for shares sold, but not yet delivered and paid for, but £22,000 has been received since the date of the balance sheet. As these sums are received they will be paid out again in reduction of the "Sundry Creditors" item. The balance of approximately £8,700 is in our favour and includes an unrealised profit which should accrue shortly. Incidentally, since the date of the report, cash—and cash assets—has increased from £80,013 to about £88,000.

We paid, as you remember, an interim dividend of 10 per cent. on the then issued capital in October last, and you are now recommended to take a further 25 per cent., making a total of 35 per cent. for fourteen months' trading. (Applause.) As to the reserve fund, there is a clause in the articles which forbids us to distribute more than 75 per cent. of our earnings. The remaining 25 per cent. goes into a permanent reserve fund, which, however, is available for the general purposes of the business. The fund at the moment stands at the amount of £5,305 13s. 9d. The idea of a permanent reserve fund is an innovation of our own which we hope will commend itself to you. I think that as yet no other company has employed it. We hope in a few years' time it may assume important dimensions. Finally, after making a reserve of £6,000 for income tax, etc., there will be a balance of £3,840 8s. 9d. of unallocated profit to be carried forward. I may tell you that ultimately about three-quarters of that income tax comes back to us. Unfortunately, we have to deduct it from our dividends.

Our main object has been to operate the syndicate as a co-operative association for the direct and indirect benefit of shareholders. With this idea before us, soon after formation we acquired fairly large lines of Wilunas at 45s. 6d. and upwards, Lace Props. at £3 12s., East Rand Consols at 11s. 6d., and recommended you to participate. We took a very small commission on these participations, reserving a small interest for the syndicate itself, and I think I may say that the shareholders who followed our advice made individually ten or more times the profit we made as a syndicate, but it is all kept in the family.

NIGEL VAN RYN REEFS

Our first subsidiary was Nigel Van Ryn Reefs, Limited. At the beginning of the year we took in hand the reconstruction of the Nigel Van Ryn Reefs. This was a company then without cash resources and in debt to the extent of over £22,500, while the shares were unmarketable. On June 30th it had over £100,000 cash in hand, or more than the whole issued capital, and all debts had been paid off. In addition, the company's assets had been written down to £2 against the share premium account. These assets include 257 claims on the Nigel Reef, contiguous to the Nigel Company, in relation to which the company has already received overtures for purchase. Whether they will amount to anything remains to be seen, but in any case the claims are there and, in my opinion, are of value.

Another asset consists of half interest, with the Oroville Dredging and Camp Bird Companies, in about 9½ miles of deep lead in the Avoca Valley in Victoria. This ground has recently been formed into a company with the title of the Lamplough Gold Mining Company, Limited, with a capital of £150,000 in 2s. shares. Of this capital £100,000 is to be paid to us and the other vendors for the property and £50,000 is to be issued for working capital. The first directors will be Mr Douglas Christopherson and Mr Robert Annan, directors of the Consolidated Goldfields. Mr Christopher-

son will be chairman and the other directors will be Mr Richard Humble, assistant managing director of the Nigel Van Ryn Reefs, Limited, and Colonel Watson, of the Oroville Dredging Company, who is, I am told, a most capable engineer, and is resident in Melbourne. Mr David Melvin, part vendor of the properties, will be managing director in Melbourne, and Mr F. G. Bryant, who has, I believe, a considerable reputation as an expert on deep leads, will be consulting engineer in Australia.

Gold Corporation, Limited.—We formed this company in April last with a capital of £250,000 in 2s. 6d. shares, placing 1,000,000 shares at par and a second million at 3s., the premium enabling us to write off the preliminary expenses. The capital was found without advertising or underwriting among our own shareholders and business friends. Here again a very large participation was taken by Johannesburg, where we have established a local transfer agency and where we intend, when the capital is more or less paid up, to apply for permission to deal, as also in London.

PROJECTED INCREASE OF CAPITAL

The business of the Gold Options Syndicate was started in a very small way, with a capital of £10,000, as a sort of co-operative institution of friends dealing in gold shares who desired expert advice, or what we claim to be expert advice, which is not always the same thing, of course. (A voice: "Pretty nearly.") Thank you. We have been successful, not only for ourselves, but much more so for our shareholders and business connections. The capital was soon afterwards increased to £50,000, and the business has grown so much that the time has now come when we think we must look forward to a much larger future than was contemplated a year ago.

The syndicate was originally a private one, and my arrangement with it was that I should have the right to subscribe for one-half of the capital at par. There are now only 32,420 shares out of the 100,000 originally under option still unexercised. We have so many shareholders now, some of them with large holdings—especially my own family—that we think we ought to apply for permission to deal on the Stock Exchange, but the capital is still too small for that, and it is proposed therefore to double it and to offer the new shares to shareholders *pro rata* on easy terms of payment, so that the capital of the company may, as far as possible, be retained in the ownership of its original supporters. (Hear, hear.)

In these conditions I feel that I must—rather reluctantly, I must confess—relinquish my preferential right to subscribe for half the new issue, in the interest of our friends who have entrusted us with their money, and for whose confidence we are grateful, and I am prepared to do so on the condition that any of the shares not applied for by the other shareholders shall revert under option to me in terms of my original founder's agreement. (Applause.)

It will be proposed that the new issue of 200,000 shares shall be offered to shareholders *pro rata* at the current price of 10s. per share, which, we submit, is more than justified by the dividends, cash position and prospects of the company. These, it is proposed, shall be payable 2s. 6d. on application and the remainder in calls of 2s. 6d. at three-monthly intervals. These terms will make it easier for the members who are not plutocrats and who wish to avail themselves of the offer.

THE FUTURE

Of course, our future is concentrated on gold and depends on the future of gold. As you know, every country in the world is strenuously competing to increase its gold resources. France has already brought her gold reserve up to the equivalent of over a thousand millions sterling, in addition to which the French Finance Minister not long ago said that about £500,000 in gold bars was hoarded by private French owners. In America the gold reserves at the Federal Bank have reached the imposing total of £334 millions, and so much importance is attached to this central hoard of gold that the private ownership of raw gold in the U.S.A. is forbidden by law. From time to time one hears that the paper dollar is to be de-valued to 50 cents, which would still further increase the dollar price for gold and certainly react on or increase the sterling price for gold.

Sooner or later, therefore, we expect to see gold at a higher price. But unless and until the dollar is de-valued there is, perhaps, not likely to be much change in the sterling price, though it may go to 140s. or possibly more before the end of this year.

In the meantime, as far as we can see, this company, unless something unexpected happens, should be able to maintain the rate of dividends now being paid. Much important business is in prospect, provided always that the gold share market maintains its present activity, as we believe it will do for a long time.

Probably many will regard the profits as incredibly small for the difficult work of reconstruction or finding capital. Undoubtedly that is so, but we do not regret it. It was the wide-

spread knowledge that we were aiming to share profits with our supporters and with the ultimate public that gave us such an extensive credit and enabled us to carry through these considerable financial transactions without the expense of underwriting and advertising, which so many companies of the great gold groups and themselves obliged to resort to. The result is, speaking generally, that the buyers of Nigel Van Ryn Reefs made shillings where we made pennies, and we hope it will be the same with other companies we bring out. (Applause.)

The report and accounts were unanimously adopted.

GOLD FIELDS RHODESIAN DEVELOPMENT COMPANY, LIMITED

SUBSTANTIALLY IMPROVED POSITION

The twenty-second ordinary general meeting of The Gold Fields Rhodesian Development Company, Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, Moorgate Place, London, E.C. Mr O. V. G. Hoare (chairman of the company) presided.

Mr Jas. W. Clark, for the secretaries (The New Consolidated Gold Fields, Limited), having read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said: Last year when I had the pleasure of occupying this chair at our general meeting I congratulated myself on having a much more agreeable task than had fallen to my lot before. I am glad to say that to-day the duties that fall to me are more pleasant still. We have to deal to-day with accounts for the year up to May 31st last, showing results very much more satisfactory than any experienced by this company before.

Our total income from dividends, realisations, and sundry receipts amounted to the record figure of £307,000; this is a figure of £130,000 over that of last year, which, as you may remember, we considered an extremely good year for profit earning. I am glad to say our dividend income is on the increase, and, having been only £22,000 two years ago, £27,000 last year, in the accounts before you it was nearly £62,000.

Turning to the balance sheet, the item, reserve account £50,000, is a new one. In the past this company has never had a reserve account and has, roughly speaking, divided among its shareholders the full extent of its profits. Your directors think, and feel sure you will agree with them, that it is most desirable for a company such as this to build up a substantial reserve, on which it can draw if bad times come again. If we have other good years, as I hope we may, it will be our intention, so far as we can, to add to this figure, to build up the position of the company, making it stronger, and we believe the shareholders will find as a result of this policy that their shares will be a more valuable investment to them.

VALUE OF INVESTMENTS

Investments at cost less amounts written off stand at £1,216,035. This is an increase of £257,550 resulting from an excess of purchases of investments over sales. In past years where there was depreciation, the auditors naturally insisted on this depreciation being stated. Last year we stated the appreciation that existed so that we might emphasise the increased value of our assets as we were afraid shareholders might not realise how much the position of the company had improved during that year unless this point was particularly marked. In view of the fact that there was still a considerable debit on profit and loss, your board were anxious to explain to shareholders that although this debit existed, there were unrealised profits more than enough to clear it up if and when they were realised. Now that we have, I am thankful to say, a substantial credit balance on profit and loss, the need for this pointer disappears, but you can rest assured that there is a very substantial appreciation still on our investments.

The balance on profit and loss account is £120,000. We propose to submit for your approval the resolution that a final dividend of 7½ per cent., less tax, should be paid, making 12½ per cent. for the year, leaving roughly £25,000 to be carried forward to the new account. We have given a good deal of thought to the question of dividend policy and we have considered that the present proposal meets the requirements of a rather exceptional state of affairs. The shareholders have had to go without a dividend for four years and we are now dealing with an exceptional year's profit, which possibly may not be repeated. Your directors realised that the profit for the year amounted, in gross, to nearly 24 per cent. on the issued capital, and that after making good the debit balance carried forward from last year there still remained a surplus of 20 per cent., and so in fact the proposal to distribute 12½ per cent. means that only about 55 per cent. of the profit

earned and realised is being distributed. We are all convinced that it is in the best interests of the shareholders to strengthen the position of the company, and if our proposals are adopted the company will start the new year with £25,000 to the credit of profit and loss and £50,000 to reserve, as against last year's debit of £55,000 with which it had to start operations. (Hear, hear.)

COMPANY'S INTERESTS

I will now deal with some of the more important interests of your company. I will first turn to the gold interests. These comprise a value of nearly 45 per cent. of the total assets of the company at the date of our balance sheet. The largest of these is our holding in the Wanderer Mine. During the year, under the supervision of the Johannesburg office of New Consolidated Gold Fields, great progress has been made in increasing the efficiency of the organisation. We are, as you know, concentrating to the utmost on development so as to increase the ore reserves. At present, I am glad to say, in spite of milling some 190,000 tons per annum, we have more than held our own, and have brought into the category of fully proved reserves a substantial tonnage, which before was only problematical.

We are at present charging out no less than 5s. a ton on development, but in spite of this charge I am glad to say our costs are reaching a satisfactory figure. Last year they were approximately 17s. 7d. a ton, and it looks as if to-day the figure is certainly 1s. less than that. I do not think this is the place to go into the details of the development work, more especially as the general meeting of the Wanderer Company will be held in the early autumn, but I think it will interest shareholders to know that apart altogether from developing the mine as we know it, we have been doing prospecting work on another part of our property, with, I am glad to say, hopeful results, and we have recently secured an option on an adjoining property about which at present we can say very little more than that indications warrant our spending money to prove its real value. In the meanwhile, our interest in Wanderer yields us a very handsome return, as the company has been paying dividends at the rate of 10 per cent. per annum.

Our next largest holding is in Ashanti Goldfields Corporation, which has proved a very profitable investment for us. As regards the mine itself, at last there are some indications of better development at depth. We have had to wait a long time for this, but we have always had confidence that our patience would ultimately be rewarded. Apart from its own mine Ashanti, as you probably know, holds shares in other mining companies on the West Coast. These shares look to-day to be a very satisfactory holding, as they were acquired at prices very much lower than those at present ruling. In addition to this, Ashanti is opening up some of the old mines and prospects on its property which were worked for various periods in the past, and so far in more than one direction these appear to be promising.

Our next largest holding is in Sub Nigel. We look upon this holding as a very sound dividend-producing investment.

We still have a holding, though smaller, in Ariston Gold Mines, Lake View and Star and New Modders, and are still interested in West Witwatersrand Areas and Gold Fields Australian Development Company. During the year we have bought an interest in the Simmer and Jack Mine, and in addition a substantial holding in the Oroville Dredging. We are in close touch with the Oroville Company and we believe that this holding will prove a profitable one to our company, both from the point of view of revenue and capital appreciation.

Our holdings in mines other than gold amount to nearly 19 per cent. of our total assets. These still consist primarily of our holding of Roan Antelope, Rhodesian Selection Trust, and Bwana M'Kubwa.

In oil companies we still have our holding in Apex (Trinidad) Oilfields, which is a good income producer, and also have a small holding in Orinoco Oilfields, a company which has recently been formed to exploit oil in Venezuela and with which we are very well satisfied. These oil holdings only account for 1 per cent. of our assets.

Our holdings in industrial shares represent about 11 per cent. of our total assets and consist principally of our various holdings in the Celanese group, though during the year we have purchased a holding in Richard Thomas and Company preference, to secure income.

There are good reasons for anticipating that there will be good opportunities for profitable business for our company during the current year, in spite of the still chaotic financial and political condition of the world around us. I can only end by expressing the hope that this year will be one to give us as much satisfaction as the past year under review, even if we do not attain quite the same record figures of profit. (Applause.)

The report and accounts were unanimously adopted.

KALIDJEROEK RUBBER COMPANY, LIMITED**IMPROVED RESULTS—SOUND FINANCIAL POSITION**

The twenty-fourth ordinary annual general meeting of the Kalidjeroek Rubber Company, Limited, was held, on the 30th ultimo, at 3, 4 and 5 Rood Lane, London, E.C., Mr Vernon Wethered (chairman of the company) presiding.

Mr R. F. Burt, representing the secretaries (Messrs Burt, Taylor and Company, Limited), read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said: It is pleasant to see a debit of £4,906 in the last balance sheet converted into a credit of £1,712, and a loss of over £2,596 into a profit of £5,213, while in the year 1931-32 the loss was over £4,000.

I have explained on previous occasions how adversely the delayed assessments of the Java Verponding tax affected our accounts owing to the heavy loss on exchange caused by that delay. Now, the way being clear before us, the three years' arrears of preference dividend have been paid. This charge does not figure in these accounts, as it has been met since the end of the financial year.

Rubber sold at 3.56d. per lb. net as against 1.49d.; coffee realised 21s. 1d. against 29s. 10d., calculated at par of exchange. Whereas in 1932-33 coffee sales contributed £9,597, rubber contributed only £3,378. This year the position was reversed, and rubber realised £12,736 against £10,349 for coffee.

The gross price for rubber now being about 7d. while coffee has been fetching very low prices—though there are signs of improvement—the prospects over the current year are very materially better.

The estates have been reported on by Mr Taylor, who paid a visit to the East last year. Kalidjeroek, as always, gives a satisfactory account of itself under its very able management. How satisfactory is well illustrated by the fact that Ayer Dingin up to now has been disappointing, and yet the company has been able to show an excellent profit-earning capacity.

As regards finance, there are liquid assets of just about £20,000, and to this may be added another asset—viz., the value of your holding in Tanah Estates (1931), Limited, which at the market price of 9d. would be equivalent to £7,000 more.

The report and accounts were unanimously adopted.

THRELFALL'S BREWERY COMPANY, LIMITED**STEADY INCREASE IN SALES**

The forty-seventh annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 1st instant, at Southern House, London, E.C.

Major C. M. Threlfall, J.P. (the chairman), in the course of his speech, said:—Since I last had the pleasure of addressing you a distinct and beneficial change in trade has been experienced both in regard to your company and to the brewing industry generally throughout the country. The past year has witnessed an expansion in our business, and, in addition, the year has been singularly free from disturbing factors which have previously prevailed. The general and welcome return to improved conditions of employment, coinciding with the reduction in the price of beer by 1d. per pint, stimulated demand and created a much more hopeful atmosphere. Your company has naturally derived its share of this increased business, and your board are, therefore, in the happy and fortunate position of presenting results to you which show a gratifying increase in profits compared with those of last year. (Hear, hear.)

I think you will agree that the accounts now before you are highly satisfactory, and that they disclose a sound and strong financial position. I am also pleased to inform you that the steady and reassuring increase in sales is continuing, and it seems a reasonable assumption that, provided no unforeseen economic conditions arise, the lowest point of the depression is gradually receding and the future outlook is more encouraging after a long period of uncertainty.

It has always been the policy of your board to use products of the finest quality only in the manufacture of the company's beverages, and this will be continued, although the prices of malt and hops are now at an exceptionally high figure. However, an agreement has been arrived at whereby an average and more reasonable price for hops has been fixed for the next five years, as included in the amended Hops Marketing Scheme, which has recently been approved by Parliament. During the year under review the gravities of all our beers have been increased in accordance with the undertaking given by the Brewers' Society when the duty was reduced, and our customers are now receiving the additional benefit of an improved commodity at a decreased price.

The report and accounts were unanimously adopted.

CRAIGIELEA RUBBER PLANTATIONS, LIMITED**EXCELLENT RESULTS AND GOOD PROSPECTS**

The eighth annual general meeting of Craigielea Rubber Plantations, Limited, was held on the 27th ultimo, at Winchester House, Old Broad Street, London, E.C.

Mr A. M. Sellar (the chairman) said that the accounts presented a welcome change in the financial position of the company, showing a working profit of £10,164, against a loss for the previous year of £395. Those results were obtained on an average selling price for their crop of 3.72d. per lb. c.i.f., so that they did not reap the full benefit of the higher prices ruling just prior to and since the closing of the accounts under review.

Their agents reported the position with regard to the condition of their properties to be entirely satisfactory, and he could confirm that as a result of a personal visit to the estate in February, when he was particularly struck with the improvement that had taken place since his inspection two years previously. Practically the whole of their planted area was of uniform growth, producing a high average yield.

As to the scheme for the control of production, it must be obvious that without such regulation the company would not be in its present position and they could now look forward with some security to a remunerative return on the capital invested in an industry supplying a commodity universally used and essential to the requirements of modern civilisation. The improved financial position of the company was alone evidence of the altered circumstances, and the directors recommended a dividend at the rate of 3 per cent. Everyone concerned in the production of rubber owed a great debt of gratitude to those who had worked so strenuously to bring about the scheme of international control. There appeared to be reasonable grounds for expecting that better times were in store. It would, however, be very unwise to assume that their difficulties were over, and to allow the lessons of the last few years to be forgotten. The directors realised their responsibilities in safeguarding the shareholders' interests, and they might be relied upon to see that the company's properties were maintained in first-class order and that the utmost value for money spent was obtained. They would also continue to use whatever influence they possessed in supporting any proposition having for its object the further use of rubber, and he would ask all members of the company to do what they could, individually, in that respect.

The report and accounts were unanimously adopted.

COVENT GARDEN PROPERTIES COMPANY, LIMITED**PROSPECTS OF INCREASED REVENUE**

The annual general meeting of the Covent Garden Properties Company, Limited, was held, on the 2nd instant, at the Hotel Victoria, Northumberland Avenue, London, W.C.

Mr Philip E. Hill (the chairman) said:—Ladies and Gentlemen, —The profits for the year, before providing for directors' fees, taxation and debenture interest, are £256,000 in round figures—some £19,000 less than those of the previous year. The profit on the sale of properties and investments is higher at some £59,000 odd, whilst the income from rents, tolls and interest is £79,000 less than in the previous year, largely attributable to reconstruction developments, tenancy disturbances and temporary unremunerative expenditure of capital, including our investment in the Second Covent Garden Property Company, Limited, upon which we shall receive our first dividend in the early part of next year. The position is a temporary one, and will improve from time to time.

The reconstruction of the Tavistock Hotel block has now been completed, as has also Princess House, Oxford Street. The reconstruction and reconditioning of the Royal Opera House has been practically completed and will be wholly completed within the next two or three months, and should provide us with a further increase of revenue. With the completion of this work, our development programme for some time to come may be regarded as finished. While the revenue position has been temporarily adversely affected, our capital values have been substantially increased.

THE OUTLOOK

At our last meeting I stated that normal revenue might be expected in 1936. Whilst I am of opinion that the accommodation we have provided should all be occupied in 1936, it would, I think, be prudent to point out that we may not be in receipt of the full revenue thereof until 1937, but a substantially increased revenue

may be expected in 1935 and again in 1936, and shortly after that—as far as one can reasonably foresee—a sum in excess of our present dividend requirements will be available from revenue alone.

The report and accounts were unanimously adopted.

UNION BANK OF AUSTRALIA, LIMITED**DIFFICULT CONDITIONS**

The annual general meeting of the Union Bank of Australia, Limited, was held on the 30th ultimo, at 71, Cornhill, London, E.C.

The Hon. Edmund W. Parker (the chairman) said that during the past year Australia had seen a substantial improvement in her general economic position, chiefly owing to the considerable rise in the value of the wool clip, but the prices of her other primary products still remained at a low and unremunerative level. The Commonwealth, too, had gained materially by the conversion of her various borrowings in this country. The business of the bank had continued to be very difficult and profits hard to earn. The continued reduction in the rates of interest charged to borrowers still cut heavily into their earning powers. The heavy discount at which the Australian and New Zealand currencies still stood in comparison with sterling continued to make exchange business difficult, while intensive competition had reduced the margin of profit on such business to an insignificant percentage.

He ventured to hope that the balance sheet now presented would be considered as not unsatisfactory. The net profit amounted to £203,509, and the directors recommended a dividend of 3 per cent. for the half year, making 5 per cent. free of tax for the year. The general business of the bank had expanded, the total figures having increased by £3,352,000 as compared with a year ago.

Shareholders would have noticed that certain particular parties in Australia had put in the forefront of their programmes proposals to nationalise the banks. These proposals must be opposed by all the banks with the utmost vigour, for if they were carried through he honestly believed that it would be disastrous to the country as well as to the shareholders of the banks.

The report was unanimously adopted.

Mr W. A. Leitch (general manager) said that, except for wool, it could not be said that any of their industries were in a better state than two years ago, when he was last present at an annual meeting of the shareholders, and the man on the land was still failing to get a return sufficient to cover his costs. Climatic and economic conditions were not the only troubles with which they had to contend in Australia and New Zealand, but during the whole period of stress it could be claimed for the banks that they had buttressed the financial position in such a way as must have commanded the approval of the community as a whole. In the impending Federal Election he believed that any political party with "Nationalisation of the Banks" for its election cry would soon find that sanity of the people a difficult obstacle to contend against, but it was a cry which the banks could not afford to ignore.

MILLARS' TIMBER & TRADING COMPANY, LIMITED**MORE PROMISING OUTLOOK**

The annual general meeting of Millars' Timber and Trading Company, Limited, was held, on the 27th ultimo, at Winchester House, Old Broad Street, London.

Dr. James White, LL.D., who presided, said that two or three days ago he had hoped that instead of telling the shareholders of trading losses he would be able to say with some confidence that prospects for 1934 were good enough to warrant the statement that they would make some profit. The barbaric murder of Dr. Dollfuss in Vienna was, unfortunately, something which might change the whole aspect of trade, not merely of Continental Europe, but possibly of the world. They could not say what the effect of that deed would be, but subject to that the board believed that 1934 would mark the turning point in the fortunes of the company and a return to profit-making.

In the last four years they had cut down overhead expenses to the absolute minimum, costs of production had been reduced very largely, stocks, which were tending to become frozen assets, had been reduced very largely, and the bank loans which at December 31, 1930, had stood at a net figure of £325,513, on June 30 last stood at the very small net sum of £62,730.

The position of the company to-day was that its credit stood high, that the goodwill was a most valuable asset, that the organisation had been maintained, and that their bankers were anxious for trade to grow, so that the company might take up further

finance from them and enable them to use some of the funds accumulating in the bankers' hands.

The board's expectation of profits for 1934 was based upon their experience of the last six months of 1933 and of six months of 1934, and on their knowledge of the company's commitments for the last half of the year. Subject to world conditions there was a fair prospect of a trading profit for 1934.

With regard to the readjustment of capital the board were hopeful that by the end of the year the company's profit would be known, and their expectations of future profit would be sufficiently firm to enable them to frame a proper scheme. The board would deal with the question immediately they had a reasoned basis upon which to put a scheme forward.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.**NATIONAL ACCOUNTS**

The total ordinary revenue for the week ended July 28, 1934, amounted to £9,955,000, against ordinary expenditure of £13,401,000. After allowing for a decrease in Exchequer Balances of £142,848 the operations for the week, as shown below, increased the National Debt by £3,448,000 to approximately £8,076 millions.*

(000's omitted)

Public Department Advances	+ 9,450	Treasury Bills	— 5,527
		N. Atlantic Shipping Issues	— 25
		P.O. and Teleg. cap. expen.	— 350
		National Savings Certificates	— 100
	+ 9,450		— 6,002

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

The aggregate revenue and expenditure to July 28, 1934, is shown below:—

FINANCIAL YEAR, 1934-35, APRIL 1, 1934, TO JULY 28, 1934

(000's omitted)

Expenditure	Revenue
231,899	180,394
	Decrease in balance
	Gross increase in borrowing £5,970
	Less—
	New Sinking Fund
	Net borrowing
231,899	231,899

* Authority will be sought in the Finance Bill to meet the amount of the Statutory Sinking Funds in 1934 by borrowing.

POSITION OF THE FLOATING DEBT

Ways and Means Advances Outstanding	July 29, '33	Mar. 31, '34	July 28, '34	Movement, week ended July 28, '34
Advances by Public Departments	31,820,000	44,900,000	33,400,000	+ 9,450,000
Treasury Bills outstanding	988,700,000	799,810,000	831,130,000	- 5,525,000
Total Floating Debt	1,020,520,000	844,710,000	864,530,000	+ 3,925,000

* Includes £7,000, the proceeds of which were not carried to the Exchequer within the period of the account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £35,000,000 in Treasury bills were opened on July 27, 1934, and the total amount applied for was £79,430,000. Tenders were accepted for Treasury bills at three months, dated Monday to Friday, at £99 16s. 3d., about 16 per cent., and above in full; Saturday, at £99 16s. 4d., and above in full. The average rate per cent. was 13s. 9-92d. The amount allotted was £35,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1932				
January 1	40,000,000	50,320,000	38,000,000	5 s. d.

GOLD

Messrs. Samuel Montagu and Company write on August 1, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,580,150 on the 25th ultimo, as compared with £191,579,997 on the previous Wednesday. During the week the Bank of England announced the purchase of £41,014 in bar gold. Business in the open market has been fairly active, and during the week the amount disposed of was about £2,000,000. Prices ruled about dollar parity, and it will be noticed that there has been very little variation.

Quotations during the week:—

Gold shipments from Bombay last week amounted to about £993,000. The s.s. "Rajputana" carries £872,000, of which £569,000 is consigned to London and £303,000 to New York, and the s.s. "President Monro" carries £121,000 consigned to New York.

SILVER

After declining to 20½d. for cash and 20¾d. for two months' delivery on the 27th ultimo, prices made some recovery, and the market has since shown a firmer tendency. During the week business has been fairly general; there has been further re-selling by speculators, and sales have been made on Continental account, whilst China has both bought and sold. Support from the Indian Bazaars has continued, and America has shown more interest, purchases on New York account having been made in the latter part of the week during which the undertone of the market appeared rather firmer.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar Silver per oz. std.	Cash Two Months' delivery	Bar Silver per oz. std.	Cents per Ounce
July 26	20½d.	July 25	46½
" 27	20½d.	" 26	46½
" 28	20½d.	" 27	46
" 30	20½d.	" 28	Closed
" 31	20½d.	" 30	46
Aug. 1	20½d.	" 31	46½
Average	20.229d.		20.333d.

The highest rate of exchange on New York recorded during the period from the 26th ultimo to the 1st instant was \$5.04½, and the lowest \$5.03.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

MOVEMENTS in the principal commodity markets this week reveal extreme sensitivity. Reports from Sheffield state that disturbed conditions abroad are exerting an adverse effect upon the export trade for coal, while shipments from South Wales are far below the capacity of the docks. Business on the London Iron and Steel Exchange has suffered a contraction on the approach of the holiday period, but, except in Cumberland, there has been considerable activity at works in order to get deliveries away. Semi-finished steel has encountered a rather better demand, most of the business being taken by British works. Moderately good orders have been taken for finished steel and export business is showing a slight tendency to increase. Little change has taken place in the markets for non-ferrous metals, but, with the exception of silver, prices are tending downwards.

There has been a slight upward tendency in raw cotton prices, but the trade is anxiously awaiting the publication of the U.S. Government's crop report. An early settlement between England and Germany, whereby Lancashire exporters will be able to obtain payment for their supplies, is still awaited. Although shipments of wool showed a decline in the season just ended, the carry-over is heavier than a year ago, and production is expected to show an increase this season. On the other hand, demand from the principal European buyers seems likely to contract, and uncertainty with regard to continental events has led to a fall in prices this week.

Reports regarding the rubber trade indicate that, here too, market conditions have been affected by recent disturbances in Europe. Germany has ceased for the time being to demand rubber, and it is possible that her tyre factories may have to close down unless they are able to obtain fresh supplies soon. As regards foodstuffs, world wheat prices have shown a further appreciation this week, prices of flour and other grains moving in the same direction. The prices of other foods are mainly unchanged.

Moody's daily index of the prices of staple commodities

in America (December 31, 1931 = 100) stood at 144.1 on August 1st, as against 142.2 on the corresponding day of the previous week and 134.8 at the same date last year.

COAL

SHEFFIELD.—Coal trade conditions are unaltered. Owing to the curtailed output there is a scarcity of best steams and smalls, and export deliveries under contract are not readily executed. Prices of steams are firm at 16s. 6d. to 17s. f.o.b. Tonnages of fuel going to factories and works are large, but rather less than formerly. House coal trade is badly depressed. The consumption of blast furnace coke is maintained, and there is no surplus output.

NEWCASTLE-ON-TYNE.—Shipment figures show an improvement compared with last year, but the coal market is still quiet, and buying is on a small scale. Disturbed financial conditions abroad are having their effect upon the North East, and are particularly affecting trade with Germany, which has been partially suspended. Screened steam qualities are steady in price, but there are abundant supplies of all classes of unscreened bunkers, coking and gas. Patent oven coke of all descriptions meets a firm trade, and although production is being increased, supplies are readily absorbed, and the outlook continues to be good.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 13s. 6d.; smalls, 10s. 6d.; Howards, Bentinck, Newbiggin screened, 13s.; smalls, 10s.; Tyne Prime, large, 12s. 9d.; smalls, 10s. 6d.; Hartley Main, large, 13s.; smalls, 10s. 6d. **DURHAM.**—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

CARDIFF.—The recent improvement in the volume of coal shipments at South Wales ports was maintained last week, when exports totalled 396,800 tons, compared with 328,900 tons the previous week, and 353,813 tons in the corresponding week last year. The volume of current business is, however, greatly below the capacity of the docks, and as from Monday this week a number of berths at Cardiff, Penarth, Barry and Newport were put indefinitely out of commission. Foreign demand shows little, if any, sign of expansion. In the case of France, a slight curtailment is feared during the next two months, when the 10 per cent. reduction in the import quota will be operative. South Wales, however, will probably suffer less from this "cut" than any of the other exporting districts of the United Kingdom, because of the operation of the barter agreement providing for the exchange, up to the end of the present year, of monthly quantities

of 40,000 tons of South Wales coal for 20,000 tons of French pitwood. Prices are nominally unchanged, and with few exceptions are ruling at the minimum schedule figures. The new draft scheme for the regulation of output and prices in the coalfield is now under consideration by the local Executive Board, and is likely to introduce some important changes in the system which has been operating during the past three and a-half years.

Approximate current quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d. to 14s.; seconds, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 10s. 6d. to 11s.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 23s. 6d. to 24s.

WORKINGTON.—The coal trade has slumped, and with production in excess of requirements, most of the collieries are losing a shift a week. The landsale market is lifeless, and business in the Irish market is poor; even industrial fuel is now in adequate supply for the coking plants. After the holidays, however, considerable contracts are to be placed, and the industry will be in full swing again by mid-September. Prices have, of course, been adversely affected. Nominally, best round are quoted at 21s. 6d.; washed doubles, 20s.; washed singles, 18s., all f.o.b.; smalls, 15s. 6d. per ton; best house coal, 30s. 8d.; and house nuts 29s. per ton at station; gas coal 27s. per ton; West Coast coke 15s. 6d. to 16s. 6d. per ton.

GLASGOW.—The Scottish coal market is making a slow return to normal after the holidays, and business generally is quiet. In the main, the features are the same as those obtaining before the stoppage. Large coal is, as a rule, freely offered, but first steam in Fifeshire is well placed, and Lanarkshire prime splint is none too plentiful. Washed smalls are generally firm in price, while single nuts meet a strong demand.

Shipment prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 3d.-14s. 6d.; navigation, unscreened, 12s. 9d.-13s. 3d.; Hartley, 14s. 6d.; steam, 12s.-12s. 6d.; trebles, 13s.-13s. 6d.; doubles, 12s. 6d.; singles, 12s. 6d.-13s.; pearls, 11s.-11s. 6d.; dross, 9s. 9d. **FIFE.**—Best unscreened navigation, 12s. 9d.-13s.; unscreened navigation, 12s. 3d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 14s.-16s.; doubles, 12s. 6d.-13s.; singles, 13s.; pearls, 10s. 6d. **LOTHIANS.**—Prime steam, 12s.-12s. 6d.; secondary steam, 11s. 6d.-11s. 9d.; unscreened navigation, 12s. 6d.; trebles, 14s.-14s. 6d.; doubles, 12s. 3d.-12s. 6d.; singles, 12s. 3d.; pearls, 10s. 9d.-11s. **AYRSHIRE.**—Best unscreened navigation, 13s. 9d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.-14s.; doubles, 13s.; singles, 12s. 6d.; pearls, 11s. 6d.-12s.; dross, 10s.

IRON AND STEEL

MIDDLESBROUGH.—Production of pig iron continues steady and now that the holidays in Scotland are over shipments to that district have already been resumed. Foundries locally are busy and are taking good deliveries of Cleveland pig iron, so that makers are not experiencing any substantial increase in stocks. No. 3 Cleveland foundry pig iron is based on 67s. 6d. per ton delivered locally for home use. East Coast hematite continues in good demand for home use, the price being based on a minimum of 68s. per ton delivered locally for No. 1 quality. The prices for overseas are not fixed, but very little business is being transacted, although a further shipment has recently been made to Italy. Shipments of all classes of pig iron from the Tees during July amounted to 7,735 tons, against 12,776 tons for the month of June. Foreign ores are firmer in price and sellers are expecting advanced prices to be paid for forward delivery. Meantime for odd cargoes of best Bilbao rubio sellers ask 17s. per ton c.i.f. Tees.

Blast furnace coke is in good demand, the price being 20s. per ton delivered at the furnaces, but here again there are indications of higher prices being required by makers. Manufactured iron and steel departments continue busy and shipments abroad are satisfactory.

SHEFFIELD.—In consequence of the pressure of work, most of the steel firms have curtailed the holiday stoppage and resumption will be general on Wednesday. However, in spite of the continued activity of the principal sections of the steel trade, several authorities predict some contraction in the near future. Bookings of new business have certainly fallen off lately, especially in seasonal lines, but there is little or no short-time working in the city. Builders of commercial motor vehicles are buying increased quantities of special steels and tools. Export trade tends slightly upwards but the movement is checked by currency restrictions in overseas markets. The holidays are responsible for extreme quietude in the markets for raw materials, including ferro-alloys used in special steels. The two branches are active but the seasonal quietude is pronounced in cutlery and table plate.

WORKINGTON.—Makers are doing little more than marking time in the North-West Coast hematite pig-iron trade. Business has for many weeks represented a tonnage smaller than is being produced, and the disappointingly poor turn it has taken means the postponement for an indefinite period of the expansion of output that was confidently anticipated earlier in the year. As, however, smelters were well sold, no stocks have yet accumulated and probably the whole of the make will continue to be absorbed until mid-September. There is no improvement in the Scottish or Continental demand, and headway has been made only in the Midland market. East Coast competition is severe, the difference between the rival hematite and that made here being 5s. per ton. Nevertheless, prices are unaffected and Bessemer mixed numbers are quoted firmly at 23 9s. 6d. per ton at Glasgow, 24 0s. 6d. at

Manchester, 24 3s. 6d. at Sheffield, and 24 4s. 6d. at Birmingham; while special qualities are an additional 2s. 6d. to 5s. per ton. Malleable iron meets a steady trade at 25 15s. per ton delivered at Birmingham, and ferro-manganese, the smelting of which is to be resumed in early winter, stands at from 210 15s. to 211 5s. per ton home. The steel trade is quiet, and new business hard to obtain, but contracts represent a tonnage that will occupy the rolling mills at Barrow and Workington for some months ahead. A large proportion of the steel being rolled is for tube-makers. Native ore, at from 13s. 6d. to 14s. 6d. per ton, is in good local request, but little is required by East Coast and Scottish smelters. Imports of North African and German ore at Workington have been very heavy during the past six months.

GLASGOW.—Plants generally are very busy this week. The position at the Clyde shipyards continues to improve and at several of the yards there are now quite a number of vessels under construction. In the early part of this week it was announced that the Fairfield Shipbuilding and Engineering Company, Ltd., of Govan, had received an order for a paddle steamer from the L.M. & S. Railway Company. Steelmakers have commenced operations with a considerable amount of work on hand—sufficient to keep plant employed for some time to come. Tubemakers also have a large amount of work on hand at the moment. Sheet makers, while still unable to secure much export business, continue to do a steady home trade and although unable to keep all mills employed have slightly increased the number in operation this week. There is no improvement yet in the iron and steel bar rolling trade and plant is only partially employed. Carriage and wagon builders are particularly busy.

CARDIFF.—On the Swansea Metal Exchange on Tuesday prices of tinplates ruled firmly at from 18s. to 18s. 3d. per basis box, but there was little new buying at these figures and apparently there are still available cheaper second-hand parcels. On the whole, however, shipments are improving, totalling nearly 92,000 boxes last week, compared with 103,071 boxes during the corresponding week last year. Galvanised sheets meet a quiet trade and are unchanged in price at from 211 5s. to 211 15s. per ton, with local steel bars at 25 per ton delivered.

OTHER METALS

No important developments occurred in the markets for non-ferrous metals this week, the most interesting event being the publication of the new tin statistics. According to A. Strauss and Company, total visible stocks of tin at the end of July showed an increase for the first time in eighteen months, and amounted to 18,352 tons, while another estimate puts the increase at an even higher figure. Deliveries declined by 471 tons during July and totalled 7,004 tons—the lowest figure since February. Although this information was not entirely unexpected, the market reacted slightly on Wednesday and tin prices declined by 2 per cent. Further reductions appear improbable, for active endeavours are being made to keep the price at about 230 per ton and these seem likely to prove successful, notwithstanding a rather poor industrial demand for the metal.

The trend of copper prices is still downwards. Exports from the United States during the first six months of the current year amounted to 107,934 short tons, against 50,331 short tons in the corresponding period of last year, but shipments declined during July. This export pressure from the States has been accompanied by a poor Continental demand, and the position in Germany shows no improvement.

The output of lead and spelter is contracting, but the market position has remained practically unchanged this week. World production of refined lead amounted to 120,800 short tons in June, against 132,300 short tons in May, while the output of spelter declined during the same period from 108,200 to 98,900 short tons. In spite of this reduction, however, stocks are showing an increase on account of small deliveries, although it is anticipated that the autumn will bring some improvement.

The silver market has been more steady during recent weeks. Contrary to anticipations, imports into the United States during the first half of this year have been below last year's level, while

BARCLAYS BANK LIMITED

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:
BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

exports from that country have shown an increase. The trade returns just published show that the value of the United States' imports of silver in the period January to June was \$19.4 millions, against \$26.6 millions in the same period of 1933; whereas exports increased in value from \$2.8 millions to \$7.7 millions over the same period. This appears to be convincing proof that the influence of United States silver policy on prices elsewhere has been over-estimated.

TIN.—Sales on the London Metal Exchange: 350 tons on Monday, against 100 tons last week; 340 tons on Tuesday, against 640 tons last week; 285 tons on Wednesday, against 570 tons last week. The New York quotation on Wednesday was 51.70 cents per lb., against 52.40 cents a week ago and 51.30 cents a month ago. Wednesday's official closing quotation in London for standard cash was £229 to £229 5s., compared with £233 7s. 6d. to £233 10s. last week. Stocks in London and Liverpool at the end of last week were 3,445 tons, a decrease of 161 tons on the week.

COPPER.—Sales on the London Metal Exchange: 500 tons on Monday, against 1,150 tons last week; 1,025 tons on Tuesday, against 2,400 tons last week; 1,350 tons on Wednesday, against 950 tons last week. Domestic spot was quoted at 7.02½ cents per lb. in New York on Wednesday, against 7.02½ cents a week ago and 7.60 cents a month ago. Wednesday's official closing price for standard cash in London was £28 13s. 9d. to £28 15s., compared with £28 17s. 6d. to £29 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 28,752 tons, show an increase of 308 tons, and stocks of rough copper, at 1,161 tons, show a decrease of 1 ton.

LEAD.—Sales on the London Metal Exchange: 200 tons on Monday, against 100 tons last week; 700 tons on Tuesday, against 700 tons last week; 550 tons on Wednesday, against 650 tons last week. The New York quotation on Wednesday was 3.75 cents per lb., against 3.85 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 17s. 6d. for shipment during the current month, compared with £10 15s. a week ago.

SPELTER.—Sales on the London Metal Exchange: 75 tons on Monday, against 575 tons last week; 300 tons on Tuesday, against 650 tons last week; 250 tons on Wednesday, against 800 tons last week. Wednesday's quotation in East St. Louis was 4.30 cents per lb., against 4.30 cents the week before, and 4.35 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 7s. 6d., for shipment during the current month, against £13 6s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver, at £11 10s. to £11 12s. 6d. per flask of 76 lbs., remains unchanged. Foreign antimony was quoted at £36 to £36 10s. per ton, as against £35 to £36 per ton last week. Chinese wolfram was quoted at 37s. 6d. to 38s. 6d. per unit, c.i.f., as against 40s. to 41s. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester.—There has been little change in raw cotton prices, but the tendency if anything has been upwards. Great interest is being taken in the American Government report on the crop due next week. As usual, private firms are publishing varying estimates of the yield, but the market expects a forecast of about 9,250,000 bales. The drought in the Western section of the belt is still unrelieved, but rather more attention is now being centred on the poorer outlook for consumption. There has been no increased activity in piece goods for export; a miscellaneous demand has been experienced, but buyers in all quarters have limited their purchases. The offtake for India remains disappointing, although an improved demand has come through in light bleaching descriptions for Madras and Karachi, with fair sales. There seems to be no hope of larger business for China just at present. Cloths for printing and dyeing have attracted some attention for Egypt, South America and the Dominions, but Continental trade has been at a low ebb. Only necessary buying has taken place in home trade fabrics. Order lists of many manufacturers are running down rather rapidly, and there is more nervousness with regard to finance. Complaints from spinners of yarn have tended to increase. In American qualities more difficulty is being experienced in clearing the output, and spindles are stopping. A dragging state of affairs has prevailed in the Egyptian section.

WOOL.—Bradford.—The past fortnight has seen no improvement in the wool textile industry. Indeed, if anything, rather the reverse has taken place, prices generally having been pushed lower by the

uneasiness created by Continental events. These lead many to believe that when the new wool is offered in Australia this month there will be only poor support from the three major European buyers, and that, in consequence, prices will suffer. Germany is obviously not in a position to buy anything more than very limited quantities; Italy has officially stated that she is to reduce her purchases in Australia by a half of their former volume, and France has certainly no great need for wool, as has been indicated by the stoppage of combing. It was previously announced that the French combing establishments were to close down indefinitely, but it now appears that there was some resumption of combing last Tuesday, and with this later report "futures" at Roubaix and at Antwerp moved slightly upwards, though the Bradford market was unaffected. But the size of stocks of tops in France and her depleted overseas trade are very discouraging factors which point to limited wool buying in the primary markets. Conditions at the supply end of the industry are no less unsatisfactory. This season's Australian clip is a large one, and the carry-over of unsold wool from last season is considerable. With so many unsettling factors the opening of the wool-selling season in Australia this month is eagerly awaited, so that some indication may be given on the price question. Bradford has suggested that the best time for such an opening is August 27th, in view of the holiday period in the West Riding. Until these sales take place, no business of any importance is expected in the Bradford market; at the same time there is a growing feeling that prices have touched the bottom for the time being. A settlement of financial difficulties in Germany would soon lead to a marked improvement in the wool trade. Exports from Australia and New Zealand in the season ended June 30, 1934, showed a decline of 302,000 bales compared with the previous season, and amounted to 3,547,000 bales.

JUTE.—Dundee.—Holidays interrupted business last week, and the majority of the works have been closed for ten days. The market during the interval has ruled quiet, with prices mainly unchanged, the raw material fluctuating only to a very slight extent. Sellers of the fibre are showing some reserve, which is considered to be due to the fact that the heavy stocks of old crop jute are now becoming smaller; but according to the first forecast of the new crop, there is a plentiful supply in view to meet requirements during the coming season. Trade in yarns and cloth continues so quiet that spinners have no incentive to make extensive purchases of the raw material, even though the price of the latter is low and reasonable. To date, there has been much less jute of the new crop bought than usual at this period of the season. Imports of raw jute into Dundee for the season from August 1, 1933, to July 31, 1934, were 937,000 bales, compared with 792,000 bales for the previous season.

The price of Daisee assortment has ruled round about £14 2s. 6d. to £14 5s. per ton for good single marks of old crop, and fours are quoted at £13 7s. 6d., while new crop full group is quoted at £14 7s. 6d. and £13 17s. 6d. per ton respectively. First Marks are more or less nominal at £16 15s., and good Lightnings, after being sold at £15 10s., are named at £15 12s. 6d., with Hearts at from £14 15s. for SCC to £15 5s. for Ram, August-September. Jute yarns are quiet, with little business to test prices. Common 8 lb. cops are still quoted at 1s. 8½d. and 8 lb. and spools at 1s. 9½d., but some sellers of the latter would accept 1s. 9d., as they are not so well foreseen in spools as in cops. Twist rules firm at from 3½d. to 3½d. for 3 ply 8 lb., and sacking yarns are unchanged in price at 2½d. for 24 lb. web and 3d. for 8 lb. chains. Rove is steady at from £17 for 48 lb. and £14 for 200 lb., while some inquiries are made for the Rio yarns, which have hitherto met an extremely quiet trade. Some carpet yarn business has been done at from 2½d. to 2½d. for 14 lb. warp. Only small quantities of jute cloth are being bought, the buyers usually stipulating quick delivery, but in some widths and weights this cannot be easily obtained. Prices are very steady at from 2½d. for 10½ oz. 40 in. hessians and 1½d. for 8 oz. Linoleum hessians are still very slow, and only a trifling business is being carried through in sacking, bagging and tarpauling.

The Calcutta goods market is quiet, but prices are fairly well maintained at 19s. for 10 oz. 40 in. and 15s. 3d. for 8 oz., August-September, 18s. 10½d. and 15s. for October-December, and 18s. 7½d. and 14s. 10½d. for January-March, Liverpool twills being quoted at 49s. 3d. and "B" twills at 43s. 9d., August-September, and 3d. less for later shipment.

GRAIN MARKETS

WHEAT.—After some moderate fluctuations the wheat market is again firm, and has been influenced by continued dry weather in North America, and by a report that Germany wishes to make a barter agreement with Argentina. Europe has had more rain, but drought still prevails in certain areas in the West. Prices in America have shown a further advance this week, but there was a reaction on the Winnipeg exchange on Tuesday, following the promise of lower temperatures with possible thunderstorms in the prairie provinces. Quotations at London and Liverpool are all higher than a week ago.

According to Mr G. Broomhall, total shipments during the past week were 1,146,000 quarters, against 1,349,000 quarters in the preceding week. On Wednesday "September" futures were quoted in Chicago at 103½ cents per bushel, against 98 cents the week before and 87½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 34s. 9d. per 496 lbs., against 33s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s., against 32s., No. 3 Northern Manitoba, Vancouver, ex ship, 31s. 9d., against 31s. 9d.; Australian, ex ship, 28s. 6d. to 29s., against 27s. to 28s. a week ago.

FLOUR.—North American shipments were 99,000 sacks in the past week, as compared with 103,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 27s. per 280 lbs., against 26s. 6d. last week; delivered

London, 26s., as compared with 25s. 6d. a week ago. Manitoba patents, ex store, 26s. to 27s. 6d., against 25s. 6d. to 27s.; Australian, ex store, 19s. to 20s., against 18s. to 19s.

BARLEY.—"October" futures were 50½ cents per bushel in Winnipeg on Wednesday, against 47½ cents last week and 43½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 27s. to 30s., against 27s. to 30s. a week before.

OATS.—On Wednesday, "September" futures were quoted at 46½ cents per bushel in Chicago, against 44½ cents a week ago, and 43 cents last month. Quotations in London, Wednesday: "River Plate," landed, 20s. 6d. per 320 lbs., against 20s. 6d. a week ago; "Chilean White," landed, 21s. 6d. to 22s., against 21s. to 22s. a week earlier.

MAIZE.—"September" futures were quoted on Wednesday at 71½ cents per bushel in Chicago, against 64½ cents a week ago and 57½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 22s. 6d. per 480 lbs., compared with 22s. last week; "Plate," ex ship, 21s. 6d., against 21s. "Plate," July, 21s. 6d., as against 21s. Yellow maize meal, ex wharf, was quoted £6 to £6 2s. 6d. per ton, against £6 to £6 2s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to July 28	Cwts. 25,067	Cwts. 29,662	Cwts. 15,157	Cwts. 131,394
48 weeks to July 28	4,881,325	3,756,472	3,498,805	6,328,589
Average price of English wheat per cwt.	s. d. 6 5	s. d. 6 5	s. d. 6 10	s. d. 5 1

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 21, 1934	Cwts. 77,712	Cwts. 8,253	Cwts. 12,087	s. d. 5 4	s. d. 7 7	s. d. 6 4
July 28, 1934	131,384	7,108	16,823	5 1	7 10	6 5
July 26, 1930	84,620	3,524	10,055	8 3	6 5	6 0
July 25, 1931	31,618	2,343	8,438	8 5	6 4	6 8
July 30, 1932	29,662	3,017	3,580	6 5	6 8	7 6
July 29, 1933	15,157	8,797	6,174	6 10	6 9	5 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Aug. 2, 1933	Jan. 3, 1934	July 25, 1934	Aug. 1, 1934
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	62½	46½	85½	65½	94½	88½
Chicago (No. 2 Winter) —Cents per 60 lb.	55½	46½	100½	84½	98	103½

The visible supply of wheat in Canada, at 100,750,000 bushels, shows an increase of 2,088,000 bushels. Supplies a year ago stood at 103,204,000 bushels.

OTHER FOODS

SUGAR.—Quotations, both spot and forward, are rather higher in New York this week, while in London a fairly good demand has been encountered at mainly unchanged prices. The spot price of raw sugar in New York on Wednesday was 3.23 cents per lb., as compared with 3.20 cents per lb. last week and 3.18 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 8d. to 4s. 8½d., against 4s. 8½d. to 4s. 9½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	910	2	1,609	1,525	32,730	29,699
Liverpool	16,492	11,220	12,546	7,600	160,022	146,932
Total tons	17,402	11,222	14,155	9,125	192,752	176,631
Last week	7,564	3,656	16,690	15,946	189,505	174,634

COFFEE.—In New York, demand has ruled steady during the past few days at the rather higher rates. On Wednesday Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London spot market has been quietly steady during the first three days of this week. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 5 bags; exported, 2 bags; stocks, 29,205 bags, against 28,926 bags a year ago. Central American, landed, 1,643 packages; delivered, for home consumption, 1,265 packages; exported, 334 packages; stocks, 110,880 packages, against 98,871 packages last year. Other kinds: landed, 10 packages; delivered, for home consumption, 1,713 packages; exported, 433 packages; stocks, 104,739 packages, against 92,618 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, "August-September," was 20s. per 50 kilos, c.i.f. Continent, as against 21s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 2,125 bags; delivered, for home consumption, 2,943 bags; exported, 461 bags; stocks, 255,576 bags, against 167,571 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 10,860 packages of Indian and 36,467 packages of Ceylon tea. The Indian grades met with keen competition and quotations occasionally advanced. The Ceylon also encountered a good market. Strong competition for the better sorts was a feature and any price changes were in favour of sellers. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

AVERAGE PRICE PER LB.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
July 27, 1933	d. 10-89	d. 10-54	d. 11-79	d. 8-86	d. 8-11	d. 9-43	d. 11-50
June 28, 1934	12-96	13-02	13-24	11-30	10-98	12-47	12-94
July 5, "	12-01	12-85	13-28	11-13	11-06	12-47	12-89
July 12, "	13-02	12-74	12-83	10-79	10-61	12-36	12-57
July 19, "	12-80	12-31	12-76	10-67	10-41	11-84	12-38
July 26, "	12-71	12-20	12-82	10-75	10-29	12-06	12-31

RICE.—"The spot" price was 8s. per cwt. on Wednesday as compared with 8s. per cwt. a week ago, while the forward quotation, at 7s. 5½d. per cwt., shows no change on the week. Movements in London during the past week were as follows: Landed, 478 tons; delivered, 104 tons; stocks, 1,338 tons, against 6,312 tons a year ago.

POTATOES.—With supplies about equal to demand prices for most varieties show little change on the week. At the London Borough Market on Tuesday new crop "King Edward" sold at 7s. 6d. to 8s. 6d. per cwt., as compared with 7s. 8d. to 8s. 6d. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5d. per lb. on Wednesday, against 4½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 13 tons; stocks, 203 tons, against 320 tons a year ago. White, landed, 79 tons; delivered, 33 tons; stocks, 6,305 tons, against 930 tons a year ago.

MEAT.—Trade at Smithfield was quiet for all descriptions of fresh meat on Wednesday and also for frozen mutton and lamb. There was a fair demand for chilled beef. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 3s. 8d. to 4s. last week. New Zealand frozen mutton was 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 8,036 tons, against 7,439 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.8 per cent. of the beef supplies, against 86.1 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 81 per cent. of the total supply of mutton and lamb, against 80.5 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Only quiet conditions prevail in the markets for oilseeds and their products. Crushers are experiencing a slightly better demand for oilcake, but trade in these and in oils is only normal or less than normal for the season of the year. The Continent has shown some interest in Plate linseed, but demand here is hardly existent, attention being directed to Indian qualities. Prices, however, remain steady. Plate for all positions to October is quoted around £10 15s. per ton, and Calcutta (to London), £12 2s. 6d. Shipments from the Plate are heavier, and the quantity afloat for Europe has increased to 110,200 tons (including 24,100 tons from India) or 23,000 tons more than last week; and for the United States 26,000 tons. Crop prospects in both South and North America remain good. Cottonseed is steady, but only a small business is reported in old crop Egyptian, which is offered at £4 15s., while new crop September loading is quoted £4 17s. 6d.

DER OESTERREICHISCHE VOLKSWIRT

VIENNA : IX. PORZELLANGASSE 77

Trade in vegetable oils is on quiet lines, with only small fluctuations in prices. Linseed oil ex Hull mill for July-August delivery is quoted £20 15s. per ton naked, and September-December a fraction over this figure. Cotton oil is easier, for refined Egyptian crude ex Hull is available at £12 and common edible at £13 15s. per ton. Oilcakes are in improved demand and are a shade dearer.

RUBBER.—Following a slump, due to political influences on the Continent, rubber prices have recovered during the past few days, and now show little change on the week. The first actual cut in exports of rubber, to 90 per cent. for August and September, came into force on Wednesday. Germany has dropped out of the market for the time being, and it is feared that her tyre factories may have

to close down. But it seems improbable that this will be allowed to occur, since the present Government is aiming at the development of motor transport, and the export of tyres has become an important item. In New York, Wednesday's spot price for rubber, at 14½ cents per lb., compared with 14½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., as against 7d. on the corresponding day last week. In forward positions, business has been done at 7½d. for October-December, 1934, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 105,390 tons, show a decrease of 13 tons as compared with the preceding week.

expenditure is not functioning. In the last weeks of the session of Congress an Act was passed to encourage the building or repair of dwelling houses, but here, again, there has been a strange hiatus between legislation and execution. The rate of building construction other than public works is still close to the lowest figure of the depression. In view of the influence of the building boom in Great Britain upon our recovery of the past twelve months, it would be difficult to exaggerate the influence of continued stagnation in this industry in the United States upon the fortunes of the whole community.

The issues raised by these considerations have been brought to a head by Mr Roosevelt's return to the mainland after a month's cruising holiday to the island possessions of the United States. The mainspring of the New Deal appears to be running down, and the country is naturally looking to the man whom it still regards as the chief author of recovery to wind it up again. Mr Roosevelt, for the moment, is feeling his way. The pronouncements he has made in his progress across the North-Western States have shown him still determined to defend the long-range philosophy of the New Deal, with its emphasis on the protection of the community from the rapacious exploitation of those whom Theodore Roosevelt called malefactors of great wealth; but they have revealed little or nothing of what he proposes to do here and now to relieve the present discontents.

The economic policies of the New Deal have been directed to a twofold objective. In the first place various devices have been tried to increase the monetary circulation of the country and restore the pre-depression price level. In the second place, an endeavour has been made to redistribute the available national income. These two policies have not been clearly distinguishable. Redistribution of the national income, for example, has been advocated not only for its own sake but also as a means of securing an increase in the total income to be distributed. This is shown by the constant recurrence of the notion that it was insufficient spending by the poor, rather than by the community as a whole, which produced the depression and has hampered recovery. Both lines of policy, however, have been brought almost to a standstill during the present year. Since the devaluation of the dollar in January monetary experiment has been not only abandoned but forsworn, and the President has let it be known that he is disappointed with the results of previous experiments and opposed to any more in the future. N.R.A. has almost entirely lost its character as a mechanism for redistributing incomes, and the much more tepid support now given by the Administration to the claims of Labour is evidence of some change of heart on this second aspect of policy also.

The present recession is, of course, explicable in accordance with the beliefs of the explainers. Some ascribe it to the failure to continue the policies of 1933; others to the fact that the New Deal has been in some measure arrested but not reversed. Inflation still has its attractions to the inflationists: they are talking of a further devaluation of the dollar; and a project for nationalising and centralising the Federal Reserve system, which appears to have a semi-official origin, is taken as indicating that Washington has not entirely abandoned the idea of further monetary interventions by the Government. On the other hand, those who have consistently called for the restoration of confidence and the freeing of private enterprise from the shackles of regulation have not changed their mind, and they have succeeded in driving N.R.A. into full retreat.

The President will have to make his choice between these schools of thought, and to make his choice soon. Moreover, the choice will have to be followed by action. The New Deal must either advance or retreat; it cannot stand still. The necessity, indeed, is more political than economic; even if Mr Roosevelt were inclined to wait and see, his prestige is so intimately bound up with continuous recovery, and the Congressional elections are so close, that he must once more redeem his inaugural pledge of "action and action now." Will he sing the New Deal song twice over, in order, like Browning's thrush, to show the world that he can recapture its first fine careless rapture? Or will he change the tune? The economic history of the next few months, in the outside world as well as in America, depends very largely on the answer.

OUR AGRICULTURAL POLICY—III

THE two previous articles of this series described the main lines of agricultural policy pursued in Great Britain during the last five years. In the present article, which concludes the series, we propose to discuss some of the issues raised by this policy.

Before judgment can be delivered on any form of agricultural policy it is necessary to know the objects such a policy envisages and the place which it accords to agriculture in the economic life of the country. To many people the proper aim of agricultural policy is merely to increase the incomes of farmers, and this attitude undoubtedly explains much of the indignant surprise with which criticisms of a policy of subsidies and import restrictions are frequently received. To others, the real objective should be to increase the rural population; and any price, whether it be back-breaking toil by smallholders or expensive food for slum dwellers, is worth paying for the maintenance of a class of yeomen. To a third group, again, the object should be to increase the home-grown food supply, whether for safety in war or for the pride of being self-sufficient.

All three points of view are undoubtedly met in the present British policy, although the smallholdings movement necessarily has less appeal than higher profits and self-sufficiency to a Party in which the landowner and the large farmer have always been powerful. No one can have any objection in theory to a thriving countryside or an expanding agricultural production; and most people, other things being equal, would probably prefer to have all our food grown at home. But other things are not equal, and the agricultural problem cannot be contemplated in a vacuum. A prosperous and expanding agriculture can be secured only at a price, and the price, of course, will have to be paid by the 93 per cent. of the population which does not depend on agriculture for its livelihood. The fundamental defect of the present policy is that the 93 per cent. is being forced to pay the price without being adequately informed as to its amount, or invited to agree to pay it. If the price is too high the majority may revolt and their reaction may deprive agriculture of even the assistance it deserves to get.

If the object of agricultural policy be merely to increase agricultural prices, the social cost of that policy will be paid in the decline of the standard of living of the poorest classes of the population. In view of the alarming extent of destitution, that would already be an excessive price for the community to pay. But when agricultural policy has the second objective of increasing the size of the industry, which involves deliberate restriction of our purchases of agricultural products from foreign countries, it adds economic dislocation to social injustice. The extent to which this is true is frequently not realised. Supporters of the present policy, following the lead of the Minister of Agriculture, usually speak as if the only effect of restricting agricultural imports would be to reduce "the income of the City of London" from foreign sources. That is in itself a large enough item. It is probable that more than half of the national income from overseas investments, amounting in normal times to some £250 millions, comes from countries whose economies would be violently damaged by the restriction of food imports by Great Britain; and it is, of course, foolish to talk as if the receipt of this money, and the economic effects of its receipt, were confined to a few rich gentlemen in the City of London.

But this is less than half the story, for our purchases of food are the ultimate source of the demand, and of the payment, for a large part of our exports. Even if we confine ourselves to the products with which British agricultural policy is most concerned—wheat (including wheat flour), meat (including live cattle and bacon) and milk products—our imports of these commodities in 1929 were valued at £255 millions. If in the future we are going to refuse to take these commodities, the countries from which we purchase them will have £255 millions a year less to spend on British goods and British services—unless, indeed, we are prepared first of all to lend them this number of pounds sterling each year and then allow them to default upon the payment of their debts. As it is certain that we shall not lend again on this scale or on these terms, we

must accept the fact that the stoppage of imports will involve a corresponding fall in the expenditure in Britain by residents in countries overseas. What the effect upon employment of the disappearance of this expenditure would be cannot be exactly measured, but, directly and indirectly, a sum of this magnitude probably provided employment in 1929 for a million persons, whose chance of a livelihood will disappear except to the extent that they may find alternative employment, to which they can be speedily transferred, arising out of the increased prosperity of our own agricultural community.

To demonstrate that a reduction of food imports would have a disastrous effect upon the national economy is not, however, to demonstrate that nothing can be done for British agriculture. Farmers are accustomed to speak as if nothing was done for them by the State before the advent of the present Government. In point of fact, there is no other industry which has been treated nearly as generously for decades past. Dr. J. A. Venn has calculated* that in direct grants, in relief from central and local taxation and in indirect assistance (such as tithe legislation), the value of State assistance amounts to over £45 millions per annum, or 15s. a week for every one of the 1,150,000 persons gainfully occupied in farming. In no other industry has the State given financial relief equal to more than half the standard rate of labourers' wages. Nevertheless, most people would be willing for the State to go even further—for example, by lending its assistance for the improvement of productive efficiency, particularly as regards the quality of the product. Protection of the market from overseas competition is a more contentious matter, but it would probably be possible to find a substantial degree of agreement that the farmer is entitled to protection against such unfair devices as export subsidies and exchange dumping. The clearest example of exchange dumping at the present is that of New Zealand. The New Zealand pound, as is well known, is kept artificially low in the interest of the primary producer. As a result, imports of mutton and lamb from New Zealand have increased from 1,449,152 cwt. in the first half of 1929 to 1,976,218 cwt. in the first six months of this year, while imports of butter and cheese have increased in the same period from 2,198,712 cwt. to 2,918,566 cwt. This is clearly unfair competition, and there is no reason why the British farmer should be exposed to it.

• But if this concession is made to the gospel of protection it should be realised that it is temporary and that it confers no mandate for deliberately restricting imports below their normal level. Moreover, agricultural policy cannot be one-sided. If the farmer is to receive benefits, he must also assume obligations. If the State is to provide cash and protection, it must be in a position to dictate the steps that shall be taken to improve efficiency and to standardise quality. In particular, the State should obviously apply its assistance only to those branches of agriculture which are particularly suited to the conditions of British farming. Stockbreeding and dairy farming, for example, are worth encouraging; the cultivation of cereals and sugar-beet is not.

The present Government's policy should be judged by the criteria which have been briefly sketched. Some parts of it are obviously bad. No one who is not an interested party has a good word to say for the sugar-beet subsidy. It is wrong in principle, faulty in technique and ruinously costly. There is no shadow of reason for believing that the sugar-beet industry is worth an annual sum large enough to pay for our aerial rearmament one and a half times over, or nearly large enough to pay the net cost of raising the school-leaving age to 15. The Wheat Act is better only in two small particulars, namely, in that wheat is a more important commodity than sugar-beet (though almost equally unsuited to these islands) and in that some limit is set to the expenditure of public money. It is worse in that the levy on the public is not honestly displayed as a tax in the Budget, but hidden in special accounts to which not one person in ten thousand gives a glance.

On the other hand, the principle of organised marketing is undoubtedly right. Farmers have too often suffered from inequality of bargaining rights, and co-operation is none

* In his Presidential address to the Agricultural Economics Society, July, 1933.

the less beneficial if it is enforced on the minority. As expressed in the first Agricultural Marketing Act, the idea was one of an honest bargain between the community and the farming industry. The State was to lend its powers of coercion, while the industry undertook to increase its efficiency. But in the Act of 1933 the terms of the bargain were altered; the industry would only organise in return for the restriction of imports. In view of the vital importance to the nation of cheap food, this can only be described as a bribe to do something which the nation is entitled to require its agriculturists to do in any case. Moreover, the bribe remains, while the counterpart has not been forthcoming. None of the Marketing Boards has shown much willingness of its own initiative to attempt to improve the efficiency of the industry. The milk industry has even demanded, and received, a special subsidy for doing what it should have done in its own interest long ago—namely, improve the quality of its product. Again, the case of fat stock is most instructive. The original idea was to bargain restriction of imports against improvement of efficiency, and a Reorganisation Commission was appointed to draft a Marketing Scheme. But the opposition of farmers to any interference with their accustomed methods is so strong that the Marketing Scheme has been pigeon-holed and a subsidy has been granted free, gratis and for nothing. In the last thirty months farmers have been given selling monopolies and import restrictions, but they still demand special subsidies before any *quid pro quo* in the way of reorganisation or improved efficiency is forthcoming. This is altogether too arrogant behaviour for a minority of 7 per cent. to adopt to the overwhelming majority; in the vernacular, it is asking for trouble.

There are other objections to the present tendencies. The mania for an increasing domestic production is difficult to defend on economic grounds. The lack of any serious attempt to co-ordinate the activities of the different Boards is likely to prove very fruitful of difficulties. There is already some risk of the beef subsidy upsetting the operations of the Milk Board, and the reactions of the uncontrolled pork market on the controlled bacon market were mentioned in the second article of this series. The narrow range of the schemes is also open to criticism. There is no reason why organisation should stop short at the sale of agricultural produce to the wholesaler; there is as much room for rationalisation in the distribution as in the production of foodstuffs. Several of these points, however, are suggestions for future legislation rather than criticisms of present endeavours. The main objection to agricultural policy as it has developed under Mr Elliot must be that stated in the preceding paragraphs, namely, that an instrument which might have served as the basis for a partnership, beneficial to both parties, between the community and agriculture has been perverted into a purely one-sided policy of subventions, not indeed for the whole industry of food production, but for those sections of it, the landlords and the large farmers, whose political representatives are most vociferous.

FRANCE IN THE DEPRESSION

(BY A CORRESPONDENT)

THE most contradictory statements are being made concerning the situation in France. It is indeed equally true to speak of increasing difficulties, of stability, or of improvement, provided these terms are applied to different elements in the nation's activity.

The general business trend is beyond doubt downwards. The real improvement registered in 1933 in the world situation helped to bring about a temporary pick-up in France; but when the recovery abroad seemed to halt for a time—during the first months of 1934—French industry experienced a serious setback. This was due in part to internal political troubles—perhaps also to the deflation policy, although it is difficult to believe that the modest budgetary measures taken in April have had much more than a psychological effect. In the main, however, it is due to persistent price discrepancies and to the commercial policy of all nations—including France herself. The difficulties of the tulle industry in Calais and Caudry and of the wool combers in Roubaix-Tourcoing are typical. Equally clear are the indications given by statistics of failures, railroad traffic, production figures, etc. Retail trade—as far as can be ascertained from partial data—is not more satisfactory. Official unemployment figures (315,000 persons) remain higher than a year ago by about 60,000 and the seasonal decline at the beginning of the summer period seems to have been less than normal. The actual number of unemployed is generally estimated at around one million, about the 1932 level. Imports are 16 per cent. under last year—the bulk of the decline being represented by food-stuffs which were directly affected by the new quotas. On this point, however, the trend may change, in view of the recent settlement of trade disputes with Great Britain, Germany and Denmark.

Some encouraging factors are, however, worth noting. French prices have not lost all their elasticity, and their decline since January has been important, French national goods falling more than imported commodities. While retail prices only experienced slight reductions, the unweighted general wholesale index fell by 10 per cent. during the first seven months of 1934. This has allowed exports to stand at the same level as last year in value, and even to increase in volume by over 10 per cent.

For agriculture, the term "stability" seems best to define its position. Quotas have done their part, but so has Nature. At least one element of fear—and a very serious one—has been greatly allayed, namely the wheat situation. The sums involved in the financing of the carry-over at the end of the season will amount to over 3,000 million francs, which have been advanced directly or indirectly by the State, the Bank of France, the Caisse des Dépôts, etc. All forecasts concerning the yield of this year's crop indicate that it will be insufficient for consumption needs. In other words, no additional financing should be necessary, and some of the money thus frozen will possibly be released in the course of next winter. This, of course, does not imply that the present disorganisation of the wheat market will soon be remedied. The price-fixing policy meets with growing opposition from the millers and even from some producers, and the official price—108 francs per quintal—remains distinctly above the black market quotations, which hardly reach 100 francs at present. At any rate, this year's crop will certainly contribute to the balancing of the market.

The wine-growing districts have also been depressed by heavy stocks, but there are indications that the vine crops also may be well under normal. Should this prove true, the balance of the market would be easier to restore.

In contrast to the general economic situation, the financial position of France has distinctly improved since the beginning of the year. The Budget for the current year has, it is true, not been fully balanced. Economies—which did not cover the total estimated deficit—have been introduced during April only, and their result can only be felt progressively. Furthermore, a part of the work achieved in April is likely to be undone by the latest fiscal measures.

These entail the loss of 2,000 million francs of annual revenue, while only 600 millions are expected from new taxes, the balance to be met by the more active prosecution of fraud. Although the new taxes apply to 1934, while some of the important reductions (e.g., those relating to income tax) will only come into force in 1935, the new deficit envisaged for the current year may be said to amount to about 3,000 or 4,000 million francs. But this is an improvement if compared with the 1933 deficit (6,832 million francs). Moreover, disappointing budgetary receipts had been taken into account by M. Germain-Martin when he drafted his decree-laws, and therefore do not aggravate the situation.

The Treasury also seems to be in a better position. The storm of the month of March has been weathered. Treasury bills and National Defence bonds are being freely renewed, while the funds withdrawn from the savings banks at a rapid pace until late April are slowly flowing back to them. This does not mean that the task of the Treasury is easy. Its charges for 1934—in addition to the Budget deficit—total 17,000 million francs, of which over 8,000 millions are refunding operations, the bulk of which should be carried out by November 1st; 5,500 millions of advances to railroads, the Post Office, etc., to be reimbursed out of funds borrowed by these departments; and 3,500 millions of direct Treasury expenses, to be financed by its own issues. The way for the refunding operations has been prepared by the issue of 4 per cent. Treasury bonds in July, and, provided the market is not shaken by new internal or external political events, there is little doubt that the necessary issues can be placed without undue strain. The Treasury issue floated in July met at first with a fairly favourable reception—until M. Tardieu's unexpected intervention—thanks to the strong tone of the rente market. A serious lowering of the interest rate is not, however, within sight as long as the Budget is not fully balanced.

In fact, the Budget question threatens to arise again soon. The Minister of Finance has announced that total credits for the general Budget will not exceed 47,000 million francs in 1935 (about the present figure, allowing for the April economies). This involves a new and serious contraction of expenditure, since the automatic increases of public expenditure should raise it by another 2,500 millions next year and since tax receipts are affected by the business recession. A favourable factor, however, is that the Treasury has no important maturities falling due in 1935.

Thus the French situation—in spite of the inherent solidarity of all branches of the nation's economy—may perhaps be summarised as follows: aggravated depression in industry, trade and, probably, consumption; decline in prices; stability in agriculture; and a real, but not final, improvement in public finance. If it be recalled that in France anxiety about monetary stability has, up to the present, been mainly due to the threat of inflation for the purpose of covering the Budget deficit, it is easy to understand why the deflation policy has as yet met with so few obstacles, in spite of illogical protection measures, which make price adjustments so much more painful. Surprising as it may appear, the decline in prices—as long as industrial prices only are concerned—is not considered a national calamity, but an advantage. That is why M. Paul Reynaud's speech in the Chamber, presenting devaluation as the only way out of depression, has encountered a cool reception from the Press and public opinion. Not one French paper—even among the industrial journals—has taken up his opinions to defend them. The chief pre-occupations of public opinion remain of a political nature: the future of the Doumergue Government, and Europe's tranquillity. Even when reflecting on monetary policy, the French are less afraid of their own position—which does not as yet look desperate—or of France's apparent isolation, than of Mr Roosevelt's impending decisions, the future of the pound sterling, or the fate of Germany, which threaten them as much as the rest of the world. As long as France is not left entirely alone in the gold bloc, as long as the 25,000 million francs hoarded in notes of the Bank of France are considered as equivalent to gold by their owners, as long as the depression does not turn into a national disaster, a psychological background for devaluation will remain almost entirely lacking.

MOTORS FOR THE MILLION

(BY A CORRESPONDENT)

THE total number of private cars in use this year shows an increase of some 8.8 per cent. from last year, and it is expected that the peak registrations for the year will total 1,308,000 during the third quarter, an increase of 105,000 vehicles over 1933. This compares with an increase of 75,000 between 1932 and 1933, and of 44,000 between 1931 and 1932; and it even equals the level of the increases in the years of rapid expansion which culminated in 1929, when the annual growth in the number of cars in use averaged some 100,000.

One of the first effects of returning prosperity has been to raise the effective demand for private car ownership, a demand which undoubtedly goes hand in hand with the building boom and the progressive suburbanisation of city populations. But, even allowing for the influence of factors of this kind, the growth of motor ownership is certainly extraordinary. It has been estimated that about 25 per cent. of the private cars registered represents purely business ownership, while a further 100,000 may be taken as representing multiple ownership, i.e. the ownership of more than one car by a single family. Even after making these corrections, however, there remain nearly 900,000 car-owning families who use their vehicles partly or wholly for private purposes, a figure which is very substantially in excess of the number of incomes known to the Inland Revenue authorities of £400 a year and upwards. The economics of motor ownership in some of the lower income grades constitutes a puzzle; for the cost of running a small car, even if the mileage be very moderate, must be an extremely heavy item in a family budget of £400 a year, while the indirect expenses on meals and refreshments taken away from home and the generally higher standard of week-end entertainment induced by the ownership of a private car must also be very considerable in the aggregate.

Registration of new cars for the eight months October, 1933-May, 1934, numbered 152,730, an increase of 21.8 per cent. over the total of 125,414 for the corresponding period of the previous year. On the not unreasonable assumption that the last four months of the current motor year will show a 15 per cent. increase (the reduction compared with the first eight months being due to the fact that the comparison is with a much better period), total new registrations in Great Britain for the year will be of the order of 214,000, which, if allowance be made for exports, imports and new registrations in Northern Ireland, corresponds to a gross production of cars by the British motor industry of 255,000 units, compared with 220,000 last year and some 183,000 in 1928-29, the pre-depression record.

There is not the slightest doubt that all previous records will easily be beaten this year. Exports for the nine months ended June 30, 1934, amounted to 34,809 units, valued at £4,449,938, compared with 34,208 units valued at £4,184,743, in the previous year; while imports increased to

5,479 units, valued at £860,763, as against 2,351 units, valued at £443,285, a year ago. The increase in imports is of course a reflection of the greater purchasing power of the class of motorist who can afford to buy American cars. It has, however, been intensified by the fall of the dollar exchange and the improved appearance and performance of the American product. Exports, although at a slightly better level than ever before, do not, upon analysis, make such a promising showing. There is no doubt that, although our total has increased by 1.8 per cent., we are doing a smaller proportion of the available export trade than has been the case for the last two or three years, and, more important still, British manufacturers are losing ground in the Continental markets such as Holland, in which they obtained a foothold during the years of acute depression. This is also probably due to the cheapness of American cars following on the devalued dollar. While exports to Empire countries since January show an increase of 34.6 per cent. compared with last year, exports to foreign countries have fallen by 28.5 per cent.

One of the ways in which improved purchasing power in the home market is making itself apparent is in the proportion of demand going to the different horse-power categories. In 1932-33 new registrations of cars of over 10 h.p. accounted for only 40.7 per cent. of all new registrations; the corresponding percentage for the seven months ended April, 1934, was 42.9 per cent., while for May, which is the first complete month in which car purchasers could be affected by the Chancellor of the Exchequer's decision to reduce the horse-power tax from £1 to 15s. per h.p. as from January, 1935, it was 44.2 per cent. There are indications that the change in popular taste revealed by the trend of demand during May will have important effects on the production policy of the chief manufacturers and on the allocation of the market between them. Further, it will give added encouragement to imports of American cars. Ford, who has been markedly successful in increasing his share of the 8 h.p. market this season, is making a bid to popularise his 30 h.p. V.8 model by his recently announced reduction in prices, which definitely puts this car within the reach of the motorist of limited means. Vauxhall, whose 12 h.p. and 14 h.p. models have won a considerable popularity this year, may be expected to make an even more direct appeal to the class of motorist who up to now has been satisfied with a model in the 10 h.p. category. It may be expected that the manufacturers who have suffered from Ford encroachments in the 8 h.p. class and Vauxhall competition in the 12 h.p. and 14 h.p. classes, but for whom the position has been somewhat masked by the large increase in the demand for new cars as a whole this year, will make their reply when the models for next season are announced. If they do not find a successful reply, rather far-reaching changes may be predicted in the order of importance of the chief firms catering for the British private car market.

Taking the British motor industry as a whole, the outlook is definitely good. Nevertheless, it may be accepted as inevitable that the American car will make further inroads in the large-car category, both in the home market

and abroad; while competition for the Continental markets from German, French and Italian manufacturers will become more acute. There is every indication, however, of still further expansion in the home market; while there should be no difficulty in maintaining exports at their present volume, if we remember that this represents a decreasing percentage of the total available trade. Quite apart from any increase in the number of motorists in Great Britain, on the assumption of an average life for private cars of eight years, the maintenance of a fleet of 1,300,000 vehicles means that in normal years the replacement demand will amount to some 163,000 cars per year. In times of trade depression this figure may be somewhat reduced by reason of potential buyers postponing the purchase of new cars until times are better, and, conversely, it may be somewhat inflated in times of good trade. In any case, this figure gives a fairly certain minimum production on the basis of which the motor industry's policy can be reasonably organised. In addition, past experience has shown that even in bad times new motorists are still recruited, albeit in diminished numbers. The present tendency towards the making of trade agreements with the chief countries catering for the British market for foodstuffs and raw materials, which are not for the most part themselves motor-manufacturing countries, should ensure at any rate a basic minimum of British car exports. With these advantages it should be possible for a moderate further expansion to take place in the British motor industry, and, with a general increase of purchasing power, this may be looked for with some confidence.

"SHY TRAFFICKERS"

Opium smoking became a curse in China from small beginnings early last century, and largely through the misplaced enterprise of Europeans. Since then the curse has not only ravaged China but has recoiled, as a social vice, upon the whole world. From opium the curse extended its grip to heroin and other narcotics; and by 1912, when the Hague Opium Convention was drawn up on American initiative, the Western world was seriously alarmed at this threat from the Far East.
